ORA-30100: internal error [<varname>number</varname>]

Cause: An internal error has occurred.

Action: Contact Oracle Worldwide Support and report the error.

ORA-30101: unknown parameter name '<varname>string</varname>'

Cause: You have misspelled the parameter name.

Action: Spell the parameter name correctly.

ORA-30102: '<varname>string</varname>' is not in the legal range for '<varname>string</varname>'

Cause: The value of the parameter is not within the legal range.

Action: Refer to the manual for the allowable values for this parameter.

ORA-30103: '<varname>string</varname>' contains an illegal integer radix for '<varname>string</varname>'

Cause: An illegal integer radix specification was found.

Action: Only 'd', 'h', 'D', and 'H' may be used as radix specifications.

ORA-30104: '<varname>string</varname>' is not a legal integer for '<varname>string</varname>'

Cause: The value is not a valid integer.

Action: Specify only valid integers for this parameter.

ORA-30105: '<varname>string</varname>' is not a legal boolean for '<varname>string</varname>'

Cause: The value is not a valid boolean.

Action: Refer to the manual for allowable boolean values.

ORA-30106: reserved for future use

Cause: None.

Action: None

ORA-30107: parameter name abbreviation '<varname>string</varname>' is not unique

Cause: The abbreviation given was not unique.

Action: Use a longer abbreviation to make the parameter name unique.

ORA-30108: invalid positional parameter value '<varname>string</varname>'

Cause: An invalid positional parameter value has been entered.

Action: Remove the invalid positional parameter.

ORA-30109: could not open parameter file '<varname>string</varname>'

Cause: The parameter file does not exist.

Action: Create an appropriate parameter file.

ORA-30110: syntax error at '<varname>string</varname>'

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

ORA-30111: no closing quote for value '<varname>string</varname>'

Cause: A quoted string was begun but not finished.

Action: Put a closing quote in the proper location.

ORA-30112: multiple values not allowed for parameter '<varname>string</varname>'

Cause: You attempted to specify multiple values for a parameter which can take only one value.

Action: Do not specify more than one value for this parameter.

ORA-30113: error when processing file '<varname>string</varname>'

Cause: A problem occurred when processing this file.

Action: Examine the additional error messages and correct the problem.

ORA-30114: error when processing from command line

Cause: A problem occurred when processing the command line.

Action: Examine the additional error messages and correct the problem.

ORA-30115: error when processing an environment variable

Cause: A problem occurred when processing an environment variable.

Action: Examine the additional error messages and correct the problem.

ORA-30116: syntax error at '<varname>string</varname>' following '<varname>string</varname>'

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

ORA-30117: syntax error at '<varname>string</varname>' at the start of input

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

ORA-30118: syntax error at '<varname>string</varname>' at the end of input

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

ORA-30119: unable to obtain a valid value for '<varname>string</varname>'

Cause: No valid value was obtained for this parameter.

Action: Rerun the application and enter a valid value.

ORA-30120: '<varname>string</varname>' is not a legal oracle number for '<varname>string</varname>'

Cause: The value is not a valid oracle number.

Action: Refer to the manual for allowable oracle number values.

ORA-30121: '<varname>string</varname>' is not an allowable value for '<varname>string</varname>'

Cause: The value is not a legal value for this parameter.

Action: Refer to the manual for allowable values.

ORA-30122: value '<varname>string</varname>' for '<varname>string</varname>' must be between '<varname>number</varname>' and '<varname>number</varname>'

Cause: The value of the parameter is not within the legal range.

Action: Specify a value that is within the legal range.

ORA-30129: invalid function argument received

Cause: A function received an invalid argument

Action: Check function calls, make sure correct arguments are being passed.

ORA-30130: invalid parameter key type received

Cause: A function received an invalid parameter key type

Action: Check parameter key types in function calls

ORA-30131: number of keys being set exceeds allocation

Cause: Number of parameter keys being set exceeds allocation

Action: Reduce the number of keys being set or increase allocation

ORA-30132: invalid key index supplied

Cause: The key index specified was not within bounds

Action: Change key index to ensure it lies within bounds

ORA-30133: reserved for future use

Cause: None.

Action: None

ORA-30134: reserved for future use

Cause: None.

Action: None

ORA-30135: OCI Thread operation fails

Cause: An OCI Thread function call has failed.

Action: Check the function call to make sure that the correct parameters are being passed and take the appropriate action.

ORA-30136: Drop-in compatibility is not supported for this application

Cause: The current application is statically linked with defopt.o from an older release, which is incompatible with the current client shared library.

Action: 1) Relink the application against the new release of the client library; or 2) Relink the application against the older release of the client library without statically linking defopt.o.

ORA-30150: Invalid argument passed to OCIFile function

Cause: An invalid argument is passed to the OCIFile function. The most common cause is that a NULL pointer is passed where a non-NULL pointer is expected.

Action: Make sure that the values passed as arguments are valid. Esp check for NULL pointers.

ORA-30151: File already exists

Cause: Tried to open a file with OCI_FILE_EXCL flag and the file already exists.

Action: OCIFile is supposed throw this exception in this case.

ORA-30152: File does not exist

Cause: The OCIFile function requires the file to exist, but it does not.

Action: Make sure that the file exists.

ORA-30153: An invalid File Object is passed to the OCIFile function

Cause: An invalid File Object is passed to the OCIFile function.

Action: Make sure that the file object is a valid one. Create a new file object by calling OCIFileOpen if needed.

ORA-30154: The memory address given as buffer for OCIFileRead/Write is invalid

Cause: An invalid memory address is given as the buffer pointer for OCIFileRead/Write.

Action: Make sure that the required memory is allocated and pass a valid memory address as buffer pointer.

ORA-30155: An I/O Error occurred during an OCIFile function call

Cause: An I/O error occurred at the system level.

Action: This is a system error and the action will depend on the error.

ORA-30156: Out of disk space

Cause: The disks associated with the underlying file system are full.

Action: Create more disk space.

ORA-30157: An invalid argument was given to operating system call

Cause: The OS call was called with an invalid argument.

Action: Check the values passed. If unsuccessful to solve the problem contact ORACLE support.

ORA-30158: The OCIFileWrite causes the file to exceed the maximum allowed size

Cause: There is no space to write to the file. Its size is at the maximum limit.

Action: Up to the user.

ORA-30159: OCIFileOpen: Cannot create the file or cannot open in the requested mode

Cause: The create flag was specified in OCIFileOpen such that the file was to be created. But unable to do so. Or the file already exists and the permissions on it doesn't allow the file to be opened in the requested open mode

Action: Check whether the user has permissions to create the specified file or if the file exists whether the permissions on it allow the requested open mode.

ORA-30160: Unable to access the file

Cause: The function was unable to access the existing the file.

Action: Check if the user has the required permissions on the file.

ORA-30161: A system error occurred during the OCIFile function call

Cause: A system error occurred while executing the OCIFile function.

Action: Depend on the error.

ORA-30162: The OCIFile context is not initialized

Cause: The function OCIFileInit need to be called before calling any other OCIFile function to initialize the OCIFile context.

Action: Call the function OCIFileInit need to be called before calling any other OCIFile function.

ORA-30163: The thread safety initialization failed

Cause: The call to SlgInit failed in OCIFileInit.

Action: Contact support

ORA-30175: invalid type given for an argument

Cause: There is an argument with an invalid type in the argument list.

Action: Use the correct type wrapper for the argument.

ORA-30176: invalid format code used in the format string

Cause: There is an invalid format code in the format string.

Action: Replace the invalid format code with a valid one.

ORA-30177: invalid flag used in a format specification

Cause: There is an invalid flag in a format specification.

Action: Replace the invalid flag with a valid one.

ORA-30178: duplicate flag used in a format specification

Cause: There is a duplicate flag in a format specification.

Action: Remove the duplicate flag.

ORA-30179: invalid argument index used in a format code

Cause: Zero or negative argument index or index not following (."

Action: Replace the invalid argument index with a valid one.

ORA-30180: argument index is too large

Cause: An argument index exceeds actual number of arguments supplied.

Action: Fix format string or pass additional arguments.

ORA-30181: integer in argument index is not immediately followed by)

Cause: Missing closing parenthesis in argument index.

Action: Fix the format specification.

ORA-30182: invalid precision specifier

Cause: Period in format specification not followed by valid format.

Action: Replace the invalid precision specifier with a valid one.

ORA-30183: invalid field width specifier

Cause: Invalid field width supplied.

Action: Replace the invalid field width with a valid one.

ORA-30184: argument type not compatible with a format code

Cause: Bad argument type given for a format code.

Action: Make format and arguments be compatible.

ORA-30185: output too large to fit in the buffer

Cause: The buffer is not large enough to hold the entire output string.

Action: Fix the buffer size and length passed in.

ORA-30186: " must be followed by four hexadecimal characters or another "

Cause: In the argument of SQL function UNISTR, a " must be followed by four hexadecimal characters or another "

Action: Fix the string format

ORA-30187: Permission denied for '<varname>string</varname>' to access procedure GET_KEY.

Cause: The client was unauthorized to invoke the procedure DBMS_INTERNAL_CLKM.GET_KEY.

Action: DBMS_INTERNAL_CLKM.GET_KEY is an Oracle GoldenGate feature and can only be accessed by Oracle GoldenGate.

ORA-30188: reserved for future use

Cause: None.

Action: None

ORA-30189: reserved for future use

Cause: None.

Action: None

ORA-30190: reserved for future use

Cause: None.

Action: None

ORA-30191: missing argument list

Cause: No argument list supplied.

Action: Modify the argument list to have at least OCIFormatEnd in it.

ORA-30192: reserved for future use

Cause: None.

Action: None

ORA-30193: reserved for future use

Cause: None.

Action: None

ORA-30194: reserved for future use

Cause: None.

Action: None

ORA-30195: reserved for future use

Cause: None.

Action: None

ORA-30196: reserved for future use

Cause: None.

Action: None

ORA-30197: reserved for future use

Cause: None.

Action: None

ORA-30198: reserved for future use

Cause: None.

Action: None

ORA-30199: reserved for future use

Cause: None.

Action: None

ORA-30200: Wrong NLS item was passed into OCINlsGetInfo()

Cause: The item is not supported NLS item

Action: Correct the item number passed to OCINlsGetInfo().

ORA-30201: Unable to load NLS data object

Cause: It may be caused by invalid NLS environment setting

Action: Check your NLS environment setting such as ORA_NLS33

ORA-30202: NULL pointer to OCIMsggh was passed to OCIMsg function

Cause: The NULL pointer was passed.

Action: Check your value of OCIMsggh pointer.

ORA-30203: Cannot open message file

Cause: The message may not exist in your system.

Action: Check your message for the given product and facility.

ORA-30204: buffer is not large enough

Cause: The destination buffer is not large enough for storing converted data.

Action: Check the size of the destination buffer.

ORA-30205: invalid Character set

Cause: The specified character set is invalid.

Action: Check if the character set ID is valid.

ORA-30300: unable to obtain SEG2

ORA-30301: cannot recover this transaction in parallel

ORA-30302: event to make PMON skip recovery

ORA-30303: Internal error

ORA-30304: Internal error

ORA-30305: Debug mode

ORA-30306: Internal error

ORA-30307: Internal error

ORA-30308: Internal error

ORA-30309: Internal error

ORA-30310: Internal error

ORA-30311: Internal error

ORA-30312: Internal error

ORA-30313: Internal error

ORA-30314: Internal error

ORA-30315: Internal error

ORA-30316: Internal error

ORA-30317: Internal error

ORA-30318: Block Level Recovery attempted

ORA-30325: SMON yielded shrink to perform other critical work

ORA-30331: summary does not exist

Cause: A non-existent summary name was specified.

Action: Check the spelling of the summary name.

ORA-30332: container table already in use by other summary

Cause: Another summary is already using this table as a container table.

Action: Select another table or materialized view as the container table for this summary.

ORA-30333: dimension does not exist

Cause: The dimension named in a dimension DDL statement does not exist.

Action: Check the spelling of the dimension name.

ORA-30334: illegal dimension level name

Cause: A level name in a dimension ddl statement did not conform to SQL identifier rules.

Action: Use a level name that begins with a letter, consists of only letters, digits, and underscores and contains no more than 30 characters.

ORA-30335: JOIN KEY clause references a level not in this hierarchy

Cause: The level name specified with the REFERENCES portion of a JOIN KEY clause in a dimension DDL statement does not reference a level in the hierarchy that contains the JOIN KEY clause. *Action: Check the spelling of the level name.

Action: n/a

ORA-30336: no child for specified JOIN KEY

Cause: The level specified in the REFERENCES portion of a JOIN KEY clause in a dimension DDL statement does not have a child level.

Action: Check the spelling of the level name referenced in the JOIN KEY clause. If the referenced level is the first level in the hierarchy, you need not and must not specify a JOIN KEY clause.

ORA-30337: multiple JOIN KEY clauses specified for the same parent level

Cause: Multiple JOIN KEY clauses were specified for a given parent level in a dimension hierarchy.

Action: Match up each JOIN KEY clause with the level it references in the hierarchy. Eliminate the redundant JOIN KEY clause.

ORA-30338: illegal dimension hierachy name

Cause: An illegal dimension hierarchy name was specified in a dimension DDL statement.

Action: Make sure the name begins with a letter, contains only letters, digits and underscore and contains no more than 30 characters. If you qualify the name with the owner name, make sure the owner name conforms with the requirements for an owner name on your system.

ORA-30339: illegal dimension attribute name

Cause: An illegal dimension attribute name was specified in a dimension DDL statement.

Action: Make sure the name begins with a letter, contains only letters, digits and underscore and contains no more than 30 characters. If you qualify the name with the owner name, make sure the owner name conforms with the requirements for an owner name on your system.

ORA-30340: illegal dimension name

Cause: An illegal dimension name was specified in a dimension DDL statement.

Action: Make sure the name begins with a letter, contains only letters, digits and underscore and contains no more than 30 characters. If you qualify the name with the owner name, make sure the owner name conforms with the requirements for an owner name on your system.

ORA-30341: dropped level has references

Cause: An attempt was made to drop a level using the default or RESTRICT option in a dimension while references to that level remain in the dimension. References can occur in hierarchies and attributes within the dimension.

Action: First remove any referenes to the level prior to dropping it, or specify the CASCADE option with the DROP LEVEL clause.

ORA-30342: referenced level is not defined in this dimension

Cause: A reference to a level not defined within the dimension was found.

Action: Check the spelling of the level name.

ORA-30343: level name is not unique within this dimension

Cause: Two or more levels were defined with the same name.

Action: Check the spelling of the level names.

ORA-30344: number of child cols different from number of parent level cols

Cause: The number of child columns specified in a JOIN KEY clause is not the same as the number of columns in the specified parent level.

Action: Check the child columns and the columns in the definition of the referenced parent level and correct the discrepancy.

ORA-30345: circular dimension hierarchy

Cause: A circularity was found the dimension hierarchy.

Action: Check the hierarchy for a level name that occurs more than once.

ORA-30346: hierarchy name must be unique within a dimension

Cause: The same name was used for more than one hierarchy in a dimension.

Action: Check the spelling of the hierarchy name.

ORA-30347: a table name is required to qualify the column specification

Cause: A table name was omitted in a column specification where where the column must be qualified by the table name.

Action: Qualify the column with the table name.

ORA-30348: ADD and DROP cannot both be specified

Cause: One or more ADD clauses were found in the same ALTER DIMENSION statement with one or more DROP clauses.

Action: Separate your ADD operations into one ALTER DIMENSION statement and your DROP operations into another.

ORA-30349: specified dimension hierarchy does not exist

Cause: A hierarchy name was encountered that is not defined within the dimension.

Action: Check the spelling of the hierarchy name.

ORA-30350: specified dimension attribute does not exist

Cause: An attribute name was encountered that is not defined within the dimension.

Action: Check the attribute name spelling.

ORA-30351: query rewrite does not currently support this expression

Cause: A complex expression was specified that is not currently supported by query rewrite.

Action: Reduce the complexity of the expression.

ORA-30352: inconsistent numeric precision or string length

Cause: The SELECT expression was of a different numeric precision or string length than the corresponding container column. Therefore, query rewrite cannot guarantee results that are identical to the results obtained with the un-rewritten query.

Action: Correct the precision or string length difference, specify the WITH REDUCED PRECISION option, or disable the REWRITE option on the materialized view.

ORA-30353: expression not supported for query rewrite

Cause: The SELECT clause referenced UID, USER, ROWNUM, SYSDATE, CURRENT_TIMESTAMP, MAXVALUE, a sequence number, a bind variable, correlation variable, a set result, a trigger return variable, a parallel table queue column, collection iterator, a non-deterministic date format token RR, etc.

Action: Remove the offending expression or disable the REWRITE option on the materialized view.

ORA-30354: Query rewrite not allowed on SYS relations

Cause: A SYS relation was referenced in the select clause for a materialized view with query rewrite enabled.

Action: Remove the reference to the SYS relation from the select clause or disable the REWRITE option on the materialized view.

ORA-30355: materialized view container does not exist

Cause: A DROP TABLE command was issued directly against the materialized view container table.

Action: Use the DROP MATERIALIZED VIEW command to clean up the residual meta data for the materialized view. Then use the CREATE MATERIALIZED VIEW statement to recreate the materialized view. Thereafter, use the DROP MATERIALIZED VIEW command rather than the DROP TABLE command to drop a materialized view.

ORA-30356: the specified refresh method is not supported in this context

Cause: The refresh method that was specified is not currently supported.

Action: Specify a different refresh method or change the context to enable support of the chosen refresh method.

ORA-30357: this PL/SQL function cannot be supported for query rewrite

Cause: The statement referenced a PL/SQL function that is not marked DETERMINISTIC.

Action: Perform one of the following actions: - Remove the use of the PL/SQL function. - Mark the PL/SQL function as DETERMINISTIC. - Disable the REWRITE option on the materialized view. The function should be marked DETERMINISTIC only if it always returns the same result value for any given set of input argument

values, regardless of any database state or session state. Do not mark the function as DETERMINISTIC if it has any meaningful side-effects.

ORA-30358: summary and materialized view are not in same schema

Cause: An internal Oracle error occurred.

Action: Report the problem through your normal support channels.

ORA-30359: Query rewrite is not supported on SYS materialized views

Cause: An attempt was made to enable the REWRITE option on a materialized view in the SYS schema.

Action: Create the materialized view in a different schema or disable the REWRITE option.

ORA-30360: REF not supported with query rewrite

Cause: The statement contained a REF operator. Repeatable behavior cannot be guaranteed with the REF operator. Therefore, query rewrite cannot support the REF operator.

Action: Remove the reference to the REF operator or disable the REWRITE option on the materialized view.

ORA-30361: unrecognized string type

Cause: An internal Oracle error occurred.

Action: Report the problem through your normal support channels.

ORA-30362: dimension column cannot be a sequence

Cause: The dimension statement referenced a column that is a sequence.

Action: Remove the reference to the sequence.

ORA-30363: columns in a dimension column list must be in the same relation

Cause: The dimension statement contained a column list where the columns are not all from the same relation.

Action: Specify the list of columns using only columns from a single relation.

ORA-30364: this level has the same set of columns as another

Cause: The level definition contained the same set of columns as another level.

Action: Eliminate the redundant level definition.

ORA-30365: left relation in the JOIN KEY clause cannot be same as right

Cause: The relation of the child columns on the left side of the JOIN KEY clause was the same as that of the parent level on the right side.

Action: Remove the JOIN KEY clause. It is not required or allowed when the child and the parent are in the same relation.

ORA-30366: child JOIN KEY columns not in same relation as child level

Cause: The relation of the child columns on the left side of the JOIN KEY clause differed from that of that child level.

Action: Specify the correct child columns in the JOIN KEY clause.

ORA-30367: a JOIN KEY clause is required

Cause: A JOIN KEY clause was omitted in a dimension statement. A JOIN KEY clause is required when the child level and the parent level are not in the same relation.

Action: Specify a JOIN KEY clause to indicate how the relation of the child level joins to the relation of the parent level.

ORA-30368: ATTRIBUTE cannot determine column in a different relation

Cause: An ATTRIBUTE clause in a dimension statement specified a determined column on the right that is in a different relation than that of the level on the left.

Action: Specify attributes only for those dimension levels that functionally determine other columns within the same relation.

ORA-30369: maximum number of columns is 32

Cause: A list of columns was specified using more than 32 columns.

Action: Specify the list using no more than 32 columns.

ORA-30370: set operators are not supported in this context

Cause: A set operator such as UNION, UNION ALL, INTERSECT, or MINUS was encountered in an unsupported context, such as in a materialized view definition.

Action: Re-specify the expression to avoid the use of set operators.

ORA-30371: column cannot define a level in more than one dimension

Cause: A column was used in the definition of a level after it had already been used to define a level in a different dimension.

Action: Reorganize dimension levels and hierarchies into a single dimension such that no column is used to define levels in different dimensions. There is no limit on the number of levels or hierarchies you can place in a dimension. A column can be used to define any number of levels provided all such levels are in the same dimension and provided no two levels contain identical sets of columns.

ORA-30372: fine grain access policy conflicts with materialized view

Cause: A fine grain access control procedure has applied a non-null policy to the query for the materialized view.

Action: In order for the materialized view to work correctly, any fine grain access control procedure in effect for the query must return a null policy when the materialized view is being created or refreshed. This may be done by ensuring that the usernames for the creator, owner, and invoker of refresh procedures for the materialized view all receive a null policy by the user-written fine grain access control procedures.

ORA-30373: object data types are not supported in this context

Cause: An object data type was encountered in an unsupported context.

Action: Re-specify the expression to avoid the use of objects.

ORA-30374: materialized view is already fresh

Cause: If the materialized view is fresh, ORACLE ignores the ALTER MATERIALIZED VIEW <varname>mv</varname> RELY FRESH command, and issues this error message.

Action: None

ORA-30375: materialized view cannot be considered fresh

Cause: If the materialized view is invalid or unusable, it cannot be considered fresh with the ALTER MATERIALIZED VIEW <varname>mv</varname> CONSIDER FRESH command.

Action: None

ORA-30376: prevent sharing of a parsed query of an explain rewrite session

Cause: Explain rewrite generates a shared cursor after parsing the user query. Raising this error will prevent the cursor from being shared.

Action: None

ORA-30377: table <varname>string</varname>.MV_CAPABILITIES_TABLE not found

Cause: You have used the DBMS_MVIEW.EXPLAIN_MVIEW() API before you have defined the MV_CAPABILITIES_TABLE.

Action: Invoke the admin/utlxmv.sql script after connecting to the desired schema.

ORA-30378: MV_CAPABILITIES_TABLE is not compatible with Oracle version

Cause: One or more column definitions in the MV_CAPABILITIES_TABLE is either missing or incompatible with the current Oracle version.

Action: Connect to the appropriate schema, DROP TABLE MV_CAPABILITIES_TABLE and recreate it by invoking the admin/utlxmv.sql script prior to invoking the DBMS_MVIEW.EXPLAIN_MVIEW() API.

ORA-30379: query txt not specified

Cause: You have attempted use DBMS_MVIEW.EXPLAIN_REWRITE() API using an empty query text argument

Action: Input a valid SQL query

ORA-30380: REWRITE_TABLE does not exist

Cause: You have used the DBMS_MVIEW.EXPLAIN_REWRITE() API before you have created the REWRITE_TABLE.

Action: Create it using the admin/utlxrw.sql script after connecting to the desired schema

ORA-30381: REWRITE_TABLE is not compatible with Oracle version

Cause: One or more column definitions in the REWRITE_TABLE is either missing or incompatible with the current Oracle version.

Action: Connect to the appropriate schema, DROP TABLE REWRITE_TABLE and recreate it by invoking the admin/utlxrw.sql script prior to invoking the DBMS_MVIEW.EXPLAIN_REWRITE() API.

ORA-30382: DROP MATERIALIZED VIEW <varname>string</varname>.<varname>string</varname> operation is not complete

Cause: The drop materialized view operation got an unexpected error while dropping summary object.

Action: Issue the drop materialized view command again

ORA-30383: specified dimension level does not exist in the attribute

Cause: An attribute level was encountered that is not defined within the attribute.

Action: Check the attribute level name spelling.

ORA-30384: specified column name does not exist in the attribute

Cause: A column was encountered that is not defined within the attribute.

Action: Check the attribute column name spelling.

ORA-30385: specified attribute relationship ('<varname>string</varname>' determines '<varname>string</varname>') exists

Cause: The specified attribute relationship has already been declared in one of the attribute clauses

Action: Remove the duplicate attribute relationship

ORA-30386: invalid SQL statement for DECLARE_REWRITE_EQUIVALENCE

Cause: Either the source or destination statement is NULL

Action: Verify both source and destination statement are valid

ORA-30387: invalid rewrite mode for REWRITE_EQUIVALENCE API

Cause: The specified rewrite mode is not supported by REWRITE_EQUIVALENCE API

Action: Verify the rewrite mode is supported by REWRITE_EQUIVALENCE API

ORA-30388: name of the rewrite equivalence is not specified

Cause: The name of the rewrite equivalence is NULL

Action: Input a valid rewrite equivalence name

ORA-30389: the source statement is not compatible with the destination statement

Cause: The SELECT clause of the source statement is not compatible with the SELECT clause of the destination statement

Action: Verify both SELECT clauses are compatible with each other such as numbers of SELECT list items are the same and the datatype for each SELECT list item is compatible

ORA-30390: the source statement is not equivalent to the destination statement

Cause: the set of rows returned by the source SQL text is not the same as the set of rows returned by the destination SQL text

Action: Make sure both source and destination statement return the same number of rows

ORA-30391: the specified rewrite equivalence does not exist

Cause: the specified rewrite equivalence does not exist

Action: Verify the rewrite equivalence has been created

ORA-30392: the checksum analysis for the rewrite equivalence failed

Cause: the given checksum does not match with that generated from the source and destination statements.

Action: Verify the create safe rewrite equivalence statement to see if it has been modified.

ORA-30393: a query block in the statement did not rewrite

Cause: A query block with a REWRITE_OR_ERROR hint did not rewrite

Action: Verify the rewrite equivalence has been created

ORA-30394: source statement identical to the destination statement

Cause: The source statement was identical to the destination statement

Action: Make sure both source and destination statements are not identical

ORA-30397: multiple JOIN KEY clauses specified for the same child level

Cause: Multiple JOIN KEY clauses were specified for a given child level in a dimension hierarchy.

Action: Eliminate the redundant JOIN KEY clauses.

ORA-30398: illegal JOIN KEY clause

Cause: A JOIN KEY clause was specified that did not conform to certain requirements. A JOIN KEY clause connecting a child level with its non-immediate ancestor level is allowed only when that child level and its ancestor level satisfy the following conditions: 1. The immediate parent of the child level must be a skip level. 2. The child level cannot be a skip level. 3. The ancestor level must be a non-skip level. 4. The ancestor level must be the nearest non-skip level to the child level in the hierarchy.

Action: Modify the JOIN KEY clause so that it satisfies the conditions mentioned above.

ORA-30399: a skip level must have at least one column that allows NULL values

Cause: A SKIP clause cannot be specified with a level when all of the columns that make up the level have NOT NULL constraints.

Action: Drop the SKIP clause.

ORA-30400: identical JOIN KEY clauses

Cause: Two JOIN KEY clauses with identical child keys and parent levels were specified.

Action: Eliminate the redundant JOIN KEY clause.

ORA-30401: JOIN KEY columns must be non-null

Cause: The dimension statement failed because the column(s) in the JOIN KEY clause permitted NULL values. The JOIN KEY columns are related to the columns of the dimension's skip levels in one or both of the following ways: 1. A skip level is defined over one or more of the JOIN KEY columns. 2. The attribute clauses of a skip level determine one or more of the JOIN KEY columns.

Action: Modify the JOIN KEY columns so that they do not allow NULL values.

ORA-30402: access advisor debug/testing trace**ORA-30403: Daylight Saving Time (DST) upgrade in progress**

Cause: Daylight Saving Time upgrade was in progress on a table in the materialized view.

Action: Wait until all tables in the materialized view have gone through DST upgrade.

ORA-30404: general event for summary**ORA-30420: <varname>string</varname> is not a valid identifier**

Cause: All identifiers used in the DBMS_OLAP package must have at most 30 characters, and must start with a letter that is followed by any combination of letters, numerals, and the signs '\$', '_', and '#'. Other characters cannot be used in identifiers. The rules for DBMS_OLAP identifiers are the same as for PL/SQL identifiers.

Action: Rename object to conform to the DBMS_OLAP naming rules and try again.

ORA-30430: list does not contain any valid summaries

Cause: List is empty or does not contain the names of existing summaries

Action: Verify that the list of names passed to refresh contains the name of at least one existing summary object

ORA-30431: refresh method must be ANY or INCREMENTAL or FORCE_FULL, not <varname>string</varname>

Cause: An invalid refresh method was specified

Action: Verify that the refresh method is one of 'ANY' or 'INCREMENTAL' or 'FORCE_FULL'

ORA-30432: summary '<varname>string</varname>.<varname>string</varname>' is in INVALID state

Cause: The summary is in INVALID state and cannot be refreshed

Action: n/a

ORA-30433: '<varname>string</varname>.<varname>string</varname>' is not a summary

Cause: There is no such summary, therefore it cannot be refreshed

Action: Verify the correct name of the summary

ORA-30434: refresh method must be one of FC?AN, not '<varname>string</varname>'

Cause: An invalid refresh method was specified

Action: Verify that the refresh method is one of 'FC?AN'

ORA-30435: job_queue_processes must be non-zero in order to refresh summaries

Cause: The server must be started with parameter 'job_queue_processes' greater than zero

Action: Correct the value of job_queue_processes and restart the server instance

ORA-30436: unable to open named pipe '<varname>string</varname>'

Cause: The refresh process was unable to open a named pipe to the job queue process usually because of insufficient system resources

Action: This is an internal error. Notify ORACLE technical support

ORA-30437: all job queue processes have stopped running

Cause: All of the job queue processes used by refresh have stopped for some reason. At least one job queue process must be running in order to refresh summaries.

Action: This is an internal error. Notify ORACLE technical support

ORA-30438: unable to access named pipe '<varname>string</varname>'

Cause: The refresh process was unable to access a named pipe to the job queue process after it successfully opened the pipe. This usually indicates an internal or operating system error condition.

Action: This is an internal error. Notify ORACLE technical support

ORA-30439: refresh of '<varname>string</varname>.<varname>string</varname>' failed because of '<varname>string</varname>'

Cause: The refresh job queue process encountered an error and is reporting it. The accompanying text of the message indicates cause of the error

Action: Varies, depending upon the reported cause.

ORA-30440: can't fast refresh;refresh complete or set event 30441 for partial refresh

Cause: Both DML and direct-load are performed against detail tables. Fast refresh can only process direct-load inserts.

Action: Refresh complete or set event 30441 to enable partial refresh with only direct-load inserts

ORA-30441: enable partial refresh when both DML and direct load inserts occur**ORA-30442: can not find the definition for filter <varname>string</varname>**

Cause: For the specified filterid parameter, there is no corresponding filter definition found in the advisor repository

Action: Use a valid filterid generated by the create_filter function

ORA-30443: definition for filter <varname>string</varname>'s item <varname>string</varname> is invalid

Cause: The specified filter is invalid. It contains at least one invalid filter item. If a filter item has a string list, it becomes illegal when the string list cannot be successfully parsed. If the filter item contains a range definition, and the lower bound of the range is greater than the higher bound, the item also becomes invalid.

Action: Remove the illegal filter with the purge_filter sub-program and redefine a correct filter

ORA-30444: rewrite terminated by the sql analyzer

Cause: The sql analyzer terminates the rewrite process

Action: This is an internal error. Notify ORACLE technical support

ORA-30445: workload queries not found

Cause: No workload queries in the advisor repository can satisfy the specified filter

Action: Redefine a new filter or load additional workload queries that can satisfy the specified filter

ORA-30446: valid workload queries not found

Cause: None of the specified queries can be successfully parsed. The error may come from many sources: SQL syntax error, the owner specified by the load_workload subprograms do not match the real user who generates the SQL statement

Action: Only load valid SQL statements into the advisor repository. Make sure the statements can be parsed with privilege of the owner as specified in the owner parameter of the load_workload() subprogram.

ORA-30447: internal data for run number <varname>string</varname> is inconsistent

Cause: Users should not explicitly modify summary advisor's internal tables. Such modifications may cause inconsistency in the internal tables and result in this error.

Action: Users can call the DBMS_OLAP.PURGE_RESULTS subprogram to remove the inconsistent data from summary advisor's internal tables

ORA-30448: internal data of the advisor repository is inconsistent

Cause: Users should not explicitly modify summary advisor's internal tables. Such modifications may cause inconsistency in the internal tables and result in this error.

Action: This is an internal error. Notify ORACLE technical support

ORA-30449: syntax error in parameter <varname>string</varname>

Cause: The syntax for the specified parameter is incorrect

Action: Check ORACLE documentation for the correct syntax

ORA-30450: refresh_after_errors was TRUE; The following MVs could not be refreshed: <varname>string</varname>

Cause: One or more errors occurred during a refresh of multiple summaries.

Action: The number_of_failures parameter returns the count of how many failures occurred. The trace logs for each refresh operation describe the each individual failure in more detail

ORA-30451: internal error

Cause: An internal error was detected by the summary refresh subsystem, and aborted the refresh operation

Action: Notify ORACLE support.

ORA-30452: cannot compute AVG(X), VARIANCE(X) or STDDEV(X), without COUNT(X) or SUM(X)

Cause: Incremental refresh of summaries requires a COUNT(X) column in order to incrementally refresh AVG(X). It requires both SUM(X) and COUNT(X) columns in order to in refresh STDDEV(X) or VARIANCE(X)

Action: Make sure that the required columns are part of the summary definition if incremental refresh capability is desired.

ORA-30453: summary contains AVG without corresponding COUNT

Cause: Incremental refresh of summaries with AVG(X) requires a COUNT(X) column to be included in the summary definition

Action: Make sure that the required columns are part of the summary definition if incremental refresh capability is desired.

ORA-30454: summary contains STDDEV without corresponding SUM & COUNT

Cause: Incremental refresh of summaries with STDDEV(X) requires COUNT(X) and SUM(X) columns to be included in the summary definition

Action: Make sure that the required columns are part of the summary definition if incremental refresh capability is desired.

ORA-30455: summary contains VARIANCE without corresponding SUM & COUNT

Cause: Incremental refresh of summaries with VARIANCE(X) requires COUNT(X) and SUM(X) columns to be included in the summary definition

Action: Make sure that the required columns are part of the summary definition if incremental refresh capability is desired.

ORA-30456: '<varname>string</varname>.<varname>string</varname>' cannot be refreshed because of insufficient privilege

Cause: The user lacks one or more permissions that are required in order to refresh summaries.

Action: Make sure that the user is granted all required privileges.

ORA-30457: '<varname>string</varname>.<varname>string</varname>' cannot be refreshed because of unmanaged NOT NULL columns in container

Cause: The container object for the summary contains one or more unmanaged columns do not allow nulls, and which do not specify a default value for those columns.

Action: Make sure that default values are specified for all NOT NULL columns that are not part of the summary definition.

ORA-30458: '<varname>string</varname>.<varname>string</varname>' cannot be refreshed because the refresh mask is <varname>string</varname>

Cause: An attempt was made to incrementally refresh a summary that is not incrementally refreshable.

Action: Do not attempt to incrementally refresh the summary; use full refresh instead.

ORA-30459: '<varname>string</varname>.<varname>string</varname>' cannot be refreshed because the refresh method is NONE

Cause: An attempt was made to refresh a summary whose refresh method is NONE

Action: Summaries whose refresh method is NONE (NEVER REFRESH) cannot be refreshed. Alter the summary to change the default refresh method from NONE to some other value.

ORA-30460: '<varname>string</varname>.<varname>string</varname>' cannot be refreshed because it is marked UNUSABLE

Cause: An attempt was made to refresh a summary which is UNUSABLE

Action: Determine why the summary is UNUSABLE, re-enable it, and retry the refresh.

ORA-30461: '<varname>string</varname>.<varname>string</varname>' cannot be refreshed because it is marked DISABLED

Cause: An attempt was made to refresh a summary which is DISABLED

Action: Determine why the summary is DISABLED, re-enable it, and retry the refresh.

ORA-30462: unsupported operator: <varname>string</varname>

Cause: An attempt was made to refresh a summary containing an unsupported operator

Action: Verify that all columns of the summary contain expressions that are refreshable.

ORA-30463: '<varname>string</varname>' is not a detail table of any summary

Cause: The list of tables passed to refresh_dependent contains at least one invalid table name. That table is not a detail table of any summary and is therefore an invalid input to refresh_dependent

Action: Verify the correct name of all tables in the list

ORA-30464: no summaries exist

Cause: A call was made to refresh_all_mviews, but no summaries exist. At least one summary must exist before calling refresh_all_mviews

Action: Create one or more summaries

ORA-30465: supplied run_id is not valid: <varname>string</varname>

Cause: There are three possible causes: The specified run_id does not exist; the run_id was created by another user other than the current user; the run_id has already been used.

Action: Call DBMS_OLAP.CREATE_ID to create a new id

ORA-30466: can not find the specified workload <varname>string</varname>

Cause: The specified workload_id is not valid

Action: Use a valid workload_id or DBMS_OLAP.WORKLOAD_ALL

ORA-30467: internal data for filter number <varname>string</varname> is inconsistent

Cause: Users should not explicitly modify summary advisor's internal tables. Such modifications may cause inconsistency in the internal tables and result in this error.

Action: Users can call the DBMS_OLAP.PURGE_FILTER subprogram to remove the inconsistent data from summary advisor's internal tables

ORA-30475: feature not enabled: <varname>string</varname>

Cause: The specified feature is not enabled.

Action: Do not attempt to use this feature.

ORA-30476: PLAN_TABLE does not exist in the user's schema

Cause: Estimate_Summary_Size uses Oracle SQL "EXPLAIN PLAN" command to estimate cardinality of the specified select-clause. This requires a table called the PLAN_TABLE in the user's schema. For more information refer to the SQL Reference Manual.

Action: Create the PLAN_TABLE as described for EXPLAIN PLAN. On most systems a script utlxplan.sql will create this table.

ORA-30477: The input select_clause is incorrectly specified

Cause: The input select-clause parameter to Estimate_Summary_Size is incorrectly specified and cannot be compiled.

Action: Check the syntax of the select-clause.

ORA-30478: Specified dimension does not exist

Cause: the specified dimension to be verified does not exist

Action: Check the spelling of the dimension name

ORA-30479: Summary Advisor error\n<varname>string</varname>

Cause: An error has occurred in the Summary Advisor package. This message will be followed by a second message giving more details about the nature of the error.

Action: See the Summary Advisor documentation for an explanation of the second error message.

ORA-30480: DISTINCT option not allowed with GROUP BY CUBE or ROLLUP**ORA-30481: GROUPING function only supported with GROUP BY CUBE or ROLLUP****ORA-30482: DISTINCT option not allowed for this function****ORA-30483: window functions are not allowed here**

Cause: Window functions are allowed only in the SELECT list of a query. And, window function cannot be an argument to another window or group function.

Action: n/a

ORA-30484: missing window specification for this function

Cause: All window functions should be followed by window specification, like <varname>function</varname>(<varname>argument list</varname>) OVER (<varname>window specification</varname>)

Action: n/a

ORA-30485: missing ORDER BY expression in the window specification

Cause: Either the ORDER BY expression is mandatory for this function, or there is an aggregation group without any ORDER BY expression.

Action: n/a

ORA-30486: invalid window aggregation group in the window specification

Cause: If the window specification is specified using RANGE option and there are multiple ORDER BY expressions, then the aggregation group cannot contain any expression (It can only have CURRENT ROW, UNBOUNDED PRECEDING, or

UNBOUNDED FOLLOWING). First end point (bound) cannot be UNBOUNDED FOLLOWING and second end point cannot be UNBOUNDED PRECEDING. If the first end point is CURRENT ROW, then second end point can only be CURRENT ROW or <varname>expr</varname> /UNBOUNDED FOLLOWING. If the first end point is <varname>expr</varname> FOLLOWING, then second end point can only be <varname>expr</varname>/UNBOUNDED FOLLOWING.

Action: n/a

ORA-30487: ORDER BY not allowed here

Cause: DISTINCT functions and RATIO_TO_REPORT cannot have an ORDER BY

Action: n/a

ORA-30488: argument should be a function of expressions in PARTITION BY

Cause: The argument of the window function should be a constant for a partition.

Action: n/a

ORA-30489: Cannot have more than one rollup/cube expression list

Cause: GROUP BY clause has more than one rollup/cube expression list.

Action: Modify the query such that only one rollup/cube expressions appear per sub-query.

ORA-30490: Ambiguous expression in GROUP BY ROLLUP or CUBE list

Cause: An expression in the GROUP BY ROLLUP or CUBE list matches an expression in the ordinary GROUP BY expression list

Action: Remove the expression from either ordinary GROUP BY expression list or ROLLUP or CUBE expression list

ORA-30491: missing ORDER BY clause

ORA-30492: One of FIRST or LAST keywords is expected.

ORA-30493: The percentile value should be a number between 0 and 1.

Cause: A percentile value for PERCENTILE_CONT or PERCENTILE_DISC function is specified out of range.

Action: Specify a value from [0,1].

ORA-30494: The argument [<varname>string</varname>] of WIDTH_BUCKET function is NULL or invalid.

ORA-30495: The argument should be of numeric or date/datetime type.

ORA-30496: Argument should be a constant.

ORA-30497: Argument should be a constant or a function of expressions in GROUP BY.

ORA-30498: ALL option not allowed for this function

ORA-30499: Event to dump stats used during grouping sets transformation

ORA-30500: database open triggers and server error triggers cannot have BEFORE type

Cause: An attempt was made to create a trigger that fires before the database is open or before server errors, but these types of triggers are not supported.

Action: Do not attempt to create a trigger that fires before the database is open or before server errors.

ORA-30501: instance shutdown triggers cannot have AFTER type

Cause: An attempt was made to create a trigger that fires after an instance shutdown, but this type of trigger is not supported.

Action: Do not attempt to create a trigger that fires after an instance shutdown.

ORA-30502: system triggers cannot have INSERT, UPDATE, or DELETE as triggering events

Cause: An attempt was made to create a system trigger with INSERT, UPDATE, or DELETE triggering events, but this type of trigger is not supported because a system trigger does not have a base table.

Action: Do not attempt to create a system trigger with INSERT, UPDATE, or DELETE triggering events.

ORA-30503: system triggers cannot have a REFERENCING clause

Cause: An attempt was made to use a REFERENCING clause with a system trigger, but this type of trigger is not supported because a system triggers does not have a base table.

Action: Do not use a REFERENCING clause with a system trigger.

ORA-30504: system triggers cannot have a FOR EACH ROW clause

Cause: An attempt was made to use a FOR EACH ROW clause with a system trigger, but this type of trigger is not supported because a system triggers does not have a base table.

Action: Do not use a FOR EACH ROW clause with a system trigger.

ORA-30505: system triggers should not reference a column in a WHEN clause

Cause: An attempt was made to use a WHEN clause to reference a column with a system trigger, but this type of trigger is not supported because a system trigger does not have a base table.

Action: Change the WHEN clause to an appropriate clause.

ORA-30506: system triggers cannot be based on tables or views

Cause: An attempt was made to base a system trigger on a table or a view.

Action: Make sure the type of the trigger is compatible with the base object.

ORA-30507: normal triggers cannot be based on a schema, a database, or a pluggable database

Cause: An attempt was made to base a normal trigger on a schema, a database, or a pluggable database, but normal triggers can be based only on tables or views.

Action: Make sure the type of the trigger is compatible with the base object.

ORA-30508: client logon triggers cannot have BEFORE type

Cause: An attempt was made to create a trigger that fires before logon. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires before logon.

ORA-30509: client logoff triggers cannot have AFTER type

Cause: An attempt was made to create a trigger that fires after logoff. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires after logoff.

ORA-30510: system triggers cannot be defined on the schema of SYS user

Cause: An attempt was made to define a system trigger on the schema of SYS user. This type of trigger is not supported currently.

Action: Do not attempt to create a system trigger defined on the schema of SYS user.

ORA-30511: invalid DDL operation in system triggers

Cause: An attempt was made to perform an invalid DDL operation in a system trigger. Most DDL operations currently are not supported in system triggers. The only currently supported DDL operations are table operations, pluggable database operations, ALTER COMPILE operations, and ALTER SESSION operations.

Action: Remove invalid DDL operations in system triggers.

ORA-30512: cannot modify <varname>string</varname>. <varname>string</varname> more than once in a transaction

Cause: An attempt was made to modify an object more than once in a transaction. This error is usually caused by a DDL statement that fires a system trigger that tries to modify the same object. It can also happen when an attempt is made to perform more than one DDL operation on a queue table in the same transaction without issuing a commit between operations.

Action: Do not create system triggers that might modify an already modified object. Also, do not specify more than one DDL operation on a queue table in the same transaction.

ORA-30513: cannot create system triggers of INSTEAD OF type

Cause: Only BEFORE or AFTER triggers can be created on system events.

Action: Change the trigger type to BEFORE or AFTER.

ORA-30514: system trigger cannot modify tablespace being made read only

Cause: A before trigger tries to modify a tablespace which is being made READ ONLY as the part of DDL operation

Action: Modify the trigger to avoid modifications to the objects in the same tablespace as the one which is being made read only, or use autonomous transactions to commit modifications

ORA-30515: suspend triggers cannot have BEFORE type

Cause: An attempt was made to create a trigger that fires before execution suspended. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires before execution suspended.

ORA-30516: database role change triggers cannot have BEFORE type

Cause: An attempt was made to create a trigger that fires before the role change completed. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires before the role change completes.

ORA-30550: index depends on a package/function spec/body which is not valid

Cause: the functional indexes depends on some invalid/non-existent package/function spec/body

Action: verify that all the package/functions which the index depends on exist and are valid

ORA-30551: The index depends on a package/type body which does not exist

Cause: the functional indexes depends on a package/type body which does not exist

Action: create the package/type body

ORA-30552: The package/procedure/function cannot be changed

Cause: The package/procedure/function is deterministic and some object depends on it

Action: Drop the other object which depends on the package/function/procedure you are trying to change

ORA-30553: The function is not deterministic

Cause: The function on which the index is defined is not deterministic

Action: If the function is deterministic, mark it DETERMINISTIC. If it is not deterministic (it depends on package state, database state, current time, or anything other than the function inputs) then do not create the index. The values returned by a deterministic function should not change even when the function is rewritten or recompiled.

ORA-30554: function-based index <varname>string</varname>.<varname>string</varname> is disabled

Cause: An attempt was made to access a function-based index that has been marked disabled because the function on which the index depends has been changed.

Action: Perform one of the following actions: -- drop the specified index using the DROP INDEX command -- rebuild the specified index using the ALTER INDEX REBUILD command -- enable the specified index using the ALTER INDEX ENABLE command -- make the specified index usable using the ALTER INDEX UNUSABLE command

ORA-30555: global index partitioning key is an expression

Cause: An attempt was made to use an expression as a partitioning key in an index.

Action: Do not attempt to use an expression as index partitioning key.

ORA-30556: either functional or bitmap join index is defined on the column to be modified

Cause: An ALTER TABLE MODIFY COLUMN was issued on a column on which either a functional index or bitmap join index exists.

Action: Drop the functional or bitmap join index before attempting to modify the column.

ORA-30557: function based index could not be properly maintained

Cause: The user updated a column on which a function based index is present which was not successfully updated

Action: Determine the error in updating the index and fix the problem

ORA-30558: internal error [<varname>string</varname>] in function based index

Cause: This is an internal error.

Action: Contact Worldwide support with the exact error text.

ORA-30560: SAMPLE clause not allowed

ORA-30561: SAMPLE option not allowed in statement with multiple table references

ORA-30562: SAMPLE percentage must be in the range [0.000001,100)

ORA-30563: outer join operator (+) is not allowed here

Cause: An attempt was made to reference (+) in either the select-list, CONNECT BY clause, START WITH clause, or ORDER BY clause.

Action: Do not use the operator in the select-list, CONNECT BY clause, START WITH clause, or ORDER BY clause.

ORA-30564: Index maintainence clause not allowed for ADD partition to RANGE partitioned tables

Cause: The clause INVALIDATE or UPDATE GLOBAL INDEXES is allowed only for ADD partition to a HASH partitioned table or ADD subpartition to a composite partitioned table.

Action: Remove clause and reissue operation

ORA-30565: Only one INVALIDATE or UPDATE GLOBAL INDEXES clause may be specified

Cause: The clause INVALIDATE or UPDATE GLOBAL INDEXES was specified more than once.

Action: Remove all but one of the INVALIDATE or UPDATE GLOBAL INDEXES clause and reissue the statement

ORA-30566: Index maintainence clause not allowed for this command

Cause: The clause INVALIDATE or UPDATE GLOBAL INDEXES is not allowed for this command

Action: Remove clause and reissue operation

ORA-30567: name already used by an existing log group

Cause: The specified log group name has to be unique.

Action: Specify a unique name for the log group. The name cannot be the same as any other log group, constraint, or cluster hash expression.

ORA-30568: cannot drop log group - nonexistent log group

Cause: The <log_group_name> specified in alter table drop log group is incorrect or nonexistent.

Action: Reenter the statement using the correct log group name.

ORA-30569: data type of given column is not supported in a log group

Cause: An attempt was made to include a column with one of these unsupported data types: LONG, VARRAY, nested table, object, LOB, FILE, or REF in a log group.

Action: Change the column data type or remove the log group. Then retry the operation.

ORA-30570: SEGMENT SPACE MANAGEMENT option already specified

Cause: In CREATE TABLESPACE, the SEGMENT SPACE MANAGEMENT option was specified more than once.

Action: Remove all but one of the SEGMENT SPACE MANAGEMENT specifications.

ORA-30571: invalid SEGMENT SPACE MANAGEMENT clause

Cause: An invalid option appears for SEGMENT SPACE MANAGEMENT clause.

Action: Specify one of the valid options: AUTO, MANUAL.

ORA-30572: AUTO segment space management not valid with DICTIONARY extent management

Cause: in CREATE TABLESPACE, the AUTO SEGMENT SPACE MANAGEMENT was used with a DICTIONARY extent management clause.

Action: Either specify LOCAL extent management or remove the AUTO SEGMENT SPACE MANAGEMENT specification.

ORA-30573: AUTO segment space management not valid for this type of tablespace

Cause: in CREATE TABLESPACE, the AUTO SEGMENT SPACE MANAGEMENT was used while creating an UNDO or TEMPORARY tablespace.

Action: Remove the AUTO SEGMENT SPACE MANAGEMENT clause.

ORA-30574: Cannot create rollback segment in tablespace with AUTO segment space management

Cause: A rollback segment is being created in a tablespace that was created with AUTO segment space management.

Action: Create the rollback segment in a different tablespace.

ORA-30575: ConText Option not installed

Cause: Oracle executable doesn't have ConText Option linked in

Action: get the correct version of Oracle

ORA-30576: ConText Option dictionary loading error

Cause: ConText dictionary tables may be corrupted

Action: not a user error

ORA-30577: SAMPLE group size must be in the range [1,UB4MAXVAL]

ORA-30579: enables order by PRIMARY KEY for base table scan during create index

ORA-30625: method dispatch on NULL SELF argument is disallowed

Cause: A member method of a type is being invoked with a NULL SELF argument.

Action: Change the method invocation to pass in a valid self argument.

ORA-30626: function/procedure parameters of remote object types are not supported

ORA-30627: Oracle event to pass temp lob by ref from sql

ORA-30628: Oracle event to turn off passing temp lob by ref

ORA-30645: reject limit out of range

Cause: Reject limit specifies the number of records rejected before terminating a table scan. The range is either a number between 1..100000 or UNLIMITED if no limit is intended.

Action: Change the token representing the reject limit to either a number in the range of 0 and 100000 or the keyword UNLIMITED.

ORA-30646: schema for external table type must be SYS

Cause: A schema other than SYS was specified for the TYPE

Action: For this version of oracle server always use schema name SYS.

**ORA-30647: error retrieving access parameters for external table
<varname>string</varname>.<varname>string</varname>**

Cause: an error occurred when fetching the access parameters for the specified external table.

Action: If the access parameter is a query which returns a CLOB, check EXTERNAL_TAB\$ to make sure the query is correct.

ORA-30648: missing LOCATION keyword

ORA-30649: missing DIRECTORY keyword

Cause: DEFAULT DIRECTORY clause missing or incorrect.

Action: Provide the DEFAULT DIRECTORY.

ORA-30650: missing PARAMETERS keyword

ORA-30651: missing CLOB keyword

ORA-30652: missing LIMIT keyword

ORA-30653: reject limit reached

Cause: the reject limit has been reached.

Action: Either cleanse the data, or increase the reject limit.

ORA-30654: missing DEFAULT keyword

Cause: DEFAULT DIRECTORY clause not specified or incorrect.

Action: Provide the DEFAULT DIRECTORY.

ORA-30655: cannot select FOR UPDATE from external organized table

Cause: A select for update on an external table was attempted.

Action: Don't do it!

ORA-30656: column type not supported on external organized table

Cause: Attempt to create an external organized table with a column of type LONG, LOB, BFILE, ADT, or VARRAY.

Action: These column types are not supported, change the DDL.

ORA-30657: operation not supported on external organized table

Cause: User attempted on operation on an external table which is not supported.

Action: Don't do that!

ORA-30658: attempt was made to create a temporary table with EXTERNAL organization

Cause: An attempt was made to create an External Organized Temporary table. This is not supported.

Action: Don't do that!

ORA-30659: too many locations specified for external table

Cause: An attempt was made to create an External Organized table with more than the maximum allowable (32767) locations specified.

Action: Don't do that, use fewer location clauses. Either consider concatenating the input files, or, creating two external tables with the input files split between them.

ORA-30660: event to enable external table ODM reads for all file sizes when testing**ORA-30665: invalid NOT NULL constraint specified on a DEFAULT ON NULL column**

Cause: A NOT NULL constraint was not specified correctly on a DEFAULT ON NULL column.

Action: If a NOT NULL constraint is specified on a DEFAULT ON NULL column, it must be enabled and nondeferrable.

ORA-30666: cannot modify NOT NULL constraint on a DEFAULT ON NULL column

Cause: The NOT NULL constraint on a DEFAULT ON NULL column could not be modified.

Action: Do not modify the NOT NULL constraint on a DEFAULT ON NULL column.

ORA-30667: cannot drop NOT NULL constraint on a DEFAULT ON NULL column

Cause: The NOT NULL constraint on a DEFAULT ON NULL column could not be dropped.

Action: Do not drop the NOT NULL constraint on a DEFAULT ON NULL column. The only way to drop the constraint is to remove the ON NULL property of the column default.

ORA-30668: LATERAL cannot follow CROSS APPLY or OUTER APPLY

Cause: An attempt was made to follow the CROSS APPLY or OUTER APPLY keyword with the LATERAL keyword.

Action: Do not include the LATERAL keyword after CROSS APPLY or OUTER APPLY.

ORA-30669: table can have only one identity column

Cause: An attempt was made to specify more than one identity column on a table.

Action: Specify only one identity column per table.

ORA-30670: invalid NOT NULL constraint specified on an identity column

Cause: A NOT NULL constraint was not specified correctly on an identity column.

Action: If a NOT NULL constraint is specified on an identity column, it must be enabled and nondeferrable.

ORA-30671: cannot modify NOT NULL constraint on an identity column

Cause: The NOT NULL constraint on an identity column could not be modified.

Action: Do not modify the NOT NULL constraint on an identity column.

ORA-30672: cannot drop NOT NULL constraint on an identity column

Cause: The NOT NULL constraint on an identity column could not be dropped.

Action: Do not drop the NOT NULL constraint on an identity column. The only way to drop the constraint is to remove the identity property of the column with ALTER TABLE MODIFY <varname>column</varname> DROP IDENTITY.

ORA-30673: column to be modified is not an identity column

Cause: An attempt was made to modify the identity properties of that is not an identity column.

Action: Modify the identity properties of an identity column.

ORA-30674: identity column cannot have a default value

Cause: An attempt was made to add a default value to an identity column.

Action: Do not modify an identity column with a default value.

ORA-30675: identity column must be a numeric type

Cause: An attempt was made to create or alter an identity column with a non-numeric data type.

Action: Do not assign a non-numeric data type to an identity column.

ORA-30676: socket read or write failed

Cause: A problem kept a socket from reading or writing the expected amount of data. More specific information is not available.

Action: Try re-establishing a connection. You may need to restart whatever program is at the other end of the socket that failed, or you may need to have some problem on your network fixed.

ORA-30677: session is already connected to a debugger

Cause: An attempt to connect a session to a debugger could not proceed because the session is already connected to some debugger.

Action: Either use the option to force a connection or first disconnect the session from its existing debugger.

ORA-30678: too many open connections

Cause: An attempt to open a connection failed because too many are already open by this session. The number of allowed connections varies as some may be in use through other components which share the same pool of allowed connections.

Action: Retry after closing some other connection. The number of connections supported is currently not adjustable.

ORA-30679: JDWP-based debugging not supported in this configuration

Cause: An attempt to open a debugging connection failed because this server configuration cannot support the required asynchronous socket traffic detection.

Action: This feature will not work under this server configuration. Either the feature is not supported on this platform at all, or is available only through use of a protocol=tcp dispatcher in shared-server configurations. Please consult the platform-specific documentation and "readme" material.

ORA-30680: debugger connection handshake failed

Cause: A problem occurred when trying to establish a debugger connection. This might indicate that the port specified as the location of the debugger is actually being used by some other type of application.

Action: Correct the host or port specifications if they are incorrect, and verify that the debugger is properly waiting for a connection.

ORA-30681: improper value for argument EXTENSIONS_CMD_SET

Cause: An improper parameter value was provided in a call to DBMS_DEBUG_JDWP.CONNECT_TCP.

Action: Correct the indicated parameter value and try again.

ORA-30682: improper value for argument OPTION_FLAGS

Cause: An improper parameter value was provided in a call to DBMS_DEBUG_JDWP.CONNECT_TCP.

Action: Correct the indicated parameter value and try again.

ORA-30683: failure establishing connection to debugger

Cause: An error was indicated when trying to establish a connection to a debugger. Usually a TNS error will display along with this message to further explain the problem, although this TNS error will likely be hidden if you choose to trap the error.

Action: Correct the indicated parameter value and try again.

ORA-30685: package version is not compatible with Oracle version

Cause: The installed version of the package from which this error is raised is not compatible with this release of Oracle.

Action: Install a compatible version of the package's spec and body.

ORA-30686: no dispatcher accepted TCP/IP connection request

Cause: A connection had to be routed through a local socket rather than a dispatcher. When this occurs, shared servers are less beneficial because the session that owns the socket cannot relinquish the process until the socket is closed. The most likely cause is that no dispatcher is configured for protocol=tcp.

Action: To improve the scalability of your configuration, configure a dispatcher for protocol=tcp. To route these particular connections through a particular set of dispatchers, you can specify presentation=kgas. However, if you haven't done so, any protocol=tcp dispatcher will be used.

ORA-30687: session terminated by debugger

Cause: Your program's execution has been stopped by the debugger. This can occur because of an explicit request to do so sent by the debugger, or because the debugger disconnected without first telling Oracle to let your program continue to run after the disconnection. To stop your program completely, Oracle needs to fully terminate the process.

Action: This is in response to a debugger request; it is not an error. No action required.

ORA-30688: maximum program calling depth exceeded

Cause: Your program contains a set of calls that are too deep to be handled. Only transitions between the different execution engines (SQL, PL/SQL, and Java) count in reaching this limit; calls within the same engine don't count.

Action: Restructure your program so as to not call so deeply. Perhaps some recursion can be replaced with iteration.

ORA-30689: improper value for ORA_DEBUG_JDWP

Cause: An improper value was used for ORA_DEBUG_JDWP when trying to establish a connection to a debugger. The value either did not conform to the format of ORA_DEBUG_JDWP or was too long.

Action: Correct the value for ORA_DEBUG_JDWP and try again.

ORA-30690: timeout occurred while registering a TCP/IP connection for data traffic detection

Cause: A timeout occurred while registering a TCP/IP connection for data traffic detection.

Action: Retry the operation later.

ORA-30691: failed to allocate system resources while registering a TCP/IP connection for data traffic detection

Cause: System resources ran out while registering a TCP/IP connection for data traffic detection.

Action: Retry the operation later.

ORA-30695: JDWP message format problem

Cause: A message passed from one software subcomponent to another using the JDWP protocol appears invalidly formatted.

Action: This is an internal error. Contact ORACLE Support Services.

ORA-30725: JDWP-based debugging is not yet available

Cause: This feature is not yet available for use.

Action: Please wait for a future release.

ORA-30726: cannot specify referenced column list here

Cause: An attempt was made to specify a referenced column list for a referential constraint involving a REF column.

Action: Remove the referenced column list specification.

ORA-30727: duplicate referential constraint for a REF column

Cause: Multiple referential constraints were specified for a single REF column.

Action: Remove the duplicate referential constraint and retry the operation.

ORA-30728: maximum number of columns exceeded

Cause: Adding referential constraint on a REF column requires the creation of an additional column.

Action: Drop some columns and retry the operation.

ORA-30729: maximum number of columns exceeded

Cause: Adding scope or referential constraint on a REF column requires the creation of additional columns if the target table's object identifier is primary key based.

Action: Drop some columns and retry the operation.

ORA-30730: referential constraint not allowed on nested table column

Cause: An attempt was made to define a referential constraint on a nested table column.

Action: Do not specify referential constraints on nested table columns.

ORA-30731: scope constraint not allowed on nested table column when the nested table is being created

Cause: An attempt was made to define a scope constraint on a nested table column when the nested table is being created.

Action: Do not specify a scope constraint on a nested table column when creating it. Instead, specify it using the ALTER TABLE statement.

ORA-30732: table contains no user-visible columns

Cause: An attempt was made to query on a system table which has no user-visible columns.

Action: Do not query on a system table that has no user-visible columns.

ORA-30733: cannot specify rowid constraint on scoped ref column

Cause: An attempt was made to specify rowid constraint on a scoped REF column.

Action: Remove the rowid constraint and then retry the operation.

ORA-30734: cannot specify scope constraint on ref column with rowid

Cause: An attempt was made to specify scope constraint on a REF column with the rowid constraint.

Action: Remove the scope constraint and then retry the operation.

ORA-30735: cannot create multiple subtables of the same type under a supertable

Cause: An attempt was made to create under a supertable (superview), a subtable(subview) of the same type as another existing subtable (subview).

Action: Drop the existing subtable(subview) and retry the operation.

ORA-30736: objects in a table or view hierarchy have to be in the same schema

Cause: An attempt was made to create a subtable(subview) under a supertable(superview) located in another schema.

Action: Connect as schema owner of the superobject and retry the operation.

ORA-30737: cannot create subtable of a type which is not a subtype of the type of the supertable

Cause: An attempt was made to create a subtable(subview) of a type which is not a subtype of the type of the super object.

Action: Change the type of the subtable to be a subtype of the superobject's type and then retry the operation.

ORA-30738: object "<varname>string</varname>" does not exist in schema "<varname>string</varname>"

Cause: The specified object does not exist.

Action: Ensure that the specified object exists and retry the operation.

ORA-30739: cannot drop a table that has subtables

Cause: The user tried to drop a table that has subtables defined under it.

Action: Drop all subtables before trying this operation.

ORA-30740: cannot grant UNDER privilege on this object

Cause: The user tried to grant UNDER privilege on an object that is not one of the following : non final object type, object table of non final type, object view of non final type.

Action: Ensure that the UNDER privilege is granted on a valid object.

ORA-30741: WITH HIERARCHY OPTION can be specified only for SELECT or READ privileges

Cause: An attempt was made to specify WITH HIERARCHY OPTION for a privilege other than SELECT or READ.

Action: Ensure that the WITH HIERARCHY OPTION is specified only with the SELECT or READ privilege.

ORA-30742: cannot grant SELECT or READ privilege when WITH HIERARCHY OPTION is specified on the object

Cause: An attempt was made to grant the SELECT or READ privilege when the WITH HIERARCHY OPTION was specified on an object that is not one of the following: - Object table of non-final type - Object view of non-final type

Action: Ensure that the SELECT or READ privilege is granted on a valid object when the WITH HIERARCHY OPTION is specified.

ORA-30743: "<varname>string</varname>" is not an object view

Cause: The specified object is not an object view.

Action: Specify an object view and retry the operation.

ORA-30744: "<varname>string</varname>" is not an object table

Cause: The specified object is not an object table.

Action: Specify an object table and retry the operation.

ORA-30745: error occurred while trying to add column "<varname>string</varname>" in table "<varname>string</varname>"

Cause: The user tried to add a subtype which tried to alter the tables dependent on the supertype.

Action: Ensure that the table will not exceed the columnlimit on adding this subtype.

ORA-30746: error occurred while trying to drop column "<varname>string</varname>" in table "<varname>string</varname>"

Cause: The user tried to drop a subtype with VALIDATE option which tried to check for stored instances of the type in the stated table

Action: Delete all instances of this subtype and then drop the type.

ORA-30747: cannot create substitutable tables or columns of non final type <varname>string</varname>.<varname>string</varname>

Cause: The user tried to create substitutable table or column of a non final type. This operation is not currently supported.

Action: Change the statement to create a non substitutable table/column.

ORA-30748: column <varname>string</varname> already enabled to store objects of type <varname>string</varname>.<varname>string</varname>

Cause: The user is trying to enable a column to store instances of a type for which it is already enabled.

Action: None

ORA-30749: column <varname>string</varname> not enabled to store objects of type <varname>string</varname>.<varname>string</varname>

Cause: The user is trying to disable a column from storing instances of a type for which it is already enabled.

Action: None

ORA-30750: cannot enable column <varname>string</varname> to store objects of type <varname>string</varname>.<varname>string</varname>

Cause: The user is trying to enable a column to store instances of a subtype. The error is raised due to one of the following :

Action: Fix the cause of the error and retry the operation.

ORA-30751: cannot disable column <varname>string</varname> from storing objects of type <varname>string</varname>.<varname>string</varname>

Cause: The user is trying to drop a type from being stored in a substitutable column or table. This error is raised due to one of the following reasons : - the column is enabled

to store instances of some subtype of the type being dropped. - the column is enabled to store instances of only one type

Action: Fix the cause of the error and retry the operation.

ORA-30752: column or table <varname>string</varname> is not substitutable

Cause: The user is performing an operation that is not allowed on non substitutable column or table.

Action: None

ORA-30753: column or table <varname>string</varname> is substitutable

Cause: The user is performing an operation that is not allowed on substitutable column or table.

Action: None

ORA-30754: column or table <varname>string</varname> stores objects of only one type

Cause: The user is trying to perform an operation that is not allowed on object column or table that is enabled to store instances of a single type.

Action: None

ORA-30755: error during expansion of view hierarchy

Cause: There was an error while trying to expand a view hierarchy. This could be due to invalid subviews (or subviews with errors)

Action: Ensure that all subviews are valid e.g. alter view ... compile and retry the operation.

ORA-30756: cannot create column or table of type that contains a supertype attribute

Cause: The user tried to create a column or table of an object type that contains a supertype attribute. This is not supported because it leads to infinite recursion in our current storage model. Note that creating a column of a type implies that we create columns corresponding to all subtype attributes as well.

Action: Change the type definition to contain a supertype REF attribute instead of the supertype object attribute.

ORA-30757: cannot access type information

Cause: Either a subtype was created and operations performed with this new type while the session was in progress, or the type information was unpinned from the object cache.

Action: Commit necessary changes, end the user session, reconnect again and re-try the object operations. If problem persists, contact your Oracle Support representative.

ORA-30758: cannot specify local on a non-partitioned table

Cause: The user specified local or global for a nested table storage parameter while the base table is non-partitioned.

Action: None

ORA-30759: nested table cannot be partitioned for a composite partitioned base table

Cause: The user specified local or nested table parameters inside partition clause for a composite partitioned table.

Action: Issue the DDL without nested table partition clauses for composite partitioned table.

ORA-30765: cannot modify scope for an unscoped REF column

Cause: An attempt was made to modify the scope for an unscoped REF column.

Action: Use an ALTER TABLE ADD SCOPE FOR command instead.

ORA-30766: cannot modify scope for a REF column with a REFERENCES constraint

Cause: An attempt was made to modify the scope for a REF column with a REFERENCES constraint.

Action: Drop the REFERENCES constraint, and retry the operation.

ORA-30767: OID type mismatch

Cause: An attempt was made to modify the scope for a REF column to a table whose object identifier's type is different from that of the original scoped table.

Action: n/a

ORA-30768: Cannot evaluate pipelined function

Cause: Pipelined functions can only be used in a TABLE expression in the from clause.

Action: Use a non-pipelined function instead.

ORA-30769: event to allow creation of sub-tables**ORA-30770: Cannot specify storage options for fixed size opaque type**

Cause: Storage clause was specified during table creation for a fixed size opaque type.

Action: Do not provide storage option clause.

ORA-30771: Cannot add more than one referential constraint on REF column "<varname>string</varname>"

Cause: Multiple referential constraints were specified for a single REF column.

Action: Remove the additional referential constraints and retry the operation.

ORA-30772: opaque types do not have default constructors

Cause: Constructor invocation did not succeed, since no user-defined constructors were defined for the opaque type, and since opaque types do not have default constructors.

Action: Add user-defined constructors to opaque type, or specify a member or static method for the opaque type.

ORA-30773: opaque types do not have default constructors

Cause: Constructor invocation did not succeed, since no user-defined constructors were defined for the opaque type, and since opaque types do not have default constructors.

Action: Add user-defined constructors to opaque type, or specify a member or static method for the opaque type.

ORA-30774: Library "<varname>string</varname>" was erroneously defined as a trusted library for opaque types

Cause: User has defined some library as trusted library for opaque types.

Action: Trusted libraries for opaque types can only be defined in internal code.

ORA-30926: unable to get a stable set of rows in the source tables

Cause: A stable set of rows could not be got because of large dml activity or a non-deterministic where clause.

Action: Remove any non-deterministic where clauses and reissue the dml.

ORA-30927: Unable to complete execution due to failure in temporary table transformation

Cause: In memory temporary tables we create are aged out of shared pool before we are able to grab them again.

Action: Reduce activities that use a lot of shared pool space or wait for a while, then retry.

ORA-30928: Connect by filtering phase runs out of temp tablespace

Cause: It is probably caused by the fact that there is a loop in the data.

Action: Please retry the query with the NO_FILTERING hint. If the same error still occurs, then increase temp tablespace.

ORA-30929: ORDER SIBLINGS BY clause not allowed here

Cause: ORDER SIBLINGS BY clause is specified in a query which doesn't have CONNECT BY clause.

Action: Remove ORDER SIBLINGS BY clause or add CONNECT BY clause.

ORA-30930: NOCYCLE keyword is required with CONNECT_BY_ISCYCLE pseudocolumn

Cause: CONNECT_BY_ISCYCLE was specified in a query which does not have the NOCYCLE keyword.

Action: Remove CONNECT_BY_ISCYCLE or add NOCYCLE.

ORA-30931: Element '<varname>string</varname>' cannot contain mixed text

Cause: XML elements must be declared mixed to contain multiple text nodes

Action: Declare this element type as mixed in its schema

ORA-30932: Reference node '<varname>string</varname>' not contained in specified parent node '<varname>string</varname>'

Cause: When using a reference node, it must have the specified parent node

Action: Use a node in the specified parent as the reference

ORA-30933: Element '<varname>string</varname>' may not appear at this point within parent '<varname>string</varname>'

Cause: The ordering specified by the content model of the parent does not allow for this element to occur at this position.

Action: Reorder the child elements to conform with the content model of the parent element

ORA-30934: '<varname>string</varname>' (<varname>string</varname> node) cannot be inserted in parent '<varname>string</varname>' (<varname>string</varname> node)

Cause: The schema does not allow a child node of this type to be inserted into a parent node of this type. For example, only element nodes may only be inserted into a document

Action: Insert only child nodes that make sense for this node type

ORA-30935: XML maxoccurs value (<varname>string</varname>) exceeded

Cause: An attempt was made to insert more than maxoccurs values into a schema-based XML document.

Action: Do not insert more than maxoccurs values into the document.

ORA-30936: Maximum number (<varname>string</varname>) of '<varname>string</varname>' XML node elements exceeded

Cause: An attempt was made to insert more than the allowed number of elements (specified by the maxoccurs facet) into an XML document.

Action: Do not attempt to add more than the maximum number of elements to XML documents.

ORA-30937: No schema definition for '<varname>string</varname>' (namespace '<varname>string</varname>') in parent '<varname>string</varname>'

Cause: The schema definition for the parent node being processed does not allow for the specified child node in its content model. Note that any typecasting via xsi:type must occur before the schema definitions for the new type can be used.

Action: Only insert elements and attributes declared in the schema. Check to make sure that xsi:type (if used) is specified first.

ORA-30938: No prefix defined for namespace '<varname>string</varname>' (particle <varname>string</varname>)

Cause: An XML namespace mapping (xmlns:<varname>prefix</varname>=<varname>namespace URL</varname>) must be defined for each particle (element or attribute) stored in an schema-constrained XMLType document.

Action: Add an xmlns attribute definition (attribute name="xmlns:prefix" and value="namespace URL") to the current XMLType document. The safest place to add this attribute is in the root node of the document to ensure that the mapping will be in scope.

ORA-30939: Order violation: Element '<varname>string</varname>' may not follow element '<varname>string</varname>'

Cause: The XML schema specifies a content model that is sequential, where the order of nodes in the instance must follow the order specified by the schema, and this instance relies on the schema validity to avoid maintaining instance order information

Action: Insert elements only in the order specified in the schema

ORA-30940: Cannot resolve prefix '<varname>string</varname>' for QName node '<varname>string</varname>'

Cause: An attempt was made to store a QName value without having a valid namespace in scope for that prefix.

Action: Declare the namespace for the prefix used

ORA-30941: Cannot specify empty URI for non-default namespace '<varname>string</varname>'

Cause: An attempt was made to insert a namespace declaration for a non-default namespace using an empty URI string.

Action: Specify a non-empty URI for namespace declarations other than the default namespace.

ORA-30942: XML Schema Evolution error for schema '<varname>string</varname>' table <varname>string</varname> column '<varname>string</varname>'

Cause: The given XMLType table/column which conforms to the given schema had errors during evolution. For more information, see the more specific error below this one

Action: Based on the schema, table and column information in this error and the more specific error below, take corrective action

ORA-30943: XML Schema '<varname>string</varname>' is dependent on XML schema '<varname>string</varname>'

Cause: Not all dependent schemas were specified and/or the schemas were not specified in dependency order, i.e., if schema S1 is dependent on schema S, S must appear before S1.

Action: Include the previously unspecified schema in the list of schemas and/or correct the order in which the schemas are specified. Then retry the operation.

ORA-30944: Error during rollback for XML schema '<varname>string</varname>' table <varname>string</varname> column '<varname>string</varname>'

Cause: The given XMLType table/column which conforms to the given schema had errors during a rollback of XML schema evolution. For more information, see the more specific error below this one

Action: Based on the schema, table and column information in this error and the more specific error below, take corrective action

ORA-30945: Could not create mapping table '<varname>string</varname>'

Cause: A mapping table could not be created during XML schema evolution. For more information, see the more specific error below this one

Action: Ensure that a table with the given name does not exist and retry the operation

ORA-30946: XML Schema Evolution warning: temporary tables not cleaned up

Cause: An error occurred after the schema was evolved while cleaning up temporary tables. The schema evolution was successful

Action: If the user needs to remove the temporary tables, use the mapping table to get the temporary table names and drop them.

ORA-30947: Dependent table '<varname>string</varname>' of XML schema '<varname>string</varname>' is version-enabled

Cause: An XMLType table that is dependent on an XML schema being evolved is version-enabled.

Action: Disable versioning on the XMLType table

ORA-30948: Illegal in-place XML schema evolution operation: <varname>string</varname>

Cause: An attempt was made to make an XML schema change that is not permitted through in-place XML schema evolution.

Action: Ensure that the XML schema changes specified in the XMLDiff argument to DBMS_XMLSCHEMA.inPlaceEvolve are permitted.

ORA-30951: Element or attribute at Xpath <varname>string</varname> exceeds maximum length

Cause: An attempt was made to insert a node of length exceeding the maximum length (specified by the maxLength facet) into an XML document.

Action: Do not attempt to add a node exceeding the maximum length to XML documents.

ORA-30952: illegal configuration of HTTP/HTTPS in xdbconfig.xml

Cause: An attempt was made to update xdbconfig.xml when either 1) a value was specified for http2-port but not for http2-protocol (or vice versa), OR 2) http-port and http2-port were set to the same value.

Action: Specify values for both elements http2-port and http2-protocol, AND set different values for http-port and http2-port.

ORA-30953: XML minoccurs value (<varname>string</varname>) violated

Cause: An attempt was made to delete more than the required minimum number of elements (specified by the minoccurs facet) from an XML document.

Action: Do not attempt to delete more than the required minimum number of elements that must be present from the XML document.

ORA-30954: char <varname>string</varname> is invalid in <varname>string</varname>

Cause: An invalid XML character was found.

Action: Use only characters allowed by the XML specification.

ORA-30955: The XML Index does not exist or is not asynchronous

Cause: An attempt was made to synchronize a nonexistent XML Index or a synchronous XML Index.

Action: Create the XML Index in asynchronous mode.

ORA-30956: invalid option for XML Index

Cause: Unexpected error.

Action: File a bug.

ORA-30957: cannot downgrade because there are XML indexes

Cause: An attempt was made to downgrade a database that has XML indexes.

Action: Drop all XML indexes before attempting the downgrade.

ORA-30958: operation directly on the Pending Table is disallowed

Cause: An illegal operation was attempted on secondary objects of an XML Index.

Action: Try appropriate operation on the XML Index.

ORA-30959: The indexed column is not stored in CLOB.

Cause: An attempt was made to create an XML Index on an OR-XMLType column.

Action: Re-create the XML Index on a CLOB-XMLType column.

ORA-30960: The entity is neither an XPATH nor a NAMESPACE.

Cause: The given string had invalid syntax.

Action: Check the syntax for XPATH and NAMESPACE.

ORA-30961: internal SQL statement is too long

Cause: unexpected internal error

Action: File a bug and provide the test case.

ORA-30962: inconsistent ODCI input arguments

Cause: unexpected internal error

Action: File a bug and provide the test case.

ORA-30963: The indexed column is not of XMLType.

Cause: An attempt was made to create an XML Index on a non-XMLType column.

Action: Re-create the XML Index on an XMLType column.

ORA-30964: The XML Index was not usable.

Cause: The domain index for XML was not created properly. The Path Table is missing.

Action: Drop and re-create the XML Index.

ORA-30965: fragment does not fit into the VARCHAR2 VALUE column

Cause: The fragment size exceeded the max size.

Action: Re-create the XML Index with values stored in CLOB.

ORA-30966: error detected in the XML Index layer

Cause: Unexpected error.

Action: File a bug.

ORA-30967: operation directly on the Path Table is disallowed

Cause: illegal operation on secondary objects of a domain index

Action: Try appropriate operation on the domain index.

ORA-30968: invalid XPATH or NAMESPACE option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30969: invalid syntax for PARAMETERS

Cause: An attempt was made to specify an invalid option.

Action: Check and use valid options.

ORA-30970: option not supported for XML Index

Cause: An attempt was made to specify an invalid option.

Action: Check and use valid options.

ORA-30971: illegal operation on the Path Table

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate command on the XML Index.

ORA-30972: invalid ALTER INDEX option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30973: invalid Path Table option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30974: invalid Path Id Index option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30975: invalid Order Key Index option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30976: invalid Parent Order Key Index option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30977: invalid Value Index option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30978: The XML Index is not locally partitioned.

Cause: An attempt was made to create a global partitioned XML Index.

Action: Do not attempt to create global partitioned XML Index or to maintain a non-local partitioned XML Index.

ORA-30979: Partitioned XML Index not yet supported.

Cause: An attempt was made to create a partitioned XML Index.

Action: Do not attempt to create partitioned XML Index.

ORA-30980: Invalid Input.

Cause: The input to the function is not valid.

Action: Make sure the input is valid (both syntactically as well as semantically).

ORA-30981: Internal event to configure Compact XML / Streaming XPath

Cause: N/A

Action: Do not document.

ORA-30982: Invalid option for a partition of an XML Index

Cause: An invalid option was specified at the partition level.

Action: Remove the invalid option.

ORA-30983: Maximum order key depth exceeded

Cause: The document could not be indexed because its nesting depth was more than that allowed by XML Index.

Action: Remove the offending document.

ORA-30984: The XMLType column has to be declared as virtual

Cause: The XMLType column was not declared as virtual when creating a structured XMLIndex.

Action: The XMLType column has to be declared as virtual when creating a structured XMLIndex.

ORA-30985: The virtual XMLType column for chaining is missing

Cause: The virtual XMLType column for chaining was missing when creating a structured XML index.

Action: A virtual XMLType column for chaining has to be specified when creating a structured XML Index.

ORA-30986: XML Index with more than one virtual column is disallowed

Cause: An attempt was made to create an XML Index with more than one virtual column.

Action: Create only one virtual column.

ORA-30987: XML Index on XML DB repository does not exist

Cause: An attempt was made to operate on a non-existent XML Index on XML DB repository.

Action: First create the index using
DBMS_XDB_ADMIN.CREATE_REPOSITORY_XMLINDEX. Try the operation again.

ORA-30988: Metadata of XML Index corrupted

Cause: An attempt to locate the XML Index failed.

Action: Contact Oracle Support Services.

ORA-30989: XML Index on an Index Organized Table is not yet supported

Cause: XML Index supported only on Heap Organized Table.

Action: Contact Oracle Support Services.

ORA-30990: insufficient privileges to change owner of resource

<varname>string</varname>

Cause: An attempt was made to change the <varname>Owner</varname> field of an XML DB resource without sufficient privileges to do so.

Action: Switch to SYS before performing the ownership change, or have the intended recipient of the resource perform the transfer.

ORA-30991: cannot use DOM to add special attribute to schema-based parent

Cause: An attempt was made to add or remove an xsi:schemaLocation, xsi:noNamespaceSchemaLocation, xsi:type, or xsi:nil attribute to or from a schema-based XML node using DOM.

Action: Use the updateXML operator instead of DOM.

ORA-30992: error occurred at Xpath <varname>string</varname>

ORA-30993: complex type <varname>string</varname> is not referred by any global element

ORA-30994: Invalid argument for DOM stream

Cause: Either a null or a nonleaf node was passed.

Action: Use a combination of DOM API and DOM streams to produce desired effect.

ORA-30995: DOM streams operations cannot be performed on null/invalid node

Cause: The node is NULL or inexistent

Action: Check the input parameters.

ORA-30996: Streams operations over non-existent stream

Cause: The stream passed is NULL or invalid.

Action: Check the input parameters.

ORA-30997: XSL processing of XML failed with error LPX-<varname>string</varname>

Cause: An LPX routine (XML/XSL processing) returned an error while tranforming an XML doc.

Action: Look up the LPX error and follow its corrective action.

ORA-30998: transformation error: <varname>string</varname>

Cause: Error occurred while transforming an XML doc with an XSL style sheet.

Action: Contact Oracle Support Services.

ORA-30999: XML context creation failed while <varname>string</varname>

Cause: Error occurred while creating XML context.

Action: Contact Oracle Support Services.

ORA-31000: Resource '<varname>string</varname>' is not an XDB schema document

Cause: The given schema URL does not refer to a registered XDB schema

Action: Make sure the specified schema has been registered in XDB

ORA-31001: Invalid resource handle or path name "<varname>string</varname>"

Cause: An invalid resource handle or path name was passed to the XDB hierarchical resolver.

Action: Pass a valid resource handle or path name to the hierarchical resolver.

ORA-31002: Path name <varname>string</varname> is not a container

Cause: XDB expected the given path name to represent a container.

Action: Pass a path name or resource handle that represents a container.

ORA-31003: Parent <varname>string</varname> already contains child entry <varname>string</varname>

Cause: An attempt was made to insert a duplicate child into the XDB hierarchical resolver.

Action: Insert a unique name into the container.

ORA-31004: Length <varname>string</varname> of the BLOB in XDB\$H_INDEX is below the minimum <varname>string</varname>

Cause: In the XDB\$H_INDEX table, the CHILDREN column, a BLOB, must have a certain minimum length without being chained. The calculated length of the LOB was less than the stated minimum.

Action: Set the value of the init.ora parameter db_block_size to at least 2K. For XDB to run at its fastest, set db_block_size to 8K.

ORA-31005: Path name length <varname>string</varname> exceeds maximum length <varname>string</varname>

Cause: The length of a path name passed to the XDB hierarchical resolver exceeded the maximum length.

Action: Choose a shorter path name.

ORA-31006: Path name segment length <varname>string</varname> exceeds maximum length <varname>string</varname>

Cause: The length of a path name segment passed to the XDB hierarchical resolver exceeded the maximum length of a path name segment.

Action: Choose a shorter path name segment.

ORA-31007: Attempted to delete non-empty container <varname>string</varname> / <varname>string</varname>

Cause: An attempt was made to delete a non-empty container in the XDB hierarchical resolver.

Action: Either perform a recursive deletion, or first delete the contents of the container.

ORA-31008: LPX context creation failed while <varname>string</varname>

Cause: Error occurred while creating LPX context because of an unexpected NULL value.

Action: Contact Oracle Support Services.

ORA-31009: Access denied for property <varname>string</varname>

Cause: An attempt was made to access a property you don't have access to

Action: Check the ACL to see what privileges you have for this property

ORA-31010: XML element index <varname>string</varname> exceeds maximum insertion index <varname>string</varname>

Cause: An attempt was made to insert an XML element at an invalid index location in the node.

Action: Choose a new index that falls within the allowed range.

ORA-31011: XML parsing failed

Cause: XML parser returned an error while trying to parse the document.

Action: Check if the document to be parsed is valid.

ORA-31012: Given XPATH expression not supported

Cause: XPATH expression passed to the function is currently unsupported.

Action: Check the xpath expression and change it to use a supported expression.

ORA-31013: Invalid XPATH expression

Cause: XPATH expression passed to the function is invalid.

Action: Check the xpath expression for possible syntax errors.

ORA-31014: Attempted to delete the root container

Cause: An attempt was made to delete the root container in the hierarchical index.

Action: Do not delete the root container.

ORA-31015: Attempted to insert entry without name

Cause: An attempt was made to insert an entry into the hierarchical resolver without a child name.

Action: Supply a child name and try inserting again.

ORA-31016: Attempted to delete entry without name

Cause: An attempt was made to delete an entry from the hierarchical resolver without a child name.

Action: Supply a child name and try deleting again.

ORA-31017: Error generating unique OID for XML document

Cause: An error occurred while generating a globally unique OID for storing an XML document.

Action: n/a

ORA-31018: Error deleting XML document

Cause: The XMLType object pointed to by the given REF could not be deleted because either the REF was invalid or it pointed to a non-existent table.

Action: Either use FORCE deletion or supply a valid REF.

ORA-31019: Recursive deletion snapshot too old for <varname>string</varname>string</varname>

Cause: Changes were made to the structure of a directory while it was being recursively deleted.

Action: Try deleting the directory again.

ORA-31020: The operation is not allowed, Reason: <varname>string</varname>

Cause: The operation attempted is not allowed

Action: See reason and change to a valid operation.

ORA-31021: Element definition not found

Cause: The element definition was not found.

Action: Supply the definition for the element or use a defined element.

ORA-31022: Element not found

Cause: The element was not found.

Action: Make sure the specified element exists.

ORA-31023: Index size error

Cause: The index is greater than the allowed value.

Action: Make sure the index is less than allowed value.

ORA-31024: Parser initialization failed with LPX-<varname>string</varname>error\nwhile <varname>string</varname>

Cause: Error occurred while initializing a parser.

Action: Contact Oracle Support Services.

ORA-31025: Invalid document element

Cause: An attempt was made to replace the data at an invalid index number in the XML document

Action: Supply a correct occurrence number and try again.

ORA-31026: unable to allocate additional memory while \n<varname>string</varname>

Cause: A dynamic memory allocation failure occurred.

Action: Report this problem to a database administrator.

ORA-31027: Path name or handle <varname>string</varname> does not point to a resource

Cause: An attempt was made to retrieve a resource based on a path name or resource handle that points to an entity other than a resource.

Action: Do not attempt to retrieve a resource based on that path name or resource handle.

ORA-31028: Resource metadata length <varname>string</varname> exceeded maximum length <varname>string</varname>

Cause: An attempt was made to insert resource metadata that exceeded the maximum length of that type of metadata.

Action: Keep resource metadata within its allowed length.

ORA-31029: Cannot bind to unsaved resource

Cause: An attempt was made to bind to a resource that had not been saved to disk.

Action: Bind only to saved resources.

ORA-31030: Unable to retrieve XML document

Cause: The resource had an invalid (dangling) REF to an XML document.

Action: Rebind the resource using a valid XMLType REF.

ORA-31031: cannot create context to parse an XPathIn<varname>string</varname>

Cause: Error occurred while parsing an XPath.

Action: Contact Oracle Support Services.

ORA-31032: XML parsing failed with error LPX-<varname>string</varname> Inwhile <varname>string</varname>

Cause: An LPX routine returned an error while transforming an XML doc.

Action: Look up the LPX error and follow its corrective action.

ORA-31033: Requested number of XML children <varname>string</varname> exceeds maximum <varname>string</varname>

Cause: An attempt was made to add more than the maximum number of allowable children in an XML element.

Action: Redefine the schema to allow breaking up of the children among siblings.

ORA-31034: invalid node set encountered while executing <varname>string</varname>

Cause: The given node set was either NULL or has an invalid type associated with it.

Action: Contact Oracle Support Services.

ORA-31035: Could not bind locked resource to path <varname>string</varname>/<varname>string</varname>

Cause: An attempt was made to bind an existing resource to a new location in the hierarchy, but a lock could not be obtained on the resource.

Action: Commit or roll back the transaction that has the lock on the resource.

ORA-31036: XSL processing context initialization failed

Cause: A error occurred while creating a XSL context.

Action: Contact Oracle Support Services.

ORA-31037: Invalid XML attribute name <varname>string</varname>

Cause: The attribute name in the XML document did not match anything in the associated schema.

Action: Supply only schema-defined or XML standard attributes.

ORA-31038: Invalid <varname>string</varname> value: "<varname>string</varname>"

Cause: The text in the XML document did not represent a valid value given the datatype and other constraints in the schema.

Action: Ensure that the specified value in XML documents is valid with respect to the datatype and other constraints in the schema.

ORA-31039: XML namespace length <varname>string</varname> exceeds maximum <varname>string</varname>

Cause: The length of the disk-formatted XML namespace exceeded the maximum.

Action: Keep XML namespace declarations below the maximum length.

ORA-31040: Property <varname>string</varname>: XML type (<varname>string</varname>) not compatible with internal memory type (<varname>string</varname>)

Cause: The XML datatype given is inconsistent with the database datatype, and a conversion cannot be made.

Action: This is an internal error, generally resulting from corruption of the compiled XML schema. Re-register schemas, or contact Oracle support.

ORA-31041: Property <varname>string</varname>: Memory type (<varname>string</varname>) not compatible with database type (<varname>string</varname>)

Cause: The memory type associated with this property is mapped to an incompatible database type, and a conversion cannot be made.

Action: This is an internal error, generally resulting from corruption of the compiled XML schema. Re-register schemas, or contact Oracle support.

ORA-31042: Too many properties in type '<varname>string</varname>'

Cause: The type can only have the same number of properties (elements and attributes) as a table can have columns.

Action: Modify the XML schema to move properties into subelements that are not inlined.

ORA-31043: Element '<varname>string</varname>' not globally defined in schema '<varname>string</varname>'

Cause: The specified element name has not been defined at the top level of the XML schema (i.e. globally). Elements must be defined globally to be the root of an XMLType object.

Action: Check the XML schema definition to make sure the specified element name has been defined at the top level.

ORA-31044: Top-level prefix length `<varname>string</varname>` exceeds maximum `<varname>string</varname>`

Cause: An attempt was made to save to disk a top-level XML namespace prefix whose length exceeded the maximum.

Action: Do not define XML namespace prefixes that exceed the maximum length.

ORA-31045: Cannot store more than `<varname>string</varname>` extras outside the root XML node

Cause: An attempt was made to store more than the maximum number of XML extras (e.g. comments and processing instructions) either before or after the document's root node.

Action: Keep the number of extras outside the root node below the maximum.

ORA-31046: Incorrect argument(s) specified in the operator

Cause: One or more of the arguments specified in the operator in the query are incorrect

Action: Correct the arguments specified in the operator

ORA-31047: Could not retrieve resource data at path `<varname>string</varname>`

Cause: An error occurred while retrieving the contents and/or metadata of a resource.

Action: Contact Oracle customer support.

ORA-31048: Unsaved resources cannot be updated

Cause: An attempt was made to update a resource that was never saved to disk.

Action: Perform a resource insertion instead.

ORA-31049: Internal event to turn off direct path loading of XML

Cause: N/A

Action: Do not document.

ORA-31050: Access denied

Cause: The requested access privileges have not been granted to the current user. User must be granted privileges prior to resource access.

Action: Check the set of requested access privileges to make sure that they are included in the set of access privileges granted to the user.

ORA-31051: Requested access privileges not supported

Cause: The requested access privileges are not supported for the specified resource.

Action: Ensure that the set of requested access privileges are valid access privileges for the specified resource.

ORA-31052: Cannot delete ACL with other references

Cause: The requested deletion of an ACL resource cannot proceed. The ACL is in use by other resources.

Action: Remove the resources that are making reference to the ACL in question and try again.

ORA-31053: The value of the depth argument in the operator cannot be negative

Cause: The value of the depth argument passed to the primary operator is not a positive integer

Action: Pass a positive value of the depth argument

ORA-31054: The <varname>string</varname> operator cannot have an ancillary operator

Cause: An ancillary operator was used with an operator which does not support ancillary operators

Action: Remove the ancillary operator in the query

ORA-31055: A null XMLType element cannot be inserted into RESOURCE_VIEW

Cause: The element which is being inserted into the RESOURCE_VIEW is NULL

Action: Specify a non-null XMLType element to insert into RESOURCE_VIEW

ORA-31056: The document being inserted does not conform to <varname>string</varname>

Cause: The XMLType element being inserted into the RESOURCE_VIEW does not conform to the specified Schema

Action: Insert an element which conforms to the specified Schema

ORA-31057: Display Name of the element being inserted is null

Cause: The Display Name of the element which is being inserted into the RESOURCE_VIEW is null

Action: Specify the Display Name and insert the element into RESOURCE_VIEW

ORA-31058: cannot modify read-only XOBs

Cause: Read-Only XOBs cannot be modified.

Action: Use only read operations on such a XOB.

ORA-31059: Cannot insert root XML document node if it already exists

Cause: An attempt was made to insert a root node into an XML document that already had a root node.

Action: Call the appropriate replace function to replace the node instead of inserting it anew.

ORA-31060: Resource at path <varname>string</varname> could not be deleted

Cause: An error occurred while deleting the named resource. The specific error can be found one lower on the error stack.

Action: Look at the next error on the stack and take appropriate action.

ORA-31061: XDB error: <varname>string</varname>

Cause: The specified error occurred in XDB.

Action: Correct the error or contact Oracle Support Services.

ORA-31062: Cannot delete an unsaved resource

Cause: An attempt was made to delete a resource that had not been saved to disk.

Action: Delete only saved resources.

**ORA-31063: XPath compilation failed: <varname>string</varname>.
ln<varname>string</varname>**

Cause: XPath compilation failed for specified reason.

Action: Contact Oracle Support Services.

ORA-31064: Cannot instantiate abstract element or property [<varname>string</varname>]

Cause: An attempt was made instantiate an abstract element.

Action: Use only read operations on such elements.

ORA-31065: Cannot modify read-only property [<varname>string</varname>]

Cause: An attempt was made to modify an immutable XML node.

Action: Use only read operations on such properties.

ORA-31066: Insertion of <varname>string</varname> into <varname>string</varname> creates a cycle

Cause: An attempt was made to insert a link into the XDB hierarchy that would create a cycle in the tree.

Action: Ensure that links to existing resources do not cause cycles.

ORA-31067: XML nodes must be updated with valid nodes and of the same type

Cause: An attempt was made to use updateXML to update an XML node with a node of another type.

Action: Ensure that the node specified by the XPath matches the type of new data provided.

ORA-31068: updateXML expected data format [<varname>string</varname>] instead of [<varname>string</varname>]

Cause: An attempt was made to use updateXML to update data with a node of the incorrect type. Text and attribute nodes must be updated with string data, whereas element nodes must be updated with XMLType data.

Action: Use CREATEXML or getStringVal to coerce the new data to the proper format.

ORA-31069: Cannot apply typed changes to non-schema-based XMLType nodes

Cause: An attempt was made to insert, delete, or update a non-schema-based XMLType node using an XML schema definition.

Action: Make changes to non-typed nodes only by referencing their tag names.

ORA-31070: Invalid database user ID <varname>string</varname>

Cause: An attempt was made set an invalid user ID into an XDB resource metadata property.

Action: Verify the validity of the user ID and try again.

ORA-31071: Invalid database username or GUID <varname>string</varname>

Cause: An attempt was made to set an invalid username or GUID into an XDB resource metadata property.

Action: Verify the validity of the username or GUID and try again.

ORA-31072: Too many child nodes in XMLType fragment for updateXML

Cause: An attempt was made to pass an XMLType fragment with multiple children as new data for the updateXML operator.

Action: Extract the desired child from the XMLType before passing it to updateXML as the desired new XML node.

ORA-31073: Resource not retrieved using path name

Cause: An attempt was made to access the path name of a resource that was either never saved to disk or was loaded using a method other than with its path name.

Action: Perform path name operations only on resources obtained using a path name.

ORA-31074: XML comment length <varname>string</varname> exceeds maximum <varname>string</varname>

Cause: The length of the disk-formatted XML comment exceeded the maximum.

Action: Keep outer XML comments declarations below the maximum length.

ORA-31075: invalid <varname>string</varname> declaration in XML Schema

Cause: The XML schema contains an invalid declaration identified by the message.

Action: Fix the identified error and try again.

ORA-31076: required attribute "<varname>string</varname>" not specified

Cause: The XML schema does not specify a required attribute.

Action: Specify a value for the required attribute.

ORA-31077: invalid attribute "<varname>string</varname>" specified

Cause: The XML schema specifies an invalid attribute.

Action: Remove specification of the invalid attribute.

ORA-31078: error in SQL mapping information

Cause: There is an error in the SQL type and table specification within the XML Schema.

Action: Ensure that all specified SQL types and tables are valid and compatible with the corresponding XML types.

ORA-31079: unable to resolve reference to <varname>string</varname> "<varname>string</varname>"

Cause: The identified type or attribute or element could not be resolved.

Action: Make sure that the name corresponds to a valid XML (simple/complex) type or attribute or element and try again.

ORA-31080: type not specified for attribute or element "<varname>string</varname>"

Cause: The identified attribute or element does not have a type.

Action: Make sure that every attribute and element has a valid type specification.

ORA-31081: name not specified for global declaration

Cause: The XML schema does not specify the name for the global declaration of attribute or element or simpleType or complexType.

Action: Specify names for all global declarations.

ORA-31082: invalid attribute "<varname>string</varname>" specified in declaration of "<varname>string</varname>"

Cause: The XML schema specifies an invalid attribute.

Action: Remove specification of the invalid attribute.

ORA-31083: error while creating SQL type "<varname>string</varname>". "<varname>string</varname>"

Cause: An error occurred while trying to create the SQL type based on the specification of a complex type.

Action: Fix the identified error and try again.

ORA-31084: error while creating table "<varname>string</varname>". "<varname>string</varname>" for element "<varname>string</varname>"

Cause: An error occurred while trying to create the table based on the declaration for the identified element.

Action: Fix the identified error and try again.

ORA-31085: schema "<varname>string</varname>" already registered

Cause: An attempt was made to register a schema with the same URL as a previously registered schema.

Action: Register the schema with a different URL.

ORA-31086: insufficient privileges to register schema "<varname>string</varname>"

Cause: An attempt was made to register a schema without sufficient privileges.

Action: Make sure that the user has sufficient privileges to register the schema.

ORA-31087: insufficient privileges to delete schema "<varname>string</varname>"

Cause: An attempt was made to delete a schema resource without sufficient privileges.

Action: Make sure that the user has sufficient privileges to delete the schema.

ORA-31088: object "<varname>string</varname>". "<varname>string</varname>" depends on the schema

Cause: An attempt was made to delete a schema which has dependent objects.

Action: Either drop the dependent objects prior to deleting the schema or use the CASCADE or FORCE options.

ORA-31089: schema "<varname>string</varname>" does not target namespace "<varname>string</varname>"

Cause: The schema document contains references (via include and import definitions) to other schemas that do not belong to valid namespaces.

Action: Make sure that all schemas referenced via include definitions target the same namespace as the parent schema. Further make sure that the namespace specified in the import definition matches the actual target namespace of the specified schema.

ORA-31090: invalid database schema name "<varname>string</varname>"

Cause: The XML schema document contains an invalid database schema name. For example, the value of attribute SQLSchema

Action: Make sure that all database user/schema names specified in the XML schema document refer to existing database users/schemas.

ORA-31091: empty string specified as a SQL name

Cause: The XML schema document contains a null SQL name. For example, the values of attributes SQLName, SQLType, defaultTable.

Action: Make sure that all names of SQL schema objects specified in the XML schema document are valid SQL names. Otherwise, remove such attributes from the schema and try again.

ORA-31092: invalid SQL name "<varname>string</varname>"

Cause: The XML schema document contains an invalid SQL name. For example, the values of attributes SQLName, SQLType, defaultTable.

Action: Make sure that all names of SQL schema objects specified in the XML schema document are valid SQL names. This implies that the database length and other restrictions on names be satisfied.

ORA-31093: null or invalid value specified for parameter : <varname>string</varname>

Cause: The argument value passed for the given parameter is null or invalid.

Action: Make sure that all the input argument values are valid.

ORA-31094: incompatible SQL type "<varname>string</varname>" for attribute or element "<varname>string</varname>"

Cause: The SQL type information provided in the XML schema is not compatible with the XML datatype for the specified attribute or element.

Action: Make sure that the specified SQL types are compatible with the declared XML datatypes.

ORA-31095: cannot generate <varname>string</varname> : "<varname>string</varname>.<varname>string</varname>" already exists

Cause: The type/table name specified in the XML schema document cannot be generated because it is already being used.

Action: Use different names for types/tables or use the NOGEN mode so that schema compiler does not generate new types/tables.

ORA-31096: validation failed for schema

Cause: The XML Schema could not be validated.

Action: Make sure that the SQLType and other datatype mapping is valid.

ORA-31097: Hierarchical Index not empty

Cause: An attempt was made to rebuild the hierarchical index which is not empty.

Action: Delete all rows in the hierarchical index and then rebuild it.

ORA-31098: Internal event to turn on XDB tracing

Cause: N/A

Action: Do not document.

ORA-31099: XDB Security Internal Error

Cause: An XDB Security internal error has occurred.

Action: Contact Oracle Support.

ORA-31100: XDB Locking Internal Error

Cause: An XDB Locking Internal error has occurred.

Action: Contact Oracle Support.

ORA-31101: Token "<varname>string</varname>" not given while locking resource "<varname>string</varname>"

Cause: Locking attempted on resource when the principal already owns a lock given by the token above.

Action: Reattempt the lock with the token.

ORA-31102: Already locked in exclusive mode. Cannot add lock.

Cause: The resource is already locked in exclusive mode. Cannot add another lock.

Action: Unlock the existing lock.

ORA-31103: Resource locked in shared mode. Cannot add exclusive lock

Cause: The resource is locked in shared mode. Cannot add a shared lock.

Action: Try locking in shared mode or unlocking the existing lock.

ORA-31104: Cannot find lock with token "<varname>string</varname>" on "<varname>string</varname>"

Cause: The lock may have been unlocked or expired. If token was supplied, token may be wrong.

Action: Verify this lock exists. Supply correct token.

ORA-31105: User does not own lock with supplied token "<varname>string</varname>"

Cause: The lock corresponding to the supplied token is not owned by the user.

Action: Log on as correct user. Supply correct token.

ORA-31106: Action failed as the parent container is locked

ORA-31107: Action failed as resource "<varname>string</varname>" is locked by name lock

Cause: Lock requests cause the whole request URI to be locked

Action: Supply lock token or unlock the lock

ORA-31108: Action failed as resource <varname>string</varname> is locked

Cause: Delete/Rename failed because of an existing lock

Action: Do lockdiscovery to find the lock and delete it.

ORA-31109: Action failed as parent resource <varname>string</varname> is locked

Cause: Delete/Rename failed because of an lock on parent resource

Action: Do lockdiscovery to find the lock and delete it.

ORA-31110: Action failed as resource <varname>string</varname> is locked by name

Cause: Delete/Rename failed because one of the children is locked.

Action: Do lockdiscovery to find the lock and delete it.

ORA-31111: table <varname>string</varname> cannot be hierarchically enabled

Cause: Trigger <varname>tablename</varname>_xdb_pittrigger already exists

Action: Either the table is already hierarchically enabled or the user trigger <varname>tablename</varname>_xdb_pittrigger needs to be dropped. Delete all rows in the hierarchical index and then rebuild it.

ORA-31112: fail to <varname>string</varname> for <varname>string</varname> port using xdb configuration

Cause: port number for the defined presentation is not valid

Action: Either the port number is already in use or it is protected. Specify another port number.

ORA-31113: XDB configuration may not be updated with non-schema compliant data

Cause: An attempt was made to update the XDB configuration resource with non-schema or non-schema compliant data.

Action: Check the document to make sure it is schema based and schema compliant.

ORA-31114: XDB configuration has been deleted or is corrupted

Cause: The XDB configuration resource has been deleted or corrupted.

Action: Reinstall XDB, or reinsert a valid configuration document.

ORA-31115: XDB configuration error: <varname>string</varname>

Cause: An error related to XDB configuration has occurred.

Action: Make sure the configuration resource contains valid data.

ORA-31116: Tablespace not specified correctly

Cause: XDB cannot be moved to the specified tablespace.

Action: Specify a valid tablespace.

ORA-31117: Table "<varname>string</varname>". "<varname>string</varname>" is not resource metadata enabled

Cause: This table does not have a RESID column for resource metadata

Action: Use disable/enable_hierarchy to enable resource metadata

ORA-31118: System schema "<varname>string</varname>" already registered

Cause: An attempt was made to register schema with same URL as a system schema.

Action: Change the schema URL to avoid conflicts with system XML schemas.

ORA-31119: XDB configuration cannot be updated on all instances

Cause: An attempt was made to update XDB configuration.

Action: Ensure that each instance is correctly configured with its listener.

ORA-31120: usedPort cannot be invoked in a Pluggable Database

Cause: An attempt was made to invoke 'usedPort' in a Pluggable Database.

Action: Connect to the root container and invoke 'usedPort'.

ORA-31121: The <varname>string</varname> operator cannot be FALSE

Cause: The value of the operator that was specified is FALSE.

Action: Specify an operator that evaluates to TRUE.

ORA-31122: The <varname>string</varname> operator has incorrect RHS value

Cause: The value on the right hand side, that has been specified for the operator did not evaluate to TRUE.

Action: Specify a value on the right hand side that evaluates to TRUE .

ORA-31126: Internal event for Structure XMLIndex debugging**ORA-31127: RCList cannot contain noncommitted resource configuration**

Cause: A commit was not executed after adding a resource configuration to an RCList by calling DBMS_RESCONFIG.ADDRESCONFIG()

Action: Make sure a commit is executed after calling DBMS_RESCONFIG.ADDRESCONFIG()

ORA-31128: The event handler calls cannot exceed the depth of <varname>string</varname>

Cause: Tried to fire an event with depth exceeding the maximum.

Action: Make sure the event that is being fired does not generate infinitely recursive calls, either to itself or to other functions or procedures.

ORA-31129: Unable to retrieve repository's resource configuration

Cause: Tried to access a resource configuration referenced by the XDB repository that has been deleted.

Action: Disassociate the resource configuration from the repository.

ORA-31130: Specified resource configuration is not associated with given resource

Cause: Tried to delete a nonexistent resource configuration from the configuration list of the target resource.

Action: Make sure that the resource and resource configuration names are specified correctly and the resource configuration belongs to the configuration list of the given resource.

ORA-31131: <varname>RCList</varname> contains OID that is not a resource configuration OID

Cause: The OID in <varname>RCList</varname> element was not a resource configuration OID.

Action: Update the <varname>RCList</varname> element and resubmit statement.

ORA-31132: Cannot validate handler "<varname>string</varname>".<varname>string</varname>"

Cause: Attempted to invoke an invalid event handler. This can be a result of one of the following reasons: 1) The handler did not exist. 2) The handler could not be compiled successfully.

Action: Verify that the named handler does exist, then recompile and fix all compilation errors that may subsequently arise.

ORA-31133: Cannot execute handler "<varname>string</varname>".<varname>string</varname>" with invoker rights

Cause: Attempted to invoke an event handler with invoker rights when the SET-INVOKER attribute in the resource configuration that defines the handler was not set to TRUE.

Action: Either redefine the named handler with definer rights or change the SET-INVOKER attribute in the resource configuration that defines the named handler to TRUE.

ORA-31134: Cannot delete a configuration that is referenced by other resources

Cause: Attempted to delete a resource configuration that was referenced by other resources.

Action: Remove all references to the target resource configuration by executing DELETERESCONFIG or DELETEREPOSITORYRESCONFIG procedures in DBMS_RESCONFIG package or specify the DELETE_FORCE option in the DELETERESOURCE statement.

ORA-31135: Resource has already been rendered

Cause: One of the following has occurred: 1) Attempted to invoke setRender* method after the resource was rendered through a setRender* method or after data was written to the output stream. 2) Attempted to access the output stream of the resource after a setRender* method was executed on the resource.

Action: Remove the method causing the problem.

ORA-31136: Resource configuration <varname>string</varname> is already associated with the resource <varname>string</varname>

Cause: The resource configuration already exists in the resource configuration list of the resource or the repository

Action: Check if this resource configuration really needs to be added. If so, remove it from resource and repository lists before adding it.

ORA-31137: Index out of range

Cause: The position specified was not valid.

Action: Check ($0 \leq \text{pos} < \text{size of the configuration list of the target resource}$)

ORA-31138: Resource-configuration is being referenced by one or more resources

Cause: Tried to add a resource configuration to the repository that was being referenced by existing resources.

Action: Remove the resource configuration from other resources before trying to add it to the repository again.

ORA-31139: Invalid resource configuration list

Cause: Attempted to create or update a resource that had duplicate resource configurations or conflicted with the repository configurations.

Action: Correct the resource configuration list and re-submit statement.

ORA-31140: Illegal operation: <varname>string</varname>

Cause: Tried to invoke a method when it was not allowed.

Action: Do not execute the indicated method.

ORA-31141: Must specify a valid path value

Cause: The path specified for the <varname>defaultChildConfig</varname> or <varname>defaultChildACL</varname> element must refer to an existing resource.

Action: Correct problem and resubmit statement.

ORA-31142: Must specify the schema for each listener

Cause: The schema element was not specified.

Action: Correct problem and resubmit statement.

ORA-31143: XDB_SET_INVOKER role is required

Cause: XDB_SET_INVOKER role was required to set the SET-INVOKER attribute to TRUE.

Action: Correct problem and resubmit statement.

ORA-31144: Implementation language for <varname>string</varname> is not specified

Cause: Implementation language for specified listener source was not specified.

Action: Correct problem and resubmit statement.

ORA-31145: Duplicate listener, <varname>string</varname>, found in resource configuration

Cause: Duplicate listener source was found in resource configuration.

Action: Remove duplicates and resubmit statement.

ORA-31146: Invalid listener source <varname>string</varname>.<varname>string</varname>

Cause: The listener source specified in the resource configuration did not exist or was invalid.

Action: Correct the listener source in the <varname>listener</varname> element and resubmit statement.

ORA-31147: <varname>string</varname> is not an ACL resource

Cause: The specified resource did not conform to acl.xsd schema.

Action: Specify a valid path for the <varname>defaultChildACL</varname> element and resubmit statement.

ORA-31148: <varname>string</varname> is not a valid resource configuration

Cause: The resource specified in the <varname>defaultChildConfig</varname> element while creating a resource configuration or specified as the rcpath in a call using DBMS_RESCONFIG package did not conform to XDBResConfig.xsd schema.

Action: Specify a valid path and resubmit statement.

ORA-31149: no such schema: <varname>string</varname>

Cause: Nonexistent schema defined in the resource configuration.

Action: Specify a valid schema in the resource configuration and resubmit statement.

ORA-31150: uncaught error in handler <varname>string</varname>

Cause: The named handler raised an exception.

Action: Fix the identified error.

ORA-31151: Cyclic definition encountered for <varname>string</varname>: "<varname>string</varname>"

Cause: The schema definition for this type has cycles.

Action: Remove cyclic definition and re-compile schema.

ORA-31152: Internal event to enable lru XOBs

Cause: N/A

Action: Do not document

ORA-31153: Cannot create schema URL with reserved prefix "http://xmlns.oracle.com/xdb/schemas/"

Cause: This prefix is reserved for XDB extended schema URLs and cannot be used in a user specified URL.

Action: Modify the prefix to a different one.

ORA-31154: invalid XML document

Cause: The XML document is invalid with respect to its XML Schema.

Action: Fix the errors identified and try again.

ORA-31155: attribute <varname>string</varname> not in XDB namespace

Cause: The specified attribute should be prefixed with XDB's namespace.

Action: Ensure that all XDB specified attributes are prefixed with XDB's namespace and try again.

ORA-31156: Internal event to turn off validation during schema registration

Cause: N/A

Action: Do not document

ORA-31157: Invalid Content-Type charset

Cause: HTTP Content-Type header had a charset that Oracle does not understand.

Action: Fix the Content-Type header in the HTTP request.

ORA-31158: schema "<varname>string</varname>" currently being referenced

Cause: The specified schema URL is currently being referenced by the same session. This could happen because of PLSQL XMLType variables still in scope.

Action: Ensure all references to this schema in this session are released and try the operation again.

ORA-31159: XML DB is in an invalid state

Cause: XML DB's internal tables are in an invalid state, probably because the database was not upgraded or the upgrade was not successful

Action: Ensure that the database is upgraded successfully. If the problem persists, contact Oracle Support

ORA-31160: max substitution group size <varname>string</varname> exceeded by "<varname>string</varname>" (<varname>string</varname>) for head element "<varname>string</varname>" (<varname>string</varname>)

Cause: The maximum limit on nested substitution groups has been exceeded by an element.

Action: Delete specified schema and re-register it after removing the offending substitution element.

ORA-31161: element or attribute "<varname>string</varname>" cannot be stored out of line

Cause: An element or attribute of a simple type has SQLInline=false

Action: Remove the SQLInline=false qualification for the offending element or attribute

ORA-31162: element or attribute "<varname>string</varname>" has no SQLType specified

Cause: Schema registration was invoked with GENTYPES=false without specifying a SQLType for some element or attribute

Action: Specify a SQLType for the offending element or attribute and register the schema again

ORA-31163: element or attribute "<varname>string</varname>" has invalid attribute value "<varname>string</varname>" (should be "<varname>string</varname>")

Cause: An element or attribute for a complex type derived by restriction has an attribute whose value is different from that in the base type

Action: Remove the mismatched attribute values from the offending element or attribute

ORA-31164: cannot load object-relational XML attribute using direct path

Cause: The table being loaded contains a xml column with object-relational storage. The xmltype column contains a type with subtypes. This type of attribute cannot be loaded with direct path.

Action: Perform the load with conventional path mode.

ORA-31165: cannot load object-relational XML attribute using direct path

Cause: The table being loaded contains a xml column with object-relational storage. The xmltype column either contains an out-of-line partitioned table or the table itself is partitioned by one of the attributes of xmltype. This type of table cannot be loaded with direct path.

Action: Perform the load with conventional path mode.

ORA-31166: internal error code to handle ignorable attributes

Cause: N/A

Action: Do not document

ORA-31167: XML nodes over 64K in size cannot be inserted

Cause: An attempt was made to insert an XML Text Node with a size greater than 64K. This is not supported.

Action: Create text nodes under 64K.

ORA-31168: Node localname and namespace values should be less than 64K

Cause: An attempt was made to specify an XML Node with localname or namespace value greater than or equal to 64K. This is not supported.

Action: Node localnames and namespace values should be under 64K.

ORA-31169: Number of children (<varname>string</varname>) defined in '<varname>string</varname>' exceeds maximum (<varname>string</varname>)

Cause: An attempt was made to define more than the allowed number of children in a complexType of an XMLSchema document.

Action: Modify the XML Schema to move children of complexType into subelements that are not inlined.

ORA-31170: Cyclic Schema Registration without using FORCE option

Cause: An attempt was made to register cyclic schemas with FORCE = false.

Action: Use FORCE = true when registering cyclic schemas.

ORA-31171: schema processing error LSX-<varname>string</varname>\nwhile <varname>string</varname>

Cause: An LSX routine returned an error.

Action: Look up the LSX error and follow its corrective action.

ORA-31172: cannot load ADT column or XMLType column using direct path

Cause: The table being loaded contained an ADT column or XMLType column with object-relational or binary storage and supplemental logging was enabled for the

table. Direct path load is not supported for such tables when supplemental logging is enabled.

Action: Perform the load with conventional path mode.

ORA-31173: internal event used by XDB schema cache

ORA-31176: API not supported in this release

Cause: This API was not supported.

Action: None

ORA-31178: Miscellaneous event for XDB

ORA-31179: internal XDB event for ftp test harness

Cause: N/A

Action: Do not document

ORA-31180: DOM Type mismatch in invalid PL/SQL DOM handle

Cause: The specified PL/SQL DOM handle is referencing a DOM Node whose DOM Type that does not match the one available in the session. This could happen because the pl/sql handle was reused, or the original document is no longer available.

Action: Ensure that the pl/sql handle for the target node is valid and try the operation again.

ORA-31181: PL/SQL DOM handle accesses node that is no longer available

Cause: The specified pl/sql handle is referencing a node in a DOM Document that is no longer available.

Action: Ensure that the pl/sql handle for the target node is valid and try the operation again.

ORA-31182: Too many PL/SQL DOM handles specified

Cause: An attempt was made to create a PL/SQL DOM handle that exceeded the maximum allowable number of PL/SQL DOM handles.

Action: Free PL/SQL DOM handles and try the operation again.

ORA-31183: Node type <varname>string</varname> cannot be converted to desired type

Cause: The given node's type cannot be converted correctly for this operation. For example, a DOM Element cannot be converted to Document Fragment

Action: Pass a valid node type for the conversion.

ORA-31185: DOM Nodes do not belong to the same DOM Document

Cause: The specified PL/SQL DOM Node does not belong to the parent DOM Document of the referring DOM Node.

Action: Ensure that both the DOM Nodes are part of the same DOM Document.

ORA-31186: Document contains too many nodes

Cause: Unable to load the document because it has exceeded the maximum allocated number of DOM nodes.

Action: Reduces the size of the document.

ORA-31187: Cannot Add Node '<varname>string</varname>' (type='<varname>string</varname>') to Simple Type Node '<varname>string</varname>'

Cause: Trying to add attribute/element nodes to a simple type against the schema definition. Simple types can have only special attribute like namespaces, xsi:nil etc.

Action: Use a valid node for the operation.

ORA-31188: The specified printing option is invalid

Cause: The printing option specified in the operation is invalid.

Action: Use a valid printing option for the operation.

ORA-31190: Resource <varname>string</varname> is not a version-controlled resource

Cause: Either one of the following is the cause: - Checkout is requested for a resource that isn't under version control". Only version-controlled resource can be checked out. - Checkout is requested for a row of a non-versioned table.

Action: put the resource under version-control before checking out.

ORA-31191: Resource <varname>string</varname> is already checked out

Cause: Either one of the following is the cause: - Checkout is requested for a resource that is already checked out to the workspace by the same or different user.

Action: checked in the resource from the workspace before checking out

ORA-31192: Resource <varname>string</varname> has not been checked out

Cause: Either one of the following is the cause: - Checkin or uncheckout is requested for a resource that has not been checked out to the workspace by any user in a workspace

Action: checked in the resource from the workspace before checking out

ORA-31193: This versioning feature isn't supported for resource <varname>string</varname>

Cause: Either one of the following is the cause: - Container cannot be put under version-controlled.

Action: Avoid using these features.

ORA-31194: Resource <varname>string</varname> is already deleted

Cause: Access a version-controlled resource that is already deleted.

Action: Recreate the resource. Remove the cyclic definitions in the type and retry compilation.

ORA-31195: XML node '<varname>string</varname>' (type=<varname>string</varname>) does not support this operation

Cause: The given node's type is not supported for this operation. For example, trying to add children to an attribute node, or passing in a document node as a child, are unsupported operations.

Action: Use a valid node type for the operation.

ORA-31196: XML nodes over <varname>string</varname> in size cannot be printed

Cause: An attempt was made to use an XML Text Node with a size greater than 64K, or an XML Comment Node with a size greater than 4K. These cannot be printed. For example, trying to add children to an attribute node, or passing in a document node as a child, are unsupported operations.

Action: Use getClobVal() or getStringVal() to print the Document.

ORA-31197: Error in processing file <varname>string</varname>

Cause: An error occurred while operating on the specified file. The possible causes are the file header is corrupt or check the next error on stack

Action: Ensure that the specified file is correct. Look at the next error on the stack and take appropriate action.

ORA-31198: Mismatch in number of bytes transferred due to non-binary mode

Cause: An error occurred while reading the specified file. The most probable cause is that the transfer was initiated in ASCII mode.

Action: Ensure that the transfer mode is set to BINARY

ORA-31199: Warning in processing file <varname>string</varname>

Cause: A warning was raised while operating on the specified file. However, the current operation was completed successfully.

Action: This is primarily an informational message. Look at the next error on the stack to obtain further information.

ORA-31200: Invalid ACL Argument

Cause: A System Constraining ACL was passed as one of the arguments to this function.

Action: Please ensure that none of the aclid arguments are for the System Constraining ACL.

ORA-31201: DBMS_LDAP: generic error: <varname>string</varname>

Cause: There has been an error in the DBMS_LDAP package.

Action: Please report the error number and description to Oracle Support.

ORA-31202: DBMS_LDAP: LDAP client/server error: <varname>string</varname>

Cause: There is a problem either on the LDAP server or on the client.

Action: Please report this error to the LDAP server administrator or your Database administrator.

ORA-31203: DBMS_LDAP: PL/SQL - Init Failed.

Cause: There has been an error in the DBMS_LDAP Init operation.

Action: Please check the host name and port number, or report the error number and description to Oracle Support.

ORA-31204: DBMS_LDAP: PL/SQL - Invalid LDAP Session.

Cause: There has been an error in the DBMS_LDAP bind operation.

Action: Please check the session handler that you use for binding, or report the error number and description to Oracle Support.

ORA-31205: DBMS_LDAP: PL/SQL - Invalid LDAP Auth method.

Cause: There has been an error in the DBMS_LDAP bind operation.

Action: Please check the authentication credentials that you use for binding, or report the error number and description to Oracle Support.

ORA-31206: DBMS_LDAP: PL/SQL - Invalid LDAP search scope.

Cause: There has been an error in the DBMS_LDAP search operation.

Action: Please check the search scope that you use for search, or report the error number and description to Oracle Support.

ORA-31207: DBMS_LDAP: PL/SQL - Invalid LDAP search time value.

Cause: There has been an error in the DBMS_LDAP search operation.

Action: Please check the search time value that you use for search, or report the error number and description to Oracle Support.

ORA-31208: DBMS_LDAP: PL/SQL - Invalid LDAP Message.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP message that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31209: DBMS_LDAP: PL/SQL - LDAP count_entry error.

Cause: There has been an error in the DBMS_LDAP count_entry operation.

Action: Please check the LDAP count_operation, or report the error number and description to Oracle Support.

ORA-31210: DBMS_LDAP: PL/SQL - LDAP get_dn error.

Cause: There has been an error in the DBMS_LDAP get_dn operation.

Action: Please check the LDAP get_dn, or report the error number and description to Oracle Support.

ORA-31211: DBMS_LDAP: PL/SQL - Invalid LDAP entry dn.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the entry dn that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31212: DBMS_LDAP: PL/SQL - Invalid LDAP mod_array.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP mod_array that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31213: DBMS_LDAP: PL/SQL - Invalid LDAP mod option.

Cause: There has been an error in the DBMS_LDAP populate_mod_array operation.

Action: Please check the LDAP mod option that you use for LDAP populate_mod_array operation, or report the error number and description to Oracle Support.

ORA-31214: DBMS_LDAP: PL/SQL - Invalid LDAP mod type.

Cause: There has been an error in the DBMS_LDAP populate_mod_array operation.

Action: Please check the LDAP mod type that you use for LDAP populate_mod_array operation, or report the error number and description to Oracle Support.

ORA-31215: DBMS_LDAP: PL/SQL - Invalid LDAP mod value.

Cause: There has been an error in the DBMS_LDAP populate_mod_array operation.

Action: Please check the LDAP mod value that you use for LDAP populate_mod_array operation, or report the error number and description to Oracle Support.

ORA-31216: DBMS_LDAP: PL/SQL - Invalid LDAP rdn.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP rdn value that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31217: DBMS_LDAP: PL/SQL - Invalid LDAP newparent.

Cause: There has been an error in the DBMS_LDAP rename_s operation.

Action: Please check the LDAP newparent value that you use for LDAP rename_s operation, or report the error number and description to Oracle Support.

ORA-31218: DBMS_LDAP: PL/SQL - Invalid LDAP deleteoldrdn.

Cause: There has been an error in the DBMS_LDAP rename_s operation.

Action: Please check the LDAP deleteoldrdn value that you use for LDAP rename_s operation, or report the error number and description to Oracle Support.

ORA-31219: DBMS_LDAP: PL/SQL - Invalid LDAP notypes.

Cause: There has been an error in the DBMS_LDAP explode_dn or explode_rdn operation.

Action: Please check the LDAP notypes value that you use for LDAP explode_dn or explode_rdn operation, or report the error number and description to Oracle Support.

ORA-31220: DBMS_LDAP: PL/SQL - Invalid LDAP SSL wallet location.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP sslwrl value that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31221: DBMS_LDAP: PL/SQL - Invalid LDAP SSL wallet passwd.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP sslpasswd value that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31222: DBMS_LDAP: PL/SQL - Invalid LDAP SSL authentication mode.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP sslauth value that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31223: DBMS_LDAP: cannot open more than <varname>string</varname> LDAP server connections

Cause: An attempt was made to open more than the maximum allowed LDAP server connections.

Action: Free unused connections.

ORA-31224: DBMS_LDAP: invalid LDAP session

Cause: An attempt was made by a PL/SQL module to use an LDAP session which is not valid and might have already been closed.

Action: Check the LDAP session handle in PL/SQL module involving DBMS_LDAP.

ORA-31225: DBMS_LDAP: invalid BER_ELEMENT

Cause: An attempt was made by a PL/SQL module to use a BER_ELEMENT which is not valid and might have already been freed.

Action: Check the BER_ELEMENT in PL/SQL module involving DBMS_LDAP.

ORA-31226: DBMS_LDAP: MOD_ARRAY size limit exceeded

Cause: An attempt was made by a PL/SQL module to add an element beyond the MOD_ARRAY size limit.

Action: Increase the MOD_ARRAY size limit in PL/SQL module involving DBMS_LDAP.

ORA-31227: DBMS_LDAP: invalid LDAP MESSAGE handle

Cause: An attempt was made by a PL/SQL module to use an LDAP MESSAGE handle which is not valid and might have already been freed.

Action: Check the LDAP MESSAGE handle in PL/SQL module involving DBMS_LDAP.

ORA-31228: DBMS_LDAP: invalid MOD_ARRAY

Cause: An attempt was made by a PL/SQL module to use a MOD_ARRAY which is not valid and might have already been freed.

Action: Check the MOD_ARRAY in PL/SQL module involving DBMS_LDAP.

ORA-31229: DBMS_LDAP: invalid input parameter

Cause: An invalid argument has been passed by a PL/SQL module to a DBMS_LDAP subprogram

Action: Check the input argument to the DBMS_LDAP subprogram in PL/SQL module involving DBMS_LDAP.

ORA-31230: DBMS_LDAP: unable to dynamically allocate additional memory

Cause: An error occurred during dynamic memory allocation from session heap.

Action: Verify that adequate memory resources are available.

ORA-31231: DBMS_LDAP: invalid PROPERTY_SET

Cause: An attempt was made by a PL/SQL module to use a PROPERTY_SET which is not valid and might have already been freed.

Action: Check the PROPERTY_SET in PL/SQL module involving DBMS_LDAP.

ORA-31232: DBMS_LDAP: invalid MOD_PROPERTY_SET

Cause: An attempt was made by a PL/SQL module to use a MOD_PROPERTY_SET which is not valid and might have already been freed.

Action: Check the MOD_PROPERTY_SET in PL/SQL module involving DBMS_LDAP.

ORA-31398: DBMS_LDAP: Shared servers are not supported.

Cause: The session executing functions from the DBMS_LDAP package is being handled by a shared server in the Database.

Action: Use dedicated database sessions to execute functions in the DBMS_LDAP package.

ORA-31399: Cannot contact LDAP server <varname>string</varname> at port <varname>number</varname>

Cause: The LDAP server specified could not be contacted. This can happen if the server is down or inaccessible.

Action: Contact the administrator of the LDAP server

ORA-31401: change source <varname>string</varname> is not an existing change source

Cause: The caller did not use the name of an existing change source. The name given does not match the name of any existing change source.

Action: Check the spelling of the change source name. Choose an existing change source.

ORA-31402: unrecognized parameter <varname>string</varname>

Cause: Unrecognized parameter was detected.

Action: Check for too many parameters in the call.

ORA-31403: change table <varname>string</varname> already contains a column <varname>string</varname>

Cause: Issued ALTER_CHANGE_TABLE with an add operation but a column by this name already exists in the specified table.

Action: Check the names and call the procedure again.

ORA-31404: all input parameters are null

Cause: All input parameters are null. At least one property must be altered.

Action: Call the procedure again, making sure that all the required parameters have been specified. Ensure that at least one parameter is not null. Refer to user documentation for the correct way of calling this procedure.

ORA-31405: cannot make changes while change set <varname>string</varname> is advancing

Cause: The change set is currently advancing. Change sources related to an advancing change set cannot be altered. Change tables related to the advancing change set cannot be created, altered or dropped. Some or all the parameters of the change set cannot be altered while the set is advancing.

Action: Wait until the change set has finished advancing, then reissue the command. If altering the change set, only the `advance_enable` parameter can be altered during an advance.

ORA-31406: change source <varname>string</varname> is referenced by a change set

Cause: The operation cannot complete because this change source is referenced by one or more change sets.

Action: Drop the change sets first, then re-issue the command. May have to drop some change tables before the change sets are dropped.

ORA-31407: end_date must be greater than the begin_date

Cause: The end data of the change set is earlier than the begin date. The end date must always be later in time than the begin date, so that the duration between the begin and end dates is a positive amount of time.

Action: Change the begin date and/or the end date, so that the end date is later than the begin date.

ORA-31408: invalid value specified for begin_scn or end_scn

Cause: The `begin_scn` was not greater than zero. The `end_scn` was less than zero. The `end_scn` was less than the `begin_scn`.

Action: Check the values of both `begin_scn` and `end_scn`. Correct them to make sure that they form a legal SCN range. An `end_scn` value of zero indicates an infinite scn range.

ORA-31409: one or more values for input parameters are incorrect

Cause: One or more of the inputs to the procedure had invalid values.

Action: Identify the bad parameter(s) and supply correct values to the procedure.

ORA-31410: change set <varname>string</varname> is not an existing change set

Cause: Could not find an existing change set by this name.

Action: Check the spelling of the change set name. Call the procedure again, passing the correct change set name.

ORA-31411: change set <varname>string</varname> is referenced by a change table

Cause: The operation cannot be performed because the change set contains one or more change tables.

Action: You will need to drop the change table(s) first, then repeat the operation

ORA-31412: change set <varname>string</varname> is disabled and cannot be advanced

Cause: The specified change set is disabled. The change set needs to be enabled for the operation to succeed.

Action: Determine why the change set is disabled and correct this condition. Alter the change set specifying 'y' for `advance_enable` then retry the operation.

ORA-31413: change set <varname>string</varname> is currently being advanced

Cause: An advance operation is in progress for this change set and we only allow one at a time.

Action: Since the change set is currently being advanced, the best action is to wait for it to finish advancing. Only one caller at a time can advance the change set. Check for the cause of long running advance operations.

ORA-31414: error(s) occurred during change table advance

Cause: One or more errors occurred during the advance operation.

Action: Check the log file(s) for a more detailed report of the underlying errors.

ORA-31415: change set <varname>string</varname> does not exist

Cause: Specified change set does not exist or the user does not have access to the publications in that change set. The name specified did not match the name of any existing change set. Certain privileges are required to access the publications within that change set.

Action: Check the name and call the procedure again, with the name of an existing change set. Contact the publisher or database administrator if user privileges are required to access the publications in the change set.

ORA-31416: invalid SOURCE_COLMAP value

Cause: A `source_colmap` value of 'y' was specified for an asynchronous change table.

Action: Specify a `source_colmap` parameter value of 'n' and call the procedure again.

ORA-31417: column list contains control column <varname>string</varname>

Cause: Reserved column name was specified in a column list or column type parameter.

Action: Control columns are selected with separate parameters. If you did not want a control column, then change the name of the specified column so that it does not conflict with a reserved column name.

ORA-31418: source schema <varname>string</varname> does not exist

Cause: Trying to create a synchronous change table and the source schema did not match any existing schema names in the database.

Action: Specify the name of an existing schema.

ORA-31419: source table <varname>string</varname> does not exist

Cause: When creating a synchronous change table, the underlying source table must exist when the procedure is called. In this case, the source table did not exist.

Action: Specify the name of an existing table.

ORA-31420: unable to submit the purge job

Cause: When creating the first change table, a purge job is submitted to the job queue. Submission of this purge job failed.

Action: Make sure that job queue processes are enabled and are currently running. If this does not solve the problem, contact Oracle.

ORA-31421: change table does not exist

Cause: Specified change table does not exist.

Action: Recheck the name, and call the procedure again using an existing change table.

ORA-31422: owner schema <varname>string</varname> does not exist

Cause: Value specified for the owner parameter does not contain the name of an existing schema in the database.

Action: Recheck the name, and call the procedure again using an existing schema name.

ORA-31423: change table <varname>string</varname> does not contain column <varname>string</varname>

Cause: Issued ALTER_CHANGE_TABLE with a drop operation and the specified column does not exist in the change table.

Action: Recheck the names, and call the procedure again.

ORA-31424: change table has active subscriptions

Cause: The change table is subscribed to, so it cannot be dropped.

Action: Do not drop a change table while there are active subscribers. If this is an emergency, use the FORCE parameter. This will forcibly drop the change table out from under all subscribers.

ORA-31425: subscription does not exist

Cause: The subscription either did not exist or did not belong to this user.

Action: Call the function again with a valid subscription name.

ORA-31426: cannot modify active subscriptions

Cause: The subscription was already activated so that additional calls to SUBSCRIBE were prohibited.

Action: Subscribe to all the desired tables and columns before activating the subscription. Ensure that the correct subscription name is specified.

ORA-31427: publication <varname>string</varname> already subscribed

Cause: The subscription already contained this publication.

Action: Check the values of subscription_name and publication_id. Check any other subscribe calls to see if they subscribe to columns that are shared among more than one publication on the same source table. Do not attempt to subscribe to the same publication more than once in the same subscription. Use the publication_id variant of the SUBSCRIBE call if needed to specify precise publications.

ORA-31428: no publication contains all the specified columns

Cause: One or more of the specified columns cannot be found in a single publication.

Action: Change the subscription request to select only columns that are in the same publication. Consult the USER_PUBLISHED_COLUMNS view to see current publications.

ORA-31429: subscription has not been activated

Cause: The called procedure required an activated subscription.

Action: Check the subscription name and correct if necessary. Call the ACTIVATE_SUBSCRIPTION procedure for this subscription and then reissue the original command.

ORA-31430: subscriber view exists

Cause: A view that is already in use was specified for the subscriber view.

Action: Call the SUBSCRIBE procedure using a different subscriber view name.

ORA-31431: all source tables must belong to the synchronous change set

Cause: Not all of the source tables belong to the synchronous change set.

Action: Check the spelling of the source tables. Make sure that all of the source tables belong to the synchronous change set.

ORA-31432: invalid source table

Cause: Either the schema_name.source_table did not exist or it did not belong to this subscription.

Action: Check the spelling of the schema_name and source_table. Verify that the specified table exists in the specified schema and is subscribed to by the subscription.

ORA-31433: subscriber view does not exist

Cause: The subscription did not contain this subscriber view.

Action: Recheck the name, and specify the name of an existing subscriber view.

ORA-31434: purge is currently running

Cause: Called the PURGE procedure while a purge job was currently running.

Action: Wait for purge to complete before reissuing this command.

ORA-31435: an error occurred during the purge operation

Cause: An error occurred during the purge operation

Action: Check the logfile for a more detailed report of the underlying errors.

ORA-31436: duplicate change source <varname>string</varname>

Cause: A change source by the specified name already exists.

Action: Recreate the change source with a unique name.

ORA-31437: duplicate change set <varname>string</varname>

Cause: A change set by the specified name already exists.

Action: Recreate the change set with a unique name.

ORA-31438: duplicate change table <varname>string</varname>

Cause: A change table by the specified name already exists.

Action: Recreate the change table with a unique name.

ORA-31439: subscription is already active

Cause: The subscription is already active.

Action: Check name and retry.

ORA-31440: change set <varname>string</varname> is empty and cannot be advanced

Cause: User attempted to advance a change set which does not contain any change tables. Without change tables, a change set cannot be advanced.

Action: Create change tables in the change set, then retry the advance.

ORA-31441: table is not a change table

Cause: User attempted to execute the DROP_CHANGE_TABLE procedure on a table that is not a CHANGE table. This can also occur when a CHANGE table object has been orphaned. CHANGE tables can become orphaned after a CREATE_CHANGE_TABLE failure or an incomplete DROP_CHANGE_TABLE.

Action: Check spelling. If error was due to an incorrect name, then retry the procedure using the correct name. To drop a table that is not a CHANGE table, or an orphaned CHANGE table, use the DROP TABLE DDL command instead.

ORA-31442: operation timed out while acquiring lock on <varname>string</varname>

Cause: CDC attempted to acquire a lock on the resource, but the operation timed out.

Action: Retry the operation later.

ORA-31443: deadlock detected while acquiring lock on <varname>string</varname>

Cause: CDC attempted to acquire a lock on the resource, but encountered a deadlock.

Action: Contact Oracle corporation

ORA-31444: parameter error while acquiring lock on <varname>string</varname>

Cause: CDC attempted to acquire a lock on the resource, but encountered a problem passing parameters to the lock manager.

Action: Contact Oracle corporation

ORA-31445: invalid lock handle while acquiring lock on <varname>string</varname>

Cause: CDC attempted to acquire a lock on the resource, but encountered a invalid lock handle, which did not correspond to any existing handle.

Action: Contact Oracle corporation

ORA-31446: this session does not own the lock handle for <varname>string</varname>

Cause: CDC attempted to acquire a lock on the resource, does not own the the lock associated with the lock. This is an internal error.

Action: Contact Oracle corporation

ORA-31447: cannot create change tables in the SYS schema

Cause: Attempted to create a change table in the SYS schema. This is not allowed.

Action: Use a different existing schema and retry the command.

ORA-31448: invalid value for change_source

Cause: The specified value was not a valid name for a Change Source.

Action: Specify a valid name and retry the command.

ORA-31449: invalid value for change_set_name

Cause: The specified value was not a valid name for a Change Set.

Action: Specify a valid name and retry the command.

ORA-31450: invalid value for change_table_name

Cause: The specified value was not a valid name for a Change Table.

Action: Specify a valid name and retry the command.

ORA-31451: invalid value <varname>string</varname> for capture_values, expecting: OLD, NEW, or BOTH

Cause: The specified value was not a valid option for a capture_values.

Action: Specify a valid option and retry the command.

ORA-31452: invalid value <varname>string</varname> for parameter, expecting: Y or N

Cause: The specified value was not Y or N.

Action: Specify Y or N for the parameter and retry the command.

ORA-31453: invalid value <varname>string</varname> for parameter, expecting: Y, N, or NULL

Cause: The specified value was not Y, N or NULL.

Action: Specify Y, N or NULL for the parameter and retry the command.

ORA-31454: invalid value <varname>string</varname> for operation parameter, expecting: ADD or DROP

Cause: The specified value was not ADD or DROP.

Action: Specify ADD or DROP and retry the command.

ORA-31455: nothing to ALTER

Cause: The specified column list is NULL and all optional control columns are 'N'.

Action: Specify one or more columns to ALTER.

ORA-31456: error executing a procedure in the DBMS_CDC_UTILITY package

Cause: An internal attempt to invoke a procedure within the DBMS_CDC_UTILITY package failed.

Action: Check the trace logs for more information. Ensure that the package has been installed successfully. Try issuing a DESCRIBE command from SQL on the package. If it fails, then try reinstalling the package. If it succeeds then try invoking one of the procedures from SQL.

ORA-31457: maximum length of description field exceeded

Cause: The maximum number of characters permitted in the description field was exceeded.

Action: The maximum length of the description field is 30 characters. Ensure the length does not exceed this value and retry the command.

ORA-31458: an internal error occurred

Cause: This is an internal error.

Action: Contact Oracle Worldwide Customer Support and report the error.

ORA-31459: system triggers for DBMS_CDC_PUBLISH package are not installed

Cause: One or more required system triggers are not installed. These triggers are required for the proper operation of Change Data Capture. Operations on Change tables cannot continue.

Action: Install or reenale the triggers, or reinstall the package.

ORA-31460: logfile location <varname>string</varname> is not an existing directory

Cause: The directory specification for logfile location for the change source, does not correspond with an existing directory, or the directory was not accessible.

Action: 1. Create the directory if it does not exist. If the directory does exist, change the file system permissions so the directory can be accessed. OR 2. perform ALTER CHANGE SOURCE and change the logfile_location to be an existing directory that contains the logfiles

ORA-31461: logfile location <varname>string</varname> contains no files that match pattern <varname>string</varname>

Cause: The directory specification for logfile location for the change source, does not contain any files whose names pattern-match the logfile_suffix.

Action: 1. Make sure that the logfile location contains logfiles whose names match the logfile_suffix pattern for the change set. OR 2. perform ALTER CHANGE SOURCE and change the logfile_suffix such that it matches the names of existing logfiles in the directory

ORA-31462: internal error while accessing metadata

Cause: An unexpected internal error occurred while CDC was accessing its internal Metadata.

Action: Contact Oracle Corporation

ORA-31463: logfile location <varname>string</varname> is an empty directory

Cause: The directory specification for logfile location for the change source, is an empty directory

Action: 1. Make sure it is the correct location of the logfiles. If it is, make sure the directory contains logfiles. OR 2. perform ALTER CHANGE SOURCE and change the logfile_location to be an existing directory that contains the logfiles

ORA-31464: target table for the change table no longer exists

Cause: User tried to drop a change table but its underlying storage table (that contains the change data) has been dropped.

Action: Contact Oracle Corporation

ORA-31465: cannot obtain a lock on the subscription

Cause: A timeout occurred while trying to place a lock on the subscription. Another session had already acquired the lock on the subscription.

Action: Ensure the subscription name is correct and correct it if necessary. If it is already correct, try the operation again after the session holding the lock has released it.

ORA-31466: no publications found

Cause: Did not find any publications that matched the input parameters or the user does not have the privileges to access the specified publication.

Action: Check the input parameters on the call to SUBSCRIBE. Validate that the proposed source table has been published by checking the USER_PUBLICATIONS view for that source table. Contact the publisher if user privileges are required to access the publication. Retry the command with correct security or publication information.

ORA-31467: no column found in the source table

Cause: The OBJECT_ID flag was set to 'Y' on the call to CREATE_CHANGE_TABLE and change table belongs to the synchronous change set. The corresponding object column was not detected in the source table.

Action: Create the change table with the OBJECT_ID flag set to 'N' or investigate why the object column is not in the source table and add it to the source table.

ORA-31468: cannot process DDL change record

Cause: The change set has stop_on_ddl enabled and was trying to process a DDL change record.

Action: Check the alert log to find out what the DDL record contained. Make any necessary changes to the change tables. Call ALTER_CHANGE_SET with recover_after_error and remove_ddl set to 'Y'.

ORA-31469: cannot enable Change Data Capture for change set <varname>string</varname>

Cause: The change set has reached the specified limit that was set up by the CREATE_CHANGE_SET command.

Action: Check the alert log to find out whether capture, apply or both reached the limit. Once apply reaches its limit, the change set is permanently disabled. Create a new change set with new limits to continue capturing data.

ORA-31470: asynchronous change tables must contain the RSID\$ column

Cause: If creating an asynchronous change table, the RSID was set to 'N'. If altering an asynchronous change table with an operation parameter of 'DROP' RSID was set to 'Y'.

Action: When creating asynchronous change tables, always specify 'Y' for the RSID parameter. When altering asynchronous change tables always specify 'N' for RSID.

ORA-31471: invalid OBJECT_ID value

Cause: An object_id value of 'y' was specified for an asynchronous change table.

Action: Specify an object_id parameter value of 'n' and call the procedure again.

ORA-31472: Importing Change Data Capture version <varname>string</varname>.<varname>string</varname> is too new

Cause: An attempt was made to Import a file that was exported by a newer version of Oracle than the target instance.

Action: If possible, re-export the file using a version of export that matches the import target. Objects can not be imported into previous versions of Oracle that did not support them.

ORA-31473: date bound out of range

Cause: The upper_bound or lower_bound specified in extend_window or purge_window API is beyond the range of records in the change set.

Action: Either select a bound that is within range or do not select an upper or lower bound at all.

ORA-31474: Invalid change view window

Cause: The specified upper_bound or lower_bound is forcing a condition where the change view window will have nothing in it.

Action: Select a different upper_bound or lower_bound and reissue the API call that produced the error. Alternatively, make the upper_bound or lower_bound parameter NULL and reissue the API call.

ORA-31475: redo log catalog contains no metadata for the source table

Cause: While advancing a change set, an CDC attempted to query the LogMiner dictionary system tables to obtain the columns from the source table. The query returned no rows. This may be because none of the redo logs contains a catalog, or it may be an internal error.

Action: First, verify that the source system contains the source table. execute dbms_logmnr_d.build procedure to populate the redos log with logminer dictionary information. If this has been done and the problem persists, then contact Oracle Corporation

ORA-31476: a change table data column is missing from the source table

Cause: While advancing a change set, an CDC determined that at least one of the data columns in a change table does not match the name of any of the columns in the source table. The source table column list is stored in dictionary table SYSTEM.LOGMNR_OBJ\$

Action: Make sure that all of the data columns of the change table have the same names as the corresponding columns in the source table, and that all the columns exist in the source table.

ORA-31477: could not detach LogMiner session during cleanup

Cause: Failure during detach from a LogMiner session during advance of an asynchronous change set. This is an internal error. This exception is raised when a previous exception occurred during the internal protocol with LogMiner, after which Change Data Capture attempted to detach the LogMiner session as part of recovery. The detach session also failed

Action: Contact Oracle Corporation

ORA-31478: could not detach LogMiner session after change set advance

Cause: Failure during detach from a LogMiner session after successful advance of an asynchronous change set. This is an internal error. This exception is raised when an asynchronous change set has been successfully advanced but CDC was unable to detach from the LogMiner session

Action: Contact Oracle Corporation

ORA-31479: could not create LogMiner session

Cause: Failure during create of a new LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31480: staging database and source database cannot be the same

Cause: A CDC API call specified a source database name that matched the staging database on which the CDC API call is being executed.

Action: Make sure that the CDC API call is being executed from the staging database and that the source database is correctly specified. The source database and staging database need to be different databases.

ORA-31481: change source <varname>string</varname> is not a HotLog change source

Cause: A change source was specified that was not a HotLog change source, but a HotLog change source was required.

Action: Correct the call to supply a HotLog change source.

ORA-31482: invalid option for non-distributed Hotlog change source

Cause: A CDC API call specified `enabled_source = 'Y'` on a non-Distributed HotLog change source.

Action: Specify a Distributed HotLog change source.

ORA-31483: cannot have spaces in the parameter <varname>string</varname>

Cause: The specified parameter contained at least 1 space character.

Action: Check the value of the specified parameter. Remove the spaces and reissue the CDC API call.

ORA-31484: source database version must be at least 9.2.0.6 or greater

Cause: The source database is not at version 9.2.0.6 or higher.

Action: Upgrade the source database to 9.2.0.6 or higher.

ORA-31485: invalid database link

Cause: The database link used to connect from a staging database to a source database was invalid. The database link may not exist, may not be accessible to the current user, or may have been redefined since the Distributed HotLog change source was originally created.

Action: Make sure that there is a database link to the source_database for the Distributed HotLog change source. Make sure this database link is accessible to the current user.

ORA-31486: cannot support column <varname>string</varname> in this configuration

Cause: The specified column cannot be used in a Distributed HotLog configuration when the source database version is 9.2.0.6 or 10.1.0.0.

Action: Remove the specified column from the CREATE_CHANGE_TABLE or ALTER_CHANGE_TABLE CDC API call.

ORA-31487: cannot support begin dates or end dates in this configuration

Cause: The specified values cannot be used in a Distributed HotLog configuration.

Action: Remove the specified values from the CREATE_CHANGE_SET CDC API call.

ORA-31488: cannot support change set <varname>string</varname> in this configuration

Cause: Change sources with the hot mine option enabled are limited to 1 change set. The system detected an existing change set so a second one can not be created.

Action: Associate the change set with a different change source.

ORA-31489: invalid DDL_MARKERS value

Cause: A DDL_MARKERS value of 'y' was specified for an synchronous change table.

Action: Specify a DDL_MARKERS parameter value of 'n' and call the procedure again.

ORA-31490: could not attach to LogMiner session

Cause: Failure during attach to a LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31491: could not add logfile to LogMiner session

Cause: Failure during add logfile to a LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31492: could not set session parameters for LogMiner session

Cause: Failure during set parameters for a LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31493: could not prepare session for LogMiner session

Cause: Failure during prepare session for a LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31494: could not activate a LogMiner session

Cause: Failure during activation of a LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31495: error in synchronous change table on "<varname>string</varname>". "<varname>string</varname>"

Cause: There was an error originating from this synchronous change table. One possible cause is that schema redefinition has occurred on the source table and one or more columns in the change table are now a different type than corresponding source columns. Another possible cause is that there is a problem accessing the synchronous change table.

Action: Check further error messages in stack for more detail about the cause. If there has been schema redefinition, drop and recreate the synchronous change table.

ORA-31496: must use DBMS_CDC_PUBLISH.DROP_CHANGE_TABLE to drop change tables

Cause: An attempt was made to use the SQL command DROP TABLE for change tables, but DROP TABLE is not supported for change tables.

Action: Use the DBMS_CDC_PUBLISH.DROP_CHANGE_TABLE procedure instead of the DROP TABLE command.

ORA-31497: invalid value specified for first_scn

Cause: The first_scn was not greater than zero or was less than the previous value of first_scn.

Action: Check the value of first_scn. Correct it to make sure it is an integer greater than zero and greater than any previous value for this change source.

ORA-31498: description and remove_description cannot both be specified

Cause: The description and remove_description parameters were both specified.

Action: Check the values of description and remove_description. Correct call to only supply one of these values.

ORA-31499: null value specified for required parameter <varname>string</varname>

Cause: A null value was specified for a parameter that requires an explicit value.

Action: Correct call to supply a value for this parameter.

ORA-31500: change source <varname>string</varname> is not a ManualLog change source

Cause: A change source was specified that is not a ManualLog change source, but a ManualLog change source is required.

Action: Correct call to supply a ManualLog change source.

ORA-31501: change source <varname>string</varname> is not an AutoLog change source

Cause: A change source was specified that was not an AutoLog change source, but an AutoLog change source was required.

Action: Correct call to supply an AutoLog change source.

ORA-31502: invalid number supplied for supplemental_processes

Cause: The caller supplied an invalid value for supplemental_processes. The value must be a positive integer.

Action: Correct call to supply a positive integer value for supplemental_processes.

ORA-31503: invalid date supplied for begin_date or end_date

Cause: The caller supplied an invalid value for begin_date or end_date. The value must be a valid date value.

Action: Correct call to supply a valid date value for begin_date and/or end_date.

ORA-31504: cannot alter or drop predefined change source

Cause: The caller attempted to alter or drop one of the predefined change sources HOTLOG_SOURCE or SYNC_SOURCE.

Action: Do not attempt to alter or drop a predefined change source or correct call to supply the name of a user-created change source.

ORA-31505: cannot alter or drop predefined change set

Cause: The caller attempted to alter or drop the predefined change set SYNC_SET.

Action: Do not attempt to alter or drop the predefined change set or correct call to supply the name of a user-created change set.

ORA-31506: duplicate subscription name <varname>string</varname>

Cause: A subscription by the specified name already exists.

Action: Recreate the subscription with a unique name.

ORA-31507: <varname>string</varname> parameter value longer than maximum length <varname>string</varname>

Cause: A value was specified for a parameter that was longer than the maximum permitted length.

Action: Correct the call to supply a shorter value for this parameter that fits within the maximum length.

ORA-31508: invalid parameter value for synchronous change set

Cause: A parameter value was specified that is not supported for synchronous change sets.

Action: Correct the call to supply only valid parameter values for a synchronous change set. Synchronous change sets only support the default values for the following parameters: begin_scn, end_scn, begin_date, end_date, stop_on_ddl, supplemental_processes.

ORA-31509: publication does not exist

Cause: The specified publication did not exist or the specified subscription subscribed to a publication that no longer exists.

Action: Recheck the publication or subscription specified. Either call the procedure again with an existing publication or create a new subscription that only subscribes to existing publications.

ORA-31510: name uses reserved prefix CDC\$

Cause: A name was specified that starts CDC\$. The name prefix CDC\$ is reserved for use by Oracle Corporation.

Action: Change the name so it does not start with characters CDC\$

ORA-31511: name exceeds maximum length of 30 characters

Cause: A name was supplied that exceeds the maximum length of 30 characters.

Action: Change the name so it does not exceed 30 characters

ORA-31512: name cannot contain double quotation marks

Cause: A name containing a double quotation mark was supplied. Subscription names cannot contain the double quotation mark.

Action: Change the name so it has no double quotation marks

ORA-31513: unsupported column type specified in change table

Cause: A source column of an unsupported type was specified for inclusion in a change table. Columns types of LOB or LONG are not currently supported for change capture.

Action: Change the column list so that it does not include columns of LOB or LONG types.

ORA-31514: change set <varname>string</varname> disabled due to capture error

Cause: This change set has encountered a capture error and was disabled.

Action: Contact the change set's publisher to request that the capture error be resolved. Subscriptions using this change set cannot be activated or have their subscription windows extended or purged until the capture error is resolved.

ORA-31515: CDC change source <varname>string</varname> already exists

Cause: A Change Data Capture change source intended for import already existed.

Action: Either verify that the existing change source has the desired characteristics or drop the existing change source and perform the import again.

ORA-31516: CDC change set <varname>string</varname> already exists

Cause: A Change Data Capture change set intended for import already existed.

Action: Either verify that the existing change set has the desired characteristics or drop the existing change set and perform the import again.

ORA-31517: CDC change table <varname>string</varname>.<varname>string</varname> already exists

Cause: A Change Data Capture change table intended for import already existed.

Action: Either verify that the existing change table has the desired characteristics or drop the existing change table and perform the import again.

ORA-31518: change column <varname>string</varname> already exists in CDC change table <varname>string</varname>.<varname>string</varname>

Cause: A column in a Change Data Capture change table intended for import was already present in the change table.

Action: Either verify that the change table contains the desired columns or drop the change table and perform the import again.

ORA-31519: CDC subscription <varname>string</varname> already exists

Cause: A Change Data Capture subscription intended for import already existed.

Action: Either verify that the existing subscription has the desired characteristics or drop the existing subscription and perform the import again.

ORA-31520: CDC subscription <varname>string</varname> already subscribes to publication ID <varname>string</varname>

Cause: A Change Data Capture subscription intended for import already subscribed to a publication.

Action: Either verify that the existing subscription has the desired characteristics or drop the existing subscription and perform the import again.

ORA-31521: CDC subscription <varname>string</varname> already subscribes to publication ID <varname>string</varname> column <varname>string</varname>

Cause: A Change Data Capture subscription intended for import already subscribed to a published column.

Action: Either verify that the existing subscription has the desired characteristics or drop the existing subscription and perform the import again.

ORA-31522: could not find Streams object <varname>string</varname> for CDC change set <varname>string</varname>

Cause: An underlying Streams capture, apply, or queue was missing for an imported Change Data Capture change set.

Action: Drop the imported change set because it is invalid. Retry the import, ensuring that STREAMS_CONFIGURATION=y is specified.

ORA-31523: could not find change source <varname>string</varname> for CDC change set <varname>string</varname>

Cause: The change source was missing for an imported Change Data Capture change set.

Action: Drop the imported change set because it is invalid. Verify that the schema containing the missing change source was included in the original export. If needed, perform the export again, including the schema of the missing change source.

ORA-31524: could not find change set <varname>string</varname> for CDC change table <varname>string</varname>.<varname>string</varname>

Cause: The change set was missing for an imported Change Data Capture change table.

Action: Drop the imported change table because it is invalid. Verify that the schema containing the missing change set was included in the original export. If needed, perform the export again, including the schema of the missing change set.

ORA-31525: could not find column `<varname>string</varname>` in CDC change table `<varname>string</varname>.<varname>string</varname>`

Cause: A column was missing for an imported Change Data Capture change table.

Action: It is likely that this table existed before the import operation and import did not overwrite it. Determine whether the imported change table should supercede the original table. If so, drop the original table and retry the import. If not, the change table must have a different name in order to be imported.

ORA-31526: could not find source table `<varname>string</varname>` for CDC change table `<varname>string</varname>.<varname>string</varname>`

Cause: The source table was missing or was not set up correctly for an imported Change Data Capture change table. A synchronous change table requires the source table to exist and have the Change Data Capture trigger defined on it. An asynchronous change table requires table rules to be defined for the source table.

Action: Drop the imported change table because it is invalid. Verify that the schema containing the source table was included in the original export. If needed, perform the export again, including the schema of the source table. If change table is asynchronous, ensure that `STREAMS_CONFIGURATION=y` is specified for the import.

ORA-31527: could not find source column `<varname>string</varname>` for CDC change table `<varname>string</varname>.<varname>string</varname>`

Cause: A source column was missing for an imported Change Data Capture change table.

Action: Drop the imported change table because it is invalid. Verify that the schema containing the source table was included in the original export. If needed, perform the export again, including the schema of the missing source table.

ORA-31528: could not find change set `<varname>string</varname>` for CDC subscription `<varname>string</varname>`

Cause: The change set was missing for an imported Change Data Capture subscription.

Action: Drop the imported subscription because it is invalid. Verify that the schema containing the missing change set was included in the original export. If needed, perform the export again, including the schema of the missing change set.

ORA-31529: could not find publication for CDC subscriber view `<varname>string</varname>.<varname>string</varname>`

Cause: A publication was missing for an imported Change Data Capture subscription.

Action: Drop the imported subscription because it is invalid. Verify that the schema containing the missing publication was included in the original export. If needed, perform the export again, including the schema of the missing publication.

ORA-31530: could not find published column `<varname>string</varname>` for CDC subscriber view `<varname>string</varname>.<varname>string</varname>`

Cause: A published column was missing for an imported Change Data Capture subscription.

Action: Drop the imported subscription because it is invalid. Verify that the schema containing the missing published column was included in the original export. If needed, perform the export again, including the schema of the missing published column.

ORA-31531: could not find column <varname>string</varname> in CDC subscriber view <varname>string</varname>.<varname>string</varname>

Cause: A column was missing in a subscriber view for an imported Change Data Capture subscription.

Action: It is likely that this view existed before the import operation and import did not overwrite it. Determine whether the imported subscriber view should supercede the original view. If so, drop the original view and retry the import. If not, the subscriber view must have a different name in order to be imported.

ORA-31532: cannot enable change source <varname>string</varname>

Cause: The change source cannot be enabled when there is no change table created in any of the change sets associated with the change source.

Action: Add a change table to a change set before enabling the the change source.

ORA-31533: only one change set (<varname>string</varname>) is allowed in change source

Cause: A Distributed HotLog change source can contain at most one change set.

Action: Create a new change source and create the change set in the new change source.

ORA-31534: Change Data Capture <varname>string</varname> publisher <varname>string</varname> is missing DBA role

Cause: The publisher does not have the DBA role, which is required by the Change Data Capture operation.

Action: Grant the DBA role the Change Data Capture publisher.

ORA-31535: cannot support change source <varname>string</varname> in this configuration

Cause: Each database can only have one change source with hot mine option enabled. The system detected an existing hot mine change source in the database, therefore, a second hot mine change source cannot be created.

Action: Remove the existing change source and create this new change source again.

ORA-31536: cannot support encrypted column <varname>string</varname> in the source table

Cause: One of the columns specified in the parameter COLUMN_TYPE_LIST was an encrypted column in the source table

Action: remove the encrypted column in the parameter COLUMN_TYPE_LIST

ORA-31537: specified purge date is invalid

Cause: The purge date specified was an invalid date or was outside of the range of data currently in the change set.

Action: Do not specify purge date or specify a date that is within the range of data in the change set.

ORA-31538: change set <varname>string</varname> disabled

Cause: This change set was disabled.

Action: Contact the change set's publisher to request that the change set be enabled. Subscriptions using this change set cannot be activated or have their subscription windows extended or purged until the change set is enabled.

ORA-31539: no privilege to create job

Cause: This change table could not be created because the create job privilege is needed to submit the default purge job.

Action: Grant the create job privilege and try again

ORA-31540: <varname>string</varname> is not a valid identifier

Cause: All Change Data Capture (CDC) identifiers must have at most 30 characters, and must start with a letter that is followed by any combination of letters, numerals, and the signs '\$', '_', and '#'. Other characters cannot be used in identifiers. The rules for CDC identifiers are the same as for PL/SQL identifiers.

Action: Rename object to conform to CDC naming rules and try again.

ORA-31600: invalid input value <varname>string</varname> for parameter <varname>string</varname> in function <varname>string</varname>

Cause: A NULL or invalid value was supplied for the parameter.

Action: Correct the input value and try the call again.

ORA-31601: Function <varname>string</varname> cannot be called now that fetch has begun.

Cause: The function was called after the first call to FETCH_xxx.

Action: Correct the program.

ORA-31602: parameter <varname>string</varname> value "<varname>string</varname>" in function <varname>string</varname> inconsistent with <varname>string</varname>

Cause: The parameter value is inconsistent with another value specified by the program. It may be inconsistent with the object type associated with the OPEN context, or it may be of the wrong datatype (a boolean rather than a text string or vice versa).

Action: Correct the program

ORA-31603: object "<varname>string</varname>" of type <varname>string</varname> not found in schema "<varname>string</varname>"

Cause: The specified object was not found in the database.

Action: Correct the object specification and try the call again.

ORA-31604: invalid <varname>string</varname> parameter "<varname>string</varname>" for object type <varname>string</varname> in function <varname>string</varname>

Cause: The specified parameter value is not valid for this object type.

Action: Correct the parameter and try the call again.

ORA-31605: the following was returned from <varname>string</varname> in routine <varname>string</varname>:lnLPX-<varname>number</varname>: <varname>string</varname>

Cause: An LPX routine (XML/XSL processing) returned an internal error number to its PL/SQL wrapper routine in facility KUX which provides the implementation for package UTL_XML.

Action: Look up the LPX error number and follow its corrective action.

ORA-31606: XML context <varname>number</varname> does not match any previously allocated context

Cause: A method in package UTL_XML was called with an invalid XML context handle. All handles must have previously been allocated by UTL_XML.XMLINIT.

Action: Always call XMLINIT before any other methods in pkg. UTL_XML.

ORA-31607: function <varname>string</varname> is inconsistent with transform.

Cause: Either (1) FETCH_XML was called when the "DDL" transform was specified, or (2) FETCH_DDL was called when the "DDL" transform was omitted.

Action: Correct the program.

ORA-31608: specified object of type <varname>string</varname> not found

Cause: The specified object was not found in the database.

Action: Correct the object specification and try the call again.

ORA-31609: error loading file "<varname>string</varname>" from file system directory "<varname>string</varname>"

Cause: The installation script initmeta.sql failed to load the named file from the file system directory into the database.

Action: Examine the directory and see if the file is present and can be read.

ORA-31610: cannot call this function from a non-master process

Cause: Called a Data Pump process model function from a process which is not a master process.

Action: Create a master process first. Then call the function from the master process. If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31611: Data Pump multiple processing setting is locked and cannot be changed.

ORA-31612: Allocation of process descriptor failed.

Cause: During creation of a master process or a worker process, a failure occurred allocating a process descriptor for the process.

Action: Try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31613: Master process <varname>string</varname> failed during startup.

Cause: The master process whose name is listed failed during startup.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31614: routine <varname>string</varname> received this error from <varname>string</varname>: ln<varname>string</varname>

Cause: The call to the specified routine failed and the specific error text is included in this error message (the last %s string).

Action: Correct inputs to the specified routine.

ORA-31615: routine <varname>string</varname> received this error: ln<varname>string</varname>

Cause: The specified routine failed and the specific error text is included in this error message (the last %s string).

Action: Correct inputs to the specified routine.

ORA-31616: unable to write to dump file "<varname>string</varname>"

Cause: Export was unable to write to the export file, probably because of a device error. This message is usually followed by a device message from the operating system.

Action: Take appropriate action to restore the device.

ORA-31617: unable to open dump file "<varname>string</varname>" for write

Cause: Export was unable to open the export file for writing. This message is usually followed by device messages from the operating system.

Action: Take appropriate action to restore the device.

ORA-31618: FILESIZE is outside valid range of <varname>string</varname>KB to <varname>string</varname>TB

Cause: The value specified for the FILESIZE parameter was either too small to hold the header information for the export file, plus any data, or exceeded the allowed maximum size for a dump file.

Action: Retry the operation using a value for FILESIZE that falls within the valid range.

ORA-31619: invalid dump file "<varname>string</varname>"

Cause: Either the file was not generated by Export or it was corrupted.

Action: If the file was indeed generated by Export, report this as an Import bug and submit the export file to Oracle Customer Support.

ORA-31620: file or device "<varname>string</varname>" cannot be specified for <varname>string</varname> operation

Cause: There was an inappropriate use of file or device in the current operation.

Action: Correct operation or job setup.

ORA-31621: error creating master process

Cause: Setup to create a master process failed.

Action: Refer to any following error messages for possible actions. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31622: premature end of file at block <varname>string</varname>

Cause: The end of the dump file input was unexpectedly reached. This is caused either by a corrupted Data Pump export dump file or by an Oracle internal error. This message should be preceded by another message identifying the name of the dump file in question.

Action: Retry the Data Pump import operation. Contact Oracle Support Services if the problem persists.

ORA-31623: a job is not attached to this session via the specified handle

Cause: An attempt to reference a job using a handle which is invalid or no longer valid for the current session.

Action: Select a handle corresponding to a valid active job or start a new job.

ORA-31624: A job cannot be modified after it has started.

Cause: The user attempted to change the definition of a Data Pump job through filters, transforms or parameters after it had started. These changes can only be made while defining a job.

Action: Stop the current job and rerun it with the correct definition.

ORA-31625: Schema <varname>string</varname> is needed to import this object, but is inaccessible

Cause: An error occurred when attempting to import objects. The schema specified is needed to import this object, but access to this schema is not available.

Action: Refer to any following error messages for possible actions. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31626: job does not exist

Cause: An invalid reference to a job which is no longer executing, is not executing on the instance where the operation was attempted, or that does not have a valid Master Table. Refer to any following error messages for clarification.

Action: Start a new job, or attach to an existing job that has a valid Master Table.

ORA-31627: API call succeeded but more information is available

Cause: The user specified job parameters that yielded informational messages.

Action: Call DBMS_DATAPUMP.GET_STATUS to retrieve additional information.

ORA-31628: error getting worker process exception

Cause: Attempt to get a worker process exception failed.

Action: Refer to any following error messages for possible actions. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31629: unable to allocate additional memory

Cause: A dynamic memory allocation failure occurred.

Action: Report this problem to a database administrator.

ORA-31630: a job name is required to attach a job for user <varname>string</varname>

Cause: No job name was supplied for an attach and the user has either no jobs executing or multiple jobs executing.

Action: Provide a job name for attach to use in selecting an executing job, or to use for restarting a stopped job.

ORA-31631: privileges are required

Cause: The necessary privileges are not available for operations such as: restarting a job on behalf of another owner, using a device as a member of the dump file set, or omitting a directory object associated with any of the various output files. Refer to any following error messages for additional information.

Action: Select a different job to restart, try a different operation, or contact a database administrator to acquire the needed privileges.

ORA-31632: master table "<varname>string</varname>.<varname>string</varname>" not found, invalid, or inaccessible

Cause: A Master Table is required but no such table exists, or the content is not consistent with that of a valid Master Table, or the table is not accessible. Refer to any following error messages for clarification.

Action: Make sure a valid Master Table exists, and eliminate any problems indicated by the following error messages.

ORA-31633: unable to create master table "<varname>string</varname>.<varname>string</varname>"

Cause: Job creation failed because a Master Table and its indexes could not be created, most commonly due to the pre-existence of a table with the same name (job name) in the user schema. Refer to any following error messages for clarification.

Action: Select a different job name, DROP the existing table, or eliminate any problems indicated by the following error messages.

ORA-31634: job already exists

Cause: Job creation or restart failed because a job having the selected name is currently executing. This also generally indicates that a Master Table with that job name exists in the user schema. Refer to any following error messages for clarification.

Action: Select a different job name, or stop the currently executing job and re-try the operation (may require a DROP on the Master Table).

ORA-31635: unable to establish job resource synchronization

Cause: A lock used in synchronizing Data Pump resources during job creation and deletion could not be obtained during job creation. This indicates that a process for some other Data Pump job has not released the lock due to an internal error.

Action: Eliminate the processes for any failed Data Pump job and try to create the new job again. If the error continues to occur, contact Oracle Customer Support and report the error.

ORA-31636: session is already attached to job <varname>string</varname> for user <varname>string</varname>

Cause: The session executing the attach is already attached to the specified job.

Action: Select a different job or create a new session.

ORA-31637: cannot create job <varname>string</varname> for user <varname>string</varname>

Cause: Unable to create or restart a job. Refer to any following or prior error messages for clarification.

Action: Eliminate the problems indicated.

ORA-31638: cannot attach to job <varname>string</varname> for user <varname>string</varname>

Cause: Unable to attach a job to a session. Refer to any following or prior error messages for clarification.

Action: Eliminate the problems indicated.

ORA-31639: unexpected data found

Cause: The Master Table or Data Pump file contents appear invalid. The table or file may not have been produced by a Data Pump job, or they may have been corrupted.

Action: Select a different job name (Master Table) or replace the table or file with one produced by Data Pump.

ORA-31640: unable to open dump file "<varname>string</varname>" for read

Cause: Import was unable to open the export file for reading. This message is usually followed by device messages from the operating system.

Action: Take appropriate action to restore the device.

ORA-31641: unable to create dump file "<varname>string</varname>"

Cause: Export was unable to create the specified file with write enabled.

Action: Check the file name and file system for the source of the error.

ORA-31642: the following SQL statement fails: \n<varname>string</varname>

Cause: An internal error was generated from package DBMS_METADATA.

Action: Contact Oracle Customer Support and report the error.

ORA-31643: unable to close dump file "<varname>string</varname>"

Cause: Export or Import was unable to close the dump file. This message is usually followed by device messages from the operating system.

Action: Take appropriate action to restore the device.

ORA-31644: unable to position to block number <varname>string</varname> in dump file "<varname>string</varname>"

Cause: Export or Import was unable to position its file pointer to a specific block within the dump file. This message is usually followed by device messages from the operating system.

Action: Take appropriate action based on the device messages.

ORA-31645: unable to read from dump file "<varname>string</varname>"

Cause: Import could not read from the dumpfile, probably because of a device error. This message is usually followed by a device message from the operating system.

Action: Take appropriate action to restore the device.

ORA-31646: no dump files found**ORA-31647: Worker process received exit message from Master process****ORA-31648: Timeout before master process <varname>string</varname> finished initialization.**

Cause: The master process whose name is listed started up but did not finish its initialization within the allowed time limit.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31649: Master process <varname>string</varname> violated startup protocol.

Cause: The master process whose name is listed started up but then exited before notifying the creating process that it was finished with initialization.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31650: timeout waiting for master process response

Cause: After creating the job infrastructure and sending the initial message to the master process, it failed to respond in the allotted time and most likely aborted during startup.

Action: Retry the open or attach request. Contact Oracle Customer Support if the problem persists.

ORA-31651: communication error with master process - detaching job

Cause: Unexpected failure trying to communicate with the master process.

Action: Attach again and retry operation. Contact Oracle Customer Support if the problem persists.

ORA-31652: command response message was invalid type - detaching job

Cause: Something horribly wrong with the command/response protocol.

Action: Reattach and retry operation. Contact Oracle Customer Support if the problem persists.

ORA-31653: unable to determine job operation for privilege check

Cause: Failure trying to determine the operation of the current job in order to test for appropriate privileges.

Action: Retry in case it's an intermittent failure. If it still fails, detach, reattach, and retry the call. Contact Oracle Customer Support if the problem persists.

ORA-31654: unable to convert file or volume size as specified to a number

Cause: File or volume size specification has an error that prevents it from being converted into a numeric value.

Action: Fix the call.

ORA-31655: no data or metadata objects selected for job

Cause: After the job parameters and filters were applied, the job specified by the user did not reference any objects.

Action: Verify that the mode of the job specified objects to be moved. For command line clients, verify that the INCLUDE, EXCLUDE and CONTENT parameters were correctly set. For DBMS_DATAPUMP API users, verify that the metadata filters, data filters, and parameters that were supplied on the job were correctly set.

ORA-31656: cannot use TABLESPACE_EXPR filter with transportable mode

Cause: A TABLESPACE_EXPR metadata filter was supplied for a transportable mode import job. Transportable mode import does not support the subsetting of tablespaces from a dump file set.

Action: Remove the filter expression.

ORA-31657: data filter name can not be defaulted

Cause: A null data filter name was supplied.

Action: Fix the call to specify a data filter name.

ORA-31658: specifying a schema name requires a table name

Cause: The caller specified a schema name but neglected to specify a corresponding table name.

Action: Fix the call to include a table name.

ORA-31659: status message was invalid type - detaching job

Cause: Message from the master process on the status queue had an invalid message type, indicating a failure in the protocol.

Action: Reattach and retry the operation. Contact Oracle Customer Support if the problem persists.

ORA-31660: metadata filter name can not be defaulted

Cause: A null metadata filter name was supplied.

Action: Fix the call to specify a metadata filter name.

ORA-31661: there are no metadata transform values of type VARCHAR2

Cause: The specified metadata transform value was an invalid type.

Action: Fix the call to specify a valid metadata transform value.

ORA-31662: metadata transform name can not be defaulted

Cause: A null metadata transform name was supplied.

Action: Fix the call to specify a metadata transform name.

ORA-31663: metadata remap name can not be defaulted

Cause: A null metadata remap name was supplied.

Action: Fix the call to specify a metadata remap name.

ORA-31664: unable to construct unique job name when defaulted

Cause: The job name was defaulted, and the name creation algorithm was unable to find a unique job name for this schema where the table name (for the master table) didn't already exist.

Action: Specify a job name to use or delete some of the existing tables causing the name conflicts.

ORA-31665: mode can only be defaulted for IMPORT and SQL_FILE operations

Cause: The job mode can not be null except for IMPORT and SQL_FILE operations.

Action: Fix the call to specify the job mode.

ORA-31666: Master process <varname>string</varname> had an unhandled exception.

Cause: A Data Pump process model master process had an unhandled exception condition.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31667: parameter name can not be defaulted

Cause: A null was supplied for the parameter name.

Action: Fix the call by providing a valid parameter name.

ORA-31668: Timeout before worker process <varname>string</varname> finished initialization.

Cause: The worker process whose name is listed started up but did not finish its initialization within the allowed time limit.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31669: Worker process <varname>string</varname> violated startup protocol.

Cause: The worker process whose name is listed started up but then exited before notifying the creating process that it was finished with initialization.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31670: Username argument must be specified and non-null.

Cause: Called change user with a NULL username or a null string.

Action: Specify a valid username argument. If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31671: Worker process <varname>string</varname> had an unhandled exception.

Cause: A Data Pump process model worker process had an unhandled exception condition.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31672: Worker process <varname>string</varname> died unexpectedly.

Cause: A Data Pump process model worker process died unexpectedly, so PMON is cleaning up the process.

Action: Check your system for problems. Check the trace file for the process, if one was created, for any additional information. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31673: worker process interrupt for normal exit by master process

Cause: A worker process was requested to clean up and exit because the master process is doing a normal exit.

Action: If this error occurs from a Data Pump client (e.g. expdp or impdp), it means that the master process for the operation exited prematurely. Try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31674: worker process interrupt for unhandled exception in master process

Cause: A worker process was requested to clean up and exit because an unhandled exception occurred in the master process.

Action: If this error occurs from a Data Pump client (e.g. expdp or impdp), it means that the master process for the operation had an unhandled exception. Check the log file for the operation and the trace file for the master process for any additional information. Try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31675: worker process interrupt for unexpected death of master process

Cause: A worker process was requested to clean up and exit (signaled by PMON, doing cleanup because the master process died unexpectedly).

Action: If this error occurs from a Data Pump client (e.g. expdp or impdp), it means that the master process for the operation died unexpectedly. Check the log file for the operation and the trace file for the master process for any additional information. Try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31676: illegal value for number of workers, <varname>string</varname>

Cause: Called create worker processes with an illegal number of workers specified.

Action: Make sure that the number of workers value is greater than 0 and less than the maximum value for the platform (normally 32767). If this error occurs from a Data Pump client (e.g. expdp or impdp) and you specified the parallel parameter, try the operation again with a smaller value for the parallel parameter. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31677: Estimate in progress using <varname>string</varname> method...

ORA-31678: Worker Aborting Job

ORA-31679: Table data object <varname>string</varname> has long columns, and longs can not be loaded/unloaded using a network link

Cause: Table data objects that contain long columns can not be selected over a network link.

Action: Export this table to a file and then import the same table from the file.

ORA-31680: . . exported <varname>string</varname> <varname>string</varname> rows

ORA-31681: . . imported <varname>string</varname> <varname>string</varname> rows

ORA-31682: Master table <varname>string</varname> successfully loaded/unloaded

ORA-31683: Processing object type <varname>string</varname>

ORA-31684: Object type <varname>string</varname> already exists

ORA-31685: Object type <varname>string</varname> failed due to insufficient privileges. Failing sql is:\n<varname>string</varname>

ORA-31686: error creating worker processes

Cause: Setup to create worker processes failed.

Action: Refer to any following error messages for possible actions. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31687: error creating worker process <varname>string</varname> with worker id <varname>string</varname>

Cause: Attempt to create the listed worker process failed.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31688: Worker process <varname>string</varname> failed during startup.

Cause: The worker process whose name is listed failed during startup.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31689: illegal value for base worker id, <varname>string</varname>

Cause: Called create worker processes with an illegal base worker id value specified.

Action: Make sure that the base worker id value is greater than 0 and less than the maximum value for the platform (normally 32767). If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31690: Process name buffer size must be specified and must be greater than 0.

Cause: Called get worker exception and either specified NULL or 0 for the buffer size argument.

Action: Be sure to specify a buffer size that is big enough to hold the worker process name (e.g. 30 bytes). If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31691: The worker received message number <varname>string</varname> from the MCP, which is invalid.

Cause: Bad code.

Action: Fix mcp code and reissue export/import command.

ORA-31692: The following SQL statement failed trying to insert a row into the Master table:\n<varname>string</varname>

Cause: Bad code.

Action: Fix code and reissue export/import command.

ORA-31693: Table data object <varname>string</varname> failed to load/unload and is being skipped due to error:\n<varname>string</varname>

Cause: Table failed to load or unload due to some error.

Action: Check load/unload error, correct problem and retry command.

ORA-31694: master table <varname>string</varname> failed to load/unload

Cause: Master table failed to load or unload.

Action: Check load/unload error, correct problem and retry command.

ORA-31695: Inconsistent master table on restart. The following SQL statement returned <varname>string</varname> identical objects.\n<varname>string</varname>

Cause: Master table on restart has the same object inserted multiple times.

Action: Restart not possible, reissue original export/import.

ORA-31696: unable to export/import <varname>string</varname> using client specified <varname>string</varname> method

Cause: Table attributes prevent client specified method for exporting or importing data.

Action: Use default 'DATA_ACCESS' parameter value.

ORA-31697: aborting operation at process order number <varname>string</varname>

Cause: User asked for it.

Action: Don't ask for it.

ORA-31698: Error stack buffer size must be specified and must be greater than 0.

Cause: Called get worker exception and either specified NULL or 0 for the error stack size argument.

Action: Be sure to specify an error stack buffer size that is big enough to hold the error stack string (e.g. 4096 bytes). If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31699: test error for use in testing**ORA-31700: Very long string supplied for AUDIT_SYSLOG_LEVEL parameter**

Cause: Very long string supplied for AUDIT_SYSLOG_LEVEL in init.ora

Action: Use a valid facility.level such as "local1.notice" as described in syslog's manual pages

ORA-31701: Event to enable xmltype table export/import with schema

Cause: Event to enable xmltype table export/import with schema

Action: Disable the event at level 0x100

ORA-31702: This privilege has already been granted.

Cause: The GRANT statement contained a privilege that was already granted to the user.

Action: Remove the privilege from the statement and retry.

ORA-31703: cannot grant <varname>string</varname> privilege on behalf of other users

Cause: Granting of the privilege was attempted by a user other than SYS or the owner.

Action: Granting of the privilege can only be done by SYS or the owner.

ORA-31704: cannot revoke <varname>string</varname> privilege on behalf of other users

Cause: Revoking of the privilege was attempted by a user other than SYS or the owner.

Action: Revoking of the privilege can only be done by SYS or the owner.

ORA-31705: failed to get library object

Cause: An error occurred while trying to lock the library object.

Action: Retry the operation later.

ORA-31706: role <varname>string</varname> not granted commonly or does not exist

Cause: Either the role was not granted commonly to the user, or the role did not exist.

Action: Create the role or grant the role commonly to the user and retry the operation.

ORA-31901: the current operation was cancelled by the user

Cause: The user requested to cancel current operation

Action: No action is necessary

ORA-31902: access advisor debug/testing trace

ORA-31903: cannot unregister materialized view for Synchronous refresh

Cause: One or more materialized views in the materialized views list were not registered for Synchronous refresh.

Action: Check catalog views for which materialized views are registered.

ORA-31904: Synchronous refresh debug or testing trace

ORA-31905: Synchronous refresh cannot be used for materialized view "`<varname>string</varname>". "<varname>string</varname>"\n<varname>string</varname>`

Cause: The materialized view did not meet the requirements for Synchronous refresh.

Action: The query defining the materialized view must conform to a star or snowflake schema, the fact-table and materialized view must both be partitioned, and the partition-key of the materialized view must be functionally-dependent on the partition-key of the fact-table. Run CAN_SYNCREF_TABLE to obtain more diagnostics and troubleshoot the problem further.

ORA-31906: Staging log of "`<varname>string</varname>". "<varname>string</varname>" contains rows which do not belong to any of the table's partitions.`

Cause: Synchronous refresh detected this error during PREPARE_REFRESH.

Action: Check the data in the staging log for validity. If the data is valid, create additional partitions,, including a default partition if needed, with the ALTER TABLE command.

ORA-31907: Synchronous refresh of "`<varname>string</varname>". "<varname>string</varname>" results in rows which do not belong to any of the materialized view's partitions.`

Cause: Synchronous refresh detected this error during PREPARE_REFRESH.

Action: Check the data in the staging logs of the materialized view's base tables for validity. If the data is valid, create additional partitions, including a default partition if needed, with the ALTER MATERIALIZED VIEW command.

ORA-31908: cannot modify the contents of a table with a staging log

Cause: An attempt was made to alter the contents of a table with a staging log.

Action: Do not use the following ALTER TABLE statements on a table with a staging log: * ALTER TABLE EXCHANGE PARTITION * ALTER TABLE DROP PARTITION * ALTER TABLE TRUNCATE PARTITION You must use the REGISTER_PARTITION_OPERATION procedure in the DBMS_SYNC_REFRESH package to perform these operations.

ORA-31909: base table "`<varname>string</varname>". "<varname>string</varname>" must have primary key or foreign key when creating a staging log`

Cause: The base table did not have a primary or foreign key defined.

Action: Define primary key or foreign key on the base table.

ORA-31910: staging log exists on table "<varname>string</varname>". "<varname>string</varname>"

Cause: Staging log was already generated on the base table.

Action: Do not attempt to create the staging log.

ORA-31911: MV log on table "<varname>string</varname>". "<varname>string</varname>" is not completely consumed.

Cause: Materialized views (MV) referencing the base table were not refreshed.

Action: Refresh all the MVs referencing the base table before altering MV log to staging log.

ORA-31912: Cannot alter MV log. MV log was not created on table "<varname>string</varname>". "<varname>string</varname>"

Cause: Materialized view (MV) log was not created on the base table.

Action: Do not alter the MV log.

ORA-31913: Log is already an MV log on table "<varname>string</varname>". "<varname>string</varname>".

Cause: An attempt was made to alter a staging log to a materialize view (MV) log when it was already an MV log.

Action: Do not alter the MV log.

ORA-31914: Staging log was created on table "<varname>string</varname>". "<varname>string</varname>"

Cause: Staging log was not created on base table.

Action: Do not alter the staging log.

ORA-31915: At least one MV referencing table "<varname>string</varname>". "<varname>string</varname>" is REFRESH ON COMMIT.

Cause: At least one materialize view (MV) referencing a table is defined as REFRESH ON COMMIT.

Action: Do not create or alter to the staging log.

ORA-31916: Staging log on table "<varname>string</varname>". "<varname>string</varname>" cannot be dropped or altered.

Cause: The current group contained a materialize view (MV) referencing the table.

Action: Do not drop or alter the staging log.

ORA-31917: illegal operation on a table which has been locked by synchronous refresh

Cause: DML or DDL was used on a base table that had a staging log or was locked by synchronous refresh. The synchronous refresh operation locks tables related to the refresh group at PREPARE_REFRESH time and unlocks them after the EXECUTE_REFRESH is done to prevent wrong results.

Action: Do not perform DML or DDL on such tables. You cannot modify tables locked by PREPARE_REFRESH until you have done the corresponding EXECUTE_REFRESH.

ORA-31918: The materialized view "<varname>string</varname>" is registered for synchronous refresh and cannot be altered or dropped.

Cause: The materialized view was registered for synchronous refresh.

Action: Do not drop or alter the materialized view.

ORA-31919: Value of DMLTYPE\$\$ column is not one of ('I','D','UO','UN') in staging log "<varname>string</varname>"

Cause: Value of DMLTYPE\$\$ column was not one of ('I','D','UO','UN').

Action: Update the staging log.

ORA-31920: 'UO' and 'UN' row counts or key values not matched in the staging log "<varname>string</varname>"

Cause: 'UO' and 'UN' row counts or key values were not matched in the staging log.

Action: Update the staging log.

ORA-31921: Staging log rows to be updated, deleted or inserted were invalid. In<varname>string</varname>

Cause: The staging log rows to be updated, deleted or inserted were invalid.

Action: Change the staging log key in the staging log table.

ORA-31922: Foreign key must contain partition key in table "<varname>string</varname>"

Cause: The foreign key did not contain a partition key. If a table does not have a primary key, the foreign key must contain a partition key.

Action: Change the foreign key or partition key in the table.

ORA-31923: must have primary key or partition key in table "<varname>string</varname>"

Cause: The table did not have a primary key or a partition key.

Action: Add a primary key or partition key to the table.

ORA-31924: must have either primary key or foreign key in table "<varname>string</varname>"

Cause: The table did not have a primary key or a foreign key.

Action: Add a primary key or foreign key to the table.

ORA-31925: Every row in staging log "<varname>string</varname>" should contain non-NULL values for all the columns comprising staging log key.

Cause: The staging log contained NULL values in key columns.

Action: Fill in non-NULL values to the staging log key columns.

ORA-31926: Type "<varname>string</varname>" is not supported for synchronous refresh.

Cause: An attempt was made to create a staging log on a base table containing an unsupported data type.

Action: Do not attempt synchronous refresh on this base table. Refer to the documentation.

ORA-31927: Staging log does not exist on table "<varname>string</varname>" "<varname>string</varname>"

Cause: An attempt to prepare a staging log that did not exist.

Action: Create a staging log on the table first.

ORA-31928: Synchronous refresh error<varname>string</varname>

Cause: An error occurred in the synchronous refresh package (DBMS_SYNC_REFRESH). This message will be followed by a second message giving more details about the nature of the error.

Action: See the synchronous refresh documentation for an explanation of the second error message.

ORA-31929: Synchronous refresh debug or testing trace**ORA-31930: The table is locked by synchronous refresh and the requested operation cannot be performed.**

Cause: An attempt was made to perform a PMOP (partition maintenance operation) or otherwise modify a table that was locked by synchronous refresh. The synchronous refresh operation locks tables related to the refresh group at PREPARE_REFRESH time and unlocks them after the EXECUTE_REFRESH is done to prevent wrong results.

Action: Do not perform PMOPs or modify the table between the execution of PREPARE_REFRESH and EXECUTE_REFRESH. You can do these operations before PREPARE_REFRESH or after EXECUTE_REFRESH.

ORA-31931: general event for materialized view refresh**ORA-31932: cannot allocate memory of <varname>string</varname> bytes for query expression****ORA-31951: invalid SCALE value**

Cause: The value was not within the allowable range.

Action: Correct the value and try again.

ORA-31952: invalid second argument

Cause: The second argument was not an integer, bind variable, or the keyword PARTITION.

Action: Specify either the keyword PARTITION or an integer or a bind variable.

ORA-31953: expected MIN or MAX aggregate not found

Cause: Either a matching pair of MIN and MAX aggregates were missing or an aggregate other than MIN or MAX was found.

Action: Specify only matching pairs of MIN and MAX aggregates.

ORA-31954: duplicate MIN or MAX aggregate found

Cause: The same MIN or MAX aggregate was found more than once.

Action: Specify a MIN or MAX aggregate only once.

ORA-31955: incorrect join found

Cause: A join other than equality left outer join was found.

Action: Specify only simple equality left outer joins with the fact table on the left side.

ORA-31956: construct or object '<varname>string</varname>' not allowed for zonemap

Cause: A construct or object not allowed in the zonemap definition was found.

Action: Remove the construct or object that is not allowed in the zonemap definition.

ORA-31957: table <varname>string</varname> not joined

Cause: A table without a join to the fact table was found.

Action: Specify a left outer join between this table and the fact table.

ORA-31958: fact table <varname>string</varname> already has a zonemap <varname>string</varname> on it

Cause: The fact table already had a zonemap.

Action: Drop the existing zonemap and repeat the command.

ORA-31959: internal error during the refresh of zonemap "<varname>string</varname>". "<varname>string</varname>"

Cause: An internal error was detected by the zonemap refresh subsystem and the refresh operation was aborted.

Action: Call Oracle Support Services.

ORA-31960: must use DROP MATERIALIZED ZONEMAP to drop "<varname>string</varname>". "<varname>string</varname>"

Cause: An attempt was made to drop a zonemap using a command other than DROP MATERIALIZED ZONEMAP.

Action: Use the DROP MATERIALIZED ZONEMAP command.

ORA-31961: must use ALTER MATERIALIZED ZONEMAP to alter "<varname>string</varname>". "<varname>string</varname>"

Cause: An attempt was made to alter a zonemap using a command other than ALTER MATERIALIZED ZONEMAP.

Action: Use the ALTER MATERIALIZED ZONEMAP command.

ORA-31962: cannot fast refresh zonemap "<varname>string</varname>". "<varname>string</varname>"

Cause: The fast refresh operation was not possible because DML had occurred to one or more dimension tables of the zonemap.

Action: Specify the force ('?') or complete ('C') option.

ORA-31963: invalid ALTER MATERIALIZED ZONEMAP option

ORA-31964: matching GROUP BY expression required

Cause: A matching GROUP BY expression was not found in the SELECT list.

Action: Specify an expression in the SELECT list that matches with the GROUP BY expression.

ORA-31965: incorrect predicate found

Cause: A predicate other than simple equality left outer join predicate was found.

Action: Specify only simple equality left outer join predicates with the fact table on the left side.

ORA-31966: invalid option specified to alter "<varname>string</varname>". "<varname>string</varname>"

Cause: An invalid option was used to alter a zonemap table.

Action: Choose a valid option with the ALTER TABLE command.

ORA-31967: built-in aggregate function must be named ZONE_ID\$

Cause: The name for built-in aggregate function was not ZONE_ID\$.

Action: Specify zone_id\$ or "ZONE_ID\$" as the name for aggregate built-in function.

ORA-31968: internal error during the staleness tracking of zonemap "<varname>string</varname>". "<varname>string</varname>"

Cause: An internal error was detected by the zonemap staleness tracking subsystem and the DML operation on the zonemap fact table was aborted.

Action: Call Oracle Support Services.

ORA-31969: ZONEMAP not supported for table stored in tablespace of this storage type

Cause: An attempt was made to define ZONEMAP on a table stored in non-Oracle Exadata storage.

Action: Create this table in a tablespace residing on Oracle Exadata storage and then define a ZONEMAP on it.

ORA-31970: cannot comment on the materialized zonemap

Cause: An attempt was made to issue a COMMENT ON TABLE statement on a materialized zonemap.

Action: Issue a COMMENT ON MATERIALIZED ZONEMAP statement instead.

ORA-31990: failed to process parameter "<varname>string</varname>" from SPFILE

Cause: An error was encountered while processing parameters from the SPFILE.

Action: Update the parameter value using the ALTER SYSTEM SET statement with scope set to SPFILE, and try opening the pluggable database again.

ORA-31991: error occurred processing parameter '<varname>string</varname>'

Cause: The parameter could not be specified for a pluggable database.

Action: Remove the parameter and try again.

ORA-32000: write to SPFILE requested but SPFILE is not modifiable

Cause: An ALTER SYSTEM command or an internal self-tuning mechanism requested a write to the SPFILE but the SPFILE was not modifiable.

Action: Perform an in-memory parameter update only.

ORA-32001: write to SPFILE requested but no SPFILE is in use

Cause: An ALTER SYSTEM command or an internal self-tuning mechanism requested a write to the SPFILE but no SPFILE was in use.

Action: Re-start the instance using an SPFILE, or execute ALTER SYSTEM SET SPFILE.

ORA-32002: cannot create SPFILE already being used by the instance

Cause: A create spfile command is trying to write to an SPFILE that was used to startup the instance.

Action: Specify a different SPFILE name

ORA-32003: error occurred processing parameter '<varname>string</varname>'

Cause: An error occurred while parsing the parameter file.

Action: See additional errors to determine the root cause.

ORA-32004: obsolete or deprecated parameter(s) specified for <varname>string</varname> instance

Cause: Obsolete or deprecated parameters for this instance type were specified in the SPFILE or the PFILE on the server side.

Action: See alert log for a list of parameters that are obsolete or deprecated. Remove them from the SPFILE or the server side PFILE.

ORA-32005: error while parsing size specification [<varname>string</varname>]

Cause: The value specified for an alter operation on a size parameter is not valid

Action: Correct the value and retry the operation

ORA-32006: <varname>string</varname> initialization parameter has been deprecated

Cause: A deprecated parameter was specified at startup

Action: Consult Oracle documentation to find new parameters to use instead.

ORA-32007: internal

Cause: A parameter error occurred.

Action: Call Oracle support.

ORA-32008: error while processing parameter update at instance <varname>string</varname>

Cause: An error occurred while processing a parameter on a remote instance.

Action: See accompanying error messages.

ORA-32009: cannot reset the memory value for instance <varname>string</varname> from instance <varname>string</varname>

Cause: Memory resets of local parameters are only allowed.

Action: Retry the query for the local instance if needed.

ORA-32010: cannot find entry to delete in SPFILE

Cause: The SPFILE did not contain the sid.parameter entry.

Action: Change the sid and/or the parameter.

ORA-32011: cannot restore SPFILE to location already being used by the instance

Cause: A restore operation trying to write to an SPFILE that was used to startup the instance.

Action: Specify a different SPFILE name

ORA-32013: failure in verifying parameters from the restored SPFILE

Cause: Failure during processing of parameters from restored SPFILE. It could be that restore image of the SPFILE is corrupted.

Action: Further diagnostic information should be in the error stack.

ORA-32014: error processing parameter "<varname>string</varname>" from the SPFILE restore image

Cause: Failure during processing of parameters from restored SPFILE. It could be that restore image of the SPFILE is corrupted.

Action: Further diagnostic information should be in the error stack.

ORA-32015: unable to restore SPFILE

Cause: Failure during SPFILE restore. It could be that the restore destination is not valid.

Action: Further diagnostic information should be in the error stack.

ORA-32016: parameter "<varname>string</varname>" cannot be updated in SPFILE

Cause: Database is mounted.

Action: Unmount the database to update the parameter in the SPFILE

ORA-32017: failure in updating SPFILE

Cause: A failure occurred while updating the SPFILE.

Action: See associated errors.

ORA-32018: parameter cannot be modified in memory on another instance

Cause: Parameter adjustment can take a very long time

Action: Modify the parameter individually on each instance using the SID clause of the alter system command

ORA-32019: The parameter SPFILE cannot be updated in the server parameter file.

Cause: An attempt was made to update the parameter SPFILE in the server parameter file.

Action: Convert the server parameter file into a parameter file and then add the parameters needed and recreate the server parameter file.

ORA-32020: SID='*' clause needed to modify this parameter

Cause: The parameter did not have the same value on all RAC instances.

Action: Retry the command by specifying SID='*'

ORA-32021: parameter value longer than <varname>string</varname> characters

Cause: An attempt was made to alter a parameter value but the number of characters in the parameter value was longer than the allowed maximum. For a list parameter, one of the values in the list was longer than the allowed maximum.

Action: Reduce the parameter value length and retry the command. For the DISPATCHERS parameter, use listener aliases to reduce value length.

ORA-32022: parameter <varname>string</varname> value longer than <varname>string</varname> characters

Cause: The combined length of all the parameter values was more than the allowed maximum.

Action: Reduce the parameter value length and retry the command. For the DISPATCHERS parameter, use listener aliases to reduce value length.

ORA-32023: Could not obtain PE enqueue**ORA-32024: invalid directory specified for audit_file_dest parameter**

Cause: Either the directory does not exist or it is not writable.

Action: Retry the command by specifying a valid directory or granting appropriate directory permissions.

ORA-32025: <varname>string</varname>.<varname>string</varname> is not a table or view object.

Cause: An attempt was made to set the audit table to a non-table object or a non-view object.

Action: Specify a valid table or view object for the audit table option.

ORA-32026: <varname>string</varname>.<varname>string</varname> has fewer columns compared to <varname>string</varname> table.

Cause: An attempt was made to set the audit table to a table or view object that has fewer columns compared to the base audit table.

Action: Specify a valid table or view object for the audit table option.

ORA-32027: There is no <varname>string</varname> column with the matching type in <varname>string</varname>.<varname>string</varname>.

Cause: An attempt was made to set the audit table to a table or view object that does not have a column with the same name and type as the one in the audit table.

Action: Specify a valid table or view object for the audit table option.

ORA-32028: Syslog facility or level not recognized

Cause: Syslog facility or level did not conform to the standard facility or level provided in the syslog.h file

Action: Specify a facility or level such as "LOCAL1.NOTICE" which conforms to the syslog.h file

ORA-32029: resetting with SCOPE=MEMORY or SCOPE=BOTH is currently not supported

Cause: An attempt was made to reset an in-memory parameter value

Action: Specify SCOPE=SPFILE if applicable, or explicitly set the parameter to the desired value

ORA-32030: an SPFILE is already associated with the instance

Cause: An attempt was made to update the parameter SPFILE on an instance that was already associated with an spfile.

Action: Restart the instance with a parameter file.

ORA-32031: illegal reference of a query name in WITH clause

Cause: forward or recursive reference of a query name in WITH clause is not allowed.

Action: Correct query statement, then retry.

ORA-32032: free temporary object number not available

Cause: Too many queries using temp table transformation are currently being run to use up all temporary object numbers.

Action: Turn off temporary table transformation or wait, then retry

ORA-32033: unsupported column aliasing

Cause: column aliasing in WITH clause is not supported yet

Action: specify aliasing in definition subquery and retry

ORA-32034: unsupported use of WITH clause

Cause: Improper use of WITH clause because one of the following two reasons: 1. nesting of WITH clause within WITH clause not supported yet 2. For a set query, WITH clause can't be specified for a branch. 3. WITH clause cannot be specified within parenthesis.

Action: correct query and retry

ORA-32035: unreferenced query name defined in WITH clause

Cause: There is at least one WITH clause query name that is not referenced in any place.

Action: remove the unreferenced query name and retry

ORA-32036: unsupported case for inlining of query name in WITH clause

Cause: There is at least one query name which is inlined more than once because its definition query is too simple and references another query name. This is currently unsupported yet.

Action: remove such query name and retry

ORA-32037: unsupported use of LEVEL in membership condition

Cause: An attempt was made to use LEVEL in membership condition with subquery that is not supported.

Action: Rewrite query to avoid using LEVEL in membership condition

ORA-32038: number of WITH clause column names does not match number of elements in select list

Cause: A list of column aliases or names was specified for a WITH clause query name but the number of elements in the list did not match the number of elements in the select list of the definition query.

Action: Update the column alias list or the select list to ensure they have the same number of elements.

ORA-32039: recursive WITH clause must have column alias list

Cause: A WITH clause query referred to itself (recursive) but did not have a column alias list specified for it.

Action: Add a column alias list for the WITH clause query name.

ORA-32040: recursive WITH clause must use a UNION ALL operation

Cause: A WITH clause query referred to itself (recursive) but did not use a UNION ALL operation in its definition query.

Action: Rewrite the recursive WITH clause query to use a UNION ALL operation.

ORA-32041: UNION ALL operation in recursive WITH clause must have only two branches

Cause: A WITH clause query referred to itself (recursive) but used a UNION ALL operation with more than two branches, which is not currently supported.

Action: Rewrite the recursive WITH clause query to use only two branches in the UNION ALL operation.

ORA-32042: recursive WITH clause must reference itself directly in one of the UNION ALL branches

Cause: A WITH clause query referred to itself (recursive) indirectly, such as through a subquery or view.

Action: Rewrite the recursive WITH clause query to refer to itself directly in the FROM clause of one of the UNION ALL branches.

ORA-32043: recursive WITH clause needs an initialization branch

Cause: A WITH clause query referred to itself (recursive) but did not have a branch in a UNION ALL with no references to itself (the initialization branch or anchor member).

Action: Rewrite the recursive WITH query to have a branch in a UNION ALL operation with no references to itself.

ORA-32044: cycle detected while executing recursive WITH query

Cause: A recursive WITH clause query produced a cycle and was stopped in order to avoid an infinite loop.

Action: Rewrite the recursive WITH query to stop the recursion or use the CYCLE clause.

ORA-32045: maximum level of recursion reached while executing recursive WITH query

Cause: A recursive WITH query reached the maximum level of recursion specified and was stopped.

Action: Increase the maximum level of recursion or use the CYCLE clause.

ORA-32046: sequence column name for SEARCH clause must not be part of the column alias list

Cause: The SEARCH clause for a recursive WITH query specified a sequence column that was already listed in the column alias list for the WITH clause query name.

Action: Specify a different name for the sequence column for the SEARCH clause or remove the name from the column alias list.

ORA-32047: cycle mark value and non-cycle mark value must be one byte character string values

Cause: The cycle mark or the non-cycle mark values specified in the CYCLE clause of a recursive WITH query were not one byte character string values as required.

Action: Specify a one byte character string for the cycle mark and non-cycle mark values of the CYCLE clause for the recursive WITH query.

ORA-32048: cycle mark column name for CYCLE clause must not be part of the column alias list

Cause: The CYCLE clause for a recursive WITH query specified a cycle mark column that was already listed in the column alias list for the WITH clause query name.

Action: Specify a different name for the cycle mark column for the CYCLE clause or remove the name from the column alias list.

ORA-32049: duplicate name found in column alias list for WITH clause

Cause: The column alias list for a WITH clause element contained a name which appeared more than once in the list.

Action: Remove the duplicate name from the column alias list.

ORA-32050: <varname>string</varname> operation failed

Cause: A mapping operation failed.

Action: Check FMON trace files for errors.

ORA-32051: mapping service not available

Cause: The mapping service was never started or previously failed to start properly.

Action: Set FILE_MAPPING to TRUE if it is not currently set. Otherwise, check FMON trace files for an ORA-32052 error.

ORA-32052: failed to start mapping service

Cause: The mapping service failed to start properly.

Action: Check FMON trace files for errors.

ORA-32053: operation not supported

Cause: Mapping libraries do not support operation.

Action: Check whether mapping libraries are available and whether operation is supported by the libraries.

ORA-32054: lost communication with FMPUTL process

Cause: Lost communication with mapping utility.

Action: Check FMON and FMPUTL trace files for errors.

ORA-32055: invalid file type

Cause: Invalid file type used when mapping files.

Action: Specify one of expected file types.

ORA-32056: invalid number of extents

Cause: Invalid number of extents used for map operation.

Action: Specify a non-negative number of extents.

ORA-32057: invalid lock mode

Cause: An invalid mode was used for a lock operation.

Action: Specify one of expected lock modes.

ORA-32058: operation restricted to SYSDBA users

Cause: Operation requires SYSDBA privileges.

Action: Connect to the database as SYSDBA.

ORA-32059: deadlock detected on mapping structures

Cause: Mapping structures already locked by the same session.

Action: Unlock mapping structures before proceeding with current operation.

ORA-32060: channel failure

Cause: Channel failure between foreground and background process.

Action: Check foreground trace files for errors.

ORA-32100: operation invalid on transient object

Cause: Trying to perform an operation on transient object which is valid only on persistent objects

Action: Make sure object is persistent

ORA-32101: cannot create OCI Environment

Cause: An OCI Environment could not be created for OCCI

Action: Insure that the parameters to the creatEnvironment method are valid

ORA-32102: invalid OCI handle

Cause: An invalid OCI handle is passed to an OCI call.

Action: This is an internal OCCI Error. Please contact customer support.

ORA-32103: error from OCI call

Cause: An error code other than OCI_ERROR is returned from an OCI call.

Action: This is an internal OCCI Error. Please contact customer support.

ORA-32104: cannot retrieve OCI error message

Cause: Error message after an OCI call could not be retrieved.

Action: This is an internal OCCI Error. Please contact customer support.

ORA-32106: array fetch not allowed without setBuffer on all columns

Cause: The setBuffer method was not called for all column positions and the next method was called to fetch more than one row.

Action: Call the setBuffer method for all column positions if next is to be called to fetch more than one row.

ORA-32107: internal OCI memory allocation failure

Cause: Memory could not be allocated from an OCI heap.

Action: Increase the process memory size.

ORA-32108: max column or parameter size not specified

Cause: The max column or parameter size is not specified.

Action: Specify the max size by setMaxColumnSize or setMaxParamSize.

ORA-32109: invalid column or parameter position

Cause: An invalid column or parameter position is specified.

Action: Specify a valid column or position number.

ORA-32110: Connection not specified

Cause: A null connection was passed.

Action: Pass a valid, non-null connection.

ORA-32113: Null object passed

Cause: Null object was passed.

Action: Pass a non-null object.

ORA-32114: Cannot perform operation on a null LOB

Cause: The LOB instance on which the operation was attempted was null.

Action: Use a valid, non-null LOB instance to perform this operation.

ORA-32116: Buffer size is less than amount specified

Cause: The buffer size specified for the LOB read or write operation was less than the amount to be read or written.

Action: The buffer size must be equal to or greater than the amount to be read from or written to the LOB.

ORA-32117: Source LOB is null

Cause: The source LOB instance on which the operation was attempted was null.

Action: Use a valid, non-null source LOB instance for this operation.

ORA-32118: Cannot perform operation on a null FILE

Cause: The FILE instance on which the operation was attempted was null.

Action: Use a valid, non-null FILE instance to perform this operation.

ORA-32120: Buffer size is less than amount specified

Cause: The buffer size specified for the FILE read or write operation was less than the amount to be read or written.

Action: The buffer size must be equal to or greater than the amount to be read from or written to the FILE.

ORA-32121: Source FILE is null

Cause: The source FILE instance on which the operation was attempted was null.

Action: Use a valid, non-null source FILE instance for this operation.

ORA-32123: Attribute number is out of range

Cause: The attribute number passed is greater than the total number of attributes of the described object.

Action: Pass the attribute number within the allowable range.

ORA-32124: Illegal attribute passed

Cause: The attribute passed is not applicable for the described object.

Action: Pass a valid attribute.

ORA-32125: Attribute type is not appropriate

Cause: The return type of the get method does not match the type of the attribute being passed.

Action: Call the appropriate get method.

ORA-32126: Cannot perform operations on a null REF

Cause: The REF instance on which the operation was attempted was null.

Action: Use a valid, non-null REF instance to perform this operation.

ORA-32127: REFs do not belong to any connection

Cause: Neither of the REFs being compared had associated connection information.

Action: At least one of the REFs being compared must be associated with a valid connection.

ORA-32128: setDataBuffer called after fetch has started

Cause: Fetch from result set has already started and the setDataBuffer call was made.

Action: Call the setDataBuffer method before calling the next() method.

ORA-32129: cannot get information about this column

Cause: The setDataBuffer method was called to get information about this column. Therefore, the current method cannot be called.

Action: Use the information from the buffers specified in the setDataBuffer call.

ORA-32130: invalid offset/index referenced in Bytes

Cause: The offset/index is out of range of valid data locations in Bytes offsets.

Action: Insure that offsets or index is within the range of Bytes object.

ORA-32131: bind data type cannot be changed

Cause: The setXXX method is called again with a different data type than originally specified, or the setXXX method is called for a subsequent iteration without being called before the first iteration.

Action: Call the setXXX method with the same data type as done before the first iteration. If no setXXX method was called for this parameter position the first iteration, then make sure that a setXXX method is called before the first addIteration method is called.

ORA-32132: maximum iterations cannot be changed

Cause: The setMaxIterations is called after a setXXX method has been called.

Action: Call the setMaxIterations method before calling any setXXX methods.

ORA-32133: Cannot get stream from LOB/FILE

Cause: An open stream exists on the the LOB/FILE on which the operation was attempted.

Action: Close the stream before getting another.

ORA-32134: Cannot assign LOBs

Cause: An open stream exists on the target LOB.

Action: Close the stream on the target LOB before assigning the LOBs.

ORA-32135: Cannot assign FILES

Cause: An open stream exists on the target FILE.

Action: Close the stream on the target FILE before assigning the FILES.

ORA-32136: Cannot perform operation on an invalid stream

Cause: The LOB/FILE from which the stream was obtained had been nullified or destroyed.

Action: Use a valid stream.

ORA-32139: Cannot write to the stream

Cause: A write was performed after the last buffer was written.

Action: Close this stream and get a new stream to perform the write.

ORA-32140: cannot perform this operation on stream

Cause: Either a read is attempted from a stream in write mode, or a write is attempted on a stream in read mode.

Action: Check the status of the stream to find out the valid operations that can be performed.

ORA-32141: get method does not match the type of the parameter

Cause: The getXXX method called on the Statement object does not match the type of the bind parameter.

Action: Call the getXXX method that is the same as the type of the parameter.

ORA-32142: maximum number of iterations exceeded

Cause: The addIteration exceeds the maximum number of iterations set by the the setMaxIterations method.

Action: Increase the maximum number of allowed iterations.

ORA-32143: Environment not specified

Cause: A null environment was passed.

Action: Pass a valid, non-null environment.

ORA-32144: Cannot perform operation on a null interval

Cause: The interval involved in this operation is null.

Action: Use valid, non-null interval instance to perform this operation.

ORA-32145: Environment not specified

Cause: The interval on which the operation was attempted was null and no environment was specified.

Action: Specify non-null environment or perform the operation on a non null instance.

ORA-32146: Cannot perform operation on a null date

Cause: The date involved in this operation is null.

Action: Use valid, non-null date instance to perform this operation.

ORA-32147: Environment not specified

Cause: The date on which the operation was attempted was null and no environment was specified.

Action: Specify non-null environment or perform the operation on a non null instance.

ORA-32150: Cannot perform operation on a null timestamp

Cause: The timestamp involved in this operation is null.

Action: Use valid, non-null timestamp instance to perform this operation.

ORA-32151: Environment not specified

Cause: The timestamp on which the operation was attempted was null and no environment was specified.

Action: Specify non-null environment or perform the operation on a non null instance.

ORA-32152: Cannot perform operation on a null number

Cause: The number involved in this operation is null.

Action: Use valid, non-null number instance to perform this operation.

ORA-32153: Environment not specified

Cause: The number on which the operation was attempted was null and no environment was specified.

Action: Specify non-null environment or perform the operation on a non null instance.

ORA-32154: Anydata context not specified

Cause: A null anydata context was passed.

Action: Pass a valid, non-null anydata context.

ORA-32155: Anydata not specified

Cause: A null anydata was passed.

Action: Pass a valid, non-null anydata.

ORA-32156: Cannot perform operation on stream

Cause: This operation is not applicable to streams obtained from LOBs.

Action: n/a

ORA-32157: Infinity not supported

ORA-32158: Invalid type passed

Cause: An inapplicable type was passed to this call.

Action: Pass an applicable type.

ORA-32159: Cannot set prefetch options for a null Type

Cause: A null Type name was passed.

Action: Pass an non-null Type name.

ORA-32161: Cannot perform piecewise fetch

Cause: Zero amount was passed and buffer size was less than LOB size

Action: Specify a larger buffer or use Stream

ORA-32162: Read/Write SQL method not registered

Cause: readSQL/writeSQL method was NULL or was not registered

Action: Register readSQL/writeSQL by calling put method in Map

ORA-32163: Method called on Invalid Environment type

Cause: A non-XA call made on an XA Environment or XA call made on non-XA Environment

Action: Make sure Environment type is OK

ORA-32164: Method called on Invalid Connection type

Cause: A non-XA call made on an XA Connection or XA call made on non-XA Connection

Action: Make sure Connection type is OK

ORA-32165: Cannot get XA environment

Cause: Incorrect dbname string was passed or the XA connection has not been opened

Action: Pass the correct dbname string or check if the XA connection is open

ORA-32166: Cannot get XA connection

Cause: Incorrect dbname string was passed or the XA connection has not been opened

Action: Pass the correct dbname string or check if the XA connection is open

ORA-32167: No payload set on the Message

Cause: An attempt was made to enqueue a message without setting a payload on it.

Action: Set a payload on the message before calling the send method.

ORA-32168: Cannot perform operation on a null AnyData

Cause: The AnyData instance on which the operation was attempted was null.

Action: Use a valid, non-null AnyData instance to perform this operation.

ORA-32169: Execution completed successfully but the number of rows affected is more than the maximum value of the unsigned integer.

Cause: The row count was larger than the maximum value of the unsigned integer. OCCI clients using 'executeUpdate()' cannot retrieve row counts larger than the maximum value of the unsigned integer.

Action: Use 'getUb8RowCount()' to get the correct row count. Use 'execute()' and 'getUb8RowCount()' for large updates.

ORA-32300: cannot drop a secondary materialized view "<varname>string</varname>". "<varname>string</varname>"

Cause: An attempt was made to drop a materialized view of a nested table column's storage table.

Action: Drop the materialized view that contains the nested table column. This will implicitly drop all secondary materialized views.

ORA-32301: object-relational materialized views must be primary key based

Cause: An attempt was made to create an object-relational materialized view that is not primary key based.

Action: Create the materialized view with the PRIMARY KEY keyword.

ORA-32302: object materialized views must be object ID based

Cause: An attempt was made to create an object materialized view that is not object ID based.

Action: Create the materialized view using the OF clause but omit any ROWID or PRIMARY KEY clauses.

ORA-32303: mviews with user-defined types cannot reference multiple master sites

Cause: For materialized views with user-defined types, the definition query cannot reference tables from different master sites.

Action: Do not create materialized views with user-defined types referencing multiple master sites.

ORA-32304: materialized views with user-defined types cannot use prebuilt table

Cause: An attempt was made to create a materialized view with the ON PREBUILT TABLE option.

Action: Do not create the materialized view with the ON PREBUILT TABLE option.

ORA-32305: RepAPI materialized views with user-defined types are not supported

Cause: An attempt was made to create a RepAPI materialized view with user-defined types.

Action: Do not create a RepAPI materialized view with user-defined types.

ORA-32306: updatable materialized views with user-defined types must use SELECT *

Cause: An attempt was made to create an updatable materialized view with user-defined types where the definition query did not use SELECT * at the topmost level.

Action: Rewrite the definition query so that SELECT * is used at the topmost level.

ORA-32307: must use FROM ONLY clause when referencing an object table

Cause: An attempt was made to create a materialized view whose definition query references object tables without the FROM ONLY clause.

Action: Rewrite the definition query to use the FROM ONLY clause for all the object tables in the query.

ORA-32308: object materialized views must use SELECT *

Cause: An attempt was made to create an object materialized view where the definition query did not use SELECT * at the topmost level.

Action: Rewrite the definition query so that SELECT * is used at the topmost level.

ORA-32309: object mview type "<varname>string</varname>". "<varname>string</varname>" does not match the master table type

Cause: An attempt was made to create an object materialized view whose type does not match the type of the master object table.

Action: Redefine the type so that it matches the type of the master object table.

ORA-32310: object materialized views must select from an object table

Cause: An attempt was made to create an object materialized view whose definition query did not select from an object table.

Action: Rewrite the definition query to select from an object table.

ORA-32311: materialized view definition query selects an unsupported user-defined type

Cause: An attempt was made in the definition query to select an embedded user-defined type, function returning a user-defined type, or a function whose arguments are user-defined types.

Action: Rewrite the definition query to exclude these unsupported user-defined types.

ORA-32312: cannot refresh a secondary materialized view "<varname>string</varname>". "<varname>string</varname>"

Cause: An attempt was made to refresh a materialized view of a nested table column's storage table.

Action: Refresh the materialized view that contains the nested table column. This will implicitly refresh all secondary materialized views.

ORA-32313: REFRESH FAST of "<varname>string</varname>". "<varname>string</varname>" unsupported after PMOPs

Cause: A Partition Maintenance Operation (PMOP) has been performed on a detail table, and the specified materialized view does not support fast refresh after PMOPs.

Action: Use REFRESH COMPLETE. Note: you can determine why your materialized view does not support fast refresh after PMOPs using the DBMS_MVIEW.EXPLAIN_MVIEW() API.

ORA-32314: REFRESH FAST of "<varname>string</varname>". "<varname>string</varname>" unsupported after deletes/updates

Cause: One or more deletes or updates has been performed on one or more of the detail tables referenced by the specified materialized view. This materialized view does not support fast refresh after deletes or updates.

Action: Use REFRESH COMPLETE. Note: you can determine why your materialized view does not support fast refresh after deletes or updates using the DBMS_MVIEW.EXPLAIN_MVIEW() API.

ORA-32315: REFRESH FAST of "<varname>string</varname>". "<varname>string</varname>" unsupported after mixed DML and Direct Load

Cause: One or more of the materialized view logs on the detail tables referenced by the specified materialized view omits the sequence number option. Such a log cannot be used to refresh a materialized view after deletes or updates and direct path insert.

Action: Use REFRESH COMPLETE. Note: you can use the DBMS_MVIEW.EXPLAIN_MVIEW() API to determine which materialized view logs omit the sequence number option.

ORA-32316: REFRESH FAST of "<varname>string</varname>". "<varname>string</varname>" unsupported after mixed DML

Cause: One or more of the materialized view logs on the detail tables referenced by the specified materialized view omits the sequence number option. Such a log cannot be used to refresh a materialized view after deletes or updates have been performed on multiple detail tables.

Action: Use REFRESH COMPLETE. Note: you can use the DBMS_MVIEW.EXPLAIN_MVIEW() API to determine which materialized view logs omit the sequence number option.

ORA-32317: cannot run a job from a job

Cause: An attempt was made to execute a job from within another job.

Action: Do not submit jobs that run other jobs.

ORA-32318: cannot rename a materialized view

Cause: Renaming a materialized view or its base table is not supported.

Action: Do not rename the base table of a materialized view.

ORA-32319: Cannot use direct loader log to FAST REFRESH materialized view "<varname>string</varname>". "<varname>string</varname>"

Cause: The direct loader log might have been dropped

Action: Need to do complete refresh

ORA-32320: REFRESH FAST of "<varname>string</varname>". "<varname>string</varname>" unsupported after container table PMOPs

Cause: A Partition Maintenance Operation (PMOP) has been performed on the materialized view, and no materialized view supports fast refresh after container table PMOPs.

Action: Use REFRESH COMPLETE. Note: you can determine why your materialized view does not support fast refresh after PMOPs using the DBMS_MVIEW.EXPLAIN_MVIEW() API.

ORA-32321: REFRESH FAST of "<varname>string</varname>". "<varname>string</varname>" unsupported after detail table TRUNCATE

Cause: A detail table has been truncated and no materialized view supports fast refresh after a detail table has been truncated

Action: Use REFRESH COMPLETE. Note: you can determine why your materialized view does not support fast refresh after TRUNCATE using the DBMS_MVIEW.EXPLAIN_MVIEW() API.

ORA-32322: PCT refresh of "<varname>string</varname>". "<varname>string</varname>" not allowed the sequence of DMLs/PMOPs

Cause: A table join dependent on another table on which PCT refresh is enabled has changed

Action: Use REFRESH FORCE which will pick the best possible refresh method on the materialized view

ORA-32330: invalid operation on online redefinition interim table "<varname>string</varname>". "<varname>string</varname>"

Cause: An invalid operation was performed on an interim table which was being used for online redefinition of a table.

Action: Do not perform any unsupported operation on the interim table.

ORA-32331: type "<varname>string</varname>". "<varname>string</varname>" is incompatible with the master site

Cause: A type used by the materialized view was found to be incompatible with its corresponding type on the master site. This could be because the type does not exist on the master site or has been evolved to a different version from that on the materialized view site.

Action: Make sure that the types used by the materialized view are the same on both the materialized view and master sites.

ORA-32332: cannot refresh materialized view "<varname>string</varname>". "<varname>string</varname>" as type evolution has occurred

Cause: The types used by the materialized view or its master tables have been evolved.

Action: Ensure that the types used by the materialized view have been evolved to the same version at both the master and materialized sites. Then, before refreshing the materialized view, evolve the materialized view using ALTER MATERIALIZED VIEW.

ORA-32333: disable table scn update for Materialized view

Cause: an event is set for disabling table scn update to prevent deadlock situation. (bug 1376209)

Action: disable null refresh and/or base table scn update for Materialized view

ORA-32334: cannot create prebuilt materialized view on a table already referenced by a MV

Cause: the table on which the materialized view is created as prebuilt is already referenced by a materialized view

Action: create the materialized view on a different table

ORA-32335: dimension must have at least one level

Cause: An level-less dimension is not allowed.

Action: Do not drop the only level of a dimension.

ORA-32336: cannot use USING NO INDEX to create materialized view "<varname>string</varname>". "<varname>string</varname>"

Cause: The USING NO INDEX option was specified to create an updatable primary key based materialized view, an index-organized materialized view or an object-id materialized view.

Action: Do not use the USING NO INDEX option to create an updatable primary key based materialized view, an index-organized materialized view or an object-id materialized view.

ORA-32337: cannot alter materialized view or zonemap to refresh on commit with pending changes

Cause: There were some pending changes in the detail tables.

Action: Perform on-demand refresh of the materialized view or zonemap to synchronize the data between the materialized view and the detail tables and then issue the ALTER MATERIALIZED VIEW or ALTER MATERIALIZED ZONEMAP statement.

ORA-32338: on commit refresh grab all the detailed tables

Cause: an event is set to let on-commit MV refresh to grab all the detailed tables, no matter whether they have modified or not.

Action: n/a

ORA-32339: cannot alter materialized view with the PMOP

Cause: the materialized view is not allowed to have destructive PMOPS such as DROP, TRUNCATE and EXCHANGE (sub)partition. The UGA flag of i_am_a_refresh should be set first.

Action: execute set_i_am_a_refresh first before alter materialized view with the PMOP.

ORA-32340: cannot tune the materialized view definition

Cause: Due to constructs in the materialized view definition, it could not be tuned to be fast-refreshable or rewriteable.

Action: Execute DBMS_MVIEW.EXPLAIN_MVIEW to determine the cause.

ORA-32341: The EXPLAIN_MVIEW facility failed to explain the materialized view "<varname>string</varname>". "<varname>string</varname>"

Cause: The dependent object(s) of the materialized view may have changed. The materialized view may no longer be valid.

Action: Execute ALTER MATERIALIZED VIEW COMPILE and to determine the status of the materialized view in catalog views.

ORA-32342: The EXPLAIN_MVIEW facility failed to explain the materialized view statement

Cause: An error exists in the materialized view definition. As a result, the materialized view statement could not be explained.

Action: Check the syntax of the statement. If it is a CREATE MATERIALIZED VIEW statement, then also check the PARAMETERS specified for the materialized view.

ORA-32343: let MVIEW engine know that it is IMPORT from 9i or earlier

Cause: N/A.

Action: Set this event only under the supervision of Oracle development. Not for general purpose use.

ORA-32344: cannot create a secondary materialized view with synonym as base table

Cause: It is not supported to create a secondary materialized view with synonym in the FROM clause.

Action: Removed the synonym(s) from the statement.

ORA-32345: fail to refresh the materialized view <varname>string</varname>. <varname>string</varname> due to the changed synonym

Cause: The definition of one or more synonyms in the from clause have changed. The structure of the materialized view has become invalid.

Action: Restore the synonym(s) or drop the materialized view and recreate it again.

ORA-32346: ON COMMIT materialized view refresh caused changes to the master table/materialized view

Cause: ON COMMIT refresh of a read-only materialized view changed the master table/materialized view. A trigger on the refreshed materialized view may be the cause.

Action: Do not create triggers on materialized view which update the master table/materialized view.

ORA-32347: NULL capabilities during explain mview

Cause: The supplied defining query did not generate any capabilities information.

Action: Replace the query since it is not suitable for creating a materialized view.

ORA-32348: revalidate summary object based on user input

Cause: An event was set to specify the number of attempts that the system needed to make in order to validate an invalidated summary object.

Action: Revalidate an invalidated summary object based on user input.

ORA-32349: cannot reference prebuilt table in definition query for materialized view

Cause: The prebuilt container table of the materialized view was referenced in the definition query.

Action: Change the definition query to reference a non-prebuilt table.

ORA-32350: ON COMMIT refresh obtain shared lock for all the detailed tables

Cause: An event was set to let ON COMMIT materialized view refresh to obtain a shared lock for all the detailed tables, whether they have been modified or not.

Action: No action necessary.

ORA-32351: database link name cannot start with a number while creating materialized view

Cause: This event was disabled by default. If enabled, the fix for bug 6074902 will be disabled and you will be unable to create database links starting with a number when creating a materialized view on remote tables.

Action: No action necessary.

ORA-32352: cannot refresh materialized view <varname>string</varname>. <varname>string</varname> using out-of-place fast refresh

Cause: Out-of-place fast refresh was either not enabled on this materialized view or not possible after changes to the base table made since the last refresh.

Action: Specify the FORCE or COMPLETE option for out-of-place refresh.

ORA-32353: cannot refresh materialized view <varname>string</varname>. <varname>string</varname> using out-of-place PCT refresh

Cause: Out-of-place Partition Change Tracking (PCT) refresh was either not enabled on this materialized view or not possible after changes to the base table made since the last refresh.

Action: Specify the FORCE or COMPLETE option for out-of-place refresh.

ORA-32354: cannot refresh materialized view <varname>string</varname>. <varname>string</varname> using out-of-place complete refresh

Cause: The materialized view did not qualify for out-of-place complete refresh.

Action: Set the 'out_of_place' parameter to 'false'.

ORA-32355: out-of-place refresh cannot be used in atomic mode

Cause: Both 'atomic_refresh' and 'out_of_place' parameters were set to 'true' in the refresh interface.

Action: Either set the 'atomic_refresh' parameter to 'false' or set the 'out_of_place' parameter to 'false'.

ORA-32400: cannot use object id columns from materialized view log on "<varname>string</varname>". "<varname>string</varname>"

Cause: The materialized view log either does not have object id columns logged, or the timestamp associated with the object id columns is more recent than the last refresh time.

Action: A complete refresh is required before the next fast refresh. Add object id columns to the materialized view log, if required.

ORA-32401: materialized view log on "<varname>string</varname>". "<varname>string</varname>" does not have new values

Cause: Materialized view log on the indicated table does not have new values information.

Action: Add new values to materialized view log using the ALTER MATERIALIZED VIEW LOG command.

ORA-32403: cannot use new values from mv log on "<varname>string</varname>". "<varname>string</varname>"

Cause: The materialized view log either does not have new values logged, or the timestamp associated with the new values columns is more recent than the last refresh time.

Action: Perform a complete refresh is required before the next fast refresh.

ORA-32404: snapshot log uses Change Data Capture which is not enabled for this database

Cause: A snapshot log that utilizes Change Data Capture is being imported to a database where Change Data Capture has not been enabled.

Action: First enable Change Data Capture on the database then retry the import.

ORA-32405: cannot alter tablespace for existing materialized view log

Cause: The tablespace specification for the existing materialized view log cannot be altered or changed.

Action: remove the tablespace clause from the statement.

ORA-32406: cannot alter partitioning for existing materialized view log

Cause: The partitioning specification for the existing materialized view log cannot be altered or changed.

Action: remove the partitioning clause from the statement.

ORA-32407: cannot exclude new values when materialized view log includes new values

Cause: The excluding new values specification for the existing materialized view log cannot be accepted when including new values is the current option.

Action: change excluding new values clause.

ORA-32408: materialized view log on "<varname>string</varname>". "<varname>string</varname>" already has new values

Cause: The materialized view log on the indicated table already has new values.

Action: No action required.

ORA-32409: materialized view log on "<varname>string</varname>". "<varname>string</varname>" already excludes new values

Cause: The materialized view log on the indicated table already excludes new values.

Action: No action required.

ORA-32410: internal mv logging event

ORA-32411: materialized view definition query exceeds the maximum length

Cause: The materialized view definition query exceeds the 64K limit.

Action: Change the materialized view definition query so that it does not exceed the maximum length of 64K.

ORA-32412: encrypted column "<varname>string</varname>" not allowed in the materialized view log

Cause: The materialized view log being created/alterd is to capture an encrypted column of the base table.

Action: Do not capture the encrypted column.

ORA-32413: allow concurrent refresh of materialized view and truncate

Cause: This event is set to allow concurrent refresh of materialized view and truncate of base table; it prevents a deadlock situation. (bug 6710019)

Action: Set this event to allow concurrent refresh of materialized view and truncate of the base table.

ORA-32414: materialized view logs are not compatible with each other for fast refresh

Cause: An attempt was made to create a fast refreshable materialized view on tables which have commit SCN-based materialized view logs and tables which have timestamp-based materialized view logs.

Action: Use COMPLETE REFRESH or change underlying materialized view logs to make them compatible with each other for fast refresh.

ORA-32415: fast refreshable remote materialized view on a detail table with commit SCN-based materialized view log is not supported

Cause: The materialized view creation failed because fast refreshable remote materialized view on a detail table with commit SCN-based materialized view log was not supported.

Action: None

ORA-32416: one or more commit SCN-based materialized view logs are not in consistent state for fast refresh

Cause: Dictionary table "SYS"."SNAP_XCMT\$" is not in consistent state.

Action: No action required.

ORA-32417: must use DROP MATERIALIZED VIEW LOG to drop "<varname>string</varname>". "<varname>string</varname>"

Cause: An attempt was made to drop materialized view log using a command other than DROP MATERIALIZED VIEW LOG.

Action: No action required.

ORA-32418: COMMIT SCN keyword only appears in CREATE MATERIALIZED VIEW LOG statement

Cause: An attempt was made to alter an existing materialized view log to have commit SCN.

Action: No action required.

ORA-32419: on commit materialized view is not supported on detail tables with commit SCN-based materialized view logs

Cause: An attempt was made to create an on commit materialized view on detail tables with commit SCN-based materialized view logs.

Action: No action required.

ORA-32420: unsupported fast refreshable materialized view defined on detail tables which have commit SCN-based materialized view logs

Cause: An attempt was made to create an unsupported fast refreshable materialized view on detail tables with commit SCN based materialized view logs.

Action: No action required.

ORA-32421: commit SCN-based materialized view log is not supported on a table with LOB column(s)

Cause: An attempt was made to create a commit SCN-based materialized view log on a table which has LOB column(s).

Action: No action required.

ORA-32422: commit SCN-based materialized view log cannot be created on table "<varname>string</varname>". "<varname>string</varname>" when there exist direct load/PMOP log entries for the table

Cause: An attempt was made to create a commit SCN-based materialized view log on a table which had direct load/PMOP log entries in sys.sumdelta\$ and sys.sumpartlog\$.

Action: Refresh the table's dependent materialized views before creating commit SCN-based materialized view log on the table.

ORA-32423: commit SCN-based materialized view log cannot be dropped on table "<varname>string</varname>". "<varname>string</varname>" when there exist direct load/PMOP log entries for the table

Cause: An attempt was made to drop a commit SCN-based materialized view log on a table which had direct load/PMOP log entries in sys.sumdelta\$ and sys.sumpartlog\$.

Action: Refresh the table's dependent materialized views before dropping commit SCN-based materialized view log on the table.

ORA-32424: materialized view log on "<varname>string</varname>". "<varname>string</varname>" already has this purge option

Cause: Materialized view log on the indicated table already has the purge option specified.

Action: Specify a different purge option or omit the purge option.

ORA-32425: asynchronous and scheduled purge option is not allowed on commit SCN-based materialized view log

Cause: An attempt was made to create or alter a commit SCN-based materialized log with asynchronous and scheduled purge option.

Action: Specify a different purge option or omit the purge option.

ORA-32426: materialized view log on "<varname>string</varname>". "<varname>string</varname>" in DST upgrade

Cause: The materialized view log was created or altered on a table that had a Daylight Saving Time upgrade in progress.

Action: Wait until DST upgrade finishes on the master table.

ORA-32427: materialized view contains unsupported NLS transformation

Cause: An attempt was made to create or alter materialized view under NLS settings which transformed the materialized view's defining query in ways not supported by Oracle.

Action: Contact Oracle support or workaround problem by removing NLS settings or modifying the materialized view's defining query.

ORA-32480: SEARCH and CYCLE clauses can only be specified for recursive WITH clause elements

Cause: A SEARCH or a CYCLE clause was specified for a WITH clause element that was not recursive.

Action: Remove the SEARCH or CYCLE clause, or add recursion to the WITH clause element.

ORA-32481: cycle value for CYCLE clause must be different from the non-cycle value

Cause: A CYCLE clause was specified for a recursive WITH query but the cycle value was the same as the non-cycle or DEFAULT value.

Action: Change either the cycle or the non-cycle values so that they no longer match.

ORA-32482: sequence column for SEARCH clause must be different from the cycle mark column for CYCLE clause

Cause: A SEARCH clause and a CYCLE clause was specified for a recursive WITH query, but the sequence column of the SEARCH clause matched the cycle mark column of the CYCLE clause.

Action: Change either the sequence column or the cycle mark column so that they no longer match.

ORA-32483: duplicate name found in sort specification list for SEARCH clause of WITH clause

Cause: A SEARCH clause was specified for a recursive query with a sort specification list which contained duplicate names.

Action: Remove the duplicate names from the sort specification list of the SEARCH clause.

ORA-32484: duplicate name found in cycle column list for CYCLE clause of WITH clause

Cause: A CYCLE clause was specified for a recursive query with a cycle column list which contained duplicate names.

Action: Remove the duplicate names from the cycle column list of the CYCLE clause.

ORA-32485: element in cycle column list of CYCLE clause must appear in the column alias list of the WITH clause element

Cause: An element in the cycle column list of a CYCLE clause that was specified for a recursive WITH query did not appear in the column alias list of the WITH clause element.

Action: Change the cycle column list to use only names which are listed in the column alias list of the WITH clause element.

ORA-32486: unsupported operation in recursive branch of recursive WITH clause

Cause: The recursive component of the UNION ALL in a recursive WITH clause element used an operation that was currently not supported. The following should not be used in the recursive branch of the UNION ALL operation: GROUP BY, DISTINCT, MODEL, grouping sets, CONNECT BY, window functions, HAVING, aggregate functions.

Action: Rewrite the query without the unsupported operation.

ORA-32487: unsupported join in recursive WITH query

Cause: The recursive component of a recursive WITH clause element contained one of the following: - A LEFT OUTER join where the right side was the recursive query name. - A RIGHT OUTER join where the left side was the recursive query name. - A FULL OUTER join involving the recursive query name.

Action: Rewrite the query without the unsupported join operation.

ORA-32488: WITH clause element did not have a column alias list

Cause: A WITH clause element used the SEARCH clause or CYCLE clause or both but did not have a column alias list specified for it.

Action: Add a column alias list for the WITH clause query name.

ORA-32489: element in sort specification list of SEARCH clause did not appear in the column alias list of the WITH clause element

Cause: An element in the sort specification list of a SEARCH clause that was specified for a recursive WITH query did not appear in the column alias list of the WITH clause element.

Action: Change the sort specification list to use only names which are listed in the column alias list of the WITH clause element.

ORA-32490: recursive query name referenced more than once in recursive branch of recursive WITH clause element

Cause: The recursive component of the UNION ALL in a recursive WITH clause element referenced the recursive query name more than once. Only one reference to the recursive query name is allowed in the recursive branch of a recursive WITH clause element.

Action: Rewrite the query using only one reference to the recursive query name in the recursive branch of the recursive WITH clause element.

ORA-32499: operation not supported with old CONNECT BY clause

Cause: The query used the old CONNECT BY clause on operations that are not supported.

Action: Disable the old CONNECT BY clause by disabling the `_old_connect_by_enabled` parameter.

ORA-32500: Dirname '<varname>string</varname>' cannot exceed '<varname>string</varname>' characters

Cause: Path name too long

Action: Use shorter pathname than maximum specified for dirname.

ORA-32501: Writing SGA to file failed

Cause: Underlying OSDs encountered an error

Action: Check additional information. slercerrno contains errno.

ORA-32502: Cannot execute command. Flash Freeze is not in effect

Cause: This command can only be issued after a flash freeze

Action: Refer to instructions for flash freeze and Oracle diagnostics.

ORA-32503: Mapping SGA from file failed

Cause: Underlying OSDs encountered an error

Action: Check additional information. slercerrno contains errno.

ORA-32504: expecting one of <varname>string</varname>, <varname>string</varname>, <varname>string</varname>, or <varname>string</varname> but found <varname>string</varname>

Cause: illegal value specified for create watchpoint mode

Action: specify one of the expected modes

ORA-32505: too many watchpoints

Cause: too many watchpoints created

Action: increase appropriate initialization parameters

ORA-32506: expecting one of <varname>string</varname>, <varname>string</varname>, or <varname>string</varname> but found <varname>string</varname>

Cause: invalid arguments provided

Action: provide one of the expected arguments

ORA-32507: expecting <varname>string</varname> but found <varname>string</varname>

Cause: invalid arguments to command

Action: provide one of the expected arguments

ORA-32508: no such watchpoint id

Cause: invalid watchpoint id

Action: use oradebug show to list valid watchpoint ids

ORA-32509: watchpoint was already deleted

Cause: trying to delete an already deleted watchpoint

Action: use oradebug show to list valid watchpoint ids

ORA-32510: cannot create watchpoint on unreadable memory

Cause: trying to create watchpoint on invalid address

Action: provide a different valid address

ORA-32511: cannot create watchpoint in memory needed by watchpointing code

Cause: overlap exists between requested memory range to watch and internal memory structures that watchpointing operations need

Action: provide a different address range

ORA-32512: type '<varname>string</varname>' is unknown

Cause: trying to dump an invalid type name

Action: specify a known type

ORA-32514: cannot dump multiple '<varname>string</varname>' types: structure size is unknown

Cause: trying to dump an invalid address

Action: provide a different valid address

ORA-32515: cannot issue ORADEBUG command '<varname>string</varname>' to process '<varname>string</varname>'; prior command execution time exceeds <varname>string</varname> ms

Cause: The process targeted to execute the ORADEBUG command was busy executing another ORADEBUG command for a time greater than the timeout value specified.

Action: Increase the timeout value.

ORA-32516: cannot wait for process '<varname>string</varname>' to finish executing ORADEBUG command '<varname>string</varname>'; wait time exceeds <varname>string</varname> ms

Cause: The execution of the ORADEBUG command took longer than the the timeout value specified.

Action: Increase the timeout value.

ORA-32517: cannot issue ORADEBUG command '<varname>string</varname>' to process '<varname>string</varname>' (prior command execution time exceeds <varname>string</varname> ms); total wait time exceeds <varname>string</varname> ms

Cause: The process targeted to execute the ORADEBUG command was busy executing another ORADEBUG command. But, because the total wait time for all targeted processes exceeded the maximum wait time, the ORADEBUG command was not issued to the target process.

Action: Increase the timeout value.

ORA-32518: cannot wait for process '<varname>string</varname>' to finish executing ORADEBUG command '<varname>string</varname>' (waited <varname>string</varname> ms); total wait time exceeds <varname>string</varname> ms

Cause: The total wait time for all targeted processes exceeded the maximum wait time, therefore the wait for the targeted process to finish executing the ORADEBUG command was aborted.

Action: Increase the timeout value.

ORA-32519: insufficient privileges to execute ORADEBUG command: <varname>string</varname>

Cause: Sufficient privileges were not granted.

Action: Perform the operation using a database session that has the required privileges. See the Oracle ORADEBUG documentation for more details.

ORA-32520: error authenticating credentials

Cause: An error was encountered while authenticating credentials.

Action: Check the other error messages for additional information or contact Oracle Support Services.

ORA-32521: error parsing ORADEBUG command: <varname>string</varname>

Cause: An invalid ORADEBUG command was specified.

Action: Specify the correct ORADEBUG command and arguments.

ORA-32522: restricted heap violation while executing ORADEBUG command: [<varname>string</varname>] [<varname>string</varname>] [<varname>string</varname>]

Cause: An invalid memory heap was used in an ORADEBUG command.

Action: Try executing the ORADEBUG command in the current process or contact Oracle Support Services.

ORA-32523: watchpoint cannot be created in dynamic processes

Cause: An attempt was made to create a watchpoint in a process involving threads.

Action: Check the process mode or try creating watchpoints only in the static non-threaded processes.

ORA-32550: Replacement occurred despite hint to the contrary

Cause: This should never be signalled; it's internal.

Action: Report to Oracle support.

ORA-32575: Explicit column default is not supported for modifying views

Cause: Default keyword was used to modify views.

Action: Use implicit default - omitting column-value pair.

ORA-32576: missing TYPE keyword

Cause: keyword TYPE is missing.

Action: Use TYPE keyword.

ORA-32577: username must be SYS or SYSTEM

Cause: A user name of SYS or SYSTEM was not specified when providing a password in the CREATE DATABASE statement.

Action: Only passwords for the SYS and SYSTEM users can be provided in the CREATE DATABASE statement. Re-issue the statement with passwords for users SYS or SYSTEM.

ORA-32578: password for SYS already specified

Cause: A password for the SYS user was specified twice in the CREATE DATABASE statement.

Action: Re-issue the CREATE DATABASE statement with only one password for the SYS user.

ORA-32579: password for SYSTEM already specified

Cause: A password for the SYSTEM user was specified twice in the CREATE DATABASE statement.

Action: Re-issue the CREATE DATABASE statement with only one password for the SYSTEM user.

ORA-32580: both SYS and SYSTEM passwords must be provided

Cause: Passwords for both the SYS and SYSTEM users were not provided in the CREATE DATABASE statement. If one of the passwords was provided, then both should be provided.

Action: Re-issue the CREATE DATABASE statement with a password for both the SYS and SYSTEM users.

ORA-32581: missing or invalid password

Cause: An incorrect password was provided for the SYS or SYSTEM user in the CREATE DATABASE statement.

Action: Re-issue the CREATE DATABASE statement with a valid password.

ORA-32582: table function with left correlation to a table cannot also be left outer-joined to the table

Cause: A table function T2 contains a reference to a table T1. T2 is also left outer-joined to T1. This is not allowed.

Action: Remove the reference to T1 from T2 or remove the left outer-join specification (+).

ORA-32583: query passed to table function has wrong number of elements in select list

Cause: The query used as an input to a table function which takes a a ref cursor as argument has wrong number of elements in the select list which does not correspond to the elements in ref cursor. The ref cursor mentioned here refers to the one referenced in order by partition clauses. This is not allowed.

Action: Make sure that the select list of the query matches the ref cursor columns as defined in the function.

ORA-32584: missing LOG keyword

Cause: keyword LOG is missing.

Action: Use LOG keyword.

ORA-32585: duplicate specification of a supplemental log attribute

Cause: In a create/alter DDL a supplemental log attribute is specified more than once.

Action: Rewrite the Create/Alter DDL such that it has a single occurrence of any supplemental log attribute.

ORA-32586: multiple specification of a supplemental logging attribute

Cause: The primary key, unique index, foreign key or all column supplemental logging attribute can be specified at most once in a create/alter ddl.

Action: Rewrite the Create/Alter DDL with single occurrence of the offending supplemental logging attribute.

ORA-32587: Cannot drop nonexistent <varname>string</varname> supplemental logging

Cause: specified supplemental log attribute does not exist.

Action: None

ORA-32588: supplemental logging attribute <varname>string</varname> exists

Cause: specified supplemental logging attribute exists.

Action: retry the alter/create ddl after removing this supplemental logging attribute.

ORA-32589: unable to drop minimal supplemental logging

Cause: Minimal supplemental logging could not be dropped as one of primary key, foreign key, unique or all column supplemental logging is enabled at the database level.

Action: Use V\$DATABASE to determine the databasewide supplemental logging directives. Minimal supplemental logging could be dropped if and only if no other databasewide supplemental logging directives are enabled.

ORA-32590: log group specification not allowed here

Cause: Supplemental log specification is not allowed in the statement.

Action: Remove the supplemental log specification from the statement.

ORA-32591: connect string too long

Cause: The connect string specified for the database link was more than 2000 characters.

Action: Specify a connect string less than 2000 characters.

ORA-32592: all columns in log group can not be no log columns

Cause: A supplemental log group must have at least one column of scalar type that is not marked as no log.

Action: Redefine the supplemental log group with at least one column of scalar type that is not marked as no log.

ORA-32593: database supplemental logging attributes in flux

Cause: there is another process actively modifying the database wide supplemental logging attributes.

Action: Retry the DDL or the LogMiner dictionary build that raised this error.

ORA-32594: invalid object category for COMMENT command

Cause: The object category specified is not a valid object for which to use the COMMENT command.

Action: Retry the COMMENT command by specifying an accepted object category. (ie, Table, Operator, Indextype, etc.)

ORA-32595: DDL statement cannot be audited with BY SESSION specified

Cause: An attempt was made to audit a DDL statement with BY SESSION clause specified. DDL statements can be audited BY ACCESS only.

Action: Specify BY ACCESS instead of BY SESSION to audit the DDL statement.

ORA-32596: duplicate ALTER USER or CREATE USER option

Cause: An ALTER USER option was duplicated.

Action: Remove the duplicate option.

ORA-32597: database supplemental logging attributes inconsistent

Cause: failed to propagate supplemental logging attributes to all RAC instances. Most likely caused by an instance leaving the RAC while this DDL was in progress.

Action: Retry the DDL or the LogMiner dictionary build that raised this error.

ORA-32598: user names cannot be changed in ALTER DATABASE LINK command

Cause: An attempt was made to change the fixed user name of the database link.

Action: None

ORA-32599: cannot create a view in SYS schema with V\$ or GV\$ name prefix

Cause: An attempt was made to create a view in SYS schema with V\$ or GV\$ name prefix, which is reserved for fixed views.

Action: Provide a different name for the view or use a different schema.

ORA-32600: RETENTION and PCTVERSION cannot be used together

Cause: cannot use both RETENTION and PCTVERSION together.

Action: Use either RETENTION or PCTVERSION.

ORA-32601: value for retention cannot be provided

Cause: cannot give a value for Retention Period.

Action: do not provide the value for parameter.

ORA-32602: FREEPOOLS and FREELIST GROUPS cannot be used together

Cause: cannot use both FREEPOOLS and FREELIST GROUPS together.

Action: Use either FREEPOOLS or FREELIST GROUPS.

ORA-32603: invalid FREEPOOLS LOB storage option value

Cause: The specified FREEPOOLS LOB storage option value must be an integer.

Action: Choose an appropriate integer value and retry the operation.

ORA-32604: invalid REBUILD option

Cause: Keyword FREEPOOLS expected after the REBUILD keyword.

Action: User must specify FREEPOOLS keyword.

ORA-32605: invalid REBUILD option

Cause: cannot rebuild freepools while creating table with lob column.

Action: User must not specify REBUILD... in this context.

ORA-32606: missing NAV keyword in MODEL clause

Cause: The NAV keyword was not specified where it was expected.

Action: Specify the NAV keyword or check the SQL statement.

ORA-32607: invalid ITERATE value in MODEL clause

Cause: The specified ITERATE value must be a 4 byte positive integer.

Action: Choose an appropriate value and retry the operation.

ORA-32608: missing INCREMENT or DECREMENT keyword in FOR loop

Cause: INCREMENT or DECREMENT keyword was not specified where it is expected.

Action: Specify the INCREMENT or DECREMENT keyword or check the SQL statement.

ORA-32609: missing REFERENCE keyword in MODEL clause

Cause: The REFERENCE keyword was not specified where it is expected.

Action: Specify the REFERENCE keyword or check the SQL statement.

ORA-32610: missing SINGLE REFERENCE or DIMENSION keyword in MODEL clause

Cause: SINGLE REFERENCE or DIMENSION keyword was not specified where it is expected.

Action: Specify the applicable keywords or check the SQL statement.

ORA-32611: incorrect use of MODEL CV operator

Cause: CV function was used outside a dimension expression, in UNTIL condition, or with non-dimensional arguments.

Action: Check the SQL statement and rewrite if necessary.

ORA-32612: invalid use of FOR loop

Cause: The MODEL FOR loop was used where it is not allowed. FOR loops are not allowed in complex dimensional predicates, on the right hand side of rules, or in the until condition.

Action: Check the SQL statement and rewrite if necessary.

ORA-32613: not a MODEL cell

Cause: The operator requires a MODEL cell as operand.

Action: Specify MODEL cell as operand, check SQL statement.

ORA-32614: illegal MODEL SELECT expression

Cause: An expression other than MODEL aliases, constants, or expressions of the two is specified in the MODEL SELECT clause.

Action: Reformulate the query, perhaps nesting inside another SELECT.

ORA-32615: incorrect use of MODEL IS ANY predicate

Cause: IS ANY predicate is used outside dimension expression or with non-dimensional or different dimensional arguments.

Action: Check the SQL statement and rewrite if necessary.

ORA-32616: missing DIMENSION BY keyword in MODEL clause

Cause: The DIMENSION keyword was not specified where it is expected.

Action: Specify the DIMENSION keyword or check the SQL statement.

ORA-32617: missing MEASURES keyword in MODEL clause

Cause: The MEASURES keyword was not specified where it is expected.

Action: Specify the MEASURES keyword or check the SQL statement.

ORA-32618: incorrect use of MODEL PREVIOUS function

Cause: The MODEL PREVIOUS function was used outside of MODEL "ITERATE UNTIL" clause, or was nested.

Action: Check the SQL statement and rewrite if necessary.

ORA-32619: incorrect use of MODEL ITERATION_NUMBER

Cause: ITERATION_NUMBER was used outside of an iterated MODEL.

Action: Check the SQL statement and rewrite if necessary.

ORA-32620: illegal subquery within MODEL rules

Cause: A subquery was used illegally within the MODEL rule.

Action: Check the SQL statement and rewrite if necessary.

ORA-32621: illegal aggregation in UNTIL iteration condition

Cause: An aggregate function was used in UNTIL condition.

Action: Check the SQL statement and rewrite if necessary.

ORA-32622: illegal multi-cell reference

Cause: Multi-cell reference was specified on a measure expression without an aggregate function.

Action: Use an aggregate function on the measure expression or qualify the cell reference.

ORA-32623: incorrect use of MODEL PRESENT* functions

Cause: A PRESENT* function (IS PRESENT, PRESENTV, PRESENTNNV) was used in a measure expression.

Action: Check the SQL statement and rewrite if necessary.

ORA-32624: illegal reordering of MODEL dimensions

Cause: The expressions to qualify dimensions were specified in an incorrect order within a cell reference.

Action: Reorder dimension expressions in the cell reference.

ORA-32625: illegal dimension in cell reference predicate

Cause: A non-positional dimension was referenced in the predicate.

Action: Check the SQL statement and rewrite if necessary.

ORA-32626: illegal bounds or increment in MODEL FOR loop

Cause: FOR loop allows only numeric and datetime without timezone type for bounds. Only constants of interval and numeric types are allowed as increment/decrement expressions.

Action: Check the SQL statement and rewrite if necessary.

ORA-32627: illegal pattern in MODEL FOR LIKE loop

Cause: The FOR LIKE pattern had zero or more than one wild characters.

Action: Simplify the pattern to have a single wildcard character.

ORA-32628: invalid nesting of MODEL cell reference

Cause: MODEL cell reference was nested too deeply.

Action: Avoid deep nesting of cell references and rewrite if necessary.

ORA-32629: measure used for referencing cannot be updated

Cause: A measure used in nested referencing is updated by a MODEL rule in the automatic order MODEL.

Action: Modify the SQL statement or use sequential order MODEL.

ORA-32630: multiple assignment in automatic order MODEL

Cause: A MODEL cell was updated on the same measure in multiple MODEL rules. Multiple assignment is not allowed in automatic order MODELS as it causes in ambiguity and nondeterminism.

Action: Use sequential order MODEL or rewrite the rule to avoid this.

ORA-32631: illegal use of objects in MODEL

Cause: An object column was used as a MODEL column. Object types are not allowed as partition by, dimension by or measure expressions.

Action: Check the SQL statement and rewrite if necessary.

ORA-32632: incorrect subquery in MODEL FOR cell index

Cause: An illegal subquery was specified in MODEL FOR cell index. A subquery used in a MODEL FOR cell index can not have subqueries, correlation, binds and references to WITH tables.

Action: Check the SQL statement and rewrite if necessary.

ORA-32633: MODEL subquery FOR cell index returns too many rows

Cause: Subquery in MODEL FOR cell index returned more than the allowed maximum.

Action: Split the rule into multiple ones.

ORA-32634: automatic order MODEL evaluation does not converge

Cause: Evaluation using automatic rule ordering did not reach a convergence point.

Action: Modify the rules or use sequential order instead.

ORA-32635: not a single cell reference predicate

Cause: A predicate that is not a single cell reference predicate was specified where a single cell reference predicate was expected. A single cell reference predicate is either a constant expression or a predicate of the form <dimension_key = constant_expr>

Action: Make sure that the predicate is a proper single cell reference. In some cases, you might have to put explicit type conversion operators (or casts) on the constant expression.

ORA-32636: Too many rules in MODEL

Cause: The number of rules (possibly after rule unfolding) exceeded the maximum number of rules allowed.

Action: Reduce the number of rules.

ORA-32637: Self cyclic rule in sequential order MODEL

Cause: A self-cyclic rule was detected in the sequential order MODEL. Sequential order MODELS cannot have self cyclic rules to guarantee that the results do not depend on the order of evaluation of the cells that are updated or upserted.

Action: Use ordered rule evaluation for this rule.

ORA-32638: Non unique addressing in MODEL dimensions

Cause: The address space defined for the MODEL (partition by and dimension by expressions) do not uniquely identify each cell.

Action: Rewrite the MODEL clause. Using UNIQUE SINGLE REFERENCE option might help.

ORA-32639: Aggregate functions on reference MODELS are not allowed

Cause: An aggregate function was specified on the cells of a reference MODEL.

Action: Check the SQL statement and rewrite if necessary.

ORA-32640: FOR LIKE loops are not allowed for multi-byte character types

Cause: FOR LIKE loops was specified for a multi-byte character type.

Action: Check the SQL statement and rewrite if necessary.

ORA-32641: invalid expression in MODEL rule ORDER BY clause

Cause: An invalid expression was specified in the MODEL rule ORDER BY clause where only expressions of dimension and measure columns and reference MODEL cell references are allowed

Action: Modify the order by clause in the MODEL rule.

ORA-32642: non-unique cell values from the ORDER BY clause

Cause: The MODEL rule ORDER BY clause did not generate unique values for all cells that satisfy the predicates in the left side of the rule.

Action: Modify the rule ORDER BY clause in the MODEL rule.

ORA-32643: invalid use of window function in MODEL rule

Cause: The window functions can not be used in SQL Model rules that have FOR-loops on the left side or aggregates on the right side.

Action: Modify the MODEL rule.

ORA-32644: this function is not allowed outside of MODEL clause

Cause: A function allowed only within the MODEL clause is used outside of MODEL clause.

Action: Rewrite the SQL statement.

ORA-32689: MODEL: event to turn on/off some optimizations**ORA-32690: Hash Table Infrastructure ran out of memory**

Cause: Not enough memory.

Action: Increase memory.

ORA-32691: Internal event for Adaptive Group-By**ORA-32692: Internal event for Adaptive Group-By****ORA-32695: HTI: Not enough memory**

Cause: Memory is not enough.

Action: Increase memory.

ORA-32696: HTI: No free slot

Cause: There is not enough memory.

Action: Increase memory.

ORA-32697: HTI: max agg size**ORA-32698: Overshoot in index scan prefetch****ORA-32699: HTI: event to dump statistics****ORA-32700: error occurred in DIAG Group Service**

Cause: An unexpected error occurred while performing a DIAG Group Service operation.

Action: Verify that the DIAG process is still active. Also, check the Oracle DIAG trace files for errors.

ORA-32701: Possible hangs up to hang ID=<varname>string</varname> detected

Cause: Hang Manager detected one or more hangs. These could be valid hangs that require action or the system could be overloaded causing very slow progress which can be interpreted as hangs. If hang resolution is enabled, Hang Manager may attempt to resolve the hang by terminating the ultimate blocker.

Action: Check the incident logs associated with this message for diagnostic information.

ORA-32702: Rolling migration is going on

Cause: DIAG detected rolling migration in IPC.

Action: No action needed. DIAG is shutting down for rolling migration. This error number is solely used for internal purposes.

ORA-32703: deadlock detected: <varname>string</varname>

Cause: Oracle sessions waiting for resources were deadlocked.

Action: Reissue any commands that failed and contact Oracle Support Services with the incident information.

ORA-32704: Oracle RAC deadlock detected: <varname>string</varname>

Cause: Oracle sessions or processes using Global Enqueue Service were deadlocked waiting for resources.

Action: Reissue any commands that failed and contact Oracle Support Services with the incident information.

ORA-32705: Oracle RAC deadlock search terminated due to an exception**ORA-32730: Command cannot be executed on remote instance**

Cause: DIAG is not registered with DIAG Group Service

Action: Issue the command without the cluster database syntax

ORA-32731: Another Parallel Oradebug session is in progress

Cause: Another session for Parallel Oradebug is in progress with the database

Action: Issue the command later when the current session finishes

ORA-32732: Parallel Oradebug session is aborted

Cause: Group reconfiguration is occurring among DIAGs

Action: Issue the command later when group reconfiguration completes

ORA-32733: Error occurred when executing Parallel Oradebug

Cause: Error is encountered during executing command at local node

Action: Check alert log and DIAG trace file for error detail

ORA-32734: Error occurred when sending Oradebug command to remote DIAGs

Cause: IPC communication problem encountered

Action: Check IPC communication between DIAGs and issue the command again

ORA-32735: DIAG process is not running in the instance

Cause: DIAG process is not alive

Action: Check error in DIAG trace file and issue the command again when DIAG is restarted

ORA-32736: Hang analysis aborted due to wrong message type

Cause: DIAG received wrong message.

Action: Check DIAG trace files for errors.

ORA-32737: Hang analysis aborted due to failed memory allocation

Cause: DIAG couldn't allocate buffer for remote copy.

Action: Check DIAG trace files for errors.

ORA-32738: Hang analysis aborted due to failed memory copy

Cause: DIAG couldn't copy buffer to remote node.

Action: Check DIAG trace files for errors.

ORA-32739: Hang analysis aborted due to failed heap re-grow

Cause: DIAG couldn't re-grow the heap for wait-for-graphs.

Action: Check DIAG trace files for errors.

ORA-32740: The requested operation cannot be proceeded

Cause: Operation was aborted because instance termination was in progress.

Action: Retry later after restarting the instance.

ORA-32741: Hang analysis already going on

Cause: Hang analysis was already in process globally or for the instance.

Action: Wait for the current operation to complete and re-run the command.

ORA-32742: Hang analysis initialize failed

Cause: Hang analyzer was not able to allocate memory to initialize.

Action: Check the trace files.

ORA-32743: command cannot be executed on remote instance

Cause: The database was not mounted in SHARED mode.

Action: Mount the database in SHARED mode.

ORA-32761: Turn off Temp LOB Ref Count Feature

Cause: None

Action: Turn off the whole temp lob ref count feature

ORA-32762: Turn on Temp LOB Ref Count Tracing

Cause: None

Action: Check Trace file for debug info

ORA-32763: Turn off N-Pass Temp LOB cleanup

Cause: None

Action: Facilitate debugging and testing

ORA-32766: instr with negative offset: use varchar semantics on LOBs

Cause: The current varchar behavior is different. e.g. `instr('abcd', 'cd', -2, 1)` returns 3, whereas `instr(to_clob('abcd'), 'cd', -2, 1)` returns 0, (i.e. no match), because the reverse search starts from offset -2, which points to 'c' and moving backward, i.e. 'd' is ignored. This is symmetric to `instr('dcba', 'dc', 2, 1)`, which returns 0.

Action: ORACLE uses the same varchar semantics on LOBs (instr). Using the same example, instr(to_clob('abcd'), 'cd', -2, 1) will return 3 as in the varchar case.

ORA-32767: No server connection for this operation

Cause: The client side sql or plsql function operation requires a connection to the server, but currently no client/server connection existed.

Action: Establish a client/server connection.

ORA-32771: cannot add file to bigfile tablespace

Cause: An attempt was made to add the second file to a bigfile tablespace.

Action: Do not use this command with bigfile tablespace.

ORA-32772: BIGFILE is invalid option for this type of tablespace

Cause: An attempt was made to create a bigfile tablespace that is dictionary managed or locally managed with manual segment-space management.

Action: Either change the tablespace type to locally managed with automatic segment-space management, or create a SMALLFILE tablespace instead.

ORA-32773: operation not supported for smallfile tablespace <varname>string</varname>

Cause: An attempt was made to perform an operation which is supported only for bigfile tablespaces, e.g. resize tablespace.

Action: Use the appropriate clause of the ALTER DATABASE DATAFILE command instead.

ORA-32774: more than one file was specified for bigfile tablespace <varname>string</varname>

Cause: More than one datafile or tempfile was specified in CREATE TABLESPACE command for a bigfile tablespace.

Action: Change command to contain only one file or create a smallfile tablespace instead.

ORA-32775: cannot change size attributes of read only tablespace <varname>string</varname>

Cause: An attempt was made to change size attributes of a tablespace that is read only.

Action: Change the tablespace to read/write and retry the operation.

ORA-32780: Analytical Functions: event to turn on or off optimizations

ORA-32781: Trace event for window functions

Cause: N/A

Action: Set this event only under the supervision of Oracle development. Trace level is a bitfield. LEVEL ACTION -----
 0x0001 trace window functions after ordering semantics rewrite 0x0002 trace statistics collected for window functions 0x0004 trace ordering groups generated for window functions 0x0008 trace dynamic sampling statistics expressions 0x0010 trace messages for slave-2-QC communication 0x0020 trace window consolidation rows

ORA-32790: Element '<varname>string</varname>' cannot share the default table '<varname>string</varname>' with element '<varname>string</varname>'

Cause: An element in the restriction shared a default table with the corresponding element in its supertype.

Action: Change the default table's name for the element in restriction.

ORA-32791: prebuilt table managed column cannot have a default on null

Cause: An attempt was made to create a materialized view on a prebuilt table that has a managed column with a default on null expression.

Action: Either remove the default on null property, or do not include the column in the materialized view definition.

ORA-32792: prebuilt table managed column cannot be an identity column

Cause: An attempt was made to create a materialized view on a prebuilt table that has a managed column that is an identity column.

Action: Either remove the identity property, or do not include the column in the materialized view definition.

ORA-32793: cannot alter a system-generated sequence

Cause: An attempt was made to alter a system-generated sequence.

Action: A system-generated sequence, such as one created for an identity column, cannot be altered.

ORA-32794: cannot drop a system-generated sequence

Cause: An attempt was made to drop a system-generated sequence.

Action: A system-generated sequence, such as one created for an identity column, cannot be dropped.

ORA-32795: cannot insert into a generated always identity column

Cause: An attempt was made to insert a value into an identity column created with GENERATED ALWAYS keywords.

Action: A generated always identity column cannot be directly inserted. Instead, the associated sequence generator must provide the value.

ORA-32796: cannot update a generated always identity column

Cause: An attempt was made to update an identity column created with GENERATED ALWAYS keywords.

Action: A generated always identity column cannot be directly updated.

ORA-32797: identity column sequence mismatch in ALTER TABLE EXCHANGE PARTITION

Cause: The two tables specified in the EXCHANGE have identity columns with sequences that are neither both increasing nor decreasing.

Action: Ensure that the identity columns have sequences with INCREMENT BY having the same sign.

ORA-32798: cannot use ANSI RIGHT or FULL outer join with a left correlation

Cause: An attempt was made to use a lateral view with a left correlation to the first operand of an ANSI RIGHT or FULL outer join.

Action: Rewrite the query without the left correlation.

ORA-32799: cannot rename a system-generated sequence

Cause: An attempt was made to rename a system-generated sequence.

Action: A system-generated sequence, such as one created for an identity column, cannot be renamed.

ORA-32800 to ORA-32857

ORA-32800: internal error <varname>string</varname>

Cause: An unexpected error occurred.

Action: Contact Oracle Support Services.

ORA-32801: invalid value <varname>string</varname> for <varname>string</varname>

Cause: An invalid value was specified for a parameter.

Action: Specify a valid value for the parameter.

ORA-32802: value for <varname>string</varname> must be <varname>string</varname>

Cause: An invalid value was specified for a parameter.

Action: Specify the value as indicated by the message.

ORA-32803: value for <varname>string</varname> cannot be altered

Cause: An attempt was made to alter a value that cannot be altered.

Action: Retry the operation without altering the indicated value.

ORA-32804: invalid value <varname>string</varname>, <varname>string</varname> should have form <varname>string</varname>

Cause: A value specified for a parameter has the incorrect form.

Action: Specify a string of the correct form.

ORA-32805: identifier for <varname>string</varname> too long, maximum length is <varname>string</varname> characters

Cause: An identifier string exceeded the maximum allowed length.

Action: Specify a string whose length is less than the maximum allowed length.

ORA-32806: value for <varname>string</varname> is too long, maximum length is <varname>string</varname>

Cause: A value exceeded its maximum allowed length.

Action: Specify a value whose length is less than the maximum allowed length.

ORA-32807: message system link <varname>string</varname> already exists

Cause: A message system link of the specified name already exists.

Action: Specify a different name.

ORA-32808: message system link <varname>string</varname> does not exist

Cause: A message system link of the specified name does not exist.

Action: Specify a message system link name that already exists.

ORA-32809: foreign queue <varname>string</varname> is already registered

Cause: The foreign queue has already been registered for this message system link (NAME@MSGLINK).

Action: Specify a different name that is not being used for this message system link.

ORA-32810: foreign queue <varname>string</varname> is not registered

Cause: The foreign queue (NAME@MSGLINK) has not been registered for this message system link.

Action: Specify the name of a registered foreign queue.

ORA-32811: subscriber <varname>string</varname> already exists

Cause: The specified subscriber identifier already exists.

Action: Specify a different identifier.

ORA-32812: subscriber <varname>string</varname> does not exist

Cause: The specified subscriber identifier does not exist.

Action: Specify an existing subscriber identifier.

ORA-32813: propagation schedule <varname>string</varname> already exists

Cause: The specified propagation schedule identifier already exists.

Action: Specify a different identifier.

ORA-32814: propagation schedule <varname>string</varname> does not exist

Cause: The specified propagation schedule identifier does not exist.

Action: Specify a schedule identifier that already exists.

ORA-32815: message system link <varname>string</varname> is referenced by a foreign queue

Cause: An attempt was made to remove a message system link currently referenced by one or more registered foreign queues.

Action: Unregister all foreign queues using this message system link and retry the operation.

ORA-32816: foreign queue <varname>string</varname> is referenced by a subscriber or schedule

Cause: An attempt was made to unregister a foreign queue currently referenced by one or more subscribers or propagation schedules.

Action: Remove all subscribers and propagation schedules using this foreign queue and retry the operation.

ORA-32817: message system link <varname>string</varname> is not configured with a log queue for <varname>string</varname>

Cause: An attempt was made to add a propagation subscriber but the message system link was not configured with a log queue for the indicated propagation type.

Action: Alter the message system link to configure the link with a log queue for this propagation type.

ORA-32818: AQ queue <varname>string</varname> does not exist

Cause: An operation was attempted where the specified AQ queue does not exist.

Action: Specify the name of an existing AQ queue.

ORA-32819: AQ queue <varname>string</varname> must be a normal queue

Cause: An operation was attempted where the specified AQ queue exists but is not a normal queue.

Action: Specify the name of an AQ queue which was created as a normal queue (NORMAL_QUEUE).

ORA-32820: subscriber queue and exception queue must use same message system link

Cause: An operation was attempted for INBOUND propagation where the specified subscriber queue and exception queue reference different message system links.

Action: Specify an exception queue that is a registered foreign queue of the same message system link as the subscriber queue.

ORA-32821: subscriber queue and exception queue must have same payload type

Cause: An operation was attempted for OUTBOUND propagation where the AQ queues used for the subscriber queue and exception queue have different payload types.

Action: Specify an exception queue that has the same payload type as the subscriber queue.

ORA-32822: subscriber <varname>string</varname> is marked for removal

Cause: An administration operation was attempted for a subscriber which is marked for removal. If attempting to remove a subscriber, the Messaging Gateway agent is not running or is running but unable to remove the subscriber at this time.

Action: Do not issue propagation administration commands for a subscriber for which removal is pending. Wait for the subscriber to be removed by the agent or issue REMOVE_SUBSCRIBER with the FORCE option to force the subscriber to be removed.

ORA-32823: subscriber exists for queue <varname>string</varname> and destination <varname>string</varname>

Cause: An attempt was made to create a propagation subscriber when one already exists for the specified queue and destination pair.

Action: Specify a different queue and destination pair, or remove the subscriber using that pair and retry the operation.

ORA-32824: schedule exists for source <varname>string</varname> and destination <varname>string</varname>

Cause: An attempt was made to create a propagation schedule when one already exists for the specified source and destination pair.

Action: Specify a different source and destination pair, or remove the schedule using that pair and retry the operation.

ORA-32825: Messaging Gateway agent has not been started

Cause: An attempt was made to shut down the Messaging Gateway agent when it is not started.

Action: No action required.

ORA-32826: Messaging Gateway agent has already been started

Cause: An attempt was made to start the Messaging Gateway agent when it is already started.

Action: No action required.

ORA-32827: Messaging Gateway agent must be shut down

Cause: An operation was attempted that requires the Messaging Gateway agent to be shut down.

Action: Issue SHUTDOWN, wait for MGW_GATEWAY view to show a NOT_STARTED status, and retry the operation. CLEANUP_GATEWAY may need to be issued to reset the gateway state if the agent fails to shut down after a reasonable time period.

ORA-32828: Messaging Gateway agent must be running

Cause: An operation was attempted that requires the Messaging Gateway agent to be started and responsive.

Action: Issue STARTUP, wait for MGW_GATEWAY view to show a RUNNING status, and retry the operation.

ORA-32829: Messaging Gateway agent cannot be shut down while it is starting

Cause: An attempt was made to shut down the Messaging Gateway agent when it is in the process of starting and initializing.

Action: Wait for MGW_GATEWAY view to show a RUNNING status and retry the operation. CLEANUP_GATEWAY may need to be issued to reset the gateway state if the agent fails to start after a reasonable time period.

ORA-32830: result code <varname>string</varname> returned by Messaging Gateway agent

Cause: The Messaging Gateway agent terminated abnormally due to an unexpected error.

Action: Review the Messaging Gateway log file for further information regarding the problem. Resolve the problem and start the Messaging Gateway agent. Contact Oracle Support Services if the problem cannot be resolved.

ORA-32831: timed out trying to acquire administration lock

Cause: A timeout occurred when attempting an administration operation. Either an administration operation was attempted while the Messaging Gateway agent was starting and initializing, or two administration operations were attempted at the same time.

Action: Retry the operation. If the Messaging Gateway agent is starting, wait for MGW_GATEWAY view to show a RUNNING status and retry the operation.

ORA-32832: failure <varname>string</varname> trying to acquire administration lock

Cause: An unexpected error occurred trying to acquire administration lock.

Action: Retry the operation. Contact Oracle Support Services if the error persists.

ORA-32833: failure <varname>string</varname> trying to release administration lock

Cause: An unexpected error occurred trying to release administration lock.

Action: Contact Oracle Support Services if the error persists.

ORA-32834: Messaging Gateway agent user has not been set

Cause: A Messaging Gateway agent user has not been configured.

Action: Create a database user having role MGW_AGENT_ROLE and issue DB_CONNECT_INFO to configure an agent user.

ORA-32835: database user <varname>string</varname> does not exist

Cause: The specified database user does not currently exist.

Action: Create the user and grant all necessary privileges and roles.

ORA-32836: database user <varname>string</varname> must be granted role <varname>string</varname>

Cause: The specified database user does not have a required role.

Action: Grant the user the indicated role.

ORA-32837: invalid configuration state <varname>string</varname>

Cause: The specified configuration state is invalid.

Action: Remove and re-create the configured entities. Contact Oracle Support Services if the problem cannot be identified or resolved.

ORA-32838: exceeded maximum number of properties

Cause: An attempt was made to alter a property list where the number of properties in the resulting list exceeds the maximum allowed.

Action: Order the elements of the alter list differently so the number of elements in the resulting list is less than the maximum.

ORA-32839: property <varname>string</varname> is reserved, names with MGWPROP\$_ prefix are not valid

Cause: An attempt was made to specify a reserved name for a property name.

Action: Use a non-reserved name.

ORA-32840: property name cannot be NULL

Cause: An attempt was made to use NULL for a property name.

Action: Specify a non-NULL name.

ORA-32841: invalid value for property <varname>string</varname>

Cause: An attempt was made to specify an invalid value for a property.

Action: Specify a valid property value.

ORA-32842: value for property <varname>string</varname> cannot be altered

Cause: An attempt was made to alter a property that cannot be altered.

Action: Retry the operation without altering the indicated property.

ORA-32843: value for <varname>string</varname> is outside the valid range of <varname>string</varname> to <varname>string</varname>

Cause: A value was specified that is not in the valid range.

Action: Specify a value within the indicated range.

ORA-32844: exceeded maximum number of <varname>string</varname> values

Cause: An attempt was made to add a value of the specified type but the maximum number of such values has been reached.

Action: No action required.

ORA-32845: Messaging Gateway agent is already running

Cause: An attempt was made to start the Messaging Gateway agent when an agent instance is already running.

Action: Shut down the Messaging Gateway agent currently running, verify the agent process has been terminated, and start the Messaging Gateway agent.

ORA-32846: Messaging Gateway agent cannot be started; status is <varname>string</varname>

Cause: An attempt to start the Messaging Gateway agent failed due to the indicated agent status. A BROKEN status indicates a problem that requires user intervention before the agent can be started.

Action: Review the MGW_GATEWAY view and the Messaging Gateway log file for further information. Resolve the problem and start the Messaging Gateway agent. Contact Oracle Support Services if the problem cannot be resolved.

ORA-32847: operation is not supported on this platform

Cause: An attempt was made to perform an operation that is not supported on this platform.

Action: Switch to a platform on which the operation is supported.

ORA-32848: foreign queue DOMAIN required for JMS unified connections

Cause: A DOMAIN was not specified when registering a foreign queue for a messaging system link that is configured to use the JMS unified messaging model.

Action: Specify a non-NULL value for the DOMAIN parameter.

ORA-32849: <varname>string</varname> cannot be set unless <varname>string</varname> is set

Cause: An attempt was made to specify a value for a parameter that cannot be set unless an associated parameter is also set.

Action: Specify a valid value for both parameters, or, do not specify a value for either parameter.

ORA-32850: agent <varname>string</varname> does not exist

Cause: The specified Messaging Gateway agent name did not exist.

Action: Specify an existing agent name.

ORA-32851: agent <varname>string</varname> already exists

Cause: The specified Messaging Gateway agent name already existed.

Action: Specify a different agent name.

ORA-32852: agent <varname>string</varname> is referenced by a message system link

Cause: An attempt was made to remove a Messaging Gateway agent currently referenced by one or more message system links.

Action: Remove all message system links associated with this agent and retry the operation.

ORA-32853: propagation job <varname>string</varname> does not exist

Cause: The specified propagation job identifier did not exist.

Action: Specify an existing identifier.

ORA-32854: propagation job <varname>string</varname> already exists

Cause: The specified propagation job identifier already existed.

Action: Specify a different identifier.

ORA-32855: propagation job <varname>string</varname> is marked for removal

Cause: An administration operation was attempted for a propagation job which is marked for removal. If attempting to remove a job, the Messaging Gateway agent is not running or is running but unable to remove the job at this time.

Action: Do not issue propagation administration commands for a job for which removal is pending. Wait for the job to be removed by the agent, or, issue REMOVE_JOB with the FORCE option to force the job to be removed.

ORA-32856: operation not supported for propagation job

Cause: An attempt was made to perform an operation that was not supported for a propagation job.

Action: Perform the operation using a propagation job procedure.

ORA-32857: propagation job exists for source <varname>string</varname> and destination <varname>string</varname>

Cause: An attempt was made to create a propagation job, subscriber, or schedule when a propagation job already existed for the specified source and destination pair.

Action: Specify a different source and destination pair, or remove the propagation job using that pair and retry the operation.

ORA-33000 to ORA-37999

ORA-33000: (AGOPEN00) AGGMAP <varname>workspace object</varname> cannot be accessed because it was compiled by a more recent version of <varname>string</varname>.

Cause: The AGGMAP was already compiled by a more recent version of the product than was being used to execute this command.

Action: Recompile the AGGMAP in the current version.

ORA-33002: (XSAGDNGL00) In AGGMAP <varname>workspace object</varname>, the FLOOR argument of <varname>number</varname> must be less than the CEILING argument of <varname>number</varname>.

Cause: The user specified a floor argument greater than the ceiling argument.

Action: Adjust the floor and ceiling arguments so that the floor is less than the ceiling.
OBSOLETE, please remove this

ORA-33003: (XSAGDIMDROP) <varname>workspace object</varname>, to be transformed during data load, must be a base dimension and not otherwise referenced in the AGGMAP.

Cause: The user tried to specify a dimension in a dataflow-related clause in an aggmap which is already in another RELATION statement, DIMENSION statement, or possibly dimensioning the AGGMAP, or they specified a composite or conjoint dimension, or an object which is not a dimension

Action: Remove the conflicting reference or specify a valid object

ORA-33004: (XSAGDNGL01) <varname>workspace object</varname> is not a relationship array.

Cause: A RELATION clause in the AGGMAP named a workspace object that is not a relation.

Action: Name a valid self-relation in the RELATION statement.

ORA-33005: (XSAGDIMBREAK) Invalid breakout for dimension <varname>workspace object</varname>.

Cause: The user specified something that was not a valid dimension or relation on a BREAKOUTDIM line in an aggmap. This might be because the object was not a valid relation, was not over the specified dimension or was multidimensional

Action: Use a valid relation instead

ORA-33006: (XSAGDNGL02) The relation <varname>workspace object</varname> is not related to itself.

Cause: A relation was named in a RELATION clause of the AGGMAP that is not a self-relation.

Action: Name a valid self-relation in the RELATION statement.

ORA-33007: (XSAGPVAR) <varname>workspace object</varname> may only be used as one of: an OPERATOR, ARGS, or FROMVAR variable.

ORA-33008: (XSAGDNGL03) The relation <varname>workspace object</varname> is not a relation over a base dimension of AGGMAP <varname>workspace object</varname>.

Cause: A relation was named in a RELATION clause of the AGGMAP that is not a relation for a base dimension of the AGGMAP.

Action: Name a valid self-relation in the RELATION statement, that is, one that has a dimension that dimensions the AGGMAP.

ORA-33009: (XSAGDNGLPREC) In AGGMAP <varname>workspace object</varname>, PRECOMPUTE may only be specified either for the entire AGGMAP or for individual RELATION statements.

Cause: PRECOMPUTE was specified both as a line in the AGGMAP and on at least one of the RELATION lines, or it was specified more than once as a line of the AGGMAP.

Action: Remove either the PRECOMPUTE line, or the PRECOMPUTE specification for all of the RELATION lines.

ORA-33010: (XSAGDNGL04) Relation <varname>workspace object</varname> is duplicated in the AGGMAP <varname>workspace object</varname>.

Cause: Two RELATION statements in the AGGMAP reference the same relation object.

Action: Remove the duplicate RELATION statement.

ORA-33012: (XSAGDNGL05) AGGMAP <varname>workspace object</varname> contains invalid syntax.

Cause: A line in the AGGMAP contains invalid syntax.

Action: Change the line to have valid syntax.

ORA-33014: (XSAGDNGL06) In AGGMAP <varname>workspace object</varname>, variable operator <varname>workspace object</varname> cannot be dimensioned by rollup dimension <varname>workspace object</varname>.

Cause: Operator variables cannot have the rollup dimension as one of their base dimensions.

Action: Modify the definition of the operator variable so that the current rollup dimension is not one of its bases.

ORA-33016: (XSAGDNGL07) In AGGMAP <varname>workspace object</varname>, <varname>workspace object</varname> is not a valid operator or variable name.

Cause: An invalid argument was supplied to the OPERATOR clause in the relation statement.

Action: Fix the OPERATOR clause so that it specifies either a valid variable name or a valid operator.

ORA-33018: (XSAGDNGL08) In AGGMAP <varname>workspace object</varname>, the data type of <varname>workspace object</varname> must be TEXT, not <varname>string</varname>.

Cause: An operator variable was supplied whose data type is not TEXT.

Action: Change the operator clause to reference a TEXT variable.

ORA-33022: (XSAGDNGL10) The measure dimension <varname>workspace object</varname> must be a TEXT or ID base dimension that does not

dimension AGGMAP <varname>workspace object</varname>, but is in the same analytic workspace.

Cause: A MEASUREDIM was supplied in the AGGMAP that was not acceptable.

Action: Modify the MEASUREDIM clause to specify a valid dimension.

ORA-33024: (XSAGDNGL11) AGGMAP <varname>workspace object</varname> contains duplicate information.

Cause: The aggmap contains multiple instances of a clause that can only be specified once.

Action: Remove the extra clause.

ORA-33026: (XSAGDNGL12) In AGGMAP <varname>workspace object</varname>, <varname>workspace object</varname> is not a valid valueset.

Cause: A line in the AGGMAP contains an invalid element where a valid valueset is required.

Action: Change the line to have a valid valueset.

ORA-33028: (XSAGDNGL13) In AGGMAP <varname>workspace object</varname>, <varname>workspace object</varname> should be scalar, not a dimensioned valueset.

Cause: A line in the AGGMAP contains a dimensioned valueset where a scalar valueset is required.

Action: Change the line to have a scalar valueset.

ORA-33030: (XSAGDNGL14) In AGGMAP <varname>workspace object</varname>, you can have either a single independent PROTECT statement or PROTECT statements in your RELATION statements.

Cause: The AGGMAP either specified multiple PROTECT statements not on a RELATION line, or specified PROTECT statements both independently and on RELATION lines.

Action: Correct the AGGMAP to have valid syntax.

ORA-33032: (XSAGDNGL15) In AGGMAP <varname>workspace object</varname>, VALUESET <varname>workspace object</varname> must be in extra dimensions of the relation.

Cause: The RELATION phrase contains a VALUESET which is not over the extra dimension of the RELATION.

Action: Correct the RELATION phrase to contain a valueset over the extra dimension or not to contain any valueset.

ORA-33034: (XSAGDNGL16) In AGGMAP <varname>workspace object</varname>, VALUESET <varname>workspace object</varname> in PRECOMPUTE phrase must be in the self dimension of the relation.

Cause: The precompute phrase contains a valueset which is not over the self dimension of the relation.

Action: Correct the relation phrase to contain a valueset over the self dimension or not to contain any valueset.

ORA-33036: (XSAGDNGL17) ARGS option <varname>workspace object</varname> must be a TEXT variable.

Cause: An ARGS value had a non-text data type.

Action: Use a text variable for ARGS.

ORA-33038: (XSAGDNGL18) In AGGMAP <varname>workspace object</varname>, RELATION <varname>workspace object</varname> contains hierarchy dimensions that are also dimensions of the AGGMAP.

Cause: Hierarchy dimensions(extra dimensions) of a RELATION in the AGGMAP are base dimensions of the AGGMAP.

Action: Correct the RELATION not to have hierarchy dimensions(extra dimensions) which are also base dimensions of the AGGMAP.

ORA-33040: (XSAGDNGL19) In AGGMAP <varname>workspace object</varname>, VALUESETS <varname>workspace object</varname> and <varname>workspace object</varname> are both over the same hierarchy dimension.

Cause: Two or more different VALUESETs over the same hierarchy dimension are used in the AGGMAP.

Action: Use the same VALUESET for two RELATION phrases or use two different VALUESETs over two different hierarchy dimensions.

ORA-33042: (XSAGDNGL20) In AGGMAP <varname>workspace object</varname>, VALUESET <varname>workspace object</varname> must qualify all relations dimensioned by <varname>workspace object</varname>.

Cause: A VALUESET over a hierarchy dimension qualifies some RELATIONS but not all RELATIONS dimensioned by the same hierarchy dimension.

Action: Use the same VALUESET to qualify all the RELATIONS dimensioned by the same hierarchy dimension.

ORA-33044: (XSAGDNGL21) AGGREGATE operator <varname>string</varname> requires a WEIGHTBY clause, but the ARGS clause in AGGMAP <varname>workspace object</varname> did not specify one.

Cause: The user used an operator which needs weight values but not provided the weight values.

Action: Provide weight values using a WEIGHTBY clause.

ORA-33045: (XSAGDNGL51) The AGGREGATE operator <varname>string</varname> does not require a weight, but ARGS clause in AGGMAP <varname>workspace object</varname> specified <varname>workspace object</varname> as a weight.

Cause: The ARGS variable specified a weight even though one is not needed.

Action: Modify the ARGS variable so that it does not specify a weight for that operation.

ORA-33046: (XSAGDNGL22) In AGGMAP <varname>workspace object</varname>, you can specify only one SCREENBY clause.

Cause: The AGGMAP contained multiple SCREENBY clauses.

Action: Remove one of the SCREENBY clauses from the AGGMAP.

ORA-33048: (XSAGDNGL23) In AGGMAP <varname>workspace object</varname>, the relation <varname>workspace object</varname> and the relation <varname>workspace object</varname> are both over the same base dimension.

Cause: The AGGMAP contains incompatible RELATION statements.

Action: Remove one of the RELATION statements from the AGGMAP.

ORA-33050: (XSAGDNGL24) AGGMAP <varname>workspace object</varname> cannot be used to aggregate <varname>workspace object</varname>, because it is defined in a different analytic workspace.

Cause: The user attempted to aggregate a variable in another analytic workspace.

Action: Create an AGGMAP in the other analytic workspace to aggregate that variable.

ORA-33052: (XSAGDNGL25) AGGMAP <varname>workspace object</varname> is a dimensioned AGGMAP; it can only be used to aggregate like-dimensioned variables.

Cause: The user attempted to aggregate a variable with different dimensions than the AGGMAP. This is only possible with undimensioned AGGMAPs.

Action: Create a new undimensioned AGGMAP.

ORA-33058: (XSAGDNGL28) In AGGMAP <varname>workspace object</varname>, error code <varname>string</varname> is greater than the maximum error code of <varname>number</varname>.

Cause: The user specified an invalid ERRORMASK value.

Action: Remove the invalid value from the ERRORMASK list.

ORA-33060: (XSAGDNGL29) In AGGMAP <varname>workspace object</varname>, the value for the ERRORLOG MAX option must be greater than 0.

Cause: The user specified an ERRORLOG MAX of 0 or a negative number.

Action: Adjust the AGGMAP so that it uses a positive number.

ORA-33062: (XSAGDNGL30) In ALLOCMAP <varname>workspace object</varname>, WEIGHTBY option <varname>workspace object</varname> must be a numerical VARIABLE or FORMULA.

Cause: The WEIGHTBY clause requires numerical VARIABLE or FORMULA but the user used invalid objects.

Action: Correct the WEIGHTBY clause to use a valid numerical VARIABLE or FORMULA.

ORA-33064: (XSAGDNGL31) In AGGMAP <varname>workspace object</varname>, the hierarchy dimension QDR <varname>workspace object</varname> cannot refer to the related dimension of the relation.

Cause: The user specified an invalid hierarchy dimension qualified data reference.

Action: Adjust the AGGMAP so that it uses a valid dimension value qualified data reference.

ORA-33066: (XSAGDNGL32) In AGGMAP <varname>workspace object</varname>, the hierarchy dimension QDR <varname>workspace object</varname> must be a hierarchy dimension of the relation.

Cause: The user specified an invalid qualified data reference for the hierarchy dimension.

Action: Adjust the AGGMAP so that it uses a valid dimension value qualified data reference.

ORA-33068: (XSAGDNGL33) In AGGMAP <varname>workspace object</varname>, the hierarchy dimension QDR over dimension <varname>workspace object</varname> must specify a positive dimension offset.

Cause: The user specified an invalid qualified data reference for the hierarchy dimension.

Action: Adjust the AGGMAP so that it uses a valid dimension value qualified data reference.

ORA-33070: (XSAGDNGL34) In AGGMAP <varname>workspace object</varname>, all QDRs of dimension <varname>workspace object</varname> must map to the same dimension position.

Cause: The user specified two conflicting hierarchy dimension qualified data references.

Action: Adjust the AGGMAP so that it uses a consistent qualified data reference.

ORA-33072: (XSAGDNGL35) In AGGMAP <varname>workspace object</varname>, the hierarchy dimension QDR over dimension <varname>workspace object</varname> must be specified for every relation dimensioned by that hierarchy dimension.

Cause: Multiple dimensions share the same hierarchy dimension, but it is only qualified within a subset of the AGGMAP relations.

Action: Adjust the AGGMAP so that it uses consistent qualified data references.

ORA-33074: (XSAGDNGL36) In AGGMAP <varname>workspace object</varname>, the offset <varname>number</varname> is not a valid offset into dimension <varname>workspace object</varname>.

Cause: The hierarchy dimension offset is an invalid dimension position.

Action: Adjust the AGGMAP so that it uses valid qualified data references.

ORA-33076: (XSAGDNGL37) In AGGMAP <varname>workspace object</varname>, the value '<varname>number</varname>' is not a valid value of dimension <varname>workspace object</varname>.

Cause: The hierarchy dimension offset is an invalid dimension position.

Action: Adjust the AGGMAP so that it uses valid qualified data references.

ORA-33078: (XSAGDNGL39) In AGGMAP <varname>workspace object</varname>, the hierarchy dimension QDR <varname>workspace object</varname> must refer to a dimension.

Cause: The user specified an invalid qualified data reference for the hierarchy dimension.

Action: Adjust the AGGMAP so that it uses a valid dimension value qualified data reference.

ORA-33080: (XSAGDNGL40) In AGGMAP <varname>workspace object</varname>, you cannot reference dimension <varname>workspace object</varname> with both a RELATION statement and a DIMENSION statement.

Cause: The user included both RELATION and DIMENSION statements in the AGGMAP referring to the same AGGMAP.

Action: Remove one of the conflicting clauses.

ORA-33082: (XSAGDNGL41) In AGGMAP <varname>workspace object</varname>, the non-dimensioned valueset <varname>workspace object</varname>

varname> must have a parent QDR in its VALUESET statement over the VALUESET's base dimension.

Cause: The VALUESET statement specified a scalar valueset but did not include a qualified data reference to specify the parent.

Action: Add a qualified data reference specifying the parent to the VALUESET statement.

ORA-33084: (XSAGDNG42) In AGGMAP <varname>workspace object</varname>, you cannot qualify the dimensioned valueset <varname>workspace object</varname>.

Cause: The VALUESET line referred to a dimensioned valueset.

Action: Use a non-dimensioned valueset to limit the status of the dimensioned one.

ORA-33086: (XSAGINIT01) AGGMAP <varname>workspace object</varname> cannot be dimensioned by a conjoint dimension.

Cause: The specified AGGMAP was dimensioned by a conjoint dimension.

Action: Use the CHGDFN command to change the conjoint to a composite dimension.

ORA-33088: (XSAGINIT03) You do not have read permission for AGGMAP object <varname>workspace object</varname>.

ORA-33090: (XSAGINIT05) You must have read permission for <varname>workspace object</varname> to use AGGMAP <varname>workspace object</varname>.

ORA-33092: (XSAGCOMP04) <varname>number</varname> is not the name of a MODEL in any attached analytic workspace.

Cause: An invalid model name was attached to an AGGMAP.

Action: Remove the model from the AGGMAP or create a model with that name.

ORA-33094: (XSAGGMAPLIST01) Your expression uses too much execution space. Eliminate recursion or reduce the levels of nesting.

Cause: formulas likely refer to each other recursively or with a great deal of depth.

Action: eliminate recursion and flatten formula trees.

ORA-33098: (APABBR01) A value of '%V' is not valid for the <varname>workspace object</varname> option.

Cause: An inappropriate value was specified for the named option.

Action: Set a legal value for the option.

ORA-33100: (APABBR02) Value '<varname>number</varname>' is not valid for the <varname>workspace object</varname> option.

Cause: An inappropriate value was specified for the named option.

Action: Set a legal value for the option.

ORA-33102: (APEIFV01) EIFVERSION cannot be greater than the current EVERSION, which is <varname>number</varname>.

ORA-33104: (APEIFV02) EIFVERSION cannot be less than 371.

ORA-33106: (APESCBAS01) '<varname>string</varname>' is not a valid value for the ESCAPEBASE option. Valid values are 'd' and 'x'.

ORA-33108: (APFTMAX01) MAXFETCH must be between 1,000 and 2,147,483,647.

ORA-33110: (APXPKTSZ01) XAPIBUFFER must be between 1,000 and 64,512.

ORA-33112: (APFTBUFF01) FETCHBUFFER must be between 1,000 and 64,512.

ORA-33114: (APLIKESC01) <varname>string</varname> is not a valid value for the LIKEESCAPE option because it is more than one character long.

ORA-33116: (APMSTYPE00) MODSIMULTYPE must be either AITKENS or GAUSS.

ORA-33118: (APMTOLER00) Value <varname>number</varname> is out of range for MODTOLERANCE.

ORA-33120: (APMOVFLO00) Value <varname>number</varname> is out of range for MODOVERFLOW.

ORA-33122: (APMGAMMA00) MODGAMMA must be a whole number greater than or equal to zero.

ORA-33124: (APMITERS00) MODMAXITERS must be a whole number greater than zero.

ORA-33126: (APMDAMPF00) MODDAMP must be greater than or equal to zero and less than one.

ORA-33128: (APMERROR00) MODERROR must be either STOP, CONTINUE, or DEBUG.

ORA-33130: (APMERROR01) The current connection type does not support interactive debugging.

ORA-33132: (APPGMGR00) The <varname>workspace object</varname> option value must be between 0 and <varname>number</varname>.

ORA-33134: (APSORTBUFSZ01) The value of SORTBUFFERSIZE must represent a number between 0 and <varname>number</varname>. You supplied <varname>number</varname>.

ORA-33136: (APSPARSX01) The value of SPARSEINDEX cannot be a multi-line string.

ORA-33138: (APSPARSX02) The value '<varname>number</varname>' is not valid for SPARSEINDEX.

ORA-33140: (AUTOCOMP1) <varname>workspace object</varname> is being compiled automatically.

ORA-33141: (XSAWFREEZE1) The analytic workspace <varname>string</varname> is already frozen.

Cause: Attempting to freeze an AW when it is already frozen

Action: Thaw the AW before freezing it again.

ORA-33142: (BADSYN00) The format of the <varname>string</varname> command is incorrect.

ORA-33143: (XSAWFREEZE2) The analytic workspace <varname>string</varname> must be attached RW or RX.

Cause: The AW must be updatable to change the freeze state

Action: Reattach AW before freezing or thawing it again.

ORA-33144: (BADSYN01) The format of the <varname>string</varname> command is incorrect.

ORA-33145: (XSAWFREEZE3) Cannot rollback analytic workspace <varname>string</varname>; generations are in use.

Cause: One or more generations due to be destroyed as part of a rollback to freeze command are currently in use.

Action: Get sessions using those generations to detach the AW.

ORA-33146: (BINENG00) The width argument for binary conversion can only be specified for INTEGER and BOOLEAN data.

ORA-33147: (XSAWFREEZE4) The analytic workspace <varname>string</varname> is not frozen.

Cause: You are attempting to "rollback to freeze" an AW that is not frozen.

Action: Only execute this command on a frozen AW.

ORA-33148: (BINENG01) The width argument for binary conversion must be 1, 2, or 4.

ORA-33150: (BOOLTOK01) <varname>string</varname> is not a Boolean.

ORA-33152: (CDELETE03) The <varname>workspace object</varname> dimension does not have a value at position <varname>number</varname>.

ORA-33154: (CFINDVAL01) The <varname>workspace object</varname> dimension does not have identifiers.

ORA-33156: (CFINDVAL02) exceeds 263.**

ORA-33158: (CGETPOS02) The <varname>workspace object</varname> dimension does not have a value numbered <varname>number</varname>.

ORA-33160: (CGETSEQ02) The <varname>workspace object</varname> dimension does not have a value at position <varname>number</varname>.

ORA-33162: (CGFIN00) principal-value

ORA-33164: (CGFIN01) asset-value

ORA-33166: (CGFIN02) The number of periods of the <varname>string</varname> function cannot be dimensioned by time.

ORA-33168: (CGFIN03) The salvage value argument of the <varname>string</varname> function must be dimensioned by the time dimension.

ORA-33170: (CGFIN04) The decline factor argument of the <varname>string</varname> function cannot be dimensioned by the time dimension.

ORA-33172: (CGFIN05) The portion argument of the <varname>string</varname> function cannot be dimensioned by time.

ORA-33174: (CGFIN06) The switch period argument of the DEPRDECLSW function cannot be dimensioned by time.

ORA-33176: (CGMCALC01) The member list expression in aggregation phrase <varname>number</varname> is multidimensional.

ORA-33178: (CGMCALC02) <varname>workspace object</varname> appears as the dimension of more than one member list expression.

ORA-33180: (CGMCALC03) WEIGHTBY can only be specified for the AVERAGE aggregation method.

ORA-33182: (CGMCALC04) The base measure expression is not dimensioned by <varname>workspace object</varname>.

ORA-33184: (CGMCALC05) A valueset argument to MCALC must have one dimension and be a valueset of the same dimension.

ORA-33186: (CGMODSET01) The ACROSS option is not supported in model equations.

ORA-33188: (CGMODSET02) The left-hand side of an equation involves the <varname>workspace object</varname> dimension, whereas the '<varname>number</varname>' term on the right-hand side involves <varname>workspace object</varname>.

ORA-33190: (CGMODSET03) An internal error caused the model assignment code generator to be called, but no MODEL is currently being compiled.

ORA-33192: (CGTCVT00) TCONVERT requires an argument dimensioned by time.

ORA-33194: (CGTCVT01) The argument to TCONVERT cannot be dimensioned by more than a single time dimension.

ORA-33196: (CGTCVT03) Invalid conversion method for TCONVERT.

ORA-33198: (CGTCVT04) The two conversion methods requested of TCONVERT are incompatible.

ORA-33200: (CGTCVT05) You cannot convert by both DAY and PERIOD. You must use one or the other.

ORA-33202: (CGTCVT06) The breakout dimension <varname>workspace object</varname> is not a time dimension.

ORA-33204: (CGTCVT07) In converting data from time dimension <varname>workspace object</varname> to <varname>workspace object</varname> using TCONVERT, a conversion direction must be given.

ORA-33206: (CGTCVT08) It is not possible to convert data dimensioned by <varname>workspace object</varname> to be dimensioned by <varname>workspace object</varname>.

ORA-33208: (CGTDF00) You can only find the start or end of a time period.

ORA-33210: (CGTDF01) The argument of the BEGINDATE or ENDDATE function must be dimensioned by exactly one time dimension.

ORA-33213: (CINSERT06) The target position for MAINTAIN ADD or MAINTAIN MOVE cannot fall in the range of session-only values.

Cause: The user specified a BEFORE or AFTER clause specifying a position in the range of SESSION dimension values.

Action: Do not use a position clause, or specify a position before the first SESSION value.

ORA-33214: (CINSERT02) The <varname>workspace object</varname> dimension is too large.

Cause: The dimension has too many values.

Action: Deleted values can still take up space in the dimension and cause this error. Try removing the deleted values by exporting the dimension to EIF and reimporting it with the REPLACE DELETE option.

ORA-33215: (CINSERT07) You cannot add session-only values to the <varname>workspace object</varname> dimension.

Cause: The user tried to add a SESSION dimension value while a spreadsheet spreadsheet cursor was open.

Action: Try adding the SESSION value while the cursor is not active.

ORA-33216: (CINSERT03) The <varname>workspace object</varname> dimension does not have a value numbered <varname>number</varname>.

ORA-33217: (CINSERT20) Custom member values cannot be added to concat dimension <varname>workspace object</varname>, or to any of its bases, because it is not defined as UNIQUE.

Cause: Only UNIQUE concat dimensions can have custom member values.

Action: Use the CHGDFN command to change the concat dimension to UNIQUE and retry.

ORA-33218: (CINSERT04) %K is not a valid value for the <varname>workspace object</varname> dimension. Values for this dimension can have at most <varname>number</varname> significant digits after rounding to <varname>number</varname> decimal places.

Cause: The user attempted to insert a value that had too many digits into a NUMBER dimension. For instance, the user might have tried to insert the value 99999 (5 digits) into a dimension with data type NUMBER(4).

Action: Use a smaller number for the dimension value, or define a new dimension with a larger precision and replace the old dimension with the new one.

ORA-33219: (CINSERT05) %K cannot be added to <varname>workspace object</varname> because it is already a value of the dependent UNIQUE concat dimension <varname>workspace object</varname>, from leaf dimension <varname>workspace object</varname>.

Cause: A value cannot be added to a dimension if it conflicts with an existing value in a unique concat dimension containing this dimension.

Action: The concat(s) causing the conflict could be CHGDFNed to NOT UNIQUE, or either of the duplicate values could be renamed to make them UNIQUE.

ORA-33220: (COPEN01) The time dimension <varname>workspace object</varname> cannot be accessed because it consists of time periods not recognized in this release of <varname>string</varname>.

ORA-33222: (CLOPEN02) The dimension `<varname>workspace object</varname>` cannot be accessed because it was created by an incompatible version of `<varname>string</varname>`.

ORA-33223: (CMOVE03) You cannot move a session-only dimension value.
Cause: The user named a SESSION dimension value in the MAINTAIN MOVE command.

Action: Do not try to MAINTAIN MOVE session-only dimension values.

ORA-33224: (CMOVE02) The `<varname>workspace object</varname>` dimension does not have a value at position `<varname>number</varname>`.

ORA-33226: (COLDEL01) The starting column must be between 1 and the maximum width of a text value (`<varname>number</varname>`). You cannot start removing at column `<varname>number</varname>`.

ORA-33228: (COLDEL02) The columns to be removed must be between 1 and the maximum width of a text value (`<varname>number</varname>`). You cannot remove column `<varname>number</varname>`.

ORA-33230: (COLDEL03) The number of columns to be removed must be greater than zero. You cannot remove `<varname>number</varname>` columns.

ORA-33232: (COLEXTR01) The starting column must be between 1 and the maximum width of a text value (`<varname>number</varname>`).
`<varname>number</varname>` is out of range.

ORA-33234: (COLEXTR02) The columns to be extracted must be between 1 and the maximum width of a text value (`<varname>number</varname>`). You cannot extract column `<varname>number</varname>`.

ORA-33236: (COLEXTR03) The number of columns to be extracted must be greater than or equal to zero. You cannot extract `<varname>number</varname>` columns.

ORA-33238: (COLINS01) The starting column must be between 0 and the maximum width of a text value (`<varname>number</varname>`). You cannot start inserting at column `<varname>number</varname>`.

ORA-33240: (COLREP01) The starting column must be between 1 and the maximum width of a text value (`<varname>number</varname>`). You cannot start replacing at column `<varname>number</varname>`.

ORA-33242: (COMPOSITE01) `<varname>workspace object</varname>` is a dimension composite and does not have position numbers that can be used in this context.

ORA-33243: (XSDPART51) `<varname>workspace object</varname>` is a PARTITION TEMPLATE and does not have position numbers that can be used in this context.

ORA-33244: (CRENAME01) The `<varname>workspace object</varname>` dimension does not have a value at position `<varname>number</varname>`.

ORA-33246: (CRENAME02) The `<varname>workspace object</varname>` dimension does not have identifiers that can be renamed.

ORA-33247: (CRENAME03) %K is already a value of the dependent UNIQUE concat dimension <varname>workspace object</varname>, from leaf dimension <varname>workspace object</varname>.

Cause: A value cannot be renamed in a dimension if the new value conflicts with an existing value in a unique concat dimension containing this dimension.

Action: The concat(s) causing the conflict could be CHGDFNed to NOT UNIQUE, or either of the duplicate values could be changed to make them UNIQUE.

ORA-33248: (CTDDEL04) Deletions from time dimension <varname>workspace object</varname> must occur at either end. <varname>number</varname> values were not deleted.

ORA-33250: (CTDINSRT00) You attempted to add a value that was outside the allowable range of dates for time dimension <varname>workspace object</varname>.

ORA-33252: (CTXENG00) The CONTEXT name cannot be NA.

ORA-33254: (CTXENG01) CONTEXT '<varname>number</varname>' already exists.

ORA-33256: (CTXENG02) CONTEXT '<varname>number</varname>' does not exist.

ORA-33258: (CTXENG03) <varname>workspace object</varname> has not been saved in CONTEXT '<varname>number</varname>'.

ORA-33260: (DIMSHOW01) Partition <varname>number</varname> does not exist.

Cause: The DIMSHOW command specified a nonexistent partition.

Action: Specify the name of an existing partition, or remove the PARTITION qualification from the DIMSHOW command.

ORA-33261: (DIMSHOW02) A partition name may be specified only for a partitioned variable.

Cause: A PARTITION qualification was provided for an object other than a partitioned variable.

Action: Remove the PARTITION qualification.

ORA-33262: (DBERR01) Analytic workspace <varname>string</varname> does not exist.

Cause: The analytic workspace requested does not seem to be in the current database

Action: Check that you are in the correct schema and have access to the requested AW.

ORA-33263: Could not create analytic workspace <varname>string</varname>

Cause: A serious error was encountered while trying to set up the tables for the named analytic workspace. Possibilities include a tablespace that can't be written to, corrupted metadata about which AWs exist, bogus tables with names the code expects to be able to use, or the remains of a partially removed AW.

Action: There should be another error on the error stack. Consult it to determine what is causing the problem and remove that table.

ORA-33264: (DBERR02) Analytic workspace <varname>string</varname> cannot be accessed because it has been damaged or belongs to an incompatible version of <varname>string</varname>.

ORA-33265: (DBERRBSZ) Analytic workspace <varname>string</varname> cannot be opened. Tablespace blocksize <varname>number</varname> does not match database cache size <varname>number</varname>.

Cause: The blocksize of the containing tablespace didn't match database cache size.

Action: Change either size to make them consistent, or set `olap_page_pool_size` to 0 to allow automatic OLAP pool management when compatibility is greater than 10.2.

ORA-33266: (DBERR03) Analytic workspace <varname>string</varname> cannot be accessed because it was last modified by an incompatible version of <varname>string</varname>.

ORA-33267: (DBERRRLS) Analytic workspace <varname>string</varname> cannot be accessed because it has fine-grained access control applied to it

Cause: An attempt was made to access the specified analytic workspace's LOB table. The OLAP option detected the table had fine-grained security applied to it. The OLAP option requires full access to this table to operate correctly.

Action: Remove the fine-grained access control.

ORA-33268: (DBERRTHW) Analytic workspace <varname>string</varname> cannot be attached with the THAW option because it was frozen with the NOTHAW option

Cause: An attempt to attach the AW using the thaw option was made; the AW was frozen using the NOTHAW option.

Action: Either attempt the command again without the THAW option.

ORA-33269: while operating on '<varname>string</varname>'

Cause: Error is raised to inform user what object was being worked on when an error occurred during the creation of an AW. It should always be signaled with 33263

Action: See error#33263

ORA-33270: (DBERR05) Analytic workspace <varname>string</varname> already exists.

Cause: The AW CREATE command was passed the name of an analytic workspace that already exists

Action: Specify a different name.

ORA-33271: simulated paging error

Cause: This is an internal error that should never be seen

Action: Contact Oracle technical support

ORA-33272: (DBERR06) Analytic workspace <varname>string</varname> cannot be opened.

ORA-33273: (XSCHKRLS01) Analytic workspace <varname>string</varname> has open cursors and cannot be detached.

Cause: A session attempted to detach an analytic workspace while there are cursors open against it.

Action: Close the open cursor before attempting to close the analytic workspace.

ORA-33274: (DBERR07) Timed out while trying to lock analytic workspace <varname>string</varname> for <varname>string</varname>.

Cause: A lock operation that was supposed to happen very quickly was taking too long. It can be due to another session being stopped while holding that lock, another session crashing while holding that lock, or an internal error.

Action: If another session is stopped, resume that session to let it release the lock. If another session has crashed, wait for a few minutes while PMON or SMON process is recovering that lock. Contact Oracle OLAP Support if none of the situations above apply.

ORA-33275: Autonomous transaction query of an UPDATED analytic workspace is not supported

Cause: The user made attempt to reference an analytic workspace that has uncommitted updates within an autonomous query.

Action: Either COMMIT or ROLLBACK your uncommitted changes, or don't use an autonomous transaction.

ORA-33276: (DBERR08) Another user has analytic workspace <varname>string</varname> attached.

ORA-33278: (DBERR09) Analytic workspace <varname>string</varname> cannot be attached in RW or EXCLUSIVE mode until the changes made and updated in MULTI mode are committed or rolled back.

Cause: There are still changes to this analytic workspace that were updated and not committed when the workspace was attached in MULTI mode.

Action: Either try attaching the workspace in RO or MULTI mode or commit or roll back the transaction before trying to attach the workspace in RW or EXCLUSIVE mode.

ORA-33280: (DBERR10) Analytic workspace <varname>string</varname> cannot be attached in MULTI mode until the changes made and updated in RW or EXCLUSIVE mode are committed or rolled back.

Cause: There are still changes to this analytic workspace that were updated and not committed when the workspace was attached in RW or EXCLUSIVE mode.

Action: Either try attaching the workspace in RO, RW, or EXCLUSIVE mode or commit or roll back the transaction before trying to attach the workspace in MULTI mode.

ORA-33282: (DBERR11) Cannot wait for analytic workspace <varname>string</varname> to become available since doing so would cause a deadlock.

Cause: Trying to wait for the workspace to become available caused a deadlock.

Action: Release an analytic workspace that some other user might be waiting for before proceeding to attach this analytic workspace in this mode.

ORA-33284: (DBERR12) Analytic workspace <varname>string</varname> cannot be opened in MULTI mode before converting it by the latest version of <varname>string</varname>.

Cause: The AW is stored in 9i format.

Action: Convert the AW to a later format

ORA-33286: (DBERR14) The specified access mode for analytic workspace <varname>string</varname> is invalid.

ORA-33288: (DBERR15) Another user has incompatible access to analytic workspace <varname>string</varname>, and the wait timeout has expired.

Cause: An attempt to access an analytic workspace conflicted with another user's access, and the timeout specified has elapsed.

Action: Wait until the conflicting user is done.

ORA-33290: (DBERR17) Analytic workspace <varname>string</varname> cannot be attached in the mode you requested because another user has it attached in an incompatible mode.

Cause: An attempt to access an analytic workspace conflicted with another user's access, and no timeout was specified

Action: Wait until the conflicting user is done.

ORA-33291: (DBERRSYNC) Analytic workspace <varname>string</varname> cannot be attached RW until a RESYNC command has brought it up to the current generation.

Cause: Another session has updated the analytic workspace since it was attached in the current session.

Action: Execute a RESYNC AW command to bring the analytic workspace up to the most recent version.

ORA-33292: (DBERR18) Insufficient permissions to access analytic workspace <varname>string</varname> using the specified access mode.

Cause: You do not have sufficient permissions to access this analytic workspace in the desired mode.

Action: Ask the owner of the schema or OLAP DBA to grant you sufficient permissions to access the {SCHEMA}.AW\${AWNAME} table (for example, SCOTT.AW\$FOO table).

ORA-33293: Please use the OLAP command AW TRUNCATE to truncate this table.

Cause: This table is part of an analytic workspace, and the OLAP option needs to control the truncation of the table.

Action: use the OLAP option to truncate the table.

ORA-33294: (DBERR19) Analytic workspace <varname>string</varname> cannot be created, deleted, or renamed while flashback mode is in effect.

ORA-33295: (DBERR20) An attached analytic workspace is blocking this command.

Cause: A table cannot be dropped because an analytic workspace based on this table is being attached.

Action: Look up the session in question in GV\$AW_OLAP and kill it.

ORA-33296: (DBERR21) Analytic workspace <varname>string</varname> can only be attached RO while tablespace <varname>string</varname> is READONLY.

Cause: The underlying tablespace of the analytic workspace is in READONLY status.

Action: Attach the analytic workspace in RO mode or alter the tablespace.

ORA-33297: (DBERR22) Analytic workspace <varname>string</varname> cannot be opened because it was last modified by an incompatible version of <varname>string</varname>.

Cause: The user attempted to attach an old OLAP Services analytic workspace that cannot be converted by this version of OLAP Services.

Action: Either create a new analytic workspace or try using a version of OLAP Services compatible with the one that created this analytic workspace.

ORA-33298: (AWUPG01) Analytic workspace <varname>string</varname> is already in the newest format allowed by the current compatibility setting

Cause: User ran the DBMS_AW.CONVERT procedure on an analytic workspace that was created in or previously upgraded to the current compatibility mode.

Action: If upgrading the analytic workspace is necessary, upgrade the database instance and then re-run DBMS_AW.CONVERT. If the new features offered by upgrading the analytic workspace are not required, then no action is needed.

ORA-33299: Please use DBMS_AW.AW_RENAME to rename this table.

Cause: This table is part of an analytic workspace, and the OLAP option needs to control the rename of the table.

Action: use the OLAP option to rename the table.

ORA-33302: (DBVALID01) SEVERE ERROR: Record <varname>number</varname> multiply used.

Cause: The AW VALIDATE command has detected an error in the structure of the analytic workspace. This error will result in the corruption of one or more objects

Action: Export what you can of the analytic workspace.

ORA-33304: (DBVALID02) Note: Record <varname>number</varname> was allocated but not used. This can result in wasted space.

Cause: This is a benign message. The AW VALIDATE command found an analytic workspace has some inaccessible space.

Action: Either nothing, or export and recreate the analytic workspace

ORA-33305: (DBVALID06) Note: Record <varname>number</varname> was allocated but not used. This can result in wasted space. (PS <varname>number</varname>)

Cause: This is a benign message. The AW VALIDATE command found an analytic workspace has some inaccessible space.

Action: Either nothing, or export and recreate the analytic workspace

ORA-33306: (DBVALID03) The AW VALIDATE command cannot be used with read-only analytic workspace <varname>string</varname>.

Cause: The AW VALIDATE command does not support read-only access.

Action: Attach the analytic workspace read/write and try again.

ORA-33308: (DBVALID04) SEVERE ERROR: Record <varname>number</varname> used but not allocated

Cause: The AW VALIDATE command has detected a problem that will result in corruption of the analytic workspace. There is no corruption yet.

Action: Export and recreate the analytic workspace.

ORA-33309: (DBVALID05) SEVERE ERROR: Record <varname>number</varname> used but not allocated (PS <varname>number</varname>)

Cause: The AW VALIDATE command has detected a problem that will result in corruption of the analytic workspace. There is no corruption yet.

Action: Export and recreate the analytic workspace.

ORA-33310: (DECIMAL) The number of decimal places must be between <varname>number</varname> and <varname>number</varname>, or <varname>number</varname>. It cannot be <varname>number</varname>.

ORA-33312: (DELDENT01) <varname>workspace object</varname> cannot be deleted while there are objects dimensioned by it, or formulas, programs, valuesets, or relations that use it.

ORA-33313: (DELDENT05) <varname>workspace object</varname> cannot be deleted because it is the target of an external partition of a partitioned variable.

Cause: User attempted to delete a variable, but some partitioned variable was defined to use that variable as the target of one of its external partitions.

Action: DELETE the partitioned variable or CHGDFN DROP PARTITION the the external partition from the partitioned variable, then delete the target variable.

ORA-33314: (DELDENT02) <varname>workspace object</varname> cannot be deleted while it is executing.

ORA-33315: (XSDELDENTANON) You cannot delete <varname>workspace object</varname> while looping over unnamed composite <varname>workspace object</varname>.

Cause: While looping over the named anonymous composite, an attempt was made to delete an object which is dimensioned by it.

Action: Delete the object outside of a loop over the dimension.

ORA-33316: (DELDENT03) You cannot delete <varname>workspace object</varname> because you do not have PERMIT permission for it or it is readonly.

ORA-33318: (DELDENT04) The variable <varname>workspace object</varname> cannot be deleted while its NA trigger is executing.

ORA-33320: (DNAMELEN00) The object name <varname>string</varname> has more than <varname>number</varname> characters.

ORA-33324: (DOSCMD01) The current directory is <varname>string</varname>.

ORA-33325: (DOSCMD02) Current directory alias is not set.

ORA-33332: (DSSEXIST01) Use the AW command to establish a current analytic workspace. Then start your current activity again.

Cause: There is no currently active analytic workspace. The command that generated the error requires an active analytic workspace to operate on.

Action: Execute an AW ATTACH or AW CREATE command to establish an active workspace.

ORA-33334: (DSSEXIST04) Analytic workspace <varname>string</varname> is not attached.

Cause: The specified analytic workspace is currently not attached to the session, or the name is misspelled.

Action: Attach the analytic workspace with the AW ATTACH command, or correct the spelling of the name .

ORA-33336: (DSSEXIST04A) Analytic workspace <varname>string</varname> is not attached.

Cause: The specified analytic workspace is currently not attached to the session, or the name is misspelled.

Action: Attach the analytic workspace with the AW ATTACH command, or correct the spelling of the name .

ORA-33338: (DSSEXIST05) You cannot specify the EXPTMP analytic workspace.

Cause: The command requires a non-temporary analytic workspace to operate on.

Action: Specify an analytic workspace other than EXPTMP.

ORA-33339: You cannot detach analytic workspace <varname>string</varname>. It is in use by an API branch.

Cause: The OLAP API is in a branch, and you are not allowed to detach the AW while the branch is active.

Action: End the branch before detaching the AW.

ORA-33340: (DTINFRMT00) A format cannot be an empty string.

ORA-33342: (DTINFRMT01) '<varname>number</varname>' is not a valid format for a <varname>string</varname> value because it has a single angle bracket > that is not part of a field specification.

ORA-33344: (DTINFRMT02) '<varname>number</varname>' is not a valid format for a <varname>string</varname> value because an angle bracket < cannot be the last character.

ORA-33346: (DTINFRMT03) '<varname>number</varname>' is not a valid format for a <varname>string</varname> value because '<varname>string</varname>' is an unrecognized specification.

ORA-33348: (DTINFRMT04) <varname>number</varname> is not a valid format because the B specifier cannot be used with a date.

ORA-33350: (DTINFRMT05) '<varname>number</varname>' is not a valid format because the '<varname>string</varname>' specification cannot be used with a date.

ORA-33352: (DTINFRMT06) '<varname>number</varname>' is not a valid format for a <varname>string</varname> value because the B specifier cannot be used with a period field.

ORA-33354: (DTINFRMT07) '<varname>number</varname>' is not a valid format because the <varname>NAME</varname> specification can only be used once.

ORA-33356: (DTINFRMT08) '<varname>number</varname>' is not a valid VNF format because it contains an ordinal specification.

ORA-33358: (DTINFRMT09) '<varname>number</varname>' is an ambiguous VNF format. The '<varname>string</varname>' specification must be followed by a space or separation character.

ORA-33360: (DTINFRMT10) '<varname>number</varname>' is not a valid VNF format because at least two of the specifications are of the same type.

ORA-33362: (DTINFRMT11) '<varname>number</varname>' is not a valid VNF format because it does not contain enough fields to match one of the defined VNF templates.

ORA-33364: (DTINFRMT12) '<varname>number</varname>' is not a valid VNF format because it contains more information than is allowed.

ORA-33366: (DTINFRMT13) '<varname>number</varname>' is not a valid format for a <varname>string</varname> value because the '<varname>string</varname>' specification has no closing angle bracket >.

ORA-33368: (DTINFRMT14) '<varname>number</varname>' is not a valid format for a <varname>string</varname> value because it contains more than one line of text.

ORA-33370: (DTTOVC01) Unable to print dates longer than <varname>number</varname> characters.

ORA-33372: (DUPCLCHK01) <varname>workspace object</varname> appears more than once in the dimension list.

ORA-33374: (DUPCLCHK02) <varname>workspace object</varname> appears more than once in the dimension list. (It is also a base dimension of <varname>workspace object</varname>.)

ORA-33376: (DUPCLCHK03) <varname>workspace object</varname> and <varname>workspace object</varname> cannot both appear in a dimension list because they share at least one base dimension (<varname>workspace object</varname>).

ORA-33381: (EIFEXPRT20) You cannot EXCLUDE bases from <varname>workspace object</varname>, because it is not a concat dimension.

ORA-33382: (EIFEXPRT01) You cannot export two objects with the same name (<varname>string</varname>).

ORA-33383: (EIFEXPRT21) You cannot EXCLUDE <varname>workspace object</varname> because it is not a base of <varname>workspace object</varname>.

ORA-33384: (EIFEXPRT02) You cannot rename a dimension (<varname>workspace object</varname>) when you export it.

ORA-33385: (EIFEXPRT22) You cannot EXCLUDE <varname>workspace object</varname>, because it is not a dimension.

ORA-33386: (EIFEXPRT03) The expression beginning with <varname>string</varname> has no data type.

ORA-33387: (EIFEXPRT23) EXCLUDE or EXCLUDING can only be used following the name of a concat dimension.

ORA-33388: (EIFEXPRT04) The expression beginning with <varname>string</varname> has too many dimensions.

ORA-33389: (EIFEXPRT24) Concat dimension <varname>workspace object</varname> has <varname>number</varname> bases. You cannot EXCLUDE more than <varname>number</varname> of them.

ORA-33390: (EIFEXPRT05) There are no objects to export.

ORA-33391: (EIFEXPRT25) concat dimension <varname>workspace object</varname> has only 1 base, which cannot be EXCLUDED.

ORA-33392: (EIFEXPRT07) SCATTER name <varname>workspace object</varname> must be a text variable of one dimension shared with the expression.

ORA-33393: (EIFIMPRT01) Object <varname>string</varname> exists in both the EIF file and the current analytic workspace.

Cause: An object with the given name was found in both the EIF file and the current analytic workspace.

Action: Rename the object in the analytic workspace that is causing the name conflict. If the object named in the error message belongs to a cube or a cube dimension, rename that cube or cube dimension.

ORA-33394: (EIFEXPRT08) SCATTER type <varname>workspace object</varname> must be a text variable with the same dimension as the name.

ORA-33396: (EIFEXPRT09) The SCATTER expression must have at least two dimensions and be numeric if TYPE is given.

ORA-33398: (EIFEXPRT10) The SCATTER type value must be INTEGER, SHORTINTEGER, SHORT, or DECIMAL, not <varname>number</varname>.

ORA-33400: (EIFEXPRT11) The scatter name value <varname>number</varname> is not a valid EIF object name.

ORA-33402: (EIFEXPRT12) You cannot export an unnamed dimension composite by itself, but only with an object dimensioned by it.

ORA-33404: (EIFEXPRT13) The format for exporting an expression is:\nEXPORT expression AS name

ORA-33406: (EIFEXPRT14) <varname>workspace object</varname> is not a legal name for an EIF file object.

ORA-33408: (EIFEXPRT15) You cannot use the SCATTER AS syntax because EIFVERSION is set to <varname>number</varname>, and that version cannot import scattered objects.

ORA-33409: (EIFEXPRT16) Cannot use the FULLMAPID or RELATIVEMAPID syntax because NOAPI has been specified.

Cause: An attempt was made to specify FULLMAPID or RELATIVEMAPID syntax with the NOAPI option.

Action: Either specify the API option instead of NOAPI, or remove the FULLMAPID or RELATIVEMAPID option.

ORA-33413: (EIFMAKEF01) You cannot export compressed composite <varname>workspace object</varname> because one of its bases has limited status or a PERMIT READ restriction.

Cause: Export of a compressed composite to an EIF file or lob failed because one or more of the bases had some values that were not in the current status. This can be caused either by a LIMIT command or a PERMIT READ restriction on the dimension.

Action: Either set the base dimensions' statuses to ALL and remove their PERMIT READ programs, or export using the NOAGGR keyword.

ORA-33414: (EIFMAKEF02) " <varname>number</varname> bytes written in <varname>number</varname> seconds."

ORA-33416: (EIFPATHLIST) You tried to set EIFEXTENSIONPATH to one or more illegal path names.

ORA-33420: (EIFMAKEF03) The EXPORT command has terminated because of insufficient disk space. One or more files could not be created.

ORA-33422: (EIFMAKEF04) CAUTION: Due to insufficient disk space, the extension count of the EIF files(s) could not be recorded. To avoid any potential errors when the file is imported with the IMPORT command, please DO NOT move, delete, or rename any of the EIF extension files. These are files of the form <varname>string</varname>.<varname>string</varname>, where <varname>string</varname> is the extension number. Please note that there are <varname>number</varname> such files.

ORA-33424: (EIFMAKEF05) <varname>workspace object</varname> cannot be exported because EIFVERSION is set to <varname>number</varname>, and objects cannot have more than 6 dimensions in that version.

ORA-33425: (EIFMAKEF15) CAUTION: Exporting NTEXT objects using <varname>string</varname> for the EIF file character set can cause loss of data. To preserve all NTEXT data, export using the UTF8 character set for the EIF file.

Cause: The user exported an object with data type NTEXT, but the EIF file that will result from the EXPORT command is not written in Unicode. Because no non-Unicode file can represent all possible Unicode data, it is possible that some data will be lost when converting from the Unicode NTEXT object to the EIF file. The EIF file will be written in the character set indicated by the "nls_charset" argument of the EXPORT command, or, if no such argument is present, in the database character set.

Action: If the user is certain that the contents of the NTEXT object can be represented in the specified character set, then no action is necessary. Otherwise, the user can add "nls_charset 'UTF8'" to the EXPORT command string. This will result in the EIF file being written in UTF8 Unicode, which can represent all the data contained in NTEXT objects.

ORA-33426: (EIFMAKEF06) The expression named <varname>string</varname> cannot be exported because EIFVERSION is set to <varname>number</varname>, and objects cannot have more than 6 dimensions in that version.

ORA-33427: (EIFMAKEF16) CAUTION: NTEXT object <varname>workspace object</varname> will be exported with type TEXT.

Cause: User attempted to export an object whose data type is NTEXT, but the EIFVERSION option indicates a version of Express / Oracle OLAP that does not support the NTEXT data type. The object will be exported as a TEXT object instead.

Action: No action needed.

ORA-33428: (EIFMAKEF07) One or more SCATTER AS expressions cannot be exported because EIFVERSION is set to <varname>number</varname>, and objects cannot have more than 6 dimensions in that version.

ORA-33429: (EIFMAKEF17) CAUTION: NTEXT expression will be exported with type TEXT.

Cause: User attempted to export an expression whose data type is NTEXT, but the EIFVERSION option indicates a version of Express / Oracle OLAP that does not support the NTEXT data type. The expression will be exported as a TEXT object instead.

Action: No action needed.

ORA-33430: (EIFMAKEF08) <varname>workspace object</varname> cannot be exported because EIFVERSION is set to <varname>number</varname>, and that version does not use <varname>string</varname> objects.

ORA-33432: (EIFMAKEF09) You cannot use the name <varname>string</varname>, because EIFVERSION is set to <varname>number</varname>. That version does not allow object names longer than <varname>number</varname> bytes.

ORA-33434: (EIFMAKEF10) You cannot export the AGGMAP object <varname>workspace object</varname> from this version of <varname>string</varname> to version 6.3. The internal format of an AGGMAP has changed too much.

ORA-33436: (EIFMAKEF11) You cannot write an EIF file using the <varname>string</varname> character set, because EIFVERSION is set to <varname>number</varname>. That version does not support that character set.

ORA-33438: (EIFSPARS00) <varname>number</varname> values of <varname>workspace object</varname> will be exported as NA, because they are not in the current status of its base dimensions.

ORA-33440: (EQUUPDATE01) The expression for formula <varname>workspace object</varname> contains invalid syntax.

ORA-33442: (ESDREAD01) Discarding compiled code for <varname>workspace object</varname> because there is no NAME dimension.

ORA-33443: (ESDREAD14) Discarding compiled code for <varname>workspace object</varname> because analytic workspace <varname>string</varname> is not attached.

Cause: A program used an analytic workspace name in a qualified object name. The named analytic workspace is not attached at program run time.

Action: No action necessary. The program will be automatically recompiled. It is likely that the recompile will fail with an appropriate exception code, in which case the signaled condition should be corrected and the program re-run.

ORA-33444: (ESDREAD02) Discarding compiled code for <varname>workspace object</varname> because <varname>number</varname> could not be found.

ORA-33445: (ESDREAD15) Discarding compiled code for <varname>workspace object</varname> because <varname>workspace object</varname> and

<varname>workspace object</varname>, which were not partition-dependent when the code was compiled, are now partition-dependent.

Cause: Two variables are "partition-dependent" if they share any external partition target variables, or if one is the target of an external partition of the other. If object names referred to non-partition-dependent variables at compile time but refer to partition-dependent variables in the run-time context, the OLAP DML program, formula, or model will be automatically recompiled.

Action: None needed.

ORA-33446: (ESDREAD03) Discarding compiled code for <varname>workspace object</varname> because <varname>number</varname> is now a <varname>string</varname>. It was another kind of object when the code was compiled.

ORA-33447: (ESDREAD16) Discarding compiled code for <varname>workspace object</varname> because <varname>workspace object</varname> and <varname>workspace object</varname>, which were partition-dependent when the code was compiled, are now not partition-dependent.

Cause: Two variables are "partition-dependent" if they share any external partition target variables, or if one is the target of an external partition of the other. If object names referred to partition-dependent variables at compile time but refer to non-partition-dependent variables in the run-time context, the OLAP DML program, formula, or model will be automatically recompiled.

Action: None needed.

ORA-33448: (ESDREAD04) Discarding compiled code for <varname>workspace object</varname> because <varname>number</varname> now has <varname>string</varname> data, whereas it had <varname>string</varname> data when the code was compiled.

Cause: The datatype of the specified variable has changed.

Action: None needed.

ORA-33449: (ESDREAD17) Discarding compiled code for <varname>workspace object</varname> because the partition method or partition dimension of <varname>number</varname> has changed since it was compiled.

Cause: The partitioning method (LIST, RANGE, or CONCAT) or the partition dimension of the partition template is sufficiently different from what it was when the code was compiled that the code must be recompiled.

Action: None needed.

ORA-33450: (ESDREAD05) Discarding compiled code for <varname>workspace object</varname> because <varname>number</varname> now has more or fewer dimensions than it had when the code was compiled.

Cause: The dimensionality of the specified object has changed.

Action: None needed.

ORA-33452: (ESDREAD06) Discarding compiled code for <varname>workspace object</varname> because <varname>number</varname> is now dimensioned by <varname>workspace object</varname>. It was dimensioned by <varname>workspace object</varname> when the code was compiled.

Cause: The dimensionality of the specified object has changed.

Action: None needed.

ORA-33454: (ESDREAD07) Discarding compiled code for <varname>workspace object</varname> because <varname>number</varname> is now <varname>string</varname> <varname>workspace object</varname>, whereas it was <varname>string</varname> <varname>workspace object</varname> when the code was compiled.

Cause: The specified object has changed.

Action: None needed.

ORA-33456: (ESDREAD08) Discarding compiled code for <varname>workspace object</varname> because <varname>number</varname> is a(n) <varname>string</varname>, which <varname>string</varname> did not expect to find in a compiled program.

Cause: The type of the specified object has changed.

Action: None needed.

ORA-33458: (ESDREAD09) Discarding compiled code for <varname>workspace object</varname> because <varname>number</varname> is now type <varname>string</varname>, whereas it was type <varname>string</varname> when the code was compiled.

Cause: The type of the specified object has changed.

Action: None needed.

ORA-33460: (ESDREAD10) Discarding compiled code for <varname>workspace object</varname> because object <varname>workspace object</varname> is not in analytic workspace <varname>string</varname>.

Cause: The specified object is not in the same analytic workspace it was in when the compiled object was compiled.

Action: None needed.

ORA-33462: (ESDREAD10A) Discarding compiled code for <varname>workspace object</varname> because object <varname>number</varname> is not in analytic workspace <varname>string</varname>.

Cause: The specified object was not in the same analytic workspace it was when the compiled object was compiled

Action: None needed.

ORA-33464: (ESDREAD11) Discarding compiled code for <varname>workspace object</varname> because two external objects that were different at compile time are now the same object (<varname>workspace object</varname>).

ORA-33466: (ESDREAD12) Discarding compiled code for <varname>workspace object</varname> because model dimension <varname>number</varname> is not in the same analytic workspace as solution variable <varname>number</varname>.

ORA-33468: (ESDREAD13) Discarding compiled code for <varname>workspace object</varname> because <varname>number</varname> is no longer a surrogate of dimension <varname>workspace object</varname>.

Cause: When the compiled code was saved, the specified object was a surrogate of a certain dimension. Now the specified object is a surrogate of a different dimension.

Action: No action needed; program automatically recompiles.

ORA-33472: (EXPCHECK1) The <varname>workspace object</varname> formula cannot be edited or compiled while it is executing.

ORA-33474: (EXPCOMP01) The calculation expression in formula `<varname>workspace object</varname>` contains a format error.

ORA-33475: (EXPCOMP02) Invalid expression.

ORA-33476: (EXPORT00) Target file `<varname>string</varname>` already exists. No data is being exported.

ORA-33478: (FCFINI02) Too many NA values exist in the input data; `<varname>string</varname>` cannot fill them all.

ORA-33480: (FCFINI04) An error occurred while filling in the NA values in the input data.

ORA-33482: (FCFINI05) Calculation of starting values and handling of NA values in the input data require at least two cycles of input data.

ORA-33484: (FCFINI06) An error occurred while calculating starting values for the smooth, trend, and seasonal series.

ORA-33486: (FCFINI07) `<varname>string</varname>` cannot calculate starting values from this input data.

ORA-33488: (FCFINI08) The forecast input has resulted in a divide-by-zero error in the calculation of the smoothed data series.

ORA-33490: (FCFINI09) The forecast input has resulted in a divide-by-zero error in the calculation of the seasonal index series.

ORA-33492: (FCINFO00) There is no saved forecast calculation for the INFO function to retrieve.

ORA-33494: (FCREATE01) File `<varname>string</varname>` is already open on file unit number `<varname>number</varname>`.

ORA-33508: (FILEREAD01) Fileunit `<varname>number</varname>` is invalid. FILEREAD and FILEVIEW can only access input files opened with the FILEOPEN function.

ORA-33510: (FILEREAD04) Unexpected EOF encountered in string while importing data.

ORA-33512: (FILESET01A) The value of the PAGESIZE option must be greater than the combined values of TMARGIN and BMARGIN.

ORA-33514: (FILESET02) The value of the TABEXPAND option must be between 0 and 100 inclusive. You specified `<varname>number</varname>`.

ORA-33516: (FILESET04) You can set the `<varname>string</varname>` attribute only if the fileunit is used exclusively for output.

ORA-33520: (FINENG01) The number of periods specified in the `<varname>string</varname>` function must be greater than 0 and less than or equal to `<varname>number</varname>`.

ORA-33522: (FINENG02) The second argument of the `<varname>string</varname>` function cannot be NA while the corresponding first argument is not NA.

ORA-33524: (FINENG03) Both the first and second arguments of the `<varname>string</varname>` function must be nonnegative.

ORA-33526: (FINENG04) An asset value cannot be NA when the corresponding salvage value is not NA.

ORA-33528: (FINENG05) The asset value must be greater than the salvage value.

ORA-33530: (FINENG06) The first period depreciation strategy argument of the `<varname>string</varname>` function cannot be NA.

ORA-33532: (FINENG07) The first period depreciation strategy argument of the `<varname>string</varname>` function must evaluate to the word FULL or HALF.

ORA-33534: (FINENG08) The rate argument of payment or interest function cannot be NA while the corresponding principal argument is not NA.

ORA-33536: (FINENG09) Both the principal and rate arguments of the payment and interest functions must be nonnegative.

ORA-33538: (FINENG10) An internal error (`<varname>number</varname>`) has occurred while evaluating an interest or payment function.

ORA-33540: (FINENG11) The decline-factor argument must be greater than 0.

ORA-33542: (FISOPEN01) A file identifier cannot exceed `<varname>number</varname>` characters.

ORA-33546: (FNAMEQRY01) You must specify a file unit number for the `<varname>string</varname>` option of FILEQUERY.

ORA-33554: (FORCHECK01) While looping over `<varname>workspace object</varname>`, you cannot change its status or contents.

ORA-33555: (FORCHECK03) While looping over alias dimension `<varname>workspace object</varname>`, you cannot change the contents of its base `<varname>workspace object</varname>`.

ORA-33556: (FORCHECK51) While looping over concat dimension `<varname>workspace object</varname>`, you cannot change the contents of its leaves.

ORA-33557: (MAINTCHK01) You cannot `<varname>string</varname>` values of dimension `<varname>workspace object</varname>` during a loop over it.

Cause: User tried to insert or delete a value of the specified dimension while some loop over that dimension was active. The loop could be an explicit FOR or ACROSS loop, or a natural expression evaluation or OLAP_TABLE loop. Also, it could be a loop over the dimension itself or over a derived dimension (like a composite or partition template) or dimension alias that includes it. The insert or delete could be explicitly caused by the MAINTAIN command. It is also possible that the user attempted to assign a value to a variable or partition dimensioned by a composite during a loop over that composite using a qualified data reference (QDR), and that the exception was generated by the engine's attempt to insert a new position in the composite to hold the new value.

Action: Move the dimension maintenance or QDR-based variable assignment outside the dimension loop.

ORA-33558: (LOCKCHECK01) The status or contents of the <varname>workspace object</varname> dimension cannot be changed while the LOCK_LANGUAGE_DIMS option is set to <varname>value</varname>.

Cause: A LIMIT or MAINTAIN was attempted on the named language dimension while the boolean option LOCK_LANGUAGE_DIMS was set to YES.

Action: SET LOCK_LANGUAGE_DIMS to NO and retry the MAINTAIN or LIMIT.

ORA-33560: (FORECAST00) The time dimension (<varname>workspace object</varname>) has no values in status. The forecast cannot be calculated.

ORA-33562: (FORECAST01) The forecast LENGTH must be a non-NA value that is greater than or equal to zero.

ORA-33564: (FORECAST02) Sum of forecast LENGTH and number of time dimension values in status equals <varname>number</varname>. The maximum is <varname>number</varname>.

ORA-33566: (FORECAST03) The values of ALPHA, BETA, and GAMMA must be greater than zero and less than or equal to one.

ORA-33568: (FORECAST04) The forecast PERIODICITY must be greater than or equal to 2.

ORA-33570: (FORECAST05) The forecast PERIODICITY must be less than or equal to the number of historical observations in the input data.

ORA-33572: (FORECAST07) In a forecast calculation, the time dimension (<varname>number</varname>) must have consecutive values in status.

ORA-33574: (FORECAST09) The forecast length extends beyond the end of the time dimension (<varname>number</varname>). Only <varname>number</varname> values will be calculated.

ORA-33576: (FORECAST10) The number of non-NA observations must be greater than 1 to calculate a TREND forecast.

ORA-33578: (FORECAST11) The number of positive observations must be greater than 1 to calculate an EXPONENTIAL forecast.

ORA-33580: (FORECAST12) The number of historical periods (<varname>number</varname>) exceeds the number of values in the current status of <varname>workspace object</varname> (<varname>number</varname>).

ORA-33582: (FORECAST13) The number of historical periods must be a non-NA value greater than zero.

ORA-33584: (FORECAST100) Forecasting Analysis

ORA-33586: (FORECAST101) Variable to Forecast:

ORA-33588: (FORECAST102) Forecast Dimension:

ORA-33592: (FORECAST104) Mean Absolute Percent Error:

ORA-33594: (FORECAST105) Forecast Equation:

ORA-33596: (FORECAST106) No forecast values can be shown since no FCNAME variable was specified to hold the results of the forecast.

ORA-33598: (FORECAST107) Actual Value

ORA-33600: (FORECAST108) Fitted Value

ORA-33602: (FORECAST109) Alpha:

ORA-33604: (FORECAST110) Beta:

ORA-33606: (FORECAST111) Gamma:

ORA-33608: (FORECAST112) Periodicity:

ORA-33610: (FORSTEP01) Program control transferred into a FOR loop from outside the loop. This transfer is not allowed.

ORA-33612: (FPUTENG01) The file unit operand of the FILEPUT command does not have a value.

ORA-33614: (FPUTENG02) File <varname>string</varname> was opened for input only.

ORA-33616: (FPUTENG04) The FROM file unit operand of the FILEPUT command does not have a value.

ORA-33618: (FPUTENG05) There is not sufficient room on the page to write data. Check your PAGESIZE, TMARGIN, BMARGIN and header values.

ORA-33620: (FRACRPOS01) <varname>string</varname> is not a valid field option for a record in <varname>string</varname> format.

ORA-33622: (FRAPPEND01) You cannot specify a position when appending to an INTEGER dimension.

ORA-33624: (FRASSIGN01) <varname>workspace object</varname> is a WORKSHEET. You cannot use the Data Reader to assign values to it.

ORA-33625: (FRASSIGN02) You cannot use the APPEND keyword with concat dimension <varname>workspace object</varname>.

Cause: User used the APPEND keyword on a CONCAT target in a FILEREAD, SQL FETCH or SQL SELECT command.

Action: APPENDING a value to one of the CONCATs leaves automatically appends to the CONCAT.

ORA-33626: (FRATPUSH01) <varname>string</varname> is not a valid field option for a record in <varname>string</varname> format.

ORA-33628: (FRATPUSH02) Dimension maintenance attributes can only be specified on the left side of the equal sign.

ORA-33630: (FRCBCHEK01) Invalid file unit <varname>number</varname>. Files read by FILEREAD or FILEVIEW must be input files opened via the FILEOPEN function.

ORA-33632: (FRCBCHEK02) No current record is available for file unit <varname>number</varname>.

ORA-33634: (FRCBSET01) <varname>string</varname> is not a valid value for the ORIGIN option of FILESET. Valid values are: <varname>string</varname>.

ORA-33636: (FRERROR01) <varname>number</varname> is not a valid value for <varname>string</varname>. Values for this attribute cannot be less than 1.

ORA-33638: (FRERROR02) <varname>number</varname> is not a valid value for SPACE because it results in a <varname>string</varname> value of <varname>number</varname>.

ORA-33640: (FRERROR03) There is no field of width <varname>number</varname> at column <varname>number</varname>. The current record is only <varname>number</varname> bytes long.

ORA-33642: (FRERROR04) <varname>number</varname> is not a valid width for <varname>string</varname> <varname>string</varname> data.

ORA-33644: (FRERROR05) NA is not a valid width for <varname>string</varname> <varname>string</varname> data. There is no default width for this data type.

ORA-33646: (FRERROR06) The string '<varname>string</varname>' is not a valid <varname>string</varname> value.

ORA-33648: (FRERROR07) The current packed field contains the invalid hexadecimal digit "<varname>character</varname>".

ORA-33650: (FRERROR08) The current packed field contains the invalid sign digit "<varname>character</varname>".

ORA-33652: (FRERROR09) <varname>value</varname> is not a valid <varname>workspace object</varname>.

ORA-33654: (FRERROR10) The <varname>workspace object</varname> dimension does not have a value numbered <varname>number</varname>.

ORA-33656: (FRERROR11) The time dimension <varname>workspace object</varname> is empty. You cannot append integer positions to it unless it has at least one value.

ORA-33658: (FRFILPUT01) File <varname>string</varname> is invalid. Source files for FILEPUT must be input files opened via the FILEOPEN function.

ORA-33660: (FRFILPUT02) You cannot write from file <varname>string</varname> to file <varname>string</varname>, because the output file was not opened with the BINARY option.

ORA-33662: (FRFILPUT03) You cannot write from file <varname>string</varname> to file <varname>string</varname>, because the output file was opened with the BINARY option.

ORA-33664: (FRSPARSE01) You cannot specify a dimension list for <varname>workspace object</varname> because it is not a conjoint dimension.

ORA-33666: (FRSTRDLM01) The <varname>string</varname> expression cannot have more than one line.

ORA-33668: (FRSTRDLM02) <varname>number</varname> is not a valid value for the <varname>string</varname> expression.

ORA-33670: (FRSTRDLM03) The `<varname>string</varname>` and `DELIMITER` expressions cannot have the same value.

ORA-33672: (FRSTRDLM04) A CSV `DELIMITER` cannot be set to a double quote or `NULL`.

ORA-33674: (FTCODE00) Data block size `<varname>number</varname>` exceeds the maximum size of `<varname>number</varname>`.

ORA-33678: (GETSCAL00) The text expression specifying a `DIMENSION` data type cannot evaluate to `NA`.

ORA-33680: (GETTIMER00) first

ORA-33682: (GETTIMER01) The `<varname>number</varname>` parameter to `<varname>string</varname>` is dimensioned by more than one time dimension.

ORA-33684: (GETTIMER02) The `<varname>number</varname>` parameter to `<varname>string</varname>` must be dimensioned by a time dimension, or an explicit time dimension must be given.

ORA-33686: (GETTIMER03) The `<varname>number</varname>` parameter to `<varname>string</varname>` is not dimensioned by `<varname>workspace object</varname>`.

ORA-33688: (GETTIMER04) The dimension composite `<varname>workspace object</varname>` cannot be used as a time dimension.

ORA-33690: (GETXVAL01) The formula `<varname>workspace object</varname>` cannot be recursively evaluated because the `RECURSIVE` option is set to `NO`.

ORA-33692: (GROWENG01) The growrate of an expression must be calculated over a strictly increasing time interval.

ORA-33694: (GROWENG02) The expression in the `GROWRATE` function must have non-`NA` values at the beginning and end of the given time interval.

ORA-33696: (GROWENG03) The beginning and ending values of the expression in `GROWRATE` must both be positive or both be negative.

ORA-33698: (GROWENG04) Cannot calculate the growrate for the values given

ORA-33700: (GROWENG05) The beginning value of the expression in the `GROWRATE` function must be non zero.

ORA-33704: (ILPCHECK01) `<varname>workspace object</varname>` is not a program.

ORA-33706: (ILPCHECK12) The `<varname>workspace object</varname>` program cannot be compiled because it contains structural errors.

ORA-33708: (ILPCHECK13) The `<varname>workspace object</varname>` program cannot be compiled while it is executing.

ORA-33712: (ILPCHECK22) The `<varname>workspace object</varname>` program cannot be executed because it contains structural errors.

ORA-33720: (ILPCHECK43) The `<varname>workspace object</varname>` program cannot be hidden or unhidden while it is executing.

ORA-33722: (ILPCOMP05) All `<varname>string</varname>` statements must precede the first non-declarative statement.

ORA-33724: (ILPCOMP07) The `<varname>workspace object</varname>` program could not be compiled because of an unrecoverable error.

ORA-33726: (ILPENG02) `<varname>workspace object</varname>` cannot be used more than once in simultaneous or nested FOR statements or ACROSS commands.

ORA-33728: (ILPINIT01) You cannot initialize `<varname>workspace object</varname>` because it is currently running.

ORA-33730: (ILPLNK01) Discarding compiled code for `<varname>workspace object</varname>` because it was compiled with code version `<varname>number</varname>`. The current code version is `<varname>number</varname>`.

ORA-33732: (ILPONLY) The `<varname>string</varname>` function can only be used in a program.

ORA-33733: (xsILPMLTPreOp01) The analytic workspace `<varname>string</varname>` cannot be REVERTed or RESYNCD while the `<varname>string</varname>` program is active.

Cause: The AW REVERT and AW RESYNC commands cannot be used on an analytic workspace that contains a running program.

Action: Execute the command without running the specified program.

ORA-33734: (ILPPUT01) Label `<varname>string</varname>` conflicts with at least one other label in `<varname>workspace object</varname>`. Labels must be unique for the first 8 characters.

ORA-33736: (ILPPUT02) The `<varname>workspace object</varname>` program contains unmatched DO or DOEND statements.

ORA-33738: (ILPPUT03) Program `<varname>workspace object</varname>` contains unmatched IF, WHILE, TEMPSTAT, FOR, or THEN/ELSE statement, or duplicate labels.

ORA-33740: (ILPPUT04) On the line defining label `<varname>string</varname>` in the `<varname>workspace object</varname>` program, text following the label has been ignored.

ORA-33742: (ILPPUT06) The `<varname>workspace object</varname>` program contains too many source lines. The limit is `<varname>number</varname>` lines. The program has been truncated.

ORA-33744: (ILPPUT07) IMPORTANT: Program `<varname>workspace object</varname>` contains text on the same line as a DO or DOEND statement, which will be ignored.

ORA-33746: (ILPPUT08) `<varname>number</varname>` must be preceded by an IF clause.

ORA-33748: (ILPPUT09) `<varname>number</varname>` must be preceded by a THEN clause.

ORA-33750: (ILPXEQ01) A referenced object can no longer be located. Execution will continue in interpreted mode.

ORA-33756: (ILTRK01) No data has been recorded by the TRACKPRG command.

ORA-33758: (IMPQUAF0) The EIF file <varname>string</varname> does not have any objects in it.

ORA-33760: (IMPQUAF02) \nThere are <varname>number</varname> objects in the EIF file:

ORA-33762: (XSCHGDIM01) Invalid LIMIT argument starting at <varname>string</varname>.

ORA-33766: (INFOFC00) Invalid second argument to INFO(FORECAST <varname>string</varname>).

ORA-33768: (INFOMOD00) Invalid second argument to INFO(MODEL <varname>string</varname>).

ORA-33770: (INFOPARS01) Invalid second argument to INFO(PARSE <varname>string</varname>).

ORA-33772: (INFOREG00) Invalid second argument to INFO(REGRESS <varname>string</varname>).

ORA-33774: (INTERP1) <varname>string</varname> is not a command.

ORA-33776: (INTERP1A) <varname>workspace object</varname> is not a command.

ORA-33780: (INTERP3) The <varname>string</varname> command can only be used in a program.

ORA-33782: (INTERP4) The <varname>string</varname> command cannot be executed by ampersand substitution.

ORA-33784: (INTERP5) Ampersand substitution is not permitted in a <varname>string</varname> statement.

ORA-33788: (INTTOK01) <varname>string</varname> is not composed solely of digits.

ORA-33790: (IOERROR01) I/O error on file <varname>string</varname>: <varname>string</varname>.

ORA-33792: (IOERROR02) I/O error on file <varname>string</varname>: Error text not available.

ORA-33796: (IOEXECUT00) The file identifier argument of <varname>string</varname> does not have a value.

ORA-33798: (IOEXECUT01) File <varname>string</varname> is the current OUTFILE or LOG unit, and cannot be closed with the FILECLOSE command.

ORA-33800: (IOEXECUT02A) The LENGTH argument to the FILEGET function (<varname>number</varname>) is negative.

ORA-33802: (IOEXECUT02B) File <varname>string</varname> was opened for writing.

ORA-33804: (IOEXECUT02C) File <varname>string</varname> was opened for binary input. You must use FILEREAD or FILENEXT to read data from this file.

ORA-33806: (IOEXECUT03A) The `<varname>string</varname>` option of `FILEQUERY` is not supported in this version of `<varname>string</varname>`.

ORA-33808: (IOEXECUT03B) You have requested a `FILEQUERY` option that is not supported in this version of `<varname>string</varname>`.

ORA-33810: (IOEXECUT04A) The `<varname>string</varname>` option of `FILESET` is not supported in this version of `<varname>string</varname>`.

ORA-33812: (IOEXECUT04B) The `<varname>string</varname>` option of a file cannot be changed by the `FILESET` command.

ORA-33814: (IOEXECUT04C) The value to be set for the `<varname>string</varname>` option cannot be `NA`.

ORA-33816: (IOEXECUT04D) You have requested a `FILESET` option that is not supported in this version of `<varname>string</varname>`.

ORA-33818: (IOEXECUT05) File unit `<varname>number</varname>` is invalid. `<varname>string</varname>` can access only input files opened via the `FILEOPEN` function.

ORA-33820: (IOEXECUT06) The file name argument to `<varname>string</varname>` cannot be null or blank.

ORA-33822: (IRR01) Time dimension `<varname>workspace object</varname>` has a range in status of `<varname>number</varname>` periods. The maximum range allowed by the `IRR` function is `<varname>number</varname>` periods.

ORA-33824: (ISDBUILD01) A local scalar named `<varname>string</varname>` already exists.

ORA-33826: (LINEDEL01) The number of the first line to remove must be between 1 and the expression's total number of lines. `<varname>number</varname>` is out of range.

ORA-33828: (LINEDEL02) You must remove at least one line. You cannot remove `<varname>number</varname>` lines.

ORA-33830: (LINEINS01) The line number after which inserting begins (`<varname>number</varname>`) is negative.

ORA-33832: (LINEREP01) The number of the first line to replace must be between 1 and the expression's total number of lines. `<varname>number</varname>` is out of range.

ORA-33834: (LINEXTR01) The line number of the first line to extract must be greater than 0. You cannot start extracting at line `<varname>number</varname>`.

ORA-33836: (LINEXTR02) You must extract at least one line. You cannot extract `<varname>number</varname>` lines.

ORA-33838: (LLPINIT05) You attempted to loop over the time dimension `<varname>workspace object</varname>` beyond the allowable range of dates.

ORA-33840: (LOOPCODE01) Multiple relations exist between `<varname>workspace object</varname>` and the dimensions of the expression to be aggregated. One is `<varname>workspace object</varname>`, and another is `<varname>workspace object</varname>`.

ORA-33842: (LOOPCODE02) <varname>workspace object</varname> cannot be used for aggregation. It is unrelated to the data's dimensions, or it is less aggregate than one of them.

ORA-33844: (LOOPCODE03) Time dimensions <varname>workspace object</varname> and <varname>workspace object</varname> are both dimensions of the data. Breaking out the aggregation by time is ambiguous.

ORA-33846: (LXNXTREC00) The input line was terminated by an end-of-file that occurred sooner than expected. The line might be incomplete.

ORA-33848: (LXNXTREC01) The input line was truncated to the maximum allowable size of <varname>number</varname> characters.

ORA-33852: (LXPARSE01) You provided extra input starting at '<varname>string</varname>'.

ORA-33854: (LXTOKEN01) The statement cannot be parsed because it is too long or too complex.

ORA-33856: (LXSUBST01) <varname>string</varname> is not a valid ampersand-substitution expression.

ORA-33858: (LXSUBST02) The value of the ampersand-substitution expression is NA.

ORA-33860: (MAKEDCL01) You have no current analytic workspace. You must attach or create an analytic workspace before defining a new object.

ORA-33862: (MAKEDCL02) You must specify a data type when you define a <varname>string</varname>.

ORA-33864: (MAKEDCL03) You cannot use the data type attribute when you define a <varname>string</varname>.

ORA-33866: (MAKEDCL04) Your current analytic workspace does not contain an object named <varname>workspace object</varname>.

ORA-33868: (MAKEDCL05) You must specify two or more dimensions when you supply a dimension list for a WORKSHEET.

ORA-33870: (MAKEDCL06) You cannot use the <varname>string</varname> attribute when you define a <varname>string</varname>.

ORA-33872: (MAKEDCL07) The <varname>string</varname> DIMENSION must have a data type (ID, NTEXT, TEXT, NUMBER, DATETIME, TIMESTAMP, or INTEGER), a time period, or a list of bases for a conjoint dimension.

ORA-33874: (MAKEDCL08) <varname>string</varname> is not the name of a valid option.

ORA-33876: (MAKEDCL09) <varname>string</varname> must be an INTEGER dimension.

ORA-33878: (MAKEDCL10) Nested composites are not supported when compatability is 11 or greater.

ORA-33880: (MAKEDCL11) Dimensions specified for a WORKSHEET must be INTEGER dimensions.

ORA-33882: (MAKEDCL12) You cannot use the `<varname>string</varname>` attribute when you define a `<varname>string</varname>` of type `<varname>string</varname>`.

ORA-33883: (MAKEDCL36) You cannot use the `<varname>string</varname>` attribute when you define an **EXTERNAL** partition with an existing target.

Cause: User gave the **TEMPORARY** keyword in the definition of an external partition whose target variable was previously defined.

Action: Any storage characteristics of the external partition are determined by the target variable. These attributes should be set when the target is defined, not when the external partition is defined.

ORA-33884: (MAKEDCL13) You can specify the **TEMPORARY** attribute only for a variable, dimension, relation, valueset, or worksheet.

ORA-33886: (MAKEDCL14) You cannot define an object dimensioned by **NAME**, because it is a special reserved dimension used to organize your analytic workspace dictionary.

ORA-33888: (MAKEDCL15) You cannot use the `<varname>string</varname>` attribute when you define a fixed-width **TEXT** `<varname>string</varname>`.

ORA-33890: (MAKEDCL16) You cannot use the dimension list attribute when you define a `<varname>string</varname>`.

ORA-33892: (MAKEDCL17) You cannot use the `<varname>string</varname>` attribute when you define a scalar `<varname>string</varname>`.

ORA-33893: (MAKEDCL18) The **TEMPORARY** attribute cannot be specified for this type of dimension

ORA-33894: (MAKEDCL20) The **WIDTH** attribute can only be used with non-scalar **TEXT** and **INTEGER** variables, or with **TEXT** dimensions.

ORA-33895: (MAKEDCL19) You can specify the **SHAREMAP** attribute only for a multiply dimensioned variable, relation, valueset, or worksheet.

ORA-33896: (MAKEDCL21) The **WIDTH** attribute for **TEXT** data must be a number between 1 and 4000.

ORA-33898: (MAKEDCL22) The **WIDTH** attribute for **INTEGER** data must be 1.

ORA-33900: (MAKEDCL23) The **NOHASH** attribute is only valid for conjoint dimensions.

ORA-33902: (MAKEDCL24) The `<varname>string</varname>` attribute is only valid for conjoint dimensions and dimension composites.

ORA-33904: (MAKEDCL25) `<varname>workspace object</varname>` is a dimension composite or is dimensioned by a dimension composite. You cannot use it as the type of a `<varname>string</varname>`.

ORA-33908: (MAKEDCL27) You cannot use the `<varname>string</varname>` attribute when you define a **DIMENSION ALIAS**, **CONCAT**, or **PARTITION TEMPLATE**.

ORA-33910: (MAKEDCL28) You cannot specify a data type when you define a **DIMENSION ALIAS**, **CONCAT**, or **PARTITION TEMPLATE**.

ORA-33911: (MAKEDCL29) You cannot define a <varname>string</varname> in analytic workspace <varname>string</varname> because it has not been upgraded to version <varname>string</varname>.

Cause: User attempted to define an object that requires a certain compatibility setting in an AW that has not been upgraded to that compatibility level.

Action: Make sure that the database is running in the appropriate compatibility mode, and upgrade the AW.

ORA-33912: (MAKEDCL30) An AGGMAP cannot be dimensioned by a conjoint dimension.

ORA-33914: (MAKEDCL31) You cannot define a dimension alias of another dimension alias.

ORA-33916: (MAKEDCL32) The dimension alias target <varname>workspace object</varname> is not a simple dimension.

ORA-33918: (MAKEDCL33) You cannot define a surrogate of dimension <varname>workspace object</varname> because it is a <varname>string</varname>.

Cause: Not all kinds of dimensions can have surrogates. The user attempted to define a surrogate of a prohibited kind of dimension.

Action: Do not attempt to define a surrogate on this dimension.

ORA-33920: (MAKEDCL34) The <varname>string</varname> SURROGATE must have one of the following data types: ID, NTEXT, TEXT, NUMBER, DATETIME, TIMESTAMP, or INTEGER.

Cause: The user attempted to define a surrogate without specifying a valid data type.

Action: Specify the data type (ID, NTEXT, TEXT, NUMBER, or INTEGER) in the definition of the surrogate.

ORA-33922: (MAKEDCL35) You cannot define a surrogate of dimension <varname>workspace object</varname> because it is a time dimension.

Cause: The user attempted to define a surrogate on a dimension that has type DAY, WEEK, MONTH, or YEAR.

Action: Do not attempt to define a surrogate on this dimension.

ORA-33934: (MISCOPTI01) OFF

ORA-33936: (MISCOPTI04) NA

ORA-33938: (MISCOPTI05) Press <varname>Enter</varname> to continue.

ORA-33940: (MISCOPTI06) <varname>DD</varname><varname>MTXT</varname><varname>YY</varname>

ORA-33942: (MODCALL01) Model <varname>workspace object</varname> cannot be run because another model is already active.

ORA-33944: (MODCALL02) Model <varname>workspace object</varname> needs a solution variable; one was not provided.

ORA-33946: (MODCALL03) Model <varname>workspace object</varname> does not take a solution variable, because it has no model dimensions.

ORA-33948: (MODCALL04) A solution variable must be provided for model `<varname>workspace object</varname>`; however, `<varname>workspace object</varname>` is not a variable.

ORA-33950: (MODCALL05) The solution variable specified for the model `<varname>workspace object</varname>` must be numeric. Variable `<varname>workspace object</varname>` is type `<varname>string</varname>`.

ORA-33952: (MODCALL08) A solution variable must be specified for model `<varname>workspace object</varname>`; however, `<varname>workspace object</varname>` has no dimensions.

ORA-33954: (MODCALL09) Solution variable `<varname>workspace object</varname>` is not dimensioned by `<varname>workspace object</varname>`, which is a dimension of model `<varname>workspace object</varname>`.

ORA-33956: (MODCALL10) The execution of model `<varname>workspace object</varname>` cannot be completed due to an internal error (TYPE = `<varname>number</varname>`).

ORA-33958: (MODCALL11) The syntax for invoking a model is: \n model-name [solution-variable] [NOWARN]

ORA-33960: (MODCALL14) Model `<varname>workspace object</varname>` contains simultaneous equations.

ORA-33962: (MODCALL15) Model `<varname>workspace object</varname>` failed to converge after `<varname>number</varname>` iterations in block `<varname>number</varname>`.

ORA-33964: (MODCALL16) Model `<varname>workspace object</varname>` diverged during iteration `<varname>number</varname>` in block `<varname>number</varname>` while executing statement `<varname>number</varname>` of model `<varname>workspace object</varname>`.

ORA-33966: (MODCALL17) The solution variable `<varname>workspace object</varname>` is referenced as a variable in model `<varname>workspace object</varname>`.

ORA-33968: (MODCALL18) Solution variable `<varname>workspace object</varname>` is dimensioned by `<varname>workspace object</varname>`, which is not a dimension of model `<varname>workspace object</varname>` but is a dimension of a model execution block.

ORA-33970: (MODCALL19) Solution variable `<varname>workspace object</varname>` is not dimensioned by `<varname>workspace object</varname>`, but model `<varname>workspace object</varname>` contains dimension-based equations that reference its values.

ORA-33972: (MODCHECK01) `<varname>workspace object</varname>` is not a model.

ORA-33973: (MODCHECK02) The `<varname>workspace object</varname>` model cannot be compiled while it is executing.

ORA-33974: (MODCHECK12) The `<varname>workspace object</varname>` model cannot be compiled because it contains structural errors.

ORA-33975: (MODCHECK13) The `<varname>workspace object</varname>` model cannot be hidden or unhidden while it is executing.

ORA-33976: (MODCHECK22) The `<varname>workspace object</varname>` model cannot be executed because it contains structural errors.

ORA-33978: (MODCOMP01) `<varname>workspace object</varname>` has already been named in a DIMENSION statement in this model.

ORA-33980: (MODCOMP02) DIMENSION statements are not allowed after an equation has appeared.

ORA-33982: (MODCOMP03) DIMENSION statements are not allowed after an INCLUDE statement has appeared.

ORA-33983: (MODCOMP15) The DIMENSION statement must list the dimensions of any included models.

ORA-33984: (MODCOMP04) INCLUDE statements are not allowed after an equation has appeared.

ORA-33986: (MODCOMP05) Only one INCLUDE statement is allowed in a model.

ORA-33988: (MODCOMP06) An INCLUDE statement must refer to another model; `<varname>workspace object</varname>` is not a model.

ORA-33990: (MODCOMP08) Models cannot be included recursively; `<varname>workspace object</varname>` has already been included.

ORA-33992: (MODCOMP09) The format of the DIMENSION command is:\n DIMENSION dimension1 [dimension2...]

ORA-33994: (MODCOMP10) The format of the INCLUDE command is:\n INCLUDE model

ORA-33996: (MODCOMP11) `<varname>workspace object</varname>` is not named in a DIMENSION statement in this model.

ORA-33998: (MODCOMP12) You cannot use both `<varname>workspace object</varname>` and `<varname>workspace object</varname>` as model dimensions, because `<varname>workspace object</varname>` is a surrogate of `<varname>workspace object</varname>`.

Cause: The user attempted to include both a dimension and its surrogate in the DIMENSION statement of a model.

Action: Use either the dimension or the surrogate in the DIMENSION statement of the model, but not both.

ORA-34000: (MODCOMP13) You cannot use both `<varname>workspace object</varname>` and `<varname>workspace object</varname>` as model dimensions, because they are both surrogates of dimension `<varname>workspace object</varname>`.

Cause: The user attempted to include two dimension surrogates of the same dimension in the DIMENSION statement of a model.

Action: Use either of the two surrogates in the DIMENSION statement of the model, but not both.

ORA-34001: (MODCOMP14) Concat leaf dimension `<varname>workspace object</varname>` already is used in a DIMENSION statement, either explicitly or as a leaf of another concat dimension.

Cause: Either two concat dimensions which share a common leaf dimension, or a concat and one of its leaves where both specified in the DIMENSION statement(s).

Action: Do not specify overlapping concat dimensions, or any leaves of specified concat dimensions.

ORA-34004: (MODGRAPH01) The model <varname>workspace object</varname> cannot be compiled due to internal error <varname>number</varname>. Contact Oracle OLAP Technical support.

ORA-34006: (MODINFO00) There is no saved model information for the INFO function to retrieve.

ORA-34008: (MODINFO01) Model <varname>workspace object</varname> has not been compiled; the information requested is available only after compilation.

ORA-34010: (MODINFO02) Model <varname>workspace object</varname> has not been executed; the information requested is available only after execution.

ORA-34012: (MODPUT06) The <varname>workspace object</varname> model contains too many source lines. The limit is <varname>number</varname> lines. The model has been truncated.

ORA-34014: (MONITOR01) No data has been recorded by the MONITOR command.

ORA-34016: (MONITOR02) No program name has been supplied for the MONITOR command.

ORA-34018: (MSCGADD01) <varname>workspace object</varname> is an INTEGER dimension. Specify only the number of values to be added, not the specific values themselves.

ORA-34019: (MSCGADD03) <varname>workspace object</varname> is not a LIST PARTITION TEMPLATE.

Cause: User attempted to MAINTAIN ADD or DELETE a list value from a RANGE or CONCAT partition template.

Action: Partitioning in a RANGE or CONCAT partition template cannot be changed using the MAINTAIN command.

ORA-34020: (MSCGADD02) <varname>workspace object</varname> is not a time dimension. You cannot add time periods to it.

ORA-34021: (MSCGADD04) You must specify a partition when maintaining PARTITION TEMPLATE <varname>workspace object</varname>.

Cause: User attempted to MAINTAIN ADD or DELETE a list value from a LIST partition template, but didn't specify which partition to add to or delete from.

Action: Specify the partition: maintain (template) add to partition (partitionname) (values) or maintain (template) delete from partition (partitionname) (values)

ORA-34022: (MSCGDEL02) You can only delete time periods from a time dimension.

ORA-34024: (MSCGMRG01) The RELATE keyword cannot be specified when the MERGE expression has no dimensions.

ORA-34026: (MSCGMRG02) <varname>workspace object</varname> is not a relationship between <varname>workspace object</varname> and the dimensions of the source expression.

ORA-34028: (MSCGMRG03) <varname>workspace object</varname>, the value of the RELATE relation, is not one of the dimensions of the source expression.

ORA-34030: (MSCGPOS00) <varname>workspace object</varname> is a time dimension. You can add values to it only FIRST or LAST.

ORA-34031: (MSCGPOS02) <varname>workspace object</varname> is a datetime dimension. Dimension values are automatically maintained in sorted order.

ORA-34032: (MSCGPOS01) <varname>workspace object</varname> is a dimension composite. You cannot specify a position when adding values to it.

ORA-34034: (MSEXECUT00B) <varname>value</varname> is already a value of <varname>workspace object</varname>.

ORA-34036: (MSEXECUT00C) <varname>number</varname> is already a value of <varname>workspace object</varname>.

ORA-34038: (MSEXECUT01) The expression for the position to add, merge, or delete is NA.

ORA-34039: (TRGPRG02) <varname>workspace object</varname> cannot be deleted while its trigger is executing.

ORA-34040: (TRGSET01) The TRIGGERASSIGN command can only be used in an ASSIGN TRIGGER.

ORA-34041: (TRGPRG01) A TRIGGER cannot be called recursively for the same object and event.

ORA-34042: (MSEXECUT03A) The expression for the position to be renamed is NA.

ORA-34044: (MSEXECUT03B) The expression for the new dimension value is NA.

ORA-34046: (MSEXECUT03C) <varname>value</varname> is already a value of <varname>workspace object</varname>.

ORA-34048: (MSEXECUT04) Time dimension <varname>workspace object</varname> is empty. You must give it a value before you can add periods to its beginning or end.

ORA-34050: (MSEXECUT05) The expression for the argument to BEFORE or AFTER is NA.

ORA-34052: (MSEXECUT06) All dimension values must be single line values.

ORA-34054: (MSEXECUT07) <varname>number</varname> is already a value of <varname>workspace object</varname>.

ORA-34056: (MSEXECUT08) The number of periods to add cannot be negative, zero, or NA.

ORA-34058: (MSEXECUT09) The number of periods to delete cannot be negative, zero, or NA.

ORA-34059: (MSEXECUT12) You cannot delete non session-only dimension values from unique concat dimension <varname>workspace object</varname>. Cause: The user tried to apply MAINTAIN DELETE to a non-SESSION value.

Action: Only use MAINTAIN DELETE to remove SESSION values from a concat dimension.

ORA-34060: (MSEXECUT10) You do not have permission to maintain <varname>workspace object</varname>.

ORA-34061: (MSEXECUT11) Session-only values cannot be added to non-unique concat dimension <varname>workspace object</varname>, or any of its base dimensions.

Cause: Only UNIQUE concat dimensions can have custom member values.

Action: Use the CHGDFN command to change the concat dimension to UNIQUE and retry.

ORA-34062: (MXARGS01) = Args:

ORA-34064: (MXARGS02) (Relation)

ORA-34066: (MXARGS03) values of

ORA-34068: (MXBREAK01) The BREAK statement can only be used within a FOR or WHILE loop or within a SWITCH statement.

ORA-34070: (MXBREAK02) The CONTINUE statement can only be used within a FOR or WHILE loop.

ORA-34072: (MXCALL01) <varname>workspace object</varname> is not a PROGRAM.

ORA-34074: (MXCGAF01) The <varname>string</varname> function cannot be used with <varname>string</varname> data.

ORA-34076: (MXCGAF02) <varname>workspace object</varname> is neither a dimension nor the name of a relationship array.

ORA-34078: (MXCGAF03) The dimension <varname>workspace object</varname> appears more than once as an argument to <varname>string</varname>.

ORA-34082: (MXCGAF05) Specify the STATUS keyword only if at least one of the breakout dimensions is not a dimension of the expression argument.

ORA-34084: (MXCGAF06) You cannot specify <varname>workspace object</varname> as a breakout dimension because it is a dimension composite.

ORA-34086: (MXCGAF07) You can only specify a qualified data reference to a breakout relation object. <varname>workspace object</varname> is not a relation.

ORA-34088: (MXCGCE04) The THEN and ELSE expressions must evaluate to values of the same dimension.

ORA-34090: (MXCGCHRL01) The expression argument to CHARLIST is not dimensioned by <varname>workspace object</varname>.

ORA-34092: (MXCGCON01) The use of a hexadecimal value (<varname>string</varname>) is not supported.

ORA-34094: (MXCGCUM00) In the CUMSUM function, the relation (<varname>workspace object</varname>) must refer to the accumulation dimension (<varname>workspace object</varname>).

ORA-34096: (MXCGCUM01) The reset parameter '<varname>workspace object</varname>' is neither a RELATION nor a DIMENSION.

ORA-34098: (MXCGCUM02) The STATUS keyword has no effect unless the first argument has more than one dimension.

ORA-34100: (MXCGCVT01) Values of type <varname>string</varname> are expected.

ORA-34102: (MXCGFIOF01) The <varname>string</varname> option of FILEQUERY is not supported in this version of <varname>string</varname>.

ORA-34104: (MXCGGET01) <varname>workspace object</varname> is not a type of object that contains data values.

ORA-34106: (MXCGGET03) FILEREAD attributes can be specified only in the context of a FILEREAD or FILEVIEW command.

ORA-34108: (MXCGGET04) FILEREAD attributes cannot be specified for the NAME dimension.

ORA-34110: (MXCGGET05) FILEREAD attributes cannot be specified for a constant.

ORA-34112: (MXCGGT01) Values of type <varname>string</varname> cannot be read with the MANY option.

ORA-34114: (MXCGGT02) The RAW attribute applies only to TEXT.

ORA-34116: (MXCGHCVT00) To convert TEXT to date use:\n CONVERT(expression DATE [dateorder])

ORA-34118: (MXCGHCVT01) To convert date to TEXT or ID use:\n CONVERT(expression {ID|TEXT} [dateformat])

ORA-34120: (MXCGHCVT02) To convert time dimension periods to TEXT or ID use:\n CONVERT(expression {ID|TEXT} [vnf-format])

ORA-34122: (MXCGHCVT03) To convert NUMBER to TEXT or ID use:\n CONVERT(expression {ID|TEXT} [output-format])

ORA-34124: (MXCGHCVT04) CONVERT(expression <varname>string</varname>\nTo [format])

ORA-34126: (MXCGKEY01) The first argument to the KEY function must be an expression yielding a dimension value.

ORA-34128: (MXCGKEY02) You cannot apply the KEY function to <varname>workspace object</varname> because it is not a conjoint dimension or composite.

ORA-34130: (MXCGKEY03) <varname>workspace object</varname> is not a component of conjoint dimension <varname>workspace object</varname>.

ORA-34132: (MXCGKEY04) <varname>workspace object</varname> is not a component of composite <varname>workspace object</varname>.

ORA-34134: (MXCGLA01) You are trying to perform an invalid operation. Dates cannot be exponentiated.

ORA-34136: (MXCGMOVE00) The first argument to the <varname>string</varname> function is not dimensioned by <varname>workspace object</varname>.

ORA-34138: (MXCGNPV03) The interest rate expression in the NPV function cannot be dimensioned by <varname>workspace object</varname>.

ORA-34140: (MXCGPFC01) Argument number <varname>number</varname> in the call to <varname>workspace object</varname> is not a simple expression.

ORA-34141: (MXCGPUT00) You cannot use the ASSIGN keyword with DIMENSION <varname>workspace object</varname>.

Cause: User used the ASSIGN keyword on a DIMENSION target in a FILEREAD, SQL FETCH or SQL SELECT command.

Action: To create a new dimension value in a FILEREAD, SQL FETCH or SQL SELECT command, use the APPEND keyword.

ORA-34142: (MXCGPUT01) You cannot assign values to a <varname>string</varname>.

ORA-34143: (MXCGPUT02) You cannot assign values to SURROGATE <varname>workspace object</varname> because it is type INTEGER.

Cause: The user attempted to assign a value to a dimension surrogate whose data type is INTEGER. INTEGER surrogates, like INTEGER dimensions, cannot have values assigned to them. They can only be referenced by position.

Action: Do not attempt to assign values to an INTEGER surrogate. Values will automatically appear and disappear from the INTEGER surrogate as positions are added to or removed from the underlying dimension.

ORA-34144: (MXCGPUT04) A model cannot assign values to a <varname>string</varname>.

ORA-34145: (MXCGPUT03) You cannot use the APPEND keyword with SURROGATE <varname>workspace object</varname>.

Cause: User used the APPEND keyword on a SURROGATE target in a FILEREAD, SQL FETCH or SQL SELECT command.

Action: To assign a value to a SURROGATE in a FILEREAD, SQL FETCH or SQL SELECT command, use the ASSIGN keyword.

ORA-34146: (MXCGQDR01) A qualified data reference (QDR) has this format:\n name(dimension1 dimvalue1 [dimension2 dimvalue2...])

ORA-34148: (MXCGQDR02) <varname>workspace object</varname> cannot be used as a qualifier because it is a COMPOSITE or PARTITION TEMPLATE. You can use its component dimensions instead.

ORA-34150: (MXCGQDR05) A dimension can be named only once in a qualified data reference. <varname>workspace object</varname> has been named more than once.

ORA-34152: (MXCGQDR06) The dimensions named in a qualified data reference must be dimensions of the qualified object. <varname>workspace object</varname> is not dimensioned by <varname>workspace object</varname>.

ORA-34154: (MXCGQDR10) <varname>workspace object</varname> has no dimensions, so it cannot have a qualified data reference.

ORA-34156: (MXCGRA00) You cannot compare time periods of different lengths or phases.

ORA-34158: (MXCGRA01) You cannot subtract time periods of different lengths or phases.

ORA-34160: (MXCGRA02) The format of the IN operator is \n <varname>date</varname> IN <varname>time dimension value</varname>.

ORA-34162: (MXCGRAVL01) The expression to be unraveled is not dimensioned by <varname>workspace object</varname>.

ORA-34164: (MXCGVAR01) A dimension used to define a local <varname>string</varname> variable cannot be located. Execution cannot continue.

Cause: A local relation or valueset has become invalid, most probably because an object used by the currently executing program has been deleted.

Action: This is an internal error that should be referred to Oracle technical support.

ORA-34168: (MXCGVFC01) Invalid context for the VALUE function.

ORA-34170: (MXCGVFC02) Data Reader attributes apply to the VALUE function only when it is used in a FILEREAD or FILEVIEW command.

ORA-34172: (MXCGWKDT01) The argument to the WKSDATA function must be the name of a WORKSHEET.

ORA-34176: (MXCHGDCL01) <varname>workspace object</varname> is not the kind of object whose index type can be changed.

ORA-34177: (MXCHGDCL19) <varname>number</varname> cannot be deleted because one or more partitioned variables instantiate it.

Cause: User attempted to CHGDFN DELETE a partition template, but some partitioned variable had data in the partition specified for deletion.

Action: Drop the partitions that are causing the problem, then retry.

ORA-34178: (MXCHGDCL02) <varname>workspace object</varname> cannot be changed to NOHASH. Only an object that was originally defined as NOHASH can be changed back to NOHASH.

ORA-34179: (MXCHGDCL20) <varname>workspace object</varname> is not a PARTITION TEMPLATE.

Cause: User specified an object that is not a partition template where a partition template is required.

Action: Supply the name of a partition template.

ORA-34180: (MXCHGDCL03) <varname>workspace object</varname> is not a conjoint dimension and cannot be changed in this manner.

ORA-34181: (MXCHGDCL21) <varname>workspace object</varname> is not a partitioned VARIABLE.

Cause: User specified an object that is not a partitioned variable in a place where a partitioned variable is required.

Action: Supply the name of a partitioned variable.

ORA-34182: (MXCHGDCL04) Wrong number of dimensions for <varname>workspace object</varname>; segwidth not changed from: <varname>string</varname>

ORA-34183: (MXCHGDCL22) Partition <varname>number</varname> already exists.

Cause: User attempted to ADD a partition that already existed to a partitioned variable.

Action: None required - the partition already exists.

ORA-34184: (MXCHGDCL05) <varname>string</varname> is not a valid segment width.

ORA-34185: (MXCHGDCL23) Only dimension composites can have optional inversions. <varname>workspace object</varname> is not a dimension composite.

ORA-34186: (MXCHGDCL06) You cannot change <varname>workspace object</varname> to a dimension composite, because it is used as the type of a PROGRAM, RELATION or VALUESET.

ORA-34187: (MXCHGDCL06) REUSE cannot be specified for dimensions that already have deletions.

ORA-34188: (MXCHGDCL07) Only conjoint dimensions can be redefined as composites. <varname>workspace object</varname> is not a conjoint dimension.

ORA-34190: (MXCHGDCL08) You cannot convert the conjoint dimension <varname>workspace object</varname> to a composite because it has the NOHASH attribute.

ORA-34192: (MXCHGDCL09) <varname>workspace object</varname> is a dimension composite and its definition cannot be changed to NOHASH.

ORA-34194: (MXCHGDCL10) You cannot change <varname>workspace object</varname> to a composite while there are permissions applied to it.

ORA-34196: (MXCHGDCL11) Only dimension composites can be redefined as DIMENSIONS. <varname>workspace object</varname> is not a dimension composite.

ORA-34198: (MXCHGDCL12) You cannot change <varname>workspace object</varname> to a composite because its dimension list has one or more duplications.

ORA-34200: (MXCHGDCL13) You cannot change <varname>workspace object</varname> to a dimension composite because there are one or more formulas dimensioned by it.

ORA-34202: (MXCHGDCL14) <varname>workspace object</varname> is not a time dimension.

ORA-34204: (MXCHGDCL15) <varname>workspace object</varname> is not the kind of object to which SEGWIDTH can be applied.

ORA-34206: (MXCHGDCL16) You cannot change <varname>workspace object</varname> to a dimension composite because there are one or more relations dimensioned by it.

ORA-34208: (MXCHGDCL17) You cannot change <varname>workspace object</varname> to a dimension composite because it is used in one or more CONCATENATE or MERGE dimensions.

ORA-34210: (MXCHGDCL18) You cannot change <varname>workspace object</varname> to a dimension composite because one or more surrogates has been defined for it.

Cause: The user attempted to redefine a conjoint dimension as a composite, but the conjoint has one or more surrogates defined. A dimension that has surrogates cannot be redefined as a composite.

Action: Either delete all surrogates for the dimension, or do not attempt to redefine the dimension as a composite.

ORA-34212: (MXCLASS01) An expression was specified where a DIMENSION or a VALUESET was expected.

ORA-34214: (MXCLASS02) <varname>workspace object</varname> is not a dimension.

ORA-34216: (MXCOMP001) <varname>workspace object</varname> cannot be compiled because it is not a PROGRAM, MODEL, AGGMAP, or FORMULA.

ORA-34218: (MXCTX01) <varname>workspace object</varname> cannot be in a CONTEXT because it is not a scalar variable.

ORA-34220: (MXCTX02) <varname>workspace object</varname> cannot be in a CONTEXT because it is not data.

ORA-34222: (MXCTX03) <varname>workspace object</varname> cannot be in a CONTEXT because it is a dimension composite.

ORA-34224: (MXDCL01) Analytic workspace <varname>string</varname> is not attached.

ORA-34226: (MXDCL02) REUSE can only be specified for SIMPLE, COMPOSITE, and CONJOINT dimensions.

ORA-34228: (MXDCL03) Only dimensions can have time periods.

ORA-34230: (MXDCL04) You provided an invalid time period.

ORA-34232: (MXDCL05) A DAY dimension cannot be phased with a BEGINNING or ENDING phrase.

ORA-34234: (MXDCL06) Beginning date translates to an invalid end date.

ORA-34236: (MXDCL07) REUSE cannot be specified in AWs that have not been upgraded to version 12.

ORA-34238: (MXDCL08) A dimension cannot have a data type of DATE.

ORA-34240: (MXDCL09) You cannot specify EXPTEMP as an analytic workspace.

ORA-34242: (MXDCL10) You cannot specify an analytic workspace in this command.

ORA-34243: (MXDCL11) You can only use the <varname>string</varname> keyword when defining a COMPOSITE.

Cause: User supplied the COMPRESSED keyword when defining an object that was not a COMPOSITE.

Action: If the intent is to create a compressed composite, make sure that the object type is COMPOSITE. Otherwise, remove the COMPRESSED keyword from the command string and rerun.

ORA-34246: (MXDCL18) You cannot define an object with a recursive SPARSE dimension list.

ORA-34248: (MXDCL19) You cannot specify a dimension list for the <varname>workspace object</varname> dimension.

ORA-34250: (MXDCL20) The <varname>workspace object</varname> dimension is in the wrong analytic workspace to be used in this DEFINE command.

ORA-34252: (MXDCL21) You have specified the wrong number of dimensions for <varname>workspace object</varname>.

ORA-34254: (MXDCL22) <varname>workspace object</varname> does not belong in the dimension list for composite <varname>workspace object</varname>, or it is in the wrong position.

ORA-34256: (MXDCL23) You must specify a dimension list for <varname>string</varname> <varname>workspace object</varname> when using it in a definition.

ORA-34258: (MXDCL24) Dimension composite <varname>number</varname> does not exist.

ORA-34260: (MXDCL25) You cannot use <varname>number</varname> to dimension a <varname>string</varname> because it is, or involves, a dimension composite. Use the composite's bases instead.

Cause: The user attempted to use a COMPOSITE in the dimension list of an object that does not allow for such dimensions.

Action: Use the base dimensions of the COMPOSITE in the dimension list.

ORA-34262: (MXDCL26) The object name <varname>string</varname>! <varname>string</varname> can only be defined in analytic workspace <varname>string</varname>, not in the EXPRESS analytic workspace.

ORA-34264: (MXDCL27) The object name <varname>string</varname>! <varname>string</varname> can only be defined in analytic workspace <varname>string</varname>, not in analytic workspace <varname>string</varname>.

ORA-34268: (MXDCL29) <varname>string</varname> objects must be type DIMENSION.

ORA-34270: (MXDCL30) You cannot specify a data type when defining a dimension alias.

ORA-34272: (MXDCL31) You cannot specify a dimension list when defining a dimension <varname>string</varname>.

ORA-34274: (MXDCL32) You cannot specify a width when defining a dimension alias.

ORA-34276: (MXDCL33) (Precision, Scale) arguments can only be used with a NUMBER variable or dimension.

Cause: The user attempted to use NUMBER(Precision) or NUMBER(Precision, Scale) as the datatype in a definition for some object other than a DIMENSION or VARIABLE, such as a FORMULA or PROGRAM. This error can also be produced in cases where a NUMBER data type is not allowed at all.

Action: Use the NUMBER type without specifying a precision or scale. If a NUMBER data type is not allowed at all, this fix will only change the exception message to something more specific.

ORA-34279: (MXDCL37) CONCAT can only be used when defining a DIMENSION.

Cause: The CONCAT keyword was used incorrectly.

Action: Retry the command without the CONCAT keyword.

ORA-34280: (MXDCL38) PARTITION BY can only be used when defining a PARTITION TEMPLATE.

ORA-34281: (MXDCL39) A (precision code) argument can only be used with DATETIME or TIMESTAMP dimensions.

ORA-34284: (MXDCL52) A SPARSE dimension cannot be specified in this context.

ORA-34286: (MXDCL53) <varname>workspace object</varname> cannot be used in this context because it is a <varname>string</varname>.

Cause: User specified a dimension composite, conjoint, or partition template in a place where that kind of dimension is not allowed. For instance, a relation cannot be dimensioned by a composite, and only a variable can be dimensioned by a partition template.

Action: Usually, the offending dimension can be replaced with its bases. For instance, a relation cannot be dimensioned by a composite of PRODUCT and GEOG, but it can be dimensioned by both PRODUCT and GEOG instead.

ORA-34298: (MXDCLEQ01) <varname>workspace object</varname> was not defined as a formula, so you cannot use the EQ command to give it a value.

ORA-34300: (MXDCLEQ02) <varname>workspace object</varname> is not a time dimension, so you cannot define a VNF formatting string for it.

ORA-34302: (MXDCLEQ03) <varname>workspace object</varname> is not a DATETIME or TIMESTAMP dimension, formula, program, or variable, so you cannot define a DATE_FORMAT formatting string for it.

ORA-34304: (MXDCLILP01) There is no current program definition. Define a program or use the CONSIDER command before using the PROGRAM command.

ORA-34306: (MXDCLILP02) <varname>workspace object</varname> was not defined as a PROGRAM.

ORA-34308: (MXDCLILP03) Since you have no current program definition, your PROGRAM entries will be discarded. Type END to return to command level.

ORA-34310: (MXDCLILP04) The <varname>workspace object</varname> program cannot be redefined while it is executing.

ORA-34312: (MXDCLMOD01) There is no current model definition. Define a model or use the CONSIDER command before using the MODEL command.

ORA-34314: (MXDCLMOD02) <varname>workspace object</varname> was not defined as a model.

ORA-34316: (MXDCLMOD03) Since there is no current model definition, the MODEL statements will be discarded. Type END to return to the command line.

ORA-34318: (MXDCLAGR01) There is no current aggmap definition. Define an aggmap or use the CONSIDER command before using the AGGMAP command.

ORA-34320: (MXDELETE00) The object <varname>workspace object</varname> is not in the <varname>string</varname> analytic workspace.

ORA-34324: (MXFETCH01) The ACROSS and DOWN keywords cannot be set to NONE at the same time.

ORA-34328: (MXDEBUG01) = Entering <varname>number</varname> from <varname>number</varname>

ORA-34330: (MXDEBUG02) = Entering <varname>number</varname>

ORA-34332: (MXDEBUG03) = Leaving <varname>number</varname>

ORA-34334: (MXDEBUG04) = Leaving <varname>number</varname>, Value = <varname>value</varname>

ORA-34336: (MXGO00) The <varname>string</varname> keyword can only be used for a model.

ORA-34338: (MXDIMEN01) An object cannot have more than <varname>number</varname> dimensions.

ORA-34340: (MXDINSRT01) An object named <varname>number</varname> already exists in analytic workspace <varname>string</varname>.

ORA-34342: (MXDSS01) IMPORTANT: Analytic workspace <varname>string</varname> is read-only. Therefore, you will not be able to use the UPDATE command to save changes to it.

Cause: This is an informational message that reminds you that you may not save changes to the specified analytic workspace.

Action: None, unless it was desired to save changes to the analytic workspace. In that case, detach and reattach the analytic workspace read-write.

ORA-34343: (MXDSS02) <varname>string</varname> is not a valid analytic workspace name. The name must be one of the following forms: SCHEMA.NAME, NAME, or ALIAS, where NAME is an analytic workspace name, SCHEMA is a schema name, and ALIAS is an analytic workspace alias.

ORA-34344: (MXDSS03) Analytic workspace <varname>string</varname> is not attached.

Cause: The command attempted to operate on an analytic workspace that is not currently attached, or the name of the analytic workspace is misspelled.

Action: Attach the analytic workspace or correct the spelling.

ORA-34346: (MXDSS04) The <varname>string</varname> analytic workspace cannot be detached.

Cause: The specified analytic workspace is an internal workspace and may not be detached by the user.

Action: Specify a different analytic workspace to detach.

ORA-34348: (MXDSS05) <varname>string</varname> is used only for internal purposes and cannot be accessed as an analytic workspace.

Cause: The command attempted to operate on an internal analytic workspace used by the system.

Action: Specify a different analytic workspace.

ORA-34350: (MXDSS06) <varname>string</varname> is an open analytic workspace.

Cause: The specified analytic workspace is currently in use.

Action: The desired action requires an analytic workspace that is not currently in use.

ORA-34352: (MXDSS07) <varname>string</varname><varname>character</varname> R/<varname>character</varname> CHANGED <varname>string</varname>

ORA-34354: (MXDSS08) <varname>string</varname><varname>character</varname> R/<varname>character</varname> UNCHANGED <varname>string</varname>

ORA-34356: (MXDSS09) Analytic workspace <varname>string</varname> is attached in read-only mode, therefore you cannot change its <varname>string</varname>.

ORA-34357: (MXDSS10) <varname>string</varname> is not an alias of analytic workspace <varname>string</varname>.

Cause: User attempted to use AW UNALIAS on a non-existent alias.

Action: Make sure that the command specified the correct analytic workspace and alias. The alias must have been assigned (using AW ALIAS) during the current session and must not have been removed by a previous AW UNALIAS or AW DETACH command.

ORA-34358: (MXDSS14) <varname>number</varname> other users reading

Cause: Used for AW LIST output formatting when %d > 1

Action: None

ORA-34359: (MXDSS11) <varname>string</varname> appears twice in the alias list.

Cause: User included the same name twice in the alias list of an AW ALIAS or AW UNALIAS command.

Action: Remove the duplicate name and try again.

ORA-34360: (MXDSS15) <varname>number</varname> other users writing

Cause: Used for AW LIST output formatting when %d > 1

Action: None

ORA-34361: (MXDSS12) <varname>number</varname> other user reading

Cause: Used for AW LIST output formatting when %d == 1

Action: None

ORA-34362: (MXDSS16) Program <varname>number</varname> does not exist.

ORA-34363: (MXDSS13) <varname>number</varname> other user writing

Cause: Used for AW LIST output formatting when %d == 1

Action: None

ORA-34364: (MXDSS17) The read/write status of analytic workspace <varname>string</varname> has not been changed. To change it, detach and re-attach the analytic workspace.

ORA-34366: (MXDSS19) Security override is not allowed on analytic workspace <varname>string</varname>.

ORA-34368: (MXDSS20) Incorrect response. Security override failure.

ORA-34370: (MXDSS21) Permission to attach analytic workspace <varname>string</varname> denied by a PERMIT program.

ORA-34372: (MXDSS26) An analytic workspace named <varname>string</varname> is already attached.

ORA-34374: (MXDSS27) <varname>string</varname> is not a valid analytic workspace name. Analytic workspace names must be 26 characters or less, can contain only letters, digits, and underscores, and cannot begin with a digit.

Cause: a specified AW or ALIAS name was too long or contained invalid characters.

Action: verify that AW name meets the specified criteria.

ORA-34376: (MXDSS28) <varname>string</varname> is not a valid analytic workspace name. Analytic workspace names must be 26 characters or less, can contain only letters, digits, underscores, and dollar signs, and cannot begin with a digit or dollar sign.

Cause: a specified AW or ALIAS name was too long or contained invalid characters.

Action: verify that AW name meets the specified criteria.

ORA-34378: (MXDSS29) <varname>string</varname> is a reserved word and cannot be used as an analytic workspace name.

ORA-34380: (MXEXPORT00) You can only export one worksheet to a spreadsheet file.

ORA-34382: (MXEXPORT01) Worksheets are the only objects you can export to spreadsheet files. <varname>workspace object</varname> is not a worksheet.

ORA-34384: (MXFILEIO01) The <varname>string</varname> option of FILESET is not supported.

ORA-34386: (MXFILEIO02) No more than 9 arguments can be supplied to FILESET.

ORA-34388: (MXFILERD01) The format of the FILEREAD command is:\n FILEREAD unit [STOPAFTER n] [STRUCTURED | CSV | RULED] [fieldlist]

ORA-34390: (MXFILERD02) The format of the FILEVIEW command is:\n FILEVIEW unit [STRUCTURED | RULED] [fieldlist]

ORA-34392: (MXFORCAS00) You cannot calculate a forecast for an expression with no dimensions.

ORA-34394: (MXFORCAS01) You cannot calculate a forecast with an STSEASONAL expression with no dimensions.

ORA-34396: (MXFORCAS02) The expression to be forecast is not dimensioned by <varname>workspace object</varname>.

ORA-34398: (MXFORCAS03) The STSEASONAL expression must be dimensioned by only one dimension.

ORA-34400: (MXFORCAS04) time-series

ORA-34402: (MXFORCAS05) When you specify the forecast LENGTH, you must also specify an FCNAME.

ORA-34404: (MXFORCAS06) When you specify METHOD WINTERS, you must also specify the PERIODICITY.

ORA-34406: (MXFORCAS07) When STSMOOTHED, STTREND, or STSEASONAL is specified, they must all be specified.

ORA-34408: (MXFORCAS08) You specified a forecast phrase that is valid only when METHOD WINTERS is specified.

ORA-34410: (MXFORCAS09) The arguments to FCNAME, FCSMOOTHED, FCTREND, and FCSEASONAL must be numeric. <varname>workspace object</varname> is not numeric.

ORA-34412: (MXFORCAS10) FCNAME, FCSMOOTHED, FCTREND, and FCSEASONAL variables must be dimensioned by time dimension <varname>workspace object</varname>. <varname>workspace object</varname> is not.

ORA-34414: (MXGETFLD01) Your FILEREAD or FILEVIEW statement specifies no width for a <varname>string</varname> <varname>string</varname> field. There is no default width for this data type.

ORA-34416: (MXGETFLD02) <varname>string</varname> data cannot be read as a <varname>string</varname> value.

ORA-34418: (MXGETFLD03) A STRUCTURED or CSV record cannot contain <varname>string</varname> data.

ORA-34420: (MXGETFLD04) The <varname>string</varname> option of FILEREAD or FILEVIEW cannot be specified for <varname>string</varname> data.

ORA-34422: (MXGETFLD05) The SCALE option of FILEREAD or FILEVIEW cannot be specified for BINARY data other than INTEGER.

ORA-34424: (MXGETFLD06) The <varname>string</varname> option of FILEREAD or FILEVIEW cannot be specified for <varname>string</varname> <varname>string</varname> data.

ORA-34426: (MXGETFLD07) Values read into the relation <varname>workspace object</varname> must be INTEGER position numbers of its conjoint value dimension.

ORA-34428: (MXGETFLD08) Values read into conjoint dimension <varname>workspace object</varname> must be either INTEGER position numbers or a bracketed list of base dimension values.

ORA-34430: (MXGETFLD09) No data type was specified for one or more of the base dimensions of conjoint dimension <varname>workspace object</varname>.

ORA-34432: (MXGETFLD10) <varname>workspace object</varname> cannot be assigned time dimension data.

ORA-34434: (MXGETFLD11) You cannot read values of a dimension composite directly. You can specify a bracketed list of base dimension values.

ORA-34436: (MXGETFLD12) No data type was specified for one or more of the base dimensions of a dimension composite.

ORA-34438: (MXGETSVN01) A value of the <varname>workspace object</varname> dimension must be a single expression without surrounding angle brackets <varname></varname>.

ORA-34440: (MXGETSVN02) A value of the <varname>workspace object</varname> dimension must be a combination of <varname>number</varname> base dimension values surrounded by angle brackets <varname></varname>.

ORA-34442: (MXGETSVN03) You cannot use a Qualified Object Name as a value of the NAME dimension.

ORA-34444: (MXGETSVN04) Dimension <varname>workspace object</varname> is not a concatenated dimension.

ORA-34446: (MXGETSVN05) Dimension <varname>workspace object</varname> is not a base of concatenated dimension <varname>workspace object</varname>.

ORA-34448: (MXGOTO01) <varname>string</varname> is not defined as a label.

ORA-34450: (MXIFERR) The IF keyword must be followed by a BOOLEAN expression. The expression starting with <varname>string</varname> is <varname>string</varname>.

ORA-34452: (MXIMPORT01) <varname>string</varname> is a reserved keyword that cannot be used in this context.

ORA-34454: (MXIMPORT02) When importing a spreadsheet, CSV file, or PRN file, the target must be a worksheet. <varname>workspace object</varname> is not a worksheet.

ORA-34456: (MXIMPORT03) The STOPAFTER specification cannot be NA.

ORA-34458: (MXIMPORT04) The RULER expression cannot be missing or NA.

ORA-34460: (MXIMPORT05) The expression identifying the file cannot be NA.

ORA-34462: (MXIMPORT06) The STOPAFTER specification cannot be less than one. The value was <varname>number</varname>.

ORA-34464: (MXIMPORT07) TEXTSTART and TEXTEND are supported only for STRUCTURED PRN files. DELIMITER is supported for STRUCTURED PRN and CSV files.

ORA-34466: (MXIMPORT08) Target <varname>workspace object</varname> is not in analytic workspace <varname>string</varname>.

ORA-34468: (MXIMPORT09) <varname>workspace object</varname> is not a valid target name. You cannot use a Qualified Object Name to specify a target in an EIF import.

ORA-34474: (MXINFILE01) The <varname>string</varname> option of INFILE is not supported by <varname>string</varname>.

ORA-34476: (MXINFO01) The first argument to the <varname>string</varname> function must be FORECAST, PARSE, REGRESS, SEASADJ, or MODEL.

ORA-34478: (MXLOG01) Disk file <varname>string</varname> cannot be opened; it is in use.

ORA-34480: (MXMAINT01) You cannot <varname>string</varname> values of conjoint dimension <varname>workspace object</varname>.

ORA-34481: (MXMAINT07) You cannot <varname>string</varname> values of PARTITION TEMPLATE <varname>workspace object</varname>.

Cause: User attempted to use the MAINTAIN command with some keyword other than ADD or DELETE on a partition template.

Action: It is not possible to MAINTAIN a partition template, except to add or delete values of a partition list.

ORA-34482: (MXMAINT02) You cannot <varname>string</varname> values of time dimension <varname>workspace object</varname>.

ORA-34484: (MXMAINT03) You cannot <varname>string</varname> values of dimension composite <varname>workspace object</varname>.

ORA-34486: (MXMAINT04) You cannot maintain dimension alias <varname>workspace object</varname>.

ORA-34487: (MXMAINT08) You cannot <varname>string</varname> values of non-unique concat dimension <varname>workspace object</varname>.

Cause: The specified MAINTAIN operation can only be applied to UNIQUE concats.

Action: Use the CHGDFN command to change the concat dimension to UNIQUE and retry.

ORA-34488: (MXMAINT05) You cannot <varname>string</varname> values of concat dimension <varname>workspace object</varname>.

ORA-34489: (MXMAINT06) You cannot maintain <varname>workspace object</varname> because it is a SURROGATE.

Cause: The user attempted to use the MAINTAIN command on a dimension surrogate. The MAINTAIN command can only be used with real dimensions, not surrogates.

Action: Use the MAINTAIN command to modify the underlying dimension of the surrogate instead.

ORA-34490: (MXMOVE00) You cannot use Qualified Object Names in the MOVE command except as part of an expression.

ORA-34492: (MXMSERR00) Analytic workspace object <varname>workspace object</varname> does not exist.

ORA-34494: (MXMSERR01) Analytic workspace <varname>string</varname> does not contain an object named <varname>workspace object</varname>.

ORA-34496: (MXNAME01) The NAME dimension is available only when you have an active analytic workspace.

ORA-34498: (MXNAME02) You cannot use the NAME dimension in this context.

ORA-34500: (MXNAME03) <varname>string</varname> is a reserved keyword that cannot be used in this context.

ORA-34502: (MXNAME03A) <varname>number</varname> is a reserved keyword that cannot be used in this context.

ORA-34504: (MXNAME04) You have no current analytic workspace.

ORA-34506: (MXNAME05) <varname>string</varname> is a local variable that cannot be used in this context.

ORA-34508: (MXNAME06) You cannot qualify references to the NAME dimension.

ORA-34512: (MXNEGERR) The NOT operator can only be used with BOOLEAN expressions. The expression at <varname>string</varname> is <varname>string</varname>.

ORA-34514: (MXOPERR) You cannot <varname>string</varname> <varname>string</varname> data in the expression that begins with '<varname>string</varname>'.

Cause: The user attempted an invalid operation.

Action: n/a

ORA-34516: (MXPROPER01) A property name cannot be NA.

ORA-34518: (MXPROPER02) A property named <varname>string</varname> does not exist.

ORA-34520: (MXPROPER03) A property name cannot be a multi-line text.

ORA-34522: (MXPROPER04) A property name must be between <varname>number</varname> and <varname>number</varname> bytes long. You supplied a name of <varname>number</varname> bytes.

ORA-34524: (MXPROPER05) The object properties in this analytic workspace cannot be read, because they were created by an incompatible version of <varname>string</varname>.

ORA-34526: (MXPSHPOP01) You cannot <varname>string</varname> <varname>workspace object</varname> because it is not a scalar variable.

ORA-34528: (MXPSHPOP02) You cannot <varname>string</varname> <varname>workspace object</varname> because it is not data.

ORA-34530: (MXPSHPOP03) You cannot <varname>string</varname> <varname>workspace object</varname> because it is a <varname>string</varname>.

ORA-34534: (MXPUTQDR01) A FILEREAD attribute list is not valid in this context.

ORA-34536: (MXRECAP00) COMMAND LOG\n -----

ORA-34538: (MXRECAP01) The format of the RECAP command is:\n RECAP [ALL\n] [string] [FILE pathname]

ORA-34540: (MXRECAP02) RECAP does not support multi-line strings.

ORA-34542: (MXRECAP03) There are no entries in the command log.

ORA-34544: (MXRECAP04) No matching commands were found.

ORA-34546: (MXRECAP05) The format of the REDO command is:\n REDO [n] [oldtext newtext [option]]

ORA-34548: (MXRECAP06) There is no occurrence <varname>number</varname> of '<varname>number</varname>' in the command.

ORA-34550: (MXRECAP07) Command number <varname>number</varname> is not available.

ORA-34552: (MXRECAP08) Multi-line strings cannot be used in editing the command.

ORA-34554: (MXRECAP09) The string '<varname>number</varname>' does not occur in the command.

ORA-34556: (MXRECAP10) Substituting <varname>number</varname> for <varname>number</varname> would cause the command to exceed the maximum command length (<varname>number</varname>).

ORA-34558: (MXRECAP11) The format of the REEDIT command is:\n REEDIT [n] oldtext newtext [option]

ORA-34560: (MXRECAP12) The <varname>string</varname> command cannot be saved in the command log by REDO or REEDIT or executed by REDO.

ORA-34562: (MXRENAME02) An object named <varname>number</varname> already exists in analytic workspace <varname>string</varname>.

ORA-34564: (MXRENAME03) The SPARSE keyword changes a named composite to unnamed. You cannot apply it to an unnamed composite.

ORA-34566: (MXRENAME04) Only integer dimensions can be named <varname>string</varname>.

ORA-34568: (MXRENAME05) You cannot rename <varname>workspace object</varname> because you do not have PERMIT rights to do it or it is readonly.

ORA-34570: (MXRENAME06) The dimension composite <varname>workspace object</varname> is not in analytic workspace <varname>string</varname>.

ORA-34572: (MXRENAME07) You cannot change <varname>workspace object</varname> to an unnamed composite because it is not a composite.

ORA-34574: (MXRENAME08) You cannot change <varname>workspace object</varname> to an unnamed composite because it has permissions attached.

ORA-34576: (MXRENAME09) You cannot change <varname>workspace object</varname> to an unnamed composite because there are pushed statuses associated with it.

ORA-34578: (MXRENAME10) You cannot change <varname>workspace object</varname> to an unnamed composite because there are no objects dimensioned by it.

ORA-34580: (MXRENAME11) You cannot change <varname>workspace object</varname> to an unnamed composite because there are properties associated with it.

ORA-34582: (MXRENAME12) You cannot change <varname>workspace object</varname> to an unnamed composite, because there is already an unnamed composite with the same base dimensions.

ORA-34584: (MXRENAME13) You cannot change <varname>workspace object</varname> to an unnamed composite, because it appears in the dimension list of unnamed composite <varname>workspace object</varname>.

ORA-34586: (MXRENAME14) You cannot change <varname>workspace object</varname> to an unnamed composite, because unnamed composite <varname>workspace object</varname> appears in its dimension list.

ORA-34588: (MXRENAME15) The object <varname>workspace object</varname> is not in analytic workspace <varname>string</varname>.

ORA-34592: (MXRENAME17) You cannot change <varname>workspace object</varname> to an unnamed composite, because it would cause the dependent object <varname>workspace object</varname> to exceed the limit for the number of named dimensions.

ORA-34594: (MXROLLUP01) <varname>workspace object</varname> is not a data variable.

ORA-34596: (MXROLLUP02) The data type (<varname>string</varname>) of <varname>workspace object</varname> is not INTEGER, DECIMAL, or SHORTDECIMAL.

ORA-34598: (MXROLLUP03) <varname>workspace object</varname> is not related to itself.

ORA-34600: (MXROLLUP04) <varname>workspace object</varname> is not dimensioned by <varname>workspace object</varname>.

ORA-34602: (MXROLLUP05) You must specify which dimension to roll up, since <varname>workspace object</varname> has more than one dimension.

ORA-34604: (MXROLLUP06) <varname>workspace object</varname> is not a relationship array.

ORA-34606: (MXROLLUP07) <varname>workspace object</varname> does not yield values of <varname>workspace object</varname>.

ORA-34608: (MXROLLUP08) <varname>workspace object</varname> is not dimensioned by <varname>workspace object</varname>.

ORA-34610: (MXROLLUP09) The relationship array <varname>workspace object</varname> shares the <varname>workspace object</varname> dimension with <varname>workspace object</varname>. It can only share the rollup dimension itself.

ORA-34612: (MXSHELL01) Your program or expression uses too much execution space. Eliminate recursion or reduce the levels of nesting.

ORA-34614: (MXSHOWCD00) No command was given. There is nothing to show.

ORA-34616: (MXSHOWCD01) No code is generated for the <varname>string</varname> command.

ORA-34618: (MXSHOWCD02) The compiled code for <varname>workspace object</varname> cannot be displayed because the program has been hidden.

ORA-34620: (MXSHOWCD03) No compiled code exists for <varname>string</varname> <varname>workspace object</varname>.

ORA-34622: (MXSHOWCD04) No text exists for <varname>string</varname> <varname>workspace object</varname>.

ORA-34624: (MXSORT01) Sort criterion <varname>number</varname> is not dimensioned by <varname>workspace object</varname>.

ORA-34626: (MXSORT02) You must convert WORKSHEET values to a simple data type before using them as a sort criterion.

ORA-34628: (MXSQL99) The SQL "<varname>string</varname>" command can only be used in a program, and it must be compiled before it can be executed.

ORA-34630: (MXSQL00) The format of the SQL DECLARE command is:\n SQL DECLARE cursor-name CURSOR FOR select-command

ORA-34632: (MXSQL01) The format of the SQL OPEN command is:\n SQL OPEN cursor-name

ORA-34634: (MXSQL02) The format of the SQL CLOSE command is:\n SQL CLOSE cursor-name

ORA-34636: (MXSQL03) The format of the SQL FETCH command is:\n SQL FETCH cursor-name [LOOP [count]] INTO :host-var [:host-var ...] [THEN filereadactions]

ORA-34637: (MXSQL11) The format of the SQL IMPORT command is:\n SQL IMPORT cursor-name INTO :host-var [:host-var ...]\n [THEN filereadactions]

ORA-34638: (MXSQL04) The format of the SQL CLEANUP command is:\n SQL CLEANUP

ORA-34639: (MXSQL05) The format of the SQL SELECT command is:\n SQL SELECT rest of select statement INTO :host-var [:host-var ...] [THEN filereadactions]

ORA-34642: (MXSQL08) The format of the SQL PREPARE command is:\n SQL PREPARE statement-name FROM non-select-command

ORA-34644: (MXSQL09) The format of the SQL EXECUTE command is:\n SQL EXECUTE statement-name

ORA-34646: (MXSQL10) The format of the SQL PROCEDURE command is:\n SQL PROCEDURE procedure-name [(parameter {, parameter})]

ORA-34647: (MXSQL18) The text expression in a CURSOR FOR TEXT declaration cannot be NA.

Cause: The text for the SELECT expression in a CURSOR FOR TEXT declaration was evaluated at compile time as NA.

Action: Specify a text expression that is not NA at the time the program containing the SQL DECLARE is compiled.

ORA-34648: (MXSQL19) The SQL command is incomplete.

ORA-34650: (MXSQL20) The SELECT command is not supported by <varname>string</varname>. You must declare a cursor to retrieve SQL data.

ORA-34652: (MXSQL21) The SQL command contains a syntax error.

ORA-34654: (MXSQL23) Host variable expected; use :: to escape a colon.

ORA-34656: (MXSQL24) Additional WHERE clause conditions with CURRENT OF <varname>cursor name</varname> syntax

Cause: A SQL UPDATE or DELETE statement tried to use the CURRENT OF <varname>cursor name</varname> syntax with a WHERE clause containing multiple conditions.

Action: When using the CURRENT OF <varname>cursor name</varname> syntax make sure it is the only condition in the WHERE clause.

ORA-34658: (MXSQL25) The words CURSOR FOR TEXT must be followed by a compile-time text expression specifying a SELECT command.

Cause: A SQL DECLARE <varname>csr</varname> CURSOR FOR TEXT command lacked a text expression, or the expression was otherwise invalid.

Action: Specify a single text expression that can be evaluated at compile time to yield a SELECT statement

ORA-34660: (MXSQL26) SQL cursor <varname>string</varname> has already been declared in this compilation.

ORA-34662: (MXSQL27) SQL statement <varname>string</varname> has already been prepared in this compilation.

ORA-34665: (MXSQL30) Concat dimension <varname>workspace object</varname> cannot be used as a target host variable. You must specify one of its leaves, and then set the concat's status from that leaf.

ORA-34666: (MXSWITCH01) Only one DEFAULT label is allowed in a SWITCH.

ORA-34668: (MXSWITCH02) The format of a DEFAULT label statement is:\n DEFAULT:

ORA-34670: (MXSWITCH03) Invalid syntax in case label expression

ORA-34672: (MXSWITCH04) The format of a CASE label statement is:\n CASE case-expression:

ORA-34674: (MXTRACE01) There is no trace in effect.

ORA-34676: (MXTRAP01) <varname>string</varname> is not defined as a label.

ORA-34680: (MXUPDATE03) Analytic workspace <varname>string</varname> is read-only. Therefore, the UPDATE command will not save changes.

ORA-34682: (MXUPDATE04) You have no attached analytic workspaces.

ORA-34684: (MXUPDATE05) All of your attached analytic workspaces are read-only. Therefore, the UPDATE command will not save changes.

ORA-34686: (MXVAR02) <varname>string</varname> is not a valid data type for a declarative statement.

ORA-34688: (MXVAR03) <varname>workspace object</varname> cannot be used as a variable or argument type because it is the name of a dimension composite.

ORA-34690: (MXWATCH01) There are no watchpoints set.

ORA-34692: (MXXEQ01) A division by zero was attempted. Set DIVIDEBYZERO to YES if you want NA to be returned as the result of division by zero.

ORA-34694: (MXXEQ02) Unsupported conversion of RELATION data was attempted.

ORA-34696: (MXXEQ03A) "<varname>number</varname>" is not a number.

ORA-34698: (MXXEQ03B) "<varname>number</varname>" is not a Boolean.

ORA-34700: (MXXEQ05) Function calls are too deeply nested to be evaluated.

ORA-34702: (MXXEQ13) "<varname>number</varname>" is not a valid number format.

ORA-34704: (MXXEQ14) "<varname>number</varname>" does not match number format "<varname>number</varname>".

ORA-34706: (MXXEQ35) <varname>value</varname> is not a valid <varname>workspace object</varname>.

ORA-34708: (MXXEQ36) <varname>value</varname> does not exist.

ORA-34710: (MXXEQ37) Positions in the product of breakout dimensions of an aggregation function cannot exceed 2**63.

ORA-34712: (NAFILENAME) The expression identifying the file cannot be NA or blank.

ORA-34716: (NLSCHARSET01) The XLTABLE method of character set conversion is no longer supported.

ORA-34718: (NLSCHARSET02) <varname>number</varname> is not a valid, installed NLS character set.

ORA-34719: (NLSCHARSET03) Character data loss in NTEXT/TEXT conversion

Cause: When character set conversion happens between TEXT and NTEXT either implicitly or explicitly, some characters are lost due to no mapping characters in the destination character set.

Action: Make sure all the characters can be mapped to destination character set or set NLS_NCHAR_CONV_EXCP to be FALSE. Note: This message is the OLAP equivalent of ORA-12713.

ORA-34720: (NLSCHARSET04) An unknown character set conversion error occurred.

ORA-34722: (NLSCHARSET05) CAUTION: Character data loss in character set conversion from <varname>string</varname> to <varname>string</varname>

Cause: Some operation required a string to be converted into a different character set, but the string contained characters that didn't exist in the new character set.

Action: Choose different character sets.

ORA-34726: (NLSCHARSET06) CAUTION: String truncated during character set conversion from <varname>string</varname> to <varname>string</varname>

Cause: Some operation required a string to be converted into a different character set. The string required more bytes in the new encoding, and exceeded some byte limit on its allowable length, causing some characters to be removed from the end of the string.

Action: If the byte limit is due to using the ID datatype, consider using the CHAR datatype instead. If the byte limit is due to the limit of 4000 bytes per line of CHAR data, break the long line up into multiple lines.

ORA-34730: (NLSCHARSET08) CAUTION: During character set conversion, some of hidden program <varname>workspace object</varname> was truncated or could not be converted.

ORA-34731: (NLSSORT01) '<varname>number</varname>' is not a valid NLS_SORT specification.

Cause: An unrecognized NLS_SORT value was specified in the SORT command or the SORT, SORTLINES or UNIQUELINES function.

Action: Specify a supported NLS_SORT value.

ORA-34732: (NOCONSIDER) You have no current definition. Define an object or use the CONSIDER command before using the <varname>string</varname> command.

ORA-34738: (NOUPDATE) A severe problem has been detected. Analytic workspace operations have been disabled.

Cause: A previous fatal error has marked the session so that it cannot perform any UPDATES

Action: Start a new session

ORA-34740: (NOUPDATEDB) Because of a previous error, changes made to the <varname>string</varname> analytic workspace will not be saved.

ORA-34744: (NPV01) Time dimension <varname>workspace object</varname> has a range in status of <varname>number</varname> periods. The maximum range allowed for the NPV function is <varname>number</varname> periods.

ORA-34746: (NPV02) The interest rate in the NPV function is <varname>number</varname>. The value must be greater than -1.

ORA-34748: (NUMARGS1) You supplied <varname>number</varname> argument(s) to the <varname>string</varname> function. You must supply at least <varname>number</varname>.

ORA-34750: (NUMARGS2) The <varname>string</varname> function cannot have any arguments.

ORA-34752: (NUMARGS3) You supplied <varname>number</varname> arguments to the <varname>string</varname> function. It can have no more than <varname>number</varname> arguments.

ORA-34754: (NUMARGS4) You supplied <varname>number</varname> argument(s) to a function that requires at least <varname>number</varname>.

ORA-34756: (NUMARGS5) You supplied arguments to a function that does not take arguments.

ORA-34758: (NUMARGS6) You supplied <varname>number</varname> arguments to a function that can have no more than <varname>number</varname> arguments.

ORA-34760: (NXHANDLE01) Decimal overflow in context that is unprotected by the DECIMALOVERFLOW option. Contact Oracle OLAP technical support.

ORA-34761: (NXHANDLEALLO) A decimal overflow occurred during an ALLOCATE operation. The results are not reliable.

Cause: While performing an ALLOCATE, a decimal overflow occurred

Action: Correct the data or use a higher precision datatype

ORA-34762: (NXHANDLE02) A decimal overflow has occurred. Set DECIMALOVERFLOW to YES if you want NA to be returned as the result of a decimal overflow.

ORA-34764: (NXHANDLE03) A decimal overflow occurred during a ROLLUP operation. The results are not reliable.

ORA-34766: (NXHANDLE04) A decimal overflow occurred during an AGGREGATE operation. The results are not reliable.

ORA-34768: (NXHANDLE05) A decimal overflow occurred while parsing the AGGMAP.

ORA-34770: (OBJENG02) The object name argument to the OBJ function cannot be NA.

ORA-34772: (OBJENG03) <varname>number</varname> contains more than one name.

ORA-34774: (OBJENG04) '<varname>number</varname>' is not the name of a dimension or composite.

ORA-34776: (OBJENG05) '<varname>number</varname>' is not the name of an analytic workspace object.

ORA-34778: (OBJENG06) You cannot use the OBJ function on objects in analytic workspace <varname>string</varname>.

ORA-34780: (OBJLIST01) Analytic workspace '<varname>string</varname>' is not attached.

ORA-34782: (OBJSAVE2) Analytic workspace <varname>string</varname> already has the maximum number of objects (65535).

ORA-34786: (OCI02) The total length of all output variables cannot be more than <varname>number</varname> bytes.

ORA-34796: (OCI08) SQL host variable <varname>number</varname> cannot be bound.

Cause: The data type of the host variable is not supported.

Action: Specify only variables of supported types as host variable names.

ORA-34798: (OCI09) OLAP OCI operation canceled.

ORA-34800: (OCI10) OLAP OCI operation returned '<varname>string</varname>'.

ORA-34802: (OCI11) OLAP OCI operation caused ROLLBACK past an UPDATE of an attached analytic workspace. Current operation canceled.

Cause: ROLLBACK past the UPDATE of one of the attached Analytic Workspaces was called. The current operation is aborted, and the Analytic Workspace detached.

Action: Change the called SQL procedure to avoid the ROLLBACK

ORA-34804: (OCI12) The value of SQL host variable <varname>number</varname> is too long. Use the WIDE keyword for columns that may exceed <varname>number</varname> bytes.

Cause: The host variable had a text value longer than the maximum SQL VARCHAR length

Action: Use the WIDE keyword in the host variable specification, e.g. :WIDE
OLAP_object_name

ORA-34805: (OCI13) Statement <varname>number</varname> must have at least one host variable.

Cause: Statements prepared with DIRECT=YES must have at least one host variable.

Action: Add a host variable to the prepared statements declaration.

ORA-34806: (OCI14) Statement <varname>number</varname> can only be executed within an ACROSS command.

Cause: Statements prepared with DIRECT=YES must be executed in an ACROSS command.

Action: Execute the statement within an ACROSS command.

ORA-34828: (OFCENG01) You cannot specify a text dimension value for an INTEGER dimension.

ORA-34830: (OFCENG02) The <varname>string</varname> function cannot be applied to the dimension composite <varname>workspace object</varname>.

ORA-34832: (OFCENG03) <varname>number</varname> is not the name of a dimension or valueset.

ORA-34833: (OFCENG04) The <varname>string</varname> function cannot be applied to the PARTITION TEMPLATE <varname>workspace object</varname>.

ORA-34834: (OKUNDSS01) Analytic workspace <varname>string</varname> must remain current because the <varname>workspace object</varname> program is still executing in it.

ORA-34836: (OKUNDSS03) Analytic workspace <varname>string</varname> cannot be detached because a currently executing command depends upon an object (<varname>workspace object</varname>) it contains.

ORA-34840: (OPCREATE01) The <varname>string</varname> option must be declared with datatype <varname>string</varname>.

Cause: An attempt was made to declare the option with the wrong datatype.

Action: Declare the option with the correct datatype.

ORA-34841: (OPCREATE02) The <varname>string</varname> option must be declared with the READONLY attribute.

Cause: An attempt was made to declare the option without the READONLY attribute.

Action: Declare the option READONLY.

ORA-34842: (OPTWIDTH) <varname>workspace object</varname> must be between <varname>number</varname> and <varname>number</varname>. It cannot be <varname>number</varname>. Its previous value was retained.

ORA-34844: (OPUTNA00) You cannot set an option to NA. The previous value of <varname>workspace object</varname> was retained.

ORA-34846: (OVERRIDE01) <varname>number</varname>

ORA-34848: (PARSE01) The text to be parsed is NA.

ORA-34850: (PARSE02) The expression is not properly constructed.

ORA-34852: (PHASTOVC00) Unsupported type

ORA-34854: (PMTSETUP00) Permission expression for <varname>workspace object</varname> is invalid and will be treated as FALSE.

ORA-34856: (PMTSETUP01) Permission for <varname>workspace object</varname> does not have proper dimensionality of the BY expression.

ORA-34858: (PMTUPDAT01) Permission expression for <varname>workspace object</varname> is invalid and will not be stored.

ORA-34859: (PMTUPDAT07) Permission condition for <varname>workspace object</varname> contains an expression longer than <varname>number</varname> bytes and cannot be stored.

Cause: One of the components of the PERMIT condition was too long.

Action: Rewrite the condition to shorten it.

ORA-34860: (PMTUPDAT02) You do not have PERMIT rights for <varname>workspace object</varname>.

ORA-34862: (PMTUPDAT03) <varname>workspace object</varname> is not a dimension, so you cannot give it MAINTAIN permission.

ORA-34864: (PMTUPDAT04) A BY clause cannot be given with <varname>string</varname> permission for <varname>workspace object</varname>.

ORA-34866: (PMTUPDAT05) You cannot apply permissions to dimension composite <varname>workspace object</varname>. Instead, you can apply permissions to its base dimensions.

ORA-34868: (PMTUPDAT06) You cannot apply permissions to dimension alias <varname>workspace object</varname>. Instead, you can apply permissions to the aliased dimension.

ORA-34870: (PERMIT01) You do not have permission to read this value of <varname>workspace object</varname>.

ORA-34871: (PERMIT06) Session-only value '<varname>value</varname>' of <varname>workspace object</varname> has been deleted because a PERMIT change has revealed a duplicate value.

Cause: Execution of a PERMIT command revealed a permanent dimension or surrogate value having the same name as the SESSION value.

Action: If the SESSION value is still needed, add it with a different name.

ORA-34872: (PERMIT02) You do not have permission to write this value of <varname>workspace object</varname>.

ORA-34873: (PERMIT07) You cannot write this value of <varname>workspace object</varname> since it is readonly.

ORA-34874: (PERMIT03) You do not have permission to run <varname>workspace object</varname>.

ORA-34876: (PERMIT04) You do not have permission to read AGGMAP <varname>workspace object</varname>.

ORA-34877: (PERMIT05) You cannot apply permissions to concat dimension <varname>workspace object</varname>. Instead, you may apply permissions to its leaf dimension(s).

ORA-34880: (PPDTORDR00) DATEORDER must be YMD, YDM, MYD, MDY, DYM, or DMY.

ORA-34882: (PPENG00) The level name for <varname>string</varname> cannot be NA.

ORA-34884: (PPENG01) <varname>number</varname> does not match a PUSHLEVEL command.

ORA-34886: (PPENG02) The option <varname>workspace object</varname> is read-only. Since its value cannot be popped, it cannot be pushed.

ORA-34888: (PPENG03) The status list for <varname>workspace object</varname> is protected by the TEMPSTAT command.

ORA-34892: (PPESCCH01) The ESCAPECHAR option requires a single character.

ORA-34894: (PPESCCH02) The '<varname>string</varname>' character is an invalid choice for the ESCAPECHAR option.

ORA-34896: (PPMONTHS00) At least 12 month names must be given. Only <varname>number</varname> were provided.

Cause: There must be at least one name for each month. Not enough names were provided.

Action: Provide at least 12 names.

ORA-34897: (PPMONTHS01) Blank lines are not allowed in the MONTHNAMES option.

Cause: There is at least one blank line in the string populating the MONTHNAMES option. We do not allow blank month names.

Action: Remove the blank line(s) from the string.

ORA-34900: (PPWKDAYS00) At least 7 day names must be given. Only <varname>number</varname> were provided.

Cause: There must be at least one name for each day. Not enough names were provided.

Action: Make sure there are at least 7 names in the string.

ORA-34901: (PPWKDAYS01) Blank lines are not allowed in the DAYNAMES option.

Cause: There is at least one blank line in the string populating the DAYNAMES option. We do not allow blank day names.

Action: Remove the blank line(s) from the string.

ORA-34902: (PPWKDNY01) The value of WEEKDAYSNEWYEAR must be a number between 1 and 7.

ORA-34904: (VCFMT001) must be multi-line

ORA-34908: (VCFMT003) missing arg

ORA-34910: (VCFMT004) duplicate

ORA-34912: (VCFMT005) error during %%p permutation

ORA-34988: (PRMPINIT216) negate

ORA-34990: (PRNIMPRT01) CAUTION: <varname>number</varname> line(s) in a TEXT PRN file were too long. Each line was truncated to <varname>number</varname> bytes.

ORA-34992: (PRNIMPRT02) CAUTION: <varname>number</varname> field(s) in a STRUCTURED PRN or CSV file were too long. Each field was truncated to <varname>number</varname> bytes.

ORA-34994: (PRNIMPRT03) Unexpected EOF encountered in string while importing data.

ORA-34996: (PRNIMPRT04) Unexpected character '<varname>character</varname>' at end of string.

ORA-35000: (PRNRULER01) The RULER specification does not have any valid field descriptions.

ORA-35002: (PRNRULER02) Zero is not a valid repeat count.

ORA-35004: (PRNRULER03) The repeat count <varname>number</varname> was not followed by a field type.

ORA-35006: (PRNRULER04) The character '<varname>character</varname>' is not a valid field type. The valid types are A, S and T.

ORA-35008: (PRNRULER05) A field description (type <varname>character</varname>) did not include a field width.

ORA-35010: (PRNRULER06) The width (<varname>number</varname>) for an A or T field was too large. The limit is <varname>number</varname>.

ORA-35012: (PRNRULER07) Zero is not a valid width for an S field.

ORA-35014: (PRNRULER08) A repeat count or field width (<varname>string</varname>) was too large. The limit is <varname>number</varname>.

ORA-35016: (QFCHECK00) The analytic workspace and EIF file definitions of <varname>workspace object</varname> have a mismatched type.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35017: (QFCHECK06) The Analytic Workspace and EIF file definitions of <varname>workspace object</varname> have different partitioning methods.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35018: (QFCHECK01) The analytic workspace and EIF file definitions of <varname>workspace object</varname> have a mismatched data type.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35019: (QFCHECK07) The Analytic Workspace and EIF file definitions of <varname>workspace object</varname> have different partition dimensions.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35020: (QFCHECK02) The analytic workspace and EIF file definitions of <varname>workspace object</varname> have mismatched dimensioning.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35021: (QFCHECK08) The EIF file definition of <varname>workspace object</varname> has some partitions that are not present in the existing Analytic Workspace object.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35022: (QFCHECK03) The analytic workspace and EIF file definitions of <varname>workspace object</varname> have a mismatched relation.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35023: (QFCHECK09) The analytic workspace and EIF file definitions of <varname>workspace object</varname> have incompatible partition definitions.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35024: (QFCHECK04) The analytic workspace and EIF file definitions of <varname>workspace object</varname> have mismatched time dimension attributes.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35026: (QFCHECK05) The analytic workspace and EIF file definitions of <varname>workspace object</varname> have a mismatched ALIASOF dimension.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35028: (QFASCI00) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35029: (QFPART00) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35030: (QFDATA00) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35031: (QFSVNS00) The IMPORT command has terminated because of a defect in the EIF file.

Cause: The EIF file contains a compressed composite with defective aggregation data.

Action: Recreate the EIF file using the NOAGGR keyword.

ORA-35032: (QFDATA01) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35034: (QFDATA02) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35036: (QFGETBUF00) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35038: (QFGETHDR00) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35040: (QFOBJECT90) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35042: (QFOBJECT92) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35044: (QFOBJECT93) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35046: (QFOBJECT94) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35048: (QFOBJECT97) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35050: (QFPUTILP97) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35052: (QFPUTILP98) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35054: (QFPUTILP99) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35056: (QFSTRING00) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35058: (QFVC00) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35060: (QFVC01) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35062: (QFGET01) Duplicate files found for extension number <varname>number</varname> of EIF file <varname>string</varname>.

Cause: IMPORT searched the directories specified in EIFEXTENSIONPATH and found two EIF extension files with the same name (differing at most by the case used in the final name component).

Action: Delete, rename or move any files that are not to be read by IMPORT.

ORA-35064: (QFGET02) " <varname>number</varname> bytes read in <varname>number</varname> seconds."

ORA-35066: (QFGET03) Extension number <varname>number</varname> is missing for EIF file <varname>string</varname>.

Cause: IMPORT searched the directories specified in EIFEXTENSIONPATH and could not find the appropriately numbered extension file.

Action: Move the missing file into one of the searched directories.

ORA-35070: (QFHEAD00) File <varname>string</varname> is not in EIF format, so you cannot import it with the EIF specification.

ORA-35071: (QFHEAD06) EIF file <varname>string</varname> cannot be imported because analytic workspace <varname>string</varname> has not been upgraded to version <varname>string</varname>.

Cause: User attempted to import from an EIF file that was created by a newer version of the product into an AW that was created by a older version of the product.

Action: Make sure that the compatibility mode parameter in the init.ora of the importing instance specifies a version that is at least as high as the parameter was in the exporting instance. Then, convert the AW to the latest storage format and reexecute the import command. Alternatively, change the EIFVERSION option of the exporting instance to a lower number, recreate the EIF file, and import the new file.

ORA-35072: (QFHEAD01) EIF file <varname>string</varname> cannot be imported.

ORA-35074: (QFHEAD02) EIF file <varname>string</varname> cannot be read by this version of <varname>string</varname>.

Cause: The EIF file was created with an internal version number indicating it may contain objects that are not compatible with the current Oracle OLAP version, or the EIF file is in an obsolete format.

Action: If possible, set EIFVERSION in the exporting instance to a lower number, recreate the EIF file, and import the new file.

ORA-35076: (QFHEAD04) CAUTION: The textual data in EIF file <varname>string</varname> is encoded in a character set that is not recognized by this version of <varname>string</varname>.

Cause: IMPORT could not recognize the character set specification in the EIF file.

Action: Check the imported text data. If it was not imported correctly, recreate the EIF file with a character set supported by the current Oracle version.

ORA-35078: (QFHEAD05) An EIF extension file header for <varname>string</varname> is not in the correct format.

Cause: An EIF extension file in multi-file IMPORT did not contain correct header information.

Action: Check to be sure that EIFEXTENSIONPATH is set correctly and that all the extension files for the current IMPORT were created by the same EXPORT command as the main EIF file.

ORA-35080: (QFOBJECT01) You cannot rename dimensions when you import them. The <varname>string</varname> dimension cannot be imported as <varname>string</varname>.

ORA-35082: (QFOBJECT02) You cannot import changes to the <varname>workspace object</varname> program now, because it is currently executing.

ORA-35084: (QFOBJECT06) CAUTION: <varname>string</varname> is being imported. However, this is a reserved word, so you must rename the new object before you can use it.

ORA-35086: (QFOBJECT07) " <varname>number</varname> dimension values "

ORA-35087: (QFOBJECT09) <varname>number</varname>\nInvalid

ORA-35088: (QFOBJECT08) " <varname>number</varname> dimension value combinations "

ORA-35090: (QFPARSE00) The object <varname>string</varname> cannot be imported because it does not exist in the EIF file.

ORA-35092: (QFPARSE01) You cannot import the object <varname>string</varname> into both <varname>string</varname> and <varname>string</varname> at the same time. To import an object into two different analytic workspaces, use two separate IMPORT commands with different INTO arguments.

ORA-35094: (QFPARSE02) The object <varname>string</varname> cannot be imported into analytic workspace <varname>string</varname> because an object named <varname>string</varname> already exists in analytic workspace <varname>string</varname>. To force a new <varname>string</varname> to be created, use an INTO argument on the IMPORT command.

ORA-35095: (QFSVNS01) One or more imported values of fixed-width dimension <varname>workspace object</varname> have been truncated.

Cause: The data in the EIF file was exported from a dimension with wider values than the target dimension will accommodate.

Action: Change the definition of the target dimension, or check to be sure that multiple values from the target dimension have not become identical during the import process. This could cause data loss as data from later dimension values overstores data imported earlier.

ORA-35096: (QUAFEOF) An unexpected end-of-file occurred in the EIF file. Check to make sure you have all the imported data that you expected.

ORA-35098: (RDPOW01) You cannot raise zero to a negative power.

ORA-35100: (RDPOW02) You cannot raise a negative number to a non-integer power.

ORA-35102: (READONLY00) The option `<varname>workspace object</varname>` is read-only. Its previous value was retained.

ORA-35104: (REALDTOK01) "`<varname>string</varname>`" is not a number.

ORA-35106: (REGRESS00) The regression was not calculated because of a linear relationship between your independent variables.

Cause: The values of the specified independent variables are not independent. For example, one may be a multiple of the other.

Action: Chose independent variables whose values are truly independent of one another.

ORA-35108: (REGRESS01) The number of non-NA observations with weights greater than zero (`<varname>number</varname>`) is too small to calculate a regression.

ORA-35110: (REGRESS02) The number of independent variables cannot exceed `<varname>number</varname>`.

ORA-35112: (REGRESS03) Regression Analysis

ORA-35114: (REGRESS04) Dependent Variable:

ORA-35116: (REGRESS05) WEIGHTBY Variable:

ORA-35118: (REGRESS06) Regressor

ORA-35120: (REGRESS07) Coefficient

ORA-35122: (REGRESS08) Std. Error

ORA-35124: (REGRESS09) T-ratio

ORA-35126: (REGRESS10) Corrected R-square

ORA-35128: (REGRESS11) F-Statistic (%1 %2)

ORA-35130: (REGRESS12) Number of observations

ORA-35132: (REGRESS13) Standard error of estimate

ORA-35134: (RGACCUM01) A weighted regression cannot be calculated if any of the weights specified is less than zero.

ORA-35136: (RGINFO00) There is no saved regression information for the INFO function to retrieve.

ORA-35138: (RPACROSS01) You must specify dimension values if you use `<varname>string</varname>` in an ACROSS phrase.

ORA-35140: (RPACROSS02) ACROSS must be followed by the name of a dimension or an expression with one dimension.

ORA-35142: (RPCOLUMN01) Multiple ACROSS phrases specifying the same dimension (`<varname>workspace object</varname>`) cannot be given for the same column.

ORA-35144: (RPFORMAT01) The value of the <varname>string</varname> attribute in column <varname>number</varname> is NA.

ORA-35146: (RPFORMAT02) The value of the <varname>string</varname> attribute in column <varname>number</varname> is negative.

ORA-35148: (RPFORMAT03) The value of the <varname>string</varname> attribute in column <varname>number</varname> is zero.

ORA-35150: (RPFORMAT04) The INDENT value for column <varname>number</varname> equals or exceeds the WIDTH.

ORA-35152: (RPFORMAT05) Column <varname>number</varname> extends past the maximum length (<varname>number</varname>) of a report line.

ORA-35154: (RSEXECUT01) The <varname>string</varname> function can only be used in a ROW or REPORT command.

ORA-35156: (RSEXECUT02) An argument to <varname>string</varname> was NA.

ORA-35158: (RSEXECUT03) Column index <varname>number</varname> in <varname>string</varname> is before the first or after the last report column.

ORA-35160: (RSEXECUT04) Totaling level index <varname>number</varname> in <varname>string</varname> is not between 1 and 256.

ORA-35162: (RSEXECUT05) The column number (<varname>number</varname>) in <varname>string</varname> must be greater than zero.

ORA-35164: (RSEXECUT06) An argument (<varname>number</varname>) to <varname>string</varname> must be zero or greater.

ORA-35166: (SIGENG01) <varname>string</varname>

ORA-35168: (SIGENG02) (<varname>number</varname>) Contact the administrator of your <varname>string</varname> application.

ORA-35170: (SIGENG03) The "errorname" argument to the SIGNAL command is NA.

ORA-35171: you may not signal error number <varname>string</varname> with the SIGNAL command

Cause: The user attempted to explicitly signal an invalid error number with the OLAP DML SIGNAL command

Action: Signal another error number

ORA-35172: (SNCHILD01) There is duplicate information beginning at <varname>string</varname>, or this information conflicts with a keyword.

ORA-35174: (SNSYN100) The word <varname>string</varname> must be followed by a name.

ORA-35176: (SNSYN101) The format of the AGGMAPINFO function is:\n\n AGGMAPINFO(aggmap-name { RELATIONS | NUMRELS | AGGINDEX | STORE | SHARE | FCACHE | MAPTYPE | { RELATION | PRECOMPUTE | STATUS } expression})

ORA-35178: (SNSYN102) The format of the INFILE command is:\n\n INFILE {EOF | filename} [NOW] [NLS_CHARSET name] [TABEXPAND expression]

ORA-35180: (SNSYN103) The format of the OUTFILE command is:\n \n OUTFILE [APPEND] {EOF | TRACEFILE | filename [NOCACHE] [NLS_CHARSET name]}

Cause: The user specified incorrect syntax for the OUTFILE command.

Action: n/a

ORA-35182: (SNSYN104) The format of the WKSDATA function is:\n \n WKSDATA(worksheetname)

ORA-35184: (SNSYN105) The dimension name (<varname>string</varname>) must be followed by one of these keywords: TO, KEEP, ADD, REMOVE, COMPLEMENT, SORT, or INSERT.

ORA-35186: (SNSYN106) The word <varname>string</varname> must be followed by an argument such as a dimension value.

ORA-35188: (SNSYN107) The word <varname>string</varname> must be followed by an expression.

ORA-35190: (SNSYN108) The TOP or BOTTOM value (<varname>string</varname>) must be followed by the keyword BASEDON or PERCENTOF and an expression.

ORA-35192: (SNSYN109) The dimension name must be followed by a sort order (A or D) and a sort criterion expression.

ORA-35194: (SNSYN110) The format of the INFO function is:\n \n INFO({FORECAST|PARSE|REGRESS|MODEL} choice [index1 [index2 ...]])

ORA-35196: (SNSYN111) The format of the CHARLIST function is:\n \n CHARLIST(expression [dimension1 [dimension2 ...]])

ORA-35198: (SNSYN112) The dimension name (<varname>string</varname>) must be followed by one of these keywords: ADD, DELETE, MERGE, MOVE, or RENAME.

ORA-35200: (SNSYN113) An angle bracket (>) is missing after <varname>string</varname>.

ORA-35202: (SNSYN114) A right parenthesis or an operator is expected after <varname>string</varname>.

ORA-35204: (SNSYN115) A label is missing after <varname>string</varname>.

ORA-35206: (SNSYN116) The word UNION must be followed by a parenthesized list of LIST clauses.

ORA-35208: (SNSYN117) An expression, SKIP, <, or ACROSS must follow '<varname>string</varname>', or this expression conflicts with a keyword.

ORA-35210: (SNSYN118) A colon (:) is required after an ACROSS phrase.

ORA-35212: (SNSYN119) The format of the UNRAVEL function is:\n \n UNRAVEL(expression [dimension1 [dimension2 ...]])

ORA-35214: (SNSYN120) The format of the COMPILE command is:\n \n COMPILE name [THREADS #]

ORA-35216: (SNSYN121) The fileunit (<varname>string</varname>) must be followed by an attribute (such as DATE) and a new value for the attribute.

ORA-35218: (SNSYN122) The format of LEAD and the LAG functions is:\n \n function(time-series nperiods time-dimension [STATUS|NOSTATUS])

ORA-35220: (SNSYN123) The format of the EXISTS function is:\n \n EXISTS(text-expression)

ORA-35222: (SNSYN135) The format of the EXTCHARS function is:\n \n EXTCHARS(text-expression [start [length]])

ORA-35224: (SNSYN136) The format of the EXTLINES function is:\n \n EXTLINES(text-expression [start [length]])

ORA-35226: (SNSYN137) The format of the FINDCHARS function is:\n \n FINDCHARS(search-text find-text [start [LINENUM]])

ORA-35228: (SNSYN138) The format of the FINDLINES function is:\n \n FINDLINES(search-text find-text)

ORA-35230: (SNSYN139) The format of the JOINCHARS function is:\n \n JOINCHARS(text-expression1 text-expression2 ...)

ORA-35232: (SNSYN140) The format of the JOINLINES function is:\n \n JOINLINES(text-expression1 text-expression2 ...)

ORA-35234: (SNSYN141) The format of the NUMCHARS function is:\n \n NUMCHARS(text-expression)

ORA-35236: (SNSYN142) The format of the NUMLINES function is:\n \n NUMLINES(text-expression)

ORA-35238: (SNSYN143) The format of the UPCASE function is:\n \n UPCASE(text-expression)

ORA-35240: (SNSYN144) The format of the TEXTFILL function is:\n \n TEXTFILL(text-expression width)

ORA-35242: (SNSYN145) The format of the INSCHARS function is:\n \n INSCHARS(text-expression characters [after-position])

ORA-35244: (SNSYN146) The format of the INSLINES function is:\n \n INSLINES(text-expression newtext [after-expression])

ORA-35246: (SNSYN147) The format of the REMCHARS function is:\n \n REMCHARS(text-expression start [length])

ORA-35248: (SNSYN148) The format of the REMLINES function is:\n \n REMLINES(text-expression start [length])

ORA-35250: (SNSYN149) The format of the REPLCHARS function is:\n \n REPLCHARS(text-expression characters [start-position])

ORA-35252: (SNSYN150) The format of the REPLLINES function is:\n \n REPLLINES(text-expression newtext [start-line])

ORA-35254: (SNSYN151) The format of the SORTLINES function is:\n \n SORTLINES(text-expression [A|D] [nls_sort [sort-exp]])

ORA-35256: (SNSYN152) The format of the INLIST function is:\n \n INLIST(text-master text-sublist)

ORA-35258: (SNSYN153) The format of the BLANKSTRIP function is:\n \n BLANKSTRIP(text-expression [LEADING|TRAILING|BOTH])

ORA-35260: (SNSYN154) The format of the ARG function is:\n \n ARG(n)\nwhere "n" specifies the number of the argument to be returned.

ORA-35262: (SNSYN155) The format of the QUAL function is:\n \n QUAL(expression dimension1 dimvalue [dimension2 dimvalue ...])

ORA-35264: (SNSYN156) The format of the ARGFR function is:\n \n ARGFR(start-arg-no)

ORA-35266: (SNSYN157) The format of the CONVERT function is:\n \n CONVERT(expression datatype [options])

ORA-35268: (SNSYN158) The format of the OBJ function is:\n \n OBJ(choice ['name']) or OBJ(choice [text-expression])

ORA-35270: (SNSYN159) The format for this type of aggregation function is:\n \n function(expression [[STATUS] dimensions])

ORA-35272: (SNSYN161) The ROWTOTALS attribute must immediately precede an ACROSS keyword.

ORA-35274: (SNSYN162) The first argument to GET must be a data type or the name of a dimension optionally preceded by the word NEW or VALID.

ORA-35276: (SNSYN163) The format of the ALLOCATE command is:\n \n ALLOCATE varname [SOURCE svarname] [BASIS bvarname [ACROSS dimname]] [TARGET tvarname [TARGETLOG logvarname]] [USING aggmap]
Cause: The user used incorrect syntax for the ALLOCATE command.

Action: Correct the calling syntax.

ORA-35278: (SNSYN164) A right parenthesis `])` is missing after "`<varname>string</varname>`".

ORA-35280: (SNSYN165) The format of the AGGREGATE command is:\n \n AGGREGATE varname1 [varname2 varname3 ...] [USING aggmap-name] [COUNTVAR intvar-name1 [intvar-name2 intvar-name3 ...]] [FUNCDATA] [FORCEORDER] [PARALLEL #] [{FROM|FROMVAR} fromname [, fromname2 ...]]
Cause: The user used incorrect syntax for the AGGREGATE command.

Action: Correct the calling syntax.

ORA-35282: (SNSYN166) The format of the AGGREGATE function is:\n \n AGGREGATE(varname [USING aggmap-name] [COUNTVAR intvar-name] [FORCECALC] [FORCEORDER] [{FROM|FROMVAR} fromname [, fromname2 ...]])

Cause: The user used incorrect syntax for the AGGREGATE function.

Action: Correct the calling syntax.

ORA-35284: (SNSYN167) The format of the IRR function is:\n \n IRR(cashflows time-dimension)

ORA-35286: (SNSYN168) The format of the NPV function is:\n \n NPV(cashflows discount-rate time-dimension)

ORA-35288: (SNSYN169) The format of a moving function is:\n \n function(expression, start, stop, stepsize, dimension)

ORA-35290: (SNSYN170) The format of the CUMSUM function is:\n \n CUMSUM(expression [STATUS] dimension [resetdimension])

ORA-35292: (SNSYN171) The format of the ISVALUE function is:\n \n ISVALUE(dimension expression)

ORA-35294: (SNSYN173) The format of the STATLEN function is:\n \n STATLEN(dimension)

ORA-35296: (SNSYN174) The format of the STATLIST function is:\n \n STATLIST(dimension [INTEGER] [width])

ORA-35298: (SNSYN175) The format of the STATFIRST function is:\n \n STATFIRST(dimension)

ORA-35300: (SNSYN176) The format of the STATLAST function is:\n \n STATLAST(dimension)

ORA-35302: (SNSYN177) The format of the STATMIN function is:\n \n STATMIN(dimension)

ORA-35304: (SNSYN178) The format of the STATMAX function is:\n \n STATMAX(dimension)

ORA-35306: (SNSYN179) The format of the STATVAL function is:\n \n STATVAL(dimension nth-value-to-find [INTEGER])

ORA-35308: (SNSYN180) The format of the STATRANK function is:\n \n STATRANK(dimension [dimension-value])

ORA-35310: (SNSYN181) The format of the INSTAT function is:\n \n INSTAT(dimension dimension-value)

ORA-35312: (SNSYN182) The format of the COLVAL function is:\n \n COLVAL(column-number)

ORA-35314: (SNSYN183) The format of the RUNTOTAL function is:\n \n RUNTOTAL(subtotal-number)

ORA-35316: (SNSYN184) The format of the SUBTOTAL function is:\n \n SUBTOTAL(subtotal-number)

ORA-35318: (SNSYN185) The format of the INTPART function is:\n \n INTPART(expression)

ORA-35320: (SNSYN186) The format of the SQRT function is:\n \n SQRT(expression)

ORA-35322: (SNSYN187) The format of the LOG function is:\n \n LOG(expression)

ORA-35324: (SNSYN188) The format of the LOG10 function is:\n \n LOG10(expression)

ORA-35326: (SNSYN189) The format of the ABS function is:\n \n ABS(expression)

ORA-35328: (SNSYN190) The format of the REM function is:
REM(expression1 expression2)

ORA-35330: (SNSYN191) The format of the MIN function is:
MIN(expression1 expression2)

ORA-35332: (SNSYN192) The format of the MAX function is:
MAX(expression1 expression2)

ORA-35334: (SNSYN194) The format of the VALUE function is:
VALUE()

ORA-35336: (SNSYN195) The format of the FILEOPEN function is:
**FILEOPEN(filename-expression {READ | WRITE | APPEND} [BINARY]
[NLS_CHARSET name])**

ORA-35338: (SNSYN196) The format of the FILEGET function is:
FILEGET(fileunit [LENGTH n])

ORA-35340: (SNSYN197) The format of the FILEQUERY function is:
FILEQUERY({fileunit-number | filename-expression} attribute)

ORA-35342: (SNSYN198) The format of the SYSVAR function is:
SYSVAR(system-variable-name)

ORA-35344: (SNSYN199) The format of the VALUES function is:
VALUES(dimension [STATUS|NOSTATUS] [INTEGER])

ORA-35346: (SNSYN201) The format of the LOWCASE function is:
LOWCASE(text-expression)

ORA-35348: (SNSYN202) Invalid format for the FORECAST command.

ORA-35349: (SNSYN203) The format of the BASEVAL function is:
BASEVAL(concat-dimension)

ORA-35350: (SNSYN206) The format of the KEY function is:
KEY(conjoint-dimension, base-dimension)

ORA-35351: (SNSYN204) The format of the BASEDIM function is:
BASEDIM(concat-dimension [LEAF])

ORA-35352: (SNSYN207) The format of the COMSET command is:
**COMSET
TYPE SOCKET**

ORA-35353: (SNSYN205) The format of the MDQUERY function is:
MDQUERY(object-type, schema-name, object-name [, refresh|norefresh])

ORA-35354: (SNSYN208) The format of the COMSET function is:
COMSET(TYPE)

ORA-35355: (SNSYN209) Invalid format for the AW command.

ORA-35356: (SNSYN210) The format of the NUMTODSINTERVAL function is:
NUMTODSINTERVAL(number, day|hour|minute|second)

ORA-35357: (SNSYN211) The format of the NUMTOYMINTERVAL function is:
NUMTOYMINTERVAL(number, year|month)

ORA-35358: (SNSYN214) The format of the NAFILL function is:
NAFILL(source-exp, fill-exp)

ORA-35360: (SNSYN215) The format of the FILENEXT function is:\n \n FILENEXT(fileunit)

ORA-35362: (SNSYN216) The format of the RECNO function is:\n \n RECNO(fileunit)

ORA-35364: (SNSYN217) The format of the ROUND function is:\n \n ROUND(expression1 [, expression2])

ORA-35366: (SNSYN218) The format for exporting an expression is "expression AS name" or "SCATTER AS namevar [TYPE typevar]".

ORA-35368: (SNSYN219) The format of the ROW function is:\n \n ROW(list-of-column-descriptions)

ORA-35370: (SNSYN220) The format of the AW function is:\n \n AW(subfunction [, analytic workspace-name-expression])

ORA-35372: (SNSYN221) The format of the OBJLIST function is:\n \n OBJLIST[(analytic workspace-list-expression)]

ORA-35374: (SNSYN222) The format of the UNIQUELINES function is:\n \n UNIQUELINES(text-expression [nls_sort [sort-exp]])

ORA-35376: (SNSYN223) The format of the JOINCOLS function is:\n \n JOINCOLS(text-expression1 [, text-expression2 ...])

ORA-35378: (SNSYN224) The format of the EXTCOLS function is:\n \n EXTCOLS(text-expression [start [length]])

ORA-35380: (SNSYN225) The format of the REMCOLS function is:\n \n REMCOLS(text-expression, start [, length])

ORA-35382: (SNSYN226) The format of the REPLCOLS function is:\n \n REPLCOLS(text-expression, overlay-expression [, start-position])

ORA-35384: (SNSYN227) The format of the INSCOLS function is:\n \n INSCOLS(text-expression, insert-expression [, after-position])

ORA-35386: (SNSYN228) The format of MCALC is:\n \n MCALC(expression [ALWAYS] [SCREENBY expr] \n [method [OF] member-expr [WEIGHTBY expr]] ...)

ORA-35388: (SNSYN229) The format of the DDOF function is:\n \n DDOF(expression)

ORA-35390: (SNSYN230) The format of the MMOF function is:\n \n MMOF(expression)

ORA-35392: (SNSYN231) The format of the YYOF function is:\n \n YYOF(expression)

ORA-35394: (SNSYN232) The format of the DAYOF function is:\n \n DAYOF(expression)

ORA-35396: (SNSYN233) The format of the SIN function is:\n \n SIN(expression)

ORA-35398: (SNSYN234) The format of the COS function is:\n \n COS(expression)

ORA-35400: (SNSYN235) The format of the MAKEDATE function is:\n \n
MAKEDATE(year month day)

ORA-35402: (SNSYN236) The format of the ANTILOG function is:\n \n
ANTILOG(expression)

ORA-35404: (SNSYN237) The format of the ANTILOG10 function is:\n \n
ANTILOG10(expression)

ORA-35406: (SNSYN238) The format of the ROLLUP command is:\n \n ROLLUP
variable [OVER dimension] [USING relationship]

ORA-35408: (SNSYN239) The format of the STARTOF function is:\n \n
STARTOF(expression)

ORA-35410: (SNSYN240) The format of the ENDOF function is:\n \n
ENDOF(expression)

ORA-35412: (SNSYN241) The format of the BEGINDATE function is : \n \n
BEGINDATE(time-dimension-value)

ORA-35414: (SNSYN242) The format of the ENDDATE function is : \n \n
ENDDATE(time-dimension-value)

ORA-35416: (SNSYN243) The format of the TCONVERT function is:\n \n
TCONVERT(expression time-dimension method [method])

ORA-35520: (SNSYN335) The format of the SMOOTH function is:\n \n SMOOTH(expression, method, parameters [BASEDON dimension1 [dimension2 ...]])

ORA-35522: (SNSYN336) The format of the NLSITEMS function is:\n \n NLSITEMS({LANGUAGE | TERRITORY})

ORA-35524: (SNSYN337) The format of the NLSAVAIL function is:\n \n NLSAVAIL({LANGUAGE | TERRITORY} itemname)

ORA-35526: (SORTENG10A) The expression for TOP or BOTTOM has a value of NA.

ORA-35528: (SORTENG10B) In the TOP or BOTTOM phrase, you requested a negative number of dimension values (<varname>number</varname>).

ORA-35529: (SORTENG10D) You cannot sort more than $2^{31} - 1$ values.

ORA-35530: (SORTENG10C) You cannot specify a percentage greater than 100 or less than 0. You requested <varname>number</varname>.

ORA-35532: (SPSFILE1) The file you specified is not in <varname>string</varname> format.

ORA-35534: (SPSFILE2) <varname>string</varname> files require worksheets with only two dimensions.

ORA-35536: (SPSFILE3) PRN files require worksheets with only two dimensions.

ORA-35538: (SPSIDIF01) A record (<varname>string</varname>) that was not in DIF format was read while importing file <varname>string</varname>.

ORA-35540: (SPSIWKS1) An unexpected end-of-file occurred in spreadsheet file <varname>string</varname>. Check your data to make sure you imported all you expected.

ORA-35542: (SPSRREC01) An unexpected end-of-file occurred while importing file <varname>string</varname>. Check your data to make sure you imported all you expected.

ORA-35544: (SQA03) The SQL data in column <varname>number</varname> of your fetch statement cannot be converted to type <varname>string</varname>.

ORA-35548: (SQCGEXE01) SQL statement-name '<varname>string</varname>' has not been prepared in the current program.

ORA-35550: (SQCGOPN01) SQL cursor '<varname>string</varname>' has not been declared in the current program.

ORA-35554: (SQCSRNAM00) SQL cursor name '<varname>number</varname>' has an invalid length of <varname>number</varname>. A cursor name must have a length of 1 to 18 bytes, inclusive.

ORA-35556: (SQCSRNAM01) SQL cursor name '<varname>number</varname>' has an invalid first character. Use a-z, @, # or \$.

ORA-35558: (SQCSRNAM02) SQL cursor name '<varname>number</varname>' contains an invalid character. Use a-z, 0-9, @, #, \$ and _.

ORA-35559: (SQCSRNAM03) SQL cursor name cannot be INTO.

ORA-35560: (SQGETCD01) Conjoint dimension <varname>workspace object</varname> cannot be an input host variable. You can use the current values of its bases via the KEY function.

ORA-35561: (XSRWLD01) Object <varname>workspace object</varname> is not a valid target.

Cause: An invalid object was specified as a target.

Action: Choose a valid object as a target.

ORA-35562: (SQLIMP01) The SQL IMPORT command will produce <varname>number</varname> columns of output, but you have provided <varname>number</varname> host variables in your INTO clause.

Cause: The expression in the source query do not match the targets in the INTO clause.

Action: Make sure the the expressions in the source query match the targets in the INTO clause.

ORA-35563: (XSRWLD17) Multiple values exist for an attribute of this dimension member.

Cause: Multiple source table rows containing different values for a dimension attribute were found. Only the first of the multiple rows has been loaded.

Action: Fix the mapping or remove the rows with conflicting attribute values.

ORA-35564: (XSRWLD02) Cannot convert from the <varname>string</varname> type to the <varname>string</varname> type.

Cause: Conversion from source to target is not allowed

Action: Choose a different target datatype

ORA-35565: (XSRWLD03) For object <varname>workspace object</varname> only APPEND, MATCH or ASSIGN may be used.

Cause: An incorrect setting was applied to the target

Action: For DIMENSIONS use APPEND or MATCH, for SURROGATES use ASSIGN.

ORA-35566: (XSRWLD04) Object <varname>workspace object</varname> cannot be used with QDRs

Cause: A QDR was placed on a target dimension

Action: Remove the QDR on the target dimension

ORA-35568: (SQLIMP03) The datatype of variable <varname>number</varname> should be INTEGER, LONGINTEGER or SHORTINTEGER.

Cause: The target variable was not INTEGER, LONGINTEGER or SHORTINTEGER.

Action: The target variable must be INTEGER, LONGINTEGER or SHORTINTEGER.

ORA-35569: (XSRWLD05) An error was encountered in converting data <varname>string</varname> to <varname>string</varname> in column <varname>number</varname>.

Cause: The data could not be converted to the target datatype.

Action: Ensure the source data is valid for the target datatype.

ORA-35570: (XSRWLD06) A column value is not a valid member of its target dimension.

Cause: The source value for a dimension is not an existing member of the dimension.

Action: Ensure the column value is an existing member of its target dimension.

ORA-35571: (XSRWLD07) The maximum number of load errors has occurred. No changes from this step were committed to the database.

Cause: The number of load errors exceeded the specified maximum.

Action: Fix the load errors, or increase the maximum number allowed and rerun the load.

ORA-35572: (XSRWLD08) A column value is not a valid member of its related dimension.

Cause: The source data for a relation is not a member of the related dimension.

Action: Ensure the source data is a valid member of the related dimension.

ORA-35573: (XSRWLD09) An incoming dimension value is null.

Cause: A source value for a dimension is null.

Action: Ensure the source data for the dimension is not null.

ORA-35574: (SQLOUT02) SQL cursor '<varname>number</varname>' is not known in the current logical unit of work.

ORA-35575: (SQLOUT04) The <varname>string</varname> command will produce <varname>number</varname> columns of output, but you have provided <varname>number</varname> host variables in your INTO clause.

ORA-35576: (SQLOUT09) SQL cursor '<varname>number</varname>' is not open.

ORA-35577: (SQLOUT10) SQL cursor '<varname>number</varname>' has already been declared with a different SELECT statement.

ORA-35578: (SQLOUT11) SQL cursor '<varname>number</varname>' cannot be used with CURRENT OF <varname>cursor name</varname> syntax

Cause: The CURRENT OF <varname>cursor</varname> syntax in the WHERE clause tried to use a cursor that was not declared with the FOR UPDATE [of <varname>column name</varname>] SQL syntax.

Action: Add the FOR UPDATE [OF <varname>column name</varname>] SQL syntax to the cursor specified.

ORA-35579: (SQLOUT12) SQL cursor '<varname>number</varname>' has already been opened.

ORA-35580: (XSRWLD10) An incoming column contains a data type mismatch.

Cause: The data could not be converted to the target datatype.

Action: Ensure the source data is valid for the target datatype.

ORA-35581: (XSRWLD11) You do not have permission to write this value of the target.

Cause: You do not have sufficient permissions to write to the specified target.

Action: Ask the owner of the schema or OLAP DBA to grant you sufficient permissions.

ORA-35582: (XSRWLD12) Cannot change the level of dimension member "<varname>number</varname>" from "<varname>number</varname>" to "<varname>number</varname>" within a single load.

Cause: A dimension member is mapped to more than one level.

Action: Change the mapping so that each dimension member is mapped to only one level.

ORA-35583: (XSRWLD13) Cannot change the level of a dimension member within a single load.

Cause: A dimension member is mapped to more than one level.

Action: Change the mapping so that each dimension member is mapped to only one level.

ORA-35584: (SQLOUT17) The <varname>string</varname> procedure requires <varname>number</varname> parameters.

ORA-35585: (XSRWLD14) This SQL query generated rejected records.

Cause: Rejected records were generated by this query.

Action: Locate the records that were rejected and resolve the rejection (for example, data, mapping, and so on).

ORA-35586: (SQLOUT19) The parameter list passed to the procedure is syntactically incorrect.

ORA-35587: (SQLOUT20) The nesting of table functions and SQL commands has exceeded the maximum of <varname>number</varname> levels.

Cause: The nesting of table functions with the PREDMLCMD token populated with an OLAP DML expression that use the embedded SQL support to access another table function which contains a table functions with the PREDMLCMD token filled in with an OLAP DML expression that uses the embedded SQL support.

Action: Reduce the level of nesting between table functions and OLAP DML embedded SQL support.

ORA-35588: (XSRWLD15) Cannot change the parent of existing dimension member "<varname>number</varname>" from "<varname>number</varname>" to "<varname>number</varname>" in LOAD RETAIN mode.

Cause: An attempt was made to change the parent of an existing dimension member in LOAD RETAIN mode.

Action: Fix the mapping or use LOAD [NO] SYNCH mode.

ORA-35589: (XSRWLD16) Cannot change the parent of an existing dimension member in LOAD RETAIN mode.

Cause: An attempt was made to change the parent of an existing dimension member in LOAD RETAIN mode.

Action: Fix the mapping or use LOAD [NO] SYNCH mode.

ORA-35590: (SQPHRASE01) The host variable expression has invalid syntax.

ORA-35592: (SQRT00) The argument to SQRT is negative. Set ROOTOFNEGATIVE to YES if you want NA to be returned for the root of a negative number.

ORA-35594: (SSCGEXP01) The LIMIT criterion expression must be dimensioned by <varname>workspace object</varname>.

ORA-35596: (SSCGEXP02) The LIMIT criterion expression must be dimensioned by <varname>workspace object</varname>, which is a component of <varname>workspace object</varname>.

ORA-35600: (SSCGLIMT01) The IFNONE label is not allowed when you specify NULL status.

ORA-35602: (SSCGLIMT02) You cannot limit dimension composite <varname>workspace object</varname>.

ORA-35603: (SSCGLIMT03) You cannot limit PARTITION TEMPLATE <varname>workspace object</varname>.

ORA-35604: (SSCGNULL01) The phrase "IFNONE label" can only be used when the LIMIT command executes in a program.

ORA-35606: (SSCGNULL02) <varname>string</varname> is not defined as a label.

ORA-35608: (SSCGPOS01) You cannot limit a dimension to values of type <varname>string</varname>. Use the CONVERT function if necessary.

ORA-35610: (SSCGREL01) <varname>workspace object</varname> and <varname>workspace object</varname> are not related.

ORA-35612: (SSCGREL02) Related dimension values are not allowed when you specify a scalar or multi-dimensional relationship array.

ORA-35614: (SSCGREL03) <varname>workspace object</varname> is not a relationship involving <varname>workspace object</varname>.

ORA-35622: (SSCGREL07) <varname>workspace object</varname> is not a relation of <varname>workspace object</varname>.

ORA-35623: (XSSCLLEV07) <varname>workspace object</varname> is not a valueset of <varname>workspace object</varname>.

ORA-35624: (SSCGREL08) <varname>workspace object</varname> is not dimensioned by <varname>workspace object</varname>.

ORA-35625: (XSSCLLEV08) <varname>workspace object</varname> is not dimensioned by <varname>workspace object</varname>.

ORA-35626: (SSCGREL09) <varname>workspace object</varname> is not related to itself.

ORA-35627: (XSSCLEV09) <varname>workspace object</varname> is not a relationship array.

ORA-35628: (SSCGREL10) <varname>workspace object</varname> is not a dimension of relation <varname>workspace object</varname>.

ORA-35629: (XSBASLIM00) <varname>workspace object</varname> does not have base dimensions.

ORA-35630: (SSCGREL11) While limiting dimension <varname>workspace object</varname>, you cannot use it to qualify relation <varname>workspace object</varname>.

ORA-35632: (SSCGREL12) While limiting an alias of <varname>workspace object</varname>, you cannot use it to qualify relation <varname>workspace object</varname>.

ORA-35633: (STATEQ01) Both arguments to STATEQUAL must be status lists of the same dimension.

ORA-35634: (SSCGVALS01) The format of a related dimension list is:\n related-dimension [valuelist] | relationship-array-name

ORA-35636: (SSCGVALS02) <varname>workspace object</varname> is a dimension composite and its position numbers cannot be used in LIMIT NOCONVERT.

ORA-35638: (SSEXECUT02) NA is not a value of <varname>workspace object</varname>.

ORA-35640: (SSEXECUT03) You cannot MAINTAIN ADD <varname>workspace object</varname> while it is being LIMITED.

ORA-35642: (SSEXECUT07A) The expression for the beginning of the dimension range has a value of NA.

ORA-35644: (SSEXECUT07B) The expression for the end of the dimension range has a value of NA.

ORA-35646: (SSEXECUT08) The expression for BEFORE or AFTER has a value of NA.

ORA-35648: (SSEXECUT09) The expression for FIRST or LAST has a value of NA.

ORA-35650: (SSEXECUT15) The expression for BEFORE or AFTER is not in current status.

ORA-35652: (SSFRLST01) In the FIRST or LAST phrase, you requested a negative number of dimension values (<varname>number</varname>).

ORA-35654: (SSNULL) The status of the <varname>workspace object</varname> dimension cannot be set to null.

ORA-35656: (STATCHK00) <varname>workspace object</varname> has no values in status.

ORA-35658: (STATLIST01) The data width argument to the STATLIST function must be greater than zero.

ORA-35660: (STATVAL03) The <varname>workspace object</varname> dimension does not have a status value numbered <varname>number</varname>.

ORA-35662: (STKTOINF01) The width argument to the CONVERT(... INFILE) function was <varname>number</varname>. The limit is <varname>number</varname>.

ORA-35664: (STKTOINF02) Conversion to INFILE would produce a value <varname>number</varname> bytes wide, exceeding the maximum input line length <varname>number</varname>.

ORA-35666: (STRBYT01) NTEXT arguments to the BYTE functions must be converted to TEXT. Use CONVERT(value TEXT NOTTRANSLATE) to avoid translation.

ORA-35668: (STRCHG01) The oldtext and newtext arguments must be single-line text values.

ORA-35670: (STRCHG02) The oldtext argument must contain at least one character.

ORA-35672: (STRCHG03) The number-to-change argument must be greater than 0.

ORA-35674: (STRDEL01) The position of the first character to remove must be at least 1.

ORA-35676: (STRDEL02) You must remove at least one character. You cannot remove `<varname>number</varname>` characters.

ORA-35678: (STREXTR01) The position of the first character to extract must be greater than zero. You cannot start extracting at position `<varname>number</varname>`.

ORA-35680: (STREXTR02) You must extract at least one character. You cannot extract `<varname>number</varname>` characters.

ORA-35682: (STRFIND01) The start argument must be at least 1.

ORA-35684: (STRINS01) Insertion must begin after a character position of zero or greater.

ORA-35686: (STRINS02) The length of one line of a text value cannot exceed `<varname>number</varname>` characters. You attempted to create a line with `<varname>number</varname>` characters.

ORA-35688: (STRREP01) The position of the first character to replace must be at least 1.

ORA-35690: (SUBGONE00) You have requested a feature or used a command that is not supported in this release.

ORA-35692: (TDENDPT00) Dimension `<varname>workspace object</varname>` is empty.

ORA-35694: (TDINCNUM00) You attempted to work with a date outside of the allowable range.

ORA-35696: (TEXTFENG01) The data width argument to the TEXTFILL function must be greater than zero.

ORA-35698: (TFGROUP01) Dimension `<varname>workspace object</varname>` appears in more than one GROUP phrase, either directly or via a dimension composite or conjoint dimension.

ORA-35700: (TFGROUP02) An expression used in a GROUP phrase must have exactly one dimension.

ORA-35702: (TFPARSE01) Dimension `<varname>workspace object</varname>` appears in both the DOWN phrase and a GROUP phrase, either directly or via a conjoint dimension or composite.

ORA-35704: (TFPARSE02) Dimension `<varname>workspace object</varname>` appears in both the DOWN phrase and an ACROSS phrase, either directly or via a conjoint dimension or composite.

ORA-35706: (TFPARSE03) Dimension `<varname>workspace object</varname>` appears both inside and outside an ACROSS loop.

ORA-35708: (TFPARSE04) The expressions used in the DOWN phrase must all have the same single dimension.

ORA-35710: (TFPARSE05) The DOWN phrase must be a single expression or a list of expressions enclosed in angle brackets `<varname></varname>`.

ORA-35712: (TFPARSE07) Dimension `<varname>workspace object</varname>` appears in both an ACROSS phrase and a GROUP phrase, either directly or via a conjoint dimension or composite.

ORA-35716: (TRIGGER00) NA trigger calls exceed the maximum allowable depth of `<varname>number</varname>`.

ORA-35718: (TRIGGER01) The NA trigger expression for variable `<varname>workspace object</varname>` contains a format error.

ORA-35720: (TRIGGER02) The NA trigger for `<varname>workspace object</varname>` could not be executed recursively because the RECURSIVE option is set to NO.

ORA-35726: (TSFENG01) The starting point (`<varname>number</varname>`) for a moving function must be less than or equal to the stopping point (`<varname>number</varname>`).

ORA-35728: (TSFENG02) The step value (`<varname>number</varname>`) for a moving function must be greater than zero.

ORA-35730: (TSFENG03) The starting point, stopping point, and step value for a moving function cannot be NA.

ORA-35732: (UNITCHEK01) `<varname>number</varname>` is an invalid file unit number.

ORA-35734: (UNITCHEK02) File unit `<varname>number</varname>` is not open.

ORA-35736: (VALNAME01) You cannot define NAME. NAME is a special reserved dimension used to organize your analytic workspace dictionary.

ORA-35738: (VCLEX01) "`<varname>number</varname>`" is not a valid dimension value because it contains invalid characters or blanks, but it is not enclosed in single quotes.

ORA-35740: (VCLEX02) `<varname>string</varname>` is too large to be an integer.

ORA-35742: (VCLEX06) `<varname>number</varname>` already exists in the `<varname>string</varname>` analytic workspace.

ORA-35744: (VCLEX07) "`<varname>number</varname>`" is not a valid name because it contains invalid characters or blanks.

ORA-35746: (VCLEX08) `<varname>string</varname>` is too large to be a short integer.

ORA-35748: (VCOVRFLW01) A text value cannot be more than `<varname>number</varname>` characters long. Your value is `<varname>number</varname>` characters long.

ORA-35749: (VCHEX01) '`<varname>character</varname>`' is not a valid hexadecimal digit.

Cause: The text being converted contains an invalid hexadecimal digit.

Action: Replace the character with a digit in the range 0-9 or A-F.

ORA-35750: (VCTOBOOL01) A multiline text value cannot be converted to a BOOLEAN.

ORA-35752: (VCTODT00) '<varname>string</varname>' is not a valid date order.
Valid orders are YMD, YDM, MYD, MDY, DMY, and DYM.

ORA-35754: (VCTODT01) '<varname>number</varname>' is not a valid date
because <varname>number</varname> is out of range for a month.

ORA-35756: (VCTODT02) '<varname>number</varname>' is not a valid date
because <varname>number</varname> is out of range for a year.

Cause: n'%1p'

Action: n/a

ORA-35758: (VCTODT03) '<varname>number</varname>' is not a valid date
because <varname>number</varname> is out of range for a day of the month.

ORA-35760: (VCTODT04) '<varname>number</varname>' is not a valid date
because it is ambiguous.

ORA-35762: (VCTODT05) '<varname>number</varname>' is not a valid packed
numeric date.

ORA-35764: (VCTODT06) '<varname>number</varname>' is not a valid date.

ORA-35766: (VCTODT07) '<varname>number</varname>' is not a valid date or
name for the <varname>workspace object</varname> dimension.

ORA-35768: (VCTODT08) '<varname>number</varname>' is not a valid name for
<varname>workspace object</varname>, because the period
<varname>number</varname> is out of range.

ORA-35770: (VCTODT15) '<varname>number</varname>' is not a valid date. The
numeric field '<varname>string</varname>' cannot be interpreted.

ORA-35772: (VCTODT16) '<varname>number</varname>' is not a valid date.
'<varname>string</varname>' is the second year field encountered.

ORA-35774: (VCTODT17) '<varname>number</varname>' is not a valid date. A
second alphabetic field, '<varname>string</varname>', is not allowed.

ORA-35776: (VCTODT18) '<varname>number</varname>' is not a valid date. A
date cannot end with a separation character.

ORA-35778: (VCTODT19) '<varname>number</varname>' is not a valid date.
Input after '<varname>string</varname>' is extra.

ORA-35780: (VCTODT20) A date cannot be an empty string.

ORA-35782: (VCTODT21) '<varname>number</varname>' is not a valid date
because it is incomplete.

ORA-35784: (VCTODT22) '<varname>number</varname>' is not a valid date.
Packed numeric notation must be 6 or 8 digits long.

ORA-35786: (VCTODT23) '<varname>number</varname>' is not a valid date.
'<varname>string</varname>' cannot be recognized as a month name.

ORA-35788: (VCTODT24) '<varname>number</varname>' is not a valid date.
There are too many leading zeros beginning at '<varname>string</varname>'.

ORA-35790: (VCTODT25) '<varname>number</varname>' is not a valid date. A
date cannot begin with '<varname>string</varname>'.

ORA-35792: (VCTODT27) '<varname>number</varname>' is not a valid date. '<varname>string</varname>' is not a valid character.

ORA-35794: (VCTORD01) A multiline text value cannot be converted to a number.

ORA-35796: (VERFAIL01) Your response does not meet the requirements for this item.

ORA-35798: (VERFAIL02) <varname>string</varname>

ORA-35800: (VSDOKAY01) Discarding compiled code for <varname>workspace object</varname>, because <varname>number</varname> now resolves to a value of <varname>workspace object</varname>. Previously, it resolved to a value of <varname>workspace object</varname>.

ORA-35802: (VSDOKAY02) Discarding compiled code for <varname>workspace object</varname>, because <varname>number</varname> is no longer a value of <varname>workspace object</varname>.

ORA-35804: (WATCHXEQ01) Watch point <varname>number</varname>: <varname>number</varname> is true in <varname>workspace object</varname> at statement:

ORA-35810: (XSINPUTERR) The command has requested more input than was supplied in the command string.

Cause: The command required input that was not supplied in the string.

Action: Reexecute the command with the required input.

ORA-35812: (XSACROSS01) The <varname>string</varname> command cannot be executed by ACROSS.

ORA-35818: (XSCAT01) Group definition values cannot be NA.

ORA-35820: (XSCAT02) Each group definition value must be greater than its predecessor.

ORA-35822: (XSCGCAT01) The source expression must be numeric.

ORA-35824: (XSCGCAT02) The group expression must be numeric.

ORA-35826: (XSCGCAT03) The group expression must be one-dimensional.

ORA-35828: (XSCGCORR01) Data expressions must be numeric.

ORA-35830: (XSCGCORR02) BASEDON names must be dimensions.

ORA-35832: (XSCGCORR03) BASEDON names must be dimensions of both data expressions.

ORA-35834: (XSCGCORR04) You have named duplicate BASEDON dimensions.

ORA-35836: (XSCGCORR05) The two expressions must have at least one common dimension.

ORA-35838: (XSCGMODE01) The data expression must be numeric.

ORA-35840: (XSCGMODE02) BASEDON names must be dimensions.

ORA-35842: (XSCGMODE03) BASEDON names must be dimensions of the data expression.

ORA-35844: (XSCGMODE04) You have named duplicate BASEDON dimensions.

ORA-35846: (XSCGPCTAGE01) The data expression must be numeric.

ORA-35848: (XSCGPCTAGE02) BASEDON names must be dimensions.

ORA-35850: (XSCGPCTAGE03) BASEDON names must be dimensions of the data expression.

ORA-35852: (XSCGPCTAGE04) You have named duplicate BASEDON dimensions.

ORA-35854: (XSCGRANK01) The data expression must be numeric.

ORA-35856: (XSCGRANK02) BASEDON names must be dimensions.

ORA-35858: (XSCGRANK03) BASEDON names must be dimensions of the data expression.

ORA-35860: (XSCGRANK04) You have named duplicate BASEDON dimensions.

ORA-35862: (XSCGSMOOTH01) The data expression must be numeric.

ORA-35864: (XSCGSMOOTH02) You have not supplied enough smoothing parameters.

ORA-35866: (XSCGSMOOTH03) The smoothing parameters must be numeric.

ORA-35868: (XSCGSMOOTH04) BASEDON names must be dimensions.

ORA-35870: (XSCGSMOOTH05) BASEDON names must be dimensions of the data expression.

ORA-35872: (XSCGSMOOTH06) You have named duplicate BASEDON dimensions.

ORA-35874: (XSFCAST01) The <varname>string</varname> forecasting option cannot be set.

ORA-35876: (XSFCAST02) You must use an INTO phrase to specify an output location for the forecast results.

ORA-35878: (XSFCAST03) The <varname>string</varname> forecasting option cannot be queried.

ORA-35880: (XSFCAST04) You cannot specify a trial number when querying the <varname>string</varname> forecasting option.

ORA-35882: (XSFCAST05) You must specify a trial number when querying the <varname>string</varname> forecasting option.

ORA-35884: (XSFCAST06) The forecasting context handle cannot be NA.

ORA-35886: (XSFCAST07) The time dimension <varname>workspace object</varname> has <varname>number</varname> values in status. The limit is <varname>number</varname>.

ORA-35888: (XSFCAST08) The time dimension <varname>workspace object</varname> has no values in status.

ORA-35890: (XSFCAST09) The time dimension <varname>workspace object</varname> has only <varname>number</varname> values in status. You cannot specify <varname>number</varname> historical periods.

ORA-35892: (XSFCAST10) The <varname>string</varname> target variable must also be dimensioned by <varname>string</varname>.

ORA-35894: (XSFCAST11) <varname>string</varname> must be less than or equal to <varname>string</varname>. The current values are <varname>number</varname> and <varname>number</varname>, respectively.

ORA-35896: (XSFCAST12) The value of <varname>string</varname> must evenly divide the difference between MIN and MAX values. The current values are <varname>number</varname>, <varname>number</varname>, and <varname>number</varname>.

ORA-35898: (XSFCAST13) The trial number for querying <varname>string</varname> cannot be NA.

ORA-35900: (XSFCAST14) <varname>number</varname> is not the handle of an open forecasting context.

ORA-35902: (XSFCAST15) You cannot specify an NA value for <varname>string</varname>.

ORA-35904: (XSFCAST16) Values of <varname>string</varname> must be between <varname>number</varname> and <varname>number</varname>. You specified <varname>number</varname>.

ORA-35906: (XSFCAST17) Values of <varname>string</varname> must be between <varname>number</varname> and <varname>number</varname>. You specified <varname>number</varname>.

ORA-35908: (XSFCAST18) '<varname>number</varname>' is not a recognized value of <varname>string</varname>.

ORA-35910: (XSFCAST19) The forecasting context <varname>number</varname> has been invalidated because one or more of the extra dimensions of the time-series expression is no longer available.

ORA-35912: (XSFCAST20) A forecasting context identified by the text '<varname>string</varname>' already exists. Its handle is <varname>number</varname>.

ORA-35914: (XSFCAST21) Values of the TRADINGDAYS expression cannot be less than or equal to zero.

ORA-35916: (XSHIDE01) <varname>workspace object</varname> is not a program or model.

ORA-35917: (XSHIDE05) You cannot HIDE model <varname>workspace object</varname> because the analytic workspace in which it is defined has not been upgraded to version <varname>string</varname>.

Cause: User attempted to apply the HIDE command to a model in an AW that has not been upgraded to the necessary compatibility level.

Action: Make sure that the database is running in the appropriate compatibility mode, and upgrade the AW.

ORA-35918: (XSHIDE02) You do not have access to <varname>workspace object</varname>.

ORA-35920: (XSHIDE03) The encryption seed for HIDE and UNHIDE must be a non-empty, one-line TEXT value.

ORA-35922: (XSHIDE04) <varname>workspace object</varname> is already hidden.

ORA-35924: (XSMOOTH01) Smoothing parameters cannot be NA.

ORA-35926: (XSMOOTH02) Smoothing constants must be between 0 and 1.

ORA-35928: (XSMOOTH03) Cannot compute valuespace offset

ORA-35930: (XSPCTAGE01) Cannot compute valuespace offset

ORA-35932: (XSPGFTCH01) Analytic workspace <varname>string</varname> is not attached.

ORA-35934: (XSPGFTCH02) No fetch analytic workspace specified

ORA-35936: (XSPGFTCH03) PageSpace has <varname>number</varname> <varname>number</varname> pages.

ORA-35950: (OBSCURE01) The seed expression argument to OBSCURE cannot be NA.

ORA-35952: (XSSPFC01) The <varname>string</varname> dimension <varname>workspace object</varname> and the <varname>string</varname> dimension <varname>workspace object</varname> must have the same number of values in status for SPFCEXEC method <varname>number</varname>.

Cause: This method requires the named dimensions to have the same number of values in status, but the user provided statuses of different lengths.

Action: Relimit the dimensions so that their status lengths are the same.

ORA-35958: (XSPGREPORT01) Of <varname>number</varname> allocated pages <varname>number</varname> are currently in use, <varname>number</varname> are available for use, <varname>number</varname> are hard-locked, and <varname>number</varname> are soft-locked.

ORA-35964: (COPYDFN01) You must have a current analytic workspace to perform a COPYDFN.

ORA-35966: (COPYDFN02) The format of the COPYDFN command is:\n\n COPYDFN newname oldname.

ORA-35968: (COPYDFN03) Analytic workspace object %1 does not exist.

ORA-35970: (COPYDFN05) You cannot copy the definition of an OPTION.

ORA-35972: (COPYDFN06) %1 is an invalid name for an analytic workspace object.

ORA-35974: (DBDESC00) There are no objects in this analytic workspace.

ORA-36000: (DBDESC13) At:

ORA-36002: (DBDESC14) NAME

ORA-36004: (DBDESC15) TYPE

ORA-36006: (DBDESC16) DESCRIPTION

ORA-36008: (DBDESC17) Analytic Workspace Listing

ORA-36010: (DBDESC18) Page

ORA-36016: (XSHIERCK01) One or more loops have been detected in hierarchy <varname>workspace object</varname> over <varname>number</varname>. The loops include <varname>number</varname> items (<varname>number</varname> and <varname>number</varname>).

ORA-36017: (XSHIERCK10) The definition of hierarchy <varname>workspace object</varname> over <varname>number</varname> in level <varname>number</varname> is not star consistent. The collision parents include <varname>number</varname>.

Cause: The definition of the hierarchy was not star consistent.

Action: Change the definition of the hierarchy.

ORA-36018: (XSHIERCK02) The format of the HIERCHECK command is:\n\n HIERCHECK relation [STATUS|NOSTATUS|valueset] [MULTIPATH] [CONSISTENT] [{BALANCED|STAR_CONSISTENT} levelrelation] \nOr\n HIERCHECK aggmap [MULTIPATH] [CONSISTENT]

Cause: The wrong object type was specified.

Action: Change the object to a RELATION or AGGMAP.

ORA-36019: (XSHIERCK11) The format of the HIERSHAPE function is:\n\n HIERSHAPE(relation[(qdr)] {level|ragged|skiplevel|regular} USING levelrel [INHIERARCHY inhvs] LEVELORDER levelsvs)

Cause: The wrong object type or the wrong object definition was specified.

Action: Change the object type or use the correct object definition.

ORA-36020: (XSHIERCK03) The definition of hierarchy <varname>workspace object</varname> over <varname>number</varname> is inconsistent.

Cause: The definition of the hierarchy was inconsistent.

Action: Change the definition of the hierarchy.

ORA-36021: (XSHIERCK12) The format of the HIERCHECK function is:\n\n HIERCHECK(relation [STATUS|NOSTATUS|valueset] [MULTIPATH] [CONSISTENT] [{BALANCED|STAR_CONSISTENT} levelrelation]) lnOr\n HIERCHECK(aggmap [MULTIPATH] [CONSISTENT])

Cause: The wrong object type was specified.

Action: Change the object to a RELATION or AGGMAP.

ORA-36022: (XSHIERCK04) Valuesets specified in the HIERCHECK command must be scalar. <varname>workspace object</varname> is dimensioned.

Cause: The HIERCHECK command specified a dimensioned valueset.

Action: Specify a scalar valueset in its place.

ORA-36024: (XSHIERCK05) Valueset <varname>workspace object</varname> must contain values of one of the extra dimensions of relation <varname>workspace object</varname>.

Cause: The HIERCHECK command specified a valueset over an invalid dimension.

Action: Specify a valueset containing values of one of the self-relation's extra dimensions (the dimensions in the relation's dimension list, minus the self-related dimension itself).

ORA-36025: (XSHIERCK06) The level dimension of the level relation <varname>workspace object</varname> is the same as the relation dimension <varname>workspace object</varname>.

Cause: The level dimension was the same as the relation dimension.

Action: Change the definition of the level relation.

ORA-36026: (XSHIERCK07) Level relation <varname>workspace object</varname> is not dimensioned by relation dimension <varname>workspace object</varname>.

Cause: The level relation was not dimensioned by the relation dimension.

Action: Change the definition of the level relation.

ORA-36027: (XSHIERCK08) Hierarchy <varname>workspace object</varname> is not balanced.

Cause: The current hierarchy was not balanced.

Action: Change the hierarchy to balanced.

ORA-36028: (XSHIERCK09) Hierarchy <varname>workspace object</varname> has multiple paths from <varname>number</varname> to <varname>number</varname>.

Cause: The current hierarchy had multiple paths.

Action: Remove multiple paths from the hierarchy.

ORA-36034: (XSMHIERCK00) One or more loops have been detected in relationship <varname>workspace object</varname> over <varname>workspace object</varname>. The last <varname>number</varname> of the items are <varname>number</varname>.

Cause: A relation was used that had loops in it. There were more items involved than could be reported.

Action: Correct the relation so that it does not contain loops.

ORA-36035: (XSMHIERCKREL) One or more loops have been detected in <varname>workspace object</varname>. <varname>number</varname> items involved are <varname>number</varname>.

Cause: A relation was used that had loops in it.

Action: Correct the relation so that it does not contain loops.

ORA-36036: (XSMHIERCK01) One or more loops have been detected in relationship <varname>workspace object</varname> over <varname>workspace object</varname>. The <varname>number</varname> items involved are <varname>number</varname>.

Cause: A relation was used that had loops in it.

Action: Correct the relation so that it does not contain loops.

ORA-36038: (INTL00) No application code specified

ORA-36040: (INTL01) IMPORTANT: The length of the following phrase(s) exceeds %1. They will be truncated.

ORA-36042: (INTL02A) The %1 language analytic workspace for %2 could not be attached, and there is no English-language analytic workspace for this application.

ORA-36044: (INTL02B) Neither the %1 language analytic workspace nor the %2 language analytic workspace could be attached for %3, and there is no English-language analytic workspace for this application.

ORA-36050: (INTL06) Invalid option specified. Option must be either OSM, CA, or blank.

ORA-36052: (LISTBY00) LISTBY cannot be called as a function returning a value.

ORA-36054: (LISTBY01) You must have a current analytic workspace to use the LISTBY command.

ORA-36056: (LISTBY02) The syntax of the LISTBY command is:\n LISTBY dimension [dimension ...]\nDimension composites can also be named.

ORA-36058: (LISTBY03) %1 does not exist in any attached analytic workspace.

ORA-36060: (LISTBY04) %1 is not a dimension or composite.

ORA-36062: (LISTBY05) %1 is in a different analytic workspace from previously specified object(s) "%2".

ORA-36064: (LISTBY06) The syntax for specifying an unnamed composite is:\n SPARSE<varname>dimension-list</varname>\nwhere 'dimension-list' is a list of simple or conjoint dimensions or named composites.

ORA-36066: (LISTBY07) %1 objects dimensioned by or related to %2 in analytic workspace %3

ORA-36068: (LISTNAMES00) Analytic workspace %1 is not attached.

ORA-36070: (LISTNAMES01) There are no objects in the analytic workspace of the following types:\n%1

ORA-36072: (LISTNAMES02) There are no objects in the analytic workspace.

ORA-36074: (LISTNAMES03) There are no objects in the analytic workspace that match '%1'.

ORA-36076: (LISTNAMES04) %1 is not a valid keyword for LISTNAMES.\nValid keywords are:\nALL, SORT or UNSORT, AW workspace-name\n%2

ORA-36078: (MODEL00) Specify the name of a model for the report.

ORA-36080: (MODEL01) %1 does not exist.

ORA-36082: (MODEL02) %1 is not a model.

ORA-36084: (MODEL03) Model %1 has not been compiled.

ORA-36086: (MODEL04) Information is not available for model %1.

ORA-36088: (MODEL05) Model %1 is not the most-recently executed model.

ORA-36090: (MODEL06) Solution status:

ORA-36092: (MODEL07) Model options in use:

ORA-36104: (STATUS00) You must have a current analytic workspace to use the STATUS command.

ORA-36106: (STATUS01) There are no dimensions in your current analytic workspace.

ORA-36108: (STATUS02) There are no dimensions in analytic workspace %1.

ORA-36110: (STATUS03) %1 has no dimensions.

ORA-36112: (STATUS04) The current status of %1 is:

ORA-36114: (STDHDR00) Page

ORA-36116: (TRACKREPORT00) Program name

ORA-36118: (TRACKREPORT01) Exclusive cost

ORA-36120: (TRACKREPORT02) Inclusive cost

ORA-36122: (TRACKREPORT03) Number of calls

ORA-36124: (XLIST00) %1 exceptions found.

ORA-36126: (XLIST01) %1 already exists.

ORA-36128: (XLIST03) The exception criterion must be a single expression.

ORA-36130: (XLIST04) The exception criterion must be a BOOLEAN expression.

ORA-36132: (XLIST05) The exception criterion must be dimensioned.

ORA-36134: (XLIST06) %1 is not an exception list.

ORA-36136: (XLIST07) There is no current exception list. You can use the NAMEXL command to specify one.

ORA-36138: (XLIST08) %1 has been deleted.

ORA-36140: (XREF00) References To:

ORA-36142: (XREF01) Referenced By:

ORA-36144: (XREF02) NONE

ORA-36145: (SETPROP01) The property "%1" cannot be set for measure "%2".
Cause: A property name was given that is not one of the allowed properties to be set.

Action: Specify one of the legal property names.

ORA-36146: (READSIZE01) The <varname>string</varname> expression cannot be missing or NA.

ORA-36148: (READSIZE02) The minimum value for <varname>string</varname> is <varname>number</varname>. You specified a value of <varname>number</varname>.

ORA-36152: (READSIZE04) The maximum value for <varname>string</varname> is <varname>number</varname>. You specified a value of <varname>number</varname>.

ORA-36154: (XSMXAGGR01) <varname>workspace object</varname> is not a data variable.

Cause: An object was specified on the Aggregate command line that was not a variable

Action: Specify a variable instead

ORA-36155: (XSMXAGGRFROM) <varname>workspace object</varname> must be a variable or formula of a similar data type to <varname>workspace object</varname>.

varname> to be used with FROM, or a TEXT variable or formula to be used with FROMVAR.

Cause: The user specified an illegal variable for use with FROM or FROMVAR on the AGGREGATE command line

Action: Specify a legal variable instead

ORA-36156: (XSMXAGGR02) When using the BOOLEAN or FORMULA WEIGHT <varname>workspace object</varname>, WNAFILL is the only valid option.

ORA-36157: (XSMXAGGR03) To use the AUTOCOMMIT keyword, you must also specify the AUTOUPDATE keyword.

Cause: The user specified AUTOCOMMIT but not AUTOUPDATE on the AGGREGATE command line, which is illegal

Action: Either also specify AUTOUPDATE or don't specify AUTOCOMMIT

ORA-36158: (XSMXAGGR03) <varname>workspace object</varname> must be an AGGMAP object.

ORA-36160: (XSMXAGGR04) You cannot use <varname>string</varname> on scalar VARIABLE <varname>workspace object</varname>.

Cause: The user tried to run the AGGREGATE or AGGCOUNT command or function on a scalar variable.

Action: Specify a dimensioned variable instead

ORA-36161: (XSAGGRRUVCV) Aggregation variable <varname>workspace object</varname> cannot have itself as a COUNTVAR.

Cause: The user specified the same variable as both an aggregation variable and a COUNTVAR

Action: Specify a different COUNTVAR

ORA-36162: (XSMXAGGR05) COUNTVAR variable <varname>workspace object</varname> must be of type INTEGER, not <varname>string</varname>.

Cause: The user specified a non-INTEGER variable as a COUNTVAR for aggregation

Action: Redefine the COUNTVAR to be an INTEGER

ORA-36164: (XSMXAGGR07) When using the COUNTVAR clause, the number of variables to be aggregated (<varname>number</varname>) must match the number of COUNTVAR variables (<varname>number</varname>).

Cause: The user specified a COUNTVAR clause to the AGGREGATE command, but the number of COUNTVAR variables specified did not match the number of variables to be aggregated

Action: Specify a separate COUNTVAR for each variable

ORA-36165: (XSAGGCNTPROP) Variable <varname>workspace object</varname> cannot have both an AGGCOUNT and the \$COUNTVAR property.

Cause: An attempt was made to add the \$COUNTVAR property to a variable which already had an AGGCOUNT, or vice versa.

Action: Delete the already existing \$COUNTVAR property or AGGCOUNT first.

ORA-36166: (XSMXAGGR08) <varname>workspace object</varname> is not a VARIABLE.

Cause: An attempt was made to perform an AGGREGATE or other action on an object which is not a variable.

Action: Specify a variable instead.

ORA-36167: (XSAGGRFORM) <varname>workspace object</varname> is an illegal AGGMAP for aggregating a FORMULA.

Cause: The user attempted to aggregate a FORMULA using an AGGMAP that is not valid for aggregating FORMULAs. The AGGMAP must specify PRECOMPUTE(NA) for all relation lines and must not specify any caching.

Action: Correct the AGGMAP so it is legal for aggregating a FORMULA.

ORA-36168: (XSMXAGGR10) COUNTVAR variable <varname>workspace object</varname> must have the same dimensionality as <varname>workspace object</varname>

Cause: The user specified a COUNTVAR variable which is missing at least one dimension of the aggregation variable

Action: Specify a COUNTVAR variable which has at least as many base dimensions as the aggregation variable

ORA-36170: (XSMXAGGR12) The data type of the WEIGHT <varname>workspace object</varname> must be numeric or BOOLEAN, not <varname>string</varname>.

Cause: The user specified a WEIGHT variable or formula which wasn't numeric or boolean

Action: Specify a numerical or boolean weight instead

ORA-36172: (XSMXAGGR18) WEIGHT option WNOAGG cannot be used with the WSTORE, WVARPRIORITY, or WAGGPRIORITY options on WEIGHT <varname>workspace object</varname>.**ORA-36174: (XSMXAGGR23) <varname>workspace object</varname> must be either a VARIABLE, a RELATION or a FORMULA.**

Cause: The user specified something that was not a variable, a relation or a formula as a weight for AGGREGATE

Action: Specify a valid variable, relation or formula instead

ORA-36176: (XSMXAGGR25) Relation <varname>workspace object</varname> must be a one-dimensional self-relation to be used as a weight for AGGREGATE.

Cause: The user specified an illegal relation as a weight. The relation might have been multidimensional, not a self-relation, or not a relation over one of the bases of the aggregation variable.

Action: Specify a valid self relation over one of the bases of the aggregation variable.

ORA-36178: (XSAGGR01) To be used with AGGREGATE, AGGMAP <varname>workspace object</varname> must be declared with the AGGMAP command.

Cause: The user used the ALLOCMAP command to define the AGGMAP, so the AGGMAP can only be used with the ALLOCATE command, or the AGGMAP has no contents attached to it.

Action: Use the AGGMAP command to define the AGGMAP.

ORA-36179: (XSNOAGM) No AGGMAP was specified for VARIABLE <varname>workspace object</varname>.

Cause: The user used the AGGREGATE command without specifying an AGGMAP on the command line, with a variable which had no \$AGGMAP property.

Action: Specify an AGGMAP on the AGGREGATE command line, or add the \$AGGMAP property to the variable in question.

ORA-36180: (XSAGGR08) AGGREGATE cannot function because there is a permission clause associated with variable <varname>workspace object</varname>.

Cause: When using AGGREGATE, only simple permissions and permissions on base dimensions are valid.

Action: Remove the permissions clause from the variable causing problems.

ORA-36181: A VARIABLE cannot have both the \$AGGREGATE_FROM and \$AGGREGATE_FROMVAR properties applied to it.

Cause: The user attempted to add both the \$AGGREGATE_FROM and \$AGGREGATE_FROMVAR properties to a single variable.

Action: Remove the existing property before applying the new one.

ORA-36182: (XSAGGR09) Could not locate a value for variable <varname>number</varname> in measure dimension <varname>workspace object</varname>.

Cause: A measure dimension was supplied in the AGGMAP, but a position for the variable was not found in it.

Action: Add a position for the variable in the measure dimension.

ORA-36184: (XSAGGR10) You do not have sufficient permissions for the variable <varname>workspace object</varname>.

Cause: The user lacked the permissions necessary for the aggregation variable.

Action: Remove the restricting permissions from the variable or base dimension.

ORA-36185: (XSAGGR11) <varname>workspace object</varname> does not have any AGGCOUNT information.

Cause: User attempted an operation (such as the AVERAGE aggregation operator or the AGGCOUNT function) that requires a variable to have AGGCOUNT information on a variable that does not.

Action: Define the variable using the WITH AGGCOUNT clause, or use the CHGDFN ADD AGGCOUNT command to enable AGGCOUNT for the variable.

ORA-36186: (XSAGGR12) You must use a COUNTVAR when aggregating with AVERAGE.

ORA-36188: (XSAGGR16) AGGREGATE read a value less than 1 out of COUNTVAR variable <varname>workspace object</varname>. Either the values of the COUNTVAR variable are stored improperly, or there is problem in AGGREGATE. If no one has modified the values in this COUNTVAR, contact Oracle customer support.

Cause: Either someone improperly changed the COUNTVAR variable, or AGGREGATE has an error.

Action: Set the COUNTVAR variable to NA before starting AGGREGATE. If you previously set the COUNTVAR variable to NA, then contact Oracle OLAP technical support.

ORA-36190: (XSAGGR26) <varname>workspace object</varname> is of type <varname>string</varname>. The numerical calculation <varname>string</varname> requires INTEGER, DECIMAL or SHORTDECIMAL data.

ORA-36192: (XSAGGR27) <varname>workspace object</varname> is of type <varname>string</varname>. The boolean calculation <varname>string</varname> requires BOOLEAN data.

ORA-36194: (XSAGGR28) <varname>workspace object</varname> is of type <varname>string</varname>. The requested operation requires INTEGER, DECIMAL, SHORTDECIMAL or BOOLEAN data.

ORA-36196: (XSAGGR32) '<varname>number</varname>' is an invalid argument specifier for AGGREGATE.

ORA-36198: (XSAGGR33) Cannot aggregate over COMPRESSED COMPOSITE <varname>workspace object</varname> using AGGMAP <varname>workspace object</varname> because the operator variable with more than 1 line dimensions is not supported for bases of a COMPRESSED COMPOSITE.

Cause: The user specified an aggregation the operator variable with more than 1 line dimensions that is not supported by COMPRESSED COMPOSITES.

Action: Use a MODEL for the calculation, or use an uncompressed COMPOSITE.

ORA-36200: (XSAGGR34) AGGREGATE operator <varname>string</varname> requires a WEIGHTBY clause, but ARGS variable <varname>workspace object</varname> did not specify one.

Cause: The given operator requires a WEIGHT specification, but the ARGS variable did not supply one.

Action: Modify the ARGS variable to specify a weight for the operation.

ORA-36201: (XSAGGR35) Cannot aggregate <varname>workspace object</varname>(partition <varname>workspace object</varname>) because the subpartition is itself partitioned.

Cause: Attempted to aggregate an intermediate partition of a variable with nested partitioning.

Action: rerun the aggregate command separately for each ultimate partition or just for the variable as a whole

ORA-36202: (XSAGOP01) '<varname>number</varname>' is not a valid aggregation operator.

Cause: An invalid string was provided for an aggregation operator.

Action: Check the spelling of the operator to make sure you are specifying a valid one.

ORA-36204: (XSAGOP04N) In AGGMAP <varname>workspace object</varname>, the NAOOPERATOR <varname>string</varname> must be HFIRST, HLAST or HEVEN.

Cause: An invalid NAOOPERATOR was specified.

Action: Specify HFIRST, HLAST or HEVEN.

ORA-36206: (XSAGOP04R) In AGGMAP <varname>workspace object</varname>, REMOPERATOR <varname>string</varname> must be MIN, MAX, FIRST, LAST, HFIRST or HLAST.

Cause: An invalid REMOPERATOR was specified.

Action: Specify one of the legal operators.

ORA-36208: (XSAGOP05N) In AGGMAP <varname>workspace object</varname>, you can only specify NAOPERATOR <varname>string</varname> with the PROPORTIONAL or EVEN operators, not <varname>string</varname>.

Cause: The user specified an NAOPERATOR when you were not using PROPORTIONAL or EVEN.

Action: Remove the NAOPERATOR clause from the RELATION line.

ORA-36210: (XSAGOP05R) In AGGMAP <varname>workspace object</varname>, you can only specify the REMOPERATOR <varname>string</varname> with the PROPORTIONAL, EVEN, or HEVEN operators, not <varname>string</varname>.

Cause: The user specified a REMOPERATOR without using PROPORTIONAL, EVEN, or HEVEN.

Action: Remove the REMOPERATOR clause from the RELATION line.

ORA-36212: (XSAGOP06) In AGGMAP <varname>workspace object</varname>, you can only specify the MIN, MAX, FLOOR, and CEILING arguments while using the PROPORTIONAL operator, not <varname>string</varname>.

Cause: The user specified MIN, MAX, FLOOR, or CEILING when using an operator other than PROPORTIONAL.

Action: Remove the incorrect argument from the RELATION line.

ORA-36214: (XSRELOBC01) The value of INDEXCACHESIZE must be positive.

ORA-36216: (XSOPARM01) A DIMENSION must have a data type (ID, TEXT, or INTEGER), a time period, or a list of bases for a conjoint dimension.

ORA-36220: (XSLPDSC01) All dimensions in LIST <varname>number</varname> are also in the IGNORE clause.

Cause: One of the dimension lists in the dimension loop descriptor had no base dimensions except those in the IGNORE list. This leaves no dimensions for looping over.

Action: Fix the dimension loop descriptor.

ORA-36221: (XSLPDSC02) LIST <varname>number</varname> and LIST <varname>number</varname> have different base dimensions.

Cause: The base dimensions of the dimension lists given in the loop descriptor do not match.

Action: Ensure that each dimension list has the same set of looping base dimensions. If necessary, use IGNORE within a lists to discard base dimensions that should not be looped.

ORA-36222: (XSLPDSC03) duplicate IGNORE or DENSE information for dimension <varname>workspace object</varname>

Cause: An IGNORE or DENSE list in a dimension loop descriptor included the dimension twice, included two different valuesets of the dimension, or includes the dimension and a valueset of the dimension.

Action: Only use the dimension or a valueset of the dimension once in an IGNORE or DENSE list.

ORA-36223: (XSLPDSC04) object <varname>workspace object</varname> in IGNORE or DENSE list has illegal type

Cause: An IGNORE or DENSE list in a dimension loop descriptor included an object that was not a dimension or a valueset, was a conjoint dimension, or was a dimensioned valueset.

Action: Only use simple dimensions and undimensioned valuesets in the IGNORE or DENSE list.

ORA-36224: (XSLPDSC05) <varname>workspace object</varname> is not a loop dimension

Cause: An IGNORE or DENSE list in a dimension loop descriptor referenced a dimension (or a valueset of a dimension) that was not a base dimension of the loop dimension list.

Action: Remove the dimension or valueset from the IGNORE or DENSE list.

ORA-36225: (XSLPDSC06) A LOOP AGGMAP list must contain an aggmap object, followed by one or more variables and/or dimensions.

Cause: An invalid AGGMAP list was specified. Either too few objects were specified, or an incorrect type of object was used.

Action: Specify a valid AGGMAP list consisting of an aggmap object, followed by one or more variables and/or dimensions.

ORA-36226: (XSLPDSC07) The syntax of the \$LOOP property on formula <varname>workspace object</varname> is incorrect.

Cause: Unrecognized contents in the \$LOOP property of a formula in the table function measure list.

Action: Restrict the contents of the \$LOOP property to valid elements (other than OPTIMIZED and MEASURES) of the table function LOOP directive.

ORA-36230: (XSANALYZ00) object <varname>workspace object</varname> cannot be used in the ANALYZE command

Cause: An object that cannot be analyzed was used in the ANALYZE command.

Action: Analyze VARIABLES, RELATIONS, DIMENSIONS, or SURROGATES.

ORA-36231: (XSANALYZ01) object <varname>workspace object</varname> cannot be used in the INHIERARCHY clause

Cause: An invalid INHIERARCHY object was referenced.

Action: Use either a VALUESET or boolean VARIABLE.

ORA-36232: (XSANALYZ02) a level list was specified when a language dimension was present

Cause: A level list dimension was specified when a language dimension was present.

Action: Remove the USING clause.

ORA-36233: (XSANALYZ03) the dimensionality of object <varname>workspace object</varname> does not match the ANALYZE command

Cause: The dimensionality of the object did not match the ANALYZE command syntax used.

Action: Match the ANALYZE syntax to the dimensionality of the specified object.

ORA-36234: (XSANALYZ04) all objects in the current status of the NAME dimension must have the same dimensionality when used with the ANALYZE command

Cause: The dimensionality of at least one of the objects listed in the NAME dimension does not match the rest of the objects.

Action: Make sure all objects listed in the NAME dimension have the same dimensionality.

ORA-36236: (XSANALYZ06) the AW format must be 11.0.0.0 or higher to use the ANALYZE command

Cause: The AW version is less than 11.0.0.0

Action: Make sure the compatible mode is 11.0.0.0 or higher and upgrade the AW

ORA-36237: (XSANALYZ07) analytic workspace <varname>string</varname>.<varname>string</varname> must be attached RW or EXCLUSIVE mode

Cause: The analytic workspace was already attached RO or MULTI mode.

Action: Detach the analytic workspace.

ORA-36238: (XSANALYZ08) object <varname>string</varname>.<varname>string</varname> does not exist

Cause: The object name does not exist

Action: Check the spelling and case of the object name

ORA-36258: (XSAGINFO00) When the AGGMAPINFO function is called, <varname>workspace object</varname> must be an AGGMAP.

Cause: The AGGMAPINFO function was called with an object that is not an AGGMAP.

Action: Modify the call to AGGMAPINFO to specify an AGGMAP object.

ORA-36260: (XSAGHIERPART00) Aggregating from partition %J to partition %J over hierarchy <varname>workspace object</varname> creates an increase in sparsity.

Cause: In the partition creation / aggmap creation a situation developed such that when aggregating over a particular dimension of the aggmap a partition boundary was crossed such that the sparsity of the target partition included dimensions that were not in the sparsity of the source partition. Since the process of aggregation always densifies rather than sparsifying this is an extremely suboptimal design and it is not supported by the aggregate system.

Action: Set up your partitioning such that for any partition boundary the source and target partitions of the aggregation will always move towards denser partitions. For any child (c) and any parent (p) where (c) and (p) are in different partitions it must be

the case that the parent partition contains no dimension in the composite that the child partition does not contain in its composite.

ORA-36261: (XSAGPARTDEP00) Can not Aggregate PARTITION TEMPLATE %J because the path of aggregation would recursively enter partition %J.

Cause: The partitioning scheme was such that while aggregating there exists a cell (m) such that both one of its descendants and one of its ancestors are both in the referenced partition, while (m) is in a different partition.

Action: Change the partitioning scheme.

ORA-36262: (XSAGREMOD00) MODEL <varname>workspace object</varname> was not attached to the AGGMAP.

ORA-36264: (XSAGREMOD01) Removed MODEL: <varname>number</varname>

ORA-36266: (XSCGMDLAGG00) Invalid context for the AGGREGATION function

Cause: The AGGREGATION function was used outside of the MODEL context.

Action: Use AGGREGATION only in a model.

ORA-36267: (XSCGMDLAGG09) <varname>workspace object</varname> has no dimensions, so it cannot have a qualified data reference.

Cause: A dimension qualification was specified for a valueset with no dimensions.

Action: Remove the qualification.

ORA-36268: (XSCGMDLAGG01) '<varname>string</varname>' is not a valid dimension value.

Cause: The AGGREGATION parameter list included a value that does not exist in the MODEL dimension that contains the target of the AGGREGATION

Action: Specify only values from the appropriate MODEL dimension

ORA-36269: (XSCGMDLAGG10) '<varname>workspace object</varname>' does not exist or is not a dimension.

Cause: A nonexistent or invalid object was specified as a QDR dimension.

Action: Specify existing dimensions only.

ORA-36270: (XSCGMDLAGG03) The parameter list for the AGGREGATION function includes duplicate values.

Cause: One or more duplicate values appeared in the AGGREGATION parameter list.

Action: Remove the duplication.

ORA-36271: (XSCGMDLAGG11) <varname>workspace object</varname> is not in the dimension list of valueset <varname>workspace object</varname>.

Cause: A QDR dimension was specified that does not appear in the valueset's dimension list.

Action: Specify only dimensions in the valueset's dimension list.

ORA-36272: (XSCGMDLAGG04) '<varname>workspace object</varname>' is not a valid operator for the AGGREGATION function.

Cause: An invalid AGGREGATION operator was specified.

Action: Correct the invalid operator.

ORA-36273: (XSCGMDLAGG12) Dimension <varname>workspace object</varname> appears more than once in the QDR.

Cause: A dimension was specified more than once in the QDR.

Action: Remove the duplication.

ORA-36274: (XSCGMDLAGG05) The operator used in this equation needs a weight variable.

Cause: An invalid weight variable was specified.

Action: Correct the invalid weight variable.

ORA-36275: (XSCGMDLAGG13) <varname>string</varname> is not a valid <varname>workspace object</varname>.

Cause: A value was specified that does not exist in the QDR dimension.

Action: Specify an existing value.

ORA-36276: (XSCGMDLAGG06) The current operator does not need a weight variable.

Cause: A weight variable was specified in a context that does not support it.

Action: Remove the weight variable.

ORA-36278: (XSCGMDLAGG07) <varname>workspace object</varname> does not exist or is not valueset.

Cause: A nonexistent or invalid object was specified where a valueset is required.

Action: Specify an existing valueset only.

ORA-36280: (XSCGMDLAGG08) Valueset <varname>workspace object</varname> does not contain values of any dimension of the current model.

Cause: AGGREGATION specified a valueset of a dimension not listed in a DIMENSION statement for the current model.

Action: Add the valueset's dimension to the model's DIMENSION list, or choose a different valueset.

ORA-36282: (DNAMELEN01) Object name <varname>string</varname> is longer than <varname>number</varname> bytes.

ORA-36286: (EIFMAKEF12) The EXPORT command terminated, because there was not enough disk space in path <varname>string</varname> to contain a complete extension file.

ORA-36290: (EIFMAKEF14) You cannot export object <varname>workspace object</varname>, because EIFVERSION is set to <varname>number</varname>. That version does not support <varname>string</varname> <varname>string</varname>s.

Cause: The user tried to export a NUMBER dimension to an EIF file with the EIFVERSION option set to a number less than 80000. Versions previous to that eversion do not support NUMBER dimensions.

Action: A NUMBER dimension cannot be used in a version of older than 9.2.0. If

ORA-36300: (XSCGTERM01) The command is too long or complex to compile. Eliminate or simplify expressions, or remove or shorten text constants.

ORA-36302: (MXCLASS03) You cannot reference an analytic workspace NAME dimension using a QON. You can only access the NAME dimension of the current analytic workspace.

ORA-36304: (MXDCLAGR02) <varname>workspace object</varname> was not defined as an AGGMAP.

ORA-36306: (MXDCLAGR03) Since there is no current aggmap definition, the AGGMAP statements will be discarded. Type END to return to the command line.

ORA-36308: (MXDCLAGR04) The object <varname>workspace object</varname> has been defined as an AGGMAP, and it cannot be redefined as an ALLOCMAP.

ORA-36310: (MXDCLAGR05) The object <varname>workspace object</varname> has been defined as an ALLOCMAP, and it cannot be redefined as an AGGMAP.

ORA-36312: (PHYS00) <varname>workspace object</varname> must be a dimension, dimensioned variable or relation.

Cause: The user specified an invalid OLAP object while attempting to use the PHYSICAL function

Action: Specify a valid object

ORA-36313: (PHYS03) The VALUE option of PHYSICAL cannot be applied to a variable.

Cause: the VALUE argument to PHYSICAL was supplied for a variable.

Action: remove VALUE or specify a relation or dimension.

ORA-36314: (PHYS01) <varname>workspace object</varname> must be a dimension, relation or variable.

Cause: The user specified an invalid OLAP object while attempting to use the PHYSICAL command

Action: Specify a valid object

ORA-36315: (PHYS04) You must specify the VALUE option for scalar relation <varname>workspace object</varname>.

Cause: The VALUE argument to PHYSICAL was omitted for a scalar relation

Action: specify VALUE or choose a dimensioned relation

ORA-36316: (PHYS02) Relation <varname>workspace object</varname> must be a single-dimensional relation that relates one INTEGER dimension to another.

Cause: The user specified an invalid relation while attempting to use the PHYSICAL command

Action: Specify a valid relation

ORA-36320: (PPENG05) No more than <varname>number</varname> push levels are allowed.

ORA-36322: (PPENG06) <varname>workspace object</varname> cannot be pushed more than <varname>number</varname> times.

ORA-36324: (PPNLSOPT00) '<varname>number</varname>' is not a legal value for the <varname>string</varname> option. The previous value was retained.

ORA-36330: (SNSYN124) The format of the PHYSICAL command is:\n \n PHYSICAL [dimension|relation]

ORA-36332: (SNSYN125) The format of the PHYSICAL function is:\n \n PHYSICAL(dimension|variable[{relation [VALUE]}])

ORA-36334: (SNSYN126) The format of the TO_DATE function is:\n \n TO_DATE(value [format] [{option optionvalue}...])

ORA-36336: (SNSYN127) The format of the TO_CHAR function is:\n \n TO_CHAR(value [format] [{option optionvalue}...])

ORA-36338: (SNSYN128) The format of the TO_NUMBER function is:\n \n TO_NUMBER(value [format] [{option optionvalue}...])

ORA-36339: (SNSYN129) The format of the TO_NCHAR function is:\n \n TO_NCHAR(value [format] [{option optionvalue}...])

ORA-36340: (SNSYN130) The format of the PARTITIONCHECK function is:\n \n PARTITIONCHECK(aggmap, partition_template)

Cause: Bad syntax

Action: Correct syntax

ORA-36341: (SNSYN131) The format of the TO_TIMESTAMP function is:\n \n TO_TIMESTAMP(value [format] [{option optionvalue}...])

ORA-36342: (SNSYN200) The format of the CLEAR command is:\n \n CLEAR [ALL | STATUS] [AGGREGATES | CHANGES | PRECOMPUTES | NONPRECOMPUTES | CACHE] FROM var1 [var2, var3...] [USING aggmap]

Cause: The syntax for the CLEAR command was invalid.

Action: Modify your syntax using the correct format.

ORA-36344: (SNSYN272) The format of the AGGREGATION function is:\n \n AGGREGATION(dimension-value [dimension-value ...]) [OPERATOR operatorname [WEIGHT | WEIGHTBY weightvar]]

ORA-36346: (SNSYN338) The format of the TRUNC function is:\n \n TRUNC(expression1 [, expression2])

ORA-36348: (SNSYN339) The format of the CEIL function is:\n \n CEIL(number)

ORA-36350: (SNSYN340) The format of the FLOOR function is:\n \n FLOOR(number)

ORA-36352: (SNSYN341) The format of the ADD_MONTHS function is:\n \n ADD_MONTHS(date, number of months)

ORA-36354: (SNSYN342) The format of the LAST_DAY function is:\n \n LAST_DAY(date)

ORA-36356: (SNSYN343) The format of the MONTHS_BETWEEN function is:\n \n MONTHS_BETWEEN(date, date)

ORA-36358: (SNSYN344) The format of the NEW_TIME function is:\n \n NEW_TIME(date, zone, new zone)

ORA-36360: (SNSYN345) The format of the NEXT_DAY function is:\n \n NEXT_DAY(date, day name)

ORA-36362: (XPROPEN01) Discarding compiled code for <varname>workspace object</varname> because it was compiled with code version <varname>number</varname>. The current code version is <varname>number</varname>.

ORA-36376: (XSAGZERO) AGGREGATE attempted to divide by zero. Set DIVIDEBYZERO to YES if you want NA to be returned as the result of a division by zero.

Cause: A calculation in the current AGGREGATE command attempted to divide by zero as a result of an AVERAGE, WAVERAGE, HAVERAGE or HWAVERAGE operation.

Action: Either fix the data, or set DIVIDEBYZERO to YES to return NA instead of signaling an error.

ORA-36378: (XSAGTHRWEIGHT) While running AGGREGATE with multiple threads, the weight variable <varname>workspace object</varname> specified by your ARGS variable <varname>workspace object</varname> must exist in the same analytic workspace as your AGGMAP <varname>workspace object</varname>.

Cause: While running AGGREGATE in threaded mode, you attempted to specify a WEIGHT variable in another analytic workspace.

Action: Use a weight variable from the same analytic workspace as the aggmap and rollup variable.

ORA-36380: (AGGRECURSE) AGGREGATE was called recursively, which is not allowed.

Cause: A model, NATRIGGER, or other object called the AGGREGATE function or command while another AGGREGATE function or command was already in progress.

Action: Modify your objects so that they do not need to have two AGGREGATE commands or functions executing at once.

ORA-36387: (XSPARTCHECK00) Object <varname>workspace object</varname> must be an AGGMAP.

ORA-36388: (XSPARTCHECK01) Object <varname>workspace object</varname> must be a PARTITION TEMPLATE.

ORA-36389: (XSAGPARTDEP01) Can not aggregate from PARTITION <varname>number</varname> into PARTITION <varname>number</varname> due to increasing sparsity along DIMENSION %J.

Cause: The user is attempting to use partitions as a means of sparsity control, however they have set up their partitions in a manner that simply makes no sense. It is a simple fact that during aggregation data becomes more dense, not less dense, and yet their partitions indicate the opposite.

Action: Modify the partition template add the specified dimension into the source composite, or removing it from the target composite.

ORA-36391: (XSMXCLEA01) When CLEAR is used with the STATUS keyword or an AGGMAP, <varname>workspace object</varname> must be dimensioned identically to <varname>workspace object</varname>.

Cause: The user specified objects whose dimensionality didn't match

Action: Break up the CLEAR command into multiple commands where the dimensionality of the objects matches

ORA-36392: (XSMXCLEA02) When using CLEAR with the PRECOMPUTES or NONPRECOMPUTES options, you must specify an AGGMAP.

Cause: The user didn't specify an AGGMAP with the CLEAR command.

Action: specify an aggmap by adding a USING phrase to the CLEAR command, or attach a '\$AGGMAP' property to the variable.

ORA-36393: (XSMXCLEA03) When using the AGGREGATES, CHANGES or CACHE options, you must specify the ALL keyword.

Cause: The user didn't use the ALL keyword when using CHANGES or CACHE.

Action: Specify the ALL keyword.

ORA-36394: (XSMXCLEA04) When using CLEAR on the AGGMAP <varname>workspace object</varname>, CACHE is the only valid directive.

Cause: The user attempted to CLEAR an AGGMAP using a directive other than CACHE.

Action: Amend the CLEAR line to only use the CACHE keyword with AGGMAPs.

ORA-36395: (XSMXCLEA05) To CLEAR ALL AGGREGATES from <varname>workspace object</varname>, you must specify an AGGMAP.

Cause: The CLEAR command could not determine how the variable was aggregated because the variable is not dimensioned by a compressed composite.

Action: Specify an aggmap by adding a USING phrase to the CLEAR command, or attach a '\$AGGMAP' property to the variable.

ORA-36397: (XSSPROPNA) The value of property <varname>string</varname> cannot be NA.

Cause: The user tried to set a system-reserved property on an OLAP object to NA

Action: Set the property to a non-NA value

ORA-36398: (XSSPROP01) Property name '<varname>number</varname>' is invalid because only system-reserved property names can begin with '\$'.

Cause: The user attempted to add a property which starts with \$ but is not a reserved property name

Action: Remove the \$ from the property name

ORA-36399: (XSSPROPDTYPE) The data type of property <varname>string</varname> must be <varname>string</varname>.

Cause: The user tried to set a system-reserved property on an OLAP object to a value with an illegal datatype

Action: Set the property with the proper datatype

ORA-36400: (XSSPROP02) <varname>workspace object</varname> is not a valid variable name.

Cause: Not a valid variable name

Action: Change to a valid variable name

ORA-36401: (XSSPROPOTYPE) Property <varname>string</varname> may only be applied to objects of type <varname>string</varname>.

Cause: The user applied a reserved property name to an incorrect object type

Action: Apply the property to the correct object

ORA-36402: (XSSPROP03) The property '<varname>string</varname>' requires a leading "\$" because it is a system-reserved property name.

Cause: The user tried to specify a property name which is reserved, but did not use a leading \$

Action: Either add a leading \$ or choose another property name

ORA-36403: (XSBADSPROP) <varname>number</varname> is an illegal value for system-reserved property <varname>string</varname> on <varname>workspace object</varname>.

Cause: The user tried to specify an illegal value for a special property

Action: Specify a legal value.

ORA-36404: (XSSPROP04) Property <varname>string</varname> cannot be applied to an undimensioned (scalar) TEMPORARY variable.

Cause: The user applied a reserved property name to an incorrect object type

Action: Apply the property to the correct object

ORA-36405: (XSSPROP05) Property ignored for object <varname>workspace object</varname>:

Cause: A property was ignored during import.

Action: Refer to the message that follows this one and correct the error it describes.

ORA-36406: (VCACHE00) '<varname>number</varname>' is an invalid value for the VRCACHE option. The only permissible values are 'SESSION', 'VARIABLE', and 'NONE'.

Cause: The user tried to assign an invalid value to the VRCACHE option

Action: Assign one of the valid values

ORA-36410: (VCACHE03) '<varname>number</varname>' is an invalid value for the \$VRCACHE property. The only permissible values are 'DEFAULT', 'SESSION', 'VARIABLE', and 'NONE'.

Cause: The user tried to assign an invalid value to the \$VRCACHE property on a variable

Action: Assign one of the valid values

ORA-36608: (XSAGHOVERFLOW) The depth of the hierarchies encountered while processing a composite dimension in AGGREGATE caused a counter overflow.

Cause: The depth of the hierarchies that are part of a composite exceeded 4 billion levels during the merge.

Action: Reduce the number of levels in the hierarchies, reduce the number of dimensions in the composite, or do not aggregate over all dimensions at once.

ORA-36610: (XSLMS00) Unable to locate a message file for OLAP message: <varname>value</varname>

Cause: An internal OLAP DML program in the EXPRESS Analytic Workspace failed to retrieve a user message.

Action: Contact support.

ORA-36612: (XSLMS01) invalid OLAP message number: <varname>value</varname>

Cause: An internal OLAP DML program in the EXPRESS Analytic Workspace attempted to retrieve a non-existent message.

Action: Contact support.

ORA-36616: (XSAGMODHIER01) There is a cycle formed by MODEL <varname>workspace object</varname> and other embedded or containing models with the same dimension, <varname>workspace object</varname>.

Cause: Inclusion of a dynamic model formed a cycle in the named dimension.

Action: Edit the models involving this dimension to remove the cycle.

ORA-36617: (XSAGMODHIER02) There is a self-cycle equation in MODEL <varname>workspace object</varname>.

Cause: The model for relation modification included a self-cycle equation.

Action: Remove the self-cycle equation from the model.

ORA-36618: (XSAGMODDIM00) <varname>workspace object</varname> is not a valid dynamic model for AGGMAP.

Cause: The model failed one of the following tests: 1) only one dimension (aside from LAG/LEAD dimensions); 2) assignment to dimension values only; 3) a single simple solution block; 4) no time-series functions with variable step values.

Action: Edit the model so that it conforms to the above requirements.

ORA-36620: (XSAGMODDIM01) MODEL <varname>workspace object</varname> cannot find the matching embedded model.

Cause: AGGMAP ADD model could not find the matching embedded model.

Action: Add the matching embedded model to the AGGMAP.

ORA-36621: (XSAGMODDIM02) You cannot AGGREGATE the individual partition using static model <varname>workspace object</varname> because a partition dimension or its deriver <varname>workspace object</varname> appears in the equation of the step or simultaneous block.

Cause: An attempt was made to AGGREGATE the individual partition using the static model with the partition dimension in the equation of the step or simultaneous block.

Action: AGGREGATE the variable instead of the individual partition.

ORA-36622: (XSAGMODLIST00) <varname>workspace object</varname> cannot be added to the AGGMAP <varname>workspace object</varname> because it is not a valid MODEL.

Cause: An object specified in AGGMAP ADD was not a model.

Action: Specify the name of a model.

ORA-36626: (XSAGMODLIST02) MODEL <varname>workspace object</varname> was skipped because there is already a MODEL by that name attached to AGGMAP <varname>workspace object</varname>.

Cause: An attempt was made to add the same model to the AGGMAP twice.

Action: None required.

ORA-36628: (XSAGMODLIST03) MODEL <varname>workspace object</varname> could not be added to AGGMAP <varname>workspace object</varname>.

Cause: The dimension of the model did not match a hierarchy of the aggmap.

Action: Add a RELATION statement to the AGGMAP for that dimension.

ORA-36630: (XSDUNION00) An empty base dimension list was specified in the concat dimension definition.

Cause: An empty concat dimension list was specified.

Action: Specify a valid list of dimensions when defining a concat dimension.

ORA-36632: (XSDUNION01) The concat dimension <varname>workspace object</varname> is not currently defined as UNIQUE.

Cause: Attempt was made to CHGDFN a concat, which is already non-unique, to NOT UNIQUE.

Action: Since the concat is already non-unique, this command is unnecessary.

ORA-36634: (XSDUNION02) INTEGER dimension <varname>workspace object</varname> cannot be used as a concat dimension base.

Cause: The user cannot specify INTEGER base dimensions when defining a concat dimension.

Action: Change the datatype of the INTEGER base dimension, or omit it from the concat.

ORA-36635: (XSDUNION03) The base dimension <varname>workspace object</varname> has an invalid datatype for use in a UNIQUE concat definition.

Cause: Base dimensions of a unique concat must have TEXT or ID datatypes.

Action: Specify a valid list of dimensions when defining a unique concat dimension.

ORA-36636: (XSDUNION04) The unique concat dimension <varname>workspace object</varname> cannot be changed to NOT UNIQUE, because it is a base of at least one other unique concat dimension.

Cause: A non-unique concat dimension cannot be used as a base of a dependent unique concat.

Action: CHGDFN any dependent unique concat dimensions to NOT UNIQUE and retry.

ORA-36637: (XSDUNION05) The concat dimension cannot be defined as UNIQUE because it has a non-unique concat base dimension <varname>workspace object</varname>.

Cause: A non-unique concat dimension cannot be used as a base of a dependent unique concat.

Action: CHGDFN any non-unique concat base dimensions to UNIQUE and retry.

ORA-36638: (XSDUNION17) Concat dimension <varname>workspace object</varname> cannot be changed to UNIQUE because it has a non-unique concat base dimension <varname>workspace object</varname>.

Cause: A non-unique concat dimension cannot be used as a base of a dependent unique concat.

Action: CHGDFN any non-unique concat base dimensions to UNIQUE and retry.

ORA-36639: (XSDUNION18) UNIQUE cannot be applied to this concat dimension because leaves <varname>workspace object</varname> and <varname>workspace object</varname> share the value <varname>number</varname>.

Cause: Unique concat base dimensions cannot contain duplicate values.

Action: Use MAINTAIN RENAME to change one of the duplicate values and retry.

ORA-36640: (XSDUNION19) Concat dimension <varname>workspace object</varname> cannot be changed to UNIQUE because base dimension <varname>workspace object</varname> does not have a TEXT or ID datatype.

Cause: Base dimensions of a unique concat must have TEXT or ID datatypes.

Action: n/a

ORA-36641: (XSDUNION20) The concat dimension must be defined as UNIQUE because base dimension <varname>workspace object</varname> contains custom member values.

Cause: The UNIQUE keyword was not specified in the concat dimension definition, and is required if any of its base dimensions contain custom member values.

Action: Define the concat as UNIQUE, or remove all base custom member values.

ORA-36642: (XSDUNION06) Concat dimension list contains duplicate leaf dimension <varname>workspace object</varname>.

Cause: Duplicate concat leaf dimension was found.

Action: Remove duplicate concat base dimensions and retry.

ORA-36643: (XSDUNION21) Concat dimension <varname>workspace object</varname> cannot be changed to NOT UNIQUE because it contains custom member values.

Cause: Only UNIQUE concat dimensions can have custom member values or base dimensions which contain custom member values.

Action: Remove all custom member values from the concat and all of its bases, and retry.

ORA-36644: (XSDUNION07) Concat dimension <varname>workspace object</varname> contains a previously detected leaf dimension.

Cause: Concat dimension contains a previously detected leaf dimension.

Action: n/a

ORA-36646: (XSDUNION08) Only concat dimensions can be redefined as UNIQUE. <varname>workspace object</varname> is not a concat dimension.

Cause: UNIQUE keyword was used with an invalid object.

Action: Retry without the UNIQUE keyword.

ORA-36648: (XSDUNION09) Concat dimension <varname>workspace object</varname> is already defined as UNIQUE.

Cause: Attempt to change a concat dimension to UNIQUE, but it is already UNIQUE.

Action: n/a

ORA-36650: (XSDUNION10) Concat dimension <varname>workspace object</varname> cannot be changed to UNIQUE. Leaves <varname>workspace object</varname> and <varname>workspace object</varname> share the value <varname>number</varname>.

Cause: Unique concat base dimensions cannot contain duplicate values.

Action: Use MAINTAIN RENAME to change one of the duplicate values and retry.

ORA-36652: (XSDUNION11) <varname>workspace object</varname> is not a <varname>string</varname> type dimension.

Cause: The CHGDFN BASE ADD command is only valid for concat dimensions.

Action: n/a

ORA-36654: (XSDUNION12) <varname>workspace object</varname> cannot be added to <varname>workspace object</varname> because it conflicts with the dimensions of object <varname>workspace object</varname>.

ORA-36656: (XSDUNION13) <varname>workspace object</varname> is already a member of <varname>workspace object</varname> and cannot be added.

ORA-36658: (XSDUNION14) <varname>workspace object</varname> is not a direct base of <varname>workspace object</varname>.

ORA-36660: (XSDUENG00) The first argument to the <varname>string</varname> function must be an expression yielding a dimension value.

ORA-36662: (XSDUENG01) You cannot apply the <varname>string</varname> function to <varname>workspace object</varname> because it is not a concat dimension.

ORA-36663: (XSDPART01) You must specify a dimension list when defining a PARTITION TEMPLATE.

ORA-36664: (XSDPART02) You must specify a partitioning method and one or more partition dimensions when defining a PARTITION TEMPLATE.

Cause: User tried to define a PARTITION TEMPLATE without a PARTITION BY clause.

Action: Add a PARTITION BY clause.

ORA-36665: (XSDPART03) <varname>workspace object</varname> is not in the dimension list of the PARTITION TEMPLATE.

Cause: While defining a partition template, user attempted to specify a partition dimension that is not a dimension of the partition template itself.

Action: Choose a partition dimension from among the dimensions of the partition template.

ORA-36666: (XSDPART04) <varname>workspace object</varname> is not a concat dimension.

Cause: User tried to define a partition template with PARTITION BY CONCAT(... dim ...) where dim is not a concat dimension.

Action: Only concat dimensions can serve as partition dimensions with CONCAT partitioning. Choose a different partition dimension.

ORA-36667: (XSDPART05) <varname>string</varname> is not a legal CONCAT partition.

Cause: User attempted to use RANGE or LIST syntax in defining a CONCAT partition template.

Action: Use CONCAT partition syntax.

ORA-36668: (XSDPART06) <varname>string</varname> is not a legal RANGE partition.

Cause: User attempted to use CONCAT or LIST syntax in defining a RANGE partition template.

Action: Use RANGE partition syntax.

ORA-36669: (XSDPART07) <varname>string</varname> is not a legal LIST partition.

Cause: User attempted to use RANGE or CONCAT syntax in defining a LIST partition template.

Action: Use LIST partition syntax.

ORA-36670: (XSDPART08) <varname>workspace object</varname> is an INTEGER or NTEXT dimension, or contains an INTEGER or NTEXT dimension. INTEGER and NTEXT dimensions cannot be used as partition dimensions.

Cause: User attempted to define a partition template partitioned by an INTEGER or NTEXT dimension or a concat containing an NTEXT leaf.

Action: Either pick a different partition dimension, or redefine the dimension to use a different datatype.

ORA-36671: (XSDPART09) Leaves of <varname>workspace object</varname> have different datatypes. A partition dimension cannot have more than one datatype when RANGE partitioning is used.

Cause: User attempted to define a range partition template with a concat partition dimension, and the concat had two leaf dimensions with different datatypes.

Action: Pick a different partition dimension.

ORA-36672: (XSDPART10) A RANGE or LIST PARTITION TEMPLATE can only have a single partition dimension.

Cause: User attempted to define a RANGE or LIST partition template with more than one partition dimension.

Action: Remove all but one of the dimensions from the PARTITION BY RANGE(...) or PARTITION BY LIST(...) clause of the partition template definition.

ORA-36673: (XSDPART11) Use simple leaf values to identify concat dimension values in a VALUES LESS THAN clause, rather than the <LEAF: VALUE> format.

Cause: When defining a RANGE partition template with a concat dimension for the partition dimension, the user attempted to define a range using the <LEAF: VALUE> format of a concat dimension value.

Action: Use just the leaf value. Instead of "VALUES LESS THAN <leaf: value>", just say, "VALUES LESS THAN value".

ORA-36674: (XSDPART12) Invalid dimension value starting at <varname>string</varname>.

Cause: When defining a RANGE or LIST partition template, the user specified an invalid value in a VALUES LESS THAN or VALUES clause. An "invalid value" can be one of two things: a value whose datatype does not match the partition dimension's datatype, or a non-constant value.

Action: Modify the offending VALUES LESS THAN or VALUES phrase.

ORA-36675: (XSDPART13) A RANGE or LIST PARTITION TEMPLATE cannot have a conjoint for its partition dimension.**ORA-36676: (XSDPART14) Missing dimension list for <varname>string</varname>.**

Cause: User attempted to define a CONCAT partition template, and didn't supply a list of dimensions for one of the partition definitions.

Action: Give a dimension list for each partition.

ORA-36677: (XSDPART15) Duplicate value in value lists of <varname>number</varname> and <varname>number</varname>

Cause: In a LIST PARTITION TEMPLATE definition, a value appeared in more than one value list, or more than once within a single value list.

Action: List each value only once.

ORA-36678: (XSDPART16) <varname>workspace object</varname> is missing from one or more partition dimension lists.

Cause: In the definition of a partition template, one of the partitions had a dimension list that did not contain all the dimensions of the partition template.

Action: Add the offending dimension to the partition's dimension list, or delete it from the partition template's dimension list. If using CONCAT partitioning and the missing dimension is a partition dimension, add to the partition dimension list any leaf of the partition dimension or any concat of leaves of the partition dimension.

ORA-36679: (XSDPART17) <varname>workspace object</varname> contains a leaf (<varname>workspace object</varname>) that is not part of the partition dimension <varname>workspace object</varname>.

Cause: In the definition of a CONCAT partition template, one of the partitions was dimensioned by a dimension that is "concat-related" to a partition dimension, meaning it shares some leaves with the partition dimension, but it contained some leaves that are not in the partition dimension.

Action: Either modify the dimensionality of the partition template to include a concat dimension that contains all the desired leaves, or pick a different dimension for the partition.

ORA-36680: (XSDPART18) <varname>workspace object</varname> is not a dimension of the PARTITION TEMPLATE.

Cause: In the definition of a partition template, one of the partitions was dimensioned by a dimension that was not given in the dimension list of the partition template.

Action: Remove the offending dimension from the partition's dimension list, or add it to the partition template's dimension list.

ORA-36681: (XSDPART19) Partitions `<varname>string</varname>` and `<varname>string</varname>` are out of order.

Cause: In the definition of a range partition template, a partition with a lower range boundary was listed after a partition with a higher range boundary.

Action: Alter the order of the partition definition list.

ORA-36682: (XSDPART20) Partition name `<varname>string</varname>` appears twice.

Cause: User gave a list of AW partitions in which some partition name appeared twice.

Action: Remove all but the first instance of the partition name from the list.

ORA-36683: (XSDPART21) Partition `<varname>string</varname>` dimensioned by more than one composite.

Cause: It is illegal to define a partition template in which one of the partitions is dimensioned by more than one composite.

Action: Make sure that the partition template being defined has at most one composite per partition.

ORA-36684: (XSDPART22) You cannot rename values of DIMENSION `<varname>workspace object</varname>` because it is the partition dimension of RANGE PARTITION TEMPLATE `<varname>workspace object</varname>`

Cause: User attempted to rename a value of a dimension that serves as the partition dimension of some RANGE or LIST partition template.

Action: It is not possible to rename values in such a dimension without deleting all RANGE and LIST partition templates that are partitioned by it.

ORA-36685: (XSDPART23) Only CONCAT partition templates can be subpartitioned.

Cause: User attempted to define a RANGE or LIST partition template with one or more partitions dimensioned by another partition template.

Action: Use only regular dimensions and composites to dimension each partition of the RANGE or LIST template.

ORA-36686: (XSDPART24) Value `<varname>number</varname>` is not in partition `<varname>number</varname>`.

Cause: User attempted to reorganize a list partition template by removing a value from some partition's list, but the value was not in the list.

Action: Ensure that the given values match the given partition.

ORA-36687: (XSDPART25) You cannot use compressed composite `<varname>workspace object</varname>` to dimension multiple partitions of the partition template, because its dimension list includes the PARTITION BY dimension `<varname>workspace object</varname>`.

Cause: The specified PARTITION BY dimension also occurred in the dimension list of a compressed composite used to dimension multiple partitions.

Action: Ensure that no PARTITION BY dimension occurs among the bases of the compressed composite used to dimension multiple partitions.

ORA-36688: (NTEXTCNV00) Error during conversion from TEXT to NTEXT.

Cause: An unknown character set conversion error occurred when converting a TEXT value to an NTEXT value.

Action: Unknown.

ORA-36691: (NTEXTCNV02) Invalid escape sequence in argument to UNISTR function: <varname>string</varname>.

Cause: The user called the UNISTR function on a string that had an invalid escape sequence. The only valid escape sequences in UNISTR are 1.) an escape-escape sequence, and 2.) an escape, followed by exactly four hexadecimal digits.

Action: Make sure that all escape sequences in UNISTR arguments are exactly four hexadecimal digits. To represent codepoints whose value is less than 0x1000, use preceding zeros. WRONG: 0x10; RIGHT: 0x0010.

ORA-36692: (XSRELGID24) A level relation must be specified for the GROUPSET and ROLLUP options of GROUPINGID.

Cause: level relation was not specified.

Action: Specify a level relation.

ORA-36693: (XSRELGID25) INHIERARCHY cannot be specified with the GROUPSET and ROLLUP options of GROUPINGID.

Cause: INHIERARCHY option was specified.

Action: Remove INHIERARCHY option.

ORA-36694: (XSRELTBL01) The value cannot be added to dimension <varname>workspace object</varname>.

Cause: Unknown.

Action: Check the context and permission for dimension maintenance.

ORA-36695: (XSRELGID26) The length of GID dimension status is <varname>number</varname>. The length of LEVEL dimension status is <varname>number</varname>.

Cause: GID dimension status did not match LEVEL dimension status.

Action: Change either GID dimension status or LEVEL dimension status.

ORA-36696: (XSRELTBL02) QDR dimension <varname>workspace object</varname> should not be the related dimension of the relation.

Cause: An ineligible dimension was specified in the Qualified Data Reference

Action: Do not attempt to qualify this dimension.

ORA-36698: (XSRELTBL03) QDR dimension <varname>workspace object</varname> should be in the dimension list that dimensions the relation.

Cause: The named dimension was not in the relation's dimension list.

Action: Select only dimensions that are in the relation's dimension list.

ORA-36700: (XSRELTBL04) Dimension <varname>workspace object</varname> cannot be qualified more than once.

Cause: The same dimension was specified more than once in the QDR.

Action: Specify each QDR dimension only once.

ORA-36702: (XSRELTBL05) The format of the HIERHEIGHT function is: \n HIERHEIGHT(relation [,] level)\n level >= 1.

Cause: The HIERHEIGHT function was specified incorrectly.

Action: Make sure the format is correct.

ORA-36704: (XSRELTBL06) <varname>workspace object</varname> should be dimensioned by <varname>workspace object</varname>.

Cause: The level relation is not dimensioned by the source relation dimension.

Action: Make sure the level relation has the correct definition.

ORA-36706: (XSRELTBL07) <varname>workspace object</varname> should be dimensioned by <varname>workspace object</varname> and one level dimension.

Cause: The destination relation has the wrong definition.

Action: Make sure the destination relation has the correct dimensions.

ORA-36708: (XSMXALLOC00) Variable <varname>workspace object</varname> must be dimensioned to be used by the ALLOCATE command.

Cause: The user supplied an undimensioned (scalar) variable to the ALLOCATE command.

Action: Use a dimensioned variable.

ORA-36710: (XSMXALLOC01) TARGETLOG variable <varname>workspace object</varname> must be dimensioned identically to TARGET variable <varname>workspace object</varname>.

Cause: The user attempted to execute ALLOCATE with mismatched TARGET and TARGETLOG variables

Action: Use TARGET and TARGETLOG variables with matching dimensionality.

ORA-36712: (XSMXALLOC02) Relation <varname>workspace object</varname> must be a one-dimensional self-relation to be used as a SOURCE or BASIS with ALLOCATE.

Cause: The user specified an invalid source or basis relation on the ALLOCATE command line.

Action: Modify the relation to be a one-dimensional self-relation.

ORA-36714: (XSMXALLOC03) TARGETLOG variable <varname>workspace object</varname> must have the same data type as TARGET variable <varname>workspace object</varname>.

Cause: The user specified a TARGETLOG variable that had a different data type from the TARGET variable.

Action: Use TARGETLOG and TARGET variables with an identical data type.

ORA-36718: (XSALLOC00) You do not have the necessary permissions to use AGGMAP <varname>workspace object</varname>.

Cause: The user did not have sufficient permissions to run the ALLOCATE command

Action: Change to a user ID with the appropriate permissions, or use objects that you have permission to use.

ORA-36720: (XSALLOC01) To be used with ALLOCATE, your AGGMAP <varname>workspace object</varname> must be defined with the ALLOCMAP command.

Cause: The user used the AGGMAP command to define the AGGMAP, so either the AGGMAP can only be used with the AGGREGATE command, or the AGGMAP has no contents attached to it.

Action: Use the ALLOCMAP command to define the AGGMAP.

ORA-36722: (XSALLOC02) In AGGMAP <varname>workspace object</varname>, you specified an NA or ZERO sourceval but supplied formula <varname>workspace object</varname> as your source for ALLOCATE.

Cause: The user requested that source values be modified during the allocation, but that is not possible when using a formula source.

Action: Either use a VARIABLE source or remove the SOURCEVAL specification for your ALLOCMAP.

ORA-36724: (XSALLOC03) <varname>workspace object</varname> cannot include more dimensions than the source variable.

ORA-36726: (XSALERR00) The character '<varname>character</varname>' is not a valid format specifier for the ALLOCATE error log.

Cause: The user specified an invalid formatter in the ALLOCERRLOGHEADER or ALLOCERRLOGFORMAT options.

Action: Correct the option to have a valid format.

ORA-36728: (XSALERR01) While performing the ALLOCATE command with AGGMAP <varname>workspace object</varname>, the error logging limit of <varname>number</varname> was exceeded.

Cause: The user specified an ERRORLOG MAX value in the ALLOCMAP, but more errors were encountered while performing the allocation.

Action: Either set ERRORLOG NOSTOP, reduce the allocation errors, or increase the ERRORLOG MAX setting

ORA-36730: A deadlock occurred allocating data.

ORA-36731: An NA basis parent cell was encountered.

ORA-36732: A value was less than the FLOOR specification.

ORA-36733: A value exceeded the CEILING specification.

ORA-36734: A value was less than the MIN specification.

ORA-36735: A value exceeded the MAX specification

Cause: .

Action: n/a

ORA-36736: Renormalizing data

ORA-36737: The logging limit was exceeded.

ORA-36738: Falling back to NAOOPERATOR after deadlock.

ORA-36739: Redistributing remainder with REMOPERATOR.**ORA-36740: A CHILDLOCK was detected in your valueset**

Cause: .

Action: n/a

ORA-36741: A source was OVER ALLOCATED to its children**ORA-36761: (XSLANGDM01) Analytic workspace <varname>string</varname> already contains a dimension (%J) with the <varname>string</varname> property.**

Cause: An attempt was made to apply this property to more than one dimension in the AW.

Action: Remove the property from the named dimension and try the command again.

ORA-36762: (XSLANGDM02) You cannot modify the <varname>string</varname> property of %J because analytic workspace <varname>string</varname> is attached in MULTI mode.

Cause: An attempt was made to add or delete a \$DEFAULT_LANGUAGE property in an AW attached in multiwriter mode.

Action: Attach the AW in a different mode.

ORA-36763: (XSAGGCNTMOVE01) Aggregation variable <varname>workspace object</varname> cannot have itself as an AGGCOUNT.

Cause: An attempt was made to turn a variable into its own AGGCOUNT.

Action: Select a different AGGCOUNT variable.

ORA-36764: (XSAGGCNTMOVE02) AGGCOUNT variable <varname>workspace object</varname> must be of type INTEGER, not <varname>string</varname>.

Cause: An attempt was made to create a non-INTEGER AGGCOUNT.

Action: Select an INTEGER AGGCOUNT variable.

ORA-36765: (XSAGGCNTMOVE03) A <varname>string</varname> aggregation variable cannot have a <varname>string</varname> AGGCOUNT.

Cause: The specified AGGCOUNT variable did not have the same permanence as the aggregation variable.

Action: Select an AGGCOUNT variable with the same TEMPORARY or PERMANENT attribute as the aggregation variable.

ORA-36766: (XSAGGCNTMOVE04) <varname>workspace object</varname> cannot be used as an AGGCOUNT because it has an AGGCOUNT.

Cause: The specified AGGCOUNT variable had its own AGGCOUNT

Action: Select a different variable, or remove the AGGCOUNT using CHGDFN.

ORA-36767: (XSAGGCNTMOVE05) <varname>workspace object</varname> cannot be used as an AGGCOUNT while there are permissions applied to it.

Cause: The specified AGGCOUNT variable had its own permissions distinct from those on the aggregation variable.

Action: Select a different AGGCOUNT variable, or remove the permissions. In some cases this may require an UPDATE before the command can succeed.

ORA-36768: (XSAGGCNTMOVE06) An aggregation variable and its AGGCOUNT must have the same base dimensions.

Cause: An AGGCOUNT variable was specified with different base dimensions than the aggregation variable.

Action: Select an AGGCOUNT variable with exactly the same base dimensions as the aggregation variable.

ORA-36778: (XSPGTRLOW) The amount of available temporary storage is still low. Free some temporary storage immediately. You can do so, for example, by UPDATING or DETACHING an analytic workspace.

Cause: Ran out of temporary tablespace storage.

Action: Increase the amount of temporary tablespace storage.

ORA-36779: Invalid parameter value.

Cause: The specified value for OLAP_PAGE_POOL_SIZE initialization parameter was out of range. OLAP_PAGE_POOL_SIZE must be between 2097152 and 2147483647. Additionally, you cannot use a fixed-size OLAP page pool with multiple tablespace block sizes. OLAP_PAGE_POOL_SIZE remains unmodified.

Action: None

ORA-36780: (IOSEC01) Current Directory Alias is not set. Cannot complete <varname>string</varname>.

ORA-36782: (IOSEC02) Directory Alias used in <varname>string</varname> does not exist, or you do not have sufficient privileges to access it.

ORA-36784: (IOSEC03) <varname>string</varname> is an invalid directory or file name.

ORA-36786: (IOSEC04) File <varname>string</varname> does not exist or cannot be accessed.

ORA-36788: (IOSEC05) Access to the directory specified by <varname>string</varname> denied.

ORA-36790: (IOSEC06) Access to the file <varname>string</varname> denied.

ORA-36792: (IOSEC07) Error accessing file <varname>string</varname>.

ORA-36800: (XSTBLFUNC00) The OLAP_TABLE function can only have a single LOOP statement within the LIMITMAP

Cause: The OLAP table function given used more than one LOOP statement.

Action: It is currently impossible to specify more than one LOOP composite, either remove one of the statements (and loop densely over relevant dimensions), or create a new composite that encompasses both loops and have a single loop statement refer to that.

ORA-36802: (XSTBLFUNC01) The OLAP_TABLE function must contain a DATAMAP that executes a FETCH command or a LIMITMAP.

Cause: There is no limitmap on the table function and either the datamap does not contain a fetch, or it errored before the fetch was called.

Action: Check the datamap for errors, make sure that it executes a fetch statement, if it is not intended to execute the fetch then make sure that the table function has a valid limitmap.

ORA-36804: (XSTBLFUNC02) The OLAP_TABLE function encountered an error while parsing the LIMITMAP.

Cause: Invalid LIMITMAP syntax, or the name resolution failure of an ANALYTIC WORKSPACE OBJECT.

Action: Check the syntax of the limit map, check that the OLAP_TABLE function refers to a valid analytic workspace, check that all analytic workspace objects within the limitmap actually exist within the analytic workspace

ORA-36806: (XSTBLFUNC03) The OLAP_TABLE function refers to an invalid ADT attribute: <varname>string</varname>.

Cause: The limitmap refers to a matching of ADT attribute to AW object, but the ADT attribute is not an element of the specified ADT table. Most commonly this is a typo.

Action: Add the attribute to the ADT, correct the LIMITMAP, or remove the reference from the LIMITMAP.

ORA-36808: (XSTBLFUNC04) The OLAP_TABLE function LEVELREL clause cannot declare <varname>number</varname> ADT fields from <varname>number</varname> AW fields.

Cause: The limitmap has a levelrel clause which has a different number of values in the list to the right of the FROM than it has to the left.

Action: Change the limitmap so that there is a 1:1 mapping of adt and aw elements.

ORA-36810: (XSTBLFUNC05) Analytic workspace object <varname>number</varname> does not exist.

Cause: The limitmap refers to a non-existent aw object.

Action: Change the limitmap or define the object

ORA-36812: (XSTBLFUNC06) Invalid Syntax at '?'.

Cause: The limitmap has a question mark character outside the context of a string.

Action: Fix the limitmap

ORA-36814: (XSTBLFUNC07) The datatype of the column used in the ROW2CELL clause of a LIMITMAP must be RAW(16).

Cause: Datatype of column used in ROW2CELL clause of a LIMITMAP is not RAW(16).

Action: Change datatype to RAW(16).

ORA-36815: (XSTBLFUNC08) The OLAP_TABLE has attempted to use an AW single row function with the aw_attach parameter set to DURATION QUERY.

Cause: The OLAP_TABLE aw_attach parameter was set to DURATION QUERY.

Action: Change the OLAP_TABLE aw_attach parameter to DURATION SESSION.

ORA-36816: (XSTBLFUNC09) The <varname>workspace object</varname> dimension is of datatype <varname>string</varname> which does not support custom member upserts.

Cause: Custom members were attempted to be added via an upsert to a dimension that does not support them

Action: Disable the AW Hash optimization for this query

ORA-36817: (XSTBLFUNC10) The LIMITMAP LOOP clause specifies an invalid type of object. <varname>workspace object</varname> must be a DIMENSION or COMPOSITE.

Cause: An invalid type of object was specified in the LOOP clause.

Action: Correct the LOOP clause.

ORA-36818: (XSTBLFUNC11) A LIMITMAP DIMENSION clause specifies an invalid type of object. <varname>workspace object</varname> must be a DIMENSION.

Cause: An invalid type of object was specified in the DIMENSION clause.

Action: Correct the DIMENSION clause.

ORA-36819: (XSTBLFUNC12) <varname>workspace object</varname> cannot be used in a LIMITMAP <varname>string</varname> clause.

Cause: An invalid type of object was specified in a LIMITMAP clause.

Action: Correct the LIMITMAP clause.

ORA-36820: (XSLMINF00) The LIMITMAPINFO function encountered an error while parsing the LIMITMAP.

Cause: Invalid LIMITMAP syntax.

Action: Correct the syntax of the limit map.

ORA-36821: (XSJPUSH00) An error occurred while attempting to push a join of 2 AW tables.

Cause: Unknown.

Action: Re-execute the query with parameter `_optimizer_aw_join_push_enabled = FALSE`.

ORA-36825: (XSTBLFUNC13) An error occurred expanding the cube_name argument in the OLAP table function

Cause: Incorrect metadata or invalid cube name

Action: Correct the metadata.

ORA-36826: (XSTBLFUNC14) OLAP C Looper is disabled by event 37395

Cause: init.ora event 37395 includes level 8 which disables the OLAP C looper

Action: Remove event level 8 and use explicit FETCH function for OLAP_TABLE

ORA-36830: (XSLMGEN00) Object <varname>string</varname>. <varname>string</varname> does not exist

Cause: The object does not exist

Action: Check view token for errors

ORA-36831: (XSLMGEN01) View token cannot be NA

Cause: A NA was passed as the view token

Action: Pass in a valid view token

ORA-36832: (XSLMGEN02) View token cannot be greater than 4000 bytes

Cause: A view token was greater than 4000 bytes

Action: Pass in a view token less than 4000 bytes

ORA-36833: (XSLMGEN03) View token cannot be blank

Cause: A blank was passed as the view token

Action: Pass in a valid view token

ORA-36834: (XSLMGEN04) Column tag is greater than 30 bytes

Cause: A value greater than 30 bytes was passed as the column tag

Action: Pass in a column tag of 30 bytes or less

ORA-36835: (XSLMGEN05) Dimension <varname>string</varname>.<varname>string</varname> hierarchy <varname>string</varname> level <varname>string</varname> is missing a COLUMNNAME property value

Cause: The COLUMNNAME property has no value

Action: Add a value to COLUMNNAME property

ORA-36836: (XSLMGEN06) The dimensionality of object <varname>string</varname>.<varname>string</varname> is different than the view token

Cause: The dimensionality of the cube does not match the view token

Action: Check view token for unrelated hierarchies clauses

ORA-36837: (XSLMGEN07) Object owner <varname>string</varname> is different than <varname>string</varname>

Cause: The object owners are different

Action: Make the object owners match

ORA-36838: (XSLMGEN08) Dimension <varname>string</varname>.<varname>string</varname> attribute <varname>string</varname> is missing a COLUMNNAME property value

Cause: The COLUMNNAME property has no value

Action: Add a value to COLUMNNAME property

ORA-36839: (XSLMGEN09) Cube <varname>string</varname>.<varname>string</varname> measure <varname>string</varname> is missing a COLUMNNAME property value

Cause: The COLUMNNAME property has no value

Action: Add a value to COLUMNNAME property

ORA-36840: (XSLMGEN10) Cube <varname>string</varname>.<varname>string</varname> has no measures

Cause: The cube has no measures

Action: Add a measure to the cube

ORA-36841: (XSLMGEN11) Dimension <varname>string</varname>.<varname>string</varname> was not found

Cause: The view token referenced a dimension that does not exist

Action: Pass in a dimension that does exist

ORA-36842: (XSLMGGEN12) Hierarchy <varname>string</varname>.<varname>string</varname>.<varname>string</varname> was not found

Cause: The view token referenced a hierarchy that does not exist

Action: Pass in a hierarchy that does exist

ORA-36843: (XSLMGGEN13) Dimension <varname>string</varname>.<varname>string</varname> hierarchy <varname>string</varname> is missing a PHYSICALNAME property value

Cause: The property PHYSICALNAME has no value

Action: Populate the property PHYSICALNAME with a value

ORA-36844: (XSLMGGEN14) Dimension <varname>string</varname>.<varname>string</varname> is missing a <varname>string</varname> property value

Cause: The dimension is missing a required property

Action: Check dimension property values

ORA-36845: (XSLMGGEN15) Owner is greater than 30 bytes

Cause: The owner passed is greater than 30 bytes

Action: Pass in an owner that is 30 bytes or less

ORA-36846: (XSLMGGEN16) AW name is greater than 30 bytes

Cause: The AW name passed is greater than 30 bytes

Action: Pass in an AW name that is 30 bytes or less

ORA-36847: (XSLMGGEN17) AW name is blank

Cause: The AW name passed is blank

Action: Pass in an AW name that has a value

ORA-36848: (XSLMGGEN18) Object name <varname>string</varname> is different than <varname>string</varname>

Cause: The object names are different

Action: Make the object names match

ORA-36849: (XSLMGGEN19) AW owner does not match View token owner

Cause: The AW owner does not match the View token owner

Action: Match AW owner to View token object owner

ORA-36850: (XSLMGGEN20) View token <varname>string</varname> is not correct

Cause: The view token is not correct

Action: Check view token syntax for errors

ORA-36861: (XSTFRC01) SQL Cache ID parameter is invalid or missing.

Cause: SQL Cache ID parameter is required to identify SQL cache to query

Action: Supply a valid SQL Cache ID. Normally, users should not call OLAP Random Access Cursor table function themselves and therefore should not encounter this error.

ORA-36862: (XSTFRC02) Column number for this SQL Cache must be between 1 and <varname>number</varname>. Specified column number <varname>number</varname> is invalid.

Cause: Column Map references a column number that is greater than the maximum column number in SQL Cache

Action: Reference a correct column number. Normally, users should not call OLAP Random Access Cursor table function themselves and therefore should not encounter this error.

ORA-36871: (XSFTDSC01) Object <varname>string</varname> cannot be used to define a column in a LIMITMAP.

Cause: The object cannot define a column in LIMITMAP most likely because it is of a wrong type such as, for example, a Worksheet.

Action: Remove the reference from the LIMITMAP.

ORA-36872: (XSTFDSC02) Column type specifier cannot be used when the table function data type is specified.

Cause: Column type can only be used with implicitly-specified table functions

Action: Remove column type from reference from the LIMITMAP or remove the explicit table function data type specification.

ORA-36873: (XSTFDSC03) Column type must be specified explicitly.

Cause: Missing column type specification.

Action: Please, make sure to specify a column type in COLUMN MAP. Normally, users should not call OLAP Random Access Cursor table function themselves and therefore should not encounter this error.

ORA-36874: (XSTFDSC04) Expression <varname>string</varname> cannot be used to define a column in a LIMITMAP.

Cause: The expression cannot define a column in LIMITMAP most likely because it is of a wrong type such as, for example, a Worksheet.

Action: Remove the reference from the LIMITMAP.

ORA-36875: (XSTFDSC05) LIMITMAP is missing or is not a string literal.

Cause: Table functions that have an automatic ADT require LIMITMAP to be a string literal.

Action: Either specify ADT for the table function or specify LIMITMAP as a string literal.

ORA-36876: (XSTFDSC06) The column datatype <varname>string</varname> is not supported in OLAP table functions.

Cause: The object type layer does not support column datatype.

Action: Use a supported column datatype.

ORA-36881: (XSSRF00) The OLAP DML ROW2CELL function can only be used in a LIMITMAP.

Cause: Using the ROW2CELL function outside of the LIMITMAP.

Action: Remove use of the ROW2CELL function.

ORA-36882: (XSSRF01) The second parameter of an AW single row function cannot be NULL.

Cause: The second parameter of the AW single row function was NULL

Action: Pass a valid OLAP DML expression as the second parameter of the AW single row function

ORA-36883: (XSSRF02) The first parameter of an AW single row function cannot be NULL.

Cause: The first parameter of the AW single row function was NULL

Action: Make sure the column specified in the LIMITMAP ROW2CELL clause is the first parameter of the AW single row function.

ORA-36884: (XSSRF03) The value of the first parameter of the AW single row function is incorrect.

Cause: The column specified in the LIMITMAP ROW2CELL clause was not the first parameter of the AW single row function.

Action: Make sure the column specified in the LIMITMAP ROW2CELL clause is the first parameter of the AW single row function.

ORA-36885: (XSSRF04) Error rewriting OLAP DML expression. Column name too big

Cause: The column name specified in the OLAP DML expression was larger than 30 bytes.

Action: Make sure the column name specified in the OLAP DML expression is less than or equal to 30 bytes.

ORA-36886: (XSSRF05) Error rewriting OLAP DML expression. Rewritten expression is greater than <varname>number</varname> bytes

Cause: The rewritten OLAP DML expression was larger than the output buffer.

Action: Create a smaller OLAP DML expression.

ORA-36887: (XSSRF06) Error rewriting OLAP DML expression. Column name <varname>string</varname> is not a valid ADT column.

Cause: The column name passes does not exist.

Action: Only reference columns that exist.

ORA-36902: (XSAGDNG143) In AGGMAP <varname>workspace object</varname>, the MODEL <varname>workspace object</varname> is not a model over a base dimension of the AGGMAP.

Cause: Model may include equations others than dimension values, or blocks other than simple blocks.

Action: Make sure model only includes the simple blocks with dimension values.

ORA-36904: (XSAGDNG144) In AGGMAP <varname>workspace object</varname>, RELATION <varname>workspace object</varname> occurs after a

dynamic model. The dynamic model must be the last calculation within the AGGMAP.

Cause: Before the current relation, dynamic model exists.

Action: Make sure the dynamic model is the last statement.

ORA-36910: (XSAGDNGL47) In AGGMAP <varname>workspace object</varname>, DYNAMIC MODEL <varname>workspace object</varname> can only edit the top level of its matching relation hierarchy.

Cause: The model attempted to edit a child node in the relation hierarchy.

Action: Remove this attempt from the model definition.

ORA-36912: (XSAGDNGL48) In AGGMAP <varname>workspace object</varname>, MODEL <varname>workspace object</varname> cannot be simultaneous.

Cause: The aggmap contained a simultaneous model.

Action: Change the model definition so that it is no longer simultaneous.

ORA-36913: (XSAGDNGL49) In AGGMAP <varname>workspace object</varname>, LOAD_STATUS object <varname>workspace object</varname> must be an undimensioned VALUESET over the relation dimension.

Cause: The object referred to by the LOAD_STATUS clause of the aggmap wasn't an undimensioned valueset over the related dimension

Action: Change the aggmap definition so that it doesn't refer to an invalid object

ORA-36914: (XSAGDNGL50) In AGGMAP <varname>workspace object</varname>, LOAD_STATUS valueset <varname>workspace object</varname> contains both a child and its ancestor.

Cause: The LOAD_STATUS valueset is not allowed to contain both a dimension value and an ancestor of that value.

Action: Perform a limit remove ancestors on the valueset and confirm that the result matches the intended load.

ORA-36920: (XSVPMTOPART01) <varname>workspace object</varname> cannot become anonymous because it has properties.

Cause: The OLAP DML command would result in a named object becoming an anonymous object, but the object had one or more properties associated with it.

Action: Remove the properties using the PROPERTY command. In some cases an UPDATE may be required before the command can proceed.

ORA-36921: (XSVPMTOPART02) <varname>workspace object</varname> and <varname>workspace object</varname> are not in the same analytic workspace.

Cause: The OLAP DML command requires certain objects to be in the same analytic workspace, and the command string specified objects from two different analytic workspaces.

Action: If more than one analytic workspace is attached to the session, make sure that the object names given in the command are unique across all attached analytic workspaces. Use qualified object names (QON's) if necessary.

ORA-36922: (XSVPMTOPART03) <varname>workspace object</varname> is the target of an external partition of a partitioned variable.

Cause: An attempt was made to perform some prohibited operation on a variable which is itself a partition of some other variable.

Action: If desired, use the CHGDFN command to DROP the partition from the partitioned variable, and then run the command again.

ORA-36923: (XSVPMTOPART04) <varname>workspace object</varname> is not a LIST or RANGE PARTITION TEMPLATE.

Cause: The user ran a command that only operates on a LIST or RANGE partition template (or a variable dimensioned by a LIST or RANGE partition template) on some other kind of analytic workspace object.

Action: Rerun the command on a LIST or RANGE partition template or a variable dimensioned by a LIST or RANGE partition template.

ORA-36924: (XSVPMTOPART05) <varname>workspace object</varname> is not in a COMPOSITE.

Cause: The OLAP DML command expected that the variable would be dimensioned by a composite containing the specified dimension, the specified dimension within a composite.

Action: Rerun the command on some variable is dimensioned by a composite containing the specified dimension.

ORA-36925: (XSVPMTOPART06) Partition <varname>number</varname> has some values that are not in <varname>workspace object</varname>.

ORA-36926: (XSVPMTOPART07) More than one variable is dimensioned by <varname>workspace object</varname>.

ORA-36930: Cannot start a recursive call to Oracle OLAP because a ROLLBACK past an UPDATE to an attached analytic workspace has been performed.

Cause: ROLLBACK past the UPDATE of one of the attached Analytic Workspaces was called. A recursive Oracle OLAP call cannot be made until the control returns to the initial OLAP call and the affected Analytic Workspaces detached.

Action: Change the called SQL procedure to avoid the ROLLBACK

ORA-36940: (XSDPENG00) You cannot apply the PARTITION function to <varname>workspace object</varname> because it is not a partition template.

ORA-36950: (XSFCAST22) The list of <varname>string</varname> values cannot have more than <varname>number</varname> members. You supplied <varname>number</varname>.

Cause: There are more than the maximum number of OFFSET or PERIODICITY values.

Action: Remove some of the values.

ORA-36951: (XSFCAST28) The ALLOCLAST parameter cannot be set to YES unless PERIODICITY specifies more than one cycle.

Cause: ALLOCLAST was set to YES when PERIODICITY specified a single value rather than a list of nested cycles.

Action: Set ALLOCLAST to FALSE (the default), or specify more than one value for PERIODICITY (in the form of a parenthesized list).

ORA-36952: (XSFCAST23) You cannot specify a cycle number when querying the <varname>string</varname> forecasting option.

Cause: A cycle number was specified in a call to FCQUERY to retrieve forecast data not related to a cycle.

Action: Remove the cycle specification from the call to FCQUERY.

ORA-36954: (XSFCAST24) The cycle number must be between 1 and <varname>number</varname>. You specified <varname>number</varname>.

Cause: A cycle number less than 1 or greater than the maximum value was specified in a call to FCQUERY.

Action: Specify a number in the indicated range.

ORA-36956: (XSFCAST25) There are only <varname>number</varname> PERIODICITY values. You cannot specify more OFFSET values.

Cause: More OFFSET values were specified than PERIODICITY values.

Action: Supply only as many OFFSETs as there are PERIODICITY values.

ORA-36958: (XSFCAST26) The OFFSET value for cycle <varname>number</varname> cannot be greater than the cycle's PERIODICITY, which is <varname>number</varname>. You specified <varname>number</varname>.

Cause: The OFFSET for a cycle exceeded the PERIODICITY for that cycle.

Action: Supply an OFFSET less than or equal to the PERIODICITY for the corresponding cycle.

ORA-36960: (XSFCAST27) The value of the <varname>string</varname> expression must be an odd number. You specified <varname>number</varname>.

Cause: An even number was given for an option that requires an odd number.

Action: Supply an odd number or let the option default.

ORA-36961: Oracle OLAP is not available.

Cause: The user attempted to utilize functionality found only in Oracle OLAP, but OLAP has not been enabled in the executable.

Action: Install the Oracle OLAP option

ORA-36962: (XSRELTBL08) <varname>string</varname> is not a valid <varname>workspace object</varname>.

Cause: The specified value does not exist in the dimension.

Action: Specify an existing value of the dimension.

ORA-36963: (XSRELTBL16) INHIERARCHY object <varname>workspace object</varname> should be a valid valueset or boolean variable.

Cause: Invalid valueset or variable was specified.

Action: Specify a valid valueset or variable.

ORA-36964: (XSRELTBL09) <varname>workspace object</varname> is not a valid level relation.

Cause: The specified level relation was not consistent with the parentage hierarchy.

Action: Fix one or both of the relations involved so that all parents are at a higher level than their children.

ORA-36965: (XSRELTBL17) Invalid LEVELORDER valueset <varname>workspace object</varname>.

Cause: Invalid LEVELORDER valueset was specified.

Action: Specify a valid valueset.

ORA-36966: (XSRELTBL10) <varname>workspace object</varname> must be a dimension.

Cause: The qualified object must be a dimensions.

Action: Remove the named object from the QDR.

ORA-36967: (XSRELTBL18) Invalid INHIERARCHY valueset <varname>workspace object</varname>.

Cause: Invalid valueset was specified.

Action: Specify a valid valueset.

ORA-36968: (XSRELTBL11) Invalid relation <varname>workspace object</varname>.

Cause: Non-object or an object other than a RELATION was specified as source or destination.

Action: Specify RELATION objects.

ORA-36969: (XSRELTBL19) Merged family relation cannot take INHIERARCHY option.

Cause: INHIERARCHY option was specified.

Action: Remove INHIERARCHY option.

ORA-36970: (XSRELTBL12) <varname>workspace object</varname> must be a self-relation.

Cause: The specified source relation was not a self-relation.

Action: Specify a self-relation as the source.

ORA-36971: (XSRELTBL19) Merged family relation cannot take LEVELORDER option.

Cause: LEVELORDER option was specified.

Action: Remove LEVELORDER option.

ORA-36972: (XSRELTBL13) Relation <varname>workspace object</varname> must be dimensioned by <varname>workspace object</varname>.

Cause: Destination relation is not dimensioned by source relation dimension.

Action: Give a correct destination relation.

ORA-36974: (XSRELTBL14) <varname>workspace object</varname> is not a BOOLEAN variable dimensioned by all the dimensions of the hierarchy.

Cause: The named variable had either the wrong data type or the wrong dimensions.

Action: Specify a BOOLEAN variable dimensioned by all the dimensions of the hierarchy.

ORA-36975: (XSRELTBL15) You must specify a USING clause naming a relation with same level dimension as LEVELORDER valueset <varname>workspace object</varname>.

Cause: USING was omitted from the HIERHEIGHT command, or specified a relation containing values of a different dimension than the LEVELORDER valueset.

Action: Provide a USING clause naming a relation containing values from the correct level dimension. -----

ORA-36976: (XSRELGID00) Invalid GROUPINGID destination relation or variable <varname>workspace object</varname>.

Cause: Non-Object or invalid relation or invalid variable.

Action: Specify the valid relation or variable.

ORA-36977: (XSRELGID17) The GROUPINGID command does not support hierarchies with more than 126 levels.

Cause: The user specified a hierarchy with more than 126 levels.

Action: Decrease the number of levels in the hierarchy.

ORA-36978: (XSRELGID01) <varname>workspace object</varname> must be a self-relation.

Cause: Source relation is not a self-relation.

Action: Specify a self-relation as the source relation.

ORA-36979: (XSRELGID18) Property <varname>number</varname> can only be set by the GROUPINGID command.

Cause: You tried to set the \$GID_DEPTH property.

Action: Stop to set the \$GID_DEPTH property.

ORA-36980: (XSRELGID02) Variable <varname>workspace object</varname> must have a numeric data type.

Cause: The destination variable does not have a numeric data type.

Action: Make sure the variable is numeric.

ORA-36981: (XSRELGID19) The format of the GROUPINGID function is:\n\n GROUPINGID(gidrel1 [gidrel2]...)

Cause: Bad syntax

Action: Correct syntax

ORA-36982: (XSRELGID03) The destination variable/relation <varname>workspace object</varname> must be dimensioned by all dimensions of the source relation <varname>workspace object</varname> that have more than one value in status.

Cause: Destination variable/relation does not have enough dimensionality to hold the result from the multi-dimensional source relation.

Action: Either limit the status of hierarchy dimensions or redefine the destination variable/relation with the extended dimensionality

ORA-36983: (XSRELGID20) The groupingid relation <varname>workspace object</varname> repeats.

Cause: The groupingid relation repeated.

Action: Remove the duplicated groupingid relation.

ORA-36984: (XSRELGID04) A value cannot be inserted into dimension <varname>workspace object</varname>.

ORA-36985: (XSRELGID21) The source relation can be omitted only when using both surrogate GID and level order valueset.

Cause: Source relation was not specified.

Action: Specify the source relation or both surrogate gid and level order valueset.

ORA-36986: (XSRELGID05) Relation <varname>workspace object</varname> must be dimensioned by <varname>workspace object</varname>.

Cause: The destination relation is not dimensioned by the dimension of the source relation.

Action: Redefine the destination relation or choose another relation with the correct dimensionality.

ORA-36988: (XSRELGID06) The related dimension of relation <varname>workspace object</varname> must be of type NUMBER.

Cause: The related dimension of the destination relation has the wrong data type.

Action: Redefine the destination relation or choose another relation whose related dimension is of type NUMBER.

ORA-36989: (XSRELGID23) GROUPSET and ROLLUP options in GROUPINGID require the destination relation.

Cause: Either variable or surrogate dimension was specified as destination.

Action: Specify the destination relation.

ORA-36990: (XSRELGID07) The level relation <varname>workspace object</varname> should be dimensioned by a level dimension.

Cause: The level relation is not dimensioned by a level dimension.

Action: Redefine the level relation or choose another relation with the correct dimensionality.

ORA-36991: (XSRELGID08) The level relation and level order valueset provide inconsistent level mappings.

Cause: There is a conflict between the hierarchy/level relation and the level order valueset.

Action: Choose objects that do not conflict.

ORA-36992: (XSRELGID09) A level relation is needed to produce a surrogate dimension gid.

Cause: A level relation was not specified.

Action: Specify a level relation.

ORA-36993: (XSRELGID10) OBJECT <varname>workspace object</varname> must be a VARIABLE, RELATION, or a numeric SURROGATE DIMENSION based on the level dimension <varname>workspace object</varname>.

Cause: not a surrogate dimension, or the surrogate dimension is not based on the level dimension.

Action: modify/change the surrogate dimension.

ORA-36994: (XSRELGID11) The SURROGATE DIMENSION <varname>workspace object</varname> must be numeric.

Cause: The surrogate dimension is not numeric

Action: Change the surrogate dimension as numeric

ORA-36995: (XSRELGID12) There are duplicate values in the surrogate dimension gid. Use the levelorder option to resolve the ambiguity.

Cause: more than 1 hierarchies in the current computing scope.

Action: use inhierarchy to limit

ORA-36996: (XSRELGID13) Valueset <varname>workspace object</varname> should be defined over dimension <varname>workspace object</varname>.

Cause: Valueset doesn't match the dimension

Action: Change the valueset's dimension

ORA-36997: (XSRELGID14) For variable or relation grouping ids, a level relation is needed when a level order valueset is specified.

Cause: no level relation exists with level order valueset.

Action: provide the level relation.

ORA-36998: (XSRELGID15) LEVEL ORDER VALUESET <varname>workspace object</varname> and LEVEL RELATION <varname>workspace object</varname> have the different level dimensions.

Cause: either level order valueset or level relation has wrong level dimension.

Action: choose the correct level dimension

ORA-36999: (XSRELGID16) OBJECT <varname>workspace object</varname> is not a surrogate dimension, a source relation must be specified when creating any non-surrogate grouping id.

Cause: use variable/relation gid without providing the source relation

Action: use the surrogate or provide the source relation

ORA-37000: (NOTALIAS00) <varname>workspace object</varname> is not an ALIAS DIMENSION of <varname>workspace object</varname>.

Cause: The user specified an object which is not alias dimension of the first dimension

Action: Specify an alias dimension of the first dimension

ORA-37001: You have one or more attached but unupdated analytic workspaces.

Cause: The user has attempted to shut down OLAP, but they have active analytic workspaces whose changes have not been saved.

Action: Either issue the update command to update the AWs, or pass TRUE as the force parameter to `dbms_aw.shutdown()`

ORA-37002: Oracle OLAP failed to initialize. Please contact Oracle OLAP technical support.

Cause: A severe error occurred while initializing OLAP.

Action: Contact support (and possibly OLAP development) for help in debugging the issue.

ORA-37003: (AWLISTALL01) <varname>number</varname> readers

Cause: used in AW(LISTALL) output formatting when %d is 0

Action: None

ORA-37004: (AWLISTALL02) <varname>number</varname> reader

Cause: used in AW(LISTALL) output formatting when %d is 1

Action: None

ORA-37005: (AWLISTALL03) <varname>number</varname> readers

Cause: used in AW(LISTALL) output formatting when %d is > 1

Action: None

ORA-37006: (AWLISTALL04) <varname>number</varname> writers

Cause: used in AW(LISTALL) output formatting when %d is 0

Action: None

ORA-37007: (AWLISTALL05) <varname>number</varname> writer

Cause: used in AW(LISTALL) output formatting when %d is 1

Action: None

ORA-37008: (AWLISTALL06) <varname>number</varname> writers

Cause: used in AW(LISTALL) output formatting when %d is > 1

Action: None

ORA-37010: (XSACQUIRE_DIFFAW) When using the CONSISTENT WITH clause, all objects must come from the same analytic workspace.

Cause: The ACQUIRE command cannot keep objects from several workspaces consistent with each other

Action: Omit the CONSISTENT WITH clause or make sure all objects being acquired belong to the same analytic workspace.

ORA-37011: (XSACQUIRE_LOCKED) Object <varname>workspace object</varname> is locked by another user.

Cause: Could not acquire (or acquire consistent) the object, since it is locked by another user

Action: Try to acquire this object later

ORA-37012: (XSACQUIRE_TIMEOUT) Object <varname>workspace object</varname> is locked by another user and the WAIT timed out.

Cause: Could not acquire (or acquire consistent) the object for a while, since it is locked by another user

Action: Try to acquire this object later

ORA-37013: (XSACQUIRE_DEADLOCK) Cannot wait to acquire object <varname>workspace object</varname>, since doing so would cause a deadlock.

Cause: Waiting to acquire the object would cause a deadlock

Action: Release some other object that another user is waiting for and try to acquire this object again.

ORA-37014: (XSACQUIRE_ACQUIRED) Object <varname>workspace object</varname> is already acquired.

Cause: The object is already acquired

Action: Do not try to acquire this object again

ORA-37015: (XSACQUIRE_YNRESYNC) Object <varname>workspace object</varname> is ambiguously listed to be acquired both with and without RESYNC.

Cause: The object is listed in with resync list and no resync list. Such usage is ambiguous as to the user's intent on preserving or not preserving private changes.

Action: Do not list the object both with and without RESYNC

ORA-37016: (XSACQUIRE01) You must specify objects to acquire for the ACQUIRE command.

Cause: A list of objects to acquire with or without resync is missing

Action: Specify the list of objects to acquire

ORA-37018: (XSACQUIRE03) Multiwriter operations are not supported for object <varname>workspace object</varname>.

Cause: Multiwriter presently does not work for this object type

Action: Attach the AW in RW or EXCLUSIVE modes to modify this object.

ORA-37020: (XSMULTI01) Analytic workspace <varname>string</varname> is not in MULTI mode.

Cause: The workspace for an object is not in multiwriter mode. Hence, no multiwriter operations are allowed on the objects in the workspace

Action: Attach the workspace in the multiwriter mode or do not use multiwriter commands with it.

ORA-37021: (XSMULTI02) Object <varname>workspace object</varname> is not acquired.

Cause: The object must be acquired for this multiwriter operation

Action: Do not use this multiwriter operation on an object that is not acquired

ORA-37023: (XSMLTUPD01) Object <varname>workspace object</varname> cannot be updated without dimension <varname>workspace object</varname>.

Cause: One cannot update an object if it is dimensioned by a maintained dimension without updating that dimension or if the object is a relation and the dimension is its target.

Action: Include the maintained dimension in the update list

ORA-37026: (XSMLTRESYNC01) Object <varname>workspace object</varname> cannot be resynced without dimension <varname>workspace object</varname>.

Cause: One cannot resync an object if it is dimensioned by a maintained dimension without updating that dimension or if the object is a relation and the dimension is its target.

Action: Include the maintained dimension in the update list

ORA-37027: (XSMLTRESYNC02) Object <varname>workspace object</varname> cannot be resynced without modified object <varname>workspace object</varname> because they share a modified composite dimension.

Cause: When one resyncs an object that is dimensioned by a composite dimension, the composite dimension is resynced automatically, dropping all new tuples. This cannot be done, however, if the automatic resync of the composite dimension might cause data in an object that shares the composite dimension to become NA.

Action: Resync both objects together. Alternatively, you can try to acquire the other object (that will ensure that the composite dimension is locked in the latest generation and will not be resynced when resyncing the first object), resync the first object, and release the other object.

ORA-37028: (XSMLTRESYNC03) Object <varname>workspace object</varname> cannot be resynced without modified object <varname>workspace object</varname> because they share a modified dimension map.

Cause: When one resyncs an object that is dimensioned by a dimension map, the dimension map is resynced automatically, dropping all changes. This cannot be done, however, if the automatic resync of the dimension map might cause data in an object that shares the dimension map to become NA.

Action: Resync both objects together. Alternatively, you can try to acquire the other object (that will ensure that the dimensions map is locked in the latest generation and will not be resynced when resyncing the first object), resync the first object, and release the other object.

ORA-37030: (XSMLTMAINT01) You cannot maintain <varname>workspace object</varname> because it is not ACQUIRED.

Cause: One cannot maintain a dimension in a multiwriter AW if it is not acquired.

Action: Acquire the dimension first.

ORA-37031: (XSMLTMAINT02) You cannot DELETE values of dimension <varname>workspace object</varname> in MULTI mode.

Cause: DELETE is allowed in multiwriter mode only for SESSION dimension members

Action: Attach the AW in a R/W mode and perform the DELETE operation

ORA-37032: (XSMLTMAINT03) You cannot MAINTAIN partition template <varname>workspace object</varname> in MULTI mode.

Cause: User attempted to add or remove values from a LIST partition template's lists while the AW containing the partition template was attached in multiwriter mode.

Action: Do the maintenance in read only or read-write mode.

ORA-37035: (XSMLTDCL01) You can only DEFINE SESSION objects in analytic workspace <varname>string</varname> because it is attached in MULTI mode.
Cause: Persistent object definition in multiwriter mode is not allowed.

Action: Do all persistent object definitions in read-write mode.

ORA-37036: (XSMLTDCL02) You cannot DELETE objects in analytic workspace <varname>string</varname> because it is attached in MULTI mode.
Cause: One cannot delete objects in an analytic workspace attached in MULTI mode.

Action: Do all object in read-only or read-write mode.

ORA-37037: (XSMLTDCL03) You cannot RENAME objects in analytic workspace <varname>string</varname> because it is attached in MULTI mode.
Cause: One cannot rename objects in an analytic workspace attached in MULTI mode.

Action: Do all persistent object maintenance in read-write mode.

ORA-37038: (XSMLTDCL04) You cannot change definitions of objects in analytic workspace <varname>string</varname> because it is attached in MULTI mode.

Cause: One cannot used CHGDFN command on objects in an analytic workspace attached in MULTI mode.

Action: Do all persistent object maintenance in read-write mode.

ORA-37039: (XSMLTDCL05) You cannot maintain triggers in analytic workspace <varname>string</varname> because it is attached in MULTI mode.
Cause: One cannot use TRIGGER command on objects in an analytic workspace attached in MULTI mode.

Action: Do all persistent object maintenance in read-write mode.

ORA-37040: (XSACQUIRE_DEP_LOCKED) Composite, concat, dimension map, or internal partition <varname>workspace object</varname> is locked by another user.

Cause: Some object required locking a composite, concat, dimension map, or internal partition, which is locked by another user

Action: Try to acquire this object later

ORA-37041: (XSACQUIRE_DEP_TIMEOUT) Composite, concat, dimension map, or internal partition <varname>workspace object</varname> is locked by another user and the WAIT timed out.

Cause: Some object required locking a composite, concat, dimension map, or internal partition, which could not be locked for a while, since it is locked by another user

Action: Try to acquire this object later

ORA-37042: (XSACQUIRE_DEP_DEADLOCK) Cannot wait to acquire composite, concat, dimension map, or internal partition <varname>workspace object</varname>, since doing so would cause a deadlock.

Cause: Some object required locking a composite, concat, dimension map, or internal partition, which would cause a deadlock

Action: Release some other object that another user is waiting for and try to acquire this object again.

ORA-37043: (XSACQUIRE_DEP_OLDGEN) Composite, concat, dimension map, or internal partition <varname>workspace object</varname> cannot be locked, since another user has committed a new one already.

Cause: Some object required locking a composite, concat, dimension map, or internal partition in the present generation, which is not possible, since a newer generation already exists.

Action: Try to acquire the main object with resync

ORA-37044: (XSACQUIRE_OLDGEN) Cannot acquire object <varname>workspace object</varname> without resync.

Cause: Could not acquire the object without resync because another user has committed a newer version of it already.

Action: Try to acquire this object with resync parameter

ORA-37050: (XSMLTDCL06) You cannot use the RELATION command with <varname>workspace object</varname> because analytic workspace <varname>string</varname> is attached in MULTI mode.

Cause: One cannot use the RELATION command on objects in an analytic workspace attached in MULTI mode.

Action: Change the default relation when the analytic workspace is attached in RW or Exclusive mode.

ORA-37051: (XSAWRESREV01) You cannot RESYNC or REVERT analytic workspace <varname>string</varname> because one or more objects have been defined in it during this session.

ORA-37052: (XSAWRESREV02) You cannot RESYNC or REVERT analytic workspace <varname>string</varname> because one or more objects have been deleted from it during this session.

ORA-37053: (XSAWRESREV03) You cannot RESYNC or REVERT analytic workspace <varname>string</varname> because one or more of its objects have had their definitions changed during this session.

ORA-37054: (XSAWRESREV04) You cannot RESYNC or REVERT analytic workspace <varname>string</varname> because it contains one or more unnamed composites renamed during this session.

ORA-37055: (XSAWRESREV05) You cannot RESYNC analytic workspace <varname>string</varname> because another session has changed the definitions of one or more objects it contains.

ORA-37056: (XSAWRESREV06) You cannot RESYNC or REVERT analytic workspace <varname>string</varname> because one or more SESSION dimensions or composites are based on <varname>workspace object</varname>.

ORA-37060: (XSMCSESS08) <varname>number</varname> is not a valid custom member in dimension <varname>workspace object</varname>.

Cause: No custom member or invalid custom member

Action: Create the custom member or use the correct custom member

ORA-37069: You may not execute a parallel OLAP operation against the EXPRESS AW.

Cause: A parallel OLAP command attempted to execute against EXPRESS.

Action: Contact Oracle support. Users should not see this message.

ORA-37070: You may not execute OLAP DML programs in a parallel query session.

Cause: The user attempted to execute a DML program inside of a parallel query session, perhaps in parallel aggregate

Action: Adjust the job so that a program does no need to be executed, or disable parallelism

ORA-37071: You may not execute a parallel OLAP operation against updated but uncommitted AW <varname>string</varname>.

Cause: The user attempted to use a parallel feature against an AW which they updated but which has not been committed

Action: Commit the current changes

ORA-37072: (XSMCSESS00) Object <varname>workspace object</varname> has the wrong type.

Cause: The object is not of the object type specified in the APPLY clause

Action: Specify the correct object type

ORA-37073: (XSMCSESS01) Applied relation <varname>workspace object</varname> must be dimensioned by dimension <varname>workspace object</varname>.

Cause: Applied relation has the different dimension from the dimension currently being maintained

Action: Maintain relation dimension

ORA-37074: (XSMCSESS02) Variable <varname>workspace object</varname> has no default aggmap.

Cause: The applied variable has no default aggmap

Action: Use variable with the default aggmap or aggmap directly

ORA-37075: (XSMCSESS03) You cannot rename a session-only dimension value.

Cause: The user tried to apply MAINTAIN RENAME to a SESSION value.

Action: Delete the old value and add a new one with the desired name.

ORA-37076: (XSMCSESS04) <varname>workspace object</varname> is not the type of dimension that can have session-only values. Valid types are TEXT, NTEXT, ID, NUMBER, and CONCAT with the UNIQUE attribute.

Cause: The user tried to add a SESSION value to a dimension type that does not support SESSION values.

Action: Use a dimension of one of the listed types.

ORA-37077: (XSMCSESS05) Object <varname>workspace object</varname> is specified more than once.

Cause: The same object name was given more than once in the apply clause or in the step dimension list.

Action: Remove the repetitions.

ORA-37078: (XSMCSESS06) The dimension being maintained (<varname>workspace object</varname>) cannot also be used as a step dimension.

Cause: The dimension being maintained was named as a step dimension.

Action: Remove this dimension from the list of step dimensions.

ORA-37079: (XSMCSESS07) Aggmap <varname>workspace object</varname> cannot be used for AGGREGATE.

Cause: The current aggmap may be for ALLOCATE

Action: Choose the correct aggmap for AGGREGATE only.

ORA-37080: Advice requested for hierarchy with too many levels

Cause: A request was made for advice on a hierarchy with more levels than are supported.

Action: Only request advice for hierarchies with less than 32 levels.

ORA-37082: Invalid percent

Cause: A request was made for advice with an illegal percent value.

Action: Request between 0 and 100 percent precomputation.

ORA-37083: Invalid object <varname>string</varname>

Cause: A request was made for advice with an illegal object name.

Action: Request using valid object names.

ORA-37084: Output valueset <varname>string</varname> must match <varname>string</varname>'s dimensionality

Cause: A request was made for advice for a relation with different dimensionality from the output valueset.

Action: Request using objects that have the same dimensionality.

ORA-37086: <varname>string</varname> is not a valueset

Cause: An operation was attempted that supports only valuesets as precompute expressions in an aggmap, yet a different kind of precompute expression was used.

Action: Replace this limit expression with an equivalent valueset and retry the operation. General precompute expressions are deprecated.

ORA-37093: (XSOBJORG_BAD_CUBE) invalid property "<varname>string</varname>" specified for cube "<varname>string</varname>.<varname>string</varname>"

Cause: Either the specified cube did not have an AW organization, or the specified property did not apply to cubes.

Action: Specify a property that applies to cubes and a cube with an AW organization.

ORA-37094: (XSOBJORG_BAD_DIM) invalid property "<varname>string</varname>" specified for dimension "<varname>string</varname>.<varname>string</varname>"

Cause: Either the specified dimension did not have an AW organization, or the specified property did not apply to dimensions.

Action: Specify a property that applies to dimensions and a dimension with an AW organization.

ORA-37095: (XSOBJORG_BAD_MEAS) invalid property "<varname>string</varname>" specified for measure "<varname>string</varname>.<varname>string</varname>.<varname>string</varname>"

Cause: Either the specified measure did not have an AW organization, or the specified property did not apply to measures.

Action: Specify a property that applies to measures and a measure with an AW organization.

ORA-37096: (XSOBJORG_BAD_ATTR) invalid property "<varname>string</varname>" specified for base attribute "<varname>string</varname>.<varname>string</varname>.<varname>string</varname>"

Cause: Either the specified base attribute did not have an AW organization, or the specified property did not apply to base attribute.

Action: Specify a property that applies to base attributes and a base attribute with an AW organization.

ORA-37097: (XSOBJORG_BAD_DIM_LEVEL) invalid property "<varname>string</varname>" specified for dimension level "<varname>string</varname>.<varname>string</varname>.<varname>string</varname>"

Cause: Either the specified dimension level did not have an AW organization, or the specified property did not apply to dimension levels.

Action: Specify a property that applies to dimension levels and a dimension level with an AW organization.

ORA-37098: (XSOBJORG_BAD_MODEL) invalid property "<varname>string</varname>" specified for dimension calculation model "<varname>string</varname>.<varname>string</varname>.<varname>string</varname>"

Cause: Either the specified dimension calculation model did not have an AW organization, or the specified property did not apply to dimension calculation models.

Action: Specify a property that applies to dimension calculation models and a dimension calculation model with an AW organization.

ORA-37099: (XSOBJORG_BAD_DIMALITY) invalid property "<varname>string</varname>" specified for dimensionality "<varname>string</varname>.<varname>string</varname>.<varname>string</varname>"

Cause: Either the specified dimensionality did not have an AW organization, or the specified property did not apply to dimensionalities.

Action: Specify a property that applies to dimensionalities and a dimensionality with an AW organization.

ORA-37100: (XSUNCOMMITTED) You have one or more updated but uncommitted analytic workspaces.

Cause: The user has attempted to shut down OLAP, but they have active analytic workspaces whose changes have not been saved.

Action: Issue the commit command. ---- 37101 - 37110 are reserved for partitioned variables ----

ORA-37101: (XSVPART01) Partitioning information can only be given for variables dimensioned by a PARTITION TEMPLATE.

Cause: User attempted to define or reference an AW object with the "all internal" phrase or internal / external partition list, but the object was not a variable, was not dimensioned by a partition template, or was an already existing target of an external partition.

Action: Eliminate phrases specific to partitioned variables from the definition string, or dimension the variable by a partition template.

ORA-37102: (XSVPART02) Invalid partition name <varname>string</varname>.

Cause: The user gave an invalid partition name. When defining a partitioned variable, this message indicates that the partition name does not exist in the partition template. In any other context, it indicates that the partitioned variable or partition template does not have a partition with the given name.

Action: Supply a valid partition name.

ORA-37103: (XSVPART03) The dimensionality or datatype of <varname>workspace object</varname> does not match the dimensionality or datatype of the partition.

Cause: User attempted to define a partitioned variable with an external partition, but the target of the external partition had incorrect dimensionality or datatype.

Action: Pick a different target variable. The target variable must be dimensioned by exactly the same dimensions, composites, and partition templates, in the same order, as are specified in the partition template, and must have the exact same datatype (including width, precision, and scale) as the partitioned variable itself.

ORA-37104: (XSVPART04) A partitioned variable must be dimensioned by a single partition template only.

Cause: User attempted to define a partitioned variable with more than one partition templates, or a partition template and one or more other dimensions, in the dimension list.

Action: Use only a partition template in the dimension list of the variable. All dimensions of the variable must be included in the definition of the partition template.

ORA-37105: (XSVPART05) Only variables dimensioned by a CONCAT PARTITION TEMPLATE can have <varname>string</varname> partitions.

Cause: User attempted to create an external partition on a partitioned variable, but the variable was dimensioned by a RANGE or LIST partition template.

Action: Declare the partition INTERNAL instead of EXTERNAL, or use a CONCAT partition template in place of the RANGE or LIST partition template.

ORA-37106: (XSVPART06) Invalid partition name <varname>number</varname>.

Cause: The user gave an invalid partition name.

Action: Supply a valid partition name.

ORA-37107: (XSVPART07) Attempt to write to non-existent partition of <varname>workspace object</varname>.

Cause: Some action attempted to write data to a partitioned variable, but the variable didn't have a partition for that data. This can result from a partition template that does not assign all possible dimension values to some subcube, or from a partitioned

variable that does not have a partition for one of the partitions defined by the partition template.

Action: Make sure that the cell being written is assigned to some partition by the partition template, and that the variable has an actual partition associated with the partition of the template. Use the CHGDFN template DEFINE... command to define new partitions within the template, and the CHGDFN variable ADD... command to add new partitions to the variable. Alternatively, the PARTWRITEERR can be set to false, in which case data being written to a non-existent partition will be silently discarded.

ORA-37108: (XSVPART08) <varname>workspace object</varname> has an AGGCOUNT, but <varname>workspace object</varname> does not.

Cause: An attempt was made to add a partition to a partitioned variable. Either the partition was defined WITH AGGCOUNT and the partitioned variable was not, or the partitioned variable was defined WITH AGGCOUNT and the partition was not.

Action: Use CHGDFN ADD AGGCOUNT or CHGDFN DROP AGGCOUNT to either add or remove an AGGCOUNT from either the partition or the partitioned variable.

ORA-37109: (XSVPART09) Partition <varname>workspace object</varname> and its parent variable <varname>workspace object</varname> cannot both be specified.

Cause: Partition and its parent partition were operated upon together.

Action: Remove the partition from the object list.

ORA-37111: Unable to load the OLAP API sharable library: (<varname>string</varname>)

Cause: This happens if: (1) the OLAP API sharable library is missing. (2) a sharable library upon which the OLAP API sharable library depends is missing. (3) the OLAP API sharable library is the wrong version.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Customer Support.

ORA-37113: OLAP API initialization error: (<varname>string</varname>)

Cause: OLAP API initialization failed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Customer Support.

ORA-37114: OLAP API bootstrap error: (<varname>string</varname>)

Cause: OLAP API bootstrapping failed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Customer Support.

ORA-37115: New OLAP API history is not allowed

Cause: If there are active OLAP API sessions, it is not allowed to start a new OLAP API history by setting _olapi_history_retention parameter to true.

Action: Wait until all active OLAP API sessions terminate before resetting _olapi_history_retention parameter to true.

ORA-37116: OLAP API table function error: (<varname>string</varname>)

Cause: OLAP API table function failed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Customer Support.

ORA-37117: olapi history retention has been disabled

Cause: Under certain circumstances, for example, when the database is read only, olapi history retention is not possible because it requires updating persistent tables from time to time. If olapi history retention has been disabled, setting `_olapi_history_retention` parameter to true has no effect.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Customer Support.

ORA-37118: The OLAP API library was not preloaded.

Cause: In shared-server mode, the OLAP API library should be loaded during process initialization to ensure that the C++ virtual table addresses are identical in all shared-server processes. The OLAP API session was executing in a process in which the library had not been loaded.

Action: Set option `_XSOLAPI_LOAD_AT_PROCESS_START` to `SHARED_SERVER` or `ALWAYS`, restart the instance, and try again.

ORA-37119: Incompatible OLAP API library load address

Cause: The OLAP API session was executing in a process in which the OLAP API sharable library was loaded which was at a different address than the process in which the OLAP API session originated.

Action: Set option `_XSOLAPI_LOAD_AT_PROCESS_START` to `ALWAYS`, restart the instance, and try again.

ORA-37120: expression string is null

Cause: expression parser received a null string for syntax analysis.

Action: Prepare a non-null and well-formed MDX query string and try again.

ORA-37121: AW Spreadsheet invalidated

Cause: While this cursor was open, a command was issued that changed the underlying data to become inconsistent.

Action: Perform the query again, avoid performing dimension maintenance and cache clears during spreadsheet processing.

ORA-37122: AW Session cache disabled

Cause: A SQL Spreadsheet was attempted while the AW Session cache was disabled.

Action: Enable the session cache and perform the query again.

ORA-37123: (XSCCOMP17) Can not AGGREGATE <varname>workspace object</varname>(partition <varname>number</varname>) because it depends on unaggregated compressed partition <varname>number</varname>.

Cause: attempted to use a feature not supported by CC's in the current AW format

Action: Remove the unsupported feature from the aggmap, or upgrade the AW

ORA-37124: (XSCCOMP16) COMPRESSED COMPOSITES with <varname>string</varname> are not supported in analytic workspace <varname>string</varname> because it has not been upgraded to version <varname>string</varname>.

Cause: attempted to use a feature not supported by CC's in the current AW format

Action: Remove the unsupported feature from the aggmap, or upgrade the AW

ORA-37125: (XSCCOMP00) Invalid use of a COMPRESSED COMPOSITE.

ORA-37126: (XSCCOMP01) The COMPRESSED COMPOSITE <varname>workspace object</varname> can only be used as a base of a single variable.

Cause: The user attempted to DEFINE a variable dimensioned by a COMPRESSED COMPOSITE, but that COMPRESSED COMPOSITE is already being used by another VARIABLE.

Action: Create a second COMPRESSED COMPOSITE for the second VARIABLE or add a measure dimension to the first variable.

ORA-37127: (XSCCOMP02) The COMPRESSED COMPOSITE <varname>workspace object</varname> must be last in the dimension list.

Cause: The user attempted to DEFINE a variable dimensioned by a COMPRESSED COMPOSITE, but gave a slower varying dimension in the dimension list.

Action: Put the COMPRESSED COMPOSITE last in the dimension list when defining the VARIABLE.

ORA-37128: (XSCCOMP20) The partition template <varname>workspace object</varname> has already used the COMPRESSED COMPOSITE <varname>workspace object</varname>.

Cause: The COMPRESSED COMPOSITE specified for either a variable or partition template is already in use in another partition template.

Action: Define a different COMPRESSED COMPOSITE.

ORA-37129: (XSCCOMP04) Cannot aggregate over COMPRESSED COMPOSITE <varname>workspace object</varname> using AGGMAP <varname>workspace object</varname>. All static MODEL statements must precede all RELATION statements over the bases of the COMPRESSED COMPOSITE.

Cause: The AGGMAP was defined with a MODEL statement after a RELATION statement over a base of the COMPRESSED COMPOSITE.

Action: Change the AGGMAP so that the MODEL statements appear before the RELATION statements.

ORA-37130: (XSCCOMP05) Cannot aggregate over COMPRESSED COMPOSITE <varname>workspace object</varname> using AGGMAP <varname>workspace object</varname> because you must specify AGGINDEX OFF when there is a PRECOMPUTE clause on a RELATION over base <varname>workspace object</varname>.

Cause: A PRECOMPUTE clause was specified in the AGGMAP for a RELATION over a base of a COMPRESSED COMPOSITE, but AGGINDEX was ON

Action: Remove the PRECOMPUTE clause from the AGGMAP, or add AGGINDEX OFF

ORA-37131: (XSCCOMP06) Cannot aggregate over COMPRESSED COMPOSITE <varname>workspace object</varname> using AGGMAP <varname>workspace object</varname> because the OPERATOR <varname>string</varname> is not supported for bases of a COMPRESSED COMPOSITE.

Cause: The user specified an aggregation OPERATOR that is not supported by COMPRESSED COMPOSITES.

Action: Use a MODEL for the calculation, or use an uncompressed COMPOSITE.

ORA-37132: (XSCCOMP07) Incremental aggregation over the dense DIMENSION <varname>workspace object</varname> is not supported when aggregating a VARIABLE dimensioned by a COMPRESSED COMPOSITE.

Cause: The status of the specified dimension did not include all detail cells.

Action: Add all detail cells to the status of the dimension and reissue the AGGREGATE command.

ORA-37133: (XSCCOMP08) You cannot write into an aggregated VARIABLE dimensioned by a COMPRESSED COMPOSITE. Use the CLEAR AGGREGATES command to reenable write access.

Cause: The user attempted to store a value into to a variable dimensioned by a compressed composite, and the variable had previously been precomputed using the AGGREGATE command. Once the AGGREGATE command is run on a variable dimensioned by a compressed composite, it becomes read-only until the computed values are removed with the CLEAR command.

Action: Run the CLEAR AGGREGATES command to remove the computed values from the variable and then rerun the failed operation. Note that CLEAR AGGREGATES will remove all the data computed during the last AGGREGATE command on this variable.

ORA-37134: (XSCCOMP09) You cannot add new values to <varname>workspace object</varname> because it includes positions for precomputed aggregate values.

Cause: The user attempted to create a new position in a compressed composite, either directly (using MAINTAIN MERGE or MAINTAIN ADD) or by storing a value into the variable dimensioned by the compressed composite. This is not allowed when the variable has been precomputed using the AGGREGATE command. Once the AGGREGATE command is run on a variable dimensioned by a compressed composite, the compressed composite becomes read-only until the computed values are removed with the CLEAR command.

Action: Run the CLEAR AGGREGATES command to remove the computed values from the variable and then rerun the failed operation. Note that CLEAR AGGREGATES will remove all the data computed during the last AGGREGATE command on this variable.

ORA-37135: (XSCCOMP19) The COMPRESSED COMPOSITE <varname>workspace object</varname> in the current defined partition template should be unique or global.

Cause: The COMPRESSED COMPOSITE was neither unique nor global. Unique means each subpartition should have different COMPRESSED COMPOSITES; Global means all subpartitions should use the same COMPRESSED COMPOSITE if they use any COMPRESSED COMPOSITE.

Action: Redefine the partition template.

ORA-37136: (XSCCOMP11) Cannot ROLLUP dimension <varname>workspace object</varname> which is a base of COMPRESSED COMPOSITE <varname>workspace object</varname>, use AGGREGATE instead.

Cause: The user ran ROLLUP on a variable dimensioned by a COMPRESSED COMPOSITE.

Action: Instead of using ROLLUP, generate an aggmap and use AGGREGATE

ORA-37137: (XSCCOMP12) You cannot CHGDFN <varname>workspace object</varname> because it is a COMPRESSED COMPOSITE.

Cause: The user tried to CHGDFN a compressed composite

Action: If the change is desired then delete the old composite and create a new one.

ORA-37138: (XSCCOMP13) You cannot delete values from <varname>workspace object</varname> because it is an aggregated COMPRESSED COMPOSITE.

Cause: The user tried to MAINTAIN DELETE from an aggregated COMPRESSED COMPOSITE.

Action: In order to perform this sort of maintenance the composite must first be cleared. This can be done by running the CLEAR AGGREGATES command on the variable dimensioning the composite. Note that this will remove all data computed during the last AGGREGATE command.

ORA-37139: (XSCCOMP14) Cannot AGGREGATE <varname>workspace object</varname> using AGGMAP <varname>workspace object</varname> because you can not AGGREGATE a variable dimensioned by a COMPRESSED COMPOSITE using an AGGMAP with a PROTECT clause.

Cause: The user tried to AGGREGATE a variable dimensioned by a COMPRESSED COMPOSITE with an AGGMAP that included a PROTECT clause.

Action: Modify the aggmap or create a new aggmap that does not include a PROTECT clause and reaggregate.

ORA-37140: (XSCCOMP15) Cannot AGGREGATE partitioned variable <varname>workspace object</varname> using AGGMAP <varname>workspace object</varname> because you cannot use the base of a COMPRESSED COMPOSITE as a partition dimension.

Cause: The user tried to run aggregate on a partitioned variable with a partition dimension that is a base of a COMPRESSED COMPOSITE.

Action: Repartition the data, drop the partition dimension from the aggmap, or don't use COMPRESSED COMPOSITES.

ORA-37141: (XSSQLMDQ01) Invalid host variable syntax for MDQUERY procedure.

Cause: The schema and analytic workspace name for the MDQUERY cursor declaration were incorrectly specified.

Action: Specify the schema and awname as a host variable name preceded by a colon, or as a text literal string of the form 'SCHEMA.AWNAME' or '*.*' (quotes optional).

ORA-37142: (XSSQLMDQ02) Invalid host variable data type for MDQUERY procedure: <varname>string</varname> expected.

Cause: The user specified a host variable that was not of the correct type.

Action: Choose a different host variable.

ORA-37143: (XSSQLMDQ03) <varname>string</varname> is not a valid analytic workspace name.

Cause: The user specified an analytic workspace name not qualified by a schema name, or one or both components of the name exceed the maximum length

Action: Specify a schema-qualified analytic workspace name with components no longer than 30 characters long.

ORA-37144: (MDQUERY01) <varname>string</varname> is not a valid metadata object type for MDQUERY.

Cause: The user specified an unrecognized first argument to MDQUERY

Action: Specify a recognized object type (CUBE or DIMENSION)

ORA-37145: (XSTTS_PLAT) Cannot transport analytic workspace across platforms.

Cause: The user attempted to transport a tablespace containing an analytic workspace from one platform to another.

Action: Use export/import to move an analytic workspace across platforms.

ORA-37146: (XSCCOMP18) The variable <varname>workspace object</varname> is already dimensioned by the COMPRESSED COMPOSITE <varname>workspace object</varname>.

Cause: An attempt was made to define the partition template dimensioned by the COMPRESSED COMPOSITE which had dimensioned the variable.

Action: Define the second COMPRESSED COMPOSITE.

ORA-37147: (XSCCOMP21) The variable <varname>workspace object</varname> must be in the current operation group of the COMPRESSED COMPOSITE <varname>workspace object</varname>.

Cause: The variable dimensioned by the COMPRESSED COMPOSITE was not in the object list of the current operation group. For AGGREGATE, all variables dimensioned by the same COMPRESSED COMPOSITE also must use the same aggmap

Action: Add the variable into the object list of the current operation group.

ORA-37148: (XSCCOMP22) <varname>workspace object</varname> is an aggregated COMPRESSED COMPOSITE.

Cause: Defined the variable or partition template with the aggregated COMPRESSED COMPOSITE.

Action: Clear the COMPRESSED COMPOSITE or use a new COMPRESSED COMPOSITE

ORA-37149: (XSCCOMP23) Individual partitions of the variable dimensiond by <varname>workspace object</varname> cannot be aggregated separately.

Cause: An attempt was made to aggregate partitions of a variable dimensioned by a global COMPRESSED COMPOSITE partition template.

Action: Aggregate the partitioned variable dimensioned by the global COMPRESSED COMPOSITE.

ORA-37150: line <varname>string</varname>, column <varname>string</varname>, <varname>string</varname>

Cause: expression syntax error was found in expression query string.

Action: Check the error message details and make the corrections.

ORA-37151: expression parser initialization error

Cause: expression parser initialization failed

Action: Please report this to Oracle Support Services.

ORA-37152: MDX query error: (<varname>string</varname>)

Cause: An exception occurred while MDX query was processed.

Action: Check the error message details and try again.

ORA-37153: unknown exception caught: (case <varname>string</varname>)

Cause: An unknown exception was caught while MDX query was processed.

Action: Please report it to Oracle Support Services.

ORA-37154: OLAP API initialization error: (case <varname>string</varname>)

Cause: OLAP API initialization failed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support Services.

ORA-37155: OLAP API bootstrap error: (case <varname>string</varname>)

Cause: OLAP API bootstrapping failed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support Services.

ORA-37156: (<varname>string</varname>)

Cause: unknown

Action: Check the error message details.

ORA-37157: expression syntax error was found in expression string but error text was missing

Cause: This happened because the message file was missing.

Action: Make sure that the message file xsous.msb is located in \$ORACLE_HOME/olap/mesg and rerun your expression query.

ORA-37158: Bad clob or varray IN-args: (case <varname>string</varname>)

Cause: When in clob or varray mode, the PL/SQL mappings of OLAP API's IDL interface methods were executed blindly with null clob/varray or non-null clob/varray containing garbages.

Action: Do not blindly execute them as doing so does not make sense unless you understand how OLAP API works internally.

ORA-37159: C++ virtual table addresses become invalid due to session migration in shared server mode.

Cause: Exec-shield is the primary reason that caused this error in shared server mode. When exec-shield is turned on, there is no way to ensure that the C++ virtual table addresses are identical in all shared-server processes.

Action: Set option `_XSOLAPI_FIX_VPTRS` to TRUE, restart the instance, and try again.

ORA-37160: OLAP object does not exist

Cause: The specified OLAP object did not exist.

Action: Use an existing OLAP object instead.

ORA-37161: invalid privilege specified for OLAP object

Cause: An attempt was made to grant or revoke an invalid privilege on an OLAP object.

Action: Specify a valid privilege.

ORA-37162: OLAP error

Cause: An exception was raised by OLAP code.

Action: Check error messages and correct any reported problems.

ORA-37163: cannot delete or truncate AW with dependent CUBES or CUBE DIMENSIONS

Cause: User attempted to delete or truncate an AW which currently has a CUBE or CUBE DIMENSION defined over it

Action: Drop the corresponding CUBE or CUBE DIMENSION before deleting the AW

ORA-37164: The current SQL statement does not support this OLAP object

Cause: The OLAP object is not supported in the current SQL statement.

Action: Use a valid SQL command on the OLAP object.

ORA-37165: cannot use EIF IMPORT into a non-empty Analytic Workspace (<varname>string</varname>.<varname>string</varname>)

Cause: An attempt was made to use EIF IMPORT to populate a non-empty Analytic Workspace.

Action: Ensure that the target Analytic Workspace is empty before populating it with EIF IMPORT.

ORA-37166: (XSOQ_BAD_OBJ) OLAP object "<varname>string</varname>.<varname>string</varname>" does not exist

Cause: The specified OLAP object did not exist.

Action: Use an existing OLAP object instead.

ORA-37167: (XSOQ_BAD_SUBOBJ) OLAP object "<varname>string</varname>.<varname>string</varname>.<varname>string</varname>" does not exist

Cause: The specified OLAP object did not exist.

Action: Use an existing OLAP object instead.

ORA-37168: (XSOBJORG_UNSUPP_OBJ) unsupported OLAP object "<varname>string</varname>.<varname>string</varname>" for OBJORG function

Cause: The specified OLAP object was of a type that is not supported by the OBJORG function.

Action: Specify an OLAP object of a type that the OBJORG function supports.

ORA-37169: (XSOBJORG_UNSUPP_SUBOBJ) unsupported OLAP object "<varname>string</varname>.<varname>string</varname>.<varname>string</varname>" for OBJORG function

Cause: The specified OLAP object was of a type that is not supported by the OBJORG function.

Action: Specify an OLAP object of a type that the OBJORG function supports.

ORA-37170: (XSOBJORG_NA) The top-level object name argument to the OBJORG function cannot be NA.

Cause: You passed NA as the second argument to the OBJORG function.

Action: Pass the name of the top-level object instead.

ORA-37171: dimension sources not specified

Cause: The user passed an empty or null collection to DBMS_AW.ADVISE_SPARSITY

Action: Specify a valid set of dimension sources

ORA-37172: illegal dimension type

Cause: The user specified an invalid member of the DIMTYPE field in the dimension sources argument

Action: Specify one of the valid enumerated values in DBMS_AW

ORA-37173: null dimension source data

Cause: The user specified NULL for one of the members of the dimension sources argument

Action: Specify a value

ORA-37174: source SQL must be a SELECT statement

Cause: The user specified an INSERT, UPDATE, DELETE or other type of SQL statement

Action: Specify a SQL SELECT statement instead

ORA-37175: column <varname>string</varname> is not a column of source data

Cause: A dimension column was specified which did not exist in the input data

Action: Specify one of the columns of the input data

ORA-37176: argument <varname>string</varname> is not valid for the sparsity advisor

Cause: An invalid argument was passed to the advisor

Action: Specify a TABLE, VIEW or SELECT statement instead

ORA-37177: column <varname>string</varname> does not have any leaf values

Cause: The specified dimension column or fact table did not contain any leaf values

Action: Populate the source data

ORA-37178: column <varname>string</varname> has no values

Cause: The specified dimension column did not contain any values

Action: Populate the source data

ORA-37179: expected at least one column for dimension <varname>string</varname>, got <varname>string</varname>

Cause: Not enough columns were specified for the dimension

Action: Specify more source columns, or change the dimension to another type

ORA-37180: expected exactly one column for dimension <varname>string</varname>, got <varname>string</varname>

Cause: Expected a single source column for the dimension. Either none or more than one was specified.

Action: Specify exactly one column, or change the dimension to another type

ORA-37181: expected exactly <varname>string</varname> columns for dimension <varname>string</varname>, got <varname>string</varname>

Cause: Expected a certain number of source columns for the dimension. Either none or the wrong number of columns was specified.

Action: Specify the right number of columns, or change the dimension to another type

ORA-37182: you may only specify one dimension to partition

Cause: The user passed a DIMENSION_SOURCE_T to ADVISE_SPARSITY which specified partitioning on more than one dimension

Action: Remove all but one of the partitioning requests

ORA-37183: illegal value <varname>string</varname> for PARTBY

Cause: The user passed a value other than PARTBY_DEFAULT, PARTBY_NONE or PARTBY_FORCE to DBMS_AW.ADVISE_SPARSITY *Action: Supply a legal value instead

Action: n/a

ORA-37184: illegal value <varname>string</varname> for ADVMODE

Cause: The user passed a value other than ADVICE_DEFAULT, ADVICE_FAST or ADVICE_FULL to DBMS_AW.ADVISE_SPARSITY *Action: Supply a legal value instead

Action: n/a

ORA-37185: length of <varname>string</varname> (<varname>string</varname>) exceeds maximum (<varname>string</varname>)

Cause: The user passed an excessively long value

Action: Specify a legal value

ORA-37186: null child value for parent (<varname>string</varname>) found in parent-child hierarchy

Cause: While reading values for a parent-child hierarchy, a NULL child value was found for a non-NULL parent

Action: Correct the source table or SQL to return value parent and child pairs.

ORA-37187: null parent and child pair found in parent-child hierarchy

Cause: While reading values for a parent-child hierarchy, a row was retrieved which had both null child and parent values.

Action: Correct the source table or SQL to return value parent and child pairs.

ORA-37188: unexpected null result while querying <varname>string</varname>

Cause: While querying the input fact table, the sparsity advisor unexpectedly got no results, possibly due to changes being made during operation.

Action: Retry the operation ensuring that the data is not changed while the sparsity advisor is running / Errors from 37200 - 37399 are reserved for events

ORA-37400: analytic workspace does not exist

Cause: The user attempted to create an OLAP MV or Table on an AW that does not exist.

Action: Specify a valid AW in the ORGANIZATION CUBE clause

ORA-37401: you may not perform this operation on a system analytic workspace

Cause: The user attempted to create a CUBE MV or Table on a system-created AW.

Action: Specify a valid AW in the ORGANIZATION CUBE clause

ORA-37402: analytic workspace object does not exist

Cause: The user attempted to create a CUBE MV or Table mapping to an object that does not exist in the AW.

Action: Specify a valid AW object name in the ORGANIZATION CUBE clause.

ORA-37403: invalid analytic workspace object type

Cause: The user attempted to create a CUBE MV or Table mapping to an object that is not the correct type.

Action: Specify a valid AW object name in the ORGANIZATION CUBE clause.

ORA-37404: Create table as select disallowed for CUBE ORGANIZED tables

Cause: User attempted to create a CUBE ORGANIZED table by doing a create table as select.

Action: Do a create table followed by an insert as select

ORA-37405: unknown ORGANIZATION CUBE keyword

Cause: An unknown keyword was encountered while parsing the ORGANIZATION CUBE clause

Action: Correct the ORGANIZATION CUBE syntax

ORA-37406: invalid option for a CUBE ORGANIZED table

Cause: An attempt to specify one or more options for a CUBE ORGANIZED table such as: [NO]CACHE, NO LOGGING, CLUSTER, (NO)COMPRESS

Action: Remove the illegal option(s)

ORA-37407: invalid column type for a CUBE ORGANIZED table

Cause: A illegal column type is specified in a CUBE ORGANIZED table.

Action: Do not use column types such as LONG, LOB

ORA-37408: Truncate table disallowed for CUBE ORGANIZED tables

Cause: User attempted to perform a TRUNCATE operation on a CUBE ORGANIZED table

Action: Remove data with DELETE or drop the table and recreate it

ORA-37409: cannot delete or truncate AW used by CUBE ORGANIZED table

Cause: User attempted to delete or truncate an AW which currently has a CUBE ORGANIZED table or MV defined over it

Action: Drop the corresponding table or MV before deleting the AW

ORA-37410: cannot delete or modify AW object referenced by CUBE ORGANIZED table

Cause: User attempted to delete, chgdfn, or otherwise modify an object referenced by a CUBE ORGANIZED table or MV

Action: Drop the corresponding table or MV before manipulating the object

ORA-37411: invalid object type

Cause: User referenced an invalid object type

Action: Use an appropriate object

ORA-37412: column not mapped by ORGANIZATION CUBE clause

Cause: Not all columns in the table or MV definition were mapped in the ORGANIZATION CUBE clause

Action: Make sure that all columns are mapped

ORA-37413: column referenced multiple times in ORGANIZATION CUBE clause

Cause: The same column name was referenced multiple times inside of the ORGANIZATION CUBE clause

Action: Supply unique mappings for each column

ORA-37414: dimension without mapping or hierarchy in ORGANIZATION CUBE clause

Cause: A dimension was listed in the ORGANIZATION CUBE clause but no mapping information was supplied

Action: Provide either a column mapping or hierarchy for the dimension

ORA-37415: AW schema must match TABLE or MATERIALIZED VIEW schema

Cause: An ORGANIZATION CUBE table or MV on top of an existing AW must be created in the same schema as the AW

Action: Create the new object in the same schema as the AW

ORA-37416: multiple GROUPING IDs found for ORGANIZATION CUBE

Cause: Multiple GROUPING IDs for the ORGANIZATION CUBE TABLE or MATERIALIZED VIEW

Action: Remove the duplicates

ORA-37417: variable does not have an AGGCOUNT

Cause: A COUNT clause was specified in the ORGANIZATION CUBE description for a variable that does not have an AGGCOUNT

Action: chgdfn the variable to include an AGGCOUNT

ORA-37418: detail query cannot be derived

Cause: If an ORGANIZATION CUBE MV is to automatically derive its loading clause, then its definition query cannot contain set operators (eg UNION ALL), a HAVING clause, START WITH or a SQL MODEL clause. The definition query contains these or other unsupported syntax.

Action: Use an explicit ORGANIZATION CUBE clause, or simplify the defining query.

ORA-37419: ORGANIZATION CUBE clause not allowed in explain mvview

Cause: User tries to explain mvview on a CREATE MATERIALIZED VIEW statement that contains a ORGANIZATION CUBE clause.

Action: Remove the ORGANIZATION CUBE clause from the CREATE MATERIALIZED MATERIALIZED VIEW statement.

ORA-37420: unsupported feature with CUBE ORGANIZED materialized view

Cause: User attempts operations such as creating a mv log on an CUBE ORGANIZED MATERIALIZED VIEW.

Action: Do not do that.

ORA-37421: specified pseudocolumn is not supported by CUBE ORGANIZED tables

Cause: An unsupported pseudocolumn was referenced with a CUBE ORGANIZED table.

Action: Remove the unsupported pseudocolumn.

ORA-37422: illegal attempt to write to a calculated column

Cause: An attempt was made to write to a calculated column which could not be written to.

Action: List only the non-calculated columns in your DML command.

ORA-37423: operation not supported on CUBE ORGANIZED tables

Cause: The attempted operation was not supported with CUBE ORGANIZED tables.

Action: Do not attempt this operation on CUBE ORGANIZED tables.

ORA-37424: alter materialized view (MV) on a primary cube organized MV failed to find secondary cube MV table

Cause: The operation failed due to the missing secondary cube materialized view (MV) table in alter MV.

Action: Recreate the primary CUBE MV and make sure the secondary cube MV table is correctly created.

ORA-37521: (HASHSCAN00) Dimension <varname>string</varname> contains duplicate values. Please contact Oracle OLAP Technical Support.

Cause: The named dimension contains duplicate values.

Action: Contact Technical Support for instructions.

ORA-37522: (HASHSCAN01) You must specify the name of an existing TEXT or NTEXT dimension.

Cause: the _HASHSCAN program was invoked with an invalid argument

Action: Provide a text expression yielding the name of an existing TEXT dimension

ORA-37523: (HASHSCAN02) %1 unindexed values in dimension %2.

ORA-37524: (HASHSCAN03) Dimension %1 contains %2 unindexed values and %3 duplicate values\n(Asterisks indicate indexed positions).

ORA-37525: (HASHSCAN04) Dimension value

ORA-37526: (HASHSCAN05) Logical position(s)

ORA-37527: (XSCHGDFN01) SESSION values of dimension <varname>string</varname> are being automatically deleted.

Cause: When using CHGDFN to rebuild the hash index of a TEXT or NTEXT dimension, SESSION values were encountered.

Action: Recreate the SESSION values after the CHGDFN command completes. Information about the deleted values has been written to the trace file.

ORA-37528: (XSOBJORG_BAD_HIER) invalid property "<varname>string</varname>" specified for hierarchy "<varname>string</varname>.<varname>string</varname>.<varname>string</varname>"

Cause: Either the specified hierarchy did not have an AW organization, or the specified property did not apply to hierarchies.

Action: Specify a property that applies to hierarchy and a dimension with an AW organization.

ORA-37530: (XSCCLOAD01) When aggregating between compressed partitions the base dimensions of <varname>workspace object</varname> did not match the base dimensions of <varname>workspace object</varname>.

Cause: When aggregating a partitioned variable the dimensionality of any compressed partitions should be identical.

Action: Delete the upper partition and redefine it with a composite that matches the lower partition. If it is dependent on multiple partitions with varying sparsity you must first unify the the sparsity of the source partitions.

ORA-37531: (XSCCLOAD02) When aggregating between compressed partitions the source partitions were aggregated with a different AGGMAP, or the RELATIONS have changed since the source partitions were aggregated.

Cause: When aggregation crosses partition boundaries within a compressed variable the individual partitions must all be aggregated using a similar aggmap over the same unaltered relations.

Action: Modify the aggmap for the upper partition to more exactly match the aggmap of the source partitions, or if the aggmap is already similar, re-aggregate the source partitions to pick up any changes to the relations.

ORA-37541: Hierarchy element DIMENSION_MEMBER can aggregate into element MEMBER_ANCESTOR through multiple paths.

Cause: When a low level hierarchy element can reach an aggregate element by more than one path through the hierarchy, it is said to have multiple paths. The danger is that the value of the low level hierarchy element will have its value counted multiple times (once per path) in the total of the aggregate element.

Action: Eliminate multiple paths from the hierarchy.

ORA-37542: DIMENSION_MEMBER makes hierarchy HIERARCHY1 unbalanced.

Cause: A hierarchy is balanced if: 1) All members of a level are at the same depth from the root of the hierarchy and 2) All the members in different levels are at different depths from the root of the hierarchy.

Action: Fix the hierarchy so that it is balanced. This is often done by looking for nulls in the middle levels of a hierarchy.

ORA-37543: Hierarchy member DIMENSION_MEMBER is inconsistent across HIERARCHY1 and HIERARCHY2.

Cause: Two hierarchies are inconsistent when members that appear in both hierarchies have different ultimate leaves.

Action: This problem is usually resolved by defining a new dimension member for the secondary hierarchy, or fixing the hierarchy table so that the definitions of the member match across hierarchies.

ORA-37544: Dimension members DIMENSION_MEMBER and MEMBER_ANCESTOR make this dimension star inconsistent.

Cause: A dimension is "star consistent" when it can be represented in a star schema table. This requires that a hierarchy level map to a single underlying column. If a level is shared across one or more hierarchies, it must have the same set of members in each hierarchy (to share a column).

Action: Create a different level for the secondary hierarchy. This provides a separate level column for each hierarchy.

ORA-37545: DIMENSION_MEMBER is part of a hierarchy loop.

Cause: A hierarchy has loops when the ancestor of a dimension member uses that member as its parent. Note that some loops are created across hierarchies. For example, in hierarchy 1, dimension member A is the parent of B, B is the parent of C and in hierarchy 2, C is that parent of A forms a hierarchy loop.

Action: Change the hierarchies so that the loop is eliminated or move the problem hierarchy to a different dimension.

ORA-37546: (XSHIERSP00) Levelorder valueset is empty.

Cause: An empty levelorder valueset was specified for the HIERSHAPE function.

Action: specify a non-empty levelorder valueset.

ORA-37547: (XSHIERSP01) DIMENSION_MEMBER has no level associated with it.

Cause: DIMENSION_MEMBER did not have an associated level. Level based hierarchies must have a level for every dimension member.

Action: Add level assignments for all dimension members in the hierarchy.

ORA-37548: (XSHIERSP02) DIMENSION_MEMBER is not specified as a member of HIERARCHY1.

Cause: When a dimension member is part of a hierarchy, it appears in the INHIER valueset associated with the hierarchy. This dimension member is missing from this value set and thus should not be part of this hierarchy.

Action: Alter the hierarchy's membership to include the specified dimension member.

ORA-37549: (XSHIERSP03) The level of DIMENSION_MEMBER is not lower than the level of MEMBER_ANCESTOR.

Cause: A dimension member has a parent that is lower or on the same level as this member according to the levelorder valueset.

Action: Fix the child and/or parent levels so that every dimension member has a parent whose level is higher than the level of this member.

ORA-37550: (XSHIERSP04) The level of MEMBER_ANCESTOR is not one level above DIMENSION_MEMBER.

Cause: A dimension member has a parent that is not one level above the level of this member according to the levelorder valueset.

Action: Fix the child and/or parent levels so that every dimension member has a parent whose level is one level above the level of this member according to the levelorder.

ORA-37551: (XSHIERSP05) Leaf value DIMENSION_MEMBER is not on the same level as the rest of leaf dimension values.

Cause: The detail or leaf values of this hierarchy must all have the same level. This member is on a different level than most of the leaf values.

Action: Fix DIMENSION_MEMBER's level so that all leaves are on the same level.

ORA-37552: (XSHIERSP06) DIMENSION_MEMBER is associated with a level not found in the levelorder valueset.

Cause: DIMENSION_MEMBER must have an associated level that is found in the levelorder valueset so that we can figure out DIMENSION_MEMBER's level depth.

Action: Fix DIMENSION_MEMBER's associated level.

ORA-37553: A cycle between <varname>number</varname> and <varname>number</varname> has been detected in relation <varname>workspace object</varname> over <varname>workspace object</varname>.

Cause: A relation was used that had loops in it.

Action: Correct the relation so that it does not contain loops.

ORA-37554: A cycle between <varname>number</varname> and <varname>number</varname> has been detected in relation <varname>workspace object</varname>.

Cause: A relation was used that had loops in it.

Action: Correct the relation so that it does not contain loops.

ORA-37560: lob locator invalid for specified log target

Cause: A lob locator was passed as a target to DBMS_CUBE_LOG.ENABLE, but the log_target was not DBMS_CUBE_LOG.TARGET_LOB

Action: Specify LOG_TARGET_LOB as the log_target, or specify a valid location instead

ORA-37561: unknown logging type

Cause: An invalid log_type was specified

Action: Specify a valid logging type from the DBMS_CUBE_LOG package

ORA-37562: unknown logging target

Cause: An invalid log_target was specified

Action: Specify a valid logging target from the DBMS_CUBE_LOG package

ORA-37563: invalid log verbosity

Cause: An invalid log_verbosity was specified

Action: Specify a valid logging verbosity from the DBMS_CUBE_LOG package

ORA-37564: unknown log table version

Cause: Could not determine the version of the specified logging table

Action: Specify a valid target table, or use DBMS_CUBE_LOG.TABLE_CREATE to create one

ORA-37565: invalid parameter for specified log type

Cause: The log_type specified does not support the specified parameter, for instance, DBMS_CUBE_LOG.MAX_ERRORS is not valid for

Action: Specify a valid log_type / log_param combination

ORA-37566: invalid log location

Cause: The specified log location is in an invalid format. For file targets it must be of the form 'directory_alias/filename'

Action: Specify a valid log location

ORA-37567: log location not specified

Cause: The log location was not specified for a log target which requires one

Action: Specify a valid log location

ORA-37568: invalid log parameter

Cause: An invalid log_param was passed to dbms_cube_log.set_parameter or get_parameter

Action: Specify a valid parameter

ORA-37569: invalid log parameter value

Cause: An invalid value was passed to dbms_cube_log.set_parameter

Action: Specify a valid value

ORA-37570: invalid log specification

Cause: An invalid logging specification was supplied to DBMS_CUBE_LOG.SET_LOG_SPEC

Action: Correct the syntax being supplied

ORA-37571: invalid SQL ID

Cause: Either the SQL ID supplied was invalid or no associated logging information was captured.

Action: Specify a valid SQL ID.

ORA-37572: invalid ID

Cause: An invalid ID was supplied for the given SQL ID.

Action: Specify a valid ID for that SQL ID.

ORA-37573: no limits logged

Cause: There were no corresponding OLAP filters to the supplied information.

Action: Specify predicates on the original query or specify a new SQL ID or ID.

ORA-37574: error logging to table "<varname>string</varname>.<varname>string</varname>"

Cause: An error occurred attempting to write log records to the named table.

Action: Make sure the user has permissions to write to the table.

ORA-37575: Invalid cube operations log component, "<varname>string</varname>".

Cause: Invalid cube operations log component value.

Action: Provide a valid cube operations log component or accept the default value by leaving the parameter unspecified.

ORA-37576: Invalid cube operations log handle id.

Cause: An invalid cube operations log handle id was specified. No oplog handle found for oplogHandleId parameter.

Action: Provide a valid cube operations log handle id for oplogHandleId. Use DBMS_CUBE_LOG.START_OPLOG to get a valid handle id.

ORA-37577: Invalid cube operations log message name.

Cause: Cube operations log message name value is NULL.

Action: Provide a valid non-null cube operations log message name.

ORA-37578: Invalid cube operations log operation value.

Cause: Cube operation log operations value is NULL.

Action: Provide a valid non-null cube operations log operation value.

ORA-37580: The EXPRESS AW does not exist.

Cause: The EXPRESS AW does not exist.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support Services.

ORA-37581: The EXPRESS AW has not been properly installed.

Cause: The EXPRESS AW has not been properly installed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support Services.

ORA-37582: The EXPRESS AW version <varname>string</varname> is different than the Oracle version <varname>string</varname>.

Cause: The EXPRESS AW version does not match the current Oracle version.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support Services.

ORA-37600: (XSPGERRPERMDETACH) Ran out of tablespace storage while updating analytic workspace <varname>string</varname>

Cause: Ran out of lob segment space.

Action: Increase tablespace storage. AW may need to be detached.

ORA-37601: (XSPGERRTEMP) Ran out of temporary storage while writing to analytic workspace with ID=<varname>number</varname>. Free some temporary storage immediately. You can do so, for example, by DETACHING an analytic workspace.

Cause: Ran out of temporary tablespace storage.

Action: Increase the amount of temporary tablespace storage.

ORA-37602: (XSPGERRTEMPUSER) Ran out of temporary storage while writing to analytic workspace <varname>string</varname>. Free some temporary storage immediately. You can do so, for example, by DETACHING an analytic workspace.

Cause: Ran out of temporary tablespace storage.

Action: Increase the amount of temporary tablespace storage.

ORA-37603: (XSPGERRTEMPSYSTEM) Ran out of temporary storage while writing to a system temporary analytic workspace. Free some temporary storage immediately. You can do so, for example, by DETACHING an analytic workspace.

Cause: Ran out of temporary tablespace storage.

Action: Increase the amount of temporary tablespace storage.

ORA-37604: (XSPGERRPQUPD) Parallel updating analytic workspace <varname>string</varname> failed

Cause: Unexpected error occurred to parallel update servers.

Action: Check the error underneath and act accordingly. AW may need to be detached.

ORA-37605: error during OLAP AW UPDATE

Cause: An error occurred during the UPDATE process

Action: Refer to the next error in the error stack

**ORA-37996: (SNSYN950) The format of the SYSINFO function is:\n
SYSINFO(option)**

**ORA-37999: Serious OLAP error: <varname>string</varname>. Please contact
Oracle Technical Support.**

Cause: Something unexpected occurred in the OLAP system

Action: Contact Oracle technical support

ORA-38001 to ORA-39965

ORA-38001: RBO Disable constant predicate elimination optimization

ORA-38002: CBO enable restriction on type of join (NL only) for a query block with pushed predicate

ORA-38003: CBO Disable column stats for the dictionary objects in recursive SQL

ORA-38004: CBO (9.0.1 ONLY) Enable column stats for the dictionary objects in recursive SQL

ORA-38005: CBO disable fix for bug 2251373

ORA-38006: DBMS_STATS override commit threshold for (sub)partition level stats

ORA-38008: CBO disable costing overhead of inlist iteration

ORA-38009: CBO disable fix for bug 2109825

ORA-38010: CBO disable push predicate, driven by functional index into PV

ORA-38011: CBO disable truncation of bind when dealing with fixed char descend index expression

ORA-38012: CBO disable normalization of b-tree index selectivity

ORA-38013: CBO disable delayed ANY=>EXISTS conversion for colocated subquery of CTAS

ORA-38014: CBO disable grouping pruning if star_transformation is enabled

ORA-38015: CBO enable unnesting of more than one subquery based on CVM

ORA-38016: CBO disable full functional index scan

ORA-38017: CBO disable push of join predicate for a table with RLS

ORA-38018: CBO disable full statistics load for evaluation of average row length

ORA-38020: CBO disable fix for bug 2324795

ORA-38021: CBO disable view merge with multi-referenced non-deterministic function

ORA-38022: CBO disable Distinct Sort Elimination at subquery unnest

ORA-38023: CBO disable fix for bug 2853398

ORA-38025: CBO enable generation of excessive semijoin subqueries

ORA-38026: CBO enable bitmap plan based on domain index, with no domain index driver

ORA-38027: CBO disable evaluation column gnd using inlist gnd

ORA-38028: DBMS_STATS disable small object optimization

ORA-38029: object statistics are locked

Cause: An attempt was made to modify optimizer statistics of the object.

Action: Unlock statistics with the DBMS_STATS.UNLOCK_TABLE_STATS procedure on base table(s). Retry the operation if it is okay to update statistics.

ORA-38030: CBO enable strongly connected preds for intersect to join

ORA-38031: CBO disable the fix for bug 2663857

ORA-38032: CBO disable the fix for bug 3063008

ORA-38033: CBO disable costing of push join predicate in OJ view

ORA-38034: CBO disable the fix for bug 2871645

ORA-38036: NSO disable the fix for bug 3070157

ORA-38037: CBO disable the fix for bug 3405237

ORA-38038: CBO disable the fix for bug 3168961

ORA-38039: CBO enable view merge/ subquery ANY=>EXISTS conversion having view(subquery) predicates in front of outer query block (connecting predicates

ORA-38040: DBMS_STATS minimum sample size in number of rows (0 = internal default)

ORA-38041: DBMS_STATS auto_sample_size overrides

ORA-38042: CBO disable usage of tjp when generating pruning subquery

ORA-38044: CBO disable expression folding at evaluation of a predicate selectivity

ORA-38047: CBO disable join back elimination of 1-row tables

ORA-38048: CBO enable the fix for bug 3400412

ORA-38049: CBO disable the fix for bug 3406977

ORA-38050: CBO disable the fix for bug 2943173

ORA-38051: CBO disable the fix for bug 3349903

ORA-38052: CBO disable the fix for bug 3317309

ORA-38053: DBMS_STATS override automatic sample size adjustment

ORA-38054: VOP enable the fix for bug 3537765

ORA-38055: CBO disable the fix for bug 3193835

ORA-38056: CBO disable peeking of form func(:b) bug 3668224

ORA-38057: CBO disable special numeric string normalization for bug 3567928

ORA-38058: CBO disable the fix for bug 3756797

ORA-38060: CBO enable the fix for bug 3517431(enable NL with view on right side)

ORA-38061: CBO disable unnest of a subquery with WITH subqueries

ORA-38063: CBO disable the fix for bug 3903100

ORA-38064: CBO disable the fix for bug 3488546

ORA-38065: CBO disable the fix for bug 3746511

ORA-38066: NSO regulate unnesting, semijoin elimination for IN and EXISTS subqueries with a view

ORA-38067: CBO enable peeking at replaced literal in equality(inequality) predicate

ORA-38068: CBO enable override of guess impact on index choice

ORA-38069: CBO disable duplicate predicate elimination

ORA-38073: CBO disable the fix for bug 4308414

ORA-38074: CBO disable the fix for bug 4275716

ORA-38075: CBO enables fix for bug 4235962

ORA-38076: CBO enables fix for bug 4258835

ORA-38077: CBO enables fix for bug 4488689

ORA-38078: CBO disables fix for bug 4708389

ORA-38079: SQL Diagnostic

ORA-38087: dbms_stats enable fix of bug 5842686

ORA-38090: CBO dump virtual columns in EXPLAIN PLAN

ORA-38091: CBO forces native full outer join

ORA-38094: dbms_stats enable fix of bug 6934892

ORA-38098: CBO reject various transformation even if chosen

ORA-38099: disable Oracle Exadata check for table clustering and zone maps

ORA-38100: enable tracing of DML frequency tracking

ORA-38101: Invalid column in the INSERT VALUES Clause: <varname>string</varname>

Cause: INSERT VALUES clause refers to the destination table columns

Action: n/a

ORA-38102: Invalid column in the INSERT WHERE Clause: <varname>string</varname>

Cause: INSERT WHERE clause refers to the destination table columns

Action: n/a

ORA-38103: Invalid column in the UPDATE SET Clause: <varname>string</varname>

Cause: UPDATE SET clause refers to the source table columns in the LHS

Action: n/a

ORA-38104: Columns referenced in the ON Clause cannot be updated: <varname>string</varname>

Cause: LHS of UPDATE SET contains the columns referenced in the ON Clause

Action: n/a

ORA-38105: Delete not yet supported when Update row-migration is possible

Cause: When Update Row-Migration is possible, Delete in MERGE is not yet supported

Action: n/a

ORA-38106: MERGE not supported on join view or view with INSTEAD OF trigger.

Cause: The MERGE operation contained a join view or view with INSTEAD of trigger which is not supported.

Action: When using MERGE to modify a view, you must only specify a single table in the view, and the view cannot have an INSTEAD OF trigger.

ORA-38131: specified SQL handle <varname>string</varname> does not exist

Cause: The specified SQL handle did not exist in the repository.

Action: Specify correct SQL handle.

ORA-38132: specified SQL ID <varname>string</varname> does not exist

Cause: The SQL statement for SQL ID did not exist in the cursor cache.

Action: Specify correct SQL ID.

ORA-38133: invalid parameter name <varname>string</varname> specified

Cause: An invalid parameter name was specified.

Action: Verify the name of the parameter.

ORA-38134: invalid parameter value <varname>string</varname> specified

Cause: An invalid parameter value was specified.

Action: Verify the parameter value.

ORA-38135: invalid fixed status value specified

Cause: Specified fixed status value was neither YES or NO.

Action: Specify either 'YES' or 'NO'.

ORA-38136: invalid attribute name <varname>string</varname> specified

Cause: An invalid attribute name was specified.

Action: Verify the name of the attribute.

ORA-38137: invalid attribute value <varname>string</varname> specified

Cause: An invalid attribute value was specified.

Action: Verify the attribute value.

ORA-38138: plan name is missing or NULL

Cause: A valid plan name was not specified.

Action: Specify a valid plan name.

ORA-38139: concurrent DDL Error in load plans operation

Cause: A concurrent DDL operation was performed during a load plans operation.

Action: Try operation again.

ORA-38140: no SQL plan baselines were found

Cause: No SQL plan baselines were found during pack or unpack operation.

Action: Specify correct selection criterion.

ORA-38141: SQL plan baseline <varname>string</varname> does not exist

Cause: A SQL plan baseline name was specified that did not exist.

Action: Verify the name of the SQL plan baseline.

ORA-38142: SQL plan baseline named <varname>string</varname> already exists

Cause: A SQL plan baseline already exists with the name specified.

Action: Specify a different name or drop the existing SQL plan baseline.

ORA-38143: invalid enabled status value specified

Cause: Specified enabled status value was neither YES or NO.

Action: Specify either 'YES' or 'NO'.

ORA-38144: specified plan name <varname>string</varname> does not exist

Cause: The specified plan name did not exist in the repository.

Action: Specify correct plan name.

ORA-38145: neither SQL handle nor plan name specified

Cause: The SQL handle or plan name was not specified. The SQL handle or plan name is required.

Action: Specify either SQL handle or plan name or both.

ORA-38146: invalid verify value specified

Cause: Specified verify value was neither YES or NO.

Action: Specify either 'YES' or 'NO'.

ORA-38147: invalid commit value specified

Cause: Specified commit value was neither YES or NO.

Action: Specify either 'YES' or 'NO'.

ORA-38148: invalid time limit specified

Cause: Specified time limit value was not a positive integer.

Action: Specify a positive integer value.

ORA-38149: There is no recommended action for object <varname>string</varname> in task <varname>string</varname>.

Cause: The advisor did not generate a recommended action for the given object and task.

Action: Choose a different object and retry the operation.

ORA-38171: Insufficient privileges for SQL management object operation

Cause: A DDL operation was attempted on a SQL management object by a session without the proper privileges.

Action: Grant the appropriate privilege.

ORA-38172: No SQL management object satisfies specified filters

Cause: An attempt was made to perform an operation by specifying filters that did not target any SQL management objects.

Action: Try different filters.

ORA-38173: Invalid value <varname>string</varname> specified for SQL management object attribute <varname>string</varname>

Cause: An invalid attribute value was specified.

Action: Specify a valid attribute value.

ORA-38301: can not perform DDL/DML over objects in Recycle Bin

Cause: Tried to perform DDL or DML operation on Recycle Bin object.

Action: DDL or DML operations are not permitted on Recycle Bin objects.

ORA-38302: invalid PURGE option

Cause: Invalid purge option specified.

Action: Specify a valid purge option.

ORA-38303: invalid option for PURGE TABLESPACE

Cause: Either a token other than USER was found following the tablespace name or some text was found following USER <varname>user name</varname>.

Action: Place nothing or only USER <varname>user name</varname> after the tablespace name

ORA-38304: missing or invalid user name

Cause: A valid user name was expected.

Action: Specify a valid user name.

ORA-38305: object not in RECYCLE BIN

Cause: Trying to Flashback Drop an object which is not in RecycleBin.

Action: Only the objects in RecycleBin can be Flashback Dropped.

ORA-38306: this object is not recoverable standalone

Cause: Trying to flashback drop an object other than of type TABLE.

Action: Only tables are recoverable.

ORA-38307: object not in RECYCLE BIN

Cause: Trying to Purge the object which is not in RecycleBin.

Action: Only the objects in RecycleBin can be PURGEDED.

ORA-38308: invalid FLASHBACK DROP option

Cause: Invalid Flashback Drop option specified.

Action: Specify a valid Flashback Drop option.

ORA-38309: object not purgable

Cause: An attempt was made to purge an object that is either not purgable or else dependent upon some other object.

Action: Cannot purge this object.

ORA-38310: cannot purge tablespace for other users

Cause: An attempt was made to purge the tablespace for a different user by a user who does not have system DBA privileges.

Action: Cannot purge the tablespace for some other user.

ORA-38311: cannot purge objects owned by other users

Cause: An attempt was made to purge an object which is owned by some other user.

Action: Cannot purge this object.

ORA-38312: original name is used by an existing object

Cause: An attempt was made to recover an object preserving the original name, but that name is taken up by some other object.

Action: use the RENAME clause to recover the object with a different name.

ORA-38320: policy does not exist

Cause: An attempt was made to delete a nonexistent policy.

Action: Correct the policy name.

ORA-38321: duplicate policy name specified

Cause: A policy name was specified that already existed under this schema.

Action: Correct the policy name.

ORA-38322: scope of policy not specified

Cause: An attempt was made to add a policy without the scope.

Action: Specify a scope when creating a policy.

ORA-38323: policy conflicts with policy <varname>string</varname>

Cause: An attempt was made to create a policy with the same action type and based on the same statistic as another policy on the object.

Action: Use a different action and/or statistic for the new policy, or delete the old policy.

ORA-38324: policy conflicts with policy <varname>string</varname>

Cause: An attempt was made to create a policy with the same action, scope and compression level as another policy on the object.

Action: Use a different action, scope and/or level for the new policy, or delete the old policy.

ORA-38325: policy conflicts with policy <varname>string</varname>

Cause: An attempt was made to create a compression policy that conflicts with another policy on the object.

Action: Change the policy so that policies with a higher compression level take effect after policies with a lower compression level, or delete the old policy.

ORA-38326: schema level policies are not supported

Cause: Attempt was made to create a schema level policy.

Action: Do not create a schema level policy.

ORA-38327: invalid argument value

Cause: The specified API argument values were of the wrong value range.

Action: Supply valid values for the API.

ORA-38328: inconsistent internal state

Cause: An inconsistency was detected in ILM related data in the dictionary.

Action: Contact Oracle Support Services.

ORA-38329: internal ILM error

Cause: An internal error occurred during execution of ILM related activity. Further information can be found in the alert log.

Action: Fix the problem and retry the operation.

ORA-38330: insufficient privilege for ILM operation

Cause: Sufficient privileges were not granted for the ILM operation.

Action: Retry operation with sufficient privileges granted. Consult documentation for privileges required to perform the ILM operation.

ORA-38331: row-level write activity tracking not enabled on the table

Cause: An attempt was made to create a modification time-based policy when row-level write tracking was not enabled on the object.

Action: Ensure that row-level write tracking is enabled on the table.

ORA-38332: valid time periods were not present on the table

Cause: An attempt was made to create a valid time-based policy when valid time periods were not present on the table.

Action: Add valid time periods to the table.

ORA-38333: row-level access activity tracking not enabled on the table

Cause: An attempt was made to create an access time-based policy when row-level access tracking was not enabled on the object.

Action: Ensure that row-level access tracking is enabled on the table.

ORA-38334: segment-level access activity tracking not enabled on the table

Cause: An attempt was made to create an access time-based policy when segment-level access tracking was not enabled on the object.

Action: Ensure that segment-level access tracking is enabled on the table.

ORA-38335: sysdba privilege is required

Cause: SYSDBA privilege is required for applying ILM policies on a tablespace.

Action: Grant user SYSDBA role before applying tablespace level ILM policies.

ORA-38336: invalid policy

Cause: A row level policy was used with a compression level other than OLTP.

Action: Use the OLTP compression level with row level compression policies.

ORA-38337: invalid policy

Cause: A custom policy is only allowed at the segment level.

Action: Change the scope of the policy to be of type segment.

ORA-38338: incorrect ILM policy scope

Cause: An attempt was made to create an Information Lifecycle Management (ILM) policy with incompatible scope.

Action: Ensure that the scope of the ILM policy is compatible.

ORA-38339: invalid action specified

Cause: An invalid action was specified in the policy definition.

Action: Specify a valid action in the policy definition.

ORA-38340: invalid policy

Cause: An attempt was made to create a custom policy at the tablespace level.

Action: Specify the policy directly on the desired objects.

ORA-38341: policy conflicts with policy <varname>string</varname>

Cause: An attempt was made to create more than one storage tiering policy directly on an object.

Action: Delete the conflicting policy before creating a new policy.

ORA-38342: heat map not enabled

Cause: An attempt was made to create an Information Lifecycle Management (ILM) policy when heat map was not enabled.

Action: Enable heat map before creating a new ILM policy.

ORA-38343: ADO online mode not supported with supplemental logging enabled

Cause: An attempt was made to perform an automatic data optimization (ADO) operation with supplemental logging enabled.

Action: Disable supplemental logging or switch to ADO offline mode and retry.

ORA-38344: bulk load compression trace event**ORA-38393: ILM internal out-of-space error**

Cause: Information Lifecycle Management (ILM) internal operation encountered out-of-space error.

Action: None

ORA-38394: test event for table ILM operations

Cause: Internal testing event for table Information Lifecycle Management (ILM) operations.

Action: None

ORA-38395: debug event for table ILM operations

Cause: There was an internal debugging event for table Information Lifecycle Management (ILM) operations.

Action: None

ORA-38396: table is already enabled for the ILM feature

Cause: The table was already enabled for the specified Information Lifecycle Management (ILM) feature.

Action: No action required.

ORA-38397: table is not enabled for the ILM feature

Cause: An attempt was made to perform an Information Lifecycle Management (ILM) operation on a table on which the specified ILM feature is not enabled.

Action: No action required.

ORA-38398: DDL not allowed on the system ILM column

Cause: An attempt was made to drop, rename, or modify a system Information Lifecycle Management (ILM) column.

Action: No action required.

ORA-38399: cannot update the system ILM column

Cause: An attempt was made to update a system Information Lifecycle Management (ILM) column.

Action: No action required.

ORA-38400: cannot combine ILM operation with other operations

Cause: An attempt was made to combine Information Lifecycle Management (ILM) operation with other ALTER TABLE operations.

Action: Ensure that ILM is the sole operation specified in ALTER TABLE.

ORA-38401: synonym <varname>string</varname> not allowed

Cause: An attempt was made to use a synonym for a data type of an attribute or a table alias.

Action: Use the object name instead of the synonym.

ORA-38402: invalid name: empty string or spaces in the name

Cause: There were spaces in the name.

Action: Remove spaces in the name or use quotes around the name.

ORA-38403: attribute set name may not be longer than 22 characters

Cause: The attribute set name was longer than 22 characters.

Action: Choose a name that has 22 or fewer characters.

ORA-38404: schema extension not allowed for the attribute set name

Cause: There was a schema extension for the attribute set name. Attribute sets are always created in the current schema and thus schema extended names are not allowed.

Action: Create the attribute set from the appropriate schema.

ORA-38405: quotes not allowed in the attribute set name

Cause: The attribute set name contained quotes.

Action: Remove quotes in the attribute set name.

ORA-38406: attribute set <varname>string</varname> already exists

Cause: An attribute set with a matching name already exists in the current schema.

Action: Drop the existing attribute set or choose a different name.

ORA-38407: The ADT associated with the attribute set already exists.

Cause: The Abstract type (ADT) with the same name as the attribute set already exists in the current schema.

Action: Create the attribute set for the existing ADT or drop the ADT.

ORA-38408: The ADT "<varname>string</varname>" does not exist in the current schema.

Cause: An attempt was made to create the attribute set from a nonexistent ADT.

Action: Make sure that the ADT with the same name as the attribute set exists in the current schema.

ORA-38409: invalid name or option for the attribute set: <varname>string</varname>

Cause: An invalid name or option was used for the attribute set.

Action: Set serveroutput ON and repeat the operation for additional information.

ORA-38410: schema extension not allowed for the table name

Cause: An attempt was made to use a schema extended name for the table storing expressions.

Action: The table storing expressions and the corresponding attribute set should be created in the same schema.

ORA-38411: invalid datatype for the column storing expressions

Cause: An attempt was made to create an expression column from a column of invalid datatype.

Action: Create a VARCHAR2 or CHAR column to store expressions in a table.

ORA-38412: Expression set column <varname>string</varname> does not exist.

Cause: The column storing expressions does not exist.

Action: Pass a valid name for the column storing expressions.

ORA-38413: elementary attribute name may not be longer than 32 characters

Cause: An attempt was made to create an elementary attribute with a name longer than 32 characters.

Action: Use a shorter name for the elementary attribute.

ORA-38414: invalid datatype for the attribute <varname>string</varname>

Cause: The datatype specified for the attribute was invalid.

Action: If the datatype is an ADT, make sure that the ADT exists and the current user has execute permissions to it.

ORA-38415: invalid name or datatype for the attribute: <varname>string</varname>

Cause: An invalid name or datatype was used for the attribute.

Action: Set serveroutput ON and repeat the operation for additional information.

ORA-38416: A stored attribute may not be longer then 300 characters.

Cause: An attempt was made to create a stored or indexed attribute longer than 300 characters.

Action: A predicate with such attribute may not be indexed. It will be evaluated as sparse predicate.

ORA-38417: attribute set <varname>string</varname> does not exist

Cause: An attempt was made to use an attribute set that does not exist.

Action: Create the attribute set or choose an existing attribute set.

ORA-38418: ADT associated with the attribute set <varname>string</varname> does not exist

Cause: The ADT with the same name as the attribute set was not found in the current schema.

Action: Drop the attribute set and recreate it.

ORA-38419: invalid identifier in attribute : <varname>string</varname>

Cause: An identifier used in the stored/indexed attribute sub-expression was not defined or was invalid.

Action: Create all the required elementary attributes and user-defined functions and try again.

ORA-38420: invalid stored attribute sub-expression: <varname>string</varname>

Cause: The sub-expression used for the stored expression was invalid.

Action: Set serveroutput ON and repeat the operation for additional information.

ORA-38421: attribute <varname>string</varname> already exists

Cause: An attribute with a matching name (or form) already exists in the attribute set.

Action: Drop the existing attribute or choose a different name for the new attribute.

ORA-38422: invalid datatype for the attribute: <varname>string</varname>

Cause: An attempt was made to create an attribute with invalid datatype.

Action: If the data type of the attribute is an ADT, make sure that the type exists.

ORA-38423: Attribute set created from an ADT may not be extended.

Cause: An attempt was made to add an elementary attribute to an attribute set created from an ADT.

Action: Create a new attribute set and add all the required elementary attributes one at a time.

ORA-38424: no attribute set currently assigned to the expression set

Cause: An attempt was made to un-assign an attribute set from an expression set when there is no attribute set assigned to it.

Action: No action is required.

ORA-38425: attribute set used for an index object may not be unassigned

Cause: An attempt was made to un-assign an attribute set from an expression set when there is an Expression Filter index defined on the column.

Action: Drop the index before un-assigning the attribute set.

ORA-38426: attribute set assigned to an expression set may not be dropped

Cause: An attempt was made to drop an attribute set when it is still associated with an expression set.

Action: Un-assign the attribute set from the expression set before dropping it.

ORA-38427: attribute <varname>string</varname> does not exist

Cause: An attempt was made to use an attribute set that does not exist.

Action: Create the attribute set.

ORA-38428: too many attributes selected for indexing

Cause: An attempt was made to create an expression filter index with more than 490 indexed attributes.

Action: Remove some of the indexed attributes. Make sure that the default indexed attributes associated with the attribute set combined with the indexed attributes specified in the Create Index Parameters clause are less than or equal to 490.

ORA-38429: invalid datatype for a stored attribute: <varname>string</varname>

Cause: The (resulting) datatype for the attribute was not appropriate for storing.

Action: Choose a stored attribute that has a resulting datatype of NUMBER, VARCHAR2, CHAR or DATE.

ORA-38430: Operation "<varname>string</varname>" not supported in the current release.

Cause: An attempt was made to perform an unsupported operation.

Action: Do not use the operation.

ORA-38431: could not evaluate subexpression "<varname>string</varname>" for rowid "<varname>string</varname>"

Cause: Either the expression was not a valid SQL-WHERE clause format or it had references to nonexistent schema objects.

Action: Correct the expression.

ORA-38432: EVALUATE operator only allowed on an expression column

Cause: An attempt was made to use the EVALUATE operator on a column not configured as a column storing expressions.

Action: Assign an attribute set to the column.

ORA-38433: index "<varname>string</varname>" could not be maintained due to "<varname>string</varname>"

Cause: The error was caused by the recursive operation.

Action: Fix the error and retry.

ORA-38434: could not evaluate expression "<varname>string</varname>"

Cause: Either the expression was not in a valid SQL-WHERE clause format or it had references to nonexistent schema objects or there is a missing attribute value.

Action: Set serveroutput ON for more details.

ORA-38435: missing elementary attribute value or invalid name-value pairs

Cause: The second argument to the EVALUATE operator had either a missing attribute or an invalid value for an attribute.

Action: Try again after fixing the error.

ORA-38436: attribute set used for an Expression set may not be modified.

Cause: An attempt was made to add an elementary attribute to an attribute set assigned to an expression set.

Action: Un-assign the attribute set and try again.

ORA-38437: The ADT "<varname>string</varname>" may not contain any user methods.

Cause: An attempt was made to create an attribute set from an ADT that has one or more user methods.

Action: Drop the ADT and recreate it with no user methods.

ORA-38438: getVarchar not possible due to "<varname>string</varname>" datatype in the attribute set

Cause: An attempt was made to use the getVarchar API when the attribute set has one or more non-scalar types.

Action: Use AnyData conversion to encode the data item.

ORA-38439: invalid operation "<varname>string</varname>"

Cause: An attempt was made to use an invalid operation.

Action: Use one of the following operations : ADD, DROP

ORA-38440: attribute set <varname>string</varname> does not exist

Cause: An attempt was made to copy an attribute set that is not accessible from the current schema.

Action: Grant execute permissions on the corresponding ADT to the current user and try again.

ORA-38441: System could not derive the list of STORED and INDEXED attributes.

Cause: The attribute set was created without default index parameters.

Action: Specify the default index parameters for the attribute set or include a valid PARAMETERS clause for the CREATE INDEX command.

ORA-38442: The ADT "<varname>string</varname>" is not in a valid state.

Cause: An attempt was made to use an ADT that is not in a valid state.

Action: Check the INCOMPLETE field in the user_types catalog view to make sure that the ADT is in a valid state. Drop the invalid ADT and recreate the corresponding attribute set.

ORA-38443: An attribute set should be assigned to the expression set for statistics collection.

Cause: An attempt was made to collect statistics for an expression set with no attribute set assigned to it.

Action: Assign an attribute set to the expression set before collecting the statistics.

ORA-38444: statistics do not exist for the expression set

Cause: An attempt was made to clear the statistics that do not exist.

Action: No action was required.

ORA-38445: TOP clause not allowed with no statistics

Cause: An attempt was made to use the TOP parameters clause with no statistics available for the expression set.

Action: Collect statistics for the expression set and try again.

ORA-38446: Error with embedded ADT "<varname>string</varname>" in the attribute set.

Cause: The embedded ADT has errors.

Action: Set serveroutput ON for additional information.

ORA-38447: Type required for the embedded ADT attribute "<varname>string</varname>" is missing

Cause: Object type required for the embedded ADT was missing.

Action: Set serveroutput ON for additional information.

ORA-38448: Indexing predicates with "<varname>string</varname>" operator is not supported.

Cause: An unsupported operator was used in the exf\$indexoper array.

Action: Choose the operators from this list : =, <, >, <=, >=, !=, is null, is not null, nvl, and between.

ORA-38449: table "<varname>string</varname>" does not exist or is not accessible

Cause: An attempt was made to create a table alias for a table that does not exist or is not accessible.

Action: Grant select privileges on the table to the current user.

ORA-38450: error computing a stored attribute for the expression set.

Cause: Either values for one of the attributes was incorrect or a stored attribute was invalid due to broken dependencies.

Action: Correct the input.

ORA-38451: index is in an inconsistent state

Cause: One or more secondary objects used to maintain the index did not exist

Action: Drop the index and recreate it.

ORA-38452: Expression Filter index name may not be longer than 25 characters

Cause: An attempt was made to use a name longer than 25 characters for the Expression Filter index.

Action: Choose a name that has 25 or fewer characters

ORA-38453: ExpFilter index should be created in the same schema as the base table.

Cause: An attempt was made to create the Expression Filter index in a schema other than that of the base table.

Action: Create the index in the same schema as the base table.

ORA-38454: attribute set not defined for the column being indexed

Cause: An attempt was made to create an Expression Filter index on a column with no attribute set association.

Action: Assign an attribute set to the expression set column being indexed.

ORA-38455: Expression Filter index should be created by the owner.

Cause: An attempt was made to create the Expression Filter index by a user who is not the owner of the index.

Action: Create the index using owner's privileges.

ORA-38456: The attribute set "<varname>string</varname>" is in an inconsistent state.

Cause: The attribute set was in an inconsistent state due to broken dependencies.

Action: Set serveroutput ON for more details. The attribute set may not be reused after this error.

ORA-38457: The attribute "<varname>string</varname>" is not a valid XMLType attribute.

Cause: An attempt was made to use a non-XMLType attribute to configure XPath filtering.

Action: Use an attribute of sys.XMLType datatype to configure XPath filtering.

ORA-38458: invalid operation "<varname>string</varname>" for XPATH_FILTER_PARAMETERS

Cause: An attempt was made to use an invalid operation.

Action: Use one of the following operations : ADD, DROP.

ORA-38459: XML Tag "<varname>string</varname>" not found for the XMLType attribute "<varname>string</varname>"

Cause: An Attempt was made to use a non-existent XML Tag.

Action: Correct the name of the XML Tag or the XMLType attribute.

ORA-38460: filtering based on datatype "<varname>string</varname>" not supported for XML Tags

Cause: An attempt was made to configure XPath filtering with an XML Tag of unsupported datatype.

Action: Leave the XML Tag out of filter parameters. It will be processed as sparse predicate

ORA-38461: XML Tag "<varname>string</varname>" already exists for the XMLType attribute "<varname>string</varname>"

Cause: An attempt was made to create a duplicate XML Tag.

Action: Choose a different XML Tag.

ORA-38462: invalid attribute list

Cause: The input was missing an attribute list or had null values for the attribute names.

Action: Correct the input.

ORA-38463: invalid XML Tag list

Cause: The input was missing a tag list or had null values for the tag names.

Action: Correct the input.

ORA-38464: expression set is not empty.

Cause: An attempt was made to assign an attribute set to a non-empty expression set.

Action: Use FORCE = 'TRUE' to validate all the existing expressions.

ORA-38465: failed to create the privilege checking trigger due to: <varname>string</varname>

Cause: Creation of the trigger failed due to the error listed in the message.

Action: Set serveroutput ON for more information.

ORA-38466: user does not have privileges to CREATE/MODIFY expressions

Cause: An attempt was made to INSERT or UPDATE a column storing expression without appropriate permissions.

Action: Appropriate privileges on the expression set should be granted by the owner of the expression set.

ORA-38467: user cannot GRANT/REVOKE privileges to/from himself

Cause: An attempt was made to GRANT or REVOKE privileges to or from the current user.

Action: The the to_user or from_user field should be different from the user performing the operation.

ORA-38468: column "<varname>string</varname>" is not identified as a column storing expressions.

Cause: An attempt was made to grant permission on a nonexistent expression set.

Action: Make sure that the table and the column exist and an attribute set is associated with the column.

ORA-38469: invalid privilege for an expression set: <varname>string</varname>

Cause: An attempt was made to use an invalid privilege.

Action: See documentation for a valid privilege.

ORA-38470: cannot revoke a privilege that was not granted.

Cause: An attempt was made to revoke a privilege that had not been granted.

Action: Check catalog views to see if the user has the privilege.

ORA-38471: ROWIDs for table aliases cannot be null

Cause: An attempt was made to pass a null value for the table alias attribute in the data item, which is not permitted.

Action: Pass a valid rowid value for the table alias.

ORA-38472: VARCHAR representation of the data item is too long.

Cause: The VARCHAR representation of data item was too long.

Action: Use the EVALUATE operator with AnyData argument instead.

ORA-38473: cannot drop a type used for Expression Filter attribute set

Cause: An attempt was made to drop an ADT that was used to maintain an attribute set for the Expression Filter.

Action: Query USER_EXPFIL_ATTRIBUTE_SETS view to see the dependency.

ORA-38474: attribute set may not have attributes of TABLE COLLECTION type.

Cause: An attempt was made to create an attribute with a TABLE COLLECTION type.

Action: Use VARRAYs instead of table collection, if possible.

ORA-38475: The attribute set and the associated ADT are out of sync.

Cause: The ADT was directly modified by CREATE or ALTER operations.

Action: Drop the attribute set and recreate it from scratch.

ORA-38476: abstract type used for an Attribute set may not be modified.

Cause: An attempt was made to alter a type (ADT) that is used to maintain an attribute set of an Expression set.

Action: Do not modify the ADT directly. Use DBMS_EXPFIL APIs instead.

ORA-38477: attribute set cannot be derived from an evolved type or a subtype.

Cause: An attempt was made to create an attribute set from an evolved ADT or a subtype.

Action: The ADT used for the attribute set cannot be an evolved type or a subtype.

ORA-38478: creation of system trigger EXPFIL_DROPOBJ_MAINT failed

Cause: The creation of the system trigger EXPFIL_DROPOBJ_MAINT failed due to missing Expression Filter dictionary tables.

Action: Try a clean installation again. If this error is ignored, the Expression Filter dictionary could have some stale entries.

ORA-38479: creation of system trigger EXPFIL_RESTRICT_TYPEEVOLVE failed

Cause: The creation of system trigger EXPFIL_RESTRICT_TYPEEVOLVE failed due to missing Expression Filter dictionary tables.

Action: Try a clean installation again. If this error is ignored, the user will be able to evolve ADTs associated with the attribute set, thus causing spurious errors.

ORA-38480: creation of system trigger EXPFIL_ALTEREXPTAB_MAINT failed.

Cause: The creation of system trigger EXPFIL_ALTEREXPTAB_MAINT failed due to errors in SYS.EXF\$DBMS_EXPFIL_SYSPACK package.

Action: Try a clean installation again. If this error is ignored, a RENAME of the expression table may cause the EVALUATE queries to fail.

ORA-38481: ADT "<varname>string</varname>" is used for a dependent object.

Cause: An attempt was made to create an attribute set from an ADT which is used by one or more dependent objects.

Action: Use a new ADT instead.

ORA-38482: no elementary attributes defined in the attribute set

Cause: An attempt was made to use an empty attribute set.

Action: Create one or more elementary attributes for the attribute set.

ORA-38483: invalid FUNCTION/PACKAGE/TYPE name: "<varname>string</varname>"

Cause: An attempt was made to use an invalid name format.

Action: The function/package/type name should be specified in the following format [owner.]object_name

ORA-38484: FUNCTION/PACKAGE/TYPE <varname>string</varname> does not exist

Cause: Attempt was made to use a object that does not exist.

Action: Query ALL_OBJECT view to ensure that the object exists.

ORA-38485: invalid object type for the user-defined function

Cause: An attempt was made to use an invalid object as a function.

Action: Valid object types are FUNCTION / PACKAGE / TYPE

ORA-38486: FUNCTION/PACKAGE/TYPE already exists for the attribute set

Cause: An attempt was made to add a duplicate function to the list.

Action: Use a different object name.

ORA-38487: FUNCTION/PACKAGE/TYPE "<varname>string</varname>" not allowed in the expression

Cause: An attempt was made to use an un-approved function in the expression.

Action: Add the function to the corresponding attribute set

ORA-38488: attribute set already assigned to the column storing expressions

Cause: An attempt was made to reassign an attribute set to an expression column.

Action: Query USER_EXPFIL_EXPRESSION_SETS view to find the attribute set assigned the expression set

ORA-38489: predicate table creation failed due to: ORA<varname>string</varname>

Cause: Predicate table creation failed due to the reported error.

Action: Set serveroutput ON for additional information

ORA-38490: invalid name: quotes do not match

Cause: The quotes in the name did not match.

Action: Correct the name to match the quotes.

ORA-38491: could not evaluate subexpression for rowid "<varname>string</varname>"

Cause: Either the expression was not in a valid SQL-WHERE clause format or it had references to nonexistent schema objects.

Action: Correct the expression.

ORA-38492: invalid ALTER INDEX parameters clause "<varname>string</varname>"

Cause: An invalid parameters clause was specified with the ALTER INDEX command.

Action: See documentation for a valid list of parameters.

ORA-38493: feature not enabled : Expression Filter index

Cause: An attempt was made to create an Expression Filter index in Standard Edition.

Action: Do not attempt to use this feature.

ORA-38494: column in the table alias and an attribute have matching names

Cause: One of the attributes in the set has the same name as the name of one of the columns in the table configured for table alias.

Action: If possible, use a different name for the attribute.

ORA-38495: data type for the stored attribute <varname>string</varname> is inconsistent.

Cause: The actual data type for the stored attribute configured for the Expression Filter index object did not match the data type recorded in the Expression Filter dictionary.

Action: Delete the attribute from the default index attributes and recreate it.

ORA-38496: Expression Filter index is not in a valid state

Cause: An attempt was made to REBUILD an Expression Filter index that was not valid.

Action: Use DEFAULT keyword in the parameters clause to rebuild the index from defaults or drop and recreate the index.

ORA-38497: Expression Filter index does not exist

Cause: Index with a matching name does not exist or the index was not created using ExpFilter indextype.

Action: Identify the correct index using the Expression Filter catalog views

ORA-38498: invalid stored attribute for the index object : <varname>string</varname>

Cause: The expression filter index object has a stored or indexed attribute that had broken dependencies.

Action: Make sure that all the identifiers used in the attribute are valid.

ORA-38499: expression set already configured for stored/indexed attributes

Cause: The expression set already had a list of stored and indexed attributes. Additional attributes cannot be specified in the CREATE INDEX parameters clause.

Action: Remove TOP, STOREATTRS and INDEXATTRS clauses from the parameters clause or clear the expression set statistics using DBMS_EXPFIL.INDEX_PARAMETERS API.

ORA-38500: <varname>string</varname>

Cause: There was a generic error

Action: See documentation for further information.

ORA-38501: sub-query not allowed in the expression

Cause: An attempt was made to use a sub-query in the expression.

Action: Do not use sub-queries in the expressions.

ORA-38502: invalid XML tag: <varname>string</varname>

Cause: An attempt was made to use an invalid XML tag for the index.

Action: Correct the XML tag and retry.

ORA-38503: index already defined using the parameters

Cause: An attempt was made to modify the index parameters after the index creation.

Action: Drop the index and retry.

ORA-38504: this operator not allowed with the configured attribute set

Cause: An attempt was made to use the operator binding with an attribute set containing more than one (table alias) attribute. This is not permitted.

Action: Use a different operator binding.

ORA-38505: invalid default value for the attribute

Cause: An attempt was made to use an invalid default value or a default that is larger than 100 characters.

Action: Specify a correct default value.

ORA-38506: invalid attribute type for text predicates

Cause: An attempt was made to use an invalid type for an attribute configured for text predicates.

Action: Use either a VARCHAR or a CLOB attribute instead.

ORA-38507: attributes of <varname>string</varname> data type should be indexed

Cause: An attempt was made to configure an attribute of spatial or text data type as stored predicate group.

Action: Configure them as indexed predicate groups instead.

ORA-38601: FI Not enough memory for frequent itemset counting: <varname>string</varname>

Cause: The memory size did not satisfy the minimum memory requirement.

Action: In workarea_size_policy='manual' mode, set _fic_area_size to a reasonably larger value. Or, In workarea_size_policy='auto' mode, this error should never happen.

ORA-38602: FI invalid input cursor

Cause: The input cursor did not return exactly two columns for transactional input format or the input cursor didn't have consistent data types for horizontal input format

Action: For transactional input format, specify that the input cursor returns exactly two columns: one for transaction-id, one for item-id. For horizontal input format, make sure the input cursor's columns have the same data types.

ORA-38603: FI including & excluding cursor can only return one column

Cause: The including & excluding cursor did not return exactly one column.

Action: Specify that the cursor return only one column: item-id.

ORA-38604: FI including & excluding cursor item-id type must match input cursor item-id type

Cause: The including & excluding cursor item-id type did not match input cursor item-id type

Action: Specify that the item-id type of the cursors match each other.

ORA-38605: FI not enough memory(<varname>string</varname>K) for candidate generation(<varname>string</varname>K)

Cause: There was insufficient available memory for candidate generation.

Action: In workarea_size_policy='manual' mode, set _fic_area_size to a reasonably larger value. Or, in workarea_size_policy='auto' mode, set pga_aggregate_target to a reasonably larger value.

ORA-38606: FI support threshold not between [0, 1]

Cause: The user inputted a support threshold not in the range of [0, 1].

Action: The user should adjust the input value in the range of [0, 1].

ORA-38607: FI minimum and maximum itemset length not between [1, <varname>string</varname>]

Cause: The inputted minimum or maximum itemset length exceed the internal maximum itemset length or less than 1.

Action: The user should adjust the input value not larger than the internal maximum itemset length and not less than 1.

ORA-38608: FI itemset minimum-length(<varname>string</varname>) should not be greater than maximum length(<varname>string</varname>)

Cause: The user inputted minimum length is more than maximum length.

Action: The user should adjust the input values to make the minimum length less than or equal to the maximum length.

ORA-38609: FI Not enough memory for tree counting, requires at least <varname>string</varname>KB

Cause: The memory size did not satisfy the minimum memory requirement for tree counting.

Action: In workarea_size_policy='manual' mode, set _fic_area_size to a reasonably larger value. Or, In workarea_size_policy='auto' mode, this error should never happen.

ORA-38610: FI "<varname>string</varname>" name prefix is reserved for frequent itemset counting

Cause: An error occurred because DBMS_FREQUENT_ITEMSET and prefix ORA_FI are reserved for the DBMS_FREQUENT_ITEMSET package's internal use.

Action: Do not re-define functions with names starting with DBMS_FREQUENT_ITEMSET package or ORA_FI.

ORA-38611: FI input cursor's item type is not supported

Cause: The input cursor's item type is not number or character type

Action: Redefine the input cursor so that item type is number or character type.

ORA-38612: FI item length cannot exceed half of one database block.

Cause: The item's length was more than half of one database block.

Action: Redefine the data type of the item column so that its maximum length is less than half of one database block.

ORA-38613: FI Cursor is returning less than 2 columns.

Cause: Cursor parameter is returning less than 2 columns.

Action: Modify the Cursor argument to return 2 columns.

ORA-38620: DT expressions in input cursor do not have an alias name

Cause: Expressions in input cursor do not have an alias name.

Action: Add an alias name for the expression.

ORA-38621: Decision Tree maximum depth setting not between [2, 20]

Cause: The user specified a max tree depth not in the range of [2, 20].

Action: The user should adjust the input value to be in the range of [2, 20].

ORA-38622: Decision Tree not enough memory, requires at least <varname>string</varname>KB

Cause: The memory size did not satisfy the minimum memory requirement for decision tree building.

Action: In workarea_size_policy='manual' mode, set _dtree_area_size to a reasonably larger value. Or, In workarea_size_policy='auto' mode, please raise pga_aggregate_target to a reasonably larger value.

ORA-38700: Limit of <varname>string</varname> flashback database logs has been exceeded.

Cause: The maximum number of flashback database log files was exceeded.

Action: DB_FLASHBACK_RETENTION_TARGET may be set to high. Modify it to a smaller value.

ORA-38701: Flashback database log <varname>string</varname> seq <varname>string</varname> thread <varname>string</varname>: "<varname>string</varname>"

Cause: This message reports the filename for details of another message.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

ORA-38702: Cannot update flashback database log file header.

Cause: Could not write to the flashback database log file.

Action: Restore access to the file.

ORA-38703: Type <varname>string</varname> in header is not a flashback database log file.

Cause: A corrupt flashback database log file header was read.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38704: Checksum error in flashback database log file header.

Cause: The flashback database log file header contained a checksum that does not match the value calculated from the file header as read from disk. This means the file header was corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38705: Expected block size <varname>string</varname> does not match <varname>string</varname> in log header.

Cause: When the flashback log file header was read, the block size in the control file did not match the block size contained in the header.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38706: Cannot turn on FLASHBACK DATABASE logging.

Cause: An ALTER DATABASE FLASHBACK ON command failed. Other messages in the alert log describe the problem.

Action: Fix the problem and retry.

ORA-38707: Media recovery is not enabled.

Cause: An ALTER DATABASE FLASHBACK ON command failed because media recovery was not enabled.

Action: Turn on media recovery with an ALTER DATABASE ARCHIVELOG command and then retry the command.

ORA-38708: not enough space for first flashback database log file

Cause: An ALTER DATABASE FLASHBACK ON command failed because there was not enough space in the Recovery Area for the first flashback database log file.

Action: Make more space in the Recovery Area. For example, this can be done by increasing the value of DB_RECOVERY_FILE_DEST_SIZE.

ORA-38709: Recovery Area is not enabled.

Cause: An ALTER DATABASE FLASHBACK ON command failed because the Recovery Area was not enabled.

Action: Set DB_RECOVERY_FILE_DEST to a location and retry.

ORA-38710: Flashback log version <varname>string</varname> is incompatible with ORACLE version <varname>string</varname>.

Cause: The flashback database log file was rejected because it appeared to be written by an incompatible version of Oracle.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38711: Corrupt flashback log block header: block <varname>string</varname>

Cause: A corrupt Flashback Database log file block header was read. More information was dumped to the trace file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38712: Corrupt flashback log record header: block <varname>string</varname>, offset <varname>string</varname>.

Cause: A corrupt flashback database log record header was read. Either the record type or length were incorrect. More information was dumped to the trace file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38713: Flashback Database logging is already turned on.

Cause: An ALTER DATABASE FLASHBACK ON command had no effect because flashback database logging was already on.

Action: No action required.

ORA-38714: Instance recovery required.

Cause: An ALTER DATABASE FLASHBACK ON command failed because the database either crashed or was shutdown with the ABORT option.

Action: Open the database and then enter the SHUTDOWN command with the NORMAL or IMMEDIATE option.

ORA-38715: Invalid log number specified in the DUMP FLASHBACK command.

Cause: An invalid log number was used when dumping a flashback database log file.

Action: Specify a valid flashback database log number.

ORA-38716: Must supply an integer for the TYPE option.

Cause: An invalid value was specified for TYPE in the DUMP FLASHBACK command.

Action: Specify an integer value.

ORA-38717: Invalid DUMP FLASHBACK option.

Cause: An invalid option was specified in the DUMP FLASHBACK command. Currently the only options allowed are: DBA, TYPE, and LOGICAL.

Action: Retry the command with the correct options.

ORA-38718: Invalid thread number specified in the DUMP FLASHBACK command.

Cause: An invalid thread number was used in dumping the flashback database log files for a thread.

Action: Specify a valid thread number.

ORA-38719: Invalid DUMP FLASHBACK object.

Cause: An invalid object was specified in a DUMP FLASHBACK command. Currently the only objects allowed are: LOGFILE or THREAD.

Action: Retry the command with the correct options.

ORA-38720: Missing log file name or number.

Cause: A log file name or number was missing in a DUMP FLASHBACK LOGFILE command.

Action: Supply a valid log file name or number.

ORA-38721: Invalid file number.

Cause: An invalid file number was specified in the DBA clause of a DUMP FLASHBACK command.

Action: Supply a valid file number.

ORA-38722: ON or OFF expected.

Cause: The ALTER DATABASE FLASHBACK command was specified without the ON or OFF keyword.

Action: Retry the command with the ON or OFF keyword.

ORA-38723: Invalid SCN expression.

Cause: The SCN keyword was specified in a FLASHBACK DATABASE command but the SCN expression was invalid.

Action: Retry the command using a valid SCN number.

ORA-38724: Invalid option to the FLASHBACK DATABASE command.

Cause: An invalid option was specified to the FLASHBACK DATABASE command. Valid options are: SCN or TIMESTAMP.

Action: Correct the syntax and retry the command.

ORA-38725: specified name "<varname>string</varname>" does not match actual "<varname>string</varname>"

Cause: The database name specified in a FLASHBACK DATABASE command did not match the name of the currently mounted database.

Action: Correct the database name spelling or DISMOUNT the mounted database and mount the correct database.

ORA-38726: Flashback database logging is not on.

Cause: A FLASHBACK DATABASE command was tried but flashback database logging has not been enabled.

Action: Flashback database logging must be enabled via the ALTER DATABASE FLASHBACK ON command before a FLASHBACK DATABASE command can be tried. If the database must be taken back in time then a restore and incomplete recovery must be performed.

ORA-38727: FLASHBACK DATABASE requires a current control file.

Cause: The control file being used is a backup control file.

Action: FLASHBACK DATABASE cannot be used with a backup control file. If the database must be taken back in time then a restore and an incomplete recovery must be performed.

ORA-38728: Cannot FLASHBACK DATABASE to the future.

Cause: An SCN or time stamp provided in a FLASHBACK DATABASE command was in the future.

Action: Supply a proper SCN or time stamp and retry the command.

ORA-38729: Not enough flashback database log data to do FLASHBACK.

Cause: There was not enough flashback database log data to do the FLASHBACK DATABASE.

Action: If the database must be taken back in time then a restore and incomplete recovery must be performed.

ORA-38730: Invalid SCN/TIMESTAMP expression.

Cause: The expression supplied in a FLASHBACK DATABASE command was invalid.

Action: Retry the command using a valid number or time stamp expression.

ORA-38731: Expected version <varname>string</varname> does not match <varname>string</varname> in log header.

Cause: The version of the flashback database log file header was corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38732: Expected file size <varname>string</varname> does not match <varname>string</varname>.

Cause: The file size indicated in the control file did not match the file size contained in the flashback log file header. The flashback database log file was corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38733: Physical size <varname>string</varname> less than needed <varname>string</varname>.

Cause: A flashback database log file shrank in size. This was likely to have been caused by operator or operating system error.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38734: Flashback log is inconsistent; belongs to another database.

Cause: The database ID in the flashback database log file did not match the database ID in the control file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38735: Wrong log number <varname>string</varname> in flashback log file header.

Cause: The log file number in the flashback database log file did not match the control file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38736: Wrong thread number <varname>string</varname> in flashback log file header.

Cause: The thread number in the flashback database log file did not match the control file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38737: Expected sequence number <varname>string</varname> doesn't match <varname>string</varname>

Cause: The flashback database log is corrupted or is an old version.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38738: Flashback log file is not current copy.

Cause: A check of flashback database log file header at database open found that the flashback database log appeared to be an incorrectly restored backup. Flashback database log files cannot be backed up and restored.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38739: Flashback log file is more recent than control file.

Cause: The control file change sequence number in the flashback database log file was greater than the number in the control file. This implies that the wrong control file was being used. Note that repeatedly causing this error can make it stop happening without correcting the real problem. Every attempt to open the database will advance the control file change sequence number until it is great enough.

Action: FLASHBACK DATABASE can only be used with the current control file. If it is not available, then a restore and an incomplete recovery must be performed instead.

ORA-38740: Usable blocks value <varname>string</varname> is not valid.

Cause: A flashback database log file header contained a usable blocks value greater than the file size. The flashback database log file is corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38741: Formatted blocks value <varname>string</varname> is not valid.

Cause: The formatted blocks value in the flashback database log file was greater than the file size. The flashback database log file was corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38742: Flashback log file has incorrect log reset status.

Cause: The flashback database log file header had log reset data that was different than the control file. The log was probably an incorrectly restored backup. Flashback database logs cannot be backed up.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38743: Time/SCN is in the future of the database.

Cause: The Time/SCN provided in a FLASHBACK DATABASE command was in the future of the database.

Action: Retry the command with a correct Time/SCN or RECOVER the database.

ORA-38744: file <varname>string</varname> is not the same file seen at start of flashback

Cause: A different copy of the file was accessed the last time FLASHBACK DATABASE looked at the file header. A backup of the file was restored or the meaning of the file name changed during FLASHBACK DATABASE.

Action: Ensure the correct file is available, then retry FLASHBACK DATABASE.

ORA-38745: Simulate block corruption in krf_check_block()

ORA-38746: error occurred while restoring data block (file# <varname>string</varname>, block# <varname>string</varname>)

Cause: An error occurred during a FLASHBACK DATABASE command. See other errors on error stack.

Action: Investigate why the error occurred. It may be that the flashback database log data is corrupt. If so, a restore and an incomplete recovery must be performed instead.

ORA-38747: corrupt before image (file# <varname>string</varname>, block# <varname>string</varname>)

Cause: A corrupt data block before image was encountered during a FLASHBACK DATABASE command.

Action: The flashback log data is probably corrupt. If so, a restore and an incomplete recovery must be performed instead.

ORA-38748: cannot flashback data file <varname>string</varname> - file is in use or recovery

Cause: An attempt to do FLASHBACK DATABASE found that the file was not available for recovery. Either it was online and the database was open in some instance, or another process was currently doing media recovery or flashback on the file.

Action: Do not do FLASHBACK DATABASE.

ORA-38749: A media recovery has been started.

Cause: An attempt was made to start a FLASHBACK DATABASE in the same session as a media recovery.

Action: Complete or cancel the first media recovery session.

ORA-38750: FLASHBACK DATABASE may not be performed using a dispatcher.

Cause: An attempt was made to use a dispatcher process for FLASHBACK DATABASE. Memory requirements disallow this recovery method.

Action: Connect to the instance via a dedicated server process to perform FLASHBACK DATABASE.

ORA-38751: Flashback database log: "<varname>string</varname>"

Cause: This message reports the filename for details of another message.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

ORA-38752: file <varname>string</varname> does not exist

Cause: During an RMAN FLASHBACK DATABASE conversation, a file was listed which was not part of the database. The RMAN conversation was aborted.

Action: Retry the conversation with the appropriate file numbers.

ORA-38753: Cannot flashback data file <varname>string</varname>; no flashback log data.

Cause: An attempt to perform a FLASHBACK DATABASE failed because the file does not have enough flashback log data to cover the time to flash back. Either the file did not have flashback generation enabled for it, or had flashback generation turned off for it some time during the time span of the flashback.

Action: The file cannot be flashed back. The file must be taken offline or the tablespace dropped before continuing with the FLASHBACK DATABASE command.

ORA-38754: FLASHBACK DATABASE not started; required redo log is not available

Cause: A FLASHBACK DATABASE command did not start. A redo log needed for the recovery part of FLASHBACK DATABASE could not be found or accessed.

Action: See trace files for details of the problem.

ORA-38755: Flashback is already turned on for this tablespace.

Cause: An attempt was made to turn on flashback database logging for a tablespace that already has flashback turned on.

Action: No action required.

ORA-38756: Flashback is already turned off for this tablespace.

Cause: An attempt was made to turn off flashback database logging for a tablespace that already has flashback off.

Action: No action required.

ORA-38757: Database must be mounted and not open to FLASHBACK.

Cause: An attempt to Flashback a database was made when the database was not mounted or was already open.

Action: Mount the database and retry the FLASHBACK command.

ORA-38758: cannot flashback data file <varname>string</varname>; restored since last recovery

Cause: An attempt to do FLASHBACK DATABASE found that the file was restored since the last standby recovery. The file cannot be flashed back.

Action: The file must be taken offline before continuing with the FLASHBACK DATABASE command.

ORA-38759: Database must be mounted by only one instance and not open.

Cause: An attempt to turn on or off Flashback Database logging was made when the database was open or mounted by more than one instance.

Action: Mount the database in only one instance and retry the command.

ORA-38760: This database instance failed to turn on flashback database

Cause: Database flashback is on but this instance failed to start generating flashback data. Look in alert log for more specific errors.

Action: Correct the error or turn off database flashback.

ORA-38761: redo log sequence <varname>string</varname> in thread <varname>string</varname>, incarnation <varname>string</varname> could not be accessed

Cause: A redo log needed for the recovery portion of FLASHBACK could not be read or opened. The FLASHBACK operation failed.

Action: Restore the log and retry the FLASHBACK command.

ORA-38762: redo logs needed for SCN <varname>string</varname> to SCN <varname>string</varname>

Cause: The FLASHBACK DATABASE operation failed. The recovery portion of FLASHBACK DATABASE needed redo from the first SCN to the second, but one or more of the redo logs in the range could not be read or opened.

Action: Check the FLASHBACK DATABASE command trace file for a description of the inaccessible redo logs, restore access to them, and retry the FLASHBACK DATABASE command.

ORA-38763: flashback not started; enabled threads have changed

Cause: A FLASHBACK DATABASE command did not start. The set of enabled threads changed during the time to flash back.

Action: The flashback cannot be performed. Perform a restore and an incomplete recovery instead.

ORA-38764: flashback not started; datafile <varname>string</varname> enabled threads are different

Cause: A FLASHBACK DATABASE command did not start. The datafile was restored from a backup taken when the enabled threads were different than at the time of the flashback.

Action: The flashback cannot be performed. Perform a restore and an incomplete recovery instead.

ORA-38765: Flashback database cannot be opened read-only.

Cause: A complete recovery was performed after a database flashback but the database was not opened for read-write access, or a FLASHBACK DATABASE command failed.

Action: If a complete recovery was performed after a database flashback, open the database for read-write access. If a FLASHBACK DATABASE command failed, fix what caused the command to fail and retry the command, or recover and open the database for read-write access.

ORA-38766: cannot flashback data file <varname>string</varname>; file resized smaller

Cause: An attempt to do FLASHBACK DATABASE found that the file was shrunk during the time to flash back.

Action: The file cannot be flashed back. The file must be taken offline or the tablespace dropped before continuing with the FLASHBACK DATABASE command.

ORA-38767: flashback retention target parameter mismatch

Cause: The value of parameters DB_FLASHBACK_RETENTION_TARGET must be same in all instances. All databases must have same flashback retention target parameters.

Action: Check DB_FLASHBACK_RETENTION_TARGET values in all instances.

ORA-38768: resizing datafile <varname>string</varname> failed

Cause: An operating system error occurred when Flashback Database tried to shrink (resize) a datafile. Flashback shrinks a file in order to undo the effects of a file expand, for example, an autoextension of the file.

Action: Recover the database to return it to its previous state, or fix the cause of the operating system error and retry the Flashback. If that is not possible, then the file can be taken offline and the Flashback command retried. The file will have to be restored from a backup and rolled forward.

ORA-38769: FLASHBACK DATABASE failed after modifying data.

Cause: A FLASHBACK DATABASE command failed after modifying the the database. Look in the alert log for more information about the failure.

Action: Recover the database to return it to its previous state, or fix the cause of the error and retry the Flashback.

ORA-38770: FLASHBACK DATABASE failed during recovery.

Cause: A FLASHBACK DATABASE command successfully restored the database but failed during the recovery step. Look in the alert log for more information about the failure.

Action: Fix the error and then recover the database to the same SCN or timestamp used in the FLASHBACK DATABASE command.

ORA-38771: unnamed datafile(s) added to control file by flashback recovery

Cause: The recovery step of FLASHBACK DATABASE encountered the creation of a datafile that could not be added to the control file. An entry has been added to the control file for the new datafile, but with the file name UNNAMEDnnnn, where nnnn is the file number. Related error messages provide the file names that were originally used to create the files.

Action: Rename the file in the control file, or use the ALTER DATABASE CREATE DATAFILE command to create a file suitable for recovery. If the file is not going to be recovered, then take it offline with the FOR DROP option. The recovery step of Flashback can be resumed by entering a RECOVERY command with the same SCN or timestamp as used in the FLASHBACK DATABASE command. For example, RECOVER AUTOMTIC DATABASE UNTIL CHANGE <varname>flashback-scn</varname>.

ORA-38772: cannot add datafile '<varname>string</varname>' - file could not be created

Cause: The recovery step of FLASHBACK DATABASE encountered the creation of a datafile and could not recreate the file. The error from the creation attempt is displayed in another message. The control file file entry for the file is 'UNNAMEDnnnnn'.

Action: Use the ALTER DATABASE CREATE DATAFILE statement to create the file.

ORA-38773: cannot add data file '<varname>string</varname>' - file already part of database

Cause: The recovery step of FLASHBACK database encountered the creation of a datafile and could not create the file because the file name is already in use in the database. The control file file entry for the file is 'UNNAMEDnnnnn'.

Action: Use the ALTER DATABASE CREATE DATAFILE statement to create the file with a different name.

ORA-38774: cannot disable media recovery - flashback database is enabled

Cause: An attempt was made to disable media recovery while flashback database was enabled.

Action: Use the ALTER DATABASE FLASHBACK OFF statement to disable flashback database, then disable media recovery.

ORA-38775: cannot disable recovery area - flashback database is enabled

Cause: An attempt was made to set DB_RECOVERY_FILE_DEST to null while flashback database was enabled. Flashback database requires DB_RECOVERY_FILE_DEST to be set.

Action: Use the ALTER DATABASE FLASHBACK OFF statement to disable flashback database, then disable the recovery area.

ORA-38776: cannot begin flashback generation - recovery area is disabled

Cause: During a database mount, the RVWR process discovered that the recovery area was disabled. DB_RECOVERY_FILE_DEST must have been set null or removed from the INIT.ORA file while the database was unmounted.

Action: Flashback database requires the recovery area to be enabled. Either enable the recovery area by setting the DB_RECOVERY_FILE_DEST and DB_RECOVERY_FILE_DEST_SIZE initialization parameters, or turn off flashback database with the ALTER DATABASE FLASHBACK OFF command.

ORA-38777: database must not be started in any other instance

Cause: A command was attempted that required the database to be mounted in this instance and not started in any other instance. ALTER DATABASE OPEN RESETLOGS requires that the database be started in only one instance if flashback database logging is enabled.

Action: Ensure that the no other instances are started. Then retry the command.

ORA-38778: Restore point '<varname>string</varname>' already exists.

Cause: The restore point name of the CREATE RESTORE POINT command already exists. A restore point name must be unique.

Action: Either use a different name or delete the existing restore point with the same name.

ORA-38779: cannot create restore point - too many restore points.

Cause: The maximum number of restore points already have been created.

Action: Delete some existing restore point and retry the operation.

ORA-38780: Restore point '<varname>string</varname>' does not exist.

Cause: The restore point name of the DROP RESTORE POINT command does not exist.

Action: No action required.

ORA-38781: cannot disable media recovery - have guaranteed restore points

Cause: An attempt was made to disable media recovery while there is at least one guaranteed restore point.

Action: Drop all guaranteed restore points and then disable media recovery.

ORA-38782: cannot flashback database to non-guaranteed restore point '<varname>string</varname>'

Cause: An attempt was made to flashback database to a non-guaranteed restore point while flashback database is off. You can only flashback a database to guaranteed restore point when flashback database is not on.

Action: Consider picking a guaranteed restore point to flashback the database to, if there is one.

ORA-38783: Instance recovery required.

Cause: An attempt was made to create a restore point when the database is in mount mode but it was not shutdown cleanly before it was mounted. In order to create a restore point when the database is mounted, the database must be shutdown cleanly before it is mounted.

Action: Consider one of the following: 1. Create the restore point after opening the database. 2. Open the database, shut it down cleanly, mount the database, and retry creating the restore point.

ORA-38784: Cannot create restore point '<varname>string</varname>'.

Cause: An attempt to create a restore point failed. See other errors on the error stack and in the alert log for the specific reason.

Action: Fix the problem and retry.

ORA-38785: Media recovery must be enabled for guaranteed restore point.

Cause: Media recovery is not enabled. Media recovery must be enabled in order to create a guaranteed restore point.

Action: Turn on media recovery with an ALTER DATABASE ARCHIVELOG statement and then retry the command.

ORA-38786: Recovery area is not enabled.

Cause: An attempt was made to perform a command that requires Flash recovery area to be enabled.

Action: Set DB_RECOVERY_FILE_DEST to an appropriate location and retry.

ORA-38787: Creating the first guaranteed restore point requires mount mode when flashback database is off.

Cause: While flashback database is not on, an attempt was made to create the first guaranteed restore point while the database is open.

Action: Mount the database and retry.

ORA-38788: More standby database recovery is needed

Cause: An attempt was made to create a restore point or a guaranteed while a physical standby database is not cleanly checkpointed.

Action: Perform more standby database recovery via managed standby database recovery. Cancel managed recovery and retry the command.

ORA-38789: File name is too long.

Cause: The file name provided in the command was longer than the maximum allowed.

Action: Use a shorter file name.

ORA-38790: BEFORE must be specified with RESETLOGS

Cause: The FLASHBACK DATABASE command included the RESETLOGS parameter but not the BEFORE parameter.

Action: Retry the command with TO BEFORE RESETLOGS.

ORA-38791: flashback did not start because file <varname>string</varname> was not in a valid incarnation

Cause: Flashback could not be started because a file was checkpointed or fuzzy at a point where the file can neither be restored nor recovered to our restore target. In order for a file to be brought to the restore target, the file has to be in one of the incarnations along the ancestral path from the current incarnation to the restore incarnation.

Action: Manually restore or recover the file to a point where it is in one of the incarnations along the ancestral path from the current incarnation to the restore incarnation.

ORA-38792: encountered unknown flashback record from release <varname>string</varname>

Cause: A Flashback Database logfile contains a record written by a future Oracle release and is unknown by this release.

Action: The given release of Oracle must be installed in order to use these flashback database log files.

ORA-38793: cannot FLASHBACK the database or pluggable database to a future SCN or time

Cause: The Flashback Pluggable Database target SCN or timestamp is greater than the current database or pluggable database SCN/timestamp and the database or pluggable database incarnation is not the last opened incarnation.

Action: If the target SCN or timestamp is in the current incarnation or a child incarnation whose branch point is after the current database or pluggable database SCN then RECOVER DATABASE or RECOVER PLUGGABLE DATABASE to the

target SCN or time. If the target SCN or timestamp is in a child incarnation whose branch point is prior to the current database or pluggable database SCN then FLASHBACK DATABASE to before the branch point. Next, use RMAN to reset the database or pluggable database to the child incarnation. Finally, RECOVER DATABASE OR PLUGGABLE DATABASE to the target SCN time.

ORA-38794: Flashback target time not in current incarnation

Cause: The Flashback Database target timestamp is not in the database's current incarnation or any of its ancestors.

Action: Use a different target timestamp or use RMAN to reset the database to the appropriate incarnation.

ORA-38795: WARNING: FLASHBACK DATABASE succeeded but OPEN RESETLOGS would fail

Cause: FLASHBACK DATABASE succeeded. However, if ALTER DATABASE OPEN RESETLOGS command was attempted now, it would fail with the specified error.

Action: Fix the error before trying ALTER DATABASE OPEN RESETLOGS.

ORA-38796: Not enough flashback database log data to undo FLASHBACK.

Cause: There was not enough flashback log data to undo the flashback so a flashback was not started.

Action: It is still possible to get to the restore target by doing a flashback until the resetlogs branch point of the restore target is reached. This can be done by executing multiple "flashback to before resetlogs" commands, or by doing a flashback to the exact time or SCN of the desired resetlogs branch point. Note that this flashback cannot be undone should an error occur. The only option is to complete the flashback.

ORA-38797: Full database recovery required after a database has been flashed back

Cause: An attempt was made to recover some datafiles or tablespaces of a database after the database had been flashed back. In order to recover control file and all datafiles correctly, full database recovery is required after a database has been flashed back.

Action: Recover the whole database instead.

ORA-38798: Cannot perform partial database recovery

Cause: See other other messages on error stack for the cause.

Action: See other other messages on error stack for the action.

ORA-38799: Cannot drop guaranteed restore point internally created for snapshot standby

Cause: An attempt is made to drop the guaranteed restore point Oracle created internally for a snapshot standby.

Action: Use the "alter database convert to physical standby" command to convert the snapshot standby to a normal physical standby. This will automatically flashback the database and drop this guaranteed restore point.

ORA-38800: Cannot start Redo Apply on the open physical standby database

Cause: An attempt was made to start Redo Apply on an open physical standby database instance.

Action: Make sure the primary database is at compatibility 11.0.0 or higher. The redo logs to be recovered on an open physical standby database must be generated at compatibility 11.0.0 or higher. If you have any redo below 11.0.0 to be applied on the standby, you must apply them on a mounted standby before restarting recovery on an open standby when the log format advances to 11.0.0 or higher. If this is a RAC standby database, make sure the `ACTIVE_INSTANCE_COUNT` parameter is not set.

ORA-38801: improper value for ORA_EDITION

Cause: An improper value was used for `ORA_EDITION` when trying to specify an edition to use at login time. The value is not understandable as an identifier, or is too long.

Action: Correct the value for `ORA_EDITION` and try again.

ORA-38802: edition does not exist

Cause: This error occurred because a reference was made to an edition that does not exist or that the current user does not have privileges on.

Action: Check the edition name and verify that the current user has appropriate privileges on the edition.

ORA-38803: edition is unusable

Cause: This error occurred because a reference was made to an unusable edition.

Action: Use another edition.

ORA-38804: not a legal edition name

Cause: This error occurred because an attempt was made to create an edition called `ORA$BASE`, `DATABASE_DEFAULT`, or `USER_DEFAULT`. These are not legal edition names. Or a value provided as an edition name is not understandable as an identifier, or is too long.

Action: Choose a different name for the edition.

ORA-38805: edition is in use

Cause: An attempt was made to `ALTER` or `DROP` an edition that was being used in another session or was the database default edition.

Action: Retry when the edition is not in use and is not the database default edition.

ORA-38806: edition is being altered or dropped

Cause: An attempt was made to use an edition that was in the process of being altered or dropped.

Action: Use a different edition.

ORA-38807: Implementation restriction: an edition can have only one child

Cause: This error occurred because an attempt was made to create more than one child edition for a parent edition.

Action: Create the edition as a child of the leaf edition.

ORA-38808: edition has a usable parent and a usable child

Cause: An attempt was made to make an edition with a usable parent and a usable child edition unusable.

Action: An edition with a usable parent and a usable child edition cannot be made unusable. Retry after either parent or child has been made unusable.

ORA-38809: edition must be unusable

Cause: This error occurred because an attempt was made to drop a usable edition.

Action: Retry after the altering the edition to be unusable.

ORA-38810: Implementation restriction: cannot drop edition that has a parent and a child

Cause: This error occurred because an attempt was made to drop an edition that has a parent and a child edition.

Action: Retry after dropping the parent or child edition.

ORA-38811: need CASCADE option to drop edition that has actual objects

Cause: This error occurred because an attempt was made to drop an edition that has actual objects.

Action: Specify CASCADE option in drop command.

ORA-38812: maximum number of editions reached

Cause: The number of editions has reached the limit.

Action: Drop some editions before creating new ones.

ORA-38813: editions not supported for schema <varname>string</varname>

Cause: The Oracle-supplied schema did not support editions.

Action: Do not attempt to enable editions for the specified Oracle-supplied schema.

ORA-38814: ALTER SESSION SET EDITION must be first statement of transaction

Cause: An attempt was made to execute an edition switch within an open transaction.

Action: Commit or rollback the transaction and reexecute the statement, or use DBMS_SESSION.SET_EDITION_DEFERRED if its deferred effect is appropriate.

ORA-38815: ALTER SESSION SET EDITION must be a top-level SQL statement

Cause: An edition switch failed because it was executed from a PL/SQL block or using recursive SQL.

Action: Execute the statement from a top-level OCI call, or use dbms_session.set_edition if its deferred effect is appropriate.

ORA-38816: edition has a child that inherits objects from the edition

Cause: This error occurred because an attempt was made to drop an edition that a child that inherits objects from the edition.

Action: Retry after the child edition has no inherited objects.

ORA-38817: Insufficient privileges

Cause: You did not have sufficient privileges to execute the subprogram package DBMS_EDITIONS_UTIL.

Action: Obtain the necessary privileges. Please see the package specification for details.

ORA-38818: illegal reference to editioned object <varname>string</varname>. <varname>string</varname>

Cause: An attempt was made to violate the rule "A noneditioned object may not depend on an editioned object."

Action: Either make this object editioned; or do not make the illegal reference.

ORA-38819: user <varname>string</varname> owns one or more objects whose type is editionable and that have noneditioned dependent objects

Cause: An attempt was made to violate the rule "A noneditioned object may not depend on an editioned object."

Action: Either make sure that those objects owned by this user whose type is editionable have no noneditioned dependent objects; or use the FORCE option.

ORA-38820: user has evolved object type

Cause: User could not be edition enabled if it has evolved object type.

Action: Reset the evolved object type first.

ORA-38821: unsupported DBMS_SQL Edition operation

Cause: Could not bind or define ADT, VARRAY, nested table or REF data type when the specified Edition is different from the current edition.

Action: Use the current Edition.

ORA-38822: referential integrity constraints not allowed on editioned views

Cause: An attempt was made to create a referential integrity constraint to or from an editioned view or enable editions for a user that has views with referential integrity constraints.

Action: Do not attempt to create editioned views with referential integrity constraints.

ORA-38823: Crossedition triggers are not allowed to exist when dropping the root edition

Cause: An attempt was made to drop the root edition when enabled crossedition trigger exists.

Action: Drop or disable all the crossedition triggers before dropping the root edition.

ORA-38824: A CREATE OR REPLACE command may not change the EDITIONABLE property of an existing object.

Cause: An attempt was made to replace an existing object with a different value for the EDITIONABLE property.

Action: Switch the EDITIONABLE property in the REPLACE statement, or alter the existing object to have an EDITIONABLE property matching the EDITIONABLE property in the REPLACE statement.

ORA-38825: The EDITIONABLE property of an editioned object cannot be altered.

Cause: An attempt was made to alter the EDITIONABLE property of an object whose type has been enabled for editioning in the owner's schema.

Action: Drop the object and re-create it with the desired EDITIONABLE state.

ORA-38826: The EDITIONABLE property of a TYPE or PACKAGE specification and its body must match.

Cause: An attempt was made to create a TYPE or PACKAGE specification or body whose EDITIONABLE property did not match its counterpart.

Action: Switch the EDITIONABLE property in the CREATE statement, or alter the existing object to have an EDITIONABLE property matching the EDITIONABLE property in the CREATE statement.

ORA-38850: an enabled thread missing from control file

Cause: A CREATE CONTROLFILE statement was given that did not list all the enabled threads for the database.

Action: Reissue the CREATE CONTROLFILE statement, including all enabled threads.

ORA-38851: cannot mark the current instance (redo thread) as disabled

Cause: The standby switchover or failover operation failed because it needs to mark the current instance (redo thread) as disabled.

Action: Shut down this instance and start up using a different instance name or redo thread number and retry.

ORA-38852: cannot mark the current instance (redo thread) as disabled

Cause: The open resetlogs or standby activation operation failed because it must use a different instance (redo thread) than the current instance (redo thread) to open the database.

Action: Shut down this instance and start up using a different instance name or redo thread number and retry.

ORA-38853: cannot mark instance <varname>string</varname> (redo thread <varname>string</varname>) as disabled

Cause: The standby switchover or failover operation failed because it needs to mark an instance (redo thread) as disabled. That instance was up, which prevented it from being disabled.

Action: Shut down the specified instance and retry this command.

ORA-38854: cannot mark instance <varname>string</varname> (redo thread <varname>string</varname>) as disabled

Cause: The open resetlogs or standby activation operation failed because it needs to mark an instance (redo thread) as disabled. That instance was up, which prevented it from being disabled.

Action: Shut down the specified instance and retry this command.

ORA-38855: cannot mark instance <varname>string</varname> (redo thread <varname>string</varname>) as enabled

Cause: The standby switchover or failover operation failed because it needs to mark an instance (redo thread) as enabled. However, it had less than 2 online redo logs, which prevented it from being enabled.

Action: Add more logfiles to the specified instance and retry the command.

ORA-38856: cannot mark instance <varname>string</varname> (redo thread <varname>string</varname>) as enabled

Cause: The open resetlogs or standby activation operation failed because it needs to mark an instance (redo thread) as enabled. However, it had less than 2 online redo logs, which prevented it from being enabled.

Action: Add more logfiles to the specified instance and retry the command.

ORA-38857: cannot mark redo thread <varname>string</varname> as enabled

Cause: The standby switchover or failover operation failed because it needs to mark a redo thread as enabled. However, the control file was recreated with a MAXINSTANCES value smaller than the thread number of the redo thread.

Action: Recreate the control file with a larger MAXINSTANCES value.

ORA-38858: cannot mark redo thread <varname>string</varname> as enabled

Cause: The open resetlogs or standby activation operation failed because it needs to mark a redo thread as enabled. However, the control file was recreated with a MAXINSTANCES value smaller than the thread number of the redo thread.

Action: Recreate the control file with a larger MAXINSTANCES value.

ORA-38859: instance <varname>string</varname> (thread <varname>string</varname>) is not ready to be disabled

Cause: The command attempted to switch the instance (thread) into a new log before disabling it. The switch attempt failed because all eligible online logs were either being cleared or not completely archived yet.

Action: Wait a few minutes and retry.

ORA-38860: cannot FLASHBACK DATABASE during instantiation of a logical standby

Cause: The command was not permitted because the controlfile indicates the database was in the process of becoming a logical standby database but the controlfile conversion had not completed.

Action: If in the process of creating a logical standby database, perform the remaining instantiation procedures to completion. If this flashback operation followed a Data Guard failure, permit the errant Data Guard operation to successfully complete. Once the instantiation is complete, reissue the flashback operation.

ORA-38861: flashback recovery stopped before reaching recovery target

Cause: Flashback recovery on the standby ended early because the user attempted to flashback to an SCN or time for which there were no redo logs. Most likely, the user is trying to flashback to a future time in the database that the database has never recovered through. Check the alert log to find out which SCN the database recovered to.

Action: Flashback to an older SCN or acquire the necessary redo logs.

ORA-38862: Flashback database logs are in use.

Cause: The command could not be performed because the flashback database logs were locked by another operation, such as FLASHBACK DATABASE or a query of V\$FLASHBACK_DATABASE_LOG.

Action: Wait for the other operation to complete.

ORA-38863: datafile <varname>string</varname> has been restored from an optimized RMAN backup.

Cause: Flashback Database could not flash back the file because it was restored from an RMAN optimized backup with deallocated objects. Flashback cannot revert the file to a time before the last deallocation in the datafile backup.

Action: Restore the file from a backup prior to the Flashback target SCN or time and then retry the command.

ORA-38864: cannot create a guaranteed restore point with user specified SCN or time.

Cause: An SCN or timestamp was specified when creating a guaranteed restore point. This is not supported. You can only create a guaranteed restore point as of the current time.

Action: Avoid this combination of options for creating a restore point.

ORA-38865: cannot create restore point for a future SCN or time.

Cause: An attempt was made to create a restore point with an SCN or timestamp that is in the future.

Action: Revise the SCN or timestamp specified so that it is an SCN or timestamp in the past.

ORA-38866: cannot create restore point for an SCN or time before current database incarnation.

Cause: An attempt was made to create a restore point with an SCN or timestamp that is before the beginning of the current database incarnation.

Action: Revise the SCN or timestamp specified so that it is within current database incarnation.

ORA-38867: database not open: cannot create restore point with the specified timestamp

Cause: An attempt was made to create a restore point with the specified timestamp while the database was not open. The database must be open in order to map the timestamp to an SCN.

Action: Open the database first or pick another way to create the restore point.

ORA-38868: warning: the control file may have incorrect data file structure

Cause: This control file was created or converted based on a control file from a time different from the time of the database.

Action: Open database and all pluggable databases read-only to synchronize the control file with the database dictionary. You can also force recovery to proceed by invoking recovery again.

ORA-38869: datafile <varname>string</varname> has been restored from an RMAN backup with undo block compression.

Cause: Flashback Database could not flash back the database because a file was restored from an RMAN backup with undo block compression, and the Flashback target was to a time when the missing undo may be needed to open the database.

Action: Restore an earlier backup of the file and retry the command or Flashback to a later time.

ORA-38870: cannot backup a control file that may have incorrect data file structure.

Cause: This control file was created or converted based on a control file from a time different from the time of the database.

Action: Open database read-only to synchronize the control file with the database dictionary to fix the control file.

ORA-38871: cannot enable flashback before open resetlogs after incomplete recovery.

Cause: To enable flashback on a primary database, the database must be clean without requiring open resetlogs.

Action: Open resetlogs first and then enable flashback database.

ORA-38872: Cannot perform backup control file recovery if Flashback Database is enabled.

Cause: RECOVER DATABASE with the BACKUP CONTROLFILE option, or a database recovery that required the control file be made a backup failed because Flashback Database was enabled or there was a guaranteed restore point.

Action: Disable Flashback Database or remove the guaranteed restore point and retry the command.

ORA-38873: missing incarnation information

Cause: Flashback Database failed because incarnation information was not found in the control file. The Flashback target incarnation was not in the control file or had a missing parent incarnation.

Action: Register logs from the missing incarnations and retry the command.

ORA-38874: cannot flashback data file <varname>string</varname> - missing incarnation information

Cause: Flashback Database failed because incarnation information for the start of the offline range for a file was not found in the control file. Flashback could not update the file's header with the missing incarnation's resetlogs information.

Action: Check the trace log for the offline range of the data file. If redo logs from the missing incarnation can be found, register the logs in the control file and retry the command.

ORA-38875: FLASHBACK DATABASE not started; in test mode

Cause: The FLASHBACK DATABASE command was not performed because it was started in test mode.

Action: No action required.

ORA-38876: redo logs not required

Cause: The FLASHBACK DATABASE command was performed in test mode and determined that no redo logs were required to perform the tested FLASHBACK DATABASE command.

Action: No action required.

ORA-38877: required redo logs are available

Cause: The FLASHBACK DATABASE command was performed in test mode and determined that no redo logs required to perform the tested FLASHBACK DATABASE command were missing.

Action: No action required.

ORA-38878: required redo log is not available

Cause: A redo log needed for the recovery part of FLASHBACK DATABASE could not be found or accessed.

Action: See trace files for details of the problem.

ORA-38879: Cannot flashback data file <varname>string</varname>; may not be able to undo all changes.

Cause: A data file was plugged in when there was a guaranteed restore point, but Flashback Database was not enabled. It is possible that some changes to the data file, after it was converted, were not logged to the Flashback Database logs.

Action: If the FLASHBACK DATABASE command was meant to rewind the database to a time before the file was plugged in, take the data file offline and retry the command. If the FLASHBACK DATABASE command was meant to rewind the database to a time after the file was plugged in, restore the original version of the plugged in file and retry the command.

ORA-38880: Cannot advance compatibility from <varname>string</varname> to <varname>string</varname> due to guaranteed restore points

Cause: Flashback database cannot undo the advance of database compatibility. Therefore, one cannot advance the compatibility of the database while there are guaranteed restore points in the database.

Action: Drop all guaranteed restore points first and retry, or delay the advance of database compatibility to a later time.

ORA-38881: Cannot drop tablespace <varname>string</varname> on primary database due to guaranteed restore points.

Cause: An attempt was made to drop a tablespace on a primary database while there are guaranteed restore points. You cannot do this because Flashback database cannot undo dropping of a tablespace.

Action: Drop all guaranteed restore points first and retry, or delay dropping the tablespace until all guaranteed restore points are removed.

ORA-38882: Cannot drop tablespace <varname>string</varname> on standby database due to guaranteed restore points.

Cause: An attempt was made to drop a tablespace on a standby database while there are guaranteed restore points. You cannot do this because Flashback database cannot undo dropping of a tablespace.

Action: Drop all guaranteed restore points and rerun recovery on standby database.

ORA-38883: Cannot shrink data file <varname>string</varname> on primary database due to guaranteed restore points.

Cause: An attempt was made to shrink a data file on a primary database while there are guaranteed restore points. You cannot do this because Flashback database cannot undo the shrinking of a data file.

Action: Drop all guaranteed restore points first and retry, or delay the data file resize until all guaranteed restore points are removed.

ORA-38884: Cannot shrink data file <varname>string</varname> on standby database due to guaranteed restore points.

Cause: An attempt was made to shrink a data file on a standby database while there are guaranteed restore points. You cannot do this because Flashback database cannot undo the shrinking of a data file.

Action: Drop all guaranteed restore points and rerun recovery on standby database.

ORA-38885: WARNING: Flashback database has been disabled while fast-start failover is enabled.

Cause: Flashback database was disabled while fast-start failover was enabled.

Action: Enable flashback database if fast-start failover is enabled.

ORA-38886: WARNING: Flashback database was disabled due to error when writing flashback database logs.

Cause: Recovery writer (RVWR) encountered an error when writing flashback database logs.

Action: See the error stack in the alert log.

ORA-38887: WARNING: Recovery writer (RVWR) hang due to error when writing flashback database logs.

Cause: An error occurred while writing to the flashback database logs.

Action: Shutdown the instance or turn off flashback database.

ORA-38888: invalid redo thread number

Cause: The provided thread number was invalid.

Action: Specify a valid redo thread number.

ORA-38900: missing mandatory column "<varname>string</varname>" of error log table "<varname>string</varname>"

Cause: Mandatory column of error logging table is not present

Action: Add the named column to the error logging table. Consult ORACLE documentation for the correct data type.

ORA-38901: column "<varname>string</varname>" of table "<varname>string</varname>" must be one of the first "<varname>string</varname>" columns

Cause: Mandatory information column of error logging table is present, but must be at the beginning of the row.

Action: Create the error logging table correctly. Consult ORACLE documentation for the correct format of an error logging table.

ORA-38902: errors in array DML exceed <varname>string</varname>

Cause: The operation failed because the array DML had more errors than can be stored internally for BATCH ERRORS.

Action: Do not use BATCH ERROR mode when array DML has more error rows than the number specified in the error.

ORA-38903: DML error logging is not supported for abstract column
"<varname>string</varname>"

Cause: A DML Error Logging operation was attempted on a table which has an ADT, REF, VARRAY, or nested table column type, and the error logging table referred to the specified column.

Action: Either do not use DML Error Logging on such a table or remove the offending column from the error logging table. The scalar columns can be logged, but not abstract column types.

ORA-38904: DML error logging is not supported for LOB column
"<varname>string</varname>"

Cause: A DML Error Logging operation was attempted on a table which has a CLOB, NCLOB, or BLOB column type, and the error logging table referred to the specified column.

Action: Either do not use DML Error Logging on such table or remove the offending column from the error logging table. The scalar columns can be logged, but not LOB column types.

ORA-38905: DML error logging is not supported for LONG column
"<varname>string</varname>"

Cause: A DML Error Logging operation was attempted on a table which has a LONG, or LONG RAW column type, and the error logging table referred to the specified column.

Action: Either do not use DML Error Logging on such a table or remove the offending column from the error logging table. The scalar columns can be logged, but not long column types.

ORA-38906: insert into DML Error Logging table "<varname>string</varname>" failed

Cause: An error occurred when attempting to log a DML Error on behalf of the DML Error logging clause. This may be intended if a trigger is defined on the error table (which in turn errors out in certain cases).

Action: Determine root cause of error (in error stack).

ORA-38907: DML error logging is not supported for FILE column
"<varname>string</varname>"

Cause: A DML Error Logging operation was attempted on a table which has a BFILE column and the Error Logging table referred to the specified column.

Action: Either don't use DML Error Logging on such table or remove the offending column from the error logging table. The scalar columns can be logged, but not BFILE column types.

ORA-38908: internal error occurred during DML Error Logging

Cause: An unexpected error occurred while executing recursive SQL to insert a row into the DML Error Logging table.

Action: Report this error to Oracle Support.

ORA-38909: DML Error logging is not supported with BATCH ERROR mode

Cause: A DML Error Logging operation was attempted on a table which has BATCH ERROR mode also specified.

Action: Refrain from using both DML Error Logging and BATCH ERROR mode on the same table.

ORA-38910: BATCH ERROR mode is not supported for this operation

Cause: BATCH ERROR mode specified for this operation.

Action: Refrain from using BATCH ERROR mode with this operation.

ORA-38911: unique constraint (<varname>string</varname>.<varname>string</varname>) violated

Cause: An INSERT statement with a CHANGE_DUPKEY_ERROR_INDEX hint tried to insert a duplicate key into a table.

Action: Either remove the unique restriction or do not insert the key.

ORA-38912: An index must be specified in the index hint

Cause: Index specification was missing in an IGNORE_ROW_ON_DUPKEY_INDEX or CHANGE_DUPKEY_ERROR_INDEX hint.

Action: In the hint, specify a unique index that exists on the table.

ORA-38913: Index specified in the index hint is invalid

Cause: The index specified in an IGNORE_ROW_ON_DUPKEY_INDEX or CHANGE_DUPKEY_ERROR_INDEX hint could not be found.

Action: Specify a unique index that exists on the table. The index cannot be a non-unique index or a bitmap index.

ORA-38914: Either mutate the error or ignore row on unique violation

Cause: IGNORE_ROW_ON_DUPKEY_INDEX and CHANGE_DUPKEY_ERROR_INDEX were both specified in the same statement.

Action: You cannot specify both hints in the same statement. Remove one of these two hints, or both, from the statement.

ORA-38915: Multiple indexes in change or ignore duplicate key hint

Cause: Multiple indexes were specified in an IGNORE_ROW_ON_DUPKEY_INDEX or CHANGE_DUPKEY_ERROR_INDEX hint.

Action: Only one index must be specified in the hint.

ORA-38916: CHANGE_DUPKEY_ERROR_INDEX hint disallowed for this operation

Cause: CHANGE_DUPKEY_ERROR_INDEX hint was specified for the operation.

Action: You cannot specify this hint for this operation. Remove the hint from the statement.

ORA-38917: IGNORE_ROW_ON_DUPKEY_INDEX hint disallowed for this operation

Cause: IGNORE_ROW_ON_DUPKEY_INDEX hint was specified for the operation.

Action: You cannot specify this hint for this operation. Remove the hint from the statement.

ORA-38918: RETRY_ON_ROW_CHANGE hint disallowed for this operation

Cause: RETRY_ON_ROW_CHANGE hint was specified for the operation.

Action: You cannot specify this hint for this operation. Remove the hint from the statement.

ORA-38919: remote table not supported for DML error logging

Cause: A remote table was specified in the DML error logging clause.

Action: You cannot specify a remote table to which errors will be logged. Specify a local table only.

ORA-38950: Source platform <varname>string</varname> not cross platform compliant

Cause: Cross platform transport was not allowed for this platform.

Action: For a list of supported platforms, query fixed view SYS.V\$TRANSPORTABLE_PLATFORM.

ORA-38951: Target platform <varname>string</varname> not cross platform compliant

Cause: Cross platform transport was not allowed for this platform.

Action: For a list of supported platforms, query fixed view SYS.V\$TRANSPORTABLE_PLATFORM.

ORA-38952: Source database not 10.0.0.0 compatible

Cause: Cross platform transport is not supported unless database compatibility is advanced to 10.0.0.0 or higher

Action: Use the compatible parameter to advance source database compatibility and redo the transport

ORA-38953: Cross platform transport is not supported between source platform <varname>string</varname> and target platform <varname>string</varname>

ORA-38954: Cross platform transport is not supported between source platform identifier <varname>string</varname> and target platform identifier <varname>string</varname>

Cause: The platform identifier in the transported file indicated that the datafile format was different than the target database datafile format.

Action: For a list of supported platforms, query fixed view SYS.V\$TRANSPORTABLE_PLATFORM. If both platforms are present, Contact Oracle support

ORA-38955: Source platform <varname>string</varname> not cross platform compliant

Cause: The platform identifier in the transported file indicated that this platform is not supported for a cross platform transport.

Action: For a list of supported platforms, query fixed view SYS.V\$TRANSPORTABLE_PLATFORM.

ORA-38956: Target platform <varname>string</varname> not cross platform compliant

Cause: Cross platform transport was not allowed for this platform.

Action: For a list of supported platforms, query fixed view SYS.V\$TRANSPORTABLE_PLATFORM.

ORA-38958: Source platform <varname>string</varname> is in different byte order than target platform <varname>string</varname>

Cause: Probably a conversion was not done before the import phase of the transport.

Action: Use RMAN CONVERT functionality to convert endian ordering.

ORA-38959: Failed to update block 0 to new version 10 format

Cause: An attempt was made to update block 0 to version 10 format.

Action: check additional error messages and contact Oracle Support Services.

ORA-38960: File <varname>string</varname> from platform <varname>string</varname> is not compatible with current platform <varname>string</varname>

Cause: The file was directly copied to this platform from a platform with a different endian ordering.

Action: Use RMAN CONVERT functionality to convert endian ordering.

ORA-38961: data file: <varname>string</varname>

Cause: Reporting file name for details of another error.

Action: See associated error message.

ORA-39000: bad dump file specification

Cause: The user specified a dump file that could not be used in the current job. Subsequent error messages describe the inadequacies of the dump file.

Action: Specify a dump file that is usable for the job.

ORA-39001: invalid argument value

Cause: The user specified API parameters were of the wrong type or value range. Subsequent messages supplied by DBMS_DATAPUMP.GET_STATUS will further describe the error.

Action: Correct the bad argument and retry the API.

ORA-39002: invalid operation

Cause: The current API cannot be executed because of inconsistencies between the API and the current definition of the job. Subsequent messages supplied by DBMS_DATAPUMP.GET_STATUS will further describe the error.

Action: Modify the API call to be consistent with the current job or redefine the job in a manner that will support the specified API.

ORA-39003: unable to get count of total workers alive

Cause: Attempt to get count of total worker processes alive failed.

Action: Check the additional error messages to see what caused the failure. Correct the error, if possible, and try the operation again. If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39004: invalid state

Cause: The state of the job precludes the execution of the API.

Action: Rerun the job to specify the API when the job is an appropriate state.

ORA-39005: inconsistent arguments

Cause: The current API cannot be executed because of inconsistencies between arguments of the API call. Subsequent messages supplied by DBMS_DATAPUMP.GET_STATUS will further describe the error.

Action: Modify the API call to be consistent with itself.

ORA-39006: internal error

Cause: An unexpected error occurred while processing a Data Pump job. Subsequent messages supplied by DBMS_DATAPUMP.GET_STATUS will further describe the error.

Action: Contact Oracle Customer Support.

ORA-39007: Job <varname>string</varname> has been reopened at <varname>string</varname>**ORA-39008: Restarting <varname>string</varname>: <varname>string</varname>****ORA-39009: Starting <varname>string</varname>: <varname>string</varname>****ORA-39010: *********ORA-39011: Dump file set for <varname>string</varname>.<varname>string</varname> is:****ORA-39012: Client detached before the job started.**

Cause: The client detached or ended their session before the Data Pump job was started.

Action: Create new job and remain attached to the job until it is started.

ORA-39013: Remapping the SYSTEM schema is not supported.

Cause: A remap_schema transform with the SYSTEM schema was specified.

Action: Retry the import command without remapping the SYSTEM schema.

ORA-39014: One or more workers have prematurely exited.

Cause: One or more of the worker processes exited before the job was completed. With no workers, the master process will terminate the job.

Action: Rerun the job. If problem persists, contact Oracle Customer Support.

ORA-39015: job is not running

Cause: An API was executed that required the job to be running, but the job was not active.

Action: Retry the API. If problem persists, contact Oracle Customer Support.

ORA-39016: Operation not supported when job is in <varname>string</varname> state.

Cause: The state of the job precludes the execution of the API.

Action: Rerun the job to specify the API when the job is an appropriate state.

ORA-39017: Worker request not supported when job is in <varname>string</varname> state.

Cause: The state of the job precludes the execution of a worker request. This is an internal error.

Action: Contact Oracle Customer Support.

ORA-39018: master process received invalid message number <varname>string</varname>

Cause: Internal Error

Action: Contact Oracle Customer Support.

ORA-39019: invalid operation type <varname>string</varname>

Cause: User specified an invalid operation name on an DBMS_DATAPUMP.OPEN API or an invalid operation name was specified in the master table for a restart API.

Action: Correct the operation name and recreate the job.

ORA-39020: invalid mode type <varname>string</varname>

Cause: User specified an invalid mode on an DBMS_DATAPUMP.OPEN API or an invalid mode was specified in the master table for a restart API.

Action: Correct the mode and recreate the job.

ORA-39021: Database compatibility version <varname>string</varname> is not supported.

Cause: User selected COMPATIBLE as the version on an DBMS_DATAPUMP.OPEN API, but the current database compatibility version is not supported by the Data Pump API. Database versions before 9.2 are not supported by the Data Pump.

Action: Specify a supported version and recreate the job.

ORA-39022: Database version <varname>string</varname> is not supported.

Cause: User selected LATEST as the version on an DBMS_DATAPUMP.OPEN API, but the current database version is not supported by the Data Pump API. Database versions before 9.2 are not supported by the Data Pump.

Action: Specify a supported version and recreate the job.

ORA-39023: Version <varname>string</varname> is not supported.

Cause: User specified an explicit version on an DBMS_DATAPUMP.OPEN API, but the current database version is not supported by the Data Pump API. Database versions before 9.2 are not supported by the Data Pump.

Action: Specify a supported version and recreate the job.

ORA-39024: wrong schema specified for job

Cause: Internal error caused by the master process finding inconsistencies between the schemas specified for the job.

Action: Contact Oracle Customer Support.

ORA-39025: jobs of type <varname>string</varname> are not restartable

Cause: Attempt to restart a job which was not restartable.

Action: Recreate the job via the open API.

ORA-39026: master table is inconsistent on validation <varname>string</varname>

Cause: Job cannot be restarted because it failed a validation check. Validation checks are of the form -xx.y where -xx is the value of the PROCESS_ORDER column in the master table where the error was detected and y is the actual validity check for the row.

Action: Recreate the job. If master table has not been modified, but problem persists, contact Oracle Customer Support.

ORA-39027: wrong version of master table

Cause: Job cannot be restarted because the version of the database upon which the job started is different than the current version of the database and the format of the master table has changed between the versions.

Action: Recreate the job.

ORA-39028: cannot restart job from <varname>string</varname> state

Cause: The job was not in a suitable state for restart. Jobs must begin executing before they can be restarted.

Action: Recreate the job.

ORA-39029: worker <varname>string</varname> with process name "<varname>string</varname>" prematurely terminated

Cause: The specified worker process terminated unexpectedly. Subsequent messages describe the reason for the termination.

Action: In many cases, the Data Pump will attempt to automatically restart the worker. If problem persists, contact Oracle Customer Support.

ORA-39030: invalid file type <varname>string</varname>

Cause: An invalid filetype was specified for an DBMS_DATAPUMP.ADD_FILE API call.

Action: Correct the filetype parameter and reissue the API request.

ORA-39031: invalid filter name <varname>string</varname>

Cause: An invalid filter name was specified on a DBMS_DATAPUMP.DATA_FILTER API call.

Action: Correct the filter name parameter and reissue the API request.

ORA-39032: Parameter <varname>string</varname> is not supported in <varname>string</varname> jobs.

Cause: The specified parameter was not supported for the specified class of jobs.

Action: Re-create the job with the appropriate mode or operation type.

ORA-39033: Data cannot be filtered under the direct path access method.

Cause: The user specified that the data access method for the job was direct which precludes the use of certain data filters.

Action: Use the SUBQUERY or the SAMPLE data filter with the automatic data access method.

ORA-39034: Table <varname>string</varname> does not exist.

Cause: The user referenced a table in an API that did not exist.

Action: Correct table name and retry API.

ORA-39035: Data filter <varname>string</varname> has already been specified.

Cause: The user has already specified a data filter that matches on the filter name, schema name, and table.

Action: Specify a different data filter.

ORA-39036: invalid metadata filter name <varname>string</varname>

Cause: An invalid metadata filter name was specified on a DBMS_DATAPUMP.METADATA_FILTER API call.

Action: Correct the metadata filter name parameter and reissue the API request.

ORA-39037: Object type path not supported for <varname>string</varname> metadata filter.

Cause: An object type path was specified for the filter, but the filter does not support the object type path parameter.

Action: Remove the object type path parameter.

ORA-39038: Object path "<varname>string</varname>" is not supported for <varname>string</varname> jobs.

Cause: The specified object type path is invalid for the job mode.

Action: Correct the object type path.

ORA-39039: Schema expression "<varname>string</varname>" contains no valid schemas.

Cause: The specified SCHEMA_EXPR filter resulted in no schemas being selected.

Action: Correct the the SCHEMA_EXPR filter specification.

ORA-39040: Schema expression "<varname>string</varname>" must identify exactly one schema.

Cause: For TABLE mode jobs, the SCHEMA_EXPR filter must identify exactly one schema.

Action: Correct the the SCHEMA_EXPR filter specification.

ORA-39041: Filter "<varname>string</varname>" either identifies all object types or no object types.

Cause: A Metadata filter specifying path names either returned all objects or no objects in the job.

Action: Correct the the metadata filter specification.

ORA-39042: invalid transform name <varname>string</varname>

Cause: An invalid transform name was specified on a DBMS_DATAPUMP.METADATA_TRANSFORM API call.

Action: Correct the transform name parameter and reissue the API request.

ORA-39043: Object type <varname>string</varname> is not supported for <varname>string</varname>.

Cause: The specified object type is invalid for the specified transform or remap.

Action: Correct the object type.

ORA-39044: Metadata transform <varname>string</varname> has already been specified.

Cause: The user has already specified the metadata transform for the same class of object types.

Action: Specify a different object_type for the transform.

ORA-39045: invalid metadata remap name <varname>string</varname>

Cause: An invalid metadata remap name was specified on a DBMS_DATAPUMP.METADATA_REMAP API call.

Action: Correct the metadata remap name parameter and reissue the API request.

ORA-39046: Metadata remap <varname>string</varname> has already been specified.

Cause: The user has already specified a metadata remap that matches on the remap name and original value.

Action: Specify a different original value.

ORA-39047: Jobs of type <varname>string</varname> cannot use multiple execution streams.

Cause: The user specified a value of parallelism that is precluded by the operation type or mode of the job.

Action: Specify only a parallelism of 1 for this type of job.

ORA-39048: Unable to start all workers; only <varname>string</varname> worker(s) available.

Cause: The full degree of parallelism could not be honored due process limits, resource limits, or other internal errors.

Action: Increase process/resource limits for the job.

ORA-39049: invalid parameter name <varname>string</varname>

Cause: An invalid parameter name was specified on a DBMS_DATAPUMP.SET_PARAMETER API call.

Action: Correct the parameter name and reissue the API request.

ORA-39050: parameter <varname>string</varname> is incompatible with parameter <varname>string</varname>

Cause: Two parameters were set that were incompatible with each other. Only the first parameter setting will be used.

Action: Decide which parameter is to be used and stick to it.

ORA-39051: parameter <varname>string</varname> specified multiple times

Cause: The user has already specified a parameter that matches on the name and the specific parameter doesn't support duplicate definitions.

Action: Specify non-repeatable parameters only once.

ORA-39052: cannot specify SKIP_CURRENT on initial start of a job.

Cause: The user has already specified SKIP_CURRENT for a job that has never executed.

Action: Only specify SKIP_CURRENT when restarting a job.

ORA-39053: parameter or attribute <varname>string</varname> must be defined for a <varname>string</varname> job

Cause: The job being defined cannot be started because it is missing the specified definition.

Action: Specify the omitted parameter or attribute before starting the job.

ORA-39054: missing or invalid definition of the SQL output file.

Cause: The job being defined cannot be started because it is missing the file to receive the SQL output of the job or the definition is unusable.

Action: Specify a valid directory name and file name for the SQL file.

ORA-39055: The <varname>string</varname> feature is not supported in version <varname>string</varname>.

Cause: The user attempted to use a feature that was not enabled in the database version specified for the current job. Typically, this error occurs if the compatibility level of the database is below the current version of the database or if the user explicitly specifies a version for a Data Pump job.

Action: Specify the current database version as a version parameter for the the job.

ORA-39056: invalid log file specification.

Cause: The log file for the job was incorrectly specified.

Action: Specify a valid directory name and file name for the log file.

ORA-39057: invalid worker request <varname>string</varname> for <varname>string</varname> jobs.

Cause: The worker process sent a message that wasn't supported for the current job.

Action: Internal error -- contact Oracle Customer Support and report the error.

ORA-39058: current object skipped: <varname>string</varname> of type <varname>string</varname>

Cause: The user specified SKIP_CURRENT when restarting a job. This message is a confirmation that the object will not be imported.

Action: User must manually define the object in the target database.

ORA-39059: dump file set is incomplete

Cause: An IMPORT or SQL_FILE operation was being performed but not all of the files from the EXPORT dump file set were included.

Action: Check the export log file and make sure all of the files that were exported are included in the current job.

ORA-39060: table(s) dropped because of conflict with master table

Cause: A table specified by a job was not included because its definition would collide with the master table definition for the current job.

Action: After the job completes. Import the conflicting tables using a unique job name to avoid conflicts with normal user tables.

ORA-39061: import mode <varname>string</varname> conflicts with export mode <varname>string</varname>

Cause: The mode used for import cannot be used with a dump file set of specified mode. Transportable jobs are not compatible with other modes.

Action: Perform the import using a mode compatible with the export.

ORA-39062: error creating master process <varname>string</varname>

Cause: An attempt to create the listed master process failed.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39063: unable to write to the bad file**ORA-39064: unable to write to the log file**

Cause: Errors were detecting while writing to the log file. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39065: unexpected master process exception in <varname>string</varname>

Cause: An unhandled exception was detected internally within the master control process for the Data Pump job. This is an internal error. messages will detail the problems.

Action: If problem persists, contact Oracle Customer Support.

ORA-39066: Unable to close the bad file.**ORA-39067: Unable to close the log file.**

Cause: Errors were detecting while closing the log file. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39068: invalid master table data in row with PROCESS_ORDER=<varname>string</varname>

Cause: A corruption was detected in the master table in the specified row(s). Either the row wasn't found, it was missing columns or had illegal values in its columns.

Action: Rerun the job with an uncorrupted master table.

ORA-39069: Unable to open the bad file.

ORA-39070: Unable to open the log file.

Cause: Errors were detecting while opening the log file. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39071: Value for <varname>string</varname> is badly formed.

Cause: The value of the user specified filter did not contain a legitimate SQL clause. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39072: Job <varname>string</varname> successfully completed at <varname>string</varname>**ORA-39073: Job <varname>string</varname> completed with <varname>string</varname> error(s) at <varname>string</varname>****ORA-39074: Job <varname>string</varname> stopped by user request at <varname>string</varname>****ORA-39075: Job <varname>string</varname> stopped due to fatal error at <varname>string</varname>****ORA-39076: cannot delete job <varname>string</varname> for user <varname>string</varname>**

Cause: Unable to delete a job. Refer to the any following or prior error messages for clarification.

Action: Eliminate the problems indicated.

ORA-39077: unable to subscribe agent <varname>string</varname> to queue "<varname>string</varname>"

Cause: The Data Pump's communication layer was unable to attach one of its processes to the control or status queue. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Customer Support.

ORA-39078: unable to dequeue message for agent <varname>string</varname> from queue "<varname>string</varname>"

Cause: The Data Pump's communication layer was unable to retrieve a message from the control or status queue. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Customer Support.

ORA-39079: unable to enqueue message <varname>string</varname>

Cause: The Data Pump's communication layer was unable to send the specified message on the control or status queue. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Customer Support.

ORA-39080: failed to create queues "<varname>string</varname>" and "<varname>string</varname>" for Data Pump job

Cause: The Data Pump's communication layer was unable to create the status and control queues required for interprocess communication. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Support.

ORA-39081: failed to unsubscribe agent <varname>string</varname> from queue "<varname>string</varname>"

Cause: The Data Pump's communication layer was unable to unsubscribe a process from the control or status queue. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Customer Support.

ORA-39082: Object type <varname>string</varname> created with compilation warnings

Cause: The object in the SQL statement following this error was created with compilation errors. If this error occurred for a view, it is possible that the base table of the view was missing.

Action: This is a warning. The object may have to be recompiled before being used.

ORA-39083: Object type <varname>string</varname> failed to create with error: ln<varname>string</varname>\nFailing sql is:ln<varname>string</varname>

Cause: Examine original error code to determine actual cause

Action: Original error code will contain more information

ORA-39084: cannot detach job <varname>string</varname> for user <varname>string</varname>

Cause: Unable to detach a job from the session. Refer to any following error messages for clarification.

Action: Eliminate the problems indicated.

ORA-39085: cannot update job <varname>string</varname> for user <varname>string</varname>

Cause: Unable to update the fixed table information for a job. Refer to any following or prior error messages for clarification.

Action: Eliminate the problems indicated.

ORA-39086: cannot retrieve job information

Cause: Unable to retrieve fixed table information for a job. Refer to the secondary error messages that follow this one for clarification.

Action: Eliminate the problems indicated by the secondary errors.

ORA-39087: directory name <varname>string</varname> is invalid

Cause: A corresponding directory object does not exist.

Action: Correct the directory object parameter, or create a corresponding directory object with the CREATE DIRECTORY command.

ORA-39088: file name cannot contain a path specification

Cause: The name of a dump file, log file, or sql file contains a path specification.

Action: Use the name of a directory object to indicate where the file should be stored.

ORA-39089: ku trace event

ORA-39090: Cannot add devices to file oriented job.

Cause: Attempt to add a device to a job that already contains more than one disk file.

Action: Only specify one file for jobs that contain sequential devices.

ORA-39091: unable to determine logical standby and streams status

Cause: An error occurred when determining if the Data Pump job needed to support logical standby or streams.

Action: The subsequent message describes the error that was detected. Correct the specified problem and restart the job.

ORA-39092: unable to set SCN metadata for object "<varname>string</varname>.<varname>string</varname>" of type <varname>string</varname>

Cause: An error occurred when applying a SCN to the specified object to support logical standby or streams.

Action: The subsequent message describes the error that was detected. Correct the specified problem and restart the job.

ORA-39093: FLASHBACK automatically enabled to preserve database integrity.

Cause: A Data Pump job was required to enable flashback support to specific SCNs in order to preserve the consistency of a logical standby or streams instantiation.

Action: None

ORA-39094: Parallel execution not supported in this database edition.

Cause: Parallel execution of Data Pump jobs is not supported for this database edition.

Action: Specify a parallelism of 1 for jobs not running on Enterprise Edition databases.

ORA-39095: Dump file space has been exhausted: Unable to allocate <varname>string</varname> bytes

Cause: The Export job ran out of dump file space before the job was completed.

Action: Reattach to the job and add additional dump files to the job restarting the job.

ORA-39096: invalid input value <varname>string</varname> for parameter <varname>string</varname>

Cause: A NULL or invalid value was supplied for the parameter.

Action: Correct the input value and try the call again.

ORA-39097: Data Pump job encountered unexpected error <varname>string</varname>

Cause: An unexpected, potentially non-fatal error occurred while processing a Data Pump job.

Action: Contact Oracle Customer Support.

ORA-39098: Worker process received data objects while loading metadata. Invalid process order range is <varname>string</varname>..<varname>string</varname>

Cause: This is an internal error. Messages will detail the problem.

Action: If problem persists, contact Oracle Customer Support.

ORA-39099: cannot create index for "<varname>string</varname>" on master table <varname>string</varname>

Cause: One or more indexes couldn't be created on the master table. subsequent error messages describe the failure.

Action: Correct the condition that is preventing the indexes from being created.

ORA-39100: Total estimation using <varname>string</varname> method: <varname>string</varname>**ORA-39101: . estimated <varname>string</varname>****ORA-39102: Timeout before master process <varname>string</varname> finished initialization. Master error:**

Cause: The master process whose name is listed started up but did not finish its initialization within the allowed time limit.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39103: Timeout before worker process <varname>string</varname> finished initialization. Worker error:

Cause: The worker process whose name is listed started up but did not finish its initialization within the allowed time limit.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39104: cannot call this function from a SQL parallel query slave process

Cause: Called a Data Pump process model function from a process which is a SQL parallel query slave process

Action: A SQL parallel query slave process cannot create a Data Pump master process. This is not supported. If this error occurs from a Data Pump client (for example, expdp or impdp), contact Oracle Customer Support and report the error.

ORA-39105: Master process <varname>string</varname> failed during startup. Master error:

Cause: The master process whose name is listed failed during startup.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39106: Worker process <varname>string</varname> failed during startup. Worker error:

Cause: The worker process whose name is listed failed during startup.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39107: Master process <varname>string</varname> violated startup protocol. Master error:

Cause: The master process whose name is listed started up but then exited before notifying the creating process that it was finished with initialization.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39108: Worker process <varname>string</varname> violated startup protocol. Worker error:

Cause: The worker process whose name is listed started up but then exited before notifying the creating process that it was finished with initialization.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39109: Unprivileged users may not operate upon other users' schemas

Cause: An unprivileged user attempted to reference another user's schema during a Data Pump operation. Because of this, no schemas were selected for the job.

Action: Retry the operation under a username owning the schema.

ORA-39110: error deleting worker processes

Cause: An attempt to delete the worker processes failed.

Action: Refer to any following error messages for possible actions. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39111: Dependent object type <varname>string</varname> skipped, base object type <varname>string</varname> already exists

Cause: During a Data Pump import job, a dependent object is being skipped because its base object already existed.

Action: If the object from the dump file is wanted, drop the base and dependent objects and try to import again using desired filters.

ORA-39112: Dependent object type <varname>string</varname> skipped, base object type <varname>string</varname> creation failed

Cause: During a Data Pump import job, a dependent object is being skipped because its base object creation failed.

Action: If the object from the dump file is wanted, drop the base and dependent objects and try to import again using desired filters

ORA-39113: Unable to determine database version

Cause: The Data Pump was unable to determine the compatibility level and version of the current database using SYS.DBMS_UTILITY.DB_VERSION.

Action: Make sure access to the DBMS_UTILITY package is granted to you. If this is a network job, be sure that access to the DBMS_UTILITY package is granted to you on the remote instance.

ORA-39114: Dump files are not supported for network jobs.

Cause: An attempt was made to add a dumpfile to an Import job that is using a network link to the source database.

Action: Do not specify a dumpfile for jobs that do not require dumpfiles.

ORA-39115: <varname>string</varname> is not supported over a network link

Cause: An attempt was made to use an option that is not supported over network links such as the PARTITION_LIST filter.

Action: Do not attempt to use Data Pump features on network jobs if they are not compatible with jobs over the network.

ORA-39116: invalid trigger operation on mutating table <varname>string</varname>.<varname>string</varname>

Cause: A Data Pump load operation failed because a trigger attempted to fire on the table while it was mutating.

Action: Disable trigger(s) on the specified table. Also see ORA-004091.

ORA-39117: Type needed to create table is not included in this operation. Failing sql is:\n<varname>string</varname>

Cause: A create table was attempted and a dependent type does not exist in the dumpfile or on the target database. Either the export or the import Data Pump job was a table mode job and types are not included in table mode jobs.

Action: Determine which type(s) are missing and create them on the target system and run the Data Pump import job again.

ORA-39118: . . imported <varname>string</varname> <varname>string</varname> out of <varname>string</varname> rows**ORA-39119: worker process interrupt for delete worker processes call by master process**

Cause: The master process that created this worker process called delete worker processes to abort the current operation.

Action: No action is necessary. This is an informational error message.

ORA-39120: Table <varname>string</varname> can't be truncated, data will be skipped. Failing error is:\n<varname>string</varname>

Cause: Table data was about to be loaded into a table that already existed and the table_exists_action parameter is truncate, but the table could not be truncated.

Action: Determine actual cause by looking at base error.

ORA-39121: Table <varname>string</varname> can't be replaced, data will be skipped. Failing error is:\n<varname>string</varname>

Cause: Table data was about to be loaded into a table that already existed and the table_exists_action parameter is replace, but the table could not be dropped.

Action: Determine actual cause by looking at base error.

ORA-39122: Unprivileged users may not perform <varname>string</varname> remappings.

Cause: A user attempted to remap objects during an import but lacked the IMPORT_FULL_DATABASE privilege.

Action: Retry the job from a schema that owns the IMPORT_FULL_DATABASE privilege.

**ORA-39123: Data Pump transportable tablespace job aborted
ln<varname>string</varname>**

Cause: A DBMS_PLUGTS procedure failed and the Data Pump operation could not continue so it was aborted. The DBMS_PLUGTS failure listed describes the original error.

Action: Look at the DBMS_PLUGTS error to determine actual cause.

ORA-39124: dump file name "<varname>string</varname>" contains an invalid substitution variable

Cause: The substitution variable '%' must be followed by '%','u', or 'U'.

Action: Correct the substitution variable in the dump file name and re-enter the command.

ORA-39125: Worker unexpected fatal error in <varname>string</varname> while calling <varname>string</varname> [<varname>string</varname>]

Cause: An unhandled exception was detected internally within the worker process for the Data Pump job while calling the specified external routine. This is an internal error. Additional information may be supplied.

Action: If problem persists, contact Oracle Customer Support.

ORA-39126: Worker unexpected fatal error in <varname>string</varname> [<varname>string</varname>] ln<varname>string</varname>

Cause: An unhandled exception was detected internally within the worker process for the Data Pump job. This is an internal error. Additional information may be supplied.

Action: If problem persists, contact Oracle Customer Support.

**ORA-39127: unexpected error from call to <varname>string</varname>
ln<varname>string</varname>**

Cause: The exception was raised by the function invocation, a procedural action extension of export.

Action: Record the accompanying messages and report this as a Data Pump internal error to customer support.

ORA-39128: unexpected DbmsJava error <varname>number</varname> from statement <varname>string</varname>

Cause: The error was returned from a call to a DbmsJava procedure.

Action: Record the accompanying messages and report this as a Data Pump internal error to customer support.

ORA-39129: Object type <varname>string</varname> not imported. Name conflicts with the master table

Cause: The table being imported from the remote instance has the same name as the master table running this Data Pump job.

Action: Rerun the Data Pump job with a nonconflicting name.

ORA-39130: Object type <varname>string</varname> not imported. Base object name conflicts with the master table

Cause: The object being imported from the remote instance is dependent on an object that has the same name as the master table running this Data Pump job.

Action: Rerun the Data Pump job with a nonconflicting name.

ORA-39131: ACCESS_METHOD of DIRECT_PATH not recommended for <varname>string</varname>. Errors could occur**ORA-39132: object type "<varname>string</varname>". "<varname>string</varname>" already exists with different hashcode**

Cause: An object type could not be created because there was already a type with the same name but a different hashcode on the target system. Tables in the transportable tablespace set that use this object type cannot be read.

Action: Drop the object type from the target system and retry the operation.

ORA-39133: object type "<varname>string</varname>". "<varname>string</varname>" already exists with different typeid

Cause: An object type in a transportable tablespace set already exists on the target system, but with a different typeid. The typeid could not be changed because the type is used by an existing table. Tables in the transportable tablespace set that use this object type cannot be read.

Action: Drop the object type from the target system and retry the operation.

ORA-39134: Cannot include "<varname>string</varname>" tablespace as a Transportable Tablespace

Cause: The user attempt to specify the SYSAUX or SYSTEM tablespace as a member of the transportable tablespace list in the current job. These tablespaces may not be transported between databases.

Action: Specify different tablespaces to be transported.

ORA-39135: File "<varname>string</varname>" is already a member of this dump set

Cause: An attempt was made to add a new file to an export job but a file with the same name already exists in the dump set for the job.

Action: Reenter the new file information using a different file name.

ORA-39136: cannot specify an SCN on a transportable job

Cause: A target SCN was specified for a table in a transportable job by the streams or logical standby components which was not the defaulted SCN for the table.

Action: This is an internal error. Please report it to Oracle support.

ORA-39137: cannot specify a TABLE_EXISTS_ACTION of <varname>string</varname> for a job with no metadata

Cause: A job was defined with the TABLE_EXISTS_ACTION parameter set to REPLACE or SKIP, but without metadata. Without metadata, data could not be loaded for the requested table actions.

Action: Change the setting of the TABLE_EXISTS_ACTION parameter to APPEND or TRUNCATE or supply Metadata with the data.

ORA-39138: Insufficient privileges to load data not in your schema

Cause: An unprivileged user attempted to load data into a different schema.

Action: Use a privileged account if you must load data not in your schema

ORA-39139: Data Pump does not support XMLType objects in version <varname>string</varname>. <varname>string</varname> will be skipped.

Cause: Object had an XMLType column using either an object relational or binary storage format, which is unsupported by Data Pump in the target version.

Action: Use the original export and import utilities to move this object.

ORA-39140: dump file "<varname>string</varname>" belongs to job <varname>string</varname>

Cause: When a dump file set consists of multiple files, all files in the set must be specified for an import operation, and all files must have been produced by the same export job. One of the files provided does not belong to the original dump file set. For instance, it was created by a different export job than the other files.

Action: Remove the dump file indicated in the message and retry the import operation providing only the complete set of dump files created by a specific export job.

ORA-39141: dump file "<varname>string</varname>" is a duplicate of dump file "<varname>string</varname>"

Cause: When a dump file set consists of multiple files, all files in the set must be specified for an import operation. One of the files provided to import was found to be a duplicate of another dump file in the set. This can occur if the files in the dump set were copied or renamed using operating system utilities and the same dump file was inadvertently copied more than once with different destination names.

Action: Remove the dump file indicated in the message and retry the import operation providing only the complete set of dump files created by a specific export job.

ORA-39142: incompatible version number <varname>string</varname> in dump file "<varname>string</varname>"

Cause: A dump file was specified for an import operation whose version number is incompatible with the dump file version of the Data Pump product currently running on the system. Usually this message indicates that the dump file was produced by a newer version of the Data Pump export utility.

Action: Import this dump file using the Data Pump import utility with the same version as the export which created the file.

ORA-39143: dump file "<varname>string</varname>" may be an original export dump file

Cause: A dump file was specified for an import operation which appears to have been created using the original export utility. These dump files cannot be processed by the Data Pump import utility.

Action: Try using the original import utility to process this dump file.

ORA-39144: file name parameter must be specified and non-null

Cause: No file name was provided in an DBMS_DATAPUMP.ADD_FILE API call.

Action: Correct the file name parameter and reissue the API request.

ORA-39145: directory object parameter must be specified and non-null

Cause: No directory object was provided in either an DBMS_DATAPUMP.ADD_FILE API call or to the directory parameter used by the Data Pump command line clients.

Action: Correct the directory object parameter and retry the operation.

ORA-39146: schema "<varname>string</varname>" does not exist

Cause: The specified schema was referenced as the source of a REMAP_SCHEMA parameter, but did not exist in the dump file (for file-based import) or in the source database (for network import).

Action: Specify the correct name of the schema to be remapped.

ORA-39147: cannot migrate Data Pump queue table ownership to this instance

Cause: There are active Data Pump jobs running on another instance in a RAC. All concurrent, active Data Pump jobs must be run on the same instance.

Action: Start this job on the same instance where other active Data Pump jobs are running, or wait until they finish.

ORA-39148: unable to import data into pre-existing queue table <varname>string</varname>. Table_exists_action of <varname>string</varname> being ignored for this table

Cause: A Data Pump import detected that a queue table that was to be imported already exists. Importing data into pre-existing queue tables is not supported.

Action: If the data from the dump file is desired, then drop the queue table and perform the import again, or use the import parameter table_exists_action=replace.

ORA-39149: cannot link privileged user to non-privileged user

Cause: A Data Pump job initiated by a user with EXPORT_FULL_DATABASE/IMPORT_FULL_DATABASE roles specified a network link that did not correspond to a user with equivalent roles on the remote database.

Action: Specify a network link that maps users to identically privileged users in the remote database.

ORA-39150: bad flashback time

Cause: A flashback time was specified for the Data Pump job which either could not be parsed or else could not be translated into a system change number (SCN). This typically occurs when specifying a time far in the past.

Action: Specify an explicit SCN for the desired flashback rather than a time.

ORA-39151: Table <varname>string</varname> exists. All dependent metadata and data will be skipped due to table_exists_action of skip**ORA-39152: Table <varname>string</varname> exists. Data will be appended to existing table but all dependent metadata will be skipped due to table_exists_action of append****ORA-39153: Table <varname>string</varname> exists and has been truncated. Data will be loaded but all dependent metadata will be skipped due to table_exists_action of truncate**

ORA-39154: Objects from foreign schemas have been removed from import

Cause: An non-privileged user attempted to import objects into a schema other than their own.

Action: Either perform the import from a privileged schema or else remap all schemas that were exported into the username running the import.

ORA-39155: error expanding dump file name "<varname>string</varname>"

Cause: Export was unable to expand the directory object and dump file name into a full file name. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39156: error parsing dump file name "<varname>string</varname>"

Cause: Export was unable to parse the dump file name. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39157: error appending extension to file "<varname>string</varname>"

Cause: Export or Import was unable to append the default extension to create the file name. The given file name could be too long or contain illegal characters. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39158: Completed <varname>string</varname> <varname>string</varname> objects in <varname>string</varname> seconds**ORA-39159: cannot call this function from a non-Data Pump process**

Cause: Called a Data Pump process model function from a process which is not a Data Pump process.

Action: Refer to any other error messages for additional information. If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39160: error on what's my name call

Cause: Attempt to get the Data Pump process name failed.

Action: Refer to any following error messages for additional information. If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39161: Full database jobs require privileges

Cause: Either an attempt to perform a full database export without the EXP_FULL_DATABASE role or an attempt to perform a full database import over a network link without the IMP_FULL_DATABASE role.

Action: Retry the operation in a schema that has the required roles.

ORA-39162: Transportable tablespace job require privileges

Cause: User attempted to perform a transportable tablespace job without being having the proper EXP_FULL_DATABASE or IMP_FULL_DATABASE role.

Action: Retry the operation in a schema that has the required roles.

ORA-39163: A sample size of <varname>string</varname> is invalid.

Cause: An attempt was made to do data sampling on a table with a value outside of the range of 0 - 100.

Action: Retry the filtering using a sampling number greater than 0 and less than 100.

ORA-39164: Partition <varname>string</varname> was not found.

Cause: If exporting or importing over the network, the user specified a partition name that was not found in the source database. For importing from files, the user specified a partition name not found in the dump file set.

Action: Retry the operation using the correct partition name.

ORA-39165: Schema <varname>string</varname> was not found.

Cause: If exporting or importing over the network, either the user specified a schema name that was not found in the source database or else the user lacked the proper EXP_FULL_DATABASE or IMP_FULL_DATABASE role that would allow them to access another schema. For importing from files, the user specified a schema name not found in the dump file set.

Action: Retry the operation using the correct schema name.

ORA-39166: Object <varname>string</varname> was not found or could not be exported or imported.

Cause: If exporting to files or importing over the network, one of the following occurred: - The object specified did not exist in the source database. - The user lacked the proper EXP_FULL_DATABASE or IMP_FULL_DATABASE role that would allow access to the object. - The VIEWS_AS_TABLES object contained a type that is not supported with the VIEWS_AS_TABLES parameter. If importing from files, the user specified an object name that was not found in the dump file set.

Action: Retry the operation using the correct object name, correct set of privileges, or a view that has only supported types.

ORA-39167: Table <varname>string</varname> uses one or more system partitions. Data will be loaded but all data will be loaded into the first system partition.**ORA-39168: Object path <varname>string</varname> was not found.**

Cause: If exporting or importing over the network, the user specified an object type path name that was not found in the source database. For importing from files, the user specified an object type path name not found in the dump file set.

Action: Retry the operation using the correct object type path name.

ORA-39169: Local version of <varname>string</varname> cannot work with remote version of <varname>string</varname>.

Cause: A Data Pump job specified a network link, but the version on the remote database cannot interoperate with the version on the local database.

Action: Do not specify network links between instance running different versions of the database.

ORA-39170: Schema expression <varname>string</varname> does not correspond to any schemas.

Cause: A schema expression or schema list was supplied for a Data Pump job that did not identify any schemas in the source database.

Action: Correct the schema specifications and retry the job.

ORA-39171: Job is experiencing a resumable wait.\n<varname>string</varname>

Cause: The Data Pump job is stalled with one or more of its sessions having a resumable wait. Resumable waits are typically caused by a non-expandable tablespace running out of space. The follow-on message describes the nature of the wait.

Action: Correct the condition causing the wait. This will typically involve adding datafiles to the tablespace that is full.

ORA-39172: Cannot remap transportable tablespace names with compatibility of <varname>string</varname>.

Cause: The user attempted to remap a tablespace name in a transportable tablespace job when the compatibility level was set below 10.1.

Action: Reset the compatibility level of the database to a more recent version.

ORA-39173: Encrypted data has been stored unencrypted in dump file set.

Cause: No encryption password was specified for an export job that involved data that was encrypted in the database.

Action: No specific user action is required. This is only a warning that secure data may be readable from within the dump file set.

ORA-39174: Encryption password must be supplied.

Cause: No encryption password was supplied to import a dump file set that was created using an encryption password.

Action: Specify the encryption password for the dump file set.

ORA-39175: Encryption password is not needed.

Cause: An encryption password was supplied to import a dump file set that was not created using an encryption password.

Action: No user action is required. This is merely a warning message.

ORA-39176: Encryption password is incorrect.

Cause: The wrong encryption password was supplied to import a dump file set.

Action: Resubmit the job using the correct encryption password for the dump file set.

ORA-39177: invalid compression value <varname>string</varname>

Cause: An invalid value was specified for compression.

Action: Correct the value and recreate the job.

ORA-39178: cannot perform estimate on metadata only jobs

Cause: An estimate was requested for a job by specifying the ESTIMATE or ESTIMATE_ONLY parameter. However, the job was also defined to have no data. These specifications conflict with each other.

Action: Remove one of the conflicting specifications for the job.

ORA-39179: unable to load table "<varname>string</varname>" because of OID transform

Cause: The OID transform for the job was set to false and the identified table contained either VARRAYs with non-final types or unscoped REF columns. Both of these column types have embedded OIDs so they cannot be imported correctly when OIDs are not preserved.

Action: You must manually move the data with the specified tables when OIDs are not preserved.

ORA-39180: unable to encrypt ENCRYPTION_PASSWORD

Cause: The specified encryption password was unable to be encrypted for placement within the master table or decrypted when it was to be restored from the master table. Subsequent messages will describe the actual error that caused the encryption to fail.

Action: Fix the problems referenced by the subsequent messages. The most common reason for the encryption to fail is the lack of a security wallet.

ORA-39181: Only partial table data may be exported due to fine grain access control on <varname>string</varname>

Cause: An unprivileged user has tried to export a table that has fine grain access control. The table owner is subjected to access control and may not be able to export all rows in the table. Only the rows that can be seen by that user will be exported. In order to preserve integrity of the table, the user importing the table should have enough privilege to recreate the table with the security policies at import time.

Action: It is strongly recommended that the database administrator handle exporting of this table.

ORA-39182: internal error <varname>string</varname> occurred during compression phase <varname>string</varname>\n

Cause: An unexpected error occurred while compressing data buffers.

Action: Contact Oracle Customer Support.

ORA-39183: internal error <varname>string</varname> occurred during decompression phase <varname>string</varname>\n

Cause: An unexpected error occurred while decompressing data buffers.

Action: Contact Oracle Customer Support.

ORA-39184: Transportable Data Pump jobs cannot exclude PLUGTS objects

Cause: A Transportable Data Pump job requires all PLUGTS% objects, but the user-supplied exclude filters were excluding these objects.

Action: Reenter command without excluding PLUGTS% objects.

ORA-39185: The transportable tablespace failure list is

Cause: Some of the tablespaces specified for this job could not be exported.

Action: See specific errors for each tablespace, correct the problem, and try again.

ORA-39186: No tablespaces in the specified list exist.

Cause: The tablespaces specified on the EXPORT command did not exist.

Action: Check the list of tablespaces and reenter command with correct set of tablespaces.

ORA-39187: The transportable set is not self-contained, violation list is

Cause: The tablespaces specified for this job did not satisfy the closure checking. The list of violations specified each closure violation.

Action: See specific errors for violation and correct the problem or change the tablespaces on the command line and try again.

ORA-39188: unable to encrypt dump file set

Cause: Data Pump could not create an encrypted dump file set. This message will be accompanied by other messages that give more details about why the encrypted dump file set could not be created. The most common reason for this message is that you are trying to create a dump file set that can be transparently decrypted, and the database external security device is not open.

Action: If the external security device is not open, then open it. If the external security device is not configured, then the only type of encrypted dump file set that you can create is a password-based dump file set.

ORA-39189: unable to decrypt dump file set

Cause: The dump file set could not be decrypted. The reason could be either that an invalid password was entered, or that, when using transparent decryption, the database external security device was not open.

Action: If password-based import was enabled for this dump file set, then supply the correct password. If transparent import was enabled for this dump file set, then ensure that the database external security device is open.

ORA-39190: internal error occurred during encryption phase <varname>string</varname>\n

Cause: An unexpected error occurred while encrypting data buffers.

Action: See the secondary error for more information and contact Oracle Customer Support.

ORA-39191: internal error occurred during decryption phase <varname>string</varname>\n

Cause: An unexpected error occurred while decrypting data buffers.

Action: See the secondary error for more information and contact Oracle Customer Support.

ORA-39192: table mode jobs with transportable=always and partition filters only allow objects from one table

Cause: Multiple tables are not supported when specifying partitions while using transportable table mode.

Action: Retry the job specifying only one table.

ORA-39193: Table mode jobs do not allow the schema to be wild carded.

Cause: The table filter included a schema expression with the % wild card.

Action: Retry the job specifying actual schemas.

ORA-39194: Table mode jobs require the tables to be comma separated.

Cause: The string describing tables in a table mode job was not comma separated.

Action: Retry the job specifying the tables separated by commas.

ORA-39195: At least one schema in the TABLE_FILTER does not exist.

Cause: The TABLE_FILTER specified contains a schema that does not exist.

Action: Retry the job specifying only schemas that exist.

ORA-39196: dump file set is consistent

ORA-39197: dump file set is inconsistent

ORA-39198: dump file set is complete

ORA-39199: dump file set consistency error: <varname>string</varname>\n

ORA-39200: Link name "<varname>string</varname>" is invalid.

Cause: The name of the network link supplied for a Data Pump job was not usable. Secondary messages identify the problem.

Action: Rerun the job using a valid network link.

ORA-39201: Dump files are not supported for estimate only jobs.

Cause: An attempt was made to add a dumpfile to an Export job that only requested file estimates.

Action: Do not specify a dumpfile for jobs that do not require dumpfiles.

ORA-39202: Data cannot be filtered or selected in <varname>string</varname> jobs.

Cause: A data filter was supplied for the specified type of job, but is not supported in the specified job type. From the command line, data filters can be specified by the CONTENT, TABLES (partition specifications), SAMPLE and QUERY parameters.

Action: Do not restrict data handling on jobs that cannot support data filtering.

ORA-39203: Partition selection is not supported over a network link.

Cause: Specific partitions were selected for a job operating over a network link.

Action: Remove the partition specifications and rerun the job.

ORA-39204: No subsetting of tablespaces is allowed for transportable import.

Cause: A tablespace filter was applied to a transportable import job that was not performed over a network link. In this case, the tablespace may not be changed from its specification at export time.

Action: Rerun the job without specifying a tablespace filter.

ORA-39205: Transforms are not supported in transportable jobs.

Cause: A metadata transformation such as STORAGE or SEGMENT_ATTRIBUTES has been specified for a transportable Data Pump job.

Action: Rerun the job without specifying a transform.

ORA-39206: A parallel degree of <varname>string</varname> is invalid.

Cause: A bad numeric was supplied for specifying the parallelism to be used within a Data Pump job. The degree of parallelism must be an integer great than 0.

Action: The the degree specifying and retry the parallelism setting.

ORA-39207: Value `<varname>string</varname>` is invalid for parameter `<varname>string</varname>`.

Cause: A parameter for a Data Pump job was set with a NULL or invalid value.

Action: Refer to the documentation to identify the legal values for each parameter.
Retry the operation with a valid value.

ORA-39208: Parameter `<varname>string</varname>` is invalid for `<varname>string</varname>` jobs.

Cause: The a parameter has been specified that is not supported for the specified type of Data Pump.

Action: Remove the parameter specification and retry the operation.

ORA-39209: Parameter `<varname>string</varname>` requires privileges.

Cause: Use of the specified privileges requires the user to have the IMP_FULL_DATABASE role for import jobs or the EXP_FULL_DATABASE role for export jobs.

Action: Remove the parameter specification and retry the operation.

ORA-39210: A PCTSPACE adjustment of `<varname>string</varname>` is invalid.

Cause: User specified a storage space transformation that was out of range. Values for PCTSPACE must be greater than zero.

Action: Retry the operation with a valid PCTSPACE value.

ORA-39211: unable to retrieve dumpfile information as specified

Cause: User specified an invalid or inaccessible file with the specified filename and directory object.

Action: Retry the operation with a valid directory object and filename.

ORA-39212: installation error: XSL stylesheets not loaded correctly

Cause: The XSL stylesheets used by the Data Pump Metadata API were not loaded correctly into the Oracle dictionary table "sys.metastylesheet." Either the stylesheets were not loaded at all, or they were not converted to the database character set.

Action: Connect AS SYSDBA and execute `dbms_metadata_util.load_stylesheets` to reload the stylesheets.

ORA-39213: Metadata processing is not available

Cause: The Data Pump could not use the Metadata API. Typically, this is caused by the XSL stylesheets not being set up properly.

Action: Connect AS SYSDBA and execute `dbms_metadata_util.load_stylesheets` to reload the stylesheets.

ORA-39214: Data Pump does not support external tables with encrypted columns. `<varname>string</varname>` will not be exported

Cause: The object is an external table with encrypted columns and this is unsupported with Data Pump.

Action: External table must be manually recreated on the target system.

ORA-39215: invalid call to routine, <varname>string</varname>**ORA-39216: object type "<varname>string</varname>". "<varname>string</varname>" hashcode mismatch**

Cause: An object type in a transportable tablespace set could not be used because there was a type with the same name but a different hashcode (and type definition) on the target system. Tables in the transportable tablespace set that use this object type cannot be created.

Action: Drop the object type and dependent objects from the target system if possible and retry the operation.

ORA-39217: object type "<varname>string</varname>". "<varname>string</varname>" typeid mismatch

Cause: An object type in a transportable tablespace set already exists on the target system, but with a different typeid. The typeid could not be changed because the type or a dependent type is used by an existing table. Tables in the transportable tablespace set that use this object be created.

Action: Drop the object type and dependent objects from the target system if possible and retry the operation.

ORA-39218: type check on object type "<varname>string</varname>". "<varname>string</varname>" failed

Cause: The type check on a type failed. Therefore, the table create for the table which uses the type also fails.

Action: Refer to any following error messages for additional information. Correct the error, if possible, and try the action again.

ORA-39219: directory object name is too long

Cause: The directory object name provided to the Data Pump Job was invalid because its length was greater than 30 characters.

Action: Retry the operation with a valid directory object name.

ORA-39220: file name is too long

Cause: The file name provided to the Data Pump Job was invalid because its length was greater than 4000 characters.

Action: Retry the operation with a valid file name.

ORA-39221: Specifying data filters is invalid when dumpfiles do not contain table data.

Cause: A data filter was supplied for an import job, but the dumpfile does not contain any table data. The export command created a dumpfile with metadata only. No table data was included. From the command line, data filters can be specified by the CONTENT, SAMPLE and QUERY parameters.

Action: Do not restrict data handling on jobs that cannot support data filtering.

ORA-39222: Unable to create global temporary master table <varname>string</varname>

Cause: Data Pump tried to create a global temporary master table but could not. The errors that follow describe why the table could not be created.

Action: Examine and fix the problems described in the additional errors.

ORA-39223: Internal Data Pump error. Master table information for version <varname>string</varname> not found.

Cause: An unexpected error occurred while processing the job. The data in an internal table could not be found.

Action: Contact Oracle Support Services.

ORA-39224: <varname>string</varname> row(s) were rejected with the following error:\n<varname>string</varname>

Cause: These rows were not loaded due to constraint or index violations.

Action: Retry the operation when row data is fixed.

ORA-39225: column <varname>string</varname>: <varname>string</varname>**ORA-39226: Rejected row #<varname>string</varname>:****ORA-39227: Rejected rows with the primary keys are:****ORA-39228: Unable to construct a unique departitioned object name for <varname>string</varname> <varname>string</varname>.<varname>string</varname>:<varname>string</varname> when defaulted.**

Cause: All (sub)partitions in the job were to be created as individual objects and the renaming was defaulted. The job will attempt to create unique object names, but the name creation algorithm was unable to find a unique object name for the specified (sub)partition.

Action: Specify a rename_table transform to use or delete some of the existing objects causing the name conflicts.

ORA-39229: . . verified <varname>string</varname> <varname>string</varname> rows**ORA-39230: Service name <varname>string</varname> is not available**

Cause: The specified resource service name for the Data Pump job was not available.

Action: Pick a service name that the user is authorized to use.

ORA-39231: invalid data remap name: <varname>string</varname>

Cause: The specified type of data remapping was not supported.

Action: Only COLUMN_FUNCTION data remaps are supported. Retry the operation using a supported data remap name.

ORA-39232: invalid remap function: <varname>string</varname>

Cause: The specified package function for performing data remapping was not found.

Action: Either create the specified package function or else grant the user access to the function.

ORA-39233: invalid remap column name: <varname>string</varname>

Cause: The column name specified for the data remapping does not exist in the specified table.

Action: Specify a scalar column name within the table to be remapped.

ORA-39234: Data cannot be remapped under the direct path access method.

Cause: Data remapping was requested on a job that requires the direct path access method. Data remapping can only be performed using the external table access method.

Action: Retry the job without specifying any access method.

ORA-39235: data remap <varname>string</varname> has already been specified

Cause: A data remap has already been specified for the indicated column. Only one data remap may be defined for a column.

Action: Remove one of the data remap specifications for the job.

ORA-39236: wrong number of data objects in job: Expected <varname>string</varname>/Found <varname>string</varname>**ORA-39237: Failed to load XML document <varname>string</varname>. Compare process aborted.**

Cause: An error occurred while performing XML difference parse.

Action: Resubmit XML compare request with valid document.

ORA-39238: XML node attribute differences are not supported.

Cause: MDAPI XML difference parsing did not support node attributes.

Action: Resubmit XML compare request with valid document.

ORA-39239: No differences found.

Cause: XML documents compared were identical.

Action: No action required.

ORA-39240: Error while processing difference document.

Cause: Error occurred in the MDAPI difference writer.

Action: Refer to any following error messages for additional information. Correct the error, if possible, and try the action again.

ORA-39241: Datafiles required for transportable tablespace <varname>string</varname>:**ORA-39242: Unable to export/import <varname>string</varname> due to table attributes.**

Cause: See the Data Pump documentation for an explanation of what table attributes prevent an export or import from succeeding.

Action: Resolve conflicting table attributes.

ORA-39243: Import job requires 'TRANSPORT_DATAFILES' parameter.

Cause: The export job used 'TRANSPORTABLE=ALWAYS' and the import job requires TRANSPORT_DATAFILES to be specified.

Action: Specify the transport datafiles associated with this job.

ORA-39244: Event to disable dropping null bit image header during relational select

ORA-39245: import job requires export dump file "<varname>string</varname>"

Cause: A Data Pump IMPORT or SQL_FILE operation was being performed but not all of the files from the Data Pump export dump file set were included.

Action: Check the export log file and make sure all of the files that were exported are included in the current job. The import log file also lists the export names of the missing files.

ORA-39246: cannot locate master table within provided dump files

Cause: A Data Pump IMPORT or SQL_FILE operation was being performed but not all of the files from the Data Pump export dump file set were included. In particular, the dump file containing the export job's master table was not provided.

Action: Check the export log file and make sure all of the files that were exported are included in the current job.

ORA-39247: dump file size inconsistency found: [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>]**ORA-39248: invalid file identifier found: [<varname>string</varname>], [<varname>string</varname>]****ORA-39249: object size inconsistency found: [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>]****ORA-39250: Using version to downgrade a transportable job is not supported****ORA-39251: Importing a SecureFile LOB with metadata into a scalar, column <varname>string</varname>, is not allowed.**

Cause: An import of a SecureFile LOB with metadata into a scalar column was attempted.

Action: Change the scalar column to a SecureFile LOB.

ORA-39252: Importing a SecureFile LOB with metadata or archived SecureFile LOB into a BasicFile LOB is not allowed

Cause: An attempt was made to import a SecureFile LOB that contained metadata or was archived at the time of export into a BasicFile LOB.

Action: Perform the import into a different table, perform DBMS_LOB.ARCHIVE_GET on any archived SecureFile LOBs, and then use INSERT AS SELECT to migrate the SecureFile LOB data to the BasicFile LOB.

ORA-39253: Specified tables do not exist.

Cause: The tables specified for this export job did not exist.

Action: Check the specified table list and make sure the tables listed exist.

ORA-39254: direct path load not possible into preexisting table with column that has a default value and is not being loaded; table <varname>string</varname>, column <varname>string</varname>

Cause: The direct path access method could not be used to load into a pre-existing table that has a column with a default value and that column is not being loaded into.

Action: Remove the ACCESS_METHOD parameter from the import command line.

ORA-39255: Failed to fetch PLUGTS_BLKs.

Cause: The Data Pump expected a PLUGTS_BLK object to be exported but none were.

Action: Contact Oracle Support Services.

ORA-39256: Transportable tablespace Data Pump jobs from read-only databases not supported.

Cause: The remote database was read-only and Data Pump export jobs using transportable tablespace over a network link require the remote database to be read/write.

Action: Use Data Pump without transportable tablespace or make the remote database read/write.

ORA-39257: internal error: <varname>string</varname>**ORA-39258: Cannot rename cluster.**

Cause: DBMS_METADATA_DIFF was comparing two clusters with different names. There is no SQL ALTER statement to rename a cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39259: Cannot add column to cluster.

Cause: DBMS_METADATA_DIFF was comparing two clusters with different column lists. There is no SQL ALTER statement to add a column to a cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39260: Cannot delete column from cluster.

Cause: DBMS_METADATA_DIFF was comparing two clusters with different column lists. There is no SQL ALTER statement to delete a column from a cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39261: Cannot modify column in cluster.

Cause: DBMS_METADATA_DIFF was comparing two clusters with different column lists. There is no SQL ALTER statement to modify a column in a cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39262: Cannot alter size for hash cluster.

Cause: DBMS_METADATA_DIFF was comparing two hash clusters with different sizes. There is no SQL ALTER statement to modify the size of a hash cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39263: Cannot alter PARALLEL INSTANCES.

Cause: DBMS_METADATA_DIFF was comparing two objects, both with PARALLEL but with different INSTANCES values. There is no SQL ALTER statement to modify PARALLEL INSTANCES.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39264: Cannot alter type of table: <varname>string</varname>

Cause: DBMS_METADATA_DIFF was comparing tables of different types: relational table, object table or XMLType table. There is no SQL ALTER statement to change a table's type.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39265: Cannot alter object_type of object table: <varname>string</varname>

Cause: DBMS_METADATA_DIFF was comparing object tables based on different object types. There is no SQL ALTER statement to change an object table's object type.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39266: Cannot alter unpartitioned table to partitioned.

Cause: DBMS_METADATA_DIFF was comparing two tables, one unpartitioned, the other partitioned. There is no SQL ALTER statement to partition an unpartitioned table.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39267: Cannot remove default from table column.

Cause: DBMS_METADATA_DIFF was comparing two table columns, one with a default value, one without. There is no SQL ALTER syntax to remove a column default.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39268: Cannot alter a real column to make it virtual or vice versa.

Cause: DBMS_METADATA_DIFF was comparing two table columns, one virtual, one real. There is no SQL ALTER statement to make a virtual column real or vice versa.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39269: Cannot alter a column of type LONG to anything other than LOB.

Cause: DBMS_METADATA_DIFF was comparing two table columns, the first of type LONG, the second of a data type other than LOB. There is no SQL ALTER statement to modify a long data type to anything other than a CLOB or NCLOB.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39270: Cannot alter a LOB column to another data type.

Cause: DBMS_METADATA_DIFF was comparing two table columns, the first of type CLOB, NCLOB or BLOB, the second of some other data type. There is no SQL ALTER statement to change the data type of a LOB column.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39271: Cannot alter substitutability of column: <varname>string</varname>

Cause: DBMS_METADATA_DIFF was comparing two table columns. This error may occur because the first column is substitutable and the second column is not, or because the first column is OF TYPE and the second column is substitutable.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39272: Cannot alter organization of nested table column: <varname>string</varname>

Cause: DBMS_METADATA_DIFF was comparing two nested table columns. One was a heap table, the other an index-organized table. There is no SQL ALTER statement to change the organization of a nested table.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39273: Cannot alter storage type of XMLType column: <varname>string</varname>

Cause: DBMS_METADATA_DIFF was comparing two XMLType columns with different storage types (CLOB, BINARY, OBJECT RELATIONAL). There is no SQL ALTER statement to change the storage type of an XMLType column.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39274: Cannot alter physical organization of table.

Cause: DBMS_METADATA_DIFF was comparing two tables with different physical organizations (heap, index organized, external, or cluster). There is no SQL ALTER statement to change the physical organization of a table.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39275: Cannot alter INITIAL storage option.

Cause: DBMS_METADATA_DIFF was comparing two tables with different FREELIST GROUPS storage options. There is no SQL ALTER statement to change a table's INITIAL storage option.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39276: Cannot alter MINEXTENTS storage option.

Cause: DBMS_METADATA_DIFF was comparing two tables with different MINEXTENTS storage options. There is no SQL ALTER statement to change a table's MINEXTENTS storage option.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39277: Cannot alter FREELIST GROUPS storage option.

Cause: DBMS_METADATA_DIFF was comparing two tables with different FREELIST GROUPS storage options. There is no SQL ALTER statement to change a table's FREELIST GROUPS storage option.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39278: Cannot alter table with segments to segment creation deferred.

Cause: DBMS_METADATA_DIFF was comparing two tables, the first with allocated segments, the second with deferred segments. There is no SQL ALTER statement to change a table which already has segments to segment creation deferred.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39279: Cannot alter tablespace of overflow segment.

Cause: DBMS_METADATA_DIFF was comparing two index organized tables whose overflow segments have different tablespaces. There is no SQL ALTER statement to change an overflow segment's tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39280: Cannot drop overflow segment.

Cause: DBMS_METADATA_DIFF was comparing two index organized tables, the first with an overflow segment, the second without. There is no SQL ALTER statement to drop an overflow segment.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39281: Cannot alter COMPRESS in index-organized materialized view.

Cause: DBMS_METADATA_DIFF was comparing two index organized materialized views with different key compression values. There is no SQL ALTER statement to modify the key compression of an index organized materialized view.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39282: Cannot alter default tablespace of partitions in partitioned table.

Cause: DBMS_METADATA_DIFF was comparing two partitioned tables with different default tablespaces. There is no SQL ALTER statement to change the default tablespace of a partitioned table.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39283: Cannot drop, split or merge hash partition: <varname>string</varname>

Cause: DBMS_METADATA_DIFF was comparing two tables or indexes partitioned or subpartitioned by hash, and a (sub)partition in the first object was not present in the second object. Partition maintenance operations such as drop, split or merge can only be performed on list or range (sub)partitioned objects.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39284: Cannot alter the list values of a list subpartition: <varname>string</varname>

Cause: DBMS_METADATA_DIFF was comparing two tables subpartitioned by list, one of which has a subpartition with the same name but a different values list as a subpartition in the other. There is no SQL ALTER statement to change the list values of a list subpartition.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39285: Cannot alter index key compression.

Cause: DBMS_METADATA_DIFF was comparing two indexes with different values of key compression. There is no SQL ALTER statement to change index key compression.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39286: Cannot convert between types of index.

Cause: DBMS_METADATA_DIFF was comparing two indexes of different types, for example, a table index, a domain index, a cluster index, a bitmap index or a bitmap join index. There is no SQL ALTER statement to change the type of an index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39287: Cannot alter index column list.

Cause: DBMS_METADATA_DIFF was comparing two indexes with different column lists. There is no SQL ALTER statement to change the columns of an index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39288: Cannot alter index base table.

Cause: DBMS_METADATA_DIFF was comparing two table indexes defined on different tables. There is no SQL ALTER statement to change the base table of an index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

**ORA-39289: Cannot add or drop local index partition or subpartition:
<varname>string</varname>**

Cause: DBMS_METADATA_DIFF was comparing two locally partitioned indexes with different partitions or subpartitions. There is no SQL ALTER statement to add or drop a partition or subpartition of a locally partitioned index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39290: Cannot drop a partition of a globally partitioned index.

Cause: DBMS_METADATA_DIFF was comparing two globally partitioned indexes and a partition in the first index does not exist in the second index. There is no SQL ALTER statement to drop a partition of a globally partitioned index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39291: Cannot alter index storage option: <varname>string</varname>

Cause: DBMS_METADATA_DIFF was comparing two indexes with different values for the specified storage option. There is no SQL ALTER statement to change this storage option.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39292: Cannot alter join table of bitmap join index.

Cause: DBMS_METADATA_DIFF was comparing two bitmap join indexes with different join tables. There is no SQL ALTER statement to alter the join tables of a bitmap join index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39293: Cannot alter join condition of bitmap join index.

Cause: DBMS_METADATA_DIFF was comparing two bitmap join indexes with different join conditions. There is no SQL ALTER statement to alter the join condition of a bitmap join index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39294: Cannot alter indextype of domain index.

Cause: DBMS_METADATA_DIFF was comparing two bitmap domain indexes with different indextypes. There is no SQL ALTER statement to alter the indextype of a domain index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39295: Cannot alter index base cluster.

Cause: DBMS_METADATA_DIFF was comparing two cluster indexes defined on different clusters. There is no SQL ALTER statement to change the base cluster of a cluster index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39296: Cannot alter index partitioning type or partitioning columns.

Cause: DBMS_METADATA_DIFF was comparing two indexes with incompatible partitioning: (1) one is partitioned and one is not (2) both are partitioned but in different ways (locally vs. globally, hash vs. range) (3) both are partitioned but on different columns. There is no SQL ALTER statement to change the way an index is partitioned.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39297: Cannot alter materialized view attribute: <varname>string</varname>

Cause: DBMS_METADATA_DIFF was comparing two materialized views with incompatible attributes. There is no SQL ALTER statement to change this attribute of a materialized view.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39298: Cannot alter materialized view partitioning type or partitioning columns.

Cause: DBMS_METADATA_DIFF was comparing two materialized views with incompatible partitioning: (1) one is partitioned and one is not (2) both are partitioned but in different ways (locally vs. globally, hash vs. range) (3) both are partitioned but on different columns. There is no SQL ALTER statement to change the way a materialized view is partitioned.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39299: Cannot alter materialized view physical organization.

Cause: DBMS_METADATA_DIFF was comparing two materialized views with different physical organizations: heap, index organized, etc. There is no SQL ALTER statement to change the index organization of a materialized view.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39300: Cannot alter materialized view log partitioning type or partitioning columns.

Cause: DBMS_METADATA_DIFF was comparing two materialized view logs with incompatible partitioning: (1) one is partitioned and one is not (2) both are partitioned but in different ways (locally vs. globally, hash vs. range) (3) both are partitioned but on different columns. There is no SQL ALTER statement to change the way a materialized view log is partitioned.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39301: Cannot alter values recorded in materialized view log: <varname>string</varname>

Cause: DBMS_METADATA_DIFF was comparing two materialized view logs that are recording different values, and the set of values in the first materialized view log

cannot be changed to that in the second materialized view log. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39302: Cannot alter tablespace of materialized view log.

Cause: DBMS_METADATA_DIFF was comparing two materialized view logs which have different tablespaces. There is no SQL ALTER statement to change the tablespace of a materialized view log.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39303: Cannot alter attribute of queue: <varname>string</varname>

Cause: DBMS_METADATA_DIFF was comparing two advanced queues with attribute differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39304: Cannot alter attribute of queue table: <varname>string</varname>

Cause: DBMS_METADATA_DIFF was comparing two AQ queue tables with attribute differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39305: Cannot alter attribute of sequence: <varname>string</varname>

Cause: DBMS_METADATA_DIFF was comparing two sequences with attribute differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39306: Cannot alter attribute of trigger: <varname>string</varname>

Cause: DBMS_METADATA_DIFF was comparing two triggers with differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39307: Cannot alter attribute of type: <varname>string</varname>

Cause: DBMS_METADATA_DIFF was comparing two types with differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39308: Cannot alter attribute of view: <varname>string</varname>

Cause: DBMS_METADATA_DIFF was comparing two views with differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39309: Cannot alter tablespace between bigfile and smallfile.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces, one bigfile, one smallfile. There is no SQL ALTER statement to change a tablespace from smallfile to bigfile or vice versa.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39310: Cannot alter tablespace type.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces of different types: permanent, temporary or undo. There is no SQL ALTER statement to change the type of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39311: Cannot alter tablespace blocksize.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces with different blocksizes. There is no SQL ALTER statement to change the blocksize of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39312: Cannot alter tablespace encryption.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces, one encrypted, one not. There is no SQL ALTER statement to change the encryption property of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39313: Cannot alter tablespace flashback mode.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces, one in flashback mode, one not. There is no SQL ALTER statement to alter the flashback mode of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39314: Cannot alter tablespace extent_management.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces with different extent management properties. There is no SQL ALTER statement to alter the extent management properties of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39315: Cannot drop the first data file from a permanent or undo tablespace.

Cause: DBMS_METADATA_DIFF was comparing two permanent or undo tablespaces. The first data file in the first tablespace is missing from the second tablespace. There is no SQL ALTER statement to drop the first data file from a permanent or undo tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39316: Cannot resize a data file in a smallfile tablespace.

Cause: DBMS_METADATA_DIFF was comparing two smallfile tablespaces. A data file in the first tablespace is of a different size from the corresponding data file in the second tablespace. There is no SQL ALTER statement to resize a data file in a smallfile tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39317: Cannot change the segment space management of a tablespace.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces with different segment space management. There is no SQL ALTER statement to change the segment space management of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39318: Cannot alter user name.

Cause: DBMS_METADATA_DIFF was comparing two users with different names. There is no SQL ALTER statement to change the name of a user.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39319: Cannot undo password expiration.

Cause: DBMS_METADATA_DIFF was comparing two users and the first user had an expired password. There is no SQL ALTER statement to undo the expiration of a user password.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39320: Column names do not match between export and import databases.

Cause: The column names of the table being imported did not match the column names of the preexisting table.

Action: Ensure the column names match between export and import database.

ORA-39321: Cannot alter functional index or virtual expression column: <varname>string</varname>

Cause: Altered column was referenced in a virtual column or functional index expression. There is no SQL ALTER statement to change a column which is referenced in one of these types of expressions.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39322: Cannot use transportable tablespace with TIMESTAMP WITH TIME ZONE columns and different time zone version.

Cause: The source database was at a different time zone version than the target database and there were tables in the dumpfile with TIMESTAMP WITH TIME ZONE columns.

Action: Convert the target database to the same timezone version as the source database or use Data Pump without transportable tablespace.

ORA-39323: cannot load data from external table dump file "<varname>string</varname>"

Cause: A dump file was specified for an import operation that had been created with external tables using the ORACLE_DATAPUMP access driver. This type of dump file cannot be processed using the Data Pump import utility.

Action: Access the data in this dump file with external tables using the ORACLE_DATAPUMP access driver.

ORA-39324: cannot load data from Data Pump dump file "<varname>string</varname>"

Cause: A dump file was specified for a load operation that had been created using the Data Pump. This type of dump file cannot be processed by external tables using the ORACLE_DATAPUMP access driver.

Action: Access the data in this dump file using the Data Pump.

ORA-39325: TABLE_EXISTS_ACTION cannot be applied to <varname>string</varname>.

Cause: An object was already in existence that uses a name in common with this table. The name collision could be the table name, a constraint, a LOB storage table, or something else in the table definition.

Action: Drop the existing object before running Data Pump.

ORA-39326: cannot load data into table, <varname>string</varname>, due to an unusable index

Cause: An unusable index existed on the table. This index prevented data from being loaded into the table associated with this index.

Action: Either drop the unusable index or make it valid before attempting the import operation.

ORA-39327: Oracle Database Vault data is being stored unencrypted in dump file set.

Cause: No encryption was specified for an export job that involved data from an Oracle Database Vault realm.

Action: No specific user action is required. This is only a warning that secure data may be readable from within the dump file set.

ORA-39328: encryption password is too long

Cause: The encryption password provided to the Data Pump job was invalid because its length was greater than the maximum allowed. When using the password to encrypt the dump file set, the maximum length is 1000 bytes. When using the password to re-encrypt encrypted columns only, the maximum length is 30 bytes.

Action: Retry the operation with a valid encryption password.

ORA-39329: Tablespace <varname>string</varname> needs to be locally managed.

Cause: An attempt was made to run an Oracle Data Pump job with the TRANSPORTABLE=ALWAYS parameter. Tablespaces that contain data for EARLY_OPTIONS in an Oracle Data Pump job run with FULL=Y and TRANSPORTABLE=ALWAYS parameter need to be locally managed.

Action: Run the Oracle Data Pump job without the TRANSPORTABLE parameter set to ALWAYS.

ORA-39330: internal cryptographic error: [<varname>string</varname>]**ORA-39331: Wallet is not open on remote node.**

Cause: The security module wallet was not open on the remote node.

Action: Open the wallet on the remote node.

ORA-39332: metadata file span inconsistency found: [<varname>string</varname>]

ORA-39339: Table <varname>string</varname> was skipped due to transportable import and TSTZ issues resulting from time zone version mismatch.

Cause: The source database is at a different time zone version than the target database and this table contains TIMESTAMP WITH TIME ZONE data.

Action: Convert the target database to the same time zone version as the source database or use Oracle Data Pump with conventional data movement to export then import this table.

ORA-39340: unsupported object, <varname>string</varname> will be skipped.

Cause: Oracle Data Pump encountered an object type that it currently does not support.

Action: Manually move the object to the target database.

ORA-39341: Cannot convert an existing column into an identity column.

Cause: An attempt was made to convert an existing column into an identity column. There is no SQL ALTER statement that will convert an existing column into an identity column.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39342: Internal error - failed to import internal objects tagged with <varname>string</varname> due to <varname>string</varname>.

Cause: Oracle Data Pump encountered an internal tagged object that failed to import properly. All other objects with the same tag will be skipped.

Action: Contact Oracle Support Services.

ORA-39343: Object type <varname>string</varname> failed to create returning error:\n<varname>string</varname>\n

Cause: The object type could not be created. Examine the original error code to determine the actual cause.

Action: The original error code will contain more information.

ORA-39344: import done in <varname>string</varname> character set and <varname>string</varname> NCHAR character set

ORA-39345: WARNING: possible data loss in character set conversions

Cause: Oracle Data Pump displayed this message at the start of the import operation because it determined that the character set or the NCHAR character set used by the export database was different from that of the target database and also that the target database character set was not a superset of the export database character set.

Action: No specific user action is required.

ORA-39346: data loss in character set conversion for object <varname>string</varname>

Cause: Oracle Data Pump import converted a metadata object from the export database character set into the target database character set prior to processing the object. Some characters could not be converted to the target database character set and so the default replacement character was used.

Action: No specific user action is required. This type of data loss can occur if the target database character set is not a superset of the export databases character set.

ORA-39347: Character data loss was detected during conversion, the row was rejected.

Cause: The row contained characters that did not exist in the destination character set.

Action: No specific user action is required. The destination character set must be a superset of the source character set to avoid data loss.

ORA-39348: export done in <varname>string</varname> character set and <varname>string</varname> NCHAR character set

ORA-39349: Estimated <varname>string</varname> <varname>string</varname> objects in <varname>string</varname> seconds

ORA-39350: Startup took <varname>string</varname> seconds

ORA-39351: Analyzed <varname>string</varname> <varname>string</varname> objects in <varname>string</varname> seconds

ORA-39352: Wrong number of TRANSPORT_DATAFILES specified: expected <varname>string</varname>, received <varname>string</varname>

Cause: The number of TRANSPORT_DATAFILES specified on the impdp command was not correct.

Action: Specify the correct TRANSPORT_DATAFILES for this transportable job.

ORA-39353: Data was not imported for <varname>string</varname>. Cannot locate the time zone version <varname>string</varname> file.

Cause: This table contains TIMESTAMP WITH TIME ZONE data and Oracle Data Pump needed to load the source version of the time zone file. This version cannot be located.

Action: Install the latest time zone version files.

ORA-39354: . . exported <varname>string</varname> <varname>string</varname> rows in <varname>string</varname> seconds

ORA-39355: . . imported <varname>string</varname> <varname>string</varname> rows in <varname>string</varname> seconds

ORA-39356: . . imported <varname>string</varname> <varname>string</varname> out of <varname>string</varname> rows in <varname>string</varname> seconds

ORA-39357: InWARNING: Oracle Data Pump operations are not typically needed when connected to the root or seed of a container database.

Cause: The Oracle Data Pump client was attached to the root or seed container database.

Action: Continue if this is the desired connection string or attach to a pluggable database within the container database.

ORA-39358: Export dump file version <varname>string</varname> not compatible with target version <varname>string</varname>

Cause: The Oracle Data Pump export job version was newer than the target compatibility version.

Action: Upgrade the target database to a compatibility level of at least the export job version, or rerun the export job with a job version that is lower than or equal to the compatibility version of the target database.

ORA-39359: Source time zone version is <varname>string</varname> and target time zone version is <varname>string</varname>.

Cause: The time zone version of the source database is not the same as the time zone version of the target database.

Action: Tables containing TIMESTAMP WITH TIME ZONE data cannot be imported with transportable tablespace technology when time zone versions are different between the export and target databases. All affected tables will be reported during the import job and will not be created. If any are reported, convert the target database to the same time zone version as the source or use Oracle Data Pump with conventional data movement to export then import the affected tables.

ORA-39360: Table <varname>string</varname> was skipped due to transportable import and TSLTZ issues resulting from time zone mismatch.

Cause: The time zone of the source database is different than the time zone of the target database and this table contains TIMESTAMP WITH LOCAL TIME ZONE data.

Action: Convert the target database to the same time zone as the source database or use Oracle Data Pump with conventional data movement to export then import this table.

ORA-39361: Source time zone is <varname>string</varname> and target time zone is <varname>string</varname>.

Cause: The time zone of the source database is different than the time zone of the target database.

Action: Tables containing TIMESTAMP WITH LOCAL TIME ZONE data cannot be imported with transportable tablespace technology when time zones are different between the export and target databases. All affected tables will be reported during the import job and will not be created. If any are reported, convert the target database to the same time zone as the source or use Oracle Data Pump with conventional data movement to export then import the affected tables.

ORA-39362: internal Oracle Data Pump import error**ORA-39363: Type evolution could not be preserved for <varname>string</varname>**

Cause: Trying to apply each version of the type during import resulted in compilation warnings. The type was successfully recreated to the latest version only.

Action: Export dump files as well as transportable tablespaces that contain earlier versions of this type cannot be imported on top of this type definition.

ORA-39364: encryption password is too long

Cause: The encryption password provided to the Oracle Data Pump job was invalid because its length was greater than the maximum allowed. When using the password

to encrypt the dump file set, the maximum length is 128 bytes. When using the password to re-encrypt encrypted columns only, the maximum length is 30 bytes.

Action: Retry the operation with a valid encryption password.

ORA-39365: supplemental log data could not be generated for <varname>string</varname>

Cause: The instance was unable to generate supplemental log data when Data Pump was importing the table. Supplemental logging is not supported for Data Pump import of tables containing columns of user-defined types.

Action: No action is required for replication using Oracle GoldenGate. For logical standby users, perform a separate import of this table into the standby database.

ORA-39366: disable table lock on <varname>string</varname> failed with: \n<varname>string</varname>\n

Cause: Examine the original error code to determine the actual cause.

Action: The original error code contains more information.

ORA-39367: Statistics are being skipped. Cannot locate the time zone version <varname>string</varname> file.

Cause: Importing statistics requires that the Oracle Data Pump load the source version of the time zone file. This version cannot be located.

Action: Install the latest time zone version files.

ORA-39368: cannot alter partition varray column properties

Cause: DBMS_METADATA_DIFF was comparing two partitioned tables. There is no SQL ALTER statement to change varray column properties.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39369: some rows may not be exported for <varname>string</varname> due to block corruption

Cause: The corrupted data blocks were ignored when Oracle Data Pump was exporting the table.

Action: No action is required.

ORA-39370: remap value <varname>string</varname> is too long

Cause: The remap value provided to the Oracle Data Pump job was invalid because its length was greater than the maximum allowed.

Action: Retry the operation with a valid remap value.

ORA-39371: cannot specify partition in remap_table without departitioning

Cause: The 'remap_table' value specified a partition but the tables were not being departitioned.

Action: Either remove the partition name in the 'remap_table' parameter or add the 'partition_options=departition' parameter.

ORA-39500: failed to notify CRS of a Startup/Shutdown event for database "<varname>string</varname>", instance "<varname>string</varname>" (ignored)

Cause: The instance was unable to obtain the context or information required to notify the CRS framework.

Action: None Required. The error is ignored.

ORA-39501: failed to notify CRS of a Startup/Shutdown event [<varname>string</varname>] (ignored)

Cause: The instance was unable to communicate with the CRS framework.

Action: None Required. The error is ignored.

ORA-39502: failed to notify CRS of a Startup/Shutdown event [<varname>string</varname>] (ignored)

Cause: The instance was unable to create an environment context.

Action: None Required. The error is ignored.

ORA-39503: failed to notify CRS of a Startup/Shutdown event [<varname>string</varname>] (ignored)

Cause: The instance was unable to populate the environment context.

Action: None Required. The error is ignored.

ORA-39504: failed to notify CRS of a Startup/Shutdown event [<varname>string</varname>] (ignored)

Cause: The instance was unable to find the location of the alert file.

Action: None Required. The error is ignored.

ORA-39505: Transparent HA tracing event**ORA-39510: CRS error performing <varname>string</varname> on <varname>string</varname> '<varname>string</varname>' on '<varname>string</varname>\n<varname>string</varname>'**

Cause: Unable to perform action on associated CRS resource.

Action: See following error messages for additional information. Fix error and retry.

ORA-39600: Queue keys needs to be a suffix of cluster key.

Cause: Attempt to specify queue key columns that don't form a suffix of the cluster key.

Action: Only specify queue key columns as a suffix of cluster key.

ORA-39601: Hash key is required.

Cause: Missing hash key in the cluster key specification.

Action: Specify one or more hash key columns.

ORA-39700: database must be opened with UPGRADE option

Cause: A normal database open was attempted, but the database has not been upgraded to the current server version.

Action: Use the UPGRADE option when opening the database to run catupgrd.sql (for database upgrade), or to run catalog.sql and catproc.sql (after initial database creation).

ORA-39701: database must be mounted EXCLUSIVE for UPGRADE or DOWNGRADE

Cause: The database was mounted for SHARED cluster access.

Action: Set the CLUSTER_DATABASE initialization parameter to FALSE and restart the server with the UPGRADE or DOWNGRADE option.

ORA-39702: database not open for UPGRADE or DOWNGRADE

Cause: An upgrade, downgrade, reload, or patch script was invoked when the database was not open for UPGRADE or DOWNGRADE.

Action: Use STARTUP UPGRADE to open the database for upgrade or to apply a patch set. Use STARTUP DOWNGRADE for running a downgrade script or the reload script.

ORA-39703: server version and script version do not match

Cause: An upgrade, downgrade, reload, or patch script was invoked, but the database instance version was not the version for which the script was intended.

Action: Check that the correct ORACLE_HOME and ORACLE_SID environment variables are set. Also check that the SQL script is being invoked from the correct ORACLE_HOME.

ORA-39704: permission to modify component registry entry denied

Cause: An attempt was made to modify an entry in the component registry, but the session user was not authorized; only the CONTROL or SCHEMA user for the component are authorized to modify the component registry entry.

Action: Connect as either the CONTROL or SCHEMA user for the component.

ORA-39705: component '<varname>string</varname>' not found in registry

Cause: No entry in the component registry was found for the specified component.

Action: Check the spelling of the component ID and use the DBA_REGISTRY view to list the existing components.

ORA-39706: schema '<varname>string</varname>' not found

Cause: The schema name specified was not found in the database.

Action: Create the schema before loading the component.

ORA-39707: compatible parameter <varname>string</varname> too high for downgrade to <varname>string</varname>

Cause: A downgrade was attempted, but the compatible initialization parameter value was greater than the downgrade release version.

Action: Once the compatible value has been raised, downgrade to earlier releases is not supported.

ORA-39708: component '<varname>string</varname>' not a <varname>string</varname> component

Cause: The component was not a component for the specified namespace.

Action: Either enter a valid component identifier for the namespace or set the session namespace to the correct component namespace.

ORA-39709: incomplete component downgrade; <varname>string</varname> downgrade aborted

Cause: One or more components did not have a status of DOWNGRADED.

Action: Correct the component problem and re-run the downgrade script.

ORA-39710: only connect AS SYSDBA is allowed when OPEN in UPGRADE mode

Cause: An attempt was made to connect to a database when the database was OPEN for UPGRADE or DOWNGRADE.

Action: Try to connect again after the database upgrade or downgrade is complete.

ORA-39711: critical patch number less than last installed CPU number

Cause: A Critical Patch Update (CPU) script was invoked that had a number that was less than the last CPU installed in the database.

Action: Check the DBA_REGISTRY_HISTORY view to identify the last CPU for the database, and install the most recent CPU.

ORA-39712: XE edition server cannot open database

Cause: An attempt was made to open a Standard Edition or Enterprise Edition database with the Express Edition of the server.

Action: Use the Express Edition server only with Express Edition databases.

ORA-39713: Type attribute or method already altered

ORA-39714: upgrade script utlmmig.sql failed

Cause: A normal database open was attempted, but the upgrade script utlmmig.sql failed to complete.

Action: Use the UPGRADE option when opening the database and then run utlmmig.sql.

ORA-39715: Downgrade script UTLMMIGDOWN.SQL failed.

Cause: A normal database open was attempted, but the downgrade script UTLMMIGDOWN.SQL failed to complete.

Action: Use the DOWNGRADE option when opening the database and then run UTLMMIGDOWN.SQL.

ORA-39726: unsupported add/drop column operation on compressed tables

Cause: An unsupported add/drop column operation for compressed table was attempted.

Action: When adding a column, do not specify a default value. DROP column is only supported in the form of SET UNUSED column (meta-data drop column).

ORA-39727: COMPATIBLE must be set to 10.0.0.0.0 or higher

Cause: An add/drop column operation for compressed table has been performed on the database. This requires COMPATIBLE to be set to 10.0.0.0.0 or higher during upgrade from 9.2 to a 10i or higher release.

Action: Set COMPATIBLE to 10.0.0.0.0 and retry the upgrade.

ORA-39751: partitioned table on both sides of PARTITIONED OUTER JOIN is not supported

Cause: An attempt was made to partition both sides of PARTITIONED OUTER JOIN.

Action: Specify partitioned table on one side of PARTITIONED OUTER JOIN only.

ORA-39752: redundant column in partitioning and join columns is not allowed

Cause: An attempt was made to specify redundant columns in partitioning and join columns for NATURAL or named column PARTITIONED OUTER JOIN.

Action: Do not specify redundant column in partitioning and join columns.

ORA-39753: unsupported use of subquery in PARTITIONED OUTER JOIN condition

Cause: An attempt was made to use subquery in PARTITIONED OUTER JOIN condition.

Action: Remove subquery from the join condition.

ORA-39754: FULL PARTITIONED OUTER JOIN is not supported

Cause: An attempt was made to use FULL PARTITIONED OUTER JOIN.

Action: Specify FULL PARTITIONED OUTER JOIN through UNION of LEFT and RIGHT PARTITIONED OUTER JOIN.

ORA-39755: cannot use PARTITIONED OUTER JOIN with a left correlation

Cause: An attempt was made to use a PARTITIONED OUTER JOIN where the right side is a lateral view with a left correlation to the left side and is partitioned.

Action: Rewrite the query without the left correlation.

ORA-39761: stream reset required before loading this stream again

Cause: An attempt was made to load a stream that was previously loaded but has not been reset yet.

Action: Reset the specified stream and convert column array data to it before attempting to load it again.

ORA-39762: streams must be loaded in conversion order

Cause: An attempt was made to load a stream out of conversion order.

Action: Load streams in the same order they were converted.

ORA-39763: stream must be completely loaded before it is reset

Cause: An attempt was made to reset a stream that contains converted column array data and hasn't been completely loaded yet.

Action: Before resetting a stream, load it until a status of OCI_SUCCESS, OCI_NO_DATA, or OCI_NEED_DATA is returned.

ORA-39764: specified stream is not in the specified direct path context

Cause: A direct path operation was attempted using a stream that was not created in the specified direct path context.

Action: Only use streams created in the specified direct path context.

ORA-39765: stream must be reset before used in a column array conversion

Cause: The stream was completely loaded, but has not been reset yet.

Action: Reset loaded streams after load returns OCI_SUCCESS, OCI_NO_DATA, or OCI_NEED_DATA. The stream can then be used in a column array to stream conversion.

ORA-39766: invalid stream specified for column array conversion

Cause: A stream must be loaded and reset before used again in a column-array-to-stream conversion. This error is issued if another stream has subsequently been converted before the specified stream has been loaded, or if the latest load of this stream returned OCI_ERROR.

Action: Don't convert into a previous stream before it is loaded. Also, when load stream returns OCI_ERROR, the stream must be loaded again to insure any remaining information in the stream is loaded. The stream must be loaded even if the last or only row was in error. There may be error information in the stream that needs to be sent to the server.

ORA-39767: finish is not allowed when unloaded stream data exists

Cause: A direct path finish was attempted when at least one stream buffer has not been completely loaded.

Action: All streams must be loaded after a column array to stream conversion until load stream returns a status of OCI_SUCCESS or OCI_NO_DATA. The load can then be finished.

ORA-39768: only one direct path context top level column array is allowed

Cause: Attempt to create multiple top level column arrays in a direct path context, when only one is allowed.

Action: Create another direct path context if additional top level column arrays are required.

ORA-39769: finish is not allowed with an incompletely loaded last row

Cause: Part of a row has been loaded, but it is not complete.

Action: Finish loading the current row when load stream returns OCI_ERROR or OCI_NEED_DATA.

ORA-39770: current conversion row should be ignored**ORA-39771: stream must be loaded before its handle is freed**

Cause: An attempt was made to free a stream handle after conversion but before the stream was loaded.

Action: Load the stream until OCI_SUCCESS, OCI_NEED_DATA or OCI_NO_DATA is returned before attempting to free the stream handle. If OCI_NEED_DATA is returned, another stream must be loaded to complete last row.

ORA-39772: column array reset disallowed after OCI_CONTINUE or OCI_NEED_DATA

Cause: An attempt was made to reset a column array when a row conversion is still in progress.

Action: Complete the current row before resetting the column array. To ignore the current row when conversion returned OCI_NEED_DATA, set the current column flag to OCI_DIRPATH_COL_ERROR. This should be followed by a conversion, which will undo and ignore the row. The column array(s) can then be reset.

ORA-39773: parse of metadata stream failed

Cause: An unexpected error occurred while attempting to parse the metadata // stream for a table being loaded.

Action: Call Oracle support.

ORA-39774: parse of metadata stream failed with the following error:\n<varname>string</varname>

Cause: An unexpected error occurred while parsing the metadata stream.

Action: See the secondary error for more information.

ORA-39775: direct path API commit not allowed due to previous fatal error

Cause: An attempt was made to commit a Direct Path context after a fatal error.

Action: Correct the error and retry.

ORA-39776: fatal Direct Path API error loading table <varname>string</varname>

Cause: A fatal error was detected loading the specified or previous table.

Action: Correct the error and retry.

ORA-39777: data saves are not allowed when loading lob columns

Cause: An attempt was made to save data when loading lob columns or columns stored as lobs (such as varrays and xml types).

Action: Do not attempt to do a data save or partial save when loading lob columns. A finish save is allowed.

ORA-39778: the parallel load option is not allowed when loading lob columns

Cause: An attempt was made to load lob columns using the attribute OCI_ATTR_DIRPATH_PARALLEL. This error will also be issued when loading any columns that are stored as lobs (such as varrays and xml types).

Action: Do not use the parallel attribute when loading lob columns.

ORA-39779: type "<varname>string</varname>". "<varname>string</varname>" not found or conversion to latest version is not possible

Cause: Unable to import table data using the specified type. The type was nonexistent in the database or the input type could not be converted to the existing type. The reasons why a conversion was not possible are: 1. The version of the type in the database was greater than the version of the type at export time because 1 or more attributes have been added or dropped from the type. 2. If the type existed in the database prior to the import operation, then its internal identifier may not match the internal identifier of the type from the export database. The identifiers must match for an import to succeed.

Action: Ensure the types in the database match those at export time.

ORA-39780: Direct path context operations are not allowed after the context is aborted or finished

Cause: The specified direct path context was aborted or finished.

Action: Do not pass a direct path context that has ended to any direct path functions.

ORA-39781: Direct path stream loads are not allowed after another context loading the same table has ended

Cause: Attempt to load a stream in one context after another loading the same table has ended.

Action: Close all contexts before trying to create another that loads the same table as a previous context in the same session.

ORA-39782: Direct path prepare is not allowed after another context loading the same table has ended

Cause: Direct path prepare called after a context loading the same table has ended.

Action: Close all contexts before trying to create another that loads the same table as a previous context in the same session.

ORA-39783: Invalid direct path transaction active

Cause: Direct path operations were not performed in the transaction started by the first OCIDirPathPrepare call.

Action: Ensure the correct transaction is active prior to calling Direct Path API operations.

ORA-39784: This direct path operation is not allowed while another is in progress

Cause: Another direct path operation was active.

Action: Complete any direct path operations in progress before attempting this operation.

ORA-39785: SQL expressions returning ADT objects are not allowed in direct path

Cause: The passed SQL expression returned a user-defined ADT which was not supported.

Action: Remove the SQL expression.

ORA-39786: Number of columns does not match between export and import databases

Cause: External tables could not import into a table with mismatched columns.

Action: Ensure the number of columns matches between export and import database.

ORA-39787: Column <varname>string</varname> subtype "<varname>string</varname>". "<varname>string</varname>" is not instantiable.

Cause: Subtype specified was not instantiable.

Action: Ensure all subtypes specified are instantiable.

ORA-39788: Subtype "<varname>string</varname>". "<varname>string</varname>" is specified multiple times for column <varname>string</varname>.

Cause: Subtype specified was not unique.

Action: Ensure all subtypes specified are unique.

ORA-39789: "<varname>string</varname>" "<varname>string</varname>" is not a valid type for column <varname>string</varname>.

Cause: Subtype specified was not a valid type for the column being loaded.

Action: Ensure all subtypes specified are valid types for the column being loaded.

ORA-39790: Attribute "<varname>string</varname>" specified multiple times for column <varname>string</varname>.

Cause: Attribute specified multiple times.

Action: Ensure all attributes specified are unique.

ORA-39791: Attribute "<varname>string</varname>" for column <varname>string</varname> is not in subtype "<varname>string</varname>" "<varname>string</varname>".

Cause: Attribute was not included in the subtype indicated.

Action: Ensure the attribute is included in the subtype indicated by the specified subtype index.

ORA-39792: Attribute "<varname>string</varname>" is not valid for subtype(s) loaded into column <varname>string</varname>.

Cause: Attribute specified was not included in any subtypes specified for the column or the declared subtype of the column.

Action: Ensure the attribute is included in at least one of the subtypes loaded into the column.

ORA-39793: Attribute "<varname>string</varname>" is not unique within the hierarchy being loaded.

Cause: The attribute was defined in multiple lines of descent in the hierarchy being loaded.

Action: When describing the attribute, a subtype index must be specified to uniquely identify the attribute being loaded.

ORA-39794: No attributes loaded for subtype "<varname>string</varname>" "<varname>string</varname>".

Cause: None of the attributes loaded were included in the type shown.

Action: At least one attribute must be loaded for each subtype specified.

ORA-39795: Subtype index is not first attribute for object table or column, <varname>string</varname>.

Cause: The subtype index was not the first attribute when describing the attributes of an object column or object table with multiple subtypes.

Action: Describe the subtype index as the first attribute for this object column or object table.

ORA-39796: column array entry for <varname>string</varname> is not valid for the current subtype

Cause: This column was not part of the current subtype being loaded for this object column or table. Therefore, its entry must be null in the column array.

Action: Set the column array entry to null.

ORA-39797: The subtype index value is not valid.

Cause: The subtype index value in the column array was not valid for the object column or object table.

Action: Set a valid subtype index value in the column array for this table or column.

ORA-39798: The column array row offset <varname>number</varname> is out of range (max: <varname>number</varname>).

Cause: The specified row offset was too large for the column array.

Action: Ensure the row offset is in range.

ORA-39799: The column index <varname>number</varname> is out of range (max: <varname>number</varname>).

Cause: The specified column index was too large for the column array.

Action: Ensure the column index is in range.

ORA-39800: Database version <varname>number</varname> does not support the load of multiple subtypes.

Cause: Direct Path API support for loading multiple subtypes of an object table or column was only present in the Oracle 11 release and higher.

Action: Upgrade database to Oracle 11 or higher.

ORA-39801: Subtype "<varname>string</varname>". "<varname>string</varname>" is not a valid subtype for column <varname>string</varname>.

Cause: Subtype specified was not the declared type nor was it derived from the declared type.

Action: Ensure all subtypes specified are either the declared type or derived from the declared type.

ORA-39802: ADT object column <varname>string</varname> specified a SQL expression which is not allowed in direct path mode.

Cause: The ADT column reported in the error specified a SQL expression which returned the ADT. This is not supported.

Action: Remove the SQL expression.

ORA-39803: Data saves are not allowed on tables with partitioning referential constraints.

Cause: Data saves (and the sqlldr ROWS parameter) are not allowed when loading both the parent and child tables of a partitioning referential constraint.

Action: Do not attempt data saves when loading both the parent and child tables of a partitioning referential constraint.

ORA-39804: The load was aborted due to an error loading parent <varname>string</varname> while also loading child <varname>string</varname>.

Cause: An error occurred while loading the child and parent table of a partitioning referential constraint. The load was aborted to ensure the partitioning referential constraint was not violated.

Action: Fix the error that caused the load to abort and retry.

ORA-39805: Parallel loads are not allowed when loading child and parent.

Cause: A parallel load was requested when loading the child and parent of a partitioning referential constraint. This is not allowed.

Action: Remove the parallel option.

ORA-39806: The attempt to lock <varname>string</varname> parent table <varname>string</varname> <varname>string</varname> <varname>string</varname> failed.

Cause: While loading the child table of a partitioning referential constraint, the parent table must be locked in SHARE mode.

Action: Determine why the parent table could not be locked and retry.

ORA-39807: Partial data save on child <varname>string</varname> was ignored.

Cause: An attempt was made to partially save data when loading both the child and parent of a partitioning referential constraint or when loading a table with a domain index.

Action: Fix the error that caused the partial load and retry.

ORA-39808: The SINGLEROW option must be specified for parent table <varname>string</varname>.

Cause: The SINGLEROW option was not specified when loading both the parent and child table of a partitioning referential constraint.

Action: Ensure the SINGLEROW option is specified for the parent when loading the parent and child of a partitioning referential constraint.

ORA-39809: Data saves are not allowed on tables with domain indexes.

Cause: Data saves (and the sqlldr ROWS parameter) could not be allowed when loading a table with domain indexes.

Action: Do not attempt data saves when loading a table with domain indexes.

ORA-39810: Data saves are not allowed when NO_INDEX_ERRORS is specified.

Cause: Data saves (and the sqlldr ROWS parameter) could not be allowed when loading with the NO_INDEX_ERRORS option.

Action: Do not attempt data saves when loading a table with the NO_INDEX_ERRORS option.

ORA-39811: index <varname>string</varname>.<varname>string</varname> had the following error:

Cause: An error occurred on the index; error follows.

Action: Fix the error and retry.

ORA-39812: index <varname>string</varname>.<varname>string</varname> partition <varname>string</varname> had the following error:

Cause: An error occurred on the index; error follows.

Action: Fix the error and retry.

ORA-39813: index <varname>string</varname>.<varname>string</varname> had <varname>string</varname> partition errors:

Cause: A logical index error occurred on a partitioned index which affected one or more index partitions, which are listed below this message.

Action: Fix the error(s) and retry.

ORA-39814: The SKIP_INDEX_MAINTENANCE option is not allowed with NO_INDEX_ERRORS.

Cause: The SKIP_INDEX_MAINTENANCE option was used with the NO_INDEX_ERRORS option.

Action: Do not use SKIP_INDEX_MAINTENANCE with NO_INDEX_ERRORS.

ORA-39815: Direct Path Unload of an external table is not allowed.

Cause: An attempt was made to use Direct Path API Unload to unload an external table.

Action: Do not use Direct Path Unload to unload an external table.

ORA-39816: Direct Path Unload of tables with encrypted column(<varname>string</varname>.<varname>string</varname>) is not allowed.

Cause: An attempt was made to use Direct Path API Unload to unload a table with encrypted columns.

Action: Do not use Direct Path Unload to unload a table with encrypted columns.

ORA-39817: index <varname>string</varname>.<varname>string</varname> was ignored due to:

Cause: Index was unusable at the start of the load and it was requested that unusable indexes be skipped.

Action: No action required.

ORA-39818: index <varname>string</varname>.<varname>string</varname> partition <varname>string</varname> was ignored due to:

Cause: Index was unusable at the start of the load and it was requested that unusable indexes be skipped.

Action: No action required.

ORA-39819: The OCI_ATTR_DIRPATH_NO_INDEX_ERRORS attribute cannot be set to TRUE in direct path parallel loads.

Cause: An attempt was made to set the OCI_ATTR_DIRPATH_NO_INDEX_ERRORS attribute to TRUE in a direct path parallel load.

Action: Do not set the OCI_ATTR_DIRPATH_NO_INDEX_ERRORS to TRUE for direct path parallel loads.

ORA-39820: Zero length LONG piece detected for column <varname>string</varname> row <varname>string</varname>.

Cause: A zero length piece was detected for a LONG column.

Action: Do not use a length of zero when loading LONG columns.

ORA-39821: domain index on columnar data made unusable

Cause: An attempt was made to load a columnar table with a domain index using SQL*Loader direct part load

Action: n/a

ORA-39822: A new direct path operation is not allowed in the current transaction.

Cause: All previous direct path contexts ended and the current transaction was ready for a commit or abort of those changes.

Action: Commit or abort the current transaction, and start a new transaction for the next direct path context.

ORA-39823: The attribute OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS is only allowed for load operations.

Cause: The attribute OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS was set for a nonload operation.

Action: Use OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS for load operations only.

ORA-39824: The OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS attribute was set when no transaction was active.

Cause: There was no active transaction to use.

Action: Start a transaction or do not set the attribute OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS to TRUE.

ORA-39825: Direct path load of view or synonym (<varname>string</varname>.<varname>string</varname>) with multiple dependencies not permitted.

Cause: An attempt was made to load a view or synonym which has more than a single dependency.

Action: A view or synonym being loaded by the direct path API must resolve to a single object.

ORA-39826: Direct path load of view or synonym (<varname>string</varname>.<varname>string</varname>) could not be resolved.

Cause: A synonym or view could not be translated.

Action: Verify that the view or synonym is valid.

ORA-39827: Direct path load of PL/SQL function not permitted.

Cause: An attempt was made to load a PL/SQL function with the direct path API.

Action: Remove PL/SQL function the direct path load.

ORA-39828: Constraint <varname>string</varname> was disabled because of index <varname>string</varname>.<varname>string</varname> error.

Cause: The index used for the constraint was set as unusable.

Action: Fix the error that caused the index to be set unusable.

ORA-39829: function-based index on columnar data made unusable

Cause: An attempt was made to load a columnar table with a function-based index using SQL*Loader direct path load.

Action: Rebuild the function-based index after the load completes.

ORA-39830: XML parsing failed \n<varname>string</varname>

Cause: XML parser returned an error while trying to parse the document.

Action: Fix the error that caused the document to be invalid.

ORA-39831: Direct path load failed, (<varname>string</varname>.<varname>string</varname>) is not a table.

Cause: Object being loaded did not resolve to a table.

Action: Verify that the view or table name is correct.

ORA-39832: Direct path unload was not allowed due to columns with default values.

Cause: Direct path unload was attempted on a table with columns that have default values.

Action: Do not attempt a direct path unload of a table with columns that have default values.

ORA-39833: Direct path parallel load was not allowed on a temporary table.

Cause: A direct path parallel load was attempted on a temporary table.

Action: Do not attempt a direct path parallel load on a temporary table.

ORA-39834: Direct path load or unload was not allowed on a remote table.

Cause: An attempt was made to specify a remote table in a direct path API load or unload.

Action: Do not specify a remote table in a direct path API load or unload.

ORA-39835: Direct path load partition memory exceeded. PGA use is <varname>string</varname>kb, PGA limit is: <varname>string</varname>kb

Cause: A direct path load ran out of process memory when loading multiple partitions.

Action: Use the PARTITION_MEMORY parameter to limit memory used when loading many partitions. Once this limit is reached, loading of some partition rows will be delayed until memory use falls below the limit. Use a value (kb) lower than the current program global area (PGA) limit included in this message and try the load again.

ORA-39861: auxiliary data file copy file for Pluggable Database <varname>string</varname>: "<varname>string</varname>"

Cause: This message reports the filename for details of another message.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

ORA-39862: RESETLOGS option only valid after a Pluggable Database incomplete recovery

Cause: The ALTER PLUGGABLE DATABASE OPEN RESETLOGS command was issued, but the Pluggable Database was not flashed back or point-in-time recovered.

Action: Retry the ALTER PLUGGABLE DATABASE OPEN command without specifying RESETLOGS.

ORA-39863: An earlier Pluggable Database incomplete recovery failed.

Cause: An earlier Pluggable Database flashback or point-in-time recovery failed.

Action: Retry the Pluggable Database flashback or incomplete recovery.

ORA-39865: cannot FLASHBACK beyond Pluggable Database resetlogs operation

Cause: An attempt was made to perform a FLASHBACK DATABASE beyond a Pluggable Database resetlogs system change number (SCN).

Action: Choose a FLASHBACK SCN that is more recent than the Pluggable Database resetlogs SCN.

ORA-39866: Data files for Pluggable Database <varname>string</varname> must be offline to flashback across PDB point-in-time recovery.

Cause: An attempt was made to perform a FLASHBACK DATABASE beyond a Pluggable Database (PDB) resetlogs system change number (SCN) while data files for the Pluggable Database are still online.

Action: Take the data files for the Pluggable Database (PDB) offline before performing the FLASHBACK DATABASE command. To bring the PDB to the same past point in time as the container database (CDB), those data files can be restored from backups and recovered to that same past point in time. This can be done in one of two ways: * Flashback the CDB and open the CDB with resetlogs. Restore the PDB later, and perform a complete PDB recovery. * Flashback the CDB first. Restore and recover the PDB to the same system change number (SCN). Open CDB with resetlogs.

ORA-39870: container database is not open in read/write mode

Cause: A command was attempted that requires the container database (CDB) to be open in read/write mode.

Action: Open the container database in read/write mode and try the command again.

ORA-39871: An earlier Pluggable Database resetlogs operation failed after making changes.

Cause: An earlier ALTER PLUGGABLE DATABASE OPEN RESETLOGS command failed after it made some changes.

Action: Perform another Pluggable Database point-in-time recovery before attempting to open the Pluggable Database with RESETLOGS.

ORA-39872: Data file <varname>number</varname> is in the middle of Pluggable Database resetlogs operation.

Cause: The data file was in the middle of a Pluggable Database resetlogs operation.

Action: Find the right file version or perform more media recovery. For additional information, see other errors.

ORA-39873: Restore all data files to a checkpoint SCN lower than <varname>string</varname>.

Cause: This error provides additional information for error 39874.

Action: Restore the data files as suggested and restart the recovery process.

ORA-39874: Pluggable Database <varname>string</varname> recovery halted

Cause: The Pluggable Database was recovered into an orphan branch.

Action: Restore all data files to a checkpoint system change number (SCN) lower than the branch point and restart the recovery process. Check the alert log for additional information.

ORA-39875: Data file <varname>string</varname> is in the middle of Pluggable Database resetlogs operation.

Cause: The data file is in the middle of a Pluggable Database (PDB) resetlogs operation.

Action: If possible, recover the data file further so that it is not in the middle of a PDB resetlogs operation. Another alternative is to perform PDB point-in-time recovery.

ORA-39876: cannot perform CDB OPEN RESETLOGS because data file <varname>string</varname> is in the middle of a PDB resetlogs operation

Cause: The data file mentioned was in the middle of a Pluggable Database (PDB) resetlogs operation.

Action: Recover the container database (CDB) to a different system change number (SCN) at which the data files are not in the middle of a PDB resetlogs operation. Alternatively, you can offline the problematic data file and let CDB OPEN RESETLOGS succeed. You may need to perform PDB point-in-time recovery later in order to open the PDB of the offlined data file.

ORA-39877: keyword ONLINE or OFFLINE expected

Cause: The ONLINE or OFFLINE keyword was not specified after the ALL keyword.

Action: Use the correct syntax.

ORA-39878: Only one Pluggable Database name can be specified.

Cause: Multiple Pluggable Database names were specified for the ALTER PLUGGABLE DATABASE OPEN RESETLOGS command.

Action: Specify only one Pluggable Database name.

ORA-39879: Pluggable Database <varname>string</varname> is in the middle of a Pluggable Database RESETLOGS operation

Cause: There was already an on-going Pluggable Database OPEN RESETLOGS operation for this Pluggable Database.

Action: If needed, retry after the Pluggable Database OPEN RESETLOGS operation completes.

ORA-39880: One or more pluggable databases were in the middle of a point-in-time recovery at this incomplete database recovery SCN.

Cause: In the past, one or more pluggable databases had an active pluggable database RESETLOGS operation as of this incomplete recovery SCN.

Action: Additional messages are logged in the alert log indicating all of the pluggable databases affected by this container database OPEN RESETLOGS operation. Recover the container database to a different system change number (SCN) at which none of the pluggable databases had an active RESETLOGS operation. To continue the container database OPEN RESETLOGS operation at the same SCN, offline all of the data files of the affected pluggable databases first and reissue the command. However, a new point-in-time recovery of the affected pluggable databases would be required before these databases can be opened again.

ORA-39881: Pluggable database <varname>string</varname> must be closed while recovering the physical standby across PDB RESETLOGS

Cause: The pluggable database (PDB) is open while the physical standby is recovering across a PDB RESETLOGS operation for the PDB.

Action: Close the PDB and restart physical standby recovery.

ORA-39901: Partitioned table <varname>string</varname>.<varname>string</varname> is partially contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Check table partitions by querying SYS.DBA_TAB_PARTITIONS.

ORA-39902: Subpartitioned table <varname>string</varname>.<varname>string</varname> is partially contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Check table subpartitions by querying SYS.DBA_TAB_SUBPARTITIONS.

ORA-39903: IOT Partition <varname>string</varname>.<varname>string</varname> is partially contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Check table partitions by querying SYS.DBA_IND_PARTITIONS.

ORA-39904: Partitioned object <varname>string</varname>.<varname>string</varname> is partially contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Check partitions and overflow segments by querying SYS.DBA_IND_PARTITIONS and SYS.DBA_TAB_PARTITIONS.

ORA-39905: Table <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> points to LOB segment <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname>.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39906: Constraint <varname>string</varname> between table <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> and table <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname>.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39907: Index <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> points to table <varname>string</varname>.

varname>.<varname>string</varname> in tablespace <varname>string</varname>.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39908: Index <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> enforces primary constraints <varname>string</varname> of table <varname>string</varname> in tablespace <varname>string</varname>.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39909: Index <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> points to table/cluster <varname>string</varname> in tablespace <varname>string</varname>.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39910: Partitioned Global index <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> points to partition <varname>string</varname> of table <varname>string</varname> in tablespace <varname>string</varname> outside of transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39911: Index <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> points to partition <varname>string</varname> of table <varname>string</varname> in tablespace <varname>string</varname> outside of transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39912: Partitioned index <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> points to table <varname>string</varname> in tablespace <varname>string</varname> outside of transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39913: <varname>string</varname> <varname>string</varname> not allowed in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39914: Index <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> points to subpartition <varname>string</varname> of table <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> outside of transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39915: Partition <varname>string</varname> of table <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> points to LOB segment <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname>.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39916: Subpartition <varname>string</varname> of table <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> points to LOB segment <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname>.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39917: SYS owned object <varname>string</varname> in tablespace <varname>string</varname> not allowed in pluggable set

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39918: PLSQL Functional Index <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> not allowed in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39919: Object <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> not contained within transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Check SYS.DBA_OBJECTS.

ORA-39920: Rollback segment <varname>string</varname> in tablespace <varname>string</varname> not allowed in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39921: Default Partition (Table) Tablespace <varname>string</varname> for <varname>string</varname> not contained in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39922: Default Partition (Index) Tablespace <varname>string</varname> for <varname>string</varname> not contained in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39923: Default Composite Partition (Table) Tablespace <varname>string</varname> for <varname>string</varname> not contained in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39924: Default Composite Partition (Index) Tablespace <varname>string</varname> for <varname>string</varname> not contained in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39925: LOB segment <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> points to table <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname>.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39926: Join index between table <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> and table <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname>.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39927: Scoped REF constraint between table <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> and table <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname>.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39928: <varname>string</varname> <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> contains evolved type data that have not been upgraded.

Cause: Transportable tablespace operation could not be performed because some tables depending on evolved types were not upgraded.

Action: Transportable tablespace operation can only be performed when all tables depending on evolved types have been upgraded. Perform ALTER TABLE <tab_name> UPGRADE for the table name listed in the message above

ORA-39929: Table <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> has encrypted columns which are not supported.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39930: Violation <varname>string</varname>.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Contact Oracle Support Services.

ORA-39931: XML Schema <varname>string</varname> Owner: <varname>string</varname> not fully contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Identify the associated elements and resolve self containment.

ORA-39932: Extensible Index <varname>string</varname>.<varname>string</varname> not fully contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Identify the associated table and list of secondary objects and resolve self containment.

ORA-39933: Parent table <varname>string</varname>.<varname>string</varname> and its nested table columns are not fully contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Identify the nested tables using view DBA_NESTED_TABLES and resolve self containment.

ORA-39934: Materialized view log <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> and master table <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> are not fully contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39935: Udatable materialized view log <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> and materialized view <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> are not fully contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39936: Token manager for the CSX tablespace <varname>string</varname> not fully contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Include the specified tablespace into the transportable set.

ORA-39937: Unsupported operation, default token tables used for binary XML data.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Copy default token tables into a new token table set using DBMS_CSX_ADMIN package.

ORA-39938: Operation not supported, tablespace <varname>string</varname> contains binary XML data.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39939: More than one set of token tables are used in tablespace <varname>string</varname>.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Remap tables in the specified tablespace to use same token tables.

ORA-39940: Child reference partitioned table <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> or parent table <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> is included but not both.

Cause: Informational message to describe a failure during transportable containment checking. Both parent and child reference partition tables must be included.

Action: Check reference partitioned tables.

ORA-39941: Partitioned table <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> has a partition that has an incomplete online move.

Cause: This is an informational message to describe a failure during transportable containment checking. Online moves need to be complete before transporting a tablespace.

Action: Use the DBMS_PART.CLEANUP_ONLINE_OP procedure to force the online move to complete.

ORA-39942: Subpartitioned table <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> has a subpartition that has an incomplete online move.

Cause: This is an informational message to describe a failure during transportable containment checking. Online moves need to be complete before transporting a tablespace.

Action: Use the DBMS_PART.CLEANUP_ONLINE_OP procedure to force the online move to complete.

ORA-39943: Global index <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> has orphaned entries.

Cause: This is an informational message to describe a failure during transportable containment checking. Orphaned entries need to be cleaned up before transporting a tablespace.

Action: Use DBMS_PART.CLEANUP_GIDX() to cleanup orphaned index entries.

ORA-39944: Global partitioned index <varname>string</varname>.<varname>string</varname> in tablespace <varname>string</varname> has orphaned entries.

Cause: This is an informational message to describe a failure during transportable containment checking. Orphaned entries need to be cleaned up before transporting a tablespace.

Action: Use DBMS_PART.CLEANUP_GIDX() to cleanup orphaned index entries.

ORA-39945: Token conflicting with existing tokens.

Cause: The binary XML tokens contained in the imported tablespace conflicted with the existing tokens.

Action: Use the dump file export or import instead of transportable tablespace.

ORA-39946: Nondefault token table encountered.

Cause: During transportable tablespace import, a nondefault token table was encountered.

Action: Use the dump file export or import instead of transportable tablespace.

ORA-39950: invalid parameter for PLSQL warnings flag

Cause: The user either entered invalid value for the PLSQL_WARNINGS flag or the value of the flag conflicts with other values.

Action: Enter correct values for the switch.

ORA-39951: incomplete values specified for PL/SQL warning settings

Cause: The user either did not enter the value for the settings or entered incomplete values.

Action: Enter correct syntax for the switch.

ORA-39952: only numbers can be specified as range values

Cause: The range values did not have numerical values only.

Action: Enter only numerical values.

ORA-39953: the range value specified is beyond allowed range

Cause: The range values were either too low or too high.

Action: Specify only the allowed range values.

ORA-39954: DEFERRED is required for this system parameter

Cause: The ALTER SYSTEM command for PLSQL_WARNINGS did not include the keyword, DEFERRED.

Action: Change the command to use the keyword, DEFERRED.

ORA-39955: invalid PL/SQL warning message number

Cause: The PL/SQL message number specified was not in a valid range.

Action: Specify PL/SQL warning message numbers within the valid range.

**ORA-39956: duplicate setting for PL/SQL compiler parameter
<varname>string</varname>**

Cause: A PL/SQL compiler parameter was set more than once.

Action: Remove the duplicate PL/SQL compiler setting.

ORA-39957: invalid warning category

Cause: The category of the message was incorrect.

Action: Specify a valid category

ORA-39958: invalid warning category qualifier

Cause: The category qualifier was incorrect.

Action: Specify a valid category qualifier.

ORA-39959: invalid warning number (<varname>string</varname>)

Cause: The warning number was incorrect.

Action: Specify a valid warning number.

ORA-39960: scope can only be SYSTEM or SESSION

Cause: The scope specified was not set.

Action: Specify a valid scope, either SESSION or SYSTEM.

ORA-39961: message specified was not found

Cause: The message number specified was not set.

Action: specify the message number whose settings have been set in the given scope.

ORA-39962: invalid parameter for PLSQL_CCFLAGS

Cause: The value for the PLSQL_CCFLAGS parameter was not valid.

Action: Specify a valid value for the PLSQL_CCFLAGS parameter.

ORA-39963: Trigger Runtime Debug event

ORA-39964: Specified value for _PLSQL_MAX_STACK_SIZE (<varname>string</varname>) is larger than available memory (<varname>string</varname>)

Cause: The value specified for the _PLSQL_MAX_STACK_SIZE parameter was larger than the amount of stack size available to the process.

Action: Specify a smaller value for the _PLSQL_MAX_STACK_SIZE parameter.

ORA-39965: Collection of records with PL/SQL type attributes are not allowed in this context.

Cause: The collection of records with attributes of PL/SQL types were not allowed as an argument to the TABLE operator.

Action: Use the collection of records whose attributes are of the types that SQL can understand.

ORA-40001 to ORA-40556

ORA-40001: value for <varname>string</varname> must be greater than zero

Cause: The input parameter in question has a value of zero or less.

Action: Provide a value greater than zero for the relevant parameter.

ORA-40002: wordsize must be <varname>string</varname> or greater

Cause: The input wordsize is less than the prescribed limit for the BLAST Match or Align algorithm.

Action: Provide a wordsize greater than or equal to the prescribed value.

ORA-40003: wordsize must be in the range <varname>string</varname> - <varname>string</varname> for BLAST-P

Cause: The input wordsize has a value out of the prescribed range.

Action: Provide a wordsize value within the prescribed range for BLAST-P.

ORA-40004: penalty must be negative for BLAST-N

Cause: The input value provided for penalty is zero or greater.

Action: Provide a negative penalty value.

ORA-40021: no column named <varname>string</varname> in training table <varname>string</varname>

Cause: The training table does not contain the specified column

Action: Provide a case-id/target column that exists in the training table

ORA-40022: null case ID column - cannot provide row diagnostics in <varname>string</varname>

Cause: A row diagnostics table name was provided, but without a corresponding case or row identifier column in the build data.

Action: Provide a non-null case identifier column in the build data to identify rows in the row diagnostics table.

ORA-40023: sufficient memory could not be allocated given the number of attributes

Cause: Unable to allocate sufficient memory to create a model capable of producing confidence bounds on predictions because there were too many attributes or there were high cardinality categorical attributes, or both, in the build data.

Action: Reduce the number of attributes, especially high cardinality categoricals, or enable ridge regression.

ORA-40024: solution to least squares problem could not be found

Cause: Unable to find solution because the predictor covariance matrix was singular.

Action: Enable ridge regression or remove exact multicollinearities from the build data.

ORA-40025: reference class name not found in build data

Cause: The provided reference class name was not found in the build data.

Action: Provide an existing target value as the reference class name.

ORA-40026: reference class name not found in the weights table

Cause: The provided reference class name did not correspond to any of the entries in the weights table.

Action: Provide consistent specification for reference class name and weights table.

ORA-40027: Target attribute has more than two distinct values

Cause: Generalized Linear Models only support binary classification.

Action: Consolidate target values into two distinct categories.

ORA-40028: solution to least squares problem could not be found

Cause: Unable to find solution because the predictor build data were not properly scaled.

Action: Standardize the predictor build data by enabling auto prep.

ORA-40029: Specified diagnostics table name already exists

Cause: A diagnostics table name matching an existing table was specified.

Action: Choose a table name that does not match any existing user table.

ORA-40030: solution to least squares problem could not be found

Cause: Unable to find solution because the predictor covariance matrix was singular for the forced-in features.

Action: If there are forced-in features, remove them. If GLMS_FTR_ACCEPTANCE was set to GLMS_FTR_ACCEPTANCE_STRICT, reset it to GLMS_FTR_ACCEPTANCE_RELAXED and rebuild the model.

ORA-40031: insufficient memory for model build given the number of forced-in features (maximum allowable for this data: <varname>string</varname>)

Cause: Unable to allocate sufficient memory to create a feature-selection model because there were too many forced-in features or the forced-in features were high cardinality categorical attributes, or both.

Action: Reduce the number of forced-in attributes, especially high cardinality categoricals.

ORA-40032: solution to least squares problem could not be found

Cause: Unable to find solution because the predictor covariance matrix was singular for the selected features.

Action: If GLMS_FTR_ACCEPTANCE was set to GLMS_FTR_ACCEPTANCE_STRICT, reset it to GLMS_FTR_ACCEPTANCE_RELAXED and rebuild the model.

ORA-40101: Data Mining System Error <varname>string</varname>-<varname>string</varname>-<varname>string</varname>

Cause: An internal system error occurred during a data mining operation.

Action: Contact Oracle Support Services.

ORA-40102: invalid input <varname>string</varname> for data mining operation <varname>string</varname>

Cause: The input parameter is either null or invalid for the given operation.

Action: Provide a valid value. Check range for NUMBER parameters.

ORA-40103: invalid case-id column: <varname>string</varname>

Cause: The case-id column was invalid. If a case-id column is specified, it must be present in the input data source. The case-id column cannot be the same as the target column, and the column's data type is restricted to NUMBER, CHAR, and VARCHAR2 when building a GLM model with a diagnostics table.

Action: Change the schema of your input data to supply a case-id column of appropriate data type.

ORA-40104: invalid training data for model build

Cause: The training data provided in the reported table is unsuitable for build, either because it is empty, has unsuitable data, or the schema of the table does not match the input specifications.

Action: Inspect the training data and correct the contents/schema as appropriate.

ORA-40105: input data incompatible with model signature

Cause: The data provided for this post-build operation is in format different from that used for model build.

Action: Provide data whose attribute data types match the build data. Input data attributes must have the same data types as those described in the model signature for the model.

ORA-40106: positive target value not specified for computing Lift

Cause: Positive target value has not been specified for Lift.

Action: Provide a positive target value for the Lift operation.

ORA-40107: operation requires <varname>string</varname> option to be installed

Cause: The specified option has not been installed with the RDBMS.

Action: Install the reported option and retry the operation.

ORA-40108: input data contains too few distinct target (<varname>string</varname>) values

Cause: At least two distinct target values are required for Build.

Action: Provide counter-example target values in the input data.

ORA-40109: inconsistent logical data record

Cause: Repeated instances of a record identifier or repeated attribute(s) in a nested column.

Action: Remove or re-label repeated instances to resolve inconsistencies.

ORA-40110: Duplicate model tables found for table type <varname>string</varname>

Cause: Operation would result in duplicate model table types which is not supported.

Action: Remove the duplicate entry.

ORA-40111: no mining attributes found in build data

Cause: Could not build a model when only special or empty columns were present. Special columns include target, row weight, and case ID columns.

Action: Provide mining attribute data.

ORA-40112: insufficient number of valid data rows

Cause: Fewer than two valid data rows were found in the build data.

Action: Provide at least two valid build data rows. If the model is either a classification or regression model, then valid rows must have non-NULL targets. If a weight column was provided, then valid rows must have positive row weights. In addition, if DELETE_ROW missing value treatment was used, consider disabling it.

ORA-40113: insufficient number of distinct target values

Cause: Less than two distinct target values were found in the build data.

Action: Provide the classification build data with valid rows containing at least two distinct target values. Valid rows must have non-NULL targets. If a weight column was provided, then valid rows must have positive row weights. In addition, if DELETE_ROW missing value treatment was used, consider disabling it.

ORA-40114: weights table target values mismatched with build data

Cause: The entries in the weights table did not correspond to the target values in the build data.

Action: Verify the entries in the weights table.

ORA-40115: weights table schema is incorrect

Cause: The weights table did not have the required schema.

Action: Provide a weights table with schema: (target_value, weight), where the type of the first column corresponds to the type of the target column (CHAR, VARCHAR2 or NUMBER) and the type of the second column is NUMBER.

ORA-40116: NULL values found in weights table

Cause: The weights table had NULL entries.

Action: Replace or eliminate all NULL entries in the weights table.

ORA-40117: repeated target values found in weights table

Cause: The weights table had repeated target values.

Action: Remove the repeated target values from the weights table.

ORA-40118: insufficient number of target values in weights table

Cause: The weights table had less than 2 target values.

Action: Provide at least two target values in the weights table.

ORA-40119: nested columns incompatible with missing value treatment

Cause: delete_row missing value treatment is not supported for nested columns.

Action: Use 2D (non-nested) data representation or manually delete the rows with NULL values and disable the delete_row missing value treatment.

ORA-40120: invalid weight value in the weights table

Cause: Negative or zero weight values were found in the weights table.

Action: Ensure that weight values in the weights table are positive.

ORA-40121: force option not allowed for drop model in different schema

Cause: The force option was specified, but the model is in a different schema.

Action: If the force option is necessary, run the drop model from the owning schema. If the force option is not necessary, set the force parameter to FALSE.

ORA-40122: invalid data type for row weights column <varname>string</varname>.

Cause: Row weights column was not assigned one of the allowed data types.

Action: Choose a row weight column of type NUMBER or FLOAT.

ORA-40123: invalid row weights column <varname>string</varname>

Cause: Row weights column was the same as the target column.

Action: Choose a new row weights column.

ORA-40181: invalid transformation definition for column <varname>string</varname>

Cause: Transformation definition has duplicate or NULL columns.

Action: Provide a valid transformation definition specification.

ORA-40182: invalid column reference

Cause: Transformation expression has no column references or more than one reference or the reference is qualified.

Action: Provide a valid expression.

ORA-40183: invalid stack definition for attribute <varname>string</varname>

Cause: Stack definition expression or reverse expression has syntax errors or it does not match the transformation definition.

Action: Provide a valid expression.

ORA-40184: transformation definition does not match the data

Cause: Transformation definition specifies nested transformation for non-nested data or it removes all of the columns.

Action: Provide a valid data.

ORA-40201: invalid input parameter <varname>string</varname>

Cause: The input parameter was either null or invalid.

Action: Provide a valid value for the input parameter.

ORA-40202: column <varname>string</varname> does not exist in the input table <varname>string</varname>

Cause: The column was missing from the table.

Action: Correct the table schema and/or provide the correct column name.

ORA-40203: model <varname>string</varname> does not exist

Cause: The model did not exist.

Action: Supply a valid model name.

ORA-40204: model <varname>string</varname> already exists

Cause: A model by the same name exists.

Action: Provide a different, unique name for the model.

ORA-40205: invalid setting name <varname>string</varname>

Cause: The input setting name was invalid.

Action: Consult the documentation for the settings table and provide a valid setting name.

ORA-40206: invalid setting value for setting name <varname>string</varname>

Cause: The input value for the given setting name was invalid.

Action: Consult the documentation for the settings table and provide a valid setting value.

ORA-40207: duplicate or multiple function settings

Cause: The input settings table contained settings for multiple mining functions.

Action: Provide setting(s) for a single function in the settings table.

ORA-40208: duplicate or multiple algorithm settings for function <varname>string</varname>

Cause: The input settings table had duplicate or multiple algorithm settings for a mining function.

Action: Provide only one appropriate algorithm setting for the mining function.

ORA-40209: setting <varname>string</varname> is invalid for <varname>string</varname> function

Cause: The specified setting was not supported for the mining function supplied.

Action: Provide appropriate combination of function and algorithm settings.

ORA-40210: invalid score criterion type when cost matrix is specified

Cause: The score criterion type may not be 'PROBABILITY' when a cost matrix is specified.

Action: Set score criterion type to 'COST' or don't specify a cost matrix.

ORA-40211: algorithm name <varname>string</varname> is invalid

Cause: Algorithm name for the model was invalid or the operation was not valid for the algorithm.

Action: Check the algorithm name for the model and verify that the operation is valid.

ORA-40212: invalid target data type in input data for <varname>string</varname> function

Cause: Target data type was invalid.

Action: Classification function accepts CHAR, VARCHAR2, and NUMBER targets.
Regression function accepts NUMBER targets only.

ORA-40213: contradictory values for settings: <varname>string</varname>, <varname>string</varname>

Cause: The settings values were not compatible.

Action: Check the documentation and change the setting value(s).

ORA-40214: duplicate setting: <varname>string</varname>

Cause: Duplicate setting in the settings table.

Action: Remove the duplicate setting from the settings table.

ORA-40215: model <varname>string</varname> is incompatible with current operation

Cause: The current operation was not supported for the mining function the model corresponds to.

Action: Provide the model name suitable for current operation.

ORA-40216: feature not supported

Cause: The feature was not supported in the API.

Action: Modify the code to avoid usage of the feature.

ORA-40217: priors table mismatched with training data

Cause: The entries in the priors table do not correspond to the targets in the training data.

Action: Verify the entries in the priors table.

ORA-40218: Both priors table and weights table are specified

Cause: Both a priors table and a weights table are specified for SVM model build.

Action: Priors table is the old (pre 11g) mechanism for specifying class weights, and class weights table is the new (and correct) way to specify class weights. Remove the priors table entry from the settings table (after transferring class weight settings, if appropriate). Going forward, priors table will be valid only for NB models. Use class weights for SVM.

ORA-40219: apply result table <varname>string</varname> is incompatible with current operation

Cause: The current operation was not allowed for the apply result table supplied.

Action: Make sure the operation being performed is valid for the mining function used to build the model (using which the apply result table was created).

ORA-40220: maximum number of attributes exceeded

Cause: The data had too many attributes.

Action: Reduce the dimensionality of the data.

ORA-40221: maximum target cardinality exceeded

Cause: The target cardinality of the training data was too high.

Action: Reduce the target cardinality.

ORA-40222: data mining model export failed, job name=<varname>string</varname>, error=<varname>string</varname>

Cause: The model export job failed.

Action: Check export job settings as required by DataPump.

ORA-40223: data mining model import failed, job name=<varname>string</varname>, error=<varname>string</varname>

Cause: The model import job failed.

Action: Check import job settings as required by DataPump.

ORA-40224: transactional input - no matching id for value column <varname>string</varname>

Cause: The training data is transactional - and a value column is specified without a matching id specification.

Action: Specify a valid id column name as input

ORA-40225: model is currently in use by another process

Cause: The model is currently in use by another process.

Action: Retry if necessary.

ORA-40226: model upgrade/downgrade must be performed by SYS

Cause: Upgrade/Downgrade routines are being invoked by a user with insufficient privileges.

Action: Run the routines as SYS during migration.

ORA-40227: invalid transformation attribute

Cause: Transformation list provided to CREATE_MODEL has duplicate or NULL attributes. Case ID or target attribute has attribute_subname that is not NULL. Attribute provided to ALTER_REVERSE_EXPRESSION does not exist in the model.

Action: Remove NULLs and duplicates and fix case ID and target attributes or provide a valid attribute for a given model.

ORA-40228: scoring cost matrix already exists

Cause: The model already has a scoring cost matrix.

Action: To add a new scoring cost matrix the existing one should be removed first.

ORA-40229: scoring cost matrix not found

Cause: The model does not have a scoring cost matrix.

Action: To remove a scoring cost matrix the model should have one.

ORA-40230: invalid transformation expression

Cause: Expression has syntax or semantic errors.

Action: Provide a valid expression.

ORA-40231: transactional input incompatible with specified algorithm

Cause: Training data in transactional format is not accepted for model creation using the specified mining algorithm.

Action: Pivot the data into 2D tabular format, or provide the transactional input through a nested table column.

**ORA-40232: transactional input - incompatible datatype for column
<varname>string</varname>**

Cause: The data type of the column in the input training data is not supported.

Action: Cast or change the type of the column to one of CHAR, VARCHAR, NUMBER or FLOAT

**ORA-40233: transactional input - case id should be provided with id
<varname>string</varname>**

Cause: The training data is transactional by virtue of presence of a and item id - but does not have a case id specification.

Action: Specify a valid case id column name as input

ORA-40234: reverse expression incompatible with model cost matrix

Cause: A cost matrix existed for this model with actual and predicted values which were inconsistent with the values resulting from the specified reverse transformation.

Action: Either remove the cost matrix table and re-add it with the new actual and predicted values, or respecify the reverse transformation to be consistent with the existing cost matrix.

ORA-40251: no support vectors were found

Cause: The input data is non-predictive in nature, or one of the input settings is incorrect/incompatible with respect to the input data.

Action: Provide additional data or change model setting value.

ORA-40252: no target values were found

Cause: No target values were identified during load.

Action: Validate that the target is correctly specified.

ORA-40253: no target counter examples were found

Cause: One or more of the target classes have only positive examples.

Action: Provide counter examples or remove that target class.

ORA-40254: priors cannot be specified for one-class models

Cause: Priors were specified.

Action: Do NOT provide priors for one-class models.

ORA-40255: specified priors or weights table has an incorrect schema

Cause: The priors or class weights table whose name is specified in in the settings does not have the prescribed schema. A priors table should have the schema (target_value, prior_probability) and a class weights table should have the schema (target_value, class_weight)

Action: Modify the schema of the input priors or class weights table to match the ones provided above (also in the documentation).

ORA-40261: input data for model build contains negative values

Cause: The input data contains negative values, which is not acceptable for a Non-negative Matrix Factorization model.

Action: Provide clean data for build without any negative values.

ORA-40262: NMF: number of features not between [1, <varname>string</varname>]

Cause: The number of requested features must be greater than 1, and less than the smaller of the number of attributes and the number of cases in the dataset.

Action: Specify the desired number of features within the acceptable range.

ORA-40263: no meaningful matrix factorization found

Cause: Input data was not significantly different from 0.

Action: Check your data for problems or add a positive constant to all the numeric attributes.

ORA-40264: number of mining attributes (<varname>string</varname>) exceeds maximum (<varname>string</varname>)

Cause: Input data was found to contain a number of mining attributes exceeding the maximum allowed.

Action: Check the input data for categorical fields with high cardinality.

ORA-40271: no statistically significant features were found

Cause: Input data inadequate in volume and/or quality to derive statistically significant predictors for building a data mining model.

Action: Provide a well-prepared training data set.

ORA-40272: apply rules prohibited for this model mode

Cause: Adaptive Bayes Network rules are only generated for SingleFeature ABN models

Action: Rebuild model in SingleFeature mode and then apply with rules.

ORA-40273: invalid model type <varname>string</varname> for Adaptive Bayes Network algorithm

Cause: The valid values for the abns_model_type settings are: abns_multi_feature, abns_single_feature, abns_naive_bayes.

Action: Use a valid value for the abns_model_type setting.

ORA-40274: the Adaptive Bayes Network algorithm is desupported

Cause: An attempt was made to score an Adaptive Bayes Network model.

Action: Drop the existing model and build a new model using a supported classification algorithm.

ORA-40281: invalid model name

Cause: A model name is invalid or does not exist.

Action: Check spelling. A valid model name must begin with a letter and may contain only alphanumeric characters and the special characters \$, _, and #. The name must be less than or equal to 30 characters and cannot be a reserved word.

ORA-40282: invalid cost matrix

Cause: Cost matrix specification is invalid.

Action: Provide valid cost matrix specification. Check syntax for data mining functions.

ORA-40283: missing cost matrix

Cause: Cost matrix specification is missing.

Action: Provide valid cost matrix specification. Check syntax for data mining functions.

ORA-40284: model does not exist

Cause: The model entered does not exist.

Action: Check spelling.

ORA-40285: label not in the model

Cause: The user-specified label was not present in the model.

Action: Provide a valid label. The set of valid labels can be retrieved from a classification model by invoking PREDICTION_SET, from a clustering model by invoking CLUSTER_SET, and from a feature extraction model by invoking FEATURE_SET.

ORA-40286: remote operations not permitted on mining models

Cause: An attempt was made to perform queries or DML operations on remote tables using local mining models.

Action: Remove the reference to remote tables in the statement.

ORA-40287: invalid data for model - cosine distance out of bounds

Cause: The norm computed using attribute values from the incoming row for the cosine model is outside the range 0-1.

Action: Remove or correct the data in the offending row.

ORA-40288: event to debug and trace mining model load**ORA-40289: duplicate attributes provided for data mining function**

Cause: A duplicate, non-nested attribute was provided as input to the data mining function. A duplicate attribute is one which is present in the model signature, occurs more than once in the USING clause after tablename expansion, and is not a collection element in a nested table column.

Action: Eliminate the duplicate attribute(s).

ORA-40290: model incompatible with data mining function

Cause: The supplied model cannot be operated upon by the data mining function because the model is built for a mining function and/ or based on an algorithm that is incompatible with function.

Action: Provide the name of the model suitable for the function.

ORA-40291: model cost not available

Cause: The supplied model was assumed to have been built with a cost matrix specification, when in reality, it was not.

Action: Provide a model name that corresponds to a model that was built with an appropriate cost matrix specification.

ORA-40292: confidence level must be greater than 0 and less than 1

Cause: The specified value for confidence level is out of range.

Action: Specify a value for confidence level in the range $0 < \text{level} < 1$

ORA-40293: input class is invalid for the specified predictive model

Cause: The specified model is either not a classification model, or does not have the input class label as one of its target values.

Action: Provide the correct target value (class label) or provide the appropriate classification model with the target attribute that has the specified class label as one of its values.

ORA-40301: invalid cost matrix specification

Cause: A valid cost matrix is not specified.

Action: Consult documentation for valid cost matrix specification.

ORA-40302: invalid classname <varname>string</varname> in cost matrix specification

Cause: Actual or predicted classname specified is not present in training data

Action: Provide valid classname(s) in cost matrix specification

ORA-40303: invalid prior probability specification

Cause: Valid prior probabilities not specified. Valid probabilities should be between 0 and 1.

Action: Consult documentation for valid prior probability specification.

ORA-40304: invalid classname <varname>string</varname> in prior probability specification

Cause: Actual or predicted classname specified is not present in training data.

Action: Provide valid classname(s) in prior probability specification.

ORA-40305: invalid impurity metric specified

Cause: Impurity metric specified is not valid. Examples of valid metrics are TREE_IMPURITY_GINI, TREE_IMPURITY_ENTROPY.

Action: Consult documentation for valid impurity metrics and specification.

ORA-40306: dm_nested types not supported by this algorithm

Cause: The training input to the CREATE_MODEL routine contained one or more columns of DM_NESTED type (DM_NESTED_NUMERICALS or DM_NESTED_CATEGORICALS). These columns are currently not supported by Orthogonal Partitioning Clustering (O-Cluster).

Action: Remove columns of these data types from the input data source.

ORA-40307: nested attribute combined name and value too long

Cause: The data that was presented to the decision tree algorithm was too long. The length is computed from the sum of the length of the nested attribute name and the length of the attribute value.

Action: Reduce the length of the attribute name or reduce the length of the categorical value (perhaps by recoding).

ORA-40321: invalid bin number, is zero or negative value

Cause: Input bin number has zero or negative values.

Action: Provide positive bin numbers starting from 1.

ORA-40322: bin number too large

Cause: Bin number is too large.

Action: Reprocess build data by choosing smaller bin numbers.

ORA-40323: Attribute <varname>string</varname> has too many distinct values (<varname>string</varname>)

Cause: Exceeded maximum number of distinct values allowed in an attribute.

Action: Bin numerical data with fewer than 1024 bins or recode categorical data with fewer than 1024 unique values.

ORA-40324: All rows contain the same data

Cause: All rows contained the same data and could not be clustered using k-Means with cosine distance metric.

Action: Use Euclidean distance metric.

ORA-40341: access violation on model storage object

Cause: An attempt was made to directly access/modify a schema object that stores model metadata and content.

Action: Perform all mining operations (create,drop,alter, and select using data mining functions) against named model objects. Contact your DBA or Oracle Support if you suspect that an orphaned schema object.

ORA-40342: model was not correctly upgraded

Cause: An attempt was made to use a model, but the model was not correctly upgraded to the current release. This is most likely caused by importing a model from an old release without upgrading it, but could also be caused by a failed database upgrade.

Action: Invoke the SYS.DMP_SYS.UPGRADE_MODELS() procedure.

ORA-40343: invalid version specified in UPGRADE_MODELS

Cause: An invalid version was specified when invoking the UPGRADE_MODELS procedure. Valid values for the version are 10.2.0, 11.0.0, 12.0.0, and NULL.

Action: Specify a valid version for UPGRADE_MODELS.

ORA-40350: One or more models exist that cannot be downgraded

Cause: There are data mining models in the database that were created in a release beyond the selected release for downgrade.

Action: Prior to downgrade, drop data mining models that cannot be downgraded to the selected release.

ORA-40361: only SELECT and ALTER are valid for mining models

Cause: An attempt was made to grant or revoke an invalid privilege on a mining model.

Action: Do not attempt to grant or revoke any privilege besides SELECT or ALTER on mining models.

ORA-40362: invalid object <varname>string</varname>.<varname>string</varname> specified in the statement

Cause: An attempt was made to grant a privilege on an invalid object.

Action: Make sure the dependents of the object are valid before attempting // to grant the privilege on the object.

ORA-40381: Invalid field specification for: <varname>string</varname>

Cause: The derived field was incorrectly defined.

Action: Make sure the field is correctly defined in the PMML document.

ORA-40382: More than one linear regression equation in the model

Cause: More than one linear regression equation was in the model.

Action: Make sure there is only one linear regression equation in the model.

ORA-40383: No model found in PMML document

Cause: There was no model found in the PMML document.

Action: Make sure the PMML document contains a model section.

ORA-40384: Only one model allowed in PMML document

Cause: More than one model existed in the PMML document.

Action: PMML model import only supports one model per PMML document. Make sure only one model exists in the PMML document.

ORA-40385: Target has more than two categories

Cause: The target contained more than two categories.

Action: PMML model import supports only binary logistic regression. Make sure the target contains no more than two categories.

ORA-40386: NormContinuous must include at least two LinearNorm elements

Cause: NormContinuous included less than two LinearNorm elements.

Action: NormContinuous must include at least two LinearNorm elements. Make sure at least two LinearNorm elements are included.

ORA-40387: Invalid interval for Discretize field: <varname>string</varname>

Cause: The intervals were incorrect.

Action: Make sure that both margins are not missing.

ORA-40388: Unsupported feature in PMML document: <varname>string</varname>

Cause: The feature was not supported by PMML model import.

Action: Please make sure to use supported features.

ORA-40389: Unsupported PMML transformation: <varname>string</varname>

Cause: The transformation was not supported.

Action: Make sure to use supported transformations.

ORA-40390: PMML DerivedField must have a unique name specified:

<varname>string</varname>

Cause: A DerivedField did not reference another defined field.

Action: A DerivedField did not have a unique name specified. Make sure to specify a unique name for each DerivedField.

ORA-40391: PMML DerivedField depends on a undefined field:

<varname>string</varname>

Cause: A DerivedField may only reference other defined fields.

Action: Make sure DerivedFields reference other defined fields.

ORA-40392: PMML regression equation references an undefined field:

<varname>string</varname>

Cause: Regression equation did not reference defined fields.

Action: Regression equation may only reference defined fields. Make sure all fields are defined.

ORA-40401: categorical attributes are not supported by this algorithm

Cause: The build data provided to the CREATE_MODEL routine contained one or more categorical attributes of types CHAR, VARCHAR2, or DM_NESTED_CATEGORICAL. These attributes are currently not supported for the SVD algorithm.

Action: Remove the categorical attributes from the build data.

ORA-40402: cannot output U matrix without a valid case identifier column

Cause: A U matrix was requested, but there was no case identifier column in the build data.

Action: Provide a non-null case identifier column in the build data.

ORA-40403: model does not have any valid features

Cause: All singular values in the SVD model were equal to zero. This can occur if the build data contains only zeros or all build columns have constant values and automatic data preparation is turned on.

Action: Inspect and modify the build data.

ORA-40404: approximate computation cannot be disabled for the build data

Cause: The build data had a very high number of attributes. An SVD model can be built only by enabling approximate computation.

Action: Enable approximate computation.

ORA-40421: missing text policy name

Cause: Text policy name was missing.

Action: Provide a valid text policy name created using CTX_DDL.CREATE_POLICY().

ORA-40422: TEXT attribute types not supported by this algorithm

Cause: The training input to the CREATE_MODEL routine contained one or more attributes of TEXT type. These attributes are currently not supported by Orthogonal Partitioning Clustering (O-Cluster).

Action: Remove attributes of these types from the input data source.

ORA-40441: JSON syntax error

Cause: The provided JavaScript Object Notation (JSON) data had invalid syntax and could not be parsed.

Action: Provide JSON data with the correct syntax.

ORA-40442: JSON path expression syntax error

Cause: The provided JavaScript Object Notation (JSON) path expression had an invalid syntax and could not be parsed.

Action: Provide JSON path expression with the correct syntax.

ORA-40443: unsupported JSON path expression

Cause: The provided JavaScript Object Notation (JSON) path expression contained unsupported features.

Action: Remove unsupported features from JSON path expression.

ORA-40444: JSON processing error

Cause: The requested JavaScript Object Notation (JSON) operation failed.

Action: Make sure the JSON operation is invoked correctly.

ORA-40445: unsupported JSON operation

Cause: The requested JavaScript Object Notation (JSON) operation is not supported.

Action: None

ORA-40446: expecting keyword STREAM

Cause: The JavaScript Object Notation (JSON) operator expected the keyword STREAM.

Action: Add the keyword STREAM to the JSON operator.

ORA-40447: expecting PASSING clause

Cause: The JavaScript Object Notation (JSON) operator expected a PASSING clause.

Action: Add a PASSING clause to the JSON operator.

ORA-40448: expecting RETURNING clause

Cause: The JavaScript Object Notation (JSON) operator expected a RETURNING clause.

Action: Add a RETURNING clause to the JSON operator.

ORA-40449: invalid data type for return value

Cause: The provided data type for the return value was invalid or unsupported.

Action: Provide a supported return value.

ORA-40450: invalid ON ERROR clause

Cause: The provided ON ERROR clause was invalid.

Action: Provide a valid ON ERROR clause.

ORA-40451: invalid default value provided

Cause: The provided default value was not allowed here.

Action: Provide a valid default value.

ORA-40452: default value not matching type defined in RETURNING clause

Cause: The provided default value did not match the type defined in RETURNING clause.

Action: Make sure that the default value and RETURNING clause are of the same type.

ORA-40453: JSON operator syntax error

Cause: The provided JavaScript Object Notation (JSON) operator had invalid syntax.

Action: Provide JSON operator with correct syntax.

ORA-40454: path expression not a literal

Cause: The provided path expression was not a literal (a constant).

Action: Provide a constant path expression.

ORA-40455: default value not a literal

Cause: The provided default value was not a literal (a constant).

Action: Provide a constant default value.

ORA-40456: JSON_VALUE evaluated to non-scalar value

Cause: The provided JavaScript Object Notation (JSON) path expression selected a non-scalar value.

Action: Correct the JSON path expression or use JSON_QUERY.

ORA-40457: JSON path expression contained an invalid array index

Cause: The provided JavaScript Object Notation (JSON) path expression contained an invalid array index.

Action: Provide array index greater 0. The first element in the array has the index 1.

ORA-40458: JSON_EXISTS used outside predicate

Cause: The operator JSON_EXISTS was used outside a predicate.

Action: Use JSON_EXISTS inside a predicate, for instance by embedding it inside a CASE expression.

ORA-40459: output value too large (actual: <varname>string</varname>, maximum: <varname>string</varname>)

Cause: The provided JavaScript Object Notation (JSON) operator generated a result which exceeds the maximum length specified in the RETURN clause.

Action: Increase the maximum size of the data type in the RETURNING clause or use a CLOB/BLOB in the RETURNING clause.

ORA-40460: default value too large

Cause: The provided default value exceed the maximum length specified in the RETURN clause.

Action: Increase the maximum size of the data type in the RETURNING clause or reduce the length of the default value.

ORA-40461: Unsupported character set

Cause: The provided JavaScript Object Notation (JSON) operator does not supported the current database character set.

Action: Chose a different database character set, for instance AL32UTF8, AL16UTF16, or a single byte character set.

ORA-40462: JSON_VALUE evaluated to no value

Cause: The provided JavaScript Object Notation (JSON) path expression did not select a value.

Action: Correct the JSON path expression.

ORA-40463: JSON path expression contained an invalid variable name

Cause: The provided JavaScript Object Notation (JSON) path expression contained a variable name that is not used in the PASSING clause.

Action: Make sure that the variable names in the path expression and PASSING clause match.

ORA-40464: JSON PASSING clause contained duplicate variable names

Cause: The provided JavaScript Object Notation (JSON) PASSING clause contained non-unique variable names.

Action: Rename the variables in the PASSING clause.

ORA-40465: JSON PASSING clause contained too many unnamed parameters

Cause: The provided JavaScript Object Notation (JSON) PASSING clause contained too many unnamed parameters.

Action: Assign names to the parameters provided in the PASSING clause.

ORA-40466: Invalid parameter in IS [NOT] JSON predicate

Cause: The IS [NOT] JSON predicate contains an invalid parameter.

Action: Remove or correct the parameter.

ORA-40467: JSON_TEXTCONTAINS() cannot be evaluated without JavaScript Object Notation (JSON) index

Cause: There was no JSON-enabled context index available.

Action: Create a JSON-enabled context index.

ORA-40468: first input parameter to JSON_TEXTCONTAINS() must be a column

Cause: The first input parameter to JSON_TEXTCONTAINS() was not a column.

Action: Pass a column to the first input parameter to JSON_TEXTCONTAINS().

ORA-40469: JSON path expression in JSON_TEXTCONTAINS() is invalid

Cause: A predicate or array position was used in JavaScript Object Notation(JSON) path expression.

Action: Do not use a predicate or array position in a JSON path expression.

ORA-40470: JSON_VALUE evaluated to multiple values

Cause: The provided JavaScript Object Notation (JSON) path expression selected more than one value.

Action: Correct the JSON path expression or use JSON_QUERY.

ORA-40471: selected value not JSON array or object

Cause: The selected value was not a JavaScript Object Notation (JSON) value. (object or array)

Action: Use CAST AS ARRAY to return this value.

ORA-40472: invalid escape in JSON data

Cause: The provided JavaScript Object Notation (JSON) data had an invalid escape sequence.

Action: Provide JSON data with corrected escape sequence.

ORA-40473: duplicate key names in JSON object

Cause: The provided JavaScript Object Notation (JSON) data had duplicate key names in one object.

Action: Provide JSON data with unique key names in each JSON object.

ORA-40474: invalid UTF-8 byte sequence in JSON data

Cause: The provided JavaScript Object Notation (JSON) data had an invalid UTF-8 byte sequence.

Action: Provide JSON data with corrected UTF-8 byte sequence or escape the characters.

ORA-40475: JSON data nested too many levels

Cause: The provided JavaScript Object Notation (JSON) data had too many levels of nesting.

Action: Provide JSON data with fewer levels of nesting.

ORA-40476: JSON key too long

Cause: The provided JavaScript Object Notation (JSON) data had a key which exceeds the maximum length.

Action: Provide JSON data with shorter key names.

ORA-40477: internal JSON error

Cause: There was an internal error in the JavaScript Object Notation (JSON) processing layer.

Action: None

ORA-40478: output value too large (maximum: <varname>string</varname>)

Cause: The provided JavaScript Object Notation (JSON) operator generated a result which exceeds the maximum length specified in the RETURN clause.

Action: Increase the maximum size of the data type in the RETURNING clause or use a CLOB or BLOB in the RETURNING clause.

ORA-40479: internal JSON serializer error

Cause: There was an internal error in the JavaScript Object Notation (JSON) serializer).

Action: None

ORA-40480: result cannot be returned without array wrapper

Cause: The JavaScript Object Notation (JSON) path expressions selected a value that can only be returned inside an array.

Action: Add WITH ARRAY WRAPPER to the JSON function.

ORA-40481: ASCII or PRETTY not supported for non-textual return data type

Cause: An attempt was made to pretty print or escape non-ASCII characters for a non-textual output of a JSON operation.

Action: Change return data type to VARCHAR2 or CLOB or remove the PRETTY or ASCII serialization option.

ORA-40482: JSON_TEXTCONTAINS() used outside predicate of WHERE clause

Cause: JSON_TEXTCONTAINS() was used outside of the predicate of a WHERE clause.

Action: Use JSON_TEXTCONTAINS() inside a predicate of a WHERE clause.

ORA-40483: incorrect search string to JSON_TEXTCONTAINS()

Cause: An incorrect search string to JSON_TEXTCONTAINS() was used.

Action: The search string to JSON_TEXTCONTAINS() needs to be a non-zero length compile time constant.

ORA-40484: invalid data type for JSON_TABLE column

Cause: A column in the provided JSON_TABLE had an unsupported data type.

Action: Provide a supported data type.

ORA-40485: keyword PRETTY not valid for this column

Cause: A JSON_TABLE column with JSON_VALUE semantics could not be pretty printed.

Action: Change column semantics to JSON_QUERY or remove the keyword PRETTY.

ORA-40486: array wrapper not valid for this column

Cause: A JSON_TABLE column with JSON_VALUE semantics could not have an array wrapper.

Action: Change column semantics to JSON_QUERY or remove the array wrapper.

ORA-40487: invalid usage of keyword EXISTS

Cause: A JSON_TABLE column with JSON_EXISTS semantics had invalid parameters.

Action: Remove the invalid keywords.

ORA-40488: invalid ON ERROR clause for column semantics

Cause: An ON ERROR clause was provided that was not valid for the selected column semantics.

Action: Change or remove the ON ERROR clause or change the column semantics.

ORA-40489: keyword ASCII not valid for this column

Cause: A JSON_TABLE column with JSON_VALUE semantics could not be pretty printed.

Action: Change column semantics to JSON_QUERY or remove keyword ASCII.

ORA-40490: COLUMNS clause required

Cause: The provided JSON_TABLE row source requires a COLUMNS clause.

Action: Provide a COLUMNS clause.

ORA-40491: invalid input data type for JSON_TABLE

Cause: The provided input to JSON_TABLE has an unsupported data type.

Action: Provide a (N)VARCHAR2, (N)CLOB, RAW, BLOB or BFILE input.

ORA-40492: invalid column definition in JSON_TABLE

Cause: A column definition inside JSON_TABLE was invalid.

Action: Correct the column definition.

ORA-40493: invalid option or parameter in JSON_TABLE

Cause: The provided JSON_TABLE definition contained one or more invalid options or parameters.

Action: Correct the JSON_TABLE definition.

ORA-40494: error during execution of JSON_TABLE

Cause: The provided JSON_TABLE definition could not be evaluated.

Action: Correct the JSON_TABLE definition.

ORA-40495: internal error in JSON_TABLE

Cause: The provided JSON_TABLE definition could not be evaluated.

Action: Contact Oracle Support Services.

ORA-40497: only one ordinality column permitted

Cause: The provided JSON_TABLE definition contained more than one ordinality column.

Action: Remove the ordinality column or columns from the JSON_TABLE definition.

ORA-40498: binary format requested for non-binary data type

Cause: The provided JSON format was binary but the input data type was not binary.

Action: Either change the format clause or use an input of binary data type.

ORA-40499: no format defined for binary data type

Cause: The provided JSON input was of binary type but a format was not defined.

Action: Define a format for binary input.

ORA-40500: General event for JSON operations

ORA-40501: cannot open an encrypted log file

Cause: An attempt was made to open a log file that has been encrypted for storage and management by the Oracle Availability Machine. Only the processes involved in shipping such a log to or from the Oracle Availability Machine can open the log.

Action: Allow the Oracle Availability Machine to manage the log file.

ORA-40551: internal BSON/JSON conversion error [<varname>string</varname>]

Cause: BSON/JSON conversion failed with internal error.

Action: Contact Oracle Support Services.

ORA-40552: invalid data type

Cause: The BSON/JSON converter was invoked with an invalid data type.

Action: Ensure that both the input and output is of data type BLOB.

ORA-40553: path expression with predicates not supported in this operation

Cause: A path expression with predicates was specified in a JavaScript Object Notation (JSON) operation that does not support predicates.

Action: Only JSON_EXISTS supports predicates.

ORA-40554: invalid input data type in PASSING clause

Cause: The specified PASSING clause had an unsupported data type.

Action: Use a supported data type in the PASSING clause.

ORA-40555: incorrect PASSING clause

Cause: The specified PASSING clause was invalid.

Action: Specify a valid passing clause.

ORA-40556: unsupported chaining of JSON_TABLE

Cause: The specified JSON_TABLES were chained.

Action: Use the NESTED PATH syntax for JSON_TABLE.

ORA-41001 to ORA-42804

ORA-41001: session id list not specified

Cause: An attempt to migrate was made, which failed because the session id list specified was null.

Action: Check the session id list, and try again with a valid value.

ORA-41002: destination instance not specified

Cause: An attempt to migrate was made, which failed because the destination instance specified was null.

Action: Check the destination instance , and try again with a valid value.

ORA-41003: client id not specified

Cause: An attempt to migrate was made, which failed because the client id specified was null.

Action: Check the client id, and try again with a valid value.

ORA-41004: percentage not specified

Cause: An attempt to migrate was made, which failed because the percentage specified was null.

Action: Check the percentage, and try again with a valid value.

ORA-41005: session id list not specified

Cause: An attempt to cancel migration was made, which failed because the session id list specified was null.

Action: Check the session id list, and try again with a valid value.

ORA-41006: session id not specified

Cause: An attempt to get migration status was made, which failed because the session id specified was null.

Action: Check the session id, and try again with a valid value.

ORA-41007: sid field is null

Cause: A session id instance passed into a dbms_tsm procedure or function had a null sid field.

Action: Check the session id, and try again with a valid value.

ORA-41008: serial# field is null

Cause: A session id instance passed into a dbms_tsm procedure or function had a null serial# field.

Action: Check the session id, and try again with a valid value.

ORA-41009: Session with session number <varname>string</varname>, serial number <varname>string</varname> does not exist

Cause: An attempt to migrate was made, which failed because of invalid session number and/or serial number.

Action: Check the session number and serial number and try again.

ORA-41010: No more memory to hold connection state information

Cause: An attempt to reference more connections than configured

Action: Check the connection information and try again.

ORA-41011: Operation failed for session id <varname>string</varname>, serial number <varname>string</varname>

Cause: An migration related operation failed because of contention between sessions.

Action: Check the additional error codes for more information, and retry operation later.

ORA-41012: Migration not allowed for session number <varname>string</varname>, serial number <varname>string</varname>

Cause: An attempt to migrate was made, which failed because the session specified cannot be migrated.

Action: Check the session number and serial number and try again.

ORA-41013: instance name not specified

Cause: An attempt to migrate was made, which failed because the instance name specified was null.

Action: Check the instance name, and try again with a valid value.

ORA-41014: Session number <varname>string</varname>, serial number <varname>string</varname> currently being migrated

Cause: An attempt to migrate was made, which failed because the session specified is currently being migrated.

Action: Check the session number and serial number and try again.

ORA-41015: destination connect string not specified

Cause: A migration attempt was made, which failed because the connect string specified was null.

Action: Check the connect string and try again.

ORA-41016: Session recreation failed

Cause: Session recreation failed at the destination instance.

Action: Check session state and try migration again

ORA-41017: Session prepare failed for session number <varname>string</varname>, serial number <varname>string</varname>

Cause: A migration attempt was made, which failed because session prepare failed.

Action: Retry migration again after checking all arguments.

ORA-41019: Session begin at the destination instance failed

Cause: Session begin failed at the destination instance because the shadow connection could not be established.

Action: Check the connect string and try beginning the session again.

ORA-41020: invalid value "<varname>string</varname>" specified for parameter "<varname>string</varname>"

Cause: An invalid value was specified for the the given parameter.

Action: Correct the value being specified for the parameter.

ORA-41021: OCI error during transparent session migration

Cause: An OCI operation failed during transparent session migration.

Action: Check the OCI error signalled, and take corrective action.

ORA-41022: instance name not specified

Cause: An attempt to recover after instance death was made, which failed because the instance name specified was null.

Action: Check the instance name, and try again with a valid value.

ORA-41023: death time not specified

Cause: An attempt to recover after instance death was made, which failed because the death time specified was null.

Action: Check the death time, and try again with a valid value.

ORA-41024: Cursor needs to be parsed again

Cause: An SQL operation failed because the cursor state was lost.

Action: Reissue all operations starting from parse.

ORA-41025: sid field <varname>string</varname> is invalid

Cause: A session id instance passed into a dbms_tsm procedure or function had an invalid sid field.

Action: Check the session id, and try again with a valid value.

ORA-41026: serial# field <varname>string</varname> is invalid

Cause: A session id instance passed into a dbms_tsm procedure or function had an invalid serial# field.

Action: Check the serial#, and try again with a valid value.

ORA-41027: Error status <varname>string</varname> during OCI operation at <varname>string</varname>

Cause: An OCI operation failed during transparent session migration.

Action: Check the OCI error signalled, and take corrective action.

ORA-41028: Session id not specified

Cause: An attempt to migrate was made, which failed during migration because the session id specified by the client was null.

Action: Check the session id, and try again with a valid value.

ORA-41029: Destination session id not specified for sid <varname>string</varname> serial# <varname>string</varname>

Cause: An attempt to migrate was made, which failed during migration because the destination session id specified by the client was null.

Action: Check the session id, and try again with a valid value.

ORA-41030: Session id not specified

Cause: An attempt to migrate was made, which failed during migration because the session id specified by the client was null.

Action: Check the session id, and try again with a valid value.

ORA-41031: Destination session key not specified for sid <varname>string</varname> serial# <varname>string</varname>

Cause: An attempt to migrate was made, which failed during migration because the destination session key specified by the client was null.

Action: Check the session id, and try again with a valid value.

ORA-41100: Oracle Cluster Registry operation failed with event <varname>string</varname>.

Cause: The Portable Clusterware/Oracle Cluster Registry stack returned an error.

Action: Check if the Portable Clusterware stack is properly brought up.

ORA-41101: The database: <varname>string</varname> has already been designated as Cluster Director.

Cause: An attempt was made to designate multiple databases as the Cluster Director.

Action: Undesignate the existing Cluster Director before Designating a new one.

ORA-41102: No database has currently been designated as Cluster Director.

Cause: An attempt was made to query/undesignate a Cluster Director when no database has been designated as Cluster Director.

Action: n/a

ORA-41103: Only the designated Cluster Director: <varname>string</varname> can undesignate itself.

Cause: An attempt was made to undesignate the current Cluster Director by a database that is not the Cluster Director.

Action: Login to the currently designated Cluster Director to perform the undesignation.

ORA-41104: The database: <varname>string</varname> is the Cluster Director.

Cause: An attempt was made to control the Cluster Director on a database that is not the Cluster Director.

Action: Log in to the currently designated Cluster Director to perform the control operation.

ORA-41105: The Cluster Director is not stopped.

Cause: An attempt was made to control the Cluster Director before the Cluster Director was stopped.

Action: Use `dbms_cluster_director.stop` to stop the Cluster Director and retry the control operation.

ORA-41106: invalid argument <varname>string</varname>: value is null

Cause: An attempt to read the scan hostname or port failed

Action: Verify pcw is running and scan is configured. Run `grdcsan read_config` to verify or `grdcsan set_config host:port` to set scan name and port.

ORA-41107: invalid argument: service <varname>string</varname> cannot be found

Cause: The program attempted to access a nonexistent or deleted service.

Action: Check to make sure the service has been properly created.

ORA-41108: Posting system alert with reason_id <varname>string</varname> failed with code [<varname>string</varname>] [<varname>string</varname>]

Cause: Internal Error: An attempt to post a system alert failed.

Action: If this condition repeats, please contact Oracle Support.

ORA-41109: Updating system alert with reason_id <varname>string</varname> failed; previous alert not found

Cause: System Error: An attempt to update a system alert failed. The alert was improperly cleared from `WRI$_ALERT_OUTSTANDING`.

Action: Do not delete from `WRI$_ALERT_OUTSTANDING`. If this condition repeats, please contact Oracle Support.

ORA-41110: The Director has blocked this instance. Cannot start [<varname>string</varname>]

Cause: An attempt to start services on an instance that will be shutdown

Action: Start the services on another available instance

ORA-41201: Session state not capturable due to reason (<varname>string</varname>, <varname>string</varname>)

Cause: Session state capture was initiated when session state could not be captured.

Action: Check session state status and make sure session state can be captured.

ORA-41202: Session state capture or restore failed

Cause: Capture or restore operation failed.

Action: Check session state status and failure reason for details.

ORA-41203: Invalid session state operation

Cause: Invalid session state operation was issued.

Action: Check if session status was valid for the current operation.

ORA-41204: Session capture in progress

Cause: Session state capture was initiated and could not perform the requested operation.

Action: Wait for the current capture to complete or abort it.

ORA-41205: Invalid parameter for session state capture or restore

Cause: Invalid parameter was passed to session state capture or restore interface.

Action: Correct the invalid parameter(s).

**ORA-41206: Session capture or restore internal error KPCSFR-
<varname>string</varname>**

Cause: Internal operation error was encountered.

Action: Turn on related trace for details and report it as a bug.

ORA-41207: Cannot restore session state due to reason (<varname>string</varname>, <varname>string</varname>)

Cause: Session state restore was initiated when session was not ready for state restore.

Action: Restore session state immediately after logging into a session or perform necessary operations to make the session ready for restore; for example, commit current transaction, or close BFiles.

ORA-41208: OCI error during session state capture and restore

Cause: An OCI operation failed during an internal operation of session state capture and restore.

Action: Check the OCI error signaled and take corrective action.

**ORA-41209: OCI operation failed at <varname>string</varname> due to ORA-
<varname>string</varname>**

Cause: An OCI operation failed during an internal operation of session state capture and restore.

Action: Check the OCI error signaled and take corrective action.

ORA-41210: Failed to resolve session state directory object

Cause: Session state directory object passed to capture or restore was incorrect.

Action: Verify session state directory object and retry.

ORA-41211: Failed to insert capture or restore record

Cause: An error occurred while capture or restore record was being stored into the database.

Action: Check the error signaled and take corrective action.

**ORA-41251: Failed to restore session state from a file (error code
<varname>number</varname>)**

Cause: Session state file may be corrupted.

Action: Ensure that the file is a session state file.

ORA-41252: Failed to switch to new session in SSCR

Cause: This is the generic internal error number for the SSCR exceptions. This indicates that the SSCR has encountered an exceptional condition.

Action: Report as a bug.

ORA-41253: Failed to access session state file

Cause: An error was encountered while reading from or writing to session state capture file.

Action: Check the error stack for the actual error number and turn on tracing if necessary.

ORA-41254: Invalid session state file: <varname>string</varname>

Cause: An invalid session state file was used in session state restore operation.

Action: Check if the session state file is a valid file created by session capture.

ORA-41255: Package not supported: <varname>string</varname>

Cause: The specified package is not supported.

Action: Do not call the package functions and procedures.

ORA-41300: File driver is not initialized

Cause: An attempt was made to operate on the uninitialized file driver.

Action: Initialize the file driver using the OCIServerAttach function.

ORA-41301: failed to write data to file

Cause: You may not have sufficient privileges or quotas for this action.

Action: Ensure that you have sufficient privileges and quotas for this action.

ORA-41302: failed to read data from file

Cause: The file may not exist or you do not have privileges for this action.

Action: Ensure that the file exists and that you have sufficient privileges for this action.

ORA-41303: Received partial data from file

Cause: This is the generic internal error number for file driver exceptions. This indicated that file driver encountered an exception condition.

Action: Report as a bug.

ORA-41304: Failed to connect to file driver

Cause: The connect string may be incorrect.

Action: Ensure that the connect string is correct.

ORA-41305: Failed to open file

Cause: You may not have sufficient privileges for this action.

Action: Ensure that the file exists and that you have sufficient privileges for this action.

ORA-41400: Bind character set (<varname>string</varname>) does not match database character set (<varname>string</varname>)

Cause: In this recursive OCI call, the bind character set was different from the current database character set. This is usually caused by database character set change.

Action: Be sure to obtain bind data in database character set and do rebind in the current environment.

ORA-41401: Define character set (<varname>string</varname>) does not match database character set (<varname>string</varname>)

Cause: In this recursive OCI call, the define character set was different from the current database character set. This is usually caused by database character set change.

Action: Be sure to do redefine in the current environment.

ORA-41402: SCNs not valid after failover; failover cannot continue

Cause: The Oracle server process failed and replay was initiated.

Action: Resubmit the request.

ORA-41403: failed over to older server; failover cannot continue (<varname>string</varname>, <varname>string</varname>, <varname>string</varname>)

Cause: Failover replay was enabled for a service in which some standby databases were older than the original server and could not replay work from the original server.

Action: Disable replay on the service, or upgrade your databases to compatible versions.

ORA-41404: invalid replay context

Cause: Application continuity protocol was violated.

Action: Contact Oracle Support Services.

ORA-41405: Failed over to older server; failover cannot continue (<varname>string</varname>, <varname>string</varname>).

Cause: Failover replay was enabled for a service in which some standby databases were older than the original server and could not replay work from the original server.

Action: Disable replay on the service, or upgrade your databases to compatible versions.

ORA-41406: driver disabled replay**ORA-41407: SQL command not supported for replay; replay disabled**

Cause: Application replay encountered a command that was not supported for replay, and so replay was disabled.

Action: Use a service without replay for this operation.

ORA-41408: embedded COMMIT in last call; failover cannot continue

Cause: The Oracle server process failed after committing a transaction but COMMIT was embedded in a stored procedure and it cannot be guaranteed that the stored procedure finished. Failover cannot continue.

Action: User may resubmit request.

ORA-41409: cannot replay committed transaction; failover cannot continue

Cause: The Oracle server process failed after committing a transaction in the current request. The transaction cannot be replayed, so the current request cannot be replayed and session state cannot be restored. Failover cannot continue.

Action: User may resubmit request.

ORA-41410: call committed a transaction and started a new transaction; failover cannot continue

Cause: The Oracle server process failed after committing a transaction in the current request. One call that committed a transaction, and thus cannot be replayed, also started a new transaction. Since that call cannot be replayed, the new transaction cannot be restored. Failover cannot continue.

Action: Resubmit, and consider restructuring application to not start a transaction in the same call after committing a transaction.

ORA-41411: too many round trips in request; replay disabled

Cause: The Oracle server process failed after executing a request with more than 65535 round trips, so replay of the request is not possible.

Action: Resubmit, and consider partitioning application calls into more requests with fewer round trips.

ORA-41412: results changed during replay; failover cannot continue

Cause: The Oracle server process failed and replay was initiated. However, results of the replay differed from the original execution. Failover cannot continue.

Action: User may resubmit request.

ORA-41413: too much data in call capture; replay disabled

Cause: The Oracle server process failed after executing a request with a complicated call whose capture had too much data, therefore, replaying of the request was not possible.

Action: Resubmit and partition the application calls into more requests with fewer round trips.

ORA-41414: could not allocate memory for call capture; replay disabled

Cause: The Oracle server process failed after executing a request with a memory allocation failure during capture, therefore, replaying of the request was not possible.

Action: Resubmit and partition the application calls into more requests with fewer round trips.

ORA-41415: duplicate or conflicting KEEP or NOKEEP specifications

Cause: Duplicate KEEP or NOKEEP was specified, or both KEEP and NOKEEP were specified.

Action: Remove the duplicate or conflicting specification.

ORA-41416: Internal DBMS_FILE_TRANSFER event number

ORA-41417: invalid use of DBMS_APP_CONT_PRIVT: [<varname>string</varname>] [<varname>string</varname>] [mode=<varname>string</varname>] [<varname>string</varname>] [<varname>string</varname>] [<varname>string</varname>] [<varname>string</varname>] [<varname>string</varname>]

Cause: Application continuity protocol was violated.

Action: Contact Oracle Support Services.

ORA-41418: Replay context is corrupt. Reason: [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>]

Cause: The replay context was not valid.

Action: Check your network configuration and hardware.

ORA-41500: possibly obsolete parameter <varname>string</varname>

ORA-41501: parameter <varname>string</varname> has had a type modification

ORA-41601: invalid property for the rule class

Cause: An invalid property was specified for the rule class.

Action: Correct the rule class properties and try again.

ORA-41602: insufficient privileges

Cause: The user does not have required privileges on the object.

Action: Obtain the required privileges and try again.

ORA-41603: invalid privilege type

Cause: An attempt was made to grant an invalid privilege on a rule class.

Action: Correct the privilege name and try again.

ORA-41604: cannot revoke a privilege that was not granted

Cause: An attempt was made to revoke a privilege that was never granted.

Action: None

ORA-41605: schema extended name not allowed: <varname>string</varname>

Cause: An attempt was made to specify a schema extended name for an event structure, a rule class, or an action call-back procedure.

Action: Specify the object name with out a schema extension.

ORA-41606: rule class name already used by an existing object

Cause: An attempt was made to create a rule class with a name that is already used by an existing object.

Action: Specify a different name for the rule class and try again.

ORA-41607: rule class creation failed with <varname>string</varname>

Cause: rule class creation failed with a recursive error.

Action: Correct the rule class specification and try again.

ORA-41608: rule class does not exist

Cause: An attempt was made to access a rule class that does not exist or is not accessible.

Action: Correct the rule class name and try again.

ORA-41609: invalid name for the rule class

Cause: An invalid name was specified for the rule class.

Action: Correct the rule class name and try again.

ORA-41610: callback procedure name already used for an existing object

Cause: An attempt was made to create a callback procedure with a name that is already used for an existing object.

Action: Choose another name for the callback procedure.

ORA-41611: rule identifier "<varname>string</varname>" not unique in the rule class

Cause: An attempt was made to use a duplicate rule identifier.

Action: Choose a unique identifier for the rule and try again.

ORA-41612: scalar values expected for action preferences

Cause: Incorrect values were specified for the action preferences.

Action: Correct the action preferences values and try again.

ORA-41613: invalid action preference for rule class: <varname>string</varname>

Cause: An attempt was made to use an invalid action preference.

Action: Correct the input and try again.

ORA-41614: missing action preference value

Cause: Values for one or more action preferences were not specified.

Action: Specify values for all relevant action preferences.

ORA-41615: too many values in action preference list

Cause: Too many entries were specified in the action preference values list. The action preference values list should not have more entries than the action preference names list.

Action: Correct the input and try again.

ORA-41616: rule class's action callback procedure may have errors

Cause: The operation failed because the action callback procedure associated with the rule class has compilation errors.

Action: Recompile the action callback procedure and try the operation again.

ORA-41617: action preference name "<varname>string</varname>" collides with an event attribute name

Cause: An attempt was made to create an action preference with the same name as an attribute in the event structure.

Action: Choose a different name for action preference and try again.

ORA-41618: specified rule does not exist

Cause: Invalid rule identifier was used to operate on a rule definition.

Action: Use a valid rule identifier.

ORA-41619: rule manager feature currently not supported

Cause: An attempt was made to use a rule manager feature that is currently not supported.

Action: No action necessary. This is an informational message only.

ORA-41620: invalid ordering property for the rule class

Cause: An attempt was made to specify an invalid ordering property for the rule class.

Action: Make sure that the attributes listed in the ordering property are all part of the rule class/event structure definition with appropriate extended names.

ORA-41621: error in ordering property :<varname>string</varname>

Cause: An attempt was made to specify an invalid ordering property for the rule class.

Action: Make sure that the attributes listed in the ordering property are all part of the rule class/event structure definition with appropriate extended names.

ORA-41622: invalid primitive event object in rule class properties : <varname>string</varname>

Cause: In the rule class properties, the name used for one or the primitive event objects was not found in the corresponding composite event structure.

Action: Correct the name of the primitive event object in the rule class properties and try again.

ORA-41623: conflicting values for autocommit and duration properties

Cause: An attempt was made to create a rule class with autocommit enabled when the duration of events is set to TRANSACTION.

Action: Turn autocommit off or choose a different duration policy.

ORA-41624: invalid duration policy for primitive object in a composite event

Cause: An attempt was made to specify a SESSION or TRANSACTION duration policy for the primitive objects.

Action: Correct the rule class properties and try again.

ORA-41625: event structure <varname>string</varname> does not exist

Cause: The object type that represents the event structure was not created in the user's schema.

Action: Create the object type with the event structure's name and try again.

ORA-41626: invalid XML element "<varname>string</varname>" in rule class properties

Cause: An invalid XML element was used in the properties specification for the rule class.

Action: Use the correct (case-sensitive) tags in the properties.

ORA-41627: event structure object type in inconsistent state

Cause: The object type specified for the event structure was in an inconsistent state.

Action: Fix the object type and try again.

ORA-41628: invalid usage of "<varname>string</varname>" attribute in "<varname>string</varname>" element

Cause: An invalid or unsupported XML attribute was used in the rule class properties.

Action: Use the correct (case-sensitive) tags in the properties.

ORA-41629: event structure for simple events cannot be reused for composite events

Cause: An attempt was made to reuse an object type (event structure) for composite events when it is already configured for simple events.

Action: Drop the attribute set associated with the object and try again.

ORA-41630: invalid value for "<varname>string</varname>" attribute in the rule class properties

Cause: An invalid value was specified for an attribute in the rule class properties.

Action: Correct the value and try again.

ORA-41631: invalid text node or child element for "<varname>string</varname>" element in properties

Cause: An attempt was made to specify a child element or a text node in invalid position in the rule class properties specification.

Action: Correct the rule class properties and try again.

ORA-41632: invalid value for the "<varname>string</varname>" attribute

Cause: An attempt was made to assign an invalid value for an attribute in the rule class properties.

Action: See the documentation.

ORA-41633: specified rule class configuration not supported: "<varname>string</varname>"

Cause: An attempt was made to use an unsupported configuration for the rule class.

Action: Remove the specified tag in the properties and try again.

ORA-41634: invalid duration specification in rule properties: "<varname>string</varname>"

Cause: Invalid value was specified for the duration attribute in the rule class properties.

Action: Correct the value and try again.

ORA-41635: invalid unit of time used in duration specification

Cause: An attempt was made to use an invalid unit of time for the rule class's duration specification. Valid units are : minutes, hours, and days.

Action: Correct the duration specification and try again.

ORA-41636: invalid duration specification at the primitive event level

Cause: An attempt was made to specify a duration policy for the primitive events when the composite event was configured with TRANSACTION or SESSION duration policy.

Action: Correct the rule class properties and try again.

ORA-41637: missing primitive event name

Cause: The name attribute of the object element in the rule class properties was not specified. This is a required value.

Action: Specify the name of the primitive event and try again.

ORA-41638: invalid attribute for "<varname>string</varname>" element in rule condition

Cause: An attempt was made to specify an invalid attribute for an XML element in the rule condition.

Action: Correct the rule condition and try again.

ORA-41639: invalid child node in "<varname>string</varname>" element

Cause: An attempt was made to specify an invalid child element or text node for an XML element in the rule condition.

Action: Correct the rule condition and try again.

ORA-41640: invalid element "<varname>string</varname>" in the rule condition

Cause: An attempt was made to use an invalid element or a valid element in invalid position in the rule condition.

Action: Correct the rule condition and try again.

ORA-41641: invalid or empty rule condition

Cause: An attempt was made to specify an invalid or empty rule condition.

Action: Correct the input and try again.

ORA-41642: Missing "<varname>string</varname>" element in the rule condition

Cause: The rule condition was specified without a required element.

Action: Correct the rule condition and try again.

ORA-41643: invalid attribute for the "<varname>string</varname>" element in the rule condition

Cause: An attempt was made to specify an invalid attribute for an element in the rule condition.

Action: Correct the rule condition and try again.

ORA-41644: invalid use of "<varname>string</varname>" attribute in rule condition

Cause: An attempt was made to specify an invalid attribute for an element in the rule condition.

Action: Correct the rule condition and try again.

ORA-41645: duplicate tag "<varname>string</varname>" in rule condition

Cause: An attempt was made to specify the same XML tag in more than one positions within a single rule condition.

Action: Remove the duplicate reference to the tag and try again.

ORA-41646: missing "<varname>string</varname>" attribute for "<varname>string</varname>" element in the rule condition

Cause: One of the required attributes was not specified in the rule condition.

Action: Correct the rule condition and try again.

ORA-41647: negation not allowed in rule conditions with "any" semantics

Cause: An attempt was made to specify a "not" element within an "any" element in the rule condition.

Action: Correct the rule condition and try again.

ORA-41648: invalid sequence of child elements in "<varname>string</varname>" element

Cause: An attempt was made to specify an invalid sequence of elements within a parent element.

Action: Correct the rule condition and try again.

ORA-41649: invalid rule condition for a rule class involving composite events

Cause: An attempt was made to add an invalid rule condition to a rule set defined for composite events.

Action: Correct the input and try again.

ORA-41650: invalid composite event structure

Cause: A composite event structure may only have attributes that are either table aliases or of an object type that is defined in the owner's schema.

Action: Ensure that the event structure has no scalar attributes and all the embedded types in it are defined in the owner's schema.

ORA-41651: Event structure object type has one or more dependent objects

Cause: An attempt was made to configure an object type that has one or more dependents as a event structure. The object type cannot be modified due to the dependent objects.

Action: Create a new object type for the event structure and try again.

ORA-41652: invalid value for the equal attribute in the rule condition

Cause: An invalid value is assigned to the equal attribute in the rule condition.

Action: Correct the input and try again.

ORA-41653: inconsistent value for the "count" attribute of the "any" element

Cause: The value specified for the "count" attribute of the "any" element is greater than or equal to the the number of primitive events appearing in the rule condition.

Action: Specify a smaller value for the "any" element's "count" attribute.

ORA-41654: insufficient number of primitive events for the use of "sequence"

Cause: An attempt was made to use "sequence" attribute when there is an insufficient number of primitive events in the rule conditions.

Action: Remove the sequence specification.

ORA-41655: rule condition construct not supported: <varname>string</varname>

Cause: An attempt was made to use a rule condition construct that is not supported in the current release.

Action: Modify the rule condition.

ORA-41656: insufficient number of child elements in "<varname>string</varname>" element.

Cause: An attempt was made to use fewer than two elements within an "and" or "notany" element.

Action: Specify at least two elements within the parent element.

ORA-41657: rule class internal objects cannot be dropped

Cause: An attempt was made to drop an internal object that is required for a rule class.

Action: Drop the rule class associated with this object.

ORA-41658: invalid value for the "count" attribute in the "any" element

Cause: An invalid value is assigned to the count attribute in the rule condition. The values should be a positive integer that is smaller than the number of object elements within the "any" element.

Action: Correct the input and try again.

ORA-41659: invalid primitive event "<varname>string</varname>" for the rule class

Cause: An attempt was made to use an invalid primitive event in a rule condition.

Action: Correct the input and try again.

ORA-41660: ordering property for the rule class is too long

Cause: An attempt was made to configure the rule class with an ordering property that is longer than 240 characters.

Action: Correct the input and try again.

ORA-41661: the system generated rule class package has errors

Cause: An attempt was made to use a rule class configuration that was not supported.

Action: File a bug.

ORA-41662: number of primitive events in the composite event exceeds maximum limit

Cause: An attempt was made to create a composite event structure with more than 32 primitive events.

Action: Use a composite event that consists of fewer primitive events.

ORA-41663: invalid use of "equal" or "sequence" attribute with a single event

Cause: An attempt was made to use "equal" or "sequence" attribute when the "count" attribute in a rule condition with "any" semantics is set to 1.

Action: Remove the "equal" and "sequence" specifications.

ORA-41664: invalid consumption policy for the primitive event

Cause: An attempt was made to use EXCLUSIVE consumption policy for a primitive event when the composite event is configured for RULE consumption policy.

Action: Correct the rule class properties and try again.

ORA-41665: conflicting values for duration, consumption, and autocommit policies

Cause: An attempt was made to use an EXCLUSIVE consumption policy with no autocommit and a duration other than TRANSACTION or SESSION.

Action: Modify the rule class properties and try again. Autocommit should be set to YES when the consumption policy is EXCLUSIVE.

ORA-41666: XML schema validation failed when validating against <varname>string</varname>

Cause: The user input has undefined element or attribute according to the provided XML schema definition.

Action: Correct the user inputs and try again.

ORA-41667: rule class results view name already used for an existing object

Cause: An attempt was made to use a duplicate name for the rule class results view.

Action: Use a different name for the rule class results view.

ORA-41668: invalid operation for the rule class

Cause: An attempt was made to use an invalid operation for the rule class.

Action: No action necessary. This is an informational message only.

ORA-41669: invalid list of primitive event identifiers

Cause: An attempt was made to pass an empty list of primitive event identifiers to the CONSUME_PRIM_EVENTS API.

Action: Correct the input and try again.

ORA-41670: duplicate or invalid event name in equal specification

Cause: An attempt was made to specify a duplicate or invalid primitive event for the rule class's equal property.

Action: Correct the input and try again.

ORA-41671: duplicate table names in the event structure with table aliases

Cause: The table used for an event structure has the same name as another table or a primitive event type in the event structure.

Action: Use an event structure with distinct table names for table aliases.

ORA-41672: invalid rowid passed in for "<varname>string</varname>" table

Cause: An attempt was made to pass a NULL or invalid rowid for a table in the event structure.

Action: Correct the input and try again.

ORA-41673: sequence attribute not allowed in rule conditions using table aliases

Cause: An attempt was made to use sequence attribute in a rule condition that is defined using table aliases. Sequence usage is not permitted for the lack of timestamp attribute.

Action: Correct the input and try again.

ORA-41674: dmlevents policy allowed only for event structures with table aliases

Cause: An attempt was made to use the dmlevents policy for an event structure with no table alias constructs.

Action: Correct the rule class properties and try again.

ORA-41675: schema for data tables does not match that of the rule class

Cause: An attempt was made to use the dmlevents policy for a rule class that refers to table residing in different schema. To use the dmlevents policy, the table associated with table aliases in the event structure and the rule class should exist in the same schema.

Action: Remove dmlevents specification from rule class properties.

ORA-41676: invalid use of dmlevents policy for primitive event

Cause: An attempt was made to use the dmlevents policy for a primitive event defined with more than one table alias attribute.

Action: Remove the dmlevents specification from the rule class properties.

ORA-41677: DML event trigger creation failed with <varname>string</varname>

Cause: Triggers could not be created on the data table to track DML events.

Action: Remove the dmlevents specification from the rule class properties.

ORA-41678: conflicting values for the autocommit and dmlevents policies

Cause: An attempt was made to use dmlevents policy in combination with autocommit set to YES. This combination is not allowed.

Action: Set autocommit to NO and try again.

ORA-41679: dmlevents specification only allowed with table alias attributes

Cause: An attempt was made to use the dmlevents policy for an event structure not containing any table alias attributes.

Action: Remove the dmlevents specification from the rule class properties.

ORA-41680: Rules Manager background process <varname>string</varname> does not exist

Cause: An attempt was made to use a Scheduler process that does not exist.

Action: Execute EXFSYS.RLM\$CREATE_SCHEDULER_JOBS procedure as a privileged user.

ORA-41681: clean up of expired events failed

Cause: The background process that cleans up the expired events failed for a rule class.

Action: Invoke EXFSYS.DBMS_RLMGR_UTL.CLEANUP_EVENTS API for the exact nature of the problem.

ORA-41682: invalid rule class package

Cause: An attempt was made to use a rule class package with invalid signature or permissions.

Action: Drop the rule class and recreate it.

ORA-41683: unable to lock a rule in the rule class

Cause: A rule matching the current event is locked by another session.

Action: Reissue the command after committing the other sessions.

ORA-41684: invalid value for the RLM\$ENABLED column

Cause: An attempt was made to insert or update a value other than 'Y' or 'N' into the RLM\$ENABLED column of a rule class table.

Action: Retry the DML statement with a value of 'Y' or 'N' for the RLM\$ENABLED column.

ORA-41685: invalid window specification for the collection element

Cause: An invalid attribute value was specified for the "windowlen" or the "windowsize" attribute. The value specified for the "windowlen" attribute should be a number indicating the number of days or a fraction of a day. The value specified for the "windowsize" attribute should be an integer which indicates number of items in the collection. The maximum value allowed for the window specification is 64000.

Action: Correct the input and try again.

ORA-41686: use of "collection" invalid for the primitive event

Cause: An attempt was made to define a rule condition with "collection" element when the corresponding event was not configured for collections of events.

Action: Correct the rule condition and try again.

ORA-41687: attribute "<varname>string</varname>" not allowed in the "groupby" specification

Cause: The attributes listed in the "groupby" specification in a rule condition were not a subset of the attributes specified in the rule class properties.

Action: Correct the "groupby" specification for the rule condition and try again.

ORA-41688: invalid value for the "groupby" attribute

Cause: An invalid value was specified for the "groupby" attribute.

Action: Correct the input and try again.

ORA-41689: invalid collection specification in the rule condition

Cause: An attempt was made to insert a rule condition with invalid collection element specification.

Action: Correct the input and try again.

ORA-41690: maximum number of grouping expressions for a rule class exceeded

Cause: An attempt was made to specify more than 32 expressions for the "groupby" clause in rule class properties.

Action: Use fewer than 32 expressions for the "groupby" clause.

ORA-41691: invalid aggregate specification: <varname>string</varname>

Cause: The aggregate operation specified in the rule condition was invalid.

Action: Correct the input and try again.

ORA-41692: unsupported aggregate operator in the having/compute clause: <varname>string</varname>

Cause: An attempt was made to use an unsupported aggregate operator in the having or the compute clause in the rule condition.

Action: Correct the input and try again.

ORA-41693: invalid attribute or data type for an aggregate operator: <varname>string</varname>

Cause: An attempt was made to apply an aggregate operator on an invalid attribute or an attribute with invalid or unsupported data type in the aggregate operator. Only NUMBER and DATE attributes are allowed in the aggregate operators.

Action: Correct the input and try again.

ORA-41694: invalid equal specification around: <varname>string</varname>

Cause: An attempt was made to specify an invalid equal clause for a rule condition or the rule class properties.

Action: Correct the input and try again.

ORA-41695: equal specification should have a minimum of two elements

Cause: An attempt was made to specify fewer than two elements in the equal clause for a rule condition or the rule class properties.

Action: Correct the input and try again.

ORA-41696: invalid operator in the having clause: <varname>string</varname>

Cause: An attempt was made to use an invalid relational operator in the having clause of the rule condition.

Action: Correct the input and try again.

ORA-41697: attribute prefix missing in aggregate specification: <varname>string</varname>

Cause: An attempt was made to specify an aggregate predicate across multiple primitive event types with no attribute prefix.

Action: Correct the input and try again.

ORA-41698: invalid use of "<varname>string</varname>" attribute in aggregate predicate

Cause: An attempt was made to use an attribute where a literal is expected in the aggregate predicate in the rule condition.

Action: Correct the input and try again.

ORA-41699: maximum number of aggregate operations per rule condition exceeded

Cause: An attempt was made to specify more than 5 aggregate operations in a rule condition.

Action: Correct the input and try again.

ORA-41700: a conditions table already exists for the event structure

Cause: A table storing the primitive rule conditions was already assigned to the event structure.

Action: No action necessary. This is an informational message only.

ORA-41701: conditions table with a rule class association cannot be truncated or dropped

Cause: An attempt was made to truncate or drop a conditions table when one or more rule classes are associated to it through the event structure.

Action: Drop the rule class before truncating or dropping the conditions table.

ORA-41702: invalid conditions table

Cause: An attempt was made to use an invalid conditions table.

Action: Correct the input and try again.

ORA-41703: invalid child node in "object" element with "ref" attribute

Cause: An attempt was made to use both a condition and a "ref" attribute in the "object" element.

Action: Remove the "ref" attribute.

ORA-41704: invalid condition reference: "<varname>string</varname>"

Cause: An attempt was made to use a reference to a nonexistent conditions table or a condition.

Action: Ensure that the conditions table exists for the primitive event and the value specified for the "ref" attribute of the "object" element is valid.

ORA-41705: conditions table cannot be dropped with DROP TABLE command

Cause: An attempt was made to drop a conditions table with a DROP TABLE command.

Action: Use DBMS_RLMGR.DROP_CONDITIONS_TABLE instead.

ORA-41706: a condition referenced in rule conditions may not be deleted

Cause: An attempt was made to delete a condition when one or more rule conditions refer to it.

Action: Delete the rules before deleting the conditions.

ORA-41707: unsupported construct with collection events: "<varname>string</varname>"

Cause: An attempt was made to define a collection rule condition with unsupported constructs.

Action: Correct the input and try again.

ORA-41708: the identifier for the shared condition may not be modified

Cause: An attempt was made to update the identifier of a row stored in the conditions table.

Action: Insert a row with the new identifier instead.

ORA-41710: invalid use of aggregate operator for a noncollection event

Cause: An attempt was made to specify an aggregate operator on an event that is not identified as collection.

Action: Correct the input and try again.

ORA-41711: invalid attribute in the rule condition's having clause

Cause: An invalid attribute is used in the specification for the having clause of the rule condition.

Action: Correct the input and try again.

ORA-41712: missing groupby specification for the collection

"<varname>string</varname>"

Cause: An attempt was made to use a collection element with no groupby specification in the rule condition.

Action: Correct the input and try again.

ORA-41713: invalid use of "windowlen" and "windowsize" attributes

Cause: An attempt was made to use the windowlen and windowsize attributes within the same collection element.

Action: Correct the input and try again.

ORA-41714: invalid use of window specification with SESSION/TRANSACTION duration

Cause: An attempt was made to use the windowlen or windowsize attributes when the events are configured for SESSION or TRANSACTION duration.

Action: Remove the window specification and try again.

ORA-41721: invalid use of DMLEVENTS and CNFEVENTS in rule class properties

Cause: An attempt was made to specify both the DMLEVENTS and CNFEVENTS for the same rule class.

Action: Remove either the DMLEVENTS or the CNFEVENTS specification.

ORA-41722: insufficient privileges for database change notification

Cause: An attempt was made to use CNFEVENTS property with insufficient privileges.

Action: Grant CHANGE NOTIFICATION privilege and EXECUTE privilege on DBMS_CHANGE_NOTIFICATION to the user and try again.

ORA-42000: invalid online redefinition column mapping for table "<varname>string</varname>". "<varname>string</varname>"

Cause: An attempt was made to change the logical structure of a materialized view log, queue table, or a partition by specifying a non-NULL column mapping during online redefinition.

Action: Pass a NULL column mapping parameter.

ORA-42002: partition "<varname>string</varname>" of table "<varname>string</varname>". "<varname>string</varname>" not being redefined

Cause: An attempt was made to redefine a partition which is not involved in this redefinition.

Action: Pass a valid partition name.

ORA-42003: partition must be specified for this redefinition

Cause: A partition was involved in this redefinition but was not specified.

Action: Specify the partition involved in this redefinition.

ORA-42004: redefinition not instantiated

Cause: An attempt was made to complete an instantiation-deferred redefinition without invoking `dbms_redefinition.sync_interim_table`.

Action: Invoke `dbms_redefinition.sync_interim_table` to instantiate this redefinition.

ORA-42005: invalid type of redefinition method

Cause: An unknown redefinition method was used.

Action: Use one of the supported redefinition methods: `o`
`dbms_redefinition.cons_use_pk` `o` `dbms_redefinition.cons_use_rowid`

ORA-42006: dependent object registration not supported during a partition redefinition

Cause: An attempt was made to register dependent objects when redefining a partition.

Action: Do not invoke `dbms_redefinition.register_dependent_object` during a partition redefinition.

ORA-42007: dependent object unregistration not supported during a partition redefinition

Cause: An attempt was made to unregister dependent objects when redefining a partition.

Action: Do not invoke `dbms_redefinition.unregister_dependent_object` during a partition redefinition.

ORA-42008: error occurred while instantiating the redefinition

Cause: An error occurred while instantiating the online redefinition which requires aborting the redefinition.

Action: Correct the error, abort, and restart the online redefinition.

ORA-42009: error occurred while synchronizing the redefinition

Cause: An error occurred while synchronizing the online redefinition.

Action: Correct the error and continue the online redefinition.

ORA-42010: error occurred while synchronizing the redefinition

Cause: An error occurred while synchronizing the online redefinition which requires aborting the redefinition.

Action: Correct the error, abort, and restart the online redefinition.

ORA-42011: error occurred while completing the redefinition

Cause: An error occurred while completing the online redefinition.

Action: Correct the error and continue the online redefinition.

ORA-42012: error occurred while completing the redefinition

Cause: An error occurred while completing the online redefinition which requires aborting the redefinition.

Action: Correct the error, abort, and restart the online redefinition.

ORA-42013: interim table of an AQ IOT table should be an IOT table

Cause: An attempt was made to create a table that is not an index-organized table (IOT) as the interim table of an AQ IOT table (history, time management, or dequeue).

Action: Ensure that the interim table is created as an IOT table.

ORA-42014: online redefinition unable to lock AQ objects

Cause: An online redefinition of an AQ table was unable to lock all related AQ objects.

Action: Abort and retry the redefinition.

ORA-42015: online redefinition unable to log changes made to AQ tables

Cause: An online redefinition of an AQ table was unable to log changes made to AQ tables during the redefinition.

Action: Abort and retry the redefinition.

ORA-42016: shape of interim table does not match specified column mapping

Cause: The number of columns, or the type or the length semantics of a column, in the interim table did not match the specified column mapping.

Action: Ensure that the interim table matches the column mapping by either modifying the column mapping string or altering the interim table's column definition(s).

ORA-42017: interim table of an AQ table should not be an AQ table

Cause: An attempt was made to create an AQ table as an interim table of an online redefined AQ table.

Action: Ensure that the interim table is not created as an AQ table.

ORA-42018: partition cannot be redefined online because of index organization incompatibility

Cause: interim table is incompatible with partition being redefined because one or more of the following apply: - one is index-organized and the other is not - one has IOT overflow segment and the other does not - one has IOT mapping table and the other does not

Action: Ensure that the interim table is compatible with the partition being redefined.

ORA-42019: partition cannot be redefined online because of incompatible partitioning of interim table

Cause: both original and interim tables are partitioned, or original table is composite-partitioned but interim table is non-partitioned.

Action: Ensure that the interim table has compatible partitioning with the original table. For example, if the original table is partitioned, the interim table should be non-partitioned. If the original table is composite-partitioned, the interim table should be partitioned.

ORA-42020: partition cannot be redefined online because of unsupported type of interim table

Cause: An unsupported type of interim table was provided during the partition redefinition. Currently the following types of interim tables are not supported: - a nested table or has nested-table columns - an external table - part of cluster - contains LOB shared segments

Action: Do not use unsupported types of interim tables.

ORA-42021: partition cannot be redefined online because of incompatible row dependencies

Cause: original/interim table was created with row dependency and interim/original table was not.

Action: Ensure that both tables are created with same row dependency properties.

ORA-42022: partition cannot be redefined online because of presence of nested columns

Cause: An attempt was made to online redefine a partition with nested table columns.

Action: Do not attempt to online redefine a partition with nested table columns.

ORA-42023: compatibility of AQ table must be release 8.1.x or later

Cause: An attempt was made to perform online redefinition on an AQ table that was created with compatibility prior to release 8.1.x.

Action: Ensure that the AQ table is created with the COMPATIBLE parameter set to release 8.1.x or later before attempting online redefinition.

ORA-42024: interim table of an AQ table can not be a partitioned table

Cause: An attempt was made to use a partitioned table as an interim table.

Action: Ensure that the interim table is not a partitioned table.

ORA-42025: redefinition of CONS_USE_ROWID method cannot be used to redefine an AQ IOT table

Cause: An attempt was made to use method of DBMS_REDEFINITION.CONST_USE_ROWID to redefine an AQ IOT table.

Action: Ensure that method of DBMS_REDEFINITION.CONST_USE_PK is used to redefine an AQ IOT table.

ORA-42026: duplicated rows detected while instantiating the redefinition

Cause: Duplicated rows are detected during instantiation of the redefinition.

Action: Abort the redefinition, turn off the optimistic ascending SCN optimization, and restart the redefinition.

ORA-42027: cannot redefine an object online that is not a table

Cause: An attempt was made to redefine an object online that is not a table.

Action: Ensure that the object being redefined online is a table.

ORA-42028: materialized view log "<varname>string</varname>". "<varname>string</varname>" does not exist

Cause: An attempt was made to register a nonexistent materialized view log as a dependent object.

Action: Invoke DBMS_REDEFINITION.REGISTER_DEPENDENT_OBJECT on a valid materialized view log.

ORA-42029: cannot online redefine table "<varname>string</varname>". "<varname>string</varname>" at this time

Cause: An attempt was made to redefine a table which is incompatible with another ongoing redefinition.

Action: Do not perform the redefinition operation on this table or wait until the incompatible ongoing redefinition has completed.

ORA-42030: cannot online redefine table "<varname>string</varname>". "<varname>string</varname>" with commit SCN-based MV log

Cause: An attempt was made to redefine a table which had a commit SCN-based materialized view log defined on it.

Action: Do not attempt to online redefine a table that has a commit SCN-based materialized view log defined on it.

ORA-42031: interim table cannot have a commit SCN-based MV log defined on it

Cause: An attempt was made to use an interim table which had a commit SCN-based materialized view log defined on it.

Action: Ensure that the interim table does not have a commit SCN-based materialized view log defined on it.

ORA-42032: cannot online redefine table "<varname>string</varname>". "<varname>string</varname>" with Flashback Data Archive enabled

Cause: An attempt was made to redefine a table which had Flashback Data Archive enabled.

Action: Do not attempt to online redefine a table that has Flashback Data Archive enabled.

ORA-42033: interim table "<varname>string</varname>". "<varname>string</varname>" cannot have Flashback Data Archive enabled

Cause: An attempt was made to redefine a table with an interim table which had Flashback Data Archive enabled.

Action: Do not attempt to online redefine a table with an interim table which has Flashback Data Archive enabled.

ORA-42034: cannot online redefine table "<varname>string</varname>". "<varname>string</varname>" which is a CDC table

Cause: An attempt was made to redefine a table which is a CDC table.

Action: Do not attempt to online redefine a table that is a CDC table.

ORA-42035: cannot online redefine IOT table "<varname>string</varname>". "<varname>string</varname>" with CONS_USE_ROWID
Cause: An attempt was made to redefine an IOT table with CONS_USE_ROWID.

Action: Do not attempt to online redefine an IOT table with CONS_USE_ROWID.

ORA-42036: cannot online redefine temporary table "<varname>string</varname>". "<varname>string</varname>"
Cause: An attempt was made to redefine a temporary table.

Action: Do not attempt to online redefine a temporary table.

ORA-42037: cannot online redefine table "<varname>string</varname>". "<varname>string</varname>" with IOT overflow segment
Cause: An attempt was made to redefine a table with IOT overflow segment.

Action: Do not attempt to online redefine a table with IOT overflow segment.

ORA-42038: cannot online redefine table "<varname>string</varname>". "<varname>string</varname>" with a CDC log defined on it
Cause: An attempt was made to redefine a table with a CDC log defined on it.

Action: Do not attempt to online redefine a table with a CDC log defined on it.

ORA-42039: cannot online redefine table "<varname>string</varname>". "<varname>string</varname>" with FGA enabled
Cause: An attempt was made to redefine a table with Fine Grained Auditing (FGA) or Row Level Security (RLS) enabled.

Action: Do not attempt to online redefine a table with Fine Grained Auditing (FGA) or Row Level Security (RLS) enabled.

ORA-42040: cannot online redefine table "<varname>string</varname>". "<varname>string</varname>" with column of binary XML type
Cause: An attempt was made to redefine a table with a column of binary XML type.

Action: Do not attempt to online redefine a table with a column of binary XML type.

ORA-42041: cannot online redefine table "<varname>string</varname>". "<varname>string</varname>" with nested table columns
Cause: An attempt was made to redefine a table with nested table columns.

Action: Do not attempt to online redefine a table with nested table columns.

ORA-42042: time out in acquiring DML lock during online redefinition
Cause: During FINISH_REDEF_TABLE procedure, the elapsed time waiting to acquire a table or partition DML lock on the original table exceeds the timeout the user specified.

Action: Rerun FINISH_REDEF_TABLE procedure to continue the process.

ORA-42043: CONS_VPD_AUTO is only applicable to null column mapping
Cause: An attempt was made to specify CONS_VPD_AUTO for non-null column mapping other than null column mapping. CONS_VPD_AUTO can only be specified for null column mapping.

Action: Set the COPY_VPD_OPT value to CONS_VPD_MANUAL.

ORA-42044: cannot redefine table with non-null VPD policy predicate against the table owner or redefinition invoker

Cause: Virtual Private Database (VPD) policies with non-null predicate against the table owner or redefinition invoker existed on the original table.

Action: Drop the VPD policies with non-null predicate against the table owner or redefinition invoker. Restart online redefinition.

ORA-42045: COPY_VPD_OPT cannot be set to CONS_VPD_NONE with VPD policies on table "<varname>string</varname>". "<varname>string</varname>".

Cause: An attempt was made to set the COPY_VPD_OPT value to CONS_VPD_NONE. COPY_VPD_OPT cannot be set to CONS_VPD_NONE with Virtual Private Database (VPD) policies on the original table.

Action: Set COPY_VPD_OPT to CONS_VPD_AUTO or CONS_VPD_MANUAL.

ORA-42046: COPY_VPD_OPT cannot be set to <varname>string</varname> with VPD policies on interim table "<varname>string</varname>". "<varname>string</varname>".

Cause: An attempt was made to set the COPY_VPD_OPT value to either CONS_VPD_NONE or CONS_VPD_AUTO. Cannot set the COPY_VPD_OPT value to CONS_VPD_NONE or CONS_VPD_AUTO with Virtual Private Database (VPD) policies on the interim table.

Action: Set the COPY_VPD_OPT value to CONS_VPD_MANUAL.

ORA-42047: The specified value for COPY_VPD_OPT is invalid.

Cause: An unknown COPY_VPD_OPT value was used.

Action: Use one of the supported COPY_VPD_OPT values: o
DBMS_REDEFINITION.CONS_VPD_NONE o
DBMS_REDEFINITION.CONS_VPD_AUTO o
DBMS_REDEFINITION.CONS_VPD_MANUAL

ORA-42048: Automatic copying of VPD policies with application context is not supported in online redefinition.

Cause: An attempt was made to set the COPY_VPD_OPT value to CONS_VPD_AUTO for Virtual Private Database (VPD) policies with application context. Automatic copying of VPD policies with application context is not supported in online redefinition.

Action: Drop VPD policies with application context or set the COPY_VPD_OPT value to CONS_VPD_MANUAL.

ORA-42049: cannot online redefine multiple tables and multiple partitions

Cause: An online redefinition procedure was passed multiple original tables and multiple partitions to redefine.

Action: Do not attempt to online redefine multiple tables at the same time as multiple partitions.

ORA-42050: COPY_VPD_OPT cannot be set to CONS_VPD_MANUAL when redefining a partition.

Cause: An attempt was made to set the COPY_VPD_OPT value to CONS_VPD_MANUAL. COPY_VPD_OPT cannot be set to CONS_VPD_MANUAL when redefining a partition.

Action: Set COPY_VPD_OPT to CONS_VPD_NONE or CONS_VPD_AUTO.

ORA-42051: duplicate partition names in partition name list

Cause: An online redefinition procedure was passed a partition name list containing duplicates.

Action: Ensure that all names in the partition name list are unique.

ORA-42052: interim table cannot have materialized view or zonemap defined on it

Cause: An attempt was made to redefine a table with an interim table on which a materialized view or zonemap was defined.

Action: Remove all materialized views and zonemaps defined on the interim table and retry online redefinition, or do not attempt online redefinition.

ORA-42053: cannot online redefine table "<varname>string</varname>".<varname>string</varname>" with OLS/XDS enabled

Cause: An attempt was made to redefine a table with Oracle Label Security (OLS) or Extensible Data Security (XDS) enabled.

Action: Do not attempt to online redefine a table with Oracle Label Security (OLS) or Extensible Data Security (XDS) enabled.

ORA-42054: cannot online redefine table "<varname>string</varname>".<varname>string</varname>" with UXI XML index

Cause: An attempt was made to redefine a table with XML indexes having an Unstructured XMLIndex (UXI) component.

Action: Do not attempt to online redefine a table with XML indexes having an Unstructured XMLIndex (UXI) component.

ORA-42055: general event for online redefinition

ORA-42287: cannot rename user on whose type a table depends

Cause: An attempt was made to rename a user whose schema contained a type on which some table depends. The operation may not proceed as it would render the table invalid causing loss of data.

Action: Drop table(s) dependent on types belonging to the schema of the user being renamed.

ORA-42288: may not create a schema synonym for the specified schema

Cause: An attempt was made to create a schema synonym for one of the reserved schemas (such as SYS or SYSTEM.)

Action: Schema synonyms for this schema may not be created.

ORA-42289: may not rename specified user

Cause: An attempt was made to rename one of the following: - reserved user (such as SYS or SYSTEM) - an administrative user - a common user - a locked user account

Action: This user may not be renamed.

ORA-42290: specified schema does not exist

Cause: An attempt was made to create a schema synonym for a schema which did not exist.

Action: Correct the input and try again.

ORA-42291: schema synonym '<varname>string</varname>' does not exist

Cause: The named schema synonym did not exist.

Action: Verify you are using the correct schema synonym name.

ORA-42292: RENAME TO already specified

Cause: The RENAME TO clause was specified twice.

Action: Use only one RENAME TO clause.

ORA-42293: user name conflicts with another user, role or schema synonym name

Cause: There was already a user, role or schema synonym with that name.

Action: Specify a different user name.

ORA-42294: role name conflicts with another user, role or schema synonym name

Cause: There was already a user, role or schema synonym with that name.

Action: Specify a different role name.

ORA-42295: schema synonym name conflicts with another user, role or schema synonym name

Cause: There was already a user, role or schema synonym with that name.

Action: Specify a different schema synonym name or use CREATE OR REPLACE SCHEMA SYNONYM.

ORA-42296: user, role or schema synonym '<varname>string</varname>' does not exist

Cause: There was no user, role, or schema synonym by that name.

Action: Respecify the name.

ORA-42297: cannot drop a schema synonym for a schema of a user who is currently connected

Cause: An attempt was made to drop a schema synonym for a schema of a user who was logged on.

Action: Make sure user is logged off, then repeat command.

ORA-42298: cannot rename a user that is currently connected

Cause: An attempt was made to rename a user that was logged on.

Action: Make sure user is logged off, then repeat command.

ORA-42300: an Editioning view is already defined on this table

Cause: An attempt was made to create an Editioning view on a table on which another Editioning view is already defined in the same Edition. This violates a

restriction that at most one Editioning view may be associated with any base table in a given Edition.

Action: Create the new view as a regular view or, if the view being created is really intended to be an Editioning view associated with this table, drop the existing Editioning view before creating the new one.

ORA-42301: definition of an Editioning view may not refer to a synonym

Cause: An attempt was made to create an Editioning view referring to a synonym, which is not supported.

Action: Do not create an Editioning view if you want the view to refer to a synonym.

ORA-42302: definition of an Editioning view may not refer to remote tables

Cause: An attempt was made to create an Editioning view referring to remote tables, which is not supported.

Action: Do not create an Editioning view if you want the view to refer to a remote table.

ORA-42303: duplicate column reference in a definition of an Editioning view

Cause: An attempt was made create an Editioning view referencing the same column of a base table more than once, which is not supported.

Action: Do not create an Editioning view if you have multiple columns referring to the same column of the base table.

ORA-42304: base table and the Editioning view must belong to the same schema

Cause: An attempt was made to create an Editioning view in a schema different from that of the base table.

Action: Create an Editioning view in the same schema as the base table.

ORA-42305: only an Editioning view may replace an Editioning view

Cause: An attempt was made to replace an Editioning view with a view which is not an Editioning view or vice versa.

Action: Ensure that either both or neither of the views involved are Editioning views.

ORA-42306: a CrossEdition trigger may not be created on an Editioning view

Cause: An attempt was made to create a CrossEdition trigger on an Editioning view, which is not supported.

Action: Instead of creating a CrossEdition trigger on an Editioning view, create it on the Editioning view's underlying table.

ORA-42307: columns of an Editioning view may only refer to base table columns

Cause: An attempt was made to define an Editioning view containing a column referring to an entity other than a base table column (for example, a PL/SQL function without a parameter), which is not supported.

Action: Ensure that every column of an Editioning view refers to a column of a base table.

ORA-42308: view <varname>string</varname>.<varname>string</varname> is already in read-only mode

Cause: An attempt was made to set a read-only table in read-only mode.

Action: This DDL can only be executed on a read/write view.

ORA-42309: view <varname>string</varname>.<varname>string</varname> is already in read/write mode

Cause: An attempt was made to set a read/write view in read/write mode.

Action: This DDL can only be executed on a read-only view.

ORA-42310: Implementation restriction: this operation is only permitted on Editioning views

Cause: The view being altered was not an Editioning view. In this release, an ALTER VIEW READ ONLY, or ALTER VIEW READ WRITE operation is only permitted on Editioning views.

Action: Ensure that the view is an Editioning view.

ORA-42311: This operation is not permitted on Editioning views with compilation errors

Cause: ALTER VIEW READ ONLY and ALTER VIEW READ WRITE are not permitted on Editioning views which have compilation errors.

Action: Resolve the compilation errors.

ORA-42312: Editioning View hints.**ORA-42313: This operation is not supported on Editioning views marked invalid**

Cause: ALTER VIEW READ ONLY and ALTER VIEW READ WRITE are not permitted on Editioning views which are marked invalid.

Action: Recompile the Editioning view to ensure that it is valid.

ORA-42314: editioning view cannot be owned by a non-editioned user

Cause: An attempt was made to create an editioning view in a schema where views were not editionable.

Action: Enable editions for the user for views and then create the editioning view.

ORA-42399: cannot perform a DML operation on a read-only view

Cause: An attempt was made to insert, delete, or update row(s) of a view created with read-only option. DML operations on such views are explicitly prohibited.

Action: Perform the desired DML operation on the view's underlying base table or issue ALTER VIEW ... READ WRITE command to make the view updatable.

ORA-42800: The specified attribute association ("<varname>string</varname>**", "**<varname>string</varname>**") is already attached to existing shared context-sensitive policies with the specified policy function **<varname>string</varname>**.**

Cause: An attempt was made to add an attribute association which was already attached to shared context-sensitive policies with the specified policy function. All shared context-sensitive policies with a common policy function need to have the same set of attribute associations. Attribute associations of an existing shared

context-sensitive policy which is using the specified policy function will be automatically added to the new policy.

Action: Retry the operation without specifying the attribute association.

ORA-42801: Value is not set for context attribute ("`<varname>string</varname>`", "`<varname>string</varname>`") which is associated with the Row Level Security (RLS) policy "`<varname>string</varname>`".

Cause: The value was not set for every attribute association of the shared context-sensitive policy. The value must be set for every attribute association of the shared context-sensitive policy.

Action: Set the value for the context attribute and retry the operation.

ORA-42802: Could not read attribute associations from an existing shared context-sensitive policy which is using the specified policy function.

Cause: An existing shared context-sensitive policy using the specified policy function was dropped from another session.

Action: Re-issue the command.

ORA-42803: Cannot use bind variable in VERSIONS clause when the object has a Row-Level Security (RLS) policy defined on it.

Cause: The object being accessed had a Row-Level Security (RLS) policy defined on it and the VERSIONS clause contained a bind variable.

Action: Rewrite the query without the use of bind variable in the VERSIONS clause.

ORA-42804: The query could disclose rows protected by select VPD policy.

Cause: The object being accessed had a select Virtual Private Database (VPD) policy defined on it and the DML which is executed could disclose rows protected by the select VPD policy.

Action: Define VPD policy with the specific statement type.

ORA-43750 to ORA-45907

ORA-43750: invalid or illegal combination of COMMIT WRITE options

Cause: invalid or illegal combination of options provided to COMMIT WRITE SQL statement.

Action: Provide a valid combination of options for COMMIT WRITE statement

ORA-43751: invalid value for parameter <varname>string</varname>

Cause: invalid or illegal value provided for parameter.

Action: Provide a valid value for the parameter

ORA-43801: parallel long-to-lob debugging event**ORA-43802: disable probe before index leaf block delete****ORA-43803: change notification tracing for iot/indexes****ORA-43804: iot-rollback testing****ORA-43805: auto-parallel tables/indexes****ORA-43806: iot nonkey reserve length fixup****ORA-43807: indexes on ORA_ROWSCN not allowed**

Cause: An attempt was made to create an index that refers to the ORA_ROWSCN pseudo-column, either directly or in an expression.

Action: Do not use ORA_ROWSCN to define an index on a table.

ORA-43808: Turn on local CELL debugging**ORA-43809: Force non-coalesced extent scans****ORA-43810: check-and-skip corrupt blocks in index scans****ORA-43811: limit readahead for block sampling table/index scans****ORA-43812: avoid online index (re)build cleanup on specific errors****ORA-43813: set soft limit for index leaf block ITL entries****ORA-43814: DROP INDEX is invalid for hash cluster index**

Cause: An attempt was made to drop an index defined on a hash cluster. Hash cluster indexes cannot be dropped.

Action: Do not attempt to drop an index defined on a hash cluster.

ORA-43815: Turn on local CELL INDEX debugging**ORA-43816: repin if lock was released during update**

ORA-43820: #block rejections in space reclamation before segment extension

ORA-43821: b+tree level to enable rejection limit

ORA-43822: enable/disable/trace rejection heuristic

ORA-43850: Advanced Compression Option parameter is required to be enabled

Cause: An Advanced Compression Option (ACO) feature was specified without enabling the ACO parameter.

Action: Set or Update the ACO parameter (enable_option_advanced_compression) to TRUE.

ORA-43852: SECUREFILE and BASICFILE cannot be used together

Cause: SECUREFILE and BASICFILE were both specified.

Action: Modify the SQL statement to specify only one of SECUREFILE or BASICFILE.

ORA-43853: SECUREFILE lob cannot be used in non-ASSM tablespace
"<varname>string</varname>"

Cause: SECUREFILE lob requires ASSM

Action: Specify an ASSM tablespace for SECUREFILE lob. 43854, 0000, "Deprecated"

ORA-43855: SYNC and ASYNC cannot be used together

ORA-43856: Unsupported LOB type for SECUREFILE LOB operation

Cause: A LOB that is not a SECUREFILE was used in a SQL statement or in a call where a SECUREFILE LOB was expected.

Action: Convert the LOB to a SECUREFILE LOB or do not use this keyword or call.

ORA-43857: Parameter Error

Cause: Attempt to modify a LOB with an invalid parameter.

Action: Fix parameters and retry the operation.

ORA-43858: Use CACHE LOGGING SYNC as default for SECUREFILE LOBs

ORA-43859: CONTENTTYPE string too long

Cause: Length of CONTENTTYPE string exceeded the defined maximum.

Action: Modify length of CONTENTTYPE string and retry operation.

ORA-43860: Lob fragments metadata has reached predefined limit

ORA-43861: Provided lob mark offset had been erased

ORA-43862: CONTENTTYPE buffer length incorrect

Cause: Length of CONTENTTYPE buffer less than defined constant.

Action: Modify length of CONTENTTYPE buffer and retry operation.

ORA-43863: securefile inode preallocation percentage

ORA-43864: securefile inode preallocation mode

ORA-43865: SECUREFILE LOBs WGC layer fast callbacks disabling event

ORA-43866: SECUREFILE LOBs RCI layer fastpath inline read disabling event

ORA-43869: SECUREFILE LOBs WGC layer crash testing event

ORA-43870: SECUREFILE lobs WGC layer tracing event

ORA-43871: SECUREFILE LOBs WGC layer in-memory read disabling event

ORA-43872: SECUREFILE LOBs WGC layer shared I/O buffer disabling event

ORA-43873: SECUREFILE LOBs WGC layer shared I/O buffer forcing event

ORA-43874: SECUREFILE LOBs WGC layer SGA buffer forcing event

ORA-43875: SECUREFILE lobs transformation layer tracing event

ORA-43876: SECUREFILE lob transformation feature "<varname>string</varname>" not yet supported

ORA-43877: SECUREFILE LOB memory pressure simulation event

ORA-43878: LOB feature unsupported below compatible setting 11.2.0

Cause: An 11.2 LOB feature was specified when the database was operating at a compatible setting lower than "11.2.0".

Action: Upgrade the database compatible setting to "11.2.0" or higher to enable the desired new features.

ORA-43879: SECUREFILE lobs deduplication facility testing event

ORA-43880: SECUREFILE lobs rci flushing event

ORA-43881: SECUREFILE lobs delta update debugging event

ORA-43882: SECUREFILE LOBs delta update testing event

ORA-43883: SECUREFILE LOBs delta update invalid operation

Cause: Invalid delta update operation was issued on LOB. This includes operation beyond LOB length; move operation with destination offset inside move interval.

Action: Check operation parameters for validity.

ORA-43884: SECUREFILE LOB mapping service debugging event

ORA-43896: SECUREFILE internal event for CTX testing

ORA-43897: SECUREFILE internal event for SQL

ORA-43898: SECUREFILE lobs tracing event

ORA-43899: SECUREFILE lobs inode tracing event

ORA-43900: SECUREFILE lob feature "<varname>string</varname>" not yet supported

ORA-43901: sampling repeatability event

ORA-43902: qksDestroyServices debugging event

ORA-43903: always result-cache node

ORA-43904: temp table event

ORA-43905: result cache tracing event

ORA-43906: result cache service (qesrc) validation event

ORA-44001: invalid schema

Cause: The schema for the given schema name did not exist.

Action: Provide a valid schema name.

ORA-44002: invalid object name

Cause: The input parameter string was not a qualified SQL identifier of an existing SQL object.

Action: Make sure the string matches an existing SQL object that is accessible by the current schema.

ORA-44003: invalid SQL name

Cause: The input parameter string was not a valid simple SQL name.

Action: Check with the DBMS_ASSERT spec to verify that the parameter string is a valid simple SQL name.

ORA-44004: invalid qualified SQL name

Cause: The input parameter string was not a valid qualified SQL name.

Action: Check with the DBMS_ASSERT spec to verify that the parameter string is a valid qualified SQL name.

ORA-44101: invalid priority

Cause: The priority level given by the user was invalid.

Action: See UTL_MAIL for valid priority values and change the priority parameter accordingly.

ORA-44102: unknown or unsupported algorithm

Cause: An unknown or unsupported authentication or compression algorithm was encountered.

Action: Check the authentication or compression algorithm. Use one that is supported by Oracle.

ORA-44201: cursor needs to be reparsed

ORA-44202: dump kcdcCheckAcrMap information

ORA-44203: timeout waiting for lock on cursor

Cause: A timeout occurred while waiting for a cursor to be compiled. This is usually caused by the SQL parse requiring access to system resources which are locked by concurrently executing sessions.

Action: Investigate possible causes of resource contention. If necessary, contact support for additional information on how to diagnose this problem.

ORA-44204: library cache object <varname>string</varname>.<varname>string</varname> found in an in-flux state

Cause: The pseudo-cursor depends on a table which was found to be obsolete due to metadata invalidation of the library cache object.

Action: Contact Oracle Support Services for additional information.

ORA-44301: NULL service name is not permitted

Cause: The service name argument was found to be NULL.

Action: Provide a non-NULL service name.

ORA-44302: NULL network name is not permitted

Cause: The network name argument was found to be NULL.

Action: Provide a non-NULL network name.

ORA-44303: service name exists

Cause: This service name was already in existence.

Action: Provide a new unique service name.

ORA-44304: service <varname>string</varname> does not exist

Cause: The specified service was not in existence.

Action: Provide a valid service name.

ORA-44305: service <varname>string</varname> is running

Cause: The specified service was running.

Action: This message is informational only.

ORA-44306: service name exceeds maximum length of <varname>string</varname>

Cause: The service name was too long.

Action: Use a shorter service name.

ORA-44307: network name too long

Cause: The network name, excluding the domain, was too long.

Action: Use a shorter network name.

ORA-44308: services not initialized

ORA-44309: unknown failure

ORA-44310: maximum number of services exceeded

Cause: The maximum number of services has been reached.

Action: None

ORA-44311: service <varname>string</varname> not running

Cause: The specified service was not running.

Action: This message is informational only.

ORA-44312: database closed

Cause: The database was closed.

Action: Open the database and retry the operation.

ORA-44313: instance name invalid

Cause: The instance name argument was not valid.

Action: Provide a valid instance name.

ORA-44314: network name already exists

Cause: The network name was already in existence.

Action: Use an alternate network name.

ORA-44315: all service attributes null

Cause: All attributes specified were null.

Action: At least one attribute must be non-null.

ORA-44316: invalid argument

Cause: Invalid argument supplied.

Action: Supply a valid argument.

ORA-44317: database open read-only

Cause: The database is open read-only.

Action: Close the database and reopen it read/write before trying again.

ORA-44318: exceeded maximum SERVICE_NAMES length

Cause: The total length of all running service network names exceeded the maximum allowable length.

Action: Stop another service to start this one.

ORA-44319: Cannot delete AQ service

Cause: Specified AQ service belonged to a queue.

Action: Delete the queue.

ORA-44320: cannot modify global service

Cause: Could not modify the global service because of insufficient privileges or you were trying to modify the global service attribute.

Action: Use global service management to modify a global service.

ORA-44321: cannot read command line from trace file <varname>string</varname>

Cause: Trace file could not be read.

Action: Make sure trace file exists and contains valid raw trace data.

ORA-44322: invalid file name '<varname>string</varname>'

Cause: A NULL or zero length file name was specified.

Action: Correct the file name to be a nonzero length string.

ORA-44323: negative <varname>count</varname> '<varname>string</varname>' to <varname>string</varname> option

Cause: The given count was a nonpositive number.

Action: Provide a positive count number.

ORA-44324: no <varname>count</varname> argument to <varname>string</varname> option

Cause: Count number was missing for the option.

Action: Provide a count number to the option.

ORA-44325: no entry points found in trace file <varname>string</varname>

Cause: The given trace symbol was not found.

Action: None

ORA-44326: no <varname>symbol</varname> argument to <varname>string</varname> option

Cause: <varname>symbol</varname> argument to -[un]trace option was missing.

Action: Provide <varname>symbol</varname> argument to -[un]trace option.

ORA-44327: no <varname>filename</varname> argument to <varname>string</varname> option

Cause: <varname>filename</varname> argument to the option was missing.

Action: Provide <varname>filename</varname> argument to the option.

ORA-44328: unsupported version number: <varname>string</varname>

Cause: Version of the trace file was not supported.

Action: Provide supported version of trace file.

ORA-44401: turn off DBA privilege

ORA-44402: restore DBA privilege

ORA-44403: invalid value specified for flag parameter

Cause: Mutually exclusive values were specified for the flag parameter.

Action: Internal error. Contact Oracle Support Services.

ORA-44404: upicui2 client function requires Oracle server of 10.2 or higher

Cause: A 10.2 or higher client is being used with an older Oracle server.

Action: Use an Oracle server with the same version as the client.

ORA-44405: parse enabled for segment attributes of IOT mapping table

ORA-44406: preserve HAKAN factor for ALTER TABLE ADD CONSTRAINT

ORA-44410: XMLAGG function exceeds system limits

ORA-44411: Invalid ACL: START_DATE cannot be larger than END_DATE for all ACE

Cause: The END_DATE was smaller than the START_DATE in one of the ACE's in this ACL.

Action: Set all END_DATE to be larger than or equal to the START_DATE in each of the ACE's in this ACL.

ORA-44412: Invalid ACL: Cyclic ACL inheritance is not allowed

Cause: A cycle was formed by ACL inheritance.

Action: Check the ACL inheritance and break the cycle by removing some ACL inheritance. GG function exceeds system limits.

ORA-44413: Invalid ACL: Security class of parent ACL must be an ancestor of security class of child ACL

Cause: Security class of parent ACL was not an ancestor of security class of child ACL

Action: Change the security class of parent ACL to be an ancestor of security class of child ACL.

ORA-44414: Invalid ACL: Parent ACL '<varname>string</varname>' does not exist

Cause: The path to the parent ACL was not a valid resource.

Action: Change the parent ACL of this resource or create the parent ACL at the specified location.

ORA-44415: Invalid ACL: Undefined privileges

Cause: An undefined privilege was found in an ACE in the ACL.

Action: Make sure the privilege is defined in the security class as specified in the ACL.

ORA-44416: Invalid ACL: Unresolved principal '<varname>string</varname>'

Cause: An unresolved principal is found in an ACE in the ACL.

Action: Make sure the principal is a valid user or role in the system.

ORA-44417: Invalid ACL: Invalid ACLID

Cause: The specified ACLID did not point to a valid ACL document.

Action: Make sure the ACLID points to a valid ACL document.

ORA-44418: Invalid ACL: <varname>string</varname>

Cause: The specified ACL did not meet the validation requirements of the constraining ACL.

Action: Ensure ACL meets the validation requirements of the constraining ACL.

ORA-44421: cannot DISALLOW NONSCHEMA without a SCHEMA clause

Cause: If no SCHEMA clause (explicit schema or ANYSCHEMA) was specified, nonschema data cannot be disallowed.

Action: Remove DISALLOW NONSCHEMA or add some SCHEMA clause.

ORA-44422: nonschema XML disallowed for this column

Cause: An attempt was made to insert nonschema based XML documents in a binary XML column that disallows nonschema data.

Action: Insert only schema-based documents or alter the column to ALLOW NONSCHEMA data.

ORA-44423: XML Schema registered for BINARY cannot be used for CLOB/OBJ-REL

Cause: An attempt was made to use a XML Schema registered for binary usage as part of a CLOB or OBJ-REL clause.

Action: Specify a schema registered for CLOB or OBJ-REL use. Else specify BINARY XML storage for column.

ORA-44424: BINARY XML storage requires XML Schema registered for BINARY usage

Cause: An attempt was made to specify BINARY XML storage using an XML schema not registered for BINARY.

Action: Specify a schema registered for BINARY usage. Else specify CLOB or OBJ-REL storage for column.

ORA-44425: XML DB needs to be installed for creating an XMLType table or column

Cause: An attempt was made to create an XMLType table or column with out XML DB installed.

Action: Install XML DB.

ORA-44501: QMEL: Too much concurrency.

Cause: Too much concurrency

Action: Transient error, try again.

ORA-44502: QMEL: Lock not found.

Cause: Lock not found

Action: Check arguments

ORA-44503: QMEL: Lock Denied.

Cause: Lock denied

Action: None

ORA-44504: Resource Locked by Implicit Lock

Cause: The resource is locked by an implicit lock

Action: Implicit locks are normally caused by NFS locks. Refer to XDB Protocol guide for removing/obtaining information about implicit locks.

ORA-44505: QMEL: Invalid arguments.

Cause: Arguments to QMEL are not correct.

Action: None

ORA-44510: NFS: Internal server error

ORA-44511: NFS: Operation not supported

ORA-44512: NFS: Bad XDR

ORA-44513: NFS: Clientid is stale

ORA-44514: NFS: Invalid parameter

ORA-44515: NFS: Bad name argument

ORA-44516: NFS: No entry found

ORA-44517: NFS: Not a directory

ORA-44518: NFS: Is a dir

ORA-44519: NFS: resource exists

ORA-44520: NFS: No file handle

ORA-44521: NFS: Resource constraint

ORA-44522: NFS: Bad stateid

ORA-44523: NFS: Old stateid

ORA-44524: NFS: Access not allowed

ORA-44525: NFS: File not opened in correct mode

ORA-44526: NFS: Lock not supported

ORA-44527: NFS: No grace period

ORA-44528: NFS: Stale stateid

ORA-44529: NFS: Bad type

ORA-44530: NFS: Bad handle

ORA-44531: NFS: Attribute not supported

ORA-44532: NFS: Files not same

ORA-44533: NFS: Buffer too small

ORA-44534: NFS: Operation illegal

ORA-44535: NFS: No restore filehandle found

ORA-44536: NFS: Name too long

ORA-44537: NFS: Read only file system

ORA-44538: NFS: Handle stale

ORA-44539: NFS: Bad owner

ORA-44540: NFS: Client Id in use

ORA-44541: NFS: File locked

ORA-44542: NFS: current filehandle is a symbolic link

ORA-44550: NFS: Client disconnected

ORA-44600: checkpoint write in progress (<varname>string</varname> out of <varname>string</varname> steps complete)

ORA-44601: checkpoint read in progress (<varname>string</varname> out of <varname>string</varname> steps complete)

ORA-44602: pageout in progress (<varname>string</varname> out of <varname>string</varname> steps complete)

ORA-44603: pagein of transaction <varname>string</varname>.<varname>string</varname>.<varname>string</varname> in progress (<varname>string</varname> out of <varname>string</varname> steps complete)

ORA-44604: Barrier synchronization on DDL with XID <varname>string</varname>.<varname>string</varname>.<varname>string</varname> (waiting on <varname>string</varname> transactions)

ORA-44605: Unused event

ORA-44606: Supplemental logging test event

ORA-44607: Archive logging must be enabled.

Cause: Archive logging was not enabled.

Action: Enable archive logging on the database.

ORA-44700: Language '<varname>string</varname>' is not a valid language for a translation

Cause: Invalid language.

Action: The language must conform to IETF RFC 3066.

ORA-44701: Language not found for translation

Cause: The document had multiple translations and one of them did not have the xml:lang attribute.

Action: All translations must have the xml:lang attribute when multiple translations are present.

ORA-44702: Multiple translations found for language '<varname>string</varname>'

Cause: The document had multiple translations for a language.

Action: The document must contain only one translation per language for every translated element.

ORA-44703: Multiple source language translations found

Cause: The document had multiple source language translations.

Action: The document must contain only one source language translation for every translated element.

ORA-44704: XPath '<varname>string</varname>' does not uniquely identify a translated element

Cause: The given XPath pointed to multiple translated elements.

Action: The given XPath must uniquely identify a translated element.

ORA-44705: Must have xdb:maxOccurs='1' for translated elements

Cause: The value of xdb:maxOccurs was not '1' for a translated element.

Action: The value of xdb:maxOccurs must be '1' for a translated element.

ORA-44706: Must have xsd:maxOccurs='unbounded' for translated elements

Cause: The value of xsd:maxOccurs was not 'unbounded' for a translated element.

Action: The value of xsd:maxOccurs must be 'unbounded' for a translated element.

ORA-44707: No source language translation found

Cause: The document had no source language translation for a translated element.

Action: The document must contain exactly one source language translation for every translated element.

ORA-44708: Translations not supported for object relational storage

Cause: The storage type of the schema was object relational.

Action: Register the schema with storage type as clob or binary xml.

ORA-44709: Invalid schema definition for translated element

Cause: The schema definition for a translated element was invalid.

Action: A translated element must be a complex type with simple content which is a restriction or extension of xs:string.

ORA-44710: Malformed XLIFF document: <varname>string</varname>

Cause: The XLIFF document was malformed.

Action: Fix the error and try again.

ORA-44711: XPath refers to an untranslatable element

Cause: XPath pointed to an untranslatable element.

Action: XPath for this operation must refer to a translatable element.

ORA-44712: Invalid XPath in XLIFF document used for merging

Cause: XPath within trans-unit/id attribute was invalid.

Action: XPath within trans-unit/id attribute must point to a set of translations, not to a particular translation.

ORA-44713: XPath does not select all translations

Cause: XPath did not select all translations for a particular element.

Action: XPath must point to a set of translations, not to a particular translation.

ORA-44714: Fusion Security resources cannot be updated or deleted**ORA-44715: Event for XDB initialization**

ORA-44716: Fusion security resources cannot be added or deleted here**ORA-44717: First 7 positions (0-6) in the XDB repository is reserved for fusion security**

Cause: An attempt was made to add or add a resource to the XDB repository at a position reserved for fusion security.

Action: Give a position other than 0 to 6.

ORA-44718: Port conflict in XDB Configuration file

Cause: A port number specified in the XDB Configuration file conflicts with a port number used in the XDB Configuration file of the same non-consolidated database or the same Pluggable Database or a different Pluggable Database of the same consolidated database or the root container of the same consolidated database.

Action: Specify a different port number.

ORA-44730: XML Index <varname>string</varname> is not usable at the moment

Cause: The async XML Index could not be used since ORACLE is not open for query.

Action: Try the same query again when ORACLE is open for query, or use NO_XMLINDEX_REWRITE hint.

ORA-44731: Path <varname>string</varname> cannot be removed from the repository XML Index

Cause: The repository XML Index indexed one of the parent folders of the resource identified by given path.

Action: Try removing the parent folder from the repository XML Index.

ORA-44732: Path <varname>string</varname> cannot be removed from the repository XML Index

Cause: The repository XML Index did not index the resource identified by given path.

Action: Try removing a resource that is indexed by the repository XML Index.

ORA-44733: The repository XML Index cannot be dropped directly

Cause: DROP INDEX could not be used on the repository XML Index.

Action: Try using DBMS_XDB_ADMIN.DROPREPOSITORYXMLINDEX.

ORA-44734: Predicate Index on nodes with similar children not allowed

Cause: There was at least one node in the document with multiple similar children which was used in Predicate Indexing.

Action: Try removing Predicate Index on nodes with multiple similar children.

ORA-44735: Too many predicates

Cause: Number of predicates were more than limit.

Action: Try reducing number of predicates.

ORA-44736: Group name already existed

Cause: The group name specified already exists.

Action: Try a different group name.

ORA-44737: Parameter <varname>string</varname> did not exist.

Cause: The parameter name specified did not exist.

Action: Check the parameter name.

ORA-44738: Group <varname>string</varname> did not exist.

Cause: The group name specified did not exist.

Action: Check the group name.

ORA-44739: Cannot drop the last group.

Cause: An attempt was made to drop the last group in the index.

Action: Use the DROP INDEX statement instead.

ORA-44740: Parameter <varname>string</varname> is already registered.

Cause: The parameter name specified was already registered.

Action: Either drop the existing parameter or use a different parameter name.

ORA-44741: Cannot drop a group whose tables are shared by other group(s).

Cause: An attempt was made to drop a group whose tables are shared by other group(s).

Action: First drop group(s) with shared table(s) from this group.

ORA-44742: Cannot alter columns of a table that is shared by other group(s).

Cause: An attempt was made to add columns to, modify columns of, or drop columns from a table shared by other group(s).

Action: First drop group(s) with shared table(s) from this group and then proceed with this operation.

ORA-44743: Cannot alter columns of a dependent shared table.

Cause: An attempt was made to add columns to, modify columns of, or drop columns from a dependent shared table. One can only add columns to, modify columns of, or drop columns from the original shared table.

Action: Use the group name of the original shared table while executing this operation.

ORA-44744: Cannot have more than one drop, add or modify operations in an ALTER INDEX statement.

Cause: An attempt was made to have more than one add, modify, or drop column or group operations in the ALTER INDEX statement.

Action: Use multiple ALTER INDEX statements instead.

ORA-44745: Cannot add or drop columns to or from multiple tables.

Cause: An attempt was made to add or drop columns to or from multiple tables in a single ALTER INDEX statement.

Action: Use multiple ALTER INDEX statements instead.

ORA-44746: Missing XMLTABLE in GROUP clause.

Cause: An attempt was made to create or add a group without XMLTABLE.

Action: Add required XMLTABLE clause to the GROUP clause.

ORA-44747: An XMLIndex with a structured component cannot be specified with ASYNC.

Cause: An attempt was made to specify ASYNC parameter for an XMLIndex with a structured component.

Action: Use valid parameters for XMLIndex with a structured component.

ORA-44748: Invalid name for GROUP.

Cause: An attempt was made to create a GROUP with invalid name.

Action: Use a valid name for the GROUP.

ORA-44749: Missing PATH for the COLUMN.

Cause: An attempt was made to create a COLUMN without PATH.

Action: Specify PATH for the COLUMN definition.

ORA-44750: Cannot create secondary index on unstructured component of XMLIndex.

Cause: An attempt was made to create a secondary index on the unstructured component of an XMLIndex when the XMLIndex does not have an unstructured component.

Action: Alter XMLIndex to add an unstructured component.

ORA-44751: XML schema enumeration index is out of range

Cause: The enumeration item corresponding to the enumeration index could not be found in the XML schema.

Action: If the XML schema has been evolved, try restarting the client that performed the evolution.

ORA-44752: New element '<varname>string</varname>' in complex type '<varname>string</varname>' has the same qualified name as another element

Cause: The new element that was added to a complex type by in-place XML schema evolution had the same qualified name as another element in the same complex type or in one of its ancestor complex types.

Action: Try adding an element with a different qualified name.

ORA-44753: Change to minOccurs attribute of element '<varname>string</varname>' is illegal

Cause: The value of attribute minOccurs on an element could not be increased by in-place XML schema evolution.

Action: Do not increase the value of attribute minOccurs.

ORA-44754: Change to maxOccurs attribute of element '<varname>string</varname>' is illegal

Cause: The value of attribute maxOccurs on an element could not be decreased by in-place XML schema evolution.

Action: Do not decrease the value of attribute maxOccurs.

ORA-44755: Change to complexType property of element '<varname>string</varname>' is illegal

Cause: The complexType property on an element could not be changed by in-place XML schema evolution.

Action: Do not change the complexType property.

ORA-44756: Change to SQLType attribute of element '<varname>string</varname>' is illegal

Cause: The SQLType property on an element in a binary XML schema could not be changed by in-place XML schema evolution.

Action: Do not change the SQLType property.

ORA-44771: Invalid name for a container database.

Cause: The service operation failed.

Action: Check the name of the container database.

ORA-44772: Cluster Ready Services (CRS) operation failed

Cause: The CRS operation failed.

Action: Check the trace file and the CRS daemon log file for details.

ORA-44773: Cannot perform requested service operation.

Cause: The consolidated database was not open. The operation was not performed.

Action: Open the consolidated database.

ORA-44774: Pluggable database attribute cannot be changed.

Cause: The attempted operation was invalid for a consolidated database.

Action: PDB attribute of a service cannot be changed.

ORA-44775: Pluggable database service cannot be created.

Cause: The attempted pluggable database operation failed.

Action: Check the trace file for details.

ORA-44776: Pluggable database service cannot be deleted.

Cause: The attempted pluggable database operation failed.

Action: Check the trace file for details.

ORA-44777: Pluggable database service cannot be started.

Cause: The attempted pluggable database operation failed.

Action: Check the trace file for details.

ORA-44778: Invalid value for service attribute retention_time.

Cause: The attempted operation failed.

Action: The value for the service attribute 'retention_time' must be greater than the value of the service attribute 'replay_initiation_timeout'.

ORA-44779: Invalid value for service attribute replay_initiation_timeout.

Cause: The attempted operation failed.

Action: The value for the service attribute 'replay_initiation_timeout' must be greater than the value of the service attribute 'failover_delay'.

ORA-44780: Invalid value for service attribute commit_outcome.

Cause: The attempted operation failed.

Action: The value for the service attribute 'commit_outcome' cannot be disabled if the service attribute 'failover_type' has the value 'transaction'.

ORA-44781: Invalid value for service attribute aq_ha_notifications.

Cause: The attempted operation failed.

Action: The value for the service attribute 'aq_ha_notifications' cannot be disabled if the service attribute 'failover_type' has the value 'transaction'.

ORA-44782: Cluster Ready Services (CRS) service operation failed - reason: <varname>string</varname>.

Cause: The attempted CRS service operation failed.

Action: Check the trace file for details.

ORA-44783: The maximum number of runtime load balancing services exceeded.

Cause: The number of runtime load balancing services reached the maximum allowed.

Action: None

ORA-44784: Service cannot be deleted.

Cause: The attempted service operation failed.

Action: Internal services and the database service cannot be deleted.

ORA-44785: Service attribute commit_outcome cannot be specified for the database or Pluggable Database service.

Cause: The attempted service operation failed.

Action: None

ORA-44786: Service cannot be started.

Cause: The service was not imported successfully while plugging in the pluggable database.

Action: None

ORA-44800: Number of classifiers cannot be NULL

Cause: The num_classifiers argument was found to be NULL.

Action: Provide a non-NULL num_classifiers.

ORA-44801: NULL classifier list not permitted

Cause: The wlm_classifiers argument was found to be NULL.

Action: Provide a non-NULL wlm_classifiers.

ORA-44802: No new plan (classifier list) has been submitted

Cause: No new plan was created before submission.

Action: Create a new plan, followed by adding classifier & PC lists.

ORA-44803: Plan is in transition (about to be activated)

Cause: New plan was attempted to be created before activating the current plan.

Action: Completely submit the current plan and activate it.

ORA-44804: Plan is not created yet

Cause: A new plan was not created before submitting the Classifier and Performance Class lists.

Action: Call `dbms_wlm.create_plan` first to create the plan.

ORA-44805: No classifier is present

Cause: The classifier list contained no classifiers.

Action: Check the syntax of the classifier list.

ORA-44806: Extra classifiers are present in list

Cause: More classifiers were present in the list than specified.

Action: Only include the number of classifiers less than or equal to `num_classifiers` mentioned in `dbms_wlm.create_plan`.

ORA-44807: Performance Class name is too large

Cause: The Performance Class name was larger than 32 bytes.

Action: Rename the Performance Class to fit within 32 bytes.

ORA-44808: Work Request Class name is too large

Cause: The Work Request Class name was larger than 32 bytes.

Action: Rename the Work Request Class to fit within 32 bytes.

ORA-44809: No expression is present for classifier

Cause: This classifiers contained no expression. It should contain one more more expressions.

Action: Check syntax in the classifier list.

ORA-44810: No parameter is present for expression

Cause: This expression contained no paramaters or attribute values. It should contain one or more attribute values. Attributes can be `SERVICE_NAME`, `MODULE`, `ACTION`, `PROGRAM` or `USER`.

Action: Check syntax in the classifier list.

ORA-44811: Service name is too large

Cause: The service name mentioned in the parameter list was too large.

Action: Check the service name.

ORA-44812: Module name is too large

Cause: The module name mentioned in the parameter list was too large.

Action: Check the module name.

ORA-44813: Action name is too large

Cause: The action name mentioned in the parameter list was too large.

Action: Check the action name.

ORA-44814: Program name is too large

Cause: The program name mentioned in the parameter list was too large.

Action: Check the program name.

ORA-44815: User name is too large

Cause: The user name mentioned in the parameter list was too large.

Action: Check the user name.

ORA-44816: Number of Performance Classes is less than specified

Cause: The number of Performance Classes submitted were less than what was specified.

Action: Submit the full list of Performance Classes.

ORA-44817: Classifier list is too large

Cause: The length of the classifier list was greater than 4000 bytes.

Action: Break the list into two lists before submission.

ORA-44818: General failure

Cause: There was an unknown failure.

Action: Contact Oracle Support Services.

ORA-44819: Execution of this WLM function is denied

Cause: Either a WLM plan was being loaded from another instance, or the strict order of the PL/SQL calls for loading WLM plan was not followed.

Action: Check if another session is also concurrently trying to load a WLM plan. If that is not true, check the order in which you are making these PL/SQL calls to load your WLM plan.

ORA-44820: Number of Work Request Classes is less than specified

Cause: The number of Work Request Classes submitted were less than what was specified.

Action: Submit the full list of Work Request Classes.

ORA-44821: Number of classifiers is too large

Cause: A very large number (> 1024) of classifiers were requested.

Action: Submit a smaller (< 1024) number of classifiers.

**ORA-44822: QoS Resource Manager plan does not exist in database
"<varname>string</varname>"**

Cause: QoS Resource Manager plan did not exist in this database.

Action: Rerun CATPROC.SQL to create the plan.

ORA-44823: The QoS Resource Manager plan is not in use

Cause: The QoS Resource Manager plan was not in use.

Action: Correct the setting of the current Resource Manager plan and try again.

ORA-44824: Resource Manager is disabled

Cause: Resource Manager was turned off.

Action: Reenable the Resource Manager and retry the operation.

ORA-44825: Classifier plan does not match across instances

Cause: Classifier plan was not the same across instances.

Action: Resubmit the classifier plan and try again.

ORA-44826: Number of Performance Classes is more than what was specified.

Cause: The number of Performance Classes submitted were more than what was specified.

Action: Submit only the specified number of Performance Classes.

ORA-44827: Number of Performance Classes is too large

Cause: A large number (≥ 50) of Performance Classes were requested.

Action: Submit a smaller (< 50) number of Performance Classes.

ORA-44850: attempt to set a bad status <varname>string</varname> [<varname>string</varname>**]**

Cause: There was an internal Global Service Manager (GSM) error.

Action: Contact Oracle Support Services.

ORA-44851: "<varname>string</varname>" is not a valid name for a database

Cause: The specified database name was not valid.

Action: Provide a valid database name.

ORA-44852: maximum number of regions exceeded

Cause: The maximum number of regions was exceeded.

Action: Check the catalog to see if you can remove unused regions.

ORA-44853: maximum number of valid nodes for VNCR exceeded

Cause: The maximum number of nodes for valid node checking for registration (VNCR) was exceeded.

Action: Check the catalog to see if you can remove unused nodes.

ORA-44854: catalog has already been created

Cause: This database already contained the cloud catalog.

Action: Make sure that the specified database name is correct and, if yes, delete and re-create the catalog.

ORA-44855: cloud name is not valid

Cause: The specified cloud name contained invalid characters or was too long.

Action: Provide a valid (or shorter) cloud name.

ORA-44856: catalog service name is not valid

Cause: There was an internal Global Service Manager (GSM) error.

Action: Contact Oracle Support Services.

ORA-44857: cloud "<varname>string</varname>" does not exist

Cause: The specified cloud name did not match the one found in the catalog.

Action: Provide a valid cloud name.

ORA-44858: cannot remove catalog

Cause: The catalog contained one or more database or Global Service Manager (GSM) objects.

Action: Remove the database and GSM objects from the catalog.

ORA-44859: GSM "<varname>string</varname>" is already defined in the catalog

Cause: The specified Global Service Manager (GSM) was already in existence in the catalog.

Action: Check the specified object name.

ORA-44860: Region "<varname>string</varname>" was not found in the catalog.

Cause: The specified region was not found in the catalog.

Action: Check the specified object name.

ORA-44861: invalid use of REMOVE VNCR command

Cause: A valid node and group name were specified in the same command.

Action: Provide either a valid node or group name.

ORA-44862: region name and buddy region name cannot be the same

Cause: A region was specified as buddy for itself.

Action: Provide a valid buddy region name.

ORA-44863: region "<varname>string</varname>" is the last region and cannot be removed

Cause: The last region could not be removed from the cloud catalog.

Action: No action is required.

ORA-44864: cannot remove region because it is still being used by a GSM

Cause: The region contained databases or Global Service Manager (GSM).

Action: Remove the database and GSM objects from the region first.

ORA-44865: cannot remove GDS pool because it is still being used by a database or service

Cause: The Global Data Services (GDS) pool contained databases or services.

Action: Remove the databases and services from the GDS pool.

ORA-44866: pool "<varname>string</varname>" can only contain databases that belong to a Data Guard broker configuration

Cause: An attempt was made to add a database that does not belong to a Data Guard broker configuration to a Data Guard broker pool.

Action: None

ORA-44867: GDS pool already contains database "<varname>string</varname>"

Cause: The database or service was already in the Global Data Services (GDS) pool.

Action: None

ORA-44868: pool "<varname>string</varname>" is a pool that contains a Data Guard broker configuration; Databases that do not belong to a broker configuration cannot be added to this pool.

Cause: An attempt was made to add a database to a pool that contains a Data Guard broker configuration.

Action: None

ORA-44869: cannot build net service name with "<varname>string</varname>" because it is too long

Cause: The automatically created network service name was too long.

Action: Use a shorter network domain name.

ORA-44870: The "role" property is only supported for pools that contain a Data Guard broker configuration.

Cause: ROLE was specified for a pool that did not contain a Data Guard broker configuration.

Action: None

ORA-44871: This operation cannot be performed on PREFERRED_ALL service "<varname>string</varname>"

Cause: The service was created with the PREFERRED_ALL option.

Action: Do not perform this operation on a PREFERRED_ALL service.

ORA-44872: The same name "<varname>string</varname>" cannot be used for both source and target databases.

Cause: The source and target parameters of MOVE SERVICE were the same.

Action: Check the parameters and try again.

ORA-44873: database "<varname>string</varname>" already offers the service

Cause: An attempt was made to add a service to a database that already offered the service.

Action: No action is required.

ORA-44874: service "<varname>string</varname>" not offered by database "<varname>string</varname>"

Cause: An attempt was made to start or stop a service on a database that does not offer the service.

Action: None

ORA-44875: database-related service parameters exceed the maximum allowed parameter length (1024 bytes)

Cause: The specified database-related service parameters were not valid.

Action: Check the parameters and try again.

ORA-44876: service <varname>string</varname> is running

Cause: The specified service was running.

Action: This message is informational only.

ORA-44877: service "<varname>string</varname>" is not enabled on database "<varname>string</varname>"

Cause: The service could not be started on the database because it was disabled.

Action: Enable the service.

ORA-44878: The database current lag is too high for the service "<varname>string</varname>"

Cause: The service could not be started on the standby database because the database current lag exceeds the service lag.

Action: The standby current lag needs to be reduced.

ORA-44879: A region name has not been provided.

Cause: An attempt was made to add a new Global Service Manager (GSM) without providing a region. When there is more than one existing region, a region name must be provided.

Action: Check the syntax and rerun the command.

ORA-44880: catalog has not yet been created

Cause: An attempt was made to modify the catalog, but it does not yet exist.

Action: Create the catalog before trying to modify it.

ORA-44881: GDS pool is not empty

Cause: An attempt was made to add broker configuration to a Global Data Services (GDS) pool that already contained a database. This is not allowed.

Action: Either remove all databases from the Global Data Services (GDS) pool or create a new GDS pool.

ORA-44882: The name "<varname>string</varname>" is not valid for a GDS pool.

Cause: The name of the specified Global Data Services (GDS) pool was not valid.

Action: Check the name and try again.

ORA-44883: The name "<varname>string</varname>" is not valid for a region.

Cause: The name of the specified region was not valid.

Action: Check the name and try again.

ORA-44884: The name "<varname>string</varname>" is not valid for a service.

Cause: The name of the specified service was not valid.

Action: Check the name and try again.

ORA-44885: invalid VNCR name <varname>string</varname>

Cause: The name specified for the valid node checking for registration (VNCR) was not valid.

Action: Check the name and try again.

ORA-44886: The name "<varname>string</varname>" is not valid for a VNCR group.

Cause: The name specified for the valid node checking for registration (VNCR) group was not valid.

Action: Check the name and try again.

ORA-44887: The name "<varname>string</varname>" is not valid for a GSM.

Cause: The name of the specified Global Service Manager (GSM) was not valid.

Action: n/a

ORA-44888: The name "<varname>string</varname>" is not valid for a GSM user.

Cause: The name of the specified Global Service Manager (GSM) was not valid.

Action: Check the name and try again.

ORA-44889: Region "<varname>string</varname>" is already defined in the catalog.

Cause: The specified region was already in existence in the catalog.

Action: Check the specified region name.

ORA-44890: GDS pool "<varname>string</varname>" is already defined in the catalog.

Cause: The specified Global Data Services (GDS) pool was already in existence in the catalog.

Action: Check the specified pool name.

ORA-44891: GSM "<varname>string</varname>" was not found in the catalog

Cause: The specified region was not found in the catalog.

Action: Check the specified region name.

ORA-44892: GDS pool "<varname>string</varname>" was not found in the catalog.

Cause: The specified Global Data Services (GDS) pool was not found in the catalog.

Action: Check the specified pool name.

ORA-44893: Database "<varname>string</varname>" was not found in pool "<varname>string</varname>".

Cause: The specified database was not found in the pool.

Action: Check the specified database name.

ORA-44894: Service "<varname>string</varname>" was not found in the catalog.

Cause: The specified service was not found in the catalog.

Action: Check the specified service name.

ORA-44895: cannot remove region because it is still being used by a database

Cause: The region contained databases.

Action: Remove the database objects from the region.

ORA-44896: GDS pool already contains service "<varname>string</varname>"

Cause: The service was already in the Global Data Services (GDS) pool.

Action: None

ORA-44897: The "lag" property is only supported for pools that contain a Data Guard broker configuration.

Cause: LAG was specified for a pool that did not contain a Data Guard broker configuration.

Action: None

ORA-44898: The "failover_primary" property is only supported for pools that contain a Data Guard broker configuration.

Cause: FAILOVER_PRIMARY was specified for a pool that did not contain a Data Guard broker configuration.

Action: None

ORA-44899: VNCR name "<varname>string</varname>" is already defined in the catalog.

Cause: The specified valid node checking for registration (VNCR) name was already in existence in the catalog.

Action: Check the specified VNCR name.

ORA-44900: Identifier "<varname>string</varname>" is too long.

Cause: The specified identifier exceeded the maximum allowed length.

Action: Use a shorter identifier name

ORA-44901: Unable to resolve symbolic link "<varname>string</varname>"

Cause: The system is unable to resolve the specified symbolic link.

Action: Check the definition of the symbolic link to ensure that this refers to a valid resource.

ORA-44902: Too many steps in resolving symbolic link "<varname>string</varname>"

Cause: This error is raised when the system is unable to fully resolve a path with symbolic links within a reasonable number of steps. It could be due to cycles in definitions of symbolic links or very long chains of symbolic links to symbolic links.

Action: Remove any cycles in symbolic link definitions. If there are no cycles, reduce the length of chains of symbolic links to symbolic links.

ORA-44903: Cannot create hard link to specified resource

Cause: The system cannot create a hard link to the specified resource.

Action: Check the configuration parameter(s) to verify the restrictions on creating hard links to folder or non-folder resources.

ORA-44904: target path in document link exceeds maximum length

Cause: Target path length exceeds the maximum which can be stored to disk.

Action: Reduce target path to smaller length

ORA-44905: extended link type not supported

Cause: XLink type attribute is extended.

Action: Remove extended link, or replace with simple link.

ORA-44906: unable to resolve target in document link

Cause: target path does not resolve to valid resource.

Action: check validity of target path.

ORA-44907: can not delete with incoming hard document links

Cause: there is a hard document link with this resource as the target.

Action: query DOCUMENT_LINKS view to see which resource has a hard link to this resource. Change the document link in the source resource accordingly.

ORA-44908: found a loop in XInclude elements while expanding <varname>string</varname>

Cause: There is a loop in XInclude elements within the document.

Action: Remove the loop in XInclude elements.

ORA-44909: href attribute is required within XInclude element

Cause: The href attribute is missing within XInclude element.

Action: Add the href attribute.

ORA-44910: xpointer not supported within XInclude element

Cause: The xpointer attribute is specified within XInclude element.

Action: Remove the xpointer attribute.

ORA-44911: exceeded maximum depth of nested xinclude expansion

Cause: The depth of nested xinclude expansion has exceeded system limit.

Action: Reduce the depth of nested xinclude expansion.

ORA-44912: invalid or unsupported xpath expression <varname>string</varname>

Cause: The specified xpath is either invalid or unsupported in this context.

Action: Change the xpath expression.

ORA-44913: error while processing XInclude <varname>string</varname>

Cause: There was an error while processing the specified XInclude.

Action: Ensure that the XInclude attributes are correct.

ORA-44951: ASSM BasicFile Bulk reclaim event

ORA-44952: ASSM BasicFile Enqueue Hash reclaim event

ORA-45000: SecureFile feature unsupported below compatible 11.2.0.0.0

Cause: An 11gR2 LOB feature was specified when the database was operating at a compatible setting lower than 11.2.0.0.0.

Action: Upgrade the database compatible setting to 11.2.0.0.0 or higher to enable the desired new features.

ORA-45001: SecureFile archive implicit not allowed

Cause: A SecureFile was archived and implicit retrieval was not allowed.

Action: Retrieve the SecureFile with a Get operation.

ORA-45002: Content ID not found in the DBFS HS

Cause: The content ID was invalid or was already deleted.

Action: No action required.

ORA-45003: DBFS HS: Invalid checksum, potential data corruption

Cause: Potential data corruption.

Action: No action required.

ORA-45004: DBFS HS SBT Error

Cause: Error related to SBT Tape library.

Action: Refer to error log for more details.

ORA-45005: DBFS HS invalid store

Cause: Error related to DBFS HS Store.

Action: Check that the store name and store parameters are valid values.

ORA-45053: Internal Debugging Event

ORA-45097: SECUREFILE LOBs DBFS HS streaming test event

ORA-45098: SECUREFILE LOBs DBFS HS debug event

ORA-45099: SECUREFILE LOBs DBFS HS test event

ORA-45300: internal primary-side LogMiner tracing event

ORA-45400: operation not permitted on current database

Cause: An operation was not permitted to start because the database role is not supported.

Action: Attempt the operation on the primary database. If the primary database has recently switched to a logical standby database, and an error has occurred, reexecute the DBMS_ROLLING.SWITCHOVER procedure on the former primary database until successful completion of the operation.

ORA-45401: upgrade plan is already active

Cause: An upgrade plan was already active.

Action: The existing plan must first be destroyed by calling DBMS_ROLLING.DESTROY_PLAN.

ORA-45402: LOG_ARCHIVE_CONFIG must contain the DG_CONFIG attribute

Cause: The DG_CONFIG attribute was missing from the LOG_ARCHIVE_CONFIG parameter.

Action: Configure this parameter with the DG_CONFIG attribute before performing DBMS_ROLLING operations.

ORA-45403: database <varname>string</varname> must be specified in DG_CONFIG

Cause: The specified database was not found in the DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG parameter.

Action: Add the specified database to the DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG parameter.

ORA-45404: target version is incompatible

Cause: The configured target software version was incompatible with a DBMS_ROLLING administered upgrade.

Action: Use alternative upgrade methods.

ORA-45405: A rolling upgrade operation is already in progress.

Cause: A DBMS_ROLLING operation was already in progress. Only one operation is permitted at a time.

Action: Wait for the operation to complete, or query the PID column of DBA_ROLLING_STATUS view to identify the active process.

ORA-45406: operation completed with warnings

Cause: An operation succeeded but warnings were generated.

Action: Consult the DBA_ROLLING_EVENTS view for the list of warnings.

ORA-45407: operation encountered a query error

Cause: An internal database query failed.

Action: Consult the DBA_ROLLING_EVENTS and DBA_ROLLING_PLAN views to identify the error code and instruction that caused the failure.

ORA-45408: parameter name is unknown

Cause: The specified parameter could not be modified because the parameter name was not recognized.

Action: Verify that the parameter is among the available parameters listed in DBA_ROLLING_PARAMETERS view.

ORA-45409: parameter value is invalid or out of bounds

Cause: The specified parameter could not be modified because its value was invalid or out of bounds.

Action: Consult the DBA_ROLLING_PARAMETERS view to obtain the valid range of values for the associated parameter.

ORA-45410: parameter may not be modified

Cause: The specified parameter could not be modified.

Action: Internal parameters may not be modified through the DBMS_ROLLING.SET_PARAMETER procedure. If the parameter is a user parameter, the parameter is no longer meaningful at the current phase of the upgrade.

ORA-45411: operation requires additional arguments

Cause: An operation has failed because one or more arguments were not supplied.

Action: Retry the operation with all required arguments.

ORA-45412: parameter scope argument is unknown

Cause: An operation has failed because the database unique name provided in the scope argument was not known.

Action: Verify that the database unique name exists in the DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG parameter.

ORA-45413: parameter has no default value

Cause: The specified parameter could not be reverted back to its default value because the default value did not exist.

Action: The parameter must be set to an explicit value.

ORA-45414: could not connect to a remote database

Cause: Connections to one or more databases failed.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the involved databases and the specific error codes.

ORA-45415: instruction execution failure

Cause: A rolling upgrade operation has halted due to the failure of one or more required upgrade instructions.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the active instructions and their associated error codes.

ORA-45416: operation cannot start until plan rebuild

Cause: An operation was not permitted to start due to recent parameter modifications which required a rebuild of the upgrade plan.

Action: Call the DBMS_ROLLING.BUILD procedure to rebuild the upgrade plan.

ORA-45417: operation not permitted since current phase was not <varname>string</varname>

Cause: An operation was not permitted to start because the upgrade was in a different phase.

Action: Call the DBMS_ROLLING procedure associated with the current phase.

ORA-45418: database is not running the higher version RDBMS

Cause: A rolling upgrade instruction has failed because a database was not running the correct target RDBMS version.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending databases and restart them on the higher version binaries.

ORA-45419: DB_UNIQUE_NAME parameter must be specified

Cause: The DB_UNIQUE_NAME parameter was not configured.

Action: Configure the DB_UNIQUE_NAME parameter.

ORA-45420: return TNS service was not found

Cause: An instruction failed because a Transparent Network Substrate (TNS) service name for return communication was not found on a remote database.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending database or databases.

ORA-45421: database type is not supported by rolling upgrade

Cause: One or more databases specified in the DG_CONFIG attribute was incompatible with a DBMS_ROLLING administered upgrade.

Action: Disable the databases from the upgrade configuration by setting their associated INVOLVEMENT parameters to a value of NONE, and rebuild the upgrade plan.

ORA-45422: operation requires existing plan

Cause: An operation was not permitted to start because it required an active plan.

Action: Configure an upgrade plan by calling the DBMS_ROLLING.INIT_PLAN procedure.

ORA-45423: target database has mismatched DB_UNIQUE_NAME

Cause: A specified DB_UNIQUE_NAME attribute in a LOG_ARCHIVE_DEST_n parameter did not match the DB_UNIQUE_NAME at the target database.

Action: Ensure the DB_UNIQUE_NAME attribute and associated Transparent Network Substrate (TNS) service name or associated connect string has been configured properly.

ORA-45424: initialization parameter file has unexpected value

Cause: An instruction failed due to an initialization parameter file at a remote database that was found to be invalid.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending database.

ORA-45425: operation halted due to required user interaction

Cause: A rolling upgrade operation stopped because interaction is required.

Action: Consult the DBA_ROLLING_EVENTS view to identify the actions required.

ORA-45426: managed recovery process was not running

Cause: An operation failed due to the inactive managed recovery process at a remote database.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database. Restart the managed recovery process or resolve any errors that would prevent the managed recovery process from remaining active.

ORA-45427: logical standby Redo Apply process was not running

Cause: An operation failed due to the inactive logical standby Redo Apply process at a remote database.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database. Restart the logical standby Redo Apply process or resolve any errors that would prevent the logical standby Redo Apply process from remaining active.

ORA-45428: database was not in expected database role

Cause: An instruction failed due to a database operating in a database role which was not expected.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database. If the role change is due to a failover, the FAILOVER parameter must be set and the upgrade plan must be rebuilt before resuming the rolling upgrade.

ORA-45429: database was set to an invalid Data Guard protection mode

Cause: An instruction failed due to a database operating at a data protection mode that was not expected.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending database. Set the data protection mode accordingly based on the requirement as described in the instruction.

ORA-45430: flashback database was not enabled

Cause: An instruction failed due to a database that was found to not have Flashback Database enabled.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending database. Configure the database with adequate storage to support guaranteed restore points and enable Flashback Database.

ORA-45431: database was mounted or open in an invalid mode

Cause: An instruction failed due to a database that was mounted or open in an invalid mode.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending database and the expected mode. Restart the database in the expected mode.

ORA-45432: future primary database is not a physical standby database

Cause: An operation was not permitted because the future primary database is not a physical standby database.

Action: Specify a physical standby database as the future primary database.

ORA-45433: failover was detected on an unsupported database

Cause: An operation was not permitted because a failover was detected on a database which does not permit continuation of the rolling upgrade.

Action: Consult the DBA_ROLLING_EVENTS view to identify the unsupported database and abort the rolling upgrade.

ORA-45434: multiple failovers of the same type detected

Cause: An operation was not permitted because multiple failovers were detected on standby databases which protect a common target.

Action: Consult the DBA_ROLLING_EVENTS view to identify the offending databases. Remove the unwanted databases from the configuration and rebuild the upgrade plan.

ORA-45435: managed recovery process was running

Cause: An operation failed due to an active managed recovery process at a remote database.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database and stop the managed recovery process.

ORA-45436: logical standby Redo Apply process was running

Cause: An operation failed due to an active Redo Apply process at a remote database.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database and stop the Redo Apply process.

ORA-45437: database upgrade progress is inconsistent

Cause: An operation failed due to the discovery of the catalog upgrade progress on a database that was different from the progress value saved in the plan state.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database and remove the database from the configuration.

ORA-45438: database is not in mounted mode

Cause: An operation failed due to the discovery of a database which was not in mounted mode.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database. If the database was opened, restart the database in mounted mode.

ORA-45439: database is not in open read/write mode

Cause: An operation failed due to the discovery of a database which was not in open read/write mode.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database. Open the database in read/write mode.

ORA-45440: server parameter file has not been configured

Cause: An operation failed due to the discovery of a database which was not configured with a server parameter file that could be modified.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database. Ensure the database has been configured with a server parameter file, and that the parameter file can be modified.

ORA-45441: no databases eligible for rollback

Cause: A rollback operation could not start because the databases have not created the guaranteed restore point needed for rollback.

Action: A rollback is not necessary. The rolling operation can be cancelled by calling DBMS_ROLLING.DESTROY_PLAN.

ORA-45442: rollback is not permitted after a role change

Cause: A rollback operation was not permitted due to a prior role change event such as a switchover or failover.

Action: Reconfigure the Data Guard configuration manually.

ORA-45443: cannot quiesce replicated PL/SQL procedures

Cause: An operation failed because there were other processes executing long running replicated PL/SQL procedures.

Action: Increase the value of DICTIONARY_PLS_WAIT_TIMEOUT and retry the failed operation.

ORA-45480: operation status is unknown**ORA-45481: message is malformed****ORA-45482: no callback exists****ORA-45483: agent process is not ready****ORA-45484: agent process has been disabled****ORA-45485: directive <varname>number</varname> is invalid - reason: <varname>string</varname>****ORA-45486: database update progress is inconsistent**

Cause: An operation failed due to the discovery of the update progress on a database that was different from the progress value saved in the plan state.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database and remove the database from the configuration.

ORA-45489: required condition was not satisfied**ORA-45490: rolling upgrade trace event****ORA-45491: rolling upgrade debug event****ORA-45499: internal error - <varname>string</varname>****ORA-45500: Cannot remove a database from a pool that contains a broker configuration.**

Cause: An attempt was made to remove a database from a pool that contained a broker configuration.

Action: If the broker configuration has changed, use the SYNC command in gsmctl to synchronize the pool

ORA-45501: The maximum number of global service managers for this region has been exceeded.

Cause: A new Global Service Manager (GSM) was added to a region that already contained the maximum number of GSMs.

Action: The maximum has been reached. Do not attempt to add anymore GSMs.

ORA-45502: Insufficient privileges to perform this operation.

Cause: A Global Service Manager (GSM) command was executed by a non-privileged user.

Action: Either connect as a privileged user, or ask your GSM administrator to add you as a pool or GSM administrator.

ORA-45503: This database is already in cloud <varname>string</varname>.

Cause: An attempt was made to add a database to a cloud when it was already in another cloud.

Action: A database can only be in one cloud. Remove it from the other cloud first.

ORA-45504: Cannot relocate a preferred_all service.

Cause: The command 'relocate service' is not supported for preferred_all services.

Action: Do no attempt to relocate a preferred_all service.

ORA-45505: The maximum number of services has been reached.

Cause: The hard limit for the number of global services has been reached.

Action: No more global services can be added without first removing a service.

ORA-45506: The maximum number of GDS pools has been reached.

Cause: The hard limit for the number of Global Data Services (GDS) pools has been reached.

Action: No more Global Data Services (GDS) pools can be added without first removing a pool.

ORA-45507: Region <varname>string</varname> does not have a buddy region.

Cause: The specified region did not have a buddy.

Action: This message is informational only. Consider using 'modify region' to add a buddy for this region.

ORA-45508: Database <varname>string</varname> does not have an assigned region.

Cause: The specified database did not have an assigned region.

Action: Use 'modify database' to assign a region to this database.

ORA-45509: Database <varname>string</varname> has an invalid status "<varname>string</varname>".

Cause: The specified database had an invalid status.

Action: Check that the account "gsmuser" has been enabled by the remote DBA, that you used the correct password for "gsmuser" when running "add database", and that there is an existing valid node check for registration (VNCR) entry for this database host.

ORA-45510: There is an outstanding GSM request for change number <varname>string</varname> created at <varname>string</varname>. GSM has failed to apply this request <varname>string</varname> times.

Cause: A change request originating from a gdsctl command was not applied after several minutes.

Action: Verify that the Global Service Manager (GSM) server is able to connect to all databases in the framework to apply the change.

ORA-45511: Service <varname>string</varname> does not have a preferred database.

Cause: The specified service did not have a preferred database. This can happen if the database was removed from the pool.

Action: Use 'modify service' to provide a preferred database for this service.

ORA-45512: Service <varname>string</varname> is a local only service which has an available database in region <varname>string</varname>, but does not have a preferred database in the same region.

Cause: The specified service did not have a preferred database in a region in which it had an available database.

Action: Use 'modify service' to provide a preferred database in this region for this service, or remove the available database in this region.

ORA-45513: Database <varname>string</varname> has no global services defined for it.

Cause: A database was added to the global data services framework, but no global services have been defined for it, or they have all been removed.

Action: This is an informational message. Consider defining a service for this database, or removing the database from the framework.

ORA-45514: Region <varname>string</varname> does not contain any databases.

Cause: A region was added to the global data services framework, but no databases were added to this region, or they have all been removed.

Action: This is an informational message. Consider adding a database to this region or removing the region.

ORA-45515: Region <varname>string</varname> does not contain any GSMs.

Cause: A region was added to the global data services framework, but no global services manager servers were defined for this region, or they have all been removed.

Action: This is a warning message. You are advised to define a GSM in this region for high availability.

ORA-45516: GDS pool <varname>string</varname> does not contain any databases.

Cause: The specified Global Data Services (GDS) pool did not contain any databases.

Action: This is an informational message. Consider adding databases to this pool or removing the pool from the global data services framework.

ORA-45517: GDS pool <varname>string</varname> does not contain any global services.

Cause: The specified Global Data Services (GDS) pool did not contain any global services.

Action: This is an informational message. Consider adding services to this pool or removing the pool from the global data services framework.

ORA-45518: Service <varname>string</varname> will not be started on logical/snapshot standby.

Cause: The specified service will not be started on a logical/snapshot standby.

Action: This is a warning message. Consider re-defining lag parameter to "any", if the service needs to be started on a logical/snapshot standby.

ORA-45519: Database pool <varname>string</varname> is empty; this operation cannot be performed on an empty pool.

Cause: The database pool does not contain any databases. Therefore this operation will have no effect.

Action: This is a warning message. Do not perform this operation on an empty database pool.

ORA-45520: A service with locality ANYWHERE cannot set region failover.

Cause: Service attributes ANYWHERE and REGION_FAILOVER are incompatible.

Action: Do not attempt to set REGION_FAILOVER on a service with locality ANYWHERE.

ORA-45521: A service with a primary role cannot set FAILOVER_PRIMARY.

Cause: A service with a primary role cannot set FAILOVER_PRIMARY.

Action: Do not attempt to set FAILOVER_PRIMARY on a service that has a primary role.

ORA-45522: LOCAL_ONLY service <varname>string</varname> cannot be relocated to a database in another region.

Cause: The specified service is LOCAL_ONLY and cannot be relocated to a database in a different region.

Action: Do not relocate a LOCAL_ONLY service to a database in another region.

ORA-45523: Warning: service <varname>string</varname> is already stopped.

Cause: The service was stopped already.

Action: None; this is only a warning message.

ORA-45524: must explicitly specify Global Data Services pool name because there could be multiple candidates

Cause: An attempt to have a default Global Data Services pool when multiple pools already coexist in the domain failed.

Action: Do not omit '-gdspool gdspool_name_list' when multiple pools exist

ORA-45525: A value of TRANSACTION was provided for the service parameter '-failovertime', but bad or nonexistent value was specified for service parameter '-retention'.

Cause: The command specified a value of TRANSACTION for the service parameter '-failovertime', and either did not provide a value for the parameter '-retention', or provided a value that was less than or equal to the value provided for the parameter '-replay_init_time'.

Action: If a service is created with a value of TRANSACTION for the parameter '-failovertime', then a value must be provided for the parameter '-retention', and that value must be greater than the value provided for the parameter '-replay_init_time'.

ORA-45526: A value of TRANSACTION was provided for the service parameter '-failovertime', but a bad or nonexistent value was specified for service parameter '-replay_init_time'.

Cause: The command specified a value of TRANSACTION for the service parameter '-failovertime', and either did not provide a value for the parameter '-replay_init_time', or provided a value that was less than or equal to the value provided for the parameter '-failoverdelay'.

Action: If a service is created with a value of TRANSACTION for the parameter '-failovertime', then a value must be provided for the parameter '-replay_init_time', and that value must be greater than the value provided for the parameter '-failoverdelay'.

ORA-45527: Database compatibility level was too low for use with Global Data Services (GDS).

Cause: The major database compatibility level is below 12. The Global Data Services (GDS) feature requires that the database compatibility level of all participating databases be at 12 or above.

Action: In order to use this database for Global Data Services (GDS), an upgrade must be completed so that its major compatibility level is at 12 or above.

ORA-45528: Service <varname>string</varname> has not been globally started.

Cause: An attempt was made to start the service in a specific database without first starting it globally.

Action: Start the service globally by using 'start service' command without specifying the '-database' parameter.

ORA-45529: Database has not been configured to use an SPFILE.

Cause: The database was not configured to use an SPFILE. This is required before it can be used within a Global Data Services (GDS) framework.

Action: Reconfigure the database to use an SPFILE and attempt the action again.

ORA-45530: A local service with the same name already exists.

Cause: An attempt was made to create a global service with the same name as an existing local service.

Action: Use a different service name or delete the existing local service.

ORA-45531: This database is already in another Global Data Services (GDS) framework.

Cause: An attempt was made to create a Global Data Services (GDS) catalog on a database that was already in another GDS framework.

Action: Remove this database from the other framework before using it as a Global Data Services (GDS) catalog.

ORA-45532: This database is already a catalog for another Global Data Services (GDS) framework.

Cause: An attempt was made add a database to a Global Data Services (GDS) framework, but it was already a catalog database for another framework.

Action: Do not attempt to to add a Global Data Services (GDS) catalog to another GDS framework.

ORA-45533: Service <varname>string</varname> is already being modified from another GDSCtl session.

Cause: The specified service was already in the process of being modified.

Action: Wait until any other service modifications have completed. If this problem persists, contact Oracle Support Services.

ORA-45534: There is a running GSM (Global Service Manager) connected to the catalog.

Cause: This command could not be executed while there were running GSM (Global Service Manager) servers connected to the catalog.

Action: Shut down all GSM servers before running this command.

ORA-45535: Catalog version cannot be determined.

Cause: The version of the GDS (Global Data Services) catalog could not be determined.

Action: Contact Oracle Support Services.

ORA-45536: This version of GDSCtl is not compatible with the GDS (Global Data Services) catalog.

Cause: The version of GDSCtl being used was not compatible with the current GDS catalog.

Action: Refer to the documentation for compatible versions and upgrade or downgrade GDSCtl or the GDS catalog.

ORA-45537: This version of GSM (Global Service Manager) is not compatible with the GDS (Global Data Services) catalog.

Cause: The version of GSM being used was not compatible with the current GDS catalog.

Action: Refer to the documentation for compatible versions and upgrade or downgrade GSM or the GDS catalog.

ORA-45538: The database version is not compatible with the GDS (Global Data Services) catalog.

Cause: The version of the database being added was not compatible with the GDS catalog.

Action: Refer to the documentation for compatible versions and upgrade or downgrade the database or the GDS catalog.

ORA-45539: Database <varname>string</varname> has already been added to another pool.

Cause: An attempt was made to add a database to a pool, but this database has already been added to another pool.

Action: Do not attempt to add a database to two different pools.

ORA-45540: Call to SRVCTL failed with status <varname>string</varname>, errors: <varname>string</varname>.

Cause: An attempt to call the SRVCTL command line failed with the specified errors.

Action: Refer to the Oracle Real Application Clusters (Oracle RAC) documentation and resolve the problems reported by SRVCTL.

ORA-45541: Parameters "-serverpool" and "-cardinality" are invalid for administrator-managed Oracle RAC databases.

Cause: The service command stipulated -serverpool or -cardinality but this database was an administrator-managed Oracle RAC database, which does not recognize these parameters.

Action: Do not use -serverpool or -cardinality on administrator-managed Oracle RAC databases.

ORA-45542: Parameters "-serverpool", "-cardinality", and "-instances" are invalid for non-Oracle RAC databases.

Cause: The service command stipulated -serverpool, -cardinality, or -instances but this database was a non-Oracle RAC database, which does not recognize these parameters.

Action: Do not use -serverpool, -cardinality, or -instances on non-Oracle RAC databases.

ORA-45543: Parameter "-instances" is invalid for policy-managed Oracle RAC databases.

Cause: The service command stipulated -instances, but this database was a policy-managed Oracle RAC database, which does not recognize this parameter.

Action: Do not use -instances on policy-managed Oracle RAC databases.

ORA-45544: An invalid weight string was provided for manual override of runtime load balancing.

Cause: The string provided by GDSCTL to override runtime load balancing with manual region weights was badly formed.

Action: Retry the command. If the problem persists, contact Oracle Support Services.

ORA-45545: cannot delete all remaining instances

Cause: This command would delete all remaining instances from the : service, leaving the service in an invalid state.

Action: Do not provide an instance list that would delete all instances.

ORA-45546: cannot create process to run SRVCTL

Cause: There was a problem creating a new process to run SRVCTL from the command line.

Action: Check the Oracle alert log on the Oracle database server machine and rectify the problem on the server.

ORA-45547: A call to SRVCTL failed with error <varname>string</varname> because of bad parameters.

Cause: The command-line execution of SRVCTL failed because of bad parameters.

Action: Check the database server traces and contact Oracle Support Services.

ORA-45548: The catalog database can be downgraded, downgrading a catalog database after making changes is not advised.

Cause: This is a warning message only. This command required catalog changes and the 'compatible' database parameter indicated that the database could be downgraded. Downgrading a catalog database after making catalog changes is not advised and may cause data loss in the catalog.

Action: Make your database upgrade permanent by updating the 'compatible' database parameter before using GDSCCTL commands that will alter the catalog.

ORA-45549: Catalog changes are not possible without a running GSM at the current version.

Cause: This command required catalog changes, which are not allowed unless there is at least one Global Service Manager (GSM) server running at the current version.

Action: Start a GSM server that is running the current version of the software. If there are none, upgrade at least one existing GSM or add a new one at the current version.

ORA-45550: service does not exist

Cause: An attempt was made to start a service that did not exist on the target database.

Action: None. This error was caught by the Global Service Manager (GSM), and the service was created automatically.

ORA-45551: Instance <varname>string</varname> was not in the instance list for this database.

Cause: An attempt was made to delete an instance from this database but the instance was not in the existing instance list.

Action: None. This is a warning only. No action was taken for the named instance.

ORA-45552: None of the provided instances were in the instance list for this database.

Cause: The provided instance list did not contain any valid instances, or the existing instance list for the catalog was empty.

Action: Check the list of instances and run the command again if necessary.

ORA-45553: Service <varname>string</varname> does not have any instances defined for database(s) <varname>string</varname>.

Cause: An attempt was made to start a service on an administrator-managed Oracle RAC database, but there were no instances defined for the service on that database.

Action: Define instances for the service on all of the listed databases before attempting to start the service.

ORA-45554: There are no services that can start on database <varname>string</varname>.

Cause: An attempt was made to start all services for a given database but there were no services that could start.

Action: None. This is a warning message indicating that no action was taken for this command.

ORA-45555: The target database is not in the preferred or available list for this service.

Cause: The new database name provided was not in the list of preferred or available databases for the service.

Action: Either add the new database to the service or relocate the service to another database.

ORA-45556: A database name or service name was not provided.

Cause: A disable service request did not provide either a database name or a service name.

Action: Provide either a service name or a database name on the request.

ORA-45557: The database pool <varname>string</varname> does not contain a broker configuration.

Cause: An attempt was made to remove a broker configuration from a database pool that does not contain one.

Action: Rerun the command using a different database pool.

ORA-45558: There are no database pools in this catalog.

Cause: The catalog did not have any database pools defined.

Action: Create at least one database pool before running any other commands.

ORA-45559: Global service manager (GSM) <varname>string</varname> did not provide a version.

Cause: The GSM did not provide a version when attempting to connect to the catalog.

Action: This version of GSM is too old to connect to the catalog. Upgrade the GSM installation.

ORA-45560: Database <varname>string</varname> must contain at least one preferred instance.

Cause: The MODIFY command did not add any preferred instances or removed all existing preferred instances from this database.

Action: Provide at least one preferred instance, or do not attempt to remove all existing preferred instances.

ORA-45561: region name is required

Cause: A region name was not provided and was required because there were multiple regions in the catalog.

Action: Provide the region name on the command line.

ORA-45562: The Global Data Services catalog must be created in a root container.

Cause: The CREATE CATALOG command could not be executed on a container other than the root container.

Action: Use the root container to create the Global Data Services catalog.

ORA-45563: The pool database cannot be a pluggable database.

Cause: The ADD DATABASE command could not add a pluggable database.

Action: Provide the consolidated database name instead.

ORA-45564: condition not ready for GSM to acquire catalog lock.**ORA-45568: A 12.1.0.1 GDSCTL session cannot make changes in a higher versioned catalog. Upgrade GDSCTL or run this command from a different client.**

Cause: A Global Data Services Control (GDSCTL) command executed from a 12.1.0.1 GDSCTL client attempted to obtain a catalog lock in a higher versioned catalog.

Action: Upgrade GDSCTL or run this command from another client.

ORA-45600: Transparent Sensitive Data Protection (TSDP) internal error

Cause: There was an unexpected error during TSDP operation.

Action: Retry the command. If the problem persists, contact Oracle Support Services.

ORA-45601: Invalid data has been found and discarded. Valid data has been imported.

Cause: The names of invalid or nonexistent database objects were found in the XML input.

Action: Check the trace files for the names of the invalid objects found in the XML input.

ORA-45602: Schema <varname>string</varname> does not exist.

Cause: The schema specified did not exist.

Action: Specify a valid schema.

ORA-45603: Schema <varname>string</varname> does not contain table <varname>string</varname>.

Cause: The table specified did not exist in the schema.

Action: Specify a valid table.

ORA-45604: Column <varname>string</varname>.<varname>string</varname> does not exist in schema <varname>string</varname>.

Cause: The column specified did not exist.

Action: Specify a valid column.

ORA-45605: invalid sensitive type <varname>string</varname>

Cause: A sensitive type that was associated with one or more sensitive columns did not exist.

Action: Ensure the valid sensitive type is mentioned. If it is a new sensitive type, include the definition in the XML input.

ORA-45606: There was no sensitive column matching the given criteria.

Cause: There was no sensitive column matching the schema, table and column input.

Action: Ensure the valid column is mentioned.

ORA-45607: Column `<varname>string</varname>.<varname>string</varname>` in schema `<varname>string</varname>` has already been identified as sensitive.

Cause: The column was already identified as sensitive.

Action: Remove the column from the list of sensitive columns to be imported.

ORA-45608: There are no sensitive columns for source `<varname>string</varname>`.

Cause: No sensitive columns were found for the given source.

Action: Specify the valid source.

ORA-45609: Sensitive type `<varname>string</varname>` already exists.

Cause: The sensitive type already existed in the database.

Action: Specify a different name for the sensitive type.

ORA-45610: Sensitive type `<varname>string</varname>` does not exist.

Cause: The sensitive type did not exist in the database.

Action: Specify the valid sensitive type.

ORA-45611: cannot drop sensitive type `<varname>string</varname>`

Cause: The sensitive type that is associated with one or more columns could not be dropped.

Action: Ensure the sensitive type is not associated with any column before dropping it.

ORA-45612: A Transparent Sensitive Data Protection (TSDP) policy with name `<varname>string</varname>` already exists.

Cause: A TSDP policy with the same name was found.

Action: Specify a different name for the policy.

ORA-45613: invalid Oracle security feature

Cause: The Oracle security feature specified was not supported by Transparent Sensitive Data Protection.

Action: Specify a valid security feature.

ORA-45614: invalid Transparent Sensitive Data Protection (TSDP) policy `<varname>string</varname>`

Cause: The TSDP policy specified did not exist.

Action: Specify a valid policy.

ORA-45615: One or more sensitive column types already exist.

Cause: Importing the list of sensitive columns succeeded. However, one or more sensitive column types already existed in the database and were not imported again. The corresponding column is associated with the existing type.

Action: Check the trace files for details regarding which sensitive column types were not imported.

ORA-45616: Column `<varname>string</varname>.<varname>string</varname>` in schema `<varname>string</varname>` is not identified as sensitive.

Cause: An attempt was made to alter a column that was not identified as sensitive.

Action: Specify a valid column.

ORA-45617: Policy `<varname>string</varname>` is not associated with sensitive column type `<varname>string</varname>`.

Cause: The given policy was not associated with the sensitive column type.

Action: Specify the valid combination of policy and sensitive column type.

ORA-45618: Policy enforcement on one or more columns failed.

Cause: Policy enforcement on one or more columns encountered errors.

Action: Check the alert log for more details.

ORA-45619: Policy `<varname>string</varname>` is not enabled on column `<varname>string</varname>`.

Cause: The given policy was not enabled on the column.

Action: Specify a valid policy.

ORA-45620: Policy `<varname>string</varname>` is already associated with sensitive column type `<varname>string</varname>`.

Cause: The given policy was associated with the sensitive column type.

Action: Specify the valid policy and sensitive column type.

ORA-45621: Disabling of a policy on one or more columns failed.

Cause: Errors were encountered while disabling one or more policies.

Action: Check the alert log for more details.

ORA-45622: warnings generated during policy enforcement

Cause: The cause of this error could be one or more of the following: - The policy that was associated with the sensitive column type of a column was not enabled on the column because no subpolicy matched the column properties. - There was no policy associated with the sensitive column type of a sensitive column. - A conflicting redaction policy was enabled on the table.

Action: Check the alert log for more details.

ORA-45623: There is no policy associated with the sensitive column type.

Cause: There was no policy associated with the sensitive column type of a column.

Action: Check the alert log for more details.

ORA-45624: reenabling protection failed before import

Cause: Importing the list of sensitive columns failed because there was a problem in disabling protection on the columns. A subsequent attempt to reenable protection on the columns also failed.

Action: Check the alert log for more details.

ORA-45625: reenabling protection failed after import

Cause: Importing the list of sensitive columns succeeded. A subsequent attempt to reenable protection on the columns failed.

Action: Check the alert log for more details.

ORA-45626: Dropping of one or more columns from the list failed.

Cause: Disabling protection on the column failed.

Action: Check the trace files for more details.

ORA-45627: There are no sensitive columns of sensitive column type <varname>string</varname>.

Cause: There was no column for the given sensitive column type.

Action: Specify a valid sensitive column type.

ORA-45628: no policy associated with sensitive column type <varname>string</varname>

Cause: There was no policy associated with the sensitive column type.

Action: Specify a valid sensitive column type.

ORA-45629: policy <varname>string</varname> is enabled on one or more columns

Cause: A Transparent Sensitive Data Protection policy that was enabled on a column could not be altered or dropped.

Action: Disable the policy before altering or dropping the policy.

ORA-45630: Policy <varname>string</varname> is associated with one or more sensitive types.

Cause: A Transparent Sensitive Data Protection policy that was associated with a sensitive column type could not be dropped.

Action: Disassociate the policy from the sensitive column type before dropping the policy.

ORA-45631: Policy <varname>string</varname> does not have the given condition.

Cause: The given condition was not found for the policy.

Action: Specify the valid condition for the policy.

ORA-45632: default policy <varname>string</varname> cannot be altered

Cause: The default policy for Transparent Sensitive Data Protection could not be altered.

Action: Specify the valid policy to be altered.

ORA-45633: default policy <varname>string</varname> cannot be dropped

Cause: The default policy for Transparent Sensitive Data Protection could not be dropped.

Action: Specify the valid policy to be dropped.

ORA-45634: The security feature does not contain parameter <varname>string</varname>.

Cause: An invalid parameter was found for the given security feature.

Action: Verify the parameters input to the policy.

ORA-45635: invalid parameter found: <varname>string</varname>

Cause: An invalid parameter was found for the given security feature.

Action: Verify the parameters input to the policy.

ORA-45636: Input parameter for '<varname>string</varname>' is not valid.

Cause: Invalid input was given for the parameter.

Action: Enter valid input.

ORA-45637: invalid condition given for policy condition

Cause: The given condition was invalid.

Action: Enter a valid value for the condition.

ORA-45638: Policy <varname>string</varname> is enabled on one or more columns of sensitive type <varname>string</varname>.

Cause: A Transparent Sensitive Data Protection policy that was enabled on one or more columns of a particular sensitive type could not be disassociated from the sensitive type.

Action: Ensure the policy is not enabled on a column of the given sensitive type.

ORA-45639: discovery result cannot be imported

Cause: One or more columns from the XML input were already identified as sensitive by a different source.

Action: Check the trace file for a list of sensitive columns that were already identified as sensitive.

ORA-45640: Columns from SYS schema cannot be marked as sensitive.

Cause: A column in a SYS-owned table was being marked as sensitive.

Action: Ensure the column being marked as sensitive does not belong to SYS schema.

ORA-45641: cannot specify SEC_RELEVANT_COLS parameter

Cause: The SEC_RELEVANT_COLS parameter was specified while configuring a Transparent Sensitive Data Protection (TSDP) policy. SEC_RELEVANT_COLS_OPT parameter can be specified to indicate that TSDP should input the sensitive column as input to SEC_RELEVANT_COLS parameter at the time of enabling protection.

Action: Use the SEC_RELEVANT_COLS_OPT parameter to configure the security relevant column.

ORA-45900: data file number <varname>string</varname> already included as <varname>string</varname>

Cause: RMAN attempted to use the specified data file number, but this data file number was already in use by a different container database.

Action: Resolve the conflict and retry the command.

ORA-45901: File <varname>string</varname> is from different container identifier <varname>string</varname>; current <varname>string</varname>

Cause: This backup piece contained a data file that did not belong to the current container. Cataloging such a backup piece is not allowed.

Action: Connect to root or correct Pluggable Database and retry the command.

ORA-45902: cannot rename data file '<varname>string</varname>' - file was instantly restored.

Cause: During ALTER DATABASE RENAME or RMAN command SWITCH, the rename was specified for an instantly restored file.

Action: Rename the file that was not instantly restored or wait until the repopulation work is complete and the retry the command.

ORA-45903: catalog instantly restored data file copy <varname>string</varname> is not supported

Cause: This data file copy was instantly restored. Cataloging such file is not supported.

Action: Do not request to catalog instantly restored data file copy.

ORA-45904: instant restore of data file copy <varname>string</varname> is not supported

Cause: An attempt was made to create a data file copy in instant restore mode. This is not supported.

Action: Do not request to create data file copy in instant restore mode.

ORA-45905: deleting or restoring instantly restored data file <varname>string</varname> is not supported

Cause: This data file was instantly restored with the full option. A background process was repopulating the data file. An attempt to take the data file out of the process failed. Deleting or restoring such files is not supported.

Action: Retry the command later.

ORA-45906: moving instantly restored data file <varname>string</varname> is not supported

Cause: This data file was instantly restored. Moving such file is not supported.

Action: Do not request to move instantly restored data file.

ORA-45907: instant restore of data file <varname>string</varname> failed

Cause: During an instant restore, it was not possible to initialize the destination data file. There might be other messages on the error stack or alert log or trace file that indicate the specific reason for the failure. One common reason for this message is that the instant restore feature is disabled in this database.

Action: Check the other messages. If the situation cannot be resolved, then request a regular (not instant) restore.

ORA-46000 to ORA-46900

ORA-46000: invalid option to apply XS Data Security

Cause: The input value was not a valid option to apply XS Data Security.

Action: Use a valid option to apply XS Data Security.

ORA-46001: argument <varname>string</varname> is not valid for XS Data Security policies

Cause: An illegal argument value was used with DBMS_RLS to apply XS Data Security.

Action: Use the XS_DATA_SECURITY API to apply XS Data Security.

ORA-46003: Column "<varname>string</varname>" is not valid in data security policy for "<varname>string</varname>"

Cause: An invalid column was specified in the data security policy.

Action: Correct the column name in the policy.

ORA-46004: XS Data Security policy is not applied on <varname>string</varname>.<varname>string</varname>

Cause: A table without an XS Data Security policy applied was specified.

Action: Specify a table with one XS Data Security policy applied.

ORA-46005: multiple XS Data Security policies applied on <varname>string</varname>.<varname>string</varname>

Cause: A table with more than one XS Data Security policy applied was specified.

Action: Specify a table with one XS Data Security policy applied.

ORA-46006: cannot mix VPD column and XS column constraint policies

Cause: The object was protected by both VPD (Virtual Private Database) column security and XS column constraint policies.

Action: Disable or drop either the VPD or XS column policies.

ORA-46007: no XS Data Security policy associated with <varname>string</varname>.<varname>string</varname>

Cause: A table not associated with an XS Data Security policy was specified.

Action: Specify a table associated with an XS Data Security policy.

ORA-46008: multiple XS Data Security policies associated with <varname>string</varname>.<varname>string</varname>

Cause: A table associated with more than one XS Data Security policy was specified.

Action: Specify a table associated with one XS Data Security policy.

ORA-46019: User-built Static ACL Materialized View does not exist

Cause: A non-existing user-built Static ACL Materialized View was specified

Action: Create a user-built Static ACL Materialized View with the specified name or use system-built Static ACL views

ORA-46020: User-built Static ACL Materialized View has invalid schema

Cause: A user-built Static ACL Materialized View was specified but with an incorrect schema

Action: Create a user-built Static ACL Materialized View with at least the required columns with correct names and types

ORA-46021: Invalid refresh mode specified for Static ACL Materialized View

Cause: The refresh mode specified for the Materialized View supporting static ACLs is invalid.

Action: Specify either "ON DEMAND" or "ON COMMIT" for parameter refresh_mode

ORA-46022: Invalid name specified for user-built Static ACL Materialized View

Cause: The name specified for the Static ACL Materialized View (ACLMV) is reserved for system-built ACLMVs.

Action: Rename the user-built Static ACL Materialized View

ORA-46023: Application Session affinity is not the same as when the cursor was parsed.

Cause: The security context was changed and was different from the time the cursor was parsed.

Action: Make sure the security context is the same as when the cursor was parsed.

ORA-46024: The policy schema differs from the object schema for Static ACL Materialized View based XDS policy.

Cause: The specified object schema was different from the policy schema.

Action: Make sure the object and the policy have the same schema.

ORA-46025: no static rule specified in applied policy

Cause: The policy applied on the table did not contain any static rules.

Action: Ensure the applied policy has at least one static rule.

ORA-46026: creation of static ACL materialized view (MV) failed

Cause: Creation of the static access control list (ACL) materialized view (MV) failed.

Action: Check the trace file for detailed error information.

ORA-46049: XS Security - Data Security tracing event

ORA-46050: Oracle Real Application Security internal error.

Cause: There was an Oracle Database Real Application Security internal error.

Action: None

ORA-46051: invalid application user specified

Cause: An invalid application user was specified.

Action: Check the user name and execute the function or procedure again.

ORA-46052: invalid session ID specified

Cause: An invalid XS Security session ID was specified.

Action: Check the session ID and execute the function or procedure again.

ORA-46053: invalid cookie specified

Cause: An invalid XS Security session cookie was specified.

Action: Check the session cookie and execute the function or procedure again.

ORA-46054: invalid namespace specified

Cause: An invalid XS session application namespace or system-defined namespace was specified. Certain operations are not allowed on the system-defined namespace.

Action: Check the namespace and execute the function or procedure again.

ORA-46055: invalid role specified

Cause: An invalid application role was specified.

Action: Check the role and execute the function or procedure again.

ORA-46056: invalid namespace or attribute specified

Cause: An invalid XS Security application namespace or attribute was specified.

Action: Check the namespace and attribute, and execute the function or procedure again.

ORA-46057: namespace already exists

Cause: The specified XS Security application namespace was already in existence.

Action: Execute the function or procedure with a different namespace.

ORA-46058: attribute <varname>string</varname> is invalid

Cause: An invalid XS Security application namespace attribute was specified.

Action: Check the attribute and execute the function or procedure.

ORA-46059: Invalid ACL identifier specified

Cause: The specified ACL identifier is invalid.

Action: Check the ACL identifier, and execute the function or procedure again with a valid ACL ID.

ORA-46060: user name not specified

Cause: An application user was not specified.

Action: Execute the function or procedure with a user name.

ORA-46061: session ID not specified

Cause: XS Security session ID was not specified.

Action: Execute the function or procedure with a session ID.

ORA-46062: Namespace not specified

Cause: XS Security application namespace was not specified.

Action: Execute the function or procedure with a namespace.

ORA-46063: not attached to XS Security session

Cause: There was no attachment to an XS Security session.

Action: Attach to an XS Security session and execute the function or procedure.

ORA-46064: attribute name not specified

Cause: XS Security application namespace attribute name was not specified.

Action: Execute the function or procedure with an attribute name.

ORA-46065: attribute value not specified

Cause: XS Security application namespace attribute value was not specified.

Action: Execute the function or procedure with an attribute value.

ORA-46066: inactivity timeout not specified

Cause: XS Security session inactivity timeout was not specified.

Action: Execute the function or procedure with an inactivity timeout value.

ORA-46067: cookie not specified

Cause: XS Security session cookie was not specified.

Action: Execute the function or procedure with a cookie value.

ORA-46068: role not specified

Cause: XS Security role was not specified.

Action: Execute the function or procedure with a Role value.

ORA-46069: operation disallowed in an application session

Cause: Operations were blocked when an application session was attached.

Action: Try the operation later after the application session is detached.

ORA-46070: insufficient privileges

Cause: An attempt was made to execute an XS Security session function or procedure without the appropriate privilege.

Action: Ask the administrator to perform the operation or to grant the appropriate privilege.

ORA-46071: Error occurred in event handler <varname>string</varname>

Cause: An error or exception was returned by the error handling function invoked as part of the current operation.

Action: Check the trace files to identify the source of the error in the event handling function. Attempt the operation again after the error has been resolved. Also, abort attach session since the changes made to the session by the event handler might not have been recorded because of the error.

ORA-46072: Column width too small

Cause: The size of the column or variable used to store the output of this function or procedure is too small.

Action: Increase the size of the column or variable and try again.

ORA-46073: cookie already in use by another session

Cause: The specified XS Security session cookie was used by another XS Security session.

Action: Execute the function or procedure with a different cookie.

ORA-46074: session ID mismatch

Cause: The specified session ID does not match the attached session ID.

Action: Execute the function or procedure without a session ID or with a matching attached session.

ORA-46075: already attached to an application user session

Cause: The current database session is already attached to an application user session.

Action: Detach from the current application user session before attaching to the new application user session.

ORA-46076: The specified name length not within valid range.

Cause: The length of the name was shorter or longer than allowed limits.

Action: Try again with a new name with a length less than the maximum or more than the minimum allowed.

ORA-46077: Length of value too large

Cause: The specified attribute value is too large.

Action: Execute the function or procedure again with a smaller attribute value.

ORA-46078: Invalid event type specified

Cause: The event type specified is invalid.

Action: Reattempt the operation with an invalid event type.

ORA-46079: invalid external principal specified

Cause: An XS Security principal already existed with same name.

Action: Specify another external principal and try again.

ORA-46080: User status is currently inactive

Cause: User was marked inactive.

Action: Change status in enterprise directory to active and try again.

ORA-46081: User's password has expired

Cause: User password was expired.

Action: Change the user's password and update status to active.

ORA-46082: User's account was locked

Cause: The user's account is locked.

Action: Update user's status to Active in Enterprise Directory and try again.

ORA-46083: Cannot update the GUID of the principal

Cause: The GUID of the principal existed or the external source was not set.

Action: None

ORA-46084: cannot update or delete system-seeded XS objects.

Cause: An attempt was made to update or delete system-seeded XS objects.

Action: Do not attempt to update or delete system-seeded XS objects.

ORA-46085: Cannot add a proxy user when there was no proxy roles.

Cause: An attempt was made to add a proxy user to a target user when proxy roles did not exist.

Action: Verify the proxy roles and try again.

ORA-46086: Cannot detach from a direct-login XS session

Cause: An attempt was made to detach from an XS session created by a direct password login.

Action: To detach and destroy the XS session, logout of the DB session.

ORA-46087: Switching users not allowed for a proxy session

Cause: An attempt was made to switch users within a proxy session.

Action: Switch back to original user and try again.

ORA-46088: operation disallowed in application session

Cause: The specified operation was not allowed in an application session.

Action: None

ORA-46089: Unsupported verifier type

Cause: This verifier was not currently supported.

Action: Execute again with a different verifier type.

ORA-46090: Requested event handler not registered for the event

Cause: An attempt was made to update or delete nonregistered event handler.

Action: Please verify event handler name.

ORA-46091: Requested event handler already registered for the event

Cause: An attempt was made to re-register an event handler.

Action: Please verify event handler name.

ORA-46092: Requested event handler does not exist

Cause: An attempt was made to register a nonexistent event handler.

Action: Please verify event handler name or create the event handler.

ORA-46093: Cannot destroy a direct-login XS session

Cause: An attempt was made to destroy an XS session created by a direct password login.

Action: To destroy the XS session, logout of the DB session.

ORA-46094: XS user not effective

Cause: An attempt was made to create an XS session by a user that is not effective.

Action: To create the XS session, contact the administrator to check the effective dates on the user.

ORA-46095: Invalid error code supplied

Cause: An error code with an illegal value was supplied.

Action: Use an error code from the range of valid values.

ORA-46096: An attribute in a namespace cannot have both default value and first read event set.

Cause: Both default value and first read were specified in namespace template.

Action: Specify either default value or first read for the attribute in the namespace, but not both.

ORA-46097: The <varname>string</varname> did not exist in the <varname>string</varname>.

Cause: An attempt was made to delete an XS artifact which was not in existence within the scope.

Action: Check if the XS artifact was created or referenced within the scope.

ORA-46098: The <varname>string</varname> already exists in the <varname>string</varname>.

Cause: An attempt was made to create or refer to an XS artifact which was already in existence within the scope.

Action: Check if the XS artifact name is unique within the scope.

ORA-46099: Feature unsupported or not implemented

Cause: This feature was not supported or implemented.

Action: None

ORA-46100: XS session operations are disallowed during the execution of a definer's rights program unit.

Cause: An attempt was made to do an XS session operation that could modify the current security context inside a definer's rights program unit.

Action: Change the program unit to invoker's rights.

ORA-46101: Circular definition for aggregate privilege <varname>string</varname> in security class <varname>string</varname>

Cause: Definition of an aggregate privilege contained itself.

Action: Fix the aggregate privilege definition.

ORA-46102: Privilege <varname>string</varname> aggregated in security class <varname>string</varname> is not found

Cause: Definition of an aggregate privilege contained a privilege that is not defined in this or parent security classes.

Action: Fix the aggregate privilege definition.

ORA-46103: Circular definition for security class <varname>string</varname>

Cause: Security class definition inherited from itself through circular definition.

Action: Fix the security class definition.

ORA-46104: Security class <varname>string</varname> cannot inherit from base security classes

Cause: Definition of a security class specified an internal base security class as a parent security class.

Action: Remove the internal base security class from the "inherits-from" list.

ORA-46105: unable to load security class <varname>string</varname>

Cause: The specified security class did not exist.

Action: Create the security class.

ORA-46106: Missing parent security class for security class <varname>string</varname>

Cause: The specified security class did not have any parent security class.

Action: Add a parent security class using "inherits-from" tag.

ORA-46107: Privilege <varname>string</varname> not found in the associated security classes

Cause: The specified privilege did not exist in the security classes that were associated with the ACLs.

Action: Use a security class that contains the specified privilege.

ORA-46108: Invalid security class targetNamespace or name.

Cause: The security class targetNamespace attribute was either null or was longer than 4000 characters. Or, the security class name attribute was either null or was longer than 1024 characters.

Action: Provide valid targetNamespace and name attributes.

ORA-46109: Duplicate definition for privilege <varname>string</varname> in security class <varname>string</varname>.

Cause: The privilege name in the security class was previously defined in another security class.

Action: Provide a unique name for the privilege.

ORA-46110: XS Security - ACL tracing event

ORA-46111: Security Class <varname>string</varname> specified in the ACL <varname>string</varname> does not exist.

Cause: An invalid security class was specified in the ACL.

Action: Specify a valid security class.

ORA-46112: Duplicate security class name <varname>string</varname> under targetnamespace <varname>string</varname>

Cause: The security class name under the targetnamespace was also used for another security class.

Action: Provide a unique name for the security class.

ORA-46113: Invalid identity value for the XS operator parameter at position '<varname>string</varname>'

ORA-46114: ACL name <varname>string</varname> not found.

Cause: An invalid ACL name was used as one of the operator parameters.

Action: Specify a valid ACL name.

ORA-46115: error raised during evaluation of a data realm

Cause: During SQL execution, evaluation of a data realm failed with an error.

Action: Find the cause of the error from the error stack.

ORA-46116: The ACL <varname>string</varname> is referenced by a namespace template.

Cause: An attempt was made to delete an access control list (ACL) which was referenced by a namespace template.

Action: Delete the namespace template first if the ACL needs to be deleted.

ORA-46148: XS Security - Application Session tracing event**ORA-46149: XS Security - Security Classes tracing event****ORA-46150: XS Security - XS Principals tracing event****ORA-46151: XS Security - MidTier Caches tracing event****ORA-46152: XS Security - invalid <varname>string</varname> specified****ORA-46200: Attribute cannot be deleted. The attribute is seeded from the template.**

Cause: An attempt was made to delete an attribute that was seeded from the template from which this namespace was created.

Action: Attempt to delete only custom attributes.

ORA-46201: Attribute <varname>string</varname> already exists in namespace <varname>string</varname>.

Cause: An attempt was made to create an attribute that already exists within the given namespace.

Action: Make sure the attribute name is unique within the namespace.

ORA-46202: handler specified in the namespace template does not exist

Cause: An attempt was made to create a namespace template with an invalid handler function.

Action: Specify a valid handler function in the template.

ORA-46203: handler is not specified in the namespace template

Cause: An attempt was made to create a template or a custom attribute with events specified. However, a handler function was not specified in the template.

Action: Specify a valid handler function in the template.

ORA-46204: Multiple UID or GUID specified for the resource.

Cause: An attempt was made to create a resource with multiple UIDs or GUIDs specified in the document.

Action: Provide, at most, one UID or GUID for the resource in the document.

ORA-46205: User with empty GUID cannot create session.

Cause: An attempt was made by an user with an empty GUID to create a session.

Action: Update the GUID for the user.

ORA-46206: Negative inactivity timeout value not allowed.

Cause: An attempt was made to set the inactivity timeout time to a negative value.

Action: Specify a non-negative inactivity timeout value.

ORA-46207: During global callback execution, <varname>string</varname> is not allowed.

Cause: An attempt was made to execute a disallowed session operation during global callback execution.

Action: Remove the invalid session operation from callback function.

ORA-46208: Circular callback call caused by <varname>string</varname>

Cause: Circular callback call caused an infinite chain of callback function executions.

Action: Check the event handling functions to identify the source of the circular callback call. Attempt the operation again after the error has been resolved.

ORA-46209: User switch is disallowed for administrative operation.

Cause: An attempt was made to switch user with administrative operation.

Action: Attach the application session to a database session first.

ORA-46210: Source user is not anonymous in user assignment operation.

Cause: An attempt was made to assign user to a named user.

Action: Change source user to the anonymous user first.

ORA-46211: XS entity name length not within valid range.

Cause: An attempt was made to create an XS entity with a name length less than the minimum or more than the maximum allowed.

Action: Ensure the name length is in the valid range (between 1 and 128).

ORA-46212: XS entity with this name already exists.

Cause: An attempt was made to create an XS entity with a name that already belongs to another entity.

Action: Use a different name and try again.

ORA-46213: An unexpected constraint violation occurred during creation of an XS entity.

Cause: An attempt was made to create an XS entity resulting in an unexpected constraint violation.

Action: Check with the DBA or security administrator for resolution.

ORA-46214: Deletion of the XS entity is not allowed while dependencies exist.

Cause: An attempt was made to delete an XS entity with dependent entities in the system.

Action: Remove the dependencies and try again.

ORA-46215: XS entity by the name <varname>string</varname> did not exist.

Cause: A reference was made to an XS entity that did not exist.

Action: Review the entity reference and try again.

ORA-46216: XS entities are not related.

Cause: An attempt was made to remove a relation that did not exist.

Action: Review the entity reference and try again.

ORA-46217: Operation is not allowed.

Cause: An unexpected operation was performed.

Action: Check with the DBA or security administrator for resolution.

ORA-46218: Unauthorized proxy user

Cause: The current user was not an authorized proxy user of the client user during a switching user operation.

Action: Add the current user as a proxy user of the client user.

ORA-46219: Role version numbers mismatch in server and mid-tier.

Cause: There was another mid-tier attached to the server session with a different set of roles.

Action: Reattach the session supplying the current set of roles.

ORA-46220: database is in readable standby mode; changes will not be saved

Cause: An attempt was made to change an application session in readable standby mode.

Action: None

ORA-46221: cannot modify an application user that is currently connected

Cause: An attempt was made to modify an application user that is currently logged on.

Action: Make sure the application user is logged off, then repeat the command.

ORA-46222: Real Application principal name <varname>string</varname> conflicts with another user or role name.

Cause: There was already a user or role with that name.

Action: Specify a different user or role name.

ORA-46230: XS administrative operation failed.

Cause: An unexpected error occurred during the requested XS administrative operation.

Action: None

ORA-46231: Granted role is not a regular role.

Cause: A nonregular role was granted to a principal.

Action: Grant a regular role to a principal.

ORA-46232: Circular grant for role

Cause: The role was granted from itself through circular operation.

Action: Fix the role grant operation.

ORA-46233: Circular definition for ACL <varname>string</varname>

Cause: The ACL was inherited from itself through circular definition.

Action: Fix the ACL definition.

ORA-46235: Policy parameter <varname>string</varname> did not exist.

Cause: The policy parameter did not exist.

Action: Review the parameter definition and try again.

ORA-46236: Invalid policy parameter type

Cause: Invalid parameter type was specified.

Action: Use the correct parameter type.

ORA-46237: Mid-tier cache synchronization failed

Cause: An unexpected error occurred during mid-tier cache synchronization.

Action: None

ORA-46238: Database user or role '<varname>string</varname>' does not exist

Cause: An invalid database user or role was specified as the principal name.

Action: Make sure the database principal is a valid database user or role.

ORA-46239: Key manager not initialized.

Cause: A request to sign the message could not be processed because the key manager was not initialized.

Action: Reinitialize the key manager and resubmit the request.

ORA-46240: Application proxy user is already configured with a schema.

Cause: An attempt was made to add a schema to an application proxy user that already was configured with a schema.

Action: Remove the schema configuration of the application proxy user and try again.

ORA-46241: Application proxy user is not configured with the schema.

Cause: An attempt was made to remove a schema from an application proxy user that was not configured.

Action: None

ORA-46242: Granting a role to XSGUEST is not allowed.

Cause: An attempt was made to grant a role to the XSGUEST seeded user.

Action: None

ORA-46243: The dispatcher's session does not exist.

Cause: The dispatcher's session timed out due to inactivity.

Action: Increase the inactivity timeout for the dispatcher's session.

ORA-46244: The request is not signed by the dispatcher.

Cause: A request was made without the dispatcher's signature. The server is configured to accept requests signed by the dispatcher only.

Action: Ask the administrator to configure the mid-tier allowing the dispatcher signature. Or, ask the administrator to configure the server to not be in dispatcher-only mode.

ORA-46245: Invalid session or namespace request

Cause: The request message was corrupt.

Action: Check with the DBA or security administrator for resolution.

ORA-46246: session operation failed

Cause: An attempt was made to either update an XS Data Security session which did not exist, or to create an XS Data Security session which already existed, or to attach a direct-login XS Data Security session.

Action: None

ORA-46247: detach completed; session changes are not saved

Cause: The XS Data Security session is detached successfully, but session changes are not saved due to updating an XS Data Security session which did not exist.

Action: None

ORA-46250: Invalid value for argument '<varname>string</varname>'

Cause: Input value was not valid for the procedure.

Action: Use a valid option.

ORA-46251: Value for argument '<varname>string</varname>' out of range

Cause: Input value was out of range.

Action: Use a value within allowed range.

ORA-46252: Cannot complete the operation, overlapping job already exists

Cause: Cleanup job already existed which spanned the given audit trail type.

Action: Drop the existing job.

ORA-46253: Cannot complete the operation, overlapping property already exists

Cause: The property already exists which spans the given audit trail type.

Action: Clear the existing property.

ORA-46254: '<varname>string</varname>' already exists

Cause: The value being set already existed.

Action: Delete the existing entry.

ORA-46255: Incorrect job name specified

Cause: The job did not exist or was not created by DBMS_AUDIT_MGMT package.

Action: Create the job using DBMS_AUDIT_MGMT package.

ORA-46256: Internal error: Audit Table not partitioned

Cause: Invalid operation on a non partitioned table.

Action: Contact Oracle Support Services.

ORA-46257: Property '<varname>string</varname>' cannot be cleared

Cause: The property could not be cleared.

Action: None. The property can only be set or reset.

ORA-46258: Cleanup not initialized for the audit trail

Cause: DBMS_AUDIT_MGMT.INIT_CLEANUP was not called for the erroring audit trail.

Action: Invoke the procedure, DBMS_AUDIT_MGMT.INIT_CLEANUP.

ORA-46260: Error during audit trail cleanup

Cause: The audit trail cleanup operation could not be completed.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

ORA-46261: Error during audit trail cleanup, internal error

Cause: The audit trail cleanup could not be completed because of an internal error.

Action: Contact Oracle Support Services.

ORA-46262: Audit table(s) cannot be moved to '<varname>string</varname>' tablespace

Cause: The tablespace was either unavailable or did not have enough space to accomodate the audit table being moved.

Action: Make sure that the tablespace is online and has enough space for the audit tables being moved.

ORA-46263: The audit trail is already initialized for cleanup

Cause: DBMS_AUDIT_MGMT.INIT_CLEANUP was already invoked for the audit trail type.

Action: None

ORA-46264: Error during DBMS_AUDIT_MGMT operation

Cause: Could not complete the DBMS_AUDIT_MGMT operation.

Action: Check the PL/SQL error stack and trace files for a possible error. Fix the cause and retry the operation. If the error is internal or if there is no error, contact Oracle Support Services.

ORA-46265: Subset of audit trail is already initialized

Cause: Audit Trail was initialized which spans the given audit trail type.

Action: Use DBMS_AUDIT_MGMT.DEINIT_CLEANUP to deinitialize conflicting audit trail types.

ORA-46266: Missing value for argument '<varname>string</varname>' in Oracle RAC enabled database

Cause: The DBMS_AUDIT_MGMT API was executed in an Oracle RAC enabled database and AUDIT_TRAIL_TYPE was one of AUDIT_TRAIL_OS or AUDIT_TRAIL_XML. But, Oracle RAC instance number for which DBMS_AUDIT_MGMT API was run, was not supplied.

Action: Input a valid Oracle RAC instance number for which the configuration must be done.

ORA-46267: Insufficient space in '<varname>string</varname>' tablespace, cannot complete operation

Cause: Could not complete the operation because the DBMS_AUDIT_MGMT API involved movement of one or more audit tables and there was not enough space in the destination tablespace.

Action: Turn on tracing using DBMS_AUDIT_MGMT.SET_DEBUG_LEVEL to find the amount of space required. Then, allocate that space in the destination tablespace, even if destination tablespace datafile has AUTOEXTEND option turned on. And then, retry the operation.

ORA-46268: Conflicting operation on audit table(s)

Cause: Audit tables were being operated by more than one DBMS_AUDIT_MGMT API from different sessions. The simultaneous execution of the following API with one another and with itself can cause the conflict: INIT_CLEANUP, DEINIT_CLEANUP, SET_AUDIT_TRAIL_LOCATION and MOVE_DBAUDIT_TABLES.

Action: Wait until the execution of one of the API's completes and try executing the API again.

ORA-46269: Conflicting operation on audit files

Cause: Audit files were being operated by more than one DBMS_AUDIT_MGMT API from different sessions. The simultaneous execution of the CLEAN_AUDIT_TRAIL API with itself can cause the conflict.

Action: Wait until the execution of one of the API's complete and try executing the API again.

ORA-46270: event to turn off Audit Commit Delay enforcement**ORA-46271: Error during DBMS_AUDIT_MGMT operation; database I/O suspended**

Cause: An I/O attempt occurred during DBMS_AUDIT_MGMT operation and the database I/O was suspended.

Action: Retry the operation after resuming database I/O suspension. If database I/O is not suspended, contact Oracle Support Services.

ORA-46272: Subset of audit trail is already deinitialized

Cause: Audit trail was deinitialized which spans the given audit trail type.

Action: Use DBMS_AUDIT_MGMT.INIT_CLEANUP to initialize conflicting audit trail types.

ORA-46273: DBMS_AUDIT_MGMT operation failed in one of the PDB

Cause: The executed DBMS_AUDIT_MGMT operation failed in one of the PDB.

Action: Check the trace files for the PDB information where the operation failed. Fix the cause and retry the operation. If the error is internal or if there is no error, contact Oracle Support Services.

ORA-46274: Error during DBMS_AUDIT_MGMT operation; tablespace '<varname>string</varname>' not available

Cause: The tablespace associated with Unified Audit Trail is either invalid or is offline.

Action: Check if the tablespace is valid and make sure the tablespace is online and writable.

ORA-46275: Conflicting operations on '<varname>string</varname>' table

Cause: Audit trail table was being operated by more than one API from different sessions. The simultaneous execution of DBMS_AUDIT_MGMT.INIT_CLEANUP or DBMS_AUDIT_MGMT.SET_AUDIT_TRAIL_LOCATION with SA_SYSDBA.CREATE_POLICY or SA_SYSDBA.DROP_POLICY can cause the conflict.

Action: Wait for the completion of the conflicting SA_SYSDBA procedure and try executing the DBMS_AUDIT_MGMT API again.

ORA-46276: DBMS_AUDIT_MGMT operation on unified audit trail failed

Cause: Audit records were not generated in the unified audit trail.

Action: Generate audit records in the unified audit trail and retry the operation.

ORA-46277: Conflicting operation on unified audit trail

Cause: Unified audit trail is being operated by more than one DBMS_AUDIT_MGMT API from different sessions. The simultaneous execution of the following API with one another and with itself can cause the conflict: FLUSH_UNIFIED_AUDIT_TRAIL, LOAD_UNIFIED_AUDIT_FILES, CLEAN_AUDIT_TRAIL, and SET_AUDIT_TRAIL_LOCATION.

Action: Wait until the execution of one of the API's complete and try executing the API again.

ORA-46278: Conflicting operation using DBMS_AUDIT_MGMT routines

Cause: One of the following API's was concurrently executed with itself or with another API in separate sessions causing a conflict: -
SET_LAST_ARCHIVE_TIMESTAMP - CLEAR_LAST_ARCHIVE_TIMESTAMP -
CLEAN_AUDIT_TRAIL - SET_AUDIT_TRAIL_PROPERTY -
CLEAR_AUDIT_TRAIL_PROPERTY.

Action: Wait until the execution of one of the API's completes and try executing the API again.

ORA-46340: Command cannot have both BY <varname>user-list</varname> and IN SESSION <varname>session-information</varname> clauses together

Cause: BY <varname>user-list</varname> clause was supplied with IN SESSION <varname>session-information</varname> clause in the command.

Action: Use either BY <varname>user-list</varname> or IN SESSION <varname>session-information</varname> clause.

ORA-46341: ALL STATEMENTS option cannot be supplied with BY SESSION clause

Cause: An attempt was made to use ALL STATEMENTS audit option with BY SESSION clause. ALL STATEMENTS audit option can be configured with BY ACCESS only.

Action: Specify BY ACCESS instead of BY SESSION.

ORA-46342: NOAUDIT command cannot be executed with IN SESSION clause

Cause: An attempt was made to use IN SESSION <varname>session-information</varname> clause in NOAUDIT command.

Action: None

ORA-46343: Cannot drop AUDSYS user

Cause: An attempt was made to drop the AUDSYS user that hosts the audit trail.

Action: None

ORA-46349: event to turn off OS flush for XML audit file write**ORA-46350: Audit policy <varname>string</varname> already applied with the BY clause.**

Cause: An attempt was made to apply audit policy with the EXCEPT clause which was already applied with the BY clause.

Action: Remove audit policy using the NOAUDIT command.

ORA-46351: Audit policy <varname>string</varname> already applied with the EXCEPT clause.

Cause: An attempt was made to apply audit policy with the BY clause which was already applied with the EXCEPT clause.

Action: Remove audit policy using the NOAUDIT command.

ORA-46352: NOAUDIT command with the EXCEPT clause is not allowed.

Cause: An attempt was made to remove audit policy using NOAUDIT command with the EXCEPT clause.

Action: Remove audit policy selectively using NOAUDIT command with the BY clause.

ORA-46353: missing or invalid audit policy name.

Cause: A valid audit policy name was expected.

Action: Specify a valid audit policy name.

ORA-46354: missing or invalid audit context or attribute name.

Cause: A valid context or attribute name was expected.

Action: Specify a valid context attribute name.

ORA-46355: missing or invalid privilege audit option.

Cause: Creating or altering the audit policy was attempted with an invalid system privilege audit option.

Action: Use a valid system privilege audit option.

ORA-46356: missing or invalid action audit option.

Cause: Creating or altering the audit policy was attempted with an invalid action audit option.

Action: Use a valid action audit option.

ORA-46357: Audit policy <varname>string</varname> not found.

Cause: The specified audit policy object did not exist in the database.

Action: Use the correct audit policy name and try again.

ORA-46358: Audit policy <varname>string</varname> already exists.

Cause: The specified audit policy object already existed in the database.

Action: Use a different name and try again.

ORA-46359: Invalid auditing option for <varname>string</varname>.

Cause: Creating or altering the audit policy was attempted with an invalid audit option for the object.

Action: Use a valid audit option for the object.

ORA-46360: Same auditing option cannot be both added and dropped in audit policy.

Cause: Altering the audit policy was attempted for adding and dropping the same auditing option in the audit policy.

Action: Choose either to add or drop the audit option.

ORA-46361: Audit policy cannot be dropped as it is currently enabled.

Cause: An attempt was made to drop the audit policy which is currently enabled.

Action: Disable the audit policy before dropping.

ORA-46362: Could not translate variable ORACLE_BASE.

Cause: An attempt to obtain the value for ORACLE_BASE failed.

Action: Make sure the variable is set.

ORA-46363: Audit directory '<varname>string</varname>' not found.

Cause: Could not find the specified audit directory.

Action: Make sure the audit directory is created.

ORA-46364: Audit directory '<varname>string</varname>' could not be created.

Cause: Could not create the specified audit directory.

Action: Make sure the Oracle process has permissions to create the audit directory.

ORA-46365: Audit file '<varname>string</varname>' could not be created.

Cause: Could not create the specified audit file.

Action: Make sure the Oracle process has permissions to create the audit files in the audit directory.

ORA-46366: File '<varname>string</varname>' is not a recognized Oracle audit file.

Cause: The file found in Oracle audit directory was not a valid Oracle audit file.

Action: Remove the file from the audit directory and try the action again.

ORA-46367: Database is not opened for write; cannot complete operation.

Cause: An operation requiring the database to be open in read/write mode was attempted.

Action: Open the database in read/write mode.

ORA-46368: Audit policy does not have a simple rule condition.

Cause: Creating or altering the audit policy was attempted with a complex audit condition.

Action: Use a simple rule expression for audit policy condition.

ORA-46369: An error occurred while evaluating audit policy condition.

Cause: Check the error stack for detailed error information.

Action: Fix the errors in the error stack and retry the operation.

ORA-46370: cannot connect as AUDSYS user

Cause: An attempt was made to connect to the database as AUDSYS user.

Action: Do not connect to the database as AUDSYS user.

ORA-46372: audit file '<varname>string</varname>' not found

Cause: An operation was attempted on the audit file which was not available in the audit directory.

Action: Make sure the file exists in the \$ORACLE_BASE/audit/\$ORACLE_SID directory.

ORA-46373: Audit policy '<varname>string</varname>' must have at least one audit option.

Cause: An attempt was made to create, alter or enable the empty audit policy.

Action: Use at least one audit option in the audit policy.

ORA-46374: error during AUDIT or NOAUDIT of audit policy in an Oracle RAC enabled database

Cause: The operation could not be completed on one or more Oracle RAC instances.

Action: Check the trace file for more information. Ensure every instance in Oracle RAC is operational and retry the operation.

ORA-46375: ASM Audit - Event to enable ASM Audit**ORA-46376: FGA policy owner '<varname>string</varname>' is not available**

Cause: An attempt to import Fine-Grained Audit (FGA) policy failed because the specified FGA policy owner has not been imported.

Action: Perform the import of the specified user schema and retry the operation.

ORA-46377: Auditing cannot be configured on the specified system privilege.

Cause: An attempt was made to configure auditing on the system privilege which is not supported by the audit facility.

Action: None

ORA-46378: Cannot use bind variable in VERSIONS clause when the object has FGA policy defined on it.

Cause: The object being accessed had a fine-grained audit (FGA) policy defined on it and the VERSIONS clause contained a bind variable.

Action: Rewrite the query without the use of a bind variable in the VERSIONS clause.

ORA-46379: generation of audit session ID failed with error '<varname>number</varname>'

Cause: An error was encountered while generating the audit session ID.

Action: Retry the operation and, if the error persists, contact Oracle Support Services.

ORA-46500: User is not a common user.

Cause: An attempt was made to apply the common audit configuration to a local user. Common audit configuration can be applied only to common users.

Action: Specify a common user.

ORA-46501: Object is not a common object.

Cause: Object audit option for the common audit policy was specified on a local object. A common audit policy can have object audit options on common objects only.

Action: Specify a common object.

ORA-46503: not connected to a pluggable database

Cause: An attempt was made to create a local audit policy or configuration while not connected to a pluggable database. Local audit policy or configuration can be created only when connected to a pluggable database.

Action: Connect or switch session to a pluggable database to create local audit policy or configuration.

ORA-46504: AUDIT command cannot specify ON <varname>object</varname> and CONTAINER clauses together.

Cause: An attempt was made to specify the CONTAINER clause with the AUDIT command while configuring object auditing. The CONTAINER clause is not supported for object auditing using the SQL AUDIT command.

Action: Do not specify the CONTAINER clause while configuring object auditing using SQL AUDIT command.

ORA-46600: invalid ADMINISTER KEY MANAGEMENT command**ORA-46601: missing KEYSTORE, ENCRYPTION, KEY, or TAG keyword****ORA-46602: missing OPEN or CLOSE keyword****ORA-46603: invalid ADMINISTER KEY MANAGEMENT CREATE command**

ORA-46604: invalid or missing keystore file name

Cause: The required keystore file name was invalid or missing.

Action: Specify a valid keystore file name.

ORA-46605: master key identifier is invalid or missing**ORA-46606: master key tag is invalid or missing****ORA-46607: client secret is invalid or missing****ORA-46608: client identifier is invalid or missing****ORA-46609: export or import secret is invalid or missing****ORA-46610: expecting SELECT query that returns the master key identifiers****ORA-46612: import file name is invalid or missing****ORA-46614: export file name is invalid or missing****ORA-46615: missing WITH or CONTAINER keyword****ORA-46616: master key is invalid or missing****ORA-46617: master key identifier is invalid or missing****ORA-46620: backup for the keystore cannot be taken**

Cause: Either the specified backup location was not an ASM path name when the configured keystore location was an ASM path or the specified backup location was an ASM path name when the configured keystore location was not an ASM path.

Action: Either specify an ASM path name for the backup location if the keystore location is an ASM path or specify a non-ASM path name for the backup location if the keystore location is not an ASM path.

ORA-46621: no backup identifier specified

Cause: Backup identifier was not specified.

Action: Provide a valid backup identifier.

ORA-46622: location of the backed up keystore is incorrect

Cause: Keystore location where the backup was to be created was incorrect.

Action: Provide a valid location to backup the keystore.

ORA-46623: cannot create the keystore file name

Cause: Keystore name could not be formed possibly due to the incorrectly specified keystore location.

Action: Verify the location to where the keystore can be backed up.

ORA-46624: cannot find the source keystore

Cause: The source keystore for which the backup was requested was not found.

Action: Verify that the source keystore exists and try again.

ORA-46625: backup keystore already exists

Cause: A backup of the keystore of the same name already existed in the given location.

Action: Change the location of the backup keystore or the backup identifier of the backup keystore and try again.

ORA-46626: cannot create a backup of the keystore

Cause: The backup of the keystore could not be created.

Action: Check the trace file for more information and try again.

ORA-46627: keystore password mismatch

Cause: The keystore password specified did not match that of the keystore that was open.

Action: Specify the correct keystore password.

ORA-46628: cannot alter the software keystore password

Cause: An attempt was made to alter the software keystore password.

Action: Check the viability of the keystore and replace the keystore from the backup if required and try to alter the keystore password.

ORA-46629: keystore was not open after the alter keystore operation

Cause: The keystore password was changed. However, the keystore was closed during this operation.

Action: Reopen the keystore with the new password.

ORA-46630: keystore cannot be created at the specified location

Cause: Keystore could not be created at the specified location because a keystore of the same type already existed.

Action: Specify a different location to create the keystore. If no keystore exists and the operation is failing, check the trace file and try again.

ORA-46631: keystore needs to be backed up

Cause: The keystore was not backed up. For this operation to proceed, the keystore must be backed up.

Action: Backup the keystore and try again.

ORA-46632: password-based keystore does not exist

Cause: Password-based keystore was missing for this operation. Auto login keystore can be created from a password-based keystore only.

Action: Specify a location where the password-based keystore exists.

ORA-46633: creation of a password-based keystore failed

Cause: Password-based keystore could not be created at the specified location due to either incorrect file permissions for Oracle on the specified location or due to the nonexistence of the specified location.

Action: Check the trace file for more information, create permissions on the specified location, or specify a different location and try again.

ORA-46634: creation of a local auto login keystore failed

Cause: The local auto login keystore could not be created at the specified location due to the incorrect password specified for the password-based keystore or due to incorrect file permissions for Oracle on the specified location or due to the nonexistence of the specified location.

Action: Check the trace file for more information, specify the correct password for the password-based keystore, create permissions on the specified location, or specify a different location and try again.

ORA-46635: creation of an auto login keystore failed

Cause: The auto login keystore could not be created at the specified location due to the incorrect password specified for the password-based keystore or due to incorrect file permissions for Oracle on the specified location or due to the nonexistence of the specified location.

Action: Check the trace file for more information, specify the correct password for the password-based keystore, create permissions on the specified location, or specify a different location and try again.

ORA-46636: cannot add second keystore to the target keystore

Cause: The second keystore could not be added to the target keystore.

Action: Check trace files for more information. Delete the target keystore and try merging the two keystores again.

ORA-46637: cannot add first keystore to the target keystore

Cause: The first keystore could not be added to the target keystore.

Action: Check trace files for more information. Delete the target keystore and try merging the two keystores again.

ORA-46638: merging of the two keystores failed

Cause: The two keystores could not be merged.

Action: Check trace files for more information. If the target keystore is corrupted, replace it from the backup and try merging the two keystores again.

ORA-46639: backup of keystore failed during migration

Cause: Keystore location was not configured correctly in the sqlnet.ora file.

Action: Keystore location is missing or not correct in the sqlnet.ora file. Specify the correct keystore location for migration and backup.

ORA-46640: incorrect file name for exporting keys

Cause: The file name of the file to which keys from the keystore will be written was incorrect or invalid.

Action: Verify the file name. Ensure that both the full path and the file name are provided.

ORA-46641: incorrect file name for importing keys

Cause: The file name of the file from which the keys will be read and saved in the keystore was incorrect or invalid.

Action: Verify the file name. Ensure that both the full path and the file name are provided.

ORA-46642: key export destination file already exists

Cause: The file name specified as the export destination for keys exported from the keystore was already in existence.

Action: Specify a different file name that does not exist.

ORA-46643: file from which keys are to be imported does not exist

Cause: The specified file from which the keys are to be imported into the keystore did not exist.

Action: Specify the name of a file that contains keys exported from the keystore.

ORA-46644: creation or open of file to store the exported keys failed

Cause: Creation or opening of the file specified as the key export destination, where the keys exported from the keystore were to be written, failed.

Action: Verify that the file name is valid and that the Oracle process has sufficient privilege to create, open and write to the file.

ORA-46645: open of file from which keys are to be imported failed

Cause: The file specified as the key import source, from which the keys were to be imported into the keystore, could not be opened.

Action: Verify that the file name is valid and that the Oracle process has sufficient privilege to read the file.

ORA-46646: file from which keys are to be imported is invalid

Cause: The file specified as the key import source, from which the keys are to be imported, was not a valid file.

Action: Specify a valid file, containing keys which were previously exported from the keystore.

ORA-46647: specified protection differs from that specified in the file

Cause: The file specified as the key import source, from which the keys are to be imported, had different protection from what was specified in the SQL command.

Action: Provide a valid protection option, ensuring that it is the same protection option that was in the file from which the keys are to be imported.

ORA-46648: cannot commit the keys to the keystore

Cause: The operation of writing the keys to the keystore failed.

Action: Verify that the keystore is not corrupt. Copy the keystore from the backup if it is corrupt. Retry the command.

ORA-46649: master key with the specified identifier does not exist

Cause: Master key with the specified identifier does not exist in the keystore.

Action: Specify a valid master key identifier for the SQL command and retry the command.

ORA-46650: cannot retrieve information for a master key identifier

Cause: The master key or the master key information associated with a specified master key identifier did not exist.

Action: Check the contents of the trace file to identify the faulty master key identifier. Either fix or drop the faulty master key, then retry the command.

ORA-46651: cannot create a master key

Cause: Master key creation failed.

Action: Check the trace file for errors and retry the command.

ORA-46652: cannot create tag for the master key

Cause: Creation of the tag for the specified master key failed.

Action: Check the contents of the trace file for errors and retry the command.

ORA-46653: cannot retrieve master key information

Cause: Retrieval of the master key information for the specified master key identifier failed.

Action: Check the contents of the trace file for errors and retry the command.

ORA-46654: cannot add the imported keys to the keystore

Cause: The operation of writing the imported keys to the keystore failed.

Action: Check the contents of the trace file for more information on the cause of the failure and retry the command.

ORA-46655: no valid keys in the file from which keys are to be imported

Cause: The specified keystore, from which keys are to be imported, did not contain any valid keys.

Action: None

ORA-46656: operation not valid for container database

Cause: The specified operation was not supported for the container database.

Action: None

ORA-46657: the source keystores are the same

Cause: The specified source keystores to be merged were the same. There is no need to merge these keystores.

Action: Check the locations and types of the specified keystores. Specify the correct path and types for the source keystores, if necessary.

ORA-46658: keystore not open in the container

Cause: The keystore was not open in the container.

Action: Open the keystore in the container.

ORA-46659: master keys for the given PDB not found

Cause: The master keys for the specified pluggable database (PDB) could not be retrieved.

Action: Check if the master keys were generated for the specified PDB and retry the command.

ORA-46660: the source and target keystores are the same

Cause: The specified source and target keystores to be merged were the same. There is no need to merge these keystores.

Action: Check the locations and types of the specified keystores. Specify the correct path and types for the source and target keystores, if necessary.

ORA-46661: keystore not open in root container

Cause: The root container keystore was not open.

Action: Open the root container keystore.

ORA-46662: master keys not created for all PDBs

Cause: Creation of the master key failed for one or more pluggable databases (PDBs).

Action: Check the trace files for errors. Create the keys in PDBs where the operation failed or retry the command.

ORA-46663: master keys not created for all PDBs for REKEY

Cause: Creation of the master key failed for one or more pluggable databases (PDBs) and as such REKEY failed for these PDBs.

Action: Check the trace files for errors. REKEY the keys in PDBs where the master keys could not be created or retry the command.

ORA-46664: master keys not created for any PDBs during REKEY

Cause: Creation of the master key failed for all pluggable databases (PDBs).

Action: Check the contents of the trace file for more information on the cause of the failure and retry the command.

ORA-46665: master keys not activated for all PDBs during REKEY

Cause: Activation of the master key failed for one or more pluggable databases (PDBs) and as such REKEY failed for these PDBs.

Action: Check the trace files for errors. Activate the keys in PDBs where the master keys were created but not activated or retry the command.

ORA-46666: master keys not created or activated for all PDBs during REKEY

Cause: Creation of the master key failed for one or more pluggable databases (PDBs). Further, activation of one or more created master keys also failed for some PDBs and as such REKEY failed on these PDBs.

Action: Check the trace files for errors. REKEY the PDBs where the master keys could not be created. Activate the keys in PDBs where the master keys were created but not activated or retry the command.

ORA-46667: client not found in the keystore

Cause: An entry with the given client name was not found in the keystore.

Action: Add the secret for the given client to the keystore, if required.

ORA-46668: client already exists in the keystore

Cause: An entry with the given client name was already in existence in the keystore.

Action: Delete or update the entry with the client name.

ORA-46669: the target keystore does not exist

Cause: The location specified for the target keystore did not contain a valid keystore, or target keystore did not have valid file permissions.

Action: Specify a different location for the target keystore where it exists. Also, check the file permissions of the target keystore.

ORA-46670: client secret keystore operation failed

Cause: The client secret keystore add, update or delete operation failed.

Action: Open the keystore and retry the client secret keystore operation.

ORA-46671: master key not set in root container

Cause: Master key was not set in the root container.

Action: Set the Master key in the root container.

ORA-46672: backup keystore file name could not be stored

Cause: The file name of the keystore backup could not be recorded in props\$.

Action: Open the keystore and retry the backup operation.

ORA-46673: write to the export file failed

Cause: Oracle was unable to write an entry to the export file.

Action: Check the trace file for more information and retry the operation. If there is no trace information and trying the operation again fails, contact Oracle Support Services.

ORA-46674: read from the export file failed

Cause: Oracle was unable to read an entry from the export file.

Action: Check the trace file for more information and retry the operation. If there is no trace information and trying the operation again fails, contact Oracle Support Services.

ORA-46900: unsupported proxy authentication

Cause: A proxy authentication was attempted using an administrative privilege.

Action: Authenticate without any administrative privilege if proxy authentication is desired.

ORA-47000 to ORA-47999

ORA-47000: Factor Type <varname>string</varname> already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47001: Factor Type <varname>string</varname> not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47002: error creating Factor Type <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred creating the factor type

Action: Please review the definition and retry the operation

ORA-47003: error deleting Factor Type <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred deleting the factor type

Action: Please review the definition and retry the operation

ORA-47004: error updating Factor Type <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred updating the factor type

Action: Please review the definition and retry the operation

ORA-47005: error renaming Factor Type <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred renaming the factor type

Action: Please review the definition and retry the operation

ORA-47020: Factor <varname>string</varname> already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47021: Factor <varname>string</varname> not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47022: error creating Factor <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred creating the factor

Action: Please review the definition for accuracy and retry the operation

ORA-47023: error deleting Factor <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred deleting the factor

Action: Please review the definition for accuracy and retry the operation

ORA-47024: error updating Factor <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred updating the factor

Action: Please review the definition for accuracy and retry the operation

ORA-47025: Factor Link already exists for <varname>string</varname> and <varname>string</varname>

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47026: error creating Factor Link for <varname>string</varname> and <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred creating the factor link

Action: Please review the definition for accuracy and retry the operation

ORA-47027: Factor Link does not exist for <varname>string</varname> and <varname>string</varname>

Cause: The factor link referenced does not exist

Action: Please review the definition for accuracy and retry the operation

ORA-47028: error deleting Factor Link for <varname>string</varname> and <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred deleting the factor link

Action: Please review the definition for accuracy and retry the operation

ORA-47029: Factor type <varname>string</varname> is used by one or more factors.

Cause: The specified factor type was used by existing factor(s).

Action: Remove the dependent factors and retry the operation.

ORA-47030: Factor <varname>string</varname> is referred by one or more factor links.

Cause: The specified factor was referred by existing factor link(s).

Action: Remove the dependent factor links and retry the operation.

ORA-47031: Factor <varname>string</varname> is used by one or more policy factors.

Cause: The specified factor was used by existing policy factor(s).

Action: Remove the dependent policy factors and retry the operation.

ORA-47032: Factor <varname>string</varname> is referred by one or more identities.

Cause: The specified factor was referred by existing identities.

Action: Remove the dependent identities and retry the operation.

ORA-47033: Factor link for <varname>string</varname> and <varname>string</varname> is referred by one or more identity maps.

Cause: The specified factor link was referred by existing identity maps.

Action: Remove the dependent identity maps and retry the operation.

ORA-47040: Identity <varname>string</varname> for Factor <varname>string</varname> already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47041: Identity <varname>string</varname> for Factor <varname>string</varname> not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47042: error creating Identity <varname>string</varname> for Factor <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred creating the identity

Action: Please review the definition for accuracy and retry the operation

ORA-47043: error deleting Identity <varname>string</varname> for Factor <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred deleting the identity

Action: Please review the definition for accuracy and retry the operation

ORA-47044: error updating Identity <varname>string</varname> for Factor <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred updating the identity

Action: Please review the definition for accuracy and retry the operation

ORA-47045: Identity <varname>string</varname> for Factor <varname>string</varname> is used by one or more identity maps.

Cause: The specified identity was used by exiting identity map(s).

Action: Remove the dependent identity maps and retry the operation.

ORA-47046: Identity <varname>string</varname> for Factor <varname>string</varname> is referred by one or more policy labels.

Cause: The specified identity was used by exiting policy label(s).

Action: Remove the dependent policy labels and retry the operation.

ORA-47060: Identity map for Identity <varname>string</varname>, <varname>string</varname>, Factor Link <varname>string</varname>, <varname>string</varname> already defined for operation <varname>string</varname> on <varname>string</varname>

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47061: Identity map for Identity <varname>string</varname>.<varname>string</varname>, Factor Link <varname>string</varname>, <varname>string</varname> not found for operation <varname>string</varname> on <varname>string</varname>

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47062: error creating Identity map for Identity <varname>string</varname>.<varname>string</varname>, Factor Link <varname>string</varname>, <varname>string</varname> already defined for operation <varname>string</varname> on <varname>string</varname>

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47063: error deleting Identity map for Identity <varname>string</varname>.<varname>string</varname>, Factor Link <varname>string</varname>, <varname>string</varname> already defined for operation <varname>string</varname> on <varname>string</varname>

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47080: code <varname>string</varname> already defined in group <varname>string</varname>

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47081: code <varname>string</varname> not found in group <varname>string</varname>

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47100: Command Rule <varname>string</varname> already defined for <varname>string</varname>.<varname>string</varname>

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47101: Command Rule <varname>string</varname> not found for <varname>string</varname>.<varname>string</varname>

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47102: error creating Command Rule <varname>string</varname> for <varname>string</varname>.<varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred creating the command rule

Action: Please review the definition for accuracy and retry the operation

ORA-47103: error deleting Command Rule <varname>string</varname> for <varname>string</varname>.<varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred deleting the command rule

Action: Please review the definition for accuracy and retry the operation

ORA-47104: error updating Command Rule <varname>string</varname> for <varname>string</varname>.<varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred updating the command rule

Action: Please review the definition for accuracy and retry the operation

ORA-47105: invalid object owner <varname>string</varname> for command <varname>string</varname>

Cause: The object owner is invalid for this command

Action: Choose an object owner other than SYS or a wildcard for this command

ORA-47120: Document <varname>string</varname> already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47121: Document <varname>string</varname> not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47140: Factor expression <varname>string</varname> already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47141: Factor expression <varname>string</varname> not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47160: Factor link <varname>string</varname> already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47161: Factor link <varname>string</varname> not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47180: Integration Policy for OLS Policy <varname>string</varname> is already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47181: Integration Policy for OLS Policy <varname>string</varname> not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47182: Label algorithm <varname>string</varname> not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47183: error creating Integration Policy for OLS Policy <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred creating the integration policy

Action: Please review the definition for accuracy and retry the operation

ORA-47184: error updating Integration Policy for OLS Policy <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred updating the integration policy

Action: Please review the definition for accuracy and retry the operation

ORA-47185: error deleting Integration Policy for OLS Policy <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred deleting the integration policy

Action: Please review the definition for accuracy and retry the operation

ORA-47200: Integration Policy Factor already defined for Factor <varname>string</varname> and Policy <varname>string</varname>

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47201: Integration Policy Factor not found for Factor <varname>string</varname> and Policy <varname>string</varname>

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47202: error creating Integration Policy Factor for factor <varname>string</varname> and policy <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred creating the integration policy factor

Action: Please review the definition for accuracy and retry the operation

ORA-47203: error deleting Integration Policy Factor for factor <varname>string</varname> and policy <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred deleting the integration policy factor

Action: Please review the definition for accuracy and retry the operation

ORA-47220: Label <varname>string</varname> for Identity <varname>string</varname>, <varname>string</varname> under OLS Policy <varname>string</varname> already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47221: Label <varname>string</varname> for Identity <varname>string</varname>.<varname>string</varname> under OLS Policy <varname>string</varname> not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47222: error creating Label <varname>string</varname> for Identity <varname>string</varname>.<varname>string</varname> under OLS Policy <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred creating the identity label

Action: Please review the definition for accuracy and retry the operation

ORA-47223: error deleting Label <varname>string</varname> for Identity <varname>string</varname>.<varname>string</varname> under OLS Policy <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred deleting the identity label

Action: Please review the definition for accuracy and retry the operation

ORA-47240: Realm <varname>string</varname> already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47241: Realm <varname>string</varname> not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47242: error creating Realm <varname>string</varname>,<varname>string</varname>

Cause: An unexpected error occurred creating the realm

Action: Please review the definition for accuracy and retry the operation

ORA-47243: error deleting Realm <varname>string</varname>,<varname>string</varname>

Cause: An unexpected error occurred deleting the realm

Action: Please review the definition for accuracy and retry the operation

ORA-47244: error updating Realm <varname>string</varname>,<varname>string</varname>

Cause: An unexpected error occurred updating the realm

Action: Please review the definition for accuracy and retry the operation

ORA-47245: error renaming Realm <varname>string</varname>,<varname>string</varname>

Cause: An unexpected error occurred renaming the realm

Action: Please review the definition for accuracy and retry the operation

ORA-47246: cannot change default realm <varname>string</varname> to mandatory realm

Cause: An attempt was made to change the realm type of this default realm to mandatory realm.

Action: No action required.

ORA-47260: Realm Authorization to <varname>string</varname> for Realm <varname>string</varname> already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47261: Realm Authorization to <varname>string</varname> for Realm <varname>string</varname> not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47262: error creating Realm Authorization to <varname>string</varname> for Realm <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred creating the realm authorization

Action: Please review the definition for accuracy and retry the operation

ORA-47263: error deleting Realm Authorization to <varname>string</varname> for Realm <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred deleting the realm authorization

Action: Please review the definition for accuracy and retry the operation

ORA-47264: error updating Realm Authorization to <varname>string</varname> for Realm <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred updating the realm authorization

Action: Please review the definition for accuracy and retry the operation

ORA-47280: Realm Object <varname>string</varname>,<varname>string</varname>,<varname>string</varname> already defined in Realm <varname>string</varname>

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47281: Realm Object <varname>string</varname>,<varname>string</varname>,<varname>string</varname> not found in Realm <varname>string</varname>

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47282: error adding Realm Object <varname>string</varname>,<varname>string</varname>,<varname>string</varname> to Realm <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred creating the realm object

Action: Please review the definition for accuracy and retry the operation

ORA-47283: error deleting Realm Object <varname>string</varname>,<varname>string</varname>.<varname>string</varname> from Realm <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred deleting the realm object

Action: Please review the definition for accuracy and retry the operation

ORA-47284: error adding Realm Object <varname>string</varname>,<varname>string</varname>. <varname>string</varname> is not a valid object type

Cause: The specified object type is not valid.

Action: Enter a valid object type for the specified object name, or enter "%" and all objects with the specified name and the specified owner will be added to the realm.

ORA-47290: error creating VPD policy for Realm <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred creating the VPD policy

Action: Please review the definition for accuracy and retry the operation

ORA-47300: Role already <varname>string</varname> defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47301: Role <varname>string</varname> not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47302: error creating Role <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred creating the role

Action: Please review the definition for accuracy and retry the operation

ORA-47303: error deleting Role <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred deleting the role

Action: Please review the definition for accuracy and retry the operation

ORA-47304: error updating Role <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred updating the role

Action: Please review the definition for accuracy and retry the operation

ORA-47305: Rule Set violation on <varname>string</varname> (<varname>string</varname>)

Cause: An operation that was attempted failed due to a rule set violation

Action: Ensure you have sufficient privileges for this operation retry the operation

ORA-47306: <varname>string</varname>: <varname>string</varname>

ORA-47320: Rule <varname>string</varname> already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47321: Rule <varname>string</varname> not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47322: error creating Rule <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred creating the rule

Action: Please review the definition for accuracy and retry the operation

ORA-47323: error deleting Rule <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred deleting the rule

Action: Please review the definition for accuracy and retry the operation

ORA-47324: error updating Rule <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred updating the rule

Action: Please review the definition for accuracy and retry the operation

ORA-47325: Rule <varname>string</varname> is used by one or more rule sets.

Cause: The specified rule was used by existing rule set(s).

Action: Remove the dependent rule sets and retry the operation.

ORA-47340: Rule Set <varname>string</varname> already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47341: Rule Set <varname>string</varname> not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47342: error creating Rule Set <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred creating the rule set

Action: Please review the definition for accuracy and retry the operation

ORA-47343: error deleting Rule Set <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred deleting the rule set

Action: Please review the definition for accuracy and retry the operation

ORA-47344: error updating Rule Set <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred updating the rule set

Action: Please review the definition for accuracy and retry the operation

ORA-47345: Rule set <varname>string</varname> is used by one or more realm authorizations.

Cause: The specified rule set was used by existing realm authorization(s).

Action: Remove the dependent realm authorizations and retry the operation.

ORA-47346: Rule set <varname>string</varname> is used by one or more command rules.

Cause: The specified rule set was used by existing command rule(s).

Action: Remove the dependent command rules and retry the operation.

ORA-47347: Rule set <varname>string</varname> is used by one or more secure application roles.

Cause: The specified rule set was used by existing secure application role(s).

Action: Remove the dependent secure application roles and retry the operation.

ORA-47348: Rule set <varname>string</varname> is used by one or more factors.

Cause: The specified rule set was used by existing factor(s).

Action: Remove the dependent factors and retry the operation.

ORA-47349: error occurred when executing the rule set handler

Cause: Either there was a syntax error on the rule set handler or DVSYS did not have sufficient privilege to execute the rule set handler.

Action: Fix the syntax error on the rule set handler or grant execute privilege on the rule set handler to DVSYS.

ORA-47360: rule <varname>string</varname> already added to rule set <varname>string</varname>

Cause: The object with this name existed already.

Action: Choose a unique object name and retry the operation.

ORA-47361: rule <varname>string</varname> not associated to rule set <varname>string</varname>

Cause: The rule specified was not associated to the rule set.

Action: Review the definition for accuracy and retry the operation.

ORA-47362: error adding rule <varname>string</varname> to rule set <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred while adding the rule to the rule set.

Action: Review the definition for accuracy and retry the operation.

ORA-47363: error deleting rule <varname>string</varname> from rule set <varname>string</varname>, <varname>string</varname>

Cause: An unexpected error occurred while deleting the rule from the rule set.

Action: Review the definition for accuracy and retry the operation.

ORA-47381: Oracle Label Security (OLS) Policy <varname>string</varname> not found

Cause: The object being requested did not exist.

Action: Choose an object name that exists and retry the operation.

ORA-47382: Oracle Label Security (OLS) Policy Label <varname>string</varname> not found for policy <varname>string</varname>

Cause: The object being requested did not exist.

Action: Choose an object name that exists and retry the operation.

ORA-47383: error capturing the session state information

Cause: An internal error occurred capture the session state

Action: Please retry the operation if possible

ORA-47388: Database Vault disable-factor-loading event**ORA-47389: Database Vault static-ruleset-evaluation event****ORA-47390: failed to audit event, <varname>string</varname>**

Cause: An internal error auditing the operation

Action: Please retry the operation if possible

ORA-47391: attempt to set Factor <varname>string</varname> violates Rule Set <varname>string</varname>

Cause: An attempt to set the factor violated the associated rule set

Action: Please check to ensure you have the ability to set the factor

ORA-47392: Factor <varname>string</varname> cannot be set

Cause: The attempt to set the factor is not allowed

Action: This factor cannot be set so there is no corrective action

ORA-47393: Factor <varname>string</varname> value not allowed

Cause: The value being assigned to the factor is not allowed

Action: This factor cannot be set to this value so there is no corrective action

ORA-47394: Factor assignment rule set not defined

Cause: The rule set being associated to the factor does not exist

Action: Please review the definition for accuracy and retry the operation

ORA-47395: error returned by Factor <varname>string</varname> evaluation expression <varname>string</varname>

Cause: The factor retrieval method resulted in an error

Action: Please review the retrieval method definition for accuracy and correct it as required

ORA-47396: error returned by Factor <varname>string</varname> validation expression <varname>string</varname>

Cause: The factor retrieval method resulted in an invalid value based on its validation method

Action: Please review the factor definition and correct it as required

ORA-47397: incorrect identified by value for Factor <varname>string</varname>

Cause: The factor identified by value is incorrect

Action: Please review the factor definition and correct it as required

ORA-47398: multiple identities defined for Factor <varname>string</varname>

Cause: The factor has duplicate identities defined

Action: Please review the factor definition and correct it as required

ORA-47399: incorrect labeled by value for Factor <varname>string</varname>

Cause: The factor labeled by value is incorrect

Action: Please review the factor definition and correct it as required

ORA-47400: Command Rule violation for <varname>string</varname> on <varname>string</varname>

Cause: An operation that was attempted failed due to a command rule violation

Action: Ensure you have sufficient privileges for this operation retry the operation

ORA-47401: Realm violation for <varname>string</varname> on <varname>string</varname>.<varname>string</varname>

Cause: An operation that was attempted failed due to a realm protection

Action: Ensure you have sufficient privileges for this operation retry the operation

ORA-47402: incorrect evaluation options value for Factor <varname>string</varname>

Cause: The factor evaluations options value is incorrect

Action: Please review the factor definition and correct it as required

ORA-47403: NULL returned by Factor <varname>string</varname> evaluation expression <varname>string</varname>

Cause: The factor evaluated to a NULL value

Action: Please review the factor definition and correct it as required

ORA-47404: NULL trust level for Factor <varname>string</varname>

Cause: The factor has a NULL trust level

Action: Please review the factor definition and correct it as required

ORA-47405: negative trust level for Factor <varname>string</varname>

Cause: The factor has a negative trust level

Action: Please review the factor definition and correct it as required

ORA-47406: ALWAYS AUDIT option set for Factor <varname>string</varname>

Cause: The factor audit option is set to always audit

Action: No action required

ORA-47407: ALWAYS AUDIT option set for Rule Set <varname>string</varname>

Cause: The rule set audit option is set to always audit

Action: No action required

ORA-47408: Realm violation for the EXECUTE command

Cause: A realm violation has occurred for a realm-protected stored procedure.

Action: In order to invoke the realm-protected procedure, you must have GRANT privileges to execute the procedure, or you must be authorized to operate in the procedure's realm.

ORA-47409: Command Rule violation for the EXECUTE command

Cause: A command rule violation occurred when trying to perform the EXECUTE command for a stored procedure protected by a command rule.

Action: Ask the Database Vault administrator to perform the operation or remove the command rule for the protected stored procedure.

ORA-47410: Realm violation for <varname>string</varname> on <varname>string</varname>

Cause: An operation that was attempted failed with insufficient privileges due to an attempt to violate a Database Vault Realm security policy which is currently enabled and enforced.

Action: Ensure you have sufficient privileges for this operation and retry the operation.

ORA-47411: Cannot use <varname>string</varname> due to Oracle Database Vault policy.

Cause: An operation that was attempted failed because Database Vault policy currently prevents the related feature from being used.

Action: Ask the Database Vault administrator to allow the feature to be used.

ORA-47412: The DVSYS and DVF users are not allowed to switch containers.

Cause: An attempt was made to switch containers while connecting as DVSYS or DVF, which is not allowed.

Action: Connect as a different user and try again.

ORA-47413: Cannot connect due to Oracle Database Vault policy.

Cause: An attempt to connect to DVSYS or DVF accounts failed because the Database Vault administrator had disabled the account.

Action: Ask the Database Vault administrator to enable the account.

ORA-47500: Database Vault cannot be configured.

Cause: The Database Vault configuration failed because some Database Vault objects were missing.

Action: Run the dvremov.sql script to remove Database Vault and then reinstall Database Vault.

ORA-47501: Database Vault has already been configured.

Cause: An attempt was made to run this procedure more than once. This procedure can be run successfully only once.

Action: If you are attempting to grant the DV_OWNER or DV_ACCTMGR roles, do so manually.

ORA-47502: Database Vault is not yet configured.

Cause: The Database Vault configuration procedure `dvsys.configure_dv()` had not been run.

Action: Run `dvsys.configure_dv()` before attempting to enable or disable Database Vault enforcement.

ORA-47503: Database Vault is not enabled on CDB\$ROOT.

Cause: Database Vault is required to be enabled on CDB\$ROOT for this operation.

Action: Enable Database Vault on CDB\$ROOT and retry the operation.

ORA-47504: Common audit policies for component Oracle Database Vault not supported.

Cause: Audit policies for Oracle Database Vault realms, factors and rule sets could not be common audit policies.

Action: If creating audit policies for Oracle Database Vault objects on CDB\$ROOT, include the clause 'container=current'.

ORA-47901: OLS policy not specified

Cause: An OLS policy name is required for this operation

Action: Specify a policy name and retry the operation

ORA-47902: OLS policy label not specified

Cause: An OLS policy label is required for this operation

Action: Specify a policy label and retry the operation

ORA-47903: OLS policy label <varname>string</varname> not found for policy <varname>string</varname>

Cause: The policy label being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47904: OLS session label does not exist

Cause: The policy label specified does not exist

Action: Choose a valid policy label and retry the operation

ORA-47905: OLS policy label <varname>string</varname> is not allowed for policy <varname>string</varname>

Cause: The policy label specified is not valid for this policy

Action: Choose a valid policy label for this policy and retry the operation

ORA-47906: OLS policy label not specified for identity <varname>string</varname>.<varname>string</varname> under policy <varname>string</varname>

Cause: The policy label is required for this operation

Action: Choose a valid policy label for this policy and retry the operation

ORA-47907: Database Vault associated OLS policy <varname>string</varname> not fully configured

Cause: The Oracle Label Security (OLS) policy was associated with Database Vault. But either the policy was not configured with a factor or the current factor identity was not assigned a label.

Action: Based on the cause, either configure a factor with the OLS policy using DVSYS.DBMS_MACADM.ADD_POLICY_FACTOR procedure and assign labels to factor identities using DVSYS.DBMS_MACADM.CREATE_POLICY_LABEL procedure or remove Database Vault association using DVSYS.DBMS_MACADM.DELETE_MAC_POLICY_CASCADE procedure.

ORA-47920: Authorization failed for user <varname>string</varname> to perform this operation

Cause: The operation attempted is not allowed for this user

Action: Please ensure you have privileges to perform this operation

ORA-47921: error adding host <varname>string</varname> to domain <varname>string</varname>, <varname>string</varname>

Cause: An error occurred adding the host specified to the domain specified

Action: Please review the host and domain definition and correct it as required

ORA-47922: error removing host <varname>string</varname> to domain <varname>string</varname>, <varname>string</varname>

Cause: An error occurred removing the host specified to the domain specified

Action: Please review the host and domain definition and correct it as required

ORA-47930: Privilege capture <varname>string</varname> already exists.

Cause: A privilege capture with the given name was already in existence.

Action: Choose another capture name or drop the existing privilege capture.

ORA-47931: Privilege capture <varname>string</varname> does not exist.

Cause: The given privilege capture did not exist.

Action: Choose another privilege capture.

ORA-47932: Privilege capture <varname>string</varname> is still enabled.

Cause: The given privilege capture was still enabled.

Action: Choose another capture or disable the given privilege capture.

ORA-47933: Privilege capture <varname>string</varname> is already enabled.

Cause: The given privilege capture was already enabled.

Action: Choose another privilege capture.

ORA-47934: Two privilege captures are already enabled.

Cause: The maximum number of two privilege captures were enabled."

Action: Disable one of the enabled privilege captures.

ORA-47935: Another privilege capture is enabled.

Cause: Another capture of the same type or another nondatabase-wide capture was enabled.

Action: Disable the enabled privilege capture.

ORA-47936: Privilege capture <varname>string</varname> is already disabled.

Cause: The given privilege capture was already disabled.

Action: Choose another capture.

ORA-47937: Input <varname>string</varname> does not match the given privilege capture type.

Cause: The given input did not match the given privilege capture type.

Action: Change the input or the privilege capture type.

ORA-47938: GENERATE_RESULT is already running for privilege capture <varname>string</varname>.

Cause: DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT was already running for the given privilege capture.

Action: Wait and retry later or choose another privilege capture.

ORA-47939: Capture context namespace or attribute does not exist or is invalid.

Cause: Context namespace or attribute used in the capture condition did not exist or was invalid.

Action: Create the namespace or set the attribute or recreate a privilege capture with a valid namespace and attribute.

ORA-47950: no value defined for required parameter <varname>string</varname>

Cause: The operation requires a value for this parameter

Action: Please specify the missing parameter and retry the operation

ORA-47951: invalid input value or length for parameter '<varname>string</varname>'

Cause: The value specified for this parameter is invalid or too large

Action: Please specify the a valid parameter and retry the operation

ORA-47952: Oracle Data Pump authorization for Oracle Database Vault to <varname>string</varname> already exists

Cause: Oracle Data Pump authorization for Oracle Database Vault was already granted to the given grantee.

Action: Choose a different grantee and retry the operation.

ORA-47953: Oracle Data Pump authorization for Oracle Database Vault to <varname>string</varname> on schema <varname>string</varname> already exists

Cause: Oracle Data Pump authorization for Oracle Database Vault on the given schema was already granted to the given grantee.

Action: Choose a different grantee or schema and retry the operation.

ORA-47954: Oracle Data Pump authorization for Oracle Database Vault to <varname>string</varname> on object <varname>string</varname> already exists

Cause: Oracle Data Pump authorization for Oracle Database Vault on the given object was already granted to the given grantee.

Action: Choose a different grantee or a different object and retry the operation.

ORA-47955: Oracle Data Pump authorization for Oracle Database Vault to <varname>string</varname> is not found

Cause: Oracle Data Pump authorization for Oracle Database Vault was not granted to the given user.

Action: Choose a user who has Oracle Data Pump authorization for Oracle Database Vault and retry the operation.

ORA-47956: Oracle Data Pump authorization for Oracle Database Vault to <varname>string</varname> on schema <varname>string</varname> is not found

Cause: Oracle Data Pump authorization for Oracle Database Vault was not granted to the given user on the given schema.

Action: Choose a different user or schema and retry the operation.

ORA-47957: Oracle Data Pump authorization for Oracle Database Vault to <varname>string</varname> on object <varname>string</varname> is not found

Cause: Oracle Data Pump authorization for Oracle Database Vault was not granted to the given user on the given object.

Action: Choose a different user or object and retry the operation.

ORA-47958: Running EXP with direct path option is disallowed when Oracle Database Vault is enabled.

Cause: While Oracle Database Vault was enabled, an attempt was made to run EXP with the 'direct=y' option.

Action: Change the option to 'direct=n' or disable Oracle Database Vault and retry the operation.

ORA-47959: Oracle transportable tablespace authorization for Oracle Database Vault to <varname>string</varname> on tablespace <varname>string</varname> already exists.

Cause: Oracle transportable tablespace authorization for Oracle Database Vault on the given tablespace was already granted to the given grantee.

Action: Choose a different grantee or tablespace and retry the operation.

ORA-47960: Oracle transportable tablespace authorization for Oracle Database Vault to <varname>string</varname> on tablespace <varname>string</varname> is not found.

Cause: Oracle transportable tablespace authorization for Oracle Database Vault was not granted to the given user on the given tablespace.

Action: Choose a different user or tablespace and retry the operation.

ORA-47961: Oracle Scheduler Job authorization for Oracle Database Vault to <varname>string</varname> already exists

Cause: Oracle Scheduler Job authorization for Oracle Database Vault was already granted to the given grantee.

Action: Choose a different grantee and retry the operation.

ORA-47962: Oracle Scheduler Job authorization for Oracle Database Vault to <varname>string</varname> on schema <varname>string</varname> already exists

Cause: Oracle Scheduler Job authorization for Oracle Database Vault on the given schema was already granted to the given grantee.

Action: Choose a different grantee or schema and retry the operation.

ORA-47963: Oracle Scheduler Job authorization for Oracle Database Vault to <varname>string</varname> is not found

Cause: Oracle Scheduler Job authorization for Oracle Database Vault was not granted to the given user.

Action: Choose a user who has Oracle Scheduler Job authorization for Oracle Database Vault and retry the operation.

ORA-47964: Oracle Scheduler job authorization for Oracle Database Vault to <varname>string</varname> on schema <varname>string</varname> is not found

Cause: Oracle Scheduler job authorization for Oracle Database Vault was not granted to the given user on the given schema.

Action: Choose a different user or schema and retry the operation.

ORA-47971: Oracle proxy authorization for Oracle Database Vault to <varname>string</varname> on schema <varname>string</varname> already exists

Cause: Oracle proxy authorization for Oracle Database Vault on the given schema was already granted to the given grantee.

Action: Choose a different grantee or schema and retry the operation.

ORA-47972: Oracle proxy authorization for Oracle Database Vault to <varname>string</varname> on schema <varname>string</varname> is not found.

Cause: Oracle proxy authorization for Oracle Database Vault was not granted to the given user on the given schema.

Action: Choose a different user or schema and retry the operation.

ORA-47973: Oracle DDL authorization for Oracle Database Vault to <varname>string</varname> on schema <varname>string</varname> already exists.

Cause: Oracle DDL authorization for Oracle Database Vault on the given schema was already granted to the given grantee.

Action: Choose a different grantee or schema and retry the operation.

ORA-47974: Oracle DDL authorization for Oracle Database Vault to <varname>string</varname> on schema <varname>string</varname> is not found.

Cause: Oracle DDL authorization for Oracle Database Vault was not granted to the given user on the given schema.

Action: Choose a different user or schema and retry the operation.

ORA-47985: password same as or similar to user

Cause: The password specified similar to the user account name and therefore insecure

Action: Please specify the more complex password and retry the operation

ORA-47986: password length must be 8 characters or more

Cause: The password specified is too short and therefore insecure

Action: Please specify a password with more characters and retry the operation

ORA-47987: password is too simple

Cause: The password specified can be guessed based on dictionary terms and therefore insecure

Action: Please specify a password that is not based on dictionary terms and retry the operation

ORA-47988: password should contain at least one numeric and one alphabetic character

Cause: The password does not contain at least one numeric and one alphabetic character

Action: Please specify a password with at least one numeric and one alphabetic character and retry the operation

ORA-47989: password should differ by at least 3 characters

Cause: The password specified does not differ from the previous one by more than 3 characters

Action: Please specify a password that differs from the previous one by more than 3 characters and retry the operation

ORA-47994: Database Vault removal script must be run as SYS

Cause: The Database Vault removal script was not run as SYS.

Action: Run the Database Vault removal script as SYS.

ORA-47995: Database Vault must be linked off and disabled before removal

Cause: Database Vault was not linked off and disabled.

Action: Link Database Vault off and execute DBMS_MACADM.DISABLE_DV_CHECK as DV_OWNER.

ORA-47996: The RECYCLEBIN is turned on

Cause: The RECYCLEBIN was turned on.

Action: Turn off the RECYCLEBIN and then execute Database Vault Removal script.

ORA-47997: Database Vault protected schema does not exist

Cause: The Database Vault DVSYS protected schema did not exist.

Action: Contact Oracle Support Services for instructions.

ORA-47998: Database Vault tracing event

ORA-47999: internal Database Vault error: <varname>string</varname>\n Error: <varname>string</varname>

Cause: An internal Database Vault framework error occurred.

Action: Contact Oracle Customer Support.

ORA-48001 to ORA-51705

ORA-48001: internal error code, arguments: [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>]

Cause: This is the generic internal error number for program exceptions. This indicated that a process encountered an exceptional condition.

Action: Report as a bug - the first argument is the internal error number.

ORA-48002: thread terminated by fatal error

Cause: The thread was in an unrecoverable state.

Action: Examine the thread trace file for more information.

ORA-48003: out of process memory when trying to allocate <varname>string</varname> bytes (<varname>string</varname>,<varname>string</varname>)

Cause: Operating system process private memory was exhausted.

Action: n/a

ORA-48004: unable to allocate <varname>string</varname> bytes of shared memory ("<varname>string</varname>","<varname>string</varname>","<varname>string</varname>","<varname>string</varname>","<varname>string</varname>")

Cause: More shared memory is needed than was allocated in the shared pool.

Action: Reduce your use of shared memory or increase the amount of available shared memory.

ORA-48005: illegal argument for function

ORA-48006: user requested cancel of current operation

ORA-48007: name is already used by an existing product type

Cause: An attempt was made to define a product type with the same name as an already defined product type.

Action: Use the already existing product type with the specified name, or use a different name for the product type.

ORA-48008: id is already used by an existing product type

Cause: An attempt was made to define a product type with the same id as an already defined product type.

Action: Choose a different name for the product type.

ORA-48100: error encountered when attempting to open a file

Cause: There was an error encountered when attempting to open a file with the ADR file interface.

Action: Check that the specified directory name, file name, and open options are valid.

ORA-48101: error encountered when attempting to read a file
 [<varname>string</varname>] [<varname>string</varname>]
 [<varname>string</varname>]

Cause: There was an error encountered when attempting to read a file with the ADR file interface.

Action: Check the specified arguments to the read interface.

ORA-48102: encountered the end-of-file when reading the file

Cause: The ADR file interface encountered the end-of-file when reading the file.

Action: Handle the end of file condition.

ORA-48103: error encountered when attempting to write a file
 [<varname>string</varname>] [<varname>string</varname>]
 [<varname>string</varname>]

Cause: There was an error encountered when attempting to write a file with the ADR file interface.

Action: Check the specified arguments to the write interface.

ORA-48104: read mismatch on blocks requested and returned,
 [<varname>string</varname>], [<varname>string</varname>]

Cause: There was a mismatch between the number of blocks requested for reading and the number of blocks actually returned.

Action: Check the file to make sure there are no partial blocks.

ORA-48105: write mismatch on blocks requested and returned,
 [<varname>string</varname>], [<varname>string</varname>]

Cause: There was a mismatch between the number of blocks requested for writing and the number of blocks actually written.

Action: Check that there is enough space left on the device to write the requested number of blocks.

ORA-48106: error initializing the ADR <varname>string</varname> object

Cause: There was an error encountered during the initialization of one of the ADR file objects.

Action: Check the validity of the specified directory name and file name.

ORA-48107: invalid Bfile input, [<varname>string</varname>]

Cause: An invalid Bfile was passed into the routine to convert the bfile into a file handle.

Action: Verify the contents of the specified Bfile.

ORA-48108: invalid value given for the diagnostic_dest init.ora parameter

Cause: The value given for the diagnostic_dest directory is not a valid directory. Either the directory does not exist or the process does not have read/write privileges on the directory.

Action: Use a value for diagnostic_dest that is a valid directory with the proper read and write privileges.

ORA-48109: invalid lock mode for file descriptor, [<varname>string</varname>]

Cause: The lock mode associated with the file descriptor was invalid in the context of the routine.

Action: Verify that a file is not trying to obtain multiple locks and that the file is holding a lock when attempting to release the lock.

ORA-48110: error encountered while attempting to get a file lock [<varname>string</varname>] [<varname>string</varname>]

Cause: There was an error encountered while trying to get a file lock.

Action: Check the state of the file and operating system.

ORA-48111: error encountered while attempting to release a file lock [<varname>string</varname>]

Cause: There was an error encountered while trying to release a file lock.

Action: Check the state of the file and operating system.

ORA-48112: invalid flags for open file, <varname>string</varname>

Cause: Invalid flags were passed in to the open file routine.

Action: Check to see if the flags are a valid combination.

ORA-48113: unable to write to stream file because of out of space condition

Cause: The system is unable to write the requested number of bytes to a stream file. This is due to an out of space condition. The additional information shows how many bytes were not written.

Action: Check that there is enough space left on the device to write the requested number of bytes.

ORA-48114: error encountered when attempting to close a file

Cause: There was an error encountered when attempting to close a file with the ADR file interface.

Action: Check the validity of the file descriptor.

ORA-48115: error encountered while seeking a file position

Cause: There was an error encountered while seeking a position in a file.

Action: Check that the requested file position falls within the file boundaries.

ORA-48116: error encountered when attempting to create a directory [<varname>string</varname>]

Cause: There was an error encountered when attempting to create a directory.

Action: Check the directory name.

ORA-48117: error encountered when attempting to remove a directory [<varname>string</varname>]

Cause: There was an error encountered when attempting to remove a directory.

Action: Check the directory name.

ORA-48118: error encountered with list directory [<varname>string</varname>]

Cause: There was an error with listing the elements of a directory.

Action: Check the state of the operating system.

ORA-48119: error encountered when attempting to remove a file
[<varname>string</varname>] [<varname>string</varname>]

Cause: There was an error encountered when attempting to remove a file with the ADR file interface.

Action: Check the directory name and file name.

ORA-48120: error encountered when attempting to retrieve the file size
[<varname>string</varname>] [<varname>string</varname>]

Cause: There was an error encountered when attempting to retrieve the file size with the ADR file interface.

Action: Check the directory name and file name.

ORA-48121: error with opening the ADR stream file [<varname>string</varname>]
[<varname>string</varname>]

Cause: An error was encountered when attempting to open an ADR stream file.

Action: Check the rest of the error stack for details of the actual error that was encountered.

ORA-48122: error with opening the ADR block file [<varname>string</varname>]
[<varname>string</varname>]

Cause: An error was encountered when attempting to open an ADR block file.

Action: Check the rest of the error stack for details of the actual error that was encountered.

ORA-48123: error encountered when attempting to flush a file

Cause: There was an error encountered when attempting to flush a file with the ADR file interface.

Action: Check the state of the file.

ORA-48124: device full encountered during write to a file

Cause: The device full error was encountered during the write to a file.

Action: Check the amount of free space on the device.

ORA-48125: illegal identifier length, argn:<varname>string</varname>,
len:<varname>string</varname>, lim:<varname>string</varname>

Cause: An input identifier was passed in that has a length that is greater than the max length.

Action: Make sure the input identifier has a length that is less than the max length.

ORA-48126: attempting to create a file that already exists

Cause: The client attempted to create a file that already exists.

Action: Either remove the file or check if it is okay if the file already exists.

ORA-48127: attempting to open a file that does not exist

Cause: An attempt was made to open a file that does not exist.

Action: Either create the file or check why the file does not exist.

ORA-48128: opening of a symbolic link is disallowed

Cause: An error was encountered when attempting to open a file that is a symbolic link. Users are not allowed to open symbolic links.

Action: Check the specified file name.

ORA-48129: invalid input for the full path specification

Cause: Input was incorrectly specified for the full path specification, or the default extension may have been incorrectly specified. Or an empty string was passed in for the full path.

Action: Check that the full path string is non-NULL. If you want to specify a relative path from ADR Home for the full path specification, then use '<ADR_HOME>' instead of the actual path to ADR Home. For ADR Base, use '<ADR_BASE>'.

ORA-48130: invalid lock parameters for get file lock [<varname>string</varname>]

Cause: Invalid lock parameters passed in for the get file lock routine. The user must pass in file as the lock type. Or, there is a lock mode mismatch. Exclusive locks are not allowed in read-only mode, and shared locks are not allowed in write-only mode.

Action: Check that correct lock type is specified and that the correct lock mode is requested for the file given its open flags.

ORA-48131: error encountered when attempting to tell the file position

Cause: An error was encountered when attempting to tell the file position using the ADR file interface.

Action: Check the directory and file name of the file along with the open state.

ORA-48132: requested file lock is busy, [<varname>string</varname>] [<varname>string</varname>]

Cause: The requested file lock is busy because another process is holding the file lock.

Action: Try to get the file lock again at a later time.

ORA-48133: file descriptor has already been opened [<varname>string</varname>] [<varname>string</varname>]

Cause: The specified file descriptor has already been opened.

Action: Do not open a file that has previously been opened, or check your code to make sure you are cleaning up a file descriptor that is being reused correctly.

ORA-48134: invalid file descriptor state for operation, <varname>string</varname>, <varname>string</varname>, <varname>string</varname>

Cause: The state of the file descriptor was invalid for the requested operation. An example is that a file was opened for read, but a write operation to the file was requested.

Action: Check the state of the file descriptor and make sure it matches the operation.

ORA-48135: uninitialized file descriptor

Cause: The specified file descriptor is uninitialized.

Action: Make sure the file descriptor is initialized before passing it into the routine.

ORA-48136: directory already exists [<varname>string</varname>]

Cause: Operation failed because the specified directory already exists.

Action: Remove the directory or ignore this error.

ORA-48137: uninitialized file handle

Cause: The specified file handle is uninitialized.

Action: Make sure the file handle is initialized before passing it into the routine.

ORA-48138: invalid directory name input for client address

Cause: An invalid directory name was specified as part of the address path specification.

Action: Check that the directory name is non-NULL and that the directory name length does not exceed the maximum length.

ORA-48139: invalid input to ADR initialization routine

Cause: There was an invalid input to the ADR initialization routine.

Action: Check the length of the ADR base, product ID, and instance ID input arguments.

ORA-48140: the specified ADR Base directory does not exist [<varname>string</varname>]

Cause: The specified ADR Base Directory does not exist.

Action: Check that the specified ADR Base Directory is a valid path name and that the directory exists.

ORA-48141: error creating directory during ADR initialization [<varname>string</varname>]

Cause: Error encountered when creating a directory during the initialization of the ADR subsystem.

Action: Check the input arguments to the ADR initialization routine and the state of the operating system.

ORA-48142: invalid permissions input for change permissions

Cause: Invalid permissions passed into change permissions routine.

Action: Check the value of the permissions input.

ORA-48143: error changing permissions for a file

Cause: Error encountered while changing the permissions for a file

Action: Check the specified directory and file and the state of the operating system.

ORA-48144: error encountered while performing standard file I/O

Cause: Error encountered while performing standard file I/O

Action: Check the validity of standard in, out, and error.

ORA-48145: invalid seek location, [<varname>string</varname>], [<varname>string</varname>]

Cause: Invalid seek location specified for routine.

Action: Check the validity of specified seek location.

ORA-48146: missing read, write, or exec permission on directory during ADR initialization [<varname>string</varname>] [<varname>string</varname>]

Cause: Error encountered when checking if the process has read, write, and exec privileges on directories needed by the ADR subsystem. This error occurs during the initialization of the ADR subsystem.

Action: Check the input arguments to the ADR initialization routine and the state of the operating system. Ensure that the user has the proper permissions on the ADR directories.

ORA-48147: invalid home location specification for ADR, [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>]

Cause: Invalid read or write home location specification for ADR.

Action: An invalid home was specified for the ADR Read or Write Home location.

ORA-48148: error encountered when attempting to move a file

Cause: There was an error encountered when attempting to move a file with the ADR file interface.

Action: Check the directory name and file name.

ORA-48149: error encountered when attempting to copy a file

Cause: There was an error encountered when attempting to copy a file with the ADR file interface.

Action: Check the directory name and file name.

ORA-48150: error encountered with set current working directory

Cause: There was an error with setting the current working directory.

Action: Check the path used, or the state of the operating system.

ORA-48151: error getting operating system time for a file

Cause: Error encountered while getting the operating system time for a file.

Action: Check the specified directory and file and the state of the operating system.

ORA-48152: lock table is full

Cause: Lock table is full - too many locks granted

Action: Try again later

ORA-48153: error encountered when getting ADR base directory default

Cause: There was an error encountered when attempting to get the ADR base directory default value.

Action: Check your environment to see if the \$ORACLE_BASE and \$ORACLE_HOME environment variables are set.

ORA-48154: reached end of file for alert log

Cause: The end of file was reached for reading the Alert Log. There are no more messages to read in the Alert Log.

Action: Do not read from the Alert Log

ORA-48155: error encountered when read alert log [<varname>string</varname>]

Cause: There was an error encountered when attempting to read a message from the Alert Log.

Action: Check the error message and the contents of the alert message.

ORA-48156: Alert log purge has occurred - retry operation

Cause: The purge of the alert log has occurred.

Action: Retry the operation.

ORA-48157: null input to ADR initialization

Cause: There was a null input to the ADR initialization routine.

Action: Check the ADR base, product ID, and instance ID input arguments.

ORA-48158: invalid input for ADR base directory

Cause: An invalid input was passed in for the ADR base directory name. The ADR base directory name is either NULL or too long of a string.

Action: Check the ADR base directory input argument.

ORA-48159: invalid input for ADR product type

Cause: An invalid input was passed in for the ADR product type. The ADR product type is out of bounds.

Action: Check the ADR product type input argument.

ORA-48160: invalid input for ADR product id

Cause: An invalid input was passed in for the ADR product id. The ADR product id is either NULL or too long of a string.

Action: Check the ADR product id input argument.

ORA-48161: invalid input for ADR instance id

Cause: An invalid input was passed in for the ADR instance id. The ADR instance id is either NULL or too long of a string.

Action: Check the ADR instance id input argument.

ORA-48162: string buffer too small to hold input, [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>]

Cause: The string buffer is too small to copy an input string into.

Action: Check the size of the string buffer and the input string. Look in the argument for the location in the code where the error occurs.

ORA-48163: error concatenating directory onto path, [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>]

Cause: Error encountered while concatenating a directory onto a path name.

Action: Check the error returned by the OS and the size of the input and output buffers.

ORA-48164: error concatenating file onto path, [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>]

Cause: Error encountered while concatenating a directory onto a path name.

Action: Check the error returned by the OS and the size of the input and output buffers.

ORA-48165: user missing read, write, or exec permission on specified ADR Base directory [<varname>string</varname>]

Cause: The specified ADR Base Directory does not have the correct permissions.

Action: Check the read, write, and exec permissions on the specified ADR Base Directory

ORA-48166: error with opening ADR block file because file does not exist [<varname>string</varname>] [<varname>string</varname>]

Cause: An error was encountered with opening an ADR block file because the file does not exist.

Action: Check the existence of the ADR Block File.

ORA-48167: invalid argument for checking ADR initialization

Cause: Invalid arguments were specified for the routine to check ADR initialization.

Action: Check the inputs to the ADR initialization routine.

ORA-48168: the ADR sub-system is not initialized

Cause: The ADR subsystem has not been initialized. The requested operation cannot be performed.

Action: Check the usage of the call to the ADR services. The ADR sub-system must be initialized for the call to work.

ORA-48169: incorrect arguments to ADR deferred initialization

Cause: There are incorrect arguments to the ADR deferred initialization.

Action: Check the input arguments. It could be possible that the product is not set up for deferred initialization.

ORA-48170: unable to lock file - already in use

Cause: the file is locked by another process, indicating that it is currently in use by another process

Action: determine which process legitimately owns this file.

ORA-48171: unable to get share lock - file not readable

Cause: share lock request was made on a file not open for read access.

Action: file must be open read-only or read-write to get a share lock.

ORA-48172: unable to find a valid ADR base

Cause: Unable to find a valid ADR base. We tried the ORACLE_BASE, ORACLE_HOME, home, and tmp directories, but none of the directories exist for read/write access.

Action: Check the validity of the ORACLE_BASE, ORACLE_HOME, home, and tmp directories.

ORA-48173: error checking directory existence during ADR initialization [<varname>string</varname>]

Cause: Error encountered when checking directory existence during the initialization of the ADR subsystem. Either the diag or product type directory does not exist underneath the ADR base.

Action: The directory in the error message must exist in order for ADR initialization to succeed. Make sure the directories exist.

ORA-48174: error encountered with get current working directory

Cause: There was an error with getting the current working directory.

Action: Check the state of the operating system or the size of the path buffer.

ORA-48175: the path name must not contain the string '..'.

Cause: The specified path name contains '..'.

Action: Correct the path name and retry the operation.

ORA-48176: error translating a path name into its full path name

Cause: An error was encountered when translating a path name into its full path name.

Action: Check the inputted path name to make sure it is a valid relative path.

ORA-48177: file name with full path information [<varname>string</varname>] not allowed

Cause: Input was incorrectly specified for the file name. The inputted file name is greater than the maximum length, or the file name has path information. In this case, the file name should not have any path information. The path information should be specified in a separate argument.

Action: Check that the string for the file name is not too long and does not have path information.

ORA-48178: error encountered while reading an ADR block file during ADR initialization [<varname>string</varname>]

Cause: An error was encountered while reading an ADR block file during the initialization of the ADR subsystem.

Action: Check the state of the file system.

ORA-48179: OS file synchronization failure

Cause: OS command to synchronize the changes to a file with the operating system failed.

Action: Check the state of the file system and the amount of free space left on your device.

ORA-48180: OS open system call failure

Cause: OS open system call failed. The system failed to open or create a file in the requested mode.

Action: Check the OS error code

ORA-48181: OS write system call failure

Cause: OS write system call failed. The system failed to write to a file.

Action: Check the OS error code

ORA-48182: OS read system call failure

Cause: OS read system call failed. The system failed to read to a file.

Action: Check the OS error code

ORA-48183: OS close system call failure

Cause: OS close system call failed. The system failed to close a file.

Action: Check the OS error code

ORA-48184: OS seek system call failure

Cause: OS seek system call failed. The system failed to seek to a position in a file.

Action: Check the OS error code

ORA-48185: OS file size system call failure

Cause: OS file size call failed. The system failed to retrieve the file size for a file.

Action: Check the OS error code

ORA-48186: OS check file exists system call failure

Cause: OS check file exists system call failed. The system failed to perform the check file exists command for a file.

Action: Check the OS error code

ORA-48187: specified directory does not exist

Cause: The specified directory does not exist.

Action: Check the directory name.

ORA-48188: user missing read, write, or exec permission on specified directory

Cause: The user does not have valid permissions on the specified directory. The user is missing either the read, write, or execute permission.

Action: Check the permissions of the specified directory.

ORA-48189: OS command to create directory failed

Cause: The OS command to create a directory failed.

Action: Check the error number associated with the create directory failure.

ORA-48190: OS unlink system call failure

Cause: OS unlink system call failed. The system failed to perform unlink on the specified file.

Action: Check the OS error code

ORA-48191: user missing read or write permission on specified file

Cause: The user does not have valid permissions on the specified file. The user is missing either the read or write permission.

Action: Check the permissions of the specified file.

ORA-48192: OS command to move a file failed

Cause: The OS command to move a file failed.

Action: Check the error number associated with the move file.

ORA-48193: OS command to open a directory failed

Cause: The OS command to open a directory failed.

Action: Check the OS error associated with the open directory failure.

ORA-48194: OS command to close a directory failed

Cause: The OS command to close a directory failed.

Action: Check the OS error associated with the close directory failure.

ORA-48195: OS command to remove a directory failed

Cause: The OS command to remove a directory failed.

Action: Check the OS error associated with the remove directory failure.

ORA-48196: OS command to release advisory lock failed

Cause: The OS command to release the advisory lock failed

Action: Check the OS error associated with the release advisory lock failure.

ORA-48197: OS command to get the file status failed

Cause: The OS command to get the file status failed. This could be because the file is not open or file descriptor is invalid.

Action: Check the OS error associated with the get file status failure.

ORA-48198: OS command to change the file permissions failed

Cause: The OS command to change the file permissions failed.

Action: Check the OS error associated with the failure.

ORA-48199: OS command to copy a file failed

Cause: The OS command to copy a file failed.

Action: Check the error number associated with the copy file.

ORA-48200: Illegal Input Argument [<varname>string</varname>]

Cause: An illegal argument was passed in.

Action: Fix the call.

**ORA-48201: Field Length Exceeds Maximum [<varname>string</varname>]
[<varname>string</varname>] [<varname>string</varname>]**

Cause: An illegal field length was used.

Action: Fix the call.

ORA-48202: Illegal Identifier [<varname>string</varname>] [<varname>string</varname>]

Cause: Illegal identifier specified.

Action: Use a valid identifier.

ORA-48203: Illegal Data Type [<varname>string</varname>]

Cause: Illegal data type specified.

Action: Use a valid data type.

**ORA-48204: Illegal Identifier Length [<varname>string</varname>]
[<varname>string</varname>] [<varname>string</varname>]**

Cause: The input identifier is too long.

Action: Specify a shorter identifier.

**ORA-48205: Record Length too Big [<varname>string</varname>]
[<varname>string</varname>] [<varname>string</varname>]**

Cause: The sum of the maximum lengths of all fields exceeds the maximum record length that is supported.

Action: Remove or shorten some of the fields.

**ORA-48206: Illegal Number of Fields [<varname>string</varname>]
[<varname>string</varname>] [<varname>string</varname>]**

Cause: The number of fields specified exceeds the supported maximum.

Action: Remove some of the fields in the relation.

ORA-48207: Illegal Field Name [<varname>string</varname>]

Cause: The field name is invalid.

Action: Specify a valid field name.

ORA-48208: Duplicate Field Names [<varname>string</varname>]

Cause: The list of fields specified contains a duplicate field.

Action: Remove the duplicate field.

ORA-48209: Relation Already Exists

Cause: The relation already exists.

Action: Remove the relation.

ORA-48210: Relation Not Found

Cause: The relation was not found.

Action: Either specify a valid relation name or create one with that name.

**ORA-48211: Illegal Access Mode [<varname>string</varname>]
[<varname>string</varname>]**

Cause: The supplied access mode is not recognized.

Action: Supply a valid mode.

ORA-48212: Open Record Access Not Done

Cause: The open record access call was not performed.

Action: The open record access call is required before attempting this call.

**ORA-48213: Incorrect Access Mode for Operation [<varname>string</varname>]
[<varname>string</varname>]**

Cause: The relation was opened in a mode not compatible with the attempted operation being done.

Action: Reopen the relation in the correct mode.

**ORA-48214: Sequence Overflow [<varname>string</varname>]
[<varname>string</varname>] [<varname>string</varname>]**

Cause: The sequence number will exceed the system maximum.

Action: Reset the sequence number.

**ORA-48215: Sequence Invalid Operation [<varname>string</varname>]
[<varname>string</varname>]**

Cause: The specified sequence operation is not valid.

Action: Specify a valid operation.

**ORA-48216: Field Len Exceeds Max Field Length [<varname>string</varname>]
[<varname>string</varname>] [<varname>string</varname>]
[<varname>string</varname>]**

Cause: The field length specified exceeds the defined maximum for the field.

Action: Supply a smaller field length.

ORA-48217: Out of Space on Device

Cause: The storage subsystem is out of space.

Action: Add more space to the storage subsystem.

**ORA-48218: Duplicate Key Name [<varname>string</varname>]
[<varname>string</varname>]**

Cause: The key name already exists.

Action: Specify a different key name.

ORA-48219: Key Name Doesn't Match Any Existing Key

Cause: The key name provided doesn't match an existing key.

Action: Specify a key name that exists.

**ORA-48220: Too Many Keys Defined [<varname>string</varname>]
[<varname>string</varname>]**

Cause: A key is trying to be created that exceeds the maximum number of keys supported.

Action: Drop another key.

**ORA-48221: Key Exceeds Maximum Allowed Length [<varname>string</varname>]
[<varname>string</varname>] [<varname>string</varname>]**

Cause: The sum of the lengths of the fields in the key exceeds the maximum length supported.

Action: Remove one or more fields from the key.

ORA-48222: Predicates/Order By Not Allowed

Cause: A predicate or order by can not be added after fetch has started.

Action: Put the predicate or order by call before the first fetch.

ORA-48223: Interrupt Requested - Fetch Aborted - Return Code
[<varname>string</varname>] [<varname>string</varname>]

Cause: User interrupt has occurred.

Action: None

ORA-48224: DDL has occurred since parse - reparse [<varname>string</varname>]
[<varname>string</varname>] [<varname>string</varname>]

Cause: Another session has performed a DDL (i.e. add field, create key, drop key) that prevents this session from being to continue.

Action: Call open record access again.

ORA-48225: No More Space in Order By Buffer

Cause: The order by buffer size is not sufficient for the number of rows.

Action: Increase the order by buffer size specified.

ORA-48226: No Fetch in Progress

Cause: An attempt to perform update or delete has occurred without a fetch.

Action: You must first perform a fetch.

ORA-48227: Invalid Relation File - [<varname>string</varname>]
[<varname>string</varname>] [<varname>string</varname>]
[<varname>string</varname>]

Cause: The AMS file is invalid or corrupt.

Action: Do a repair relation

ORA-48228: Missing Define Call [<varname>string</varname>]

Cause: A call to define was not performed before doing a fetch.

Action: Call the define service before fetch.

ORA-48229: Invalid Relation Handle Provided [<varname>string</varname>]
[<varname>string</varname>]

Cause: An invalid or corrupt relation handle was used.

Action: Possible memory corruption.

ORA-48230: Expression arguments must match types

Cause: Incorrect type semantics for fields in the predicate.

Action: Correct the predicate.

ORA-48231: Predicate syntax error

Cause: A syntax error exists in the predicate string.

Action: Correct the predicate.

ORA-48232: Debug command syntax error [<varname>string</varname>]

Cause: An invalid debug command has been specified.

Action: Correct the debug command.

**ORA-48233: Invalid Field Handle [<varname>string</varname>]
[<varname>string</varname>] [<varname>string</varname>]**
Cause: The field handle is invalid.

Action: Possible memory corruption.

ORA-48234: Create Field of Field Name [<varname>string</varname>] Failed

**ORA-48235: Operation [<varname>string</varname>] on Relation
[<varname>string</varname>] Failed**

**ORA-48236: Operation [<varname>string</varname>] on Relation
[<varname>string</varname>] Field [<varname>string</varname>] Failed**

**ORA-48237: Operation [<varname>string</varname>] on Relation
[<varname>string</varname>] Key [<varname>string</varname>] Failed**

**ORA-48238: Invalid Surrogate Length Specified [<varname>string</varname>]
[<varname>string</varname>]**
Cause: An invalid length during create field was specified

Action: Specify a correct length

**ORA-48239: Invalid Predicate Handle Provided [<varname>string</varname>]
[<varname>string</varname>]**
Cause: An invalid or corrupt relation handle was used.

Action: Possible memory corruption.

ORA-48240: Field is NOT NULL but NULL value supplied
Cause: A field [%s] declared to not allow nulls contains a null value.

Action: Specify a correct value

**ORA-48241: File is at wrong version [file = <varname>string</varname>]
[current = <varname>string</varname>]**

ORA-48242: Fields that are NOT NULL can not use surrogates
Cause: NOT NULL fields can not have surrogates specified.

Action: Either remove the constraint or the surrogate.

ORA-48243: Additional Fields must be declared nulls allowed
Cause: A field can not be added to a relation that is defined NOT NULL

Action: Do not specify NOT NULL

ORA-48244: Purge for Retention can't be called while in an Query
Cause: A query is already running - purge for retention can't be invoked

Action: Fix call sequence

ORA-48245: Attempt to Update/Delete when at EOF
Cause: The fetch operation is positioned at EOF - can not update/delete

Action: Do not call update/delete after fetch has returned EOF

ORA-48246: Illegal Operation on External Relation

Cause: An illegal call was made using an external relation

Action: Do not perform the API Call

ORA-48247: Predicate Conversion Error <varname>string</varname>

Cause: A time conversion failed

Action: Fix the input

ORA-48248: Function <varname>string</varname> type check error; ityp = <varname>string</varname> typ = <varname>string</varname> arg = <varname>string</varname>

Cause: Invalid inputs to the specified function

Action: Change the inputs

ORA-48249: Type mismatch - lhs = <varname>string</varname>, rhs = <varname>string</varname>, result = <varname>string</varname>, op = <varname>string</varname>**ORA-48250: Details: <varname>string</varname>****ORA-48251: Failed to open relation due to following error**

Cause: See error below in the error stack

Action: See error below in the error stack

ORA-48252: Relation does not require migration

Cause: Relation on disk is compatible with the current code

Action: Don't run the migration services

ORA-48253: Relation Being Migrated - Can't be opened**ORA-48254: Migration Error [<varname>string</varname>] [<varname>string</varname>] [<varname>string</varname>] [<varname>string</varname>] [<varname>string</varname>] [<varname>string</varname>]****ORA-48255: Changes not supported on relations opened read-only****ORA-48256: Having by not allowed****ORA-48257: Grouping function (<varname>string</varname>) used - but no group by specified****ORA-48258: AMS Corrupt Page Found - Rebuild Relation**

Cause: A corrupted page has been found.

Action: Do a rebuild of the relation

ORA-48259: AMS Relation not Created Correctly

Cause: Create relation failed

Action: Recreate the relation

ORA-48260: Function <varname>string</varname> not found

Cause: A reference to a function that is not valid was found

Action: Fix the function name

ORA-48261: Grouping Function <varname>string</varname> not allowed in a having clause

ORA-48262: Sequence references not allowed in predicates

Cause: References to currval or nextval not allowed

Action: Remove these references

ORA-48263: Currval not set yet - use nextval

Cause: References to currval can't occur until a nextval is done

Action: Remove the reference

ORA-48264: Internal Application Function Failure

ORA-48265: Incorrect number of arguments (<varname>string</varname>) provided - expected (<varname>string</varname>)

Cause: Number of arguments to function is incorrect

Action: Specify the correct number of arguments

ORA-48290: Xaction Control General Fault

ORA-48291: Field name <varname>string</varname> can't be unique resolved

Cause: Field name appears in more than one relation

Action: Prefix the field name with the relation name

ORA-48292: Can't use outer join syntax mixed with inner join syntax

Cause: The join condition was specified using both inner and outer join elements"

Action: Specify the join condition correctly

ORA-48293: Outer join syntax not allowed without a join

Cause: Using outer join syntax in the predicate without doing a join

Action: Fix the predicate

ORA-48300: Incident Record Already Exists

Cause: trying to create an incident that already exists

Action: retry operation with new incident ID

ORA-48301: An Invalid Incident ID was specified

Cause: the specified incident ID was invalid

Action: retry operation with correct incident ID

ORA-48302: Incident Directory does not exist

Cause: the incident directory was not found

Action: retry operation with a different incident ID

ORA-48303: Exceeded max Incident Sequence Value

Cause: the maximum supported incident sequence value was exceeded

Action: reset incident sequence and retry operation

ORA-48304: incident staging file not found

Cause: the incident staging file is missing

Action: retry with a different incident ID

ORA-48305: incident ID range is too large

Cause: the maximum incident sequence value was exceeded

Action: retry operation with a smaller range

ORA-48308: Illegal input parameter: [prm = <varname>string</varname>] [pos = <varname>string</varname>]

ORA-48309: illegal incident state transition, [<varname>string</varname>] to [<varname>string</varname>]

Cause: the incident cannot be moved to the new state

Action: retry operation with a valid incident status

ORA-48310: Incident <varname>string</varname> staging file not found

Cause: the incident staging file does not exist

Action: retry operation with a valid incident ID

ORA-48311: Invalid field name [<varname>string</varname>]

Cause: the specified field name is invalid

Action: retry operation with a valid field name

ORA-48312: Sweep incident <varname>string</varname> staging file failed

Cause: the sweep action of incident staging file failed

Action: check the incident ID and retry

ORA-48313: Updates not allowed on ADR relation [<varname>string</varname>] of Version=<varname>string</varname>

Cause: Update operations not supported on this version of ADR relation

Action: check ADR version and retry

ORA-48314: Invalid ADR Control parameter [<varname>string</varname>]

Cause: the specified control parameter is invalid

Action: check parameter and reissue command

ORA-48315: ADR unavailable

Cause: the ADR directory is not available

Action: enable ADR and retry operation

ORA-48316: relation [<varname>string</varname>] unavailable or cannot be created

Cause: the ADR relation is not available

Action: check ADR directory and retry operation

ORA-48317: ADR Relation [<varname>string</varname>] of version=<varname>string</varname> is obsolete

Cause: the version of ADR relation is too old and not supported

Action: check the ADR version and retry

ORA-48318: ADR Relation [<varname>string</varname>] of version=<varname>string</varname> cannot be supported

Cause: the version of ADR relation is too new and cannot be supported

Action: need to use a newer release to access the ADR

ORA-48319: Update operation on ADR relation [<varname>string</varname>] not allowed

Cause: updates to foreign ADR relation cannot be supported

Action: verify ADR location and reissue command

ORA-48320: Too many incidents to report

Cause: the result set of incidents is too large to handle

Action: use a predicate to reduce the number of incidents and retry

ORA-48321: ADR Relation [<varname>string</varname>] not found

Cause: the required ADR relation is missing, ADR may be corrupted

Action: check ADR directory and retry

ORA-48322: Relation [<varname>string</varname>] of ADR V[<varname>string</varname>] incompatible with V[<varname>string</varname>] tool

Cause: the tool version is incompatible with the ADR version

Action: use another version of tool and retry

ORA-48323: Specified pathname [<varname>string</varname>] must be inside current ADR home

Cause: A file outside of ADR home was not allowed for this type of file.

Action: Check the file name and retry.

ORA-48324: Incompatible staging file encountered

Cause: sweep incident failed because staging file is incompatible

Action: check the incident ID and version of ADR and retry

ORA-48325: Staging File Validation Error [<varname>string</varname>] line [<varname>string</varname>]**ORA-48326: Illegal Staging File Type <varname>string</varname>****ORA-48327: Illegal Staging Status Type <varname>string</varname>****ORA-48328: View already exists - use replace option****ORA-48329: Create View Fails with the following errors****ORA-48330: Expected Clause (<varname>string</varname>) not found**

ORA-48331: Views only allowed <varname>string</varname> relations to be specified

ORA-48332: invalid relation-field name [<varname>string</varname>] in select list

ORA-48333: select field name [<varname>string</varname>] not found

ORA-48334: ambiguous select field name [<varname>string</varname>] found

ORA-48335: illegal function reference to more than one field [<varname>string</varname>], relation [<varname>string</varname>]

ORA-48336: missing Alias name for function column [<varname>string</varname>]

ORA-48338: Invalid function argument

ORA-48339: view [<varname>string</varname>] does not exist
Cause: view has not been created

Action: verify view name and reissue command

ORA-48340: operation not supported on view [<varname>string</varname>]
Cause: unsupported (dml) operation on views

Action: verify relation name and reissue command

ORA-48341: Field [<varname>string</varname>] not a grouping field
Cause: the field name specified is not a grouping field

Action: verify field names and groupby clause and reissue command

ORA-48342: Field [<varname>string</varname>] cannot be mixed with <varname>string</varname> fields
Cause: the specified field is incompatible with other grouping fields

Action: verify this and other field names and reissue command

ORA-48343: invalid field [<varname>string</varname>] reference in <varname>string</varname> clause
Cause: the specified field in the specified clause is invalid

Action: verify this field name and reissue command

ORA-48344: Invalid Name [<varname>string</varname>] specified
Cause: Either the name refers to an existing object or violates the reserved namespace rules.

Action: Pick another name

ORA-48345: Timeout encountered during operation
Cause: The attempted operation conflicted with another operation that was already being executed.

Action: Retry operation at a later time.

ORA-48390: Too many fields

ORA-48391: Field <varname>string</varname> not found in object

ORA-48392: Field (<varname>string</varname>) conversion error - type <varname>string</varname> value <varname>string</varname>

ORA-48393: Field (<varname>string</varname>) exceeds maximum length of <varname>string</varname>

ORA-48394: Field (<varname>string</varname>) is declared as NOT NULL

ORA-48395: Incident Range Function Only Available on Dual

ORA-48396: Invalid range supplied - valid range is [<varname>string</varname>.<varname>string</varname>]

ORA-48397: Range must be a numeric constant

ORA-48400: ADRCI initialization failed

Cause: The ADR Base directory does not exist

Action: Either create an ADR Base directory or point to an existing one

ORA-48401: SET command requires arguments

Cause: No arguments are input for the SET command

Action: Input the arguments

ORA-48402: Variable is not defined

Cause: No substitution value is input.

Action: Input the substitution value following after the variable name.

ORA-48403: DEFINE or UNDEFINE command has no arguments

Cause: DEFINE and UNDEFINE command need users to input the substitution variable name.

Action: Input the variable name after the keyword DEFINE or UNDEFINE

ORA-48404: RUN or @ command has no arguments

Cause: RUN and @ commands need users to input script filename

Action: Input script filename after RUN and @ commands

ORA-48405: The option in the command is invalid

Cause: The option is not allowed in the command

Action: Check the command syntax

ORA-48406: ECHO or TERMOUT status must be set to ON or OFF

Cause: the status of ECHO and TERMOUT commands must be ON or OFF

Action: input ON or OFF

ORA-48407: DESCRIBE and QUERY commands need at least relation name argument

Cause: This is no relation name is input as argument

Action: Need users to input at least the relation name

**ORA-48408: The incident number exceeds the maximum number
[<varname>string</varname>]**

Cause: The input incident number exceeds the maximum number

Action: Input fewer incidents

ORA-48409: The ADR homes exceed the maximum number [<varname>string</varname>]

Cause: The input ADR homes number exceeds the maximum number

Action: Input shorter ADR home string

ORA-48410: The trace path exceeds the maximum number [<varname>string</varname>]

Cause: The input trace path exceeds the maximum number

Action: Input less trace path

ORA-48411: The trace files exceed the maximum number [<varname>string</varname>]

Cause: The input trace file path number exceeds the maximum number

Action: Input less trace file path

ORA-48412: The parameters exceed the maximum number [<varname>string</varname>]

Cause: The input parameter number exceeds the maximum number

Action: Input fewer parameters

**ORA-48413: The number of orderby fields exceeds maximum number
[<varname>string</varname>]**

Cause: The orderby field number exceeds the maximum number

Action: Input fewer fields

**ORA-48414: The string in the execution option exceeds maximum length
[<varname>string</varname>]**

Cause: The string length is too long

Action: Divide the commands into two sets or use adrci scripts.

**ORA-48415: Syntax error found in string [<varname>string</varname>] at
column [<varname>string</varname>]**

Cause: Parsing error found in the user input string

Action: Validate the input string

**ORA-48416: Variable value [<varname>string</varname>] must be single or
double quoted****ORA-48417: SHOW command needs arguments****ORA-48418: The variable [<varname>string</varname>] is not defined****ORA-48419: Illegal arguments**

Cause: The input argument is illegal

Action: Check the input arguments and make sure it is not null

ORA-48420: EXPORT command must have a relation name

ORA-48421: Predicate string in the command must be single or double quoted

Cause: The predicate string is not single or double quoted

Action: Put single or double quotes around the predicate string

ORA-48422: Invalid relation field type [<varname>string</varname>]

ORA-48423: IMPORT command must have a filename

Cause: File name is missing from the command

Action: Input the import file name after the IMPORT keyword

ORA-48424: SHOW TRACE command needs argument

Cause: SHOW TRACE command needs arguments

Action: Input arguments

ORA-48425: ADRCI environment is not initialized

ORA-48426: The initialization filename is too long

Cause: The initialization filename length exceeds the maximum length

Action: This is really an internal setting parameter of the ADRCI, report it as a bug.
Alternatively move the initialization file to the current working directory

ORA-48427: Unknown command

ORA-48428: Input command string exceeds max length [<varname>string</varname>]

Cause: The current command string is too long and exceeds the limit

Action: Input less characters

ORA-48429: Variable name [<varname>string</varname>] is an invalid identifier

Cause: The substitution variable name is not a valid identifier

Action: Input the valid identifier defined by ADRCI

ORA-48430: Cannot read the parameter

ORA-48431: Must specify at least one ADR home path

Cause: The command syntax requires at least one ADR home path to be input

Action: Check the command syntax and input the home path

ORA-48432: The ADR home path [<varname>string</varname>] is not valid

Cause: The adr home user inputs is not valid, which may due to the path does not exist.

Action: Check if the input home path exists

ORA-48433: Unknown help topic

Cause: The input topic is unknown

Action: Check if the topic is valid

ORA-48434: No DDE commands are input

Cause: No DDE commands are input

Action: Input a DDE command

ORA-48435: Input a trace file

Cause: Show trace expects a trace file

Action: Input a trace file

ORA-48436: File [<varname>string</varname>] does not exist

Cause: the file does not exist

Action: Validate the trace file name

ORA-48437: No IPS commands are input

Cause: No IPS commands are input

Action: Input a IPS command

ORA-48438: [<varname>string</varname>] is not a valid number

Cause: The input number is not valid

Action: Check the input number

**ORA-48439: The input path name exceeds the maximum length
[<varname>string</varname>]**

Cause: The input path name is too long

Action: Report as a bug to change the limit

ORA-48440: Variable [<varname>string</varname>] is already defined

Cause: The variable name is defined previously

Action: Use another variable name

**ORA-48441: The function parameter number exceeds the maximum number
[<varname>string</varname>]**

Cause: The function parameter number exceeds the maximum number

Action: Report it as bug to change the maximum number

**ORA-48442: The number of control parameters exceeds the maximum allowed
[<varname>string</varname>].**

Cause: The control parameters exceeded the maximum number allowed.

Action: Check the parameters. If the parameters are correct, contact Oracle Support Services.

ORA-48443: Trace Record type appears in the middle of the path

Cause: The trace record cannot be in the middle of the path

Action: Validate the input

ORA-48444: The single "." and "*" cannot appear in the middle of the path

Cause: The single "." and "*" appears in the middle of the path

Action: Validate the input

ORA-48445: Path expression only supports one bucket dump type

Cause: The path expression only supports one bucket dump"

Action: Change the path expression syntax

ORA-48446: The command needs path input

Cause: No path is input as a parameter

Action: Input the path

ORA-48447: The input path [<varname>string</varname>] does not contain any ADR homes

Cause: The input path does not contain ADR homes

Action: Validate the path

ORA-48448: This command does not support multiple ADR homes

Cause: There are multiple homes in the current adr setting.

Action: Use command SET HOMEPATH to set a single home

ORA-48449: Tail alert can only apply to single ADR home

Cause: There are multiple homes in the current setting

Action: Use command SET HOMEPATH to set a single home

ORA-48450: Syntax:\n**ORA-48451: adrci [-help] [-script script_filename]\n\n****ORA-48452: Options Description (Default)\n****ORA-48454: script script file name (None) \n****ORA-48455: help help on the command options (None) \n****ORA-48457: ADRCI core dumped**

Cause: It is adrci internal error.

Action: Report to Oracle

ORA-48458: "show incident" failed due to the following errors

Cause: There could be a bug or users do not have the access permission

Action: Report to Oracle if the errors are not due to ADR permission settings

ORA-48459: "describe" command only supports one ADR home path

Cause: Multiple ADR home paths in the command

Action: put one ADR home path

ORA-48460: The home path [<varname>string</varname>] is not valid

Cause: The input home path is not valid home path

Action: Verify the homopath

ORA-48461: "describe" failed due to the following errors

Cause: Underlying code failed

Action: If it is not due to permission issue, report to Oracle

ORA-48462: Fatal error encountered in [<varname>string</varname>]

Cause: Fatal error encountered

Action: Report to Oracle

ORA-48463: The value buffer reached the maximum length [<varname>string</varname>]

Cause: The value buffer is full

Action: Report to Oracle

ORA-48464: The predicate buffer reached the maximum length [<varname>string</varname>]

Cause: The predicate buffer is too small

Action: Report to Oracle

ORA-48465: The specified type [<varname>string</varname>] is undefined

Cause: The purge type specified is undefined

Action: Check the type name

ORA-48466: Internal failure, the report context is not initialized

Cause: Internal problem failure.

Action: Report to Oracle

ORA-48467: "<varname>string</varname>" for the keyword "<varname>string</varname>" is not a valid number

Cause: The keyword value is not a valid number

Action: Check the value

ORA-48468: "<varname>string</varname>" is not a valid keyword

Cause: The keyword is not defined for the command

Action: Check the available keywords

ORA-48469: Keyword "<varname>string</varname>" cannot be duplicated

Cause: The command can only allow one key with the name

Action: Remove one keyword name from the command

ORA-48470: Unknown "<varname>string</varname>" command

Cause: The command is not valid

Action: Use help manual to check the command syntax

ORA-48471: "<varname>string</varname>" is not a valid shell command**ORA-48472: Invalid product name**

Cause: The product name provided does not exist

Action: Specify a product name, see HELP SHOW BASE

ORA-48473: Internal failure, unknown return code [<varname>string</varname>]

Cause: Internal program failure

Action: Report to Oracle

ORA-48474: Syntax error specifying product, must not be NULL

Cause: The product clause is being used, but no product name is provided

Action: Supply the product name

ORA-48475: [<varname>string</varname>] is not a valid timestamp

Cause: The input timestamp string is not in valid format

Action: None

ORA-48476: Cannot write the results out to a file, please check if \nthe environment variable TMPDIR is set or the current directory is \nnot writable

Cause: The current path may not be writable

Action: If the current path is writable, report to Oracle

ORA-48477: The input path does not contain any valid ADR homes

Cause: The input path does not contain any valid ADR homes

Action: Check the path if it is valid

ORA-48478: No alert messages are created

Cause: No alert messages are created

Action: No action

ORA-48479: No HM runs are created

Cause: There is no hm runs

Action: No action

ORA-48480: No incidents are created

Cause: There is no incident

Action: No action

ORA-48481: Report is not available

Cause: The requested report does not exist"

Action: Check the report ID

ORA-48482: Report is not generated

Cause: The requested report is not ready to be generated

Action: Check the report ID

ORA-48483: Spooling failed, it may be because the spool file cannot be created due to a permission issue

Cause: The spooling filename may not be valid or the file cannot be created

Action: Check the permissions of the target directory and verify the filename

ORA-48484: Run script failed, it may be because the script file does not exist

Cause: The script file may not exist

Action: Check if the script file exist

ORA-48485: The file exceeds the maximum length [<varname>string</varname>]

Cause: The filename is too long

Action: Report to Oracle

ORA-48486: The file [<varname>string</varname>] exceeds the maximum length [<varname>string</varname>]

Cause: The filename is too long

Action: Report to Oracle

ORA-48487: The internal predicate string exceeds the maximum length [<varname>string</varname>]

Cause: The predicate string exceeds the maximum length

Action: Report to Oracle

ORA-48488: The predicate string exceeds the maximum length [<varname>string</varname>]

Cause: The input predicate string exceeds the maximum length

Action: Report to Oracle

ORA-48489: The input exceeds the maximum length [<varname>string</varname>]

Cause: The input exceeds the maximum length

Action: Report to Oracle

ORA-48490: The field number exceeds the maximum number [<varname>string</varname>]

Cause: The input field number exceeds the maximum number

Action: Input less field names

ORA-48491: The program name is too long, exceeds the maximum length [<varname>string</varname>]

Cause: the program name length exceeds the maximum length setting

Action: Report to Oracle

ORA-48492: The report component name is not defined

Cause: the report component name does not exist

Action: Check the component name to ensure it is registered

ORA-48493: Sweep command needs parameters

Cause: sweep command needs parameter

Action: Check the syntax of the command

ORA-48494: ADR home is not set, the corresponding operation cannot be done

Cause: The adr home is not set in the current adrci session

Action: Set the adr home using the adrci command "set base" and "set homopath"

ORA-48495: Interrupt requested

Cause: User requested to interrupt the current action

Action: No action is needed

ORA-48496: "<varname>string</varname>" is a mandatory keyword for the command

Cause: The keyword is not specified for the command

Action: Input the keyword

ORA-48497: "<varname>string</varname>" is an invalid product type

Cause: The product type is not registered

Action: Check the product type

ORA-48499: The value of the keyword "<varname>string</varname>" exceeds the maximum length <varname>string</varname>

Cause: The keyword value is too long

Action: Check the limit and input again

ORA-48500: File Write Error [<varname>string</varname>] [<varname>string</varname>]

Cause: Number of bytes written differs from number requested. Possibly due to out of disk space.

Action: Ensure sufficient disk space.

ORA-48501: File Read Error [<varname>string</varname>] [<varname>string</varname>]

Cause: Number of bytes read differs from number requested. Possibly due to corrupted file.

Action: Recreate the file.

ORA-48502: Invalid Command Line - Missing Required Elements

Cause: Missing required command line arguments.

Action: Review the help message and supply the required arguments.

ORA-48503: Invalid Parameter Specified

Cause: Invalid input parameter supplied.

Action: Review the help message and correct the invalid input parameter.

ORA-48504: Relation Parameter Must be Specified

Cause: Relation parameter must be specified during ADR export.

Action: Supply the relation parameter.

ORA-48505: File Parameter Must be Specified

Cause: File parameter must be specified during ADR import.

Action: Supply the file parameter.

**ORA-48506: Existing Relation at different version than export
[<varname>string</varname>] [<varname>string</varname>]**

Cause: Attempting to import into an existing relation and the schema version of that relation differs from the schema of the relation that was exported.

Action: Drop the existing relation if you still wish to import the relation.

ORA-48507: Predicate Not Allowed during Import

Cause: The predicate option is not allowed during ADR import.

Action: Remove the predicate argument.

**ORA-48508: Export File Version [<varname>string</varname>] Can Not be Used
by Import [<varname>string</varname>]**

Cause: The version of the export file is not able to be read by this version of ADR import.

Action: Rerun the export using the current version of ADR export.

ORA-48509: Error occurred during operation. See the following errors

Cause: An underlying error has occurred.

Action: Review and correct the underlying error.

ORA-48510: Can not export an in memory relation

Cause: In memory relations can not be exported.

Action: Pick a different relation.

ORA-48511: Repair Schema currently not implemented**ORA-48600: HM run with name [<varname>string</varname>] already exists**

Cause: The specified run name already existed.

Action: Specify different run name and re-run the check

ORA-48601: HM run id [<varname>string</varname>] not found**ORA-48602: HM finding id [<varname>string</varname>] not found****ORA-48603: HM recommendation id [<varname>string</varname>] not found****ORA-48604: Alloc Function Pointer should not be NULL****ORA-48605: Argument [<varname>string</varname>] value should not be NULL****ORA-48606: Argument [<varname>string</varname>] value should not be ZERO**

ORA-48607: Not valid(supported) parameter type

ORA-48608: Info list object doesn't have space

ORA-48609: Param [<varname>string</varname>] was not found in the infolist object

ORA-48610: Format of info list text is not correct

ORA-48611: Message object doesn't have space for new message

ORA-48612: Info list object doesn't have space for new params

ORA-48613: Finding set object doesn't have space for new finding

ORA-48614: HM run with name [<varname>string</varname>] not found

ORA-48615: Parameter [<varname>string</varname>] value not specified
Cause: Run was invoked without specifying the parameter and its value

Action: Specify the needed parameter and its value

ORA-48616: Parameter [<varname>string</varname>] is NULL

ORA-48617: Parameter [<varname>string</varname>] value [<varname>string</varname>] length exceeds the maximum limit [<varname>string</varname>]

ORA-48618: Invalid HM run name specified

Cause: An invalid Health Monitor (HM) run name was specified.

Action: Specify a HM run name using only alphanumeric and underscore characters.

ORA-48700: DBG initialization out of sequence

ORA-48701: DBG initialization : bad Library Group ID

ORA-48702: DBG initialization : no callbacks specified to disable ADR

ORA-48703: DBG initialization : no process-level diag context specified

ORA-48704: DBG initialization : invalid value for initial number

ORA-48705: DBG initialization : invalid value for working number

ORA-48750: DBG context management internal failure

ORA-48751: DBG context management internal failure

ORA-48752: DBG context management internal failure

ORA-48753: DBG context management internal failure

ORA-48754: DBG context management internal failure

ORA-48755: DBG context management internal failure

ORA-48756: DBG context management internal failure

ORA-48757: DBG context management internal failure

ORA-48758: DBG context management internal failure

ORA-48759: DBG context management internal failure

ORA-48760: DBG context management internal failure

ORA-48761: DBG context management internal failure

ORA-48762: DBG context notification service internal failure

ORA-48763: DBG memory corruption for thread local root

ORA-48800: "<varname>string</varname>" for the keyword "<varname>string</varname>" is not in the right format of timestamp

Cause: The value format is not right

Action: Check the format ADRCI supports

ORA-48801: The option "<varname>string</varname>" is duplicated

Cause: The option has been specified more than once

Action: Check the input

ORA-48802: The options "%0!s" and "%1!s" are mutually exclusive.

Cause: An attempt was made to specify the two options together.

Action: Specify only one of the options.

ORA-48803: The keyword "<varname>string</varname>" is not defined for this command

Cause: The keyword is invalid

Action: Check the valid keywords for the command

ORA-48804: The command needs at least one file input

Cause: No files are specified to view

Action: Input the files

ORA-48805: BEGIN BACKUP issued already - must do an END BACKUP first

Cause: A begin backup was already issued.

Action: Issue END BACKUP

ORA-48806: Unknown Function Reference (<varname>string</varname>)

Cause: The function reference is not a valid function

Action: Change the reference

ORA-48807: The SET subcommand requires at least one additional parameter

Cause: An argument was not specified for the SET subcommand.

Action: Specify additional arguments or precede the command with help.

ORA-48808: malformed SET CONTROL command - see "HELP SET CONTROL"

Cause: Improper syntax was specified for the SET CONTROL command.

Action: Specify additional arguments or use the HELP SET CONTROL command for more information.

ORA-48809: The number of estimate parameters exceeds the maximum allowed [<varname>string</varname>].

Cause: The estimate parameters exceeded the maximum number allowed.

Action: Check the parameters. If the parameters are correct, contact Oracle Support Services.

ORA-48810: malformed ESTIMATE command - see "HELP ESTIMATE"

Cause: Improper syntax was specified for the ESTIMATE command.

Action: Specify additional arguments or use the HELP ESTIMATE command for more information.

ORA-48900: Illegal Input Argument [<varname>string</varname>]

Cause: The input argument is invalid

Action: Check the input parameter

ORA-48902: Empty component specification

ORA-48903: String [<varname>string</varname>] is not a valid library name

ORA-48904: String [<varname>string</varname>] is not a valid component name

ORA-48905: String [<varname>string</varname>] is not a valid operation name

ORA-48906: Parser context is not valid

Cause: The parser context is not initialized

Action: Call the initialization routine first before using the context

ORA-48907: The end of file is reached

Cause: The end of file is reached

Action: Handle the end of file

ORA-48908: No trace files are found

Cause: This is no file in the navigator context, either it is done with parsing, or no file is pushed

Action: Check if the file is added to the context

ORA-48909: Scan context is not initialized

Cause: The scan context is not initialized

Action: call the initialization routine of the scan context

ORA-48910: Fetch already started

ORA-48911: The parent node does not exist

ORA-48912: The specified trace filename is too long

Cause: The resulting trace filename length exceeds the maximum length

Action: Use a smaller trace filename suffix or move ADR higher in the directory hierarchy

ORA-48913: Writing into trace file failed, file size limit [<varname>string</varname>] reached

Cause: An attempt was made to write into a trace file that exceeds the trace's file size limit

Action: increase the trace's file size limit.

ORA-48914: File position is not in right format

Cause: The file position format is not right

Action: Check if the file format string is the right one

ORA-48915: The output format is not supported

ORA-48916: Cannot open the output file with path [<varname>string</varname>] and filename [<varname>string</varname>]

ORA-48917: Fail to seek to the requested file position

ORA-48918: Interruption is caught

ORA-48919: End of Fetch is reached in the trace navigator

ORA-48920: The merge context is not initialized

ORA-48921: The begin timestamp cannot be larger than the end timestamp

ORA-48922: The input hompath is not a valid ADR home

ORA-48923: There is no file to be merged

ORA-48924: The merge is done

ORA-48925: The incident does not exist

ORA-48926: The offset is not valid

ORA-48927: The requested line number does not exist

ORA-48928: The predicate exceeds the max limit <varname>string</varname>

Cause: The predicate is too long, exceeds the max limit

Action: Use a shorter predicate

ORA-48929: The trace record size exceeded the max size that can be read [<varname>string</varname>]

Cause: A trace record is too large to be read by the ADR viewer

Action: Report to Oracle

ORA-48930: Cannot allocate memory for processing traces

Cause: A memory allocation request failed

Action: Report to Oracle

ORA-48931: The metadata header of file [<varname>string</varname>] is not valid

ORA-48932: The data offset is not in non-decreasing order at byte [<varname>string</varname>]

ORA-48933: Fail to switch to ADR default home

ORA-48934: invalid input for the file name identifier

Cause: An invalid input was given for the file name identifier. The file name is not allowed to have slashes (" /") and is not allowed to refer to the parent directory using the '..' characters.

Action: Check the file name and provide a valid input.

ORA-48935: bucket snapshotting error: [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>]

ORA-48936: The number of relations exceeds maximum number [<varname>string</varname>]

Cause: Too many relations listed

Action: Reduce the number

ORA-48937: Feature (<varname>string</varname>) currently not allowed for SELECT

Cause: Feature is not allowed

Action: Remove feature

ORA-48938: View select column count differs from select alias list

Cause: The view alias list has a different number of fields than the select list"

Action: Change the alias list or view select statement

ORA-48939: Select * not allowed in a CREATE VIEW

Cause: * is currently not allowed for a create view select list

Action: List the fields explicitly

ORA-48940: invalid value <varname>string</varname> (length = <varname>string</varname>) for parameter _MAX_INCIDENT_FILE_SIZE

ORA-48941: The maximum metadata version that can be processed is [<varname>string</varname>]

ORA-49100: Failed to process event statement [<varname>string</varname>]

ORA-49101: Failed to parse action [<varname>string</varname>]

ORA-49102: Action definition for [<varname>string</varname>] not found

ORA-49103: Missing Mandatory argument [<varname>string</varname>] for <varname>string</varname> [<varname>string</varname>]

ORA-49104: [<varname>string</varname>] is not a valid argument for <varname>string</varname> [<varname>string</varname>]

ORA-49105: Too many arguments specified for <varname>string</varname> [<varname>string</varname>]

ORA-49106: Parameter value [<varname>string</varname>] is invalid

ORA-49107: Passed end of string while parsing

ORA-49108: Event Name [<varname>string</varname>] not found

ORA-49109: Library Name [<varname>string</varname>] not found

ORA-49110: Parameter value [<varname>string</varname>] length is longer than maximum allowed

ORA-49111: Parsing failed because memory allocation failed

ORA-49112: Parameter value [<varname>string</varname>] is not one of allowed values

ORA-49113: Scope event limit exceeded, scoped events may work incorrectly

ORA-49114: Target not specified for scope [<varname>string</varname>]

ORA-49115: Target not specified for event [<varname>string</varname>]

ORA-49116: SQL ID string [<varname>string</varname>] is invalid

ORA-49150: Parameter NULL for this call [<varname>string</varname>]

ORA-49151: Event group not initialized

ORA-49152: Event parse context not initialized

ORA-49153: Event group sync failed, parent[<varname>string</varname>] is not parent of child[<varname>string</varname>]

ORA-49154: Failed to initialize parse context in [<varname>string</varname>]

ORA-49155: Failed to initialize event group in [<varname>string</varname>]

ORA-49156: Failed to destroy parse context in [<varname>string</varname>]

ORA-49157: Syncing failed, parent and child are same group

ORA-49158: Empty Filter Specification

ORA-49159: Too many filters specified

ORA-49160: Scope or Filter cannot be specified for mapped event, use [<varname>string</varname>]

ORA-49161: Usage for event <varname>string</varname> : <varname>string</varname>

ORA-49162: [<varname>string</varname>] is not a valid scope

ORA-49163: Event string must begin with a valid event name/number

ORA-49164: Event number is invalid

ORA-49165: Too many arguments for event <varname>string</varname>

ORA-49166: Keyword IMMEDIATE must be at the beginning of event string

ORA-49167: Invalid value of parameter [<varname>string</varname>] for <varname>string</varname> [<varname>string</varname>]

ORA-49168: Missing value for name-value pair

ORA-49169: Event [<varname>string</varname>] is not a valid filter

ORA-49170: arg=action() construct can not be used in <varname>string</varname> [<varname>string</varname>]

ORA-49171: Type of parameter [<varname>string</varname>] is not compatible with action [<varname>string</varname>]

ORA-49172: Depth of action nesting exceeds allowed limit

ORA-49173: Parameter [<varname>string</varname>] of <varname>string</varname> [<varname>string</varname>] must be specified as a literal

ORA-49174: Unable to set event in <varname>string</varname> due to <varname>string</varname>

ORA-49200: DDE Internal Error

ORA-49201: Arguments not valid for DDE invocation

ORA-49202: DDE global context not initialized for DDE invocation

ORA-49203: Too many recursive DDE invocations

ORA-49204: Recursive DDE invocation at Phase I

**ORA-49205: DDE async action error [<varname>string</varname>]
[<varname>string</varname>] [<varname>string</varname>]
[<varname>string</varname>] [<varname>string</varname>]
[<varname>string</varname>] [<varname>string</varname>]
[<varname>string</varname>]**

ORA-49206: No DDE async actions in queue

ORA-49300: DDE User Actions Internal Error

ORA-49301: Illegal input argument [<varname>string</varname>]

**ORA-49302: Invalid action/invocation specified [<varname>string</varname>]
[<varname>string</varname>] [<varname>string</varname>]**

ORA-49303: Invalid action specified (action not defined) [<varname>string</varname>]

**ORA-49304: Invalid action/invocation/parameter specified [<varname>string</varname>]
[<varname>string</varname>] [<varname>string</varname>] [<varname>string</varname>]
[<varname>string</varname>]**

ORA-49305: Invalid parameter specified (action parameter not defined)
 [<varname>string</varname>] [<varname>string</varname>]

ORA-49306: Invalid parameter length specified, argn:<varname>string</varname>, len:<varname>string</varname>, lim:<varname>string</varname>

ORA-49307: Invalid length in user credentials, argn:<varname>string</varname>, len:<varname>string</varname>, lim:<varname>string</varname>

ORA-49308: Unable to read ADR record [<varname>string</varname>]

ORA-49309: Action failed [<varname>string</varname>] [<varname>string</varname>] [<varname>string</varname>]

ORA-49310: Invalid command string length [<varname>string</varname>] [<varname>string</varname>] [<varname>string</varname>] [<varname>string</varname>]

ORA-49311: Command processor not found (system call returned null value)
 [<varname>string</varname>] [<varname>string</varname>]

ORA-49312: No incident provided and no default incident set

ORA-49313: Specified parameter cannot be modified [<varname>string</varname>] [<varname>string</varname>]

ORA-49314: Specified action is in status INCOMPLETE and cannot be executed

ORA-49315: Invalid incident type specified [<varname>string</varname>]
 Cause: The specified incident type is not defined in this ADR.

Action: Specify an available incident type.

ORA-49400: IPS Internal Error

ORA-49401: Illegal input argument [<varname>string</varname>]

ORA-49402: Invalid length specified [<varname>string</varname>] [<varname>string</varname>] [<varname>string</varname>]

ORA-49404: No such package [<varname>string</varname>]
 Cause: The specified package does not exist.

Action: Specify an existing package.

ORA-49405: Cannot change package name [<varname>string</varname>] [<varname>string</varname>]

Cause: Attempted to change package name after package generation.

Action: Use current name, or create a new package with the desired name.

ORA-49406: Undefined configuration parameter specified [<varname>string</varname>] [<varname>string</varname>]

Cause: The specified configuration parameter was not found in ADR.

Action: Specify an existing parameter. Re-populate parameters if necessary.

ORA-49407: No unpacking history in this home
 Cause: No packages were unpacked into this home.

Action: Verify the current home. Unpack a package if necessary.

ORA-49408: Invalid home specified [<varname>string</varname>]

Cause: An invalid ADR_HOME was specified.

Action: Verify that the directory exists, and has the correct structure.

ORA-49409: Incremental package provided when complete expected

Cause: No packages were unpacked into this home.

Action: Provide a complete package, or use FORCE option.

ORA-49410: Not an IPS package

Cause: The specified file was not an IPS package.

Action: Verify that the file is a valid zip file with expected contents.

**ORA-49411: Incompatible package version [<varname>string</varname>]
[<varname>string</varname>]**

**ORA-49412: Package ID does not match existing ID [<varname>string</varname>]
[<varname>string</varname>]**

Cause: The package ID in package file did not match previously unpacked packages.

Action: Use the correct location for unpacking the package.

**ORA-49413: Package name does not match existing name [<varname>string</varname>]
[<varname>string</varname>]**

Cause: The package name in package file did not match previously unpacked packages.

Action: Use the correct location for unpacking the package.

**ORA-49414: Package sequence later than expected [<varname>string</varname>]
[<varname>string</varname>]**

Cause: The package sequence in package file was later than expected.

Action: Apply packages in correct order, or use FORCE option.

**ORA-49415: Package sequence earlier than expected [<varname>string</varname>]
[<varname>string</varname>]**

Cause: The package sequence in package file was earlier than expected.

Action: Apply packages in correct order, or use FORCE option.

**ORA-49416: Earlier package sequence applied with FORCE option
[<varname>string</varname>] [<varname>string</varname>]**

Cause: An earlier package sequence was applied using the FORCE option.

Action: Apply a complete sequence which is later than any already applied, or use FORCE option to apply an incremental package.

ORA-49417: Cannot modify already generated package

Cause: Attempted to change package attributes after package generation.

Action: Create a new package with the desired name.

ORA-49418: Invalid package name specified

Cause: An invalid Incident Packaging Service (IPS) package name was specified.

Action: Specify a package name using only alphanumeric and underscore characters.

**ORA-49420: Package too large [<varname>string</varname>]
[<varname>string</varname>]**

Cause: The package is too large.

Action: Remove some files or incidents from the package, or try using incremental mode.

ORA-49421: Maximum number of package files generated [<varname>string</varname>]

Cause: The command generated the maximum number of package files.

Action: Remove some files or incidents from the package, or use incremental mode to generate additional files.

ORA-49423: File outside ADR not allowed

Cause: The specified file is not within the ADR directory structure.

Action: Specify a file inside ADR.

ORA-49424: Directory outside ADR not allowed

Cause: The specified directory is not within the ADR directory structure.

Action: Specify a directory inside ADR.

ORA-49425: File inside ADR not allowed

Cause: The specified file is within the ADR directory structure.

Action: Specify a file outside ADR.

ORA-49426: Directory inside ADR not allowed

Cause: The specified directory is within the ADR directory structure.

Action: Specify a directory outside ADR.

ORA-49427: No such file or file not accessible [<varname>string</varname>]

Cause: The specified file does not exist or cannot be accessed.

Action: Create the file or verify file permissions.

ORA-49428: No such directory or directory not accessible [<varname>string</varname>]

Cause: The specified directory does not exist or cannot be accessed.

Action: Create the directory or verify directory permissions.

ORA-49429: File already exists and OVERWRITE option not specified [<varname>string</varname>]

Cause: The client attempted to create a file that already exists.

Action: Either remove the file or use the OVERWRITE option.

ORA-49430: No such problem [<varname>string</varname>]

Cause: The specified problem does not exist.

Action: Specify a problem that exists in this repository.

ORA-49431: No such incident [<varname>string</varname>]

Cause: The specified incident does not exist.

Action: Specify an incident that exists in this repository.

ORA-49432: Problem not part of package [<varname>string</varname>]

Cause: The specified problem is not included in the package.

Action: Specify a problem that is included in the package.

ORA-49433: Incident not part of package [<varname>string</varname>]

Cause: The specified incident is not included in the package.

Action: Specify an incident that is included in the package.

ORA-49434: Invalid date format

Cause: An invalid format was used to specify a date

Action: Specify the date in a supported format.

ORA-49435: Flood-controlled incident not allowed here [<varname>string</varname>]

Cause: A flood-controlled incident cannot be included in a package

Action: Specify an incident that is not flood-controlled

ORA-49436: Date conversion error [<varname>string</varname>]

Cause: An invalid format was used to specify a date

Action: Specify the date in a supported format.

ORA-49440: Warnings while unpacking package, details in file <varname>string</varname>

Cause: There were some non-fatal errors when unpacking a package

Action: Review the specified unpacking log file

ORA-49441: Warnings while finalizing package, details in file <varname>string</varname>

Cause: There were some non-fatal errors when finalizing a package

Action: Review the specified finalize log file

ORA-49450: Non-zero return code from archiving utility [<varname>string</varname>] [<varname>string</varname>]

Cause: The archiving utility (zip/unzip) returned a warning or error.

Action: Verify that the file and directory exist and are readable, and that the file is a valid zip file.

**ORA-49451: Archive file structure error [<varname>string</varname>]
[<varname>string</varname>]**

Cause: The archiving utility (zip/unzip) returned an error indicating that the archive file structure is incorrect.

Action: Verify that the file was transferred correctly and that the file is a valid zip file.

**ORA-49452: Archiving utility out of memory [<varname>string</varname>]
[<varname>string</varname>]**

Cause: The archiving utility (zip/unzip) returned an error indicating that it was unable to allocate enough memory.

Action: Check for operating system limitations on process memory usage.

**ORA-49453: Invalid command invoking archiving utility [<varname>string</varname>]
[<varname>string</varname>]**

Cause: The archiving utility (zip/unzip) was invoked with an invalid command line, or with invalid options.

Action: Verify that there are no operating system settings affecting the behavior of the archiving utility..

**ORA-49454: Archive is missing or empty [<varname>string</varname>]
[<varname>string</varname>]**

Cause: The specified archive does not exist, or is empty.

Action: Check if the specified archive exists.

**ORA-49455: Archive I/O failed [<varname>string</varname>]
[<varname>string</varname>]**

Cause: An attempt to create, write to or read from an archive failed.

Action: Verify that operating system I/O operations are working correctly.

**ORA-49456: Operation failed due to insufficient disk space [<varname>string</varname>]
[<varname>string</varname>]**

Cause: An operation on an archive failed due to insufficient disk space.

Action: Verify that there is sufficient disk space. Check for operating system quotas or other restrictions.

ORA-49480: Starting to finalize package contents

ORA-49481: Finished finalizing package contents

ORA-49482: Starting package generation

ORA-49483: Finished package generation

ORA-49490: Getting additional information

ORA-49491: Getting CRS information

ORA-49492: Getting OCM information

ORA-49493: Getting RDA information

ORA-49494: Getting OSS information

ORA-49500: Invalid Transient LifeTime[<varname>string</varname>]

ORA-49501: Invalid Critical Factor[<varname>string</varname>]

ORA-49502: Invalid Warning Factor[<varname>string</varname>]

ORA-49503: Invalid Weight Factor[<varname>string</varname>]

ORA-49504: Incident meter configuration record not found

ORA-49505: Problem record not found

ORA-49506: Incident record not found

ORA-49600: ,

ORA-49601: syntax error: found "<varname>string</varname>": expecting one of: "<varname>string</varname>" etc..

Cause: Syntax error discovered when processing event specification

Action: Enter correct event specification

ORA-49602: attempt recovery: symbol "<varname>string</varname>" inserted before "<varname>string</varname>".

ORA-49603: attempt recovery: symbol "<varname>string</varname>" ignored.

ORA-49604: attempt recovery: symbol "<varname>string</varname>" substituted for "<varname>string</varname>".

ORA-49605: error: got NULL for lexer callback.

ORA-49606: file "<varname>string</varname>", line "<varname>string</varname>".

ORA-49607: error: got NULL for debug callback when debug flag is set.

ORA-49608: fatal: internal error

ORA-49609: error: too many errors at token <varname>string</varname>. cannot recover.. bye!

ORA-49610: error: got NULL for one of memory callbacks and not others

ORA-49611: error: lexer callback doesn't handle PZLEXERRGET.

ORA-49612: warning: no 'error' token lookahead for any state on parse stack.

ORA-49700:

ORA-49701: Parameter '<varname>string</varname>' is NULL.

Cause: NULL was passed to a function that requires a non-NULL parameter.

Action: Pass a valid non-NULL parameter.

ORA-49702: unable to allocate '<varname>string</varname>' bytes of external procedure call memory

Cause: An attempt to allocate memory in a C external procedure failed due to insufficient memory.

Action: Try the operation again.

ORA-49703: invalid ADR service name

Cause: A NULL or undefined Automatic Diagnostic Repository (ADR) service name was specified.

Action: Specify a valid ADR service name.

ORA-49704: invalid incident ID

Cause: A NULL or nonpositive incident ID was specified.

Action: Specify a valid ADR incident ID.

ORA-49800: ADR block file [<varname>string</varname>] could not be opened using direct I/O

Cause: An error was encountered when attempting to open an Automatic Diagnostic Repository (ADR) block file using O_DIRECT. The system automatically retries the open without using O_DIRECT.

Action: No action is required.

ORA-49801: actual permissions [<varname>string</varname>], expected minimum permissions [<varname>string</varname>] for effective user [<varname>string</varname>]

ORA-49802: missing read, write, or execute permission on specified ADR home directory [<varname>string</varname>]

Cause: The specified Automatic Diagnostic Repository (ADR) home directory did not have the correct permissions.

Action: Check the read, write, and execute permissions on the specified ADR home directory.

ORA-49803: Purge not possible due to incompatible schema version.

Cause: The Automatic Diagnostic Repository (ADR) found on disk was different from the version in the library.

Action: Start the product to migrate automatically or use the ADRCI utility command MIGRATE SCHEMA.

ORA-49804: cannot modify ADR PDB parameter <varname>string</varname>

Cause: An attempt was made to alter the Automatic Diagnostic Repository (ADR) pluggable database (PDB) - only parameters from a non-consolidated database or root container of a consolidated database.

Action: ADR PDB parameters cannot be altered from non-consolidated database or root container of a consolidated database. Switch to a PDB to perform the operation.

ORA-49900: cannot modify parameter <varname>string</varname>

Cause: An attempt was made to alter the parameter from a non-consolidated database or pluggable database.

Action: The parameter can only be altered in the root container of a consolidated database.

**ORA-51000: HM framework error: [<varname>string</varname>]
[<varname>string</varname>]**

ORA-51001: check [<varname>string</varname>] not found in HM catalog

Cause: checker name might have been misspelled

Action: retry running check with proper checker name

ORA-51002: Too many parameters**ORA-51003: run parameters not formatted correctly**

Cause: Run parameters were given in a wrong format

Action: Correct the run params text and try again

ORA-51004: Check doesn't take any input params

Cause: run params were passed to the check, which doesn't take any inputs

Action: don't pass any run params and try again

ORA-51005: run params missing the parameter name**ORA-51006: unexpected delimiter ';' in the run params text**

Cause: run params were not properly formatted.

Action: correct the run params format and try again

ORA-51007: parameter [<varname>string</varname>] not registered with this check

Cause: Wrong inputs were given to this check.

Action: correct the run params and try the check again

ORA-51008: parameter [<varname>string</varname>] value is not a proper number

Cause: the given parameter value is a not a proper number

Action: correct the run params and try again

ORA-51009: parameter [<varname>string</varname>] value type not supported yet**ORA-51010: NULL context passed****ORA-51011: NULL Info passed****ORA-51012: Param not found****ORA-51013: default message not found****ORA-51014: Checker Run got Timed Out****ORA-51015: dummy HM failure with [<varname>string</varname>] as arguments****ORA-51016: dummy HM recommendation with [<varname>string</varname>] as arguments****ORA-51017: dummy HM damage description with [<varname>string</varname>] as argument**

ORA-51018: list parameter values are of wrong type

ORA-51019: unsupported list parameter type

ORA-51020: parameter [<varname>string</varname>] not found in info

ORA-51021: Element list full

ORA-51022: Invalid element position

ORA-51023: Param type mismatch

ORA-51024: unsupported info type

ORA-51025: check name should be non NULL value

Cause: NULL value was passed for check name

Action: give a proper check name and retry again

ORA-51026: Diag ADR not enabled, can't run check

ORA-51027: Run name should be non NULL value

ORA-51028: Report type should be non NULL value

ORA-51029: Report type should be non NULL value

ORA-51030: Unsupported report type

ORA-51031: Unsupported report level

ORA-51032: check name too long

ORA-51033: run name too long

ORA-51034: pseudo context not allowed

ORA-51035: invalid timeout value

Cause: User specified an invalid timeout value

Action: n/a

ORA-51036: check [<varname>string</varname>] can only be executed in database instance

Cause: An attempt was made to run database-specific check in ASM environment

Action: Don't run the check in ASM environment

ORA-51037: check [<varname>string</varname>] can only be executed in ASM instance

Cause: An attempt was made to run ASM-specific check in a database environment

Action: Don't run the check in database environment

ORA-51100: Control file is older than datafiles and/or log files

ORA-51101: NOARCHIVELOG mode restore datafile <varname>string</varname>

ORA-51102: cannot change priority of a critical failure <varname>string</varname>

Cause: An attempt was made to change priority of a failure with CRITICAL priority.

Action: No action is required.

ORA-51103: cannot change priority of a closed failure <varname>string</varname>

Cause: An attempt was made to change priority of a closed failure.

Action: No action is required.

ORA-51104: NOARCHIVELOG mode restore datafiles <varname>string</varname>**ORA-51105: cannot change priority of a failure to CRITICAL**

Cause: An attempt was made to change priority of a failure to CRITICAL.

Action: No action is required.

ORA-51106: check failed to complete due to an error. See error below

Cause: While executing the check, an unexpected error occurred.

Action: Check the errors below and try rerunning the check.

ORA-51107: failures are changing too rapidly - retry command

Cause: Failures were added or closed during a Data Recovery Advisor command.

Action: Retry the command.

ORA-51108: unable to access diagnostic repository - retry command

Cause: A lock or timeout error occurred when trying to read failure or repair data from the Automatic Diagnostic Repository.

Action: Retry the command.

ORA-51109: repair script file is too large

Cause: Data Recovery Advisor generated a repair script file that was too large.

Action: Retry the command with fewer failures selected.

ORA-51110: buffer size [<varname>string</varname>] is too small - [<varname>string</varname>] is needed

Cause: An internal buffer was too small.

Action: This is an internal error. Contact Oracle Support Services.

ORA-51111: failure revalidation timed out

Cause: Data Recovery Manager was unable to revalidate all failures before timing out.

Action: Increase timeout and retry the command.

ORA-51190: Internal error [<varname>string</varname>], [<varname>string</varname>] from DBMS_IR

Cause: An unexpected error occurred while executing a routine in the DBMS_IR package.

Action: This is an internal error. Contact Oracle Support Services.

ORA-51191: Too many files opened

Cause: Data Recovery Advisor attempted to open too many files using the DBMS_IR package.

Action: This is an internal error. Contact Oracle Support Services.

ORA-51192: File not open

Cause: Data Recovery Advisor attempted to read or write from a file that was not open.

Action: This is an internal error. Contact Oracle Support Services.

ORA-51193: invalid parameter value

Cause: An invalid parameter value was supplied in a call to the DBMS_IR package.

Action: Fix the parameter value and retry the call.

ORA-51200: <varname>string</varname> <varname>string</varname> has invalid size

ORA-51201: Database cannot be mounted

ORA-51202: Control file <varname>string</varname> is missing

ORA-51203: Control file <varname>string</varname> is corrupt

ORA-51204: Control file needs media recovery

ORA-51205: Control file <varname>string</varname> does not belong to the database

ORA-51206: Control files are mutually inconsistent

ORA-51207: Insufficient kernel memory to access <varname>string</varname> <varname>string</varname>

ORA-51208: Database might be unrecoverable or become unrecoverable

ORA-51209: Online log member <varname>string</varname> is missing

ORA-51210: Online log member <varname>string</varname> is corrupt

ORA-51211: <varname>string</varname> <varname>string</varname> cannot be opened because of limit on number of open files per process

ORA-51212: Online log group <varname>string</varname> is unavailable

ORA-51213: <varname>string</varname> <varname>string</varname> cannot be accessed because of an ASM Failure

ORA-51214: <varname>string</varname> <varname>string</varname> cannot be opened because of system limit on number of open files

ORA-51215: Archived redo log file <varname>string</varname> is missing

ORA-51216: Archived redo log file <varname>string</varname> is corrupt

ORA-51217: Database cannot be opened

ORA-51218: <varname>string</varname> <varname>string</varname> cannot be accessed because of NFS mount error

ORA-51219: System datafile <varname>string</varname>: '<varname>string</varname>' is missing

ORA-51220: System datafile <varname>string</varname>: '<varname>string</varname>' is corrupt

ORA-51221: System datafile <varname>string</varname>: '<varname>string</varname>' needs media recovery

ORA-51222: See impact for individual child failures

ORA-51223: <varname>string</varname> <varname>string</varname> cannot be accessed because of invalid partitioning of raw volume

ORA-51224: One or more non-system datafiles are missing

ORA-51225: One or more non-system datafiles are corrupt

ORA-51226: One or more non-system datafiles need media recovery

ORA-51227: <varname>string</varname> <varname>string</varname> does not have correct access permissions

ORA-51228: Datafile <varname>string</varname>: '<varname>string</varname>' is missing

ORA-51229: Datafile <varname>string</varname>: '<varname>string</varname>' is corrupt

ORA-51230: Datafile <varname>string</varname>: '<varname>string</varname>' needs media recovery

ORA-51231: Some objects in tablespace <varname>string</varname> might be unavailable

ORA-51232: Datafile <varname>string</varname>: '<varname>string</varname>' contains one or more corrupt blocks

ORA-51233: Block <varname>string</varname> in datafile <varname>string</varname>: '<varname>string</varname>' is media corrupt

ORA-51234: Object <varname>string</varname> owned by <varname>string</varname> might be unavailable

ORA-51235: Redo log group <varname>string</varname> is corrupt near change <varname>string</varname>

ORA-51236: Archived redo log file <varname>string</varname> is corrupt near change <varname>string</varname>

ORA-51237: Recovery cannot be completed

ORA-51238: Perform block media recovery of block <varname>string</varname> in file <varname>string</varname>

ORA-51239: Use a multiplexed copy to restore control file <varname>string</varname>

ORA-51240: Restore a backup control file

ORA-51241: If this is a primary database and you have a CREATE CONTROLFILE script, use it to create a new control file

ORA-51242: Restore and recover datafile <varname>string</varname>

ORA-51243: Restore and recover datafiles <varname>string</varname>

ORA-51244: Recover datafile <varname>string</varname>

ORA-51245: Recover datafiles <varname>string</varname>

ORA-51246: Take datafile <varname>string</varname> offline

ORA-51247: Take datafiles <varname>string</varname> offline

ORA-51248: If this is a primary database and a standby database is available, then perform a Data Guard failover initiated from the standby

ORA-51249: Recover multiple corrupt blocks in datafile <varname>string</varname>

ORA-51250: Table object <varname>string</varname> has corrupted data

ORA-51251: Table <varname>string</varname>.<varname>string</varname> may not be accessible

ORA-51252: Row <varname>string</varname> of table object <varname>string</varname> has corrupted data

ORA-51253: Table <varname>string</varname>.<varname>string</varname> may not be accessible

ORA-51254: Table object <varname>string</varname> mismatched with index object <varname>string</varname>

ORA-51255: Table <varname>string</varname>.<varname>string</varname> is not synchronized with index <varname>string</varname>

ORA-51256: Table row <varname>string</varname> of table object <varname>string</varname> mismatched with index object <varname>string</varname>

ORA-51258: Restore and recover database

ORA-51259: Recover database

ORA-51260: Drop and re-create redo log group member <varname>string</varname>

ORA-51261: Clear redo log group <varname>string</varname>

ORA-51262: Clear unarchived redo log group <varname>string</varname>

ORA-51263: Clear unarchived redo log group <varname>string</varname> using the UNRECOVERABLE DATAFILE clause in the ALTER DATABASE CLEAR LOGFILE statement

ORA-51264: Perform flashback of the database to SCN <varname>string</varname>

ORA-51265: Perform incomplete database recovery to SCN <varname>string</varname>

ORA-51266: The repair includes complete media recovery with no data loss

ORA-51267: The repair includes point-in-time recovery with some data loss

ORA-51268: The repair makes some data temporarily unavailable

ORA-51269: Ensure that all disks and network connections are functional

ORA-51270: If file <varname>string</varname> was unintentionally renamed or moved, restore it

ORA-51271: If you have an export of tablespace <varname>string</varname>, then drop and re-create the tablespace and import the data.

ORA-51272: If you have the correct version of the control file, then replace the old control file

ORA-51273: If the instance failed when file <varname>string</varname> was in online backup mode, then issue ALTER DATABASE END BACKUP. This option must not be used for a restored backup

ORA-51274: If you re-created inaccessible files in an alternative location, alter initialization parameters in the parameter file appropriately

ORA-51275: Obtain a copy of redo block from an alternative source (if exists)

ORA-51276: Drop damaged log group member and add new member

ORA-51277: <varname>string</varname> <varname>string</varname> cannot be accessed because file system does not have correct access permissions

ORA-51278: <varname>string</varname> <varname>string</varname> cannot be accessed because it is locked by another process

ORA-51279: Block <varname>string</varname> of <varname>string</varname> <varname>string</varname> cannot be accessed because of device IO error

ORA-51280: <varname>string</varname> <varname>string</varname> is inaccessible

ORA-51281: Force a commit of the corrupted transaction whose id is <varname>string</varname>

ORA-51282: Transaction <varname>string</varname> is corrupted; its undo segment number is <varname>string</varname>

ORA-51283: Transaction <varname>string</varname> is not corrupted

ORA-51284: Undo segment <varname>string</varname> is not corrupted

ORA-51285: Damage analysis of transaction <varname>string</varname> can be found in <varname>string</varname>

ORA-51286: Transaction <varname>string</varname> seems to be corrupted; its undo segment number is <varname>string</varname>

ORA-51287: Check corrupt list in V\$CORRUPT_XID_LIST for transaction <varname>string</varname>. If present, then force commit it. If not, then corruption is likely to happen

ORA-51288: If you restored the wrong version of data file <varname>string</varname>, then replace it with the correct one

ORA-51289: If you know which copy of the control file is correct, replace other copies with it

ORA-51290: Ensure that file system is mounted properly and OS kernel resources are adequately configured

ORA-51291: Increase per-process limit on number of open files

ORA-51292: Increase operating system kernel limit on total number of open files

ORA-51293: Mount NFS with the Oracle-recommended mount options

ORA-51294: Ensure that disk partition provided to Oracle does not start at sector 0

ORA-51295: Mount your file system with the required access mode

ORA-51296: Change access permissions for file <varname>string</varname>

ORA-51297: Find process that is holding lock on file <varname>string</varname> and resolve lock conflict

ORA-51298: Ensure that file <varname>string</varname> has correct access permissions and is not locked by another process

ORA-51299: Please contact Oracle Support Services to resolve failure <varname>string</varname>: <varname>string</varname>

ORA-51300: Configure operating system kernel so that there is enough memory available to open a file

ORA-51301: SQL dictionary health check: <varname>string</varname> <varname>string</varname> on object <varname>string</varname> failed

ORA-51302: Damaged rowid is <varname>string</varname> - description: <varname>string</varname>

ORA-51303: illegal check mask value specified

Cause: An illegal check mask value was specified.

Action: Specify one of the following legal values: COLUMN_CHECKS, ROW_CHECKS, REFERENTIAL_CHECKS, or ALL.

ORA-51304: Checkpoint database and clear redo log group <varname>string</varname>

ORA-51305: Checkpoint database and clear unarchived redo log group
<varname>string</varname>

ORA-51306: Checkpoint database and clear unarchived redo log group
<varname>string</varname> with unrecoverable datafile(s)

ORA-51307: Undo segment <varname>string</varname> is corrupted

ORA-51308: Restore database and recover with UNTIL CANCEL option

ORA-51309: If you have the correct version of the control file, then replace
<varname>string</varname> with it

ORA-51310: Ensure that ASM instance is up

ORA-51311: Ensure that ASM disk group is mounted

ORA-51312: Name for datafile <varname>string</varname> is unknown in the
control file

ORA-51313: A repair cannot be performed until the database is restarted.
Please shutdown, restart database in nomount mode, and retry ADVISE
command

ORA-51314: If you have the correct version of the control file, then shutdown
the database and replace the old control file

ORA-51315: Perform incomplete database recovery

ORA-51316: No check meta-data found on specified table <varname>string</
varname>

Cause: No check meta-data was found for the object

Action: Table may not exist or no checks currently defined for the table

ORA-51317: If the file exists, rename data file <varname>string</varname> to
the name of the real file using ALTER DATABASE RENAME FILE command. If
the file does not exist, create a new data file using ALTER DATABASE CREATE
DATAFILE command.

ORA-51318: The repair includes flashing the database back with some data loss

ORA-51319: The repair includes recovery in NOARCHIVELOG mode with some
data loss

ORA-51320: No backup of block <varname>string</varname> in file
<varname>string</varname> was found. Drop and re-create the associated
object (if possible), or use the DBMS_REPAIR package to repair the block
corruption

ORA-51321: If possible, drop and re-create the object associated with the
logically corrupted block <varname>string</varname> in file <varname>string</
varname>. Otherwise, use the DBMS_REPAIR package to repair the block

ORA-51322: Contact Oracle Support Services if the preceding
recommendations cannot be used, or if they do not fix the failures selected for
repair

ORA-51323: A database state change is required to repair some failures. An
automatic repair might be feasible if you mount the database.

ORA-51324: A database state change is required to repair some failures. An automatic repair might be feasible if you open the database.

ORA-51325: Block <varname>string</varname> in datafile <varname>string</varname>: '<varname>string</varname>' is logically corrupt

ORA-51326: Datafile <varname>string</varname>: '<varname>string</varname>' was not taken offline cleanly. If you do not want to recover it, then take the file OFFLINE FOR DROP and repeat the ADVISE command

ORA-51327: The repair includes clearing unarchived redo log with some data loss

ORA-51328: Block <varname>string</varname> in control file is corrupt

ORA-51329: The control file cannot be repaired while the database is mounted or open. Please shutdown, restart the database in nomount mode, and retry the ADVISE command. A backup control file or CREATE CONTROLFILE script will be needed for the repair. If you do not have a backup control file, a CREATE CONTROLFILE script can be built by using 'alter database backup controlfile to trace'.

ORA-51330: The control file cannot be repaired while the database is open or mounted. Please shutdown, restart the database in nomount mode, and retry the ADVISE command. A CREATE CONTROLFILE script will be needed for the repair because a backup control file could not be found. If you do not have a script, one can be built by using 'alter database backup controlfile to trace'.

ORA-51331: Control file contains one or more corrupt blocks

ORA-51332: Database or some of its functionality may not be available

ORA-51333: Open resetlogs

ORA-51334: Automatic repairs may be available if you shutdown the database and restart it in mount mode

ORA-51335: Initiate fast-start failover

ORA-51336: Redo log <varname>string</varname> with block size <varname>string</varname> is incompatible with native disk sector size

ORA-51337: Move file <varname>string</varname> with block size <varname>string</varname> to a disk with a compatible sector size

ORA-51338: Datafile <varname>string</varname>: '<varname>string</varname>' is offline

ORA-51339: Online datafile <varname>string</varname>

ORA-51340: One or more non-system datafiles are offline

ORA-51341: Tablespace <varname>string</varname>: '<varname>string</varname>' is offline

ORA-51342: Online tablespace <varname>string</varname>

ORA-51343: System datafile <varname>string</varname>: '<varname>string</varname>' is offline

ORA-51344: If datafile '<varname>string</varname>' is in the current undo tablespace, then bring it online using ALTER DATABASE DATAFILE <varname>string</varname> ONLINE command

ORA-51345: A database state change is required to repair some failures. An automatic repair might be feasible if you shut down the database and reopen it in read/write mode.

ORA-51346: An automatic repair was generated for some of the failures selected for repair. More failures might be repaired if you open the database.

ORA-51347: An automatic repair was generated for some of the failures selected for repair. More failures might be repaired if you open the database in read/write mode.

ORA-51348: Open the database read/write to validate and get repair advice for failure <varname>string</varname>: <varname>string</varname>

ORA-51349: Open the database to validate and get repair advice for failure <varname>string</varname>: <varname>string</varname>

ORA-51350: Mount the database to validate and get repair advice for failure <varname>string</varname>: <varname>string</varname>

ORA-51351: An automatic repair was generated for some of the failures selected for repair. More failures might be repaired if you mount the database.

ORA-51352: A database state change is required to repair the following failures.

ORA-51353: An automatic repair was generated for some of the failures selected for repair. A database state change is required to repair the following failures.

ORA-51354: If you have an export of tablespace <varname>string</varname>, open the database read/write, then drop and re-create the tablespace and import the data.

ORA-51355: If you have an export of tablespace <varname>string</varname>, offline its data files, open the database read/write, then drop and re-create the tablespace and import the data.

ORA-51356: Perform a Data Guard role change (using PL/SQL routine DBMS_DG.INITIATE_FS_FAILOVER).

ORA-51357: Perform a Data Guard role change (using Data Guard broker failover).

ORA-51358: Perform a Data Guard role change (failover).

ORA-51359: Shut down, mount the database and try flush redo using ALTER SYSTEM FLUSH REDO TO 'standby name' command. Then perform a Data Guard role change (using Data Guard broker failover). Available standbys: <varname>string</varname>.

ORA-51360: Try flush redo using ALTER SYSTEM FLUSH REDO TO 'standby name' command. Then perform a Data Guard role change (using Data Guard broker failover). Available standbys: <varname>string</varname>.

ORA-51361: Shut down, mount the database and try flush redo using ALTER SYSTEM FLUSH REDO TO 'standby name' command. Then perform a Data Guard role change (failover). Available standbys: <varname>string</varname>.

ORA-51362: Try flush redo using ALTER SYSTEM FLUSH REDO TO 'standby name' command. Then perform a Data Guard role change (failover). Available standbys: <varname>string</varname>.

ORA-51363: Data Guard Switchover/Failover performance may be affected

ORA-51364: Recovery cannot continue

ORA-51365: Datafile <varname>string</varname>: contains NOLOGGING data

ORA-51366: Standby redo log group <varname>string</varname> is unavailable

ORA-51367: If this is a standby database and a primary database is available, go to the primary and create a standby control file using ALTER DATABASE CREATE STANDBY CONTROLFILE command

ORA-51368: Creates a standby control file from the primary

ORA-51369: Redo log group may become unavailable

ORA-51370: Copy datafile <varname>string</varname> from another database using BACKUP AUXILIARY FORMAT command

ORA-51371: If the NOLOGGING data in datafile <varname>string</varname> exists on another database (primary or standby), take an incremental backup of it and restore it on this database

ORA-51372: Restore datafile <varname>string</varname> from primary database

ORA-51373: No data loss mode may not be available when database is used as Data Guard

ORA-51374: Restore from standby and recover datafile <varname>string</varname>

ORA-51375: Restore datafile <varname>string</varname> and recover database

ORA-51376: If this is a standby database, restore the controlfile for a standby database using RESTORE STANDBY CONTROLFILE FROM AUTOBACKUP command

ORA-51377: Restore database from standby and recover database

ORA-51378: Restore database from primary

ORA-51379: Restore and recover database

ORA-51380: Create a new datafile <varname>string</varname> using ALTER DATABASE CREATE DATAFILE command

ORA-51381: Datafiles are mutually inconsistent

ORA-51382: Database may not be able to open

ORA-51383: Ensure the primary database is up and recover database using ALTER DATABASE RECOVER MANAGED STANDBY DATABASE UNTIL CONSISTENT command. Check alert log for potential failures that may cause recovery not to run. Potential problems may include missing archived logs or datafiles being in an orphaned incarnation.

ORA-51384: Another primary exists in the Data Guard configuration

ORA-51385: Attempt to reinstate the old primary database, <varname>string</varname>, as a standby database of the current primary database by issuing the REINSTATE DATABASE command of the Data Guard Broker CLI (DGMGRL) on the current primary. If the database cannot be reinstated, you must re-create the old primary database from a copy of the current primary database.

ORA-51386: Datafile is not protected

ORA-51387: Restore datafile <varname>string</varname>

ORA-51388: Restore database

ORA-51401: ASM disk group mount failure can result in failure mounting Oracle database.

ORA-51402: Disk missing from the disk group. Disk number: <varname>string</varname> Name: <varname>string</varname> Path: <varname>string</varname>. InSee trace file <varname>string</varname>.

ORA-51403: ASM extent allocation failed. ASM disk group may be in unbalanced state.

ORA-51404: Disk group '<varname>string</varname>' Imbalance: '<varname>string</varname>%. Partner Imbalance: '<varname>string</varname>%. Size Variance: '<varname>string</varname>%'

ORA-51405: ASM disk not added to disk group as requested.

ORA-51406: Requested ASM disk(s) not discovered on all nodes where disk group is mounted. InSee trace file <varname>string</varname>.

ORA-51407: ASM file <varname>string</varname> not dropped as requested.

ORA-51408: Database <varname>string</varname> on host <varname>string</varname> currently accessing file.

ORA-51409: Too many offline disks detected.

ORA-51410: <varname>string</varname>

ORA-51411: Insufficient number of disks to establish quorum.

ORA-51412: Insufficient memory available for allocation.

ORA-51500: HM Test Check

ORA-51501: Check for health monitor functionality

ORA-51502: Number of failures to be raised

ORA-51503: Number of recommendations to be raised

ORA-51504: Damage description parameter value

ORA-51505: Failure description parameter value

ORA-51506: Dummy element list

ORA-51700: Invalid file URL

Cause: A URL with invalid syntax was provided, either directly to the function or through an XML IMPORT or INCLUDE.

Action: Check the URL.

ORA-51701: Invalid file URL or path prefix

Cause: Either a URL or path prefix with invalid syntax was provided.

Action: Check the URL.

ORA-51702: Could not find file at URL provided

Cause: The file requested could not be found in the given location.

Action: Check the URL provided.

ORA-51703: Missing <varname>body</varname> tag from HTML

Cause: An HTML document was passed to the function missing its <varname>body</varname> tag.

Action: Check the HTML source.

ORA-51704: Error <varname>string</varname> received from XPath engine

Cause: An error was received from the XPath library during an XPath operation.

Action: Check xmlerr.h to understand the cause of the error and correct the relevant client code.

ORA-51705: XML <varname>string</varname> error: <varname>string</varname> "<varname>string</varname>"

Cause: An error was received from an underlying XDK API and is being resigalled.

Action: Check `xmlerr.h` to understand the cause of the error and correct the relevant client code.

ORA-53000 to ORA-54047

ORA-53000: document type "<varname>string</varname>" is invalid

Cause: An invalid document type was specified.

Action: See the ORDDCM_DOCUMENT_TYPES view for a list of valid document types.

ORA-53001: <varname>TAG</varname> and <TAG_RANGE> tag values are null

Cause: An invalid attribute was found in the private dictionary document. The values specified by the <varname>TAG</varname> and <TAG_RANGE> tags were null.

Action: A private attribute definition must contain either a non-null <varname>TAG</varname> value or a non-null <TAG_RANGE> value. Correct the values and try the operation again. See the private dictionary schema (ordcmpv.xsd) listed in the Oracle Multimedia documentation for more information.

ORA-53002: document name "<varname>string</varname>" already inserted

Cause: The specified document name was found in the repository.

Action: Specify a unique document name and try again. See the ORDDCM_DOCUMENTS view for a list of document names.

ORA-53003: document <varname>string</varname> does not exist

Cause: The specified document name was not found in the repository.

Action: Correct the value and try again. See the ORDDCM_DOCUMENTS view for a list of documents in the repository.

ORA-53004: The value of tag <varname>VR</varname> "<varname>string</varname>" is invalid.

Cause: An invalid value for the <varname>VR</varname> tag was found in the dictionary document.

Action: Correct the value and try again. The value of the <varname>VR</varname> tag must either be a value defined by DICOM or an Oracle extension. See the data type schema (ordcmdt.xsd) listed in the Oracle Multimedia documentation for a list of valid <varname>VR</varname> tag values.

ORA-53005: tag references found in document: <varname>string</varname>

Cause: The delete operation failed because some tags in the dictionary document were being referenced by the listed document.

Action: To perform the delete operation, follow these steps: 1. Export the listed document to a file. 2. Delete the listed document from the repository. 3. Remove the referencing tags from the exported document. 4. Insert the updated document into the repository. 5. Repeat the delete operation.

ORA-53006: wild card characters are not allowed in <TAG_RANGE> tags

Cause: A <TAG_RANGE> tag containing wild card characters 'x' or 'X' was found in the dictionary document.

Action: Remove the wild card characters from <TAG_RANGE> tag and try again. See the Oracle Multimedia documentation for information about the private dictionary schema (ordcmpv.xsd).

ORA-53007: The document type STANDARD_DICTIONARY is not loaded.

Cause: The standard dictionary document was not found.

Action: Load the standard dictionary document (ordcmsd.xml). This is an installation error. Contact Oracle Support Services.

ORA-53008: The <varname>NAMESPACE</varname> tag value is not a registered schema.

Cause: The schema URL specified by the value of the <varname>NAMESPACE</varname> tag was not a registered Oracle XML DB schema.

Action: Specify a registered schema URL value. See the ALL_XML_SCHEMAS view for a list of registered schemas. See the Oracle XML DB Developers's Guide for information about registering schemas. See the Oracle Multimedia documentation for information about the mapping document schema (ordcmmp.xsd).

ORA-53009: cannot find the <ROOT_ELEM_TAG> tag value in the metadata schema

Cause: The value of the <ROOT_ELEM_TAG> tag was not found in the metadata schema specified by the value of the <varname>NAMESPACE</varname> tag.

Action: Correct the value and try again. You can either specify a valid value for the <ROOT_ELEM_TAG> tag or clear the value of the <varname>NAMESPACE</varname> tag. See the Oracle Multimedia documentation for information about the mapping document schema (ordcmmp.xsd).

ORA-53010: The value of the <varname>VR</varname> tag is null.

Cause: A null <varname>VR</varname> tag was found in the dictionary document.

Action: Correct the value and try again. If the value of the <varname>VR</varname> tag is null, then the value of the <varname>RETIRED</varname> tag must be set to true. See the Oracle Multimedia documentation for information about the standard dictionary schema (ordcmsd.xsd) and the private dictionary schema (ordcmpv.xsd).

ORA-53011: cannot find the <MAPPED_ELEM> tag value in the metadata schema

Cause: The value of the <MAPPED_ELEM> tag was not found in the metadata schema specified by the value of the <varname>NAMESPACE</varname> tag.

Action: Correct the value and try again. You can either specify a valid value for the <MAPPED_ELEM> tag or clear the value of the <varname>NAMESPACE</varname> tag. See the Oracle Multimedia documentation for information on the mapping document schema (ordcmmp.xsd).

ORA-53012: cannot find the <UNMAPPED_ELEM> tag value in the metadata schema

Cause: The value of the <UNMAPPED_ELEM> tag was not found in the metadata schema specified by the value of the <varname>NAMESPACE</varname> tag.

Action: Correct the value and try again. You can either specify a valid value for the <UNMAPPED_ELEM> tag or clear the value of the <varname>NAMESPACE</varname> tag. See the Oracle Multimedia documentation for information about the mapping document schema (ordcmp.xsd).

ORA-53013: cannot find the <ATTRIBUTE_TAG> value: <varname>string</varname> in the dictionaries

Cause: The value of the specified <ATTRIBUTE_TAG> tag was not found in the standard or private dictionaries.

Action: Correct the tag and/or the definer name value and try again. The value of the <ATTRIBUTE_TAG> tag must refer to a tag and definer name specified in the data dictionaries.

ORA-53014: The runtime preference table is not empty

Cause: The function was unable to process due to an internal error.

Action: Contact Oracle Support Services.

ORA-53015: An internal dictionary attributes table is empty

Cause: This document could not be processed due to an internal error.

Action: Contact Oracle Support Services.

ORA-53016: null input argument: <varname>string</varname>

Cause: The function was unable to process due to an internal error

Action: Contact Oracle Support Services.

ORA-53017: The installation file <varname>string</varname> has an incorrect document type

Cause: An incorrect document type was specified for this file during installation. The function was unable to process due to an internal error.

Action: Contact Oracle Support Services.

ORA-53018: document <varname>string</varname> contains an unsupported encrypt action attribute

Cause: The operation failed because an unsupported encrypt action

Action: Change the value of the action attribute to none, remove or replace

ORA-53019: cannot delete installation document: <varname>string</varname>

Cause: The document could not be deleted because it was an installation document.

Action: See the ORDDCM_DOCUMENTS view for a list of the documents in the repository.

ORA-53020: invalid external reference in the constraint document: <varname>string</varname>

Cause: The referenced external rule or macro could not be found in the repository.

Action: Insert the referenced documents first and try again.

ORA-53021: cannot insert a rule or macro <varname>string</varname> that was already inserted

Cause: The rules or macros existed in the repository.

Action: Insert a new rule or macro.

ORA-53022: rules or macros in the constraint document <varname>string</varname> do not exist

Cause: The rules or macros did not exist in the repository.

Action: Delete or update an existing rule or macro.

ORA-53023: cannot delete or update a referenced rule or macro <varname>string</varname>

Cause: Because the rules or macros were referenced by other rules or macros, they could not be deleted or updated.

Action: Delete the referencing rules or macros first and try again.

ORA-53024: error processing constraint document: <varname>string</varname>

Cause: An error occurred while processing the constraint document.

Action: If the error described in the message can be corrected, do so; otherwise, contact Oracle Support Services.

ORA-53025: invalid constraint document: <varname>string</varname>

Cause: The constraint document was invalid.

Action: Correct the error described in the message and try again.

ORA-53026: failed to insert the constraint <varname>string</varname> to the database

Cause: An error occurred while trying to insert the constraint document into the database.

Action: Contact Oracle Support Services.

ORA-53027: invalid invocation of a macro <varname>string</varname> that is partially defined

Cause: Constraint rules could not invoke partially defined constraint macros.

Action: Ensure that all dependent constraint macros are inserted into the repository, then try the operation again.

ORA-53031: unable to export or import data model: <varname>string</varname>

Cause: An error occurred during export or import data model.

Action: If the error described in the message can be corrected, do so; otherwise, contact Oracle Support Services.

ORA-53032: The default preference document cannot be found.

Cause: The delete operation failed due to an internal error.

Action: When a user-defined preference document is deleted, the default values are restored from the Oracle default preference document. The default preference document is loaded during installation. If this document cannot be found, it is an unrecoverable error. Contact Oracle Support Services.

ORA-53033: The default UID Definition document cannot be found.

Cause: The delete operation failed due to an internal error.

Action: When a user-defined UID Definition document is deleted, the default values are restored from the Oracle default UID Definition document. The default UID Definition document is loaded during installation. If this document cannot be found, it is an unrecoverable error. Contact Oracle Support Services.

ORA-53034: document <varname>string</varname> contains an unsupported action attribute

Cause: The operation failed because an unsupported action attribute was found in the specified anonymity document.

Action: Change the value of the action attribute to none, remove or replace

ORA-53035: The rows for the mapping document (<varname>string</varname>) do not exist.

Cause: The delete operation failed due to an internal error.

Action: Contact Oracle Support Services.

ORA-53036: An internal table for the mapping document (<varname>string</varname>) is empty.

Cause: The function failed due to an internal error.

Action: Contact Oracle Support Services.

ORA-53037: invalid range tag, <START_TAG> <varname>string</varname> must be less than <END_TAG> <varname>string</varname>

Cause: The operation failed because an invalid range tag was specified.

Action: Correct the value and try the operation again.

ORA-53038: The data type name for tag: <varname>string</varname> cannot be found.

Cause: The function failed due to an internal error.

Action: Contact Oracle Support Services.

ORA-53039: user-defined preference document: <varname>string</varname> already exists

Cause: The insert operation failed because only one user-defined preference document is allowed.

Action: To change an existing user-defined preference document, follow these steps: 1. Export the specified document to a file. 2. Delete the specified document from the repository. 3. Make changes to the exported document. 4. Insert the updated document into the repository. To add a new user-defined preference document, follow these steps: 1. Delete the specified document from the repository. 2. Insert the new document into the repository.

ORA-53040: user-defined UID definition document: <varname>string</varname> already exists

Cause: The insert operation failed because only one user-defined UID definition document is allowed.

Action: To change an existing user-defined UID definition document, follow these steps: 1. Export the specified document to a file. 2. Delete the specified document from the repository. 3. Make changes to the exported document. 4. Insert the updated document into the repository. To add a new user-defined UID definition document, follow these steps: 1. Delete the specified document from the repository. 2. Insert the new document into the repository.

ORA-53041: The tag value for a replace action attribute is null.

Cause: The operation failed because a null tag value was found for a replace action attribute in the anonymity document

Action: Either add a non-null tag value for each replace action attribute

ORA-53042: tag <varname>string</varname> is referenced by document: <varname>string</varname>

Cause: The insert operation failed because the specified tag in the dictionary document was being referenced by the listed document.

Action: To perform the insert operation, follow these steps 1. Export the listed document to a file. 2. Delete the listed document from the repository. 3. Remove the specified tag from the exported document. 4. Insert the updated document into the repository. 5. Repeat the insert operation.

ORA-53043: tag <varname>string</varname> is referenced by unknown document

Cause: The operation failed because a tag in the specified dictionary document was being referenced by another document in the repository.

Action: This is an internal error. Contact Oracle Support Services.

ORA-53044: invalid tag: <varname>string</varname>

Cause: The operation failed because the specified tag was invalid.

Action: The tag must match the regular expression ([0-9a-fA-FxX]{8}). Correct the tag format and try the operation again. See the dictionary schemas (ordcmsd.xsd, ordcmpv.xsd) listed in the Oracle Multimedia documentation for more information.

ORA-53045: invalid tag: <varname>string</varname>

Cause: The operation failed because the specified tag was invalid.

Action: The tag must match the regular expression ([0-9a-fA-F]{8}). Correct the tag format and try the operation again. See the dictionary schemas (ordcmsd.xsd, ordcmpv.xsd) listed in the Oracle Multimedia documentation for more information.

ORA-53046: tag: <varname>string</varname> collides with existing tag: <varname>string</varname> in document: <varname>string</varname>

Cause: The operation failed because the specified tag collided with an existing tag in the specified document.

Action: Tag collisions are not allowed in the dictionary documents. Correct the specified tag in the document and try the operation again.

ORA-53047: internal error: <varname>string</varname>

Cause: This document could not be processed due to an internal error.

Action: Contact Oracle Support Services.

ORA-53048: definer name DICOM is not allowed in a private dictionary

Cause: The operation failed because the definer name DICOM was found in the private dictionary.

Action: Correct the definer name and try the operation again.

ORA-53049: unsupported <ATTRIBUTE_TAG> tag value: <varname>string</varname>

Cause: The operation failed because the locator path with FIELD_TAG was not supported in the <ATTRIBUTE_TAG> tag in the anonymity document.

Action: Remove the FIELD_TAG in the locator path and try the operation again. See the Oracle Multimedia documentation for more information about locator path syntax.

ORA-53050: The data model is being edited by another user.

Cause: The operation failed because the data model was being edited by another user.

Action: The data model can be edited by only one administrator at a time.

ORA-53051: no editDataModel session found

Cause: The operation failed because there was no editDataModel session.

Action: Call the editDataModel procedure first and try the operation again.

ORA-53052: lock release returned error: <varname>string</varname>

Cause: The operation succeeded, but an error occurred while releasing a lock.

Action: This is an internal error. Contact Oracle Support Services.

ORA-53053: lock request error: <varname>string</varname>

Cause: The operation failed because an exclusive lock could not be acquired.

Action: This is an internal error. Contact Oracle Support Services.

ORA-53054: An editDataModel session already exists.

Cause: The editDataModel procedure was called more than once in the same session.

Action: Continue the insert or delete operations, call rollbackDataModel to rollback the data model changes, or call publishDataModel to publish the data model changes.

ORA-53055: empty data model table

Cause: The operation failed because the data model table was empty.

Action: This is an internal error. Contact Oracle Support Services.

ORA-53056: unrecognized preference parameter name: <varname>string</varname>

Cause: The operation failed because the parameter name was invalid.

Action: Correct the value and try the operation again. See the preference schema (ordcmpf.xsd) listed in the Oracle Multimedia documentation for more information.

ORA-53057: invalid preference parameter value: <varname>string</varname>

Cause: The operation failed because the parameter value was invalid.

Action: Correct the value and try the operation again. See the preference schema (ordcmpf.xsd) listed in the Oracle Multimedia documentation for more information.

ORA-53058: The <ATTRIBUTE_TAG> value:<varname>string</varname> is not a simple tag.

Cause: The operation failed because the value of the specified <ATTRIBUTE_TAG> tag contained wild card characters 'x' or 'X'.

Action: Only simple tags that match the regular expression `[0-9A-F]{8}(\.(.*))?` are allowed in the <ATTRIBUTE_TAG> tag. For example: 00080096(DICOM), 00080096 and so on. Correct the tag format and try the operation again. See the schemas ordcmdt.xsd, ordcmpf.xsd, and ordcman.xsd listed in the Oracle Multimedia documentation for more information.

ORA-53059: document name: <varname>string</varname> is too long

Cause: A document name with more than 100 characters was specified.

Action: Use a shorter document name and try the operation again.

ORA-53060: <varname>string</varname> is not a standard attribute tag

Cause: The operation failed because the specified standard dictionary attribute tag did not have an even group number.

Action: A standard dictionary attribute tag represents a two-byte hexadecimal number (group number followed by element number) and must match the regular expression `[0-9a-fA-FxX]{3}[02468aceACEeX]{1}[0-9a-fA-FxX]{4}`. Correct the attribute tag format and try the operation again.

ORA-53061: document name <varname>string</varname> contains reserved prefix - ORD

Cause: The operation failed because the specified document name contained the ORD prefix that is reserved for Oracle Multimedia documents.

Action: Remove the ORD prefix from the document name and try the operation again.

ORA-53062: invalid model name: <varname>string</varname>

Cause: The operation failed because the specified model name was invalid.

Action: The model name DEFAULT is the only value that is supported in this release. Remove the model name or replace it with the value DEFAULT and try the operation again.

ORA-53063: invalid exportOption: <varname>string</varname>

Cause: The specified value for the exportOption parameter was not valid.

Action: Valid values for the exportOption parameter are USER, ALL, or ORACLE. The default value is USER. Remove the specified value for the exportOption parameter or replace it with a valid value for this parameter.

ORA-53064: no user-defined documents to export

Cause: The value USER was specified for the exportOption parameter, but there were no user-defined documents in the repository.

Action: Valid values for the exportOption parameter are USER, ALL, or ORACLE. Specify another valid value for the exportOption parameter.

ORA-53065: stored tag list document: <varname>string</varname> already exists

Cause: The operation failed because only one stored tag list document is allowed.

Action: To change an existing stored tag list document, follow these steps: 1. Export the specified document to a file. 2. Delete the specified document from the repository. 3. Make changes to the exported document. 4. Insert the updated document into the repository. To add a new stored tag list document, follow these steps: 1. Delete the specified document from the repository. 2. Insert the new document into the repository.

ORA-53066: invalid manifest file: <varname>string</varname> or directory: <varname>string</varname>

Cause: The specified manifest file name or directory name was invalid.

Action: Confirm that the manifest file and the directory exist, and that the names are valid.

ORA-53067: validation failed for manifest file: <varname>string</varname>

Cause: The specified manifest file did not conform to the XML schema ordcmmft.xsd.

Action: Ensure that the manifest file conforms to the XML schema ordcmmft.xsd.

ORA-53068: cannot import data model because user-defined documents exist

Cause: User-defined documents were found in the repository.

Action: First export all user-defined documents in the repository so they can be saved, then delete all user-defined documents in the repository before importing a data model.

ORA-53069: doc version:<varname>string</varname> in <varname>string</varname> is not <= repos version:<varname>string</varname>

Cause: The document version of the specified document was not compatible with the repository version.

Action: You cannot import this data model into this version of the repository. Either upgrade or import a data model that is compatible with your repository version. See the Oracle Multimedia documentation for more information about document versioning considerations for the importDataModel procedure.

ORA-53070: manifest file:<varname>string</varname> does not contain all the Oracle documents

Cause: The specified manifest file did not contain the complete set of Oracle-defined documents that were included in the database release.

Action: A manifest file can contain all user-defined documents, all Oracle-defined documents, or both. Confirm that the manifest file includes all the documents listed in the orddcm_dbrelease_docs information view or no Oracle-defined documents. See the Oracle Multimedia documentation for more information on manifest files.

ORA-53071: tag: <varname>string</varname> from <varname>string</varname> is not listed in the stored tag list document

Cause: The specified document contained a tag that was not included in the stored tag list document.

Action: If the preference parameter MANDATE_ATTR_TAGS_IN_STL is set to true the stored tag list document must contain all the tags used by the constraint and

mapping documents. Change the preference parameter value to false, or add the listed tag to the stored tag list document. See the Oracle Multimedia documentation for more information on stored tag list documents.

ORA-53072: even group number is not allowed in private tag:

<varname>string</varname>

Cause: The operation failed because the specified private dictionary attribute tag contained an even group number.

Action: A dictionary attribute tag represents a two-byte hexadecimal number (a group number followed by an element number). Even group numbers are reserved for the DICOM Standard dictionary. Thus, the group number of a private dictionary attribute tag must be an odd number. Replace the even group number with an odd number in the specified attribute tag, and try the operation again.

ORA-53073: invalid docSet: <varname>string</varname>

Cause: The specified value for the docSet parameter was not valid.

Action: Valid values for the docSet parameter are USER, ALL, or ORACLE. The default value is USER. Remove the specified value for the docSet parameter, or replace it with a valid value.

ORA-53074: namespace value is too long

Cause: A namespace value longer than 700 characters was specified in the mapping document.

Action: Use a shorter namespace value and try the operation again.

ORA-53075: null ROOT_ELEM_TAG tag value

Cause: The value of the ROOT_ELEM_TAG tag was null or all spaces.

Action: Correct the value and try again.

ORA-53076: attempt to modify data model repository during rolling upgrade

Cause: An attempt was made to modify the Digital Imaging and Communications in Medicine (DICOM) data model in an administrator editing session during a rolling upgrade.

Action: Wait for the rolling upgrade to complete, then try the operation again. If a DICOM administrator editing session was in progress when the rolling upgrade was started, execute the rollbackDataModel() procedure to end the DICOM administrator session. Then, after the rolling upgrade completes, execute the editDataModel() procedure to restart the session.

ORA-53100: The repository data model is in invalid state.

Cause: Error detected while loading the data model from the repository.

Action: Contact Oracle Support Services.

ORA-53111: The repository data model is not loaded.

Cause: The operation failed because the ord_dicom.setDataModel procedure was not called to load the repository data model.

Action: Call the ord_dicom.setDataModel procedure first and try the operation again.

ORA-53112: unable to load repository: <varname>string</varname>

Cause: The ord_dicom.setDataModel procedure failed to load the repository due to the listed error.

Action: This is an internal error. Contact Oracle Support Services.

ORA-53122: invalid document type : <varname>string</varname>

Cause: The ord_dicom.setDataModel procedure failed to load the repository because an invalid document type was found.

Action: This is an internal error. Contact Oracle Support Services.

ORA-53124: cannot find VR number for data type: <varname>string</varname>

Cause: The VR number for the listed data type could not be found in the lookup table.

Action: This is an internal error. Contact Oracle Support Services.

ORA-53125: invalid range tag: <varname>string</varname>

Cause: The ord_dicom.setDataModel procedure failed to load the repository because an invalid range tag was found in the dictionary table.

Action: This is an internal error. Contact Oracle Support Services.

ORA-53126: assertion failure: <varname>string</varname>

Cause: The operation failed because an assertion error had occurred.

Action: This is an internal error. Contact Oracle Support Services.

ORA-53200: Argument <varname>string</varname> is null.

Cause: The argument was expecting a non-null value, but the value of the passed argument was null.

Action: Check your program and ensure that the caller of the routine does not pass a null argument value.

ORA-53201: Argument <varname>string</varname> is null or invalid.

Cause: The argument was expecting a non-null, valid value, but the value of the passed argument was null or invalid.

Action: Check your program and ensure that the caller of the routine does not pass a null or invalid argument value.

ORA-53202: internal error, argument [<varname>string</varname>]

Cause: The internal argument was invalid.

Action: Contact Oracle Support Services.

ORA-53203: security violation

Cause: A possible security violation was detected.

Action: Check the alert log and trace file for more information.

ORA-53210: unable to read empty DICOM object

Cause: There was no data in the specified DICOM object.

Action: See the Oracle Multimedia documentation for information about loading DICOM object data into the database.

ORA-53211: unable to read invalid ORDDicom object

Cause: The value of the source attribute or the extension attribute of the ORDDicom object was null.

Action: See the Oracle Multimedia documentation for information about creating a valid ORDDicom object.

ORA-53212: unable to read invalid ORDImage object: attribute <varname>string</varname> is null

Cause: The ORDImage object was invalid.

Action: See the Oracle Multimedia documentation for information about creating a valid ORDImage object.

ORA-53213: cannot access DICOM data with invalid source type

Cause: An invalid source type was stored in the source attribute of the ORDDicom object.

Action: See the Oracle Multimedia documentation for information about the supported source types for DICOM data.

ORA-53214: cannot access DICOM image data with invalid source type

Cause: An invalid source type was stored in the source attribute of the ORDImage object.

Action: See the Oracle Multimedia documentation for information about the supported source types for DICOM image data.

ORA-53215: cannot access ORDDataSource object with invalid source type

Cause: An invalid source type was stored in the ORDDataSource object. Or, an error occurred while trying to retrieve a BFILE while the object status was local.

Action: See the Oracle Multimedia documentation for information about the supported source types.

ORA-53216: cannot export the ORDDataSource object with an external source

Cause: The source of the ORDDataSource object was not local.

Action: Import the data before calling the export procedure. Or, get the data directly from the external source.

ORA-53217: The source LOB locator is null.

Cause: The source BLOB locator or BFILE locator was null.

Action: Correct the statement to pass an initialized LOB locator.

ORA-53230: unable to write to an invalid destination ORDDicom object

Cause: The value of the source attribute or the extension attribute of the destination ORDDicom object was null.

Action: See the Oracle Multimedia documentation for information about constructing a valid ORDDicom object.

ORA-53231: unable to write to a nonlocal destination ORDDicom object

Cause: The source attribute of the destination ORDDicom object was not local.

Action: See the Oracle Multimedia documentation for information about constructing a local ORDDicom object.

ORA-53232: unable to write to an invalid destination ORDImage object

Cause: The value of the source attribute of the destination ORDImage object was null.

Action: See the Oracle Multimedia documentation for information about constructing a valid ORDImage object.

ORA-53233: unable to write to a nonlocal destination ORDImage object

Cause: The source attribute of the destination ORDImage object was not local.

Action: See the Oracle Multimedia documentation for information about constructing a local ORDImage object.

ORA-53234: The destination BLOB locator is null.

Cause: The destination BLOB locator was null.

Action: Correct the statement to pass an initialized BLOB locator.

ORA-53250: Mapping document does not exist.

Cause: The specified mapping document did not exist.

Action: Check the installed mapping documents, and correct the statement to pass the name of an installed mapping document.

ORA-53251: Anonymity document does not exist.

Cause: The specified anonymity document did not exist.

Action: Check the installed anonymity definition documents, and correct the statement to pass the name of an installed anonymity definition document.

ORA-53252: Constraint does not exist.

Cause: The specified constraint did not exist.

Action: Check the installed constraints, and correct the statement to pass an installed constraint name.

ORA-53253: The metadata for the new DICOM object is invalid.

Cause: The metadata for the new DICOM object did not conform to the default metadata schema (ordcmmd.xsd).

Action: Check the metadata argument to ensure it has the correct namespace and conforms to the default metadata schema (ordcmmd.xsd). See the Oracle Multimedia documentation for information about the default metadata schema (ordcmmd.xsd).

ORA-53254: The SOP INSTANCE UID for the new DICOM object is invalid.

Cause: The SOP INSTANCE UID for the new DICOM object was invalid.

Action: See the Oracle Multimedia documentation for information about creating a valid SOP INSTANCE UID.

ORA-53255: cannot import from a null or invalid source type

Cause: A null or invalid source type was specified in the import procedure.

Action: See the Oracle Multimedia documentation for information about the supported source types for the DICOM object.

ORA-53256: cannot export to a null or invalid destination data type

Cause: A null or invalid destination data type was specified in the export procedure.

Action: See the Oracle Multimedia documentation for information about the supported destination data types for the DICOM object.

ORA-53257: Attribute does not exist.

Cause: The specified attribute did not exist.

Action: Ensure that the attribute name is valid.

ORA-53258: Metadata attribute is not available.

Cause: The value of the metadata attribute of the ORDDicom object was null.

Action: Call the setProperties method first.

ORA-53259: cannot extract metadata that conforms to the schema definition

Cause: The extracted metadata did not conform to its schema definition.

Action: Check the metadata schema definition, the mapping document and the parameters for the extractMetadata method to ensure that they are correct. See the Oracle Multimedia documentation for information about creating repository documents and extracting metadata.

ORA-53400: Missing DICOM magic number.

Cause: The DICOM object did not contain the DICOM magic number "dicm" required by part 10 of the DICOM standard.

Action: Fix the DICOM object or the DICOM object source, if possible. Otherwise, update the DICOM preference document to ignore this category of error.

ORA-53402: Missing DICOM header.

Cause: The DICOM object did not contain the file preamble.

Action: Fix the DICOM object or the DICOM object source, if possible. Otherwise, update the DICOM preference document to ignore this category of error.

ORA-53404: Missing the mandatory DICOM attribute <varname>string</varname>.

Cause: One or more mandatory DICOM attributes were missing from the DICOM object.

Action: Fix the DICOM object or the DICOM object source, if possible. Otherwise, update the DICOM preference document to ignore this category of error.

ORA-53406: The DICOM object contains invalid attribute value <varname>string</varname>.

Cause: The DICOM object did not conform to the DICOM standard and contained invalid attribute values.

Action: Fix the DICOM object or the DICOM object source, if possible. Otherwise, update the DICOM preference document to ignore this category of error.

ORA-53408: The DICOM object encoding is wrong <varname>string</varname>.

Cause: The DICOM object did not conform to the DICOM standard's binary encoding rules.

Action: Determine if the DICOM object is corrupt. If the DICOM object is not corrupt, verify whether it conforms to the binary encoding rules in the DICOM standard. If the DICOM object is corrupt, fix it if possible. Otherwise, update the DICOM preference document to ignore this category of error.

ORA-53410: The attribute <varname>string</varname> does not conform to the VM rule.

Cause: The DICOM object either contained an attribute that did not conform to the DICOM value multiplicity rule or was missing an attribute that was required by the DICOM standard.

Action: Determine if the DICOM object conforms to the DICOM standard. If it does, verify if the data dictionary matches the DICOM object or is more recent than the DICOM object. If the data dictionary is obsolete, update it using the ORD_DICOM_ADMIN repository API, if possible. Otherwise, update the DICOM preference document to ignore this category of error.

ORA-53412: The DICOM object contains an invalid VR value <varname>string</varname>.

Cause: The DICOM object with explicit value representation encoding had attribute VR values that did not match their definitions in the data dictionary.

Action: Determine if the DICOM object conforms to the DICOM standard. If it does, verify if the data dictionary matches the DICOM object or is more recent than the DICOM object. If the data dictionary is obsolete, update it using the ORD_DICOM_ADMIN repository API, if possible. Otherwise, update the DICOM preference document to ignore this category of error.

ORA-53414: The DICOM object contains undefined values <varname>string</varname>.

Cause: The DICOM object had attribute values that were expected to be part of the data model.

Action: Determine if the DICOM object conforms to the DICOM standard. If it does, verify if the data model matches the DICOM object or is more recent than the DICOM object. If the data model is obsolete, update it using the ORD_DICOM_ADMIN repository API, if possible. Otherwise, update the DICOM preference document to ignore this category of error.

ORA-53430: The DICOM object contains unsupported values <varname>string</varname>.

Cause: This type of DICOM object is not supported by the current release.

Action: Check for software updates, and contact Oracle Support Services for information about feature enhancements.

ORA-53432: The DICOM object attribute <varname>string</varname> has invalid definer name.

Cause: A private attribute definer for a private attribute contained in this DICOM object had invalid characters.

Action: Determine if the DICOM object is corrupt. If the DICOM object conforms to the DICOM standard, contact Oracle Support Services.

ORA-53434: Not a DICOM object.

Cause: The binary object is not a DICOM object.

Action: Determine if the DICOM object is corrupt. If the DICOM object conforms to the DICOM standard, contact Oracle Support Services.

ORA-53500: Not a DICOM image.

Cause: The binary object was not a DICOM image.

Action: Determine if the DICOM object is an image. Only DICOM images can be processed with image processing functions.

ORA-53502: Image processing failure.

Cause: An error occurred when processing a DICOM image.

Action: Determine if the DICOM image is corrupt, and if it is supported by the current release.

ORA-53800: The DICOM object does not contain attribute <varname>string</varname>.

Cause: The DICOM object did not contain the attribute that was required for conformance validation.

Action: Determine if the locator path is properly constructed. All attributes used in the locator path must be defined in the DICOM standard, and must not be retired. All attributes except the last attribute in the locator path must be of sequence type. If the locator path is correct, verify if the DICOM data dictionary is up to date. If the data dictionary is obsolete, update it using the ORD_DICOM_ADMIN repository API.

ORA-53801: cannot apply conformance validation on DICOM attribute <varname>string</varname>.

Cause: The content length of the attribute exceeded the value of the XML_SKIP_ATTR parameter that was defined in the preference document.

Action: Remove the attribute from the constraint rule or increase the value of the XML_SKIP_ATTR parameter that is defined in the preference document. Then, attempt the operation again.

ORA-53802: cannot perform conformance validation because recursion level exceeds MAX_RECURSION_DEPTH

Cause: When evaluating the recursive constraint on the DICOM object, the number of levels of recursion exceeded the value of the MAX_RECURSION_DEPTH parameter that was defined in the preference document.

Action: Ensure that the constraint definition is correct. If necessary, increase the value of the MAX_RECURSION_DEPTH parameter that is defined in the preference document. Then, attempt the operation again.

ORA-53810: error logging conformance validation messages

Cause: An error occurred while trying to log conformance validation messages.

Action: Ensure that the constraint rule definition does not contain any ACTION elements if the isConformanceValid method is called from a SQL query. If this error persists, contact Oracle Support Services.

ORA-53820: Invalid locator path <varname>string</varname>

Cause: A locator path for an attribute was invalid.

Action: Please verify the locator path is properly constructed. All attribute used in the locator path must be defined in the DICOM standard and must not be retired. An attribute that is not the last one of the locator path must be a sequence type. If the locator path is correct, please verify the DICOM data dictionary is up-to-date. If the data dictionary is obsolete, please use the ORD_DICOM_ADMIN API to update the data dictionary.

ORA-53900: I/O failure <varname>string</varname>.

Cause: A device I/O failure occurred when attempting to read from and write to a DICOM object.

Action: Check the permissions and privileges that have been granted for I/O operations.

ORA-53910: SQL error <varname>string</varname>.

Cause: An error occurred when attempting to run a SQL command.

Action: If you are using a JDBC connection string, ensure that the connection string is valid. Check the user account to see if it is locked. Ensure that the listener and the database server are running. And ensure that the setDataModel() function has been invoked before any other DICOM functions are called.

ORA-53920: XML error <varname>string</varname>.

Cause: An error occurred when attempting to read from and write to XML metadata.

Action: Ensure that Oracle XDB and all related schemas are properly installed.

ORA-53930: XSLT error <varname>string</varname>.

Cause: An error occurred while attempting to process XML metadata.

Action: Ensure that Oracle XDB and all related schemas are properly installed. And, verify that the mapping and anonymity documents are valid.

ORA-53940: make anonymous error <varname>string</varname>.

Cause: An error occurred while attempting to make DICOM object anonymous.

Action: Ensure that the anonymity document content is valid.

ORA-53980: unimplemented feature: <varname>string</varname>

Cause: The specified feature is not implemented.

Action: Contact Oracle Support Services.

ORA-53990: internal error <varname>string</varname>.

Cause: An internal error occurred while attempting to process a DICOM object.

Action: Contact Oracle Support Services, and supply them with a script that can be duplicated as well as the DICOM object that caused this error.

ORA-53991: cannot move tablespace because tables are being used

Cause: The operation failed because Oracle Multimedia tables were being used.

Action: End all sessions using Oracle Multimedia tables and try again.

ORA-54000: Virtual column feature not yet implemented

Cause: Feature has not been implemented.

Action: Feature is being implemented.

ORA-54001: <varname>string</varname>: invalid identifier specified for virtual column expression

Cause: Column expression referenced a column that does not exist in the table.

Action: Rewrite column expression to reference only scalar columns in the table.

ORA-54002: only pure functions can be specified in a virtual column expression

Cause: Column expression contained a function whose evaluation is non-deterministic.

Action: Rewrite column expression to reference only pure functions.

ORA-54003: specified data type is not supported for a virtual column

Cause: Only scalar data types are supported for virtual columns. LONG, BLOB, REF, and BFILE data types are not supported for virtual columns.

Action: Specify the expression column with a supported scalar data type.

ORA-54004: resultant data type of virtual column is not supported

Cause: The data type of the underlying expression is not supported. Only scalar data types are supported for virtual columns. LONG, BLOB, REF, and BFILE data types are not supported for virtual columns.

Action: Specify the expression of virtual column to return a supported scalar data type.

ORA-54005: keyword VIRTUAL cannot be specified here

Cause: The keyword VIRTUAL was either repeated or incorrectly specified.

Action: Remove the keyword from the specified syntax.

ORA-54006: keyword VISIBLE cannot be specified here

Cause: The keyword VISIBLE was either repeated or incorrectly specified.

Action: Remove the keyword from the specified syntax.

ORA-54007: keyword HIDDEN cannot be specified here

Cause: The keyword HIDDEN was either repeated or incorrectly specified.

Action: Remove the keyword from the specified syntax.

ORA-54008: expression column is not supported for an index organized table

Cause: Attempt to create/alter an index organized table with an expression column

Action: These columns are not supported, change the DDL.

ORA-54009: expression column is not supported for an external table

Cause: Attempt to create/alter an external table with an expression column

Action: These columns are not supported, change the DDL.

ORA-54010: expression column is not supported for a temporary table

Cause: Attempt to create/alter a temporary table with an expression column

Action: These columns are not supported, change the DDL.

ORA-54011: expression column is not supported for a clustered table

Cause: Attempt to create/alter a clustered table with an expression column

Action: These columns are not supported, change the DDL.

ORA-54012: virtual column is referenced in a column expression

Cause: This virtual column was referenced in an expression of another virtual column

Action: Ensure the column expression definition for any virtual column does not refer to any virtual column

ORA-54013: INSERT operation disallowed on virtual columns

Cause: Attempted to insert values into a virtual column

Action: Re-issue the statement without providing values for a virtual column

ORA-54014: Resulting table from a CTAS operation contains virtual column(s)

Cause: Table being created by a CTAS operation contains a virtual column definition

Action: Remove the virtual column definition from the table being created

ORA-54015: Duplicate column expression was specified

Cause: Expression of the virtual column being added/created conflicts with an existing/previously specified functional index expression or virtual column expression

Action: Change the expression of the virtual column as there are no duplicate expressions

ORA-54016: Invalid column expression was specified

Cause: Virtual column expression is not a valid arithmetic expression. It probably refers to another column in the table

Action: Change the expression of the virtual column

ORA-54017: UPDATE operation disallowed on virtual columns

Cause: Attempted to update values of a virtual column

Action: Re-issue the statement without setting values for the virtual column

ORA-54018: A virtual column exists for this expression

Cause: Specified index expression matches an existing virtual column"

Action: Re-issue the statement by replacing the index expression with the matching virtual column

ORA-54019: Virtual column expression cannot be changed because it is a partitioning column

Cause: Attempted to modify the expression of a virtual column that was also a partitioning column.

Action: This is not supported.

ORA-54020: Virtual column expression cannot be changed because it is a subpartitioning column

Cause: Attempted to modify the expression of a virtual column that was also a subpartitioning column.

Action: This is not supported.

ORA-54021: Cannot use PL/SQL expressions in partitioning or subpartitioning columns

Cause: Attempted to partition a table on a virtual column that contained PL/SQL expressions.

Action: This is not supported.

ORA-54022: Virtual column expression cannot be changed because an index is defined on column

Cause: Attempted to change the expression of a virtual column that was indexed.

Action: Alter index unusable. Change expression and then rebuild index.

ORA-54023: Virtual column expression cannot be changed because a constraint is defined on column

Cause: Attempted to change the expression of a virtual column that had a constraint defined on it.

Action: Drop constraint and then change expression.

ORA-54024: expression column is not supported for an organization cube table

Cause: Attempted to create or alter an organization cube table with an expression column

Action: These columns are not supported, change the DDL.

ORA-54025: Virtual column cannot have a default value

Cause: Attempted to alter a virtual column to have a default value.

Action: This is not valid, change the DDL.

ORA-54026: Real column cannot have an expression

Cause: Attempted to alter a real column to have an expression.

Action: This is not valid, change the DDL.

ORA-54027: cannot modify data-type of virtual column

Cause: Attempted to change the data-type of virtual column without modifying the underlying expression

Action: change the underlying expression to be compatible with the data-type change

ORA-54028: cannot change the HIDDEN/VISIBLE property of a virtual column

Cause: Attempted to change the HIDDEN/VIRTUAL property of a virtual column

Action: re-issue the DDL without the virtual column property change

ORA-54029: Virtual column cannot be updated in trigger body

Cause: Attempted to change the value of virtual column in a trigger body"

Action: This is not valid, change the trigger definition.

ORA-54030: datatype mismatch between virtual column and expression

Cause: virtual column expression was changed after column was created"

Action: change the underlying expression to return datatype that conforms to the virtual column

ORA-54031: column to be dropped or modified is used in a virtual column expression

Cause: Attempted to drop or modify a column that was used in a virtual column expression.

Action: Drop the virtual column first or change the virtual column expression to eliminate dependency on the column to be dropped.

ORA-54032: column to be renamed is used in a virtual column expression

Cause: Attempted to rename a column that was used in a virtual column expression.

Action: Drop the virtual column first or change the virtual column expression to eliminate dependency on the column to be renamed.

ORA-54033: column to be modified is used in a virtual column expression

Cause: Attempted to modify the data type of a column that was used in a virtual column expression.

Action: Drop the virtual column first or change the virtual column expression to eliminate dependency on the column to be modified.

ORA-54034: virtual columns not allowed in functional index expressions

Cause: An attempt was made to create a functional index with an expression defined on one or more virtual columns.

Action: Specify the index expression using only regular columns.

ORA-54035: keyword HIDDEN cannot be specified here

Cause: Attempted to specify HIDDEN key word for a virtual column

Action: This is not supported.

ORA-54036: cannot define referential constraint with ON DELETE SET NULL clause on virtual column

Cause: Attempted to specify ON DELETE SET NULL clause for a referential integrity constraint on a virtual column.

Action: Reissue the statement without specifying ON DELETE SET NULL clause.

ORA-54037: table must have at least 1 column that is not virtual

Cause: An attempt was made to create a table with only virtual columns.

Action: Include at least 1 column that is not virtual in the table being created.

ORA-54038: Virtual column cannot be encrypted

Cause: An attempt was made to create or alter a virtual column to have encryption.

Action: Encryption is unnecessary for a virtual column as the data is not stored on disk.

ORA-54039: table must have at least one column that is not invisible

Cause: An attempt was made to create or alter a table to have only invisible columns.

Action: Include at least one column that is not invisible in the table being created or altered.

ORA-54040: Visibility of a system-generated column cannot be changed.

Cause: An attempt was made to alter the visibility of a system-generated column.

Action: This is not supported.

ORA-54041: Visibility of an abstract data type column cannot be changed.

Cause: An attempt was made to alter the visibility of an abstract data type column.

Action: Specify the column visibility change with a supported data type.

ORA-54042: Invisible column is not supported on this type of table.

Cause: An attempt was made to create or alter the visibility of a column on an unsupported table type. Invisible columns are only supported for heap and index-organized tables (IOT).

Action: These columns are not supported, change the DDL.

ORA-54043: Including column of an IOT cannot be an invisible column.

Cause: An attempt was made to alter the visibility of the included column of an index-organized table (IOT).

Action: This is not supported.

ORA-54044: Visibility of a column having a column-level object privilege cannot be changed.

Cause: An attempt was made to alter the visibility of a column with a column-level object privilege.

Action: Revoke the column-level object privilege before making the column invisible.

ORA-54045: An invisible column cannot be granted a column-level object privilege.

Cause: An attempt was made to grant a column-level object privilege to an invisible column.

Action: Modify the column to make it visible and then grant the column-level object privilege.

ORA-54046: Column visibility modifications cannot be combined with any other modified column DDL option.

Cause: An attempt was made to combine the modification of the visibility of a column with other modified column property changes.

Action: Separate column visibility modifications into a standalone DDL.

ORA-54047: virtual columns not allowed for XMLType tables with object-relational storage

Cause: An attempt was made to create an object-relational XMLType table with virtual columns.

Action: Do not create virtual columns for XMLType tables with object-relational storage . This feature is not available.

ORA-54500 to ORA-56974

ORA-54500: invalid combination of elements

Cause: The geometry did not start from the correct level in the hierarchy.

Action: Correct the hierarchy in the geometry.

ORA-54501: no holes expected

Cause: The geometry contained one or more unexpected holes.

Action: Remove any holes in the geometry.

ORA-54502: solid not closed

Cause: The solid geometry was not closed i.e., faces of solid are not 2-manifold due to incorrectly defined, oriented, or traversed line segment because each edge of a solid must be traversed exactly twice, once in one direction and once in the reverse direction.

Action: Correct the orientation of the edges of the neighboring polygons.

ORA-54503: incorrect solid orientation

Cause: The orientation of the solid was not correct.

Action: Correct the orientation or specification of the outer or inner solid geometry according to the geometry rules for such a solid.

ORA-54504: multiple outer geometries

Cause: The geometry contained more than one outer geometry.

Action: Remove all but one of the outer geometries.

ORA-54505: ring does not lie on a plane

Cause: The ring was not flat.

Action: Make sure all of the vertices of the ring are on the same plane.

ORA-54506: compound curve not supported for 3-D geometries

Cause: The 3-D geometry contained one or more compound curves, which are not supported for 3-D geometries.

Action: Remove all compound curves from the geometry.

ORA-54507: duplicate points in multipoint geometry

Cause: The multipoint geometry had two points that either had identical coordinates or were the same point considering the geometry tolerance.

Action: Make sure all points are different, considering the tolerance.

ORA-54508: overlapping surfaces in a multisolid geometry

Cause: The multisolid geometry contained one or more fully or partially overlapping surfaces.

Action: Ensure that the multisolid geometry contains no overlapping areas.

ORA-54509: solid not attached to composite solid

Cause: To connect solids in a composite solid geometry, at least one of the faces of a solid must be shared (fully or partially) with only another solid. However, at least one of the faces in this composite solid was not shared by exactly two solids only.

Action: Ensure that at least one face in a composite solid is shared by exactly two solids.

ORA-54510: no outer geometry expected

Cause: An outer geometry was found when only inner geometries were expected.

Action: Remove all outer geometries.

ORA-54511: edges of inner and outer solids intersect

Cause: An inner solid had a common edge with outer solid.

Action: Ensure that edges of inner and outer solids do not intersect.

ORA-54512: a vertex of an inner solid is outside corresponding outer solid

Cause: A solid geometry contained an inner solid with at least one vertex outside its corresponding outer solid.

Action: Ensure that all vertices of inner solids are not outside their corresponding outer solid.

ORA-54513: inner solid surface overlaps outer solid surface

Cause: One or more faces of an inner solid surface either fully or partially overlapped an outer solid surface.

Action: Ensure that inner and outer surfaces have no shared (fully or partially overlapping) faces.

ORA-54514: overlapping areas in multipolygon

Cause: A multipolygon geometry contained one or more common (shared, fully or partially overlapped) polygons.

Action: Ensure that no polygons in a multipolygon overlap.

ORA-54515: outer rings in a composite surface intersect

Cause: Outer rings, either on the same plane or different planes, in a composite surface intersected.

Action: Ensure that outer rings do not intersect. They can share edges.

ORA-54516: adjacent outer rings of composite surface cannot be on same plane

Cause: The conditional flag was set, and a composite surface had at least two outer rings sharing a common edge on the same plane.

Action: Change those outer rings into one larger outer ring.

ORA-54517: outer ring is on the same plane and overlaps another outer ring

Cause: An outer ring in a composite surface shared a common area with another outer ring.

Action: Ensure that no outer rings fully or partially overlap.

ORA-54518: shared edge of composite surface not oriented correctly

Cause: A shared edge (one shared by two polygons) in a composite surface was not correctly oriented. Each shared edge must be oriented in one direction with respect to its first polygon and then in the reverse direction with respect to its second polygon.

Action: Reverse one of the directions of the shared edge with respect to its polygons.

ORA-54519: polygon (surface) not attached to composite surface

Cause: Not all polygons of a surface had a common (fully or partially shared) edge.

Action: Ensure that each polygon is attached to the composite surface by one of its edges.

ORA-54520: inner ring not on the same plane as its outer ring

Cause: An inner ring was not on the same plane as its outer ring.

Action: Ensure that each inner ring is on the same plane as its outer ring.

ORA-54521: inner ring is not inside or is touching outer ring more than once

Cause: An inner ring either was not inside its outer ring or touched its outer ring more than once.

Action: Ensure that the inner ring is inside its outer ring and does not touch the outer ring more than once. If an inner ring touches its outer ring more than once, then the outer ring is no longer a topologically simple or singly connected polygon (ring).

ORA-54522: inner rings of same outer ring cannot intersect or share boundary

Cause: Two inner rings of the same outer ring intersected or shared a boundary.

Action: Ensure that line segments of an inner ring do not intersect or fully or partially coincide with line segments of another inner ring sharing the same outer ring.

ORA-54523: inner rings of same outer ring cannot touch more than once

Cause: Two inner rings of the same outer ring touched more than once.

Action: Ensure that inner rings of the same outer ring touch at no more than one point.

ORA-54524: inner ring cannot be inside another inner ring of same outer ring

Cause: An inner ring was inside another ring of the same outer ring.

Action: Ensure that no inner ring is inside another inner ring of the same outer ring.

ORA-54525: incorrect box volume due to wrong ordinates

Cause: The rectangular box in shortcut format did not have its first x,y,z coordinates either all greater or less than its second x,y,z coordinates.

Action: Make sure that the first x,y,z coordinates are either all greater or all less than the second x,y,z coordinates.

ORA-54526: multi or composite geometry must be decomposed before extraction

Cause: The extraction could not be performed because the multi or composite geometry must first be decomposed into simple geometries (with or without inner geometries). The multi or composite geometry had a gtype of GTYPE_MULTISOLID,

GTYPE_MULTISURFACE, GTYPE_MULTICURVE, GTYPE_MULTIPOINT, or GTYPE_COLLECTION, or the geometry was a line string.

Action: Use the MULTICOMP_TOSIMPLE parameter to element extractor to decompose the multi or composite geometry to a simple geometry.

ORA-54527: operation not permitted on a simple geometry

Cause: A MULTICOMP_TOSIMPLE parameter to element extractor was attempted on a geometry that is already simple.

Action: Do not use the MULTICOMP_TOSIMPLE parameter to element extractor on simple geometries.

ORA-54528: inner composite surfaces or surfaces with inner ring(s) expected

Cause: An INNER_OUTER parameter to element extractor was attempted on a surface that was not simple or composite.

Action: Ensure that the etype of the geometry for the INNER_OUTER parameter to element extractor is ETYPE_SURFACE or ETYPE_COMPOSITESURFACE.

ORA-54529: geometry should have multi-level hierarchy (like triangle)

Cause: The geometry did not have the multi-level hierarchy required for this operation. For example, if the parameter to element extractor (hierarchy level) is not LOWER_LEVEL, but the geometry etype is ETYPE_SOLID and gtype is GTYPE_SOLID, an extract operation is not allowed, because a simple solid can only be decomposed into lower level geometries, such as composite surfaces.

Action: Ensure that the geometry has the appropriate hierarchy. For example, if the geometry etype is ETYPE_SOLID and gtype is GTYPE_SOLID, the parameter to element extractor (hierarchy level) should be LOWER_LEVEL.

ORA-54530: invalid etype for element at element offset

Cause: An invalid etype was encountered.

Action: Correct the etype of the geometry.

ORA-54531: invalid orientation for element at element offset

Cause: The orientation of the current geometry was not valid.

Action: Reverse the orientation of the geometry.

ORA-54532: incomplete composite surface

Cause: The end of composite surface was reached before all necessary surfaces were defined.

Action: Add more surfaces to match the geometry definition, or reduce the specified number of surfaces.

ORA-54533: invalid etype in composite surface of solid

Cause: The etype of the composite surface of a solid was not valid.

Action: Ensure that the etype is orient*1000+ETYPE_SOLID, where orient is 1 for outer solid and 2 for inner solid.

ORA-54534: incorrect box surface due to wrong specification

Cause: The elemInfo definition was not correct for the surface of the axis aligned box.

Action: Change the interpretation to 3 in the elemInfo definition.

ORA-54535: incorrect box surface because it is on arbitrary plane

Cause: The axis aligned box surface was not on the yz, xz, or xy plane.

Action: Ensure that the first and fourth coordinates, or the second and fifth coordinates, or the third and sixth coordinates are the same. This means that the surface is on the yz, xz or xy plane, respectively.

ORA-54536: axis aligned box surface not defined properly

Cause: The inner geometry etype did not start with 2, or the outer geometry etype did not start with 1, or both occurred.

Action: Use the correct etype for the inner and outer geometries.

ORA-54537: incorrect box surface due to wrong orientation

Cause: The rectangular surface in shortcut format did not have its first x,y,z coordinates all greater than or equal to or all less than or equal to its second x,y,z coordinates.

Action: Ensure that the first x,y,z coordinates are either all greater than or equal to or all less than or equal to the second x,y,z coordinates.

ORA-54538: unexpected gtype

Cause: The gtype of the geometry was not GTYPE_SOLID, GTYPE_SURFACE, GTYPE_CURVE or GTYPE_POINT.

Action: Correct the elemInfo array to fix any invalid gtype and etypes that violate the geometry hierarchy.

ORA-54539: cannot process the geometry(s) for this operation

Cause: The geometry had errors in it.

Action: Validate the geometry or geometries to ensure that each is valid.

ORA-54540: at least one element must be a surface or solid

Cause: One of the geometries had holes, and the geometries were neither (A) simple, composite, or multisurfaces, or (B) simple, composite, or multisolids. (Surfaces and solids are the only geometries that can have holes. Points and curves cannot have holes.)

Action: Ensure that each geometry having holes is a surface or solid (simple, composite, or multi).

ORA-54545: holes incorrectly defined

Cause: The holes were defined with incorrect etype.

Action: Ensure that the etype is correct in the definition of the inner geometry.

ORA-54546: volume of solid cannot be 0 or less

Cause: The solid geometry having one outer and multiple inner geometries had a negative or zero volume.

Action: Correct the orientation or specification of the outer solid geometry to obey outer geometry rules so that the outer geometry has a positive volume. Additionally,

correct the orientation or specification of inner solid geometries to obey inner geometry rules so that each inner geometry has a negative volume.

ORA-54547: wrong input for COUNT_SHARED_EDGES

Cause: The COUNT_SHARED_EDGES parameter value was not 1 or 2.

Action: Ensure that the COUNT_SHARED_EDGES parameter value is either 1 or 2.

ORA-54548: input geometry gtype must be GTYPE_POLYGON for extrusion

Cause: The input geometry gtype was not GTYPE_POLYGON.

Action: Ensure that the gtype of the input polygon is GTYPE_POLYGON.

ORA-54549: input geometry has incorrect elemInfo

Cause: The input 2-D polygon did not have only one outer ring.

Action: Ensure that the input 2-D polygon has only one outer ring.

ORA-54550: input 2-D polygon not valid

Cause: The 2-D polygon violated the rules for polygons and rings.

Action: Correct the polygon definition.

ORA-54551: grdHeight and/or Height array sizes incorrect

Cause: The sizes of grdHeight and Height arrays were not equal to half the size of input 2-D polygon's ordinates array. As a result, each point in the 2-D polygon could not be extruded from the grdHeight entry to the Height entry.

Action: Ensure that the sizes of the grdHeight and Height arrays are half that of input 2-D polygon ordinates array.

ORA-54552: height entries must be \geq to ground height entries

Cause: In the definition of a solid, the height values were less than the ground height.

Action: Ensure that that height values are greater than or equal to ground height values.

ORA-54553: incorrect geometry for appending

Cause: The geometry could not be appended to a homogeneous collection (for example, multi-geometry) or to a heterogeneous geometry (for example, collection). In other words, the gtype of the geometry to be appended was neither GTYPE_COLLECTION or GTYPE_MULTI-X (where X is point, curve, surface, or solid).

Action: Ensure that the geometries involved in the append operation have appropriate gtypes.

ORA-54554: arcs are not supported as defined

Cause: An arc was defined in a geometry type in which arcs are not supported. Arcs are supported for 2-D (circle) polygons, 2-D compound polygons, 2-D single arc, and 2-D compound (composite) curves only.

Action: Remove or simplify the arcs.

ORA-54555: invalid geometry dimension

Cause: The geometry did not have three dimensions.

Action: Ensure that geometry has three dimensions.

ORA-54556: operation is not supported for 3-D geometry

Cause: A 3-D geometry was passed into an operation that supports only 2-D geometries.

Action: Check the Spatial documentation for operations that are supported and not supported on 3-D geometries.

ORA-54557: incomplete composite solid

Cause: The end of composite solid was reached before all necessary solids were defined.

Action: Add more solids to match the geometry definition, or reduce the specified number of solids.

ORA-54558: 3D SRID is not found for the corresponding 2D SRID

Cause: In extruding a 2D polygon into a 3D geometry, the SRID conversion function did not find an equivalent 3D SRID of the 2D SRID.

Action: Specify a 2D SRID that has a 3D equivalent

ORA-54559: query element and source geometry cannot be the same

Cause: A query element geometry and a source geometry were the same, which prevented a label pointing query element in the source geometry from being output.

Action: Redefine the query element or the source geometry so that a label can be output.

ORA-54560: query element cannot be a collection or multitype geometry

Cause: A query element was a collection geometry or a multitype geometry. Such geometries are not permitted in a query element because they are at the top of the geometry hierarchy. A query element must be part of the source geometry.

Action: Redefine the query element or the source geometry so that a label can be output.

ORA-54601: CREATE_PC: invalid parameters for creation of Point Cloud

Cause: An invalid or unknown parameter was specified in the creation of Point Cloud.

Action: Check for valid set of parameters.

ORA-54602: CREATE_PC: input points table <varname>string</varname> does not exist

Cause: The specified table for loading points into a Point Cloud did not exist.

Action: Create the points table with appropriate columns, and then create the Point Cloud.

ORA-54603: CREATE_PC: specified total dimensionality cannot exceed 8

Cause: The specified total dimensionality for the Point Cloud exceeded the maximum limit of 8.

Action: Create the Point Cloud with fewer dimensions. You can store the rest in the output points table.

ORA-54604: CREATE_PC: input points table should not be empty

Cause: The input points table had no data.

Action: Insert data into the input points table and then create the Point Cloud.

ORA-54605: CREATE_PC: scratch-tables/views (<varname>string</varname>) exist and need to be dropped

Cause: Transient tables/views from a previous CREATE_PC operation were still in existence.

Action: Delete the invalid Point Cloud from the base table (for cleanup of scratch tables), and initialize and create the Point Cloud again. Alternately, use SDO_UTIL.DROP_WORK_TABLES with oidstring as the parameter.

ORA-54607: CREATE_PC: error fetching data from input points table

Cause: An internal read error occurred during Point Cloud creation.

Action: Contact Oracle Support Services with the error number reported.

ORA-54608: CREATE_PC: error writing Point Cloud LOB

Cause: An internal LOB write error occurred during Point Cloud creation. The cause might be lack of table space.

Action: Look for information from other errors in the stack, or contact Oracle Support Services with the error number reported.

ORA-54609: CREATE_PC: input extent cannot be null

Cause: The extent of the Point Cloud was null.

Action: Specify an extent for the Point Cloud that is not null.

ORA-54610: CREATE_PC: input extent cannot be more than 2-D for geodetic data

Cause: The extent of the Point Cloud was more than 2-D for geodetic data.

Action: Change the extent to 2-D (longitude, latitude).

ORA-54611: INIT: either invalid basetable/schema or they do not exist

Cause: The base table or schema, or both, were invalid strings; or the base table and schema combination did not exist.

Action: Ensure that the specified base table exists in the specified schema before performing the initialization operation.

ORA-54613: INIT: internal error creating DML trigger

Cause: The necessary privileges to create the trigger were not granted.

Action: Grant the necessary privileges to create the trigger. If necessary, contact Oracle Support Services for help with privileges for trigger creation.

ORA-54614: INIT: block table name has to be unique

Cause: The specified block table name was not unique. For example, it might have been used for another block table.

Action: Specify a different block table name.

ORA-54616: INIT: internal error [<varname>number</varname>, <varname>string</varname>]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54617: CLIP_PC: invalid Point Cloud; extent is empty

Cause: The input Point Cloud for the CLIP_PC operation was invalid.

Action: Specify a point cloud that was created using the CREATE_PC procedure.

ORA-54618: CLIP_PC: SRIDs of query and Point Cloud are incompatible

Cause: The Point Cloud and the query geometry had incompatible SRID values.

Action: Change the query SRID to be compatible with that of the Point Cloud.

ORA-54619: CLIP_PC: query and BLKID parameters cannot both be null

Cause: Both the query and BLKID parameters were null in the call to the CLIP_PC operation.

Action: Either specify a query geometry that is not null, or specify a BLKID for use as a query.

ORA-54620: CLIP_PC: internal error [<varname>number</varname>, <varname>string</varname>]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54621: TO_GEOMETRY: TOTAL_DIMENSIONALITY not same as in INIT operation

Cause: The specified TOTAL_DIMENSIONALITY was invalid.

Action: Ensure that the TOTAL_DIMENSIONALITY matches that specified in the call to the initialization operation.

ORA-54622: TO_GEOMETRY: internal error [<varname>number</varname>, <varname>string</varname>]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54623: CREATE_PC: internal error [<varname>number</varname>, <varname>string</varname>]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54640: PARTITION_TABLE utility: invalid input parameters [<varname>number</varname>, <varname>string</varname>]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54641: PARTITION_TABLE utility: scratch tables exist with oidstr = <varname>string</varname>

Cause: Scratch tables/views could not be created because they already existed.

Action: Use SDO_UTIL.DROP_WORK_TABLES with the specified oidstr parameter to clean up the scratch tables.

ORA-54642: PARTITION_TABLE utility: invalid SORT_DIMENSION specified

Cause: An invalid string was specified for the SORT_DIMENSION.

Action: Specify the SORT_DIMENSION as 'BEST_DIM', 'DIMENSION_1', 'DIMENSION_2', or 'DIMENSION_3'.

ORA-54643: PARTITION_TABLE utility: invalid WORKTABLESPACE parameter

Cause: An invalid string was specified for the WORKTABLESPACE parameter.

Action: Specify an existing valid tablespace for WORKTABLESPACE (to hold the scratch tables).

ORA-54644: PARTITION_TABLE utility: error in reading input, output tables

Cause: The names for the input/output tables were invalid, or the tables did not exist or did not have the right structure.

Action: Check the Spatial documentation for PARTITION_TABLE.

ORA-54651: CREATE_TIN: invalid parameters specified in creation of TIN

Cause: An invalid or unknown parameter was specified in the creation of the TIN.

Action: Check the Spatial documentation for CREATE_TIN.

ORA-54652: CREATE_TIN: input points table <varname>string</varname> does not exist

Cause: The specified table for loading points into a TIN did not exist.

Action: Create the points table with appropriate columns, and then create the TIN.

ORA-54653: CREATE_TIN: specified total dimensionality cannot exceed 8

Cause: The specified total dimensionality for the TIN exceeded the maximum limit of 8.

Action: Create the TIN with fewer dimensions. You can store the rest in the output points table.

ORA-54654: CREATE_TIN: input points table should not be empty

Cause: The input points table had no data.

Action: Insert data into the input points table, and then create the TIN.

ORA-54655: CREATE_TIN: scratch tables/views(<varname>string</varname>) exist and need to be dropped

Cause: Transient tables from previous CREATE_TIN operation still existed.

Action: Delete the invalid TIN from the base table (for cleanup of scratch tables), and initialize and create the TIN again. Alternately, use SDO_UTIL.DROP_WORK_TABLES with oidstring as its parameter.

ORA-54656: CREATE_TIN: error fetching data from input points table

Cause: An internal read error occurred during TIN creation.

Action: Contact Oracle Support Services with the error number reported.

ORA-54657: CREATE_TIN: error writing TIN LOB

Cause: An internal LOB write error occurred during TIN creation. The cause might be lack of table space.

Action: Look for information from other errors in the stack, or contact Oracle Support Services with the error number reported.

ORA-54658: CREATE_TIN: input extent cannot be null

Cause: The extent of the TIN was null.

Action: Specify an extent for the TIN that is not null.

ORA-54659: CREATE_TIN: input extent has to be 2-D for geodetic data

Cause: The extent of the TIN was more than 2-D for geodetic data.

Action: Change the extent to 2-D (longitude, latitude).

ORA-54660: CLIP_TIN: invalid Point Cloud; extent is empty

Cause: The input TIN for the CLIP_TIN operation was invalid.

Action: Specify a TIN that was created using the CREATE_TIN operation.

ORA-54661: CLIP_TIN: SRIDs of query and TIN are incompatible

Cause: The TIN and the query geometry had incompatible SRID values.

Action: Change the query geometry SRID to be compatible with that of TIN.

ORA-54662: CLIP_TIN: query and blkid parameters cannot both be null

Cause: Both the query and blkid parameters were null in the call to the CLIP_TIN operation.

Action: Either specify a query geometry that is not null, or specify a blkid for use as a query.

ORA-54663: CLIP_TIN: internal error [<varname>number</varname>, <varname>string</varname>]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54664: TO_GEOMETRY: internal error [<varname>number</varname>, <varname>string</varname>]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54665: CREATE_TIN: internal error [<varname>number</varname>, <varname>string</varname>]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54666: query gtype is a superset of the source geometry

Cause: A query element geometry was at a higher level in the geometry hierarchy than the source geometry.

Action: Try replacing the source geometry with the query geometry.

ORA-54667: query element cannot be matched to an element in source geometry (<varname>string</varname>)

Cause: A query element geometry was not a part of the source geometry.

Action: Redefine the query element or the source geometry.

ORA-54668: a 2D SRID cannot be used with a 3D geometry

Cause: A 2D SRID was used with a 3D geometry.

Action: Replace the 2D SRID with an appropriate 3D SRID.

ORA-54669: Event to turn off query rewrite for spatial partition pruning**ORA-54670: Event to set the number of leaf nodes used in memory-resident R-tree processing****ORA-54671: Event to turn off optimized R-tree bulk inserts****ORA-54672: Event to turn off R-tree node caching in bulk updates****ORA-54673: Event to set the number of cached R-tree nodes in bulk updates****ORA-54674: Event to dump the R-tree node cache contents to trace file****ORA-54675: Event to enable diagnostic and informational messages to trace file****ORA-54676: Event to enable direct-row-access performance enhancement****ORA-54677: Event to enable faster geometry operations****ORA-54678: Event to enable within_distance optimization****ORA-54679: Event to specify an alternate statistics collection algorithm****ORA-54680: Event to specify the maximum number of points used for polygon orientation checking****ORA-54681: Event to specify the maximum number of buckets to be used for statistics collection****ORA-54682: Event to force direct-row-access usage****ORA-54683: Event to specify the number of successful operations after which a simulated error will occur****ORA-55200: Java exception from tag data translation java stack**

Cause: Java exceptions.

Action: Turn on java output by calling `dbms_java.set_output(OUTPUT_SIZE)`; Set java logging level by calling `MGD_ID_UTL.setJavaLoggingLevel('INFO')`; Analyze java logging messages.

ORA-55201: Tag data translation category not found

Cause: No matching category ID could be found.

Action: Make sure the input category name, category version or category ID is correct.

ORA-55202: Tag data translation scheme not found

Cause: No matching scheme could be found for the input data format.

Action: Make sure the input data format is supported and correct.

ORA-55203: Tag data translation level not found

Cause: No matching level could be found for the input data format.

Action: Make sure the input data format is supported and correct.

ORA-55204: Tag data translation option not found

Cause: No matching option could be found for the input data format.

Action: Make sure the input data format is supported and correct.

ORA-55205: Tag data translation field validation failed

Cause: Invalid field value.

Action: Make sure the field value of the input data is within the range specified in the tag data translation XML.

ORA-55206: Tag data translation field not found

Cause: Invalid input field.

Action: Make sure the spellings of the input fields are correct.

ORA-55207: Tag data translation rule evaluation failure

Cause: Error occurred when idcode translator tried to evaluate the rule specified in the tag data translation XML.

Action: Java proxy must be set in order to evaluate manager look up rules. Call `MGD_ID_UTL.setProxy(PROXY_HOST, PROXY_PORT)` to enable java proxy.

ORA-55208: Too many matching levels were found for the input data

Cause: Necessary field values were missing.

Action: Add additional field value pairs that are necessary to determine a unique matching level.

ORA-55300: model <varname>string</varname> does not exist

Cause: The specified model could not be found.

Action: Make sure that the model has been created.

ORA-55301: rulebase <varname>string</varname> does not exist

Cause: The specified rulebase could not be found.

Action: Make sure that the rulebase has been created.

ORA-55302: insufficient privileges <varname>string</varname>

Cause: Sufficient privileges were not granted.

Action: Ask the database administrator to grant the appropriate privileges.

ORA-55303: SDO_RDF_TRIPLE_S constructor failed: <varname>string</varname>

Cause: SDO_RDF_TRIPLE_S constructor failed.

Action: Check the stack trace for additional information.

ORA-55304: specified reuse-bNode model-id <varname>string</varname> != target model-id <varname>string</varname>

Cause: The reuse-bNode model-id specified for the SDO_RDF_TRIPLE_S constructor was neither 0 nor the model-id of the target model.

Action: Make sure that the reuse-bNode model is either 0 or the model-id of the target model.

ORA-55305: reification constructor functions not supported

Cause: Unsupported reification constructor functions were used.

Action: Insert each triple in the reification quad individually. See documentation for more information.

ORA-55306: internal error: invalid <varname>string</varname>: value_name=<varname>string</varname> value_type=<varname>string</varname>

Cause: The value type of this component of the RDF triple was invalid.

Action: This is an internal error. Contact Oracle Support Services.

ORA-55307: invalid value type for lexical value: <varname>string</varname>

Cause: The value type of this lexical value was invalid.

Action: Make sure that the lexical value format is correct. If this error occurs during bulk load from a staging table, then this may be an internal error. Contact Oracle Support Services.

ORA-55308: invalid time zone <varname>string</varname> for lexical value <varname>string</varname>

Cause: The time zone of this lexical value was invalid.

Action: Make sure that the lexical value format is correct. If this error occurs during bulk load from a staging table then this may be an internal error. Contact Oracle Support Services.

ORA-55309: hash collision resolution failed for lexical value <varname>string</varname>

Cause: Attempts to resolve hash collision exceeded the maximum retry count.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55310: parse failed for the <varname>string</varname> lexical value: <varname>string</varname>

Cause: Attempts to insert the specified lexical value failed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55311: invalid value type <varname>string</varname> for long lexical value <varname>string</varname>

Cause: The value type of this long (length > 4000) lexical value was invalid.

Action: Make sure that the long value has a valid value type.

ORA-55312: parse failed for triple: id-form: <varname>string</varname> <varname>string</varname> <varname>string</varname>

Cause: Attempts to insert triple failed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55313: SDO_RDF_TRIPLE_S constructor failed to process triple containing bNode

Cause: The SDO_RDF_TRIPLE_S constructor without bNode reuse option was invalid for triple containing bNode.

Action: Use SDO_RDF_TRIPLE_S constructor that allows bNode reuse.

ORA-55314: invalid temporary table name (<varname>string</varname>) for use with batch load

Cause: Specified temporary table name was not valid.

Action: See documentation for rules for temporary table name validity.

ORA-55315: batch load attempt failed: <varname>string</varname>

Cause: The batch load operation failed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55316: model <varname>string</varname> does not match model <varname>string</varname> for table and column

Cause: This column of the table was not associated with the specified model.

Action: Make sure to use the correct target model.

ORA-55317: model <varname>string</varname> already exists

Cause: A model with the specified name was already present.

Action: Choose a different model name, or delete the existing model and create a new model with the specified name.

ORA-55318: column <varname>string</varname> in table <varname>string</varname> already contains data

Cause: At model creation time, the table column contained data.

Action: Ensure that the table column does not contain data before model creation.

ORA-55319: model <varname>string</varname> create attempt failed: <varname>string</varname>

Cause: The attempt to create the specified model did not succeed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55320: model <varname>string</varname> drop attempt failed: <varname>string</varname>

Cause: The attempt to drop the specified model did not succeed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55321: network already exists

Cause: Attempt to create the network failed because the network already existed.

Action: If necessary, drop the network before trying to recreate the network.

ORA-55322: model(s) exist

Cause: An attempt was made to drop a network that contained one or more models.

Action: Drop all the model(s) and then retry the operation.

ORA-55323: rulebase(s) exist

Cause: An attempt was made to drop a network that contained one or more rulebases.

Action: Drop all the rulebase(s) and then retry the operation.

ORA-55324: no rulebases specified

Cause: Rulebases for the operation were not specified.

Action: Specify at least one rulebase.

**ORA-55325: rulebase or rules index <varname>string</varname> already exists
<varname>string</varname>**

Cause: A rulebase or rules index with the specified name already existed.

Action: Choose a different name, or delete the existing rulebase or rules index.

**ORA-55326: rules index (<varname>string</varname>) create attempt failed:
<varname>string</varname>**

Cause: The attempt to create the specified rules index did not succeed.

Action: This may be an internal error. Contact Oracle Support Services.

**ORA-55327: rule <varname>string</varname> yields a triple with a literal
subject or predicate**

Cause: The specified rule created an invalid triple containing a literal in the subject or predicate position.

Action: Check and modify the rule to avoid creation of invalid triple.

ORA-55328: literal value <varname>string</varname> insert attempt failed

Cause: The attempt to create the specified literal value failed.

Action: This may be an internal error. Contact Oracle Support Services.

**ORA-55329: same model <varname>string</varname> specified more than once
in the list of models**

Cause: The specified model occurred more than once in the list of models.

Action: Eliminate duplicate occurrences of the model in the list of models.

ORA-55330: rulebase or rules index <varname>string</varname> is busy

Cause: The specified rulebase or rules index was busy and could not be used.

Action: Retry your operation later.

ORA-55331: user owns RDF objects

Cause: The user could not be dropped because it owns RDF objects.

Action: Drop the RDF objects and then retry.

ORA-55332: virtual model cannot be used in this context

Cause: A virtual model was used as input instead of a model.

Action: Use a model as input.

ORA-55333: virtual model <varname>string</varname> does not exist

Cause: The specified virtual model could not be found.

Action: Make sure that the virtual model has been created.

ORA-55334: virtual model name <varname>string</varname> is invalid

Cause: The specified virtual model name was not valid.

Action: Check Oracle documentation for valid virtual model names.

ORA-55335: at least one model must be specified

Cause: An empty list of models was specified as the set of models for a virtual model.

Action: Make sure at least one model appears in the set of models used to create a virtual model.

ORA-55336: insufficient privileges for using one or more of the models and rules indexes

Cause: An attempt was made to create a virtual model without the appropriate privileges.

Action: Ask the database administrator to perform the operation or to grant the required privileges.

ORA-55337: a virtual model or rules index with the name <varname>string</varname> already exists

Cause: A virtual model or rules index with the specified name was already present.

Action: Choose a different virtual model name.

ORA-55338: a model with the name <varname>string</varname> already exists

Cause: A model with the specified name was already present.

Action: Choose a different virtual model name.

ORA-55339: a virtual model already exists for the specified model-rulebase combination

Cause: A virtual model with identical components was already present.

Action: Choose a different set of components for the new virtual model.

ORA-55340: rules index does not exist for the specified model-rulebase combination

Cause: A rules index did not exist for the specified sets of models and rulebases.

Action: Make sure a rules index is created for the specified sets of models and rulebases.

ORA-55341: label index out-of-range

Cause: An attempt was made to use an out-of-range index for retrieving the label.

Action: Correct the input and try again.

ORA-55342: not a defined label in the policy

Cause: An attempt was made to use an undefined label.

Action: Correct the input and try again.

ORA-55343: invalid dependent component for custom label generator

Cause: An attempt was made to specify an invalid dependent component for the label generator.

Action: Correct the input and try again.

ORA-55344: invalid label generator implementation or use

Cause: An attempt was made to use an invalid label generator to generate labels for inferred data.

Action: Correct the input and try again.

ORA-55345: invalid use of label generator with no OLS policy

Cause: An attempt was made to use a label generator when Oracle Label Security (OLS) was not enabled for Resource Definition Framework (RDF) data.

Action: None

ORA-55346: invalid label generation option with user rules

Cause: An attempt was made to specify an invalid label generation option for entailment involving user rules.

Action: Correct the input and try again.

ORA-55347: missing proof for the specified label generation option

Cause: The chosen label generation option required proof, which was missing for the entailment.

Action: Correct the input and try again.

ORA-55348: label generator error: RDF data not enabled for <varname>string</varname>

Cause: An invalid label generator option was chosen for entailment.

Action: Correct the input and try again.

ORA-55349: OLS not installed or in an invalid state

Cause: Oracle Label Security (OLS) support for Resource Definition Framework (RDF) was not installed.

Action: Consult Oracle documentation to install the Oracle Label Security (OLS) support.

ORA-55350: RDF-OLS table option <varname>string</varname> not supported

Cause: An attempt was made to use an unsupported Oracle Label Security (OLS) option for Resource Definition Framework (RDF) data.

Action: Correct the input and try again.

ORA-55351: RDF secure access option not supported or is invalid

Cause: An attempt was made to use an unsupported secure access option for Resource Definition Framework (RDF).

Action: Correct the input and try again.

ORA-55352: insufficient privileges for policy administration

Cause: The necessary privileges needed to administer Oracle Label Security (OLS) or Oracle Virtual Private Database (VPD) policies for Resource Definition Framework (RDF) data were not specified.

Action: None

ORA-55353: invalid column name for label column <varname>string</varname>

Cause: An attempt was made to use an invalid column to maintain labels for Resource Definition Framework (RDF) data.

Action: Use CTXT2 as the label column.

ORA-55354: Policy <varname>string</varname> does not exist or is inaccessible

Cause: An attempt was made to use a nonexistent policy.

Action: Correct the input and try again.

ORA-55355: RDF network does not exist

Cause: An attempt was made to perform an operation that required Resource Definition Framework (RDF) network to be present.

Action: Create the Resource Definition Framework (RDF) network.

ORA-55356: OLS not enabled for RDF data

Cause: An attempt was made to perform an RDF-OLS-specific operation when Oracle Label Security (OLS) was not enabled for Resource Definition Framework (RDF) data.

Action: None

ORA-55357: insufficient privileges for the current operation

Cause: An attempt was made to perform a Resource Definition Framework (RDF) secure access operation with restricted privileges.

Action: See Oracle documentation.

ORA-55358: model "<varname>string</varname>" is not empty

Cause: An attempt was made to reset Oracle Label Security (OLS) labels for a model with some data.

Action: None

ORA-55359: unauthorized operation with policy <varname>string</varname> - <varname>string</varname>

Cause: An attempt was made to perform an unauthorized DML operation on OLS-enabled Resource Definition Framework (RDF) repository.

Action: None

ORA-55360: invalid value for resource position - <varname>string</varname>

Cause: An invalid value was specified for the resource position while setting labels.

Action: Correct the input and try again.

ORA-55361: duplicate specification for the namespace found

Cause: An attempt was made to use a namespace map that contained one or more duplicate specifications.

Action: Correct the input and try again.

ORA-55362: RDF VPD policy may not be created in the SYS schema

Cause: An attempt was made to create an Oracle Virtual Private Database (VPD) policy in the SYS schema.

Action: None

ORA-55363: context <varname>string</varname> does not exist

Cause: An attempt was made to specify a nonexistent context for the Oracle Virtual Private Database (VPD) policy.

Action: Create the context using CREATE CONTEXT command.

ORA-55364: invalid operation type <varname>string</varname> for VPD policy

Cause: An attempt was made to specify an invalid operation for the application of Oracle Virtual Private Database (VPD) policy.

Action: Specify ALL, QUERY, or DML for operation type.

ORA-55365: invalid metadata for VPD policy

Cause: An attempt was made to define invalid metadata elements for the Oracle Virtual Private Database (VPD) policy.

Action: See Oracle documentation for valid set of metadata elements.

ORA-55366: unknown namespace prefix "<varname>string</varname>"

Cause: An attempt was made to make use of an undefined namespace prefix in Oracle Virtual Private Database (VPD) metadata.

Action: Correct the input and try again.

ORA-55367: invalid maintenance operation for VPD metadata

Cause: An attempt was made to perform an invalid maintenance operation on Oracle Virtual Private Database (VPD) metadata.

Action: Specify ADD or DELETE for VPD metadata maintenance.

ORA-55368: empty match or apply pattern not allowed in a VPD constraint

Cause: An attempt was made to specify an empty match or apply pattern for a Oracle Virtual Private Database (VPD) constraint.

Action: Correct the input and try again.

ORA-55369: invalid identifier specified for the constraint group

Cause: An invalid SQL identifier was specified for the constraint group.

Action: Correct the input and try again.

ORA-55370: input parameter not a zero or positive integer

Cause: The input parameter was not zero or a positive integer.

Action: Change the input parameter to zero or a positive integer.

ORA-55371: RDF rules index '<varname>string</varname>' exists for different model-rulebase combination

Cause: A rules index with the specified name has already been built for a different model-rulebase combination.

Action: Specify a different rules index name, or drop the existing rules index and then create a new rules index with that name.

ORA-55372: entailment (rules index) '<varname>string</varname>' already exists

Cause: The entailed graph (rules index) already exists.

Action: Specify a different rules index name, or drop the existing rules index and then create a new rules index with that name.

ORA-55373: inference internal error: <varname>string</varname>

Cause: An unexpected internal error condition occurred.

Action: Check the error message and the stack trace.

ORA-55374: query constants not in the database; no rows selected

Cause: URIs or literals used in the query did not exist in the database.

Action: Check the query, and ensure that the URIs or literals do exist.

ORA-55375: cannot drop table '<varname>string</varname>' because this table owns RDF objects

Cause: A table containing RDF data could not be dropped without first dropping its RDF model.

Action: Drop the corresponding RDF model or models, and then drop the table.

ORA-55376: cannot alter or drop column '<varname>string</varname>' because this column owns RDF objects

Cause: A table column containing RDF data could not be altered or dropped without first dropping its RDF model.

Action: Drop the corresponding RDF model or models, and then alter or drop the column.

ORA-55377: number of triples less than 1 or null error indication marker

Cause: An internal error occurred during validation. The number of triples was less than 1 or the error indication marker was null.

Action: Check the input parameters, and ensure that the number of triples is 1 or greater and that the error indication marker is not null; or contact Oracle Support Services.

ORA-55378: invalid error code

Cause: An invalid error code was passed in during validation.

Action: Specify a valid error code.

ORA-55379: too many triples

Cause: An internal error occurred during validation. Too many triples were passed in.

Action: Specify a valid number of triples for the operation, or contact Oracle Support Services.

ORA-55430: query pattern is null

Cause: The query pattern specified in the SEM_MATCH query was null.

Action: Modify the query pattern to be non-null.

ORA-55441: insufficient privileges to drop virtual model <varname>string</varname>

Cause: An attempt was made to drop a virtual model without the appropriate privileges.

Action: Ask the database administrator to perform the operation or grant the required privileges.

ORA-55442: a virtual model cannot be used with other models in a SEM_MATCH query

Cause: The set of models used as input to a SEM_MATCH query contained a virtual model.

Action: Create a new virtual model with contents that are equivalent to the specified SEM_MATCH model set and query the new virtual model.

ORA-55443: a virtual model cannot be used with a rulebase in a SEM_MATCH query

Cause: A rulebase was specified in conjunction with a virtual model as input to a SEM_MATCH query.

Action: Create a new virtual model that expands the specified virtual model to include the specified rulebase and query the new virtual model.

ORA-55450: continually refreshed workspaces not supported with RDF

Cause: An attempt was made to use continually refreshed workspaces with Resource Definition Framework (RDF) data.

Action: None

ORA-55451: multi-parent workspaces not supported with RDF

Cause: An attempt was made to use multi-parent workspaces with Resource Definition Framework (RDF) data.

Action: None

ORA-55452: batch mode not allowed with version-enabled models

Cause: An attempt was made to batch load data into a version-enabled Resource Definition Framework (RDF) model. This is not supported.

Action: None

ORA-55453: OLS/VPD-enabled indexes must be created with CREATE_ENTAILMENT API

Cause: An attempt was made to create entailment for OLS/VPD-enabled models using unsupported API.

Action: Correct the input and try again.

ORA-55454: version-enabled indexes must be created with CREATE_ENTAILMENT API

Cause: An attempt was made to create entailment for version-enabled models using unsupported API.

Action: Correct the input and try again.

ORA-55455: rules index status not recognized (<varname>string</varname>)

Cause: The specified rules index status was not recognized.

Action: Ensure that the rules index status is VALID, INCOMPLETE, or INVALID, and retry the operation.

ORA-55456: no valid rules index for this model-rulebase combination

Cause: A valid rules index did not exist for specified combination of models and rulebases.

Action: Create a rules index for the specified models and rulebases combination, or use a combination of models and rulebases for which a rules index exists, and retry the operation. Also ensure that the rules index status matches the status for the rules index specified in the query.

ORA-55457: predicate not found in model

Cause: The predicate value passed in as an argument to the semantic operator did not exist in the model.

Action: In the query using semantic operators, use a predicate value that exists in the model and retry the operation.

ORA-55458: object not found in model

Cause: The object value passed in as an argument to the semantic operator did not exist in the model.

Action: In the query using semantic operators, use an object value that exists in the model and retry the operation.

ORA-55459: invalid parameter string

Cause: The parameter string used in the creation of an index of type SEM_INDEXTYPE had invalid or malformed parameters.

Action: See the documentation for information on how to write a valid parameter string.

ORA-55460: incorrect usage of semantic operators

Cause: There was a syntax error in the call to the SEM_RELATED operator

Action: See the documentation for information on how to use the SEM_RELATED operator. Check that the value returned by SEM_RELATED is compared to 1 or 0.

ORA-55461: no distance information available

Cause: Distance information was not generated during rules index creation.

Action: Retry query without the SEM_DISTANCE operator and/or without specifying bounds in the SEM_RELATED operator. See the documentation for information on when distance information is generated.

ORA-55462: internal error

Cause: An internal error occurred during a semantic operator query or during the creation of an index of type SEM_INDEXTYPE.

Action: Contact Oracle Support Services.

ORA-55463: missing privileges for MDSYS schema for OLS-enabled entailment

Cause: An attempt was made to run entailment with insufficient privileges for MDSYS schema.

Action: Grant EXEMPT ACCESS POLICY to MDSYS.

ORA-55464: model "<varname>string</varname>" does not exist

Cause: An attempt was made to use a nonexistent Resource Definition Framework (RDF) model.

Action: Correct the input and try again.

ORA-55465: resource position <varname>string</varname> not secured with OLS policy

Cause: An attempt was made to associate labels with resource positions that were not secured with Oracle Label Security (OLS).

Action: Correct the input and try again.

ORA-55466: one or more triples have incompatible sensitivity label

Cause: An attempt was made to reset a label for a resource that participated in triples with incompatible label.

Action: Correct the input and try again.

ORA-55467: model-specific label for the resource is incompatible

Cause: An attempt was made to set a global label for a resource when an incompatible model-specific label already existed.

Action: Correct the input and try again.

ORA-55468: rule base "<varname>string</varname>" does not exist or is not accessible

Cause: An attempt was made to specify a rule base that did not exist.

Action: Correct the input and try again.

ORA-55469: rule "<varname>string</varname>" does not exist or is not accessible

Cause: An attempt was made to set a label for a rule that did not exist.

Action: Correct the input and try again.

ORA-55470: OLS may not be applied with one or more models VPD-enabled

Cause: An attempt was made to OLS-enable Resource Definition Framework (RDF) repository when one or more models is VPD-enabled.

Action: Oracle Label Security (OLS) and Oracle Virtual Private Database (VPD) may not be used simultaneously.

ORA-55471: OLS may not be applied to version-enabled RDF repository

Cause: An attempt was made to OLS-enable Resource Definition Framework (RDF) repository when one or more models is version-enabled.

Action: Oracle Label Security (OLS) may not be enabled when one or more models is version-enabled.

ORA-55472: Secure access policy already assigned to RDF data

Cause: An attempt was made to assign an Oracle Label Security (OLS) policy to Resource Definition Framework (RDF) data when some other policy was already in effect.

Action: None

ORA-55473: RDF model participating in a virtual model may not be version-enabled

Cause: An attempt was made to version-enable a Resource Definition Framework (RDF) model which participated in a virtual model.

Action: None

ORA-55474: internal error: [<varname>string</varname>],[<varname>string</varname>],[<varname>string</varname>]

Cause: There was an internal error with Resource Definition Framework (RDF) OLS/VPS support.

Action: Contact Oracle Support Services.

ORA-55475: policy with a matching name already exists

Cause: An attempt was made to specify a duplicate Oracle Virtual Private Database (VPD) policy name.

Action: Correct the input and try again.

ORA-55476: policy "<varname>string</varname>" does not exist

Cause: An attempt was made to use a nonexistent Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

ORA-55477: policy with dependent models may not be dropped

Cause: An attempt was made to drop an Oracle Virtual Private Database (VPD) policy with dependent models.

Action: Remove the VPD policy from the models and try again.

ORA-55478: application table with multiple RDF models not suitable for VPD

Cause: An attempt was made to VPD-enable a model which shared the application table with another model.

Action: None

ORA-55479: a policy already assigned to the RDF model

Cause: An attempt was made to assign Oracle Virtual Private Database (VPD) policy to a model with a VPD policy already in effect.

Action: None

ORA-55480: model participating in a virtual model may not be VPD-enabled

Cause: An attempt was made to VPD-enable a model that participated in a virtual model.

Action: None

ORA-55481: VPD policy may not be applied for OLS-enabled RDF repository

Cause: An attempt was made to VPD-enable a model with an Oracle Label Security (OLS) policy already in effect.

Action: OLS and VPD may not be used simultaneously.

ORA-55482: VPD may not be applied to version-enabled RDF repository

Cause: An attempt was made to VPD-enable a version-enabled Resource Definition Framework (RDF) repository. This is not supported.

Action: None

ORA-55483: policy "<varname>string</varname>" not assigned to the model

Cause: An attempt was made to remove an Oracle Virtual Private Database (VPD) policy that was never assigned to the model.

Action: None

ORA-55484: circular dependency not allowed in RDF metadata

Cause: An attempt was made to define metadata elements that had a circular dependency for the Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

ORA-55485: metadata may not be directly assigned to an equivalent property

Cause: An attempt was made to assign metadata directly to a property that was declared to be an equivalent of another.

Action: None

ORA-55486: metadata exists for the equivalent property

Cause: An attempt was made to make a property equivalent of another when some metadata already existed for this property.

Action: None

ORA-55487: VPD constraints exist for the equivalent property

Cause: An attempt was made to make a property equivalent of another when some Oracle Virtual Private Database (VPD) constraints already existed for this property.

Action: Correct the input and try again.

ORA-55488: metadata definition already exists for the policy

Cause: An attempt was made to add a duplicate metadata definition for an Oracle Virtual Private Database (VPD) policy.

Action: None

ORA-55489: conflicting metadata definition exists for the policy

Cause: An attempt was made to define conflicting metadata definitions for an Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

ORA-55490: VPD constraint may not be assigned to an equivalent property

Cause: An attempt was made to assign an Oracle Virtual Private Database (VPD) constraint to a property declared to be an equivalent of another.

Action: Assign the VPD constraint to the property that is the target of the equivalent property.

ORA-55491: VPD policy constraint with matching name already exists

Cause: An attempt was made to specify a duplicate name for the Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

ORA-55492: error creating VPD policy constraint: <varname>string</varname>

Cause: The Oracle Virtual Private Database (VPD) constraint had errors.

Action: See Oracle documentation.

ORA-55493: specified VPD policy constraint does not exist

Cause: An attempt was made to operate on an Oracle Virtual Private Database (VPD) constraint that did not exist.

Action: None

ORA-55494: input model set may only have a unique VPD policy

Cause: An attempt was made to execute a multi-model query where the models, as a set, did not have a unique Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

ORA-55495: application table with multiple models may not be version-enabled

Cause: An attempt was made to version-enable an application table associated with multiple Resource Definition Framework (RDF) models.

Action: Correct the input and try again.

ORA-55496: unsupported versioning configuration (History/Valid time) for RDF data

Cause: An attempt was made to use an unsupported configuration for Resource Definition Framework (RDF) versioning.

Action: Correct the input and try again.

ORA-55497: RDF repository with an OLS policy may not be version-enabled

Cause: An attempt was made to version-enable a model with Oracle Label Security (OLS) policy.

Action: Versioning is not supported for OLS-enabled Resource Definition Framework (RDF) repository.

ORA-55498: VPD-enabled RDF model may not be version-enabled

Cause: An attempt was made to version-enable a model with an Oracle Virtual Private Database (VPD) policy in effect.

Action: Versioning of VPD-enabled Resource Definition Framework (RDF) models is not supported.

ORA-55500: Event to be used for different trace levels

Cause: None.

Action: Change level for desired tracing in Flashback Transaction Backout.

ORA-55501: Backing out live transaction

Cause: Flashback Transaction Backout was requested on a transaction that has not committed yet.

Action: Commit the transaction before using this feature.

ORA-55502: Specified input transaction by name has no SCN hint

Cause: The specified transaction names for Flashback Transaction Backout was missing an SCN hint.

Action: Provide an SCN hint, and guarantee that the named transactions start before the given SCN.

ORA-55503: Mining finished without seeing specified transactions

Cause: The SCN hit passed was not good. The SCN hit may have come after the start of any of the input transactions.

Action: Give a lesser and more conservative SCN hint, with greater probability of having seen the start of a transaction.

ORA-55504: Transaction conflicts in NOCASCADE mode

Cause: Transactions other than the ones specified conflicts with the specified transactions.

Action: Try using other options like NONCONFLICT_ONLY or CASCADE or NOCASCADE_FORCE.

ORA-55505: DDL done on an interesting object after mining start SCN

Cause: The Flashback Transaction Backout process encountered an interesting object which had its last DDL operation done on it after the mining start time. An interesting object is one that has been modified by either the specified transactions or any of their dependents.

Action: Specify transactions that have committed after the last DDL done on all the objects they touched.

ORA-55506: Transaction performed unsupported change

Cause: A transaction in the dependency DAG performed some action that cannot be backed out. You can back out a transaction, only if undo has been logged for all of its operations. Note some operations do not log undo, such as Insert Direct Load and LOB changes. If you encounter a transaction that has performed any of these operations, you cannot back it out.

Action: The specified transaction cannot be backed out.

**ORA-55507: Encountered mining error during Flashback Transaction Backout.
function:<varname>string</varname>**

Cause: Mining error.

Action: None

ORA-55508: Invalid input to Flashback Transaction Backout

Cause: Null varrays passed or invalid input specified

Action: Specify properly formed varrays and valid options

ORA-55509: Creation of dependencies could not finish

Cause: One or more input transaction or any of its dependents are not committed or have been aborted after more than 1 minute of calling the backout function.

Action: Commit all the active transactions associated with this table and try again.

ORA-55510: Mining could not start

Cause: Mining could not start for the following reasons. 1. A logminer session was processing 2. The database was not mounted or not opened for read and write 3. Minimum supplemental logging was not enabled 4. Archiving was not enabled

Action: Fix the mentioned problems and try again. Note that if you enable supplemental logging now, you will not be able to remove a transaction that has committed without supplemental logging.

ORA-55511: Flashback Transaction experienced error in executing undo SQL

Cause: There was a constraint violation exception when executing in NOCASCADE_FORCE mode. Users could also get this error if appropriate supplemental logging is not enabled causing constraint dependencies to go unnoticed.

Action: Either use CASCADE or NONCONFLICT_ONLY options or add appropriate level for supplemental logging.

ORA-55512: Backing out PDML or XA-RAC transaction

Cause: One of the transactions in the dependency graph was a PDML transaction or a local transaction which is a branch of a global XA transaction, spanning multiple RAC instances. Currently flashback transaction does not support this type of transaction.

Action: None

ORA-55513: Backing out an AQ transaction

Cause: One of the transactions in the dependency graph touched an AQ table. As AQ externalizes database information, these transactions are not backed out, as the entire effects of the transaction cannot be seen from inside the database.

Action: None

ORA-55514: Backing out a DDL transaction

Cause: One of the transactions in the dependency graph is a DDL transaction and could not be backed out.

Action: None

ORA-55515: Mining sees input transaction changes without seeing transaction start

Cause: The start SCN provided was higher than the transaction start but below the transaction commit. The result was only partial changes for the given transaction.

Action: Please provide a lower scn hint to flashback transaction.

ORA-55516: Event to dump the LCR's seen by flashback transaction backout to trace file

Cause: None.

Action: Set it to 0 for real flashback transaction. If this is set, flashback transaction will not proceed.

ORA-55517: Internal use

Cause: None.

Action: None

ORA-55518: Mining across reset logs

Cause: Flashback Transaction Backout cannot work with missing changes. This error is thrown if we walk across a reset-logs branch, where we might have missed changes.

Action: If the user knows that the transaction happened in the current reset logs branch, then the SCN-hint is possibly incorrect. Provide an SCN in the current reset log branch.

ORA-55519: Supplemental logging not available for mining SCN range

Cause: Flashback Transaction cannot work if there are regions in the mining range where supplemental logging is not enabled.

Action: If you have provided a SCN/time hint which is approximate and far beyond the specified transaction start time, then readjust the SCN hint and try again. If the system has figured out the transaction start time or you are sure of the range, then the specified transaction cannot be backed out.

ORA-55520: Log record in compatibility lower than 11.0

Cause: The logical change record shows that the compatibility of the mined redo is lower than version 11.0. Flashback transaction works only on redo versions 11.0 and above.

Action: Advance the compatibility and try to back out transactions that have occurred after the compatibility increase.

ORA-55521: Transaction layer temp undo- miscellaneous debug event**ORA-55522: failed to extend temporary undo segment number <varname>string</varname>**

Cause: A failure occurred when trying to extend the temporary undo segment.

Action: This is normally followed by another error message that caused the failure. Check the size of default the temporary tablespace.

ORA-55523: Transaction layer parallel transaction- miscellaneous debug event

ORA-55524: Too many recursive autonomous transactions for temporary undo

Cause: An attempt was made to issue too many recursive autonomous transactions causing the temporary undo segment to be out of slots.

Action: Reconnect to establish a new session and do not use deep nesting of autonomous transactions.

ORA-55525: cannot generate temporary undo in a distributed transaction

Cause: An attempt was made to generate temporary undo in a distributed transaction.

Action: Do not change temporary objects in a distributed transaction.

ORA-55526: temporary tablespace to store temporary undo not available

Cause: An attempt was made to generate temporary undo without adding temporary tablespace in the database.

Action: Add temporary tablespace prior to enabling temporary undo.

ORA-55527: Diagnostic event for external SCN-comparing errors**ORA-55528: maximum number of RECO sessions reached**

Cause: To mitigate a potential denial-of-service (DoS) attack via the recoverer process (RECO), the creation of a new RECO session has been prevented, because the maximum number of RECO sessions has been reached.

Action: If there is a legitimate requirement for additional concurrent RECO sessions, adjust the values for the RECO parameters to allow more RECO sessions.

ORA-55548: transaction layer in-memory processing- internal event**ORA-55549: transaction layer in-memory processing- miscellaneous debug event****ORA-55550: Event to be used for testing ktubu extensions**

Cause: None.

Action: None

ORA-55551: Trigger 4136 corruption**ORA-55552: Trigger 4137 corruption****ORA-55553: Trigger 4139 corruption****ORA-55554: Trigger 4140 corruption****ORA-55555: Trigger 4152 corruption****ORA-55556: Trigger 4143 corruption****ORA-55557: Trigger 4144 corruption**

Cause: Above events used for testing corruption path

Action: None

ORA-55558: <varname>string</varname> is not a corrupted transaction

Cause: the given transaction is not in the corrupt list v\$corrupt_xid_list

Action: check v\$corrupt_xid_list

ORA-55559: Test proactive txn health check

ORA-55560: Test reactive txn health check

ORA-55561: Test 25027 corruption

ORA-55562: Not able to get TX enqueue, cannot force commit
<varname>string</varname>

ORA-55563: <varname>number</varname> is not a valid undo segment number
 Cause: the given usn is not a valid one

Action: check undo\$

ORA-55564: <varname>string</varname> is not a valid transaction id
 Cause: the given txn is not a valid one

Action: check txn id

ORA-55565: <varname>string</varname> is not a valid undo segment number
 Cause: the given usn is not a valid one

Action: check undo\$

ORA-55566: SQL statement issued when the database was not open for queries
 Cause: Tried to access SMON time zone information when database was not open for queries.

Action: Reissue the SQL statement after the database is open for queries.

ORA-55567: The _highthreshold_undoretention value should be at least <varname>string</varname> based on the current undo retention settings.
 Cause: The _highthreshold_undoretention value was not greater than or equal to the UNDO_RETENTION setting and the low threshold value used for tuning undo retention.

Action: Reissue the SQL statement with a higher value.

ORA-55568: The maximum query length (mql) value should be atmost <varname>string</varname> based on the current _highthreshold_undoretention setting.
 Cause: The maximum query length (mql in minutes) was not less than or equal to half the _highthreshold_undoretention parameter setting.

Action: Reissue the SQL statement with a lower value for mql or increase the value of _highthreshold_undoretention parameter.

ORA-55569: The UNDO_RETENTION parameter value should be atmost <varname>string</varname>, the _highthreshold_undoretention setting.
 Cause: The UNDO_RETENTION parameter value was not less than or equal to the _highthreshold_undoretention parameter setting.

Action: Reissue the SQL statement with a lower value for UNDO_RETENTION parameter or increase the value of _highthreshold_undoretention parameter.

ORA-55570: transaction layer debug trace event

ORA-55600: The table "<varname>string</varname>". "<varname>string</varname>" is already enabled for Flashback Archive

Cause: The specified table is already enabled for Flashback Archive.

Action: No action required.

ORA-55601: The table "<varname>string</varname>". "<varname>string</varname>" cannot be enabled for Flashback Archive

Cause: An attempt is made to enable Flashback Archive for a table which should never be enabled for Flashback Archive.

Action: Check the table name.

ORA-55602: The table "<varname>string</varname>". "<varname>string</varname>" is not enabled for Flashback Archive

Cause: An attempt was made to perform Flashback Archive operation on a table on which Flashback Archive is not enabled.

Action: Check the table name.

ORA-55603: invalid flashback archive or valid time period command

Cause: An invalid flashback archive or valid time period command was specified.

Action: Check the SQL statement.

ORA-55604: Incorrect tablespace is specified

Cause: An incorrect tablespace is specified for the Flashback Archive.

Action: Check the SQL statement and verify the possible causes, 1, the tablespace that was already used by the Flashback Archive. 2, the tablespace was not used by the Flashback Archive. 3, the tablespace block size is less than 8K.

ORA-55605: Incorrect Flashback Archive is specified

Cause: An attempt was made to operate on a Flashback Archive that does not exist, or to create a Flashback Archive that already exists.

Action: Check the SQL statement.

ORA-55606: Event to modify archiver sleep time in seconds

Cause: 30 seconds is recommended as the archiver sleep time for tests.

Action: The default archiver sleep time is 300 seconds

ORA-55607: Event to enable debugging of archiver

Cause: The purpose of this event is for debugging.

Action: Attach to process specified.

ORA-55608: Default Flashback Archive does not exist

Cause: The default Flashback Archive did not exist.

Action: Create the default Flashback Archive first.

ORA-55609: Attempt to create duplicate default Flashback Archive

Cause: An attempt was made to create a default Flashback Archive while one already exists.

Action: No action required.

ORA-55610: Invalid DDL statement on history-tracked table

Cause: An attempt was made to perform certain DDL statement that is disallowed on tables that are enabled for Flashback Archive.

Action: No action required.

ORA-55611: No privilege to manage default Flashback Archive

Cause: An attempt was made to create, alter, or drop the default Flashback Archive.

Action: No action required.

ORA-55612: No privilege to manage Flashback Archive

Cause: An attempt was made to create, alter, or drop a Flashback Archive.

Action: No action required.

ORA-55613: Invalid Flashback Archive quota size

Cause: An attempt was made to specify invalid Flashback Archive quota size.

Action: Specify size in MB, GB, TB, PB, or EB.

ORA-55614: AUM needed for transactions on tracked tables

Cause: An attempt was made to execute DML on a tracked table without enabling Auto Undo Management.

Action: Disable tracking on the table or enable Auto Undo Management.

ORA-55615: Event to test archiver scheduled internal tasks

Cause: The purpose of this event is for testing.

Action: No action required.

ORA-55616: Transaction table needs Flashback Archiver processing

Cause: Too many transaction table slots were being taken by transactions on tracked tables.

Action: Wait for some amount of time before doing tracked transactions.

ORA-55617: Flashback Archive "<varname>string</varname>" runs out of space and tracking on "<varname>string</varname>" is suspended

Cause: Flashback archive tablespace quota is running out.

Action: Add tablespace or increase tablespace quota for the flashback archive.

ORA-55618: Insufficient privilege to grant Flashback Archive privilege

Cause: An attempt was made to grant Flashback Archive privilege.

Action: No action required.

ORA-55619: Invalid privilege to grant on Flashback Archive

Cause: An attempt was made to grant invalid privilege on a Flashback Archive object.

Action: Specify valid privilege.

ORA-55620: No privilege to use Flashback Archive

Cause: An attempt was made to enable Flashback Archive on a table without such privileges.

Action: No action required.

ORA-55621: User quota on tablespace "<varname>string</varname>" is not enough for Flashback Archive

Cause: An attempt was made to create or alter a Flashback Archive quota which is larger than the user's quota.

Action: No action required.

ORA-55622: DML, ALTER and CREATE UNIQUE INDEX operations are not allowed on table "<varname>string</varname>". "<varname>string</varname>"

Cause: An attempt was made to write to or alter or create unique index on a Flashback Archive internal table.

Action: No action required. Only Oracle is allowed to perform such operations on Flashback Archive internal tables.

ORA-55623: Flashback Archive "<varname>string</varname>" is blocking and tracking on all tables is suspended

Cause: Flashback archive tablespace has run out of space.

Action: Add tablespace or increase tablespace quota for the flashback archive.

ORA-55624: The table "<varname>string</varname>". "<varname>string</varname>" cannot be enabled for Flashback Archive at this point

Cause: An attempt was made to enable Flashback Archive again on a table which was just disabled.

Action: Try again later.

ORA-55625: Cannot grant Flashback Archive privilege to a role

Cause: An attempt was made to grant or revoke Flashback Archive privilege to a role.

Action: No action required.

ORA-55626: Cannot remove the Flashback Archive's primary tablespace

Cause: An attempt was made to remove the primary tablespace of the Flashback Archive.

Action: No action required.

ORA-55627: Flashback Archive tablespace must be ASSM tablespace

Cause: An attempt was made to add a tablespace that was not an ASSM tablespace.

Action: Add tablespace that is created with segment space management auto.

ORA-55628: Flashback Archive supports Oracle 11g or higher

Cause: An attempt was made to create a Flashback Archive with incorrect compatible mode or without auto undo management.

Action: Use compatible mode equal to 11.0 or higher, and use auto undo management.

ORA-55629: Event to test Flashback Archiver internal management tasks

Cause: The purpose of this event is for testing.

Action: No action required.

ORA-55630: Flashback data archive cannot be enabled on a nested table, temporary table, external table, materialized view, AQ table, clustered table, or non-table object.

Cause: An attempt was made to enable flashback data archive on an object which is not supported by flashback data archive.

Action: Do not use the FLASHBACK ARCHIVE clause for this object.

ORA-55631: Table has columns with data types that are not supported by Flashback Data Archive

Cause: An attempt was made to add a column of data type that is not supported by Flashback Data Archive. Or, the table on which Flashback Data Archive is being enabled contains column(s) with data types not supported by Flashback Data Archive.

Action: Do not use FLASHBACK ARCHIVE clause for this object. If adding column, do not use LONG or Nested Table column data type.

ORA-55632: Tablespace has Flashback Archive tables

Cause: An attempt was made to remove a tablespace that has Flashback Archive tables.

Action: No action required.

ORA-55633: Cannot do DDL on Flashback Data Archive enabled table

Cause: An attempt was made to do DDL on tracked tables while one DDL is running.

Action: Retry the DDL at a later time.

ORA-55634: Unable to disassociate or re-associate Flashback Data Archive table "<varname>string</varname>". "<varname>string</varname>"

Cause: Either an incorrect table name was used or an exclusive lock on the table could not be acquired.

Action: Check the table name and release locks on the table.

ORA-55635: Flashback Data Archive enabled table "<varname>string</varname>". "<varname>string</varname>" is disassociated

Cause: An attempt was made to perform operation on a Flashback Data Archive enabled table that is currently disassociated for DDL.

Action: Retry the operation at a later time.

ORA-55636: Flashback Data Archive enabled table "<varname>string</varname>". "<varname>string</varname>" has different definition from its history table

Cause: The Flashback Data Archive enabled table has different table definition from its history table.

Action: Fix the table definition.

ORA-55637: Flashback Data Archive enabled table "<varname>string</varname>". "<varname>string</varname>" is not in the correct compliance mode for this operation

Cause: An attempt was made to perform disassociation operation on a Flashback Data Archive enabled table that is in compliance mode. Or, DDL are not supported on tables in noncompliance mode.

Action: Disable compliance mode before retrying the disassociation operation.

ORA-55638: DDL operations on Flashback Data Archive-enabled table are not allowed at this point

Cause: Flashback Data Archive could not acquire resources to complete the operation on Oracle RAC.

Action: Retry the DDL at a later time.

ORA-55639: Flashback Data Archive internal SQL error

Cause: Flashback Data Archive encountered internal SQL error.

Action: No action required.

ORA-55640: Insufficient privilege to perform the Flashback Data Archive operation

Cause: An attempt was made to disassociate tables enabled for Flashback Data Archive without the required privilege.

Action: No action required.

ORA-55641: Cannot drop tablespace used by Flashback Data Archive

Cause: An attempt was made to drop a Flashback Data Archive tablespace.

Action: Remove the tablespace from Flashback Data Archive before retrying the operation.

ORA-55642: Table has column names that are reserved by Flashback Data Archive

Cause: The table on which Flashback Data Archive is being enabled contains column(s) with names that are reserved by Flashback Data Archive.

Action: Rename column name before retry.

ORA-55643: cannot combine Flashback Data Archive operation with other operations

Cause: An attempt was made to combine the Flashback Data Archive operation with other ALTER TABLE operations.

Action: Ensure that Flashback Data Archive is the sole operation specified in ALTER TABLE statement.

ORA-55644: event to enable system column ORA_XID testing

Cause: The purpose of this event was for testing.

Action: No action required.

ORA-55645: Valid time period cannot be enabled on a nested table, temporary table, external table, materialized view, AQ table, clustered table, or non-table object.

Cause: An attempt was made to enable a valid time period on an object which is not supported by valid time period.

Action: Do not use a valid time period for this object.

ORA-55646: application already enabled for flashback archive

Cause: An attempt was made to enable flashback archive on an application for a second time.

Action: No need to enable flashback archive on this application.

ORA-55647: application not previously enabled for flashback archive

Cause: An attempt was made to disable flashback archive on an application that has not been enabled for flashback archive.

Action: No need to disable flashback archive on this application.

ORA-55648: table already added to application

Cause: An attempt was made to add a table to an application for a second time.

Action: Do not add a table to an application more than once.

ORA-55649: table not previously added to application

Cause: An attempt was made to remove a table that has not been added to an application.

Action: No need to remove table from application.

ORA-55650: application not registered for flashback archive

Cause: An attempt was made to access an application that has not been registered for flashback archive.

Action: Register the application before accessing it.

ORA-55651: application already registered for flashback archive

Cause: An attempt was made to register an application for flashback archive for a second time.

Action: No need to register this application for flashback archive.

ORA-55652: application already locked down

Cause: An attempt was made to lock down an application for a second time.

Action: No need to lock down this application.

ORA-55653: application not previously locked down

Cause: An attempt was made to unlock an application that was not previously locked down.

Action: No need to unlock this application.

ORA-55654: too many columns in the base table

Cause: An attempt was made to enable flashback archive on a base table with so many columns that the history table has no room for metadata columns.

Action: Have fewer columns in the base table.

ORA-55700: Disable MinActiveTxnStartScn block cleanout optimization

ORA-55701: Turn OFF HP Exadata Storage Server Commit Cache

ORA-55702: Dump the HP Exadata Storage Server Commit Cache on the CellSrv

ORA-55703: Trace min-act to MMON trace file

ORA-55710: Unable to alter system parameter GLOBAL_TXN_PROCESSES at this time

Cause: The system was in the process of adjusting the number of global transaction background processes.

Action: Retry the operation at a later time.

ORA-55711: Unable to bind clusterwide global transactions to compatible undo

Cause: Undo tablespace was not onlined for automatic undo management.

Action: Create undo tablespace if it has not been created.

ORA-55712: XA transactions on RAC are not supported with GLOBAL_TXN_PROCESSES set to 0

Cause: The initialization parameter GLOBAL_TXN_PROCESSES was set to 0.

Action: Set the initialization parameter GLOBAL_TXN_PROCESSES to a value greater than 0.

ORA-55713: GLOBAL_TXN_PROCESSES cannot be set to 0 at runtime

Cause: An attempt was made to set initialization parameter GLOBAL_TXN_PROCESSES to 0 at runtime.

Action: Set the initialization parameter GLOBAL_TXN_PROCESSES to 0 before starting RAC instance to disable GTX background processes. Note that XA transactions are not supported on RAC database when GTX background processes are disabled.

ORA-55714: savepoint '<varname>string</varname>' disabled with interleaved changes across Oracle RAC instances

Cause: After the savepoints were established, interleaved changes were made across Oracle RAC instances within the clusterwide global transaction.

Action: Do not make interleaved changes across Oracle RAC instances after savepoints are established.

ORA-55800: NLS errors while processing Oracle number

Cause: Error occurred when trying to convert Oracle number to an integer.

Action: Check the input parameters.

ORA-55801: Event to control CR activity

Cause: The bit values that we consider. 0x1: Remove fix for bug 3514835 which could potentially throw more 8177 errors We have conservatively blocked some serializability errors, where there could potentially be a dependency between a service transaction in an index and forward going transaction.

Action: Set event 55801 to 1 to disable the bug fix, thereby reducing 8177 error, although it might cause some internal errors instead.

ORA-55802: Event to enable CR in memory tracing

ORA-55803: Prepared transaction marked for deletion

ORA-55901: Secure file log Trace event

ORA-55902: Secure file log Debug event

ORA-55903: Secure file log feature unimplemented: <varname>string</varname>

Cause: This feature has not been implemented yet.

Action: None

ORA-55904: Secure file log name too big

Cause: The specified log name was bigger than the maximum identifier supported in Oracle.

Action: Use a smaller log name.

ORA-55905: Secure file log <varname>string</varname> exists with same name

Cause: Create operation was attempted on an existing secure file log.

Action: Destroy the log with the specified name and retry.

ORA-55906: Secure file log [id: <varname>string</varname> name: <varname>string</varname>] does not exist

Cause: An open operation for read or write was attempted on a nonexistent log.

Action: Create the log and retry.

ORA-55907: Tablespace <varname>string</varname> does not exist for secure file log

Cause: The specified tablespace to keep the swap space for the secure file log does not exist.

Action: Retry with a different tablespace or create one with the specified name.

ORA-55908: Tablespace <varname>string</varname> does not support secure files

Cause: Specified tablespace to keep secure file logs did not support secure files.

Action: Provide a tablespace that supports secure files, or remove secure file options in the create statement.

ORA-55909: Create mode invalid: <varname>string</varname>

Cause: The mode to create the log was not supported, or there was a discrepancy between the in-memory log creation and the persistent definition already present.

Action: Retry by correcting the problem.

ORA-55910: Swap table <varname>string</varname> does not exist

Cause: The dictionary-provided swap name did not exist. This could be caused by an external dropping of the swap table without going through the secure file log API's. This means that all of the persistent part of the log was lost.

Action: Destroy the specified log and recreate from start.

ORA-55911: Log with id: <varname>string</varname> is being destroyed

Cause: A write, read or open operation was being tried on a log that was in the process of being destroyed.

Action: None

ORA-55912: Invalid thread Id provided to write to a threaded log

Cause: A valid thread Id was not provided in order to write to a threaded log. Thread Ids are used to partially order messages to the log from different writing processes.

Action: Provide a logical thread Id or use a nonthreaded log.

ORA-55913: Valid thread Id provided to a nonthreaded log

Cause: A valid logical thread Id was provided for a nonthreaded log. A partial order will not be maintained in a nonthreaded log and messages could be output in random order.

Action: Provide a null thread-id for a non-threaded log, or create a threaded log to do what is required.

ORA-55914: An invalid descriptor was passed to a log operation. Reason: <varname>string</varname>

Cause: An invalid or uninitialized descriptor was found while doing a secure file log read or write.

Action: Provide a properly initialized descriptor created by log open.

ORA-55915: Invalid option: <varname>string</varname>

Cause: An invalid option was passed for a log operation.

Action: Check the cause and retry.

ORA-55916: Message too long

Cause: The log is opened with split messages across buffers set to false. However, the message size is bigger than what can be fit in one buffer.

Action: Write the message in smaller segments or allow split messages while creating the log.

ORA-55917: Table flush I/O failed for log ID: <varname>string</varname> bucket ID: <varname>string</varname>

Cause: Table flush I/O failed. The most common cause for this could be out-of-space errors in the tablespace.

Action: Resolve the underlying problem and retry.

ORA-55918: Required buffer size too big

Cause: The buffer size was greater than 16K. Secure file logging supports buffer sizes of 4K, 8K and 16K. The only reason a large buffer size is required is if split message is set to false, and the potential message is large.

Action: Request a smaller buffer size, or try to use smaller message segments.

ORA-55919: destroying, purging or partitioning log while writers or readers have open descriptors

Cause: The method to destroy, purge or partition log was called and requested to wait for open descriptors. After waiting for 5 minutes, an error is returned if writers or readers still exist.

Action: Close all open descriptors or call destroylog, purgelog or createpartition with the option of not waiting for open descriptors.

ORA-55920: Buffer sequence is too low

Cause: The buffer sequence was too low or rows were removed from the swap table.

Action: Try to read from a higher sequence. Note, that the data in buffer with this sequence has been lost.

ORA-55921: Start point provided is incorrect.

Cause: The provided start point, from which to begin reading, was incorrect.

Action: Provide a minimum SCN, timestamp or sequence or specify that reading should begin with the oldest data available.

ORA-55922: PL/SQL API error: <varname>string</varname>

Cause: PL/SQL callbacks had a problem

Action: Consider the problem string and act appropriately

ORA-55923: PL/SQL maximum number of array elements exceeded

Cause: Number of elements in an array write exceeded the maximum limit 100 message segments in one write.

Action: Try a write buffered with multi-segment write or reduce the element count in the array write.

ORA-55924: PL/SQL encountered a NULL element in the array

Cause: A null element was encountered during an array write.

Action: Provide non-null VARCHAR2 or RAW elements as an array element.

ORA-55925: write end called without proper write start

Cause: An attempt was made to end write without a corresponding start write.

Action: Write starts and ends must be called in the right order for writing piecewise or use a write whole option which does not need an explicit start or end.

ORA-55926: Closing log descriptor before calling write end

Cause: An attempt was made to close the log descriptor before the corresponding write end.

Action: Write end should be called before closing the log write descriptor

ORA-55927: No tablespace found for the log

Cause: No suitable tablespace was found for the log.

Action: Provide a tablespace and retry log creation.

ORA-55928: Duplicate tablespace being added

Cause: The tablespace being added for the named log already existed in the list of tablespaces available for this log.

Action: The user should provide a different tablespace for addition to the list of available tablespaces for the named log.

ORA-55929: Creating new partition when current partition is empty

Cause: An attempt was made to create a new partition for the named log when the current partition is empty.

Action: Do not attempt to create a new partition when the current partition is still empty.

ORA-55930: Version of log, identified by (logname, instanceid), does not exist

Cause: Version of log, identified by (logname, instanceid), did not exist.

Action: Provide the correct (logname, instanceid) input.

ORA-55931: The highest partition of log, identified by (logname, instanceid), does not exist

Cause: The highest partition of log, identified by (logname, instanceid), did not exist.

Action: Provide the correct (logname, instanceid) input.

ORA-55932: No SGA memory available for buffers

Cause: An attempt was made to create a secure file log with no available memory for buffers.

Action: Set SECUREFILE_LOG_SHARED_POOL_SIZE to allocate adequate memory.

ORA-55933: invalid log owner provided

Cause: The user provided did not own the secure file log under consideration.

Action: Provide the correct owner of the secure file log.

ORA-55934: invalid user ID provided

Cause: The specified user ID did not exist in the database.

Action: Provide a valid database user ID.

ORA-55935: invalid user name provided

Cause: The specified user name did not exist in the database.

Action: Provide a valid database user name.

ORA-55936: user ID mismatch

Cause: The user ID provided did not own the secure file log under consideration.

Action: Provide the correct owner of the secure file log.

ORA-55937: storage already associated with the secure file log

Cause: An attempt was made to associate storage with a secure file log which already has storage.

Action: Do not attempt to associate storage with a secure file log which already has associated storage.

ORA-55938: no flush callback associated with the secure file log

Cause: Flush callback was not associated with the secure file log under consideration.

Action: The secure file log needs to be re-created with valid flush callback.

ORA-55939: database is not open for attempted operation

Cause: The attempted operation failed because the database is not yet open.

Action: Resubmit the operation when the database opens.

ORA-55940: An error occurred during execution of ktliIngestExternData.

Cause: An error occurred during execution of ktliIngestExternData.

Action: See the message associated with the error for remedial action.

ORA-55941: DML and DDL operations are not allowed on table "<varname>string</varname>". "<varname>string</varname>"

Cause: A DML or DDL operation was attempted on a Common Logging Infrastructure internal table.

Action: No action required. Only Oracle is allowed to perform such operations on Common Logging Infrastructure internal tables.

ORA-55942: read not started for read descriptor of the secure file log

Cause: An attempt was made to get a readsavpoint before ktliRead successfully returned a message, using the secure file log descriptor under consideration.

Action: Execute a ktliRead, which returns a message using the secure file log descriptor, before attempting to get a readsavpoint.

ORA-55943: unsupported verison in readsavpoint of the secure file log

Cause: An attempt was made to open a secure file log with a readsavpoint which had unsupported version.

Action: Contact Oracle Support Services.

ORA-55944: External flush I/O failed for log ID: <varname>string</varname> bucket ID: <varname>string</varname>

Cause: External flush I/O failed.

Action: Resolve the underlying problem and retry.

ORA-55945: tablespace name not specified

Cause: The tablespace needed to keep the swap space for the secure file log has not been provided by the user.

Action: Retry the operation with the appropriate tablespace name.

**ORA-55946: operation failed due to CrossInstanceCall failure -
<varname>string</varname> <varname>string</varname>**

Cause: The operation failed due to a CrossInstanceCall failure. Check the trace files on remote instances for the underlying problem.

Action: Resolve the underlying problem and retry.

ORA-55947: message too long

Cause: The message length was greater than what the Secure file log supports.

Action: Provide the message with a length that the Secure file log supports and retry the operation.

ORA-55948: flush threshold is invalid

Cause: The flush threshold specified for the secure file log is invalid.

Action: The flush threshold for secure file log must be an integer greater than or equal to 1 and less than or equal to 100.

**ORA-55949: swap table of secure file log (<varname>string</varname>,
<varname>string</varname>) does not exist**

Cause: The swap table of secure file log did not exist. This could be caused by an external dropping of the swap table without going through the secure file log API's. This means that all of the persistent parts of the log were lost.

Action: Destroy the specified log and re-create it from the start.

**ORA-55950: storage not associated with the secure file log [name:
<varname>string</varname>]**

Cause: An attempt was made to import data from an external source into a secure file log which is not associated with tablespace storage.

Action: Associate tablespace storage with a secure file log before importing data from an external source.

ORA-56500: DRCP: Pool not found

Cause: The pool name passed was either null or an invalid pool name.

Action: Input a valid pool name.

ORA-56501: DRCP: Pool startup failed

Cause: The connection pool failed to start up.

Action: Check logs for details.

ORA-56502: DRCP: Pool is inactive

Cause: The operation is only supported on an active pool.

Action: Start the pool.

ORA-56503: DRCP: Pool is active

Cause: The operation is only supported on an inactive pool.

Action: Shutdown the pool.

ORA-56504: DRCP: Invalid pool configuration parameter name

Cause: The configuration parameter name is null or invalid input.

Action: Input a valid configuration parameter name.

ORA-56505: DRCP: Invalid pool configuration parameter value

Cause: The configuration parameter value is null or invalid input.

Action: Input a valid configuration parameter value.

ORA-56506: DRCP: Pool shutdown failed

Cause: Connection pool failed to shutdown.

Action: Check logs for details.

ORA-56507: DRCP: Pool alter configuration failed

Cause: Connection pool failed to configure pool.

Action: Check logs for details.

ORA-56508: DRCP: Pool startup failed

Cause: Connection Broker failed to startup the pool.

Action: Check logs for details.

ORA-56509: DRCP: Pool shutdown failed

Cause: Connection Broker failed to shutdown the pool.

Action: Check logs for details.

ORA-56510: DRCP: Pool alter configuration failed

Cause: Connection Broker failed to configure the pool.

Action: Check logs for details. For the NUM_CBROK and MAXCONN_CBROK values, if the initialization parameter CONNECTION_BROKERS contains a (TYPE=POOLED) entry, then use the parameter instead to update these values.

ORA-56511: DRCP: Cross instance synchronization failed

Cause: Publish message to all RAC instances failed.

Action: Check logs for details.

ORA-56512: DRCP: Failed to synchronize RAC instances [<varname>string</varname>]

Cause: Some of the RAC instances were not synchronized.

Action: Perform the same operations on all the failed instances.

ORA-56513: DRCP: Cannot perform requested operation using pooled connection

Cause: This operation was not supported using connections from a pool.

Action: Use a regular connection to perform this operation.

ORA-56514: DRCP: invalid value for maximum number of connections to Connection broker

Cause: The value passed exceeded the maximum allowed.

Action: No action required. The maximum number of connections was automatically set to the maximum allowed value.

ORA-56515: DRCP: Operation not allowed from a Pluggable Database

Cause: The operation was not allowed in Database Resident Connection Pooling when connected to a Pluggable Database.

Action: Connect to the root database and retry the same operation.

ORA-56600: DRCP: Illegal call [<varname>string</varname>]

Cause: An illegal OCI function call was issued.

Action: Check the documentation for Database Resident Connection Pool (DRCP) usage.

ORA-56601: DRCP: Illegal connection class

Cause: Wrong value for connection class was given.

Action: Check the documentation for Database Resident connection pool usage.

ORA-56602: DRCP: Illegal purity

Cause: Wrong value for purity was provided.

Action: Check the documentation for Database Resident connection pool usage.

ORA-56603: DRCP: Internal error

Cause: Malformed input values.

Action: Input well-formed values.

ORA-56604: DRCP: Length[<varname>string</varname>] for <varname>string</varname> exceeded the MAX allowed

Cause: Length exceeded MAX for the value.

Action: Use a value within the MAX allowed.

ORA-56605: DRCP: Session switching and migration not allowed

Cause: Application tried to switch or migrate session across connections.

Action: This usage is irrelevant in the Database Resident connection pooling context and is not supported. Release existing session.

ORA-56606: DRCP: Client version does not support the feature

Cause: The client version is lower than 11g.

Action: Upgrade to a higher client version or turn off (SERVER=POOLED) in the connect string.

ORA-56607: DRCP: Connection is already authenticated

Cause: Attempt to reauthenticate the connection which is authenticated.

Action: Logoff the connection before reauthenticating.

ORA-56608: DRCP: Server Group feature is not supported

Cause: Server Group attribute was set on the server handle, connected to a Database Resident connection pool.

Action: Do not set Server Group attribute on server handles while using Database Resident connection pool.

ORA-56609: Usage not supported with DRCP

Cause: This usage was not supported on a DRCP connection.

Action: Use a dedicated connection to perform this task.

ORA-56700: plan <varname>string</varname> is a subplan and SUB_PLAN attribute cannot be modified

Cause: An attempt was made to modify the SUB_PLAN attribute of the specified plan.

Action: Do not attempt to modify the SUB_PLAN attribute.

ORA-56701: INTERNAL_USE attribute of consumer group <varname>string</varname> cannot be modified

Cause: An attempt was made to modify the INTERNAL_USE attribute of the specified consumer group.

Action: Do not attempt to modify the INTERNAL_USE attribute.

ORA-56702: consumer group <varname>string</varname> is for internal use only and cannot be a switch target

Cause: An attempt was made to specify an INTERNAL_USE consumer group as a switch target.

Action: Do not attempt to switch to INTERNAL_USE consumer groups.

ORA-56703: VKTM process died unexpectedly

Cause: An explicit kill or internal error caused the death of VKTM background process.

Action: Restart the instance.

ORA-56704: EXPLICIT consumer group mapping priority must be set to 1

Cause: An attempt was made to set the EXPLICIT mapping priority to a value other than 1.

Action: Set the mapping priorities to unique integers within the documented range with the EXPLICIT priority set to 1.

ORA-56705: I/O calibration already in progress

Cause: An attempt was made to run a second instance of I/O Calibration

Action: Wait until the first I/O calibration run is complete; then, retry the operation.

ORA-56706: The specified Resource Manager plan is a subplan and cannot be set as a top-level plan

Cause: An attempt was made to set a subplan as a top-level plan.

Action: Do not attempt to set subplans as top-level plans.

ORA-56707: INTERNAL_QUIESCE plan cannot be specified as a top-level Resource Manager plan

Cause: An attempt was made to specify INTERNAL_QUIESCE as a top-level Resource Manager plan.

Action: Do not attempt to set INTERNAL_QUIESCE as a Resource Manager plan.

ORA-56708: Could not find any datafiles with asynchronous i/o capability

Cause: There are no datafiles which are asynchronous I/O capable.

Action: Make sure asynchronous i/o is permitted to datafiles.

ORA-56709: timed_statistics set to FALSE

Cause: timed_statistics parameter in database is set to FALSE. Needs to be enabled for calibration.

Action: set timed_statistics=TRUE in init.ora or "alter system set timed_statistics=TRUE"

ORA-56710: DBRM process died unexpectedly

Cause: An explicit kill or internal error caused the death of the DBRM background process.

Action: Restart the instance.

ORA-56711: <varname>string</varname> is an invalid <varname>string</varname> argument

Cause: The named argument is invalid.

Action: Specify a valid argument for this procedure.

ORA-56712: Invalid upcgm_table_type argument**ORA-56713: insufficient Resource Manager privileges**

Cause: An attempt was made to execute administration procedures from the DBMS_RESOURCE_MANAGER package without the appropriate privilege. The procedure requires the Resource Manager system privilege.

Action: Ask the database administrator to grant the Resource Manager system privilege to the user.

ORA-56714: Plan name <varname>string</varname> exceeds the maximum length allowed

Cause: Plan name is greater than 30 characters long.

Action: Do not exceed 30 characters when naming a resource plan.

ORA-56715: <varname>string</varname> resource plan contains a reserved word

Cause: The specified plan name is prefixed with a reserved prefix such as FORCE or SCHED.

Action: Do not prefix resource plan name with FORCE or SCHED.

ORA-56716: Category <varname>string</varname> does not exist

Cause: A non-existent category was specified as an argument to a procedure in the package, DBMS_RESOURCE_MANAGER.

Action: Specify an existing category name or create a new category with this name.

ORA-56717: switch directives are set without a corresponding SWITCH_GROUP

Cause: The plan directive contained a switch directive (SWITCH_TIME, SWITCH_IO_REQS, or SWITCH_IO_MEGABYTES) without a SWITCH_GROUP.

Action: Specify a SWITCH_GROUP parameter in the plan directive.

ORA-56718: Timeout occurred while setting resource plan

Cause: A timeout occurred while waiting for one or more RAC instances to set the resource plan.

Action: Since the resource plan may have actually been set successfully, first check the current resource plan for each instance by querying gv\$sqlsrc_plan. If the resource plan was not successfully set on all instances, then retry the operation.

ORA-56719: Error spawning or communicating with calibration slave

Cause: An error occurred in calibration slave process - Calibration process aborted.

Action: Review trace files for errors.

ORA-56720: I/O data limit exceeded - call aborted

Cause: The Resource Manager SWITCH_IO_MEGABYTES limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56721: I/O data limit exceeded - session terminated

Cause: The Resource Manager SWITCH_IO_MEGABYTES limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56722: I/O request limit exceeded - call aborted

Cause: The Resource Manager SWITCH_IO_REQS limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56723: I/O request limit exceeded - session terminated

Cause: The Resource Manager SWITCH_IO_REQS limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56724: ksfd calibration tracing

ORA-56725: Could not spawn additional calibration slaves

Cause: An error occurred when spawning calibration slave process - Calibration process aborted.

Action: Check OS resources required for spawning processes

ORA-56726: Category <varname>string</varname> is referred to by a consumer group and cannot be deleted

Cause: An attempt was made to delete a category that is referred to by a consumer group.

Action: Modify or remove all consumer groups that use this category and then retry.

ORA-56727: Orion (<varname>string</varname>) must be invoked using its full, absolute path

Cause: Orion is spawning a child process and cannot determine the location of the executable.

Action: Use the full, absolute path for Orion.

ORA-56728: SQL blocks cannot be nested

Cause: An attempt was made to start an SQL block using DBMS_RESOURCE_MANAGER.BEGIN_SQL_BLOCK() while already inside an SQL block.

Action: Close the existing SQL block using DBMS_RESOURCE_MANAGER.BEGIN_SQL_BLOCK() or remove this call.

ORA-56729: Failed to bind the database instance to processor group <varname>string</varname>

Cause: Binding the database instance to the processor group specified by the PROCESSOR_GROUP_NAME parameter failed.

Action: Set the PROCESSOR_GROUP_NAME to a valid, configured processor group and restart the database instance.

ORA-56730: pluggable database plan <varname>string</varname> may not specify parameter <varname>string</varname>

Cause: Resource plans inside a pluggable database attempted to use the following parameters: MGMT_P2, MGMT_P3, MGMT_P4, MGMT_P5, MGMT_P6, MGMT_P7, MGMT_P8

Action: Remove these parameters and try again.

ORA-56731: pluggable database plan <varname>string</varname> may not use subplans

Cause: A plan was specified as the argument to the GROUP_OR_SUBPLAN parameter. Resource plans inside a pluggable database may not specify a plan for the GROUP_OR_SUBPLAN parameter.

Action: Specify only consumer groups for the GROUP_OR_SUBPLAN parameter.

ORA-56732: value <varname>string</varname> for <varname>string</varname> is outside valid range of 0 to 4294967295

Cause: An invalid value was specified for a plan directive parameter.

Action: Specify a value between 0 and 4294967295, inclusive.

ORA-56733: logical I/O limit exceeded - call aborted

Cause: The Resource Manager SWITCH_IO_LOGICAL limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56734: logical I/O limit exceeded - session terminated

Cause: The Resource Manager SWITCH_IO_LOGICAL limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56735: elapsed time limit exceeded - call aborted

Cause: The Resource Manager SWITCH_ELAPSED_TIME limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56736: elapsed time limit exceeded - session terminated

Cause: The Resource Manager SWITCH_ELAPSED_TIME limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56737: SWITCH_GROUP is set without a corresponding switch directive

Cause: The plan directive specified a value for SWITCH_GROUP without specifying one of the following switch directives: - SWITCH_TIME - SWITCH_IO_REQS - SWITCH_IO_MEGABYTES - SWITCH_ELAPSED_TIME - SWITCH_IO_LOGICAL

Action: Specify a switch directive or remove SWITCH_GROUP directive.

ORA-56738: CDB resource plan <varname>string</varname> has more than <varname>string</varname> profile directives.

Cause: An attempt was made to create or update the specified multitenant container database (CDB) resource plan to use more than the supported number of profile directives.

Action: Remove the directives for profiles that are not active on this database.

ORA-56800: DSKM process died unexpectedly

Cause: An explicit kill or internal error caused the death of the DSKM background process.

Action: Restart the instance.

ORA-56801: ksz trace event**ORA-56802: ksz test event****ORA-56840: LIBCELL API error in Master Diskmon**

Cause: A LIBCELL operation in Master Diskmon failed.

Action: Look in the \$ORA_CRS_HOME/log/<varname>hostname</varname>/diskmon/diskmon.log file for additional error information.

ORA-56841: Master Diskmon cannot connect to a CELL

Cause: A LIBCELL operation from Master Diskmon failed to create a network connection to the target CELL.

Action: Look in the \$ORA_CRS_HOME/log/<varname>hostname</varname>/diskmon/diskmon.log file for additional error information.

ORA-56842: LIBCELL operation network error in Master Diskmon

Cause: A LIBCELL operation in Master Diskmon failed because of a network error.

Action: Look in the \$ORA_CRS_HOME/log/<varname>hostname</varname>/diskmon/diskmon.log file for additional error information.

ORA-56843: LIBCELL SKGXP error in Master Diskmon

Cause: A LIBCELL operation from Master Diskmon failed because of an SKGXP network layer error.

Action: Look in the \$ORA_CRS_HOME/log/<varname>hostname</varname>/diskmon/diskmon.log file for additional error information.

ORA-56864: Master Diskmon "<varname>string</varname><varname>string</varname>" operation cannot complete because of a LIBCELL network error

Cause: A LIBCELL operation between Master Diskmon and a CELL failed because of a network error.

Action: Look in the \$ORA_CRS_HOME/log/<varname>hostname</varname>/diskmon/diskmon.log file for additional error information.

ORA-56865: Invalid IP address in CELLINIT.ORA

Cause: One or more of the specified IP addresses in CELLINIT.ORA is not valid.

Action: Check that all IP addresses in CELLINIT.ORA are valid.

ORA-56866: No IP parameter

Cause: No IP address is set in CELLINIT.ORA.

Action: Check that one or more valid IP addresses are set in CELLINIT.ORA.

ORA-56867: Cannot connect to Master Diskmon on pipe "<varname>string</varname>"

Cause: Master Diskmon was not running or the listening pipe was deleted.

Action: Look at the \$ORA_CRS_HOME/log/<varname>hostname</varname>/diskmon/diskmon.log, \$ORA_CRS_HOME/log/<varname>hostname</varname>/hasmsgs.log and \$ORA_CRS_HOME/log/<varname>hostname</varname>/alert<varname>hostname</varname>.log for additional error information.

ORA-56868: Duplicate IP address in CELLINIT.ORA

Cause: One or more of the specified IP addresses in CELLINIT.ORA was repeated.

Action: Check that all IP addresses in CELLINIT.ORA are unique.

ORA-56870: Attempt to register dead cell with Master Diskmon

Cause: An attempt was made by a process to register a cell that is known to be down.

Action: None

ORA-56900: bind variable is not supported inside pivot|unpivot operation

Cause: Attempted to use bind variables inside pivot|unpivot operation.

Action: This is not supported.

ORA-56901: non-constant expression is not allowed for pivot|unpivot values

Cause: Attempted to use non-constant expression for pivot|unpivot values.

Action: Use constants for pivot|unpivot values.

ORA-56902: expect aggregate function inside pivot operation

Cause: Attempted to use non-aggregate expression inside pivot operation.

Action: Use aggregate function.

ORA-56903: sys_op_pivot function is not allowed here

Cause: invalid use of sys_op_pivot function.

Action: Remove sys_op_pivot function.

ORA-56904: pivot value must have datatype that is convertible to pivot column

Cause: Datatype of pivot value is not convertible to the datatype of pivot column.

Action: Check and correct pivot value.

ORA-56905: pivot|unpivot operations are not supported on lateral views

Cause: An attempt was made to do a pivot or unpivot operation on a lateral view.

Action: This is not supported.

ORA-56920: a prepare or upgrade window or an on-demand or datapump-job loading of a secondary time zone data file is in an active state

Cause: A prepare or upgrade window was started or an on-demand or datapump-job loading of a secondary time zone data file was done.

Action: Make sure there is no active prepare or upgrade window and no active on-demand or datapump-job loading of a secondary time zone data file.

ORA-56921: invalid time zone version

Cause: Invalid time zone version passed.

Action: Check and correct the time zone version.

ORA-56922: Starting a prepare window failed

Cause: Error(s) occurred when starting a prepare window.

Action: Check alert or trace file for error(s).

ORA-56923: database properties related to time zone version are not set up properly

Cause: There were no database properties related to time zone version in dictionary table sys.props\$.

Action: Contact Oracle Support Services.

ORA-56924: prepare window does not exist

Cause: There was no active prepare window.

Action: None

ORA-56925: Ending a prepare window failed

Cause: Error(s) occurred when ending a prepare window.

Action: Check alert or trace file for error(s).

ORA-56926: database must be in UPGRADE mode in order to start an upgrade window

Cause: Database was not in UPGRADE mode.

Action: Restart database in UPGRADE mode.

ORA-56927: Starting an upgrade window failed

Cause: Error(s) occurred when starting an upgrade window.

Action: Check alert or trace file for error(s).

ORA-56928: upgrade window does not exist

Cause: There was no active upgrade window.

Action: None

ORA-56929: Ending an upgrade window failed

Cause: Ending an upgrade window failed or there were tables containing TSTZ data which have not been upgraded.

Action: Check alert or trace file for error(s) or complete upgrading of tables containing TSTZ data.

ORA-56930: database must be restarted before performing upgrade of user tables

Cause: Database was not restarted after starting an upgrade window.

Action: Restart database.

ORA-56931: inconsistent DST patching state found

Cause: DST patching was in an inconsistent state.

Action: Contact Oracle Support Services.

ORA-56932: "<varname>string</varname>". "<varname>string</varname>" does not exist

Cause: Specified table name was invalid.

Action: Check the existence of the specified table name.

ORA-56933: Table creation failed

Cause: Error(s) occurred when creating the table.

Action: Check the error.

ORA-56934: database property DST_UPGRADE_STATE for datapump job is in an inconsistent state

Cause: Database property DST_UPGRADE_STATE was not recorded correctly.

Action: Check the alert file.

ORA-56935: existing datapump jobs are using a different version of time zone data file

Cause: An attempt was made from a datapump job to request a different version of time zone data file from the one used by existing datapump jobs.

Action: Wait until existing datapump jobs unload the secondary time zone data file.

ORA-56936: datapump jobs are utilizing secondary time zone data file

Cause: An on-demand loading of secondary time zone data file was requested when there was a secondary time zone data file already loaded in the database utilized by existing datapump jobs.

Action: Wait until existing datapump jobs unload the secondary time zone data file.

ORA-56937: failed to load the secondary time zone data file

Cause: Attempt to load the secondary timezone data file failed.

Action: Check alert or trace files for error(s).

ORA-56938: no secondary time zone data file being loaded by on-demand or a datapump job

Cause: There was no secondary timezone data file being loaded by on-demand or a datapump job.

Action: None

ORA-56939: failed to unload the secondary time zone data file

Cause: Attempt to unload the secondary timezone data file failed.

Action: Check alert or trace files for error(s).

ORA-56950: Invalid value for incident identifier

Cause: Invalid incident identifier argument passed.

Action: Check and correct the identifier

ORA-56971: Invalid set of export options

Cause: The options specified are inconsistent

Action: Check and a consistent set of option parameters

ORA-56972: referenced file not found

Cause: One of the file specified in the test case package is missing

Action: rebuild the SQL test case or make sure that all the referenced files are readable and located in the same directory as the SQL test case manifest.

ORA-56973: import options do not match export options

Cause: The import options specified do not match the export options

Action: Check that import is being invoked with the same values for options like export environment, export data and export metadata

ORA-56974: Invalid set of import options

Cause: The import options specified are inconsistent

Action: Check that import options are consistent and have valid values

ORA-57000 to ORA-57000

ORA-57000: TimesTen IMDB error: <varname>string</varname>

Cause: An error occurred during a TimesTen operation.

Action: Look up the error code in the TimesTen error documentation to diagnose.

ORA-60000 to ORA-65535

ORA-60000: SECUREFILE block checking fault injection event

ORA-60001: adding (<varname>string</varname>) blocks to save undo segment in tablespace <varname>string</varname> with MAXSIZE (<varname>string</varname>)

Cause: Save undo for the offline tablespace at segment MAXSIZE.

Action: Check the storage parameters for the system tablespace. The tablespace needs to be brought back online so the undo can be applied.

ORA-60002: adding (<varname>string</varname>) blocks to temporary segment in tablespace <varname>string</varname> with MAXSIZE (<varname>string</varname>)

Cause: Extending a temporary segment violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60003: adding (<varname>string</varname>) blocks to table <varname>string</varname>.<varname>string</varname> partition <varname>string</varname> with MAXSIZE (<varname>string</varname>)

Cause: Extending a table partition violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60004: adding (<varname>string</varname>) blocks to table <varname>string</varname>.<varname>string</varname> with MAXSIZE (<varname>string</varname>)

Cause: Extending a table violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60005: adding (<varname>string</varname>) blocks to cluster <varname>string</varname>.<varname>string</varname> with MAXSIZE (<varname>string</varname>)

Cause: Extending a cluster violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60006: adding (<varname>string</varname>) blocks to index <varname>string</varname>.<varname>string</varname> partition <varname>string</varname> with MAXSIZE (<varname>string</varname>)

Cause: Extending an index partition violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60007: adding (<varname>string</varname>) blocks to index <varname>string</varname>.<varname>string</varname> subpartition <varname>string</varname> with MAXSIZE (<varname>string</varname>)

Cause: Extending an index subpartition violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

**ORA-60008: adding (<varname>string</varname>) blocks to index
<varname>string</varname>.<varname>string</varname> with MAXSIZE
(<varname>string</varname>)**

Cause: Extending an index violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

**ORA-60009: adding (<varname>string</varname>) blocks to LOB segment
<varname>string</varname>.<varname>string</varname> partition
<varname>string</varname> with MAXSIZE (<varname>string</varname>)**

Cause: Extending a LOB segment violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

**ORA-60010: adding (<varname>string</varname>) blocks to LOB segment
<varname>string</varname>.<varname>string</varname> with MAXSIZE
(<varname>string</varname>)**

Cause: Extending a LOB segment violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

**ORA-60011: adding (<varname>string</varname>) blocks to lob segment
<varname>string</varname>.<varname>string</varname> subpartition
<varname>string</varname> with MAXSIZE (<varname>string</varname>)**

Cause: Extending a LOB segment violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

**ORA-60012: adding (<varname>string</varname>) blocks to table
<varname>string</varname>.<varname>string</varname> subpartition
<varname>string</varname> with MAXSIZE (<varname>string</varname>)**

Cause: Extending a table subpartition violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60013: invalid MAXSIZE storage option value

Cause: Invalid value was specified for MAXSIZE storage clause.

Action: Correct the value and retry command.

ORA-60014: invalid MAXSIZE storage option value

Cause: Minimum of 1M should have been specified against the MAXSIZE storage clause.

Action: Correct the value and retry command.

ORA-60015: invalid RETENTION storage option value

Cause: Value of MIN retention should have been nonzero.

Action: Correct the value and retry command.

ORA-60016: Operation not supported on SECUREFILE segment

Cause: The operation to ALTER FREELIST/RETENTION was not supported on SECUREFILE segment.

Action: Check the LOB type and reissue the statement.

ORA-60018: adding <varname>string</varname> blocks to rollback segment <varname>string</varname> with MAXSIZE (<varname>string</varname>)

Cause: Extending a rollback segment violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60019: Creating initial extent of size <varname>string</varname> in tablespace of extent size <varname>string</varname>

Cause: Creation of SECUREFILE segment failed due to small tablespace extent size.

Action: Create tablespace with larger extent size and reissue command.

ORA-60020: Internal event

ORA-60021: Internal event

ORA-60022: Internal event

ORA-60023: Internal event

ORA-60024: Internal event

ORA-60025: Event for temp segment cleanup used for temp lob

Cause: Temp LOB segments used for temporary LOBs are deleted only on session exit which may lead to large amounts of memory being held across multiple sessions.

Action: Setting this event will cause temporary LOB segments to be freed when there are no active temporary LOBs in the session. Setting this event will have a significant performance impact as it can cause temporary lob segments to be allocated and deleted many times during a session rather than once per session. Use this event only when temporary LOB segment memory use is an issue.

ORA-60038: SECUREFILE space double allocation checking event

ORA-60051: space preallocation tracing event

ORA-60052: space preallocation history logging event

ORA-60053: space background task cancellation event

ORA-60054: space background framework shutdown event

ORA-60055: Internal debugging event

ORA-60056: Internal debugging event

ORA-60057: Internal debugging event

ORA-60058: Internal debugging event

ORA-60060: extent allocation alignment event

ORA-60061: temporary space management tracing event

ORA-60062: fail to repair LOB segment

ORA-60063: Oracle temporary file creation does not allocate space on file systems.

ORA-60064: ILM activity tracking is disabled

ORA-60065: SYSAUX is disabled

ORA-60066: SYSAUX tablespace does not exist

ORA-60067: Internal event to trigger extension of ILMSTAT segment

ORA-60068: Unable to allocate memory for ILM activity tracking

ORA-60069: ILM statistics tracking is disabled

ORA-60070: ILM activity tracking disabled due to multiple errors

ORA-60071: internal debugging event to disable SecureFile UFS reservation

ORA-60072: adding (<varname>string</varname>) blocks to heat map segment with MAXSIZE (<varname>string</varname>)

Cause: Extending the heat map segment violated the MAXSIZE limit.

Action: Increase the MAXSIZE limit.

ORA-60073: Heat map segment cannot be created

Cause: SYSAUX tablespace has uniform extent allocation and the extent size is not a multiple of megabyte.

Action: Re-create SYSAUX tablespace with autoallocate extent management policy or use the uniform extent size which is a multiple of megabyte.

ORA-60074: Heat map activity tracking is disabled

ORA-60075: temporary file space management tracing event

ORA-60076: Internal event to trigger extension of heat map segment

ORA-60077: Unable to allocate memory for heat map activity tracking

ORA-60078: Heat map statistics tracking is disabled

ORA-60079: Heat map tracking disabled due to multiple errors

ORA-60080: bitmapped tablespace space management tracing event

ORA-60081: extent space management debugging event

ORA-60200: bigfile tablespace space management tracing event

ORA-60201: bigfile tablespace space management debugging event

ORA-60202: tablespace operation debugging event

ORA-60203: SecureFiles LOB force FSG creation event

ORA-62001: value for parameter cannot contain a comma

Cause: Parameter value contained a comma.

Action: Remove the comma from the parameter value.

ORA-62006: internal event for XML and object replication**ORA-62007: Encountered a value of unsupported type or size for XPath (<varname>string</varname>)**

Cause: Encountered a value of unsupported type in a SQL/XML DML operator. SQL/XML operators, such as UPDATEXML, expect value operands of type VARCHAR2 and XMLTYPE. XML DML replication is not supported for SQL/XML DML operators with values of unsupported types or very large values of supported types.

Action: Rewrite the UPDATE statement using XQuery update or set event 19027 level 1 to dump XML Document as against XMLDiff in redo log.

ORA-62008: Cannot rewrite a newer version of XML redo diff (encountered: <varname>string</varname>, supported: <varname>string</varname>)

Cause: Encountered a newer version of XML redo diff that is not supported.

Action: Use RDBMS version that supports rewrite of given version of XML redo diff.

ORA-62009: An attempt to encode invalid XML character <varname>string</varname> in supplemental log has occurred.

Cause: An attribute was being populated or updated with characters which are not valid for XML and therefore could not be supplementally logged.

Action: Store the desired value in a RAW or BLOB attribute.

ORA-62010: invalid argument: <varname>string</varname>**ORA-62011: no columns to process****ORA-62012: ROWID range is not supported for index-organized or external tables****ORA-62013: OCI error status %0!s, source line: %1!s****ORA-62014: internal error, arguments: [%0!s], [%1!s], [%2!s]****ORA-62015: column "<varname>string</varname>" has the national character set form****ORA-62016: column "%0!s" has the unsupported data type %1!s****ORA-62017: unable to allocate %0!s bytes of memory, argument: [%1!s]****ORA-62018: repository not installed****ORA-62019: DUMA_ROWID_MAP\$ column is missing or is of wrong data type****ORA-62020: source row is missing****ORA-62021: unrecognized type of the fetched attribute "%0!s"****ORA-62022: unrecognized character set %0!s for column "%1!s"****ORA-62023: BLOB exceeds the size limit of LONG column****ORA-62024: invalid table ID****ORA-62025: column data types do not match**

ORA-62026: unrecognized delayed cleansing action

ORA-62027: exception logging not supported for external tables

ORA-62029: DBMS_DUMA_INTERNAL tracing event

ORA-62030: split brain event

ORA-62031: QESXL internal tracing event

ORA-62032: QESXL SO testing event

ORA-62033: QESGV internal tracing event

ORA-62034: Invalid KEY VECTOR

ORA-62500: function is not allowed outside of MATCH_RECOGNIZE clause

Cause: The function was specified outside of the MATCH_RECOGNIZE clause. This function is only allowed in the MATCH_RECOGNIZE clause.

Action: Rewrite the SQL statement.

ORA-62501: invalid value specified for bounded quantifier in MATCH_RECOGNIZE clause

Cause: The specified lower bound or upper bound value was greater than UB4MAXVAL. The lower bound value must be non-negative. The upper bound value must be strictly positive. The upper bound value must be greater than or equal to the lower bound value.

Action: Choose an appropriate value and retry the operation.

ORA-62502: invalid variable name

Cause: The specified variable name was invalid. Variable names are not allowed to be "^", "\$", or "*".

Action: Choose an appropriate variable name and retry the operation.

ORA-62503: illegal variable definition

Cause: The specified variable definition was invalid. Variables defined in the DEFINE clause must be in the PATTERN clause. Variables defined in the SUBSET clause cannot be in the PATTERN clause. Variables cannot be defined twice either in the SUBSET clause or the DEFINE clause.

Action: Choose an appropriate variable and retry the operation.

ORA-62504: illegal variable reference

Cause: The referenced variable was invalid. Variables referenced in the SUBSET clause must be in the PATTERN clause. Variables referenced in the DEFINE clause, the MEASURES clause, and the AFTER MATCH SKIP TO must be in the PATTERN clause or defined in the SUBSET clause.

Action: Choose an appropriate variable and retry the operation.

ORA-62505: expression needs to be aliased

Cause: The expression was not aliased. MEASURES clause items have to be aliased.

Action: Choose an appropriate variable and retry the operation.

ORA-62506: illegal nesting of operators in MATCH_RECOGNIZE clause

Cause: An attempt was made to nest aggregates/FIRST/LAST/PREV/NEXT. Aggregates/FIRST/LAST/PREV/NEXT cannot be nested. The only exception allowed is PREV/NEXT(FIRST/LAST()).

Action: Modify the query and retry the operation.

ORA-62507: illegal use of MATCH_NUMBER or CLASSIFIER in MATCH_RECOGNIZE clause

Cause: An attempt was made to use MATCH_NUMBER or CLASSIFIER in the MATCH_RECOGNIZE clause. CLASSIFIER and MATCH_NUMBER can only be used in the MEASURES clause. CLASSIFIER can only be used if the query is ALL ROWS PER MATCH. CLASSIFIER and MATCH_NUMBER cannot be used inside aggregates/FIRST/LAST/PREV/NEXT.

Action: Modify the query and retry the operation.

ORA-62508: illegal use of aggregates or navigation operators in MATCH_RECOGNIZE clause

Cause: An attempt was made to define aggregates/FIRST/LAST/PREV/NEXT over multiple variables. Aggregates/FIRST/LAST/PREV/NEXT cannot be defined over multiple variables.

Action: Modify the query and retry the operation.

ORA-62509: illegal use of RUNNING or FINAL in MATCH_RECOGNIZE clause

Cause: An attempt was made to use RUNNING or FINAL in MATCH_RECOGNIZE. RUNNING or FINAL can only be used on aggregate/FIRST/LAST. FINAL aggregate/FIRST/LAST is not allowed in the DEFINE clause.

Action: Modify the query and retry the operation.

ORA-62510: Correlated subqueries are not allowed in MATCH_RECOGNIZE clause.

Cause: An attempt was made to use correlated subqueries in the MATCH_RECOGNIZE clause. Correlated subqueries are currently not allowed in the MATCH_RECOGNIZE clause.

Action: Modify the query and retry the operation.

ORA-62511: Correlation variables are not allowed in MATCH_RECOGNIZE clause.

Cause: An attempt was made to use correlation variables in the MATCH_RECOGNIZE clause. Correlation variables are currently not allowed in the MATCH_RECOGNIZE clause.

Action: Modify the query and retry the operation.

ORA-62512: This aggregate is not yet supported in MATCH_RECOGNIZE clause.

Cause: An unsupported aggregate was specified in the MATCH_RECOGNIZE clause. Only COUNT, SUM, AVG, MIN, and MAX are currently supported in the MATCH_RECOGNIZE clause. Distinct aggregates are currently not supported in the MATCH_RECOGNIZE clause.

Action: Modify the query and retry the operation.

ORA-62513: Quantified subpatterns that can have empty matches are not yet supported.

Cause: There were empty matches for the quantified subpattern in the PATTERN clause. Quantified subpatterns are currently required to match one or more rows.

Action: Modify the query and retry the operation.

ORA-62514: AFTER MATCH SKIP TO variable is not bounded in the match found.

Cause: AFTER MATCH SKIP TO variable was not bound in the match found due to pattern operators such as |, *, ?, and so on.

Action: Modify the query and retry the operation.

ORA-62515: Exclusion syntax cannot be used with WITH UNMATCHED ROWS.

Cause: An attempt was made to use exclusion syntax with WITH UNMATCHED ROWS. Exclusion syntax {-} cannot be used with WITH UNMATCHED ROWS.

Action: Modify the query and retry the operation.

ORA-62516: The PARTITION BY, ORDER BY, or MEASURES clause is too large for MATCH_RECOGNIZE.

Cause: The number of items in PARTITION BY, ORDER BY, or MEASURES clause exceeded the maximum allowed. There cannot be more than UB2MAXVAL elements in PARTITION BY, ORDER BY, or MEASURES clause.

Action: Modify the query and retry the operation.

ORA-62517: Next match starts at the same point last match started.

Cause: AFTER MATCH SKIP TO option repositioned the next match at the start of the previous one resulting in an infinite loop.

Action: Modify the query and retry the operation.

ORA-62518: MATCH_RECOGNIZE pattern is too large.

Cause: MATCH_RECOGNIZE pattern was too large. More than UB2MAXVAL elements in alternation, concatenation, or permute, or more than UB4MAXVAL states in the state machine are currently not supported. Permute with more than 7 elements or bounded quantifier bound greater than 200 are also currently not supported.

Action: Modify the query and retry the operation.

ORA-62519: Subquery inside MATCH_RECOGNIZE cannot contain MATCH_RECOGNIZE.

Cause: An attempt was made to use a subquery containing a MATCH_RECOGNIZE clause inside a MATCH_RECOGNIZE clause. Subqueries containing MATCH_RECOGNIZE clauses are currently not allowed in the MATCH_RECOGNIZE clause.

Action: Modify the query and retry the operation.

ORA-62520: illegal offset for MATCH_RECOGNIZE navigation operators

Cause: An attempt was made to use something other than a constant or a bind variable as the offset for MATCH_RECOGNIZE navigation operators FIRST, LAST,

PREV, or NEXT. Offset for MATCH_RECOGNIZE navigation operators have to be constants or bind variables.

Action: Modify the query and retry the operation.

ORA-62521: MATCH_RECOGNIZE is not supported on lateral views

Cause: An attempt was made to use MATCH_RECOGNIZE on a lateral view, which is not supported.

Action: Modify the query and retry the operation.

ORA-62550: Invalid SQL ROW LIMITING expression was specified.

Cause: The SQL ROW LIMITING expression contained components other than literals, binds, correlation variables, or subqueries.

Action: Modify the SQL ROW LIMITING expression and retry the operation.

ORA-63000: operation disallowed: data file <varname>string</varname> is being moved

Cause: The specified data file was being moved.

Action: Wait for the move operation to complete and retry the command.

ORA-63001: file error during move operation

Cause: The move operation encountered an error for the moved data file. The error might be caused by file going offline or by an I/O error. See alert or trace files in all instances for further information.

Action: Retry the move command.

ORA-63002: a data file copy that is not current

Cause: An obsolete copy of a data file left from a data file move operation was used for the CREATE CONTROLFILE command or file header read.

Action: Pass a valid file or perform a media recovery on the file.

ORA-63003: a half-done data file copy

Cause: A half-done copy of a data file created from a previous data file move operation was used for the CREATE CONTROLFILE command or file header read.

Action: Check file headers and pass only valid files.

ORA-63004: Database names in file headers are inconsistent: <varname>string</varname> and <varname>string</varname>.

Cause: Differing database names were found in database file headers.

Action: Check that correct and valid data files are used.

ORA-63997: file size refresh failed

Cause: An operating system error or device error occurred when retrieving the file's size.

Action: Remedy the operating system or device errors mentioned in the error stack and then perform crash recovery.

ORA-63998: undo tablespace file suffered media failure

Cause: An undo tablespace file was detected as inaccessible due to media failure.

Action: Restore accessibility to the file mentioned in the error stack and restart the instance.

ORA-63999: data file suffered media failure

Cause: A data file was detected as inaccessible due to media failure.

Action: Restore accessibility to the file mentioned in the error stack and restart the instance.

ORA-64000: specified path already exists

Cause: The pathname of a new item specified in a DBFS API operation already exists.

Action: Specify a valid, new pathname for the operation.

ORA-64001: invalid parent directory in specified path

Cause: The pathname of an item specified in a DBFS API operation has one or more invalid parent components.

Action: Specify a valid pathname with valid parent components for the operation.

ORA-64002: specified path is invalid

Cause: The pathname of an item specified in a DBFS API operation is invalid.

Action: Specify a valid pathname for the operation.

ORA-64003: an unsupported operation was invoked

Cause: The current DBFS API operation is unsupported by a provider.

Action: Use the provider feature set to invoke only supported operations.

ORA-64004: an invalid combination of arguments was specified

Cause: The current DBFS API operation specifies an invalid combination of arguments for the specified pathname(s) and operation.

Action: Specify a valid combination of pathname(s) and arguments.

ORA-64005: access control checks failed

Cause: The current DBFS API operation failed access control checks for the pathname(s) being accessed.

Action: Specify valid pathname(s) and principal for the operation, or take store-specific actions to enable access.

ORA-64006: lock conflict in current operation

Cause: A DBFS API locking operation could not be completed due to conflicts in the locking protocol.

Action: Follow the proper lock/unlock protocol according to the provider feature set.

ORA-64007: invalid store specified

Cause: The current operation specifies an invalid store name.

Action: Specify a valid store name for the operation.

ORA-64008: invalid mount-point specified

Cause: The current operation specifies an invalid mount-point.

Action: Specify a valid mount-point for the operation.

ORA-64009: invalid provider specified

Cause: The current operation refers to an invalid or incomplete or non-conformant store provider package.

Action: Specify a valid, complete, and conformant (per "dbms_dbfs_content_spi") store provider package.

ORA-64010: cannot modify store via read-only mount

Cause: The current operation attempts to modify a store via a read-only mount (or specifies a read-only store).

Action: Specify a valid modifiable store/mount for the operation.

ORA-64011: cross store operation

Cause: The current operation attempts to span 2 or more different stores and cannot be implemented entirely by the DBFS API.

Action: Split the operation, at the application-level, into multiple sub-operations to implement the same overall functionality.

ORA-64012: specified path is a directory

Cause: The current operation specifies a path that is a directory element, when a non-directory element is expected.

Action: Specify a path of the proper type for the operation.

ORA-64013: specified path is not a directory

Cause: The current operation specifies a path that is not a directory element, when a directory element is expected.

Action: Specify a path of the proper type for the operation.

ORA-64014: directory not empty

Cause: The current operation specifies a directory element that is not empty as required.

Action: Specify an empty directory element.

ORA-64101: Cannot alter both a structured and an unstructured component of an XMLIndex in the same ALTER INDEX statement.

Cause: An attempt was made to alter the unstructured component and structured component of an XMLIndex at the same time.

Action: Use separate ALTER INDEX statements to change an unstructured component and a structured component of an XMLIndex.

ORA-64102: Cannot create an XMLIndex with a structured component on a CLOB column within the object-relational storage model.

Cause: An attempt was made to create an XMLIndex with a structured component on a CLOB column within the object-relational storage model.

Action: Only unstructured XML indexes can be created on a CLOB column within the object-relational storage model.

ORA-64103: Cannot create an XMLIndex on an object-relational XML type table or column.

Cause: An attempt was made to create an XMLIndex on an XML type table or column that uses the object-relational storage model.

Action: The object-relational storage model does not support an XMLIndex.

ORA-64104: Column name already used by internal column of the structured component of the XMLIndex.

Cause: An attempt was made to use a column name already in use by an internal column of the structured component of the XMLIndex.

Action: Chose another column name.

ORA-64105: Cannot create domain index on XMLIndex internal tables.

Cause: An attempt was made to create a domain index on an internal table of an XMLIndex.

Action: Create the domain index on the base table.

ORA-64106: Incorrect use of comma(,) punctuation in COLUMN definitions.

Cause: An attempt was made to define COLUMNS with incorrect use of comma punctuation.

Action: Properly separate COLUMN definitions with comma punctuation.

ORA-64107: The XMLIndex has been successfully altered but the metadata could not be updated.

Cause: An internal error occurred when updating the index metadata. The dbms_metadata.get_ddl function may return improper metadata.

Action: contact Oracle Support Services.

ORA-64108: Cannot truncate a table that has an XMLIndex whose internal table has been indexed using Oracle Text.

Cause: An attempt was made to truncate a table that has an XMLIndex whose internal table has been indexed using Oracle Text.

Action: Drop the Oracle Text index on the XMLIndex internal table.

ORA-64109: XMLIndex: problems encountered during the dropping of statistics

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64110: XMLIndex: problems encountered during the gathering of statistics

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64111: XMLIndex: problems encountered during EXPORT

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64112: XMLIndex: problems encountered during IMPORT

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64113: XMLIndex: XDB.XDB\$XIDX_IMP_T still has bad data for "<varname>string</varname>". "<varname>string</varname>"

Cause: See associated error message.

Action: Ask the DBA to delete all the rows that belong to the given schema_name.index_name from the system table XDB.XDB\$XIDX_IMP_T."

ORA-64114: XMLIndex: reserved for EXPORT or IMPORT

ORA-64115: XMLIndex Exchange Partition: the table has no XMLIndex

Cause: The non-partitioned table had no XMLIndex.

Action: None

ORA-64116: XMLIndex Exchange Partition: incompatible XPath subsets

Cause: The XMLIndexes on the two tables had different path subsets.

Action: Correct the error and retry the command.

ORA-64117: XMLIndex Exchange Partition: incompatible modes for asynchronous DML

Cause: The XMLIndexes on the two tables had different deferred DML modes.

Action: Correct the error and retry the command.

ORA-64118: XMLIndex Exchange Partition: incompatible unstructured components

Cause: One of the XMLIndexes had no unstructured component.

Action: Correct the error and retry the command.

ORA-64119: XMLIndex Exchange Partition: incompatible structured components

Cause: One of the XMLIndexes had no structured component.

Action: Correct the error and retry the command.

ORA-64120: XMLIndex Exchange Partition: incompatible structured components

Cause: The XMLIndexes had different structured components.

Action: Correct the error and retry the command.

ORA-64121: XMLIndex DDL: failure of the internal "<varname>string</varname>"

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64122: XMLIndex DDL: failure of the recursive "<varname>string</varname>"

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64123: XMLIndex DDL: failure of a recursive DDL

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64124: XMLIndex: failure during the setting of an event

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64125: XMLIndex: failure during the resetting of an event

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64126: XMLIndex Table Function: failure at the start of the function

Cause: See associated error message.

Action: Examine the error messages and take appropriate action.

ORA-64127: XMLIndex Table Function: failure at the beginning of the function

Cause: See associated error message.

Action: Examine the error messages and take appropriate action.

ORA-64128: XMLIndex Table Function: failure during the function evaluation

Cause: See associated error message.

Action: Examine the error messages and take appropriate action.

ORA-64129: XMLIndex Table Function: failure at the end of the function

Cause: See associated error message.

Action: Examine the error messages and take appropriate action.

ORA-64130: XMLIndex: invalid namespace mapping "<varname>string</varname>"

Cause: Namespace mapping was invalid. The syntax is XMLNS="string".

Action: Check the namespace string, correct the error and retry command.

ORA-64131: XMLIndex Metadata: failure during the looking up of the dictionary

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64132: XMLIndex Metadata: failure during the updating of the dictionary

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64133: XMLIndex DML: failure of the internal "<varname>string</varname>"

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64134: XMLIndex DML: failure of the recursive "<varname>string</varname>"

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64135: XMLIndex DML: failure of a recursive DML

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64136: XMLIndex Asynchronous DML: synchronization failure

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64137: Cannot drop an XMLIndex whose internal table has been indexed using Oracle Text.

Cause: An attempt was made to drop an XMLIndex whose internal table has been indexed using Oracle Text.

Action: Drop the Oracle Text index on the XMLIndex internal table.

ORA-64138: Cannot drop groups from an XMLIndex whose internal table has been indexed using Oracle Text.

Cause: An attempt was made to drop groups from an XMLIndex whose internal table has been indexed using Oracle Text.

Action: Drop the Oracle Text index on the XMLIndex internal table.

ORA-64139: The type of VIRTUAL column is not XMLTYPE

Cause: An attempt was made to create an XML index with VIRTUAL column not of XMLTYPE.

Action: Specify the type of VIRTUAL column to be XMLTYPE.

ORA-64140: missing chaining XMLTABLE for VIRTUAL column in the index

Cause: An attempt was made to create an XML index with VIRTUAL column but without required chaining XMLTABLE.

Action: Specify a chaining XMLTABLE after VIRTUAL column.

ORA-64141: Can only have a single XMLType column when a table is shared.

Cause: An attempt was made to create a shared table with more than one columns.

Action: Specify a correct shared table definition with only one XMLType column.

ORA-64142: Shared tables must have same semantics for truncation.

Cause: An attempt was made to create shared tables with inconsistent semantics for truncation. Either all shared tables should have or should not have (TRUNCATE) keyword.

Action: Be consistent with (TRUNCATE) keyword while defining shared tables.

ORA-64143: Can only share an existing XMLIndex table with an XMLTYPE column.

Cause: An attempt was made to share a table without an XMLTYPE column.

Action: Drop the group containing the XMLIndex table without an XMLTYPE column and re-create the group with new definition.

ORA-64144: Shared tables must have equivalent paths.

Cause: An attempt was made to share a table with different paths.

Action: Specify a correct shared table definition with appropriate paths.

ORA-64145: This XMLIndex rewrite failed

Cause: One of the rewrites being tried by XMLIndex engine failed.

Action: None. This error is for understanding the trace file of XMLIndex rewrite.

ORA-64146: Nonblocking alter XMLIndex error

Cause: Internal error.

Action: None

ORA-64147: Invalid use of NONBLOCKING COMPLETE or ABORT.

Cause: NONBLOCKING COMPLETE or ABORT is only allowed for XMLIndex that is being modified using NONBLOCKING ADD_GROUP or ADD_COLUMN.

Action: None

ORA-64148: Cannot complete nonblocking alter index operation.

Cause: NONBLOCKING COMPLETE is only allowed for XMLIndex that is being modified using NONBLOCKING ADD_GROUP or ADD_COLUMN and there are no pending rows left.

Action: Call DBMS_XMLINDEX.PROCESS_PENDING to finish pending work.

ORA-64149: Invalid alter XMLIndex operation.

Cause: An attempt was made to alter an XMLIndex that is already being modified using NONBLOCKING ADD_GROUP or ADD_COLUMN. Only NONBLOCKING COMPLETE or ABORT alter index operations are allowed. Also, NONBLOCKING operation is not allowed with alter index rebuild.

Action: Call DBMS_XMLINDEX.PROCESS_PENDING to finish pending work and then execute NONBLOCKING COMPLETE to successfully finish existing NONBLOCKING operation. Execute NONBLOCKING ABORT to cancel existing NONBLOCKING operation.

ORA-64151: Invalid use of DBMS_XMLINDEX.PROCESS_PENDING.

Cause: DBMS_XMLINDEX.PROCESS_PENDING was called on an index that was not modified using NONBLOCKING ADD_GROUP or ADD_COLUMN.

Action: None

ORA-64152: There are no pending rows to process.

Cause: DBMS_XMLINDEX.PROCESS_PENDING was called on an index that does not have any pending rows to process.

Action: Execute NONBLOCKING COMPLETE operation to complete the nonblocking alter index.

ORA-64200: Internal event to control collection storage during create table

Cause: N/A

Action: Do not document

ORA-64201: unregistered LOB value encountered

Cause: The LOB value associated with the input locator did not exist in client-side reference tables.

Action: This is an internal error. Contact Oracle Support Services.

ORA-64202: remote temporary or abstract LOB locator is encountered

Cause: Local database encountered a temporary or abstract LOB created on a remote database. Remote access to temporary or abstract LOB is not supported.

Action: Avoid remote queries that return a temporary or abstract LOB.

ORA-64203: Destination buffer too small to hold CLOB data after character set conversion.

Cause: An attempt was made to convert CLOB to CHAR, where the LOB size was bigger than the buffer limit for CHAR types or the CHAR buffer was not big enough to hold all data after character set conversion.

Action: Do one of the following: * Make the LOB smaller before performing the conversion. for example, by using SUBSTR on CLOB * Use DBMS_LOB.SUBSTR to convert CLOB to CHAR.

ORA-64204: encountered partial multibyte character

Cause: The requested operation could not complete because a partial multibyte character was found at the end of the input.

Action: Ensure that the input buffer ends with a complete multibyte character and retry the operation.

ORA-64205: Cannot use other triggering events along with LOGICAL LOB UPDATE event

Cause: An attempt was made to use other triggering events (such as INSERT, DELETE and UPDATE) with the LOGICAL LOB UPDATE event.

Action: Create multiple triggers instead of sharing a trigger for multiple events.

ORA-64206: Cannot create INSTEAD OF LOGICAL LOB UPDATE trigger

Cause: INSTEAD OF LOGICAL LOB UPDATE trigger was not allowed.

Action: None

ORA-64207: Invalid LOGICAL LOB UPDATE trigger definition

Cause: The LOGICAL LOB UPDATE trigger could not be created on a non-LOB column of a table. The column name has to be specified while creating the trigger. Only one column name can be specified while creating the trigger.

Action: Specify LOGICAL LOB UPDATE trigger with a valid definition.

ORA-64208: FOR EACH ROW clause is required for before or after LOGICAL LOB UPDATE triggers

Cause: An attempt was made to create a before or after LOGICAL LOB UPDATE trigger without a FOR EACH ROW clause.

Action: Specify a FOR EACH ROW clause for a before/after LOGICAL LOB UPDATE trigger.

ORA-64209: WHEN clause is not allowed for LOGICAL LOB UPDATE triggers

Cause: WHEN clause was specified for a LOGICAL LOB UPDATE trigger.

Action: Remove the WHEN clause when creating a LOGICAL LOB UPDATE trigger.

ORA-64210: Cannot reference a trigger of a different type

Cause: The LOGICAL LOB UPDATE trigger did not follow other LOGICAL LOB UPDATE triggers. Non-LOGICAL LOB UPDATE triggers cannot follow LOGICAL LOB UPDATE triggers.

Action: None

ORA-64211: Cannot access other columns within a LOGICAL LOB UPDATE trigger body

Cause: An attempt was made to access an invalid column. A LOGICAL LOB UPDATE trigger can only access ROWID column and the column for which it was specified. Access to other columns is not allowed.

Action: Remove references to other columns within a LOGICAL LOB UPDATE trigger body.

ORA-64212: Cannot create a LOGICAL LOB UPDATE trigger on a view

Cause: A LOGICAL LOB UPDATE trigger could not be created on view.

Action: None

ORA-64213: Cannot create a compound LOGICAL LOB UPDATE trigger with statement level actions

Cause: A compound LOGICAL LOB UPDATE trigger could not contain statement level actions.

Action: None

ORA-64214: Cannot create a crossedition LOGICAL LOB UPDATE trigger

Cause: Crossedition LOGICAL LOB UPDATE triggers were not supported.

Action: None

ORA-64215: PL/SQL subprogram '<varname>string</varname>' for internal use only

Cause: An attempt was made to use a subprogram that is for internal Oracle development use only.

Action: Do not use this unsupported subprogram. Refer to Oracle documentation for available subprograms.

ORA-64216: Internal event

ORA-64217: Internal event

ORA-64300: Invalid compression level specified

Cause: The specified archive compression level value was invalid. Valid values are LOW or HIGH.

Action: Choose a valid level and retry the operation.

ORA-64301: COMPRESS must be specified with HYBRID COLUMNAR organization

ORA-64303: Incorrect organization clause

ORA-64304: Incorrect organization clause

ORA-64305: LOB update operations are not supported on HYBRID COLUMNAR organization tables of this type

ORA-64306: LOB update operations are not supported on HYBRID COLUMNAR compressed tables with certain index types

ORA-64307: Exadata Hybrid Columnar Compression is not supported for tablespaces on this storage type

Cause: An attempt was made to use Exadata Hybrid Columnar Compression on unsupported storage.

Action: Create this table in a tablespace residing on Oracle Exadata, Oracle's Sun ZFS or Pillar Axiom storage or use a different compression type.

ORA-64308: hybrid columnar compressed table cannot have column with LONG data type

Cause: One of the following was attempted: - Create a hybrid columnar compressed table with a LONG data type. - Alter an existing table with a LONG data type to be hybrid columnar compressed. - Add a LONG data type column to a hybrid columnar compressed table.

Action: LONG data types are not supported with hybrid columnar compressed tables. Create table without LONG column or change table to not be hybrid columnar compressed. If adding a column, do not use LONG data type. If modifying attributes of a column to change data type to LONG, the table cannot be hybrid columnar compressed.

ORA-64309: Hybrid Columnar Compression with row-level locking is not supported for tablespaces on this storage type.

Cause: An attempt was made to use Hybrid Columnar Compression with row-level locking on an unsupported storage type.

Action: Create this table in a tablespace residing on Oracle Exadata storage or use a different compression type.

ORA-64350: only one INMEMORY clause may be specified

Cause: INMEMORY was specified more than once.

Action: Specify each desired INMEMORY clause option only once.

ORA-64351: in-memory area already exists

ORA-64352: in-memory area does not exist

ORA-64353: in-memory area size cannot be less than 100MB

ORA-64354: in-memory area size cannot exceed max(sga target, shared pool size)

ORA-64356: in-memory area out of space

ORA-64357: in-memory area out of space for the current container

ORA-64358: in-memory column store feature not supported for IOTs

ORA-64359: INMEMORY clause may not be specified for virtual columns

ORA-64360: only one INMEMORY clause may be specified for each column

ORA-64361: column INMEMORY clause may only be specified for an inmemory table

ORA-64362: INMEMORY clause may not be specified for LONG columns

ORA-64363: invalid value "<varname>string</varname>" for parameter inmemory_clause_default

ORA-64364: In-memory column store on Oracle RAC is only supported on Oracle-engineered systems.

Cause: An attempt was made to use the in-memory column store feature with Oracle RAC on an unsupported system.

Action: Disable Oracle RAC before attempting to use the in-memory column store in this environment or use an Oracle-engineered system.

ORA-64365: In-memory column store FastStart debug event

ORA-64366: In-memory column store FastStart internal error

ORA-64367: In-memory column store FastStart tablespace is offline.

Cause: The FastStart feature was enabled but its tablespace was offline.

Action: Disable FastStart or bring the FastStart tablespace online.

ORA-64368: In-memory FastStart is only supported on Oracle-engineered systems.

Cause: An attempt was made to use the in-memory column store FastStart feature on an unsupported system.

Action: Use FastStart on an Oracle-engineered system.

ORA-64369: In-memory FastStart Oracle Call Interface (OCI) error <varname>string</varname>

Cause: An OCI error occurred when enabling or disabling FastStart.

Action: Manually correct the problem.

ORA-64401: This manageability package is only supported on Oracle RDBMS versions 10.2, 11.1, and 11.2.

Cause: Package installation invoked on database version that was not 10.2, 11.1 or 11.2..

Action: Use Oracle databaseversion 10.2, 11.1, or 11.2.

ORA-64402: Invalid input. XMLSchema is null.

Cause: XMLSchema was not provided to the procedure or function call..

Action: Provide an XMLSchema.

ORA-64403: Input cannot be null

Cause: An input parameter was null.

Action: Provide input paramter.

ORA-64404: Input string cannot exceed 30 characters

Cause: An input string was provided whose length exceeded 30 character.

Action: Provide a shorter input string.

ORA-64405: No matching elements found. Zero annotations were applied.

Cause: The parameters provided to annotate the XMLSchema did not match any entities in the XMLSchema.

Action: Correct the parameters.

ORA-64406: No matching elements found. Zero annotations were removed.

Cause: The parameters provided to annotate the XMLSchema did not match any entities in the XMLSchema.

Action: Correct the parameters.

ORA-64407: Annotation maps to multiple elements.

Cause: The parameters provided to annotate the XMLSchema matched to multiple entities in the XMLSchema.

Action: .

ORA-64408: Name for collection table too long.

Cause: The name for the collection table exceeded 25 characters.

Action: Reduce the length of the name of the collection table.

ORA-64409: XPath could not be mapped to exactly one table.

Cause: XPath could not be mapped to existing table.

Action: Check input parameters.

ORA-64410: Invalid XPath.

Cause: The XPath string provided to the procedure was not valid.

Action: Check XPath string.

ORA-64411: Invalid collection table specified by XPath.

Cause: An invalid collection table was specified by the XPath string.

Action: Check XPath string.

ORA-64412: Procedure called on XML table with BINARY storage model.

Cause: The procedure renameCollectionTable did not work on binary storage model.

Action: .

ORA-64413: Cannot disable constraints/indexes for non-global schemas owned by other users or a non schema based table/column.

Cause: An attempt was made to disable constraints or indexes for non-global schemas owned by other users or a non schema based table/column.

Action: Use an OR schema based table/column or change users to disable constraints or indexes.

ORA-64414: Cannot enable constraints/indexes for non-global schemas owned by other users or a non schema based table/column.

Cause: An attempt was made to enable constraints or indexes for schemas owned by other users or for a non schema based table/column.

Action: Use an OR schema based table/column or change users to enable constraints or indexes.

ORA-64415: Error in namespace declaration.

Cause: The namespace declaration was invalid.

Action: Correct namespace declaration.

ORA-64416: Table does not exist.

Cause: The tab_name parameter provided the name of a table that did not exist..

Action: Correct the tab_name parameter.

ORA-64417: Column does not exist in table.

Cause: The col_name parameter provided the name of a column that did not exist in the given table.

Action: Correct the col_name parameter.

ORA-64418: Column not of XMLType.

Cause: The col_name parameter provided the name of a column that was not an XMLType column.

Action: Correct the col_name parameter.

ORA-64419: Name for collection table already exists.

Cause: The name for the collection table could not be used because it already exists.

Action: Use another name for collection table.

ORA-64420: Table not of XMLType.

Cause: The table_name parameter provided the name of a table that was not an XMLType table.

Action: Correct the table_name parameter or provide the name of an XMLType column in the table.

ORA-64421: XSLT rewrite transformtion to XQuery not successful.**ORA-64422: NoInlining for XSLT to XQuery translation event is set****ORA-64423: deletion of global <varname>string</varname> is not permitted**

ORA-64424: deletion of `<varname>string</varname>` from a complex type is not permitted (complex type '`<varname>string</varname>`')

ORA-64425: addition of non-optional `<varname>string</varname>` to a complex type is not permitted (complex type '`<varname>string</varname>`')

ORA-64426: deletion from an enumeration list is not permitted (simple type '`<varname>string</varname>`')

ORA-64427: insertion at the end of an enumeration list is not permitted (simple type '`<varname>string</varname>`')

ORA-64428: Error `<varname>string</varname>` named '`<varname>string</varname>`' - '`<varname>string</varname>`' is not a superset of '`<varname>string</varname>`'

ORA-64429: Error `<varname>string</varname>` named '`<varname>string</varname>`' - change from '`<varname>string</varname>`' to '`<varname>string</varname>`' in non-binary XMLSchema

ORA-64430: illegal or unsupported change to `<varname>string</varname>` '`<varname>string</varname>`'

ORA-64431: illegal or unsupported change to mixed in complex type '`<varname>string</varname>`'

ORA-64432: illegal or unsupported change to mixed in local complex type

ORA-64433: illegal or unsupported change to mixed in complex type '`<varname>string</varname>`' of non-binary XMLSchema

ORA-64434: illegal or unsupported change to mixed in local complex type of non-binary XMLSchema

ORA-64435: type of `<varname>string</varname>` named '`<varname>string</varname>`' changed from '`<varname>string</varname>`' to '`<varname>string</varname>`'

ORA-64436: Error `<varname>string</varname>` named '`<varname>string</varname>`' changed from being of a local type to type `<varname>string</varname>`

ORA-64437: Error `<varname>string</varname>` '`<varname>string</varname>`' changed from being reference-based to being of type `<varname>string</varname>`

ORA-64438: illegal or unsupported change to complex type '`<varname>string</varname>`'

ORA-64439: illegal or unsupported change to `<varname>string</varname>`

ORA-64440: Error `<varname>string</varname>` '`<varname>string</varname>`' changed from being of complex type to being of simple type '`<varname>string</varname>`'

ORA-64441: maxoccurs in a non-binary XMLSchema cannot be modified (element '`<varname>string</varname>`')

ORA-64442: deletion of elements, attributes, and so on not supported for binary

**ORA-64443: illegal/unsupported change to <varname>string</varname>
'<varname>string</varname>'**

**ORA-64444: illegal/unsupported change within restriction of complex type
'<varname>string</varname>'**

ORA-64445: Illegal in-place XMLSchema evolution operation

**ORA-64446: Operation <varname>string</varname> returned error code
<varname>string</varname>**

ORA-64447: Invalid localObject value

**ORA-64448: Failed to create a new stylesheet during <varname>string</
varname>**

ORA-64449: Invalid input value specified

**ORA-64450: Table or XMLType column does not exist, is not user-visible or not
of OR-xmltype**

ORA-64451: Conversion of special character to escaped character failed.

ORA-64452: Bind value was null.

**ORA-64453: Function 'XPath2TabColMapping' can only be invoked on table with
object-relational (structured) storage mode.**

**ORA-64454: Function 'XPath2TabColMapping' can only be invoked on column
with object-relational (structured) storage mode.**

**ORA-64455: Function 'XPath2TabColMapping' does not accept XPath with a
parent axis.**

**ORA-64456: Function 'RenameCollectionTable' was not able to map XPath to
table.**

ORA-64457: No owner name provided in renameCollectionTable

ORA-64458: No name provided for collection table

ORA-64459: No owner name provided in xpath2TabColMapping

**ORA-64460: Function IndexXMLReferences can only be invoked on table with
object-relational (structured) storage mode.**

**ORA-64461: Function IndexXMLReferences can only be invoked on column with
object-relational (structured) storage mode.**

ORA-64462: XPath cannot have predicates.

ORA-64463: Parent table column could not be found.

ORA-64464: XML event error

ORA-64465: zero length XML data

ORA-64466: hexadecimal to raw string conversion failed

ORA-64467: XML diff failed

ORA-64468: XML patch failed

ORA-64469: invalid namespace encountered

ORA-64470: Cannot allocate a new VM. All VMs are in use.

ORA-64471: XSLT compiler creation failed

ORA-64472: XSL VM creation failed

ORA-64473: copy to LOB buffer failed

ORA-64474: cannot set VM parameter

ORA-64475: null query in query webservice

ORA-64476: invalid bindXML value

ORA-64477: Multiple token tables are not supported.

Cause: An attempt was made to create a new token table. If encountered during an import, a critical patch was possibly missing on the export database.

Action: Use the default token table. If encountered during an import, apply the appropriate patch on the export database and try the export and import again.

ORA-64478: fix invalid XDB schema types

ORA-64600: duplicate or conflicting PARTITION or NOPARTITION specifications

Cause: The specifications were either a duplicate of each other or were conflicting.

Action: Remove the duplicate or conflicting specification.

ORA-64601: duplicate RESTART specified

Cause: The specified RESTART was a duplicate.

Action: Remove the duplicate specification.

ORA-64610: bad depth indicator

ORA-64620: duplicate user tablespace specification

Cause: An attempt was made to create more than one user tablespace during database creation.

Action: Modify the command to contain only one user tablespace.

ORA-64621: SQL statement length (<varname>string</varname>) exceeds maximum allowed length (<varname>string</varname>)

Cause: An attempt was made to issue a SQL statement that exceeded the maximum allowed length of a statement.

Action: Modify the SQL statement or the views to which it refers to fit within the maximum length or split the SQL statement.

ORA-64700: Backup Appliance is shutting down

Cause: The Backup Appliance was in the process of shutting down. This message is recorded in the incident log for the Backup Appliance. When the shutdown completes, the incident is marked as FIXED.

Action: Wait for the Backup Appliance to complete its shutdown.

ORA-64701: storage location <varname>string</varname> can no longer honor its reservations.

Cause: The specified storage location did not contain enough space to fulfill the reservations of all of the databases assigned to it. This error will be seen if a storage location lost part of its disk space and was in the process of being repaired.

Action: Either shrink the reservations for the databases contained within the storage location or add additional disk space to the storage location.

ORA-64702: error repairing container files for storage location <varname>string</varname>:\n<varname>string</varname>

Cause: An error was returned while trying to rebuild or repair the container files used to store data from protected databases.

Action: The subsequent error will identify the error that needs to be addressed before the Backup Appliance can be repaired.

ORA-64703: resource error detected

Cause: A task needed to be interrupted because it detected a resource limitation such as insufficient temporary table space or a snapshot being too old. It will be retried once the contention for the resource decreases. The secondary messages will identify the resource that has been exhausted.

Action: If this error occurs rarely, no user action is required. If the condition becomes persistent, the Backup Appliance administrator should increase the resource that is exhausted.

ORA-64704: unbalanced parenthesis in "<varname>string</varname>" at column <varname>string</varname>

ORA-64705: no destination in "<varname>string</varname>" at column <varname>string</varname>

Cause: The storage destination contained a syntax error.

Action: Correct the syntax error and retry the operation.

ORA-64706: bad storage size in "<varname>string</varname>" at column <varname>string</varname>

ORA-64707: no storage size in "<varname>string</varname>" at column <varname>string</varname>

ORA-64708: more than one polling_location in "<varname>string</varname>" at column <varname>string</varname>

Cause: More than one polling_location was specified. Only one polling_location is allowed.

Action: Specify only one polling destination directory and retry the operation.

ORA-64709: ASM polling_location is not supported in "<varname>string</varname>" at column <varname>string</varname>

Cause: The polling_location specified an ASM-based location. Only non-ASM-based polling_locations are supported.

Action: Specify one non-ASM polling destination and retry the operation.

ORA-64710: polling_location must not have storage size in "<varname>string</varname>" at column <varname>string</varname>

ORA-64711: storage destination do not reference an ASM diskgroup

Cause: The storage destination referenced a non-ASM storage location. Only ASM-based storage destinations are allowed. The operation has been rolled back.

Action: Correct the syntax error and retry the operation.

ORA-64712: non-ASM storage destination

ORA-64713: requested size <varname>string</varname> for <varname>string</varname> was too small; already using <varname>string</varname>

Cause: The size requested for the storage destination was smaller than its current size.

Action: Increase the requested size and retry the operation.

ORA-64714: requested size <varname>string</varname> for <varname>string</varname> was larger than total available space <varname>string</varname>

Cause: The size requested for the storage destination was larger than its current used space plus its current free space.

Action: Decrease the requested size and retry the operation.

ORA-64715: redundancy type "<varname>string</varname>" for diskgroup <varname>string</varname> is invalid

Cause: The redundancy type for the specified diskgroup was not one of {NORMAL | HIGH | EXTERN}.

Action: Correct the redundancy type of the diskgroup and retry the operation.

ORA-64716: storage location <varname>string</varname> allocation size <varname>string</varname> does not equal diskgroup <varname>string</varname> allocation size <varname>string</varname>

Cause: The minimum allocation size of the specified storage location was not the same as the specified diskgroup allocation unit size.

Action: Specify a different diskgroup or a different storage location and retry the operation.

ORA-64717: network chunk size <varname>string</varname> is not a multiple of diskgroup <varname>string</varname> allocation size <varname>string</varname>

Cause: The configured network chunk size was not a multiple of the specified diskgroup allocation unit size.

Action: Specify a different diskgroup or reconfigure the network chunk size and retry the operation.

ORA-64718: diskgroup <varname>string</varname> allocation size <varname>string</varname> is not a power of two

Cause: The diskgroup allocation unit size was not a power of two.

Action: Specify a different diskgroup and retry the operation.

ORA-64719: diskgroup <varname>string</varname> allocation size <varname>string</varname> is less than two megabytes <varname>string</varname>

Cause: The diskgroup allocation unit size was less than two megabytes.

Action: Specify a different diskgroup and retry the operation.

ORA-64720: no containers were created for storage location <varname>string</varname>

Cause: No storage was allocated and initialized for the specified storage location.

Action: Specify a different diskgroup for the storage location, increase the size of the diskgroup, or reduce the size of the storage location and retry the operation.

ORA-64721: reserved space <varname>string</varname> is less than the minimum reservation <varname>string</varname>

Cause: No storage was allocated and initialized for the specified storage location.

Action: Specify a different diskgroup for the storage location, increase the size of the diskgroup, or reduce the size of the storage location and retry the operation.

ORA-64722: number of drives must be greater than zero

Cause: The specified number of tape drives was NULL or was less than or equal to zero.

Action: Specify a number of tape drives greater than 0 and retry the operation.

ORA-64723: number of drives reserved for restore operations must be greater than or equal to zero

Cause: The number of tape drives reserved for restore operations was NULL or was less than zero.

Action: Specify a number of tape drives reserved for restore operations greater than or equal to zero and retry the operation.

ORA-64724: number of restore drives <varname>string</varname> too large; must be less than <varname>string</varname>

Cause: The number of tape drives reserved for restore operations was at least as large as the total number of drives available. The number of tape drives reserved for restore operations must be at least one less than the total number of drives available.

Action: Specify a number of tape drives reserved for restore operations less than the total number of drives available and retry the operation.

ORA-64725: number of streams must be greater than zero

Cause: The number of streams was less than or equal to zero.

Action: Specify a number of streams greater than zero and retry the operation.

ORA-64726: number of streams <varname>string</varname> too large; must be no larger than <varname>string</varname>

Cause: The number of streams was larger than the total number of drives available. The number of streams must be no larger than the total number of drives available.

Action: Reduce the number of available streams and retry the operation.

ORA-64727: number of copies <varname>string</varname> not in the range 1 through 4

Cause: The number of copies was either NULL or not in the range 1 through 4 inclusive.

Action: Specify a number of copies in the range 1 through 4 and retry the operation.

ORA-64728: replication server name length <varname>string</varname>; maximum length 32

Cause: The replication server name was longer than 32 characters.

Action: Specify a replication server name shorter than 32 characters and retry the operation.

ORA-64729: replication server proxy port <varname>string</varname> must be greater than zero

Cause: The replication server proxy port number was less than or equal to zero.

Action: Specify a replication server proxy port number greater than zero and retry the operation.

ORA-64730: replication server proxy URL provided but proxy port is NULL

Cause: A replication server proxy URL was provided but a proxy port number was not. If either a proxy URL or a proxy port are specified, both must be specified.

Action: Specify both a replication server URL and a replication server proxy port number and retry the operation.

ORA-64731: replication server proxy port provided but proxy URL is NULL

Cause: A replication server proxy port number was provided but a proxy URL was not. If either a proxy URL or a proxy port are specified, both must be specified.

Action: Specify both a replication server URL and a replication server proxy port number and retry the operation.

ORA-64732: HTTP server not configured at replication host

Cause: The HTTP server at the replication host site has not been configured.

Action: Configure the HTTP server at the replication host site and retry the operation.

ORA-64733: unable to move individual backup piece with BP_KEY <varname>string</varname>; not a KEEP backup

Cause: An attempt was made to move an individual backup piece, but the backup set of which this backup piece was a member was not a KEEP backup.

Action: Specify a backup piece key that is a member of a KEEP backup set and retry the operation.

ORA-64734: storage size is less than minimum <varname>string</varname> in "<varname>string</varname>" at column <varname>string</varname>**ORA-64735: unknown incarnation detected at Backup Appliance, need catalog resync**

Cause: A new archived log or backup set belonging to the new incarnation was received at Backup Appliance.

Action: Using RMAN, connect to the Backup Appliance as a recovery catalog, primary database as target database and perform the resynchronization operation using the RESYNC CATALOG RMAN command. If this error occurred at downstream of the Backup Appliance (in a replicated Backup Appliance setup), the reconcile operation fixes this error automatically when the same error is fixed at the upstream Backup Appliance.

ORA-64736: Task ID <varname>string</varname> of type <varname>string</varname> has been interrupted <varname>string</varname> times.

Cause: The specified task was restarted an unexpected number of times. Tasks get interrupted when there is competition for resources. This is only a warning. It does not necessarily indicate a problem with the Backup Appliance.

Action: If these problems persist for long periods, contact Oracle Support Services.

ORA-65000: missing or invalid pluggable database name

Cause: A valid pluggable database name was not present where required.

Action: Reissue the statement with a valid pluggable database name.

ORA-65001: missing or invalid administrative user name

Cause: A valid administrative user name was not present where required by the syntax of CREATE PLUGGABLE DATABASE statement.

Action: Reissue the CREATE PLUGGABLE DATABASE statement with a valid administrative user name.

ORA-65002: missing or invalid administrative user password

Cause: A valid administrative user password was not present where required by the syntax of CREATE PLUGGABLE DATABASE statement.

Action: Reissue the CREATE PLUGGABLE DATABASE statement with a valid administrative user password.

ORA-65003: missing or invalid XML file name

Cause: A valid XML file name was not present where required by the syntax of CREATE PLUGGABLE DATABASE statement.

Action: Reissue the CREATE PLUGGABLE DATABASE statement with a valid XML file name.

ORA-65004: missing or invalid database link name

Cause: A valid database link name was not present where required by the syntax of CREATE PLUGGABLE DATABASE statement.

Action: Reissue the CREATE PLUGGABLE DATABASE statement with a valid database link name.

ORA-65005: missing or invalid file name pattern for file - <varname>string</varname>

Cause: Either source or replacement file name pattern was missing or invalid in a SOURCE_FILE_NAME_CONVERT or FILE_NAME_CONVERT clause.

Action: Correct the SOURCE_FILE_NAME_CONVERT or FILE_NAME_CONVERT clause and reissue the statement.

ORA-65006: missing or invalid ENABLE PLUGGABLE DATABASE clause

Cause: An ENABLE PLUGGABLE DATABASE clause was not present where required by the syntax of CREATE DATABASE statement.

Action: Reissue the CREATE DATABASE statement with a valid ENABLE PLUGGABLE DATABASE clause.

ORA-65007: duplicate ENABLE PLUGGABLE DATABASE clause

Cause: A duplicate ENABLE PLUGGABLE DATABASE clause was specified in a CREATE DATABASE statement.

Action: Reissue the CREATE DATABASE statement with a valid ENABLE PLUGGABLE DATABASE clause.

ORA-65008: missing or invalid SEED clause

Cause: A SEED clause was not present where required by the syntax of CREATE DATABASE statement.

Action: Reissue the CREATE DATABASE statement with a valid SEED clause.

ORA-65010: maximum number of pluggable databases created

Cause: User attempted to create more than supported number of pluggable databases.

Action: Avoid creating too many pluggable databases.

ORA-65011: Pluggable database <varname>string</varname> does not exist.

Cause: User attempted to specify a pluggable database that does not exist.

Action: Check DBA_PDBS to see if it exists.

ORA-65012: Pluggable database <varname>string</varname> already exists.

Cause: User attempted to create a pluggable database with a name that already exists.

Action: Check DBA_PDBS to see if the name exists.

ORA-65013: invalid CONTAINER clause

Cause: An invalid CONTAINER clause was encountered.

Action: Reissue the DDL statement with a valid CONTAINER clause.

ORA-65014: invalid SHARING clause

Cause: An invalid SHARING clause was encountered.

Action: Reissue the DDL statement with a valid SHARING clause.

ORA-65015: missing or invalid container name

Cause: A valid container name was not present where required by the syntax of ALTER SESSION SET CONTAINER or ALTER USER ... SET|ADD|REMOVE CONTAINER_DATA statement.

Action: Reissue the statement with a valid container name.

ORA-65016: FILE_NAME_CONVERT must be specified

Cause: Data files, and possibly other files, needed to be copied as a part of creating a pluggable database. However, Oracle Managed Files (OMF) was not enabled, PDB_FILE_NAME_CONVERT was not defined, and there was a failure to specify the FILE_NAME_CONVERT clause.

Action: Enable OMF or define PDB_FILE_NAME_CONVERT system parameter before issuing CREATE PLUGGABLE DATABASE statement, or specify FILE_NAME_CONVERT clause as a part of the statement.

ORA-65017: seed pluggable database may not be dropped or altered

Cause: User attempted to drop or alter the Seed pluggable database which is not allowed.

Action: Specify a legal pluggable database name.

ORA-65018: FILE_NAME_CONVERT or NOCOPY must be specified

Cause: Oracle Managed Files (OMF) was not enabled and PDB_FILE_NAME_CONVERT was not defined. The FILE_NAME_CONVERT or the NOCOPY clause was not specified as a part of creating a pluggable database using data files.

Action: Enable OMF or define PDB_FILE_NAME_CONVERT system parameter before issuing CREATE PLUGGABLE DATABASE statement, or specify FILE_NAME_CONVERT clause or NOCOPY as a part of the statement.

ORA-65019: pluggable database <varname>string</varname> already open

Cause: An attempt was made to open a pluggable database that was already opened.

Action: Check the OPEN_MODE column in V\$PDBS view.

ORA-65020: pluggable database <varname>string</varname> already closed

Cause: An attempt was made to close a pluggable database that was already closed.

Action: Check the OPEN_MODE column in V\$PDBS view.

ORA-65021: illegal use of SHARING clause

Cause: A SHARING clause was encountered in unexpected context.

Action: Do not use SHARING clause outside of Oracle-supplied scripts.

ORA-65022: CONTAINER clause already specified

Cause: A statement contained multiple CONTAINER clauses.

Action: Eliminate redundant CONTAINER clauses.

ORA-65023: active transaction exists in container <varname>string</varname>

Cause: A statement attempted to create a new transaction in the current container while there was an active transaction in another container.

Action: Switch to the container with the active transaction and commit, rollback or detach the active transaction before attempting to issue any statement that will attempt to create a new transaction in another container.

ORA-65024: Pluggable database <varname>string</varname> is not open.

Cause: An operation was attempted on a pluggable database that was not open.

Action: Open the pluggable database using appropriate open mode.

ORA-65025: Pluggable database <varname>string</varname> is not closed on all instances.

Cause: An operation was attempted on a pluggable database that was not closed on all Oracle RAC instances.

Action: Close the pluggable database on all instances and retry the operation.

ORA-65026: XML metadata file error : <varname>string</varname>

Cause: An error occurred while trying to parse or write to the XML metadata file.

Action: Check that the XML metadata file exists and is readable.

ORA-65027: XML metadata file error while getting node or value for (<varname>string</varname> - <varname>string</varname>)

Cause: An error occurred while trying to parse the XML metadata file.

Action: Check and correct the XML metadata file.

ORA-65028: Unable to open plugin data file at path <varname>string</varname>

Cause: Error occurred while trying to open the datafile.

Action: Check that the datafile exists at the path.

ORA-65029: a Local User may not grant or revoke a Common Privilege or Role

Cause: A Local User issued a GRANT or REVOKE statement specifying CONTAINER=ALL, which is illegal.

Action: Remove CONTAINER=ALL from the statement.

ORA-65030: one may not grant a Common Privilege to a Local User or Role

Cause: A Common User issued a GRANT statement specifying CONTAINER=ALL and naming a Local User or Role as a grantee, which is illegal.

Action: If trying to grant a Local Privilege, remove CONTAINER=ALL from the statement. If trying to grant a Common Privilege, remove Local Users and Roles from the list of grantees.

ORA-65031: one may not revoke a Common Privilege from a Local User or Role

Cause: A Common User issued a REVOKE statement specifying CONTAINER=ALL and naming a Local User or Role as a grantee, which is illegal.

Action: If trying to revoke a Local Privilege, remove CONTAINER=ALL from the statement. If trying to revoke a Common Privilege, remove Local Users and Roles from the list of grantees.

ORA-65032: a Local Role may only be granted or revoked within the current Container

Cause: A user issued a GRANT or REVOKE statement specifying CONTAINER=ALL and listing a Local Role among roles to be granted or revoked, which is illegal.

Action: If trying to revoke a Local Role, remove CONTAINER=ALL from the statement. If trying to revoke Common Privileges and/or Roles, remove Local Roles from the list of roles being granted or revoked.

ORA-65033: a common privilege may not be granted or revoked on a local object

Cause: A GRANT or REVOKE statement was issued specifying CONTAINER=ALL and naming a local object on which privileges are to be granted or revoked, which is illegal.

Action: Remove CONTAINER=ALL from the statement.

ORA-65034: PDB describe output file not specified

Cause: User attempted to describe a pluggable database without specifying an output XML file location.

Action: Specify an output file location for describe

ORA-65035: unable to create pluggable database from <varname>string</varname>

Cause: The pluggable database had ongoing or active transactions that need to be recovered.

Action: Open the pluggable database in read/write mode before cloning again so that transaction recovery can be performed.

ORA-65036: pluggable database <varname>string</varname> not open in required mode

Cause: Attempted to perform an operation on a pluggable database in incorrect open mode.

Action: Open the pluggable database in the mode required for this operation

ORA-65037: a common privilege may not be granted or revoked on a local user

Cause: A GRANT or REVOKE statement was issued specifying CONTAINER=ALL and naming a local user on which privileges are to be granted or revoked, which is illegal.

Action: Remove CONTAINER=ALL from the statement.

ORA-65039: container identifier column missing or is of unexpected type in a definition of a CONTAINER_DATA object

Cause: Table or view whose definition contained a CONTAINER_DATA clause lacked a column used to identify a container to which data belongs or the column was of unexpected type.

Action: Correct the statement and reenter.

ORA-65040: operation not allowed from within a pluggable database

Cause: An operation was attempted that can only be performed in the root container.

Action: Switch to the root container to perform the operation.

ORA-65041: CONTAINER_DATA attribute for this user cannot be modified

Cause: An attempt was made to modify CONTAINER_DATA attribute for user SYS or SYSBACKUP which is disallowed.

Action: Do not attempt to modify CONTAINER_DATA attribute for users SYS or SYSBACKUP.

ORA-65042: name is already used by an existing container

Cause: The name was already used by another container.

Action: Specify a valid name.

ORA-65043: TABLESPACE keyword expected

Cause: TABLESPACE keyword was missing.

Action: Specify a TABLESPACE keyword.

ORA-65044: missing or invalid option following STORAGE keyword

Cause: An option other than MAXSIZE or MAX_SHARED_TEMP_SIZE was specified.

Action: Specify only legal options.

ORA-65045: pluggable database not in a restricted mode

Cause: An operation was attempted on a pluggable database that was not in restricted mode.

Action: Open the pluggable database in a restricted mode.

ORA-65046: operation not allowed from outside a pluggable database

Cause: An operation was attempted that can only be performed from within a pluggable database.

Action: Switch to a pluggable database to perform the operation.

ORA-65047: object <varname>string</varname>.<varname>string</varname> is invalid or compiled with errors in CDB\$ROOT

Cause: An attempt was made to issue a metadata link ddl for an object that was invalid or compiled with errors in CDB\$ROOT.

Action: Check the validity of the object in CDB\$ROOT.

ORA-65048: error encountered when processing the current DDL statement in pluggable database <varname>string</varname>

Cause: An error was encountered when executing a statement in one of the pluggable databases.

Action: Examine the cause of failure in the pluggable database.

ORA-65049: creation of local user or role is not allowed in CDB\$ROOT

Cause: An attempt was made to create a local user or role in CDB\$ROOT.

Action: If trying to create a common user or role, specify CONTAINER=ALL.

ORA-65050: Common DDLs only allowed in CDB\$ROOT

Cause: An attempt was made to issue a Common DDL in a pluggable database.

Action: Switch to CDB\$ROOT and issue the Common DDL there.

ORA-65051: missing valid container identifier

Cause: A valid container identifier was not specified.

Action: Specify a valid container identifier.

ORA-65052: statement involves operations with different container scope

Cause: An attempt was made to combine one operation that applies to all containers with another that only applies to the local container into one statement.

Action: Execute the operations in separate statements.

ORA-65053: A global user cannot change the container in the session.

Cause: An attempt was made by a global user to change the container using the ALTER SESSION SET CONTAINER statement.

Action: This operation is not allowed for global users.

ORA-65054: Cannot open a pluggable database in the desired mode.

Cause: An attempt was made to open a pluggable database in a mode incompatible with that of the CDB.

Action: Open the CDB in a compatible mode first and retry the operation.

ORA-65056: CONTAINER_DATA attribute is not used in a pluggable database.

Cause: User connected to a pluggable database attempted to modify a CONTAINER_DATA attribute which is illegal.

Action: User connected to a pluggable database may only see rows of CONTAINER_DATA objects on which he has been granted appropriate privilege and which pertain to that pluggable database or to the CDB as a whole. Ability to see this data is not controlled by CONTAINER_DATA attribute, which is only used to control ability to see rows pertaining to certain Containers while connected to CDB\$ROOT in a CDB.

ORA-65057: CONTAINER_DATA attribute must always include the current container

Cause: User issuing ALTER USER ... SET|REMOVE CONTAINER_DATA = ... statement attempted to exclude the current container from a CONTAINER_DATA attribute.

Action: Ensure that a CONTAINER_DATA attribute always includes the current container.

ORA-65058: object-specific CONTAINER_DATA attribute may only be specified for a CONTAINER_DATA object

Cause: Object referenced in an ALTER USER statement modifying an object-specific CONTAINER_DATA attribute is not a CONTAINER_DATA table or view.

Action: Ensure that an object referenced in the statement is a CONTAINER_DATA table or view.

ORA-65059: duplicate container name in CONTAINER_DATA clause

Cause: Duplicate references to a name of some container was encountered in a CONTAINER_DATA clause.

Action: Ensure that no container name appears more than once.

ORA-65060: CONTAINER_DATA attribute is not set

Cause: User attempted to add container(s) to an object-specific CONTAINER_DATA attribute which has not been explicitly set or has been set to DEFAULT or remove

containers from a CONTAINER_DATA attribute which has not been explicitly set or has been set to DEFAULT.

Action: Avoid adding containers to object-specific CONTAINER_DATA attribute which has not been explicitly set or has been set to DEFAULT or removing containers from a CONTAINER_DATA attribute which has not been explicitly set or has been set to DEFAULT.

ORA-65061: some of specified containers do not belong to the CONTAINER_DATA attribute

Cause: User attempted to remove from a CONTAINER_DATA attribute container(s) which do not belong to it.

Action: Do not attempt to remove from a CONTAINER_DATA attribute container(s) which do not belong to it.

ORA-65062: CONTAINER_DATA attribute is set to ALL

Cause: User attempted to add/remove container(s) to/from a CONTAINER_DATA attribute whose current value is ALL, which is not supported.

Action: Do not attempt to add/remove container(s) to/from a CONTAINER_DATA attribute whose current value is ALL.

ORA-65063: CONTAINER_DATA clause has already been specified

Cause: The CONTAINER_DATA clause was specified twice.

Action: Specify only one CONTAINER_DATA clause.

ORA-65064: incorrect contents of XML metadata file

Cause: The contents of the XML metadata file were different from the actual file properties.

Action: Check and correct the XML metadata file.

ORA-65065: A local user or role can only be altered within the current container

Cause: The ALTER USER or ALTER ROLE statement was issued specifying CONTAINER=ALL and listing a local user or role among the users or roles to be altered, which is illegal.

Action: If trying to alter a local user or role, specify CONTAINER=CURRENT. If trying to alter common users or roles, remove local users or roles from the list of roles being altered.

ORA-65066: The specified changes must apply to all containers

Cause: An attempt was made to apply the specified changes to the current container.

Action: Specify CONTAINER=ALL.

ORA-65067: DEFAULT ROLE clause referencing a local role can only apply to the current container

Cause: An attempt was made to reference a local role across all containers using the DEFAULT ROLE clause.

Action: If you are trying to set a local role as the default role, specify CONTAINER=CURRENT. If trying to set common roles as the default roles, remove local roles from the list of roles referenced in the DEFAULT ROLE clause.

ORA-65068: cannot define a trigger that fires after a pluggable database is unplugged

Cause: An attempt was made to create a trigger that fires after a pluggable database has been unplugged. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires after a pluggable database has been unplugged.

ORA-65069: AFTER DB_ROLE_CHANGE triggers cannot be defined on a pluggable database

Cause: An attempt was made to create a pluggable database trigger that fires after a role change occurs from a standby database to primary or vice versa. This type of trigger is not supported.

Action: Do not specify AFTER DB_ROLE_CHANGE when creating a trigger on a pluggable database.

ORA-65070: AFTER CLONE trigger can only be created on a pluggable database

Cause: An attempt was made to create an AFTER CLONE trigger on a schema or a database. This type of trigger is not supported.

Action: Do not specify AFTER CLONE when creating a trigger on a schema or a database.

ORA-65071: BEFORE UNPLUG trigger can only be created on a pluggable database

Cause: An attempt was made to create a BEFORE UNPLUG trigger on a schema or a database. This type of triggers is not supported.

Action: Do not specify BEFORE UNPLUG when creating a trigger on a schema or a database.

ORA-65072: user must be connected to a pluggable database on which a trigger is being created

Cause: An attempt was made to create a database event trigger on a pluggable database while not connected to a pluggable database. This is not supported.

Action: Connect to the pluggable database on which a database event trigger needs to be created before attempting to create such a trigger.

ORA-65073: cannot define a trigger that fires before a pluggable database is cloned

Cause: An attempt was made to create a trigger that fires before a pluggable database has been cloned. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires before a pluggable database has been cloned.

ORA-65074: editions not supported for common users

Cause: An attempt was made to support editions for common users.

Action: Do not attempt to enable editions for common users.

ORA-65080: cannot determine pluggable database name

Cause: An attempt was made to map the database ID to the pluggable database name.

Action: Contact Oracle Support Services.

ORA-65081: database or pluggable database is not open in read only mode

Cause: An operation was attempted on a database or pluggable database that is not open in read only mode

Action: Open the database or pluggable database in read only mode and then retry the operation.

ORA-65082: cannot add any more pluggable databases: limit of <varname>string</varname> exceeded

Cause: There was no more room in the control file for adding pluggable databases.

Action: Recreate the control file.

ORA-65083: pluggable database (PDB) shutdown in progress

Cause: The pluggable database is in the middle of shutdown abort

Action: Retry the operation later.

ORA-65084: object <varname>string</varname>.<varname>string</varname> does not exist in root

Cause: An attempt was made to create a common object that does not exist in root.

Action: Invoke the script using catcon.pl to create the object in all containers.

ORA-65085: cannot open pluggable database in read-only mode

Cause: The pluggable database has been created and not opened.

Action: The pluggable database needs to be opened in read/write or restricted mode first.

ORA-65086: cannot open/close the pluggable database

Cause: The pluggable database has been unplugged.

Action: The pluggable database can only be dropped.

ORA-65087: Oracle-supplied operation not allowed from within a pluggable database

Cause: An operation in an Oracle-supplied script was attempted that can only be performed in the root container.

Action: Confirm that the operation is needed in the root container, and switch to the root container to perform the operation.

ORA-65088: database open should be retried

Cause: An inconsistency between the control file and the data dictionary was found and fixed during the database open. The database open needs to be executed again.

Action: Retry the database open.

ORA-65089: pluggable database is not clean

Cause: The pluggable database was not open anywhere but was not marked as clean yet.

Action: Wait until the cleanup is done and retry.

ORA-65090: operation only allowed in a container database

Cause: User attempted an operation that is only allowed in a CDB

Action: Connect to a CDB to perform this operation

ORA-65091: operation on <varname>string</varname> not allowed in a pluggable database

Cause: An undo tablespace or rollback segment operation was attempted that can only be performed in the root container.

Action: Switch to the root container to perform the undo tablespace or rollback segment operation.

ORA-65092: system privilege granted with a different scope to '<varname>string</varname>'

Cause: An attempt to revoke a system privilege that was granted with a different scope has been made. The user tried to either revoke a common privilege in the current container or to revoke a local privilege in a container database (CDB).

Action: Specify the correct value for the CONTAINER clause.

ORA-65093: multitenant container database not set up properly

Cause: An attempt was made to open a multitenant container database without the correct parameter set for a multitenant container database in the initialization parameter file.

Action: Set the 'enable_pluggable_database=true' parameter for the multitenant container database in the initialization parameter file and restart the database.

ORA-65094: invalid local user or role name

Cause: An attempt was made to create a local user or role with a name that was not valid for local users or roles. In addition to the usual rules for user and role names, local user and role names cannot start with C## or c##.

Action: Specify a valid local user or role name.

ORA-65095: invalid common object name

Cause: An attempt was made to create a common object with a name that was not valid for common objects. In addition to the usual rules for object names, common object names must consist only of ASCII characters.

Action: Specify a valid common object name.

ORA-65096: invalid common user or role name

Cause: An attempt was made to create a common user or role with a name that was not valid for common users or roles. In addition to the usual rules for user and role names, common user and role names must start with C## or c## and consist only of ASCII characters.

Action: Specify a valid common user or role name.

ORA-65097: Invalid argument supplied to CDB\$VIEW function

Cause: CDB\$VIEW may be applied to a valid table name of the form <varname>owner</varname>.<varname>tablename</varname>

Action: Correct the statement

ORA-65098: Datatype not supported with CDB\$VIEW function

Cause: Column with unsupported datatype was selected from a CDB View.

Action: Remove the column from the select list

ORA-65099: Operation cannot be performed when the CDB is not open

Cause: An operation was attempted inside a pluggable database that requires the container database (CDB) to be open. *Action: Open the CDB and then reissue the operation.

Action: n/a

ORA-65100: missing or invalid path prefix - <varname>string</varname>

Cause: Path prefix was missing or invalid.

Action: Correct the PATH_PREFIX clause and reissue the statement.

ORA-65101: container database set up incorrectly

Cause: An attempt was made to use a non container database control file to startup a container database (CDB).

Action: Create a new control file for the CDB.

ORA-65102: missing or invalid instance name

Cause: A valid instance name was not present where required by the syntax of a ALTER PLUGGABLE DATABASE statement.

Action: Reissue the statement with a valid instance name.

ORA-65103: UPGRADE cannot be specified for PDBs being open in READ ONLY mode

Cause: ALTER PLUGGABLE DATABASE ... OPEN UPGRADE was specified, but the root is open READ ONLY, so the specified PDBs will also be opened READ ONLY, and UPGRADE cannot be specified for PDBs being opened READ ONLY.

Action: Reissue the statement without specifying UPGRADE or reopen the root in READ WRITE mode and then reissue the statement.

ORA-65104: operation not allowed on an inactive pluggable database

Cause: The pluggable database status was INACTIVE. It was still being created or there was an error during the create operation.

Action: Wait until the status is changed to CREATED or, in case of errors, drop the pluggable database and re-create it.

ORA-65105: SYSTEM data file for pluggable database #<varname>string</varname> not found

Cause: Data files were not specified in a CREATE CONTROLFILE statement in the SYSTEM tablespace of a pluggable database.

Action: Locate the data files and resubmit the CREATE CONTROLFILE statement.

ORA-65106: Pluggable database #<varname>string</varname> (<varname>string</varname>) is in an invalid state.

Cause: Data files were not specified in a CREATE CONTROLFILE statement of a pluggable database.

Action: Drop the pluggable database or locate the data files and resubmit the CREATE CONTROLFILE statement.

ORA-65107: Error encountered when processing the current task on instance:<varname>string</varname>

Cause: An error was encountered when executing a pluggable database task on one of the Oracle RAC instances.

Action: Examine the cause of failure on the instance.

ORA-65108: invalid use of a cursor belonging to another container

Cause: An attempt was made to use a cursor that was parsed or executed in a different container.

Action: Check if there are any incorrect uses of the SET CONTAINER statement. Parse, execute, fetch, and close a cursor only all in the same container.

ORA-65109: operation not allowed in CDB\$ROOT

Cause: An operation was attempted that is not supported in the Container Database root.

Action: Switch to a pluggable database to perform the operation.

ORA-65110: Invalid instance name specified

Cause: An attempt was made to use an invalid or inactive instance name in the instance clause to alter the state of a pluggable database.

Action: Specify a valid and active instance name.

ORA-65111: Cannot relocate to the same instance

Cause: An attempt was made to relocate a pluggable database to the current instance.

Action: Specify an instance which is different then the current instance.

ORA-65112: pluggable database <varname>string</varname> not closed on all instances of the standby database

Cause: Media recovery stopped because the pluggable database was either unplugged, dropped or renamed on the primary database.

Action: Close the pluggable database on all instances and restart the recovery.

ORA-65113: value of MAX_PDB_STORAGE property for the PDB is too low

Cause: The value of MAX_PDB_STORAGE specified in the ALTER or CREATE PLUGGABLE DATABASE statement is less than the current space usage of data files and temporary files of the container.

Action: Specify a higher value for MAX_PDB_STORAGE.

ORA-65114: space usage in container is too high

Cause: Space usage in the current container exceeded the value of MAX_PDB_STORAGE for the container.

Action: Specify a higher value for MAX_PDB_STORAGE using the ALTER PLUGGABLE DATABASE statement.

ORA-65115: CDB resource plan <varname>string</varname> has more than <varname>string</varname> PDB directives.

Cause: An attempt was made to create or update the specified multitenant container database (CDB) resource plan to use more than the supported number of directives.

Action: Remove the directives for pluggable databases (PDBs) that are not active on this database.

ORA-65116: incompatible database character set

Cause: The database character set of the container database was not a superset of the database character set of the pluggable database being plugged in.

Action: Plug the pluggable database into a container database having a compatible database character set.

ORA-65117: CONTAINER clause may only be specified when connected to a container database

Cause: The CONTAINER clause was specified when not connected to a container database (CDB).

Action: Reenter the statement without the CONTAINER clause.

ORA-65118: operation affecting a pluggable database cannot be performed from another pluggable database

Cause: An attempt was made to perform an operation affecting a pluggable database while connected to a different pluggable database.

Action: Connect to the desired pluggable database and perform the operation.

ORA-65119: incompatible national character set

Cause: The national character set of the container database was not the same as the national character set of the pluggable database being plugged in.

Action: Plug the pluggable database into a container database having the same national character set.

ORA-65120: illegal character set ID in XML metadata file

Cause: The XML metadata file for the pluggable database being plugged in contained a database or national character set ID that was not valid for the container database. This can happen if the XML file is manually modified, if it is corrupted on disk, or if the set of supported character sets differs between the container database and the source database of the pluggable database because a user-defined character set has not been installed in the Oracle Home directory of the container database.

Action: If you have manually modified the XML metadata file of the pluggable database, restore the original file or re-create the pluggable database from its source database. Manual modifications of the XML file are not supported. If the pluggable database uses a user-defined character set, make sure the character set is installed in the Oracle Home directory of the container database. Otherwise, contact Oracle Support Services.

ORA-65121: ALTER SESSION SET CONTAINER not allowed from this client

Cause: Clients earlier than Oracle Database 12c Release 1 do not support this feature.

Action: Upgrade the client to Oracle Database 12c Release 1 or later.

ORA-65122: Pluggable database GUID conflicts with the GUID of an existing container.

Cause: While creating a pluggable database, the GUID conflicted with the GUID of an existing container in the container database.

Action: Retry creating the pluggable database or consider using the AS CLONE clause for CREATE PLUGGABLE DATABASE if plugging in a copy of another pluggable database.

ORA-65123: cannot perform a SET CONTAINER operation in this context

Cause: An attempt was made to set the container inside a context where such an operation is prohibited.

Action: Do not set the container from inside a system trigger or a DML context.

ORA-65125: valid XML file name is required

Cause: An attempt was made to provide a file name that did not have an XML extension.

Action: Specify an XML file.

ORA-65126: pluggable database <varname>string</varname> cannot be unplugged.

Cause: The pluggable database was not closed cleanly and there are active transactions that need to be recovered.

Action: Open the pluggable database in read/write mode before unplugging again so that transaction recovery can be performed.

ORA-65127: PDB recover output file not specified

Cause: An attempt was made to recover a pluggable database (PDB) without specifying an output XML file location.

Action: Specify an output file location for recovery.

ORA-65128: PDB recover data file name not specified

Cause: An attempt was made to recover a pluggable database (PDB) without specifying a data file location.

Action: Specify a data file location for recovery.

ORA-65129: Pluggable database <varname>string</varname> cannot be relocated.

Cause: The pluggable database was already opened on all instances.

Action: Close the pluggable database without RELOCATE clause or close the pluggable database on another instance.

ORA-65130: cannot relocate more than one pluggable database.

Cause: An attempt was made to relocate more than one pluggable database.

Action: RELOCATE pluggable database one at a time.

ORA-65131: The feature <varname>string</varname> is not supported in a pluggable database.

Cause: An attempt was made to use a feature that is not supported in a pluggable database.

Action: Do not use this feature in a pluggable database.

ORA-65134: endian mismatch

Cause: The endian of the container database was not the same as the endian of the pluggable database being plugged in.

Action: Plug the pluggable database into a container database having the same endian.

ORA-65135: cannot perform ALTER SESSION SET CONTAINER operation in this context

Cause: An ALTER SESSION SET CONTAINER operation was attempted in a context where such an operation is prohibited.

Action: Do not perform the ALTER SESSION SET CONTAINER operation from a session that can be migrated or a session from an OCI connection pool.

ORA-65136: SPFILE name cannot be specified for a pluggable database

Cause: An attempt was made to specify an SPFILE name for a pluggable database.

Action: Remove the SPFILE name and retry the operation in the pluggable database.

ORA-65137: Pluggable database <varname>string</varname> is in the middle of Pluggable Database RESETLOGS operation.

Cause: The pluggable database is in the middle of a Pluggable Database (PDB) RESETLOGS operation.

Action: If possible, recover the Container Database further so that this Pluggable database is not in the middle of a PDB RESETLOGS operation. Another alternative is to perform PDB point-in-time recovery. A message is logged in the alert log indicating SCN and time until which the pluggable database can be point-in-time recovered.

ORA-65138: Data file <varname>string</varname> of pluggable database <varname>string</varname> belongs to an orphan PDB incarnation.

Cause: Either the specified data file was restored from a backup that was taken during a period of time that was discarded by a RESETLOGS operation, or Oracle could not identify which pluggable database incarnation the file belongs to. The alert log contains more information.

Action: Restore a backup of this file that belonged to either the current or a prior incarnation of the pluggable database. If you are using RMAN to restore, RMAN will automatically select a correct backup.

ORA-65139: Mismatch between XML metadata file and data file <varname>string</varname> for value of <varname>string</varname> (<varname>string</varname>)

Cause: Either the XML metadata file or the data file was corrupt.

Action: Verify that the XML metadata file and the data file are consistent as of the point when the unplug was done and retry the operation.

ORA-65140: invalid common profile name

Cause: An attempt was made to create a common profile with a name that is not valid for common profiles. Common profile names must start with C## or c## and consist only of ASCII characters.

Action: Specify a valid common profile name.

ORA-65141: invalid local profile name

Cause: An attempt was made to create a local profile with a name that is not valid for local profiles. Local profile names cannot start with C## or c##.

Action: Specify a valid local profile name.

ORA-65142: A local profile can be altered only within the current container

Cause: An attempt was made to alter a local profile using an ALTER PROFILE statement with the CONTAINER=ALL clause.

Action: If attempting to alter a local profile, ensure that you are connected to the correct container and optionally specify CONTAINER=CURRENT.

ORA-65143: creation of local profiles is not allowed in CDB\$ROOT

Cause: An attempt was made to create a local profile in CDB\$ROOT.

Action: If attempting to create a common profile, do not specify CONTAINER=CURRENT.

ORA-65144: ALTER SYSTEM DISABLE RESTRICTED SESSION is not permitted

Cause: An attempt was made to disable a restricted session while an unresolved error existed in PDB_PLUG_IN_VIOLATIONS.

Action: Resolve all of the errors before trying to disable a restricted session.

ORA-65145: FORCE open of a pluggable database on more than one instance is not supported

Cause: An attempt was made to FORCE open a pluggable database on more than one instance.

Action: Retry the FORCE open of the pluggable database one instance at a time.

ORA-65146: account cannot be unlocked in a PDB while it is locked in the root

Cause: An attempt was made to unlock a common user account in a pluggable database (PDB) which was locked in the root of the container database.

Action: Ensure that a common user account is not locked in the root before attempting to unlock it in a PDB.

ORA-65147: DB_UNIQUE_NAME specified without SPFILE scope

Cause: An attempt was made to specify a DB_UNIQUE_NAME in an ALTER SYSTEM statement without SCOPE=SPFILE.

Action: Use DB_UNIQUE_NAME only with SCOPE=SPFILE.

ORA-65148: cannot FORCE open a pluggable database to or from upgrade mode

Cause: An attempt was made to FORCE open a pluggable database to or from upgrade mode.

Action: Close the pluggable database first and retry the operation.

ORA-65149: PDB name conflicts with existing service name in the CDB or the PDB

Cause: An attempt was made to create a pluggable database (PDB) whose name conflicts with the existing service name in the container database (CDB) or the PDB.

Action: Choose a different name for the PDB.

ORA-65150: unable to start the instance

Cause: An attempt was made to start an instance as a container or a non-container database when at least one of the other instances was started in a different mode.

Action: Start the instance in the same mode as all the other instances.

ORA-65151: invalid tablespace name specified

Cause: An attempt was made to use an invalid tablespace name or a mandatory tablespace name (SYSTEM or SYSAUX) in the USER_TABLESPACES clause when creating a pluggable database.

Action: Specify a valid tablespace name.

ORA-65152: cannot bring datafile online

Cause: An attempt was made to bring online one or more datafiles belonging to a pluggable database that is disabled for recovery.

Action: Issue the ALTER PLUGGABLE DATABASE ENABLE RECOVERY statement first and retry the operation.

ORA-65153: cannot bring tablespace online

Cause: An attempt was made to bring online a tablespace that was either missing in the plug XML file or excluded when the pluggable database was created.

Action: Drop and recreate the tablespace to bring it online.

ORA-65154: specified logging attribute for the pluggable database is same as the current attribute value

Cause: An attempt was made to change the default logging attribute to be the same as the current attribute value for the pluggable database.

Action: Change the logging attribute to a different value.

ORA-65155: missing or invalid source file directory <varname>string</varname>

Cause: Source file directory was missing or invalid.

Action: Correct the SOURCE_FILE_DIRECTORY clause and reissue the statement.

ORA-65156: pluggable database version <varname>string</varname> not allowed

Cause: An attempt was made to plug in a pluggable database with an incompatible version of the multitenant container database.

Action: Plug in a pluggable database with a compatible version of the multitenant container database.

ORA-65157: SOURCE_FILE_NAME_CONVERT and SOURCE_FILE_DIRECTORY cannot be specified together

Cause: SOURCE_FILE_NAME_CONVERT and SOURCE_FILE_DIRECTORY clauses were both specified.

Action: Use either the SOURCE_FILE_NAME_CONVERT or the SOURCE_FILE_DIRECTORY clause and reissue the statement.

ORA-65158: could not find a matching file for - <varname>string</varname>

Cause: A matching file was not found in the directory specified with the SOURCE_FILE_DIRECTORY clause.

Action: Correct the SOURCE_FILE_DIRECTORY clause or check that the file exists in the directory and reissue the statement.

ORA-65159: invalid service name specified

Cause: An attempt was made to use an invalid service name in the services clause.

Action: Specify a valid service name.

ORA-65160: invalid cleanup task ID

Cause: An attempt was made to pass an invalid cleanup task ID to the DBMS_PDB.CLEANUP_TASK function.

Action: Specify a valid cleanup task ID.

ORA-65161: Unable to create pluggable database with no data

Cause: An attempt was made to clone a pluggable database which contains some clustered tables or index organized tables or advanced queue tables.

Action: Retry the clone operation after dropping all such objects from the source pluggable database.

ORA-65162: The password has expired.

Cause: The user's account expired and the password needs to be changed by connecting to the root of the multitenant container database

Action: Change the password or contact the DBA.

ORA-65164: database is in NOARCHIVELOG mode

Cause: The database was in NOARCHIVELOG mode when pluggable database (PDB) shutdown abort was attempted.

Action: Set the database to ARCHIVELOG mode by issuing the ALTER DATABASE ARCHIVELOG command.

ORA-65165: missing or invalid path for file creation <varname>string</varname>

Cause: The path specified in CREATE_FILE_DEST clause was missing or invalid.

Action: Correct the CREATE_FILE_DEST clause and reissue the statement.

ORA-65166: cannot run noncdb_to_pdb.sql if PDB's version differs from CDB's

Cause: An attempt was made to run noncdb_to_pdb.sql when the version of the pluggable database (PDB) was different from the version of the multitenant container database (CDB).

Action: Upgrade the PDB before running noncdb_to_pdb.sql

ORA-65167: cannot run noncdb_to_pdb.sql if container database is in upgrade mode

Cause: An attempt was made to run noncdb_to_pdb.sql when the multitenant container database (CDB) was in upgrade mode.

Action: Open the CDB in non-upgrade mode.

ORA-65168: missing PFILE name

Cause: An operation involving PFILE was issued in a pluggable database without specifying the PFILE name

Action: Specify a valid PFILE name and retry the operation in the pluggable database.

ORA-65169: error encountered while attempting to copy file <varname>string</varname>

Cause: An error was encountered while attempting to copy the file while creating a pluggable database.

Action: Check additional error messages for the cause of the failure to copy the file, and resolve the issue accordingly.

ORA-65170: XML file <varname>string</varname> already exists

Cause: An attempt to create an XML file failed because a file with that name already exists.

Action: Use a different XML file name.

ORA-65171: invalid value for DB_BLOCK_CHECKING parameter

Cause: An attempt was made to specify a value of FALSE or OFF for the DB_BLOCK_CHECKING parameter in a pluggable database (PDB), when the value of DB_BLOCK_CHECKING parameter in the multitenant container database (CDB) is neither FALSE nor OFF. If the CDB has enabled the DB_BLOCK_CHECKING parameter, then the PDB cannot disable the DB_BLOCK_CHECKING parameter.

Action: Specify a value other than FALSE or OFF for the DB_BLOCK_CHECKING parameter in the PDB.

ORA-65172: cannot run noncdb_to_pdb.sql unless pluggable database is an unconverted non-container database

Cause: An attempt was made to run 'noncdb_to_pdb.sql' on a pluggable database (PDB) that was not an unconverted non-container database.

Action: 'noncdb_to_pdb.sql' is not necessary for this PDB.

ORA-65173: privilege granted with a different scope to '<varname>string</varname>'

Cause: An attempt to revoke a privilege that was granted with a different scope has failed. The user tried to either revoke a common privilege in the current container or to revoke a local privilege in a multitenant container database (CDB).

Action: Specify the correct value for the CONTAINER clause.

ORA-65174: invalid or conflicting name in service <varname>string</varname> found in the pluggable database

Cause: The service name or network name in the specified service is invalid or it conflicts with an existing service name or network name in the container database.

Action: Use an appropriate SERVICE_NAME_CONVERT clause and reissue the statement.

ORA-65175: cannot grant SYSDBA privilege locally in the root

Cause: An attempt was made to grant SYSDBA privilege locally in the root of a multitenant container database (CDB).

Action: While connected to the root, SYSDBA privilege can only be granted commonly.

ORA-65176: system tablespace block size (<varname>string</varname>) does not match configured block sizes

Cause: The block size of the system tablespace of the pluggable database to be plugged in did not match the block sizes configured in the container database.

Action: Configure the appropriate cache for the block size of the system tablespace using the DB_<varname>n</varname>K_CACHE_SIZE parameter (where <varname>n</varname> is 2, 4, 8, 16, or 32).

ORA-65177: cannot create common user with the same name as local user

Cause: An attempt was made to create a common user with the same name as an existing local user.

Action: Specify a different user name.

ORA-65178: invalid logging mode specified for the pluggable database

Cause: An attempt was made to either enable a conflicting logging mode or to disable a logging mode when it was not enabled.

Action: Check the current logging modes in DBA_PDBS for the pluggable database and specify a valid mode.

ORA-65179: cannot keep datafiles for a pluggable database that is not unplugged

Cause: An attempt was made to drop a pluggable database without specifying the INCLUDING DATAFILES clause, and the pluggable database has not been unplugged.

Action: Unplug the pluggable database before dropping the pluggable database or use the INCLUDING DATAFILES clause in the DROP PLUGGABLE DATABASE statement.

ORA-65180: duplicate file name encountered - <varname>string</varname>

Cause: An attempt was made to issue a CREATE PLUGGABLE DATABASE statement with a duplicate source or target file name for the source file name mentioned in the message. This could be caused by incorrect SOURCE_FILE_NAME_CONVERT or FILE_NAME_CONVERT clause.

Action: Use an appropriate SOURCE_FILE_NAME_CONVERT or FILE_NAME_CONVERT clause to ensure that there are no duplicate source or target file names and then reissue the statement.

ORA-65181: invalid argument supplied to CONTAINERS function

Cause: An attempt was made to create a multitenant container database (CDB) view with an invalid table or view name.

Action: Specify a valid table or view name of the form <varname>owner</varname>.<table_name | view_name>.

ORA-65182: unable to modify the state of pluggable database <varname>string</varname>

Cause: An attempt was made to modify the state of a pluggable database which is currently in the middle of a state transition.

Action: Retry the operation later.

ORA-65183: FORCE open of a PDB on only a few instances where its open on is not allowed

Cause: An attempt was made to FORCE open a pluggable database on only a few Oracle RAC instances where it is currently open.

Action: Retry the FORCE open and include all Oracle instances where the PDB is open

ORA-65184: encountered data files belonging to different PDBs

Cause: An attempt was made to invoke DBMS_PDB.RECOVER() by specifying data files or a directory name containing data files belonging to different PDBs.

Action: Check the paths provided to DBMS_PDB.RECOVER() and retry the operation.

ORA-65185: could not find data file belonging to SYSTEM tablespace

Cause: An attempt was made to invoke DBMS_PDB.RECOVER() by specifying data files or a directory name containing data files where no data file belonging to SYSTEM tablespace was found. SYSTEM tablespace is critical to recover a PDB.

Action: Check the paths specified to dbms_pdb.recover() and ensure that it at least contains data files belonging to SYSTEM tablespace.

ORA-65400: Table does not have CLUSTERING clause associated with it

Cause: User attempts to modify clustering clause on a table that does not have one.

Action: Create CLUSTERING clause on the table first.

ORA-65402: invalid option on CLUSTERING clause

Cause: Invalid option on CLUSTERING clause. Only [YES | NO] ON LOAD or [YES | NO] ON DATA MOVEMENT are valid.

Action: Correct the option on the CLUSTERING clause.

ORA-65403: invalid usage of CLUSTERING clause

Cause: Invalid usage of CLUSTERING clause. The clause can be specified only for CREATE/ALTER TABLE/SNAPSHOT/MATERIALIZED VIEW

Action: Don't use CLUSTERING clause in this statement

ORA-65404: CLUSTERING clause specified more than once on a table

Cause: A table can have only one clustering clause. The clause was specified multiple times.

Action: Correct the statement to use only one CLUSTERING clause.

ORA-65405: CLUSTERING clause cannot be used with existing table options

Cause: CLUSTERING clause conflicts with other clauses on the table. Clustering cannot be used on IOT, CLUSTERED, GLOBAL TEMPORARY TABLE, EXTERNAL TABLE.

Action: Correct the statement so clustering clause does not conflict with other clauses.

ORA-65406: invalid option on CLUSTERING clause

Cause: CLUSTERING was not followed by BY [LINEAR | MULTIDIMENSIONAL] ORDER.

Action: Correct the option on the CLUSTERING clause.

ORA-65407: CLUSTERING clause already exists on the table

Cause: Add CLUSTERING clause was specified on a table with an existing clustering clause.

Action: If table has clustering, you can only change ON LOAD or ON DATA MOVEMENT options. To change other options, you must first drop the clause.

ORA-65408: CLUSTERING clause has too many columns in BY ORDER

Cause: More than 10 columns were specified in the BY ORDER subclause. You can have at most 10 columns in the BY ORDER subclause.

Action: Lower the number of columns in the BY ORDER subclause to a value of 10 or less.

ORA-65409: CLUSTERING clause has too many MULTIDIMENSIONAL columns or groups

Cause: More than 40 columns were specified in the MULTIDIMENSIONAL ORDER subclause. You can have at most 40 columns in the MULTIDIMENSIONAL ORDER subclause.

Action: Lower the number of columns in the BY MULTIDIMENSIONAL ORDER subclause to a value of 40 columns or less or 4 groups or less.

ORA-65410: CLUSTERING clause can have only scalar columns

Cause: A non-scalar column was specified in the BY LINEAR or MULTIDIMENSIONAL ORDER subclause. Also, virtual or hidden columns are not allowed.

Action: Specify only scalar columns in the BY [LINEAR | MULTIDIMENSIONAL] ORDER subclause.

ORA-65411: CLUSTERING clause does not exist

Cause: An attempt was made to modify or drop a CLUSTERING clause in a table that had no CLUSTERING clause associated with it.

Action: Do not attempt to modify a nonexistent CLUSTERING clause.

ORA-65412: invalid option on ALTER TABLE .. CLUSTERING ..

Cause: You have specified an invalid option on ALTER TABLE...CLUSTERING. For example, you specified DROP and ADD CLUSTERING in one statement.

Action: Correct the statement.

ORA-65413: cannot resolve referenced object in the CLUSTERING clause

Cause: An object was referenced in the CLUSTERING clause that could not be resolved to a base table reference.

Action: The CLUSTERING clause can refer to base tables only.

ORA-65414: column resolves to multiple tables in the CLUSTERING clause

Cause: A column resolved to multiple tables in the CLUSTERING clause.

Action: Correct the statement. The column should resolve to only one table. Need to qualify by table name.

ORA-65415: wrong join condition in the CLUSTERING clause

Cause: The CLUSTERING clause had an OR condition and the individual join condition on the base table columns was not an equijoin.

Action: Correct the statement. Make sure that join conditions are equijoins and there are no OR conditions, or no expressions in the join.

ORA-65416: multiple dimension tables in the CLUSTERING clause

Cause: Joins in the CLUSTERING referenced a dimension table more than once.

Action: Correct the statement. Remove one of the references.

ORA-65417: illegal dimension table in the CLUSTERING clause

Cause: The dimension table in the CLUSTERING clause was illegal. Dimension table cannot be GLOBAL TEMPORARY TABLE or EXTERNAL TABLE.

Action: Rewrite the statement so it does not use an illegal option on the dimension table.

ORA-65418: primary or unique Key constraint missing in CLUSTERING join

Cause: The join between the fact and dimension tables in the CLUSTERING clause did not have a primary or unique key constraint on the dimension table.

Action: Add a primary or unique key constraint to the join columns on the dimension table.

ORA-65419: columns in a clustering group come from different tables

Cause: Columns in the clustering group did not come from the same table. For example: .. CLUSTERING BY ..((t1.c1, t2.c2), (t2.c1, t2.c2)). Clustering group (t1.c1, t2.c2) must contain references to only one table.

Action: Restructure the clustering group so it contains only references to a single table.

ORA-65420: columns in a join condition in the CLUSTERING clause are not compatible

Cause: The data type of columns in the join condition of CLUSTERING clause were not compatible. They must be of the same type.

Action: Select a compatible data type for the join conditions in the CLUSTERING clause.

ORA-65421: The CLUSTERING clause is defined on columns that are to be modified

Cause: An ALTER TABLE MODIFY COLUMN command was issued on a column on which a CLUSTERING clause exists.

Action: Drop the CLUSTERING clause before attempting to modify the column.

ORA-65422: The CLUSTERING clause already has a zonemap defined on it

Cause: An ALTER TABLE MODIFY CLUSTERING command was issued with the WITH MATERIALIZED ZONEMAP option but the table already had zonemap defined on it.

Action: Drop the zonemap associated with the base table before attempting to add zonemap using the CLUSTERING clause.

ORA-65423: The CLUSTERING clause does not have a zonemap associated with it

Cause: An ALTER TABLE MODIFY CLUSTERING command was issued with the WITHOUT MATERIALIZED ZONEMAP option but the table did not have zonemap associated with the CLUSTERING clause.

Action: Do not use the ALTER TABLE MODIFY CLUSTERING WITHOUT ZONEMAP.

ORA-65424: CLUSTERING clause has too many joins

Cause: More than 4 joins were specified in the CLUSTERING clause. You can have at most 4 joins to the dimension tables.

Action: Reduce the number of joins to 4 or less.

ORA-65425: CLUSTERING clause not supported for table stored in tablespace of this storage type

Cause: An attempt was made to define clustering on a table stored in non-Oracle Exadata storage.

Action: Create this table in a tablespace residing on Oracle Exadata storage or remove the CLUSTERING clause.

ORA-65426: Non-scalar data type is used for a clustering column

Cause: Oracle cannot perform data clustering because an attempt was made to populate a clustering column with non-scalar data values, or a clustering column defaulted to non-scalar values was omitted.

Action: Use only scalar data type for the clustering columns, or disable data clustering with NO_CLUSTERING hint.

ORA-65451: Advanced index compression is not supported for tablespaces on this storage type.

Cause: An attempt was made to use advanced index compression on an unsupported storage type.

Action: Drop and re-create the index with a compression option that is supported on the current storage type.

ORA-65455: family <varname>string</varname> is invalid

Cause: An invalid family was used to specify a parameter value.

Action: Use a valid family.

ORA-65456: family <varname>string</varname> is not valid in <varname>string</varname> instance

Cause: The specified family could not be used in the current instance type.

Action: Remove the family from the environment variable ORACLE_FAMILY.

ORA-65457: family <varname>string</varname> is not valid in <varname>string</varname> instance

Cause: The specified family could not be used in the current instance type.

Action: Use a family that is valid for this instance to set the initialization parameter.

ORA-65458: maximum length of parameter qualifier exceeded

Cause: Too many characters were specified in the parameter qualifier in the initialization parameter file.

Action: Change the parameter qualifier to a valid SID or family.

ORA-65459: family used with a specific system identifier (SID)

Cause: A SID was used with FAMILY.

Action: Use FAMILY without a SID.

ORA-65460: family <varname>string</varname> is invalid

Cause: An invalid family was specified for this instance in ORACLE_FAMILY.

Action: Use a valid family in ORACLE_FAMILY.

ORA-65461: invalid parameter name specified with CONTAINER clause set to ALL

Cause: The CONTAINER clause was set to ALL in the ALTER SYSTEM SET statement for a non-PDB modifiable parameter.

Action: Retry the ALTER SYSTEM SET statement without the CONTAINER clause.

ORA-65466: family '<varname>string</varname>' contains an illegal character or is too long

Cause: The specified family contained an illegal character or the family specified was too long, which cannot occur in an SPFILE setting. Illegal characters include *,#="() and whitespace.

Action: Use a family that does not contain a special character or whitespace. Check platform-specific documentation for the maximum length of family.

ORA-65500: could not modify DB_UNIQUE_NAME, resource exists

Cause: DB_UNIQUE_NAME could not be modified, because a database resource identified by DB_UNIQUE_NAME existed in the cluster. To modify DB_UNIQUE_NAME, any resource it identifies must first be removed.

Action: Remove the database resource identified by DB_UNIQUE_NAME before modifying DB_UNIQUE_NAME.

ORA-65501: locator from <varname>string</varname> container cannot be used in container <varname>string</varname> for this operation

Cause: In a pluggable database environment, an attempt was made to modify a LOB using a locator which belongs to a different container.

Action: Switch back to the original container.

ORA-65502: cannot access temporary LOB data

Cause: The database did not open.

Action: Open the database before accessing LOB data.

ORA-65535: Oracle client cannot handle error code exceeding 65535. Actual error code and message follow:\n

Cause: Oracle server encountered an error whose error code exceeded 65535. Older Oracle clients (prior to version 12) cannot handle error codes larger than 65535.

Action: Actual Oracle error code and error message are a part of the error message for ORA-65535. Upgrade Oracle client to version 12 client libraries or higher.

ORADNFS-65000 to ORADNFS-65072

ORADNFS-65000: Permission denied. You are not a member of ORA_DBA group.

Cause: The ORADNFS utility was invoked by a user who was not in the ORA_DBA group.

Action: Add user of this utility to ORA_DBA group and retry, or log on as a different user (who is in the ORA_DBA group) and retry.

ORADNFS-65001: Currently this option is supported only on Windows.

Cause: The ORADNFS command was issued on an operating system other than Windows.

Action: Run this command only on Windows.

ORADNFS-65002: NFS initialization failed, error code: <varname>number</varname>.

Cause: NFS initialization failed. error code is zero if successful, a negative error code if a software bug is encountered, or a positive error code if a hardware or user error is encountered. NEGATIVE ERROR EXAMPLES: - An impossible instance id. - context not initialized to zero. POSITIVE ERROR EXAMPLES: - Execution thread does not have privilege needed to access ODM. - Insufficient memory to allocate context

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65003: failed to query user's local groups in the system, error code: <varname>number</varname>

Cause: failed to query user's local groups in the system Error code Description- 0005 : The user does not have access rights to the requested information. This error is also returned if the servername parameter has a trailing blank. 0124 : The system call level is not correct. This error is returned if the level parameter was not specified as 0. 0087 : A parameter is incorrect. This error is returned if the flags parameter contains a value other than LG_INCLUDE_INDIRECT. 0234 : More entries are available. Specify a large enough buffer to receive all entries. 0008 : Insufficient memory was available to complete the operation. 2453 : The domain controller could not be found. 2221 : The user could not be found. This error is returned if the username could not be found. 1722 : The RPC server is unavailable. This error is returned if the servername parameter could not be found. access denied, not enough memory, no dc controller or many more

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65004: NFS registration failed, error code: <varname>number</varname>.

Cause: NFS registration failed, error code - 4 in case of error

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65005: Invalid value for parameter <varname>string</varname>.

Cause: Invalid input value entered for SEEK or SKIP.

Action: Enter only numeric values.

ORADNFS-65006: Invalid use. Refer to Help for valid use.

Cause: Invalid usage of command, either some argument may be missing or some invalid value might be entered for an input flag.

Action: Check the usage in help and pass correct arguments.

ORADNFS-65007: No oranfsodm12.dll in ORACLE_HOME\rdbms\lib\odm

Cause: oranfsodm12.dll missing in ORACLE_HOME\rdbms\lib\odm

Action: Run ORADNFS DNFSENABLE command to copy the DLL.

ORADNFS-65008: No oranfstab in ORACLE_HOME\db, file: <varname>string</varname>.

Cause: oranfstab file missing in ORACLE_HOME\db

Action: Run ORADNFS DNFSENABLE & ORADNFS MOUNT to create oranfstab.

ORADNFS-65009: DNFS is enabled.

Cause: DNFS is in enabled status for given ORACLE_HOME
1. oranfstab file present in ORACLE_HOME\db
2. oranfsodm12.dll present in ORACLE_HOME\rdbms\lib\odm
3. size of oranfstab is non zero

Action: None

ORADNFS-65010: DNFS is not enabled.

Cause: DNFS is not in enabled status for given ORACLE_HOME

Action: Confirm that - 1. oranfstab file present in ORACLE_HOME\db
2. oranfsodm12.dll present in ORACLE_HOME\rdbms\lib\odm
3. size of oranfstab is non zero

ORADNFS-65011: No entries found in oranfstab.

Cause: size of oranfstab is zero

Action: Use the ORADNFS MOUNT command to add appropriate entries to the oranfstab file.

ORADNFS-65012: failed to discover NFS path. error code: <varname>number</varname>

Cause: failed to discover NFS path, error code- 1 no common version found 2 file system not installed 3 permission to access ODM denied 4 some other error occurred

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65013: failed to get statistics of file <varname>string</varname> on local file system

Cause: failed to get statistics of file on local file system

Action: Ensure that you have read access to the file and retry.

ORADNFS-65014: Filer <varname>string</varname> may not be defined in this system.

Cause: Filer may not be defined in this system

Action: None

ORADNFS-65015: failed to set attributes of file <varname>string</varname> on local file system

Cause: failed to change attributes of file on local file system

Action: Ensure that you have required access to change parameters of file and retry.

ORADNFS-65016: source file not specified

Cause: source file not specified in command line arguments

Action: Specify source file in command line and retry.

ORADNFS-65017: destination file not specified

Cause: destination file not specified in command line arguments

Action: Specify destination file in command line and retry.

ORADNFS-65018: warning: file <varname>string</varname> already exists

Cause: It's a warning message to user saying that destination already exists.

Action: None

ORADNFS-65019: No value specified for option -IF

Cause: Input filename not specified.

Action: Specify input filename and retry.

ORADNFS-65020: Invalid value:<varname>number</varname> entered for IBS.

Cause: Invalid value entered for IBS.

Action: Value of IBS must be less than COUNT, enter a valid value and retry.

ORADNFS-65021: Invalid value: <varname>number</varname> entered for SKIP parameter.

Cause: Invalid value entered for SKIP parameter.

Action: Enter a valid value for SKIP parameter and retry. Value of SKIP should be less than file size.

ORADNFS-65022: Operation failed.

Cause: this is a generic message which tells that the given command failed

Action: Examine the preceding error messages to determine the problem.

ORADNFS-65023: Operation completed successfully.

Cause: this is a generic message which tells that the given command succeeded

Action: None

ORADNFS-65024: invalid ORADNFS command verb

Cause: An unrecognized command verb or option was specified.

Action: Issue 'oradnfs' for information on command verbs.

ORADNFS-65025: Error in seeking file: <varname>string</varname>

Cause: Error in seeking file

Action: None

ORADNFS-65026: Could not open log file: <varname>string</varname> errno: <varname>number</varname>.

Cause: failed to open log file to write traces

Action: Ensure that a writable file system path is provided.

ORADNFS-65027: NFS I/O completion failed, errno: <varname>number</varname>

Cause: NFS I/O completion failed 2 timeout 4 waitlist complete 8 completion list full 16 no more active I/O

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65028: Not a directory: <varname>string</varname>.

Cause: given file is not a directory

Action: None

ORADNFS-65029: NFS file creation failed. file: <varname>string</varname> error code: <varname>number</varname>.

Cause: NFS file creation failed error code is zero if successful, a negative error code if a software bug is encountered, or a positive error code if a hardware or user error is encountered.

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65030: NFS file deletion failed, file: <varname>string</varname> error code: <varname>number</varname>.

Cause: NFS file deletion failed, error code- 1 file is not an ODM file 2 file is identified so it is still in use 3 file has already been deleted

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65031: failed to read directory: <varname>string</varname>

Cause: failed to read directory

Action: review the system configuration and retry

ORADNFS-65032: failed to open directory on local file system: <varname>string</varname>

Cause: failed to open directory on local file system

Action: Ensure that you have read access to path provided and retry.

ORADNFS-65033: no value specified for option -OF

Cause: Output filename not specified.

Action: specify output filename and retry

ORADNFS-65034: failed to remove directory on local file system: <varname>string</varname>

Cause: failed to remove directory on local file system

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65035: failed to re-identify NFS file: error code: <varname>number</varname>

Cause: failed to re-identify NFS file error code is zero if successful, a negative error code if a software bug is encountered, or a positive error code if a hardware or user error is encountered.

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65036: failed to identify NFS file: <varname>string</varname> error code: <varname>number</varname>

Cause: failed to identify NFS file, error code- 1 successfully identified the file 2 cannot be identified by ODM 3 no file exists with this path name

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65037: ORACLE_HOME not defined in environment

Cause: ORACLE_HOME not defined in environment

Action: Define ORACLE_HOME in environment and retry.

ORADNFS-65038: failed to delete file on local file system: <varname>string</varname>.

Cause: failed to delete file on local file system

Action: Ensure that you have write access to the path provided and retry.

ORADNFS-65039: missing required value for parameter <varname>string</varname>

Cause: value missing for -BS, -IBS, -OBS, -COUNT, -SEEK or -SKIP parameter BS means block size, it specifies the size of read and write I/O IBS means input block size, it specifies the size of read I/O OBS means output block size, it specifies the size of write I/O SEEK specifies the offset of destination file from where we should start writing SKIP specifies the offset from start of source file from where we should begin reading the file

Action: Specify the missing value of parameter and retry.

ORADNFS-65040: failed to get fully qualified user name

Cause: failed to get fully qualified user name for current user 0234 : The lpNameBuffer buffer is too small. The lpnSize parameter contains the number of bytes required to receive the name. 1355 : The domain controller is not available to perform the lookup 1332 : The user name is not available in the specified format.

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65041: no value specified for option -P (parallel)

Cause: value missing for -P command line argument -p specifies the degree of parallelism done

Action: specify whether to use parallel I/O or not

ORADNFS-65042: failed to read nfs link, file: <varname>string</varname> error code: <varname>number</varname>

Cause: failed to read nfs link,error code- 1 symbolic link is not an ODM file 2 server error 3 symbolic link does not exist

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65043: failed to read NFS directory, error code: <varname>number</varname>

Cause: failed to read NFS directory, error code- 1 directory is not an ODM file 2 server error 3 directory does not exist

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65044: invalid trace level for component <varname>string</varname>

Cause: invalid trace level entered for kgodm, kgnfs, skgnfs or oradnfs

Action: Enter a value between 0-4 and retry

ORADNFS-65045: failed to resize NFS file: error code: <varname>number</varname>

Cause: failed to resize NFS file. error code is zero if successful, a negative error code if a software bug is encountered, or a positive error code if a hardware or user error is encountered.

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65046: failed to commit NFS file. error code: <varname>number</varname>

Cause: failed to Commit NFS file error code is zero if successful, a negative error code if a software bug is encountered, or a positive error code if a hardware or user error is encountered.

Action: None

ORADNFS-65047: invalid size suffix multiplier

Cause: Invalid unit size entered for BS, IBS or OBS

Action: unit size must be one of w, B, k, KB, M, MB, G or GB. w - BS* 2 b, B - BS* 512 KB, kb - BS* 1000 K, k - BS* 1024 MB, mb - BS* 1000*1000 M, m - BS* 1024*1024 GB, gb - BS* 1000*1000*1000 G, g - BS* 1024*1024*1024 Eg: -BS 1M means 1*1024*1024 bytes is the block size for read and write I/O

ORADNFS-65048: failed to get statistics of NFS file, file: <varname>string</varname> error code: <varname>number</varname>

Cause: failed to get statistics of NFS file, error code- 1 file is not an ODM file 2 server error 3 file does not exist

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65049: File <varname>string</varname> does not exist on local file system.

Cause: File does not exist on local file system.

Action: None

ORADNFS-65050: failed to un-identify NFS file: <varname>string</varname> error code: <varname>number</varname>

Cause: failed to un-identify NFS file error code is zero if successful, a negative error code if a software bug is encountered, or a positive error code if a hardware or user error is encountered.

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65059: error during validation of file specification <varname>string</varname>

Cause: Checks if input filename is of valid format or not. For example, if user is running the utility in Windows and if he gives Linux style '/' in file path, it will be converted to Windows style \" and processed. In this case it will be considered positive validation and no error is returned. Likewise there are negative cases as well where error will be returned saying that validation failed

Action: Ensure that input filename is of valid format.

ORADNFS-65060: Failed to allocate requested amount of memory: <varname>number</varname> bytes.

Cause: Failed to allocate required memory.

Action: None

ORADNFS-65061: failed to open file <varname>string</varname> on local file system

Cause: failed to open file on local file system

Action: Ensure that you have write access to the path specified and retry.

ORADNFS-65062: failed to make directory on local file system, file: <varname>string</varname> errno: <varname>number</varname>.

Cause: failed to make directory on local file system

Action: Ensure that you have write access to the path specified and retry.

ORADNFS-65063: failed to make NFS directory: <varname>string</varname> errno:<varname>number</varname>

Cause: failed to make NFS directory,error code- 1 directory is not an ODM dir 2 server error 3 directory already exists

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65064: failed to copy oranfsodm12.dll to \$OH\rdbms\lib\odm

Cause: failed to copy oranfsodm12.dll to \$OH\rdbms\lib\odm

Action: Ensure that we have write access to \$OH\rdbms\lib\odm.

ORADNFS-65065: failed to reap NFS I/O, errno: <varname>number</varname>

Cause: failed to reap NFS I/O 2 timeout 4 waitlist complete 8 completion list full 16 no more active I/O

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65066: failed to get information of NFS file, file: <varname>string</varname> errno: <varname>number</varname>

Cause: failed to get information of NFS file,errno- 1 file is not an ODM file 2 server error 3 file does not exist

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65067: failed to get attributes of NFS file: <varname>string</varname> errno: <varname>number</varname>

Cause: failed to get attributes of NFS file, errno- 1 file is not an ODM file 2 server error 3 nonexistant or stale file handle

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65068: failed to set attributes of NFS file: <varname>string</varname> errno: <varname>number</varname>

Cause: failed to set attributes of NFS file, errno - 1 file is not an ODM file 2 file server error 3 nonexistent or stale file handle

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65069: failed to remove NFS directory, file: <varname>string</varname> errno: <varname>number</varname>

Cause: failed to remove NFS directory, errno - 1 directory is not an ODM file 2 server error 3 directory has already been deleted 4 directory is still in use

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65070: failed to submit NFS I/O, errno: <varname>number</varname>

Cause: failed to submit NFS I/O, errno - 2 timeout 4 waitlist complete 8 completion list full 16 no more active I/O

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65071: Input path is DNFS enabled.

Cause: The NFS mount listed in oranfstab was a part of or matched the input path.

Action: None

ORADNFS-65072: Input path is not DNFS enabled.

Cause: The NFS mount listed in oranfstab was not a part of or did not match the input path.

Action: Ensure that the input path is specified in the mount location present in the oranfstab file.

PCC-02010 to PCC-02474

PCC-02010: found end-of-file while scanning string literal

Cause: A string in a SQL statement, which should be delimited by single quotation marks, was not terminated properly.

Action: Check that all strings are delimited.

PCC-02011: found identifier greater than 128 characters (truncated)

Cause: The precompiler found an identifier that was too long.

Action: Shorten the identifier. SQL identifiers should be limited to 18 characters.

PCC-02012: did not find matching quote for char constant

Cause: A character constant with a single quotation mark was not terminated.

Action: Terminate the character constant.

PCC-02013: unknown escape sequence

Cause: The precompiler found an escape sequence that it could not process inside a string literal. This error can arise when multibyte character strings that can contain shift-in or shift-out escape sequences are used.

Action: Correct the string representation.

PCC-02014: Syntax error at line <varname>number</varname>, column <varname>number</varname>, file <varname>string</varname>:\n

Cause: The precompiler detected an error in C or embedded SQL syntax. This message is followed by a more specific error message.

Action: Correct the syntax error.

PCC-02015: unable to open include file

Cause: The precompiler could not open a header file that was specified using the #include preprocessor directive or the EXEC SQL INCLUDE statement. This can happen if the file specification is inaccurate or if read permission or read access rights on the file or on one or more of the directories in the path were not granted.

Action: Recheck that the file specification is correct, that the file exists, and that read permission has been granted so that the file can be read.

PCC-02016: Absolute path to included file, "<varname>string</varname>" exceeds the limit of <varname>number</varname> characters

Cause: The file name length specified exceeded the maximum length. Some operating systems have a maximum file name length.

Action: Use a file name of length less than or equal to the maximum platform specific file name length.

PCC-02017: unable to open output file

Cause: The precompiler could not open an output file. This could be a generated code output file(.c file) or a listing file. This message can result from many causes. For example: o) A pathname for a specified output file contains a non-existent directory. o) An operating-system error occurred because the file system or disk is full. o) Write permission on the specified directory or directories in the path do not exist.

Action: Track down the cause of the error, as suggested above, and correct it.

PCC-02018: found end-of-file while scanning comment

Cause: A C comment either in C code or in an embedded SQL statement, was not terminated.

Action: Find the unterminated comment and terminate it with */ .

PCC-02019: Preprocessor warning at line <varname>number</varname>, column <varname>number</varname>, file <varname>string</varname>:\n

Cause: This message indicates that a warning condition occurred as the precompiler was doing the preprocessor pass. A more specific warning message will follow this message.

Action: Correct the condition according to the action specified for the message that follows.

PCC-02020: Preprocessor error at line <varname>number</varname>, column <varname>number</varname>, file <varname>string</varname>:\n

Cause: This message indicates that an error condition occurred as the precompiler was in the preprocessing phase. A more specific error message will follow this message.

Action: Correct the error according to the action specified for the message that follows.

PCC-02021: Found newline while scanning string literal

Cause: A string constant contains a newline character, For example char x[] = "Hello world";

Action: Remove the newline character.

PCC-02022: Found end of file while scanning a SQL statement

Cause: The precompiler encountered an end of file while parsing an EXEC SQL statement.

Action: Add statement terminator(;) or complete the EXEC SQL statement.

PCC-02023: Found end of file while scanning a PL/SQL statement

Cause: The precompiler encountered an end of file while parsing a PL/SQL statement (EXEC SQL EXECUTE ...).

Action: Complete the PL/SQL statement.

PCC-02035: CMD-LINE: CONFIG= option is invalid in a config file

Cause: A user configuration file inside a user configuration file cannot be specified. That is, nested configuration files cannot be nested.

Action: If there are nested configuration files, move the options from the nested files to the top levels.

PCC-02040: CMD-LINE: Option selected, but no value provided

Cause: An option on the command line was specified, but a value for it was not included. For example, the offending code might look like: `proc iname=sample1.pc oname=`

Action: Provide a value for the option.

PCC-02041: CMD-LINE: Option does not exist:

Cause: A non-existent option on the command line was specified.

Action: See the Programmer's Guide to the Oracle Precompilers, Release 2.2 for a list of the valid command line options and their possible values.

PCC-02043: CMD-LINE: Option syntax is incorrect

Cause: A value for a command line option was incorrectly specified.

Action: See the Programmer's Guide to the Oracle Precompilers, Release 2.2 for the correct syntax for specifying command line option values.

PCC-02044: CMD-LINE: Illegal or out of range value for option:

Cause: A value specified for a command line option was not within the accepted range. For example,, the range for the MAXOPENCURSORS option is 5 to 256. If a value outside the range is specified, the message is triggered.

Action: See the Programmer's Guide to the Oracle Precompilers for the ranges that option values can take.

PCC-02045: CMD-LINE: Option is not unique:

Cause: An option name was partially specified on the command line that made it non unique. For example, `% proc in=t.pc` the "in" option can imply either the INAME or INCLUDE option.

Action: Provide sufficient characters on the command line to make the option name unique.

PCC-02046: CMD-LINE: Unable to open config file:

Cause: A non-existent user configuration file was specified on the command line with the config option.

Action: Provide a valid filename for the configuration file.

PCC-02047: CMD-LINE: Option is not allowed inline:

Cause: An option was entered inline that can only be entered on the command line or in a configuration file. For example, the offending code might look like `EXEC ORACLE OPTION (NLS_CHAR=<varname>name</varname>);` The NLS_CHAR option can only be entered on the command line or in a configuration file.

Action: Remove the option from the source file, and specify it on the command line.

PCC-02066: CMD-LINE: Could not find or could not open system config file

Cause: The system configuration file has a standard name (`pmscfg.h`) and a location that is operating system dependent. On UNIX systems, it is located in the

ORACLE_HOME/proc directory. If a file named pmscfg.h is not found in the standard location, this warning message is issued.

Action: Create a system configuration file in the standard location. The file can be empty. See also the operating system specific Oracle documentation.

PCC-02081: CMD-LINE: Unterminated option value list or value list was truncated.

Cause: An option that takes a list of values was entered. The value list did not have a closing parenthesis. This error may also occur if the list of values entered on a single line was too long and Pro*C truncated it.

Action: Ensure that all value lists are terminated with a closing parenthesis. Split long value lists into individual entries.

PCC-02100: Unable to initialize PL/SQL

Cause: The precompiler connected to Oracle but could not invoke the PL/SQL engine. This error can result if an earlier release of Oracle7 is used without the Procedural Option.

Action: To use PL/SQL, upgrade to a more recent release of Oracle7.

PCC-02101: Unable to open input file

Cause: The precompiler could not open the input file. This is the .pc file specified in the INAME=option. This means that the file does not exist, that a directory was incorrectly specified in the pathname, or that the person running the precompiler does not have read permission for the file. This message could also result from operating-system errors. For example, an unmounted file system or disk I/O errors, could trigger this error.

Action: Check that permission to read the file exists and that the full pathname has been specified correctly. Check for operating- system problems. See also the operating system-specific Oracle documentation.

PCC-02102: Fatal error while doing C preprocessing

Cause: The precompiler issues this message after a more specific message.

Action: Correct the problem specified in the previous message or messages.

PCC-02103: Password:

Cause: The username was specified on the command line without a password. For example, proc sqlcheck=full iname=sample1.pc userid=scott

Action: Re-enter the command line, and include the password or specify the password when prompted.

PCC-02104: Unable to connect to Oracle

Cause: The precompiler could not connect to Oracle with the username, password, and, if applicable, database link that was supplied. Note that this is a precompiler message, not a runtime message. This means that the USERID option value, either on the command line or in a configuration file, was incorrect.

Action: Check that the username and password are current and correct. Run SQL*DBA or SQL*PLUS and verify that connection can be made using that username and password.

PCC-02105: Unable to open list file

Cause: The precompiler could not open the listing file. This message can result from many causes. For example, o) A pathname for a specified listing file contains a non-existent directory. o) An operating-system error occurred because the file system or disk is full. o) Write permission on the specified directory has not been granted.

Action: Track down the cause of the error, as suggested above, and correct it.

PCC-02106: Userid only used when SQLCHECK = FULL, userid ignored.

Cause: The USERID option was specified on the command line, but SQLCHECK was not equal to FULL or SEMANTICS. The USERID has no effect, unless SQLCHECK=FULL or SQLCHECK=SEMANTICS.

Action: This is a warning message only.

PCC-02107: You may not specify PARSE = FULL when CODE = CPP

Cause: The PARSE=FULL and CODE=CPP options were both specified on the command line. The PARSE=FULL option invokes the C parser which does not understand any C++ constructs generated by the precompiler with CODE=CPP option.

Action: Set the PARSE option to either NONE or PARTIAL if the CODE=CPP option is specified.

PCC-02108: UNSAFE_NULL=YES allowed if MODE=ORACLE and DBMS=V7 or V8

Cause: UNSAFE_NULL=YES was specified on the command line, but either the MODE was not ORACLE or the DBMS was not V7 or V8.

Action: Specify MODE=ORACLE and DBMS=V7 or V8 when using UNSAFE_NULL=YES.

PCC-02109: SQLCHECK=NONE is no longer supported.. using SYNTAX

Cause: SQLCHECK=NONE was specified on the command line but is no longer a supported option. SQLCHECK=SYNTAX was used instead.

Action: This is a warning message only. To avoid this warning, specify SQLCHECK=SYNTAX or SQLCHECK=SEMANTICS.

PCC-02110: DBMS=V6_CHAR is deprecated. Use CHAR_MAP=VARCHAR2, DBMS=V7 instead

Cause: DBMS=V6_CHAR was specified on the command line but is no longer a supported option. The options CHAR_MAP=VARCHAR2 and DBMS=V7 were used instead.

Action: This is a warning message only. To avoid this warning, specify CHAR_MAP=VARCHAR2 and, if required, DBMS=V7.

PCC-02111: CHAR_MAP option ignored. Only CHAR_MAP=VARCHAR2 allowed for DBMS=V6

Cause: DBMS=V6 was specified, and CHAR_MAP was specified with a value other than VARCHAR2. The CHAR_MAP value is ignored.

Action: This is a warning message only. To avoid this warning, specify a DBMS value other than DBMS=V6 or use CHAR_MAP=VARCHAR2.

PCC-02112: OBJECTS option ignored. OBJECTS=YES is not allowed for DBMS=V6 or V7.

Cause: OBJECTS=YES was specified on the Pro*C command line, but the DBMS option value was not valid.

Action: This is a warning message only. To avoid this warning for OBJECTS=YES, use DBMS=V8 or DBMS=NATIVE with a V8 database.

PCC-02113: DBMS=V6 no longer supported; using DBMS=NATIVE, CHAR_MAP=VARCHAR2.

Cause: DBMS=V6 was specified on the command line, but is no longer a supported option value. The options DBMS=NATIVE and CHAR_MAP=VARCHAR2 were used instead.

Action: Check your program to verify that you are not depending on any V6 behavior. Please refer to the Programmer's Guide to the Pro*C/C++ Precompiler for effects of specifying DBMS=V6.

PCC-02114: Command line argument MODE=ANSI may not be used with DBMS=V6

Cause: The semantics of certain operations (such as character comparison) in Oracle version ^ are not 100% compliant with the ANSI/ISO SQL standards. When V6 semantics are requested, using the DBMS=V6 or DBMS=V6_CHAR option, precompilation with MODE=ANSI is not permitted.

Action: Do not use ANSI mode with V6 options.

PCC-02115: Unable to open output file for writing

Cause: An attempt was made to precompile a header file where the output data file could not be opened (or created) for writing.

Action: Check for appropriate permissions on the directory and possibly file objects (if a data file already exists) to make sure that write permissions have been granted.

PCC-02116: You must specify a file extension using the HEADER option

Cause: An attempt was made to precompile a header file without specifying the name of the extension to use when creating the generated data file.

Action: Use the HEADER option to specify the name of a file extension to use when creating a data file for a precompiled header.

PCC-02117: Semantic checking disabled by TimesTen.

Cause: Semantic checking is not supported by TimesTen

Action: This is a warning message only.

PCC-02129: CMD-LINE: Client supplied static options table is invalid

Cause: This is an internal error message not usually issued.

Action: Call Oracle customer support.

PCC-02132: CMD-LINE: Could not allocate memory

Cause: This is an internal error message not usually issued.

Action: Call Oracle customer support.

PCC-02133: CMD-LINE: Error in string processing function

Cause: This is an internal error message not usually issued. It indicates that a C string function, such as strcpy or strlen, returned an error.

Action: Call Oracle customer support.

PCC-02134: CMD-LINE: Null option supplied

Cause: A zero length option was specified on the command line.

Action: Re-enter the command line with a valid option.

PCC-02135: CMD-LINE: User asked for help

Cause: This is a final message that the precompiler issues when information about the command line options has been requested. For example, if the command proc ? is issued to get a list of current default values for the command line options, this message appears at the end of the list.

Action: No action required.

PCC-02138: CMD-LINE: Internal consistency error

Cause: This is an internal message for program exceptions. An unexpected condition was encountered by the command-line processor and a consistency check failed. Some possible causes of this message include: --invalid command-line options -- memory corruption

Action: Report this error to Worldwide Support after gathering the following information: --the events that led to the error --the attempted operations that led to the error --any unusual circumstances prior to this error

PCC-02144: CMD-LINE: Blank characters are not allowed on either side of an equal sign (=)

Cause: An equal sign (=) was either immediately preceded or followed by a blank character.

Action: Precompile your program again without blank characters on either side of any equal sign (=) on the command line.

PCC-02146: CMD-LINE: value of option too long

Cause: The length of the user option exceeded 1023 bytes

Action: Reduce the length of the user option

PCC-02150: Error at line <varname>number</varname>, column <varname>number</varname> in file <varname>string</varname>

Cause: An error was encounter at the given location.

Action: Check the named source file and correct the error using the additional information which follows this error message.

PCC-02151: Line <varname>number</varname> column <varname>number</varname> file <varname>string</varname>:

Cause: An error was encounter at the given location.

Action: Check the listed source file and correct the error using the additional information which follows this error message.

PCC-02152: Unable to open file <varname>string</varname> to display or list the source line <varname>number</varname>

Cause: The file contains an error, but could not be reopened to list or display the incorrect line.

Action: Check that the file is intact and it has read permission. Then rerun the operation.

PCC-02153: Open file: <varname>string</varname>

Cause: A new source file was opened while producing the list file.

Action: No action required; this is an informational message.

PCC-02154: Close file: <varname>string</varname>

Cause: A source file was closed while producing the list file.

Action: No action required; this is an informational message.

PCC-02200: found unrecognized punctuation sequence

Cause: The error indicates that the precompiler parser encountered a badly-formed identifier or keyword.

Action: Correct the syntax.

PCC-02201: Found syntax error

Cause: This general message precedes one or more specific messages that detail the nature of the error.

Action: No action required. Correct the errors diagnosed in the following message(s).

PCC-02202: No typedef name was given

Cause: The precompiler parser encountered a typedef statement that had no name after the type specification. For example, typedef int;

Action: Correct the syntax

PCC-02203: found end of file when not expected

Cause: The parser can emit this message when a general syntax error occurs, for example, an unmatched '{' or '('.

Action: Correct the syntax.

PCC-02204: EXEC SQL INCLUDE not permitted from within an included file

Cause: EXEC SQL INCLUDE statements cannot be nested. Also, EXEC SQL INCLUDE statement cannot be put inside a file that is included using the #include preprocessor command.

Action: Recode the program so that the nested include statement is not required.

PCC-02205: Parser error at line <varname>number</varname>, column <varname>number</varname>, file <varname>string</varname>:\n

Cause: The precompiler parser encountered a syntax error, either in C code or in SQL code. A more specific message should follow.

Action: No action required for this message. Take the appropriate action for any following messages.

PCC-02206: Host variables are not permitted within a DDL statement

Cause: A Data Definition Language statement cannot use host variables. For example, the statement `CREATE TABLE :table_name (c1 char(10));` is illegal, because the name of the table in a `CREATE TABLE` statement cannot be represented using host variable.

Action: Use dynamic SQL to create the names of database objects (tables, views, columns, etc.) at runtime. See the Programmer's Guide to the Oracle Precompilers, Release 2.2 for information about dynamic SQL.

PCC-02207: Invalid macro name

Cause: The precompiler parser encountered a `#define` directive that had no macro name associated with it. For example, `#define`

Action: Correct the syntax.

PCC-02208: No filename specified in #include statement

Cause: The precompiler parser encountered a `#include` directive that had no filename associated with it. For example, `#include`

Action: Specify appropriate filename with the `#include` directive, or correct the syntax.

PCC-02209: Macro invocation has incorrect number of arguments

Cause: A macro invocation in the source does not have the same number of arguments as the macro definition in the `#define` line.

Action: Correct the macro reference or the macro definition.

PCC-02210: C++ punctuation sequences are not permitted

Cause: C++ punctuation sequences are not supported by the ProC/C++ precompiler.

Action: Rewrite your C++ code without using punctuation sequences and precompile it again.

PCC-02301: cannot reopen input file for reading

Cause: The semantic analysis phase of the precompiler could not reopen the input file to generate the output code.

Action: Check that the input file and its directory protection and privileges do not change during precompilation.

PCC-02302: cannot open code generation output file "<varname>string</varname>"

Cause: Pro*C was unable to open one or both temporary files required for code generation. The user executing the precompiler must have write permission (and/or the appropriate privileges) on the current directory.

Action: Check that permission exists to create files in the directory where you precompile.

PCC-02303: cannot open include file

Cause: The precompiler was not able to open a header file specified using the `#INCLUDE` preprocessor directive or the `EXEC SQL INCLUDE` statement. This can happen if the file specification is inaccurate or if read permission or read-access rights on the file or on one or more of the directories in the path have not been granted.

Action: Recheck that the file specification is correct, that the file exists, and that read permission has been granted so that the file can be read.

PCC-02304: invalid declaration of C function

Cause: A C function using invalid syntax was declared.

Action: Consult a C programming manual and correct the declaration.

PCC-02305: illegal mixing of new and old style C function declarations

Cause: All C functions using either the traditional style (K&R style) function declarations or the new (ANSI) style must be declared; the two styles cannot be mixed.

Action: Adopt a consist declaration style for functions.

PCC-02306: illegal name of C function

Cause: A C function was declared with a name that is not a legal C identifier.

Action: Use legal C identifiers for all function names.

PCC-02307: void can only be used when single parameter

Cause: A function can be declared or defined using the following syntax: `int func1(void)` to indicate that the function has no parameters. `void` can be used only once in this case.

Action: Remove the extra voids in the function definition or declaration.

PCC-02308: identifier required in this function declaration

Cause: A function definition written in ANSI C must have both the name and the type for all parameters.

Action: Rewrite the function definition so that it contains the name of each parameter.

PCC-02309: illegal formal parameter declaration

Cause: A formal parameter to a function was specified without giving its type.

Action: Rewrite the function declaration and include types of all parameters in function declarations.

PCC-02310: formal parameter VARCHARs should be declared as pointers

Cause: Many C compilers allow structures to be passed to and returned from functions. Although a VARCHAR is implemented as a C struct, VARCHARs must be passed to a function as pointers.

Action: Take the address of a VARCHAR when it is passed to a function. See the example in the section "Referencing VARCHAR Variables" in the Programmer's Guide to the Oracle Precompilers.

PCC-02311: cannot have VARCHAR bit fields

Cause: Host variables cannot contain bit fields.

Action: Recode the application to remove the bit fields.

PCC-02312: arrays of VARCHAR greater than 2 dimensions not allowed

Cause: A VARCHAR variable having more than 2 dimensions was declared. Multidimensional arrays are not supported as host variables.

Action: Recode the application to remove multidimensional array usage.

PCC-02313: malformed VARCHAR declaration - missing length

Cause: When a VARCHAR is declared, a length specification is mandatory. For example, the following VARCHAR declaration is meaningless, hence illegal:
VARCHAR v1[];

Action: Specify the length for each declared VARCHAR.

PCC-02314: cannot evaluate constant sizeof expression

Cause: A SIZEOF operator was used where a precompiler expression was expected. For example, as the length of a varchar.

Action: Eliminate the SIZEOF operator in this instance.

PCC-02315: cannot evaluate expression as constant

Cause: The specified expression does not evaluate to a constant. Such expressions are required, for example, as the length of a VARCHAR.

Action: Replace the expression with one that does evaluate to a constant integer.

PCC-02316: illegal operator in constant expression

Cause: A non-arithmetic operator was present in a constant expression.

Action: Rewrite the expression to eliminate the non-arithmetic operator.

PCC-02317: illegal cast type expression

Cause: An illegal cast is present in the expression.

Action: Remove the illegal cast.

PCC-02318: missing type expression

Cause: The specified expression is missing the declaration of a type.

Action: Specify a type for the expression.

PCC-02319: expression type does not match usage

Cause: The type of a variable does not match its usage. For example, in dynamic SQL, a host variable containing the text of a SQL statement must be declared as a C character type or be equivalenced to the SQL type STRING.

Action: Remove the declaration.

PCC-02320: arithmetic expression does not have correct operand types

Cause: The arithmetic expression must be specified with integral types.

Action: Rewrite the expression using integral types.

PCC-02321: only subtraction between two pointers is permitted

Cause: Pointer values cannot be added, multiplied, or divided. The only arithmetic operation permitted with pointers is subtraction.

Action: Recode to avoid this error message.

PCC-02322: found undefined identifier

Cause: An identifier used in a SQL statement was not defined. For example, a cursor name was referenced that had not been declared, or in a DECLARE CURSOR statement, a statement name was used that had not been PREPARED.

Action: Check that all SQL identifiers, such as cursor names and statement names, have been defined before use. Provide a declaration for the variable and/or its type identifier.

PCC-02323: found typedef name used in an expression (expecting a value)

Cause: The name of a typedef was found where a variable was expected.

Action: Rewrite the expression and remove the reference to the typedef.

PCC-02324: found variable name used as a typedef name

Cause: The name of a variable was found where a typedef was expected.

Action: Rewrite the expression and specify the correct typedef reference.

PCC-02325: illegal indirection operation

Cause: An attempt was made to use a non-pointer type as a pointer.

Action: Rewrite the expression.

PCC-02326: illegal structure reference operation

Cause: A structure component using invalid syntax was referenced. For example, a -> operator was used instead of a required `.' operator.

Action: Correct the invalid reference.

PCC-02327: struct or struct pointer required

Cause: A scalar host variable was used in a context where a structure (or its pointer) is required.

Action: Make the host variable a structure or add more scalar host variables to satisfy the SQL syntax requirements.

PCC-02328: undefined struct member

Cause: A structure component was referenced that was not declared as part of the structure.

Action: Redefine the structure member.

PCC-02329: found reference to undeclared function

Cause: A function was referenced that was not declared. All function references must be declared.

Action: Declare the function.

PCC-02330: expecting an expression of integer type

Cause: The expression does not evaluate to an integer. For example, a SQL FOR expression must evaluate to an integral type.

Action: Rewrite the expression.

PCC-02331: undefined SQL identifier

Cause: All SQL identifiers must be declared before they are used. This message can result when a CURSOR or STATEMENT is not declared (defined) before being referenced.

Action: Define the SQL identifier before it is used.

PCC-02332: attempted to redefine SQL identifier

Cause: A SQL identifier (such as a cursor name) can be defined only once.

Action: Do not redefine the SQL identifier. Use a different name.

PCC-02333: SQL identifier was not declared as a statement

Cause: A SQL statement identifier was referenced in a DECLARE... CURSOR statement that was not PREPARED.

Action: Check that all SQL statement names have been declared. Remember that SQL statement names are identifiers, not variables, and that they are local to the precompilation unit.

PCC-02334: SQL identifier was not declared as a cursor

Cause: A cursor name was used in an OPEN, FETCH, or CLOSE statement that had not been DECLARED.

Action: Check that all SQL cursor names have been declared. Remember that cursors are identifiers, not variables, and that they are local to the precompilation unit.

PCC-02335: body of cursor must name statement identifier

Cause: In a Dynamic SQL Method 4 application, the DECLARE... CURSOR statement must name a statement identifier that has been PREPARED in a preceding statement. The PREPARE statement must physically (not logically) precede the DECLARE command.

Action: This error message is followed by another message that gives the line and column of the reference to the statement. Recode the application.

PCC-02336: host variable expression has invalid type

Cause: The host variable was declared using a C type that is not permitted as a host variable. See the Programmer's Guide to the Oracle Precompilers for a list of the permissible C types for host variables.

Action: Use a permissible host variable type.

PCC-02337: cannot declare multi-dimensioned array for this type

Cause: Host variable arrays of scalars with more than 1 dimension cannot be declared. The only host variables allowed to be multi-dimensioned are CHAR and VARCHAR.

Action: Rewrite the variable declaration.

PCC-02338: structure contains a nested struct or union

Cause: A structure used as a host variable may not have structures or unions nested within it.

Action: Rewrite the variable declaration.

PCC-02339: host variables cannot be of union types

Cause: A C union as a host variable cannot be used.

Action: This error message is followed by another message that gives the line and column of the reference to the illegal union. Recode, using a struct or individual scalar host variables.

PCC-02340: structure contains a bit field

Cause: Bit fields are not allowed in host variables because they are meaningless for database DML operations.

Action: This error message is followed by another message that gives the line and column of the reference to the offending host variable. Recode the application.

PCC-02341: host variable has illegal type

Cause: A host variable has an unpermitted type (i.e.; enum, void, etc).

Action: Rewrite the host variable declaration, using a permissible host variable type.

PCC-02342: using WHERE CURRENT OF on cursor defined without FOR UPDATE clause

Cause: When MODE=Oracle, a cursor defined with a WHERE CURRENT OF clause must also have a FOR UPDATE clause.

Action: Rewrite the cursor definition.

PCC-02343: body of cursor must be a query expression

Cause: A cursor definition must be a SELECT statement.

Action: Rewrite the cursor definition.

PCC-02344: Host variable array size mismatch. Using minimum: <varname>number</varname>

Cause: Host variable arrays in a single statement should all be of equal size.

Action: Redefine the bind variable array lengths to all be the same size.

PCC-02345: SQLCHECK=SEMANTICS must be given when embedded PL/SQL blocks are used

Cause: Embedded PL/SQL blocks require that the command-line flag SQLCHECK=SEMANTICS is used.

Action: Use the SQLCHECK=SEMANTICS option. This also requires that the USERID connect option be given.

PCC-02346: PL/SQL found semantic errors

Cause: A database entity, such as a table or column name, was referenced, that does not exist. This is a compile time error, not a runtime error.

Action: Check that all referenced objects in PL/SQL statements actually exist and that the necessary access permission on them have been granted.

PCC-02347: PL/SQL found syntax errors

Cause: A PL/SQL statement was used illegally.

Action: Check the PL/SQL User's Guide and Reference for the correct syntax.

PCC-02348: indicators are not allowed in EXEC IAF statements

Cause: Indicator variables associated with host variables cannot be used in EXECIAF statements such as GET and PUT in a user exit.

Action: Eliminate the indicator variables. If feasible (for example with Forms V4), use EXEC TOOLS statements, which do allow indicator variables. See the Programmer's Guide to the Oracle Precompilers for more information of EXECIAF and EXEC TOOLS statements.

PCC-02349: precision must be specified for this type

Cause: In a VAR or TYPE statement, certain Oracle types require that the precision be specified. For example, VARCHAR2 or CHAR.

Action: Indicate the precision.

PCC-02350: cannot equivalence this SQL type

Cause: Datatype or variable equivalencing to the datatypes NUMBER or DECIMAL cannot be used. See the "Datatype Equivalencing" section in the Programmer's Guide to the Oracle Precompilers for more information.

Action: Use the appropriate datatype for the application.

PCC-02351: illegal datatype equivalencing operation

Cause: The datatype specified could not be equivalenced, or the syntax was incorrect in the VAR or TYPE statement.

Action: See the Programmer's Guide to the Oracle Precompilers for a list of the datatypes that can be equivalenced and the correct syntax of the VAR or TYPE statement.

PCC-02352: out of bounds bind position from PL/SQL

Cause: PL/SQL requested a bind position that does not exist.

Action: Contact ORACLE customer support.

PCC-02353: Semantic error at line <varname>number</varname>, column <varname>number</varname>, file <varname>string</varname>:\n

Cause: This error message precedes a more specific error message.

Action: No action required. Correct the error(s) reported in the following message(s).

PCC-02354: A file included with #include may not contain SQL statements

Cause: The Pro*C Precompiler reads header files referenced in #INCLUDE directives and uses the values defined in them. But the precompiler never generates code using statements in header files, so use of SQL statements in these files is illegal.

Action: Move the SQL statement(s) into the main body of the application or use EXEC SQL INCLUDE to check that the included file is precompiled.

PCC-02355: Invalid or obsolete option, ignored

Cause: A command-line option that is not used in Pro*C Release 2.0 was specified. For example, the option AREASIZE is no longer valid with precompilers used with the Oracle7 Server.

Action: No action required. This is an informational message.

PCC-02356: Warning at line <varname>number</varname>, column <varname>number</varname>, file <varname>string</varname>:\n

Cause: This is a generic warning message. It precedes a more specific warning.

Action: No action required. Correct the error(s) indicated in the following message(s).

PCC-02357: Function calls may not be used as host variable expressions

Cause: Only objects that are lvalues (that resolve to an address) can be host variables. Because a function call is not an lvalue, one cannot be used in place of a host variable.

Action: Recode the application.

PCC-02358: Identifier following ARRAYLEN must be the name of an array

Cause: A declared array must be specified as the argument for an ARRAYLEN statement. Declare the array textually before the ARRAYLEN statement. See the Programmer's Guide to the Oracle Precompilers for the syntax of the ARRAYLEN statement.

Action: Correct the statement, specifying a host array as the argument.

PCC-02359: Identifier specifying ARRAYLEN must be a 4-byte integer

Cause: The expression that specifies the ARRAYLEN dimension must evaluate to an integer. For example, the statement EXEC SQL ARRAYLEN my_array(1,3) cannot be parsed.

Action: Correct the statement, using an integral dimesnsion.

PCC-02360: This array type is invalid for use with ARRAYLEN statement

Cause: Arrays of some host variables types are not allowed and hence also cannot be used in ARRAYLEN statements. VARCHAR and DATE are examples.

Action: Specify an array with a datatype that can be used in host arrays.

PCC-02361: Use of ARRAYLEN with SQL bind arrays is ignored

Cause: ARRAYLEN is only valid with arrays that can be bound in PL/SQL blocks.

Action: Use an appropriate array type.

PCC-02362: Host variable not declared within SQL DECLARE section

Cause: When MODE=ANSI is specified at precompile time, all host variables must be declared inside Declare Sections. Remember that MODE=ANSI refers to ANSI SQL, not ANSI C.

Action: Add the EXEC SQL BEGIN DECLARE SECTION... EXEC SQL END DECLARE SECTION statements around all host variable declarations.

PCC-02363: Indicator variable must be a structure

Cause: If a host variable is a structure, the associated indicator variable must also be a structure.

Action: Recode the application to create an indicator variable as a structure.

PCC-02364: Host struct and its indicator must have the same number of fields

Cause: When a structure containing indicator variables is declared and associated with a host structure, the indicator structure must contain the same number of fields

as the host structure. This is so even when some of the indicators will not be used or even when it would not make sense to do so (for fields constrained as NON NULL, for example).

Action: Redeclare the indicator variable with the correct number of fields.

PCC-02365: Indicator array size cannot be smaller than host array size

Cause: An indicator array must have dimension greater than or equal to the corresponding host variable array dimension.

Action: Change the dimension of the indicator array.

PCC-02366: Command line argument MODE=ANSI may not be used with DBMS=V6

Cause: The semantics of certain operations (such as character comparison) in Oracle version ^ are not 100% compliant with the ANSI/ISO SQL standards. When V6 semantics are requested, using the DBMS=V6 or DBMS=V6_CHAR option, precompilation with MODE=ANSI is not permitted.

Action: Do not use ANSI mode with V6 options.

PCC-02367: This indicator variable must be declared as type short

Cause: An indicator for a host variable of this type must have the C type short. An array of such indicators must be an array of shorts.

Action: Declare the indicator variable or indicator array as type short.

PCC-02368: An EXEC TOOLS host variable context name is not type char

Cause: If a host variable is used to define a context name in an EXEC TOOLS GET CONTEXT or EXEC TOOLS SET CONTEXT statement, that host variable must be of a character type.

Action: Redeclare the context name to a host variable of a char type.

PCC-02369: An EXEC TOOLS host pointer variable is not a pointer

Cause: The host variable specifying an EXEC TOOLS context must be a pointer type.

Action: Redeclare the variable, making sure that it is a pointer.

PCC-02370: An EXEC TOOLS MESSAGE host variable is not type char

Cause: If a host variable is used to define a context name in an EXEC TOOLS GET CONTEXT or EXEC TOOLS SET CONTEXT statement, that host variable must be of a character type.

Action: Declare the message to a host variable of a char type.

PCC-02371: Illegal FOR clause

Cause: The argument of a FOR clause must be specified as an integer or as an identifier containing an integer.

Action: Rewrite the FOR clause.

PCC-02372: FOR clause not allowed in SELECT statement

Cause: A SQL statement containing a SELECT command cannot contain a FOR clause. The meaning of such a statement would be unclear.

Action: Rephrase the SELECT statement, removing the FOR clause.

PCC-02373: Invalid declaration in EXEC SQL DECLARE section

Cause: An improper declaration was placed in a Declare Section. This message is usually caused by including an EXEC SQL TYPE or EXEC SQL VAR declaration in a Declare Section.

Action: Move the declaration outside of the SQL DECLARE section.

PCC-02374: SQLCHECK value exceeds command line value

Cause: The value given to the SQLCHECK option in an EXEC ORACLE statement in a program was greater than the value given either on the command line or greater than the default value if no SQLCHECK option was given on the command line. The order of the option values is SEMANTICS>SYNTAX>NONE. When this warning message is issued, the original value of SQLCHECK (the default or the command-line value) stays in effect.

Action: Remove or recode the EXEC Oracle option(s) in the .pc source file to avoid this warning message.

PCC-02375: SQL statement found outside the body of a function

Cause: A SQL statement other than a declarative, datatype equivalence or WHENEVER statement was found outside the body of a function when PARSE=FULL.

Action: Move the SQL statement inside the body of a function.

PCC-02376: You may not declare SQLCODE when DEF_SQLCODE = TRUE

Cause: The DEF_SQLCODE option may not be specified if a SQLCODE declaration already explicitly appears in the program.

Action: Remove the SQLCODE declaration from the program or specify DEF_SQLCODE=NO (the default).

PCC-02377: Arrays of implicit varchars are not permitted

Cause: An array of implicit VARCHARS was declared when HOST_VARCHAR=TRUE.

Action: Rewrite the implicit VARCHAR declaration without using arrays.

PCC-02378: Invalid type for National Language character variable

Cause: A variable declared as a National Language character using the NLS_CHAR option was not declared as a char or implicit VARCHAR.

Action: Declare the variable as a char or implicit VARCHAR or do not specify using the NLS_CHAR option.

PCC-02379: Cannot equivalence National Language character variables

Cause: A National Language character variable (specified using the NLS_CHAR option) has undergone datatype equivalencing using either the EXEC SQL VAR or TYPE statements.

Action: Do not equivalence National Language character variables.

PCC-02380: Cannot specify a connect mode when altering a user password

Cause: An attempt was made to connect in either SYSOPER or SYSDBA mode while at the same time trying to change passwords using the ALTER AUTHORIZATION clause in the same CONNECT statement.

Action: Changing passwords while connecting in SYSOPER or SYSDBA mode is prohibited. Rewrite the connect statement by either removing the ALTER AUTHORIZATION clause or the CONNECT MODE clause.

PCC-02382: You must specify MODE=ANSI when using NLS_LOCAL=YES

Cause: NLS_CHAR was used to specify NLS multi-byte character variables without specifying MODE=ANSI.

Action: Specify MODE=ANSI on the command line when using NLS_LOCAL=TRUE.

PCC-02383: Expecting an expression of type OCIExtProcContext

Cause: The type of the bind variable given in a REGISTER CONNECT USING statement was not (pointer to) OCIExtProcContext.

Action: Declare a variable having type (pointer to) OCIExtProcContext and use it in the REGISTER CONNECT USING statement.

PCC-02384: Missing array length specifier

Cause: An array declaration was given without an array length specifier.

Action: Provide the length for the array declaration.

PCC-02385: CHAR_MAP disallowed when using NLS_CHAR and NLS_LOCAL=TRUE

Cause: The CHAR_MAP option was specified while indicating which host variables are to be treated by the precompiler as NLS multi-byte character variables. This mapping cannot be performed with the option NLS_LOCAL=TRUE. This error also occurs when DBMS=V6 is used in conjunction with NLS_CHAR and NLS_LOCAL=TRUE.

Action: Remove either the CHAR_MAP option or set NLS_LOCAL=FALSE. Ensure that DBMS is not set to V6.

PCC-02386: Use of the AT clause is not permitted here

Cause: An explicit AT clause was used with an ALLOCATE statement or a FETCH/CLOSE statement also using a SQL_CURSOR declaration.

Action: Remove the AT clause.

PCC-02387: Expecting an expression of type sql_cursor

Cause: A host bind variable was used in an ALLOCATE, FETCH or CLOSE statement that was not declared as a result set SQL_CURSOR.

Action: Declare the variable to be of type sql_cursor.

PCC-02388: Arrays not allowed in FROM/WHERE clause of SELECT statement

Cause: A host array was used in the WHERE clause of a SELECT-INTO statement.

Action: Rewrite the SELECT statement without using arrays or use a cursor.

PCC-02389: Arrays not allowed as input bind variables in SELECT list

Cause: A host array was used in the SELECT list of a SELECT-INTO statement.

Action: Rewrite the SELECT statement without using arrays in SELECT list.

PCC-02390: No EXEC SQL CONTEXT USE statement encountered

Cause: No EXEC SQL CONTEXT USE statement was encountered and the option threads=yes was requested.

Action: Ensure that the necessary context variable (of type sql_context) has been declared and that has been ALLOCATED and USED prior to any executable SQL statements.

PCC-02391: Runtime context variable not of correct type

Cause: The host variable in a EXEC SQL CONTEXT USE statement or in the RETURNING clause of a REGISTER CONNECT statement was not declared to be of type SQL_CONTEXT.

Action: Declare the runtime context variable to be of type SQL_CONTEXT.

PCC-02392: You are already in an EXEC SQL DECLARE SECTION

Cause: A SQL DECLARE SECTION appears nested inside another one.

Action: Do not nest DECLARE SECTIONS. Remove any nested inner ones.

PCC-02393: SQL statement found inside an EXEC SQL DECLARE SECTION

Cause: An executable SQL statement appears inside a DECLARE SECTION.

Action: Move the SQL statement into the body of a function.

PCC-02394: Input file name and output filename are identical

Cause: The values of INAME and ONAME are the same or the default output filename is the same as that specified by ONAME.

Action: Use ONAME to specify a different filename for the output file.

PCC-02395: Using arrays of structs requires that the struct be named

Cause: An array of some unnamed struct was used as a host variable. When using arrays of structs, the struct requires a name or tag.

Action: Provide a name for the struct.

PCC-02396: Illegal use of arrays inside an array of structs

Cause: An array of a struct that contained arrays of scalars or two-dimensional char or VARCHAR fields was used as a host variable.

Action: Rewrite the struct so that there are no scalar arrays or two-dimensional char or VARCHAR fields.

PCC-02397: VARCHAR declarations not permitted in #include file

Cause: A VARCHAR declaration was found in a file included using a #include form.

Action: Use the EXEC SQL INCLUDE form to include files with VARCHAR declarations instead.

PCC-02398: Indicator ignored in this statement for this type

Cause: An indicator variable was used in a host/indicator variable pair for some type in a statement that did not require or need one. Typically, indicator variables are not used in ALLOCATE and FREE statements for types other than object or collection types. They are also not used in OBJECT CREATE/DEREF statements for REF types.

Action: Remove the use of the indicator for the type in the specified statement. It will be ignored otherwise.

PCC-02399: Illegal CHAR_MAP option value for DBMS=V6. Option ignored.

Cause: A CHAR_MAP option other than CHAR_MAP=VARCHAR2 was specified inline. Since DBMS=V6, this option is ignored for a character or string variable in the offending statement.

Action: Either set DBMS to something other than V6, or specify CHAR_MAP=VARCHAR2.

PCC-02400: This host variable must be declared as a pointer type

Cause: The specified host variable was not declared as a pointer type.

Action: Declare the host variable to be a pointer type.

PCC-02401: Host variable arrays of this type are currently not supported

Cause: Host variable arrays of the specified type are not supported.

Action: Rewrite your program so that there are no arrays of this type.

PCC-02402: Pro*C option OBJECTS=YES is required when using the object cache

Cause: The object cache will be used for this host variable, but OBJECTS=NO was specified on the Pro*C command line.

Action: Specify OBJECTS=YES on the Pro*C command line when using the object cache.

PCC-02403: Invalid indicator variable type for this host variable

Cause: The type of the indicator variable is not appropriate for the specified host variable.

Action: Change the type of the indicator variable to a valid type. Refer to the "Programmer's Guide to the ORACLE Pro*C/C++ Precompiler" for a discussion of appropriate indicator variable declarations.

PCC-02404: This indicator variable must be declared as a pointer type

Cause: The specified indicator variable was not declared as pointer type.

Action: Declare the indicator variable to be a pointer type.

PCC-02405: Variable is of undefined type

Cause: No declaration was found for the type identifier of the variable.

Action: Provide a valid declaration for the type of the host variable. If using objects in your program, check that the OTT-generated header for the object type was #included and that the typefile was specified in the INTYPE option on the Pro*C command line.

PCC-02406: Expecting the form 'RETURN[ING] REF INTO :<varname>ref</varname>' only

Cause: When using the RETURNING clause in an OBJECT CREATE statement, only a single 'REF INTO :<varname>host variable</varname>' is expected. This error occurs if the expression list to which REF belongs is greater than one or if there are more than one host variables supplied in the into list.

Action: Rewrite the RETURNING clause as per the given specification.

PCC-02407: Object and REF types do not match

Cause: In an OBJECT CREATE or DEREf statement, the types of the given Object and its associated REF do not match.

Action: Make sure that the Object and its REF have the same type. The type information is generated by OTT and should appear in the header file which OTT creates.

PCC-02408: Expecting an expression of some Object type

Cause: The expression is not an Object type. For example, many host variable expressions in the Navigational statements require that the variable be declared of some Object type.

Action: Rewrite the expression or declare the variable to be an Object.

PCC-02409: Expecting an expression of some REF type

Cause: The expression is not a REF type. For example, some host variables in the Navigational CREATE and DEREf statements are required to be declared of some REF type.

Action: Rewrite the expression or declare the variable to be a REF.

PCC-02410: Expecting an expression of some Collection type.

Cause: The expression is not a Collection type. A VARRAY or Nested Table object was expected, but the given host variable did not resolve to a valid Collection type.

Action: Check that the OTT-generated header for the Collection type was properly #included in the Pro*C/C++ program and that the typefile was specified in the INTYPE option on the Pro*C/C++ command line.

PCC-02411: Invalid type for INDICATOR descriptor item host variable

Cause: The type of the host variable paired with the INDICATOR descriptor item was invalid. The only permissible types for the INDICATOR item are a signed 2 byte numeric type or an indicator struct generated by the Object Type Translator for a user defined object type.

Action: Either replace the INDICATOR host variable with a valid one having an acceptable type or redeclare the existing host variable to be of a valid type.

PCC-02412: FOR clause not permitted in OBJECT GET or SET statement

Cause: An explicit FOR clause was used in an OBJECT GET or OBJECT SET statement. Use of the FOR clause is illegal for these statements.

Action: Remove the FOR clause.

PCC-02413: Number of attributes does not match number of host variables

Cause: The number of attributes supplied in the attribute list of an OBJECT SET or GET statement does not match the total number of host variables also supplied in that statement.

Action: Either remove some attributes or remove some host variables from the statement in order to make the total count for each the same.

PCC-02414: This attribute does not exist in the specified Object

Cause: An attribute given in the attribute list of an OBJECT SET or GET statement is not a member of the specified object in that statement.

Action: Remove the attribute from the list.

PCC-02415: Cannot manipulate Object attributes in an OBJECT GET or SET

Cause: An attempt was made to either GET or SET an attribute of an Object that itself was an Object or REF type.

Action: Remove the attribute from the attribute list in the statement.

PCC-02416: The Object in an OBJECT GET or SET must not be an array

Cause: The Object specified in an OBJECT GET or SET statement is an array which is illegal.

Action: Redefine the Object so that it is not an array or subscript the Object so that only a single element of the Object array is specified.

PCC-02417: Illegal type conversion between attribute and host variable

Cause: An illegal type conversion was attempted in a Navigational GET or SET statement between the type of the Attribute and the type of the Host Variable.

Action: Change the type of either the Attribute or the Host Variable.

PCC-02418: Array size mismatch between Object and REF host variables

Cause: The array sizes of the Object and REF variables in an OBJECT CREATE or DEREf do not match.

Action: Adjust the array dimensions of the two host variables so that they are equal to one another.

PCC-02419: Host variable arrays not allowed in an OBJECT SET or GET

Cause: An array was found in the host variable list of an OBJECT SET or GET statement.

Action: Only scalars are allowed (except for single dimensioned char or varchar variables) in the host variable list of an OBJECT SET or GET. Make sure to use only scalars in these statements.

PCC-02420: Incomplete (or missing) type specification

Cause: An incomplete or perhaps missing type specification was given when declaring a host variable used in some SQL statement.

Action: Provide a complete type definition when declaring host variables intended for use inside any SQL statements.

PCC-02421: This host variable requires the use of an indicator variable

Cause: No indicator variable was provided (or matched) with a specific host variable where one was explicitly required.

Action: Provide an indicator variable for use with the specified host variable in the given SQL statement.

PCC-02422: Invalid value specified for the given context option

Cause: An illegal value was given for the specified runtime context option in the CONTEXT <varname>option</varname> OPTION SET (or GET) statement.

Action: Use a valid option value in the statement for the specified option being manipulated by the statement.

PCC-02423: Host variable has an invalid type for this option value

Cause: The type of the host variable corresponding to a specific option value in a CONTEXT <varname>option</varname> OPTION SET (or GET) statement is invalid for that particular value.

Action: Use a type suitable for the specific value being manipulated.

PCC-02424: The number of values and host variables does not match

Cause: There is a mismatch between the number of values specified and the number of valid host variables given in a CONTEXT <varname>option</varname> OPTION SET (or GET) statement.

Action: Use the same number of host variables as there are values given in that particular statement.

PCC-02425: An indicator variable is not required with this attribute

Cause: In a LOB or Collection DESCRIBE, an Indicator Variable was used with a Host Variable when retrieving a LOB attribute that doesn't require one.

Action: Remove the Indicator Variable.

PCC-02426: Incompatible LOB types

Cause: A LOB operation was attempted between LOBs whose types were not compatible. For example, When ASSIGNing one LOB to another, both LOBs must be of the same type. If they are not, this error results.

Action: Correct the LOB operation by having it function between LOBs of the same type. This may require a redeclaration of one of the LOBs used in the LOB statement performing the specified operation.

PCC-02427: Expression is not of the correct character string type

Cause: The given host variable expression was not declared to be of the required character type. In this case, one of several possible character types would have been accepted. However, the host variable type did not match any of them.

Action: Redeclare the problematic host variable, using one of the permitted character types.

PCC-02428: Buffer type is incompatible with LOB type

Cause: This error can occur in either of the following situations 1. An attempt to READ from a LOB into a buffer whose type was not compatible with the LOB type. 2. An

attempt to WRITE a buffer into a LOB whose type was not compatible with the buffer type.

Action: Either the LOB type or the buffer type needs to be changed so that the LOB and buffer types become compatible for the specified operation.

PCC-02429: Expecting an expression of some internal LOB type

Cause: The given host variable was not declared to be an Internal LOB. BLOB, CLOB or NCLOB would have been accepted, however, the type of the host variable did not match any of these.

Action: Redefine the host variable using one of the Internal LOB types.

PCC-02430: Expecting an expression of some arbitrary LOB type

Cause: The given host variable was not declared to be any type of LOB, Internal or External. In addition to any Internal LOB type, BFILE would also have been accepted, however, the type of the host variable did not match any of these.

Action: Redefine the host variable using any of the LOB types, Internal or External.

PCC-02431: Expecting an expression of type external LOB (BFILE)

Cause: The given host variable was not declared to be an External LOB. Only BFILE would have been accepted in this case.

Action: Redefine the host variable using an External LOB type (BFILE).

PCC-02432: Cannot open an external LOB (BFILE) in READ WRITE mode

Cause: An attempt was made to OPEN a BFILE in READ WRITE mode. Writable BFILES are currently not supported so this operation is considered erroneous.

Action: Do not open BFILES using READ WRITE mode. BFILES can only be OPENed in READ ONLY mode.

PCC-02433: Invalid host variable and attribute pairing

Cause: The host variable and attribute pairing in a LOB or Collection DESCRIBE is invalid. Most likely, this was due to some problem with the host variable. For example, this error could occur if the host variable was not declared or is otherwise not provided.

Action: Usually, other, more specific, errors will accompany this one. Correcting some or all of those problems should resolve this error.

PCC-02434: FOR clause not permitted in any LOB statement

Cause: An explicit FOR clause was used in some LOB statement. The use of the FOR clause in LOB statements is erroneous.

Action: Remove the FOR clause.

PCC-02435: This attribute is only valid for internal LOB types

Cause: A request for a LOB attribute was made in a LOB DESCRIBE statement in which the given LOB was not of some Internal LOB type.

Action: Replace the LOB host variable in the LOB DESCRIBE with one that was declared to be an Internal LOB.

PCC-02436: This attribute is only valid for external LOB types (BFILEs)

Cause: A request for a LOB attribute was made in a LOB DESCRIBE statement in which the given LOB was not an External LOB type (BFILE).

Action: Use an External LOB (BFILE) host variable in the LOB DESCRIBE statement.

PCC-02437: Expecting an expression having binary integral type

Cause: A host variable was given that was not declared to be of some acceptable binary numeric integral type. Generally, when this error occurs, a signed or unsigned integral type was expected. Floating point or otherwise imprecise numeric types are considered erroneous.

Action: Replace the problematic host variable with one that was declared using a proper exact numeric integral type.

PCC-02438: Arrays of collection objects are not allowed

Cause: An array of collections was given in a COLLECTION statement. Only scalar (non-array) collection objects are allowed in any of the COLLECTION statements.

Action: Change the declaration of the Collection host variable so that it is not an array.

PCC-02439: FOR clause not allowed in this COLLECTION statement

Cause: An illegal FOR clause was used in a COLLECTION statement that did not allow one, particularly, one of either the TRIM or DESCRIBE COLLECTION statements.

Action: Remove the FOR clause from the statement.

PCC-02440: This attribute is valid for either internal or external LOBs

Cause: A request for a LOB attribute was made in a LOB DESCRIBE statement in which the given LOB host variable was neither an Internal an External LOB (BFILE) type.

Action: Use either an Internal or External LOB host variable in the LOB DESCRIBE statement.

PCC-02441: Number of attributes does not match number of host variables

Cause: There is a mismatch between the number of attributes and the number of valid host variables in the LOB or Collection DESCRIBE.

Action: Make sure that for each attribute being requested there is at most a single valid host variable given to hold its value.

PCC-02442: Expecting a value between 1 and 65535 inclusive

Cause: The value specified in the WITH MAX clause of an ALLOCATE DESCRIPTOR statement or the VALUE clause of a GET/SET DESCRIPTOR statement was either less than 1 or greater than 65535.

Action: Specify a value between 1 and 65535 inclusive.

PCC-02443: This usage is only valid when DYNAMIC=ANSI is specified

Cause: One of the following statements was used without specifying a DYNAMIC=ANSI command line option setting o EXEC SQL ALLOCATE/ DEALLOCATE/GET/SET DESCRIPTOR o EXEC SQL DESCRIBE OUTPUT/ INPUT ... USING ... <varname>descriptor</varname> o EXEC SQL EXECUTE ... INTO ... o EXEC SQL EXECUTE ... USING ... <varname>descriptor</varname> o

EXEC SQL OPEN ... INTO ... o EXEC SQL OPEN ... USING ...
 <varname>descriptor</varname>

Action: Specify DYNAMIC=ANSI or remove statements like those above from the program.

PCC-02444: Invalid combination of descriptor and non-descriptor clauses

Cause: There was a mixing of descriptor and non-descriptor clauses in an ANSI Dynamic SQL statement.

Action: Do not mix descriptors and non-descriptors in the ANSI statement in question.

PCC-02445: USING clause valid only on a PREPARED dynamic statement

Cause: The USING clause was used with an OPEN cursor statement where the cursor declaration was not for a PREPARED statement. The correct sequence of statements should be as follows EXEC SQL PREPARE s FROM :stmt; EXEC SQL DECLARE c CURSOR FOR s; EXEC SQL OPEN c USING ...;

Action: Use the PREPARE statement for the SQL statement and use that in the DECLARE CURSOR statement.

PCC-02446: FOR clause not allowed in a DEALLOCATE statement

Cause: An explicit FOR clause was used in a DEALLOCATE DESCRIPTOR statement.

Action: Remove the FOR clause from the statement.

PCC-02447: Cannot specify destination offset in a LOB WRITE APPEND

Cause: A destination offset was specified in a LOB WRITE APPEND statement. The destination offset is assumed to be the end of the LOB so specifying an explicit destination offset is erroneous.

Action: Remove the destination offset from the LOB WRITE APPEND statement.

PCC-02448: Cannot specify a UCS2 variable in the NLS_NCHAR option

Cause: A variable declared as utext, uvvarchar, or longuvvarchar was specified in the NLS_NCHAR command line option.

Action: Re-compile without specifying the variable in an NLS_NCHAR command line option.

PCC-02449: Cannot type equivalence a UCS2 type

Cause: A UCS2 type has been type equivalenced in an EXEC SQL TYPE statement or a variable of UCS2 type has been type equivalenced in an EXEC SQL VAR statement.

Action: Remove the EXEC SQL TYPE or EXEC SQL VAR statement.

PCC-02450: Cursor was not declared in scrollable mode

Cause: A cursor which was not DECLARED in SCROLL mode was used in scrollable mode in the FETCH statement.

Action: Declare the cursor in scroll mode using the SCROLL keyword.

PCC-02451: Value of offset cannot be negative in ABSOLUTE orientation mode

Cause: The offset for the FETCH ABSOLUTE statement is negative.

Action: Value of offset should be positive.

PCC-02452: Common SQL Front End found semantic error

Cause: A database entity, such as a table or column name, was referenced, that does not exist. This is a compile time error, not a runtime error.

Action: Check that all referenced objects in the SQL statements actually exist and that the necessary access permission on them have been granted.

PCC-02453: Must use option SQLCHECK=SEMANTICS(FULL) when option OUTLINE is used

Cause: The precompiler option OUTLINE was used without specifying SQLCHECK=SEMANTICS(FULL).

Action: Set the precompiler option SQLCHECK=SEMANTICS(FULL).

PCC-02454: Must use option OUTLINE when option OUTLINPREFIX is used

Cause: The precompiler option OUTLINEPREFIX was used without specifying OUTLINE=YES|<varname>OUTLINENAME</varname>. The precompiler option OUTLINE must be specified if OUTLINPREFIX is used.

Action: Set the precompiler option OUTLINE=YES|<varname>OUTLINENAME</varname>.

PCC-02455: Must use option OUTLINE when option RUNOUTLINE is used

Cause: The precompiler option RUNOUTLINE was used without specifying OUTLINE=YES|<varname>OUTLINENAME</varname>. The precompiler option OUTLINE must be specified if RUNOUTLINE is used.

Action: Set the precompiler option OUTLINE=YES|<varname>OUTLINENAME</varname>.

PCC-02456: Unable to open Outline SQL file

Cause: Pro*C was unable to open the OUTLINE SQL file. The user executing the precompiler must have write permission (and/or the appropriate privileges) on the current directory.

Action: Check that permission exists to create files.

PCC-02457: Unable to open Outline LOG file

Cause: Pro*C was unable to open the OUTLINE LOG file. The user executing the precompiler must have write permission (and/or the appropriate privileges) on the current directory.

Action: Check that permission exists to create files.

PCC-02458: Outline name length exceeds the allowed limit

Cause: Outline name <varname>value of outline option</varname>_<varname>filename</varname>_<varname>filetype</varname>_<varname>seqno</varname> has exceeded the allowed limit.

Action: Use OUTLINPREFIX option to specify the outline name which will be well in the permitted limit.

PCC-02459: Number of outlines has exceeded the limit

Cause: Number of outlines that can be created has exceeded the file limit. Allowed outlines per file is 10000.

Action: Split the file so that each file can have not more than 10000 outlines.

PCC-02460: Outline cannot be created

Cause: Outline cannot be created as there is syntax error; or outlines are not supported on that statement.

Action: Correct the syntax error in the actual SQL used in the file or refer to "Performance Tuning Guide" for the list of supported statements.

PCC-02461: Must specify SQLCHECK=FULL along with option PLAN_BASELINE

Cause: The precompiler option PLAN_BASELINE was used without specifying SQLCHECK=FULL.

Action: Set the precompiler option SQLCHECK=FULL.

PCC-02462: Must use option PLAN_BASELINE along with option PLAN_PREFIX

Cause: The precompiler option PLAN_PREFIX was used without specifying PLAN_BASELINE=[<module_name>/yes].

Action: Specify the option PLAN_BASELINE=[<module_name>/yes].

PCC-02463: Must use option PLAN_BASELINE along with option PLAN_RUN

Cause: The precompiler option PLAN_RUN was used without specifying PLAN_BASELINE=[<module_name>/yes].

Action: Specify the option PLAN_BASELINE=[<module_name>/yes].

PCC-02464: Unable to open Plan Baseline SQL file

Cause: Pro*C was unable to open the Plan Baseline SQL file. The user executing the precompiler must have write permission (or the appropriate privileges) on the current directory.

Action: Check that permission is granted to create files.

PCC-02465: Unable to open Plan Baseline LOG file

Cause: Pro*C was unable to open the Plan Baseline LOG file. The user executing the precompiler must have write permission (and/or the appropriate privileges) on the current directory.

Action: Check that permission exists to create files.

PCC-02466: Length of Plan Baseline name exceeds the allowed limit

Cause: Plan Baseline name <module_name>_<varname>filename</varname>_<varname>filetype</varname>_<varname>seqno</varname> exceeded the allowed limit.

Action: Use PLAN_PREFIX option to specify the Plan Baseline prefix-name.

PCC-02467: Number of Plan Baselines has exceeded the limit per file

Cause: Number of Plan Baselines that can be created has exceeded the file limit. Allowed Plan Baselines per file is 10000.

Action: Split the file so that each file can have no more than 10000 Baselines.

PCC-02468: Plan Baseline cannot be created

Cause: Plan Baseline cannot be created, as there is a syntax error or Baselines are not supported on that statement.

Action: Correct the syntax error in the actual SQL used in the file or refer to the Oracle Database Performance Tuning Guide for the list of supported statements.

PCC-02469: Must use option PLAN_BASELINE along with option PLAN_ENABLED

Cause: Parameter required for Plan Baseline creation (PLAN_ENABLED) was used without specifying the option PLAN_BASELINE=[<module_name>/yes].

Action: Specify the option PLAN_BASELINE=[<module_name>/yes].

PCC-02470: Must use option PLAN_BASELINE along with option PLAN_FIXED

Cause: Parameter required for Plan Baseline creation (PLAN_FIXED) was used without specifying PLAN_BASELINE=[<module_name>/yes].

Action: Specify the option PLAN_BASELINE=[<module_name>/yes].

PCC-02471: Cannot use both PLAN_BASELINE and OUTLINE simultaneously

Cause: Both PLAN_BASELINE and OUTLINE options were specified. These options are not supported simultaneously.

Action: Specify either the PLAN_BASELINE option or the OUTLINE option, but not both.

PCC-02472: Module name exceeds 30 bytes, will be truncated in database

Cause: SQL Plan Management (SPM) does not support module names greater than 30 bytes and the specified module name exceeded this limit.

Action: Shorten the module name to stay within this limit.

PCC-02473: program has EXEC SQL DECLARE TABLE, therefore PLAN_RUN option is ignored

Cause: PLAN_RUN was ignored because DECLARE TABLE was found. Baseline plans were not created during precompilation.

Action: Run the generated SQL manually.

PCC-02474: invalid numeric value

Cause: The numeric value was invalid.

Action: Specify a proper numeric value.

PGA-20900 to PGA-22014

PGA-20900: unable to obtain <varname>number</varname> bytes of storage for <varname>string</varname>

Cause: Memory shortage in the gateway server process.

Action: Ensure your system has enough available memory to support the number of concurrent users you are running.

PGA-20901: internal gateway error: <varname>string</varname>

Cause: Internal error in the gateway server process.

Action: Reproduce the error with debugging enabled to produce a log file. Supported customers should contact Oracle Worldwide Support for assistance.

PGA-20905: invalid conversation id: no active conversations were found

Cause: There were no APPC conversations active for the user.

Action: Check that the application is not calling the PL/SQL TIP routines out of sequence.

PGA-20906: invalid conversation id: no matching conversation was found

Cause: The conversation id received from the caller is not a valid active conversation id.

Action: Check that the application is not calling the PL/SQL TIP routines out of sequence.

PGA-20907: preceding error occurred during gateway <varname>string</varname> processing

Cause: An error occurred processing the Oracle function <varname>func</varname>. This message is preceded by additional messages providing more detailed information about the error.

Action: Refer to the messages preceding this one to determine the course of action to take.

PGA-20910: communication error: CPI-C <varname>string</varname> failed, rc = <varname>number</varname>, errno = <varname>number</varname>

Cause: An unexpected communication error occurred while executing the specified CPI-C function <varname>func</varname>. The CPI-C function return code <varname>rc</varname> and system error number <varname>errno</varname> are provided in the message text. The CPI-C function return codes and system error numbers are described in the vendor documentation.

Action: Determine the cause of the communications error, correct it, and rerun the transaction.

PGA-20911: update transaction is already active with TP <varname>string</varname> at LU <varname>string</varname>

Cause: Transaction <varname>tpname</varname> has already been started at LU <varname>luname</varname> by a PGAINIT call with synclevel set to 1 or 2. Only one transaction at synclevel 1 or 2 is allowed at any given time.

Action: The new transaction is not started. Change your application to start the second update transaction after the first one has completed, or to use a different gateway database link for the second update transaction.

PGA-20912: send and receive buffer lengths cannot both be zero

Cause: Both the send and receive buffer lengths passed to PGAXFER were zero. This is invalid.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20914: send buffer length of <varname>number</varname> exceeds actual send buffer size of <varname>number</varname>

Cause: The send buffer length <varname>len</varname> passed to PGAXFER was larger than the actual size <varname>size</varname> of the send buffer passed to PGAXFER.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20915: receive buffer length of <varname>number</varname> exceeds the maximum of <varname>number</varname>

Cause: The receive buffer length <varname>len</varname> passed to PGAXFER was larger than the maximum allowed length <varname>max</varname>.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20916: send count is <varname>number</varname> but only <varname>number</varname> send lengths were specified

Cause: The first value <varname>count</varname> in the send lengths array passed to PGAXFER specified more elements than the send lengths array contained. Only <varname>num</varname> elements were found in the array.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20917: receive count is <varname>number</varname> but only <varname>number</varname> receive lengths were specified

Cause: The first value <varname>count</varname> in the receive lengths array passed to PGAXFER specified more elements than the receive lengths array contained. Only <varname>num</varname> elements were found in the array.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20918: send length number <varname>number</varname> is <varname>number</varname> but only <varname>number</varname> bytes are left in the buffer

Cause: The length <varname>len</varname> specified in send lengths array element number <varname>num</varname> exceeded the number of bytes <varname>bytes</varname> of data remaining in the send buffer.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20919: receive length number <varname>number</varname> is <varname>number</varname> but only <varname>number</varname> bytes are left in the buffer

Cause: The length <varname>len</varname> specified in receive lengths array element number <varname>num</varname> exceeded the number of bytes <varname>bytes</varname> of space remaining in the receive buffer.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20920: unexpected request-to-send received

Cause: The remote transaction program requested to send data when the gateway was still sending data.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20921: buffer overflow on receive: requested <varname>number</varname> bytes, received <varname>number</varname> bytes

Cause: The remote transaction program sent <varname>len</varname> bytes of data when the gateway was expecting to receive only <varname>num</varname> bytes.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20922: no data available to receive: <varname>number</varname> bytes were requested

Cause: The remote transaction program has either requested to receive or deallocated the conversation, but the gateway is still expecting to receive more data.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL

TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20923: unexpected status, <varname>number</varname> (<varname>string</varname>), received after <varname>string</varname>

Cause: An unexpected status code <varname>stat</varname> was received from the remote transaction program following the CPI-C <varname>func</varname> call. The descriptive name of the status code is <varname>desc</varname>. <varname>func</varname> is the CPI-C function receiving the status.

Action: This is usually a problem with the remote transaction program or a network problem. The status codes for each CPI-C function call are documented in the platform-specific SNA software documentation for your system. Refer to the "System Requirements" chapter of the Oracle Database Gateway for APPC Installation and Configuration Guide for your platform for titles of SNA software documentation.

PGA-20924: unable to enter send state for deallocate, state = <varname>number</varname> (<varname>string</varname>)

Cause: The gateway was unable to enter send state to perform a normal deallocation. The conversation state is <varname>state</varname>, and its descriptive name is <varname>desc</varname>. The conversation states are documented in the /usr/include/cmc.h header file.

Action: This is usually a problem with the remote transaction program or a problem with the network. Check the remote system for diagnostic information. The gateway will perform an abnormal deallocation after this error has been encountered.

PGA-20925: missing LU/TP/MODE name parameter and no side info profile specified

Cause: PGAINIT was called with no Side Information profile name specified but the LU name, TP name, and MODE name parameters were not all filled in with non-blank values.

Action: Check the PGDL used to define the transaction program to PGAU to ensure that either a valid Side Information profile name is specified (SIDEPROFILE keyword), or that the LU name, TP name, and Mode name (LUNAME, TPNAME, LOGMODE keywords) are all specified with valid values. If no Side Information profile is specified, the LU name, TP name, and Mode name parameters are all required.

PGA-20926: userid <varname>string</varname> length of <varname>number</varname> is invalid; maximum length is <varname>number</varname>

Cause: The userid <varname>uid</varname> is too long (<varname>len</varname>) to be used with APPC conversation security. The maximum allowable length for the userid is <varname>max</varname> characters. This can occur only when the gateway initialization parameter PGA_SECURITY_TYPE is set to either SAME or PROGRAM.

Action: The userid must be changed to a shorter value on both the client system and the system where the remote transaction program is being executed. This restriction is imposed by SNA and APPC, not by the gateway.

PGA-20927: password length of <varname>number</varname> is invalid; maximum length is <varname>number</varname>

Cause: The password is too long (<varname>len</varname>) to be used with APPC conversation security. The maximum allowable length for the password is

<varname>max</varname> characters. This can occur only when the gateway initialization parameter PGA_SECURITY_TYPE is set to PROGRAM.

Action: The password must be changed to a shorter value on both the client system and the system where the remote transaction program is being executed. This restriction is imposed by SNA and APPC, not by the gateway.

PGA-20928: cannot open parameter file <varname>string</varname>

Cause: The gateway cannot locate or open the file specified.

Action: Make sure that the file exists in a location expected by the gateway and can be opened.

PGA-20930: invalid SYNCLEVEL, <varname>number</varname>, specified; valid range is <varname>number</varname>:<varname>number</varname>

Cause: The synclevel, <varname>sync</varname>, passed to PGAINIT is not a valid value. This value is specified by the SYNCLEVEL keyword in the DEFINE TRANSACTION statement used to define the transaction to PGAU.

Action: The value for SYNCLEVEL must fall within the range <varname>min</varname>:<varname>max</varname>. Correct the value specified in the DEFINE TRANSACTION statement for the SYNCLEVEL keyword, and regenerate the PL/SQL TIP using PGAU.

PGA-20931: send buffer length of <varname>number</varname> exceeds the maximum of <varname>number</varname>

Cause: The send buffer length, <varname>len</varname>, passed to PGAXFER was larger than the maximum allowed, <varname>max</varname>.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU do not define any data items larger than the maximum size allowed by APPC. Correct the data item(s) in error and regenerate the PL/SQL TIP using PGAU.

PGA-20932: invalid function code, <varname>string</varname>, passed to pgatctl

Cause: The function code, <varname>func</varname>, passed to the PGATCTL function was invalid.

Action: Correct the function code in the PL/SQL procedure, recompile it, and retry the operation.

PGA-20933: invalid value specified by initialization parameter <varname>string</varname>=<varname>string</varname>

Cause: The keyword parameter <varname>keyword</varname>=<varname>value</varname> specifies an invalid value.

Action: Refer to the Oracle Database Gateway for APPC, Installation and Configuration Guide, documenting gateway initialization parameters for the keyword and correct the error.

PGA-20934: side information profile <varname>string</varname> not defined; cannot establish conversation

Cause: The Side Information profile <varname>profile</varname> is not defined to the SNA software. Either the profile name was misspelled, or no profile has been defined.

Action: Correct the profile name if it was misspelled, or have the profile defined to the SNA software if it was not already defined.

PGA-20935: synclevel <varname>number</varname> is not allowed when PGA_CAPABILITY=<varname>string</varname>

Cause: The synclevel parameter <varname>sync</varname> passed to PGAINIT was incompatible with the setting of the PGA_CAPABILITY gateway initialization parameter, <varname>cap</varname>.

Action: If the synclevel passed to PGAINIT is correct, then the gateway initialization parameter PGA_CAPABILITY must be changed to allow the desired synclevel to be supported. If the synclevel is not correct, the TIP should be changed to specify the correct sync- level in the call to PGAINIT. If the TIP was generated by PGAU, the SYNCLEVEL keyword of the DEFINE TRANSACTION statement should be changed to specify the correct synclevel and the TIP should be regenerated. The table below shows which synclevels are valid with each PGA_CAPABILITY setting.

PGA_CAPABILITY Value SYNCLEVELs Allowed -----
 READ_ONLY 0 SINGLE_SITE 0, 1 COMMIT_CONFIRM 0, 1

PGA-20936: send buffer length is <varname>number</varname> but no send lengths were specified

Cause: The send buffer length passed to PGAXFER was <varname>len</varname>, but the send lengths array was either null or contained a send count of zero.

Action: Check that the PGDL or COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions.

PGA-20937: receive buffer length is <varname>number</varname> but no receive lengths were specified

Cause: The receive buffer length passed to PGAXFER was <varname>len</varname>, but the receive lengths array was either null or contained a receive count of zero.

Action: Check that the PGDL or COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions.

PGA-20938: send lengths array too small (<varname>number</varname>) to contain a valid send count

Cause: The send lengths array passed to PGAXFER was too small to contain a valid send item count. The actual length of the send lengths array was <varname>len</varname>. The minimum length of the send lengths array is 4 bytes.

Action: If the TIP was generated by PGAU, ensure that it was not modified incorrectly. If the TIP was not modified, supported customers should contact Oracle Worldwide Support for assistance. If the TIP was modified or was not generated by PGAU, correct the send lengths array passed to PGAXFER.

PGA-20939: receive lengths array too small (<varname>number</varname>) to contain a valid receive count

Cause: The receive lengths array passed to PGAXFER was too small to contain a valid receive item count. The actual length of the receive lengths array was <varname>len</varname>. The minimum length of the receive lengths array is 4 bytes.

Action: If the TIP was generated by PGAU, ensure that it was not modified incorrectly. If the TIP was not modified, supported customers should contact Oracle Worldwide Support for assistance. If the TIP was modified or was not generated by PGAU, correct the receive lengths array passed to PGAXFER.

PGA-20945: unable to log on to Oracle for transaction logging

Cause: The gateway server was unable to connect to the Oracle server where the transaction log table is stored. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. If the protocol is SNA: also check the PGA_LOG_DB, PGA_LOG_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. If the protocol is TCP/IP: also check the PGA_TCP_DB, PGA_TCP_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. Refer to the Oracle Server Messages and Codes Manual for information on the Oracle server message.

PGA-20947: unable to bind variable <varname>string</varname> for transaction logging

Cause: The gateway server was unable to bind variable <varname>var</varname> for use in performing transaction logging functions. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also check the PGA_LOG_DB, PGA_LOG_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. Refer to the Oracle Server Messages and Codes Manual for information on the Oracle server message.

PGA-20948: unable to prepare the statement for transaction logging

Cause: The gateway server was unable to prepare the statement to be used to call the transaction logging PL/SQL stored procedure. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also check the PGA_LOG_DB, PGA_LOG_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. Verify that the transaction logging PL/SQL procedure has been properly installed into the Oracle server under the userid and password specified by PGA_LOG_USER and PGA_LOG_PASS and that it is executable. Refer to the Oracle Server Messages and Codes Manual for information on the Oracle server message.

PGA-20949: unable to define variable <varname>string</varname> for transaction recovery

Cause: The gateway server was unable to define variable <varname>var</varname> to be used in accessing the transaction log table during recovery processing. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also check the PGA_LOG_DB, PGA_LOG_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. Refer to the Oracle Server Messages and Codes Manual for information on the Oracle server message.

PGA-20950: unable to perform <varname>string</varname> on transaction log

Cause: The gateway server was unable to insert, update, or delete a pending transaction row in the transaction log table. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also check the PGA_LOG_DB, PGA_LOG_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. Verify that the transaction logging PL/SQL stored procedure and the transaction log table have been properly installed into the Oracle server under the userid and password specified by PGA_LOG_USER and PGA_LOG_PASS. Refer to the Oracle Server Message and Codes Manual for information on the Oracle server message.

PGA-20960: missing <varname>string</varname> parameter, required when PGA_CAPABILITY=<varname>string</varname>

Cause: The PGA_CAPABILITY parameter specified <varname>cap</varname>, but another required parameter, <varname>parm</varname>, was omitted.

Action: Add the missing parameter to the gateway initialization file. Refer to Appendix A, 'Gateway Initialization Parameters', in the Oracle Database Gateway for APPC Installation and Configuration Guide for information on required parameters.

PGA-20961: synclevel 1 conversations not allowed when PGA_CAPABILITY=2_PHASE

Cause: A conversation was requested at synclevel 1. The gateway init file specified PGA_CAPABILITY=2_PHASE. When 2-phase commit is enabled, synclevel 1 conversations are not supported, since they are not protected by 2-phase processing.

Action: Either use synclevel 2 for the conversation (if the remote transaction program supports it) or use a different gateway SID for this conversation.

PGA-20962: synclevel 2 conversations not currently allowed

Cause: A conversation was requested at synclevel 2, but the SNA software allocated the conversation at synclevel 0 or 1. This means that the SNA software is not configured to support synclevel 2, or has no RRM enabled.

Action: Correct the SNA software configuration to support synclevel 2 and to enable RRN processing.

PGA-20963: side profile <varname>string</varname> specifies the wrong local LU name (<varname>string</varname>)

Cause: The Side Information profile <varname>profile</varname> specified for this conversation has a local LU name <varname>lu</varname> that is different from the local LU name specified by the PGA_LOCAL_LU gateway initialization parameter.

Action: This message will be accompanied by message PGA-20984, which provides the local LU name that was specified by the PGA_LOCAL_LU gateway initialization parameter. The Side Information profile must be changed to use the same local LU name.

PGA-20964: local LU name specified by PGA_LOCAL_LU is <varname>string</varname>

Cause: Message PGA-20963 was issued. This message always follows.

Action: See message PGA-20963.

PGA-20965: syncpoint error: expecting <varname>string</varname> PS header, received <varname>string</varname>

Cause: During the processing of a 2-phase commit, an incorrect response was received from the remote transaction program following a syncpoint control command. The response received was <varname>rcv</varname> and not a <varname>pstype</varname> PS header as expected.

Action: This is an error in the remote transaction program or the remote OLTP. Check the remote system for error messages from the OLTP. Contact the system administrator for the remote system to assist in problem determination.

PGA-20966: syncpoint error: sent <varname>string</varname>, expecting <varname>string</varname>, received <varname>string</varname>

Cause: During the processing of a 2-phase commit, an incorrect response <varname>resp</varname> was received from the remote transaction program following a syncpoint control command <varname>psh</varname>. The expected response was <varname>exp</varname>.

Action: This is an error in the remote transaction program or the remote OLTP. Check the remote system for error messages from the OLTP. Contact the system administrator for the remote system to assist in problem determination.

PGA-20967: 2-phase commit recovery attempted, DBA action required

Cause: The recovery process of the Oracle integrating server has connected to the gateway to perform recovery. However, the gateway cannot perform automatic recovery for this transaction due to unknown heuristic action taken by the target OLTP.

Action: The DBA must attempt to manually resolve the in-doubt transaction. Detailed information on how to proceed is contained in Chapter 8 of the Oracle Database Gateway for APPC Installation and Configuration Guide, in the section titled "Manual Recovery of In-Doubt Transactions".

PGA-20995: communication error: '<varname>string</varname>' failed, rc = <varname>number</varname>, errno = <varname>number</varname>

Cause: An unexpected communications error occurred while executing the AIX SNA Server API <varname>func</varname> function. The function return code is <varname>rc</varname> and the system error number is <varname>errno</varname>. The AIX SNA Server LU6.2 API function return codes and system error numbers are described in the vendor documentation. The SNA system error numbers can also be found in the /usr/include/luxsna.h header file on AIX systems.

Action: Determine the cause of the communications error, correct it, and rerun the transaction. If you need assistance, contact your system administrator.

PGA-20999: SIGDANGER received from system - all conversations deallocated

Cause: The system sent a SIGDANGER signal to the server, indicating that there is a shortage of paging space. All currently active conversations are deallocated abnormally.

Action: Contact your system administrator.

PGA-21001: internal error: <varname>string</varname>

Cause: Internal error in the gateway RRM process.

Action: Reproduce the error with tracing enabled to produce a trace file. Supported customers should contact Oracle Worldwide Support for assistance.

PGA-21002: unable to obtain <varname>number</varname> bytes of memory for <varname>string</varname>

Cause: Memory shortage in the gateway RRM process. A request failed to allocate <varname>bytes</varname> of memory for the <varname>usage</varname> area.

Action: Ensure your system has enough available memory to support the RRM.

PGA-21003: memory allocation error in lxinit

Cause: Memory shortage in the gateway RRM process.

Action: Ensure your system has enough available memory to support the RRM.

PGA-21004: invalid <varname>string</varname> specified by NLS_LANG

Cause: The <varname>comp</varname> component of the NLS_LANG environment variable was not valid. The component can be the language, territory, or character set.

Action: Correct the invalid component and restart the RRM process.

PGA-21005: no message file found for language '<varname>string</varname>'

Cause: There was no message file available for the language <varname>lang</varname> specified by the NLS_LANG environment variable.

Action: Refer to Appendix J, National Language Support, for a list of message file languages supported by the RRM. If the language required is supported, ensure that the ORACLE_HOME environment variable specifies the gateway's home directory and that the message files are properly installed.

PGA-21006: RRM initialization failed

Cause: The initialization of the gateway RRM process failed.

Action: This message is sent to the system log as an ALERT message when the initialization of the RRM failed before it could initialize the message facility or before it could determine the local LU name for which it was started.

PGA-21010: missing fully-qualified local LU name argument

Cause: The fully-qualified local LU name was not passed as the first argument to the pg4arm program on the command line.

Action: The fully-qualified local LU name must be specified as the first argument to the pg4arm program. Reenter the command line with the fully-qualified local LU name specified.

PGA-21011: invalid network name length (<varname>number</varname>), valid range is <varname>number</varname>:<varname>number</varname>

Cause: The network name portion of the fully-qualified local LU name specified as the first argument to the pg4arm program is the wrong length (<varname>len</varname>).

Action: The valid range of lengths for the network name is given in the message text by <varname>min</varname>:<varname>max</varname>. Reenter the command line with a valid network name specified in the fully-qualified local LU name.

PGA-21012: invalid LU name length (<varname>number</varname>), valid range is <varname>number</varname>:<varname>number</varname>

Cause: The LU name portion of the fully-qualified local LU name specified as the first argument to the pg4arm program is the wrong length (<varname>len</varname>).

Action: The valid range of lengths for the LU name is given in the message text by <varname>min</varname>:<varname>max</varname>. Reenter the command line with a valid LU name specified in the fully-qualified local LU name.

PGA-21013: missing period(.) in fully-qualified local LU name

Cause: There is no period (.) in the fully-qualified local LU name specified as the first argument to the pg4arm program.

Action: A fully-qualified local LU name must contain a network name and an LU name, separated by a period (.). Reenter the command line with a valid fully-qualified local LU name specified.

PGA-21014: invalid character(s) found in network name '<varname>string</varname>'

Cause: One or more invalid characters were found in the network name portion <varname>net</varname> of the fully-qualified local LU name.

Action: The network name must begin with an upper-case alphabetic character or one of the national characters \$, #, or @. Subsequent characters can be upper-case alphabetic, national, or numeric. Reenter the command line with a valid network name specified in the fully-qualified local LU name.

PGA-21015: invalid character(s) found in LU name '<varname>string</varname>'

Cause: One or more invalid characters were found in the LU name portion <varname>lu</varname> of the fully-qualified local LU name.

Action: The LU name must begin with an upper-case alphabetic character or one of the national characters \$, #, or @. Subsequent characters can be upper-case alphabetic, national, or numeric. Reenter the command line with a valid network name specified in the fully-qualified local LU name.

PGA-21016: RRM initialization failed for LU <varname>string</varname>

Cause: The initialization of the gateway RRM process for local LU <varname>lu</varname> failed.

Action: This message is sent to the system log as an ALERT message when the initialization of the RRM failed for the local LU.

PGA-21017: RRM already active for LU <varname>string</varname>

Cause: The RRM has already been started for the local LU <varname>lu</varname>. A second RRM cannot be started for the same local LU.

Action: Determine whether the RRM is still active and functioning. If it is not, then it may have terminated without cleaning up. On AIX systems, the /tmp/o/e<varname>luname</varname> file may still exist. This will prevent a new RRM from being started. If you have verified that the original RRM is no longer running, you can delete the file to allow a new copy of the RRM to be started.

PGA-21020: error creating path object for init file

Cause: A memory shortage occurred while creating an internal control block for accessing the init file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21021: error creating name object for init file

Cause: A memory shortage occurred while creating an internal control block for accessing the init file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21022: error creating file object for init file

Cause: A memory shortage occurred while creating an internal control block for accessing the init file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21023: error opening init file <varname>string</varname>

Cause: An error occurred opening the init file <varname>ifn</varname>.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21024: error reading init file <varname>string</varname>

Cause: An error occurred reading the init file <varname>ifn</varname>.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21025: error closing init file <varname>string</varname>

Cause: An error occurred opening the init file <varname>ifn</varname>.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21030: invalid keyword in line <varname>number</varname>

Cause: An invalid keyword was encountered in the init file in line number <varname>line</varname>.

Action: Correct the invalid line in the init file and restart the RRM process.

PGA-21031: length of <varname>string</varname> value (<varname>number</varname>) not within valid range (<varname>number</varname>:<varname>number</varname>)

Cause: The length <varname>len</varname> of the value specified in the init file by the keyword <varname>key</varname> is not within the valid range <varname>min</varname>:<varname>max</varname>.

Action: Correct the invalid keyword value in the init file and restart the RRM process.

PGA-21032: invalid value specified by <varname>string</varname><varname>string</varname>

Cause: The value <varname>val</varname> specified in the init file by the keyword <varname>key</varname> is invalid.

Action: Correct the invalid keyword value in the init file and restart the RRM process.

PGA-21033: error(s) found in init file

Cause: One or more errors were found in the init file during RRM initialization. The RRM process has terminated.

Action: Correct all init file errors and restart the RRM process.

PGA-21034: too many errors in init file, cannot continue

Cause: The init file contained more errors than the RRM initialization code could process.

Action: Correct all errors that have been processed so far, and restart the RRM process. Any additional errors will then be processed. This error is received only when the init file contains a very large number of invalid lines.

PGA-21035: value of <varname>string</varname> (<varname>number</varname>) not within valid range (<varname>number</varname>:<varname>number</varname>)

Cause: The value <varname>val</varname> specified in the init file by the keyword <varname>key</varname> is not within the valid range <varname>min</varname>:<varname>max</varname>.

Action: Correct the invalid keyword value in the init file and restart the RRM process.

PGA-21040: error creating path object for log file

Cause: A memory shortage occurred while creating an internal control block for accessing the log file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21041: error creating name object for log file

Cause: A memory shortage occurred while creating an internal control block for accessing the log file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21042: error creating file object for log file

Cause: A memory shortage occurred while creating an internal control block for accessing the log file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21043: error opening log file <varname>string</varname>

Cause: An error occurred opening the log file <varname>lfn</varname>.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21044: error writing to log file <varname>string</varname>

Cause: An error occurred writing to the log file <varname>lfn</varname>.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21045: error closing log file <varname>string</varname>

Cause: An error occurred closing the log file <varname>lfn</varname>.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21046: logging switched to system log due to error on log file

Cause: An error occurred writing to the log file, and logging as been switched to the system log facility for the remainder of this RRM execution.

Action: Correct the problem that caused the error on the log file, so that the next restart of the RRM will be able to write to the log file. A common cause for this message is unavailable disk space for the file.

PGA-21050: error creating path object for trace file

Cause: A memory shortage occurred while creating an internal control block for accessing the trace file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21051: error creating name object for trace file

Cause: A memory shortage occurred while creating an internal control block for accessing the trace file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21052: error creating file object for trace file

Cause: A memory shortage occurred while creating an internal control block for accessing the trace file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21053: error opening trace file <varname>string</varname>

Cause: An error occurred opening the trace file <varname>tfn</varname>.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21054: error writing to trace file <varname>string</varname>

Cause: An error occurred writing to the trace file <varname>tfn</varname>.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21055: error closing trace file <varname>string</varname>

Cause: An error occurred closing the trace file <varname>tfn</varname>.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21056: tracing suspended due to error on trace file

Cause: An error occurred writing to the trace file, and tracing has been suspended for the remainder of this RRM execution.

Action: Correct the problem that caused the error on the trace file, so that the next restart of the RRM will be able to write to the trace file. A common cause for this message is unavailable disk space for the file.

PGA-21060: system errno = <varname>number</varname>

Cause: The system error number was <varname>errno</varname> following a failure in a file operation.

Action: The system error codes are documented in the header file /usr/include/errno.h. Determine the cause of the file error and correct it.

PGA-21100: RRM initializing for local LU <varname>string</varname>

Cause: The RRM is initializing for the local LU <varname>llu</varname>.

Action: Informational message.

PGA-21101: initialization parameters read from <varname>string</varname>

Cause: Init parameters were read from the file <varname>ifn</varname>.

Action: Informational message.

PGA-21102: log messages written to <varname>string</varname>

Cause: Log messages will be written to the file <varname>lfn</varname>.

Action: Informational message.

PGA-21103: trace information written to <varname>string</varname>

Cause: Trace information will be written to the file <varname>tfn</varname>.

Action: Informational message.

PGA-21104: trace level currently set to <varname>number</varname>

Cause: The trace level specified by the TRACE_LEVEL parameter is <varname>trc</varname>.

Action: Informational message.

PGA-21105: startup for local LU <varname>string</varname> is warm

Cause: The RRM is warm-starting for the local LU <varname>llu</varname>. The RRM will attempt to restore all LU6.2 log states from the RRM LU6.2 log as it existed at the last RRM shutdown.

Action: Informational message.

PGA-21106: warm start complete for local LU <varname>string</varname>

Cause: The RRM has warm-started for the local LU <varname>llu</varname>. This means that all state information for the local LU and partner LUs with which the RRM has previously communicated was restored from the RRM LU6.2 log as it existed at the last RRM shutdown.

Action: Informational message.

PGA-21107: startup for local LU <varname>string</varname> is cold

Cause: The RRM is cold-starting for the local LU <varname>llu</varname>. The RRM will not retain any LU6.2 log states from the previous execution.

Action: Informational message.

PGA-21108: cold start complete for local LU <varname>string</varname>

Cause: The RRM has cold-started for the local LU <varname>llu</varname>. The RRM has a new local LU6.2 log name and all LU6.2 log names for partner LUs have been erased.

Action: Informational message.

PGA-21109: local log name is x'<varname>string</varname>'

Cause: The local LU's LU6.2 log name is <varname>llog</varname>. Since the log name is not necessarily a printable string, it is listed as a hexadecimal string.

Action: Informational message.

PGA-21110: XLN received from partner LU <varname>string</varname>

Cause: An Exchange Log Names (XLN) GDS variable has been received from the RRM at the partner LU <varname>plu</varname>. This is the first thing that occurs when communication is established with a partner LU for the first time since either the local RRM or the partner RRM was last started.

Action: Informational message.

PGA-21111: partner log name is x'<varname>string</varname>'

Cause: The partner LU's LU6.2 log name is <varname>plog</varname>. Since the log name is not necessarily a printable string, it is listed as a hexadecimal string.

Action: Informational message.

PGA-21112: creating new log entry for partner LU <varname>string</varname>

Cause: The RRM is creating an entry in its LU6.2 log for the partner LU <varname>plu</varname>. This happens only the first time that the partner LU's RRM contacts the local RRM since the last cold start of the local RRM.

Action: Informational message.

PGA-21113: warm starting for partner LU <varname>string</varname>

Cause: The RRM is warm starting for the partner LU <varname>plu</varname>. This happens when the partner LU's RRM is warm starting and is contacting the local RRM for the first time since the local RRM was started.

Action: Informational message.

PGA-21114: cold starting for partner LU <varname>string</varname>

Cause: The RRM is cold starting for the partner LU <varname>plu</varname>. This happens when the partner LU's RRM is cold starting and is contacting the local RRM for the first time since the local RRM was started.

Action: Informational message.

PGA-21115: shutdown request received

Cause: A shutdown request has been received by the RRM.

Action: Informational message.

PGA-21116: RRM termination complete for local LU <varname>string</varname>

Cause: The RRM has terminated for the local LU <varname>llu</varname>.

Action: Informational message.

PGA-21200: connect to Oracle Server as <varname>string</varname> failed

Cause: The RRM was unable to connect as user <varname>user</varname> to the Oracle server where its LU6.2 log information is stored. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also check the LOG_DB, LOG_USER, and LOG_PASS parameters in the RRM init file and ensure that they specify the correct database string, userid, and password, respectively.

PGA-21201: error selecting PGA_2PC_LUS row for local LU <varname>string</varname>

Cause: The RRM was unable to read its local LU6.2 log entry. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21202: error updating PGA_2PC_LUS row for local LU <varname>string</varname>

Cause: The RRM was unable to update its local LU6.2 log entry during warm start processing. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21203: error inserting PGA_2PC_LUS rows for local LU <varname>string</varname>

Cause: The RRM was unable to create its local LU6.2 log entry during cold start processing. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started again.

PGA-21204: error deleting PGA_2PC_PENDING rows for local LU <varname>string</varname>

Cause: The RRM was unable to delete the pending transaction entries from its local LU6.2 log during cold start processing. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_PENDING table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started again.

PGA-21205: error deleting PGA_2PC_LUS rows for partner LUs

Cause: The RRM was unable to delete the partner LU entries from its local LU6.2 log during cold start processing. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started again.

PGA-21206: error selecting PGA_2PC_LUS row for partner LU <varname>string</varname>

Cause: The RRM was unable to read its local LU6.2 log entry for the partner LU. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

**PGA-21207: error inserting PGA_2PC_LUS row for partner LU
<varname>string</varname>**

Cause: The RRM was unable to create a local LU6.2 log entry for the partner LU. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

**PGA-21208: error updating PGA_2PC_LUS row for partner LU
<varname>string</varname>**

Cause: The RRM was unable to update its local LU6.2 log entry for the partner LU. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

**PGA-21209: error selecting PGA_2PC_PENDING rows for partner LU
<varname>string</varname>**

Cause: The RRM was unable to read the pending transaction entries from its LU6.2 log for the partner LU <varname>plu</varname>. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_PENDING table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21210: unable to open connection with SNA services

Cause: The RRM was unable to initialize its connection with the SNA software for LU6.2 communications. An OS-specific error message precedes this message.

Action: Check the error information in the OS-specific error message to determine the cause of the problem, and take corrective action. Once the problem has been corrected, restart the RRM.

PGA-21211: unable to allocate LU6.2 listen for RRM TP

Cause: The RRM was unable to allocate an LU6.2 listen with the SNA software for LU6.2 communications. An OS-specific error message precedes this message.

Action: Check the error information in the OS-specific error message to determine the cause of the problem, and take corrective action. Once the problem has been corrected, restart the RRM.

PGA-21212: incorrect data received from partner LU <varname>string</varname>

Cause: A partner LU has sent incorrect data in its initial communication with the local RRM. The first data received should be an Exchange Log Names (XLN) GDS variable, but was not.

Action: This error indicates that there is a problem on the partner LU side of the connection. Corrective action must be taken by the system administrator for that LU.

PGA-21213: received x'<varname>string</varname>'

Cause: This message follows message PGA-00208, and dumps out the first 32 bytes of the data received from the partner LU.

Action: If the data in this message is not sufficient for determination of the problem at the partner LU, use SNA traces on either side of the connection to gather more detailed information, or use the TRACE_LEVEL parameter in the RRM init file to enable SNA data tracing to the trace file.

PGA-21214: incorrect service flag in XLN

Cause: The service flag in the Exchange Log Names (XLN) GDS variable received from the partner LU's RRM is not correct. The XLN is expected to have the REQUEST flag set.

Action: This error indicates that there is a problem on the partner LU side of the connection. Corrective action must be taken by the system administrator for that LU.

PGA-21215: partner log name mismatch on warm start

Cause: The Exchange Log Names (XLN) GDS variable received from the partner LU's RRM contains an LU6.2 log name that is different from that known by the local LU's RRM.

Action: This can happen if the partner LU was cold started and later warm started, all between the times the local LU's RRM was last shut down and warm started. The local LU's RRM is not aware that the partner LU was cold started, and therefore assumes that the partner LU's RRM is using the wrong LU6.2 log name. Verify that this is what happened, and if so, the local LU's RRM can be forced to accept the new LU6.2 log name from the partner LU's RRM by deleting the local RRM's LU6.2 log entry for the partner LU, and then forcing the partner LU to reinitiate the connection to the local LU. For further information on recovery from this error, refer to "RRM Recovery" in Chapter 12, "2-Phase Commit".

PGA-21216: last stored log name x'<varname>string</varname>'

Cause: This message always follows message PGA-00213, and lists the last partner LU LU6.2 log name <varname>plog</varname> saved by the local LU's RRM.

Action: The log name in the message may be of use to the system administrator for the partner LU in determining the cause for the log name mismatch.

PGA-21217: partner sent log name x'<varname>string</varname>'

Cause: This message always follows message PGA-00214, and lists the LU6.2 log name <varname>plog</varname> sent by the partner LU's RRM in the warm start Exchange Log Names (XLN) GDS variable.

Action: The log name in the message may be of use to the system administrator for the partner LU in determining the cause for the log name mismatch.

PGA-21218: cold start for partner LU <varname>string</varname> rejected, <varname>number</varname> pending transactions exist

Cause: A cold start was requested by the partner LU's RRM, but the local RRM determined that there are still unresolved pending transactions for that LU in the local RRM's LU6.2 log.

Action: If the pending transactions have been resolved, then they must be manually deleted from the local RRM's LU6.2 log before the partner LU's cold start request will be accepted. If the pending transactions have not been resolved, then they must be resolved and then manually deleted from the local RRM's LU6.2 log before the partner LU's cold start request will be accepted.

PGA-21219: recovery action by DBA required for local LU <varname>string</varname>

Cause: A condition has occurred which requires action by the DBA. This message is also sent to the system log as an alert message.

Action: The DBA should examine the RRM log file to determine what action to take. The messages in the log file show what event has occurred that makes DBA action necessary, and their descriptions in this appendix provide the DBA with a course of action. For further information on recovery, refer to "RRM Recovery" in Chapter 8, "Implementing Two-Phase Commit", of the Oracle Database Gateway for APPC Installation and Configuration Guide.

PGA-21220: logging error limit (<varname>number</varname>) exceeded, RRM shutting down for LU <varname>string</varname>

Cause: The limit of <varname>lim</varname> Oracle errors while accessing the RRM's local LU6.2 log tables has exceeded. The RRM for the local LU <varname>llu</varname> is shutting down.

Action: The DBA should examine the RRM log file to determine what action to take. The messages in the log file will show what Oracle errors have occurred, and the DBA should take whatever corrective action is required.

PGA-21221: commit failed during cold start of local LU <varname>string</varname>

Cause: The RRM was unable to commit updates to its local log during a cold start of local LU <varname>llu</varname>. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21222: commit failed during warm start of local LU <varname>string</varname>

Cause: The RRM was unable to commit updates to its local log during a warm start of local LU <varname>llu</varname>. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21223: commit failed during first-time processing for partner LU <varname>string</varname>

Cause: The RRM was unable to commit updates to its local log during a first-time processing for partner LU <varname>plu</varname>. An Oracle Server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21224: commit failed during cold start of partner LU <varname>string</varname>

Cause: The RRM was unable to commit updates to its local log during a cold start of partner LU <varname>plu</varname>. An Oracle Server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21300: received no data when expecting data

Cause: The RRM was expecting to receive data from a partner RRM, but received none.

Action: This error indicates that there may be a problem on the partner LU side of the connection. Corrective action must be taken by the system administrator for that LU.

PGA-21301: invalid control received: <varname>string</varname>

Cause: The RRM received an invalid control flag <varname>control</varname> from a partner RRM.

Action: This error indicates that there may be a problem on the partner LU side of the connection. Corrective action must be taken by the system administrator for that LU.

PGA-21400: ORACLE_HOME environment variable not set

Cause: The ORACLE_HOME environment variable was not set before the RRM was started.

Action: The ORACLE_HOME environment variable must be set to the gateway's ORACLE_HOME directory before the RRM is started.

PGA-21401: ORACLE_HOME environment variable set to null string

Cause: The ORACLE_HOME environment variable was set to a null value.

Action: The ORACLE_HOME environment variable must be set to the gateway's ORACLE_HOME directory before the RRM is started.

PGA-21402: error opening file <varname>string</varname>, fopen errno = <varname>number</varname>

Cause: An error occurred opening the RRM enqueue file <varname>fn</varname> for writing. The error number from fopen is <varname>errno</varname>.

Action: Use the <varname>errno</varname> value to determine the cause of the problem and correct it before restarting the RRM.

PGA-21403: error writing to file <varname>string</varname>, fputs errno = <varname>number</varname>

Cause: An error occurred writing to the RRM enqueue file <varname>fn</varname>. The error number from fputs is <varname>errno</varname>.

Action: Use the <varname>errno</varname> value to determine the cause of the problem and correct it before restarting the RRM.

PGA-21404: error closing file <varname>string</varname>, fclose errno = <varname>number</varname>

Cause: An error occurred closing the RRM enqueue file <varname>fn</varname>. The error number from fclose is <varname>errno</varname>.

Action: Use the <varname>errno</varname> value to determine the cause of the problem and correct it before restarting the RRM.

PGA-21405: error deleting file <varname>string</varname>, remove errno = <varname>number</varname>

Cause: An error occurred deleting the RRM enqueue file <varname>fn</varname> during shutdown. The error number from remove is <varname>errno</varname>.

Action: Use the <varname>errno</varname> value to determine the cause of the problem and correct it before restarting the RRM. The file <varname>fn</varname> must be manually deleted before attempting to start the RRM.

PGA-21450: communication error: '<varname>string</varname>' failed, errno = <varname>number</varname>

Cause: The AIX SNA function <varname>func</varname> failed with a system error number of <varname>errno</varname>.

Action: The AIX SNA error codes are documented in the IBM manual AIX SNA Server: Diagnosis Guide and Messages. Use this manual to determine the cause of the problem and correct it. AIX SNA system error numbers are also documented in the /usr/include/luxsna.h header file on AIX systems.

PGA-21451: SNA Server is shutting down

Cause: SNA Server is being shut down and sent a SIGUSR1 to the RRM.

Action: The RRM must terminate when this occurs. Contact the system administrator to determine the cause of the SNA Server shutdown. Restart the RRM after SNA Server has been restarted.

PGA-22001: remote host name is null.

Cause: TCP/IP protocol has returned "null" for the remote host name.

Action: Verify the remote host name via the pg4tcpmap tool and re-execute your PL/SQL statement. If the problem cannot be resolved, supported customers should contact Oracle Support Services.

PGA-22002: communication error: TCP/IP <varname>string</varname> failed, rc = <varname>number</varname>

Cause: The function <varname>func</varname> has failed with the return code of <varname>rc</varname>.

Action: If the problem cannot be resolved, the supported customers should contact Oracle Support Services for assistance.

PGA-22003: communication error: TCP/IP <varname>string</varname> failed, rc = <varname>number</varname>, for, <varname>string</varname>

Cause: An unexpected communications error occurred while executing the specified TCP/IP function <varname>func</varname>. The TCP/IP function return code is

<varname>rc</varname> and the function <varname>func</varname> parameter is <varname>parm</varname>.

Action: If the problem cannot be resolved, the supported customers should contact Oracle Support Services for assistance.

PGA-22004: length of the total message value (<varname>number</varname>) not within valid range (<varname>number</varname>:<varname>number</varname>)

Cause: The length <varname>len</varname> for the value is not within the valid range <varname>min</varname>:<varname>max</varname>.

Action: If the problem cannot be resolved, the supported customers should contact Oracle Support Services for assistance.

PGA-22005: invalid socket file descriptor: no active conversations were found

Cause: There were no TCP/IP conversations active for the user.

Action: Check that the application is not calling the PL/SQL TIP routines out of sequence.

PGA-22006: Parameter <varname>string</varname> is not specified.

Cause: Parameter <varname>parm</varname> is missing from the gateway initialization file.

Action: Add the missing parameter to the gateway initialization file. Refer to the Oracle Database Gateway Installation and Configuration Guide for the required initialization parameters for gateways using TCP/IP.

PGA-22007: user ID <varname>string</varname> length of <varname>number</varname> is invalid; maximum length is <varname>number</varname>

Cause: The user id <varname>uid</varname> is too long <varname>len</varname> to be used. The maximum allowable length for the user ID is <varname>max</varname> characters.

Action: The user id must be changed to a shorter value for OCI logon to the table PGA_TCP_IMSC. Refer to the Oracle Database Gateway Installation and Configuration Guide for the required gateway initialization parameters for gateways using TCP/IP.

PGA-22008: password length of <varname>number</varname> is invalid; maximum length is <varname>number</varname>

Cause: The password is too long <varname>len</varname> to be used. The maximum allowable length for the password is <varname>max</varname> characters.

Action: The password must be changed to a shorter value for OCI logon to the table PGA_TCP_IMSC. Refer to the Oracle Database Gateway Installation and Configuration Guide for the required gateway initialization parameters for gateways using TCP/IP.

PGA-22009: database name <varname>string</varname> length of <varname>number</varname> is invalid; maximum length is <varname>number</varname>

Cause: The database name <varname>db name</varname> is too long <varname>len</varname> to be used. The maximum allowable length for the database name is <varname>max</varname> characters.

Action: The database name must be changed to a shorter value for OCI logon to the table PGA_TCP_IMSC. Refer to the Oracle Database Gateway Installation and Configuration Guide for the required gateway initialization parameters for gateways using TCP/IP.

PGA-22010: userid <varname>string</varname> length of <varname>number</varname> is invalid; maximum length is <varname>number</varname>

Cause: The userid <varname>uid</varname> is too long (<varname>len</varname>) to be used with TCP/IP RACF conversation security. This can occur only when the gateway initialization parameter PGA_SECURITY_TYPE is set to either SAME or PROGRAM.

Action: The userid must be changed to a shorter value on both the client system and the system where the remote transaction program is being executed. The maximum allowable length for the userid is <varname>max</varname> characters. This restriction is imposed by RACF, not by the gateway.

PGA-22011: password length of <varname>number</varname> is invalid; maximum length is <varname>number</varname>

Cause: The password is too long (<varname>len</varname>) to be used with TCP/IP RACF conversation security. This can occur only when the gateway initialization parameter PGA_SECURITY_TYPE is set to PROGRAM.

Action: The password must be changed to a shorter value on both the client system and the system where the remote transaction program is being executed. The maximum allowable length for the password is <varname>max</varname> characters. This restriction is imposed by RACF, not by the gateway.

PGA-22012: IMS Connect error: return code = <varname>string</varname>, reason code = <varname>string</varname>

Cause: An unexpected IMS Connect error occurred while executing the 'recv' function. The return code <varname>rc</varname> and reason code <varname>rsc</varname> are provided in the message text. For more information, look at the OLTP SDSF log and IMS Connect error message which starts with HWS. The messages are documented in the IBM IMS Connect Guide and Reference manual.

Action: Determine the cause of the error, correct it, and rerun the transaction.

PGA-22014: Transaction code length of <varname>number</varname> exceeds the maximum of <varname>number</varname>

Cause: The transaction code length <varname>len</varname> passed to PGAINIT or PGAINIT_SEC was larger than the maximum allowed length <varname>max</varname>.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGU-00100 to PGU-50101

PGU-00100: invalid SPOOL file name

Cause: When using the SPOOL command, you specified the name of a file that already exists.

Action: Specify a valid name for a file that does not currently exist.

PGU-00101: extraneous text at end of command

Cause: There were unrecognized commands or other text on the command line.

Action: Check the syntax of the command, then issue the command again.

PGU-00106: invalid ECHO switch

Cause: An invalid option for the SET ECHO command was specified.

Action: Use either ON or OFF as an option for the SET ECHO command.

PGU-00107: invalid TERMOUT switch

Cause: An invalid option for the SET TERMOUT command was specified.

Action: Use either ON or OFF as an option for the SET TERMOUT command.

PGU-00108: invalid TIMING switch

Cause: An invalid option for the SET TIMING command was specified.

Action: Use either ON or OFF as an option for the SET TIMING command.

PGU-00110: illegal SET option

Cause: An invalid option for the SET command was specified.

Action: Check the syntax of the SET command and issue the command again.

PGU-00111: illegal SHOW option

Cause: An invalid option for the SHOW command was specified.

Action: Check the syntax of the SHOW command and issue the command again.

PGU-00115: unexpected end of command

Cause: An option was specified without the required arguments.

Action: Check the syntax of the command and enter the command again with the appropriate arguments for options that require values.

PGU-00120: invalid STOPONERROR switch

Cause: An invalid options switch was specified for the SET STOPONERROR command.

Action: Use either ON or OFF as an option for the SET STOPONERROR command.

PGU-00122: invalid SET numeric parameter

Cause: A character or an invalid value was specified when a number was expected as a value for a SET command option.

Action: Check the syntax of the command, use an appropriate number for the option, and enter the command again.

PGU-00125: integer value overflow

Cause: A numeric value was specified that was too large.

Action: Use a smaller number.

PGU-00129: value out of range (1 - <varname>number</varname>)

Cause: The specified value was out of range. The valid range is given by the error message.

Action: Use a number within the range specified by this message.

PGU-00132: null hostname/password specified

Cause: The hostname/password was not specified.

Action: Specify the correct hostname/password.

PGU-00136: bad variable specification

Cause: A variable was incorrectly specified using the VARIABLE command.

Action: Check the syntax of the command, then issue the command again.

PGU-00137: syntax error in PL/SQL Block

Cause: The PL/SQL block contains a syntax error.

Action: Correct the syntax error.

PGU-00142: cannot recognize object type, owner or name

Cause: The specified object type, owner, or name was not recognized.

Action: Specify a legal object type, owner, or name.

PGU-00143: variable has not been defined

Cause: The specified variable was not recognized.

Action: Specify an existing variable.

PGU-00144: invalid object type for DESCRIBE

Cause: The specified object type was not TABLE, VIEW, or PROCEDURE.

Action: Check that the object is a table, view, or procedure. If so, check that you specified the correct name and try again. If not, you describe the object.

PGU-00145: invalid object name for DESCRIBE

Cause: The specified table, view, stored procedure, or function was not recognized.

Action: Check the spelling and be sure to specify an existing table, view, stored procedure, or function.

PGU-00149: invalid SERVEROUTPUT switch

Cause: An invalid option was specified for the SET SERVEROUTPUT command.

Action: Check the syntax of the command, then issue the command again.

PGU-00300: internal error code; arguments: [<varname>number</varname>], [<varname>string</varname>]

Cause: You have encountered an internal error.

Action: Supported customers should contact Oracle Worldwide Support and provide the circumstances leading to the error and the complete set of messages.

PGU-00302: not connected to a database

Cause: You must be connected to the database for the requested operation.

Action: CONNECT to the database using a valid username and password before retrying the operation.

PGU-00304: input file I/O error [<varname>number</varname>] - input aborted

Cause: A command file used as input to PGAU is corrupt or invalid.

Action: Check the file before retrying the operation.

PGU-00305: command size exceeds internal buffer size (<varname>number</varname>)

Cause: The SQL statement size exceeds PGAU's buffer size.

Action: Shorten the SQL statement by removing extra blanks or by using intermediate statements as views, if necessary.

PGU-00306: monitor cycle interval time out of range (1 - <varname>number</varname>)

Cause: You entered an invalid number for the cycle interval.

Action: Enter a number between 1 and 3600 for the cycle interval. The number indicates seconds.

PGU-00307: cannot open spool file <varname>string</varname>

Cause: PGAU tried to open a spool file after you entered SPOOL filename, but could not open the file. Possible causes are not enough disk space or inadequate privileges to create a file.

Action: Determine why PGAU could not create a new file and retry.

PGU-00308: no spool file opened

Cause: You entered SPOOL OFF, but you were not spooling currently so there was no file to close.

Action: If you wish to capture session output, first use the SPOOL command to open a file, and then enter your commands before closing the file with SPOOL OFF.

PGU-00309: cannot close spool file <varname>string</varname>

Cause: SPOOL OFF could not close the currently open spool file.

Action: Check for an operating system reason that the spool file could not be closed.

PGU-00310: cannot open parameter file <varname>string</varname>

Cause: PGAU cannot locate or open the file specified by the PFILE option, either because the file does not exist or because PGAU has insufficient privilege to open the file.

Action: Make sure that the file exists in a location expected by PGAU and can be opened.

PGU-00311: data exceeds internal buffer size

Cause: The results returned by a SQL query exceed the internal PGAU buffer.

Action: Use the SET command to increase MAXDATA or decrease ARRAYSIZE.

PGU-00314: invalid parameter given on PGAU command line

Cause: An unrecognized parameter was given on the PGAU command line.

Action: Check the parameters given on the PGAU command line.

PGU-00315: cannot open command file <varname>string</varname>

Cause: PGAU cannot locate the specified command file.

Action: Verify the file's name and PGAU's access to it before retrying.

PGU-00317: version of tool conflicts with version [<varname>string</varname>] of DATA

Cause: This version of the PGAU tool cannot process the DATA in the database.

Action: You are attempting to use a tool that might cause damage to the current database. If the version of DATA is greater than the version of the tool, then you are using the wrong version of the tool. If the version of the tool is greater than the version of the DATA, check to see if there is an ORACLE-supplied SQL script to update the DATA to the correct version level.

PGU-00318: PGAU command line error [<varname>number</varname>]

Cause: You made a syntax or typing error while entering a PGAU command line.

Action: Check the syntax and try again.

PGU-00319: cannot locate pgau configuration file, <varname>string</varname>

Cause: File mentioned cannot be located.

Action: Make sure that the specified file exists before re-running PGAU.

PGU-00320: cannot open pgau configuration file, <varname>string</varname>

Cause: File mentioned cannot be opened.

Action: Make sure that the specified file is available for use by PGAU.

PGU-00322: total size of command line parameters exceeds buffer size

Cause: You entered too many command line arguments and the PGAU buffer was exceeded.

Action: Reduce the number of command line arguments.

PGU-00325: pfile too large

Cause: The file you specified using PFILE is too large (exceeds 8K).

Action: Reduce the size of the parameter file before specifying it again with PFILE.

PGU-00327: command not available in this mode

Cause: You have specified a command that is not available in this mode.

Action: Do not specify the command.

PGU-00328: insufficient privilege for this display

Cause: You attempted to display a MONITOR display without sufficient privileges.

Action: Contact the DBA to obtain the required privileges.

PGU-00331: cannot allocate enough memory for SQL Buffer

Cause: There is not enough memory for the current SQL buffer.

Action: Use the SET command to reduce MAXDATA.

PGU-00337: missing instance name

Cause: The instance name was not specified in the connect statement.

Action: Use 'connect username/password@instance' or 'connect username/password'.

PGU-00341: '<varname>string</varname>' is an undefined bind variable

Cause: The SQL statement refers to an undefined bind variable.

Action: Use the VARIABLE statement to define the bind variable and re-execute the query.

PGU-00347: no offline tablespaces exist

Cause: The list box of set tablespace online contained 0 elements.

Action: No action is required.

PGU-00359: monitor already active

Cause: An instantiation of this monitor is already active.

Action: Cycle through windows until this monitor becomes visible.

PGU-00360: object to be described does not exist

Cause: The object in a DESCRIBE FUNCTION/PROCEDURE/PACKAGE statement does not exist.

Action: check that the object name and owner are correct and that the object exists.

PGU-00361: error during describe

Cause: An unexpected error occurred during a describe.

Action: Check the following error and correct the problem.

PGU-00362: object <varname>string</varname> is a package; use 'DESCRIBE <varname>package</varname>.<varname>procedure</varname>'

Cause: The named object is a package. DESCRIBE does not currently describe an entire package specification.

Action: Describe the package specification, as indicated in the message text.

PGU-00363: procedure or function <varname>string</varname> not found in the package

Cause: The named package does not contain the procedure or function specified.

Action: Specify a procedure or function within the package.

PGU-00364: object <varname>string</varname> is a remote object, cannot further describe

Cause: The specified object name contains a database link, or is a synonym that resolves to a name with a database link. Such objects cannot currently be described.

Action: Specify a local object.

PGU-00365: object <varname>string</varname> is invalid, it may not be described

Cause: The object must have been successfully compiled.

Action: Fix any errors in the object and recompile.

PGU-00366: name <varname>string</varname> is malformed, it must be of form [[a.]b.]c@dblink

Cause: The name may have at most 3 parts and a dblink.

Action: Use a well-formed object name.

PGU-00370: mandatory field/list needs to be filled in

Cause: You tried to execute the dialog before filling in all required items.

Action: Fill in all required items and retry.

PGU-00371: cannot open/locate input help file, <varname>string</varname>

Cause: You pressed the Help Key or chose an item from the Help Menu.

Action: Put the help file in the location specified.

PGU-00372: cannot open/locate input index file, <varname>string</varname>

Cause: You pressed the Help Key or chose an item from the Help Menu.

Action: Put the index help file in the location specified.

PGU-00373: cannot allocate memory of size <varname>number</varname> from toolkit

Cause: You pressed the Help Key or chose an item from the Help Menu.

Action: Exit PGAU and re-enter and try again.

PGU-00374: could not set file position in <varname>string</varname> directly

Cause: You pressed the Help Key or chose an item from the Help Menu.

Action: The fseek() routine failed. Alternate chosen - no action is necessary.

PGU-00375: unexpected end of file, <varname>string</varname>

Cause: You pressed the Help Key or chose an item from the Help Menu.

Action: Exit PGAU and install the correct help file.

PGU-00376: mandatory field has to be filled in before navigation is possible

Cause: Attempted to navigate to the next/previous item.

Action: Fill in current field and then go to the next/previous item.

PGU-00377: mandatory list item has to be selected before navigation is possible

Cause: Attempted to navigate to the next/previous item.

Action: Select an item and then go to the next/previous item.

PGU-00378: an item has to be selected before help can be sought for it

Cause: Attempted to obtain help before selecting an item.

Action: Select an item first and re-execute.

PGU-00379: variable(s) not defined

Cause: Attempted SHOW VAR[IBLES] [var-name] and the variable was not defined, or no variables were specified or defined.

Action: Ensure the variables are correctly defined.

PGU-00380: procedural option required for this statement

Cause: Attempt to execute a statement that requires the Procedural option was made, but the Procedural option is not installed.

Action: This statement cannot be issued without the Procedural option. Install the Procedural option to execute this statement.

PGU-00381: error in the SERVEROUTPUT option

Cause: Most likely the package DBMS_OUTPUT not installed. Check the accompanying messages for more information.

Action: Check accompanying messages and take appropriate action.

PGU-00382: value <varname>string</varname> is not a recognizable file name for <varname>string</varname>

Cause: The value for the PGAU initialization variable (which points to the initialization file) is not a recognizable file name.

Action: Specify a valid file name or do not define the variable to avoid running the initialization file.

PGU-00383: file name <varname>string</varname> pointed to by <varname>string</varname> could not be opened

Cause: The file name pointed to by the PGAU initialization variable could not be opened.

Action: Specify an available file or do not define the variable to avoid running the initialization file.

PGU-00384: could not open pgau resource file, <varname>string</varname>

Cause: The specified file could not be opened.

Action: Make the file available to PGAU.

PGU-00385: could not locate pgau resource file, <varname>string</varname>

Cause: The specified file could not be located.

Action: Make sure file exists before rerunning PGAU.

PGU-00386: could not open toolkit resource file, <varname>string</varname>

Cause: The specified file could not be opened.

Action: Make the file available to PGAU.

PGU-00387: could not locate toolkit resource file, <varname>string</varname>

Cause: The specified file could not be located.

Action: Make sure file exists before rerunning PGAU.

PGU-00388: cannot start PGAU in screen mode; check if values are legal:

Cause: A variable was not properly set.

Action: Check the values listed by PGAU to see if they are correct.

PGU-00389: toolkit resource file name is defined to <varname>string</varname>

Cause: The specified file could not be located.

Action: Ensure the file specified exists and can be accessed.

PGU-00390: terminal type <varname>string</varname> is defined by <varname>string</varname>

Cause: Terminal type specified by <varname>variable</varname> may not be valid.

Action: Ensure the terminal specification is correct.

PGU-00391: value <varname>string</varname> is defined to <varname>string</varname>; legal values: <varname>string</varname> or <varname>string</varname>

Cause: The PGAU mode has been incorrectly defined.

Action: Define the value of the variable as one of the legal values.

PGU-20000: <varname>string</varname> of <varname>string</varname> statement failed for table <varname>string</varname>, rc=<varname>number</varname>

Cause: PGAU encountered a syntax error during parse operation <varname>oper</varname> of the statement <varname>statement</varname> for the table <varname>table</varname> with the indicated return code <varname>rc</varname>.

Action: Check the PGAU statement identifier names for proper spelling and punctuation, or other syntax errors.

PGU-20001: <varname>string</varname> of <varname>string</varname> variable of <varname>string</varname> statement failed for table <varname>string</varname>, rc=<varname>number</varname>

Cause: The operation <varname>oper</varname> on the variable <varname>varname</varname> for the statement <varname>statement</varname> against the PG DD table <varname>table</varname> failed with return code <varname>rc</varname>.

Action: A semantic error has occurred. Check all the identifier names in the PGAU script.

PGU-20002: unable to login to Oracle

Cause: An error occurred attempting to logon to the Oracle server. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational.

PGU-20003: unable to open the cursor

Cause: Internal PGAU logic error - should not occur. An error occurred opening an SQL statement cursor. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational. Otherwise, reproduce the error with symptom documentation. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-20004: unable to close the cursor

Cause: Internal PGAU logic error - should not occur. An error occurred closing an SQL statement cursor. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational. Otherwise, reproduce the error with symptom documentation. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-20005: unable to commit PG DD changes

Cause: Internal PGAU logic error - should not occur. An error occurred attempting to commit changes to the PG DD. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational. Otherwise, reproduce the error with symptom documentation. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-20006: unable to logout from Oracle

Cause: Internal PGAU logic error - should not occur. An error occurred during logoff from the Oracle server. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational. Otherwise, reproduce the error with symptom documentation. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-20007: unable to rollback PG DD changes

Cause: Internal PGAU logic error - should not occur. An error occurred attempting to rollback changes from the PG DD. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational. Otherwise, reproduce the error with symptom documentation. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-30000: transaction <varname>string</varname>, version <varname>string</varname> specification generated to file <varname>string</varname>

Cause: PGAU successfully completed generation of the TIP specification for transaction <varname>trannname</varname> and version <varname>version</varname> into file <varname>fileid</varname>.

Action: None required. This is an informational message.

PGU-30001: PGAU internal error - <varname>string</varname>

Cause: An internal PGAU operation error has occurred.

Action: Supported Customers should contact Oracle World Wide Support for assistance.

PGU-30002: >>> Initialization of <varname>string</varname> File Header <<<

Cause: This record is written to the Trace or Log file upon initialization.

Action: This is an informational message only.

PGU-30003: transaction <varname>string</varname>, version <varname>string</varname> body generated to file <varname>string</varname>

Cause: PGAU successfully completed generation of the TIP body for transaction <varname>trannam</varname> and version <varname>version</varname> into file <varname>fileid</varname>.

Action: None required. This is an informational message.

PGU-30008: failure to open file <varname>string</varname>

Cause: Before complete initialization of LMS functions, PGAU tracing or logging to disks was requested, but PGAU failed to open the indicated trace or log file. <varname>fileid</varname>.

Action: Ensure that write access exists to the file and that space for file growth is available.

PGU-30009: failure to close file <varname>string</varname>

Cause: After termination of LMS functions,PGAU tracing or or logging to disks had been requested, but PGAU failed to close the indicated trace or log file. <varname>fileid</varname>.

Action: Ensure that write access exists to the file and that space for file growth is available.

PGU-30010: failure to obtain <varname>string</varname> bytes of storage for <varname>string</varname>

Cause: Before complete initialization of LMS functions, PGAU failed to obtain <varname>bytes</varname> of storage for <varname>use</varname>, commensurate with LMS initialization.

Action: Increase the total amount of private storage available to PGAU during operation.

PGU-30012: invalid language environment (<varname>string</varname>), default used

Cause: Before complete initialization of LMS functions, the environment variable LANGUAGE specified an invalid Oracle NLS language <varname>lang</varname>. The language environment variable SSTDLANG setting was used as the default.

Action: Correct the LANGUAGE environment variable to specify a valid Oracle NLS Language.

PGU-30014: pgau message file <varname>string</varname> not found

Cause: Before complete initialization of LMS functions, the PGAU message file <varname>fileid</varname> could not be located.

Action: Ensure that the Oracle message file resides in \$ORACLE_HOME/pg4appc/mesg directory and is not damaged. Valid fileid's are of the form pguxx.msb where xx is the country code.

PGU-30024: memory allocate failure: <varname>string</varname> for <varname>string</varname> bytes

Cause: Insufficient memory available. Storage failed to be allocated for the reason <varname>purpose</varname> of the size <varname>len</varname> specified.

Action: Increase the total amount of private storage available to PGAU during GENERATE operation.

PGU-30026: open failure: file <varname>string</varname> in <varname>string</varname> mode

Cause: Error during fopen processing <varname>file</varname> for <varname>mode</varname> access.

Action: Ensure PGAU has access to the file specified, and write access if file is used for output.

PGU-30028: file <varname>string</varname> failure: <varname>string</varname> rc <varname>string</varname>

Cause: An error occurred during <varname>oper</varname> processing for the file <varname>fileid</varname> with return code <varname>rc</varname>. File operations include: 'fclose' to close input or output files 'remove' to erase, delete, or remove output files

Action: Ensure PGAU has access to the file specified, and write access if file is used for output.

PGU-30030: read failure: <varname>string</varname> from <varname>string</varname> after offset <varname>string</varname>

Cause: Error during fgets <varname>oper</varname> processing for <varname>file</varname> at <varname>offset</varname> bytes into the file.

Action: Ensure PGAU has access to the file specified.

PGU-30031: write failure: <varname>string</varname> to <varname>string</varname> at <varname>number</varname> for <varname>string</varname> bytes

Cause: Error during fputs <varname>oper</varname> processing for <varname>file</varname> from buffer at <varname>addr</varname> for <varname>len</varname> bytes of data.

Action: Ensure PGAU has access to the file specified, and that disk space is available for file growth.

PGU-30032: write log failure: rc %4li, message no was <varname>string</varname>

Cause: fprintf returned the error code <varname>rc</varname> attempting to print PGAU error message number <varname>msgno</varname>. The indicated event message was being written when the error occurred.

Action: Check to insure that PGAU has write access to the pgau.log file and that disk space is available for file growth.

PGU-30033: write trace failure: rc %4li, message no was <varname>string</varname>

Cause: fprintf returned the error code <varname>rc</varname> attempting to print PGAU trace message number <varname>msgno</varname>. The indicated trace message was being written when the error occurred.

Action: Check to insure that PGAU has write access to the pgau.trc file and that disk space is available for file growth.

PGU-30035: file control failure: <varname>string</varname> for <varname>string</varname>, rc <varname>string</varname>

Cause: Error during control function <varname>oper</varname> processing for <varname>file</varname> with error code <varname>rc</varname> returned.

Action: Ensure PGAU has access to the file specified, and that disk space is available for file growth.

PGU-30036: no ORACLE_HOME environment variable available

Cause: The ORACLE_HOME environment variable setting is missing or invalid.

Action: Correct the ORACLE_HOME environment variable to specify the current Oracle home directory.

PGU-30120: missing <varname>string</varname> attribute for parm <varname>string</varname>, field <varname>string</varname> f#<varname>string</varname>

Cause: The parameter <varname>parm</varname> specifies an aggregate data record for which field <varname>field</varname> with PG DD field id number <f#> was being processed, but the field had no relative level attribute <varname>attr</varname>. Typical relative level attributes are: nn ... COBOL-clauses for IBMVSCOBOLII 'LEVEL' attribute Each attribute is stored as a separate row in the PG DD, and the missing attribute's row may have been deleted from the PG DD.

Action: Check the PG DD to ensure that the failing field has a level attribute assigned.

PGU-30122: level limit: field f#=<varname>string</varname> nest level <varname>string</varname> exceeds <varname>string</varname> of <varname>string</varname>

Cause: PGAU was processing nested records when the next field <f#> for nest level <varname>lev</varname> exceeded the product defined minimum or maximum nest level <varname>limit</varname>.

Action: Simplify the data record definition to reduce nest levels.

PGU-30123: level limit: level <varname>string</varname> field <varname>string</varname> can't follow level <varname>string</varname>

Cause: PGAU was processing nested records when the next field at level <varname>levN</varname>, identified by <fld#>, occurred after fields at current level <varname>levC</varname>. Additional fields at intermediate levels should have preceded this field. This error happens when special fields such as COBOL RENAMES (at LEVEL 66) appear next after the level 01 definition.

Action: Correct the data record definition to place the special fields in their proper sequence, and/or insert fields being modified ahead of the special modifying field.

PGU-30220: allocate failure: <varname>string</varname> storage of <varname>string</varname> bytes

Cause: Insufficient memory available for the specified purpose. Requestor attempted to allocate a <varname>type</varname> control block of <varname>len</varname> size specified.

Action: Increase the total amount of private storage available to PGAU during GENERATE operation.

PGU-30233: control block load failure: <varname>string</varname> block from PG DD

Cause: Control block of the specified <varname>type</varname> was being loaded with a row from the PG Data Dictionary when an error occurred. A preceding message issued specifies the cause.

Action: Refer to the Action for the preceding message.

PGU-30234: attribute array for <varname>string</varname> exceeded by PG DD rows > <varname>string</varname>

Cause: A control block of the specified <varname>type</varname> was being loaded with attribute rows from the PG Data Dictionary when the <varname>limit</varname> was exceeded.

Action: Reproduce the error with tracing enablead and attempt to determine what PG DD rows are exceeding the attribute limit and delete any possible duplicates. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-30300: work file output error writing <varname>string</varname>

Cause: PGAU encountered an error writing a PL/SQL code segment to the indicated work file <varname>fileid</varname>.

Action: Ensure PGAU has access to the file specified, and that disk space is available for file growth.

PGU-30301: TIP output error appending <varname>string</varname> to <varname>string</varname>

Cause: PGAU encountered an error appending the work file <varname>infile</varname> to the TIP output file <varname>outfile</varname>.

Action: Ensure PGAU has access to both files specified, and that disk space is available for TIP output file growth.

PGU-30302: TIP output error writing function <varname>string</varname> to file <varname>string</varname>

Cause: PGAU encountered an error appending the TIP function definition <varname>func</varname> to the work output file <varname>file</varname>. Error occurred during generation of the TIP Package Specification.

Action: Ensure PGAU has write access to the file specified, and that disk space is available for TIP output work file growth.

PGU-30303: TIP generation error writing variable <varname>string</varname> to file <varname>string</varname>

Cause: PGAU encountered an error appending the TIP variable definition <varname>var</varname> to the work output file <varname>file</varname>. Error occurred during generation of the TIP Package Specification.

Action: Ensure PGAU has write access to the file specified, and that disk space is available for TIP output work file growth.

PGU-30304: TIP generation warning: <varname>string</varname> name truncated to <varname>string</varname> characters

Cause: This is a warning of possible non-unique PL/SQL names. PGAU encountered record field names which combined exceed the maximum PL/SQL name length, and the last field name specified <varname>field</varname> was truncated to the length

<varname>len</varname>. The condition occurred during generation of the TIP Package Specification for parameter variables.

Action: Revise the PG DD entries for the defined parameters and either reduce the number of nested record levels or shorten the record field names.

PGU-30305: TIP generation error defining record type <varname>string</varname> for <varname>string</varname>

Cause: An occurred during generation of a nested record type <varname>type</varname> for the indicated field name <varname>name</varname>. This message should be preceded by the specific error. Condition occurred during generation of the TIP Package Specification for parameter variables.

Action: Follow recommended action for the first error message issued.

PGU-30306: TIP generation: invalid PL/SQL parameter mode <varname>string</varname> for <varname>string</varname>

Cause: The parameter call mode <varname>mode</varname> specified for the parameter <varname>parm</varname>. Valid parameter modes are IN, OUT or IN OUT. Probable PG DD content error.

Action: Revise the PG DD entries for the indicated parameter and correct the PL/SQL parameter call mode for the indicated parameter.

PGU-30307: TIP generation: invalid PL/SQL variable type <varname>string</varname> for <varname>string</varname>

Cause: An invalid PL/SQL record type <varname>type</varname> was encountered while generating conversion statements for the data field <varname>field</varname>. The indicated <varname>type</varname> is neither valid PL/SQL nor a nested record type, for the indicated record field <varname>field</varname>. Probable PG DD content error.

Action: Revise the PG DD entries for the indicated parameter and either correct the PL/SQL variable type for the field, or define a corresponding nested record for the field.

PGU-30308: TIP generation: name <varname>string</varname>.<varname>string</varname> exceeds max length of <varname>string</varname> characters

Cause: The number of nested groups and lengths of their field names in the input data, when concatenated to form a fully qualified PL/SQL record field variable name <recname.varname>, exceeded the maximum length allowed by PL/SQL <varname>maxlen</varname>. Condition occurred during generation of the TIP Package Specification for parameter variables.

Action: Revise the PG DD entries for the defined parameters and either reduce the number of nested record levels or shorten the record field names.

PGU-30309: TIP generation: call <varname>string</varname> parm <varname>string</varname> exceeds PGAXFER <varname>string</varname> limit (<varname>string</varname>)

Cause: The TIP function call <varname>cname</varname> at parm <varname>pname</varname> exchanges too many parameters for the <varname>type</varname> buffers on a PGAXFER RPC. The PGAXFER parameter limit is <varname>limit</varname>. The indicated <varname>type</varname> is either 'SEND' or RECEIVE'. Probable PGAU DEFINE CALL error, coding too many

parameters. Note also that IN OUT mode parameters are present in both send and receive buffers and may be causing the excess.

Action: Revise the transaction and call to specify the excessive parameters on an additional function call and include that added call in the transaction definition.

PGU-30314: TIP generation: failure converting record type <varname>string</varname> for <varname>string</varname>

Cause: An occurred during generation of PL/SQL statements for conversion of a nested record type <varname>type</varname> for the indicated field name <varname>name</varname>. This message should be preceded by the specific error. Condition occurred during generation of the TIP Package Specification for parameter variables.

Action: Follow recommended action for the first error message issued.

PGU-30315: TIP generation: parameter conversion error for <varname>string</varname>, <varname>string</varname>

Cause: Failure to generate PL/SQL conversion statements for the indicated parameter data <varname>dtype</varname> for function <varname>call</varname>. This message may be preceded by specific messages describing the error. Possible errors include disk access, invalid datatype, and/or missing nested record or field datatype definitions.

Action: Follow recommended action for the first error message issued, and ensure the PG DD entries for the indicated parameter are correct and that disk access is allowed to output work files.

PGU-30316: TIP generation: PL/SQL <varname>string</varname> control logic for <varname>string</varname> <varname>string</varname>

Cause: Failure to generate PL/SQL statement <varname>stmt</varname> used to control TIP processing of the field <varname>fname</varname> for compiler clause <varname>clause</varname>. Typical IBMVSCOBOLII clauses are: OCCURS (requires FOR/LOOP logic) OCCURS DEPENDING ON (requires FOR/LOOP logic) REDEFINES (requires IF/END IF logic) This message may be preceded by specific messages describing the error. Possible errors include disk access, invalid datatype, and/or missing nested record or field datatype definitions.

Action: Follow recommended action for the first error message issued, and ensure the PG DD entries for the indicated parameter are correct and that disk access is allowed to output work files.

PGU-30317: TIP generation: PL/SQL <varname>string</varname> statements for <varname>string</varname> <varname>string</varname>

Cause: Failure to generate PL/SQL control logic <varname>stmt</varname> to process TIP parameter <varname>dataname</varname> in function <varname>callname</varname>. This message may be preceded by specific messages describing the error. Possible errors include disk access, invalid datatype, and/or missing nested record or field datatype definitions.

Action: Follow recommended action for the first error message issued, and ensure the PG DD entries for the indicated parameter are correct and that disk access is allowed to output work files.

PGU-30318: TIP generation: <varname>string</varname> <varname>string</varname>, PL/SQL <varname>string</varname> for <varname>string</varname>

Cause: Data field <varname>d-field</varname> <f#> was referenced by other fields which required PL/SQL statements <varname>stmt</varname> be generated for the value <varname>num</varname>, but an error occurred during the generation of the statements. This message may be preceded by specific messages describing the error. Possible errors include disk access and memory exceeded.

Action: Follow recommended action for the first error message issued, and ensure that disk access is allowed to output work files.

PGU-30319: TIP generation: <varname>string</varname> <varname>string</varname>

Cause: TIP execution diagnostics for PG Data Dictionary References PKGEX(DR) was requested on the PGAU GENERATE statement, but the PG DD reference for <varname>type</varname> <id#> couldn't be generated. This message may be preceded by specific messages describing the error. Possible errors include disk access and memory exceeded.

Action: Follow recommended action for the first error message issued, and ensure that disk access is allowed to output work files.

PGU-30600: TIP generation: invalid COBOL syntax in <varname>string</varname>:

Cause: The COBOL data field <varname>field</varname> specifies conflicting or invalid PIC <varname>mask</varname> and USAGE <varname>maskopts</varname> clauses. The invalid PIC and USAGE definitions were selected from the PG DD to identify field conversion function calls. PGAU also issues messages 30601 for <varname>mask</varname> and 30602 for <varname>maskopts</varname> .

Action: Use the pgddsf.sql script to reproduce the selected rows and then correct the mask and maskopts columns for the stated field in the PG DD.

PGU-30601: COBOL mask: <varname>string</varname>

Cause: Issued to identify <varname>mask</varname> for the preceding message.

Action: See preceding message.

PGU-30602: COBOL maskopts: <varname>string</varname>

Cause: Issued to identify <varname>maskopts</varname> for the preceding message.

Action: See preceding message.

PGU-30604: missing <varname>string</varname> attribute for <varname>string</varname>

Cause: A COBOL field <varname>field</varname> containing a clause of the form <varname>syntax</varname> required a missing attribute <varname>attr</varname> corresponding to <varname>token</varname>. PGAU issues messages 30603 and 30604 consecutively for <varname>field</varname>, <varname>syntax</varname>, <varname>attr</varname>, and <varname>token</varname>. Typical IBMVSCOBOLII required token attributes are: field OCCURS int-1 TIMES where 'int-1' is the token for attribute 'repgrpff' field OCCURS int-1 TO int-2 TIMES DEPENDING ON name-1 where 'int-1' is the token for attribute 'repgrpvf' 'int-2' is the token for attribute 'repgrpvf' 'name-1' is the token for attribute 'repgrpvm' field

RENAMES name-1 THRU name-2 where 'name-1' is the token for attribute 'renamemf' 'name-2' is the token for attribute 'renameml' field REDEFINES name-1 WHEN name-2 = value where 'name-1' is the token for attribute 'remapsmf' 'name-2' is the token for attribute 'remapsml' 'value' is the token for attribute 'remapswc' or for attribute 'remapswn' field LENGTH IS name-1 where 'name-1' is the token for attribute 'length' Each attribute is stored as a separate row in the PG DD, and the missing attribute's row may have been deleted from the PG DD.

Action: In the PG DD, redefine the referencing data item to restore the missing attribute row.

PGU-30605: TIP generation: invalid COBOL syntax in unknown field:

Cause: An unidentified COBOL field specifies conflicting or invalid PIC <varname>mask</varname> and USAGE <varname>maskopts</varname> clauses. The invalid PIC and USAGE definitions were selected from the PG DD to identify global TIP conversion variables. PGAU also issues messages 30601 for <varname>mask</varname> and 30602 for <varname>maskopts</varname> .

Action: Use the pgddsf.sql script to reproduce the selected rows and then correct the mask and maskopts columns for the invalid row in the PG DD.

PGU-30606: TIP generation: missing multi-byte NLS name for <varname>string</varname>:

Cause: The COBOL data field <varname>field</varname> specifies character data in the the PIC <varname>mask</varname> and USAGE <varname>maskopts</varname> clauses which require translation with a multi-byte character set (MBCS), but no Oracle MBCS NLS name was specified. The MBCS-oriented PIC and USAGE definitions were selected from the PG DD to identify field conversion function calls. PGAU also issues messages 30601 for <varname>mask</varname> and 30602 for <varname>maskopts</varname> .

Action: Use the pgddsa.sql script to reproduce the selected rows and then either correct the mask and maskopts columns for the stated field in the PG DD to not require MBCS translation, or use the PGAU REDEFINE DATA FIELD NLS_LANGUAGE(nlsname) parameter to specify an Oracle MBCS NLS name for the field, or specify the NLS_MBCS(nlsname) parameter on the PGAU DEFINE TRANSACTION statement.

PGU-30611: references missing field <varname>string</varname> specified for <varname>string</varname>

Cause: The data field <varname>d-field</varname> containing a clause of the form <varname>syntax</varname> references a missing field <varname>r-field</varname> specified by the clause word <varname>token</varname>. PGAU issues messages 30610 and 30611 consecutively for <varname>d-field</varname> <varname>syntax</varname> <varname>r-field</varname> and <varname>token</varname>. Typical IBMVSCOBOLII clause syntax for this error includes: d-field OCCURS int-1 TIMES d-field OCCURS int-1 TO int-2 TIMES DEPENDING ON name-1 d-field RENAMES name-1 THRU name-2 d-field REDEFINES name-1 WHEN name-2 = value d-field LENGTH IS name-1 The clause references a field <varname>r-field</varname> specified by the word <varname>token</varname>. PGAU GENERATE searched previous fields within the current parameter but failed to find the named field <varname>r-field</varname>. The word <varname>token</varname> may be misspelled in the defining clause or the referenced field whose name should match <varname>token</varname> may be missing from, or misspelled in the PG DD.

Action: In the PG DD, redefine the entry for <varname>d-field</varname> to change its clause <varname>token</varname> to specify the correct name of the intended field <varname>r-field</varname>, or redefine the data name of the intended field <varname>r-field</varname> to match the subsequent clause's <varname>token</varname> reference. Also ensure the data field <varname>d-field</varname> containing the clause follows the intended field <varname>r-field</varname> in the data definition.

PGU-30622: unable to insert <varname>string</varname> value for field <varname>string</varname>

Cause: During TIP generation, an attempt to insert a new attribute value for the <varname>attr</varname> attribute for the named field <varname>fname</varname> failed.

Action: Check for an Oracle error message preceding this message to determine the cause of the problem.

PGU-30631: no alignment for environment <varname>string</varname> <varname>string</varname>, datatype <varname>string</varname> <varname>string</varname>

Cause: The data field <varname>d-field</varname> <f#> specified an attribute which specifies remote host boundary alignment. The PG DD environment tables were searched for alignment information for environment <varname>ename</varname> compiler <varname>compno</varname> datatype <varname>dtype</varname> datatype alignment group <varname>dagno</varname>, but no entries were found matching these characteristics. PGAU issues messages 30630 and 30631 consecutively for <varname>d-field</varname> <f#> and <varname>ename</varname> <varname>compno</varname> <varname>dtype</varname> <varname>dagno</varname>. PGAU requires the alignment information to properly align the remote host data in the TIP transfer buffers. Supported: environment and compilers are; IBM370 for compiler IBMVSCOBOLII alignment attributes are; <varname>d-field</varname> ... PIC S9(n) <varname>dtype</varname> SYNC <varname>d-field</varname> ... PIC S9(n) <varname>dtype</varname> SYNCHRONIZE datatype values <varname>dtype</varname> may be; COMP COMPUTATIONAL COMP-4 COMPUTATIONAL-4 datatypes grouped under <varname>dagno</varname> by length/alignment: dagno = 1 for 2-byte length aligned on 2-byte boundary dagno = 2 for 4-byte length aligned on 4-byte boundary Possible causes are: - The TRANSACTION entry in the PG DD for the TIP being generated may have specified an invalid ENVIRONMENT. - The DATA entry in the PG DD being referenced in the TIP function call being generated may have specified an invalid LANGUAGE. - The field datatype and/or length within the DATA entry may be invalid or unsupported. - The PG DD may be unavailable, in which case previous error messages will indicate problems accessing the PG DD.

Action: In the PG DD, redefine the TRANSACTION or DATA entries to correct the specification of ENVIRONMENT, LANGUAGE or the field datatype and attributes. Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-30632: TIP generation: <varname>string</varname> <varname>string</varname>, <varname>string</varname> ignored for <varname>string</varname>

Cause: The data field <varname>d-field</varname> <f#> specified a modifying clause <varname>clause</varname> which is ignored for datatype <varname>dtype</varname> <varname> by the compiler in the remote host environment. For supported:

environment and compilers; IBM370 for compiler IBMVSCOBOLII <varname>clause</varname> is ignored when <varname>dtype</varname> is; SYNC | SYNCHRONIZE COMP-3 | COMPUTATIONAL-3 SYNC | SYNCHRONIZE DISP | DISPLAY

Action: This is a warning message, PGAU execution continues. No action is necessary. The user may wish to ensure the resulting TIP data conversion is consistent with the remote host data format.

PGU-30635: TIP generation: <varname>string</varname> <varname>string</varname>, nested repeating group for <varname>string</varname>

Cause: The data field <varname>d-field</varname> <f#> specified a repeating group clause <varname>clause</varname> while a previous repeating group is active. The repeating group in <varname>d-field</varname> cannot be nested within a previous repeating group. TIP's use PL/SQL tables to implement repeating groups, and PL/SQL tables are limited to a single key or subscript which cannot support nested repeating groups (a table of tables).

Action: Redefine the data such that the previous repeating group is ended before beginning another repeating group.

PGU-30636: TIP generation: <varname>string</varname> <varname>string</varname>, <varname>string</varname> attribute value (<varname>string</varname>) ignored

Cause: The data field <varname>d-field</varname> <f#> specified an attribute <varname>attr</varname> whose value <varname>attrval</varname> is being ignored. Attribute values are ignored for supported: environment and compilers; IBM370 for compiler IBMVSCOBOLII when <varname>attr</varname> is the <varname>attrval</varname> is ignored: SYNC | SYNCHRONIZE LEFT JUST | JUSTIFY LEFT

Action: This is a warning message, PGAU execution continues. No action is necessary. The user may wish to ensure the resulting TIP data conversion is consistent with the remote host data format.

PGU-30637: TIP generation: <varname>string</varname> <varname>string</varname>, <varname>string</varname> attribute value (<varname>string</varname>) invalid

Cause: The data field <varname>d-field</varname> <f#> specified an attribute <varname>attr</varname> whose value <varname>attrval</varname> is invalid or unsupported.

Action: In the PG DD, redefine the FIELD entry to correct the attribute clause to specify a supported value.

PGU-35002: failure to open cursor for statement <varname>string</varname>: rc <varname>string</varname>

Cause: Open of an Oracle cursor for the PGAU SQL statement <varname>stmtname</varname> failed with Oracle error <varname>rc</varname>. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35003: failure to parse SQL statement <varname>string</varname> for cursor <varname>string</varname>: rc <varname>string</varname>

Cause: Parsing of the PGAU SQL statement <varname>stmtname</varname> for Oracle cursor <varname>curno</varname> failed with Oracle error <varname>rc</varname>. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35004: failure to bind <varname>string</varname> for cursor <varname>string</varname> statement <varname>string</varname>: rc <varname>string</varname>

Cause: Binding input variable <varname>invar</varname> for Oracle cursor <varname>curno</varname> to the PGAU SQL statement <varname>stmtname</varname> failed with Oracle error <varname>rc</varname>. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35005: failure to define <varname>string</varname> for cursor <varname>string</varname> statement <varname>string</varname>: rc <varname>string</varname>

Cause: Defining output variable <varname>outvar</varname> for Oracle cursor <varname>curno</varname> to the PGAU SQL statement <varname>stmtname</varname> failed with Oracle error <varname>rc</varname>. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35006: failure to execute for cursor <varname>string</varname> statement <varname>string</varname>: rc <varname>string</varname>

Cause: Executing Oracle cursor <varname>curno</varname> PGAU SQL statement <varname>stmtname</varname> failed with Oracle error <varname>rc</varname>. Possible error in PGAU GENERATE statement transaction or version parameters, or possible missing rows or misspelled in the PG DD for the requested transaction. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Check that all call, data, and attribute definitions associated with the requested transaction and version are properly defined in the PG DD. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35007: failure to fetch for cursor <varname>string</varname> statement <varname>string</varname>: rc <varname>string</varname>

Cause: Fetch using Oracle cursor <varname>curno</varname> PGAU SQL statement <varname>stmtname</varname> failed with Oracle error <varname>rc</varname>. Possible error in PGAU GENERATE statement transaction or version parameters, or possible missing rows or misspelled in the PG DD for the requested

transaction. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. Check that all call, data, and attribute definitions associated with the requested transaction and version are properly defined in the PG DD. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35008: failure to close cursor <varname>string</varname> for statement <varname>string</varname>: rc <varname>string</varname>

Cause: Close of Oracle cursor <varname>curno</varname> for PGAU SQL statement <varname>stmtname</varname> failed with rc <varname>rc</varname>. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35009: no transaction rows for statement <varname>string</varname>, <varname>string</varname> <varname>string</varname>: rc <varname>string</varname>

Cause: No Transaction rows were fetched from the PG DD for PGAU SQL statement <varname>stmt</varname> with transaction name <varname>tname</varname> and transaction version <varname>tver</varname>. The Oracle error code is <varname>rc</varname>. Either the transaction name and version supplied on the GENERATE statement were invalid or the transaction entry is missing from the PG DD. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the requested transaction and version are properly defined in the PG DD or correct the GENERATE statement.

PGU-35010: no <varname>string</varname> rows for statement <varname>string</varname>, id no <varname>string</varname>: rc <varname>string</varname>

Cause: No <varname>type</varname> rows were fetched from the PG DD for PGAU SQL statement <varname>stmt</varname> with id number <varname>idno</varname>. The Oracle error code is <varname>rc</varname>. Either the parent PG DD entry references an invalid subordinate entry or the entry is missing from the PG DD. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the requested transaction and version are properly defined in the PG DD or correct the GENERATE statement.

PGU-35011: no environment rows for statement <varname>string</varname>, <varname>string</varname> <varname>string</varname>: rc <varname>string</varname>

Cause: No Environment rows were fetched from the PG DD for PGAU SQL statement <varname>stmt</varname> with environment name <varname>ename</varname> and compiler number <varname>compno</varname>. The Oracle error code is <varname>rc</varname>. Either the environment specified for the transaction or the compiler specified for the data entry in the transaction were invalid, or the entries are

missing from the PG DD. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the requested transaction and version are properly defined in the PG DD or correct the GENERATE statement.

**PGU-35012: missing transaction entry <varname>string</varname>
<varname>string</varname>**

Cause: The transaction <varname>tname</varname> <varname>tver</varname> was not found in the PG DD. Either the transaction name and version requested in the GENERATE statement were invalid or the transaction specified in a previous DEFINE TRANSACTION <varname>tname</varname> may have been deleted from or altered in the PG DD. This message may be preceded by specific messages describing the error.

Action: Correct the requested transaction and version definitions in the PG DD or correct the GENERATE statement.

**PGU-35013: missing call entry for transaction <varname>string</varname>
<varname>string</varname> (<varname>string</varname>)**

Cause: A call entry under transaction definition <varname>tname</varname> <varname>tver</varname> (<varname>tin</varname>) was not found in the PG DD. The call entry associated with the transaction (as specified in a previous DEFINE TRANSACTION ... CALL(cname)) may have been deleted from or altered in the PG DD. This message may be preceded by specific messages describing the error.

Action: Correct the requested transaction and/or call definitions in the PG DD or correct the GENERATE statement to request a different transaction.

**PGU-35014: missing parm entry for transaction <varname>string</varname>
<varname>string</varname> (<varname>string</varname>) call
<varname>string</varname> <varname>string</varname> (<varname>string</varname>)**

Cause: A parameter or data entry for transaction <varname>tname</varname> <varname>tver</varname> (<varname>tin</varname>), call <varname>cname</varname> <varname>cver</varname> (<varname>cin</varname>) was not found in the PG DD. The parm or data entry associated with the call (as specified in a previous DEFINE CALL <varname>cname</varname> ... PARMS(dname)) may have been deleted from or altered in the PG DD. This message may be preceded by specific messages describing the error.

Action: Correct the requested transaction and/or call definitions in the PG DD or correct the GENERATE statement to request a different transaction.

**PGU-35015: missing field entry for transaction <varname>string</varname>
<varname>string</varname> (<varname>string</varname>) call
<varname>string</varname> <varname>string</varname> (<varname>string</varname>)
parm <varname>string</varname> data <varname>string</varname>
<varname>string</varname> (<varname>string</varname>)**

Cause: A data field entry for transaction <varname>tname</varname> <varname>tver</varname> (<varname>tin</varname>), call <varname>cname</varname> <varname>cver</varname> (<varname>cin</varname>), parm <varname>relno</varname> data <varname>dname</varname> <varname>dver</varname> (<varname>din</varname>) was not found in the PG DD. The field entry associated with this data (as specified in the input file field position or FIELD(fname) of a previous DEFINE or REDEFINE DATA statement) may have been deleted from

or altered in the PG DD. This message may be preceded by specific messages describing the error.

Action: Correct the requested transaction and/or call definitions in the PG DD or correct the GENERATE statement to request a different transaction.

PGU-35016: missing formatted conversion entry for transaction
<varname>string</varname> <varname>string</varname>

Cause: For transaction <varname>tname</varname> <varname>tver</varname>, the data field usage, mask, and maskopts entries were not found in the PG DD. PG DD field entries are selected with usage='PASS' and not null mask and maskopts columns, to identify which data fields will use UTL_RAW MAKE_..._FORMAT conversions. Possible invalid entries in pga_fields(usage,mask,maskopts) columns. This message may be preceded by specific messages describing the error.

Action: Correct the data definitions for the requested transaction in the PG DD.

PGU-35017: missing environment <varname>string</varname>
<varname>string</varname> for t# <varname>string</varname> d#
<varname>string</varname>

Cause: The combined environment <varname>ename</varname> <varname>compno</varname> was not found in the PG DD for transaction id# <varname>tin</varname> and data id# <varname>din</varname>. The environment name stored in the transaction entry and the compiler no stored in a call parameter data entry have no environment rows stored in the PG DD environment tables. This message may be preceded by specific messages describing the error.

Action: Ensure the Oracle server supporting the PG DD is active, and that the TRANSACTION ENVIRONMENT name and the DATA LANGUAGE name are defined in the PG DD with supported values. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

**PGU-35018: failed select for statement <varname>string</varname>,
**
<varname>string</varname> <varname>string</varname>: rc
<varname>string</varname>

Cause: No information was fetched from Oracle dual for SQL statement <varname>stmt</varname> with date format <varname>dfmt</varname> and time format <varname>tfmt</varname>. The Oracle error code is <varname>rc</varname>. Either the date and time formats specified are invalid or some other Oracle server error occurred. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting PGAU is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

Cause: Queue Management Tracing Active. Requested structure not located.

Action: None

PGU-39400: IT read %4li bytes from <varname>string</varname>

Cause: Initiation/Termination Tracing Active. Successful read of file or segment data.

Action: None

PGU-39404: IO file <varname>string</varname> <varname>string</varname> for <varname>string</varname> mode

Cause: I/O Tracing Active. Successful file control operation.

Action: None

PGU-39405: IO <varname>string</varname> %4li bytes <varname>string</varname>

Cause: I/O Tracing Active. Successful read/write of file or segment data.

Action: None

PGU-39500: DD rc %4li, <varname>number</varname> <varname>string</varname><varname>string</varname>

Cause: Data Dictionary Tracing Active. Successful select and load of a PG DD entry

Action: None

PGU-39501: DD rc %4li - warning

Cause: Data Dictionary Tracing Active. Failed select and/or load of a PG DD entry

Action: None

PGU-39502: DD rc %4li, <varname>number</varname> <varname>string</varname> <varname>string</varname> <varname>string</varname>

Cause: Data Dictionary Tracing Active. Successful select and load of a format conversion block

Action: None

PGU-39503: OC %3ls %5ls %2li

Cause: Oracle Call Tracing Active. Successful cursor operation

Action: None

PGU-39504: DD rc %4li, <varname>string</varname>, <varname>string</varname>, <varname>string</varname>

Cause: Data Dictionary Tracing Active. Successful select from dual for current session attributes

Action: None

PGU-39510: OC %7ls %12ls cursor %2li %3ls, rc <varname>string</varname>

Cause: Oracle Call Tracing Active. Successful BIND variable operation

Action: None

PGU-39512: OC %7ls %12ls cursor %2li %3ls, rc <varname>string</varname>

Cause: Oracle Call Tracing Active. Successful DEFINE operation

Action: None

PGU-39513: OC %7ls cursor %2li %3ls, rc <varname>string</varname>

Cause: Oracle Call Tracing Active. Successful EXECUTE operation

Action: None

PGU-39514: OC %7ls cursor %2li %3ls, rows <varname>string</varname>, rc <varname>string</varname>

Cause: Oracle Call Tracing Active. Successful FETCH operation

Action: None

PGU-39600: TG TIP <varname>string</varname>, SFD <varname>string</varname>

Cause: TIP package generation tracing active. Successful generation of TIP specification function definition.

Action: None

PGU-39601: TG TIP <varname>string</varname>, SVD <varname>string</varname>

Cause: TIP package generation tracing active. Successful generation of TIP specification variable definition.

Action: None

PGU-39602: TG <varname>string</varname> for <varname>string</varname>=<varname>string</varname> <varname>string</varname>, <varname>string</varname> l=<varname>string</varname> o=<varname>string</varname>

Cause: TIP package generation tracing active. Successful generation of TIP data conversion logic. This trace entry is written at the completion of generation for every data parameter of a TIP call and field of a data parameter. There should be one trace for every parameter exchanged by the TIP and one trace for every data field of each parameter.

Action: None

PGU-39603: TG DBlink <varname>string</varname>, rpc <varname>string</varname>

Cause: TIP package generation tracing active. Successful generation of specified PGA gateway server RPC.

Action: None

PGU-39604: TG edit var <varname>string</varname> PLS <varname>string</varname>

Cause: TIP package generation tracing active. Successful generation of specified PL/SQL variable conversion.

Action: None

PGU-39605: TG F-chk <varname>string</varname> <varname>string</varname> f#<varname>string</varname> fl=<varname>string</varname>

<varname>string</varname><varname>string</varname> pl=<varname>string</varname>

Cause: TIP package generation tracing active. Successful syntax check of cobol field.

Action: None

PGU-39606: TG %8ls=> <varname>string</varname>

Cause: TIP package generation tracing active. Successful syntax check of cobol field. This trace entry is supplemental to 39605.

Action: None

PGU-39607: TG %8ls=> a#<varname>string</varname> <varname>string</varname> <varname>string</varname>

Cause: TIP package generation tracing active. Successful syntax check of cobol field numeric attribute This trace entry is supplemental to 39605.

Action: None

PGU-39608: TG %8ls=> a#<varname>string</varname> <varname>string</varname> <varname>string</varname>

Cause: TIP package generation tracing active. Successful syntax check of cobol field numeric attribute This trace entry is supplemental to 39605.

Action: None

PGU-39609: TG %8ls=> a#<varname>string</varname> <varname>string</varname> <varname>string</varname>

Cause: TIP package generation tracing active. Successful syntax check of cobol field date attribute This trace entry is supplemental to 39605.

Action: None

PGU-39610: TG <varname>string</varname> for <varname>string</varname> #<varname>string</varname> <varname>string</varname>, <varname>string</varname>

Cause: TIP package generation tracing active. Successful generation of TIP Function. This trace entry is written at the completion of generation for every TIP public function. There should be one trace of this type for every Call defined in the Transaction.

Action: None

PGU-39620: TG rc %4li, <varname>string</varname>

Cause: TIP package generation tracing active. Successful alignment/offset computation

Action: None

PGU-41000: invalid field definition syntax

Cause: An field definition is invalid. There may be invalid punctuation or an invalid keyword present.

Action: Delete invalid punctuation; replace invalid keyword.

PGU-41001: unexpected end of input

Cause: An unexpected end-of-file condition has occurred in the PGAU command stream.

Action: Check the PGAU statement for proper syntax and premature ending on the last line.

PGU-41002: improper REPORT statement

Cause: There is a syntax error in the REPORT statement.

Action: Check for misspelled items or unbalanced parentheses within the REPORT statement.

PGU-41003: invalid data field definition name

Cause: A DEFINE or REDEFINE DATA statement has specified an invalid field name for a field definition. The field name may be missing. A field name must begin with an alphabetic character and contain only alphanumeric characters or an underscore ('_'). Syntax checking only continues with the next statement.

Action: Correct the specification of the field name or its delimiters. Supply the field name if it is missing.

PGU-41004: invalid delimiter

Cause: An invalid delimiter has been found (such as a parenthesis or comma in the wrong place).

Action: The delimiter may have to be deleted. Or there may be tokens missing before the delimiter.

PGU-41005: invalid PGAU statement syntax

Cause: A token has been found which is not a valid PGAU keyword, delimiter, or identifier name. Syntax checking only continues with the next statement.

Action: Correct the PGAU statement.

PGU-41006: value for parameter '<varname>string</varname>' missing

Cause: The parameter keyword <varname>keyword</varname> was properly specified but parameter value was not found. Syntax checking only continues with the next statement.

Action: Supply the missing parameter value or remove the keyword from the PGAU statement. PGAU parameter values should be enclosed in parentheses immediately following the keyword with no intervening space. statement.

PGU-41007: parameter '<varname>string</varname>' was previously specified

Cause: The parameter <varname>dupparm</varname> has been specified earlier in a PGAU statement and is only allowed once. Syntax checking only continues with the next statement.

Action: Remove one of the duplicated specifications from the statement.

PGU-41008: invalid DATA definition dname specified

Cause: An invalid token has been specified for the data name for a DEFINE DATA or REDEFINE DATA statement. A DATA identifier dname must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the DATA dname identifier in the statement.

PGU-41012: invalid PLSDNAME parameter

Cause: The parameter specified in the PLSDNAME clause of a DEFINE or REDEFINE DATA statement does not comply with PL/SQL syntax for PL/SQL variable names. Syntax checking only continues with the next statement.

Action: Correct the PLSDNAME parameter to use a name which complies with PL/SQL syntax for data variables.

PGU-41013: invalid LANGUAGE parameter

Cause: The LANGUAGE parameter in a DEFINE or REDEFINE DATA statement is not a valid PGA Compiler Language. Syntax checking only continues with the next statement.

Action: Correct the LANGUAGE parameter to specify a valid PGA Compiler language. Valid languages are: "IBMVSCOBOLII"

PGU-41014: invalid USAGE parameter

Cause: The USAGE parameter in a DEFINE or REDEFINE DATA statement is not a valid PGAU usage. Syntax checking only continues with the next statement.

Action: Correct the USAGE parameter to specify a valid use. Valid use choices are SKIP, ASIS, PASS, and NULL.

PGU-41015: USAGE parameter was previously specified

Cause: The USAGE parameter has already been specified in a DEFINE or REDEFINE DATA statement and is only allowed once per data definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of USAGE from the PGAU statement.

PGU-41016: LANGUAGE parameter was previously specified

Cause: The LANGUAGE parameter has already been specified in a DEFINE or REDEFINE DATA statement and is only allowed once per data definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of LANGUAGE from the PGAU statement.

PGU-41017: PLSDNAME parameter was previously specified

Cause: The PLSDNAME parameter has already been specified in a DEFINE or REDEFINE DATA statement and is only allowed once per data definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of PLSDNAME from the statement.

PGU-41018: invalid COMPOPTS parameter

Cause: The COMPOPTS parameter in a DEFINE or REDEFINE DATA statement is not a valid compiler option string recognized by PGAU. Syntax checking only continues with the next statement.

Action: Correct the COMPOPTS parameter to specify valid options. The only valid option is 'TRUNC(BIN)'.

PGU-41019: COMPOPTS parameter was previously specified

Cause: The COMPOPTS parameter has already been specified in a DEFINE or REDEFINE DATA statement and is only allowed once per data definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of COMPOPTS from the PGAU statement.

PGU-41020: invalid CALL definition cname specified

Cause: The token is not a valid call identifier name for a DEFINE CALL statement. A CALL identifier cname must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the CALL cname identifier in the statement.

PGU-41021: PKGCALL parameter was previously specified

Cause: The PKGCALL parameter has already been specified in a DEFINE CALL statement and is only allowed once per call definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of PKGCALL from the statement.

PGU-41022: invalid PKGCALL parameter

Cause: The function name specified in the PKGCALL parameter of a DEFINE CALL statement does not comply with PL/SQL syntax for PL/SQL function names. Syntax checking only continues with the next statement.

Action: Correct the PKGCALL parameter to use a name which complies with PL/SQL syntax for function calls.

PGU-41025: invalid VERSION number specified

Cause: The token is not a valid version number in a PGAU DEFINE or UNDEFINE CALL or TRANSACTION statement, or in a GENERATE statement. Valid version numbers are all numeric and must match the Oracle sequence object value reported by a previous DEFINE statement. Syntax checking only continues with the next statement.

Action: Correct the VERSION number in the statement.

PGU-41026: PARMS parameter was previously specified

Cause: The PARMS parameter has already been specified in a DEFINE CALL statement and is only allowed once per call definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of PARMS from the statement.

PGU-41029: invalid TRANSACTION CALL cname specified

Cause: The token is not a valid call identifier name for specifying CALLs in a DEFINE TRANSACTION statement. A CALL identifier cname must begin with an alphabetic character and contain only alphanumeric characters, and must have originated in a previous DEFINE CALL statement. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION CALL cname parameter in the statement.

PGU-41030: NLS_LANGUAGE parameter was previously specified

Cause: The NLS_LANGUAGE parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of NLS_LANGUAGE from the statement.

PGU-41031: parameter '<varname>string</varname>' specifies undefined Oracle NLS name '<varname>string</varname>'

Cause: The PGAU parameter <varname>parm</varname> specifies an Oracle NLS language name <varname>nlsname</varname> which is not defined on the Oracle server to re PGAU executes. which PGAU is connected. The language <varname>nlsname</varname> is not defined possibly because it was not selected when Oracle was installed, or the GENERATE'd TIPS are intended to execute on another Oracle, or it is not a valid Oracle NLS Language, i.e. misspelled or unsupported. Syntax checking only continues with the next statement.

Action: Correct the parameter value to specify a valid Oracle NLS Language, or install the language, or ensure the TIPS execute on a server which has the NLS language installed, (in which case this message may be considered a warning). Valid languages must begin with an alphabetic character, contain only alphanumeric characters, not exceed 40 characters in length. Supported customers may contact Oracle Worldwide Support for assistance with installing or determining NLS language support for your platform.

PGU-41032: ENVIRONMENT parameter was previously specified

Cause: The ENVIRONMENT parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of ENVIRONMENT from the statement.

PGU-41033: invalid ENVIRONMENT parameter

Cause: The ENVIRONMENT parameter in a DEFINE TRANSACTION statement is not a valid PGA ENVIRONMENT. Syntax checking only continues with the next statement.

Action: Correct the ENVIRONMENT parameter to specify a valid PGA ENVIRONMENT. Valid environments are: "IBM370"

PGU-41034: SIDEPROFILE parameter was previously specified

Cause: The SIDEPROFILE parameter as already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of SIDEPROFILE from the statement.

PGU-41035: invalid SIDEPROFILE name specified

Cause: The token is not a valid name for specifying an SNA Side Profile in a DEFINE TRANSACTION statement. A Side Profile name must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION SIDEPROFILE parameter in the statement.

PGU-41036: LUNAME parameter was previously specified

Cause: The LUNAME parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of LUNAME from the statement.

PGU-41037: invalid LUNAME name specified

Cause: The token is not a valid name for specifying an SNA LU name in a DEFINE TRANSACTION statement. An LU name must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION LUNAME parameter in the statement.

PGU-41038: TPNAME parameter was previously specified

Cause: The TPNAME parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of TPNAME from the statement.

PGU-41039: invalid TPNAME name specified

Cause: The token is not a valid name for specifying an SNA TP name in a DEFINE TRANSACTION statement. A TP name must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION TPNAME parameter in the statement.

PGU-41040: LOGMODE parameter was previously specified

Cause: The LOGMODE parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of LOGMODE from the statement.

PGU-41041: invalid LOGMODE name specified

Cause: The token is not a valid name for specifying an SNA logmode in a DEFINE TRANSACTION statement. A logmode must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION LOGMODE parameter in the statement.

PGU-41042: SYNCLEVEL parameter was previously specified

Cause: The SYNCLEVEL parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of SYNCLEVEL from the statement.

PGU-41043: invalid SYNCLEVEL value specified

Cause: The token is not a valid value for specifying an APPC SYNC level in a DEFINE TRANSACTION statement. The only values allowed for SYNC level are 0 and 1. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION SYNCLEVEL parameter in the statement.

PGU-41044: invalid TRANSACTION name

Cause: The token is not a valid transaction identifier name in a DEFINE TRANSACTION statement. A transaction name must begin with an alphabetic

character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION name parameter in the statement.

PGU-41045: missing call name in DEFINE TRANSACTION

Cause: PGAU DEFINE TRANSACTION syntax requires a call name which was not found. Syntax checking only continues with the next statement.

Action: Correct the DEFINE TRANSACTION statement to specify a call name.

PGU-41046: SIDEPROFILE omitted: all of LUNAME, TPNAME, and LOGMODE required

Cause: If the SNA SIDEPROFILE parameter is not specified, then all three of the LUNAME, TPNAME and LOGMODE parameters must be specified in a DEFINE TRANSACTION statement. Syntax checking only continues with the next statement.

Action: Correct the DEFINE TRANSACTION statement to specify either (1) the SIDEPROFILE parameter, (2) all three of the LUNAME, TPNAME and LOGMODE parameters, or (3) the SIDEPROFILE parameter and any combination of the LUNAME, TPNAME, and LOGMODE parameters.

PGU-41048: CALL parameter was previously specified

Cause: The CALL parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of CALL parameter from the statement.

PGU-41049: DEFINE TRANSACTION parameter <varname>string</varname> previously specified

Cause: The parameter <varname>parm</varname> has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of the parameter <varname>parm</varname> from the DEFINE TRANSACTION statement.

PGU-41053: VERSION parameter was previously specified
