Cause: The VERSION parameter has already been specified, and is only allowed once in a GENERATE or REDEFINE statement. Syntax checking only continues with the next statement.

Action: Remove the second specification of VERSION from the statement.

PGU-41054: invalid version number in VERSION parameter

Cause: The version number must follow the VERSION keyword enclosed in parenthesis in a GENERATE or REDEFINE statement. Syntax checking only continues with the next statement.

Action: Correct the version number specification in the VERSION parameter.

PGU-41055: invalid FIELD or PLSFNAME name for indicated language

Cause: The token is not a valid field identifier name in the specified language for specifying a FIELD or PLSFNAME parameter in a REDEFINE DATA statement. A field identifier name must obey the naming conventions of the specified language. In

COBOL, only alphanumerics may be used in addition to the hyphen character and the first character must be alphabetic. Syntax checking only continues with the next statement.

Action: Correct the FIELD or PLSFNAME identifier name in the statement.

PGU-41058: invalid transaction name specified

Cause: The token is not a valid transaction identifier name for a GENERATE statement. A transaction identifier name must begin with an alphabetic character and contain only alphanumeric characters, and must have originated in a previous DEFINE TRANSACTION statement. Syntax checking only continues with the next statement.

Action: Correct the transaction identifier name in the statement.

PGU-41059: PKGNAME parameter was previously specified

Cause: The PKGNAME parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of PKGNAME from the statement.

PGU-41060: invalid PKGNAME name specified

Cause: The token is not a valid identifier name for specifying the PL/SQL TIP package name in a GENERATE statement. A package name identifier must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the GENERATE PKGNAME parameter in the statement.

PGU-41061: OUTFILE parameter was previously specified

Cause: The OUTFILE parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of OUTFILE from the statement.

PGU-41063: DIAGNOSE parameter was previously specified

Cause: The DIAGNOSE parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of DIAGNOSE from the statement.

PGU-41064: PGANODE parameter was previously specified

Cause: The PGANODE parameter <varname>keyword</varname> has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of PGANODE from the statement.

PGU-41065: invalid PGANODE name specified

Cause: The token is not a valid PGA node identifier name in a GENERATE statement. A PGA node identifier name must begin with an alphabetic character and contain only alphanumeric characters, and be a valid Oracle DB link name. Syntax checking only continues with the next statement.

Action: Correct the PGANODE parameter in the statement.

PGU-41068: unable to open the input definition file

Cause: An error occurred opening the input definition file specified with the INFILE parameter in a DEFINE or REDEFINE DATA statement. Syntax checking only continues with the next statement.

Action: Ensure that the input definition file exists and read access is allowed to the input definition file.

PGU-41070: COBOL inline definition must start with left-paren at line end

Cause: A COBOL inline definition starts with a left parenthesis. The left parenthesis must be the last character on the line preceding any COBOL data definition statements.

Action: Make sure an inline COBOL data definition starts on a line following a left parenthesis

PGU-41071: missing LANGUAGE parameter

Cause: PGAU DEFINE or REDEFINE DATA syntax requires a LANGUAGE parameter which was not found. Syntax checking only continues with the next statement.

Action: Correct the DEFINE or REDEFINE DATA statement to specify a LANGUAGE parameter.

PGU-41072: OPTIONS parameter was previously specified

Cause: The OPTIONS parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of OPTIONS from the statement.

PGU-41073: repeated OPTIONS subparameter

Cause: The indicated subparameter was previously specified in an OPTIONS parameter. The only valid OPTIONS subparameter is UDF. It may be specified only once per GENERATE statement. Syntax checking only continues with the next statement.

Action: Remove the duplicate subparameter from the OPTIONS specification.

PGU-41075: TRACE parameter was previously specified

Cause: The TRACE parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of TRACE from the statement.

PGU-41076: repeated TRACE or PKGEX parameter

Cause: The indicated parameter was previously specified in a DIAGNOSE TRACE or PKGEX parameter. The valid TRACE parameters are SE, IT, QM, IO, OC, DD, and TG. The valid PKGEX parameters are DC and DR. Each may be specified only once per GENERATE statement. Syntax checking only continues with the next statement.

Action: Remove the duplicate parameter from the TRACE/PKGEX specification.

PGU-41077: PKGEX parameter was previously specified

Cause: The PKGEX parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request.

Action: Remove the second specification of PKGEX from the statement.

PGU-41079: data definition <varname>string</varname> version <varname>number</varname> inserted into PG DD

Cause: PGAU inserted the data definition <varname>dname</varname> with version number <varname>dver</varname> as the result of processing a DEFINE DATA statement.

Action: Note the VERSION number of the data definition for future reference.

PGU-41080: call definition <varname>string</varname> version <varname>number</varname> inserted into PG DD

Cause: PGAU inserted the call definition <varname>cname</varname> with version number <varname>cver</varname> as the result of processing a DEFINE CALL statement.

Action: Note the VERSION number of the call definition for future reference.

PGU-41081: transaction definition <varname>string</varname> version <varname>number</varname> inserted into PG DD

Cause: PGAU inserted the transaction definition <varname>tname</varname> with version number <varname>tver</varname> as the result of processing a DEFINE TRANSACTION statement.

Action: Note the VERSION number of the transaction definition for future reference.

PGU-41082: data definition <varname>string</varname> version <varname>number</varname> updated in PG DD

Cause: PGAU updated the data definition <varname>dname</varname> with version number <varname>dver</varname> as the result of processing a REDEFINE DATA statement.

Action: None required. This is an informational message.

PGU-41083: data definition <varname>string</varname> version <varname>number</varname> deleted from PG DD

Cause: PGAU deleted the data definition <varname>dname</varname> with version number <varname>dver</varname> as the result of processing an UNDEFINE DATA statement.

Action: None required. This is an informational message.

PGU-41084: call definition <varname>string</varname> version <varname>number</varname> deleted from PG DD

Cause: PGAU deleted the call definition <varname>cname</varname> with version number <varname>cver</varname> as the result of processing an UNDEFINE CALL statement.

Action: None required. This is an informational message.

PGU-41085: transaction definition <varname>string</varname> version <varname>number</varname> deleted from PG DD

Cause: PGAU deleted the transaction definition <varname>tname</varname> with version number <varname>tver</varname> as the result of processing an UNDEFINE TRANSACTION statement.

Action: None required. This is an informational message.

PGU-41086: length of <varname>string</varname> token exceeds maximum allowed length of <varname>number</varname>

Cause: The object name of type <varname>var</varname> is longer than the maximum length <varname>len</varname> allowed by PGAU. Only syntax checking continues with the next statement.

Action: Reduce the length of the indicated name.

PGU-41087: data name <varname>string</varname> does not exist

Cause: A DEFINE CALL references a data definition name <varname>dname</varname> that does not exist.

Action: Use only previously defined data definitions in a DEFINE CALL statement.

PGU-41088: data name <varname>string</varname> or specified version (<varname>number</varname>) of data name <varname>string</varname> does not exist

Cause: A DEFINE CALL references a data definition name <varname>dname</varname> that does not exist, or specified a non-existent version <varname>dver</varname> of the data definition <varname>dname</varname>.

Action: Use only previously defined data definitions in a DEFINE CALL statement.

PGU-41089: call name <varname>string</varname> does not exist

Cause: A DEFINE TRANSACTION references a call definition name <varname>cname</varname> that does not exist.

Action: Use only previously defined call definitions in a DEFINE TRANSACTION statement.

PGU-41090: call name <varname>string</varname> or specified version (<varname>number</varname>) of call name <varname>string</varname> does not exist

Cause: A DEFINE TRANSACTION references a call definition name <varname>cname</varname> that does not exist, or specified a non-existent version <varname>cver</varname> of the call definition <varname>cname</varname>.

Action: Use only previously defined data definitions in a DEFINE TRANSACTION statement.

PGU-41091: data name <varname>string</varname> does not exist

Cause: An UNDEFINE DATA references a data definition name <varname>dname</varname> that does not exist.

Action: Use only previously defined data definitions in an UNDEFINE DATA statement.

PGU-41092: data name <varname>string</varname> or specified version (<varname>number</varname>) of data name <varname>string</varname> does not exist

Cause: An UNDEFINE DATA references a data definition name <varname>dname</varname> that does not exist, or specified a non-existent version <varname>dver</varname> of the data definition <varname>dname</varname>.

Action: Use only previously defined data definitions in an UNDEFINE DATA statement.

PGU-41093: call name <varname>string</varname> does not exist

Cause: An UNDEFINE CALL references a call definition name <varname>cname</varname> that does not exist.

Action: Use only previously defined call definitions in an UNDEFINE CALL statement.

PGU-41094: call name <varname>string</varname> or specified version (<varname>number</varname>) of call name <varname>string</varname> does not exist

Cause: An UNDEFINE CALL references a call definition name <varname>cname</varname> that does not exist, or specified a non-existent version <varname>cver</varname> of the call definition <varname>cname</varname>.

Action: Use only previously defined call definitions in an UNDEFINE CALL statement.

PGU-41095: transaction name <varname>string</varname> does not exist

Cause: An UNDEFINE TRANSACTION references a transaction definition name <varname>tname</varname> that does not exist.

Action: Use only previously defined transaction definitions in an UNDEFINE TRANSACTION statement.

PGU-41096: transaction name <varname>string</varname> or specified version (<varname>number</varname>) of transaction name <varname>string</varname> does not exist

Cause: An UNDEFINE TRANSACTION references a transaction definition name <varname>tname</varname> that does not exist, or specified a non-existent version <varname>tver</varname> of the transaction definition <varname>tname</varname>.

Action: Use only previously defined transaction definitions in an UNDEFINE TRANSACTION statement.

PGU-41097: language parameter given in REDEFINE DATA conflicts with DEFINE DATA

Cause: The LANGUAGE parameter in a REDEFINE DATA statement for a given dataname specifies a language different than the language originally specified in the DEFINE DATA statement for the given dataname.

Action: Change the LANGUAGE parameter in the REDEFINE DATA statement to that of the original DEFINE DATA statement. The associated language-dependent field definitions must also be changed.

PGU-41100: FIELD parameter on REDEFINE specifies unknown field name (<varname>string</varname>)

Cause: A REDEFINE with the FIELD parameter specifies a field name <varname>fname</varname> that does not currently exist in the data object being REDEFINED.

Action: Specify the correct field name on the FIELD parameter. Use the REPORT DATA statement to list current field names.

PGU-41101: INFILE parameter given on DEFINE DATA with inline data

Cause: An INFILE parameter was found on a DEFINE DATA statement, but an inline data definition was also found. Only one of the two forms is allowed in a single DEFINE DATA statement.

Action: Remove the INFILE specification or the inline data definition.

PGU-41102: data definition missing on <varname>string</varname> DATA

Cause: Neither an inline data definition nor an INFILE parameter was found in a DEFINE DATA or REDEFINE DATA statement. One of these is required in a DEFINE DATA. One of these may be required in a REDEFINE DATA depending on other parameters given.

Action: Specify either an INFILE parameter or an inline data definition.

PGU-41103: INFILE parameter was previously specified

Cause: The INFILE parameter has already been specified in a DEFINE DATA or REDEFINE DATA statement and is only allowed once per data definition or redefinition. Syntax checking only continues with the next statement.

Action: Remove the second specification of INFILE from the statement.

PGU-41105: memory exhausted

Cause: An attempt to allocated memory failed.

Action: Supported customers should contact Oracle Worldwide Support for assistance.

PGU-41106: missing left parenthesis in a GROUP

Cause: Left parenthesis must immediately follow a GROUP verb

Action: Examine source for missing left parenthesis.

PGU-41107: GROUP within a GROUP not allowed

Cause: A GROUP was found within a GROUP.

Action: There is no need to have a recursive GROUP. Delete the inner GROUP along with its enclosing parentheses.

PGU-41108: data definition <varname>string</varname> does not exist

Cause: A data name, <varname>name</varname>, was specified but does not exist.

Action: Check <varname>name</varname> for a misspelling or, if an explicit version was specified, recheck for a misnumbering. Use the REPORT verb to find out what really exists.

PGU-41109: field name <varname>string</varname> does not exist in data definition <varname>string</varname>

Cause: The field name <varname>fld</varname> does not exist in the data definition named <varname>dnm</varname>.

Action: Check the data definition named `<varname>dnm</varname>` for the existence of a field named `<varname>fld</varname>`. Use the REPORT verb to find out what really exists in the data definition named `<varname>dnm</varname>`.

PGU-41110: field name `<varname>string</varname>` appears multiple times in data definition `<varname>string</varname>`

Cause: A REDEFINE specifies the field name `<varname>fld</varname>`; this field name is multiply defined in the data definition `<varname>dnm</varname>`. The field name must be sufficiently qualified to remove the ambiguity so that a unique field may be referenced.

Action: Replace the ambiguous field name `<varname>fld</varname>` with a sufficiently qualified field name. An example of a qualified field name is SUBFIELD2 OF FIELD1 (or the generic equivalent, FIELD1.SUBFIELD2). It may be easier to just spool the output for a REPORT of the DATA definition for `<varname>dnm</varname>` into an output file, edit the output file, and DEFINE the DATA object named `<varname>dnm</varname>` anew.

PGU-41111: missing `<varname>string</varname>` name

Cause: A DEFINE or REDEFINE statement is missing the name of a transaction object, a call object, or a data object. `<varname>token</varname>` is the type of object.

Action: Supply the missing name (as well as any other parameters that are surely needed).

PGU-41112: invalid name for UNDEFINE `<varname>string</varname>`

Cause: The identifier name in an UNDEFINE statement is invalid. An identifier name must begin with an alphabetic character and contain only alphanumeric characters. `<varname>token</varname>` is the type of object.

Action: Check the name for illegal characters in the identifier name.

PGU-41113: invalid WITH operand

Cause: The token is not a valid operand in a WITH phrase. Only DATA and CALLS are valid.

Action: WITH must be followed by DATA or CALLS.

PGU-41114: duplicate WITH operand

Cause: An identical WITH phrase has been previously found in this statement.

Action: Delete one of the identical phrases.

PGU-41115: invalid WITH operand in this context

Cause: A WITH phrase has been found in an invalid context. The phrase WITH CALLS can appear only in an UNDEFINE TRANSACTION; the phrase WITH DATA cannot appear in an UNDEFINE DATA.

Action: Delete the offending WITH phrase

PGU-41119: expecting one of DATA, CALL, or TRANSACTION in a DEFINE

Cause: One of DATA, CALL, or TRANSACTION must be given to specify what type of object is to be defined.

Action: Insert one of DATA, CALL, or TRANSACTION into the command.

PGU-41120: VERSION parameter conflicts with UNDEFINE ALL

Cause: A VERSION parameter was found in an UNDEFINE ALL.

Action: Either delete the ALL (in UNDEFINE ALL) or delete the VERSION parameter.

PGU-41121: invalid DIAGNOSE parameter

Cause: An invalid sub-parameter was found within a DIAGNOSE parameter.

Action: Check the sub-parameter for misspelling.

PGU-41122: no transaction name given in a GENERATE statement

Cause: The transaction name is missing.

Action: Provide a transaction name.

PGU-41123: expecting DATA (type of object)

Cause: DATA was expected to be found at this point in the REDEFINE.

Action: Examine the REDEFINE statement for the missing DATA token and insert if necessary.

PGU-41124: expecting one of DATA, CALL, or TRANSACTION in an UNDEFINE

Cause: One of DATA, CALL, or TRANSACTION must be given to specify what type of object is to be deleted.

Action: Insert one of DATA, CALL, or TRANSACTION into the command.

PGU-41125: expecting the name of a <varname>string</varname> object

Cause: The type of object (DATA, CALL, or TRANSACTION) must be followed by a name for the object.

Action: Insert the name of a DATA, CALL, or TRANSACTION object.

PGU-41126: WITH token immediately followed by another WITH token

Cause: There are two successive WITH tokens in the command input stream.

Action: Insert DATA or CALLS after the WITH token depending on which type of referenced objects should also be UNDEFINED or REPORTed.

PGU-41127: a DATA or CALLS token was found but not preceded by a WITH token

Cause: There is a missing WITH token before DATA or CALLS

Action: Insert the WITH token in the proper place.

PGU-41128: a WITH token ends <varname>string</varname>

Cause: A WITH token was found as the last token in an UNDEFINE or REPORT command.

Action: The WITH token must be followed either by DATA or CALLS to delete or REPORT all referenced DATA or CALLS.

PGU-41129: parameter <varname>string</varname> invalid without FIELD parameter

Cause: The FIELD parameter is a pre-requisite to specify the <varname>parm</varname> parameter because <varname>parm</varname> applies to FIELDS within

a DATA redefinition. PGAU REDEFINE parameters which require FIELD are: -
PLSFNAME - CODEPAGE

Action: Include the FIELD parameter in the REDEFINE statement to indicate to which FIELD the redefinition of <varname>parm</varname> applies, or remove the <varname>parm</varname> specification.

PGU-41131: FIELD specified, but USAGE, PLSFNAME, or language input absent

Cause: The FIELD keyword must be accompanied by at least one of the following keywords: USAGE, PLSFNAME, INFILE.

Action: Make sure at least one of the above keywords is specified.

PGU-41132: language input defines more than one field

Cause: A REDEFINE DATA with the FIELD option indicates that a single field is being redefined. The language input contained definitions for more than one field.

Action: Delete the extra field definitions.

PGU-41133: language input defines no data field for REDEFINE ... FIELD(...)

Cause: A REDEFINE DATA with the FIELD option indicates that a single field is being redefined. However, the language input contained no field definitions.

Action: Supply the (single) field definition in the language input.

PGU-41134: no <varname>string</varname> PGAU objects satisfied the REPORT request

Cause: A REPORT command requested information about a group of unnamed PGAU data objects with a type specified by <varname>token</varname>. But there were no objects of that type.

Action: This is an informational message.

PGU-41135: no PGAU <varname>string</varname> objects named <varname>string</varname> satisfied the REPORT request

Cause: A REPORT command requested information about a PGAU data object with a type specified by <varname>type</varname> and a name of <varname>name</varname>. But there were no objects of that <varname>type</varname> with the given <varname>name</varname>.

Action: This is an informational message.

PGU-41136: no <varname>string</varname> PGAU object named <varname>string</varname> at version <varname>number</varname> satisfied the REPORT request

Cause: A REPORT command requested information about a specific PGAU data object with a type specified by <varname>type</varname>, a name of <varname>name</varname>, and a version of <varname>vsn</varname>. But there is no object with that name and version.

Action: This is an informational message.

PGU-41137: too many version requests; maximum of <varname>number</varname> allowed

Cause: The VERSION parameter of a REPORT request has too many sub-parameters; the <varname>maximum</varname> is specified in the message.

Action: split the request into multiple REPORTs.

PGU-41138: missing <varname>string</varname> name

Cause: The <varname>object</varname> name is missing in a REPORT statement.

Action: supply the missing name.

PGU-41139: use of VERSION parameter conflicts with ALL parameter

Cause: A VERSION parameter has been found. But an ALL parameter has also been found (denoting all versions)

Action: Delete the ALL parameter or the VERSION parameter.

PGU-41140: version number expected

Cause: A version number was expected at this point.

Action: supply a version number or delete the entire VERSION parameter.

PGU-41141: an invalid version number was found

Cause: A non-numeric string was found when scanning for a version number.

Action: Inspect statement for missing delimiters.

PGU-41142: version parameter has already been specified

Cause: The VERSION parameter has already been found.

Action: Delete a VERSION parameter so there is only one left.

PGU-41143: this type of WITH operand invalid with a <varname>string</varname> object

Cause: The WITH phrase is invalid with respect to an object of type <varname>type</varname>. For example, REPORT DATA ... WITH DATA is invalid,

Action: Delete the offending WITH phrase.

PGU-41144: default PKGCALL parameter truncated to <varname>string</varname>

Cause: The PKGCALL parameter was defaulted in a DEFINE CALL statement and normally takes the value of the CALL object name. However, the length of the CALL object name is greater than the maximum length allowed for the PKGCALL parameter (which is 30). The default value actually used is <varname>value</varname>.

Action: None. This is an informational message.

PGU-41145: default PLSDNAME parameter truncated to <varname>string</varname>

Cause: The PLSDNAME parameter was defaulted in a DEFINE DATA statement and normally takes the value of the DATA object name. However, the length of the DATA object name is greater than the maximum length allowed for the PLSDNAME parameter (which is 30). The default value actually used is <varname>value</varname>.

Action: None. This is an informational message.

PGU-41146: invalid INFILE parameter

Cause: The INFILE parameter in a DEFINE or REDEFINE DATA statement does not designate a valid filename. Syntax checking only continues with the next statement.

Action: Correct the INFILE parameter to specify a valid filename.

PGU-42001: ALL not valid in VALUE(S) clause at level 88

Cause: ALL cannot be specified in a level 88 (condition-names) entry

Action: Delete the reserved word ALL

PGU-42002: COPY statement: ended prematurely

Cause: There are missing operands in the COPY clause

Action: Supply missing operands

PGU-42003: COPY reserved word found within a COPY clause

Cause: COPY clause found embedded within another COPY clause

Action: Examine COPY clauses. Statment terminator may be missing.

PGU-42004: COPY not allowed as operand-1 or operand-2 in COPY REPLACING

Cause: COPY reserved word not allowed as operand-1 or operand-2 in the REPLACING clause of a COPY statement.

Action: If operand-1 replace COPY by some other word here and in the copied source file. If operand-2, examine offending COPY clause for missing terminator or reserved words.

PGU-42005: COPY statement: nothing to copy

Cause: No filename operand given in COPY clause

Action: Supply filename operand in COPY clause

PGU-42006: invalid token <varname>string</varname>

Cause: An unrecognized token <varname>token</varname> was found when checking for a COBOL reserved word

Action: Check source around the unrecognized token for other missing reserved words or for a missing statment terminator.

PGU-42007: invalid EJECT statement

Cause: An EJECT statement cannot be given with operands

Action: Delete the extraneous text after EJECT up to the statement terminator

PGU-42008: invalid SKIPn statement

Cause: A SKIP1, SKIP2, or SKIP3 statment cannot have operands

Action: Delete the extraneous text after the SKIPn up to the statement terminator.

PGU-42009: <varname>string</varname>

Cause: This is an echo of the offending source line, <varname>sourceline</varname>.

Action: Peruse this line with respect to a previous error message

PGU-42010: level-number with <varname>number</varname> digits exceeds maximum of two

Cause: A level-number was found with <varname>number</varname> digits. Level-numbers are restricted to a maximum of two digits

Action: Make sure level number is in range 01-49, 66, 77, or 88

PGU-42011: invalid level number of <varname>number</varname> found

Cause: Level numbers are restricted to 01-49, 66, 77, or 88; <varname>number</varname> was found.

Action: Change level number.

PGU-42012: level 01 or 77 has yet to be found

Cause: Record definition must start at level 01 or 77; a level other than 01 or 77 has been found.

Action: Examine source for missing level 01 or 77 definition; if offending definition is a top-level for a record, then renumber it to level 01 or 77.

PGU-42013: level 01 or 77 not yet found or begun between columns <varname>number</varname> and <varname>number</varname>

Cause: Missing level 01 or 77 in source file or the 01 or 77 did not start within the column limits specified by <varname>margin-A</varname> and <varname>margin-B</varname>.

Action: If level 01 or 77 appears, make sure it starts before <varname>margin-B</varname> and after <varname>margin-A</varname>. If level 01 or 77 does not appear, a renumbering of levels may be appropriate.

PGU-42014: RENAME clause must be at level 66

Cause: The RENAME reserved word may be used ONLY at level 66.

Action: Renumber the level to 66.

PGU-42015: multiple <varname>string</varname> clauses found

Cause: Multiple instances of a clause of type <varname>type</varname> were found.

Action: Make sure there is only one instance of the type of clause given.

PGU-42016: invalid figurative_type value passed

Cause: This is an internal error.

Action: Supported customers should contact Oracle Worldwide Support.

PGU-42017: VALUES can be used only at level 88

Cause: The VALUES keyword can only be specified in a data definition describing a condition and only at level 88.

Action: If the definition describes a condition, make sure it is at level 88; if the definition does not describe a condition, then use VALUE IS rather than VALUES ARE.

PGU-42018: could not open input file <varname>string</varname>

Cause: The specified input file <varname>file</varname> could not be opened for reading.

Action: Make sure the file exists and allows read access.

PGU-42019: REDEFINES clause should be first clause

Cause: A REDEFINES clause must appear before any other clause in a data definition.

Action: Move the REDEFINES clause to the beginning of the data definition immediately after the data definition name.

PGU-42020: RENAMES dn-1 (THROUGH) dn-2 must stand alone

Cause: If a RENAMES clause appears in a data definition, it must be the ONLY clause.

Action: Delete other clauses.

PGU-42021: unterminated record definition found

Cause: An end-of-file was found before the ending statement terminator. This also results from COBOL definitions which extend beyond column 72.

Action: Check last records in input file for a missing statement terminator. Also check to ensure that the data definitions reside within their proper starting and ending columns.

PGU-42022: VALUES clause must be the only clause at level 88

Cause: The only clause allowed at level 88 is a VALUE or VALUES clause.

Action: Delete any clauses other than a VALUE or VALUES clause at level 88.

PGU-42024: missing period-separator in TITLE statement

Cause: A TITLE statement is not ended by a period separator.

Action: Check for missing period separator.

PGU-42025: invalid TITLE statement

Cause: Invalid format for TITLE statement.

Action: Check format of TITLE statement.

PGU-42026: COPY copies a COPY REPLACING or vice versa

Cause: The source file copied by a COPY statement cannot contain a COPY ... REPLACING statment; or the source file copied by a COPY ... REPLACING statement cannot have a COPY statement.

Action: Correct the file in error.

PGU-42027: in line <varname>number</varname> of file <varname>string</varname> as follows

Cause: This message follows another message that describes the actual error. The line following this message echoes the input COBOL source line. The source line was found in line <varname>line</varname> of file <varname>filename</varname>.

Action: Peruse messages immediately before and after this message.

PGU-42028: invalid USAGE token: <varname>string</varname>

Cause: An invalid word, <varname>token</varname> follows USAGE in a USAGE clause. <varname>token</varname> may be valid in some COBOL dialects.

Action: Replace `<varname>token</varname>` in the USAGE clause with a valid USAGE operand for the IBMVSCOBOLII COBOL dialect.

PGU-42029: reserved word `<varname>string</varname>` is invalid as a PICTURE

Cause: A reserved word, `<varname>token</varname>`, was used as a PICTURE operand.

Action: Check PICTURE clause for missing PICTURE operand.

PGU-42030: a `<varname>string</varname>` clause has been prematurely terminated

Cause: A clause of type `<varname>type</varname>` has ended but there are missing operands.

Action: Check the clause for missing operands.

PGU-42031: `<varname>string</varname>` phrase is misplaced after `<varname>string</varname>` phrase

Cause: A phrase introduced by `<varname>key-word-1</varname>` cannot come after a phrase introduced by `<varname>key-word-2</varname>`. Certain phrases must precede other phrases in a data definition. For instance, an ASCENDING [KEY] phrase must appear before an INDEXED phrase.

Action: Reverse the placement of the phrases.

PGU-42032: state value `<varname>string</varname>` is `<varname>string</varname>`

Cause: An internal error has occurred in the PGAU COBOL parser. State `<varname>state</varname>` is either valid or invalid according to `<varname>validity</varname>`.

Action: Reproduce the error with full diagnostics enabled and save all related input and output files and listings. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-42033: extraneous text at column `<varname>string</varname>`

Cause: Extraneous text has been found at the end of a record definition. It starts in column `<varname>column</varname>` of the source input record.

Action: The only source text that can follow the terminating '.' of a record definition is a COPY, EJECT, or SKIPn statement. Check to see if the terminating '.' has been misplaced.

PGU-42034: COPY for file `<varname>string</varname>` is recursive

Cause: A COPY statement for file `<varname>filename</varname>` has been found while processing a previous occurrence of a COPY specifying the same file.

Action: Check the COBOL source for recursive COPY. A single COPY file may need to be replaced with multiple, uniquely-named COPY files to achieve the desired results.

PGU-42035: invalid null operand in pseudo-text in a COPY REPLACING clause

Cause: The first operand in a REPLACING clause of a COPY statement is pseudo-text but the pseudo-text is null.

Action: Replace the null pseudo-text string with a non-null string.

PGU-42036: invalid input in <varname>string</varname> clause or paragraph

Cause: Invalid syntax in a <varname>special</varname> clause or paragraph.

Action: Check the indicated source line(s) for syntactical errors.

PGU-42037: missing END-EXEC token

Cause: An END-EXEC was not found while processing an EXEC clause.

Action: Insert an END-EXEC where appropriate. If the COBOL source input was generated by another product, regenerate the source using that product.

PGU-42038: invalid use of reserved word <varname>string</varname>

Cause: A reserved word, <varname>reserved</varname>, was found in an illegal context.

Action: Check to see if a reserved word is perhaps being used where a user dataname would normally appear.

PGU-42039: in line as follows

Cause: This message follows another message that describes the actual error. The line following this message echos the input COBOL source line.

Action: Refer to messages immediately before and after this message.

PGU-42040: DEPENDING ON phrase missing in OCCURS clause

Cause: An OCCURS clause describes a variable length table. One needs a DEPENDING ON phrase to tell how large is the current instance of the table. The DEPENDING ON clause is missing. DEPENDING ON phrase that tells how large the current instance

Action: Supply the DEPENDING ON clause or make the table a fixed length table.

PGU-42041: missing or invalid USAGE clause for DBCS PIC clause

Cause: A PICTURE clause specifies a DBCS datatype, but the required USAGE IS DISPLAY-1 clause is missing or invalid.

Action: Supply the USAGE clause or revise the PIC datatype to noth required DBCS.

PGU-42042: LENGTH IS clause not allowed for numeric or edited data

Cause: A LENGTH IS clause was specified for a data item that is not non-edited character data.

Action: Remove the LENGTH IS clause or change the PICTURE clause for the data item to specify a non-edited, character data mask.

PGU-50001: error reading the log file.

Cause: An error occurred reading the log file.

Action: Determine the cause of the problem and correct it before restarting PG4TCPMAP.

PGU-50002: no data found.

Cause: The predicate that was chosen to delete the row from the PGA_TCP_IMSC table is not found.

Action: Determine the cause of the problem and correct it before restarting PG4TCPMAP.

PGU-50003: <varname>string</varname> length of <varname>number</varname> exceeds the maximum of <varname>number</varname>.

Cause: The parameter, <varname>parm</varname> length, <varname>len</varname>, passed to PG4TCPMAP tool was larger than the maximum allowed, <varname>max</varname>.

Action: Correct the parameter in error and recall PG4TCPMAP tool. For more information, refer to Oracle Database Gateway for APPC, User's Guide.

PGU-50004: PG4TCPMAP has ended with a failure.

Cause: An error occurred processing pg4tcpmap tool. This message is preceded by additional messages providing more information about the error.

Action: Refer to the messages preceding this one to determine the course of action.

PGU-50101: You have entered an invalid value.

Cause: This is a warning that you have entered an invalid value.

Action: The question will be asked again. Enter a valid value.

PLS-00001 to PLS-01918

PLS-00001: <varname>string</varname>

PLS-00022: out of memory

PLS-00027: redeclared SQL Identifier '<varname>string</varname>' at line <varname>number</varname> in file <varname>string</varname>

PLS-00028: option '<varname>string</varname>' not legal as EXEC ORACLE OPTION

PLS-00029: ambiguous option '<varname>string</varname>'

PLS-00030: invalid label range specified

PLS-00031: invalid operand '<varname>string</varname>' for option '<varname>string</varname>'

PLS-00032: invalid option '<varname>string</varname>'

PLS-00033: missing operand for option '<varname>string</varname>'

PLS-00035: no host language specified

PLS-00036: no input file name specified

PLS-00037: ?? unable to log on to ORACLE with '<varname>string</varname>'

PLS-00038: ?? unable to open a cursor

PLS-00039: unable to open input file '<varname>string</varname>'

PLS-00040: unable to open listing file '<varname>string</varname>'

PLS-00041: unable to open output file '<varname>string</varname>'

PLS-00042: unable to close output file '<varname>string</varname>'

PLS-00049: bad bind variable '<varname>string</varname>'

Cause: The client (caller) of PL/SQL has parsed a bind variable that it has informed to be 'bad'.

Action: n/a

PLS-00101: reserved for future use

PLS-00102: parser stack overflow because nesting is too deep

Cause: The parser, which checks the syntax of PL/SQL statements, uses a data structure called a stack; the number of levels of nesting in the PL/SQL block exceeded the stack capacity.

Action: Reorganize the block structure to avoid nesting at too deep a level. For example, move the lowest-level sub-block to a higher level.

PLS-00103: <varname>string</varname>

Cause: This error message is from the parser. It found a token (language element) that is inappropriate in this context.

Action: Check previous tokens as well as the one given in the error message. The line and column numbers given in the error message refer to the end of the faulty language construct.

PLS-00104: empty argument list in call of procedure '<varname>string</varname>' must be omitted

Cause: In a subprogram call, the name of the subprogram was followed by an empty parameter list. For example, procedure P was called as P(). This is not allowed.

Action: Remove the empty parameter list. In the example, change the procedure call to P.

PLS-00105: at most one forward declaration of type '<varname>string</varname>' is permitted

Cause: More than one forward declaration of a type is redundant.

Action: Remove all but one forward declaration.

PLS-00106: double quote disallowed in a quoted identifier

PLS-00108: declarative units must be a single variable declaration

Cause: While checking a declarative unit (a top-level declare block without the BEGIN...END), PL/SQL found that there was more than one item declared or that the item was not a variable declaration. A table is a common variable declaration at the unit level. To define a TABLE, compile a DECLARE compilation unit, but only one at a time is allowed.

Action: Declare variables in separate declarative units.

PLS-00109: unknown exception name '<varname>string</varname>' in PRAGMA EXCEPTION_INIT

Cause: No declaration for the exception name referenced in an EXCEPTION_INIT pragma was found within the scope of the pragma.

Action: Make sure the pragma follows the exception declaration and is within the same scope.

PLS-00110: bind variable '<varname>string</varname>' not allowed in this context

Cause: A bind variable, that is, an identifier prefixed with a colon, was found in an inappropriate context.

Action: Remove the colon or replace the bind variable with the appropriate object.

PLS-00111: end-of-file in comment

Cause: A Comment had a comment initiator (/), but before the

Action: Remove the Comment initiator or add a comment terminator. The line and column numbers accompanying the error message refer to the beginning of the last legal token before the Comment initiator.

PLS-00112: end-of-line in quoted identifier

Cause: A quoted identifier had a beginning quote ("), but before the ending quote (") was found, an end-of-line marker was encountered.

Action: Remove the beginning quote or add the ending quote. The line and column numbers accompanying the error message refer to the beginning of the quoted identifier.

PLS-00113: END identifier '<varname>string</varname>' must match '<varname>string</varname>' at line <varname>string</varname>, column <varname>string</varname>

Cause: Following the keyword END, which terminates some language constructs (such as loops, blocks, functions, and procedures), you can optionally place the name of that construct. For example, at the end of the definition of loop L you might write END L. This error occurs when the optional name does not match the name given to the language construct. It is usually caused by a misspelled identifier or by faulty block structure.

Action: Make sure the spelling of the END identifier matches the name given to the language construct and that the block structure is correct.

PLS-00114: identifier '<varname>string</varname>' too long

Cause: The name of a PL/SQL variable is longer than 30 characters. Legal identifiers (including quoted identifiers) have a maximum length of 30 characters. A string literal might have been mistakenly enclosed in double quotes instead of single quotes, in which case PL/SQL considers it a quoted identifier.

Action: Shorten the identifier.

PLS-00115: this PRAGMA must follow the declaration of '<varname>string</varname>'

Cause: The pragma refers to a PL/SQL object that was not declared or is not within the scope of the reference. Identifiers must be declared before they are used in a pragma; forward references are not allowed.

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00116: Duplicate where-clause in table expression

Cause: Two or more WHERE clauses were found in a DELETE, SELECT, or UPDATE statement. The WHERE clause specifies a condition under which rows in a table are processed. The condition can contain several logical expressions connected by AND or OR, but a statement can contain only one WHERE clause.

Action: Remove one of the WHERE clauses and, if necessary, connect logical expressions by AND or OR

PLS-00117: Duplicate connect-by clause in table expression

Cause: Two or more CONNECT BY clauses were found in a SELECT statement. The CONNECT BY clause defines a relationship used to return rows in a hierarchical order. The relationship can contain two expressions separated by a relational operator (such as = or !=), but a statement can contain only one CONNECT BY clause.

Action: Remove one of the CONNECT BY clauses and, if necessary, separate expressions by a relational operator.

PLS-00118: Duplicate group-by clause in table expression

Cause: Two or more GROUP BY clauses were found in a SELECT statement. The GROUP BY clause lists column expressions used to form a summary row for each group of selected rows. The list can contain several column expressions separated by commas, but a statement can contain only one GROUP BY clause.

Action: Remove one of the GROUP BY clauses and, if necessary, separate column expressions by commas.

PLS-00119: Duplicate having-clause in table expression

Cause: Two or more HAVING clauses were found in a SELECT statement. The HAVING clause specifies a condition under which groups of rows (formed by the GROUP BY clause) are included in the result. The condition can include several logical expressions connected by AND or OR, but a statement can contain only one HAVING clause.

Action: Remove one of the HAVING clauses and, if necessary, connect logical expressions by AND or OR.

PLS-00120: inappropriate argument in OPEN statement

Cause: The asterisk (*) option was used in the argument list of a SQL group function other than COUNT. For example, the code might look like SELECT SUM(*) INTO emp_count FROM emp; -- should be COUNT(*) Only COUNT permits the use of the asterisk option, which returns the number of rows in a table.

Action: Remove the asterisk option from the argument list and replace it with an expression that refers to one or more database columns.

PLS-00122: <varname>string</varname> as separator is allowed only with specific built-in functions

Cause: A few built-in functions use keywords (instead of commas) as argument separators: Built-in function Argument separators -----
CHR, TRANSLATE USING CAST AS TRIM TRAILING, LEADING, BOTH, FROM A
function different from one of these built-in functions is using a keyword as an argument separator.

Action: Correct the argument list or change the function name.

PLS-00123: program too large (<varname>string</varname>)

Cause: The PL/SQL compiler has exceeded one of its capacity limits. The compiler cannot proceed.

Action: Revise the PL/SQL program so that it no longer exceeds the reported limit. The specific revision depends on the limit that was exceeded. However, usually a simple reduction in the size of the unit being compiled will fix the problem. Consider splitting the library unit into two or more library units, or shrinking repetitious or patterned code (possibly by creating helper routines).

PLS-00124: name of exception expected for first arg in exception_init pragma

Cause: The first argument passed to the EXCEPTION_INIT pragma was something other than an exception name. The first argument must be the name of a legally declared exception.

Action: Replace the first argument with the name of a legally declared exception.

PLS-00125: type name expected

Cause: When a constant or variable was declared, its datatype was not specified. For example, the code might look like `pi CONSTANT := 3.14159; --` should be `CONSTANT REAL := 3.14159`. Every constant and variable must have a datatype, which specifies a storage format, constraints, and valid range of values.

Action: Supply the type name

PLS-00126: selector ALL is not allowed

Cause: The ALL shortcut for specifying system privileges or statement options was used in a SQL statement. PL/SQL does not support the ALL shortcut.

Action: Remove the ALL shortcut from the SQL statement.

PLS-00127: Pragma <varname>string</varname> is not a supported pragma

Cause: The named pragma (compiler directive) is not among those supported by PL/SQL. The pragma name might be misspelled, or the pragma syntax might be faulty.

Action: Check the spelling of the pragma name, and make sure the proper syntax was used.

PLS-00128: Illegal number of arguments for pragma <varname>string</varname>

Cause: The number of arguments (actual parameters) passed to the named pragma (compiler directive) is incorrect. A required argument was omitted from the argument list, or the pragma syntax is faulty (for example, a comma might be missing between two parameters).

Action: Supply the missing argument, or correct the faulty syntax.

PLS-00129: Pragma INTERFACE only supports C as its first argument

Cause: The first parameter passed to pragma INTERFACE specified a host language other than C. Currently, C is the only host language supported. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the first parameter, which should be C, and make sure the proper syntax was used.

PLS-00130: Pragma <varname>string</varname> expects 1st argument to be a procedure/function/package/cursor

Cause: The first argument (actual parameter) passed to the named pragma (compiler directive) was not the name of a subprogram, package, or cursor, as required. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the first parameter, and make sure the proper syntax was used.

PLS-00131: Pragma <varname>string</varname> expects 2nd argument to be a procedure/function

Cause: The second argument (actual parameter) passed to the named pragma (compiler directive) was not the name of a procedure or function, as required. The parameter cannot be a non-static method. The parameter might be misspelled or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the second parameter and make sure the proper syntax was used.

PLS-00132: Pragma <varname>string</varname> does not support <varname>string</varname>

Cause: One of the parameters passed to this pragma was not among the list of allowed values. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of all the parameters and make sure the proper syntax was used.

PLS-00133: Pragma <varname>string</varname> expects 1st argument to be an identifier or string-literal

Cause: The first argument (actual parameter) passed to the named pragma (compiler directive) was not an identifier or string literal, as required. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the first parameter, and make sure the proper syntax was used.

PLS-00134: Pragma <varname>string</varname> expects 2nd argument to be an identifier or string-literal

Cause: The second argument (actual parameter) passed to the named pragma (compiler directive) was not an identifier or string literal, as required. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the second parameter, and make sure the proper syntax was used.

PLS-00135: Pragma <varname>string</varname> expects 3rd argument to be an identifier, string or numeric literal

Cause: The fourth argument (actual parameter) passed to the named pragma (compiler directive) was not a numeric literal, as required. The parameter might be miscoded, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the coding of the fourth parameter, and make sure the proper syntax was used.

PLS-00138: Precision for a binary type must be one of 8, 16, or 32

Cause: Invalid precision was specified for a signed or unsigned binary type.

Action: Specify precision as one of 8, 16, or 32.

PLS-00139: duplicate external NAME specification in subprogram expression

Cause: The subprogram was found to have two external NAME specifications.

Action: Remove one of the external NAME specifications.

PLS-00140: duplicate external LIBRARY specification in subprogram expression

Cause: The subprogram was found to have two external LIBRARY specifications.

Action: Remove one of the external LIBRARY specifications.

PLS-00141: duplicate external PARAMETER STYLE specification in subprogram expression

Cause: The subprogram was found to have two external PARAMETER STYLE specifications.

Action: Remove one of the external PARAMETER STYLE specifications.

PLS-00142: duplicate external PARAMETER list specification in subprogram expression

Cause: The subprogram was found to have two external PARAMETER STYLE specifications.

Action: Remove one of the external PARAMETER STYLE specifications.

PLS-00143: duplicate external LANGUAGE specification in subprogram expression

Cause: The subprogram was found to have two external LANGUAGE specifications.

Action: Remove one of the external LANGUAGE specifications.

PLS-00144: duplicate external CALLING STANDARD specification in subprogram expression

Cause: The subprogram was found to have two external CALLING STANDARD specifications.

Action: Remove one of the external CALLING STANDARD specifications.

PLS-00145: duplicate external WITH CONTEXT specification in subprogram expression

Cause: The subprogram was found to have two external WITH CONTEXT specifications.

Action: Remove one of the external WITH CONTEXT specifications.

PLS-00146: duplicate external TRUSTED/UNTRUSTED specification in subprogram expression

Cause: The subprogram was found to have two external TRUSTED/UNTRUSTED specifications.

Action: Remove one of the external external TRUSTED/UNTRUSTED specifications.

PLS-00147: LIBRARY or ASSEMBLY file specification string is empty

Cause: A zero-length string was found for the LIBRARY or ASSEMBLY file specification.

Action: Specify a non-zero length string for the LIBRARY or ASSEMBLY file specification.

PLS-00148: Only 1 pragma of this type is allowed per subprogram

Cause: The subprogram was found to have two PRAGMA RESTRICT_REFERENCES.

Action: Remove one of the PRAGMA RESTRICT_REFERENCES.

PLS-00150: found: <varname>string</varname> but expected : INTEGER

Cause: This error happens in the creation of a pl/sql external type: [SIGNED | UNSIGNED] BINARY INTEGER (<varname>precision</varname>). It may be

referenced only in a create type statement. Such types are non-queryable. Something other than 'INTEGER' was supplied.

Action: n/a

**PLS-00151: Expression or Variable is an illegal type to PLS/QL:
<varname>string</varname>**

Cause: A type was used which does not belong PL/SQL. This type can only be referenced in CREATE TYPE statements, and is a non-queryable data type.

Action: n/a

PLS-00152: POINTER type may only reference an object type.

Cause: A POINTER type which does not belong to PL/SQL can only refer to an object type. This type can only be referenced in CREATE TYPE statements, and is a non-queryable data type.

Action: n/a

PLS-00153: A <varname>string</varname> type may only be used as an object type attribute.

Cause: A POINTER or [SIGNED/UNSIGNED] BINARY INTEGER can only be used as attributes of object types. These types can only be referenced in CREATE TYPE statements, and are non-queryable data types. One of these external PL/SQL types outside of an object type.

Action: n/a

PLS-00154: An object type may have only 1 MAP or 1 ORDER method.

Cause: More than one map or order function was declared. An object type can have only one map function or one order function, but not both.

Action: n/a

PLS-00155: Only a function may be a MAP, ORDER or CONSTRUCTOR method.

Cause: A procedure was declared as a MAP, ORDER or CONSTRUCTOR method. Only functions can be MAP, ORDER or CONSTRUCTOR methods.

Action: n/a

PLS-00156: Null constraints not supported for object attributes.

Cause: A null constraint was specified for an attribute in an object. This is not supported.

Action: Remove the constraint.

PLS-00157: Only schema-level programs allow <varname>string</varname>

Cause: An AUTHID or ACCESSIBLE BY clause was specified for a subprogram inside a package or type. These clauses are only supported for top-level stored procedures, packages, and types.

Action: Remove the clause.

PLS-00160: AUTHID must specify CURRENT_USER or DEFINER

Cause: The only two allowed options for AUTHID are CURRENT_USER and DEFINER.

Action: Fix the AUTHID clause to specify CURRENT_USER or DEFINER

PLS-00161: Pragma <varname>string</varname> expects 3rd argument to be an identifier or a string literal

Cause: The third argument (actual parameter) passed to the named pragma (compiler directive) was not an identifier or a string literal when there is a fourth argument to the pragma. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the third parameter, and make sure the proper syntax was used.

PLS-00162: Pragma <varname>string</varname> expects 4th argument to be a positive integer literal

Cause: The fourth argument (actual parameter) passed to the named pragma (compiler directive) was not a numeric literal, as required. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the fourth parameter, and make sure the proper syntax was used.

PLS-00164: cursor subqueries are not supported in this release

Cause: This feature is not yet implemented.

Action: n/a

PLS-00165: call statement is not supported in PL/SQL

Cause: A CALL statement was found in PL/SQL source.

Action: Use an ordinary PL/SQL function or procedure call.

PLS-00166: bad format for date, time, timestamp or interval literal

Cause: The contents of the date, time, timestamp or interval literal did not match the expected format.

Action: Correct the format for the date, datetime, or interval literal.

PLS-00167: keyword BULK is used in a wrong context

Cause: keyword BULK is used illegally. For example, BULK is used without INTO clause

Action: remove the keyword BULK.

PLS-00168: duplicate modifier specification '<varname>string</varname>'

Cause: A method or object type modifier was specified more than once.

Action: Remove all but one occurrence of the duplicate modifier.

PLS-00169: modifier '<varname>string</varname>' conflicts with prior '<varname>string</varname>' specification

Cause: The method or object type modifier specified conflicts with an earlier modifier. For example, a FINAL modifier cannot be combined with a NOT FINAL modifier.

Action: Remove one of the conflicting modifiers.

PLS-00170: the SQL statement in an OPEN statement or FOR loop must be a SELECT

Cause: An OPEN cursor statement or cursor FOR loop can only invoke a SELECT statement, not an UPDATE, INSERT or DELETE.

Action: Use only SELECT statements in OPEN or cursor FOR loops

PLS-00171: duplicate dedicated AGENT specification in subprogram expression

Cause: The subprogram was found to have two dedicated AGENT specifications.

Action: Remove one of the dedicated AGENT specifications.

PLS-00172: string literal too long

Cause: The string literal was longer than 32767 bytes.

Action: Use a string literal of at most 32767 bytes.

PLS-00173: SPACE, TAB or RETURN are disallowed as alternative quote delimiters

Cause: SPACE, TAB or RETURN was used as alternative quote delimiter.

Action: Use a character other than SPACE, TAB or RETURN as the alternative quote delimiter.

PLS-00174: a static boolean expression must be used

Cause: The expression contained a syntax or semantic error, or it did not have a boolean type or its evaluation raised an exception.

Action: Write correct static boolean expression.

PLS-00176: unexpected preprocessor token '\$<varname>string</varname>'

Cause: A preprocessor token was used inappropriately.

Action: Remove the preprocessor token that is inappropriately used.

PLS-00177: '\$<varname>string</varname>' preprocessor directive does not end properly

Cause: A preprocessor directive was not ended properly.

Action: Use \$end to end the preprocessor directive properly.

PLS-00178: a static character expression must be used

Cause: The expression contained a syntax or semantic error, or it did not have a character type or its evaluation raised an exception.

Action: Write correct static character expression.

PLS-00179: \$ERROR: <varname>string</varname>

Cause: \$ERROR directive was used. This is an expected error message.

Action: NA

PLS-00180: preprocessor directives are not supported in this context

Cause: A preprocessor directive was used in a compilation unit for which conditional compilation is not supported.

Action: Do not use any preprocessor directives in this compilation unit.

PLS-00181: unsupported preprocessor directive '<varname>string</varname>'

Cause: An unsupported preprocessor directive was used.

Action: Use a supported preprocessor directive.

PLS-00182: Identifier cannot be an empty string

Cause: Identifier was declared using an empty string,

Action: rename the identifier to a non empty string.

PLS-00183: too many bind variables

Cause: The library unit used more bind variables than permitted. (The current limit is 65535 bind variables in one library unit.)

Action: Reduce the number of bind variables in the library unit. Consider splitting the library unit into two or more library units, or shrinking repetitious or patterned code (possibly by creating helper routines.)

PLS-00201: identifier '<varname>string</varname>' must be declared

Cause: You tried to reference either an undeclared variable, exception, procedure, or other item, or an item to which no privilege was granted or an item to which privilege was granted only through a role.

Action: 1) Check your spelling and declaration of the referenced name. 2) Verify that the declaration for the referenced item is placed correctly in the block structure. 3) If the referenced item is indeed declared but you don't have privileges to refer to that item, for security reasons, you will be notified only that the item is not declared. 4) If the referenced item is indeed declared and you believe that you have privileges to refer to that item, check the privileges; if the privileges were granted only via a role, then this is expected and documented behavior. Stored objects (packages, procedures, functions, triggers, views) run in the security domain of the object owner with no roles enabled except PUBLIC. Again, you will be notified only that the item was not declared.

PLS-00202: type '<varname>string</varname>' must be declared

Cause: An attempt was made to reference an undefined type. Either the type specifier was not declared or it is not within the scope of the reference.

Action: Check the spelling and declaration of the type specifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00203: function DECODE must be called with at least 3 non-boolean arguments

Cause: Less than three arguments were passed to the built-in function DECODE. Though DECODE takes a variable number of (non-Boolean) arguments, at least three arguments must be passed.

Action: Call DECODE with three or more arguments

PLS-00204: function or pseudo-column '<varname>string</varname>' may be used inside a SQL statement only

Cause: A pseudocolumn or proscribed function was used in a procedural statement. The SQL pseudocolumns (LEVEL, ROWID, ROWNUM) can be used only in SQL statements. Likewise, certain functions such as DECODE, DUMP, and VSIZE and the SQL group functions (AVG, MIN, MAX, COUNT, SUM, STDDEV, VARIANCE) can be used only in SQL statements.

Action: Remove the pseudocolumn reference or function call from the procedural statement. Or, replace the procedural statement with a SELECT INTO statement; for example, replace `bonus := DECODE(rating, 1, 5000, 2, 2500, ...)`; with the following statement: `SELECT DECODE(rating, 1, 5000, 2, 2500, ...) INTO bonus FROM dual`;

PLS-00205: Aggregate not allowed here

Cause: An aggregate, that is, a parenthesized list of values such as (7788, 'SCOTT', 20), was found in an inappropriate context.

Action: Remove or relocate the aggregate.

PLS-00206: %%TYPE must be applied to a variable, column, field or attribute, not to "<varname>string</varname>"

Cause: The program object declared using the %TYPE datatype attribute is not of the appropriate class. It must be a variable, column, record component, subprogram formal parameter, or other object to which values can be assigned.

Action: Declare an object of the appropriate class or define the datatype in another way (for example, use %ROWTYPE).

PLS-00207: identifier '<varname>string</varname>', applied to implicit cursor SQL, is not a legal cursor attribute

Cause: An identifier that is not a cursor attribute was applied to the identifier SQL. For example, this error occurs if the cursor attribute is misspelled.

Action: Check the spelling of the cursor attribute name. Make sure the attribute is one of these: %NOTFOUND, %FOUND, %ROWCOUNT, %ISOPEN.

PLS-00208: identifier '<varname>string</varname>' is not a legal cursor attribute

Cause: An identifier not declared as a cursor attribute was applied to an identifier declared as a cursor. For example, this error occurs if the cursor attribute is misspelled.

Action: Check the spelling of the cursor attribute name. Make sure the attribute is one of these: %NOTFOUND, %FOUND, %ROWCOUNT, %ISOPEN.

PLS-00209: table '<varname>string</varname>' is not in FROM clause

Cause: In a query, a table referenced by the select list is not named in the FROM clause.

Action: Check the spelling of the table names, make sure each column in the select list refers to a table in the FROM clause, then re-execute the query.

PLS-00210: an OTHERS clause is required in this CASE statement

Cause: Unless the clauses of a CASE statement mention all values of the type of the selecting expression, an OTHERS clause must be provided as the last clause of the CASE statement. It is impossible to cover all values of type INTEGER (or NUMBER), so an OTHERS clause is always required when the expression following the keyword CASE is of type INTEGER (or NUMBER).

Action: n/a

PLS-00211: CASE labels or ranges must not be duplicated in different WHEN clauses

Cause: In this CASE statement, a value appears in more than one WHEN clause. A value may appear in at most one WHEN clause of a CASE statement.

Action: n/a

PLS-00212: could not obtain enough memory to compile CASE statement

Cause: The CASE statement is too big. The compiler did not have enough storage to process it.

Action: n/a

PLS-00213: package STANDARD not accessible

Cause: The PL/SQL compiler could not find package STANDARD in the current Oracle database. To compile a program, PL/SQL needs package STANDARD.

Action: Make sure that package STANDARD is available in the current Oracle database, then retry the operation.

PLS-00214: BEGIN...END block nesting is too deep

Cause: The number of levels of nesting in the PL/SQL block is too large. Blocks can be nested up to 255 levels deep, depending on the availability of system resources such as memory.

Action: Reorganize the block structure to avoid nesting at too deep a level. For example, move the lowest-level sub-block to a higher level.

PLS-00215: String length constraints must be in range (1 .. 32767)

Cause: When a character variable was declared, a length outside the legal range was specified. For example, the following declarations are illegal: `flag CHAR(0);` -- illegal; zero length name `VARCHAR2(-10);` -- illegal; negative length

Action: Change the length constraint, making sure that it lies in the range 1 .. 32767.

PLS-00216: NUMBER precision constraint must be in range (1 .. 38)

Cause: A NUMBER variable was declared with a precision that is outside the legal range. Declarations such as `N NUMBER(800)` or `N NUMBER(123,10)` are not supported.

Action: Change the illegal NUMBER precision constraint, making sure that it lies in the range 1 .. 38.

PLS-00217: NUMBER scale constraint must be in range (-84 .. 127)

Cause: A NUMBER variable was declared with a scale that is outside the legal range. Declarations such as `N NUMBER(10,345)` or `N NUMBER(10,-100)` are not supported.

Action: Change the illegal NUMBER scale constraint, making sure that it lies in the range -84 .. 127.

PLS-00218: a variable declared NOT NULL must have an initialization assignment

Cause: In general, variables that have no initialization clause in their declaration are automatically initialized to NULL. This is illogical for NOT NULL variables; therefore, an initialization clause is required.

Action: Add an initialization clause to the variable declaration. If the initialization is too complicated for the syntax, one can add a function call (in a later release).

PLS-00219: label '<varname>string</varname>' reference is out of scope

Cause: A block or loop label was used to qualify a variable (as in `outer_block.date`) that was not declared or is not within the scope of the label. The variable name might be misspelled, its declaration might be faulty, or the declaration might be placed incorrectly in the block structure.

Action: Check the spelling and declaration of the variable name. Also confirm that the declaration is placed correctly in the block structure.

PLS-00220: simple name required in this context

Cause: A qualified name such as `A.B` or `A.B.C` is not permitted here.

Action: Use a simple name such as `A` instead.

PLS-00221: '<varname>string</varname>' is not a procedure or is undefined

Cause: An identifier being referenced as a procedure was not declared or actually represents another object (for example, it might have been declared as a function).

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00222: no function with name '<varname>string</varname>' exists in this scope

Cause: An identifier being referenced as a function was not declared or actually represents another object (for example, it might have been declared as a procedure).

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00223: parameterless procedure '<varname>string</varname>' used as function

Cause: An identifier being referenced as a parameterless function actually represents a procedure.

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure. If necessary, change the declaration of the identifier or change the reference so that it does not require a return value.

PLS-00224: object '<varname>string</varname>' must be of type function or array to be used this way

Cause: An identifier being referenced as a function or an array actually represents an object (a number or date, for example) that cannot be referenced in this way.

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00225: subprogram or cursor '<varname>string</varname>' reference is out of scope

Cause: The prefix in a qualified name was a subprogram or cursor which was not in an enclosing scope; i.e., a subprogram or cursor name is being used as a scope qualifier for a reference to an entity (within that subprogram or cursor) that is not in scope. Example: `declare x number; type t1 is record (a number); function f return t1 is`

a number; begin x := f.a; -- legal use of function "f" as a scope qualifier; -- resolves to local variable "a" in function "f". x := f().a; -- legal reference to component "a" of returned record end; begin x := f.a; -- illegal use of function "f" as a scope qualifier x := f().a; -- legal reference to component "a" of returned record end;

Action: a) if the intention was to refer to a local variable of a non-enclosing function, this is not allowed; remove the reference b) if this is a parameterless function, and the intention was to access a field of the result of a call to this function, then use empty parentheses in the call.

PLS-00226: package '<varname>string</varname>' used as variable reference

Cause: A package was referenced in an expression as if it were a variable or function. Either the name of the variable or function is misspelled or the reference is not fully qualified. For example, to call the function my_function, which is stored in package my_package, dot notation must be used, as follows: ... my_package.my_function ...

Action: Correct the spelling of the variable or function name or use dot notation to reference the packaged variable or function.

PLS-00227: subprogram 'in' formal <varname>string</varname> is not yet denotable

Cause: When the formal parameters of a subprogram were declared, one parameter was used to initialize another, as in PROCEDURE my_proc (j NUMBER, k NUMBER := j) IS ... The first parameter has no value until run time, so it cannot be used to initialize another parameter.

Action: Remove the illegal formal parameter reference.

PLS-00228: Illegal declaration of variable of type LONG

Cause: An attempt was made to declare a variables to be of type LONG. Only columns can be of type LONG. CAUSE: The identifier is a formal parameter which is being used in the context of a default expression value for a formal parameter in the same formal parameter list. E.g.: procedure p(j number, k number := j).

Action: Remove the offending variable definition

PLS-00229: Attribute expression within SQL expression

Cause: An attribute expression, such as SQL%NOTFOUND, was used in a SQL statement, but attribute expressions are allowed only in procedural statements.

Action: To workaround this limitation, assign the value of the attribute expression to a variable, then use the variable in the SQL statement. For example, replace the statement INSERT INTO audits VALUES (c1%ROWCOUNT, ...); with the following statements: row_count := c1%ROWCOUNT; INSERT INTO audits VALUES (row_count, ...);

PLS-00230: OUT and IN OUT formal parameters may not have default expressions

Cause: When the formal parameters of a procedure were declared, an OUT or IN OUT parameter was initialized to a default value, as in PROCEDURE calc_bonus (bonus OUT REAL := 0, ...) IS ... However, only IN parameters can be initialized to default values.

Action: Remove the illegal default expression.

PLS-00231: function '<varname>string</varname>' may not be used in SQL

Cause: A proscribed function was used in a SQL statement. Certain functions such as SQLCODE and SQLERRM can be used only in procedural statements.

Action: Remove the function call from the SQL statement. Or, replace the function call with a local variable. For example, the following statement is illegal: INSERT INTO errors VALUES (SQLCODE, SQLERRM); However, you can assign the values of SQLCODE and SQLERRM to local variables, then use the variables in the SQL statement, as follows: err_num := SQLCODE; err_msg := SQLERRM; INSERT INTO errors VALUES (err_num, err_msg);

PLS-00232: nested packages not permitted

Cause: A package was declared inside another package, but package declarations are allowed only at the top level. In other words, packages cannot be nested.

Action: Move the package declaration outside the enclosing package.

PLS-00233: function name used as an exception name in when clause

Cause: The WHEN clause in an exception handler contains a function call instead of an exception name. A valid exception handler consists of a WHEN clause, which must specify an exception, followed by a sequence of statements to be executed when that exception is raised.

Action: Check the spelling of the identifier in the WHEN clause, then replace the function call with an exception name.

PLS-00234: PARAMETER STYLE SQL may not be specified with a PARAMETERS list

Cause: A subprogram cannot specify both PARAMETER STYLE SQL and an explicit PARAMETERS list. Use PARAMETER STYLE GENERAL to supply default PARAMETERS list types.

Action: Change the subprogram specification.

PLS-00235: the external type is not appropriate for the parameter

Cause: An unsuccessful attempt was made to convert a parameter to the specified external parameter type.

Action: Specify a different external type or parameter type.

PLS-00236: Invalid external type specification for <varname>string</varname>.

Cause: The external type specified is not valid for one of the following: INDICATOR, LENGTH, MAXLEN, TDO, DURATION, CHARSETID, or CHARSETFORM.

Action: Check the manual and specify an appropriate external type.

PLS-00237: invalid BY VALUE indicator or length specification

Cause: BY VALUE was specified with an indicator or length parameter that is being passed in OUT or IN OUT mode. Only IN mode parameters may be passed by value.

Action: Remove the BY VALUE specification or change it to IN mode.

PLS-00238: external parameter name <varname>string</varname> not found in formal parameter list

Cause: An external parameter name was specified that does not match one in the formal parameter list.

Action: Correct the external parameter name.

PLS-00239: invalid external type specification for SQLCODE

Cause: An inappropriate external parameter type was specified for the SQLCODE parameter.

Action: Correct the SQLCODE parameter specification.

PLS-00240: Invalid type specification for RETURN indicator, length, tdo, duration

Cause: An inappropriate external parameter type was specified for the RETURN indicator, LENGTH, TDO, or DURATION.

Action: Correct the RETURN parameter specification.

PLS-00241: invalid external type specification for SQLSTATE

Cause: An inappropriate external parameter type was specified for the SQLSTATE parameter.

Action: Correct the SQLSTATE parameter specification.

PLS-00242: invalid external type specification for CONTEXT

Cause: An inappropriate external parameter type was specified for the CONTEXT parameter.

Action: Correct the CONTEXT parameter specification.

PLS-00243: invalid external type specification for SQLNAME

Cause: An inappropriate external parameter type was specified for the SQLNAME parameter.

Action: Correct the SQLNAME parameter specification.

PLS-00244: Multiple declarations in foreign function formal parameter list

Cause: There are multiple declarations of at least one the following FORMAL, INDICATOR, LENGTH, MAXLENGTH, or CONTEXT. PL/SQL allows only one declaration of the above for each formal parameter in the PARAMETERS clause.

Action: Correct the PARAMETERS clause.

PLS-00245: Formals used in the 'parameters' clause must appear exactly once

Cause: There are multiple declarations of the formal parameter in the PARAMETERS clause. PL/SQL allows only one declaration of the formal parameter in the PARAMETERS clause.

Action: Correct the PARAMETERS clause.

PLS-00246: PARAMETER STYLE is unsupported

Cause: A PARAMETER STYLE clause was placed in the external subprogram body.

Action: Remove the PARAMETER STYLE clause.

PLS-00247: LIBRARY or ASSEMBLY name must be specified

Cause: The LIBRARY or ASSEMBLY name is missing from the external subprogram body.

Action: The LIBRARY or ASSEMBLY name was not specified in the external subprogram body.

PLS-00248: Invalid Library Syntax

Cause: The LIBRARY syntax was entered incorrectly.

Action: Correct the LIBRARY syntax and recompile.

PLS-00249: Invalid WITH CONTEXT Syntax

Cause: CONTEXT was used in a WITH CONTEXT or a PARAMETERS clause. This is invalid.

Action: Check if WITH CONTEXT is used without specifying CONTEXT in the PARAMETERS clause or vice versa. The PARAMETERS clause must be complete. Thus if WITH CONTEXT is specified, then CONTEXT must be referenced in the PARAMETERS clause (if there is one).

PLS-00250: Incorrect Usage of <varname>string</varname> in parameters clause.

Cause: The usage of Keywords such as MAXLEN, LENGTH, CHARSETID, CHARSETFORM RETURN in the parameters clause was incorrect

Action: This error occurs if keywords like MAXLEN, LENGTH, TDO, DURATION, CHARSETID, or CHARSETFORM cannot be used with PL/SQL formal parameters or the mode of the formal parameter. For example, MAXLEN can only be declared for a CHAR or VARCHAR2 PL/SQL variable and its use is allowed only for OUT or INOUT PL/SQL variables. Also, RETURN was specified in the parameters clause for a PL/SQL PROCEDURE. E.g. CREATE PROCEDURE proc IS EXTERNAL NAME ... LIBRARY ... PARAMETERS(RETURN INDICATOR SHORT, RETURN);

PLS-00251: RETURN, for actual function return, must be last in the parameters clause

Cause: RETURN specification for the actual function return, used within the parameters clause must hold the very last position. Example : The following will give this error since the RETURN specification for the actual function return in the parameters clause is not the last. FUNCTION myexternalfunc (var1 BINARY_INTEGER, var2 BINARY_INTEGER) RETURN BINARY_INTEGER IS EXTERNAL NAME "myexternalfunc" LIBRARY somelib PARAMETERS (var1 LONG, var2 SHORT, RETURN INT, RETURN INDICATOR SHORT); The correct syntax is the following. Note that RETURN for actual function return is the last specification in the parameters clause. FUNCTION myexternalfunc (var1 BINARY_INTEGER, var2 BINARY_INTEGER) RETURN BINARY_INTEGER IS EXTERNAL NAME "myexternalfunc" LIBRARY somelib PARAMETERS (var1 LONG, var2 SHORT, RETURN INDICATOR SHORT, RETURN INT);

Action: Correct the syntax of the RETURN specification in the parameters clause

PLS-00252: reference to the wrong copy of package STANDARD

Cause: A reference is made to the fixed package version of STANDARD when the database is open, or to the on-disk version when the database is closed. Explicit use of a SYS.X\$ package name can lead to this. One might also see this from a compilation that begins while the db is closed but has the bad luck to have another session open the db before compilation is complete. Another possible cause is having 'set serveroutput on' through svrmgrl when doing an 'alter database close'.

Action: Make use of on-disk versions of packages when the database is open and fixed (preloaded) versions when the database is closed. Do not attempt to use the wrong set. It should be quite hard to reference the wrong set, except by using SYS.X\$ package names explicitly. Also, be sure to 'set serveroutput off' before doing an 'alter database close'.

PLS-00253: Formal parameter <varname>string</varname> missing in the parameters clause

Cause: The parameter clause does not have a matching parameter for a parameter specified in the formal parameter list.

Action: Provide a matching parameter in parameters clause for every formal parameter.

PLS-00254: OUT and IN/OUT modes cannot be used in this context

Cause: actual parameter mode (OUT, or IN/OUT) is not used properly in USING clause. For USING clause in an OPEN statement, only IN mode is allowed.

Action: change the parameter mode in the USING clause to an appropriate mode.

PLS-00255: CALL Specification parameters cannot have default values

Cause: CALL Specification formal parameters default values are disallowed.

Action: Remove the default values in the formal parameter list (spec or body) and compile again.

PLS-00256: <varname>string</varname> is not a valid external library or assembly

Cause: The supplied external library or assembly name in the external clause is not a valid alias library or assembly.

Action: Provide the name of a valid alias library or assembly which is previously declared.

PLS-00257: illegal use of EXTERNAL clause in a TYPE or PACKAGE specification

Cause: An EXTERNAL Clause was detected in a TYPE Specification or a PACKAGE specification.

Action: Remove the EXTERNAL Clause and use the new CALL Specification syntax.

PLS-00258: constrained datatypes disallowed in CALL Specifications

Cause: A call specification for C or Java cannot have constraints on the PL/SQL formal parameter types. PL/SQL types which have constraints are NATURAL, NATURALN, POSITIVE, POSITIVEN, SIGNTYPE, INTEGER, INT, SMALLINT, DECIMAL, NUMERIC, DEC This includes NOT NULL constraints from POSITIVEN, NATURALN

Action: Use the unconstrained type for that PL/SQL formal declaration i.e NUMBER, BINARY_INTEGER or PLS_INTEGER

PLS-00259: rights model (AUTHID) must be specified

Cause: It is mandatory to specify the rights model if a PL/SQL PROCEDURE, FUNCTION, PACKAGE OR TYPE HAS CALL-Specifications

Action: Add the AUTHID clause indicating the rights model.

PLS-00260: Datetime/Interval constraints must be in range (0 .. 9)

Cause: A Datetime/Interval variable or attribute was declared with a constraint outside the legal range.

Action: Change the illegal constraint.

PLS-00261: Java CALL Specification not yet allowed as a method in an object type

Cause: A call specification declaring that an implementation is in Java has been found for a method of an object or opaque type. This usage is not yet supported.

Action: Implement the method using a language other than Java. A PL/SQL method implementation is permitted to call to Java through a call specification provided as a schema-level procedure or in a package; such a call specification can only target a static Java method, however. ***** errors until 300 are reserved for External Procedures ***** PH2 errors *****

PLS-00301: Invalid GOTO to non-label '<varname>string</varname>'

Cause: A GOTO was attempted to something which is not a label (for example, a variable).

Action: Specify a valid label name.

PLS-00302: component '<varname>string</varname>' must be declared

Cause: In a reference to a component (for example, in the name "A.B", "B" is a component of "A"), the component has not been declared. The component might be misspelled, its declaration might be faulty, or the declaration might be placed incorrectly in the block structure.

Action: Check the spelling and declaration of the component. Also confirm that the declaration is placed correctly in the block structure.

PLS-00303: qualifier '<varname>string</varname>' must be declared

Cause: In a name such as "A.B", "A" is the qualifier, and "B" is a component of the qualifier. This error occurs when no declaration for the qualifier is found. The qualifier might be misspelled, its declaration might be faulty, or the declaration might be placed incorrectly in the block structure.

Action: Check the spelling and declaration of the qualifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00304: cannot compile body of '<varname>string</varname>' without its specification

Cause: The compiled package specification required to compile a package body could not be found. Some possible causes follow: --the package name is misspelled --the package specification was never compiled --the compiled package specification is not accessible The package specification must be compiled before compiling the package body, and the compiler must have access to the compiled specification.

Action: Check the spelling of the package name. Compile the package specification before compiling the package body. Also, make sure the compiler has access to the compiled specification.

PLS-00305: previous use of '<varname>string</varname>' (at line <varname>string</varname>) conflicts with this use

Cause: While looking for prior declarations of a cursor, procedure, function, or package, the compiler found another object with the same name in the same scope. Or, the headers of subprogram in a package specification and body do not match word for word.

Action: Check the spelling of the cursor, procedure, function, or package name. Also check the names of all constants, variables, parameters, and exceptions declared in the same scope. Then, remove or rename the object with the duplicate name. Or, change the headers of the packaged subprogram so that they match word for word.

PLS-00306: wrong number or types of arguments in call to '<varname>string</varname>'

Cause: This error occurs when the named subprogram call cannot be matched to any declaration for that subprogram name. The subprogram name might be misspelled, a parameter might have the wrong datatype, the declaration might be faulty, or the declaration might be placed incorrectly in the block structure. For example, this error occurs if the built-in square root function SQRT is called with a misspelled name or with a parameter of the wrong datatype.

Action: Check the spelling and declaration of the subprogram name. Also confirm that its call is correct, its parameters are of the right datatype, and, if it is not a built-in function, that its declaration is placed correctly in the block structure.

PLS-00307: too many declarations of '<varname>string</varname>' match this call

Cause: The declaration of a subprogram or cursor name is ambiguous because there was no exact match between the declaration and the call and more than one declaration matched the call when implicit conversions of the parameter datatypes were used. The subprogram or cursor name might be misspelled, its declaration might be faulty, or the declaration might be placed incorrectly in the block structure.

Action: Check the spelling and declaration of the subprogram or cursor name. Also confirm that its call is correct, its parameters are of the right datatype, and, if it is not a built-in function, that its declaration is placed correctly in the block structure.

PLS-00308: this construct is not allowed as the origin of an assignment

Cause: The construct or expression does not designate a value that can be assigned to a variable. For example, the datatype name NUMBER cannot appear on the right hand side of an assignment statement as in X := NUMBER.

Action: Correct the illegal assignment statement.

PLS-00309: with %%LAST attribute, '<varname>string</varname>' must be a variable of an enumerated type

Cause: The "%%LAST" attribute must be applied to an identifier that has been declared as a variable of an enumerated type (or subtype of an enumerated type). This error occurs when "%%LAST" follows some identifier that has not been so declared.

Action: n/a

PLS-00310: with %%ROWTYPE attribute, '<varname>string</varname>' must name a table, cursor or cursor-variable

Cause: The %%ROWTYPE attribute must be applied to an identifier declared as a cursor, cursor variable, or database table. This error occurs when %%ROWTYPE follows some identifier that has not been so declared.

Action: Change the declaration or do not apply the %%ROWTYPE attribute to the identifier.

PLS-00311: the declaration of "<varname>string</varname>" is incomplete or malformed

Cause: This occurrence of the identifier cannot be compiled because its type has not been properly defined.

Action: Correct the faulty datatype declaration.

PLS-00312: a positional parameter association may not follow a named association

Cause: When a list of parameters is passed to a subprogram or cursor, if both positional and named associations are used, all positional associations must be placed in their declared order and before all named associations, which can be in any order.

Action: Reorder the parameter list to meet the requirements or use named association only.

PLS-00313: '<varname>string</varname>' not declared in this scope

Cause: There is no declaration for the given identifier within the scope of reference. The identifier might be misspelled, its declaration might be faulty, or the declaration might be placed incorrectly in the block structure.

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00314: TABLE declarations are not allowed as PL/SQL local variables

Cause: In a precompiled program, the DECLARE TABLE statement was mistakenly used inside an embedded PL/SQL block. If an embedded PL/SQL block refers to a database table that does not yet exist, use the DECLARE TABLE statement to tell the precompiler what the table will look like. However, DECLARE TABLE statements are allowed only in the host program.

Action: Move the DECLARE TABLE statement outside the embedded PL/SQL block. If you want a variable that can store an entire row of data selected from a database table or fetched from a cursor or cursor variable, use the %%ROWTYPE attribute.

PLS-00315: Implementation restriction: unsupported table index type

Cause: In the INDEX BY clause of a PL/SQL table declaration, a datatype other than BINARY_INTEGER, PLS_INTEGER, or VARCHAR2 was specified. PL/SQL tables can have one column and a primary key. The column can have any scalar type, but the primary key must be either a binary integer type or VARCHAR2.

Action: Use one of the supported key types in the INDEX BY clause.

PLS-00316: PL/SQL TABLEs must use a single index

Cause: In the INDEX BY clause of a PL/SQL table declaration, a composite primary key was specified. PL/SQL tables must have a simple, unnamed primary key of a binary integer or VARCHAR2 type.

Action: Use one of the supported key types in the INDEX BY clause.

PLS-00317: incomplete type "<varname>string</varname>" was not completed in its declarative region

Cause: An incomplete type declaration was not completed in the declarative region where it was declared.

Action: Complete the type appropriately, then retry the operation.

PLS-00318: type "<varname>string</varname>" is malformed because it is a non-REF mutually recursive type

Cause: A type-declaration such as: -- a non-REF recursive type, for example: type t is record (a t); or -- non-REF mutually dependent types, for example: type t1; type t2 is record (a t1); type t1 is record (a t2); was performed. In these examples, the type is malformed because it participates in a mutually recursive non-REF relationship with itself and possibly other types.

Action: Use another type to remove the recursion.

PLS-00319: subquery in an IN or NOT IN clause must contain exactly one column

Cause: An invalid expression such as X IN (SELECT A,B ...) was used. When a [NOT]IN clause is used with a subquery, it does not test for set membership. The number of expressions in the [NOT]IN clause and the subquery select list must match. So, in the example above, the subquery must specify at most one column.

Action: Change the subquery to select only one column.

PLS-00320: the declaration of the type of this expression is incomplete or malformed

Cause: In a declaration, the name of a variable or cursor is misspelled or the declaration makes a forward reference. Forward references are not allowed in PL/SQL. A variable or cursor must be declared before it is referenced in other statements, including other declarative statements. For example, the following declaration of dept_rec raises this exception because it refers to a cursor not yet declared: DECLARE dept_rec dept_cur%ROWTYPE; CURSOR dept_cur IS SELECT

Action: Check the spelling of all identifiers in the declaration. If necessary, move the declaration so that it makes no forward references.

PLS-00321: expression '<varname>string</varname>' is inappropriate as the left hand side of an assignment statement

Cause: The expression does not designate a variable that can have a value assigned to it. For example, the function SYSDATE cannot appear on the left hand side of an assignment statement such as SYSDATE := '01-JAN-1990';

Action: Correct the illegal assignment statement.

PLS-00322: declaration of a constant '<varname>string</varname>' must contain an initialization assignment

Cause: A constant declaration lacks the assignment of an initial value. For example, in the following declaration " := 3.14159" is the initialization clause: "pi constant number := 3.14159;"

Action: Correct the constant declaration by supplying the missing initialization assignment.

PLS-00323: subprogram or cursor '<varname>string</varname>' is declared in a package specification and must be defined in the package body

Cause: A subprogram specification was placed in a package specification, but the corresponding subprogram body was not placed in the package body. The package body implements the package specification. So, the package body must contain the definition of every subprogram declared in the package specification.

Action: Check the spelling of the subprogram name. If necessary, add the missing subprogram body to the package body.

PLS-00324: cursor attribute may not be applied to non-cursor '<varname>string</varname>'

Cause: This error occurs when a cursor-attribute ("%FOUND", "%NOTFOUND", "%ROWS", "%IS_OPEN", etc.) appears following an identifier that is not declared as a cursor or cursor variable. It occurs, for example, if the variable name my_cur in my_cur%FOUND was not properly declared as a cursor or if the variable declaration was placed incorrectly in the block structure.

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00325: non-integral numeric literal <varname>string</varname> is inappropriate in this context

Cause: A non-integral numeric literal was used in a context that requires an integer (a number with no digits to the right of its decimal point).

Action: Replace the inappropriate literal with an integer literal.

PLS-00326: IN clause must contain same number of expressions as subquery

Cause: The number of expressions in an IN clause did not equal the number of expressions in a corresponding subquery select list. For example, the following statement is invalid because the IN clause contains two expressions, but the subquery select list contains just one: ... WHERE (ename, sal) IN (SELECT sal FROM emp);

Action: Check the number of expressions in each set, then revise the statement to make the numbers equal.

PLS-00327: "<varname>string</varname>" is not in SQL scope here

Cause: In a SQL statement, a reference was made to an out-of-scope database object. The referenced object might be misspelled, or the reference might be mixed, as in the following example: CURSOR c1 IS SELECT dept.dname FROM emp;

Action: Check the spelling of all database objects in the SQL statement, and make sure all references are to objects within the current scope.

PLS-00328: A subprogram body must be defined for the forward declaration of <varname>string</varname>.

Cause: A subprogram specification was declared, but the corresponding subprogram body was not defined. Write the subprogram specification and body as a unit. An alternative solution is to separate the specification from its body, which is necessary when you want to define mutually recursive subprograms or you want to group subprograms in a package.

Action: Check the spelling of the subprogram name. If necessary, supply the missing subprogram body.

PLS-00329: schema-level type has illegal reference to <varname>string</varname>

Cause: An attempt was made to make a reference from a schema-level type to something other than a schema-level type.

Action: Replace the illegal reference and retry the operation.

PLS-00330: invalid use of type name or subtype name

Cause: A datatype or subtype specifier was mistakenly used in place of a constant, variable, or expression. For example, the code might look like IF emp_count > number THEN ... -- illegal; NUMBER is a datatype specifier

Action: Replace the datatype or subtype specifier with a valid constant, variable, or expression.

PLS-00331: illegal reference to <varname>string</varname>

Cause: You had an EITHER 1. an illegal reference to some object in user SYS. to use one of them in an illegal way OR 2. an illegal reference to a remote object type.

Action: Remove the reference.

PLS-00332: "<varname>string</varname>" is not a valid prefix for a qualified name

Cause: You have a malformed qualified name because the prefix is not valid.

Action: Remove or change the reference.

PLS-00333: "<varname>string</varname>" must match an object-table alias in this context

Cause: The name, appearing in the context of a REF or VALUE, did not resolve to an object-table alias.

Action: 1) If there is no object table in the scope, then remove the REF or VALUE; or provide the missing object table reference. 2) If there is an object table in the scope, but you're not referring to it, add the reference.

PLS-00334: "<varname>string</varname>" matches table or view without an alias

Cause: You have a reference to a table or view name without an alias.

Action: Replace the reference with a reference to an object-table alias.

PLS-00335: a package name conflicts with an existing object

Cause: In a CREATE PACKAGE statement, a package (which is a database object that groups logically related PL/SQL types, objects, and subprograms) was given the same name as an existing database object.

Action: Give the package a unique name.

PLS-00336: non-object-table "<varname>string</varname>" illegal in this context

Cause: You have a REF or VALUE modifier for a non-object-table

Action: Replace the reference with a reference to an object-table alias.

PLS-00337: "<varname>string</varname>" matches too many object table aliases

Cause: You have an ambiguous reference to an object-table alias; there are at least two object-table aliases in the same scope.

Action: Remove all but one of the references or change the alias names of the remaining.

PLS-00338: unable to resolve "<varname>string</varname>" as a column or row expression

Cause: You have a reference to a name that could not be resolved as a column or row expression. This occurred in an update or insert statement involving an object-table.

Action: If this is an update statement and you intended to code this as a column reference, fix it as such. If you intended to code this as a row expression, change this to refer to an alias of an object-table.

PLS-00339: "<varname>string</varname>" matches object-table without a REF or VALUE modifier

Cause: You have an object-table name appearing without a REF or VALUE modifier.

Action: If you intended to code this with a REF or VALUE modifier, add the modifier; if you intended to code this as a column reference, change the reference appropriately; otherwise, remove the reference.

PLS-00341: declaration of cursor '<varname>string</varname>' is incomplete or malformed

Cause: A cursor declaration is improper or an identifier referenced in the cursor declaration was not properly declared. A return type that does not refer to an existing database table or a previously declared cursor or cursor variable might have been specified. For example, the following cursor declaration is illegal because c1 is not yet fully defined: `CURSOR c1 RETURN c1%ROWTYPE IS SELECT ... -- illegal` In this case, a return type does not have to be specified because it is implicit.

Action: Check the spelling and declaration of the cursor name and any identifiers referenced in the cursor declaration. Also confirm that the declaration is placed correctly in the block structure. If a return type was specified, make sure that it refers to an existing database table or a previously declared cursor or cursor variable.

PLS-00351: Not logged onto database '<varname>string</varname>'

Cause: An attempt was made to access an Oracle database without being logged on. Probably, an invalid username or password was entered.

Action: Log on to Oracle with a correctly spelled username and password before trying to access the database.

PLS-00352: Unable to access another database '<varname>string</varname>'

Cause: An attempt was made to reference an object in a database other than the current local or remote Oracle database.

Action: Correct the reference and make sure the object is in the current Oracle database.

PLS-00353: '<varname>string</varname>' must name a user in the database

Cause: This error occurs when the username was misspelled or when the user does not exist in the database.

Action: Check the spelling of the username and make sure the user exists.

PLS-00354: username must be a simple identifier

Cause: A qualified username such as scott.accts is not permitted in this context.

Action: Specify a simple username such as scott instead.

PLS-00355: use of pl/sql table not allowed in this context

Cause: A PL/SQL table was referenced in the wrong context (for example, with a remote link).

Action: Remove the PL/SQL table reference or change the context.

PLS-00356: '<varname>string</varname>' must name a table to which the user has access

Cause: The named table is not accessible to the user. This error occurs when the table name or username was misspelled, the table and/or user does not exist in the database, the user was not granted the necessary privileges, or the table name duplicates the name of a local variable or loop counter.

Action: Check the spelling of the table name and username. Also confirm that the table and user exist, the user has the necessary privileges, and the table name does not duplicate the name of a local variable or loop counter.

PLS-00357: Table, View Or Sequence reference '<varname>string</varname>' not allowed in this context

Cause: A reference to database table, view, or sequence was found in an inappropriate context. Such references can appear only in SQL statements or (excluding sequences) in %TYPE and %ROWTYPE declarations. Some valid examples follow: SELECT ename, emp.deptno, dname INTO my_ename, my_deptno, my_dept .FROM emp, dept WHERE emp.deptno = dept.deptno; DECLARE last_name emp.ename%TYPE; dept_rec dept%ROWTYPE;

Action: Remove or relocate the illegal reference.

PLS-00358: column '<varname>string</varname>' exists in more than one table; use qualifier

Cause: The statement is ambiguous because it specifies two or more tables having the same column name. For example, the following statement is ambiguous because deptno is a column in both tables: SELECT deptno, loc INTO my_deptno, my_loc FROM emp, dept;

Action: Precede the column name with the table name (as in emp.deptno) so that the column reference is unambiguous.

PLS-00359: assignment target in '<varname>string</varname>' must have components

Cause: An assignment target was declared that lacks the components needed to store the assigned values. For example, this error occurs if you try to assign a row of column values to a variable instead of a record, as follows: `DECLARE dept_rec dept %ROWTYPE; my_deptno dept.deptno%TYPE; ... BEGIN SELECT deptno, dname, loc INTO my_deptno -- invalid FROM dept WHERE ...`

Action: Check the spelling of the names of the assignment target and all its components. Make sure the assignment target is declared with the required components and that the declaration is placed correctly in the block structure.

PLS-00360: cursor declaration without body needs return type

Cause: A cursor declaration lacks either a body (SELECT statement) or a return type. If you want to separate a cursor specification from its body, a return type must be supplied, as in `CURSOR c1 RETURN emp%ROWTYPE;`

Action: Add a SELECT statement or return type to the cursor declaration.

PLS-00361: IN cursor '<varname>string</varname>' cannot be OPEN'ed

Cause: A cursor parameter with mode IN cannot be modified, and therefore cannot be opened.

Action: Change the cursor parameter to be IN OUT or OUT

PLS-00362: invalid cursor return type; '<varname>string</varname>' must be a record type

Cause: In a cursor specification or REF CURSOR type definition, a non- record type such as NUMBER or TABLE was specified as the return type. This is not allowed. Only the following return types are allowed: `<record_type_name> <record_name> %TYPE` `<table_name>%ROWTYPE` `<cursor_name>%ROWTYPE` `<cursor_variable_name>%ROWTYPE`

Action: Revise the cursor specification or REF CURSOR type definition so that it specifies one of the above return types.

PLS-00363: expression '<varname>string</varname>' cannot be used as an assignment target

Cause: A literal, constant, IN parameter, loop counter, or function call was mistakenly used as the target of an assignment. For example, the following statement is illegal because the assignment target, 30, is a literal: `SELECT deptno INTO 30 FROM dept WHERE ... -- illegal`

Action: Correct the statement by using a valid assignment target.

PLS-00364: loop index variable '<varname>string</varname>' use is invalid

Cause: An attempt was made to assign the value of an OUT parameter to

Action: Use an IN OUT parameter instead of the OUT parameter. Inside a

PLS-00366: subtype of a NOT NULL type must also be NOT NULL

Cause: After a subtype was defined as NOT NULL, it was used as the base type for another subtype defined as NULL. That is not allowed. For example, the code might look like `DECLARE SUBTYPE Weekday IS INTEGER NOT NULL; SUBTYPE Weekend IS Weekday NULL; -- illegal` instead of `DECLARE SUBTYPE Weekday IS INTEGER NOT NULL; SUBTYPE Weekend IS Weekday;`

Action: Revise the subtype definitions to eliminate the conflict.

PLS-00367: a RAISE statement with no exception name must be inside an exception handler

Cause: A RAISE statement not followed by an exception name was found outside an exception handler

Action: Delete the RAISE statement, relocate it to an exception handler, or supply the missing exception name.

PLS-00368: in RAISE statement, '<varname>string</varname>' must be an exception name

Cause: The identifier in a RAISE statement is not a valid exception name.

Action: Make sure the identifier in the RAISE statement was declared as an exception and is correctly placed in the block structure. If you are using the name of a PL/SQL predefined exception, check its spelling.

PLS-00369: no choices may appear with choice OTHERS in an exception handler

Cause: A construct of the form WHEN excep1 OR OTHERS => was encountered in the definition of an exception handler. The OTHERS handler must appear by itself as the last exception handler in a block.

Action: Remove the identifier that appears with OTHERS or write a separate exception handler for that identifier.

PLS-00370: OTHERS handler must be last among the exception handlers of a block

Cause: One or more exception handlers appear after an OTHERS handler. However, the OTHERS handler must be the last handler in a block or subprogram because it acts as the handler for all exceptions not named specifically.

Action: Move the OTHERS handler so that it follows all specific exception handlers.

PLS-00371: at most one declaration for '<varname>string</varname>' is permitted

Cause: A reference to an identifier was ambiguous because there were multiple declarations for the identifier. At most one local variable with a given identifier is permitted in the declarative part of a block, procedure, or function. At most one label with a given identifier may appear in a block.

Action: Check the spelling of the identifier. If necessary, remove all but one declaration of the identifier.

PLS-00372: In a procedure, RETURN statement cannot contain an expression

Cause: In a procedure, a RETURN statement contains an expression, which is not allowed. In functions, a RETURN statement must contain an expression because its value is assigned to the function identifier. However, in procedures, a RETURN statement simply lets you exit before the normal end of the procedure is reached.

Action: Remove the expression from the RETURN statement, or redefine the procedure as a function.

PLS-00373: EXIT/CONTINUE label '<varname>string</varname>' must label a LOOP statement

Cause: The label in the EXIT or CONTINUE statement did not refer to a LOOP statement. An EXIT or CONTINUE statement need not specify a label. However, if a label is specified (as in EXIT my_label or CONTINUE my_label), it must refer to a LOOP statement.

Action: Make sure the label name is spelled correctly and that it refers to a LOOP statement.

PLS-00374: illegal EXIT/CONTINUE statement; must appear inside the loop labeled '<varname>string</varname>'

Cause: The label in the EXIT or CONTINUE statement did not refer to a loop statement. An EXIT or CONTINUE statement need not specify a label. However, if a label is specified (as in EXIT my_label or CONTINUE my_label), the EXIT or CONTINUE statement must be inside the LOOP statement designated by that label.

Action: Make sure the label name is spelled correctly; if necessary, move the EXIT or CONTINUE statement inside the LOOP statement to which the label refers.

PLS-00375: illegal GOTO statement; this GOTO cannot branch to label '<varname>string</varname>'

Cause: The line and column numbers accompanying the error message refer to a GOTO that branches from outside a construct (a loop or exception handler, for example) that contains a sequence of statements to a label inside that sequence of statements. Such a branch is not allowed.

Action: Either move the GOTO statement inside the sequence of statements or move the labeled statement outside the sequence of statements.

PLS-00376: illegal EXIT/CONTINUE statement; it must appear inside a loop

Cause: An EXIT or CONTINUE statement was found outside of a loop construct. The EXIT statement is used to exit prematurely from a loop and the CONTINUE statement is used to begin the next iteration of a loop; each must always appear within a loop.

Action: Either remove the EXIT or CONTINUE statement or place it inside a loop.

PLS-00377: internal type PLS_INTEGER is not included in this release of PL/SQL

Cause: The type-name INTEGER was used in a declaration.

Action: n/a

PLS-00378: invalid compilation unit for this release of PL/SQL

Cause: A compilation unit is a file containing PL/SQL source code that is passed to the compiler. Only compilation units containing blocks, declarations, statements, and subprograms are allowed. This error occurs when some other language construct is passed to the compiler.

Action: Make sure the compilation unit contains only blocks, declarations, statements, and subprograms.

PLS-00379: CASE statements are not included in this release of PL/SQL

Cause: The unit being compiled contains a CASE statement. However, the current release of PL/SQL does not support CASE statements.

Action: Remove the CASE statement from the compilation unit.

PLS-00380: functions and procedures are not included in this release of PL/SQL

Cause: The program being compiled contains a declaration of a FUNCTION or PROCEDURE.

Action: n/a

PLS-00381: type mismatch found at '<varname>string</varname>' between column and variable in subquery or INSERT

Cause: The datatypes of a column and a variable do not match. The variable was encountered in a subquery or INSERT statement.

Action: Change the variable datatype to match that of the column.

PLS-00382: expression is of wrong type

Cause: An expression has the wrong datatype for the context in which it was found.

Action: Change the datatype of the expression. You might want to use datatype conversion functions.

PLS-00383: type mismatch found at '<varname>string</varname>' inside an IN or NOT IN clause

Cause: In a test for set membership such as X NOT IN (SELECT Y ...), the expressions X and Y do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the expressions so that their datatypes match. You might want to use datatype conversion functions in the select list.

PLS-00384: type mismatch found at '<varname>string</varname>' in UPDATE's SET clause

Cause: The column to the left of the equal sign in the SET clause of an UPDATE statement does not match in datatype with the column, expression, or subquery to the right of the equal sign, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the expressions so that their datatypes match. You might want to use datatype conversion functions in the SET clause.

PLS-00385: type mismatch found at '<varname>string</varname>' in SELECT...INTO statement

Cause: The expressions to the left and right of the INTO clause in a SELECT...INTO statement do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the expressions so that their datatypes match. You might want to use datatype conversion functions in the select list.

PLS-00386: type mismatch found at '<varname>string</varname>' between FETCH cursor and INTO variables

Cause: An assignment target in the INTO list of a FETCH statement does not match in datatype with the corresponding column in the select list of the cursor declaration, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the cursor declaration or change the datatype of the assignment target. You might want to use datatype conversion functions in the select list of the query associated with the cursor.

PLS-00387: INTO variable cannot be a database object

Cause: An item in the INTO list of a FETCH or SELECT statement was found to be a database object. INTO introduces a list of user-defined variables to which output values are assigned. Therefore, database objects cannot appear in the INTO list.

Action: Check the spelling of the INTO list item. If necessary, remove the item from the INTO list or replace it with a user-defined output variable.

PLS-00388: undefined column '<varname>string</varname>' in subquery

Cause: A subquery contains a column name that was not defined in the specified table.

Action: Change the expression to specify a column that was defined.

PLS-00389: table, view or alias name "<varname>string</varname>" not allowed in this context

Cause: A table, view or alias name <varname>name</varname> corresponding to a regular (non-object) table appeared in an inappropriate context.

Action: Remove the reference, or, if you intended to code this as a column reference, fix it as such.

PLS-00390: undefined column '<varname>string</varname>' in INSERT statement

Cause: Check the spelling of the column name, then change the expression so that it refers only to defined columns.

Action: Check the spelling of the column name, then change the expression so that it refers only to defined columns.

PLS-00391: undefined column '<varname>string</varname>' in UPDATE statement

Cause: An UPDATE statement refers to a column not defined for the table or view being updated.

Action: Check the spelling of the column name, then revise the statement so that it refers only to defined columns.

PLS-00392: Type mismatch in arguments to BETWEEN

Cause: In a comparison such as X BETWEEN Y AND Z, the expressions X, Y, and Z do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the expressions so that their datatypes match. You might want to use datatype conversion functions.

PLS-00393: wrong number of columns in SELECT...INTO statement

Cause: The number of columns selected by a SELECT...INTO statement does not match the number of variables in the INTO clause.

Action: Change the number of columns in the select list or the number of variables in the INTO clause so that the numbers match.

PLS-00394: wrong number of values in the INTO list of a FETCH statement

Cause: The number of variables in the INTO clause of a FETCH statement does not match the number of columns in the cursor declaration.

Action: Change the number of variables in the INTO clause or the number of columns in the cursor declaration so that the numbers match.

PLS-00395: wrong number of values in VALUES clause of INSERT statement

Cause: The number of columns in an INSERT statement does not match the number of values in the VALUES clause. For example, the following statement is faulty because no column is specified for the value 20: `INSERT INTO emp (empno, ename) VALUES (7788, 'SCOTT', 20);`

Action: Change the number of items in the column list or the number of items in the VALUES list so that the numbers match.

PLS-00396: INSERT statement's subquery yields wrong number of columns

Cause: The number of columns in an INSERT statement does not match the number of columns in a subquery select list. For example, the following statement is faulty because no corresponding column is specified for col3: `INSERT INTO emp (ename, empno) SELECT col1, col2, col3 FROM ...`

Action: Change the column list of the INSERT or subquery so they are the same length. ACTION: Change the number of items in the column list of the INSERT statement or the number of items in the select list so that the numbers match.

PLS-00397: Type mismatch in arguments to IN

Cause: In a test for set membership such as `X IN (Y, Z)`, the expressions X, Y, and Z do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the expressions so that their datatypes match. You might want to use datatype conversion functions.

PLS-00398: wrong number of columns in UNION, INTERSECT, or MINUS expression

Cause: The SELECT clauses to the left and right of a UNION, INTERSECT, or MINUS expression do not select the same number of columns. For example, the following statement is faulty because the select lists do not contain the same number of items: `CURSOR my_cur IS SELECT ename FROM emp INTERSECT SELECT ename, empno FROM emp;`

Action: Change the select lists so that they contain the same number of items.

PLS-00399: different types of columns in UNION, INTERSECT, or MINUS expression

Cause: The select lists to the left and right of a UNION, INTERSECT, or MINUS expression select at least one column that is mismatched in datatype. For example, the following statement is faulty because the constant 3 has datatype NUMBER, whereas SYSDATE has datatype DATE: `CURSOR my_cur IS SELECT 3 FROM emp INTERSECT SELECT SYSDATE FROM emp;`

Action: Change the select lists so that they match in datatype. You might want to use datatype conversion functions in the select list of one or more queries.

PLS-00400: different number of columns between cursor SELECT statement and return value

Cause: In a cursor declaration, a return type (such as RETURN emp%ROWTYPE) was specified, but the number of returned column values does not match the number of select-list items.

Action: Change the cursor return type or the select list so that the number of returned column values matches the number of select-list items.

PLS-00401: different column types between cursor SELECT statement and return value found at '<varname>string</varname>'

Cause: In a cursor declaration, a return type (such as RETURN emp%ROWTYPE) was specified, but a returned column value and its corresponding select-list item have different datatypes.

Action: Change the cursor return type or the select list so that each returned column value and its corresponding select-list item have the same datatype.

PLS-00402: alias required in SELECT list of cursor to avoid duplicate column names

Cause: A cursor was declared with a SELECT statement that contains duplicate column names. Such references are ambiguous.

Action: Replace the duplicate column name in the select list with an alias.

PLS-00403: expression '<varname>string</varname>' cannot be used as an INTO-target of a SELECT/FETCH statement

Cause: A FETCH statement was unable to assign a value to an assignment target in its INTO list because the target is not a legally formed and declared variable. For example, the following assignment is illegal because 'Jones' is a character string, not a variable: FETCH my_cur INTO 'Jones';

Action: Check the spelling and declaration of the assignment target. Make sure that the rules for forming variable names are followed.

PLS-00404: cursor '<varname>string</varname>' must be declared with FOR UPDATE to use with CURRENT OF

Cause: The use of the CURRENT OF cursor_name clause is legal only if cursor_name was declared with a FOR UPDATE clause.

Action: Add a FOR UPDATE clause to the definition of the cursor or do not use the CURRENT OF cursor_name clause.

PLS-00405: subquery not allowed in this context

Cause: A subquery was used in an inappropriate context, such as: if (SELECT deptno FROM emp WHERE ...) = 20 then ... Subqueries are allowed only in SQL statements.

Action: The same result can be obtained by using a temporary variable, as in: SELECT deptno INTO temp_var FROM emp WHERE ...; IF temp_var = 20 THEN ...

PLS-00406: length of SELECT list in subquery must match number of assignment targets

Cause: A query select list is not the same length as the list of targets that will receive the returned values. For example, the following statement is faulty because the subquery returns two values for one target: UPDATE emp SET ename = (SELECT ename, empno FROM emp WHERE ename = 'SMITH') ...

Action: Change one of the lists so that they contain the same number of items.

PLS-00407: '*' not allowed here; a list of columns is required

Cause: An asterisk (*) was used as an abbreviation for a list of column names. However, in this context the column names must be written out explicitly.

Action: Replace the asterisk with a list of column names.

PLS-00408: duplicate column '<varname>string</varname>' not permitted in INSERT or UPDATE

Cause: An UPDATE or INSERT statement has a column list that contains duplicate column names.

Action: Check the spelling of the column names, then eliminate the duplication.

PLS-00409: duplicate variable '<varname>string</varname>' in INTO list is not permitted

Cause: The same variable appears twice in the INTO list of a SELECT or FETCH statement.

Action: Remove one of the variables from the INTO list.

PLS-00410: duplicate fields in RECORD, TABLE or argument list are not permitted

Cause: When a user-defined record was declared, the same name was given to two fields. Like column names in a database table, field names in a user-defined record must be unique.

Action: Check the spelling of the field names, then remove the duplicate.

PLS-00411: Number of values in aggregate and in subquery don't match

Cause: In a statement of the form aggregate = subquery, the numbers of values in the aggregate and subquery are unequal. For example, the code might look like ... WHERE (10,20,30) = (SELECT empno,deptno FROM emp WHERE...);

Action: Revise the aggregate or subquery so that the numbers of values match.

PLS-00412: list of values not allowed as argument to this function or procedure

Cause: A parenthesized list of values separated by commas (that is, an aggregate) was used in the wrong context. For example, the following usage is invalid: WHERE (col1, col2) > (SELECT col3, col4 FROM my_table ...) However, an equal sign can take a list of values and a subquery as left- and right-hand-side arguments, respectively. So, the following usage is valid: WHERE (col1, col2) = (SELECT col3, col4 FROM my_table ...)

Action: Rewrite the expression. For example, the clause WHERE (col1, col2) > (SELECT col3, col4 FROM my_table ...) can be rewritten as WHERE col1 > (SELECT col3 FROM my_table ...) AND col2 > (SELECT col4 FROM my_table ...)

PLS-00413: identifier in CURRENT OF clause is not a cursor name

Cause: The identifier in a CURRENT OF clause names an object other than a cursor.

Action: Check the spelling of the identifier. Make sure that it names the cursor in the DELETE or UPDATE statement and that it names the cursor itself, not a FOR-loop variable.

PLS-00414: no column '<varname>string</varname>' in table

Cause: A table name or alias was used to qualify a column reference, but the column was not found in that table. Either the column was never defined or the column name is misspelled.

Action: Confirm that the column was defined and check the spelling of the column name.

PLS-00415: '<varname>string</varname>' is an OUT parameter and cannot appear in a function

Cause: An OUT or IN OUT formal parameter was used in a function specification.

Action: n/a

PLS-00416: The third argument of DECODE cannot be NULL

Cause: The third argument of DECODE is NULL.

Action: Enter an argument with a proper type and value.

PLS-00417: unable to resolve "<varname>string</varname>" as a column

Cause: A database table, view, or column was specified in a SQL statement that does not exist, or the privileges required to access the table or view were not granted.

Action: Check the spelling of the table (or view) and column names; make sure the table and columns exist. If necessary, ask the DBA to grant the privileges required to access the table.

PLS-00418: array bind type must match PL/SQL table row type

Cause: A host array was passed (by an Oracle Precompiler program, for example) to a PL/SQL subprogram for binding to a PL/SQL table parameter. However, the datatypes of the array elements and PL/SQL table rows are incompatible. So, the binding failed.

Action: Change the datatype of the array elements or PL/SQL table rows to make the datatypes compatible.

PLS-00419: reference to remote attribute not permitted

Cause: An attempt was made to reference a remote cursor attribute, which is not allowed. For example, the code might look like IF SQL%NOTFOUND@newyork THEN ...

Action: Do not try to reference a remote cursor attribute.

PLS-00420: can't call builtin routines remotely

Cause: An attempt was made to call a built-in PL/SQL function remotely, which is not allowed. For example, the code might look like my_sqlerrm := SQLERRM@newyork; or INSERT INTO emp VALUES (my_empno, STANDARD.RTRIM@newyork(my_ename), ...);

Action: Always call built-in functions locally; never specify a database link.

PLS-00421: circular synonym '<varname>string</varname>'

Cause: Directly or indirectly, a synonym was defined in terms of itself, creating a circular definition.

Action: Redefine the synonyms to eliminate the circular definition.

PLS-00422: no PL/SQL translation for the bindtype given for this bind variable

Cause: A host variable was passed (by an Oracle Precompiler program, for example) to PL/SQL for binding. However, its datatype is not compatible with any PL/SQL datatype. So, the binding failed.

Action: Change the datatype of the host variable to make it compatible with a PL/SQL datatype.

PLS-00423: ORDER BY item must be the number of a SELECT-list expression

Cause: A column alias was used in the ORDER BY clause of a SELECT statement that uses a UNION, INTERSECT, or MINUS set operator. This is not allowed. In such cases, expressions in the ORDER BY clause must be unsigned integers that designate the ordinal positions of select-list items.

Action: Change the alias in the ORDER BY clause to an unsigned integer that designates the ordinal position of the select item in question.

PLS-00424: RPC defaults cannot include Package State

Cause: An attempt was made to call a remote subprogram whose defaulted parameters depend on package state, which is not allowed. When calling remote subprograms, the actual parameters must be passed explicitly if the corresponding formal parameters depend on package state.

Action: Call the remote subprogram by passing each actual parameter explicitly.

PLS-00425: in SQL, function argument and return types must be SQL type

Cause: When a cursor variable was declared as the formal parameter of a

Action: Change the parameter mode from OUT to IN or IN OUT.

PLS-00427: RPC defaults cannot use builtins when versions of STANDARD differ

Cause: An attempt was made to call a remote subprogram whose defaulted parameter value is calculated using a builtin operation. If the calling system uses a different version of package STANDARD than does the called system, a defaulted expression must be either a simple numeric or string literal, NULL, or a direct call to a user-written function.

Action: Call the remote subprogram by passing each actual parameter value explicitly.

PLS-00428: an INTO clause is expected in this SELECT statement

Cause: The INTO clause of a SELECT INTO statement was omitted. For example, the code might look like SELECT deptno, dname, loc FROM dept WHERE ... instead of SELECT deptno, dname, loc INTO dept_rec FROM dept WHERE ... In PL/SQL, only a subquery is written without an INTO clause.

Action: Add the required INTO clause.

PLS-00429: unsupported feature with RETURNING clause

Cause: - INTO clause and RETURNING clause cannot be use in the same statement
- RETURNING clause is currently not supported for object type columns, LONG columns, records, %rowtypes, remote tables and INSERT with subquery. This is as ORA-28815.

Action: Use separate select statement to get the values.

PLS-00430: FORALL iteration variable <varname>string</varname> is not allowed in this context

Cause: FORALL iteration variable can only be used as a subscript. It cannot be used directly or as a part of an expression.

Action: Use FORALL variable only as a collection subscript.

PLS-00431: bulk SQL attributes must use a single index

Cause: More than one index specified to access SQL bulk attribute.

Action: Use a single index of integer datatype.

PLS-00432: implementation restriction: cannot use FORALL and BULK COLLECT INTO together in SELECT statements

Cause: SELECT statement contains both the FORALL and BULK COLLECT INTO phrases.

Action: Do not use FORALL and BULK COLLECT INTO together in SELECT statements.

PLS-00433: inconsistent package STANDARD

Cause: PL/SQL compiler could not find the entries (such as type declarations) that should exist in the package STANDARD.

Action: Make sure that the correct version of package STANDARD is available in the current Oracle database, then retry compilation.

PLS-00434: record field has unsupported type: "<varname>string</varname>"

Cause: An attempt was made to use an unsupported type for a record field. In this release, the use of the SQL92 datetime types (time, timestamp, time with time zone, timestamp with time zone, interval year to month, interval day to second) are not supported in record fields.

Action: Use only supported types for record fields.

PLS-00435: DML statement without BULK IN-BIND cannot be used inside FORALL

Cause: The DML (SELECT/INSERT/DELETE/UPDATE) statement inside the FORALL statement does not contain BULK IN-BIND variables.

Action: The DML (SELECT/INSERT/DELETE/UPDATE) statement inside the FORALL statement must contain BULK IN-BIND variables.

PLS-00436: implementation restriction: cannot reference fields of BULK IN-BIND table of records or objects

Cause: table(bulk_index).field is not supported at run-time.

Action: Use FOR loop with instead of the FORALL DML statement (MERGE/INSERT/DELETE/UPDATE).

PLS-00437: FORALL bulk index cannot be used in <varname>string</varname> clause

Cause: RETURNING table(bulk_index) is not supported.

Action: Use RETURNING BULK COLLECT instead

PLS-00438: value in LIMIT clause: '<varname>string</varname>' use is invalid

Cause: The evaluation value in the LIMIT clause of a bulk fetch was found in an inappropriate context. For example, the following statement is illegal because the LIMIT clause in a bulk fetch expects a numeric value. `FETCH c1 BULK COLLECT INTO var_tab LIMIT '22333';` -- illegal

Action: Change the expression of the LIMIT clause so that the evaluation result is compatible to a numeric value.

PLS-00439: A LIMIT clause must be used within a BULK FETCH

Cause: A LIMIT clause is used within a non-bulk fetch

Action: Do not use a LIMIT clause when a non-bulk fetch is used.

PLS-00440: FORALL bulk IN-bind variables cannot be used here

Cause: A reference to a FORALL statement's bulk IN-bind variable was found in a context in which it is not permitted. For example, such variables are not permitted in expressions in the USING clause of a dynamic SQL statement: `forall j in 1..Users.Count() execute immediate 'insert into System_Users(Username) values :U' using Upper(Users(j));`

Action: In the case described above, move the expression from the USING clause into the SQL statement: `forall j in 1..Users.Count() execute immediate 'insert into System_Users(Username) values Upper(:U)' using Users(j);`

PLS-00441: EXIT/CONTINUE statement may have a label here; '<varname>string</varname>' is not a label

Cause: The specified name was not a label. An EXIT or CONTINUE statement does not require a label, but when the optional name appears, it must be a label.

Action: Check the spelling of the name. Make sure that the name is the label of a loop in which the EXIT or CONTINUE statement is nested. If a label is not needed for this statement, delete the name.

PLS-00442: CONTINUE statement may not have the prefix STANDARD

Cause: The procedure CONTINUE appears in STANDARD but that procedure may not be called either with its name alone or with the prefix STANDARD. It exists only to help in analysis of the CONTINUE statement.

Action: If a CONTINUE statement is intended, remove the prefix. If some other procedure was intended, check the spelling of the prefix and of the procedure name.

PLS-00450: a variable of this private type cannot be declared here

Cause: A variable declaration uses a type that is declared PRIVATE in some other compilation unit.

Action: Do not use this type in a PRIVATE variable declaration.

PLS-00452: Subprogram '<varname>string</varname>' violates its associated pragma

Cause: A packaged function cannot be called from SQL statements unless its purity level is asserted by coding a RESTRICT_REFERENCES pragma in the package specification. The pragma, which is used to control side effects, tells the PL/SQL compiler to deny the packaged function read/write access to database tables, public packaged variables, or both. A SQL statement that violates the pragma will cause a compilation error.

Action: Raise the purity level of the function, or relax the pragma restrictions.

PLS-00453: remote operations not permitted on object tables or user-defined type columns

Cause: A reference to a remote object tables or user-defined type column was found.

Action: Do not refer to it.

PLS-00454: with a returning into clause, the table expression cannot be remote or a subquery

Cause: A reference to a remote table or subquery was found in a sql statement with a returning into clause.

Action: Do not refer to it, or do use a subsequent select statement.

PLS-00455: cursor '<varname>string</varname>' cannot be used in dynamic SQL OPEN statement

Cause: dynamically OPEN a REF CURSOR that has RETURN type. However, only REF CURSOR without RETURN type can be OPEN'ed by an embedded dynamic OPEN statement.

Action: define a REF CURSOR without return type, and use it in the statement.

PLS-00456: item '<varname>string</varname>' is not a cursor

Cause: the given variable is not a cursor and therefore cannot be OPEN'ed or FETCH'ed from.

Action: check the spelling and declaration for the given variable.

PLS-00457: expressions have to be of SQL types

Cause: an expression of wrong type is in USING or dynamic RETURNING clause. In USING or dynamic RETURNING clause, an expression cannot be of non-SQL types such as BOOLEAN, INDEX TABLE, and record.

Action: change the expression type to a SQL type.

PLS-00458: subprogram '<varname>string</varname>' cannot be called from a REPEATABLE subprogram

Cause: The subprogram is not REPEATABLE and cannot be called from a REPEATABLE subprogram.

Action: delete the call or delete REPEATABLE.

PLS-00459: this feature is not allowed in REPEATABLE subprogram

Cause: Having one of the followings feature in the REPEATABLE subprogram: dynamic SQL statements or autonomous transaction.

Action: delete the statements or delete REPEATABLE.

PLS-00460: REPEATABLE subprogram '<varname>string</varname>' has to be RNDS, WNDS, RNPS, and WNPS

Cause: Repeatable subprogram can neither read database state (RNDS), write database state (WNDS), read package state (RNPS), nor write package state (WNPS).

Action: make the subprogram to be RNDS, WNDS, RNPS, and WNPS or delete REPEATABLE

PLS-00461: mismatch REPEATABLE information between specification and body of '<varname>string</varname>'

Cause: REPEATABLE is declared at the subprogram's specification, but not at its body, or vice versa.

Action: make sure both specification and body are declared as REPEATABLE

PLS-00462: nested subprogram '<varname>string</varname>' has to be REPEATABLE

Cause: the nested subprogram of a REPEATABLE subprogram is not declared as REPEATABLE. If a subprogram is REPEATABLE, all of its nested subprograms has to be declared as REPEATABLE.

Action: declared the nested subprogram as REPEATABLE

PLS-00483: exception '<varname>string</varname>' may appear in at most one exception handler in this block

Cause: An exception appears in two different WHEN clauses (that is, two different exception handlers) in the exception-handling part of a PL/SQL block or subprogram.

Action: Remove one of the references to the exception.

PLS-00484: redundant exceptions '<varname>string</varname>' and '<varname>string</varname>' must appear in same exception handler

Cause: Using the EXCEPTION_INIT pragma, different exceptions were initialized to the same Oracle error number; then, they were referenced in different exception handlers within the same exception-handling part. Such references conflict.

Action: Remove one of the exceptions or initialize it to a different Oracle error number.

PLS-00485: in exception handler, '<varname>string</varname>' must be an exception name

Cause: An identifier not declared as an exception appears in an exception handler WHEN clause. Only the name of an exception is valid in a WHEN clause.

Action: Check the spelling of the exception name and make sure the exception was declared properly.

PLS-00486: select list cannot be enclosed in parentheses

Cause: In a SELECT statement, the select list was enclosed in parentheses, as in: SELECT (deptno, dname, loc) FROM dept INTO ... This breaks the rules of SQL syntax. Parentheses are not required because the keywords SELECT and FROM delimit the select list.

Action: Remove the parentheses enclosing the select list.

PLS-00487: Invalid reference to variable '<varname>string</varname>'

Cause: A variable was referenced in a way that is inconsistent with its datatype. For example, a scalar variable might have been mistakenly referenced as a record, as follows: DECLARE CURSOR emp_cur IS SELECT empno, ename, sal FROM emp; emp_rec emp_cur%ROWTYPE; my_sal NUMBER(7,2); BEGIN ... total_sal := total_sal + my_sal.sal; -- invalid ...

Action: Check the spelling of the variable name. Make sure the variable was declared properly and that the declaration and reference are consistent regarding datatype.

PLS-00488: '<varname>string</varname>' must be a type

Cause: The datatype specifier in a declaration or expression does not designate a legal type. For example, the %TYPE attribute might not have been added to a declaration, as in `DECLARE my_sal emp.sal%TYPE; my_ename emp.ename; -- missing %TYPE ...` When declaring a constant or variable, to provide the datatype of a column automatically, use the %TYPE attribute. Likewise, when declaring a record, to provide the datatypes of a row automatically, use the %ROWTYPE attribute.

Action: Make sure the datatype specifier designates a legal type. Remember to use the %TYPE and %ROWTYPE attributes when necessary.

PLS-00489: invalid table reference: '<varname>string</varname>' must be a column in this expression

Cause: In a query, a select-list item refers to a table in the FROM clause but not to a database column.

Action: Check the spelling of the column names, make sure each column in the select list refers to a table in the FROM clause, then re-execute the query.

PLS-00490: illegal statement

Cause: A constant, variable, function call, or incomplete statement was used where a statement was expected. For example, instead of calling a function from an expression, it might have been called as a statement (as if it were a procedure).

Action: Check the statement, making sure that its commands, identifiers, operators, delimiters, and terminator form a complete and valid PL/SQL statement.

PLS-00491: numeric literal required

Cause: A constant or variable was used where a numeric literal is required. For example, the code might look like `my_ename VARCHAR2(max_len);` instead of `my_ename VARCHAR2(15);` When specifying the maximum length of a VARCHAR2 variable, an integer literal must be used.

Action: Replace the identifier with a numeric literal.

PLS-00492: variable or constant initialization may not refer to functions declared in the same package

Cause: If a package spec `p` declares a function `f`, that function may not be used in any variable declarations in that same package spec. This is because of a circular instantiation problem: in order to fully instantiate the package spec, the variable must be initialized. To initialize the variable, the function body code in the package body must be executed. That requires that the package body be instantiated. However, the package body cannot be instantiated until the package spec is fully instantiated.

Action: Remove the reference to the function from the variable initialization. A technique which often works is to move the variable initialization from the variable declaration (in the package spec) to the package body initialization block.

PLS-00493: invalid reference to a server-side object or function in a local context

Cause: A reference to a server-side object (e.g. a table column) or function (a group function such as SUM, AVG, MIN, MAX, ...) was found in a context where only PL/SQL objects may be present (such as within the parameter list of a local function or as the index of a (local) PL/SQL table.)

Action: Rewrite the offending statement; or (if a local function call is the problem context), make the function non-local (either packaged or top- level.)

PLS-00494: coercion into multiple record targets not supported

Cause: The INTO list of a SELECT or FETCH specified more than a single record-type target and the column types required coercion into a record to match the INTO list. This is type checked as correct, but not yet supported.

Action: Create a new record type to hold all of the column types or code the SELECT with an INTO target for every source column.

PLS-00495: too many columns in SELECT...INTO statement after bursting record targets

Cause: Type checking indicated the columns in a SELECT or FETCH were being collected into a record in the INTO list. The record was burst into its fields. There were not enough fields in the record for each of the columns.

Action: Change the number of columns or the record variable(s) in the INTO clause so that they match.

PLS-00496: too few columns in SELECT...INTO statement after bursting record targets

Cause: Type checking indicated the columns in a SELECT or FETCH were being collected into a record in the INTO list. The record was burst into its fields. There were not enough columns to fill all of the fields in the record.

Action: Change the number of columns or the record variable(s) in the INTO clause so that they match.

PLS-00497: cannot mix between single row and multi-row (BULK) in INTO list

Cause: - When BULK syntax (e.g. BULK COLLECT INTO) is used to retrieve data, every variable in the INTO list has to be of type that is a collection of the type of the corresponding column. - When BULK is NOT used, every variable in the INTO list has to be of compatible type with the corresponding column.

Action: Change the INTO list so that all variables have correct data types

PLS-00498: illegal use of a type before its declaration

Cause: A variable or constant was declared to be of a type whose declaration appears later in the compilation unit; or, a type or subtype was declared in terms of another type whose declaration appears later in the compilation unit.

Action: Ensure that the type declaration precedes its use in the variable/ constant/type declaration.

PLS-00499: coercion into collection of records not supported

Cause: A SELECT or FETCH may specify a column list to be coerced into a variable which is a collection of records. This is type checked as correct, but not yet supported because of the implicit layout change required.

Action: Express the SELECT with an object constructor around the columns and use a collection of objects as an INTO variable. Or, build the collection one row at a time coercing each row into a record which happens to be an element. Or, use a record of collections.

PLS-00500: invalid operator binding

Cause: An operator binding function cannot be found in the specified scope.

Action: Provide the correct number and types of parameters for the operator binding function. Or, specify the correct names for schema, package, or type containing the operator binding function.

PLS-00503: RETURN <varname>value</varname> statement required for this return from function

Cause: In a function body, a RETURN statement was used that contains no expression. In procedures, a RETURN statement contains no expression because the statement simply returns control to the caller. However, in functions, a RETURN statement must contain an expression because its value is assigned to the function identifier.

Action: Add an expression to the RETURN statement.

PLS-00504: type <varname>string</varname>_BASE may not be used outside of package STANDARD

Cause: In a declaration, the datatype NUMBER_BASE (for example) was mistakenly specified. The datatypes CHAR_BASE, DATE_BASE, MLSLABEL_BASE, and NUMBER_BASE are for internal use only.

Action: Specify (for example) the datatype NUMBER instead of NUMBER_BASE.

PLS-00505: User Defined Types may only be defined as PLSQL Tables or Records

Cause: An attempt was made to define a type other than TABLE or RECORD, but these are the only user-defined types allowed in this release of PL/SQL. For example, the following type definition is illegal: TYPE Byte IS INTEGER(2); -- illegal

Action: Remove the type definition, or revise it to specify a TABLE or RECORD type.

PLS-00506: User Defined Constrained Subtypes are disallowed

Cause: An attempt was made to define a constrained subtype, but only unconstrained subtypes are allowed in this release of PL/SQL. For example, the following type definition is illegal: SUBTYPE Acronym IS VARCHAR2(5); -- illegal

Action: Remove the illegal type constraint.

PLS-00507: a PLSQL Table may not contain a table or a record with composite fields

Cause: In a TABLE type definition, a nested record type was specified as the element type. This is not allowed. All fields in the record must be scalars.

Action: Remove the TABLE type definition, or replace the nested record type with a simple record type.

PLS-00508: The expression in a RETURN statement cannot be a type

Cause: A datatype specifier was used instead of an expression in the RETURN statement of a user-defined function, as shown in the example below. Do not confuse the RETURN statement, which sets the function identifier to the result value, with the RETURN clause, which specifies the datatype of the result value. FUNCTION credit-rating (acct_no NUMBER) RETURN BOOLEAN IS BEGIN ... RETURN NUMBER; -- should be an expression END;

Action: Replace the datatype specifier in the RETURN statement with an appropriate expression.

PLS-00509: Implementation Restriction : Pass a returned record to a temporary identifier before selecting a field

Cause: Illegal syntax was used to call a parameter-less function that returns a record or a PL/SQL table of records. When calling a function that takes parameters and returns a record, you use the following syntax to reference fields in the record: `function_name(parameters).field_name` However, you cannot use the syntax above to call a parameter-less function because PL/SQL does not allow empty parameter lists. That is, the following syntax is illegal: `function_name().field_name` -- illegal; empty parameter list You cannot just drop the empty parameter list because the following syntax is also illegal: `function_name.field_name` -- illegal; no parameter list.

Action: Declare a local record or PL/SQL table of records to which you can assign the function result, then reference its fields directly.

PLS-00510: Float cannot have scale

Cause: When a FLOAT variable was declared, its precision and scale were specified, as shown in the following example: `DECLARE Salary FLOAT(7,2);` However, a scale for FLOAT variables cannot be specified; only a precision can be specified, as in `salary FLOAT(7);`

Action: Remove the scale specifier from the declaration, or declare a NUMBER variable instead.

PLS-00511: a record may not contain a PL/SQL table of records

Cause: In a RECORD definition, one of the fields was declared as a PL/SQL table of records. This is not allowed. A record can be the component of another record (that is, records can be nested), but a PL/SQL table of records cannot be the component of a record.

Action: Remove the field declaration, or revise it to specify a simple record type.

PLS-00512: Implementation Restriction: '<varname>string</varname>': Cannot directly access remote package variable or cursor

Cause: An attempt was made to reference a remote packaged variable or cursor. This is not allowed. Instead, add to the remote package a function that returns the value of the variable or cursor.

Action: Remove the illegal reference.

PLS-00513: PL/SQL function called from SQL must return value of legal SQL type

Cause: In a SQL statement, do not call a PL/SQL function having a return type that can not be handled by SQL. For example, type BOOLEAN, records and indexed-tables are not supported by SQL and functions returning such values can not be called from SQL.

Action: n/a

PLS-00514: INSERT statement with REF INTO clause requires a typed table

Cause: This INSERT statement provides REF INTO clause, which is only legal when the table specified in the INTO clause is an object table.

Action: n/a

PLS-00515: The type of the REF INTO variable '<varname>string</varname>' must be REF to the table's type

Cause: In INSERT statement with REF INTO clause, the type of the data item must be REF to the type of the table used in INTO clause.

Action: n/a

PLS-00516: Type mismatch between object table and value '<varname>string</varname>' in INSERT statement.

Cause: In the INSERT statement operating on typed tables (tables of objects), the type of a non-aggregate value did not match the object type of the table.

Action: n/a

PLS-00517: Type mismatch between a select list element '<varname>string</varname>' and corresponding table column in INSERT statement with a subquery

Cause: In an INSERT statement with subquery, at least one of the elements of the select list was not type-compatible with the corresponding column of the table in the INTO clause. This error indicates that the subquery should be rewritten to match the structure of the target table.

Action: n/a

PLS-00518: This INSERT statement requires VALUES clause containing a parenthesised list of values

Cause: A VALUES clause was entered without a list of SQL data items in parentheses. In all INSERT statements with an explicit column list, the VALUES clause must contain a list of SQL data items in parentheses. For example: INSERT INTO my_tab (a,b,c) VALUES (1,2,my_variable);

Action: Rewrite the statement to include a list of SQL data items in parentheses.

PLS-00519: This INSERT statement requires a VALUES clause containing an object type expression, not a list of values

Cause: In an INSERT statement with typed tables, an aggregate was used when an object type item was expected.

Action: Replace the aggregate with an object constructor or other object type expression.

PLS-00520: MAP methods must be declared without any parameters other than (optional) SELF.

Cause: A MAP member function was declared with a parameter. Map member functions can have only one parameter: the default SELF parameter. Map methods must be declared without any parameters. The compiler adds the SELF parameter.

Action: Remove the parameter from the map member function.

PLS-00521: ORDER methods must be declared with 1 (one) parameter in addition to (optional) SELF.

Cause: An order member function was declared without the user-specified parameter. Order member functions have two parameters, one is the default SELF parameter which is added by the compiler. the second parameter is added by the user and must declare an order method which must be the same type as the containing object type.

Action: Check and correct the way the parameter is specified.

PLS-00522: MAP methods must return a scalar type.

Cause: The MAP member function was written such that it returns something other than a scalar type.

Action: Rewrite the MAP function such that it returns a scalar type.

PLS-00523: ORDER methods must return an INTEGER.

Cause: An order member function was written such that it returns something other than an integer type.

Action: Rewrite the ORDER method such that it returns an integer type.

PLS-00524: The parameter type in an ORDER method must be the containing object type.

Cause: An order member function was declared without the user- specified parameter. Order member functions have two parameters, one is the default SELF parameter which is added by the compiler. the second parameter is added by the user and must declare an order method which must be the same type as the containing object type.

Action: Check and correct the way the parameter is specified.

PLS-00525: Within SQL statements, only equality comparisons of objects are allowed without a map or order function.

Cause: A map or order function was not provided for a relational comparison. Only equality comparisons may be used when a map or order function is not supplied.

Action: Supply either a map or order function for the object. Otherwise change the program to use only equality comparisons.

PLS-00526: A MAP or ORDER function is required for comparing objects in PL/SQL.

Cause: Within stand alone PL/SQL, an attempt was made to compare objects without a map or order function.

Action: Provide a map or order function and retry the operation.

PLS-00527: MAP or ORDER functions require a PRAGMA RESTRICT_REFERENCES specifying :WNDS,WNPS,RNPS,RNDS.

Cause: Either a PRAGMA RESTRICT_REFERENCES was not specified or it was specified without one of the following: WNDS, WNPS, RNPS, or RNDS.

Action: Add or correct the PRAGMA and retry the operation.

PLS-00528: The parameters to an ORDER function must have IN mode

Cause: You declared parameter to an ORDER function to have OUT or IN OUT mode.

Action: Correct the parameter to use IN mode only.

PLS-00529: Bad column name <varname>string</varname> in INSERT statement (must be an identifier)

Cause: In an INSERT statement, an attempt was made to use a column name that is not an identifier. In any INSERT statement with explicit column list a column name must be a simple identifier.

Action: Rewrite the INSERT statement, using a simple identifier for the column name.

PLS-00530: Illegal type used for object type attribute: '<varname>string</varname>'.

Cause: An attempt was made to use an invalid type for an object type attribute.

Action: Use only supported types for the object type attribute.

PLS-00531: Unsupported type in a VARRAY or TABLE type: '<varname>string</varname>'.

Cause: An attempt was made to use an unsupported type in a VARRAY or TABLE type.

Action: Use only supported types in a VARRAY or TABLE type.

PLS-00532: Target of REF must be a complete or incomplete object type.

Cause: The target of a REF can only be a complete or an incomplete object type.

Action: If a REF is to be used, change the type; otherwise, remove the REF.

PLS-00533: Tables of non_queryable types are not supported.

Cause: An attempt was made to create a table of a type which cannot be queried. Tables of such types are not supported.

Action: Create an object type containing the non-queryable type. Then create a table of the object type.

PLS-00534: A Table type may not contain a nested table type or VARRAY.

Cause: An attempt was made to do one of the following: define a table type which contained nested collection types. or define an object table that has (perhaps nested) another table type or VARRAY type.

Action: Check the table definitions to be sure that they do not contain nested tables or VARRAYs.

PLS-00535: A VARRAY type may not contain a NESTED TABLE, VARRAY or LOB

Cause: An attempt was made to do one of the following: define a VARRAY type containing a nested collection type or LOB or define a VARRAY type of an object type that has a nested attribute which is one of NESTED TABLE, VARRAY or LOB type.

Action: Check the VARRAY definitions to be sure that they do not contain nested collection types, LOBs or nested attributes.

PLS-00536: Navigation through REF variables is not supported in PL/SQL.

Cause: The expression of the form refvar.field was entered. This is not supported in PL/SQL, ver 8.0.

Action: n/a

PLS-00537: A VARRAY must have a positive limit

Cause: A VARRAY type was declared with a non-positive limit, for example VARRAY(0).

Action: Declare the VARRAY with a positive limit and retry the operation.

PLS-00538: subprogram or cursor '<varname>string</varname>' is declared in an object type specification and must be defined in the object type body

Cause: The specified subprogram is declared in an object type's specification, but is not defined in the object type body.

Action: Define the subprogram in the object type body, or remove the declaration from the specification.

PLS-00539: subprogram '<varname>string</varname>' is declared in an object type body and must be defined in the object type specification

Cause: The specified subprogram is declared in an object type's body, but is not defined in the object type's specification. Notice cursor bodies can exist without a specification.

Action: Define the subprogram in the object type's specification, or remove the declaration from the body.

PLS-00540: object not supported in this context.

Cause: An object was declared inside a local scope (Function, Procedure, or anonymous block), or in a package scope which is not supported.

Action: Declare the type in a global or data base scope.

PLS-00541: size or length specified is too large.

Cause: A length or size that is too large was specified for a data item.

Action: Specify a smaller value and retry the operation.

PLS-00542: CLOB and NCLOB cannot use varying-width character sets in the server

Cause: A server type is being created with an embedded CLOB or NCLOB attribute which uses a varying-width character set.

Action: Use VARCHAR2 instead of CLOB, or use a fixed-width character set.

PLS-00543: a PLSQL Table may not contain a nested table type or VARRAY.

Cause: An attempt was made to define a PLSQL table that contained a (possibly deeply) nested table type or VARRAY. Nested collection types are not supported.

Action: Remove the nested table type or VARRAY from the table. Then retry the operation.

PLS-00546: SELF may not be declared as a REF parameter.

Cause: SELF was declared as a ref parameter to a member function or procedure. SELF is not supported as a REF.

Action: Redefine SELF as a value parameter.

PLS-00548: invalid use of operator.

Cause: A name of an operator is used as a qualifier or appears outside from sql context.

Action: Eliminate the use of operator name as a qualifier or place it in a sql clause.

PLS-00550: character set specification is not allowed for this type

Cause: A character set specification was made on a type that does not require one.

Action: Remove the character set specification, or change the type.

PLS-00551: character set ANY_CS is only allowed on a subprogram parameter

Cause: The character set ANY_CS was specified when it is not allowed.

Action: Change or remove the character set specification.

PLS-00552: flexible character set is not allowed on component element

Cause: ANY_CS or %CHARSET was used to reference an ANY_CS parameter which is not a CHAR, VARCHAR2, or CLOB type. ANY_CS or %CHARSET is not allowed for fields of a record, object, elements of a collection, etc.

Action: Change or remove the character set specification.

PLS-00553: character set name is not recognized

Cause: An unrecognized name appears in a character set specification.

Action: Change or remove the character set specification.

PLS-00554: character set has already been determined

Cause: A redundant or conflicting character set was specified.

Action: Remove the CHARACTER SET specification, or change the character set specified.

PLS-00555: default expressions are not allowed for SQL operators

Cause: A default expression has been specified for a SQL operator.

Action: Eliminate the default expression from the operator.

PLS-00560: character set mismatch

Cause: An expression was used that has the wrong character set for this context.

Action: Adjust the expression, using TRANSLATE(... USING ...) or by rethinking the logic.

PLS-00561: character set mismatch on value for parameter '<varname>string</varname>'

Cause: An expression was used that contains an incorrect character set. The actual argument has a character set conflict. If a default argument value is being used, it might be in conflict with some actual argument that must have the same character set.

Action: Adjust the expression, using TRANSLATE(... USING ...) or change the character set.

PLS-00562: a function must return a type.

Cause: The current function was defined to return something other than a data type.

Action: Make sure the function is returning a data type.

PLS-00563: illegal use of CAST expression

Cause: CAST (in PLSQL) was used outside of a DML scope.

Action: Do not use CAST outside DML statements.

PLS-00564: lob arguments are not permitted in calls to remote server

Cause: use of lob argument in call to remote server

Action: Do not use LOBs in call to remote server

PLS-00565: <varname>string</varname> must be completed as a potential REF target (object type)

Cause: Incomplete library units that are potential targets of REF dependencies must be completed so that they continue to remain potential targets of REF dependencies (since there might be library units with REF dependencies on this library unit).

Potential REF targets include complete and incomplete object types. This error happened because an attempt was made to complete a potential REF target as something other than a potential REF target.

Action: Use another name for this library unit, or drop the original incomplete library unit.

PLS-00566: type name "<varname>string</varname>" cannot be constrained

Cause: A lob, date, boolean, rowid, or mlslabel type was constrained with a length specification. For example: X BLOB(5);

Action: Remove the constraint.

PLS-00567: cannot pass NULL to a NOT NULL constrained formal parameter

Cause: You attempted to pass NULL to a NOT NULL constrained parameter.

Action: Pass a NOT NULL expression instead.

PLS-00568: cannot access rows from a non-nested table item

Cause: You attempted to use TABLE expression, from a non-nested table

Action: pass the correct parameter

PLS-00569: numeric overflow or underflow

Cause: A constant literal is either too large or too small to fit in an Oracle number

Action: Change the value of the literal

PLS-00570: different number of columns in the multiset and cast expressions

Cause: Number of columns in the collection returned by MULTISSET and the number of columns for the CAST type don't match. For example: create type tab_obj as object (n number); create type tab1 as table of tab_obj; create table tab2 (col1 number, col2 number); select CAST(MULTISSET(select col1, col2 from tab2) as tab1) from tab2;

Action: n/a

PLS-00571: method access through data base link not yet supported on client side

Cause: Remote link is used with on client side

Action: Create a dummy function to call symbolic link on server side or wait till it is implemented

PLS-00572: improper constraint form used

Cause: "number" types cannot have a range. user-defined aggregate types and integer types cannot have scale or precision specified. Example: "x number(5,3)" is acceptable but "x number range 1..10" is not.

Action: Remove the constraint

PLS-00573: cannot constrain scale, precision, or range of an anchored type declaration

Cause: A variable declared with %TYPE or %ROWTYPE cannot have a scale, precision, or range constraint. Example: x y%TYPE(10) is not acceptable. It is legal to add "NOT NULL" or non-conflicting CHARACTER SET constraints to anchored type declarations.

Action: Remove the constraint or use a type name instead of an anchored type.

PLS-00580: supertype must be an object type

Cause: An attempt was made to declare an object type to have a supertype, but the specified supertype was not itself an object type. Object types can inherit only from other object types.

Action: Remove the supertype specification, or change it to refer to an object type. If the declaration appears correct, make sure the supertype has compiled correctly.

PLS-00581: inheritance is not supported for opaque types

Cause: An attempt was made to declare an opaque type with a supertype.

Action: Remove the supertype specification.

PLS-00582: attribute declarations are not allowed in opaque types

Cause: An attempt was made to declare an attribute in an opaque type.

Action: Remove the attribute declaration.

PLS-00583: size must be specified if opaque type is fixed-length

Cause: An attempt was made to declare a fixed-length opaque type without specifying an explicit size.

Action: Specify an explicit size, or change the declaration to be varying-length.

PLS-00584: size of an opaque type must be between 1 and 4000 bytes

Cause: An attempt was made to specify an explicit size for an opaque type, but the specified size was out of the valid range.

Action: Change the explicit size to be between 1 and 4000 bytes, or change the declaration to be varying-length without an explicit size.

PLS-00585: declared support library for opaque type is not a library

Cause: An attempt was made to name a support library for an opaque type, but the name refers to an object that is not a library.

Action: Change the declaration to name a valid library.

PLS-00586: a static method cannot declare a parameter named SELF

Cause: An attempt was made to name a parameter SELF when declaring a static method. SELF is reserved as a parameter name in methods, to hold the object instance on which the method is applied. A parameter named SELF is not allowed in static methods because static methods do not apply to a particular object instance.

Action: Change the name of the parameter in the declaration.

PLS-00587: a static method cannot be invoked on an instance value

Cause: An attempt was made to use an object instance value, not a typename, as the qualifier of the name of a method invocation, but only a typename can be used as the qualifier when calling a static method.

Action: Use the typename, not an object instance value, to qualify the name of a method if the method is static.

PLS-00588: unqualified instance attribute references allowed only in member methods

Cause: An attempt was made to use the name of an object instance attribute in the body of a static method, or in an initialization default value on another attribute. If the instance attribute is not qualified with a particular object instance that supplies a value, the instance attribute can be named only when it is inside a member method.

Action: Qualify the attribute reference with the name of an object value, or change the containing method to a member method rather than a static method.

PLS-00589: no attributes found in object type "<varname>string</varname>"

Cause: Table of non adt type is defined.

Action: Table of type should be of ADT type only

PLS-00590: attempting to create a subtype UNDER a FINAL type

Cause: An attempt was made to create a subtype UNDER a FINAL type.

Action: Avoid deriving a subtype from this FINAL type.

PLS-00591: this feature is not supported in client-side programs

Cause: One of the following features was used in a wrong context: pragma AUTONOMOUS_TRANSACTION, dynamic SQL statements, (e.g. EXECUTE IMMEDIATE), and bulk binds. These listed features can only be used in server-side programs but not client-side programs.

Action: Remove it or define a server-side subprogram to do the work and call the subprogram from the client.

PLS-00592: the type of a object table must be an object type

Cause: You have defined a typed-table of a non-object type.

Action: Replace the non-object type with an object-type.

PLS-00593: default value of parameter "<varname>string</varname>" in body must match that of spec

Cause: The default value initialization of a parameter in a subprogram body contained in a package body did not match that of the corresponding subprogram specification in the corresponding package specification.

Action: Change the default initialization of the parameter in body to match that of spec.

PLS-00594: the SELF parameter can be declared only as IN or as IN OUT

Cause: The SELF parameter was declared as an OUT parameter.

Action: Declare the SELF parameter as either an IN or an IN OUT parameter.

PLS-00595: the TABLE operator is not allowed in this context

Cause: This feature is not yet implemented.

Action: Don't use weak ref cursors with bulk binds.

PLS-00597: expression '<varname>string</varname>' in the INTO list is of wrong type

Cause: This exception is raised for the following errors: - the expression in INTO clause of OPEN or RETURNING statement is neither of legal SQL datatypes nor of PL/SQL RECORD datatype - a collection of records is used in INTO clause of OPEN or RETURNING statement. - a record or a collection of records is used in BULK COLLECT INTO

Action: Use expression with correct datatype in the INTO clause

PLS-00598: comparison of object with NULL using "<varname>string</varname>" is not allowed

Cause: An object is compared with NULL using a relational operator.

Action: Use IS NULL comparison operator.

PLS-00599: SAMPLE percentage must be in the range [0.000001,100)

Cause: The percentage number is not in the range [0.000001,100)

Action: Use a percentage number in the range [0.000001,100)

PLS-00600: SAMPLE cannot be applied to a remote object

Cause: SAMPLE applying to a remote object is not supported

Action: Do not use SAMPLE with a remote object

PLS-00601: partition extended object names may only be used with tables

Cause: User attempted to use a partition-extended object name with an object which is not a table.

Action: Avoid using partition-extended name syntax with objects which are not tables

PLS-00602: CUBE and ROLLUP may appear only in a GROUP BY clause

Cause: User attempted to use the keywords CUBE or ROLLUP outside a GROUP BY clause

Action: Avoid using the keywords CUBE and ROLLUP outside the GROUP BY clause

PLS-00603: GROUPING function supported only with GROUP BY CUBE or ROLLUP

Cause: User attempted to use the GROUPING function without GROUP BY CUBE or GROUP BY ROLLUP

Action: Avoid using the GROUPING function without GROUP BY CUBE or ROLLUP

PLS-00604: aggregate function is not allowed here

Cause: One of the functions, such as AVG, COUNT, MAX, MIN, SUM, STDDEV or VARIANCE, was used in a WHERE or GROUP BY clause

Action: Remove the group function from the WHERE or GROUP BY clause. The desired result may be achieved by including the function in a subquery or HAVING clause.

PLS-00605: set operators are not yet supported as an argument to a MULTISSET operator

Cause: A set operator was used in a subquery that was the argument to a MULTISSET operator.

Action: Rewrite your SQL statement so that it does not use a set operator in the subquery that is the argument to the MULTISSET operator.

PLS-00606: cursor subquery is not supported on client side in this release

Cause: A query that contains a cursor subquery is being used from client side.

Action: Use this feature from server side only.

PLS-00607: SQLJ Object Types can have only SQLJ Types as its supertype or subtype

Cause: You were trying to create a SQLJ Object Type under a non-SQLJ Object Type.

Action: Recreate the type as a SQLJ Object Type.

PLS-00608: the value of the USING clause must match that of the supertype

Cause: You were trying to create a SQLJ Object Type with a different value of the USING clause from the USING clause specified in its supertype.

Action: Change the value of the USING clause to match the USING clause in its supertype.

PLS-00609: the OVERRIDING clause is not valid for SQLJ Object Types

Cause: You were trying to a SQLJ Object Type method that override an inherited method.

Action: Change the SQLJ Object Type definition by removing the OVERRIDING method.

PLS-00610: ROW can be used only once in SET clause of UPDATE statement

Cause: You were trying to use ROW more than once in UPDATE statement.

Action: Remove all the additional ROW in set clause of UPDATE statement.

PLS-00611: right hand side can be only the variables of record type

Cause: with ROW on LHS, only PL/SQL records or %ROWTYPE variables are allowed on right hand side..

Action: Make appropriate changes, so that right hand side should only have variables of record or %ROWTYPE.

PLS-00612: Number of attributes do not match in SET clause

Cause: Number of columns do not match with number of attributes on record type on rhs.

Action: Make sure that number of columns match with the number of attributes in record on rhs.

PLS-00613: only one item is allowed, when using variables of record type

Cause: You are trying to use more than one values in VALUES clause or RETURNING INTO clause, when one of the value is of record type..

Action: Specify only one variable of record type, or don't use variables of record type.

PLS-00614: creating a FINAL NOT INSTANTIABLE type

Cause: An attempt was made to create a FINAL NOT INSTANTIABLE type. No useful operation can be performed with this type.

Action: Avoid using the keywords FINAL and NOT INSTANTIABLE together when creating types.

PLS-00615: type mismatch found at '<varname>string</varname>' between CASE operand and WHEN operands

Cause: In a simple CASE statement or expression, the CASE operand and WHEN operands do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the CASE operand and WHEN operands so that their datatypes match. Consider using datatype conversion functions in the CASE operand and/or WHEN operands.

PLS-00616: type mismatch found at '<varname>string</varname>' among result expressions in a CASE expression

Cause: In a CASE expression, the result expressions do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the result expressions so that their datatypes match. Consider using datatype conversion functions in the result expressions.

PLS-00617: at least one result in the CASE expression must not be NULL

Cause: All the results in the CASE expression are the literal NULL.

Action: Change at least one result in the CASE expression to be non-NULL.

PLS-00618: type mismatch found at '<varname>string</varname>' between operands in a NULLIF expression

Cause: In a NULLIF expression, the two operands do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the operands so that their datatypes match. Consider using datatype conversion functions in the operands.

PLS-00619: the first operand in the NULLIF expression must not be NULL

Cause: The first operand in the NULLIF expression is the literal NULL.

Action: Change the first operand in the NULLIF expression to be non-NULL.

PLS-00620: type mismatch found at '<varname>string</varname>' among operands in a COALESCE expression

Cause: In a COALESCE expression, the operands do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the operands so that their datatypes match. Consider using datatype conversion functions in the operands.

PLS-00621: at least one operand in the COALESCE expression must not be NULL

Cause: All the operands in the COALESCE expression are the literal NULL.

Action: Change at least one operand in the COALESCE expression to be non-NULL.

PLS-00622: range constraints must be between -2147483647 and 2147483647

Cause: The range constraints specified for a pls_integer or binary_integer declaration did not fall between -2147483647 and 2147483647.

Action: Use range constraints between -2147483647 and 2147483647.

PLS-00623: FLOAT precision constraint must be between 1 and 126

Cause: The precision specified for a FLOAT, REAL or DOUBLE PRECISION did not fall between 1 and 126.

Action: Use precision constraints between 1 and 126.

PLS-00624: USING clause must be used with either aggregate or pipelined functions

Cause: USING clause cannot be used with functions that are not declared with AGGREGATE or PIPELINED properties.

Action: Define function body in PL/SQL or some other language (using external callout call specification).

PLS-00625: PARTITION/CLUSTER/ORDER-BY clause can only be used with IN parameters

Cause: A PARTITION/CLUSTER/ORDER-BY clause was used with an OUT or IN OUT ref-cursor parameter.

Action: Change the parameter mode to IN or use some other parameter with the PARTITION/CLUSTER/ORDER-BY clause.

PLS-00626: partitioned/clustering/ordered parameter must be a function argument

Cause: A partitioning or clustering/ordering specification specified on an argument that is not one of the function arguments.

Action: Specify partitioning/clustering/ordering based on the function ref-cursor formal argument.

PLS-00627: '<varname>string</varname>' must be a strongly typed ref cursor

Cause: A partitioning or clustering/ordering specification specified on an argument that is not a strongly typed ref cursor.

Action: Specify partitioning/clustering/ordering based on the function ref-cursor formal argument.

PLS-00628: '<varname>string</varname>' must be a valid record attribute

Cause: A partitioning or clustering/ordering specification must use only valid record attributes.

Action: Specify partitioning/clustering/ordering based on valid record attributes.

PLS-00629: PIPE statement cannot be used in non-pipelined functions

Cause: A PIPE statement was used in a non-pipelined function.

Action: Use PIPE statement only in pipelined functions.

PLS-00630: pipelined functions must have a supported collection return type

Cause: A pipelined function was specified with an unsupported return type. The following are not supported as return types of pipelined functions: - non-collections, - PL/SQL tables, - associative arrays, - collections of PL/SQL types: rowid, mlslab, long, long raw, boolean, binary_integer, pls_integer, string and urowid. The following restrictions apply: - If the return type is a collection of records, then each of the attributes of the record must be a supported type. - A collection of records must not contain a record type as one of its attributes.

Action: Specify a supported collection type as the pipelined function return type.

PLS-00631: PARTITION-BY and CLUSTER/ORDER-BY clauses must be used with the same function argument

Cause: PARTITION-BY and CLUSTER/ORDER-BY clauses are specified on different function arguments.

Action: Use the same argument in both PARTITION-BY and CLUSTER/ORDER-BY clauses.

PLS-00632: NOT INSTANTIABLE method cannot have a body

Cause: An attempt was made to provide an implementation for a NOT INSTANTIABLE method.

Action: Remove the implementation for the NOT INSTANTIABLE method.

PLS-00633: RETURN statement in a pipelined function cannot contain an expression

Cause: A RETURN statement in a pipelined function contains an expression, which is not allowed. Pipelined functions must send back values to the caller by using the PIPE statement.

Action: Remove the expression from the RETURN statement and use a PIPE statement to return values. Else, convert the function into a non-pipelined function.

PLS-00634: type with NOT INSTANTIABLE methods must be declared NOT INSTANTIABLE

Cause: The type being created contains NOT INSTANTIABLE methods, either declared or inherited. The type must be explicitly declared NOT INSTANTIABLE.

Action: Explicitly specify the NOT INSTANTIABLE keyword or provide implementations for all the NOT INSTANTIABLE methods.

PLS-00635: method does not override

Cause: The method specification contains the OVERRIDING keyword but the method does not override a method in the ancestor types.

Action: Check the method specification.

PLS-00636: overriding method requires OVERRIDING keyword

Cause: An attempt was made to provide an overriding method specification, but the OVERRIDING keyword was not specified.

Action: Modify the method specification and specify the OVERRIDING keyword.

PLS-00637: FINAL method cannot be overridden or hidden

Cause: An attempt was made to override a FINAL MEMBER method or hide a FINAL STATIC method.

Action: Avoid overriding FINAL MEMBER methods or hiding FINAL STATIC methods

PLS-00638: cannot overload MAP method

Cause: The MAP method does override the inherited one.

Action: Make the specifications match.

PLS-00639: NCHAR/NVARCHAR2 cannot be byte length semantics

Cause: NCHAR/NVARCHAR can only be codepoint length semantics. BYTE qualifiers used with NCHAR is illegal: nc NCHAR(7 BYTE); name NVARCHAR2(10 byte);

Action: Remove BYTE qualifier to make it as codepoint length semantics

PLS-00640: a pipelined function cannot be called from PL/SQL context

Cause: A pipelined function was invoked from a PL/SQL expression.

Action: Use the pipelined function in the FROM clause of a SQL query.

PLS-00641: INTO clause not allowed for this SELECT statement

Cause: A SELECT statement in a cursor definition, an OPEN statement or a cursor FOR loop has an erroneous INTO clause.

Action: Remove the INTO clause.

PLS-00642: local collection types not allowed in SQL statements

Cause: A locally-defined (i.e. not schema level) collection type was used in a SQL statement. The type must be defined in a schema to be accepted in a SQL statement.

Action: Define the collection type in your schema, not inside a PL/SQL subprogram.

PLS-00643: booleans, index tables, records and cursors not allowed in SQL statements

Cause: Items of type boolean, table of foo index by binary_integer, record and static cursors cannot be used in SQL statements.

Action: Remove expressions of these types from the SQL statement.

PLS-00644: character set mismatch found at '<varname>string</varname>' among result expressions in a CASE expression

Cause: In a CASE expression, the result expressions do not match in character set, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the result expressions so that their character sets match.

PLS-00645: character set mismatch found at '<varname>string</varname>' among operands in a COALESCE expression

Cause: In a COALESCE expression, the operands do not match in character set and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the operands so that their character sets match.

PLS-00646: MAP or ORDER method must be defined in the root of the subtype hierarchy

Cause: An attempt was made to define a MAP or ORDER method in a subtype.

Action: Define the MAP or ORDER method in the root of the subtype hierarchy. You can override MAP methods in subtypes.

PLS-00647: attribute by name "<varname>string</varname>" conflicts with method by same name

Cause: While creating a subtype some attribute name conflicted with a method name.

Action: Use a different name for attribute or method in the type being created.

PLS-00648: type of supertype attribute "<varname>string</varname>" can not be a subtype or reference to a subtype in this release

Cause: User tried to complete a type, Tsub as a subtype of another type, Tsuper where Tsuper contained an attribute of type Tsub or of type REF to Tsub. This is an implementation restriction.

Action: Change the design of code to not use any type with attribute whose type is of subtype or REF to subtype.

PLS-00649: method "<varname>string</varname>" can be overridden only once per object type

Cause: User tried to override the method more than once in the same subtype.

Action: Either make this an extra overload by removing the OVERRIDING keyword where the method signature is different. The argument types should be reconsidered otherwise.

PLS-00650: invalid type for PARTITION/CLUSTER/ORDER BY clause

Cause: User tried to use invalid type for PARTITION/CLUSTER?ORDER BY clause.

Action: Use legal allowed types.

PLS-00651: implementation type in Aggregate/Table function should be a valid type

Cause: User tried to use some other database object like a package to define implementation type of an aggregate/table function.

Action: Use a valid user defined type as implementation type.

PLS-00652: aggregate functions should have exactly one argument

Cause: User tried to create aggregate function with either 0 or more than one arguments.

Action: Do not create aggregate function with 0 or more than one argument.

PLS-00653: aggregate/table functions are not allowed in PL/SQL scope

Cause: User tried to use a table/aggregate function in PL/SQL scope.

Action: Do not use table/aggregate function in PL/SQL scope.

PLS-00654: PARTITION/ORDER/CLUSTER BY are allowed for only with PARALLEL_ENABLE

Cause: User tried partition by order by cluster by without parallel enable clause in table function.

Action: specify parallel enable also when using partition by, cluster by order by clause.

PLS-00655: only functions can be declared as PIPELINED

Cause: user is trying to declare a procedure to be pipelined function

Action: declare a function instead of a procedure to be a pipelined function

PLS-00656: field '<varname>string</varname>' not available in input argument

Cause: An EXTRACT operation specified a field that was not present. For example, you tried to extract the YEAR field from a TIME variable.

Action: Specify a legal field in the call to EXTRACT.

PLS-00657: Implementation restriction: bulk SQL with associative arrays with VARCHAR2 key is not supported.

Cause: Variable or expression of associative array type was used as bulk SQL bind or define.

Action: Use collection types supported by bulk SQL.

PLS-00658: constructor method name must match type name

Cause: The name of the object type constructor does not match the type name.

Action: Change the name of the constructor method to match the type name.

PLS-00659: constructor method must return SELF AS RESULT

Cause: The return clause of the constructor method did not specify SELF AS RESULT.

Action: Change the return clause to include RETURN SELF AS RESULT.

PLS-00660: SELF parameter of constructor method must be IN OUT

Cause: The mode of the SELF parameter of the constructor was not IN OUT.

Action: Change the mode of the SELF parameter to be IN OUT.

PLS-00661: RETURN statement in a CONSTRUCTOR cannot include an expression

Cause: An attempt was made to include an expression in the RETURN statement of a CONSTRUCTOR body.

Action: Remove the expression from the RETURN statement.

PLS-00662: Non-external object types containing external mapped attributes are not allowed

Cause: An attempt was made to create a non-external object, whose attributes are mapped externally.

Action: Create the object as an external object.

PLS-00663: the NEW keyword is not allowed in this context

Cause: The NEW keyword is not followed by a call to a constructor method.

Action: Remove the NEW keyword, or make sure the expression following it is a constructor call.

PLS-00664: Both ORDER BY and CLUSTER BY can not be specified for the same table function

Cause: An attempt was made to specify both ORDER BY and CLUSTER BY for the same table function.

Action: specify either ORDER BY or CLUSTER BY for a table function, but not both.

PLS-00665: ORDER BY and CLUSTER BY clauses require a PARTITION BY clause

Cause: An attempt was made to specify an ORDER BY or CLUSTER BY clause without also specifying a PARTITION BY clause.

Action: Add a PARTITION BY clause, or remove the ORDER BY or CLUSTER BY clause.

PLS-00666: Only index by binary_integer/pls_integer associative arrays allowed here

Cause: An attempt was made to specify index collection that was not indexed by binary_integer or pls_integer.

Action: Change the index collection variable type to associative array that is indexed by binary_integer or pls_integer.

PLS-00667: Element type of associative array should be pls_integer or binary_integer

Cause: An attempt was made to specify index collection whos element type was not one of pls_integer or binary_integer.

Action: Change the index collection variable type to associative array whose element type is pls_integer or binary_integer.

PLS-00668: Type of expression should be a collection type

Cause: An attempt was made to specify expression after INDICES OF or VALUES OF clause whose type is not a collection type.

Action: Change the index collection expression type to a valid collection type.

PLS-00669: Type of expression should be a valid collection variable

Cause: An attempt was made to specify expression after INDICES OF or VALUES OF clause that is not a collection variable.

Action: Change the index collection expression type to a valid collection variable.

PLS-00670: sort columns must be simple column names

Cause: An attempt was made to specify an expression as a sort column in a PARTITION BY, CLUSTER BY or ORDER BY clause. Only simple column names are permitted.

Action: Specify a simple column name.

PLS-00671: this expression is allowed only with instance methods

Cause: The generalized invocation syntax was used in instance method context.

Action: The generalized invocation syntax can only be used in a instance method that is not a constructor

PLS-00672: The expression <varname>string</varname> should be a subtype of the type <varname>string</varname>

Cause: The expression in the generalized expression should be a sub type of the type.

Action: The type of expression should be a subtype of the type name

PLS-00673: Generalized expression is not allowed in this context

Cause: The generalized expression is used in wrong context

Action: Fix the expression and remove the generalized expression syntax.

PLS-00674: references to fields of BULK In-BIND table of records or objects must have the form A(I).F

Cause: The form table(bulk_index).field is the only field selection supported at runtime.

Action: Use a FOR loop instead of the FORALL DML statement (MERGE/INSERT/DELETE/UPDATE) or revise reference to fit the form allowed.

PLS-00675: invalid section for this type of Compound Trigger

Cause: Before and After row sections are not allowed for Compound triggers defined on the Table and instead of row section is not allowed for Compound Triggers defined on a view.

Action: Remove the invalid sections for this context.

PLS-00676: duplicate Compound Triggers section

Cause: Each Compound Trigger Section can appear at most once in a body of the compound trigger

Action: Remove the offending sections.

PLS-00677: Compound Triggers cannot be autonomous transactions

Cause: The Compound Triggers hsd pragma autonomous transaction.

Action: Call autonomous function or procedure, if autonomous transaction behavior is desired from Compound Triggers.

PLS-00678: RETURN statement not allowed inside Compound Triggers

Cause: A return Statement was seen inside a compound trigger

Action: Remove Return statement and use other PL/SQL constructs to transfer flow of control.

PLS-00679: trigger binds not allowed in before/after statement section

Cause: :new or :old were used in this section.

Action: Do not use trigger binds in this section

PLS-00680: BEFORE/AFTER ROW sections were used in a view trigger

Cause: BEFORE/AFTER ROW sections are not allowed with instead of row triggers.

Action: Remove the offending sections.

PLS-00700: PRAGMA EXCEPTION_INIT of <varname>string</varname> must follow declaration of its exception in the same declarative part

Cause: An EXCEPTION_INIT pragma was not declared in the same block as its exception. They must be declared in the proper order in the same block, with the pragma declaration following the exception declaration.

Action: Place the EXCEPTION_INIT pragma directly after the exception declaration referenced by the pragma.

PLS-00701: illegal ORACLE error number <varname>string</varname> for PRAGMA EXCEPTION_INIT

Cause: The error number passed to an EXCEPTION_INIT pragma was out of range. The error number must be in the range -9999 .. -1 (excluding -100) for Oracle errors or in the range -20000 .. -20999 for user-defined errors.

Action: Use a valid error number.

PLS-00702: second argument to PRAGMA EXCEPTION_INIT must be a numeric literal

Cause: The second argument passed to an EXCEPTION_INIT pragma was something other than a numeric literal (a variable, for example). The second argument must be a numeric literal in the range -9999 .. -1 (excluding -100) for Oracle errors or in the range -20000 .. -20999 for user-defined errors.

Action: Replace the second argument with a valid error number.

PLS-00703: multiple instances of named argument in list

Cause: Two or more actual parameters in a subprogram call refer to the same formal parameter.

Action: Remove the duplicate actual parameter.

PLS-00704: '<varname>string</varname>' must be declared as an exception

Cause: The exception_name parameter passed to an EXCEPTION_INIT pragma is misspelled or does not refer to a legally declared exception. Or, the pragma is misplaced; it must appear in the same declarative section, somewhere after the exception declaration.

Action: Check the spelling of the exception_name parameter. Then, check the exception declaration, making sure the exception name and the keyword EXCEPTION are spelled correctly. Also make sure the pragma appears in the same declarative section somewhere after the exception declaration.

PLS-00705: exception '<varname>string</varname>' used in expression requiring return type

Cause: An exception was referred to in an expression. Exceptions have names but not values and therefore cannot contribute values to an expression. For example, the following RETURN statement is illegal: FUNCTION credit_limit (cust_no INTEGER) RETURN NUMBER IS limit NUMBER; over_limit EXCEPTION; ... BEGIN ... RETURN over_limit; -- illegal END;

Action: Check the spelling of the identifiers in the expression, then rewrite the expression so that it does not refer to an exception.

PLS-00706: Exception `<varname>string</varname>` cannot be used as prefix of a selected component

Cause: An exception name was mistakenly used to qualify a reference to a component. For example, when dot notation was used to specify fields within a record, an exception name might have been coded instead of the record name.

Action: Rewrite the component reference using a valid prefix (for example, the name of a package, record, or schema).

PLS-00707: unsupported construct or internal error [`<varname>string</varname>`]

Cause: At run time, this is an internal error. At compile time, it indicates one of the following problems: -- A call was made to a remote subprogram that has a parameter type or default expression not supported at the calling site. -- An incomplete upgrade or downgrade was done to a database that has stored procedures. Perhaps incorrect versions of system packages such as STANDARD.SQL were installed. -- A compiler bug was encountered. In such cases, legal PL/SQL syntax will fail to compile.

Action: Either report the internal error to your Customer Support representative or, depending on the problem, take one of the following actions: -- Revise the logic of the application to use parameter types and default expressions that are supported at both the local and remote sites. -- Complete the upgrade or downgrade properly, making sure to install correct versions of all system packages. -- Report the legal-syntax error to your Customer Support representative. If there are line and column numbers displayed with the error message, they might help you find a workaround. For example, try recoding the offending line to avoid the bug.

PLS-00708: Pragma `<varname>string</varname>` must be declared in a package specification

Cause: The named pragma was not declared in a package specification, as required. For example, the pragma RESTRICT_REFERENCES must be declared in a package specification.

Action: Remove or relocate the misplaced pragma.

PLS-00709: pragma `<varname>string</varname>` must be declared in package specification and body

Cause: The named pragma was declared in a package specification but not in the corresponding package body or vice-versa, as well as the package body.

Action: Add the pragma to that part of the package declaration that does not have the pragma.

PLS-00710: Pragma `<varname>string</varname>` cannot be specified here

Cause: The pragma was specified in an inappropriate context.

Action: Remove or relocate the misplaced pragma. Check the documentation to determine the correct context for this pragma.

PLS-00711: PRAGMA `<varname>string</varname>` cannot be declared twice

Cause: The PRAGMA was declared twice in the same block.

Action: remove the duplicate declaration of the PRAGMA

PLS-00712: illegal option for subprogram <varname>string</varname>

Cause: Only top level subprograms or subprogram declarations in PACKAGE or TYPE specifications are allowed to have the options DETERMINISTIC or PARALLEL_ENABLE. For example, this error would be raised if the options are used in PACKAGE or TYPE body.

Action: remove the option.

PLS-00713: attempting to instantiate a type that is NOT INSTANTIABLE

Cause: An attempt was made to instantiate a type that is defined as NOT INSTANTIABLE.

Action: Avoid instantiating variables of this NOT INSTANTIABLE type, instead derive an INSTANTIABLE subtype from it and instantiate variables of the subtype.

PLS-00714: supertypes's AUTHID is DEFINER but supertype and subtype are not in same schema

Cause: The supertype's AUTHID is DEFINER, but the supertype and subtype are defined in different schemas. SQL statements executed in dynamically dispatched methods can potentially pick up different values from database tables in the two schemas.

Action: Create the subtype in the same schema as the supertype.

PLS-00715: attribute or method by name '<varname>string</varname>' does not exist

Cause: An attempt was made to drop a nonexistent method or attribute from the type being altered.

Action: Check the spelling of the attribute or method name. Make sure it is locally defined in the type and not inherited.

PLS-00716: Attribute/method '<varname>string</varname>' can occur only once in an ALTER TYPE statement

Cause: User attempted more than one of ADD, DROP or MODIFY on an attribute in single ALTER TYPE statement. User attempted more than one of ADD or DROP on a method in single ALTER TYPE statement.

Action: Do only one ADD, DROP or MODIFY for an attribute in single ALTER TYPE statement. Do only one ADD or DROP for a method in single ALTER TYPE statement.

PLS-00717: method '<varname>string</varname>' does not have matching signature among existing methods

Cause: The method to be dropped matches the name of some existing method but does not match it in signature.

Action: Make sure that a matching method signature is provided for dropping a method.

PLS-00718: type of attribute '<varname>string</varname>' does not allow modifications to the attribute

Cause: The type of the attribute to modify is not one of VARCHAR2, NUMBER, or RAW.

Action: Only VARCHAR2, NUMBER and RAW type attributes are allowed to be modified.

PLS-00719: only widening of attribute '<varname>string</varname>' constraints is allowed

Cause: Modification to the attribute did not widen its constraints or attempted to change the type of the attribute. For NUMBER type attributes, scale and precision can be changed to allow increase in number of digits after and before the decimal point. For VARCHAR2 and RAW type attributes the size can be increased. Other type attributes are not allowed to be modified. Change of type of attribute is also not allowed.

Action: Change the constraint specification so as to widen the existing constraints. To narrow the constraints or to change the type of the attribute, you must drop the attribute and add it with new constraints or new type. In that case you must also take appropriate steps to preserve your existing data based on the type (if you want to preserve it). Typically this will involve backing up the data and restoring it after the ALTER TYPE.

PLS-00720: type '<varname>string</varname>' has evolved

Cause: The type has evolved. The version of the type used by the compiled code is not the same as the latest version of the type.

Action: Recompile the code to use the latest version of the type.

PLS-00721: '<varname>string</varname>' formed a non-REF mutually-dependent cycle with '<varname>string</varname>'

Cause: This compilation was aborted because the library unit that was compiled would have formed a non-REF mutually-dependent cycle with some other library units. This happens when an attempt is made to compile types that have attributes of other types that may participate in a cycle with this type. Example: create type t1; create type t2 (a t1); create type t1 (a t2);

Action: Break the cycle (possibly by adding a REF or by using another type).

PLS-00722: supertypes's AUTHID is different than subtype's AUTHID

Cause: The subtype's's AUTHID must be same as the supertype's AUTHID.

Action: Create the subtype with AUTHID of its supertype or do not specify AUTHID for subtype.

PLS-00725: type '<varname>string</varname>' must be a supertype or subtype of the TREAT expression

Cause: In TREAT(<varname>expr</varname> AS <varname>type</varname>), type must be a supertype or subtype of <varname>expr</varname>.

Action: n/a

PLS-00726: MODIFY ELEMENT is supported only on schema-level varray and nested tables

Cause: An attempt was made to modify the limit of a type that was not a schema-level varray and nested table type.

Action: This is not a legal ALTER TYPE command for this type.

PLS-00727: MODIFY LIMIT is supported only on schema-level varray types

Cause: An attempt was made to modify the limit of a type that was not a schema-level varray type.

Action: This is not a legal ALTER TYPE command for this type.

PLS-00728: the limit of a VARRAY can only be increased and to a maximum 2147483647

Cause: An attempt was made to decrease the limit or raise it past 2147483647.

Action: This is not a legal limit for this type, change it.

PLS-00729: only widening of the collection element type is allowed

Cause: Modification to the collection element type did not widen its constraints or attempted to change the type of the element. For NUMBER types, scale and precision can be changed to allow increase in number of digits after and before the decimal point. For VARCHAR2 and RAW type attributes the size can be increased.

Action: Change the constraint specification so as to widen the existing constraints.

PLS-00730: collection element type does not allow modifications

Cause: The element type to modify is not one of VARCHAR2, NUMBER, or RAW.

Action: Only VARCHAR2, NUMBER and RAW collection elements can be modified.

PLS-00731: ALTER TYPE is supported only on schema-level types

Cause: An attempt was made to alter a type that was not schema-level.

Action: ALTER TYPE is not legal for this type.

PLS-00732: Illegal overload of ellipsis in formal parameter list

Cause: An ellipsis and a non-ellipsis type appeared at the same position in separate overload candidates. Currently, if ellipsis types are used they must appear in ALL overload candidates with the same name (regardless of the number or types of their formal parameters) at the same position in the formal parameter list.

Action: Make sure that ellipsis types appear at the same position in all overload candidates.

PLS-00733: RPCs to variable argument functions are not allowed

Cause: Attempted to call a vararg function (a function which contains ellipsis in the formal parameter list) as an RPC.

Action: Do not call vararg functions as an RPC.

PLS-00734: Illegal use of an associational parameter with a formal ellipsis

Cause: Attempted to use an associational actual argument for a formal ellipsis type argument.

Action: Remove associational parameters which correspond to formal ellipsis types.

PLS-00735: Attempted to declare more than one formal ellipsis parameter

Cause: More than one ellipsis (...) was found in a formal parameter specification for a function or procedure

Action: Make sure only one ellipsis appears in a formal parameter specification for any given function or procedure

PLS-00736: user-declared operators are not allowed

Cause: An attempt was made by the user to declare an operator (a function whose name is enclosed in single quotes ('')). Operators may only be declared in package STANDARD.

Action: Remove the single quotes from around the function name, replacing them with double quotes (""") only if needed.

PLS-00737: LIBRARY or ASSEMBLY file specification exceeds the maximum allowed length

Cause: A string of more than expected number of characters was found for the LIBRARY or ASSEMBLY file specification.

Action: Limit the LIBRARY or ASSEMBLY file specification to the appropriate size for the platform.

PLS-00738: REF target <varname>string</varname> changed during compilation

Cause: The current unit contains a REF to a target object. During compilation, the REF's target object was simultaneously changed by a different session. The current unit is therefore invalid and needs to be recompiled to pick up the latest definition of the REF target.

Action: Recompile the unit that has this error.

PLS-00739: FORALL INSERT/UPDATE/DELETE not supported on remote tables

Cause: The current statement refers to remote insert/update/delete for remote object.

Action: Use a FOR loop instead of a FORALL loop or call a remote function or procedure that includes the FORALL INSERT/UPDATE/ DELETE statement.

PLS-00740: ASSEMBLY identity specification exceeds the maximum allowed length

Cause: A string of more than expected number of characters was found for the ASSEMBLY identity specification.

Action: Limit the ASSEMBLY identity specification to the appropriate size.

PLS-00741: <varname>string</varname> must be specified on subprogram <varname>string</varname>'s declaration and definition

Cause: A property was specified on a subprogram's declaration but not on its definition or vice-versa.

Action: Certain subprogram properties (e.g., RESULT_CACHE) must be specified as part of the subprogram declaration and definition. For example, if the property RESULT_CACHE is specified on a subprogram declared in a package specification, then it must also be specified on the subprogram's definition in the package body (and vice-versa).

PLS-00742: field <varname>string</varname> is not yet denotable

Cause: When the fields of a record were declared, one field was used to initialize another, as in: TYPE my_rec IS RECORD (f1 varchar2(10), f2 varchar2(10) := f1); The first field has no value until run time, so it cannot be used to initialize another field.

Action: Remove the illegal field reference.

PLS-00743: ASSEMBLY IDENTITY string is null

Cause: The string provided for the identity clause of an ASSEMBLY was null.

Action: Provide a valid identity string for the ASSEMBLY.

PLS-00744: DOTNET call specification methodname is null

Cause: The string provided for the METHODNAME clause of a DOTNET call specification was null.

Action: Provide a valid METHODNAME for the ASSEMBLY.

PLS-00745: ASSEMBLY CONTEXT string is null

Cause: The string provided for the CONTEXT clause of an ASSEMBLY was null.

Action: Provide a valid CONTEXT string for the ASSEMBLY.

PLS-00746: ASSEMBLY AGENT string is null

Cause: The string provided for the AGENT clause of an ASSEMBLY was null.

Action: Provide a valid AGENT string for the ASSEMBLY.

PLS-00747: .NET assemblies are not supported on this platform

Cause: .NET assemblies were not supported on this platform. .NET assemblies are only supported on 32-bit and 64-bit Windows.

Action: Only attempt to create assemblies on 32-bit or 64-bit Windows.

PLS-00748: compilation terminated due to other errors

Cause: Compilation of the library unit was terminated because of other reported errors.

Action: Fix the other reported errors.

PLS-00751: cannot find PACKAGE SYS_STUB_FOR_PURITY_ANALYSIS

Cause: A top level subprogram (function or procedure) cannot be created if the system package SYS_STUB_FOR_PURITY_ANALYSIS is missing in the Oracle database.

Action: Make sure the package is in the database, and retry the creation

PLS-00752: Table function <varname>string</varname> is in an inconsistent state.

Cause: Some of the internally generated types prefixed with SYS_ have been dropped. These should never be dropped by the user.

Action: Recompile the table function or the package or type that contains the table function.

PLS-00753: malformed or corrupted wrapped unit

Cause: The format of the wrapped unit being compiled is not understood by the compiler. This may be because the unit was edited or modified after it was wrapped.

Action: Rewrap the unit.

PLS-00754: illegal reference to editioned object <varname>string</varname>

Cause: An attempt was made to violate the rule "A noneditioned object may not depend on an editioned object."

Action: Either make this object edited; or do not make the illegal reference.

PLS-00755: SYSAUX tablespace offline while saving identifier data

Cause: The SYSAUX tablespace was offline while attempting to save identifier data. Any identifier data previously collected and saved for the library will be invalid.

Action: Bring the SYSAUX tablespace back online and recompile the object.

PLS-00756: PL/SQL does not support feature "<varname>string</varname>" "<varname>string</varname>" in this environment

Cause: Some host environments of the PL/SQL compiler do not support the full range of PL/SQL features. A construct in the program violated one of the current host's restrictions.

Action: Modify the program to avoid using features that are not supported by this host environment. Check the host environment documentation for specific changes and limitations in PL/SQL features.

PLS-00757: only one column allowed for PARTITION BY VALUE clause

Cause: More than one column was specified for the PARTITION BY VALUE clause.

Action: Remove the additional columns.

PLS-00758: only a NUMBER column is allowed in this context

Cause: The partitioning column of the PARTITION BY VALUE clause was not a NUMBER column.

Action: Change the partitioning column to be a NUMBER column.

PLS-00800: PD<varname>number</varname>(<varname>number</varname> <varname>string</varname> <varname>string</varname>)

PLS-00801: internal error [<varname>string</varname>]

Cause: This is a generic internal error that might occur during compilation or execution. The first parameter is the internal error number.

Action: Report this error as a bug to your Customer Support representative.

PLS-00900: can't find body of unit '<varname>string</varname>'

Cause: At run time, the body of a program unit could not be found. This can happen for one of two reasons. -- First, there may be a unit 'a' which calls a module 'b', where the spec for 'b' exists but not the body. In this case, since the spec is present, there will be no compile-time errors. -- Secondly, this can occur if there is a reference to a sequence outside of the proper context such as a SQL statement. In this case, the "spec" of the sequence reference can be found, but it is invalid to actually run code which references the sequence outside a SQL statement, as in: `i := seq.nextval;`

Action: If caused by the first reason, create a body for the object that is being referenced. If caused by the second reason, move the sequence into a SQL statement. For example, `i := seq.nextval;` can be replaced by: `select seq.nextval into temp from dual; i := temp;`

PLS-00901: the data type of column '<varname>string</varname>' of table '<varname>string</varname>' is not supported

Cause: A column in a database table belongs to a datatype that is not supported by the current release of PL/SQL.

Action: Remove the offending column from the table or copy the desired columns to another table.

PLS-00902: A READ-ONLY bind variable used in OUT or IN-OUT context

Cause: A host variable that is protected from update was used in a context that allows an update.

Action: Check the context and change the use of the host variable, or assign the value of the host variable to a PL/SQL local variable, then use the local variable instead.

PLS-00904: insufficient privilege to access object <varname>string</varname>

Cause: An attempt was made to operate on a database object without the required privilege. This error occurs, for example, if an attempt was made to UPDATE a table for which only SELECT privileges were granted.

Action: Ask the DBA to perform the operation or to grant you the required privilege.

PLS-00905: object <varname>string</varname> is invalid

Cause: An invalid package specification or stored subprogram was referenced. A package specification or stored subprogram is invalid if its source code or any database object it references has been DROPPed, REPLACed, or ALTERed since it was last compiled.

Action: Find out what invalidated the package specification or stored subprogram, then make sure that Oracle can recompile it without errors.

PLS-00906: Compilation is not possible

Cause: The PL/SQL compiler cannot run properly because its operating environment is corrupted. For example, its error message file might be inaccessible.

Action: Check the PL/SQL operating environment, making sure that all files required by the compiler are accessible.

PLS-00907: cannot load library unit <varname>string</varname> (referenced by <varname>string</varname>)

Cause: PL/SQL is unable to find and load a library unit that was previously available. This typically happens when you try to load a unit which references another library unit that is non-existent or invalid.

Action: Provide the needed library unit.

PLS-00908: The stored format of <varname>string</varname> is not supported by this release

Cause: PL/SQL cannot understand the stored format of a library unit. It has been compiled or shrink-wrapped with a version of PL/SQL either too new or too old for this version to understand it.

Action: Recompile the library unit for this version of PL/SQL.

PLS-00909: object <varname>string</varname> is not declared or insufficient privileges to access object <varname>string</varname>

Cause: An object from the operator declaration is not declared, or it is declared but there is no sufficient privileges to access that object.

Action: Declare the object, or ask the DBA to grant the privileges required to access the object.

PLS-00910: insufficient privilege to inherit from type <varname>string</varname>

Cause: An attempt was made to inherit from a type without the required UNDER privilege.

Action: n/a

PLS-00920: parameter plsql_native_library_dir is not set

Cause: A PL/SQL program is being compiled natively, but the compiler parameter plsql_native_library_dir, which denotes the directory to store the native shared objects (DLL), is not set.

Action: The DBA should set this parameter.

PLS-00923: native compilation failed: <varname>string</varname>:<varname>string</varname>

Cause: The native compilation of PL/SQL program has failed because the native shared object (DLL) could not be created successfully.

Action: The DBA should ensure that the commands specified in spnc_commands file are correct.

PLS-00924: native compilation is not supported on this platform

Cause: Native compilation of PL/SQL programs is not supported on this platform.

Action: Compile the PL/SQL program to bytecode by setting the parameter plsql_compiler_flags to INTERPRETED.

PLS-00925: native compilation failed: Unable to create file (<varname>string</varname> <varname>string</varname>)

Cause: Native compilation of a PL/SQL program failed because a file could not be created. It is likely that the system parameter plsql_native_library_dir does not reference a writable, existing directory

Action: Ensure that the system parameter plsql_native_library_dir references a directory which exists, and is writable.

PLS-00950: In this version, PL/SQL tables can not be used in this SQL statement.

Cause: In a SQL statement, a PL/SQL table was referenced incorrectly. For example, the following reference might have been made, but PL/SQL table attributes can only be used in procedural statements: SELECT ename_tab.COUNT INTO name_count WHERE ...

Action: Remove the incorrect reference from the SQL statement.

PLS-00951: <varname>string</varname> Feature is not supported by this release

Cause: PL/SQL cannot understand something in an imported library unit. It uses some feature either too new or too old for this version to understand it.

Action: Recompile the imported library unit with this version of PL/SQL, to discover more precisely what feature is not supported.

PLS-00960: RPCs cannot use parameters with schema-level object types in this release

Cause: Schema-level object types, or types which recursively use such types, were used in an RPC, which is not permitted. For example: create type foo as object (...) create package my_pack is type my_rec is record(v foo); -- on a remote server: x my_pack.my_rec@rpc; -- illegal attempt to use type my_rec

Action: Use only PL/SQL-defined types in RPC calls. It may be necessary to add extra code to element-wise copy schema-level types into local types in order to move such data through an RPC.

PLS-00970: The class name of a method must match that of EXTERNAL NAME clause in the type header

Cause: The class name defined as part of the method signature does not match the one defined in the type header in the EXTERNAL NAME clause. create type foo as object EXTERNAL NAME 'foo' LANGUAGE JAVA (... MEMBER FUNCTION my (number) return number EXTERNAL NAME 'bar.func(oracle.sql.NUMBER) return oracle.sql.NUMBER', ..);

Action: Either omit the class name from the method signature or use the one defined in the type header.

PLS-00989: Cursor Variable in record, object, or collection is not supported by this release

Cause: 3.0 Implementation Restriction for Ref Cursors

Action: n/a

PLS-00990: Index Tables of Cursor Variables are disallowed

Cause: 2.2 Implementation Restriction for Ref Cursors

Action: n/a

PLS-00992: Cursor Variables cannot be FETCH'ed from

Cause: 2.2 Implementation Restriction for Ref Cursors

Action: n/a

PLS-00993: Cursor variables cannot be passed as forwarded RPC arguments or results

Cause: An attempt was made to pass a cursor variable to or from a remote subprogram by way of a forwarded RPC, which is not allowed. For example, from a client-side tool, a procedure on a remote database cannot be used to open a cursor variable because remote subprograms cannot return the values of cursor variables.

Action: Change the subprogram call to reference the local database.

PLS-00994: Cursor Variables cannot be declared as part of a package

Cause: An attempt was made to declare a cursor variable in a package specification, which is not allowed. Although REF CURSOR types can be defined in a PL/SQL block, subprogram, or package, cursor variables can be declared only in a block or subprogram.

Action: Move the cursor variable declaration into a PL/SQL block or subprogram.

PLS-00995: unhandled exception # <varname>string</varname>

Cause: An exception was raised for which no handler was found. If it cannot find a handler for a raised exception, PL/SQL returns an unhandled exception to the host environment. The number embedded in the message is an Oracle error code listed in this manual.

Action: Fix the condition that raised the exception, write an appropriate exception handler, or use the OTHERS handler. If there is an appropriate handler in the current block, the exception was raised in a declaration or exception handler, and therefore propagated immediately to the enclosing block.

PLS-00996: out of memory

Cause: A request from PL/SQL for more memory failed.

Action: Make sure that you are not referencing the wrong row in a PL/SQL table and that the program is not recursing too deeply.

PLS-00997: no cursor return types allowed in this beta version

Cause: Cursor return types have bugs, and it is best to disable them for now.

Action: n/a

PLS-00998: implementation restriction (may be temporary)**PLS-00999: implementation restriction (may be temporary) <varname>string</varname>****PLS-01400: Use of '||' token**

Cause: Use of '||' token in expressions is not in ANSI's grammar. This corresponds to the "binary_add_op"'s reduction to a "CAT_" in plsql.y

Action: n/a

PLS-01401: Identifier over 18 characters long

Cause: Identifiers over 18 characters long are not allowed under the ANSI grammar.

Action: n/a

PLS-01402: Use of quoted identifier

Cause: The use of quoted identifiers is a PL/SQL extension and is not allowed under the ANSI grammar.

Action: n/a

PLS-01403: Comment delimiters /* */

Cause: C-style comments (introduced with the '/' and '*' characters) are not part of the ANSI grammar. To conform with ANSI, comments must be preceded by the ANSI comment introducer, '--', and must not contain a newline. If someone can figure out a way to make this message look less cheesy without ending up with nested comments, be my guest.

Action: n/a

PLS-01404: ANSI Identifiers can only consist of letters, digits, and the underscore character

Cause: ANSI identifiers can only consist of letters, digits, and the underscore character. PL/SQL allows "#" and "\$" in identifiers, but these are not ANSI.

Action: n/a

PLS-01405: Under ANSI's grammar, numeric data represented in exponent notation must use an uppercase E

Cause: Under ANSI's grammar, numeric data represented in exponent notation must use an uppercase "E". Example: 3.45E-6 is ANSI, but 3.45e-6 is not.

Action: n/a

PLS-01406: An identifier has been found that is considered a keyword in ANSI's grammar but not in PL/SQL's

Cause: An identifier has been found that is considered a keyword in ANSI's grammar but not in PL/SQL's.

Action: n/a

PLS-01407: One of the identifiers CHAR, CHARACTER, or INTEGER has been redefined by the programmer

Cause: One of the identifiers "CHAR", "CHARACTER", or "INTEGER" (all ansi keywords) has been redefined by the programmer.(special case of 1406, above).

Action: n/a

PLS-01408: Use of '&' token

Cause: Use of '&' token in expressions is not in ANSI's grammar.

Action: n/a

PLS-01409: Use of 'PRIOR_' token

Cause: Use of 'PRIOR_' token in expressions is not in ANSI's grammar.

Action: n/a

PLS-01410: Use of 'MOD' token

Cause: Use of 'MOD' token in expressions is not in ANSI's grammar.

Action: n/a

PLS-01411: Use of 'REM' token

Cause: Use of 'REM' token in expressions is not in ANSI's grammar.

Action: n/a

PLS-01412: Use of 'EXP' token

Cause: Use of 'EXP' token in expressions is not in ANSI's grammar.

Action: n/a

PLS-01413: Use of NULL an expression

Cause: Use of NULL an expression not in ANSI's grammar.

Action: n/a

PLS-01414: Use of qualified expression here

Cause: Use of qualified expression here is not in ANSI's grammar.

Action: n/a

PLS-01415: Use of aggregate value here

Cause: Use of aggregate value here is not in ANSI's grammar.

Action: n/a

PLS-01416: Use of <varname>id</varname> (<varname>value</varname>...) here

Cause: Use of <varname>id</varname> (<varname>value</varname>...) here is not in ANSI's grammar.

Action: n/a

PLS-01417: Use of %%attribute

Cause: Use of %%attribute value here is not in ANSI's grammar.

Action: n/a

PLS-01418: Subquery cannot include set operators in ANSI's grammar

Cause: Subquery cannot include set operators in ANSI's grammar.

Action: n/a

PLS-01419: Subquery must have either '*' or exactly one column in its select list

Cause: Subquery must have either '*' or exactly one column in its select list according to ANSI's grammar.

Action: n/a

PLS-01420: INTERSECT and MINUS set operators are not ANSI

Cause: INTERSECT and MINUS set operators are not ANSI

Action: n/a

PLS-01421: FOR UPDATE clause

Cause: FOR UPDATE clause is not in ANSI's grammar.

Action: n/a

PLS-01422: Aliases

Cause: Aliases are not in ANSI's grammar.

Action: n/a

PLS-01423: Subquery on right-hand-side in set clause

Cause: Subquery on right-hand-side in set clause is not in ANSI's grammar.

Action: n/a

PLS-01424: Non-ANSI order of clauses

Cause: ANSI specifies an ordering to clauses in a table-expression which PL/SQL doesn't. The ordering according to ANSI must be: (1) from clause (2) where clause (3) group-by clause (4) having clause In PL/SQL, the from clause must come first, and the clauses after it can appear in any order (with the addition of the non-ansi connect-by clause).

Action: n/a

PLS-01425: Connect-by clause

Cause: ANSI doesn't allow connect-by clauses.

Action: n/a

PLS-01450: This <varname>value expression</varname> contains a nonconforming data type

Cause: This <varname>value expression</varname> contains a nonconforming data type. Section 4.2 of X3H2, "Data types" states that: "A nonnull value is either a character string or a number." Many builtin functions in STANDARD will be flagged with this warning by means of a pragma.

Action: n/a

PLS-01451: The data types of these <varname>value expressions</varname> must be comparable

Cause: The data types of these <varname>value expressions</varname> must be comparable. Section 4.2 of X3H2, "Data types", states that: "A character string and a number are not comparable values." Many builtin functions in STANDARD will be flagged with this warning by means of a pragma. This warning will be place on data-type coercion functions, for example, TO_CHAR(<varname>number</varname>), that are inserted in OracleSQL to allow non-conforming data type combinations.

Action: n/a

PLS-01452: This function is not part of the ANSI standard

Cause: This function is not part of the ANSI standard. This warning is used to flag such functions as "POWER" that are not mentioned in the ANSI specifications.

Action: n/a

PLS-01453: This procedure is not part of the ANSI standard

Cause: This procedure is not part of the ANSI standard. This warning is used to flag such procedures as "STOP" that are not mentioned in the ANSI specifications.

Action: n/a

PLS-01454: No operator may be used with values of data type CHAR

Cause: No operator may be used with values of data type "character string". Section 5.9, "<varname>value expression</varname>", syntax rule 3, of X3H2 states: "If the data type of a <varname>primary</varname> is character string, then the <varname>value expression</varname> shall not include any operators." This warning is placed on many functions in STDBASE that take CHAR args.

Action: n/a

PLS-01455: The predicates IS NULL and IS NOT NULL are defined only for column specifications

Cause: The predicates "IS NULL" and "IS NOT NULL" are defined only for column specifications, not for any other expressions. Section 5.15, "<varname>null predicate</varname>", indicates that in the predicate "x IS NULL", x must be a column, and may not be any other kind of expression.

Action: n/a

PLS-01456: Name length cannot exceed 3.

PLS-01458: The set clause in an UPDATE statement requires a column name of length 1

Cause: The set clause in an UPDATE statement requires a column name of length 1. Sect. 8.11, 8.12

Action: n/a

PLS-01460: Cannot access object on a remote host

Cause: Cannot access object on a remote host.

Action: n/a

PLS-01463: STDDEV is not a standard set function

Cause: STDDEV is not a standard set function.

Action: n/a

PLS-01464: VARIANCE is not a standard set function

Cause: VARIANCE is not a standard set function.

Action: n/a

PLS-01466: Null strings are not allowed

Cause: Null strings are not allowed.

Action: n/a

PLS-01467: The value list of the IN predicate, if not a subquery, must contain only value_specifications

Cause: The value list of the IN predicate, if not a subquery, must contain only value_specifications (i.e. literals and PL/SQL or embedded variables).

Action: n/a

PLS-01468: The first argument of the like-predicate must be a column of type character string

Cause: The first argument of the like-predicate must be a column of type character string.

Action: n/a

PLS-01469: ANSI standard does not permit records

Cause: ANSI standard does not permit records.

Action: n/a

PLS-01470: The escape character in the like-predicate must be a literal or a variable of type CHAR

Cause: The escape character in the like-predicate must be a literal or a variable of type character.

Action: n/a

PLS-01471: The keyword DISTINCT must be present in a COUNT(DISTINCT sim_expr)

Cause: The keyword DISTINCT must be present in a COUNT(DISTINCT sim_expr). Sect 5.8

Action: n/a

PLS-01472: In a set_function_specification, if DISTINCT is present, the expression must be a column_specification

Cause: In a set_function_specification, if DISTINCT is present, the expression must be a column_specification.

Action: n/a

PLS-01473: Use <varname></varname> instead of != or ~=

Cause: Use <varname></varname> instead of != or ~=. Sect 5.11.

Action: n/a

PLS-01474: Use of ANY is non_ANSI

Cause: Due to the combining of comparison_predicate and quantified_predicate, we may have something like sim_expr = ANY_sim_expr, which is nonetheless accepted by kernel.

Action: n/a

PLS-01500: Unions are not allowed in the definition of a view

Cause: Unions are not allowed in the definition of a view. Sect. 6.9

Action: n/a

PLS-01501: Options in CREATE TABLE statement is non-ANSI.

Cause: CREATE TABLE allows only the definition of the structure of a table. None of the .SPACE__name. .PCTFREE__numeric_literal. .cluster. is ANSI. Sect. 6.2

Action: n/a

PLS-01502: Constraint name and constraint status are non-ANSI.

Cause: Constraint name and constraint status are non-ANSI. Sect. 6.3

Action: n/a

PLS-01503: The expression in a SET clause must not include a set function

Cause: The expression in a SET clause must not include a set function. Sect. 8.12.

Action: n/a

PLS-01504: Use of AS phase in CREATE TABLE statement is non_ANSI

Cause: CREATE TABLE allows only the definition of the structure of a table. Use of AS phase in CREATE TABLE statement is non-ANSI.

Action: n/a

PLS-01505: ALTER is non-ANSI

Cause: ALTER is non-ANSI

Action: n/a

PLS-01506: CREATE INDEX is non-ANSI

Cause: CREATE INDEX is non-ANSI

Action: n/a

PLS-01507: DROP is non-ANSI

Cause: DROP is non-ANSI

Action: Sect. 6.2

PLS-01701: Illegal syntax in ROLLBACK WORK statement

Cause: Illegal syntax in ROLLBACK WORK statement.

Action: n/a

PLS-01702: Illegal syntax in COMMIT WORK statement

Cause: Illegal syntax in COMMIT WORK statement.

Action: n/a

PLS-01703: Cursor name in CLOSE statment must be of length 1

Cause: Cursor name in CLOSE statment must be of length 1.

Action: n/a

PLS-01704: The expressions in a sort clause must be column specs or unsigned integers, with optional ASC or DESC

Cause: The expressions in a sort clause may only be column specifications or unsigned integers, followed by optional ASC or DESC.

Action: n/a

PLS-01705: table specified by a cursor not updatable if cursor specification has a UNION or ORDER_BY

Cause: Missing keyword FROM.

Action: n/a

PLS-01707: In positioned DELETE or UPDATE statement, table must be identified in specification of cursor

Cause: In a positioned DELETE or UPDATE statement, the table deleted from or updated must be identified in the specifictation of the cursor.

Action: n/a

PLS-01708: In searched DELETE, UPDATE or INSERT, table must not appear in FROM clause of subqueries in search condition

Cause: In a searched DELETE, UPDATE or INSERT statement, the table affected must not appear in a FROM clause in any of the subqueries in the search condition.

Action: n/a

PLS-01709: value list of INSERT statement, if specified with value list rather than subquery, must be value specification

Cause: In an INSERT statement, the insert value list, if specified with a value list rather than a subquery, must be value specifications, i.e. no compound expressions or column references. Sect 8.7.

Action: n/a

PLS-01710: In a positioned DELETE or UPDATE statement, the cursor name must be of length 1

Cause: In a positioned DELETE or UPDATE statement, the cursor name must be of length 1.

Action: n/a

PLS-01711: A SELECT statement may not contain ORDER_BY, HAVING, or GROUP_BY clause

Cause: A SELECT statement may not contain ORDER_BY, HAVING, or GROUP_BY clause. Sect. 8.10.

Action: n/a

PLS-01712: ANSI does not allow bind variables as INDICATORS

Cause: ANSI does not allow bind variables as INDICATORS

Action: n/a

PLS-01713: The constraints on these types do not match

Cause: The constraints on these types do not match

Action: n/a

PLS-01714: ANSI expects a column name not a literal value here

Cause: ANSI expects a column name not a literal value here

Action: n/a

PLS-01715: ANSI does not accept SAVEPOINTS**PLS-01900: : character to number conversion error**

Cause: There was a failure while converting a character string into a numeric value.

Action: Verify that all character strings assigned to number variables have valid numeric value interpretations.

PLS-01901: : host bind array too small

Cause: PL/SQL was unable to transfer data into a host array because the array is too small.

Action: Increase the size of the host array.

PLS-01902: : hex to raw conversion error

Cause: There was a failure while converting a hexadecimal string to a raw.

Action: Verify that the hexadecimal variable to be converted contains a valid hexadecimal value.

PLS-01903: : non-integer error number

Cause: SQLERRM() was called with a non-integer value.

Action: Make sure SQLERRM() is called with an integer value.

PLS-01904: : NULL index table key value

Cause: An attempt was made to index into an index table with a NULL key value.

Action: Make sure key values used to index into index tables are non-NULL.

PLS-01905: : character string buffer too small

Cause: An error was encountered while moving a character string from a source to a destination. This error occurs if, for example, an attempt is made to move a character string of 10 characters into a 1 character buffer. The cause of this error may not always be obvious. For example, the following will result in this error: `a varchar2(1); b number; b := 10; a := b;` An error results because an implicit conversion causes the number 10 to become the character string '10', which does not fit in the character buffer of 1 allocated for the variable a.

Action: First, look for character string assignment statements where the buffer size is mismatched. If there are none found, then consider the implicit conversion case illustrated in the example above.

PLS-01906: : raw variable length too long

Cause: The length of a raw variable being copied or assigned was too long to fit into its destination.

Action: Make sure the raw variable length is correct.

PLS-01907: : number precision too large

Cause: The number being copied or assigned had too many digits to the left of the decimal and did not fit into its destination. In other words, there is a number precision mismatch. This error may also occur if, for example, an attempt is made to assign a character string to a number, as demonstrated below. `a varchar2(4); b number(1,1); a := '10.1'; b := a;`

Action: First, check explicit number precision value mismatches. If none are found, then consider implicit conversions of other types to numbers, including conversions performed during binds.

PLS-01908: : RETURNING INTO buffer too small

Cause: PL/SQL determined that a server side DML with a RETURNING INTO clause does not use a buffer that is large enough to hold the data being returned.

Action: Increase the size of the RETURNING INTO clause buffer.

PLS-01909: : cannot assign supertype instance to subtype

Cause: An attempt was made to assign or copy a supertype instance to a container (destination) that can only hold a subtype instance.

Action: Make sure the runtime type of the source of the assignment or copy is the same type as the destination or is a subtype of the destination type

PLS-01910: : associative array shape is not consistent with session parameters

Cause: NLS parameters affecting comparison of keys have been altered dynamically. The associative array's index is invalid.

Action: Avoid using associative arrays with string keys in applications which require frequent changes of NLS_COMP and/or NLS_SORT.

PLS-01911: : associative array key violates its type constraints

Cause: The key value of an element being inserted into an associative array violates the key type constraints.

Action: Relax the constraints if the key value is meant to be acceptable. Otherwise, apply a valid key value when inserting an element.

PLS-01912: : instance must of be of type '<varname>string</varname>'

Cause: The run-time type of the instance is not the declared type. e.g. If the return value of a user defined constructor is wrong.

Action: Return the correct type.

PLS-01913: : instance must of be of type '<varname>string</varname>' or one of its subtypes

Cause: The run-time type of the instance is the not declared type or one of its subtypes. e.g. TREAT(supertype AS subtype) fails.

Action: Catch the exception.

PLS-01914: duplicate SECURITY specification in subprogram expression

Cause: The subprogram was found to have two SECURITY specifications.

Action: Remove one of the SECURITY specifications.

PLS-01915: duplicate ASSEMBLY specification in subprogram expression

Cause: The subprogram was found to have two ASSEMBLY specifications.

Action: Remove one of the ASSEMBLY specifications.

PLS-01916: SECURITY level specification exceeds ASSEMBLY SECURITY specification

Cause: The security level specified in the callspec exceeds the maximum security level allowed by the assembly.

Action: Lower the security level specified in the callspec to match the maximum security level specified in the assembly.

PLS-01917: illegal reference to package STANDARD item '<varname>string</varname>'

Cause: The item is intended for internal use and must not be referred to in user code.

Action: Remove the reference and use syntax that provides the necessary functionality.

PLS-01918: 9.2 and earlier wrap formats are not permitted

Cause: An attempt was made to compile a unit that was wrapped using 9.2 or earlier version of the wrap utility. Wrapped source created by 9.2 and earlier versions of wrap is not permitted on this database.

Action: Wrap the source using 10g or later versions of the wrap utility. Alternately, set the initialization parameter PERMIT_92_WRAP_FORMAT parameter to TRUE.

PLW-05000 to PLW-07206

PLW-05000: mismatch in NOCOPY qualification between specification and body

Cause: The indicated parameter was declared with the NOCOPY hint in the subprogram specification but not in the body, or it was declared with the NOCOPY hint in the body but not in the specification.

Action: Ensure that the specification and the body agree in their use of NOCOPY. If this mismatch is not corrected, the program will obey the declaration given in the specification, ignoring that in the body.

PLW-05001: previous use of '<varname>string</varname>' (at line <varname>string</varname>) conflicts with this use

Cause: While looking for prior declarations of a variable, constant, or label, the compiler found another declaration with the same name in the same scope. Or, the headers of subprogram in a package specification and body were not identical.

Action: Check the spelling of the variable, constant, or label name. Also check the names of all parameters and exceptions declared in the same scope. Then, remove or rename the object with the duplicate name. Or, change the headers of the packaged subprogram in the package specification or body so that they are identical.

PLW-05002: same actual parameter(<varname>string</varname> and <varname>string</varname>) is not a good programming practice**PLW-05003: same actual parameter(<varname>string</varname> and <varname>string</varname>) at IN and NOCOPY may have side effects**

Cause: The indicated parameter was declared with the NOCOPY hint in the subprogram specification but not in the body, or it was declared with the NOCOPY hint in the body but not in the specification.

Action: Ensure that the specification and the body agree in their use of NOCOPY. If this mismatch is not corrected, the program will obey the declaration given in the specification, ignoring that in the body.

PLW-05004: identifier <varname>string</varname> is also declared in STANDARD or is a SQL builtin

Cause: The indicated identifier was also either: o) declared in package STANDARD, or o) a SQL builtin function, or o) a pseudo-column. This situation can result in name resolution issues since the STANDARD/builtin declaration will be chosen over the local declaration in SQL statements; however the local declaration will be chosen over the STANDARD/builtin declaration outside SQL scope. (See the documentation on PL/SQL name resolution.)

Action: Either: o) rename the given identifier, o) qualify any references to the identifier with the containing scope's name, or o) make sure the intended resolution occurs if using the identifier in SQL scope.

PLW-05005: subprogram <varname>string</varname> returns without value at line <varname>string</varname>

Cause: A function terminated without a return value. RETURN statements with values are required for all PL/SQL functions.

Action: Inspect function source code to ensure that every RETURN statement returns a value and that a function does not terminate by executing its END statement. Notice that this message may appear at the call site for a function if the function call was inlined and if the called function did not terminate properly.

PLW-05006: shadow type generation resulted in warning: <varname>string</varname>

Cause: Compilation of a table function causes the creation of internally- generated types. A problem occurred during creation of these types which was not severe enough to prevent the creation of the types, but which may impact the usage of the table function. See the accompanying error message for more information.

Action: Fix the issue reported in the accompanying error message.

PLW-05007: first parameter to pragma INLINE must be an identifier

Cause: The first parameter to the pragma INLINE must be an identifier denoting a procedure or function.

Action: Use a procedure or function name

PLW-05008: illegal number of arguments for pragma <varname>string</varname>

Cause: The number of arguments (actual parameters) passed to the named pragma (compiler directive) is incorrect. A required argument was omitted from the argument list, or the pragma syntax is faulty (for example, a comma might be missing between two parameters).

Action: Supply the missing argument or correct the faulty syntax.

PLW-05009: pragma INLINE may not appear in a declaration list

Cause: Pragma INLINE applies only to the following statement, and can not appear immediately prior to a declaration

Action: Remove the pragma.

PLW-05010: duplicate pragma INLINE on procedure '<varname>string</varname>'

Cause: Pragma INLINE was applied twice to the same procedure in the same statement. The procedure will be inlined only if all duplicates specify a control value of 'YES'

Action: Remove the duplicate pragma.

PLW-05011: pragma INLINE for procedure '<varname>string</varname>' does not apply to any calls

Cause: A pragma INLINE was provided, but there was no call to the mentioned procedure in the next statement.

Action: Remove the unnecessary pragma.

PLW-05012: pragma INLINE for procedure '<varname>string</varname>' could not be applied

Cause: A pragma INLINE(<varname>name</varname>, 'yes') was used, but the named procedure could not be inlined.

Action: Eliminate the reasons which are blocking the inlining. See the documentation for possible problems.

PLW-05013: second parameter to pragma INLINE '<varname>string</varname>' is not 'YES' or 'NO'

Cause: The second parameter to the pragma INLINE governs whether or not a procedure call can be inlined. The only legal values are 'YES', meaning that the compiler should attempt to inline the call, and 'NO', meaning that the compiler must not inline the call.

Action: Use 'YES' or 'NO' as appropriate.

PLW-05014: Pragma <varname>string</varname> cannot be specified here

Cause: The pragma was specified in an inappropriate context.

Action: Remove or relocate the misplaced pragma. Check the documentation to determine the correct context for this pragma.

PLW-05015: implementation restriction - too many debug records

Cause: The program is so large that it overflowed a compiler limit on the size of the debug symbol table. The module was compiled with partial debugging information.

Action: Compile the module with PLSQL_DEBUG=FALSE, or split it into multiple modules

PLW-05016: INTO clause should not be specified here

Cause: The INTO clause was incorrectly specified on a cursor declaration. It should have been specified on the FETCH statement.

Action: Relocate the misplaced clause.

PLW-05017: prefix of the expression will be ignored

Cause: Generalized invocation with explicit SELF and a dotted name was used to call the type method causing the prefix of the dotted name to be ignored.

Action: Do not use a dotted name to invoked type method in this context.

PLW-05018: unit <varname>string</varname> omitted optional AUTHID clause; default value DEFINER used

Cause: The AUTHID clause is missing. The unit is allowed to have an AUTHID clause. If the clause is missing, DEFINER's rights are used by default. Good practice suggests that an explicit AUTHID clause should always be used.

Action: Write an explicit AUTHID clause for the unit.

PLW-05019: the language element near keyword <varname>string</varname> is deprecated beginning with version <varname>string</varname>

Cause: A deprecated language element was used. The particular language element is deprecated in PL/SQL versions greater than or equal to the version number given in the message text.

Action: The deprecated language element should be deleted or rewritten. Deprecated PL/SQL language elements become obsolete one version after they are deprecated. An obsolete language element will no longer be supported and use of the element will result in an error.

PLW-05020: parameter name must be an identifier

Cause: A string literal was used as the parameter name in a call that used named notation.

Action: Change the code to use an identifier for the parameter name.

PLW-05021: exception <varname>string</varname> does not have a pragma EXCEPTION_INIT

Cause: A user-defined exception was declared but it was not given an exception number by the pragma EXCEPTION_INIT. Good practice suggests that all user-defined exceptions should be explicitly numbered.

Action: Add a pragma EXCEPTION_INIT to give the exception a number.

PLW-05022: argument '<varname>string</varname>' is not comparable

Cause: An argument to either IN, BETWEEN or MEMBER OF was not of a comparable type. Or, if the argument was of an object type, no MAP or ORDER method was specified for the type.

Action: Use appropriate arguments, or specify a MAP or ORDER method.

PLW-05023: PL/Scope is disabled because SYSAUX is offline.

Cause: PL/Scope was disabled for the current PL/SQL unit compilation because the SYSAUX tablespace is or was offline at the time of compilation. Note that PL/Scope stores identified metadata in the SYSAUX tablespace, and thus cannot function when SYSAUX is offline.

Action: Verify SYSAUX is online and recompile the PL/SQL unit.

PLW-05024: Do not use BULK COLLECT clause in a cursor declaration

Cause: A BULK COLLECT clause was specified in a cursor declaration.

Action: Remove the BULK COLLECT clause from the cursor declaration, moving it to the FETCH statement or statements, if appropriate.

PLW-05400: This is a severe warning #1

PLW-05401: This is a severe warning #2

PLW-05999: implementation restriction (may be temporary) <varname>string</varname>

PLW-06000: This is a informational warning #1

PLW-06001: This is a informational warning #2

PLW-06002: Unreachable code

Cause: Static program analysis determined that some code on the specified line would never be reached during execution. This may have been caused by expression evaluation at compile time.

Action: Inspect program logic for possible defects. Disable the warning if much code is made unreachable intentionally and the warning message is more annoying than helpful.

PLW-06003: unknown inquiry directive '<varname>string</varname>'

Cause: An unknown inquiry directive was used. The inquiry directive is neither predefined nor user-defined.

Action: Use a predefined inquiry directive or define the inquiry directive.

PLW-06004: inlining of call of procedure '<varname>string</varname>' requested

Cause: A pragma INLINE(, 'YES') referring to the named procedure was found. The compiler will, if possible, inline this call.

Action: n/a

PLW-06005: inlining of call of procedure '<varname>string</varname>' was done

Cause: A call to the procedure was inlined.

Action: n/a

PLW-06006: uncalled procedure "<varname>string</varname>" is removed.

Cause: Static program analysis determined that the procedure can never be called or executed. Therefore, it has been removed to save time during compilation and space during execution.

Action: Inspect program logic for possible defects. Disable the warning if the procedure is useful but simply not being used right now and the warning message is more annoying than helpful.

PLW-06007: procedure "<varname>string</varname>" is removed because optimization removed calls

Cause: Static program analysis determined that the procedure can never be called or executed. Therefore, it has been removed to save time during compilation and space during execution.

Action: Inspect program logic for possible defects. Disable the warning if the procedure is useful but simply not being used right now and the warning message is more annoying than helpful.

PLW-06008: call of procedure '<varname>string</varname>' will not be inlined

Cause: A pragma INLINE(, 'NO') referring to the named procedure was found. The compiler is prevented from inlining this call.

Action: n/a

PLW-06009: procedure "<varname>string</varname>" OTHERS handler does not end in RAISE or RAISE_APPLICATION_ERROR

Cause: The OTHERS handler can exit without executing some form of RAISE or a call to the standard procedure RAISE_APPLICATION_ERROR.

Action: Good programming practices suggest that OTHERS handlers must always pass an exception upward. Inspect the program logic to determine if the handler code needs revision.

PLW-06010: keyword "<varname>string</varname>" used as a defined name

Cause: A PL/SQL or SQL keyword was used as defined name. Although legal, this is not recommended.

Action: Choose another name for the defined item.

PLW-06011: detailed dependency information discarded due to size limitations

Cause: The compiled unit was so large that the compiler could not store detailed dependency information that could be used to quickly recompile the unit if it was invalidated.

Action: Break up the unit into smaller units.

PLW-06012: SQL statement cannot be inlined. <varname>string</varname>

Cause: The SQL statement could not be inlined.

Action: n/a

PLW-06013: deprecated parameter PLSQL_DEBUG forces PLSQL_OPTIMIZE_LEVEL <= 1

Cause: The PLSQL_DEBUG parameter was set to TRUE forcing the optimization level to 1 (or 0 if the user selected 0) regardless of the setting of the PLSQL_OPTIMIZE_LEVEL parameter to a higher level

Action: Do not use the PLSQL_DEBUG parameter; it is deprecated. Instead, set the PLSQL_OPTIMIZE_LEVEL parameter to 1.

PLW-06014: PLSQL_OPTIMIZE_LEVEL <= 1 turns off native code generation

Cause: Native code generation was not done because the optimization was set to 1 or less.

Action: The goal of native code generation is high performance and a low optimization level defeats that purpose. Either request a higher optimization level or remove the request for native code generation. Note that using the deprecated parameter PLSQL_DEBUG also forces the optimization level to 1; do not use this parameter when native code generation is desired.

PLW-06015: parameter PLSQL_DEBUG is deprecated; use PLSQL_OPTIMIZE_LEVEL = 1

Cause: The PLSQL_DEBUG parameter was specified.

Action: The parameter PLSQL_DEBUG no longer controls the generation of debugging information by the PL/SQL compiler; debugging information is always generated and no special parameter is needed.

PLW-06016: unit <varname>string</varname> is too large; native code generation turned off

Cause: Because the program was extremely large, analysis took an excessive amount of time or space to complete causing native compilation to be turned off.

Action: The goal of native code generation is high performance and the compiler does extensive analysis of the program. If possible, reduce the size of the largest procedure, or split the program unit into multiple units.

PLW-06017: an operation will raise an exception

Cause: An operation near this location is certain to raise an exception during execution; it may be a programming error because it is not an explicit RAISE.

Action: The compiler has determined that some operation near this location is certain to raise an exception during execution. This may be a programming error; consider rewriting the code. If the intention is to raise an exception, use an explicit RAISE statement.

PLW-06018: an infinity or NaN value is computed or used

Cause: An operation near this location computes or uses an infinite NUMBER, BINARY_FLOAT, or BINARY_DOUBLE value or a NaN BINARY_FLOAT or BINARY_DOUBLE value.

Action: The compiler has determined that an operation near this location computes or uses either an infinity or a not-a-number (NaN) value. This may indicate a programming error; consider rewriting the code. If the intention is to use a BINARY_FLOAT or a BINARY_DOUBLE non-numeric value, use the appropriate constant from STANDARD rather than computing the value. Some valid uses exist for these values; the warning will still appear in those cases. The use of infinite NUMBER values is not well-defined and should be avoided.

PLW-07200: This is a performance warning #1**PLW-07201: This is a performance warning #2****PLW-07202: bind type would result in conversion away from column type**

Cause: The column type and the bind type do not exactly match. This will result in the column being converted to the type of the bind variable. This type conversion may prevent the SQL optimizer from using any index the column participates in. This may adversely affect the execution performance of this statement.

Action: To make use of any index for this column, make sure the bind type is the same type as the column type.

PLW-07203: parameter '<varname>string</varname>' may benefit from use of the NOCOPY compiler hint

Cause: The mode of the specified parameter was IN OUT or OUT. Use of the NOCOPY compiler hint may speed up calls to this subprogram.

Action: Change the mode of the parameter to explicitly use the NOCOPY compiler hint. For example, if your subprogram declaration is: PROCEDURE proc(p1 IN OUT CLOB); you can change it to: PROCEDURE proc(p1 IN OUT NOCOPY clob); to get the benefit of the NOCOPY hint. For member procedures or functions in object types, you may have to explicitly declare the SELF parameter as illustrated in the following: MEMBER PROCEDURE proc(SELF IN OUT NOCOPY MY_TYPE);

PLW-07204: conversion away from column type may result in sub-optimal query plan

Cause: The column type and the bind type do not exactly match. This may result in the column being converted to the type of the bind variable. This type conversion may prevent the SQL optimizer from using any index the column participates in. This may adversely affect the execution performance of this statement.

Action: To make use of any index for this column, make sure the bind type is the same type as the column type.

PLW-07205: SIMPLE_INTEGER is mixed with BINARY_INTEGER or PLS_INTEGER

Cause: Using SIMPLE_INTEGER and BINARY_INTEGER or PLS_INTEGER arguments in the same arithmetic expression may inhibit certain optimizations.

Action: Try using SIMPLE_INTEGER values only if the expression is computed on a performance critical path.

PLW-07206: analysis suggests that the assignment to '<varname>string</varname>' may be unnecessary

Cause: This assignment may be unnecessary; the PL/SQL optimizer could not find any further use of the variable which was being set. If the assignment was being done for some side-effect such as raising a specific exception, the compiler may not have been able to understand the side-effect and this warning may be inappropriate.

Action: If the assignment sets a variable whose value will not be used again and there are no side-effects (exceptions or calls) to consider, remove the assignment for better performance. If the assignment was in place to raise a specific known exception, replace the assignment with a RAISE statement.

PRCA-01000 to PRCA-01126

PRCA-01000: ASM Disk Group {0} does not exist

Cause: An attempt failed to retrieve an ASM disk group that was not configured.

Action: Create the diskgroup using sqlplus if the specified diskgroup does not exist. Mount the diskgroup in ASM which registers the diskgroup with CRS.

PRCA-01001: ASM Disk Group resource does not exist

Cause: There was no disk group resource registered with CRS.

Action: Create the diskgroup using sqlplus and mount the diskgroup in ASM which registers the diskgroup with CRS.

PRCA-01002: Failed to remove CRS resource {0} for ASM Disk Group {1}

Cause: An attempt to remove the CRS resource for the specified ASM Disk Group failed.

Action: Examine the accompanying error messages for details.

PRCA-01003: Failed to create ASM {0} resource {1}

Cause: An attempt to add the CRS resource for ASM failed.

Action: Ensure that the CRS stack is running, the user running srvctl add asm is also the owner of the CRS home, and examine the accompanying error message for details.

PRCA-01005: Failed to retrieve server parameter file of ASM {0}

Cause: Cannot retrieve ASM server parameter file.

Action: Retry the request after ensuring that the CRS stack is running, the ASM resource has been configured, and the user has read permission on the ASM resource.

PRCA-01006: Failed to update server parameter file {0} of ASM {1}

Cause: Unable to update the ASM server parameter file.

Action: Retry the request after ensuring that the CRS stack is running, the ASM resource has been configured, and the user has update permission on the ASM resource.

PRCA-01007: ASM {0} is not using initialization parameters: {1}

Cause: The specified ASM instance does not use the initialization parameters shown.

Action: Examine the accompanying error messages for details.

PRCA-01016: Failed to remove ASM resource {0} for ASM instance {1}

Cause: An attempt to remove the specified ASM configuration failed.

Action: Examine the accompanying error message for details.

PRCA-01017: ASM {0} does not exist

Cause: ASM is not configured yet.

Action: Configure ASM and then retry.

PRCA-01018: Failed to retrieve ASM instance list for ASM {0}

Cause: Failed to retrieve the list of ASM instances.

Action: Make sure that the crs stack is up and the ASM resource has been configured.

PRCA-01019: ASM {0} is not running

Cause: The ASM resource does not have any running instances.

Action: Use 'srvctl start asm' command to start the asm resource.

PRCA-01020: Unable to create ACFS file system resource {0} for the volume device {1}

Cause: The ACFS file system resource for the specified volume device path could not be created. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc) 4) Was unable to identify the mount point that the user requested the resource to use.

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. (srvctl status asm) 3) Verify that the user is running with administrative access. 4) Verify that the mount point given to the create resource command exists.

PRCA-01021: Unable to retrieve ACFS file system for the volume device {0}

Cause: The ACFS file system resource for the specified volume device path could not be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc) 4) Was unable to identify the mount point that the user requested the resource to use.

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. (srvctl status asm) 3) Verify that the user is running with administrative access. 4) Verify that the mount point given to the create resource command exists.

PRCA-01022: ACFS file system resource already exists for disk group {0} and volume {1}

Cause: The ACFS file system resource had already been created for the specified disk group and volume names.

Action: Take one of the following actions: 1) Supply a different volume device path to the 'srvctl add filesystem' command to create a different ACFS file system resource. - or- 2) Delete the previous resource ('srvctl remove filesystem -device <volume_device>') and run the command again.

PRCA-01023: Unable to add ACFS file system resource {0} for disk group {1} and volume {2}

Cause: The ACFS file system resource for the specified volume device path could not be added. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root,

Administrator, etc) 4) Was unable to identify the mount point that the user requested the resource to use.

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access. 4) Verify that the mount point given to the create resource command exists.

PRCA-01024: Unable to retrieve the volume for disk group {0} and volume {1}

Cause: The ACFS file system resource for the specified volume device path was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01025: Unable to retrieve the mountpoint path for disk group {0} and volume {1}

Cause: The ACFS file system resource for the specified volume device path was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01026: Unable to set the user of the ACFS file system for disk group {0} and volume {1}

Cause: The user of the ACFS file system resource for the specified disk group and volume was unable to be modified. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01027: Failed to remove ACFS file system configuration for disk group {0} and volume {1}

Cause: Cannot remove the ACFS file system configuration for the specified disk group and volume.

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01028: Failed to retrieve listener associated with ASM {0}

Cause: Failed to retrieve listener associated with ASM.

Action: Ensure that user has read permissions on ASM resource and then retry. Also, ensure that listener specified in ASM resource's start dependencies exists.

PRCA-01029: Failed to associate listener {0} with ASM {1}

Cause: Failed to associate given listener with ASM.

Action: Ensure that user has update permissions on ASM resource and then retry.

PRCA-01030: Failed to retrieve the diskgroup associated with the volume device {0}

Cause: Unable to retrieve the diskgroup associated with the given volume device using "asmcmd volinfo -g <volume_name>" command.

Action: Make sure that the asm instance is running; the asmcmd utility exists and the underlying ofs devices are accessible.

PRCA-01031: Unable to retrieve the diskgroup {0} associated with the volume device {1}

Cause: The ACFS file system resource for the specified volume device path was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc) 4) Disk group is not mounted.

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access. 4) Verify that the disk group is mounted.

PRCA-01032: ASM listener {0} does not exist

Cause: The ASM listener was not registered with Oracle Clusterware.

Action: Add the listener with the 'srvctl add listener -listener <lsnr_name> -asmlistener' command or specify a listener name that is already registered.

PRCA-01033: ACFS file system resource does not exist for volume device {0}

Cause: The ACFS file system resource with the specified volume device was not registered with Oracle Clusterware.

Action: Use the command 'srvctl add filesystem' to create an ACFS file system resource.

PRCA-01034: ACFS file system resource does not exist in Oracle Clusterware

Cause: No ACFS file system resource was registered with Oracle Clusterware.

Action: Use the command 'srvctl add filesystem' to create an ACFS file system resource.

PRCA-01035: Unable to determine the databases that use the disk group {0}

Cause: Unable to retrieve databases that have dependencies on the disk group.

Action: Make sure that the crs stack is up; the user has read permissions on database CRS resources and then retry.

PRCA-01036: An Oracle Restart environment-specific API was invoked in an Oracle Clusterware environment.

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCA-01037: Failed to retrieve the diskgroup discovery string of ASM {0}

Cause: An attempt to retrieve the diskgroup discovery string for ASM failed.

Action: Retry the request after ensuring that the CRS stack is running, the ASM resource has been configured, and the user has read permission on ASM resource.

PRCA-01038: Failed to update the diskgroup discovery string {0} of ASM {1}

Cause: An attempt to update the diskgroup discovery string for ASM failed.

Action: Retry the request after ensuring that the CRS stack is running, the ASM resource has been configured, and the user has update permission on ASM resource.

PRCA-01039: Volume device {0} does not exist

Cause: The supplied volume device does not exist.

Action: Use asmca to create the volume device and then run 'srvctl add filesystem' command again.

PRCA-01040: Failed to check the existence of volume device {0}

Cause: Failed to execute acfsutil command to check for the existence of the supplied volume device.

Action: Review the underlying error messages that provide the details of why acfsutil execution failed. Resolve the reported problem and retry the command.

PRCA-01041: Failed to validate disk group {0} of volume device {1}

Cause: Failed to execute acfsutil command to validate the disk group of the volume device.

Action: Review the underlying error messages that provide the details of why acfsutil execution failed. Resolve the reported problem and retry 'srvctl add filesystem' command.

PRCA-01042: Diskgroup {0} is not valid for volume device {1}

Cause: The supplied diskgroup does not match the underlying diskgroup created for the supplied volume device.

Action: Execute 'srvctl add filesystem' command with the correct disk group value.

PRCA-01043: Failed to validate volume {0} of volume device {1}

Cause: Failed to execute acfsutil command to validate the volume of the volume device.

Action: Review the underlying error messages that provide the details of why acfsutil execution failed. Resolve the reported problem and retry 'srvctl add filesystem' command.

PRCA-01044: Volume {0} is not valid for volume device {1}

Cause: The supplied volume does not match the underlying volume created for the supplied volume device.

Action: Execute 'srvctl add filesystem' command with the correct volume value.

PRCA-01045: ACFS is not supported on this platform

Cause: A filesystem operation was requested on an unsupported platform.

Action: Run srvctl filesystem command on a supported platform.

PRCA-01046: File system for volume device {0} exists in the ACFS registry

Cause: File system for the specified volume device was registered in the ACFS registry. File system can either be in the ACFS registry or registered as a CRS resource, but not both.

Action: Either run the command 'acfsutil registry -d' to delete the volume device from the ACFS registry or run the command 'srvctl add filesystem' with a different volume device.

PRCA-01047: Unable to find ACFS file system resource for volume device {0} because of inability to get the canonical form of the volume device

Cause: An internally-issued 'advmutl canonical' command failed and the volume device recorded in the ACFS file system resource did not match the specified volume device.

Action: Review the underlying error messages that provide the details of why advmutl execution failed. Resolve the reported problem and retry.

PRCA-01048: Invalid mount point path {0} because specified mount point path was a remote path

Cause: The specified mount point path was a remote path.

Action: Make sure that the mount point path was not a remote path.

PRCA-01049: The user "{0}" could not be found on the cluster

Cause: The user specified as the file system owner/user could not be found.

Action: Enter the name of an existing user or the owner of the specified file system.

PRCA-01050: Unable to retrieve the canonical form of the volume device for disk group {0} and volume {1}

Cause: The ACFS file system resource for the specified canonical form of the volume device path was not retrieved.

Action: 1) Make sure that the CRS stack is available. ('crsctl check crs') 2) Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCA-01051: No volume resource registered with CRS for specified diskgroup or volume name or volume device

Cause: There was no volume resource registered with CRS for specified diskgroup and volume name.

Action: Create the volume using sqlplus which registers the volumes with CRS.

PRCA-01052: When attempting to create a volume resource in CRS, volume resource already exists for disk group {0} and volume {1}

Cause: The volume resource was already created for the specified disk group and volume names.

Action: Supply different volume name or diskgroup name to create a different volume resource.

PRCA-01053: Failed to add volume resource {0} for disk group {1} and volume {2}

Cause: The volume resource for the specified volume device path could not be added. Possible causes: 1) CRS stack was not available. 2) ASM instance was not

running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01054: Failed to remove volume configuration for disk group {0} and volume {1}

Cause: Cannot remove the volume configuration for the specified disk group and volume.

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01055: Failed to retrieve the volume file system type for disk group {0} and volume {1}

Cause: The usage of the specified volume was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01056: Unable to upgrade ACFS from version {0} to version {1}

Cause: Failed to upgrade ACFS from one version to another version.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCA-01057: Failed to retrieve the password file location used by ASM {0}

Cause: An attempt to retrieve the password file attribute of the specified ASM failed.

Action: Retry the request after ensuring that the CRS stack is running, the ASM resource has been configured, and the user has read permission on the ASM resource.

PRCA-01058: Failed to update password file location {0} used by ASM {1}

Cause: An attempt to update the password file attribute of the specified ASM failed.

Action: Retry the request after ensuring that the CRS stack is running, the ASM resource has been configured, and the user has update permission on the ASM resource.

PRCA-01059: Invalid ASM type {0}

Cause: The ASM type supplied is not valid.

Action: Supply a valid ASM type.

PRCA-01060: Invalid ASM presence {0}

Cause: The ASM presence supplied is not valid.

Action: Supply a valid ASM presence (legacy or remote).

PRCA-01061: Failed to create ASM I/O Server resource {0}

Cause: An attempt to add the CRS resource for ASM I/O Server failed.

Action: Ensure that the CRS stack is running, the user running 'srvctl add asm' is also the owner of the CRS home, and examine the accompanying error message for details.

PRCA-01062: Failed to create cluster ASM resource {0}

Cause: An attempt to add the CRS resource for cluster ASM failed.

Action: Ensure that the CRS stack is running, the user running 'srvctl add asm' is also the owner of the CRS home, and examine the accompanying error message for details.

PRCA-01063: Failed to create ADVN proxy resource {0}

Cause: An attempt to add the CRS resource for ADVN proxy failed.

Action: Ensure that the CRS stack is running, the user running 'srvctl add asm' is also the owner of the CRS home, and examine the accompanying error message for details.

PRCA-01064: Failed to create leaf ASM resource {0}

Cause: An attempt to add the CRS resource for leaf ASM failed.

Action: Ensure that the CRS stack is running, the user running command 'srvctl add asm' is also the owner of the CRS home, and examine the accompanying error message for details.

PRCA-01065: No file system resource found in Oracle Clusterware

Cause: No ACFS or non-ACFS file system resource was registered with Oracle Clusterware.

Action: Use the command 'srvctl add filesystem' to create a file system resource.

PRCA-01066: File system resource already exists for disk group {0} and volume {1}

Cause: The file system resource was already created for the specified disk group and volume names.

Action: Take one of the following actions: 1) Supply a different volume device path to the 'srvctl add filesystem' command to create a different file system resource. -or- 2) Delete the existing resource ('srvctl remove filesystem -device <volume_device>') and run the command again.

PRCA-01067: Unable to add file system resource {0} for disk group {1} and volume {2}

Cause: The file system resource for the specified volume device path could not be added. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc) 4) Was unable to resolve the mount point path that the user requested the resource to use.

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access. 4) Verify that the mount point path given to the create resource command exists.

PRCA-01068: Failed to remove file system resource for disk group {0} and volume {1}

Cause: Failed to remove the file system resource for the specified disk group and volume.

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01069: Unable to set the user of the file system configuration for disk group {0} and volume {1}

Cause: The user of the FS file system resource for the specified disk group and volume was unable to be modified. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01070: File system resource does not exist for volume device "{0}"

Cause: The file system resource with the specified volume device was not registered with Oracle Clusterware.

Action: Use the command 'srvctl add filesystem' to create a file system resource.

PRCA-01071: Multiple file system resources found for volume device "{0}"

Cause: More than one file system resources with the specified volume device were found.

Action: Internal error. Contact Oracle Support Services.

PRCA-01072: Either zero or multiple volume resources found for diskgroup "{0}" and volume "{1}"

Cause: A single volume was expected to be found for the specified parameters.

Action: Internal error. Contact Oracle Support Services.

PRCA-01073: A resource for application with ID "{0}" that uses a different file system than "{1}" already exists

Cause: A resource with the same application ID was registered for a different file system type.

Action: Make sure that the file system being added uses the same type as the existing resource for the given application ID.

PRCA-01074: Unable to modify the file system resource {0} for disk group {1} and volume {2}

Cause: The ACFS file system resource for the specified volume device path could not be modified. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01075: The file system resource is running on nodes (e.g. node "{0}") which are not included in the node list

Cause: The attempt to modify the node list failed as the file system resource was running on one or more nodes of the existing node list that were not included in the new node list.

Action: Either stop the resource that is running and retry or add the node where the resource is running to the new node list.

PRCA-01076: The file system resource is running on server pools (e.g. server pool "{0}") which are not included in the server pool list

Cause: The attempt to modify the node list failed as the file system resource was running on one or more server pools of the existing server pool list that were not included in the new server pool list.

Action: Either stop the resource that is running and retry.

PRCA-01077: Unable to retrieve the file system type for disk group {0} and volume {1}

Cause: The file system resource for the specified volume device path was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01078: Unable to retrieve the file system mount options for disk group {0} and volume {1}

Cause: The file system resource for the specified volume device path was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01079: Unable to retrieve the file system node names for disk group {0} and volume {1}

Cause: The file system resource for the specified volume device path was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01080: Unable to retrieve the file system server pools for disk group {0} and volume {1}

Cause: The file system resource for the specified volume device path was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01081: Unable to retrieve the application ID for disk group {0} and volume {1}

Cause: The file system resource for the specified volume device path was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01082: Unable to retrieve the value for attribute 'TYPE' for the file system resource with disk group {0} and volume {1}

Cause: The file system resource for the specified volume device path was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01083: Invalid ASM mode {0}

Cause: The specified ASM mode was not valid.

Action: Specify a valid ASM mode LEGACY, REMOTE or CLIENT.

PRCA-01084: Failed to retrieve ASM Mode

Cause: An attempt to retrieve the configured ASM mode from the ASM resource failed.

Action: Retry the request after ensuring that the CRS stack is running, the ASM resource has been configured, and the user has read permission on the ASM resource.

PRCA-01085: Failed to check if OCR is on ASM, when attempting to create resource {0}

Cause: An attempt to retrieve the OCR locations and check if any of the locations is on ASM failed.

Action: Ensure that the CRS stack is running, the user running command 'srvctl add asm' is also the owner of the CRS home, and examine the accompanying error message for details.

PRCA-01086: Unable to retrieve the file system description for disk group {0} and volume {1}

Cause: The file system resource for the specified volume device path was unable to be retrieved. Possible cause: The CRS stack was not available.

Action: Verify that the CRS stack is available. ('crsctl check crs')

PRCA-01087: Server pool "{0}" does not exist

Cause: No serverpool was found for the specified server pool name.

Action: Make sure that the serverpool exists and retry.

PRCA-01088: Unable to retrieve information about server pool "{0}"

Cause: An error occurred while trying to retrieve information about the specified server pool.

Action: Examine the accompanying error messages for details.

PRCA-01089: Unable to retrieve volume and disk group for volume device path {0}

Cause: The volume and disk group resources for the specified volume device path could not be retrieved. Possible causes: 1) The CRS stack was not available. 2) The volume device path does not exist.

Action: 1) Verify that the CRS stack is running. ('crsctl check crs') 2) Verify that the volume device path was previously created.

PRCA-01090: Unable to retrieve information about the server category for server pool "{0}"

Cause: An error occurred while trying to retrieve information about the server category for the specified server pool.

Action: Examine the accompanying error messages for details.

PRCA-01091: The server category for server pool "{0}" is not "{1}"

Cause: The server category for the specified server pool had not the indicated expected value.

Action: Execute the command 'srvctl modify srvpool' to set the server category for the specified server pool to the indicated value and retry.

PRCA-01092: Cannot retrieve ASM resource information on an ASM client cluster

Cause: An attempt was made to get reference to an ASM resource on an ASM client cluster, which is not allowed.

Action: Perform this action only on an ASM cluster in either the Standard mode or in the Remote mode.

PRCA-01093: ASM I/O Server {0} is not running

Cause: The ASM I/O Server resource did not have any running instances.

Action: Use the command 'srvctl start ioserver' to start the ASM I/O Server resource.

PRCA-01094: Failed to retrieve ASM I/O Server instance list for ASM I/O Server {0}

Cause: Failed to retrieve the list of ASM I/O Server instances.

Action: Make sure that the Clusterware stack is up and the ASM I/O Server resource has been configured.

PRCA-01095: Unable to create ASM resource because it already exists.

Cause: An attempt was made to add the ASM resource but the resource already exists.

Action: Either remove the ASM resource and then add it, or avoid adding an already existing resource.

PRCA-01096: failed to create the Network Attached Storage (NAS) resource {0} for mount point path {1}

Cause: An attempt to create a Network Attached Storage (NAS) resource failed for the specified mount point path.

Action: Examine the accompanying error messages for details.

PRCA-01097: failed to retrieve the Network Attached Storage (NAS) resource for the mount point path {0}

Cause: An attempt to retrieve the Network Attached Storage (NAS) resource failed for the specified mount point path.

Action: Examine the accompanying error messages for details.

PRCA-01098: A Network Attached Storage (NAS) resource already exists for mount point path {0}.

Cause: An attempt to create a Network Attached Storage (NAS) resource failed because a NAS resource already exists for the specified mount point path.

Action: Do one of the following: - Supply a different mount point path. - Delete the previous resource.

PRCA-01099: failed to set the user of the Network Attached Storage (NAS) for mount point path {0}

Cause: An attempt to modify the user for the Network Attached Storage (NAS) failed for the specified mount point path.

Action: Examine the accompanying error messages for details.

PRCA-01100: The Network Attached Storage (NAS) resource does not exist for mount point path {0}.

Cause: The Network Attached Storage (NAS) resource with the specified mount point path was not registered with Oracle Clusterware.

Action: Create a Network Attached Storage (NAS) resource with the specified mount point path.

PRCA-01101: failed to modify the Network Attached Storage (NAS) resource for mount point path {0}

Cause: An attempt to modify the Network Attached Storage (NAS) resource failed for the specified mount point path.

Action: Examine the accompanying error messages for details.

PRCA-01102: Mount point path {0} is in use by another file system resource.

Cause: The supplied mount point path was already used by an existing file system resource.

Action: Specify a mount point path not in use by ACFS and not in use by Network Attached Storage (NAS) resources.

PRCA-01103: Failed to validate export server {0}

Cause: An attempt to resolve the export server name failed because the specified server name does not exist in DNS.

Action: Specify a valid IP address or hostname.

PRCA-01104: failed to remove Network Attached Storage (NAS) resource for mount point path {0}

Cause: An attempt to remove the Network Attached Storage (NAS) resource failed for the specified mount point path.

Action: Examine the accompanying error messages for details.

PRCA-01105: The mount point path must be specified when adding a Network Attached Storage (NAS) resource.

Cause: An attempt to create a Network Attached Storage (NAS) resource failed because a value was not specified for the mount point path.

Action: Specify a valid mount point path.

PRCA-01106: Mount point path {0} is in use by another file system resource

Cause: The supplied mount point path was already used by an existing file system resource.

Action: Specify a mount point path that is not in use by a file system resource.

PRCA-01107: A Network Attached Storage (NAS) resource already exists with the name {0}.

Cause: The Network Attached Storage (NAS) resource was already created for the specified name.

Action: Supply a different name or delete the previous resource.

PRCA-01108: The file system resource is not node local.

Cause: The attempt to relocate the specified file system failed because the resource is not node local.

Action: Specify a node local file system resource.

PRCA-01109: The volume for the specified disk group {0} and volume name {1} is not registered with CRS.

Cause: There was no volume resource registered with CRS for the specified disk group and volume name.

Action: Create the volume for the specified disk group and volume name using SQL*Plus which registers the volumes with CRS.

PRCA-01110: The volume for the specified device path {0} is not registered with CRS.

Cause: There was no volume resource registered with CRS for the specified device path.

Action: Create the volume for the specified device path using SQL*Plus which registers the volumes with CRS.

PRCA-01111: Multiple volume resources were found for volume device "{0}".

Cause: This is an internal error. More than one volume resource with the specified volume device were found.

Action: Contact Oracle Support Services.

PRCA-01112: Mount point path {0} is in use by another file system resource on node {1}

Cause: An attempt to add a file system resource was rejected because the specified mount point path was already used by an existing file system resource on one of the specified nodes.

Action: Specify a mount point path not in use by a file system resource on any of the supplied nodes.

PRCA-01113: Unable to upgrade volume resources from version {0} to version {1}

Cause: An attempt to upgrade volume resources from one version to another version failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCA-01114: Unable to upgrade export file system resources from version {0} to version {1}

Cause: An attempt to upgrade export file system resources from one version to another version failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCA-01115: Volume device {0} is specified as both a primary and an auxiliary volume

Cause: An attempt to add a file system resource was rejected because the specified auxiliary volume devices included a volume device specified as a primary volume.

Action: Specify auxiliary volume devices that are not also specified as a primary volume device.

PRCA-01116: Unable to define auxiliary volumes for non-ACFS file systems

Cause: An attempt to add a file system resource was rejected because auxiliary volume devices were specified for a non-ACFS file system resource.

Action: Specify auxiliary volumes for an ACFS file system.

PRCA-01117: Unable to retrieve the auxiliary volumes for file system resource {0}

Cause: An attempt to retrieve the auxiliary volumes for the specified file system resource failed. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running.

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm')

PRCA-01118: Multiple auxiliary volumes are not supported.

Cause: An attempt to add a file system resource was rejected because multiple auxiliary volume devices were specified for a file system resource.

Action: Specify only one auxiliary volume.

PRCA-01119: Unable to get the users of the file system configuration for disk group {0} and volume {1}

Cause: 1) CRS stack was not running. 2) User was not running with an account with administrative access. (root or administrator)

Action: 1) Verify that the CRS stack is running. ('crsctl check crs') 2) Verify that the user is running with administrative access.

PRCA-01120: Unable to use add (/+) or remove (/-) prefix with a list of operating system users for the file system.

Cause: The modify operation failed because a list of operating system users was specified using the add or remove prefix.

Action: Specify a single operating system user with the add or remove prefix, or specify a list of operating system users without any prefix to replace it entirely.

PRCA-01121: The file system type {0} is not supported for the current operating system platform.

Cause: An attempt to add a file system resource was rejected because the specified file system type is not supported for the current operating system platform.

Action: Specify a valid file system type for the operating system platform in use.

PRCA-01122: unable to modify the mount point path of a running file system resource

Cause: An attempt to modify the mount point path of the specified file system was rejected because the file system was mounted.

Action: Stop the file system resource and retry the operation.

PRCA-01123: The specified ASM cardinality {0} is less than the minimum cardinality of 2.

Cause: An attempt to set ASM cardinality was rejected because the specified cardinality was less than 2.

Action: Specify a number that is equal to or larger than 2 for the '-count' option.

PRCA-01124: The specified ASM cardinality {0} is larger than the maximum cardinality of 1024.

Cause: An attempt to set ASM cardinality was rejected because the specified cardinality was larger than 1024.

Action: Specify a number that is equal to or less than 1024 for the '-count' option.

PRCA-01125: The auxiliary volumes are not supported on this operating system.

Cause: An attempt to add a file system resource was rejected because auxiliary volumes are not supported for the current operating system.

Action: Do not specify auxiliary volumes.

PRCA-01126: unable to retrieve information about server category "{0}"

Cause: An error occurred while trying to retrieve information about the specified server category.

Action: Examine the accompanying error messages for details.

PRCC-01000 to PRCC-01110

PRCC-01000: Parameter {0} value is not valid

Cause: This is an internal error. The value for the specified parameter is null or empty string.

Action: Contact Oracle Support Services.

PRCC-01001: Failed to retrieve install group: {0}

Cause: An attempt to retrieve the install group failed.

Action: Examine the accompanying error messages for details.

PRCC-01002: Failed to update install group: {0}

Cause: An attempt to set the install group failed.

Action: Examine the accompanying error messages for details.

PRCC-01003: Version for module {0} is not available

Cause: An attempt to retrieve the version information for specified module failed.

Action: Examine the accompanying error messages for details.

PRCC-01004: Unknown identifier {0} specified for checking result of operation

Cause: Failed to retrieve the result from the exception data using the specified identifier because the exception did not have the specified identifier.

Action: This is an internal error. Contact Oracle Support Services.

PRCC-01005: Parameter {0} is not an absolute path

Cause: The specified parameter is not an absolute directory path.

Action: Provide an absolute directory path.

PRCC-01006: Path {0} is not a directory

Cause: The specified path is not a directory.

Action: Provide a directory path.

PRCC-01007: Path {0} does not exist

Cause: The specified path did not exist.

Action: Provide an existing directory path.

PRCC-01008: Enumerated type {0} does not have a member with corresponding value of {1}

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCC-01009: Parameter {0} cannot have null as a value

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCC-01010: {0} was already enabled

Cause: Given entity was already enabled.

Action: No action needed. To re-enable the entity, first disable it and then retry.

PRCC-01011: {0} was already enabled on {1}

Cause: Given entity was already enabled on given nodes.

Action: No action needed. To re-enable the entity on given nodes, first disable it on these nodes and then retry.

PRCC-01012: {0} was already disabled

Cause: Given entity was already disabled.

Action: No action needed. To re-disable the entity, first enable it and then retry.

PRCC-01013: {0} was already disabled on {1}

Cause: Given entity was already disabled on given nodes.

Action: No action needed.

PRCC-01014: {0} was already running

Cause: Given entity is already running.

Action: No action needed. To re-start the entity, first stop it and then retry.

PRCC-01015: {0} was already running on {1}

Cause: Given entity was already running on given nodes.

Action: No action needed. To re-start the entity on given nodes, first stop it on these nodes and then retry.

PRCC-01016: {0} was already stopped

Cause: Given entity was already stopped.

Action: No action needed. To re-stop the entity, first start it and then retry.

PRCC-01017: {0} was already stopped on {1}

Cause: Given entity was already stopped on given nodes.

Action: No action needed. To re-stop the entity on given nodes, first start it on these nodes and then retry.

PRCC-01018: A request to retrieve private network addresses for node {0} found no addresses

Cause: A request to retrieve private network addresses by executing the command 'olsnodes -p' returned no private IP addresses.

Action: Check the command 'oifcfg getif' for cluster_interconnect networks and ensure this node has an IP address on the cluster_interconnect networks.

PRCC-01019: Parameter "{0}" value is not valid

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCC-01020: Version {0} cannot be used to administer resource configuration of version {1} or later

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCC-01021: One or more of the submitted commands did not execute successfully.

Cause: Either a node failed in the middle of a manageability operation, or the communication between nodes was disrupted.

Action: Examine the accompanying error messages for details.

PRCC-01022: The file system type must be ACFS and not {0}

Cause: Expected ACFS file system while the file system provided in the argument list was non-ACFS.

Action: Make sure that the file system type provided in the argument list is ACFS.

PRCC-01023: The file system type must be non-ACFS

Cause: Expected non-ACFS file system while the file system provided in the argument list was ACFS.

Action: Make sure that the file system type provided in the argument list is non-ACFS.

PRCC-01024: Creation of non-ACFS file system local resource is not supported

Cause: Attempted to create a file system local resource while the file system type was non-ACFS.

Action: Either specify a node or serverpool list to create a cluster resource for the file system or make sure that the file system type is ACFS to create a local resource.

PRCC-01025: Command submitted on node {0} did not complete within {1} seconds

Cause: A command submitted on the node specified did not finish within the specified interval.

Action: Ensure that the node specified is reachable and not overloaded. Contact Oracle Support Services.

PRCC-01100: Failed to create administrator helper resource configuration

Cause: An attempt to create configuration for the administrator helper resource failed. Either the request was not issued by an account with administrative access (root, Administrator and so on) or a problem was detected inside Oracle Clusterware.

Action: Examine the accompanying error messages for details. Make sure that the user has administrative privileges.

PRCC-01101: The database type cannot be MGMTDB.

Cause: An attempt to create the database of the wrong database type has failed.

Action: Contact Oracle Support Services.

PRCC-01102: Mount point path "{0}" is not an absolute path

Cause: The mount point path value was not an absolute path.

Action: Specify an absolute path in the '-mountpoint' argument.

PRCC-01103: Failed to verify node membership

Cause: An error occurred while querying the clusterware to obtain information about the cluster membership.

Action: Examine the accompanying error messages for details.

PRCC-01104: Specified node {0} is not a configured cluster node

Cause: Found a node in the node list that was not configured in the cluster.

Action: Make sure that all the nodes in the specified node list are configured cluster nodes. Check the cluster membership with 'olsnodes'.

PRCC-01105: Server pool or node list cannot be modified because the file system for volume device {0} is a cluster-wide cluster file system

Cause: An attempt to modify the server pool or node list attributes of a cluster file system was rejected because the filesystem resource was a local resource. Placement attributes like server pools or node names apply only to cluster resources.

Action: Do not specify node names and server pools, or remove the local resource and add a cluster resource with the command 'srvctl add filesystem {-serverpools <serverpool_list>|-nodes <node_list>}'.

PRCC-01106: Parameter {0} value {1} is not valid

Cause: This is an internal error. The value for the specified parameter is not valid.

Action: Contact Oracle Support Services.

PRCC-01107: Failed to set the OHASD resource dependencies for ASM

Cause: An attempt to set the OHASD dependencies on all nodes failed.

Action: Examine the accompanying error messages for details.

PRCC-01108: Invalid VIP address {0} because the specified IP address is reachable

Cause: The submitted command was rejected because the Virtual Internet Protocol (VIP) address was reachable.

Action: Configure VIPs to use IP addresses that are not active on any host system and cannot be reached using 'ping'.

PRCC-01109: User {0} is not present on the Access Control List.

Cause: A request to remove a user from an Access Control List specified a user name not in the Access Control List.

Action: Specify a user who is on the Access Control List.

PRCC-01110: User {0} is already added to the Access Control List.

Cause: A request to add a user to an Access Control List specified a user name already on the Access Control List.

Action: Specify a user who is not on the Access Control List.

PRCD-01000 to PRCD-01324

PRCD-01000: Database {0} already exists

Cause: The specified database resource was already registered in Oracle Clusterware.

Action: No action is needed.

PRCD-01001: Database {0} does not exist

Cause: The specified database resource was not registered in Oracle Clusterware.

Action: Register the database resource using the command 'srvctl add database'.

PRCD-01002: Database {0} is dependent upon server pool {1}

Cause: An attempt to remove the specified server pool failed because the server pool is in use.

Action: Remove the specified database before removing the server pool.

PRCD-01003: Service {0} already exists

Cause: The specified service was already created and registered in Oracle Clusterware.

Action: No action is needed.

PRCD-01004: Service {0} is dependent upon server pool {1}

Cause: An attempt to remove the specified server pool failed because the server pool is in use.

Action: Remove the specified service before removing the server pool.

PRCD-01005: Server pool {0} for the database {1} does not exist

Cause: The specified server pool used by the database was removed by force.

Action: Create the server pool using the command 'srvctl add srvpool'.

PRCD-01007: Failed to retrieve the database name

Cause: Failed in retrieving the DB_NAME resource attribute.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01008: Server parameter file does not exist for database {0}

Cause: Failed in retrieving the SPFILE resource attribute.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01009: Failed to retrieve server parameter file of database {0}

Cause: Cannot retrieve the server parameter file for the specified database.

Action: Retry the request after ensuring that the CRS stack is running, the database resource has been configured, and the user has read permission on the database resource.

PRCD-01010: Failed to update server parameter file {0} of database {1}

Cause: Unable to update the server parameter file for the specified database.

Action: Retry the request after ensuring that the CRS stack is running, the database resource has been configured, and the user has update permission on the database resource.

PRCD-01011: Failed to identify whether this database {0} is a multi-instance database

Cause: Failed in retrieving the CLUSTER_DATABASE resource attribute.

Action: Examine the accompanying error messages for details.

PRCD-01012: Failed to retrieve disk group list for database {0}.

Cause: Failed to retrieve the diskgroups from the start dependencies of the specified database.

Action: Examine the accompanying error messages for details. Create the diskgroup using sqlplus if the specified diskgroup does not exist. Mount the diskgroup in database which registers the diskgroup with Oracle Clusterware.

PRCD-01014: Failed to retrieve database domain of database {0}

Cause: Failed to get the domain of the specified database from its USR_ORA_DOMAIN attribute.

Action: Examine the accompanying error messages for details.

PRCD-01015: Combination of service cardinality {0} and TAF {1} is not allowed for service {2}

Cause: The specified service cardinality can not be used with the specified TAF policy.

Action: Change the cardinality or find a matching TAF policy. PRECONNECT can only be used with SINGLETON cardinality.

PRCD-01016: Failure encountered while accessing server pool {0} for database {1}

Cause: An attempt to look up the server pools referenced by the database SERVER_POOLS attribute failed.

Action: Examine the accompanying error messages for details.

PRCD-01019: Failed to retrieve Oracle home of database {0}

Cause: An attempt to retrieve the ORACLE_HOME attribute of the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01020: Failed to retrieve TAF policy for service {0}

Cause: An attempt to retrieve the TAF_POLICY attribute of the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01021: Failed to update TAF policy {0} for service {1}

Cause: An attempt to set the TAF_POLICY attribute of the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01022: Cannot add a second instance to a single instance database

Cause: Unable to add an instance to a single instance database.

Action: Multiple instances are not supported for a single instance database. Convert to a Oracle RAC database if multiple instances are desired.

PRCD-01023: An instance has already been added to node {0} for database {1}

Cause: Unable to add an instance to the database on the specified node because another instance has already been added to the node.

Action: Use the command 'srvctl modify instance' to change the instance name on the specified node.

PRCD-01024: Failed to retrieve instance list for database {0}

Cause: An attempt to get the list of the instances for the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01025: Failed to create database {0}

Cause: An attempt to create Clusterware resources for the specified database failed. Either the request was issued by the wrong OS userid or a problem was detected inside Oracle Clusterware.

Action: Examine the accompanying error messages for details. Login in as the user of the Oracle Home to issue the command 'srvctl add database'.

PRCD-01026: failed to create service {0} for database {1}

Cause: An attempt to create the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01027: Failed to retrieve database {0}

Cause: An attempt to get the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01028: Failed to retrieve service resource {0} for database {1}

Cause: An attempt to get the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01029: Disk group {0} for database {1} does not exist

Cause: The disk group for the specified database does not exist.

Action: Use the command 'srvctl add diskgroup' to add the specified disk group.

PRCD-01030: Failed to determine whether the database {0} has cardinality

Cause: Failed to determine whether the specified database is cardinality based or not based on its VERSION attribute.

Action: Examine the accompanying error messages for details.

PRCD-01031: Failed to determine whether the service {0} has cardinality

Cause: Failed to check whether the specified service is cardinality based or not.

Action: Examine the accompanying error messages for details.

PRCD-01032: Failed to remove database resource {0}

Cause: Failed to remove the specified database.

Action: Examine the accompanying error messages for details.

PRCD-01033: The server pool of service {0} is different from the server pool of database {1}

Cause: The specified server pool is not the child of the database's server pool.

Action: Use a server pool which is the child of the database's server pool.

PRCD-01034: Database {0} is not a single instance database. It is a cluster database

Cause: The specified database is not a single instance database.

Action: Provide database name for a single instance database.

PRCD-01035: Database {0} is not a cluster database

Cause: The specified database is not a cluster database.

Action: Provide database name for an Oracle RAC database.

PRCD-01036: Failed to set Oracle home {0} for database {1}

Cause: An attempt to update Oracle home for the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01037: Failed to set Oracle home {0} for database {1} on node {2}

Cause: An attempt to update Oracle home for the specified database on the specified node failed.

Action: Examine the accompanying error messages for details.

PRCD-01038: Cannot create a RAC database {0} in a non cluster environment

Cause: Failed to create the specified Oracle RAC database because Oracle Clusterware is not installed and configured.

Action: Install and configure Oracle Clusterware before creating the Oracle RAC database.

PRCD-01039: Failed to retrieve database for service {0}

Cause: An attempt to get the database that the specified service depended on failed. This is an internal error.

Action: Contact Oracle Support Services.

PRCD-01040: Specified server pool {0} for {1} is already hosting an administrator-managed configuration for databases {2} and services {3}

Cause: Server pool is hosting administrator-managed databases and service.

Action: Specify a server pool that is not hosting an administrator-managed database and service.

PRCD-01041: The administrator-managed database {0} can have only one server pool {1}

Cause: Multiple server pools cannot be configured for an administrator-managed database

Action: Contact Oracle Support.

PRCD-01042: The database {1} is administrator-managed and a policy-managed service {0} cannot be created on it.

Cause: The specified database does not support policy-managed services.

Action: Provide a database which supports policy-managed services.

PRCD-01043: The service {0} is not a uniform or a singleton service and therefore it cannot be created as policy-managed service. This service can only be created as administrator-managed service using preferred, and optionally available instance lists.

Cause: The service to be created was an administrator-managed service and the database that the service depended on was a policy-managed database.

Action: Use preferred and available instance lists to create an administrator-managed service for an administrator-managed database.

PRCD-01044: Failed to retrieve the list of nodes where instances have been configured for database {0}

Cause: An attempt failed to get the list of nodes where the instances of the specified database were configured.

Action: Examine the accompanying error messages for details.

PRCD-01045: Database {0} is policy managed and does not support add instance option

Cause: The specified database did not support add instance option

Action: Take one of the following actions: 1) Provide an administrator-managed database. -or- 2) For a policy-managed database, add a server to a server pool which manages the database using the 'srvctl modify srvpool' or 'srvctl relocate server' command.

PRCD-01046: Database {0} is policy managed and does not support the remove instance option

Cause: The specified database did not support the remove instance option.

Action: Take one of the following actions: 1) Provide an administrator-managed database. -or- 2) For a policy-managed database, stop the database on a server and then remove that server from the server pool which manages the database using the 'srvctl modify srvpool' or 'srvctl relocate server' command.

PRCD-01047: Failed to retrieve list of services for database {0}

Cause: An attempt to get the list of services for the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01048: Cannot remove instance from the single instance database {0}

Cause: An attempt to remove the instance from the single instance database failed.

Action: Remove the database using the command 'srvctl remove database'.

PRCD-01049: Failed to update server pool {0} for database {1}

Cause: An attempt to update the specified server pool failed.

Action: Examine the accompanying error messages for details.

PRCD-01050: Failed to update auto start value of service {0}

Cause: An attempt to update the auto start value for the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01051: Failed to add instance to database {0}

Cause: An attempt to add an instance to the specified database failed because the node of the instance is not a node of the cluster or other errors.

Action: Examine the accompanying error messages for details.

PRCD-01052: Failed to remove instance from database {0}

Cause: An attempt to remove the specified instance failed because the services depended on the instance or other errors.

Action: Examine the accompanying error messages for details.

PRCD-01053: Failed to retrieve the database instances providing service {0}

Cause: An attempt to get the database instances that provide the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01054: Database name is null

Cause: The database name given by the user is null.

Action: Provide a valid database name that is not a null string.

PRCD-01055: Instance name is null

Cause: The instance name given by the user is null.

Action: Provide a valid instance name that is not a null string.

PRCD-01056: Database name {0} contains invalid characters.

Cause: The supplied database name contained invalid characters.

Action: Supply a valid database name. A database name must start with an alphabetic character and may include only characters from "(a-z, A-Z, 0-9, \$, #, _)".

PRCD-01057: Instance name {0} is not valid

Cause: The supplied instance name is not of the correct format.

Action: Supplied a valid instance name. The valid character set for instance name is [a-zA-Z0-9_-].

PRCD-01058: Invalid server pool list {0} supplied for single instance database {1}

Cause: The server pool size was not one when creating a single instance database on a cluster.

Action: Use one server pool with only one server when creating the single instance database.

PRCD-01059: Instance name prefix {0} contains illegal characters

Cause: The supplied instance name prefix contained non-alphanumeric characters.

Action: Supply an instance name prefix that consists of alphanumeric characters a-z, A-Z, and 0-9.

PRCD-01060: Server pool has not been supplied for creating cluster service {0} for database {1}

Cause: No server pool argument has been supplied when configuring a cluster database.

Action: Supply an existing server pool when configuring a cluster database.

PRCD-01061: No database exists

Cause: No database has been configured.

Action: Configured database and retry.

PRCD-01062: Invalid service cardinality {0}

Cause: The service cardinality supplied is not valid.

Action: Supply a valid service cardinality.

PRCD-01063: Invalid service taf policy {0}

Cause: The service taf policy supplied is not valid.

Action: Supply a valid service taf policy.

PRCD-01064: Invalid database role {0}

Cause: The database role supplied is not valid.

Action: Supply a valid database role.

PRCD-01065: Invalid management policy {0}

Cause: The management policy supplied is not valid.

Action: Supply a valid management policy. The management policy should be automatic or manual.

PRCD-01066: Invalid start option {0}

Cause: The start option supplied is not valid.

Action: Supply a valid start option.

PRCD-01067: Invalid stop option {0}

Cause: The stop option supplied is not valid.

Action: Supply a valid stop option.

PRCD-01068: Failed to modify instance {0} on node {1} for database {2}

Cause: The instance for the specified node does not exist on the database.

Action: Use `srvctl add instance` to add the per-X instance.

PRCD-01069: Failed to modify instance {0} on node {1} for database {2}

Cause: The instance for the specified node cannot not be updated.

Action: Make sure that the crs stack is up and running; the oracle user has the permission to modify the instance; and then retry.

PRCD-01070: Failed to retrieve startup options for database {0}

Cause: Unable to retrieve the startup options for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01071: Failed to update startup options for database {0}

Cause: Unable to update the startup options for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01072: Failed to retrieve stop options for database {0}

Cause: Unable to retrieve the stop options for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01073: Failed to update stop options for database {0}

Cause: Unable to update the stop options for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01074: Failed to retrieve the database role for database {0}

Cause: Unable to retrieve the database role for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01075: Failed to set the database role {1} for database {0}

Cause: Unable to update the database role for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01076: Failed to retrieve the management policy for database {0}

Cause: Unable to retrieve the management policy for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01077: Failed to update the management policy for database {0}

Cause: Unable to update the management policy for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01078: Failed to update the db name {0} of database {1}

Cause: Unable to update the db name for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01079: Failed to update pullup for service {0}: {1}

Cause: Failed to update pullup modifier for the service.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01080: Failed to get attributes for service {0}

Cause: Failed to get attributes for the service.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01081: Failed to set attributes for service {0}

Cause: Failed to set attributes for the service.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01082: Failed to modify service {0}: Unsupported attribute {1}

Cause: Operation doesn't support modification of attribute.

Action: Fix your application.

PRCD-01083: Failed to modify service {0}

Cause: Failed to modify service.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01084: Failed to start service {0}

Cause: Failed to start the service.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01085: Failed to stop service {0}

Cause: Failed to stop the service.

Action: Make sure that the crs stack is up, the service is running and then retry.

PRCD-01086: Invalid rlb goal {0}

Cause: The rlb goal supplied is not valid.

Action: Supply a valid rlb goal.

PRCD-01087: Invalid failover type {0}

Cause: The failover type supplied is not valid.

Action: Supply a valid failover type.

PRCD-01088: Invalid connection load balancing goal {0}

Cause: The clb goal supplied is not valid.

Action: Supply a valid clb goal.

PRCD-01089: Invalid failover method {0}

Cause: The failover method supplied is not valid.

Action: Supply a valid failover method.

PRCD-01090: Failed to retrieve Oracle home of database {0} on node {1}

Cause: No Oracle home of the database has been set on the specified node.

Action: Set the Oracle home of the database on the specified node.

PRCD-01091: Failed to create database instance {0} for database {1}

Cause: Unable to create database instance for the specified instance name.

Action: Make sure that the local node can be used for creating a database instance; the instance name provided is valid. The valid character set for instance name is [a-zA-Z0-9_-].

PRCD-01092: Failed to create database instance {0} for database {1} on node {2}

Cause: Unable to create database instance for the specified instance name and node name.

Action: Make sure that the specified node can be used to create a database; the instance name provided is valid. The valid character set for instance name is [a-zA-Z0-9_-].

PRCD-01093: Failed to update the domain {0} of database {1}

Cause: Unable to update the domain for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01094: Failed to create start dependency for database {0} on the ASM cluster filesystem where ACFS path {1} resides

Cause: Unable to modify the database resource to include a start dependency on the ASM cluster filesystem for the ACFS path.

Action: Make sure that the ASM instance is running, the OFS driver exists in the driver directory, and the underlying ofs devices are accessible.

PRCD-01095: Failed to retrieve databases for version 11.1 and earlier

Cause: Unable to read OCR configuration to get databases for version 11.1 and earlier

Action: Make sure that the Oracle clusterware is up and running and the primary group of the user running srvctl is the same as the primary group of the user who installed the Oracle clusterware home. Also, run 11.1 srvctl config to verify that the database configuration exists in OCR.

PRCD-01096: Failed to retrieve the database unique name

Cause: Unable to read the attribute value for database unique name.

Action: Make sure that the Oracle clusterware is up and running and then retry.

PRCD-01097: Failed to retrieve the active servers of server pool {0} for database {1}

Cause: Unable to read the active servers attribute value for the database underlying server pools.

Action: Make sure that the Oracle clusterware is up and running; the database underlying server pools exist; the user has the permission to access the database underlying server pools and then retry.

PRCD-01098: Failed to retrieve the configured servers of server pool {0} for database {1}

Cause: Unable to read the servers attribute value for the database underlying server pool.

Action: Make sure that the Oracle clusterware is up and running; the database underlying server pool exists and then retry.

PRCD-01099: {0} enum member has a constant value that cannot be changed to given value {1}

Cause: An attempt was made to change value of read-only valued enum member.

Action: Contact Oracle Support Services.

PRCD-01100: Invalid relocate option {0}

Cause: Supplied relocate option is unknown.

Action: Contact Oracle Support Services.

PRCD-01101: Failed to remove running instance {0} for database {1}

Cause: Unable to remove the instance configuration for the database because the instance was still running.

Action: Stop the running instance using `srvctl stop instance` command and then retry.

PRCD-01102: Failed to create preconnect service for service {0}

Cause: An attempt to register service failed due to failure to register its corresponding preconnect service.

Action: Contact Oracle Support Services.

PRCD-01103: Failed to retrieve the maximum cardinality for database {0}

Cause: Unable to query the number of servers in the server pool used to manage the database.

Action: Make sure that the Oracle clusterware is up and running; the database underlying server pool exists and then retry.

PRCD-01104: A source server must be specified to relocate cluster database {0}

Cause: Cluster database cannot be relocated without specifying source server to relocate instance from.

Action: Supply source and target servers for database relocation.

PRCD-01105: A source server must be specified to relocate service {0}

Cause: Cluster database service cannot be relocated without specifying source server to relocate service member from.

Action: Supply source and target servers for service relocation.

PRCD-01106: Failed remove service {0}: could not get data for its underlying server pool

Cause: Server pool data is not found.

Action: Make sure that the Oracle clusterware is up and running; the service underlying server pool exists.

PRCD-01107: Removed service {0} but failed to remove its underlying server pool {1}

Cause: Failed to remove the server pool.

Action: Make sure that the Oracle clusterware is running and remove the server pool manually.

PRCD-01108: Failed to determine if database {0} is administrator-managed

Cause: An attempt to determine if a database is administrator-managed failed.

Action: Examine the accompanying error messages for details.

PRCD-01109: Failed to find administrator-managed service {0} of database {1} because the database is a policy-managed database.

Cause: The database does not support administrator-managed services.

Action: Provide an administrator-managed database and make sure that the service exists within that database.

PRCD-01110: Database {0} does not have instances {1}

Cause: The database does not have instances mentioned in the message.

Action: Make sure that database name is correct and the database has requested instances.

PRCD-01111: The type of service cardinality for this operation should be {1}, not {0}

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCD-01112: Failed to get preferred instances of service {0}

Cause: The service does not exist or the Oracle clusterware is down.

Action: Make sure that the Oracle clusterware is up and running and the service exists.

PRCD-01113: Failed to modify service {0}

Cause: The service does not exist or the Oracle clusterware is down.

Action: Make sure that the Oracle clusterware is up and running and the service exists.

PRCD-01114: Failed to enable service {0} on one or more instances

Cause: The service does not exist or enabled on all database instances. The Oracle clusterware is down.

Action: make sure that the Oracle clusterware is up and running; the service exists and disabled on at least one database instance.

PRCD-01115: Failed to disable service {0} on one or more instances

Cause: The service does not exist or disabled on all database instances. The Oracle clusterware is down.

Action: Make sure that the Oracle clusterware is up and running; the service exists and enabled on at least one database instance.

PRCD-01116: Failed to get available instances of service {0}

Cause: The service does not exist or the Oracle clusterware is down.

Action: Make sure that the Oracle clusterware is up and running and the service exists.

PRCD-01117: Failed to modify service {0}, the service should have at least one preferred instance

Cause: An attempt was made to remove all preferred instances of the service.

Action: Make sure that there is at least one instance provided in the service preferred instance list.

PRCD-01118: Failed to set service {0} to {1} because it runs on more than one node

Cause: The service was running on more than one node.

Action: Make sure that the service is not running or running on one node only.

PRCD-01119: Failed to create database {0} because the database unique name matches that of database {1} in the first 8 characters

Cause: The database unique name was not unique in the first 8 characters. It is a requirement because the name is used to generate ORACLE_SID.

Action: Ensure that the name supplied is unique in the first 8 characters, and retry the command.

PRCD-01120: The resource for database {0} could not be found.

Cause: The resource for the specified database name could not be found. Either the database name was misspelled or the database has not been created.

Action: Correct the database name spelling or use the 'srvctl add database' command to create the database configuration.

PRCD-01121: Specified server pool {0} for {1} is already hosting an administrator-managed configuration for database(s) {2}

Cause: Server pool is hosting administrator-managed databases.

Action: Specify a server pool that is not hosting an administrator-managed database.

PRCD-01122: Specified server pool {0} for {1} is already hosting an administrator-managed configuration for service(s) {2}

Cause: Server pool is hosting administrator-managed services.

Action: Specify a server pool that is not hosting an administrator-managed service.

PRCD-01123: Oracle Clusterware resource does not exist for ACFS filesystem of volume device {0}. A resource is required for the filesystem containing ACFS path {1}.

Cause: The resource for the filesystem did not exist for the database which has its dependency on the ACFS path. A resource is required for path used by the database on ACFS filesystems so that Oracle Clusterware can track the database's dependency on the filesystem. Database's dependent ACFS paths cannot be mounted via the ACFS registry.

Action: Add the resource with 'srvctl add filesystem'.

PRCD-01124: Failed to stop database {0} and its services

Cause: Attempt to stop the database has failed.

Action: Ensure that user attempting to stop the database has execute privileges on the database resource. Also, review the accompanying error messages for details about failure to stop database. Retry after resolving those issues or contact Oracle Support Services.

PRCD-01125: Failed to create dependency from database {0} to its Oracle home {1} that is located on the ASM cluster filesystem

Cause: An attempt to modify the database resource to include a stop dependency on the ASM cluster filesystem for the database's Oracle home failed.

Action: Make sure that the asm instance is running; the ACFS driver exists in the driver directory and the underlying ACFS devices are accessible.

PRCD-01126: Instance {0} cannot be removed because it is the only preferred instance for service(s) {1} for database {2}

Cause: An attempt was made to remove the instance which is the only preferred instance for specified services.

Action: Make sure that specified services have more than one preferred instance or modify services to not have the instance as a preferred instance.

PRCD-01127: Failed to verify if instance {0} is the only preferred instance for any service

Cause: An attempt to verify if the instance is the only preferred instance for any service failed.

Action: Make sure that the Oracle clusterware is up and running. Also, review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01128: Failed to remove all services configured for database {0}

Cause: An attempt to remove all services configured for database.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01129: Failed to start instance {0} for database {1}

Cause: An attempt to start an instance with the specified name failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01130: Failed to convert administrator-managed database {0} into a policy-managed database to use server pool {1}

Cause: An attempt to convert the database from an administrator-managed configuration to a policy-managed configuration failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01131: Failed to stop database {0} and its services on node(s) {1}

Cause: Attempt to stop the database on given nodes has failed.

Action: Ensure that user attempting to stop the database has execute privileges on the database resource. Also, review the accompanying error messages for details about failure to stop database. Retry after resolving those issues or contact Oracle Support Services.

PRCD-01132: Database {0} doesn't have defined service(s) {1}

Cause: An attempt to start/stop services on the given database failed.

Action: Make sure that every service you want to start or stop is configured for the given database.

PRCD-01133: Failed to start services for database {0}

Cause: An attempt to start given services on the given database failed because those service(s) are not configured for the database.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01134: Failed to find any listener defined for network {0}

Cause: An attempt to find listener(s) defined for specified network failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01135: There is no listener defined for network {0} to be used by service {1}

Cause: An attempt to create a service failed because provided network doesn't have listener to publish a service on that network.

Action: Make sure that the provided network has a listener.

PRCD-01136: Failed to retrieve type of the database {0}

Cause: An attempt to query the type of database has failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01137: Failed to retrieve online relocation timeout for RAC One Node database {0}

Cause: An attempt to query the current online relocation timeout for RAC One Node database has failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01138: Failed to set online relocation timeout to {0} for RAC One Node database {1}

Cause: An attempt to update the online relocation timeout for RAC One Node Database has failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01139: The current server {0} where RAC One Node database {1} is running is not in the given candidate server list {2}

Cause: An attempt to update the candidate servers of the server pool hosting RAC One Node Database has failed because current server where this database is running is not in the given candidate server list.

Action: Retry the operation after either including the current server where this database is running in the given candidate server list or stopping the database.

PRCD-01140: Failed to update candidate servers to {0} of the server pool hosting RAC One Node database {1}

Cause: An attempt to update the candidate servers of the server pool hosting RAC One Node Database has failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01141: The database {0} is not hosted by a server pool

Cause: An attempt to query the server pool for given database failed because this database is not hosted by a server pool. This is most likely due to a program calling cluster environment API in Oracle Restart environment.

Action: Examine the accompanying error messages for details and contact Oracle Support Services.

PRCD-01142: The {0} TAF policy is not valid for RAC One Node service {1}

Cause: A TAF policy other than BASIC or NONE was specified for RAC One Node service.

Action: Specify BASIC or NONE TAF policy and retry the operation.

PRCD-01143: The cardinality of {0} is not valid for RAC One Node database or service {1}

Cause: An invalid cardinality was specified for RAC One Node database or service.

Action: Specify a SINGLETON cardinality and retry the operation.

PRCD-01144: The {0} management policy is not valid for RAC One Node database {1}

Cause: A management policy other than AUTOMATIC was specified for RAC One Node database.

Action: Specify AUTOMATIC management policy and retry the operation.

PRCD-01145: {0} API is not supported on RAC One Node database environment

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCD-01146: Database {0} is not a RAC One Node database

Cause: The specified database is not a RAC One Node database.

Action: Provide database name for a RAC One Node database.

PRCD-01147: The server pool {0} of administrator-managed database {1} has no candidate servers

Cause: Either the instance had not been added to the database or this database's server pool was altered inappropriately.

Action: If an instance was not added to the database yet, try to add an instance to this database, for example by using the command 'srvctl add instance', and then retry. Otherwise, contact Oracle Support Services.

PRCD-01148: Failed to convert the configuration of RAC One Node database {0} into its equivalent configuration for RAC database

Cause: Internal error.

Action: Review the accompanying error messages and contact Oracle Support Services.

PRCD-01149: AUTOMATIC management policy cannot be used for the service {0} when the database {1} is not AUTOMATIC

Cause: An attempt to create/modify a service failed because the management policy specified for the service is AUTOMATIC but the database's management policy is not AUTOMATIC.

Action: Make sure that the provided service's management policy is MANUAL or NORESTART when running 'srvctl add service' or 'srvctl modify service' command.

PRCD-01150: Failed to retrieve EDITION for service {0}

Cause: An attempt to retrieve the EDITION attribute of the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01151: Failed to convert the configuration of RAC One Node database {0} into its equivalent RAC database configuration because RAC One Node database is running on a different server {1} than the given target server {2}

Cause: A target server was specified that was different from the server where the RAC One Node database is running.

Action: Either supply the server where RAC One Node Database is running now as target server or stop the database and retry.

PRCD-01152: Failed to update instance name {0} for database {1}

Cause: An attempt to update instance name for the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01153: Failed to convert the configuration of cluster database {0} into its equivalent RAC One Node database configuration

Cause: An attempt to convert the specified cluster database to RAC One Node database failed.

Action: Review the accompanying error messages and retry after resolving these errors or contact Oracle Support Services.

PRCD-01154: Failed to convert the configuration of cluster database {0} into its equivalent RAC One Node database configuration because cluster database is running on more than one server {1}

Cause: User attempted conversion of a cluster database to RAC One Node database that was running on more than one servers.

Action: Stop this database on all but one server and retry.

PRCD-01155: Failed to convert the configuration of cluster database {0} into its equivalent RAC One Node database configuration because cluster database has more than one server pool {1} to control its placement

Cause: User attempted conversion of a cluster database that had more than one server pool to control its placement.

Action: Update configuration of this database by either the command 'srvctl modify database' or if this database has services that are in their own respective server pool, then removing all but one of its services via the command 'srvctl remove service' and then retry.

PRCD-01156: Failed to convert the configuration of cluster database {0} into its equivalent configuration for RAC One Node database due to its services {1} having {2} TAF policy

Cause: This database had services that have TAF policy (e.g. PRECONNECT) that is not supported by an Oracle RAC One Node database.

Action: Either modify the TAF policy of these services to either BASIC or NONE using the command 'srvctl modify service' or remove these services using the command 'srvctl remove service' and then retry.

PRCD-01157: Failed to convert the configuration of cluster database {0} into its equivalent configuration for RAC One Node database because none of its services have {1} management policy

Cause: An attempt to convert a cluster database configuration into its equivalent configuration for an Oracle RAC One Node database was rejected because all services of the given database have the MANUAL management policy.

Action: Modify the management policy of at least one of these services to AUTOMATIC using the command 'srvctl modify service ... -policy AUTOMATIC' and then retry.

PRCD-01158: Invalid database type {0}

Cause: The database type supplied is not valid.

Action: Supply a valid database type.

PRCD-01159: Target node must be specified when initiating an online relocation of administrator managed RAC One Node database {0}

Cause: The target node was not specified when requesting online relocation on the administrator managed Oracle RAC One Node database.

Action: Include the '-node' option with the 'srvctl relocate database' command.

PRCD-01160: Online relocation request for RAC One Node database {0} was rejected because this database is not running

Cause: An Oracle RAC One Node database was not running.

Action: Start the database by issuing the command 'srvctl start database' and then retry.

PRCD-01161: Online relocation failed for RAC One Node database {0}

Cause: Online relocation of the given database was unsuccessful.

Action: Either run the command 'srvctl relocate database -a' to abort the online relocation or run the command 'srvctl relocate database -n' to perform online relocation of the database to the given target node.

PRCD-01162: Invalid online relocation status {0}

Cause: This is an internal error.

Action: Review the accompanying error messages and contact Oracle Support Services.

PRCD-01163: Failed to modify database {0}

Cause: Failed to modify database.

Action: Make sure that the CRS stack is up and running and then retry.

PRCD-01164: An online relocation request for RAC One Node database {0} is already active

Cause: The given database has an already active online relocation request.

Action: Either specify another database in the 'srvctl relocate database' command or abort the in-progress request with 'srvctl relocate database -a' command.

PRCD-01165: An online relocation request for RAC One Node database {0} has failed

Cause: An online relocation request for the database has failed and the supplied target node was not the same as that in the failed request.

Action: Use the command 'srvctl status database' to query the target node of the failed online relocation request. Either run the command 'srvctl relocate database -a' to abort the failed request or 'srvctl relocate database -n' command with the correct target node.

PRCD-01166: The supplied node {0} is not available in the {1} server pool

Cause: Supplied node was not in the Free server pool.

Action: Supply node from the Free server pool.

PRCD-01175: Failed to determine the status of the online relocation request for RAC One Node database {0}

Cause: Unable to determine the status of the online relocation request for the given Oracle RAC One Node database.

Action: Examine the accompanying error messages for details.

PRCD-01176: Invalid online relocation state {0}

Cause: This is an internal error.

Action: Review the accompanying error messages and contact Oracle Support Services.

PRCD-01177: Failed to abort the online relocation request for RAC One Node database {0}

Cause: Failed to abort the online relocation of the Oracle RAC One Node database.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01178: A failed online relocation request for RAC One Node database {0} does not exist

Cause: The supplied Oracle RAC One Node database does not have a failed online relocation request.

Action: Supply an Oracle RAC One Node database that has a failed online relocation request.

PRCD-01179: The online relocation timeout value {0} is not within the range of between {1} and {2}

Cause: The specified online relocation timeout value was not within the required range.

Action: Supply a value within the required range.

PRCD-01180: Configuration of database {0} has already been upgraded to version {1}

Cause: The supplied database was already upgraded.

Action: Supply a database of a lower version.

PRCD-01181: Failed to upgrade configuration of services {0} to version {1}

Cause: Failed to upgrade the service configuration.

Action: Review the accompanying error messages. If you are unable to resolve the problem, contact Oracle Support Services.

PRCD-01182: Failed to upgrade configuration of database {0} to version {1}

Cause: Failed to upgrade the database configuration.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01183: Failed to upgrade configuration of service type to version {0}

Cause: Failed to upgrade the service type configuration.

Action: Review the accompanying error messages and contact Oracle Support Services.

PRCD-01184: Failed to upgrade configuration of database type to version {0}

Cause: Failed to upgrade the database type configuration.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01185: Failed to retrieve service resource {0} for non cluster database {1}

Cause: An attempt to get the specified service failed because the database provided is a single instance and not a cluster database.

Action: Make sure that Oracle Clusterware is configured, specify a service defined for cluster database, and then retry.

PRCD-01186: TAF policy 'PRECONNECT' cannot be used to add a service for single instance database {0}

Cause: Failed to create a service because provided TAF specification can not be used with a single instance database.

Action: Retry after removing 'PRECONNECT' TAF policy.

PRCD-01187: Failed to enable or disable service {0} on particular nodes for non-cluster single instance database {1}

Cause: An attempt to enable or disable the service on particular nodes for single instance database failed. Such enable or disable operations are not applicable to services defined for single instance databases in Oracle Restart.

Action: Specify a service defined for database which is running on cluster or do not specify nodes.

PRCD-01188: Failed to detect whether the standby database {0} supports the Data Guard protection mode

Cause: An attempt has failed to determine whether the standby database supports the configured Data Guard protection mode.

Action: Review the accompanying error messages for details about the failure and retry the command after resolving those issues.

PRCD-01189: Cannot update server pool to {0} for RAC One Node database service {1}

Cause: An attempt to update the server pool of an Oracle RAC One Node database service was rejected because placement of this service is controlled by the server pool hosting the underlying database.

Action: Try updating the server pool controlling the placement of the database via 'srvctl modify database' command or its equivalent.

PRCD-01190: Cannot update server pool to {0} for single instance database service {1}

Cause: An attempt to update the server pool of a single instance (non-RAC) database service was rejected because placement of this service is controlled by the server pool hosting the underlying database.

Action: Try updating the server pool controlling the placement of the database using the 'srvctl modify database' command or its equivalent.

PRCD-01191: Cannot update server pool to {0} for database service {1}

Cause: An attempt to update server pool of database service was rejected because a subpool server pool was specified.

Action: Supply a first-level server pool that is not a subpool of any other server pool and retry the operation.

PRCD-01192: The cardinality {0} is not valid for single instance database service {1}

Cause: An invalid cardinality was specified for single instance (non-RAC) database.

Action: Retry after specifying a SINGLETON cardinality in 'srvctl modify service' command or its equivalent.

PRCD-01193: Service {0} defined for RAC One Node database {1} cannot be started on more than one node

Cause: An attempt to start the specified service failed because RAC One Node service cannot be started on more than one node.

Action: Retry after specifying one node to start the service on.

PRCD-01194: Failed to retrieve the version of database {0}

Cause: An attempt to retrieve the VERSION resource attribute has failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01195: Option to remove the target node was not allowed for aborting online relocation of policy-managed RAC One Node database {0}

Cause: The '-revert' option was specified on a request to abort online relocation of the policy-managed Oracle RAC One Node database.

Action: Use the command 'srvctl relocate database -abort' without the '-revert' option.

PRCD-01196: 'PRECONNECT' TAF policy cannot be used to create service {0} on policy managed database {1}

Cause: Failed to create a service because a policy managed database cannot have service with PRECONNECT TAF policy.

Action: Retry after supplying 'BASIC' or 'NONE' TAF policy.

PRCD-01197: The database {0} is policy-managed and an administrator-managed service {1} cannot be created on it

Cause: The specified database does not support administrator-managed services.

Action: Provide a database which supports administrator-managed services.

PRCD-01198: Failed to add service {0} to database {1} because database is already at maximum services limit of {2}

Cause: Attempt to add a new service to database was rejected because database has already reached the maximum services limit.

Action: Retry after removing a service from this database using the command 'srvctl remove service', or contact Oracle Support Services.

PRCD-01199: The stop request on instance {0} of standby database {1} was rejected to prevent termination of the primary database

Cause: The attempt to stop this instance of the standby database was rejected because the configured Data Guard protection mode required this instance to be running to prevent termination of the primary database.

Action: Retry the stop request after stopping the primary database or downgrading the protection mode.

PRCD-01200: Configuration of database {0} has already been downgraded to version {1} for database {2}

Cause: The supplied database was already downgraded.

Action: Supply a database of a higher version.

PRCD-01201: Downgrade from current version {0} to version {1} is not supported for database {2}

Cause: An unsupported version was specified for downgrading the database.

Action: Check that the versions provided are correct.

PRCD-01202: Failed to downgrade configuration of services {0} to version {1}

Cause: A request to downgrade the service configuration failed.

Action: Review the accompanying error messages. If you are unable to resolve the problem, contact Oracle Support Services.

PRCD-01203: Failed to downgrade configuration of database {0} to version {1}

Cause: A request to downgrade the database configuration failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01204: Failed to update administrator-managed database {0} to use server pool {1}

Cause: Attempt to update administrator-managed database was rejected because administrator-managed database cannot be moved to another subpool.

Action: Retry after supplying a first-level server pool in 'srvctl modify database' command to convert administrator-managed database to policy-managed database.

PRCD-01205: Failed to update policy-managed database {0} to use server pools {1} because it excludes the server pools {2} of the service {3}

Cause: An attempt to update policy-managed database was rejected because specified server pools do not include all server pools hosting services of this database.

Action: Include all server pools hosting services of this database in the supplied server pool list.

PRCD-01206: Failed to retrieve preferred instance of service {0} of RAC One Node database {1}

Cause: Attempt to retrieve preferred instance of service belonging to RAC One Node database failed because database is either in failed online relocation state or undergoing online relocation.

Action: Check the status of online relocation via 'srvctl status database' command. If online relocation status is reported as active, then retry after online relocation completes. If online relocation status is reported as failed, then repair the configuration via 'srvctl relocate database ... -a' command and then retry.

PRCD-01207: The start options {2} can not be used while starting service {0} and its database {1}

Cause: An attempt to start the service was rejected because the specified start options can not be used with service when the database is not running.

Action: Remove the specified start options and then retry.

PRCD-01208: The start options {1} can not be used while starting services for database {0}

Cause: An attempt to start the services was rejected because the specified start options can not be used with services when the database is not running.

Action: Remove the specified start options and then retry.

PRCD-01209: RAC One Node database {0} does not have enough servers in its server pool {1} to initiate an online relocation

Cause: Online relocation request was rejected because there were less than two servers in the server pool of the specified RAC One Node database.

Action: Make sure that the minimum and maximum size of the server pool are set properly.

PRCD-01210: The service name {0} cannot be same as the database default service name {1}

Cause: An attempt to create the service was rejected because the given service name is same as the database default service name.

Action: Retry after supplying a service name that is different than the database default service name.

PRCD-01211: Cannot start RAC One Node database {0} because a failure has occurred while trying to clean up an earlier failed online relocation

Cause: An attempt to start an Oracle RAC One Node database was rejected because a failure occurred while trying to clean up an earlier failed online relocation.

Action: Use the command 'srvctl status database' to query the target node of the failed online relocation process. Either run the command 'srvctl relocate database' with the '-abort' option or with the '-node' option with the target node thus discovered.

PRCD-01212: An instance with name "{0}" already exists on node {1}

Cause: An instance could not be added to the database on the specified node because an instance with the same name was found on another node.

Action: Use the command 'srvctl modify instance' to change the name of the existing instance, or use a different instance name in the 'srvctl add instance -instance <inst_name>' command.

PRCD-01213: Service {0} of database {1} is still running

Cause: An attempt to remove RAC One Node service failed because the given service was still running.

Action: Stop the service and then retry the command.

PRCD-01214: Administrator-managed RAC database {0} has more than one instance

Cause: An attempt to convert an Oracle RAC database to an Oracle RAC One Node database failed because there was more than one instance.

Action: Use the command 'srvctl remove instance' to remove all but one instance and then run the 'srvctl convert database -dbtype RACONENODE' command.

PRCD-01215: Unable to downgrade RAC One Node database {0}

Cause: Failed to downgrade RAC One Node database to an earlier version because there was no RAC One Node specific configuration in the earlier version.

Action: None

PRCD-01222: Online relocation of database "{0}" failed but database was restored to its original state

Cause: Online relocation of the given database was unsuccessful, therefore the database was restored to its original state.

Action: See accompanying messages for online relocation failure.

PRCD-01223: The service name {0} contains illegal characters {1}

Cause: An attempt to create the service was rejected because the given service name contains illegal characters.

Action: Retry after supplying a service name that contains an upper or lower case letter as the first character and the remainder includes characters only from the character set {a-z, A-Z, 0-9, _}, and the domain name (if provided) only includes characters from the character set {a-z, A-Z, 0-9, _, \$, #}.

PRCD-01224: The {0} management policy is not valid for RAC One Node database service {1}

Cause: A management policy other than AUTOMATIC was specified for RAC One Node database service.

Action: Either specify AUTOMATIC management policy for this service or modify management policy of another service of this database to AUTOMATIC, such as via 'srvctl modify service' command, and then retry the current operation.

PRCD-01225: An attempt to remove service {0} of database {1} was rejected because this is the last service with {2} management policy. A RAC One Node database must have at least one service with {2} management policy.

Cause: An attempt was made to remove the last service of an Oracle RAC One Node database having the AUTOMATIC management policy.

Action: Add another service with the AUTOMATIC management policy, for example by using the command 'srvctl add service ... -policy AUTOMATIC' or modify the management policy of an existing service to AUTOMATIC using the command 'srvctl modify service', before removing the given service.

PRCD-01226: Failed to retrieve ASM Cluster Filesystem resource {0} for database {1}.

Cause: The ASM Cluster Filesystem resource was not registered in Oracle Clusterware.

Action: Create the ASM Cluster Filesystem resource using the command 'srvctl add filesystem' and then retry.

PRCD-01227: Failed to retrieve ASM Cluster Filesystem list for database {0}.

Cause: Failed to retrieve the ASM Cluster Filesystems of the specified database.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01228: Failed to convert administrator-managed RAC database {0} to RAC One Node database because the database had no instance added

Cause: An attempt to convert an Oracle RAC database to an Oracle RAC One Node database was rejected because the database did not have an instance added.

Action: Use the command 'srvctl add instance' to add an instance and then run the command 'srvctl convert database -dbtype RACONENODE'.

PRCD-01229: An attempt to access configuration of database {0} was rejected because its version {1} differs from the program version {2}. Instead run the program from {3}.

Cause: An attempt was made to access configuration of database that is of different version than that of the program.

Action: Make sure that database configuration version and the program version are same and then retry. For example, try the operation using srvctl from the ORACLE_HOME mentioned in the error message.

PRCD-01230: Failed to modify database {0} to use server pool {1}

Cause: An attempt to modify the database to use the given server pool has failed.

Action: Review the accompanying error messages for details about the failure. For example, a failure could happen if the database owner does not have execute permissions on the given server pool. In this case, use the command 'srvctl config database -db <db_unique_name>' to find out the database owner's user name, create a server pool as that user, and then supply that server pool as an argument when retrying the command.

PRCD-01231: Failed to upgrade configuration of database {0} to version {1} in new Oracle home {2}

Cause: Failed to upgrade the database configuration.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01232: Failed to upgrade configuration of database {0} because database version {1} is an unsupported version for upgrade

Cause: Version of the database was not supported for upgrade.

Action: None

PRCD-01233: Failed to downgrade configuration of database {0} to version {1} in new Oracle home {2}

Cause: Failed to downgrade the database configuration.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01234: Failed to downgrade configuration of database {0} to version {1} because the specified version is unsupported for downgrade

Cause: Specified version was not supported for downgrade.

Action: Specify a version that is 10.1 or later.

PRCD-01235: Unable to downgrade configuration of single instance database {0} to version {1}

Cause: Single instance database was specified.

Action: Remove the single instance database configuration. 11.2 Clusterware cannot manage pre-11.2 single instance databases.

PRCD-01236: Unable to downgrade configuration of RAC One Node database {0} to version {1}

Cause: An Oracle RAC One Node database was specified.

Action: Convert the administrator-managed Oracle RAC One Node database to an administrator-managed Oracle RAC database using the command 'srvctl convert database' and then retry.

PRCD-01237: Unable to downgrade configuration of policy-managed RAC database {0} to version {1}

Cause: A policy-managed Oracle RAC database was specified.

Action: Remove the 11.2 database configuration and use pre-11.2 srvctl to re-create the configuration.

PRCD-01238: Failed to get attributes for database {0}

Cause: Failed to get attributes for the database.

Action: Make sure that the CRS stack is up and running and then retry.

PRCD-01239: Failed to downgrade configuration of database {0} to version {1} because the database has dependency on ASM Cluster File System

Cause: Specified database was dependent on ASM Cluster File System.

Action: None

PRCD-01240: Unable to downgrade configuration of database {0} because its database role of {1} is not supported in version {2}

Cause: Database role of specified database was not supported in the specified version.

Action: Modify the database role using the 'srvctl modify database' command and then retry this command.

PRCD-01241: Failed to upgrade configuration of database {0} to version {1} in new Oracle home {2}. Also failed to remove the internal server pool configuration.

Cause: Failed to upgrade the database configuration.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01242: Unable to convert RAC database {0} to RAC One Node database because the database had no service added

Cause: An attempt to convert an Oracle RAC database to an Oracle RAC One Node database was rejected because the database did not have any service configured. An Oracle RAC One Node database must always have one service.

Action: Use the command 'srvctl add service' to add a service and then run 'srvctl convert database -dbtype RACONENODE'.

PRCD-01243: Failed to start instance {0} of database {1} because an instance having same name was already running on node {2}

Cause: An attempt to start an instance with the given name was rejected because another instance with same name was already running on another node.

Action: Either supply a different instance name or stop the running instance with the same name and then retry.

PRCD-01244: Failed to start service {0} of RAC One Node database {1} on the given node {2} because the database was running on node {3}

Cause: An attempt to start the specified service on the given node was rejected because RAC One Node database is running on a node different than the given node.

Action: Either omit the node option or supply the node where the database is running.

PRCD-01246: Online relocation of RAC One Node Data Guard standby database "{0}" was rejected because the database is in Data Guard maximum protection mode

Cause: An online relocation request was rejected because the specified database is operating in Data Guard maximum protection mode.

Action: Downgrade the protection mode to maximum availability and retry the online relocation.

PRCD-01247: Failed to retrieve pluggable database for service {0}

Cause: An attempt to retrieve the pluggable database attribute of the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01248: Failed to retrieve the maximum value of replication lag available for the service {0}

Cause: An attempt to retrieve the maximum value of replication lag for the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01249: Failed to determine whether the service {0} is global or not

Cause: Failed to check whether the specified service is global or not.

Action: Examine the accompanying error messages for details.

PRCD-01250: Modification of the global service attribute {0} not allowed

Cause: An attempt was made to change a global service attribute managed by Global Data Services for just one database.

Action: The attribute must be changed for all databases at the same time through GDS's 'GDSCTL' command (or specify '-global_override').

PRCD-01251: The specified operation on global service {0} is not allowed

Cause: An attempt was rejected to operate on a global service managed by Global Data Services for just one database.

Action: Operate on the service using Global Data Services' 'GDSCTL' command, or specify '-global_override'.

PRCD-01252: Failed to retrieve the password file location of database {0}

Cause: An attempt to retrieve the password file attribute of the specified database failed.

Action: Retry the request after ensuring that the CRS stack is running, the database resource has been configured, and the user has read permission on the database resource.

PRCD-01253: Failed to update password file location {0} of database {1}

Cause: An attempt to update the password file attribute of the specified database failed.

Action: Retry the request after ensuring that the CRS stack is running, the database resource has been configured, and the user has update permission on the database resource.

PRCD-01254: Password file attribute does not exist for database {0}

Cause: An attempt to retrieve the PWFIL resource attribute failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01255: Failed to retrieve SQL translation profile for service {0}

Cause: An attempt to retrieve the translation profile attribute of the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01256: Failed to retrieve commit outcome for service {0}

Cause: An attempt to retrieve the commit outcome attribute of the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01257: Invalid session state consistency {0}

Cause: The session state consistency supplied is not valid.

Action: Supply a valid session state consistency either STATIC or DYNAMIC.

PRCD-01258: Addition or modification of retention is not allowed when commit outcome is set to FALSE

Cause: An attempt to add or modify retention value was rejected because the commit outcome is not set to TRUE.

Action: Set the option '-commit_outcome' to TRUE and then modify the retention value.

PRCD-01259: Addition or modification of failover type to TRANSACTION is not allowed when commit outcome is set to FALSE

Cause: An attempt to add or modify failover type value to TRANSACTION was rejected because the commit outcome is not set to TRUE.

Action: Set the option '-commit_outcome' to TRUE and then modify the failover type value.

PRCD-01260: Failed to retrieve failover type for service {0}

Cause: An attempt to retrieve the failover type attribute of the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01261: Failed to add or modify replay initiation time because the failover type is not set to TRANSACTION

Cause: An attempt to modify the replay initiation time attribute of the specified service failed.

Action: Set the failovertyp to TRANSACTION and retry the command.

PRCD-01262: Failed to add or modify session state consistency because the failover type is not set to TRANSACTION

Cause: An attempt to modify the session state consistency attribute of the specified service failed.

Action: Set the failovertyp to TRANSACTION and retry the command.

PRCD-01263: Invalid retention time {0} seconds greater than the maximum {1} seconds

Cause: The specified value exceeds the maximum permissible retention time.

Action: Supply a valid retention time value less than 2592000.

PRCD-01264: Invalid replay initiation time {0} seconds greater than the maximum {1} seconds

Cause: The specified value exceeds the maximum permissible replay initiation time.

Action: Supply a valid replay initiation time value less than 86400.

PRCD-01265: Failed to retrieve parallel query helper service for service {0}

Cause: An attempt to retrieve the parallel query helper service of the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01266: Failed to set parallel query helper service {0} for service {1}

Cause: An attempt to set the parallel query helper service for the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01267: Failed to retrieve the server pools of the parallel query helper service for service {0}

Cause: An attempt to retrieve the server pools of the parallel query helper service of the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01268: Failed to set parallel query helper service {0} for service {1}

Cause: An attempt to set the parallel query helper service for the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01269: Failed to set parallel query helper service {0} for database {1}

Cause: An attempt to set the parallel query helper service for the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01270: {0} API is not supported on management database environment

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRCD-01271: Failed to unset commit outcome because the failover type is set to TRANSACTION

Cause: An attempt to unset the commit outcome attribute of the specified service failed.

Action: Modify the value of failovertype and retry the command.

PRCD-01272: Failed to remove the management database resource

Cause: An attempt to remove the management database failed.

Action: Examine the accompanying error messages for details.

PRCD-01273: Failed to retrieve the service type for service {0}

Cause: An attempt to retrieve the service type of the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01274: Failed to set service type {0} for service {1}

Cause: An attempt to set the service type for the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01275: Failed to retrieve the server pools of the parallel query helper service for database {0}

Cause: An attempt to retrieve the server pools of the parallel query helper service of the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01276: Service {0} of database {1} does not have parallel query helper service

Cause: The specified service did not have parallel query helper service configured.

Action: None

PRCD-01277: The specified operation on global service {0} is not allowed

Cause: An attempt was rejected to operate on a global service managed by Global Data Services for just one database.

Action: Operate on the service using Global Data Services' 'GDSCTL' command, or specify '-global_override'.

PRCD-01278: The service name {0} cannot be same as the pluggable database default service name {1}

Cause: An attempt to create or modify the service was rejected because the given service name is same as the pluggable database default service name.

Action: Make sure that the service name is different from the pluggable database default service name and retry the command.

PRCD-01279: AQ HA notification cannot be set to FALSE when the failover type is TRANSACTION

Cause: An attempt was rejected to add or modify the service because conflicting options were found.

Action: Set the AQ HA notification to TRUE or modify the failover type to any of the values NONE | SESSION | SELECT.

PRCD-01280: The pluggable database name {0} contains invalid characters.

Cause: The supplied pluggable database name contained invalid characters.

Action: Valid characters in a pluggable database name are a-z, A-Z, 0-9, \$, #, and _ (underscore) and it should start with a letter.

PRCD-01281: The database {0} in an ASM Client Cluster cannot have dependency on diskgroup {1}

Cause: Diskgroups were supplied for creating a database in an ASM Client Cluster.

Action: Do not specify diskgroups when creating a database in an ASM Client Cluster.

PRCD-01282: Cannot add instance {0} for database "{1}" because node {2} has active role {3}.

Cause: An attempt to add an instance for a database specified a node with an active node role other than hub.

Action: Specify the node with hub active node role when adding the instance for database.

PRCD-01283: Password file pathname {0} cannot contain only the diskgroup name

Cause: An attempt to add a password file resource attribute was rejected because the supplied pathname consisted only of a diskgroup name.

Action: Specify a valid password file path and retry the command.

PRCD-01284: Failed to create start dependency for database {0} on the ASM cluster file system because path {1} is not on an ASM cluster file system

Cause: An attempt to create a start dependency for the database resource on the ASM cluster file system failed because the specified path was not on an ASM cluster file system.

Action: Specify a path on an ASM cluster file system.

PRCD-01285: Cannot disable session replay because session disconnect is not requested

Cause: An attempt to stop or relocate services was rejected because the session noreplay option was specified without the session disconnect option.

Action: Specify the '-force' option for session disconnect or omit the '-noreplay' option. For example: 'srvctl stop service -db hr -service hrl -force -noreplay'

PRCD-01286: Failed to create the management database

Cause: An attempt to create the management database failed because the request was issued by the wrong user.

Action: Login in as the owner of the Oracle Home to issue the command 'srvctl add mgmtldb'.

PRCD-01287: User is not authorized to remove service {0} for database {1}

Cause: An attempt to remove the specified service was rejected because the command was not issued by the Oracle home owner.

Action: Examine the accompanying error messages for details. Log in as the user of the Oracle home to issue the command.

PRCD-01288: User is not authorized to create service {0} for database {1}

Cause: An attempt to create the specified service failed because the command was not issued by the Oracle home owner.

Action: Examine the accompanying error messages for details. Log in as the user of the Oracle home to issue the command.

PRCD-01289: Invalid stop option {0} for the online relocation of database {1}

Cause: An attempt to relocate the specified database failed because an invalid stop option was specified. Only NORMAL shutdown of the running instance may be specified for relocation of an Oracle RAC One Node database.

Action: Specify NORMAL to override the default stop option for the running instance or issue the request without any stop option.

PRCD-01290: NORMAL shutdown is not allowed for physical standby databases

Cause: An attempt to relocate the specified database was rejected because an invalid stop option was specified.

Action: Issue the request without any stop option.

PRCD-01291: The specified server pool {0} has maximum size {1} greater than one, which is invalid for a single instance database {2}.

Cause: An attempt to create a single instance database failed because a server pool with maximum size greater than one server was specified.

Action: Specify a different server pool with maximum size of one, or modify the specified server pool using the command 'srvctl modify srvpool' with '-max 1' option to have at most one server.

PRCD-01292: specified server pool {0} has no candidate server for single instance database {1}

Cause: An attempt to create a single instance database failed because the specified server pool had no configured candidate server.

Action: Specify a different server pool with a maximum of one server, or modify the specified server pool using the command 'srvctl modify srvpool' with '-servers' option to configure exactly one candidate server.

PRCD-01293: specified server pool {0} has more than one candidate server

Cause: An attempt to create a single instance database failed because a server pool with more than one candidate server was specified.

Action: Specify a different server pool with a maximum of one server, or modify the specified server pool using the command 'srvctl modify srvpool' with '-servers' option to configure exactly one candidate server.

PRCD-01294: Invalid option GSM flags for the specified non-global service {0}

Cause: An attempt to add or modify the specified option was rejected because an option that is only valid for global services was specified.

Action: Reissue the request without the invalid option.

PRCD-01295: Cannot downgrade configuration of database {0} from version {1} to newer version {2}

Cause: An attempt was made to downgrade the database to a version newer than the current one.

Action: Specify a target version older than the current one.

PRCD-01296: An error occurred while loading Oracle JDBC driver

Cause: An attempt to load Oracle JDBC driver failed.

Action: This is an internal error. Contact Oracle Support Services.

PRCD-01297: An error occurred while establishing connection to database with user name "{0}" and connect descriptor:\n{1}

Cause: An attempt to connect to database failed.

Action: Examine the accompanying error message for details.

PRCD-01298: Version {0} of database or service resource is different from the srvctl version {1}

Cause: The version of srvctl used did not match the version of the database or service to be added or modified.

Action: Run `srvctl` from the Oracle Home where the database or service is configured.

PRCD-01299: Database {0} is policy-managed

Cause: An attempt to retrieve the configured nodes of an administrator-managed database failed because the database is policy-managed.

Action: Specify an administrator-managed database.

PRCD-01300: Failed to retrieve nodes on which database {0} is configured

Cause: An attempt to retrieve the configured nodes of an administrator-managed database failed.

Action: Examine the accompanying error messages for details.

PRCD-01301: Current owner {0} of the database {1} is different from the owner {2} of the specified Oracle home {3}

Cause: An attempt to modify the Oracle home of the database failed because the owner of the Oracle home was not the current owner of the database. Changing to use an Oracle home with a different owner changes the ownership of the database.

Action: To modify the Oracle home of a database to a new home whose owner is not the current owner of this database, specify the new user also as a modification parameter.

PRCD-01302: failed to retrieve the node hosting this single-instance database

Cause: An attempt to retrieve the `HOSTING_MEMBERS` resource attribute of the database failed. Details are provided by the accompanying messages.

Action: Examine the accompanying error messages for details and take the corrective action indicated.

PRCD-01303: cannot retrieve the node hosting a policy-managed, single-instance database

Cause: An attempt to retrieve the node hosting a single-instance database was rejected because the database is policy-managed.

Action: Specify an administrator-managed single-instance database or a fixed single-instance database.

PRCD-01304: failed to set or modify the server pool for fixed single-instance database {0}

Cause: An attempt to set or modify the server pools for this database failed because it is a fixed single-instance database which is not hosted by a server pool.

Action: Provide a database which is not a fixed-single-instance database.

PRCD-01305: Modification of the database role from or to FAR_SYNC_STANDBY for database {0} is not allowed.

Cause: An attempt to modify the database role of a database failed because a `FAR_SYNC_STANDBY` role can be specified only during the database creation.

Action: Reissue the request without attempting to modify the role of a database created with the role `FAR_SYNC_STANDBY` or attempting to change the current role to `FAR_SYNC_STANDBY`.

PRCD-01306: Services cannot be created for the far sync database {0}.

Cause: An attempt to create a service for the database was rejected because the database role was FAR_SYNC_STANDBY.

Action: If the request was issued with the wrong database name, reissue with the correct database name.

PRCD-01307: Invalid start option OPEN specified for database {0} with the role FAR_SYNC_STANDBY.

Cause: An attempt to add, modify or start the database with start option OPEN was rejected because its role was FAR_SYNC_STANDBY.

Action: Reissue the request with a different start option.

PRCD-01308: Database {0} is not permitted to have the role FAR_SYNC_STANDBY in an Oracle RAC One Node configuration.

Cause: An attempt to add or convert the database failed because a database with role FAR_SYNC_STANDBY cannot be used in an Oracle RAC One Node configuration.

Action: Reissue the request with a different database type or database role.

PRCD-01309: Database {0} cannot be configured on parallel query server pools {1}.

Cause: An attempt to add or modify the database was rejected because a database with role FAR_SYNC_STANDBY cannot run on Leaf nodes.

Action: Reissue the request without specifying the parallel query server pools.

PRCD-01310: Failed to update the open mode of database {0}.

Cause: An attempt to modify the open mode of the database failed.

Action: Examine the accompanying error message for details.

PRCD-01311: Failed to update the open mode of database {0}. \nDetails: \n{1}

Cause: An attempt to modify the open mode of the database failed.

Action: Examine the accompanying error message for details.

PRCD-01312: The targeted database instance or instances are already running in the specified open mode. \nDetails: \n{0}

Cause: An attempt to update the open mode of the database was rejected because the targeted database instance or instances were already running as desired.

Action: Reissue the command with a different start option.

PRCD-01313: The specified start option is incompatible with the current running state of at least one database instance. \nDetails: \n{0}

Cause: An attempt to update the open mode of the database was rejected because it was not one of the following legal transitions: - NOMOUNT to MOUNT, OPEN, or READONLY - MOUNT to OPEN or READONLY

Action: Reissue the command with a different start option and only if the database's current mode is NOMOUNT or MOUNT.

PRCD-01314: failed to retrieve the list of databases configured on the cluster

Cause: An attempt to retrieve the list of databases configured on the cluster failed.

Action: Examine the accompanying error messages for details.

PRCD-01315: failed to stop instances for database {0}

Cause: An attempt to stop the database on the specified nodes has failed.

Action: Ensure that the user attempting to stop the database has execute privileges on the database resource. Also, review the accompanying error messages for details about failure to stop the database. Retry after resolving those issues.

PRCD-01316: failed to stop services {0} for database {1}

Cause: An attempt to stop the specified services for the indicated database failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01317: modification of user for database is not supported on Windows

Cause: An attempt to modify the database failed because a new user was specified.

Action: Ensure that there is no attempt to modify the Oracle user of the database and reissue the request.

PRCD-01318: failed to create database {0} because the length of the database unique name is greater than 30 characters

Cause: The length of the database unique name was greater than 30 characters.

Action: Ensure that the length of the database name supplied is less than or equal to 30 characters, and retry the command.

PRCD-01319: failed to move databases from Oracle home {0} to new Oracle home {1}

Cause: An attempt to move databases between the specified Oracle homes has failed.

Action: Examine the accompanying error messages for details.

PRCD-01320: failed to move database {0} to new Oracle home {1}

Cause: An attempt to move the database to a new Oracle home has failed.

Action: Examine the accompanying error messages for details.

PRCD-01321: Version {0} of Oracle home {1} is different from version {2} of Oracle home {3}.

Cause: An attempt to change the Oracle home of a database failed because the version of the new Oracle home is different from the version of the current Oracle home.

Action: Specify Oracle homes that are of the same version.

PRCD-01322: operation not supported for Oracle home {0} of version {1}

Cause: An attempt to change the Oracle home of a database failed because the version of the Oracle home is less than 11.2.

Action: Specify an Oracle home whose version is greater than 11.2.

PRCD-01323: Installation of patch 18697602 is not supported for Oracle Grid Infrastructure of version {0}.

Cause: An attempt to install patch 18697602 failed because the version of Oracle Grid Infrastructure is not 12.1.0.1.0.

Action: Install the patch from 12.1.0.1.0 Oracle Grid Infrastructure.

PRCD-01324: Neither the previous Oracle home {0} nor the new Oracle home {1} has a built-in user account.

Cause: An attempt to modify the Oracle home of the database failed because a database cannot be moved between homes that have different domain users.

Action: Move the database to an Oracle home that has either the same domain user or one that uses built-in account.

PRCF-01001 to PRCF-02030

PRCF-01001: The directory "{0}" does not exist

Cause: A directory that did not exist was chosen for the top-level directory of the directory map.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01002: Source directory "{0}" is not a directory

Cause: An existing file which was not a directory was provided as top-level directory.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01003: The file "{0}" does not exist

Cause: The file was not found in the file system.

Action: Make sure that the file exists in the file system.

PRCF-01004: The link destination "{0}" does not exist

Cause: The link destination was not found in the file system.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01005: "{0}" conflicts with the exclude-list

Cause: The pathname (directory, file or symbolic link pathname) to add to the directory map could not be added as it conflicted with the exclude list.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01006: The directory "{0}" exists already in the directory map

Cause: The directory existed already in the directory map.

Action: No action. This is just to let the user know that no action is taken as the task is already complete.

PRCF-01007: The file "{0}" exists already in the directory map

Cause: The file existed already in the directory map.

Action: No action. This is just to let the user know that no action is taken as the task is already complete.

PRCF-01008: The link "{0}" exists already in the directory map

Cause: The link existed already in the directory map.

Action: No action. This is just to let the user know that no action is taken as the task is already complete.

PRCF-01009: The parent of "{0}" does not exist

Cause: The parent directory of the content (directory, file or symbolic link) that was being processed did not exist.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01010: "{0}" is not a directory

Cause: The indicated object was expected to be a directory, but it was not.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01011: Cannot remove "{0}" as the directory map does not contain it

Cause: The content (i.e., directory, file or symbolic link) could not be removed from the directory map as it did not exist there.

Action: No action. This is just to let the user know that no action is taken as the task is already complete.

PRCF-01012: The following contents (directories, files or symbolic links) cannot be included to to the list of contents to add to the directory map: {0}

Cause: The contents that could not be included to the add-list were those which conflicted with the exclude-list (see the accompanying PRCF-1005 message).

Action: No action. This is just to let the user know about the conflicts with the exclude-list.

PRCF-01013: The directory map has no entry

Cause: The user tried to acquire information about an empty directory map.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01014: Cannot add "{0}" as there is no directory map

Cause: The user tried to add a content (i.e., directory, file or symbolic link) to an empty directory map. This operation is allowed only if there is a directory map.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01015: Cannot add "{0}" to the directory map as "{0}" does not exist

Cause: The content to add to the directory map was not found in the file system.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01016: Cannot remove "{0}" as there is no directory map

Cause: The user tried to remove a content (i.e., directory, file or symbolic link) from an empty directory map. This operation is allowed only if there is a directory map.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01017: Cannot remove "{0}" from the directory map as "{0}" does not exist

Cause: The content to remove from the directory map was not found in the file system.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01018: Exception encountered. Details: {0}

Cause: An unexpected error condition was detected during reading the exclude-list or include-list file.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01019: The API supports only Unix OS

Cause: The user was running on Windows OS.

Action: Make sure that the OS is Unix or Linux.

PRCF-01020: "{0}" is not a file

Cause: The content that was expected to be a file which turned out not to be a file.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01021: "{0}" is not a valid pathname

Cause: The content that was expected to be a valid pathname which turned out to be an invalid one.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01022: "{0}" does not exist

Cause: The specified pathname does not exist in the file system.

Action: Make sure that the pathname exists in the file system.

PRCF-01023: Symbolic link "{0}" points to "{1}" which does not exist

Cause: An existing symbolic link that resolves to a pathname that does not exist.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01024: Symbolic link "{0}" points to "{1}" which is not a directory

Cause: An existing symbolic link that resolves to a non-directory pathname was provided as top-level directory.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01025: Error while trying to open file "{0}" for reading. Details: {1}

Cause: An I/O error occurred while trying to open the file for reading.

Action: Make sure that the file exists, is a regular file rather than a directory and that the user has read permissions on the file. Also, look at the accompanying error messages for additional details.

PRCF-01026: Error while reading file "{0}". Details: {1}

Cause: An I/O error occurred while reading or closing the file.

Action: Look at the accompanying error messages for additional details.

PRCF-01027: Error while trying to create file "{0}" for writing. Details: {1}

Cause: An I/O error occurred while trying to create the file for writing.

Action: Make sure that if the file exists it is a regular file rather than a directory, if it does not exist it can be created and that the user has write permissions on the file. Also, look at the accompanying error messages for additional details.

PRCF-01028: Error while writing file "{0}". Details: {1}

Cause: An I/O error occurred while writing or closing the file.

Action: Look at the accompanying error messages for additional details.

PRCF-02001: Connection to host/IP address: {0} -- port: {1} refused

Cause: Could not establish connection to the provided host/IP address using the port number reported.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02002: Connection to node "{0}" is lost

Cause: The connection to the remote node with the specific node ID was lost.

Action: Verify that the remote node (which acts as server) is still up and running. Then do the same for the local node (which acts as client).

PRCF-02003: Expected "{0}" but received "{1}"

Cause: The command was not executed successfully. The local node received a reply from the remote node that was different from the expected one.

Action: No action. The program should take care of it (i.e., catch the exception and handle it).

PRCF-02004: Problem encountered while saving the directory listing to file "{0}". Details : {1}

Cause: While trying to save the directory listing to a file, the operation could not be completed successfully.

Action: If you can correct the problem indicated in the accompanying details, do so and then retry the request. Otherwise, contact Oracle Support Services.

PRCF-02005: File transfer cannot proceed because the remote node names do not match the remote node ports

Cause: An internal error caused a mismatch between the number of remote nodes and the number of remote node ports.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02006: File transfer cannot proceed because the list of remote nodes is empty

Cause: An empty list of remote nodes was passed as argument.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02007: Invalid selection for the remote node port. "{0}" is not an integer number as expected.

Cause: The port number for the remote node was either not a number at all or not an integer number.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02008: The remote node port number "{0}" is out of the expected range [1, 65535]

Cause: The port number for the remote node was indeed an integer number but either less than 1 or greater than 65535.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02009: Cannot proceed with the file transfer. There has to be at least one remote node to send the installer files!

Cause: The user either provided an empty list of remote nodes or each remote node of the list had invalid format.

Action: Make sure that the list of remote nodes is not empty and the remote nodes have valid format.

PRCF-02010: All connections to the remote nodes got refused. Cannot proceed with the file transfer. There has to be at least one remote node to send the installer files!

Cause: All the attempts to connect to the remote nodes that had valid format failed.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02011: The file "{0}" cannot be read successfully

Cause: The file existed in the file system but could not be read successfully.

Action: Make sure that the file is not corrupted. To verify that try to open the file manually and read its contents.

PRCF-02012: The top-level directory "{0}" does not exist

Cause: The top-level directory was not found in the file system.

Action: Make sure that the top-level directory exists in the file system.

PRCF-02013: Cannot find the CRS Home

Cause: The CRS Home did not exist or 'oui' was not a directory under the CRS Home.

Action: Make sure that 'oui' is a directory under the CRS Home. Refer to your platform-specific documentation for information about locating the Oracle software inventory.

PRCF-02014: Executing command "{0}" on "{1}" failed on node "{2}".ln{3}

Cause: The command ('mkdir', 'mkfile', 'mklink' or 'wfile') failed while executing on the remote node.

Action: Try to fix the problem based on the error message. If the problem still exists, contact Oracle Support Services.

PRCF-02015: One or more commands were not executed successfully on one or more nodes

Cause: At least one of the commands 'mkdir', 'mkfile', 'mklink' or 'wfile' failed while executing on one or more remote nodes.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02016: Required binary file "{0}" not found

Cause: The binary file was not found under the expected location.

Action: Contact Oracle Support Services.

PRCF-02017: Node "{0}": The transfer binary was not executed successfully as it returned a wrong port number

Cause: Misbehavior of the transfer binary on the provided node.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02018: Node "{0}": The transfer binary was not executed successfully

Cause: Unsuccessful execution of the transfer binary.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02019: Cannot retrieve the name for the local node

Cause: No IP address for the local host could be found.

Action: Use the ping command manually to check whether you get a reply from the host or not.

PRCF-02020: Cannot retrieve the host for node "{0}"

Cause: No IP address for the node host could be found.

Action: Use the ping command manually to check whether you get a reply from the host or not.

PRCF-02021: There is a mismatch between the number of node names ({0}) and the number of node destination directories ({1})

Cause: An internal error caused a mismatch between the number of remote nodes and the number of remote destination directories.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02022: The file "{0}" became smaller while being transferred

Cause: The file became smaller while being transferred.

Action: None

PRCF-02023: The following contents cannot be transferred as they are non-readable. \nDirectories:\n {0} \nFiles:\n {1}

Cause: The file permissions for the listed contents did not allow the requested operation.

Action: Ensure that the user has read permissions on the specified files and directories.

PRCF-02024: The directory "{0}" is not transferred as it is non-readable

Cause: The file permissions of the listed directory did not allow the requested operation.

Action: None

PRCF-02025: Internal error: {0}

Cause: An internal error occurred. The included value is an internal identifier.

Action: Contact Oracle Support Services.

PRCF-02026: File name is too long: {0}

Cause: An internal error occurred.

Action: Ensure that the copy doesn't result in pathnames that are too long, by making sure that the destination directory name is not too long.

PRCF-02027: Link path is too long: {0}

Cause: An internal error occurred.

Action: Ensure that the copy doesn't result in pathnames that are too long, by making sure that the destination directory name is not too long.

PRCF-02028: Failed to get system information for {0}: {1}

Cause: An attempt to get system information failed

Action: Make sure that the specified file, directory or symbolic link exists. To verify that execute 'ls -l <varname>file</varname>' manually.

PRCF-02029: The transfer operation completed with partial failures.

Cause: The operation failed to transfer all of the contents to one or more nodes.

Action: Look at the accompanying error messages for details.

PRCF-02030: Parallel transfer workload distribution error.

Cause: An error occurred while distributing the transfer workload to multiple threads.

Action: Look at the accompanying error messages for details.

PRCG-01000 to PRCG-01132

PRCG-01000: Failed to create Rapid Home Provisioning Server configuration

Cause: An attempt to create configuration for the Rapid Home Provisioning Server failed. Either the request was not issued by an account with administrative access (root, Administrator, etc) or a problem was detected inside Oracle Clusterware.

Action: Examine the accompanying error messages for details. Make sure that the user is running with administrative access.

PRCG-01001: Failed to create Rapid Home Provisioning Server configuration because there is an existing Rapid Home Provisioning Client configured on the cluster

Cause: An attempt to create configuration for the Rapid Home Provisioning Server failed because there was a Rapid Home Provisioning Client configured on the cluster.

Action: Either configure the Rapid Home Provisioning Server on another cluster or remove the existing Rapid Home Provisioning Client configuration.

PRCG-01002: Failed to find the management database resource

Cause: An attempt to find the management database resource used for the Rapid Home Provisioning Server failed because the Clusterware stack encountered errors.

Action: Examine the accompanying error messages for details.

PRCG-01003: Failed to create the Rapid Home Provisioning Client configuration

Cause: An attempt to create the configuration for the Rapid Home Provisioning Client failed. Either the request was not issued by an account with administrative access (root, Administrator, etc) or a problem was detected inside Oracle Clusterware.

Action: Examine the accompanying error messages for details. Make sure that the user is running with administrative access.

PRCG-01004: Failed to retrieve storage base path attribute for Rapid Home Provisioning Server

Cause: An attempt to retrieve the STORAGE_BASE_PATH attribute of the Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01005: Failed to update the storage base path to {0} for Rapid Home Provisioning Server

Cause: An attempt to update the storage base path for the Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01006: Failed to retrieve diskgroup list for Rapid Home Provisioning Server

Cause: An attempt to retrieve the diskgroups from the start dependencies of the Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01007: Client data file {0} does not exist for Rapid Home Provisioning Client

Cause: An attempt to locate the specified client data file failed.

Action: Make sure that the path and name of the client data file were entered correctly and the absolute path of the client data file exists.

PRCG-01008: Client data file {0} is not a file

Cause: Specified client data file was a directory.

Action: Make sure that to specify the absolute file path of the client data file.

PRCG-01009: Failed to create Rapid Home Provisioning Client because there is an existing Rapid Home Provisioning Server configured on the cluster

Cause: An attempt to create Clusterware resource for the Rapid Home Provisioning Client failed because there was a Rapid Home Provisioning Server configured on the cluster.

Action: Either configure the Rapid Home Provisioning Client on another cluster or remove the existing Rapid Home Provisioning Server configuration.

PRCG-01010: Failed to determine whether ACFS is configured on Rapid Home Provisioning Server

Cause: An attempt to verify that ACFS was configured on Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01011: Failed to determine whether ACFS is configured on Rapid Home Provisioning Client

Cause: An attempt to verify that ACFS was configured on Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01012: ACFS is not configured on Rapid Home Provisioning Server

Cause: ACFS was not configured on Rapid Home Provisioning Server.

Action: Configure ACFS on Rapid Home Provisioning Server.

PRCG-01013: ACFS is not configured on Rapid Home Provisioning Client

Cause: Either storage base path or diskgroup was supplied, but ACFS was not configured on Rapid Home Provisioning Client.

Action: Either configure ACFS on Rapid Home Provisioning Client or run the command 'srvctl add rhpcient' without the '-storage' and '-diskgroup' options.

PRCG-01014: Failed to retrieve storage base path for Rapid Home Provisioning Client

Cause: An attempt to retrieve the STORAGE_BASE_PATH attribute of the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01015: Failed to update the storage base path to {0} for Rapid Home Provisioning Client

Cause: An attempt to update the storage base path for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01016: Failed to retrieve disk group list for Rapid Home Provisioning Client

Cause: Failed to retrieve the diskgroups from the start dependencies of the Rapid Home Provisioning Client.

Action: Examine the accompanying error messages for details.

PRCG-01017: Failed to check for existence of Rapid Home Provisioning Server

Cause: An attempt to find the Rapid Home Provisioning Server resource failed.

Action: Examine the accompanying error messages for details.

PRCG-01018: Failed to check for existence of Rapid Home Provisioning Client

Cause: An attempt to find the Rapid Home Provisioning Client resource failed.

Action: Examine the accompanying error messages for details.

PRCG-01019: Failed to retrieve database schema for Rapid Home Provisioning Server

Cause: An attempt to retrieve the DB_SCHEMA attribute of the Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01020: Invalid option {0} for the Rapid Home Provisioning action

Cause: The option supplied was not a valid option name.

Action: Supply a valid option.

PRCG-01021: Invalid return status {0} for the Rapid Home Provisioning action

Cause: An unexpected return status occurred.

Action: Contact Oracle Support Services.

PRCG-01022: Failed to connect to OC4J for cluster {0}

Cause: An attempt to connect to the OC4J container failed for this cluster.

Action: Examine the accompanying error messages for details.

PRCG-01023: Failed to start Rapid Home Provisioning instance

Cause: An attempt to start the Rapid Home Provisioning instance failed.

Action: Examine the accompanying error messages for details.

PRCG-01024: Failed to destroy Rapid Home Provisioning instance

Cause: An attempt to destroy the Rapid Home Provisioning instance failed.

Action: Examine the accompanying error messages for details.

PRCG-01025: Failed to stop Rapid Home Provisioning instance

Cause: An attempt to stop the Rapid Home Provisioning instance failed.

Action: Examine the accompanying error messages for details.

PRCG-01026: Failed to retrieve the Rapid Home Provisioning version

Cause: An attempt to retrieve the version of the Rapid Home Provisioning instance failed.

Action: Examine the accompanying error messages for details.

PRCG-01027: Invalid command specified : {0}

Cause: The command keyword specified on the command line was not recognized.

Action: Valid commands are add|allow|query|delete|deleteimage|disallow| export| grant|import|insertimage|modify|promote|revoke. Usage of rhpctl is printed with this error. Check the rhpctl usage printed along with this error and specify a valid command.

PRCG-01028: Invalid object specified : {0}

Cause: The object keyword specified on the command line was not recognized.

Action: Check the rhpctl usage printed along with the error message and specify a valid object.

PRCG-01029: Invalid value {0} for command-line option -{1}

Cause: An invalid value was specified for the command-line option.

Action: Check the value printed and specify the correct value.

PRCG-01030: Missing mandatory option -{0}

Cause: An option required by the specified command was missing.

Action: Issue 'rhpctl <varname>command</varname> <varname>object</varname> - help' to display option details for the command and make sure that all the mandatory options are specified.

PRCG-01031: Invalid command-line options for command: {0} and object: {1}. {2} can not be specified with {3}.

Cause: A command was specified with conflicting or incomplete options, some options in one set are missing or the options from both sets were specified.

Action: Check the command-line options entered and make sure that all the options in one set are specified.

PRCG-01032: Command line option {0} must be followed by a value.

Cause: A command-line option that requires a value was specified without one.

Action: Look at the usage and of the command and specify an appropriate value.

PRCG-01033: Invalid command-line option: -{0}

Cause: An invalid command-line option was specified.

Action: Look at the usage of the command and specify the correct option.

PRCG-01034: No option was specified for command : {0} and object: {1} combination. {2} options should be specified.

Cause: Required options were omitted from a command.

Action: Look at the usage of the command and specify required options.

PRCG-01035: Invalid syntax or missing required option: {0} in the specified command.

Cause: A required option was not specified for the command or an invalid combination of options was specified.

Action: Specify required options or check the command-line options entered and make sure that all the options in one set are specified.

PRCG-01037: Failed to update the Rapid Home Provisioning Server's cluster name {0} for Rapid Home Provisioning Client

Cause: An attempt to update the GHS_CLUSTERNAME attribute for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01038: Failed to retrieve the Rapid Home Provisioning Server's cluster name for Rapid Home Provisioning Client

Cause: An attempt to retrieve the GHS_CLUSTERNAME attribute for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01039: Failed to update the GNS discovery string {0} for Rapid Home Provisioning Client

Cause: An attempt to update the GNS_DISCOVERY_STRING attribute for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01040: Failed to retrieve the GNS discovery string for Rapid Home Provisioning Client

Cause: An attempt to retrieve the GNS_DISCOVERY_STRING attribute for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01041: Invalid internal parameter {0}

Cause: The internal parameter supplied was not a valid parameter.

Action: Contact Oracle Support Services.

PRCG-01043: Failed to modify Rapid Home Provisioning Server's listening port to {0}

Cause: An attempt to modify the Rapid Home Provisioning Server's listening port failed.

Action: Ensure that the Oracle Clusterware stack is up and that the specified IP port is not in use by another program.

PRCG-01044: Failed to modify Rapid Home Provisioning Client's listening port to {0}

Cause: An attempt to modify the Rapid Home Provisioning Client's listening port failed.

Action: Ensure that the Oracle Clusterware stack is up and that the specified IP port is not in use by another program.

PRCG-01045: The specified '-toclientdata' path does not exist

Cause: The '-toclientdata <varname>path</varname>' option value was not an existing file system path.

Action: Ensure that the '-toclientdata <varname>path</varname>' option value corresponds to an existing file system path.

PRCG-01046: Missing mandatory options, either -role or -maproles required.

Cause: The command requires exactly one set of mandatory command-line options.

Action: Check the command-line options entered and make sure that all the mandatory options in one set are specified.

PRCG-01047: Invalid command line syntax or missing mandatory options.

Cause: The command requires exactly one set of mandatory command-line options. But either some options in one set were missing or the options from both sets were specified.

Action: Check the command-line options entered and make sure that all the mandatory options in one set are specified.

PRCG-01048: Failed to import client data from file {0} for Rapid Home Provisioning Client

Cause: An attempt to import client data for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01049: Storage base path "{0}" is not an absolute path

Cause: The storage base path value was not an absolute path.

Action: Specify an absolute path in the '-storage' argument.

PRCG-01050: Rapid Home Provisioning Server is not running.

Cause: The requested operation failed because the Rapid Home Provisioning Server is not started

Action: Start the Rapid Home Provisioning Server using the command 'srvctl start rhpsrv' and retry the operation.

PRCG-01051: Rapid Home Provisioning Client is not running.

Cause: The requested operation failed because the Rapid Home Provisioning Client is not started

Action: Start the Rapid Home Provisioning Client using the command 'srvctl start rhpc' and retry the operation.

PRCG-01052: The client data file {0} already exists in the specified '-toclientdata' path

Cause: While generating client data, the specified file was found.

Action: Delete the existing file and retry the command.

PRCG-01053: The specified path "{0}" does not exist on nodes {1}

Cause: The mountpath specified was not an existing directory on all cluster nodes.

Action: Ensure that the path corresponds to an existing directory on all cluster nodes.

PRCG-01054: The "-{0}" option requires the specification of {1} option.

Cause: Required options were omitted from a command.

Action: Look at the usage of the command and specify required options.

PRCG-01055: The options "-{0}" and "-{1}" can not be specified together.

Cause: An invalid combination of options was specified together.

Action: Specify only valid combination of options and retry the command.

PRCG-01056: Both "-{0}" and "-{1}" options can not be specified with the "-dbname" option.

Cause: An invalid combination of options was specified.

Action: Specify only one of the other possible options.

PRCG-01057: The specified path "{0}" does not exist

Cause: The path specified was not an existing directory.

Action: Ensure that the path corresponds to an existing directory.

PRCG-01058: The specified path {0} is not an Oracle Database Home

Cause: The specified home path does not contain the 'oracle' binary or it is an Oracle Grid Infrastructure home.

Action: Make sure that the home path is an Oracle database home path.

PRCG-01059: Attribute {0} does not exist in the credential file {1}

Cause: An attempt to add Rapid Home Provisioning Client failed because a required attribute does not exist in the credential file.

Action: Ensure that a valid credential file is supplied and retry the command.

PRCG-01060: The provided credential file {0} does not conform to XML standards

Cause: An attempt to add Rapid Home Provisioning Client failed because an invalid credential file was supplied.

Action: Ensure that a valid credential file is supplied and retry the command.

PRCG-01061: Failed to retrieve the GNS SUBDOMAIN string for Rapid Home Provisioning Client

Cause: An attempt to retrieve the GNS_SUBDOMAIN_STRING attribute for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01062: Failed to update the GNS SUBDOMAIN string {0} for Rapid Home Provisioning Client

Cause: An attempt to update the GNS_SUBDOMAIN_STRING attribute for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01063: Invalid command-line option value for option -{0}

Cause: The value specified for a command-line option was an empty string.

Action: Specify a value for the option.

PRCG-01064: An attempt to remove the Rapid Home Provisioning Server configuration failed because the Rapid Home Provisioning Server is running

Cause: A request to remove the Rapid Home Provisioning Server configuration was rejected because such removal requires Rapid Home Provisioning Server to be stopped.

Action: Use the command 'srvctl stop rhpserver' or, if necessary, use the command 'srvctl stop rhpserver -force' to stop the Rapid Home Provisioning Server and then retry removing the Rapid Home Provisioning Server configuration.

PRCG-01065: Syntax error: expected an option keyword but found {0}

Cause: The command line parser found non-option text where an option with leading dash was expected.

Action: Review the command inline help and formulate the command with valid options.

PRCG-01066: Rapid Home Provisioning Server or Rapid Home Provisioning Client not configured on this cluster

Cause: The requested operation was rejected because the Rapid Home Provisioning Server or Rapid Home Provisioning Client was not configured.

Action: Add the Rapid Home Provisioning Server or Rapid Home Provisioning Client using the command 'srvctl add rhpserver' or 'srvctl add rhpclient' and retry the operation.

PRCG-01067: The requested operation cannot be executed by user "root"

Cause: The requested operation was rejected because it was attempted as a root user.

Action: Log on as a user other than 'root' to perform this operation.

PRCG-01068: Non-numeric value {0} specified for command-line option {1}

Cause: An invalid value was specified for a command-line option that requires a number.

Action: Check the value printed and specify a number.

PRCG-01069: An attempt to remove the Rapid Home Provisioning Client configuration failed because the Rapid Home Provisioning Client is running

Cause: A request to remove the Rapid Home Provisioning Client configuration was rejected because such removal requires Rapid Home Provisioning Client to be stopped.

Action: Use the command 'srvctl stop rhpclient' or, if necessary, use the command 'srvctl stop rhpclient -force' to stop the Rapid Home Provisioning Client and then retry removing the Rapid Home Provisioning Client configuration.

PRCG-01078: At least one of -{0}, -{1} or -{2} options required

Cause: An attempt to modify NFS home failed because a mandatory option was not specified.

Action: Specify at least one of the required options.

PRCG-01079: Internal error: {0}

Cause: An internal error occurred. The included value is an internal identifier.

Action: Contact Oracle Support Services.

PRCG-01080: Specified name "{0}" is not a valid node.

Cause: The specified node name was not resolved to a registered node in the cluster.

Action: Specify a valid node name.

PRCG-01081: Command "{0}" is not supported for object "{1}"

Cause: An unsupported command and object combination was specified.

Action: Use the command 'rhpctl -h' to identify valid combinations and re-issue the command.

PRCG-01082: No permission to write to the specified path, "{0}"

Cause: The user did not have permission to write to the specified path.

Action: Specify a path to which write permission is granted and retry the command.

PRCG-01083: The credentials file provided is for cluster {0}, not for this cluster {1}.

Cause: The credentials file provided did not correspond to the name of this cluster.

Action: Provide the credentials file generated for this cluster and retry. To generate the credentials file, run the command 'rhpctl export client' on the Rapid Home Provisioning Server cluster, specifying the name of this cluster in the '-client' option.

PRCG-01084: Failed to get hash code of given string

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRCG-01085: Failed to encrypt the given string

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRCG-01086: Failed to decrypt the given string

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRCG-01087: Failed to retrieve security algorithm used for Rapid Home Provisioning Server

Cause: An attempt to retrieve the CRYPTO_ALGORITHM attribute of the Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01088: Failed to update the security algorithm to {0} for Rapid Home Provisioning Server

Cause: An attempt to update the security algorithm for the Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01089: Failed to retrieve security algorithm used for Rapid Home Provisioning Client

Cause: An attempt to retrieve the CRYPTO_ALGORITHM attribute of the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01090: Failed to update the security algorithm to {0} for Rapid Home Provisioning Client

Cause: An attempt to update the security algorithm for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01091: The -user option value can not contain "@"

Cause: The requested operation failed because the user name contained a "@" character.

Action: Specify the user name without a "@" character and retry the command.

PRCG-01092: Invalid value list for option -{0}

Cause: A comma-separated list of values was supplied for an option that takes a single value.

Action: Specify single value without commas and retry the command.

PRCG-01093: Failed to get Rapid Home Provisioning Client (RHPC) credential from credential storage for cluster: {0}

Cause: The requested operation failed because an error occurred while accessing the credential storage.

Action: Examine the accompanying error messages for details.

PRCG-01094: The -clientdata option value {0} is a directory, not a file

Cause: A 'rhpctl export client' operation failed because the '-clientdata' option specified a directory.

Action: Ensure that the '-clientdata <varname>path</varname>' option value corresponds to a file path.

PRCG-01095: The client data file {0} already exists in the specified '-clientdata' path

Cause: A request to export client data found the specified output file already exists.

Action: Delete or rename the existing file or choose a different file name.

PRCG-01096: The specified owner {0} is not a valid OS user

Cause: The specified owner was not a valid OS user.

Action: Ensure that the '-pathowner <varname>username</varname>' option value corresponds to the name of an existing OS user.

PRCG-01097: Option '-pathowner' cannot be specified for image type ORACLEDBSOFTWARE

Cause: A request to import an image was rejected because the '-pathowner' option was specified for importing the Oracle Database home.

Action: Omit the '-pathowner' option.

PRCG-01098: Failed to create Administrator Credentials for Rapid Home Provisioning Server

Cause: An attempt to create Administrator Credentials for Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01099: Failed to create Administrator Credentials for Rapid Home Provisioning Client

Cause: An attempt to create Administrator Credentials for Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01100: The connection to the Rapid Home Provisioning daemon process was lost.

Cause: The requested operation failed because the connection to the Rapid Home Provisioning daemon process for this cluster was lost.

Action: Examine the accompanying error messages for details and take appropriate corrective action.

PRCG-01101: Grid Infrastructure Management Repository resource has not been configured

Cause: A Rapid Home Provisioning Server add request failed because the Grid Infrastructure Management Repository resource was not configured.

Action: If the Grid Infrastructure Management Repository was not configured while installing Grid Infrastructure, then reinstall Grid Infrastructure selecting the option to configure the Grid Infrastructure Management Repository.

PRCG-01102: Specified file name "{0}" is not valid for a template.

Cause: The specified template name did not end with a valid file extension.

Action: Specify a template file name which ends with .dbt or .dbc.

PRCG-01103: The Oracle ASM Dynamic Volume Manager compatibility attribute ({0}) is less than 12.1.0.0.0 for disk group {1}.

Cause: The Oracle ADVM compatibility attribute for the specified disk group was not set to version 12.1.0.0.0 or higher.

Action: Use the Oracle ASM Configuration Assistant (ASMCA) tool or the SQL statement ALTER DISKGROUP to upgrade the 'compatible.advm' attribute.

PRCG-01104: User terminated the command. The command operation is not cancelled by this interruption, and may continue to be processed on the server.

Cause: An 'rhpctl' command execution was interrupted by typing Control-C or by other means.

Action: Verify the completion of this command by executing a 'config' or some other command that would display the results of this interrupted command.

PRCG-01105: unable to configure Rapid Home Provisioning Server because neither GNS server nor GNS client are configured on this cluster

Cause: An attempt to configure Rapid Home Provisioning Server was rejected because neither GNS server nor GNS client were configured.

Action: Configure either GNS server or GNS client using the command 'srvctl add gns' and then retry adding Rapid Home Provisioning Server.

PRCG-01106: failed to determine whether GNS is configured on Rapid Home Provisioning Server

Cause: An attempt to verify the GNS configuration on the Rapid Home Provisioning Server failed. The accompanying messages provide details.

Action: Examine the accompanying error messages for details. Address issues reported and retry the command.

PRCG-01107: failed to delete Rapid Home Provisioning Client (RHPC) credential from credential storage for cluster {0}

Cause: The requested operation failed because an error occurred while accessing the credential storage.

Action: Examine the accompanying error messages for details. Address issues reported and retry the command.

PRCG-01108: Rapid Home Provisioning Server or Client is not configured

Cause: An attempt was made to operate on a resource that does not exist.

Action: Check for the configured resource using 'srvctl config rhpserver' and/or 'srvctl config rhpclient'. If neither Rapid Home Provisioning resource exists, create the appropriate one using the command 'srvctl add {rhpserver|rhpclient}'.

PRCG-01109: Repetition of command-line option: -{0}

Cause: Execution of the command was rejected because the command-line option displayed with the error message was repeated.

Action: Retry the command specifying the command-line option only once.

PRCG-01110: failed to modify Rapid Home Provisioning Client with disk group {0}

Cause: An attempt to configure the Rapid Home Provisioning Client with the cited disk group failed because there was already a disk group configured for the Rapid Home Provisioning

Action: Remove the Rapid Home Provisioning Client configuration and run 'srvctl add rhpclient' command.

PRCG-01111: failed to update the storage base path to {0} for Rapid Home Provisioning Client

Cause: An attempt to update the storage base path for the Rapid Home Provisioning Client

Action: Remove the Rapid Home Provisioning Client configuration and run 'srvctl add rhpclient' command.

PRCG-01112: failed to retrieve storage base path attribute for Rapid Home Provisioning Client

Cause: An attempt to retrieve the STORAGE_BASE_PATH attribute of the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details. Address issues reported and retry the command.

PRCG-01113: failed to update the storage base path to {0} for Rapid Home Provisioning Client

Cause: An attempt to set the STORAGE_BASE_PATH attribute for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01114: failed to update the storage base path to {0} for Rapid Home Provisioning Client because no disk group was configured

Cause: An attempt to update the storage base path for the Rapid Home Provisioning Client failed because there was no disk group configured for the Rapid Home Provisioning Client.

Action: Run srvctl to configure diskgroup, then retry.

PRCG-01115: Disk group is not configured on Rapid Home Provisioning Client.

Cause: An attempt to retrieve disk group information for the Rapid Home Provisioning Client failed because there was no disk group configured for it.

Action: Run 'srvctl modify rhpclient' command to configure the disk group.

PRCG-01116: Unable to create mount path because the generated mount path name already exists

Cause: An attempt to create a mount path failed because the number of tries attempted for generating the mount path was exhausted.

Action: Retry the command.

PRCG-01117: Working copy name "{0}" is too long or contains characters other than alphanumeric and underscore.

Cause: The workingcopy name was not valid.

Action: Specify a valid workingcopy name.

PRCG-01118: Specified image name "{0}" contains invalid characters.

Cause: The image name was not valid. Image names must not contain the following characters: \$@">():*? .

Action: Specify a valid image name.

PRCG-01119: The -path option is not allowed when storage type is not LOCAL on Rapid Home Provisioning Server (RHPS).

Cause: An attempt to add working copy on RHPS was rejected because the '-path' option was specified when storage type was not LOCAL.

Action: Omit the '-path' option or specify storage type option value as LOCAL.

PRCG-01120: The value {0} exceeds the maximum value of {1} for command line option '-numberOfPDBs'.

Cause: The supplied value exceeded the maximum value for command line option '-numberOfPDBs'.

Action: Specify an integer value within the range given in the error message.

PRCG-01121: The PDB prefix "{0}" contains invalid characters.

Cause: The supplied pluggable database (PDB) prefix contained invalid characters.

Action: Supply a valid PDB prefix. A PDB prefix must start with an alphabetic character and may include only characters from a-z, A-Z, 0-9, \$, # and _.

PRCG-01122: The -datafileDestination option was not specified, when -dbtype was not SINGLE.

Cause: A request to create a RAC or RAC One Node database was rejected because the data file location was not specified using the '-datafileDestination' option.

Action: Reissue the command specifying the -datafileDestination option.

PRCG-01123: failed to create Rapid Home Provisioning Client (RHPC) credential in credential storage for cluster {0}

Cause: The requested operation failed because an error occurred while creating the credential in the credential storage.

Action: Examine the accompanying error messages for details. Address the issues reported and retry the command.

PRCG-01124: failed to export Rapid Home Provisioning Client (RHPC) credential from credential storage for cluster {0} to file {1}

Cause: The requested operation failed because an error occurred while exporting the credential from the credential storage.

Action: Examine the accompanying error messages for details. Address the issues reported and retry the command.

PRCG-01125: failed to import Rapid Home Provisioning Client (RHPC) credential from file {0} into credential storage for cluster {1}

Cause: The requested operation failed because an error occurred while importing the credential from the specified file into the credential storage.

Action: Examine the accompanying error messages for details. Address the issues reported and retry the command.

PRCG-01126: failed to export Rapid Home Provisioning Client (RHPC) credential from credential storage for cluster {0}

Cause: The requested operation failed because an error occurred while exporting the credential from the credential storage.

Action: Examine the accompanying error messages for details. Address the issues reported and retry the command.

PRCG-01127: Server pool cannot be specified for single instance database.

Cause: An attempt to add a single instance database was rejected because a server pool was specified.

Action: Use the '-node' option instead of the '-serverpool' or '-newpool' options when specifying SINGLE for the '-dbtype' option.

PRCG-01128: Improper '-dbversion' option specified for image type SOFTWARE.

Cause: An attempt to query images was rejected because the '-dbversion' option was specified together with a value of SOFTWARE for '-imagetype'.

Action: Either remove the '-dbversion' option or specify ORACLEDBSOFTWARE for '-imagetype' and retry the command.

PRCG-01129: The DB version supplied "{0}" is invalid.

Cause: The DB version supplied did not exist or was an unsupported version.

Action: Supply a valid DB version and retry the command.

PRCG-01130: failed to update Rapid Home Provisioning Client registration in Rapid Home Provisioning Server

Cause: An attempt to update the Rapid Home Provisioning Client registration with the Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01131: failed to determine whether this Rapid Home Provisioning Server has any Rapid Home Provisioning Clients registered

Cause: An attempt to determine whether this Rapid Home Provisioning Server has any registered Rapid Home Provisioning Clients failed.

Action: Examine the accompanying error messages for details.

PRCG-01132: unable to delete Rapid Home Provisioning Server because it contains one or more registered Rapid Home Provisioning Clients

Cause: An attempt to delete the Rapid Home Provisioning Server was rejected because one or more Rapid Home Provisioning Clients registered with it.

Action: "Either reissue the command with the '-force' option, or first delete all the registered Rapid Home Provisioning Clients using the command 'rhpci delete client'."

PRCH-01000 to PRCH-01061

PRCH-01000: Failed to stop resources running from Oracle home {0}

Cause: An attempt to stop one or more resources in the specified Oracle home failed.

Action: Review the underlying error messages that provide the details of which resources failed to stop, check the cause and action for the individual resource stop failure and perform the steps for each resource that failed to stop.

PRCH-01001: Failed to start resources in Oracle home {0}

Cause: An attempt to start one or more resources in the specified Oracle home failed.

Action: Review the underlying error messages that provide the details of which resources failed to start, check the cause and action for the individual resource start failure and perform the steps for each resource that failed to start.

PRCH-01002: Failed to stop resources running from CRS home {0}

Cause: An attempt to stop one or more resources in the specified CRS home failed.

Action: Review the underlying error messages that provide the details of which resources failed to stop, check the cause and action for the individual resource stop failure, and perform the steps for each resource that failed to stop.

PRCH-01003: Failed to start resources in CRS home {0}

Cause: An attempt to start one or more resources in the specified CRS home failed.

Action: Review the underlying error messages that provide the details of which resources failed to start, check the cause and action for the individual resource start failure and perform the steps for each resource that failed to start.

PRCH-01004: Failed to stop service

Cause: An attempt to stop a service resource failed.

Action: Review the accompanying error messages for possible reasons and if needed, use the command 'srvctl stop service -db <db_unique_name>' to stop the service.

PRCH-01005: Failed to stop database

Cause: An attempt to stop the database resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop database -db <db_unique_name>' to stop the database.

PRCH-01006: Failed to stop Listener

Cause: An attempt to stop the listener resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop listener' to stop the listener.

PRCH-01007: Failed to stop Listener

Cause: An attempt to stop the listener resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop listener' to stop the listener.

PRCH-01008: Failed to start service

Cause: An attempt to start a service resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start service -db <db_unique_name>' to start the service.

PRCH-01009: Failed to start database

Cause: An attempt to start the database resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start database -db <db_unique_name>' to start the database.

PRCH-01010: Failed to start Listener

Cause: An attempt to start the listener resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start listener' to start the listener.

PRCH-01011: Failed to start Listener

Cause: An attempt to start the listener resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start listener' to start the listener.

PRCH-01012: Failed to stop EONS

Cause: An attempt to stop the EONS resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop nodeapps' to stop the EONS resource.

PRCH-01013: Failed to start EONS

Cause: An attempt to start the EONS resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start nodeapps' to start the EONS resource.

PRCH-01014: Failed to stop ONS

Cause: An attempt to stop the ONS resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop nodeapps' to stop the ONS resource.

PRCH-01015: Failed to start ONS

Cause: An attempt to start the ONS resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start nodeapps' to start the ONS resource.

PRCH-01016: Failed to stop GSD resource

Cause: An attempt to stop the GSD resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop nodeapps' to stop the GSD resource.

PRCH-01017: Failed to start GSD resource

Cause: An attempt to start the GSD resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start nodeapps' to start the GSD resource.

PRCH-01018: Failed to stop VIP resource

Cause: An attempt to stop the VIP resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop vip -node <node_name>' to stop the VIP resource.

PRCH-01019: Failed to start VIP resource

Cause: An attempt to start the VIP resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start vip -node <node_name>' to start the VIP resource.

PRCH-01020: Failed to stop Network resource

Cause: An attempt to stop the Network resource failed.

Action: Review the error messages for possible reasons, correct the error and use the command 'srvctl stop nodeapps' to stop the Network resource.

PRCH-01021: Failed to start Network resource

Cause: An attempt to start the Network resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start nodeapps' to start the Network resource.

PRCH-01022: Failed to stop SCAN VIP resource

Cause: An attempt to stop the SCAN VIP resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop scan' to stop the SCAN VIP resource.

PRCH-01023: Failed to start SCAN VIP resource

Cause: An attempt to start the SCAN VIP resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start scan' to start the SCAN VIP resource.

PRCH-01024: Failed to stop SCAN Listener resource

Cause: An attempt to stop the SCAN listener resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop scan_listener' to stop the SCAN listener resource.

PRCH-01025: Failed to start SCAN Listener

Cause: An attempt to start the SCAN listener resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start scan_listener' to start the SCAN listener resource.

PRCH-01026: Failed to stop ASM

Cause: An attempt to stop the ASM resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop asm' to stop the ASM resource.

PRCH-01027: Failed to start ASM

Cause: An attempt to start the ASM resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start asm' to start the ASM resource.

PRCH-01028: One or more resources failed to start: {0}

Cause: An attempt to start one or more resources failed.

Action: Review the underlying error messages that provide the details of which resources failed to start, check the cause and action for the individual resource start failure and perform the steps for each resource that failed to start.

PRCH-01029: One or more resources failed to stop: {0}

Cause: An attempt to stop one or more resources failed.

Action: Review the underlying error messages that provide the details of which resources failed to stop, check the cause and action for the individual resource stop failure and perform the steps for each resource that failed to stop.

PRCH-01030: One or more resources failed to stop: {0}

Cause: An attempt to stop one or more resources failed.

Action: Review the accompanying resource error messages and their documentation, and correct the problems indicated.

PRCH-01031: One or more resources failed to start: {0}

Cause: An attempt to start one or more resources failed.

Action: Review the underlying error messages that provide the details of which resources failed to start, check the cause and action for the individual resource start failure and perform the steps for each resource that failed to start.

PRCH-01032: Failed to stop GNS resource

Cause: An attempt to stop the GNS resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop gns' to stop the GNS resource.

PRCH-01033: Failed to start GNS resource

Cause: An attempt to start the GNS resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start gns' to start the GNS resource.

PRCH-01034: Failed to stop diskgroup resource

Cause: An attempt to stop the diskgroup resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop diskgroup -diskgroup <dg_name>' to stop the diskgroup resource.

PRCH-01035: Failed to start diskgroup resource

Cause: An attempt to start the diskgroup resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start diskgroup -diskgroup <dg_name>' to start the diskgroup resource.

PRCH-01036: The state file "{0}" does not exist

Cause: The state file required for the current operation was not found.

Action: Make sure the named file exists in the file system.

PRCH-01037: The filesystem object "{0}" is not a file

Cause: The content that was expected to be a file which turned out not to be a file.

Action: Retry the 'srvctl stop home' to generate this file. If the problem still exists, contact Oracle Support Services.

PRCH-01038: "{0}" is a non-readable file

Cause: The user does not have read permissions to open the file.

Action: Modify the file permissions so that the file becomes readable or execute the command from an OS userid with the required privileges.

PRCH-01039: Failed to stop CVU resource

Cause: An attempt to stop the CVU resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop cvu' to stop the CVU resource.

PRCH-01040: Failed to start CVU resource

Cause: An attempt to start the CVU resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start cvu' to start the CVU resource.

PRCH-01041: Failed while checking status of service "{0}"

Cause: An attempt to check the status of the listed service failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01042: Failed while checking status of database "{0}"

Cause: An attempt to check the status of the listed database failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01043: Failed while checking status of database instance "{0}"

Cause: An attempt to check the status of the listed database instance failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01044: Failed while checking status of listener "{0}"

Cause: An attempt to check the status of the listed listener failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01045: Failed while checking status of VIP "{0}"

Cause: An attempt to check the status of the listed VIP failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01046: Failed while checking status of SCAN VIP "{0}"

Cause: An attempt to check the status of the listed SCAN VIP failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01047: Failed while checking status of SCAN Listener "{0}"

Cause: An attempt to check the status of the listed SCAN listener failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01048: Failed while checking status of CVU resource "{0}"

Cause: An attempt to check the status of the listed CVU resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01049: Failed while checking status of disk group "{0}"

Cause: An attempt to check the status of the listed disk group failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01050: Failed while checking status of ASM "{0}"

Cause: An attempt to check the status of the listed ASM failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01051: Failed while checking status of GNS "{0}"

Cause: An attempt to check the status of the listed GNS failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01052: Failed while checking status of GSD "{0}"

Cause: An attempt to check the status of the listed GSD failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01053: Failed while checking status of Network "{0}"

Cause: An attempt to check the status of the listed network failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01054: Failed while checking status of ONS "{0}"

Cause: An attempt to check the status of the listed ONS failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01055: Failed to create or open file "{0}"

Cause: State file processing failed because: the file specified is a directory rather than a file, the file did not exist but could not be created, or the file exists but could not be opened.

Action: Enable state file processing by: not specifying a directory name, ensuring the the directory is writable, or ensuring that an existing state file can be overwritten.

PRCH-01056: Failed to write to file "{0}"

Cause: An attempt to write to the given file failed.

Action: If the state file already exists, then make sure that it is writable. Otherwise, make sure that parent directory of the state file path is writable.

PRCH-01057: The Clusterware resource for database "{0}" does not exist.

Cause: The Oracle Clusterware resource for the database with the given name did not exist.

Action: Make sure that Oracle Clusterware resource for the database with the given name exists.

PRCH-01058: Failed while checking status of CRS home {0}

Cause: An attempt to check the status of the CRS home failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01059: Failed while checking status of Oracle home {0}

Cause: An attempt to check the status of the Oracle home failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01060: Status check for one or more resources failed: {0}

Cause: An attempt to check the status for one or more resources failed.

Action: Review the underlying error messages that provide the details of which resources failed to query their status, check the cause and action for the individual resource start failure and perform the steps for each resource that failed to start.

PRCH-01061: The following resources specified in the state file do not exist: {0}

Cause: An attempt to start one or more resources in the specified state file failed because they do not exist.

Action: Make sure the resources provided in the state file exist.

PRCI-01000 to PRCI-01168

PRCI-01000: Failed to retrieve install information on local node using OUI location {0}

Cause: An attempt to retrieve install information on the local node from the specified location failed.

Action: Examine the accompanying error messages for details.

PRCI-01001: Failed to retrieve install information on remote node {0} using OUI location {1}

Cause: An attempt to retrieve install information on a remote node from the specified location failed.

Action: Examine the accompanying error messages for details.

PRCI-01100: Failed to get Vendor Cluster for CRS home {0}

Cause: Unable to locate vendor cluster library or execute lsnodes.

Action: Install Vendor Clusterware. Then try to run lsnodes again.

PRCI-01101: Failed to get Vendor Cluster for CRS home {0} on node {1}

Cause: Unable to locate vendor cluster library or execute lsnodes on the specified node.

Action: Install Vendor Clusterware on the specified node. Then try to run lsnodes again.

PRCI-01102: Failed to get OracleCM Cluster for CRS home {0}

Cause: Failed to get OracleCM Cluster for the local node using CRS home provided.

Action: Install Oracle 9i and make sure that /etc/ORCLcluster exists.

PRCI-01103: Failed to get OracleCM Cluster for CRS home {0} on node {1}

Cause: Failed to get OracleCM Cluster for the specified node using CRS home provided.

Action: Examine the accompanying error messages for details.

PRCI-01104: Failed to check Oracle Restart running state for Oracle Restart home {0}

Cause: Failed to check whether Oracle Restart is running from the specified home on the local node.

Action: Examine the accompanying error messages for details.

PRCI-01105: Failed to check Oracle Restart running state for Oracle Restart home {0} on node {1}

Cause: Failed to check whether Oracle Restart is running from the specified home on the specified node.

Action: Examine the accompanying error messages for details.

PRCI-01106: Failed to check Oracle Restart configuration state for Oracle Restart home {0} on node {1}

Cause: Failed to check whether Oracle Restart is configured for the specified home on the specified node.

Action: Examine the accompanying error messages for details.

PRCI-01107: Failed to check CRS running state for CRS home {0}

Cause: Failed to check whether Oracle Clusterware is running from the specified home on the local node.

Action: Examine the accompanying error messages for details.

PRCI-01108: Failed to check CRS running state for CRS home {0} on node {1}

Cause: Failed to check whether Oracle Clusterware is running from the specified home on the specified node.

Action: Examine the accompanying error messages for details.

PRCI-01109: Failed to check CRS configuration state for CRS home {0}

Cause: Failed to check whether Oracle Clusterware is configured for the specified home on the specified node.

Action: Examine the accompanying error messages for details.

PRCI-01110: Failed to check CRS configuration state for CRS home {0} on node {1}

Cause: Failed to check whether Oracle Clusterware is configured for the specified home on the local node.

Action: Examine the accompanying error messages for details.

PRCI-01111: File path is null

Cause: The specified file is null or an empty string.

Action: Provide a valid file path that is not null.

PRCI-01112: Directory name passed was null

Cause: The specified directory name is null or an empty string.

Action: Provide a valid directory name that is not null.

PRCI-01113: Directory {0} does not exist

Cause: Could not find the specified directory or it was a file instead of a directory.

Action: Provide an existing directory name.

PRCI-01114: Node name is null

Cause: The specified node name is null or an empty string.

Action: This is an internal error. Contact Oracle Support Services.

PRCI-01115: argument passed is null

Cause: The specified database name is null or an empty string.

Action: This is an internal error. Contact Oracle Support Services.

PRCI-01116: Failed to check if a database named {0} exists

Cause: Failed to execute the command 'crsctl stat resource <database_resource_name>' to decide whether the specified database exists or not.

Action: Examine the accompanying error messages for details.

PRCI-01117: Failed to retrieve list of databases under high availability management

Cause: Failed to execute the command 'crsctl stat resource -w TYPE=ora.database.type <varname>filter</varname>' in order to get the list of databases managed by Oracle Restart.

Action: Examine the accompanying error messages for details.

PRCI-01118: Failed to determine if database {0} depends on Automatic Storage Management

Cause: Failed to execute crsctl command to decide whether the specified database depended on Automatic Storage Management (ASM).

Action: Examine the accompanying error messages for details.

PRCI-01119: Failed to determine if database {0} is configured on node {1}

Cause: An attempt to determine the nodes on which a database is configured failed. Either the specified node name is invalid or an internal request failed.

Action: Examine the accompanying error messages for details.

PRCI-01120: Failed to retrieve list of databases under high availability management for node {0}

Cause: Failed to get the list of database managed by Oracle Restart on the specified node because the specified node is null or an invalid node or crsctl command execution failed.

Action: Examine the accompanying error messages for details.

PRCI-01121: Failed to determine if database {0} depends on Automatic Storage Management on node {1}

Cause: Failed to execute crsctl command to decide whether the specified database depended on Automatic Storage Management (ASM) on the specified node because the specified node is null or an invalid node or crsctl command execution failed.

Action: Examine the accompanying error messages for details.

PRCI-01122: Failed to determine if the public network is using dynamic address assignment (DHCP)

Cause: An attempt to determine whether the public network is using dynamic address assignment (DHCP) failed.

Action: Examine the accompanying error messages for details.

PRCI-01123: CRS home does not exist on the local node

Cause: CRS home is not installed on the local node.

Action: Install a CRS home using the Oracle Universal Installer.

PRCI-01124: Oracle Restart home does not exist on the local node

Cause: Oracle Restart home is not installed.

Action: Install an Oracle Restart home using the Oracle Universal Installer.

PRCI-01125: CRS home does not exist on node {0}

Cause: CRS home is not installed on the specified node.

Action: Install a CRS home using the Oracle Universal Installer.

PRCI-01126: Oracle Restart home does not exist on node {0}

Cause: Oracle Restart home is not installed on the specified node.

Action: Install an Oracle Restart home using the Oracle Universal Installer.

PRCI-01127: CRS active version cannot be queried in a non-cluster environment

Cause: Clusterware is not configured.

Action: Ensure that Clusterware is configured.

PRCI-01128: Failed to check Oracle Restart configuration state for Oracle Restart home {0}

Cause: Oracle Restart may not be configured

Action: Ensure that Oracle Restart is installed and configured

PRCI-01129: Failed to check Oracle Restart configuration state on node {1}

Cause: Oracle Restart may not be configured

Action: Ensure that Oracle Restart is installed and configured

PRCI-01130: Failed to check CRS configuration state

Cause: Clusterware CRS may not be configured

Action: Ensure that Clusterware CRS is installed and configured

PRCI-01131: Failed to check CRS configuration state on node {1}

Cause: Clusterware CRS may not be configured

Action: Ensure that Clusterware CRS is installed and configured

PRCI-01132: Failed to get clustrname for CRS home {0} and version {1}

Cause: Clusterware is not configured and CRS stack is not up

Action: Ensure that Clusterware CRS is installed and configured and the stack is up.

PRCI-01133: The IP address {0} does not have the same number of fields with the subnet mask {1}

Cause: IP address is in IPv4 address format while the subnet mask is in IPv6 address format or the other way around.

Action: Ensure that both the IP address and the subnet mask use the same representation (the longer required among IPv4 and IPv6).

PRCI-01134: Applying subnet mask {0} to IP address {1} resulted in an invalid IP address format

Cause: This won't ever happen. Message added just in case.

Action: None

PRCI-01135: Failed to check if path {0} on node {1} is on ACFS

Cause: An attempt to determine if the specified path is on ACFS failed. This can occur because: 1. The Clusterware stack is down on the specified node. 2. ASM is down on the specified node. 3. A diskgroup associated with the path is not online. 4. The path is not mounted.

Action: Perform checks corresponding to the above causes: 1. Ensure the Clusterware stack is running on the specified node. 2. Ensure that ASM is running on the specified node. 3. Ensure that the diskgroup associated with the path is online. 4. Ensure that the file system is mounted on the node.

PRCI-01136: The specified path {0} is not on Oracle Automatic Storage Manager Cluster File System (ACFS)

Cause: The specified path is not on ACFS.

Action: Specify a path that is on ACFS. This check will only accept paths on ACFS.

PRCI-01137: Failed to check if path {0} is on ACFS

Cause: An attempt to determine if the specified path is on ACFS failed. This can occur because: 1. The Clusterware stack is down on the specified node. 2. ASM is down on the specified node. 3. A diskgroup associated with the path is not online. 4. The path is not mounted.

Action: Perform checks corresponding to the above causes: 1. Ensure the Clusterware stack is running on the specified node. 2. Ensure that ASM is running on the specified node. 3. Ensure that the diskgroup associated with the path is online. 4. Ensure that the file system is mounted on the node.

PRCI-01138: Failed to check Oracle Restart configuration state

Cause: Oracle Restart was not configured.

Action: Ensure that Oracle Restart is installed and configured.

PRCI-01140: Error occurred while reading input from console

Cause: An attempt to read input from console failed

Action: Make sure that the process running this program has a valid standard input (stdin).

PRCI-01141: Failed to get volume device for path {0}

Cause: An attempt to retrieve the volume device for the given ACFS path failed. This can occur because: 1. The Clusterware stack is down on the node. 2. ASM is down on the node. 3. A diskgroup associated with the path is not online. 4. The path is not mounted.

Action: Perform checks corresponding to the above causes: 1. Ensure the Clusterware stack is running on the node. 2. Ensure that ASM is running on the node. 3. Ensure that the diskgroup associated with the path is mounted. 4. Ensure that the file system is mounted on the node.

PRCI-01142: Failed to get volume device for path {0} on node {1}

Cause: An attempt to retrieve the volume device for the given ACFS path failed. This can occur because: 1. The Clusterware stack is down on the specified node. 2. ASM

is down on the specified node. 3. A diskgroup associated with the path is not online.
4. The path is not mounted.

Action: Perform checks corresponding to the above causes: 1. Ensure the Clusterware stack is running on the specified node. 2. Ensure that ASM is running on the specified node. 3. Ensure that the diskgroup associated with the path is mounted. 4. Ensure that the file system is mounted on the specified node.

PRCI-01143: Error executing the script {0} on nodes {1}

Cause: An error occurred in executing the script on the list of nodes mentioned. This message is accompanied by others providing details of the error.

Action: Correct the problem indicated by the accompanying messages and retry.

PRCI-01144: Failed to retrieve Oracle Grid Infrastructure home path

Cause: An attempt to read Grid Infrastructure home path from OLR configuration file or registry entry failed.

Action: Examine the accompanying error messages for details. 1. Make sure Grid Infrastructure is configured as either Oracle Clusterware or Oracle Restart, and that the invoking user is able to read the configuration. 2. Issue the command '`<varname>GI home</varname>/srvm/admin/getcrshome`' and examine the resulting output.

PRCI-01145: Failed to retrieve Oracle Grid Infrastructure home path on node {0}

Cause: An attempt to read Grid Infrastructure home path from OLR configuration file or registry entry on specified node failed.

Action: Examine the accompanying error messages for details. 1. Make sure Grid Infrastructure is configured as either Oracle Clusterware or Oracle Restart, and that the invoking user is able to read the configuration. 2. Issue the command '`<varname>GI home</varname>/srvm/admin/getcrshome`' and examine the resulting output.

PRCI-01146: invalid {0} argument passed

Cause: The argument provided was null.

Action: This is an internal error. Contact Oracle Support Services.

PRCI-01147: root script operation failed on the first node {0}

Cause: The root configuration or upgrade failed on the first node. This message is accompanied by other messages providing details of the error.

Action: Correct the problem indicated by the accompanying messages and retry.

PRCI-01148: root script operation failed on the last node {0}

Cause: The root configuration or upgrade failed on the last node. This message is accompanied by other messages providing details of the error.

Action: Correct the problem indicated by the accompanying messages and retry.

PRCI-01149: olsnodes utility failed to get the cluster node active roles

Cause: An attempt to execute `olsnodes -a` has failed.

Action: This is an internal error. Contact Oracle Support Services.

PRCI-01150: failed to retrieve the active node role of the node {0}

Cause: An attempt to retrieve the active node role of an invalid node of the cluster has failed.

Action: Enter a valid node of the cluster.

PRCI-01151: crsctl utility failed to get the cluster node configured roles

Cause: The argument provided was null.

Action: This is an internal error. Contact Oracle Support Services.

PRCI-01152: failed to retrieve the configured node role of the node {0}

Cause: An attempt to retrieve the configured node role of an invalid node of the cluster has failed.

Action: Enter a valid node of the cluster.

PRCI-01156: The GNS VIP {0} does not match any of the available subnets {1}.

Cause: The provided Grid Naming Service (GNS) virtual internet protocol (VIP) did not belong to an available subnet.

Action: Ensure that GNS VIP belongs to one of subnets connected to the node.

PRCI-01157: Failed to retrieve the node name on which the management database is running.

Cause: An attempt to retrieve the management database node was made when the management database was not running.

Action: Use the 'srvctl start mgmtldb' command to start the management database and retry.

PRCI-01158: Failed to retrieve the size of management database

Cause: An attempt to retrieve the management database size failed because of underlying errors.

Action: Examine the accompanying error messages for details.

PRCI-01159: Path {0} is not on an ACFS file system

Cause: The supplied path was not on an ACFS filesystem.

Action: Supply a path that is on ACFS.

PRCI-01160: Failed to determine if database {0} is administrator-managed

Cause: An internal command to determine management status of the specified database failed.

Action: Examine the accompanying error message for details.

PRCI-01161: Failed to retrieve nodes on which database {0} is configured

Cause: An internal command to determine the nodes configured for the specified database failed.

Action: Examine the accompanying error message for details.

PRCI-01162: The specified subnets {0} do not match with any of the subnets {1} present in the node {2}.

Cause: An attempt to check whether the specified subnets were present in the current node failed.

Action: Ensure that the provided subnets match with the subnets present in the current node.

PRCI-01163: The public subnets {0} do not match with any of subnets {1} present in the node {2}.

Cause: An attempt to check whether the VIP belongs to a public subnet failed.

Action: Ensure that the VIP address belongs to a public subnet. The public subnets are displayed by the command 'oifcfg getif'.

PRCI-01164: File "{0}" does not exist.

Cause: The specified file could not be found.

Action: Reissue the command specifying the name of an existing file.

PRCI-01165: XSD resource "{0}" could not be located.

Cause: The XML Schema Definition file was not found at the designated location. This is an internal error.

Action: Contact Oracle Support Services.

PRCI-01166: Credential file "{0}" is invalid.

Cause: The provided credentials file was invalid.

Action: Reissue the command specifying a valid credentials file.

PRCI-01167: failed to extract attributes from the specified file "{0}"

Cause: An attempt to extract attributes for the specified credentials file failed. This is an internal error.

Action: Contact Oracle Support Services.

PRCI-01168: The OCRDUMP utility failed to get all cluster nodes.

Cause: An attempt to execute "ocrdump -noheader -stdout -keyname SYSTEM.version.hostnames" failed. This is an internal error.

Action: Contact Oracle Support Services.

PRCN-02018 to PRCN-03087

PRCN-02018: Current user {0} is not a privileged user

Cause: Current user did not have sufficient privileges to perform this operation.

Action: Make sure that the user has root privileges on Linux/Unix's and Administrator on Windows.

PRCN-02030: Subnet does not exist for resource {0}

Cause: An attempt was made to query subnet for a network resource configured with Oracle clusterware and it was not found.

Action: Internal error. Contact Oracle Support.

PRCN-02031: Unknown DHCP server name {0} found for resource {1}

Cause: The DHCP server type obtained for the network resource is not a valid server type.

Action: Internal error. Contact Oracle Support.

PRCN-02032: Failed to retrieve DHCP server type {0}

Cause: An attempt to query the DHCP server type for the network resource failed because its value could not be retrieved from the Oracle clusterware resource attributes.

Action: make sure Oracle clusterware is up and running. and also look at the help for the accompanying CRS error message.

PRCN-02033: Failed to update DHCP server type to {0} \n{1}

Cause: An attempt to update the DHCP server type for the network resource failed because its value could not be updated in the Oracle Clusterware resource attribute.

Action: Make sure that the Clusterware stack is up. Make sure that the user has enough permission to modify node applications. Examine the accompanying message for additional details.

PRCN-02034: Could not find dependent resource {0} for resource {1}: {2}

Cause: Could not get the resource associated with a given resource. Could not get the ASM resource associated with a given ASM disk group resource.

Action: Make sure that clusterware stack is up. Make sure that the network resource associated with this resource has not been removed. Make sure that the user has permission to perform this operation.

PRCN-02035: Port {0} is not available on node(s) or virtual host(s): {1}

Cause: The port specified is already being used by some other applications on the nodes or virtual hosts given.

Action: Stop the applications that are using these ports or specify a different port and try the command again.

PRCN-02036: Failed to retrieve port number(s) for {0}

Cause: An attempt to retrieve the port number(s) for the cluster resource failed.

Action: Make sure that the clusterware stack is up. Make sure that the resource you are querying has been configured. Also take a look at the help for the accompanying error message(s).

PRCN-02037: Failed to retrieve Oracle home for {0}

Cause: An attempt to retrieve Oracle home value for the listener resource failed.

Action: Make sure that the clusterware stack is up. Make sure that listener is configured. If node name is being specified in the command line make sure that the node name is a valid node name. Also look at help for the accompanying error message(s).

PRCN-02038: Failed to update Oracle home {0} for listener {1}

Cause: An attempt to update the Oracle home value for the listener resource failed.

Action: Make sure that the clusterware stack is up. Make sure that the listener is configured. If node name is being specified in the command line make sure that the node name is a valid node name. Make sure that user is a owner or has write permissions to modify the listener resource. Also look at the help for other errors listed in error stack.

PRCN-02039: Failed to retrieve Oracle home for {0} on node {1}

Cause: An attempt to retrieve Oracle home value for the listener resource on a the specified node failed.

Action: Make sure that the clusterware stack is up. Make sure that the listener is configured on the node. Make sure that the node name being passed in the command line is a valid node name. Also look at the help for the accompanying error message(s).

PRCN-02040: Failed to update Oracle home {0} for {1} on node {2}

Cause: Attempt to update value of attribute Oracle home for listener resource on the specified node failed.

Action: Make sure that the clusterware stack is up. Make sure that the listener is configured on the node. Make sure that the user has enough permission to modify the listener. Make sure that the node name being passed in the command line is a valid node name. Also look at the help for other errors listed in error stack.

PRCN-02041: Failed to retrieve properties of {0}

Cause: Failed to retrieve properties of the given entity.

Action: Make sure that user has permission to read resource attribute.

PRCN-02042: Failed to set properties {0} of {1}

Cause: Failed to update properties of the given entity.

Action: Make sure that user has permission to update resource attribute.

PRCN-02043: Multiple network resources {0} exist on the cluster

Cause: More than one network resource has been configured and the one to be used for creating this resource has not been specified.

Action: Use the '-netnum <net_num>' option to specify the network to be used and retry the command again.

PRCN-02044: No listener exists

Cause: No listener has been configured.

Action: Use netca or srvctl to add/configure a listener.

PRCN-02045: No network exists

Cause: No network has been configured.

Action: Use 'srvctl add nodeapps' to add/configure network resource.

PRCN-02046: Netmask does not exist for resource {0}

Cause: An attempt to retrieve the subnet information for the network resource resulted in not finding subnet mask.

Action: Internal error. Contact Oracle Support.

PRCN-02047: VIP {0} exists

Cause: The VIP with specified name has been registered in CRS.

Action: Remove the existing VIP before registering it again.

PRCN-02048: The network number {0} is already registered for subnet "{3}" and adapters "{4}". Can not add network number {0} for the specified subnet "{1}" and adapters "{2}".

Cause: The network number is taken by a registered network resource.

Action: Use a different network number to add a new network resource with the specified subnet and adapters, or modify existing network using the command 'srvctl modify nodeapps'.

PRCN-02049: The network attributes specified (network number: {0}, subnet: {1}, adapters: {2}) conflict with an already registered network (network number: {3}, subnet: {4}, adapters: {5})

Cause: The network resource is registered with different network number

Action: Use the registered network resource with the registered network number or provide different subnet or adapters.

PRCN-02050: The requested VIP (nodename: {0}, VIP name: {1}, network number: {2}) has the same VIP name but different network number or preferred node than the registered VIP (nodename: {3}, VIP name: {4}, network number: {5}).

Cause: One VIP name (and IP address) can only be used by one VIP with the same network number on the same node.

Action: Use a different VIP name or IP address.

PRCN-02051: The requested VIP (nodename: {0}, VIP name: {1}, network number: {2}) has the same network number and the same preferred node but different VIP name with the registered VIP (nodename: {3}, VIP name: {4}, network number: {5}).

Cause: One network resource on one preferred node can have only one cluster VIP.

Action: Use different network number or preferred node to register different VIP.

PRCN-02052: Failed to modify network number {0} to use subnet "{1}" with subnet mask "{2}", adapters "{3}" and address type "{4}"

Cause: CRS was unable to modify the network resource to use new subnet/netmask/interface/address type.

Action: Check accompanying error message(s) for details, then ensure that: - The clusterware stack is up. - The subnet, netmask, address type and adapters values are correct. - The network interface referred to is running. - The user trying to modify the network resource has root privileges.

PRCN-02053: Failed to modify ONS listening port for local client connections to {0}

Cause: CRS unable to modify the ONS listening port for local connections

Action: Make sure that clusterware stack is up. If the port is in use by another application, try using a different port.

PRCN-02054: Failed to modify ONS listening port for remote client connections to {0}

Cause: CRS unable to modify the ONS listening port for remote client connections

Action: Make sure that clusterware stack is up. If the port is in use by another application, try using a different port.

PRCN-02055: Failed to update port number(s) to {0} for {1}

Cause: An attempt to update the listener port failed for the nodes of the cluster.

Action: The port could be in use. Try using different port. If node name was specified in the command line make sure that the node name is a valid node name. Also look at the help for the accompanying error message(s).

PRCN-02056: Invalid listener protocol type {0}

Cause: The specified listener protocol type is invalid.

Action: Provide a valid listener protocol type. It can be TCP, TCPS, IPC, NMP, or SDP.

PRCN-02057: Invalid listener protocol value {0}

Cause: The specified listener protocol value is invalid.

Action: Provide a valid listener protocol value. It cannot contain special characters ':,/'

PRCN-02058: Invalid listener protocol ENDPOINTS {0}. Delimiter is "{1}", invalid part is "{2}"

Cause: The specified listener ENDPOINTS are invalid.

Action: Provide valid listener protocol ENDPOINTS. It cannot contain invalid part.

PRCN-02059: Invalid listener port number {0}

Cause: The specified listener port number is invalid.

Action: Provide a valid listener port number.

PRCN-02060: Duplicated listener protocol value {0}

Cause: The specified listener protocol value is a duplication of another one.

Action: Remove duplicated listener protocol value.

PRCN-02061: Failed to add listener {0}

Cause: An attempt to add listener failed because endpoints were not specified correctly or other reasons.

Action: Review the underlying error messages that provide the details of which resources failed to create. Check the cause and action for the individual resource creation failure. If the endpoints were not specified correctly, correct endpoints.

PRCN-02062: The specified hostname or address {0} cannot be resolved.

Cause: An invalid IP address or unresolvable hostname was specified.

Action: If IP address is specified then make sure that it is of legal length. If a host name is specified then make sure that the host name resolves to an IP address.

PRCN-02063: Failed to modify OC4J listening port to {0}

Cause: CRS unable to modify the OC4J instances listening port.

Action: Make sure that clusterware stack is up. If the port is in use by another application, try using a different port.

PRCN-02064: Found {0} VIPs for {1}

Cause: A conflict was found in VIP resource definition: either more than one VIP is using the same name or address, or a VIP is using the same name or address as a real host.

Action: Ensure that each VIP is defined with a distinct name and address relative to other VIPs and hosts in the network.

PRCN-02065: Ports {0} are not available on the nodes given

Cause: The ports specified are already being used by some other applications in one or more of the specified nodes.

Action: Stop the applications that are using these ports or specify different ports.

PRCN-02066: Failed to retrieve cluster listener for {0} because it has the type of Single Client Access Name Listener

Cause: Failed to use cluster listener APIs or `srvctl` commands for specified listener.

Action: Use Single Client Access Name Listener (SCAN listener) APIs or `srvctl` commands (`srvctl <varname>verb</varname> scan_listener`) for specified listener name.

PRCN-02067: Port {0} is not available on nodes: {1}

Cause: The port specified is already being used by other application.

Action: Stop the application that is using this port or specify a different port.

PRCN-02068: Failed to check the port availability

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCN-02069: Unable to retrieve the list of nodes

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCN-02070: Failed to validate network. No interface matches required network (subnet: {0}, netmask: {1} adapters: {2}).

Cause: No interfaces were found that match the specified network.

Action: Specify a subnet that exists on all nodes, or reconfigure the nodes to ensure that the specified subnet exists on all nodes.

PRCN-02071: Failed to update attribute USE_EVM to {0}

Cause: An attempt to update the attribute value of USE_EVM for ONS failed.

Action: Examine the accompanying error message(s) and respond accordingly.

PRCN-02072: Failed to get multicast port for events from EONS

Cause: An attempt to get multicast port for events from EONS failed.

Action: Examine the accompanying error message(s) and respond accordingly.

PRCN-02073: Failed to remove EONS

Cause: An attempt to remove EONS failed.

Action: Examine the accompanying error message(s) and respond accordingly.

PRCN-02074: Specified check interval of {0} minutes is below the minimum check interval {1} minutes

Cause: The CVU resource check interval specified was less than the minimum check interval.

Action: Retry the operation with a interval greater than or equal to the minimum check interval.

PRCN-02075: Failed to modify the CVU RUN_INTERVAL attribute to {0}

Cause: CRS was unable to modify the CVU RUN_INTERVAL attribute.

Action: Make sure that the Clusterware stack is up. Make sure that the user is an owner or has write permissions to modify the CVU resource. Check for and respond to any accompanying error messages.

PRCN-02076: failed to retrieve the CVU RUN_INTERVAL attribute for resource "{0}"

Cause: An attempt to retrieve the RUN_INTERVAL attribute for the Cluster Verification Utility cluster resource failed.

Action: Make sure that the Clusterware stack is up. Make sure that the CVU resource has been configured. Check for and respond to any accompanying error messages.

PRCN-02077: Failed to modify the CVU CHECK_RESULTS attribute to "{0}"

Cause: CRS was unable to modify the CVU CHECK_RESULTS attribute.

Action: Make sure that Clusterware stack is up. Make sure that the CVU resource has been configured. Check for and respond to any accompanying error messages.

PRCN-02078: Failed to retrieve the CVU CHECK_RESULTS for "{0}"

Cause: An attempt to retrieve the CHECK_RESULTS attribute for the CVU cluster resource failed.

Action: Make sure that the Clusterware stack is up. Make sure that the CVU resource has been configured. Check for and respond to any accompanying error messages.

PRCN-02079: Port {0} is out of the valid range, between 1 and 65535 and cannot be used on any of the nodes given

Cause: The port number that was provided was either less than 1 or greater than 65535.

Action: Make sure the port provided has a value between 1 and 65535.

PRCN-02080: Address type does not exist for resource {0}

Cause: An attempt was made to query address type for a network resource configured with Oracle clusterware and it was not found.

Action: Contact Oracle Support Services.

PRCN-02081: Failed to modify network number {0} to use subnet "{1}" with prefix length "{2}", adapters "{3}" and address type "{4}"

Cause: CRS was unable to modify the network resource to use new subnet/prefix length/interface/address type.

Action: Check accompanying error message(s) for details, then ensure that: - The clusterware stack is up. - The subnet, prefix length, address type and adapters values are correct. - The network interface referred to is running. - The user trying to modify the network resource has root privileges.

PRCN-02082: Setting the server type to "{0}" is not allowed for an {1} network

Cause: An attempt was made to set the IPv4 network server type to 'autoconfig' or to set the IPv6 network server type to 'static'.

Action: Make sure that the network is IPv4 or IPv6 when trying to set the server type to 'dhcp' or 'autoconfig' respectively.

PRCN-02083: Modifying the server type from "{0}" to "{1}" directly is not allowed

Cause: An attempt was made to change the network server type from 'static' to a dynamic type (or the reverse) without the required intermediate setting of 'mixed'.

Action: First change the server type to 'mixed', then retry the command.

PRCN-02084: Failed to update the {0} server type to "{1}" \n{2}

Cause: An attempt to update the server type for the network resource failed because its value could not be updated in the Oracle Clusterware resource attribute.

Action: Make sure that the Clusterware stack is up. Make sure that the user has enough permission to modify node applications. Examine the accompanying message for additional details.

PRCN-02085: There exists already another network (" {0} ") with the same IPv6 link-local subnet

Cause: Already registered another network with the same IPv6 link-local subnet.

Action: Make sure that the IPv6 link-local subnet is unique among the existing networks.

PRCN-02086: Failed to modify the CRSHOME_SPACE_ALERT_MODE attribute of the CVU resource to "{0}"

Cause: Cluster Ready Service (CRS) was unable to modify the CRSHOME_SPACE_ALERT_MODE attribute of the Cluster Verification Utility (CVU) CRS resource.

Action: Make sure that the Oracle Clusterware stack is up. Make sure that the CVU resource has been configured. Examine and respond to any accompanying error messages.

PRCN-02087: Failed to retrieve the CRSHOME_SPACE_ALERT_MODE attribute of the CVU resource

Cause: An attempt to retrieve the CRSHOME_SPACE_ALERT_MODE attribute of the Cluster Verification Utility (CVU) cluster resource failed.

Action: Make sure that the Oracle Clusterware stack is up. Make sure that the CVU resource has been configured. Examine and respond to any accompanying error messages.

PRCN-03000: The IPMI configuration failed on all nodes

Cause: The node names were invalid or were valid but had no IPMI device present.

Action: Make sure that all nodes are reachable and the IPMI device exists on those nodes.

PRCN-03001: The IPMI configuration failed on one or more nodes

Cause: There was at least one node with invalid name or with no IPMI device.

Action: Make sure that all nodes are reachable and the IPMI device exists on those nodes.

PRCN-03002: There is no network resource configured for the cluster

Cause: A request to add a listener was rejected due to the lack of a network resource.

Action: Use the command 'srvctl add network' to configure the network first, then retry the command.

PRCN-03003: Failed to unregister EONS resource type

Cause: A request to unregister the EONS resource type failed because of the reason provided by an accompanying exception message.

Action: Examine the accompanying error message for details.

PRCN-03004: Listener {0} already exists

Cause: The specified listener was already created.

Action: Use the command 'srvctl modify listener' to modify attributes if needed.

PRCN-03005: Failed to add or use registered network {0} with network interfaces "{1}" because the network was already registered for network interfaces "{2}"

Cause: The network resource was already registered with different interfaces.

Action: Use the same network interfaces as the one registered with network resource.

PRCN-03006: Failed to add or use registered network {0} with network interfaces "{1}" because the network was already registered with no interface specified

Cause: The network resource was already registered with no user specified interface.

Action: Do not specify network interface as the system decides the network interface.

PRCN-03007: Failed to add or use registered network {0} with network mask "{1}" because the network was already registered for network mask "{2}"

Cause: The network resource was already registered with a different network mask.

Action: Use the same network mask as the one registered with network resource.

PRCN-03008: Failed to add or use registered network {0} with network subnet "{1}" because the network was already registered for network subnet "{2}"

Cause: The network resource was already registered with a different network subnet.

Action: Use the same network subnet as the one registered with network resource.

PRCN-03009: Failed to retrieve log file attribute for {0} resource

Cause: An attempt to retrieve the log file attribute for the cluster resource failed.

Action: Make sure that the clusterware stack is up. Make sure that the resource you are querying has been configured. Refer also to any accompanying error messages for details.

PRCN-03010: Failed to retrieve log component attribute for {0} resource

Cause: An attempt to retrieve the log component attribute for the cluster resource failed.

Action: Make sure that the clusterware stack is up. Make sure that the resource you are querying has been configured. Refer also to any accompanying error messages for details.

PRCN-03011: Failed to retrieve debug file attribute for {0} resource

Cause: An attempt to retrieve the debug file attribute for the cluster resource failed.

Action: Make sure that the clusterware stack is up. Make sure that the resource you are querying has been configured. Refer also to any accompanying error messages for details.

PRCN-03012: Failed to retrieve debug component attribute for {0} resource

Cause: An attempt to retrieve the debug component attribute for the cluster resource failed.

Action: Make sure that the clusterware stack is up. Make sure that the resource you are querying has been configured. Refer also to any accompanying error messages for details.

PRCN-03013: Failed to update log file attribute of {0} resource

Cause: An attempt to update the attribute value of LOG_FILE for ONS failed.

Action: Examine the accompanying error message(s) and respond accordingly.

PRCN-03014: Failed to update log component attribute of {0} resource

Cause: An attempt to update the attribute value of LOG_COMP for ONS failed.

Action: Examine the accompanying error message(s) and respond accordingly.

PRCN-03015: Failed to update debug file attribute of {0} resource

Cause: An attempt to update the attribute value of DEBUG_FILE for ONS failed.

Action: Examine the accompanying error message(s) and respond accordingly.

PRCN-03016: Failed to update debug component attribute of {0} resource

Cause: An attempt to update the attribute value of DEBUG_COMP for ONS failed.

Action: Examine the accompanying error message(s) and respond accordingly.

PRCN-03017: Specified check interval of {0} minutes exceeds the maximum check interval {1} minutes

Cause: The CVU resource check interval specified was more than the maximum check interval.

Action: Retry the operation with an interval smaller than or equal to the maximum check interval.

PRCN-03018: Addition of listener version {0} is not allowed using srvctl version {1}

Cause: The versions of srvctl used and listener to be created did not match.

Action: Use the same version of srvctl as listener.

PRCN-03019: Not allowed to modify the network address type from {0} to {1}

Cause: An attempt was made to change the network address type directly from "IPv4" to "IPv6" or vice versa.

Action: Ensure that transitions between IPv4 and IPv6 first set an intermediate address type of 'both'.

PRCN-03020: Invalid LISTENER type {0}

Cause: The LISTENER type supplied is not valid.

Action: This is an internal error; contact Oracle Support Services.

PRCN-03021: No ASM listener exists

Cause: No ASM listener was configured for cluster ASM.

Action: Use the command 'srvctl add listener -asm' to configure an ASM listener.

PRCN-03022: Leaf ASM listener does not exist

Cause: Leaf ASM listener was not configured for leaf ASM.

Action: Use the command 'srvctl add listener -leaf' to configure an ASM listener.

PRCN-03023: Unable to retrieve information about the network subnet mask

Cause: An error occurred while obtaining information about the network subnet mask.

Action: Examine the accompanying error messages for details.

PRCN-03024: Mismatch between the subnet mask of the VIP ({0}) and that of the associated network ({1})

Cause: The subnet mask of the VIP address did not match the one of the associated network resource.

Action: Make sure the VIP address has the same subnet mask as the network it belongs to.

PRCN-03025: Mismatch between the prefix length of the VIP ({0}) and that of the associated network ({1})

Cause: The prefix length of VIP address did not match the one of the associated network resource.

Action: Make sure the VIP address has the same prefix length as the network it belongs to.

PRCN-03026: "{0}" is not a valid IPv4 network mask or IPv6 prefix length

Cause: The provided string was neither a valid IPv4 network mask nor a valid IPv6 prefix length.

Action: Contact Oracle Support.

PRCN-03027: Unable to determine the network type

Cause: An error occurred while retrieving the USR_ORA_AUTO network attribute value.

Action: Examine the accompanying error messages for details.

PRCN-03028: VIP {0} address modification is not allowed because the network type is "{1}"

Cause: An attempt was made to change the USR_ORA_VIP value for a VIP on an IPv4 network with 'dhcp' network type or on an IPv6 network with 'autoconfig' network type.

Action: Make sure that the network type is either 'static' or 'mixed' for the IPv4 or IPv6 type of the VIP address that you try to modify.

PRCN-03029: Transition for a network that contains both IPv4 and IPv6 addresses to an {0} network of network type 'mixed' is not allowed

Cause: An attempt was made to transition from a network with both IPv4 and IPv6 addresses to a network that has only one type of addresses and is of network type 'mixed'.

Action: Finish the transition from 'DHCP' or 'autoconfig' to 'static' or vice versa and retry.

PRCN-03030: Unable to retrieve the list of VIPs for network with number {0}

Cause: An error occurred while obtaining information about the VIPs that depend on the given network.

Action: Examine the accompanying error messages for details.

PRCN-03031: Unable to retrieve information about the address of VIP resource "{0}"

Cause: An error occurred while obtaining information about the address of the given VIP resource.

Action: Examine the accompanying error messages for details.

PRCN-03032: The VIP for hosting node "{0}" on network number {1} does not contain an {2} address or a VIP name that resolves to an {2} address

Cause: The given VIP did not contain an IP address or a VIP name that resolved to an IP address of the displayed address type.

Action: Make sure that the VIP contains an IP address or a VIP name that resolves to an IP address of the displayed address type.

PRCN-03033: Unable to retrieve the SCAN name for network {0}

Cause: An error occurred while obtaining the Single Client Access Name (SCAN) name for the specified network.

Action: Examine the accompanying error messages for details.

PRCN-03034: SCAN name "{0}" resolves to one or more {1} addresses

Cause: The given SCAN name resolved to the given type (IPv4 or IPv6) of addresses.

Action: Make sure that the SCAN name does not resolve to addresses of the given address type.

PRCN-03035: SCAN name "{0}" resolves to {1} addresses instead of {2}

Cause: The given SCAN name resolved to a wrong number of addresses.

Action: Make sure that the SCAN name resolves to the same number of addresses as the existing SCAN VIPs by using the 'srvctl modify scan -scanname <scan_name>' command.

PRCN-03036: Unable to retrieve the list of SCAN VIPs that depend on network with network number {0}

Cause: An error occurred while obtaining information about the SCAN VIPs that depend on the given network.

Action: Examine the accompanying error messages for details.

PRCN-03037: Unable to retrieve information about the address of SCAN VIP resource "{0}"

Cause: An error occurred while obtaining information about the address of the given SCAN VIP resource.

Action: Examine the accompanying error messages for details.

PRCN-03038: SCAN name "{0}" resolves to different addresses than those of the existing SCAN VIPs

Cause: While attempting to change the network address type, it was found that the given SCAN name resolved to a set of addresses that are different from the ones of the existing SCAN VIPs.

Action: Make sure that the SCAN name resolves to the same addresses as those of the existing SCAN VIPs by using the command 'srvctl modify scan -scanname <scan_name>'.

PRCN-03039: Unable to remove the {0} address from the VIP resource "{1}"

Cause: An error occurred while trying to remove either the IPv4 or the IPv6 address from all the VIPs on the network.

Action: Examine the accompanying error messages for details.

PRCN-03040: Unable to remove the {0} address from the SCAN VIP resource "{1}"

Cause: An error occurred while trying to remove either the IPv4 or the IPv6 address from all the SCAN VIPs on the network.

Action: Examine the accompanying error messages for details.

PRCN-03041: Failed to modify the network address type

Cause: An error occurred while trying to modify the network address type.

Action: Examine the accompanying error messages for details.

PRCN-03042: Subnet "{0}" is already in use by a network on the cluster

Cause: The specified subnet was already registered with another network on the cluster.

Action: Use a unique subnet and retry the operation.

PRCN-03043: Failed to verify the uniqueness of subnet "{0}" among the networks of the cluster

Cause: An error occurred while trying to verify the uniqueness of the subnet.

Action: Examine the accompanying error messages for details.

PRCN-03044: There is no {0} subnet for network with number {1}

Cause: No subnet of the given address type was found for the specified network.

Action: Modify the network to include a subnet of the specified address type and retry.

PRCN-03045: Management listener is not running in the cluster

Cause: An attempt to retrieve the IP address failed because the management listener was not running.

Action: Start the management listener using the command 'srvctl start mgmtlsnr'.

PRCN-03046: Failed to retrieve the IP address of the management listener

Cause: An attempt to retrieve the IP address of the management listener failed in querying the management listener resource.

Action: Stop and restart the management listener using the commands 'srvctl stop mgmtlsnr' and 'srvctl start mgmtlsnr', then retry the command. If the problem persists, contact Oracle Support Services.

PRCN-03047: Failed to set or get the subnet of the listener resource

Cause: An attempt to set or retrieve the subnet of the listener failed because the operation is not allowed for this resource.

Action: Use the 'srvctl' commands on the underlying network resource to set or get the subnet value or create a different listener.

PRCN-03048: Listener subnet "{0}" is not a subnet classified {1}

Cause: While adding a management listener, the specified subnet was not classified as a subnet of the required type.

Action: Specify a subnet that is classified as required as reported by using the command 'oifcfg getif', or change the subnet classification to the required type using the command 'oifcfg setif'.

PRCN-03049: Cannot change the network subnet address type to 'both' because it has only an {0} subnet address

Cause: An attempt to modify the network address type failed because the network had only one type of subnet address instead of both IPv4 and IPv6 subnet addresses.

Action: Make sure that the network has been configured with both IPv4 and IPv6 subnets using the command 'srvctl modify network -subnet'.

PRCN-03050: SCAN name "{0}" resolves to different number of IPv4 ({1}) and IPv6 ({2}) addresses

Cause: An attempt to change subnet address type to 'both' was rejected because the given SCAN name resolved to a different number of IPv4 and IPv6 addresses.

Action: Make sure that the SCAN name resolves to the same number of IPv4 and IPv6 addresses.

PRCN-03051: Unable to retrieve a list of the hub nodes

Cause: While attempting to change the subnet address type, an error occurred while retrieving a list of the hub nodes.

Action: Examine the accompanying message for details.

PRCN-03052: The following nodes do not have VIPs configured for network: {0}

Cause: While attempting to change the subnet, some nodes were found to be missing VIP addresses.

Action: Configure VIP addresses for the given nodes using the command 'srvctl add VIP'.

PRCN-03053: The following nodes do not have configured VIPs with IPv4 addresses on network {0}: {1}

Cause: A request to change the subnet address type was rejected because the specified nodes had VIPs which did not have any configured IPv4 address or a name that resolved to an IPv4 address.

Action: Make sure that the given nodes have configured VIPs with IPv4 address or name that resolved to an IPv4 address.

PRCN-03054: The following nodes do not have configured VIPs with IPv6 addresses on network {0}: {1}

Cause: A request to change the subnet address type was rejected because the specified nodes had VIPs which did not have any configured IPv6 address or a name that resolved to an IPv6 address.

Action: Make sure that the given nodes have configured VIPs with IPv6 address or name that resolved to an IPv6 address.

PRCN-03055: Cannot change the network subnet address type to 'both' for the following VIP related issues: {0}

Cause: An attempt to modify the network address type was rejected because the network either had no VIPs on one or more nodes or the VIPs did not have the expected address type.

Action: Examine the accompanying message for details.

PRCN-03056: The VIP address "{0}" is an {1} address, while network {2} has no {3} subnet

Cause: The VIP with the given address had a different address type than the network subnet address type.

Action: Either modify the network via the command 'srvctl modify network -subnet' to include the missing type or make sure that the VIP address type matches the address type of the network subnet.

PRCN-03057: The VIP name "{0}" resolves to one or more {1} addresses (" {2}"), while network {3} has no {1} subnet

Cause: The VIP name mapped to an address with different address type than the network subnet address type.

Action: Either modify the network via the command 'srvctl modify network -subnet' to include the missing type or make sure that the VIP name resolves to addresses that match the address type of the network subnet.

PRCN-03058: Cannot update listener that is not an ASM listener

Cause: An attempt was made to update a non-ASM listener.

Action: Specify the name of an ASM listener on the command line. Use the command 'srvctl config listener -asmlistener' to display ASM listener names.

PRCN-03059: Unable to retrieve the network number

Cause: An error occurred while attempting to retrieve the network number.

Action: Examine the accompanying error messages for details.

PRCN-03060: Unable to retrieve the list of configured networks on the cluster

Cause: An error occurred while attempting to retrieve the set of configured network resources 'ora.net*.network'.

Action: Examine the accompanying error messages for details.

PRCN-03061: The specified network server type "{0}" is invalid for an "IPv4" network.

Cause: The network server type was specified as 'autoconfig' which is not valid for an IPv4 network.

Action: The network server type must be 'static' or 'dhcp' or 'mixed'.

PRCN-03062: The specified network server type "{0}" is invalid for an "IPv6" network.

Cause: The network server type was specified as 'dhcp' which is not valid for an IPv6 network.

Action: The network server type must be 'static' or 'autoconfig' or 'mixed'.

PRCN-03063: Failed to find an available port in the default TCP port range {0} - {1} among nodes: {2}

Cause: An attempt to find an available default TCP port failed because all default TCP ports were used by some other applications in at least one node in the cluster.

Action: Specify a port to be used outside the default TCP port range using 'srvctl add listener -endpoints'

PRCN-03064: The user "{0}" could not be found on the cluster

Cause: The user specified as the listener owner was not a known OS user name.

Action: Enter the name of an existing OS user as the owner of the specified listener.

PRCN-03065: Cannot configure the default network as leaf.

Cause: An attempt was made to configure the default network with the leaf category.

Action: Provide a non-default network when using SRVCTL to add a network resource with the '-leaf' flag.

PRCN-03066: Cannot configure network resource as leaf because cluster is not configured as Flex Cluster.

Cause: An attempt was made to add a network resource with the leaf category in a cluster not configured as Flex Cluster.

Action: Use SRVCTL without the '-leaf' flag when adding a network resource in a non-Flex Cluster system. Or, convert the cluster to a Flex Cluster before doing this operation.

PRCN-03067: Unable to modify the owner for an ASM or leaf listener.

Cause: An attempt was made to modify the owner of a ASM or leaf listener resource.

Action: Repeat the operation specifying a node listener.

PRCN-03068: Unable to determine whether the VIP address "{0}" belongs to network with number {1}

Cause: An error occurred while trying to determine whether the VIP address matches the network subnet.

Action: Examine the accompanying error messages for details.

PRCN-03069: Unable to determine whether the VIP address "{0}" belongs to network with number {1} and subnet number {2}

Cause: An error occurred while trying to determine whether the VIP address matches the network subnet.

Action: Examine the accompanying error messages for details.

PRCN-03070: The VIP address "{0}" does not belong to network with number {1} and subnet number {2}

Cause: The VIP address did not match the subnet of the specified network.

Action: Make sure that the VIP address or the address the VIP name resolves to matches the network subnet.

PRCN-03071: Invalid address or unknown host "{0}"

Cause: An attempt was made to configure a network resource with an invalid address or host name.

Action: Specify a resolvable host name or an IP address of legal length.

PRCN-03072: Unable to modify the home node of the HAVIP.

Cause: An attempt to modify the home node of the HAVIP failed because there was an export file system registered with the same path, export options and HAVIP home node.

Action: Provide a different home node or examine the accompanying error messages for details.

PRCN-03073: Invalid node name: {0}

Cause: The home node name was invalid. The home node name must contain alphanumeric characters and hyphens only. It cannot be a fully qualified domain name.

Action: Check the home node name and try again.

PRCN-03074: The specified ping target list contains duplicate addresses.

Cause: The specified ping target list was invalid. It contained duplicate IP addresses or host names that resolve to duplicate IP addresses.

Action: Reissue the command without elements that are or resolve to the same

PRCN-03075: The specified TCP ports ({0}) are configured for another ASM or management listener.

Cause: An attempt to add an ASM or management listener failed because one or more of the specified ports were already configured for another ASM or management listener.

Action: Retry the command specifying a port not in use by another ASM or management listener.

PRCN-03076: Unable to find an available port in the default TCP port range {0} - {1}

Cause: An attempt to find an available default TCP port failed because all default TCP ports were configured for other ASM or management listeners.

Action: Retry the command specifying a port outside the default TCP port range.

PRCN-03077: The specified ports {0} are in the privileged ports range.

Cause: The specified ports were in the privileged ports range (0-1023) which can only be used by daemons running as user 'root'.

Action: Specify port numbers greater than 1023.

PRCN-03078: Setting the address type to "ipv4" is not allowed because the existing network address type is "ipv6".

Cause: An attempt to change the address type from 'ipv6' to 'ipv4' directly was rejected because the address type must first be changed to 'both' then to 'ipv4'.

Action: Use the command 'srvctl modify network' to change the network type to 'both' by adding an IPv4 subnet and retry the command.

PRCN-03079: Setting the address type to "ipv6" is not allowed because the existing network address type is "ipv4".

Cause: An attempt to change the address type from 'ipv4' to 'ipv6' directly was rejected because the address type must first be changed to 'both' then to 'ipv6'.

Action: Use the command 'srvctl modify network' to change the network type to 'both' by adding an IPv6 subnet and then retry the command.

PRCN-03080: The network configuration cannot be modified when the network type is 'mixed'.

Cause: An attempt to modify a network configuration was rejected because either the IPv4 or IPv6 subnet is configured with 'mixed' network type.

Action: Change the network type to 'static' or 'dhcp' or 'autoconfig' before proceeding with the configuration change.

PRCN-03081: The specified subnet ({0}) is already configured for ASM listener "{1}".

Cause: An attempt to add or modify an ASM listener was rejected because the specified subnet was already used for another ASM listener.

Action: Retry the command specifying a subnet that is not in use by another ASM listener.

PRCN-03082: An attempt to modify the OC4J port failed because OC4J is running. Use -force to force stop and restart of OC4J.

Cause: A request to modify the port number of OC4J was rejected because such modification requires OC4J to be stopped and restarted.

Action: Use '-force' option to force restart of OC4J.

PRCN-03083: failed to modify OC4J when trying to set the HTTP port and Remote Method Invocation (RMI) port to the same number {0}

Cause: A request to modify the OC4J port numbers was rejected because the HTTP port number was the same as the Remote Method Invocation (RMI) port number.

Action: Choose a different port that is not in use.

PRCN-03084: failed to modify RMI port for OC4J to use the port number {0} that is used by the listener {1}

Cause: A request to modify the OC4J Remote Method Invocation (RMI) port number was rejected because the specified port was already used by a node listener.

Action: Choose a different port number that is not used as an HTTP port or a node listener port.

PRCN-03085: failed to modify HTTP port for OC4J to use the port number {0} that is used by the listener {1}

Cause: A request to modify the OC4J HTTP port number was rejected because the specified port was already used by a node listener.

Action: Choose a different port number that is not used as an RMI port or a node listener port.

PRCN-03086: failed to merge files "{0}" and "{1}"

Cause: An attempt to merge the two indicated network configuration files failed.

Action: Examine the accompanying error messages for details, resolve issues and retry.

PRCN-03087: An attempt to extract the DNS name server IP address from file "{0}" failed.

Cause: No DNS name server IP address was specified in the specified file.

Action: Make sure that there is a line in the specified file that starts with 'nameserver' followed by the GNS name server IP address.

PRCO-00001 to PRCO-00019

PRCO-00001: Failed to initialize olsnodes

Cause: Unable to initialize and start olsnodes

Action: Ensure that the clusterware is running.

PRCO-00002: Unable to communicate with the clusterware

Cause: Unable to communicate with the clusterware

Action: Ensure that the clusterware is running.

PRCO-00003: OCR operation failed \n<varname>string</varname>\n

Cause: OCR operation failed

Action: Refer to the OCR error message

PRCO-00004: OCR initialization failed \n<varname>string</varname>\n

Cause: OCR initialization failed

Action: Refer to the OCR error message

PRCO-00008: Unable to retrieve local node number

Cause: Unable to retrieve local node number from clusterware

Action: Ensure that the clusterware is running.

PRCO-00009: Unable to retrieve local node name

Cause: Unable to retrieve local node name from clusterware

Action: Ensure that the clusterware is running.

PRCO-00010: Unable to retrieve max number of nodes

Cause: Unable to retrieve maximum number of nodes from clusterware

Action: Ensure that the clusterware is running.

PRCO-00011: Unable to retrieve node name

Cause: Unable to retrieve node name from clusterware

Action: Ensure that the clusterware is running.

PRCO-00012: Unable to retrieve node number

Cause: Unable to retrieve node number from clusterware

Action: Ensure that the clusterware is running.

PRCO-00013: Unable to retrieve private interconnect name

Cause: Unable to retrieve private interconnect name from clusterware

Action: Ensure that the clusterware is running.

PRCO-00014: Unable to retrieve node virtual IP

Cause: Unable to retrieve node virtual IP from clusterware

Action: Ensure that the clusterware is running.

PRCO-00015: Not a cluster member

Cause: Specified node is not a cluster member

Action: Specify a cluster member node.

PRCO-00016: Cluster node membership interface for retrieving nodes list returned error code <varname>number</varname>

Cause: Call to the CSS nodelist service failed with the specified error as return value

Action: Ensure that the clusterware is running and look at the Clusterware log files

PRCO-00017: Cluster attribute retrieval interface to retrieve max node length failed

Cause: Call to the CSS attribute fetch service failed for attribute max node length

Action: Ensure that the clusterware is running, and look at the Clusterware log files

PRCO-00018: Unable to retrieve cluster name

Cause: Unable to retrieve cluster name from clusterware

Action: Ensure that the clusterware is running.

PRCO-00019: Failure retrieving list of nodes in the cluster

Cause: The list of cluster nodes could not be determined. Additional details on the problem are in accompanying message(s).

Action: Take action based on the accompanying message(s).

PRCR-01000 to PRCR-01194

PRCR-01000: Resource {0} already exists

Cause: An attempt was made to create a resource that already exists.

Action: Check the resource using the command 'srvctl config <varname>object</varname>' and if the resource should not exist then remove it using the command 'srvctl remove <varname>object</varname>'.

PRCR-01001: Resource {0} does not exist

Cause: An attempt was made to operate on a resource that does not exist.

Action: Check the resource using the command 'srvctl config <varname>object</varname>' and if the resource does not exist, then create it using the command 'srvctl add <varname>object</varname>'.

PRCR-01002: Resource {0} is already enabled

Cause: An attempt was made to enable a resource that is already enabled.

Action: If the resource is already enabled then no action is needed. Use the command 'srvctl status <varname>object</varname>' to determine whether it is enabled.

PRCR-01003: Resource {0} is already disabled

Cause: An attempt was made to disable a resource that is already disabled.

Action: If the resource is already disabled then no action is needed. Use the command 'srvctl status <varname>object</varname>' to determine whether it is disabled.

PRCR-01004: Resource {0} is already running

Cause: An attempt was made to start a resource that is already running.

Action: If the resource is already running then no action is needed. Use the command 'srvctl status <varname>object</varname>' to determine whether it is running.

PRCR-01005: Resource {0} is already stopped

Cause: An attempt was made to stop a resource that is already stopped.

Action: If the resource is already stopped then no action is needed. Use the command 'srvctl status <varname>object</varname>' to determine whether it is stopped.

PRCR-01006: Failed to add resource {0} for {1}

Cause: An attempt to add the specified resource failed.

Action: Examine the accompanying error messages for details.

PRCR-01007: Failed to check status of resource {0}

Cause: An attempt to check status of specified resource has failed.

Action: Check the help for the underlying exception.

PRCR-01008: Failed to retrieve version of resource {0}

Cause: An attempt to retrieve version of the specified resource has failed.

Action: Check the help for the underlying exception.

PRCR-01009: Failed to retrieve permissions of resource {0}, ACL {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01010: Failed to update permissions of resource {0}

Cause: An attempt to update permissions of specified resource has failed.

Action: Check the help for the underlying exception.

PRCR-01011: Failed to enable resource {0}

Cause: An attempt to enable specified resource has failed.

Action: Check the help for the underlying exception.

PRCR-01012: Failed to disable resource {0}

Cause: An attempt to disable specified resource has failed.

Action: Check the help for the underlying exception.

PRCR-01013: Failed to start resource {0}

Cause: An attempt to start specified resource on several nodes failed.

Action: Check the help for the underlying exception.

PRCR-01014: Failed to stop resource {0}

Cause: An attempt to stop specified resource on several nodes failed.

Action: Check the help for the underlying exception.

PRCR-01015: Failed to relocate resource {0}

Cause: An attempt to relocate specified resource has failed.

Action: Check the help for the underlying exception.

PRCR-01016: Failed to modify resource {0}

Cause: An attempt to modify specified resource has failed.

Action: Check the help for the underlying exception.

PRCR-01024: Failed to remove resource {0} on nodes {1}

Cause: An attempt to remove the resource on the specified nodes failed.

Action: Check the accompanying error messages for details.

PRCR-01025: Resource {0} is still running

Cause: The specified resource is not stopped.

Action: Check the accompanying error messages to decide whether to stop the specified resource.

PRCR-01026: Resource {0} is not running

Cause: The specified resource is not started.

Action: Check the accompanying error messages to decide whether to start the specified resource.

PRCR-01028: Failed to remove resource {0}

Cause: An attempt to remove specified resource failed.

Action: Check the help for the underlying CRSEException.

PRCR-01029: Attribute {0} does not exist in resource {1} definition

Cause: An attempt was made to get an attribute which is not defined for that resource type.

Action: Make sure that the attribute exists in the resource definition.

PRCR-01030: Resource attribute name {0} is not valid

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01031: Resource attribute {0} value {1} is not valid

Cause: Specified resource attribute value is not valid.

Action: Try recreating the resource attribute value using srvnm APIs or recreating the resource using srvctl commands.

PRCR-01032: Current state of resource {0} is not valid

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01033: Resource type {0} does not exist

Cause: An attempt to retrieve the type has failed.

Action: Make sure that the type exists.

PRCR-01035: Failed to look up CRS resource {0} for {1}

Cause: An attempt to access the specified resource failed because it did not exist.

Action: Check that the specified name and resource type are correct.

PRCR-01036: Failed to retrieve cardinality of the resource {0}

Cause: An attempt to retrieve cardinality of resource has failed.

Action: Examine the accompanying error messages to determine how to respond.

PRCR-01037: Failed to update cardinality of the resource {0} to {1}

Cause: An attempt to set cardinality of the resource has failed.

Action: Examine the accompanying error messages to determine how to respond.

PRCR-01039: Server pool {0} does not exist

Cause: An attempt was made to retrieve the server pool which does not exist.

Action: Make sure that requested server pool exists.

PRCR-01040: Resource {0} is already enabled on node(s) {1}

Cause: An attempt was made to enable a resource that is already enable on nodes.

Action: The status of a resource can be checked by using the command 'srvctl status <varname>object</varname>'.

PRCR-01041: Resource {0} is already disabled on node(s) {1}

Cause: An attempt was made to disable a resource that is already disabled on nodes.

Action: The status of a resource can be checked by using the command 'srvctl status <varname>object</varname>'.

PRCR-01042: Failed to get dependent resources {0} of resource {1}: {2}

Cause: Failed to retrieve dependent resources of the given resource.

Action: Examine the accompanying error messages to determine how to respond.

PRCR-01043: Failed to update dependent resources {0} of resource {1} to resource {2}

Cause: Failed to update dependent resources of the given resource.

Action: Examine the accompanying error messages to determine how to respond.

PRCR-01050: Resource {0} is not configured in Oracle cluster environment

Cause: The environment for the specified resource is not Oracle Clusterware.

Action: The specified commands or APIs can only be used when Oracle Clusterware is running. If the environment is configured as Oracle Restart, use the correspond commands and APIs for Oracle Restart.

PRCR-01051: OracleCM Cluster is not found on node {0}

Cause: The OracleCM Cluster was not found on the specified node because the library for OracleCM Cluster was not found.

Action: Install OracleCM Cluster on the specified node.

PRCR-01052: Failed to find OracleCM Cluster library on node {0}

Cause: Failed to check OracleCM Cluster because of the error in executing the command to find the file /etc/ORCLcluster/oracm/lib/libskgxn2.so.

Action: Make sure that the caller has the read and execute permission for the library file.

PRCR-01053: Vendor Cluster is not found on node {0}

Cause: The Vendor Cluster was not installed and configured on the specified node.

Action: Install and configure the Vendor Cluster on the specified node.

PRCR-01054: Failed to find Vendor Cluster library on node {0}

Cause: Failed to check OracleCM Cluster because of the error in executing the command to find the file /etc/ORCLcluster/lib/libskgxn2.so.

Action: Make sure that the caller has the read and execute permission for the library file.

PRCR-01055: Cluster membership check failed for node {0}

Cause: The specified node does not belong to the cluster.

Action: Check whether the node name is correct.

PRCR-01061: User permissions are insufficient

Cause: User permissions are insufficient to register resource/type.

Action: Make sure the user is crs-user or root.

PRCR-01062: Failed to retrieve attributes of resource {0} on node {1}

Cause: An attempt to retrieve attributes of the resource has failed.

Action: Make sure that resource exists.

PRCR-01063: Failed to create context

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01064: Failed to start resource {0} on node {1}

Cause: An attempt to start the resource has failed.

Action: Make sure that resource is ready to start on the node before starting it.

PRCR-01065: Failed to stop resource {0}

Cause: An attempt to stop the resource failed because the resource wasn't running or the running resource had dependent resources also running.

Action: Check the accompanying messages to identify dependent resources and stop them. Make sure that resource is running before stopping it.

PRCR-01067: Failed to create a filter

Cause: An attempt to create a filter has failed.

Action: Check the help for the underlying exception.

PRCR-01068: Failed to query resources

Cause: An attempt to query the resource failed.

Action: Check the help for the underlying exception.

PRCR-01069: Attribute {0} of {1} {2} not found

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01070: Failed to check if {0} {1} is registered

Cause: Failed to check if resource is registered.

Action: Check the help for the underlying exception.

PRCR-01071: Failed to register or update {0} {1}

Cause: An attempt to register or update the resource failed.

Action: Check the help for the underlying exception.

PRCR-01072: Failed to unregister {0} {1}

Cause: An attempt to unregister specified Oracle clusterware entity failed.

Action: Check the help for the underlying exception.

PRCR-01074: Failed to retrieve attributes for {0} {1}

Cause: Failed to retrieve attributes for specified resource.

Action: Check the help for the underlying exception.

PRCR-01075: Failed to retrieve status for resource {0}

Cause: Failed to retrieve status for specified resource.

Action: Check the help for the underlying exception.

PRCR-01076: Failed to retrieve status for resource {0}: {1} is missed

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01077: Failed to calculate status for resource {0}: {1}/{2}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01078: Failed to retrieve attributes of resource {0}

Cause: An attempt to retrieve attributes of the resource has failed.

Action: Make sure that resource exists.

PRCR-01079: Failed to start resource {0}

Cause: An attempt to start the resource has failed.

Action: Make sure that resource is ready to start before starting it.

PRCR-01085: Unknown typeAsString: {0}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01086: {0} {1} is already registered

Cause: An attempt to register specified resource failed.

Action: Make sure that a resource is not registered before register it.

PRCR-01087: Failed to retrieve resource {0} instances

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01088: Failed to stop resource {0}: it was not started on node {1}

Cause: The resource was not started on the node..

Action: Make sure that resource was started before stopping it.

PRCR-01089: Failed to relocate resource {0}.

Cause: An attempt to relocate specified resource failed.

Action: Check the help for the underlying exception.

PRCR-01090: Failed to relocate resource {0}. It is not running.

Cause: The resource was not started.

Action: Make sure that resource was started before relocating it.

PRCR-01091: Failed to relocate resource {0}. It is not running on node {1}.

Cause: The resource was not started on the node.

Action: Make sure that resource was started before relocating it.

PRCR-01092: Failed to relocate resource {0}. It is running on more than one node

Cause: The resource was started on more than one node.

Action: Make sure that resource is running on one node only before relocating it.

PRCR-01093: Failed to relocate resource {0}. It is already running on node {1}

Cause: The resource is running that node.

Action: Make sure that resource is not running on a node before relocating it.

PRCR-01094: Failed to start resources on node {0}: {1}

Cause: Resources defined by filter cannot be started on the node.

Action: Make sure that resources are not running and ready to run before starting them. Make sure that the node is online.

PRCR-01095: Failed to start resources using filter {0}

Cause: Resources defined by filter cannot be started.

Action: Make sure that resources are not running and ready to run before starting them.

PRCR-01096: Filter cannot be null

Cause: An attempt to use filter has failed.

Action: Make sure that a filter is provided.

PRCR-01097: Resource attribute not found: {0}

Cause: Requested resource attribute not found.

Action: Make sure that resource has requested attribute.

PRCR-01098: Could not set rolling upgrade mode {0}

Cause: An attempt to start the resource in rolling upgrade mode has failed.

Action: Make sure that the correct LD_LIBRARY_PATH is set and all shared libraries are present.

PRCR-01099: Cannot start resource {0} on {1} additional nodes because it would exceed the resource cardinality {2}. Resource is already running on {3} nodes

Cause: Resource cannot be started because of its cardinality restriction.

Action: Make sure that number of additional nodes does not exceed the resource cardinality.

PRCR-01100: Cannot start resource {0} on {1} nodes because it would exceed the resource cardinality {2}

Cause: Resource cannot be started because of its cardinality restriction.

Action: Make sure that number of nodes does not exceed the resource cardinality.

PRCR-01101: Cannot stop resource {0} on {1} nodes, it is running on {2} nodes.

Cause: The resource does not have enough running instances to stop.

Action: Make sure that resource has enough running instances to stop.

PRCR-01102: Failed to verify if user {0} has CRS administrator role

Cause: Failed to verify if the user has CRS administrator role.

Action: Resolve the reported error message and retry.

PRCR-01104: Unsupported relocate option {0}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01105: Failed to relocate resource {0} to node {1}

Cause: An attempt to relocate the resource to the specified node has failed.

Action: Examine accompanying message(s) that provide details of the error, and respond accordingly.

PRCR-01106: Failed to relocate resource {0} from node {1} to node {2}

Cause: An attempt to relocate the resource from the specified node to another has failed.

Action: Check the help for the underlying exception.

PRCR-01107: Error while trying to set default network as dependent resource for {0}

Cause: An attempt to set default network dependency for the specified resource failed.

Action: Examine the accompanying error message(s) for details.

PRCR-01108: ONS cannot be created because default network is not configured.

Cause: An attempt was made to create ONS resource with out creating the dependent default network resource.

Action: Network resource can be created using the command 'srvctl add nodeapps'. Create the network resource and try this command again.

PRCR-01109: Failed to remove attributes "{1}" from resource {0}

Cause: Possible reasons: Oracle Clusterware stack might not be active, CRS resource may not exist, or the CRS resource may not have given attributes set.

Action: Make sure that Oracle Clusterware is active, the CRS resource exists and has given attributes set.

PRCR-01110: Failed to retrieve processed attributes of resource {0} for node {1}

Cause: Oracle Clusterware stack was not active or CRS resource did not exist.

Action: Make sure that Oracle Clusterware is active, the CRS resource exists.

PRCR-01111: Failed to retrieve processed attributes of resource {0} for node {1}

Cause: requested CRS resource did not exist.

Action: Make sure that the CRS resource exists.

PRCR-01112: Failed to retrieve current event sequence number

Cause: Oracle Clusterware stack was not active.

Action: Make sure that Oracle Clusterware is active.

PRCR-01113: Failed to create detailed error message, rc = {0}

Cause: Internal error

Action: Contact Oracle Support Services.

PRCR-01114: Failed to relocate servers {0} into server pool {1}

Cause: Failed to relocate servers into the given server pool. This message may be accompanied by others providing additional details. A likely cause is violation of defined configuration attributes such as pool MIN_SIZE, SERVER_NAMES etc.

Action: If the problem stems from violating configuration attributes, either modify the attributes or reformulate the request. Otherwise, contact Oracle Support Services.

PRCR-01115: Failed to find entities of type {0} that match filters {1} and contain attributes {2}

Cause: Failed to look up entities of given type that match given filters. This message may be accompanied by others providing additional details. A likely cause is that current user does not have permissions to read attributes of entities of given type.

Action: If lack of permissions is the cause of this failure, then use the command 'svctl config <varname>object</varname> -a' to find the current owner of the entity and retry the query as that owner user. Otherwise, contact Oracle Support Services.

PRCR-01116: {0} {1} cannot be created and registered now

Cause: Oracle Clusterware stack could not create and register an object.

Action: Check the help for the underlying exception.

PRCR-01117: Failed to stop resources using filter {0}

Cause: An attempt to stop resources using specified filter failed.

Action: Respond based on the accompanying exception message.

PRCR-01118: Failed to generate resource permissions for the resource

Cause: Creation of the Access Control List (permission) structures for the resource failed. This message is accompanied by others providing details of the error.

Action: Respond based on the accompanying exception message(s).

PRCR-01119: Failed to look up CRS resources of {0} type

Cause: An attempt to find the resource for the specified resource type failed because it did not exist.

Action: Create a resource of the type.

PRCR-01120: Resources are already running: {0}

Cause: An attempt to start resources failed because they are already running. For detailed information about resources review the accompanying error messages.

Action: None

PRCR-01121: Value of parameter "{0}" cannot be null or empty

Cause: An attempt to construct ACFS resource name failed due to null or empty value for the indicated parameter.

Action: This is an internal error. Contact Oracle Support Services.

PRCR-01122: Resource type {0} is not registered with Oracle Clusterware

Cause: Given resource type was not registered.

Action: Make sure that required resource type is registered.

PRCR-01123: Failed to rename resource type {0}

Cause: An attempt was made to change name of the given resource type. Resource types cannot be renamed.

Action: None

PRCR-01124: Failed to check resource {0}

Cause: An attempt to check the resource failed.

Action: Correct any problems reported in accompanying messages. Make sure that resource is registered with Oracle Clusterware.

PRCR-01125: Failed to check resource {0} on node {1}

Cause: An attempt to check the resource on specified node failed.

Action: Correct any problems reported in accompanying messages. Make sure that resource is registered with Oracle Clusterware.

PRCR-01126: Failed to relocate resource {0} from node {1}

Cause: An attempt to relocate the resource from the specified node has failed.

Action: Examine the accompanying error messages and respond accordingly.

PRCR-01127: Resource {0} does not have attributes {1} on per node basis

Cause: An attempt to remove given attributes failed because these attributes do not exist on per node basis.

Action: Retry after supplying attributes that exist on per node basis.

PRCR-01128: Resource {0} does not have attributes {1} on node {2}

Cause: An attempt to remove given attributes failed because these attributes do not exist on the given node.

Action: Retry after supplying attributes that exist on the node.

PRCR-01129: Failed to upgrade resource type {0}

Cause: An attempt to upgrade specified resource type failed.

Action: Examine the accompanying error message(s) and respond accordingly.

PRCR-01130: Failed to get the name for resource type {0} from resource type enum class

Cause: An attempt to get the name of the resource type for the given resource type enum class.

Action: Ensure that the resource type enum class contains the proper resource type name.

PRCR-01131: CVU resource cannot be created because default network is not configured.

Cause: An attempt was made to create CVU resource without creating the dependent default network resource.

Action: Network resource can be created using the command 'srvctl add nodeapps'. Create the network resource and try this command again.

PRCR-01132: Failed to stop resources using a filter

Cause: An attempt to stop resources failed because resources were not running or running resources had dependent resources also running.

Action: Check the accompanying messages to identify dependent resources and stop them. Make sure that resources are running before stopping them.

PRCR-01133: Failed to stop database {0} and its running services

Cause: An attempt to stop given database and its running services failed.

Action: Correct any problems reported in accompanying messages.

PRCR-01134: Failed to stop database {0} and its running services on nodes {1}

Cause: An attempt to stop the given database and its running services failed on the specified nodes.

Action: Correct any problems reported in accompanying messages.

PRCR-01135: Failed to check if node with node number 0 exists

Cause: An attempt failed to determine whether a node numbered 0 exists.

Action: Follow action specified for accompanying message.

PRCR-01136: Action {0} is not allowed for snapshot entities

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01137: Action {0} is not allowed for CRS local entities

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01138: Failed to get cached attributes for entity {0} on node {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01139: Cache is not ready to generate a snapshot

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01140: Wrong sequence number {0}, expected {1} or more

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01141: Attribute {0} is not set for local entity {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01142: Failed to build a snapshot

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01143: Snapshot does not have information about database {0}

Cause: Internal Error: An attempt was made to operate on a database that does not exist in a snapshot.

Action: Contact Oracle Support Services.

PRCR-01144: Failed to evaluate the effects of the proposed request \n{0}

Cause: An error occurred during processing of the proposed request.

Action: Examine the accompanying error messages for details.

PRCR-01145: The proposed operation being evaluated would result in an error \n{0}

Cause: The effect of the proposed WhatIf request resulted in an error.

Action: Examine the accompanying error messages for details of the error that would result from the proposed operation.

PRCR-01146: The cluster active version doesn't allow the requested action

Cause: CRS failed to perform a request because the cluster upgrade is not completed.

Action: Complete the cluster upgrade and retry the request.

PRCR-01147: Snapshot support was interrupted

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01149: Failed to initialize snapshot subsystem

Cause: An attempt to initialize snapshot subsystem failed.

Action: Check the accompanying messages. Make sure that Oracle Clusterware is active.

PRCR-01150: Snapshot subsystem was not initialized

Cause: An attempt was made to create a snapshot but snapshot subsystem is not initialized.

Action: Check the accompanying messages. Make sure that Oracle Clusterware is active.

PRCR-01151: Snapshot does not have information about server {0}

Cause: An attempt was made to operate on a server that does not exist in a snapshot. Either the server name was misspelled or the server has not been registered at the time of snapshot creation.

Action: Make sure that the server name spelling is correct. Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCR-01152: Invalid CRS cache mode: {0}

Cause: CRS cache does not support requested mode.

Action: Retry after supplying correct value for CRS Cache mode.

PRCR-01153: Snapshot internal error: {0}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01154: Failed to create file output stream with file name: {0}

Cause: An attempt to create file output failed because of IO problems opening the file.

Action: Contact Oracle Support Services.

PRCR-01155: Failed to create file output stream with file name: {0} due to security manager does not allowed to permit the operation

Cause: An attempt to create file output failed due to security manager does not allowed to permit the operation.

Action: Run as different user or modify the security permissions or controls.

PRCR-01156: Failed to create file output stream with file name: {0} because 'count' or 'limit' is invalid

Cause: An attempt to create file output failed because of illegal arguments 'count' < 1 or 'limit' < 0.

Action: Retry with proper arguments 'limit' >= 0 or 'count' >= 1.

PRCR-01157: Failed to close the file output stream with file name: {0} due to security manager does not allow to close

Cause: An attempt to create file output failed due to security manager does not permit the operation.

Action: Run as different user or modify the security permissions or controls.

PRCR-01158: Directory {0} in file path does not exist

Cause: An attempt was made to operate on a directory that does not exist.

Action: Retry with valid directory.

PRCR-01159: Failed to create file output stream because of empty file name

Cause: An attempt to create file output stream failed because of empty file name.

Action: Specify valid file name.

PRCR-01160: Output stream does not exist

Cause: An attempt was made to operate on an output stream that does not exist.

Action: Contact Oracle Support Services.

PRCR-01161: Failed to write to output stream

Cause: An attempt to write to an output stream failed.

Action: Check if file system runs out of space otherwise contact Oracle Support Services.

PRCR-01162: Failed to format a message

Cause: An attempt to format a log message failed.

Action: Contact Oracle Support Services.

PRCR-01163: Failed to open or create the output stream with file name: {0}

Cause: An attempt to open or create an output file failed.

Action: Check if file system runs out of space otherwise contact Oracle Support Services.

PRCR-01164: Failed to flush an output stream

Cause: An attempt to flush a log output stream failed.

Action: Contact Oracle Support Services.

PRCR-01165: Failed to close the output stream

Cause: An attempt to close a log file failed.

Action: Contact Oracle Support Services.

PRCR-01166: An operation on output stream failed

Cause: An operation on output stream failed.

Action: Contact Oracle Support Services.

PRCR-01169: Mismatch between the number of attribute names ({0}) and the number of the corresponding attribute values ({1})

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01170: Failed to add resource {0}

Cause: An attempt to add the specified resource failed.

Action: Examine the accompanying error messages for details.

PRCR-01171: Insufficient number of arguments while executing "{0}"

Cause: An attempt was made to execute the specified script with insufficient number of arguments.

Action: This is an internal error. Contact Oracle Support Services.

PRCR-01172: Failed to execute "srvmhelper" for {0}

Cause: Failed to execute srvmhelper for the specified API.

Action: This is an internal error. Contact Oracle Support Services.

PRCR-01173: Failed to look up CRS resource for type {0}

Cause: An attempt to search for resource of the specified type failed.

Action: Check that at least one of the specified type exists. Examine the accompanying error messages for details.

PRCR-01174: Resource {0} is not running on node {1}

Cause: The specified resource is not started or not running on the specified node.

Action: Check that specified resource is running on the specified node.

PRCR-01175: Failed to add ASM Listener "{0}" because a dependent resource does not exist.

Cause: During creation of an ASM listener resource, internal updates to associated ASM or IOserver resources could not be made because the resource(s) did not exist.

Action: Review the accompanying messages for more details.

PRCR-01176: A software exception has occurred.

Cause: An internal exception occurred while attempting to update resource dependencies during creation of an ASM Listener configuration.

Action: Contact Oracle Support Services.

PRCR-01177: Failed to update dependency on related resources when adding ASM listener "{0}"

Cause: During creation of an ASM listener resource, updates to associated ASM or IOserver resources failed.

Action: Review the accompanying messages for more details.

PRCR-01178: Execution of command failed on one or more nodes

Cause: Execution of a command through the administrator helper resource failed.

Action: Examine the accompanying error messages that provide the details of why and where command execution failed. Resolve the reported problem and retry.

PRCR-01179: Failed to retrieve nodes suitable for configuring an administrator-managed database

Cause: An attempt to execute the command 'olsnodes -a' has failed.

Action: Ensure that the clusterware stack is up. If it is, and the errors reported by olsnodes cannot be resolved, contact Oracle Support Services.

PRCR-01180: No response received

Cause: A response was not received while executing the command through the administrator helper resource.

Action: Ensure that the node specified is reachable and responsive. If the problem persists, Contact Oracle Support Services.

PRCR-01181: Failed to request action {0} on resource {1}

Cause: An attempt to request the action on the resource failed.

Action: Make sure that the resource is running.

PRCR-01182: Failed to request action {0} on resource {1} on nodes {2}

Cause: An attempt to request the action on the resource failed on the specified nodes.

Action: Make sure that the resource is running on the specified nodes.

PRCR-01183: Failed to request action {0} on multiple resources

Cause: An attempt to request the action on multiple resources failed.

Action: Make sure that the resources are running.

PRCR-01184: Response from the resource on which the action was requested was not in the correct format

Cause: An internal error occurred. The callback message for the requested action was not in the correct format during an attempt to request the action.

Action: Contact Oracle Support Services.

PRCR-01185: failed to execute "srvmhelper" for command "{0}" with the following errors:\n{1}

Cause: An attempt to execute the command has failed.

Action: Examine the accompanying error messages that provide the details of why and where command execution failed. Resolve the reported problem and retry.

PRCR-01186: Multiple final messages for the requested action were received for node {0}

Cause: An internal error occurred. Multiple final messages for the requested action were received during an attempt to request the action.

Action: Contact Oracle Support Services.

PRCR-01187: No final message for the requested action was received.

Cause: An internal error occurred. No final message for the requested action was received during an attempt to request the action.

Action: Contact Oracle Support Services.

PRCR-01188: The requested action cannot be executed because there is no resource instance.

Cause: The resource has no instance on the specified nodes or, if nodes were not specified, in the cluster.

Action: Make sure that at least one resource instance exists on the specified nodes or, if nodes were not specified, in the cluster.

PRCR-01189: The user {1} does not have read and execute permissions for the ACFS file system resource associated with path {0}.

Cause: A check on the permissions for the ACFS file system resource associated with the indicated path failed because the user indicated in the message did not have read and execute permissions for the resource.

Action: Verify that the specified user has read and execute permissions on the ACFS file system resource using 'srvctl config filesystem'. To change permissions use 'srvctl modify filesystem'.

PRCR-01190: The specified VIP name {0} resolves to multiple {1} addresses.

Cause: The specified VIP name did not resolve to a single IPv4 or IPv6 address.

Action: Specify a numeric GNS VIP address or ensure that the specified VIP name resolves to a single IPv4 or IPv6 address. Use 'nslookup <varname>vipname</varname>' to display the addresses to which the VIP name resolves.

PRCR-01191: The stop request failed because the resource is not running on nodes {0}.

Cause: A request to stop a resource was rejected because the resource did not have a running instance on the specified nodes.

Action: Specify nodes where the resource is running.

PRCR-01192: The specified instance on cardinality ID {0} of resource {1} is already enabled.

Cause: An attempt to enable the specified resource instance was rejected because the resource instance was already enabled.

Action: No action is needed.

PRCR-01193: The specified instance on cardinality ID {0} of resource {1} is already disabled.

Cause: An attempt to disable the specified resource instance was rejected because the resource instance was already disabled.

Action: No action is needed.

PRCR-01194: Resource {0} does not have attributes {1} on cardinality ID {2}.

Cause: An attempt to remove the specified attributes failed because these attributes did not exist on the specified cardinality.

Action: Retry after specifying attributes that exist on the cardinality.

PRCS-01000 to PRCS-01118

PRCS-01000: Failed to get enabled status of {0}

Cause: An attempt to check whether a server is enabled failed.

Action: Examine the accompanying error messages for details.

PRCS-01001: Failed to enable {0}

Cause: An attempt to enable the specified server failed.

Action: Examine the accompanying error messages for details.

PRCS-01002: Failed to disable {0}

Cause: An attempt to disable the specified server failed.

Action: Examine the accompanying error messages for details.

PRCS-01005: Failed to create server {0}

Cause: An attempt to create the specified server failed.

Action: Examine the accompanying error messages for details.

PRCS-01006: Failed to get server for node {0}

Cause: An attempt to get server for the specified node failed.

Action: Examine the accompanying error messages for details.

PRCS-01007: Server pool {0} already exists

Cause: The specified server pool already exists.

Action: Examine the accompanying error messages for details.

PRCS-01008: Server pool {0} does not exist

Cause: The specified server pool does not exist.

Action: Use the `srvctl` command to create server pool.

PRCS-01009: Failed to create server pool {0}

Cause: An attempt to create specified server pool failed.

Action: Examine the accompanying error messages for details.

PRCS-01010: Failed to get {0} of server pool {1}

Cause: An attempt to get the attribute value of the specified server pool failed.

Action: Examine the accompanying error messages for details.

PRCS-01011: Failed to modify server pool {0}

Cause: An attempt to modify the specified server pool failed.

Action: Examine the accompanying error messages for details.

PRCS-01012: Failed to remove server pool {0}

Cause: Failed to unregister server pool. This message is followed by the reason for failure.

Action: Retry after resolving the issue reported in the failure message.

PRCS-01013: Failed to look up server pool {0}

Cause: An attempt to get the specified server pool failed.

Action: Examine the accompanying error messages for details.

PRCS-01014: Server {0} is already part of server pool {1}

Cause: An attempt to add the server as a candidate for the specified server pool failed because the server is already in the pool's SERVER_NAME attribute.

Action: No action is needed.

PRCS-01015: Server {0} is not part of server pool {1}

Cause: An attempt to remove the server from the SERVER_NAMES attribute of the server pool failed because the specified server is not in the pool's SERVER_NAME attribute.

Action: Add the server to the server pool.

PRCS-01016: Failed to resolve Single Client Access Name {0}

Cause: An attempt to resolve specified Single Client Access Name to a list of IP addresses failed because Single Client Access Name could not be resolved in DNS using nslookup or using other lookup methods.

Action: Check whether the specified Single Client Access Name is correct. Review the underlying error messages that provide the details of which resource failed to resolve. Check the cause and action for the individual error. If Single Client Access Name should be resolved in DNS, check the configuration of Single Client Access Name in DNS.

PRCS-01017: Failed to configure Single Client Access Name {0}

Cause: An attempt to add cluster configuration for Single Client Access Name failed.

Action: Review the underlying error messages that provide the details of which resources failed to create. Check the cause and action for the individual resource creation failure.

PRCS-01018: Failed to add cluster configuration for Single Client Access Name listener {0}

Cause: An attempt to configure Single Client Access Name listener failed because endpoints were not specified correctly or other reasons.

Action: Review the underlying error messages that provide the details of which resources failed to create. Check the cause and action for the individual resource creation failure. If the endpoints were not specified correctly, correct endpoints.

PRCS-01019: Failed to remove the configuration for Single Client Access Name listener {0}

Cause: An attempt to remove the configuration of Single Client Access Name listener failed because other resources depended on it or other reasons.

Action: Review the underlying error messages that provide the details of which resources failed to remove. Stop Single Client Access Name listener resource before removing it. Can consider using force flag to remove Single Client Access Name listener resources if no other resources depend on it.

PRCS-01020: Failed to enable Single Client Access Name resources {0}

Cause: An attempt to enable Single Client Access Name resources failed.

Action: Review the underlying error messages that provide the details of which resources failed to enable. Check the cause and action for the individual resource creation failure.

PRCS-01021: Failed to disable Single Client Access Name resources {0}

Cause: An attempt to disable Single Client Access Name resources failed because current user did not have sufficient privileges to perform this operation or other reasons.

Action: Review the underlying error messages that provide the details of which resources failed to disable. Check the cause and action for the individual resource failure. Make sure that the user has root privileges on Linux/Unix's and Administrator on Windows.

PRCS-01022: Failed to start Single Client Access Name resources {0}

Cause: An attempt to start Single Client Access Name resources failed.

Action: Review the underlying error messages that provides the details of which resources failed to start.

PRCS-01023: Failed to stop Single Client Access Name resources {0}

Cause: An attempt to stop Single Client Access Name resources failed because Single Client Access Name listeners were not stopped/relocated or other reasons.

Action: Review the underlying error messages that provides the details of which resources failed to stop. Check the cause and action for the individual resource creation failure. Stop Single Client Access Name listeners first or use force flag to stop Single Client Access Name Virtual Internet Protocol(VIP) resources if no other resources depend on them.

PRCS-01024: Failed to remove Single Client Access Name Virtual Internet Protocol(VIP) resources {0}

Cause: Could not remove Single Client Access Name Virtual Internet Protocol(VIP) resources because the resources are running or Single Client Access Name listeners depend on or other reasons.

Action: Review the underlying error messages that provides the details of which resources failed to remove. Stop the Single Client Access Name VIPs and Single Client Access Name listeners, then remove Single Client Access Name listeners. Or use force flag to remove Single Client Access Name Virtual Internet Protocol(VIP) resources if no other resources depend on them.

PRCS-01025: Could not find any Single Client Access Name (SCAN) Virtual Internet Protocol (VIP) resources using filter {0}

Cause: An attempt to retrieve the SCAN VIP resources failed.

Action: Ensure that the resource name supplied is correct. Examine the accompanying error messages for additional details.

PRCS-01026: Could not find any Single Client Access Name (SCAN) listener resources using filter {0}

Cause: An attempt to retrieve the SCAN listener resources failed.

Action: Ensure that the resource name supplied is correct. Examine the accompanying error messages for additional details.

PRCS-01027: Could not find any Single Client Access Name listener with ordinal number {0}

Cause: Could not find the Single Client Access Name listener for specified ordinal number.

Action: Use the command 'srvctl config scan_listener' to check available ordinal number.

PRCS-01028: Single Client Access Name (SCAN) listener resources already exist on network {0}

Cause: Single Client Access Name listeners were already created on the specified network.

Action: Use the command 'srvctl modify scan_listener' to modify attributes if needed.

PRCS-01031: Failed to modify Single Client Access Name listeners using endpoints {0}

Cause: An attempt to modify Single Client Access Name listeners failed.

Action: Check if the endpoints specified are valid.

PRCS-01032: No server pool was found that matches the query {0}

Cause: An attempt to find server pools that match the given query found no matching server pool.

Action: Either configure a server pool via the command 'srvctl add srvpool' or modify existing a server pool via the command 'srvctl modify srvpool' to match the query and retry the request.

PRCS-01034: Failed to modify Single Client Access Name {0}

Cause: Failed to modify the configuration of Single Client Access Name because the endpoints were not specified correctly or extra Single Client Access Name VIPs could not be removed or other reasons.

Action: Review the underlying error messages that provides the details of which resources failed to modify. Resolve the reported problem and retry. If to modify the endpoints, specify correct endpoints. If to update the number of Single Client Access Name VIPs, stop the Single Client Access Name listeners that depend on.

PRCS-01035: Invalid number of TCP ports ({0}) for SCAN Listener

Cause: Either no port was specified, or more than one port was specified.

Action: Specify only one port number for TCP protocol for SCAN listener.

PRCS-01037: Single Client Access Name (SCAN) Virtual Internet Protocol (VIP) resources already exist on network {0}

Cause: An attempt was made to add SCAN VIPs when SCAN VIPs were already configured. Only one SCAN per cluster network can be configured.

Action: Remove the existing SCAN on the given network and add a new SCAN. Or, modify the SCAN to use a new SCAN name or have the existing SCAN name map to different SCAN VIPs.

PRCS-01038: Failed to find Single Client Access Name Virtual Internet Protocol(VIP) associated with listener {0}

Cause: Cannot find Single Client Access Name Virtual Internet Protocol(VIP) associated with the given listener.

Action: Examine the accompanying error messages to determine how to respond.

PRCS-01039: Failed to find Single Client Access Name listener associated with the given Virtual Internet Protocol(VIP) {0}

Cause: Cannot find Single Client Access Name listener associated with the given Virtual Internet Protocol(VIP).

Action: Examine the accompanying error messages to determine how to respond.

PRCS-01040: User {0} does not have CRS administrator role

Cause: The specified user did not have CRS administrator role.

Action: Grant CRS administrator role to the user by using the command 'crsctl add crs administrator -u <user_name>' and retry.

PRCS-01041: Invalid builtin server pool name {0}

Cause: The specified builtin server pool name is invalid.

Action: Provide a valid builtin server pool name. It can be Generic or Free.

PRCS-01042: Server pool {0} is not hosting any database currently

Cause: A database could not be found referencing the given server pool.

Action: Create the database configuration using the command 'srvctl add database ... -serverpool <server_pool>' and retry.

PRCS-01043: Server pool {0} is not hosting any database service currently

Cause: A service could not be found referencing the given server pool.

Action: Create the service configuration using the command 'srvctl add service ... -serverpool <server_pool>' and retry.

PRCS-01046: Name {0} is not valid

Cause: Specified name was not valid.

Action: Specify a valid string name, and retry.

PRCS-01047: Minimum size of {0} is not valid

Cause: Specified minimum size was not valid.

Action: Specify minimum size to be an integer equal to or greater than zero and less than the maximum size (other than -1), and retry.

PRCS-01048: Maximum size of {0} is not valid

Cause: Specified maximum size was not valid.

Action: Specify maximum size to be an integer greater than or equal to -1 and retry.

PRCS-01049: Importance of {0} is not valid

Cause: Specified importance was not valid.

Action: Specify importance value to be an integer greater than or equal to 0 and retry.

PRCS-01050: Could not add GNS VIP {0} because another one with name {1} already exists

Cause: The name of the GNS VIP to be added matches one that already existed.

Action: Specify another name.

PRCS-01051: Could not add GNS VIP using network {0} because registered another one using network {1} already exists

Cause: The network specified for the GNS VIP to be added matches one that already existed.

Action: Specify another network.

PRCS-01053: failed to resolve address for Grid Naming Service VIP {0}:\n{1}

Cause: The address specified for the GNS VIP could not be resolved.

Action: Specify a valid address.

PRCS-01054: Failed to configure VIP for Grid Naming Service VIP {0}

Cause: The creation of the GNS VIP failed.

Action: Examine the accompanying error message for details.

PRCS-01055: Failed to modify Grid Naming Service VIP {0}

Cause: The modification of the GNS VIP failed.

Action: Examine the accompanying error message for details.

PRCS-01056: Could not find resources for Grid Naming Service Virtual Internet Protocol(VIP) {0}

Cause: The specified GNS VIP did not exist.

Action: Specify a valid GNS VIP name.

PRCS-01057: INTERNAL ERROR: no attributes specified.

Cause: No attributes to modify GNS with were passed to a method.

Action: This is an internal error. Please contact Oracle Customer Support.

PRCS-01058: INTERNAL ERROR: unsupported query type: "\${0}"

Cause: The type of query to be made to GNS is unrecognized.

Action: This is an internal error and should not be visible. Please contact Oracle Customer Support.

PRCS-01059: Failed to get sub-server pools of server pool {0}

Cause: Failed to look up PARENT_POOLS attribute of server pools containing the given server pool name. Ensure that current user has read permissions on the given server pool and its sub-server pools.

Action: Grant read permissions on the given server pool and its sub-server pools.

PRCS-01060: Failed to relocate servers {0} into server pool {1}

Cause: Failed to relocate servers into the given server pool. This message may be accompanied by others providing additional details. A likely cause is violation of defined configuration attributes such as pool MIN_SIZE, SERVER_NAMES etc.

Action: If the problem stems from violating configuration attributes, either modify the attributes or reformulate the request. Otherwise, contact Oracle Support Services.

PRCS-01061: Failed to find running database instances hosted by server pool {0}

Cause: Failed to find running database instances hosted by the servers in the given server pool. This message is accompanied by others providing additional details. A likely cause is that current user may not have permissions to query profiles of databases hosted by the given server pool.

Action: If lack of permissions is the cause of this failure, then use the command 'srvctl config <varname>object</varname> -a' to find the current owner of entity and retry the query as that owner user. Otherwise, contact Oracle Support Services.

PRCS-01062: Failed to determine whether server pool {0} has any parents or children

Cause: Failed to find parents or children of the given server pool. A likely cause is that current user may not have permissions to query profile of given server pool or profiles of other server pools whose PARENT_POOLS attribute contains this server pool name.

Action: If lack of permissions is the cause of this failure, then use the command 'srvctl config serverpool <varname>serverpool</varname> -a' to find the current owner of the server pool and retry the query as that owner user. Otherwise, contact Oracle Support Services.

PRCS-01063: Server pool {0} with minimum size {1}, maximum size {2}, importance {3} and server list {4} can not be created

Cause: Specified server pool cannot be created because of the reason provided by an accompanying exception message.

Action: Respond based on the accompanying exception message.

PRCS-01064: Failed to find server pools using filter {0}

Cause: Attempt to look up server pool entities using given filter failed. A likely cause is that current user does not have permissions to query server pool entities

Action: If lack of permissions is the cause of this failure, then use the command 'srvctl config serverpool -a' to find the current owner of the server pools and retry the query as that owner user. Otherwise, contact Oracle Support Services.

PRCS-01065: GNS server is not configured in this cluster.

Cause: A command that applies only to a GNS server cluster was rejected because this cluster has not been configured as a GNS server.

Action: If GNS server is to run in this cluster, use the 'srvctl add gns' command to configure it.

PRCS-01066: Server group {0} with server list ({1}) can not be created

Cause: Specified server group cannot be created because of the reason provided by an accompanying exception message.

Action: Respond based on the accompanying exception message.

PRCS-01067: Failed to find online database instances hosted by server pool {0}

Cause: Failed to find online database instances hosted by the servers in the given server pool. This message is accompanied by others providing additional details. A likely cause is that current user may not have permissions to query profiles of databases hosted by the given server pool.

Action: If lack of permissions is the cause of this failure, then use the command 'srvctl config <varname>object</varname> -a' to find the current owner of the entity and retry the query as that owner user. Otherwise, contact Oracle Support Services.

PRCS-01068: Oracle Clusterware server entity for node {0} does not exist

Cause: The server entity for the specified node does not exist.

Action: Start Oracle Clusterware on the given node and retry.

PRCS-01069: Label {0} in GNS domain name {1} does not follow RFC-1035 convention

Cause: The specified portion of the GNS domain name does not follow RFC-1035 label conventions.

Action: Specify a domain name that follows RFC-1035 conventions. According to RFC-1035 conventions, the domain name consists of a set of labels separated by ".". A label must begin with an alphabetic character and can contain only alphanumeric and "-" (dash or minus character), end with an alphanumeric, and be no more than 63 characters long.

PRCS-01070: Label {0} part of GNS domain name {1} is too long

Cause: The specified portion of the GNS domain name does not follow RFC-1035 label conventions, as it is longer than 63 characters.

Action: Specify a domain name that follows RFC-1035 conventions. The domain name consists of a set of labels separated by ".". Label must begin with an alphabetic character and can contain only alphanumeric characters and "-" (dash or minus character), end with an alphanumeric and be no more than 63 characters long.

PRCS-01071: An error occurred while trying to look up IP address for domain name {0}

Cause: An error occurred while trying to translate the indicated fully domain qualified name (FQDN) to an IP addresses.

Action: Make sure that name servers on local node are correctly configured. If the domain in the FDQN is GNS domain make sure that DNS has been set up to forward request to GNS and GNS resource is online. Make sure that there are no firewalls between the local node and the name servers.

PRCS-01072: Failed to create server pool with reserved name {0}

Cause: Request to create the specified server pool was rejected because specified server pool name is the name of builtin server pool of Oracle Clusterware.

Action: Supply a server pool name other than the builtin server pool name (Generic or Free) of Oracle Clusterware and retry.

PRCS-01073: The specified GNS logging level {0} was outside the expected range of {1} to {2}

Cause: The 'log_level' value in the 'srvctl start gns -loglevel <log_level>' command was less than the minimum limit.

Action: Ensure that the 'log_level' value is within the valid range.

PRCS-01074: The specified GNS logging level {0} was outside the expected range of {1} to {2}

Cause: The 'log_level' value in the 'srvctl start gns -loglevel <log_level>' command was greater than the maximum limit.

Action: Ensure that the 'log_level' value is within the valid range.

PRCS-01075: GNS Domain name {0} ends with invalid character {1}

Cause: The specified GNS domain name ends with an invalid character and does not follow RFC-1035 label conventions.

Action: Specify a domain name that follows RFC-1035 conventions. According to RFC-1035 conventions, the domain name consists of a set of labels separated by ".". A label must begin with an alphabetic character and can contain only alphanumeric characters or "-" (dash or minus character), end with an alphanumeric, and be no more than 63 characters long.

PRCS-01076: Invalid Single Client Access Name {0}. The subnet {1} of SCAN VIP {2} differs from the subnet {3} of network {4}

Cause: The SCAN VIPs resolved from the specified Single Client Access Name are in a subnet that differs from the network's subnet.

Action: Use the SCAN name that can be resolved to the SCAN VIPs in the same subnet of network resource.

PRCS-01077: The specified trace level {0} was outside the expected range of {1} to {2}

Cause: The trace level value was less than the minimum limit or greater than the maximum limit.

Action: Ensure that the trace level value is within the valid range.

PRCS-01078: Failed to update the invited nodes {0} for service registration with Scan Listener {1}

Cause: An attempt to update the invited nodes attribute failed.

Action: Retry the request after ensuring that the CRS stack is running, the SCAN listener resource has been configured, and the user has update permission on the SCAN listener resource.

PRCS-01079: Failed to retrieve the invited nodes for service registration with Scan Listener {0}

Cause: An attempt to retrieve the invited nodes attribute value of scan listener failed.

Action: Retry the request after ensuring that the CRS stack is running, the SCAN listener resource has been configured, and the user has update permission on the SCAN listener resource.

PRCS-01080: Failed to update the invited subnets {0} for service registration with Scan Listener {1}

Cause: An attempt to update the invited subnets attribute of scan listener failed.

Action: Retry the request after ensuring that the CRS stack is running, the SCAN listener resource has been configured, and the user has update permission on the SCAN listener resource.

PRCS-01081: Failed to retrieve the invited subnets for service registration with Scan Listener {0}

Cause: An attempt to retrieve the invited subnets attribute of scan listener failed.

Action: Retry the request after ensuring that the CRS stack is running, the SCAN listener resource has been configured, and the user has update permission on the SCAN listener resource.

PRCS-01082: Invalid built-in server category name {0}

Cause: The specified category name was invalid.

Action: Provide a valid category name. It can be ora.hub.category or ora.leaf.category.

PRCS-01083: There is no server category {0} registered in CRS

Cause: The server category did not exist.

Action: Add the server category using the command 'crsctl add category <category_name>' or use the command 'crsctl status category' to get a list of server categories already registered in CRS.

PRCS-01084: Failed to find server categories using filter {0}

Cause: An attempt to look up server category entities using the given filter failed.

Action: See the accompanying error messages for further details.

PRCS-01085: Server category {0} already exists

Cause: A server category that already exists was specified.

Action: Examine the accompanying error messages for details.

PRCS-01086: Failed to create category {0}

Cause: An attempt to create the specified server category failed.

Action: Examine the accompanying error messages for details.

PRCS-01087: SCAN name "{0}" does not resolve to an IPv4 or IPv6 address

Cause: The SCAN name did not resolve to an IP address (either IPv4 or IPv6).

Action: Ensure that the SCAN name resolves to an IP address.

PRCS-01088: SCAN name "{0}" resolves to a different number of IPv4 ({1}) and IPv6 ({2}) addresses

Cause: The number of IPv4 and IPv6 addresses that the SCAN name resolved to were not equal.

Action: Ensure that the SCAN name resolves to an equal number of IPv4 and IPv6 addresses.

PRCS-01089: Domain must be supplied because network "{0}" has type "{1}".

Cause: An attempt to add GNS on a non-static network was rejected because a domain was not supplied.

Action: Ensure that a domain is forwarded from DNS, and supply the domain using the command 'srvctl add gns -vip <varname>address</varname> -domain <varname>domain</varname>'.

PRCS-01090: Failed to retrieve the sub-domain configured for GNS

Cause: An attempt to retrieve the sub-domain attribute of the specified Grid Naming Service (GNS) failed.

Action: Retry the request after ensuring that the CRS stack is running, the GNS resource has been configured, and the user has read permission on the GNS resource.

PRCS-01091: The scan name "{0}" resolves to {1} addresses such as "{2}", while network {3} has only {4} subnet

Cause: The given scan name resolved to a type of addresses that the network did not have.

Action: Either modify the network via the command 'srvctl modify network -subnet' to include the missing type or make sure that the scan name resolves only to the addresses of the same type as the network.

PRCS-01092: Failed to get the value for the attribute {0} of server category {1}

Cause: An attempt to get the attribute value of the specified server category failed.

Action: Examine the accompanying error messages for details.

PRCS-01093: Server pool {0} does not have a server category defined

Cause: The server pool did not have the server category defined as required for policy-managed databases in an Oracle Flex Cluster.

Action: Modify the server pool using the command 'srvctl modify srvpool -serverpool <varname>serverpool</varname> -category <varname>category</varname> -servers ""'.

PRCS-01094: Server category {0} of server pool {1} has the following non-hub active CSS role: {2}

Cause: The server category of the server pool did not have ACTIVE_CSS_ROLE=HUB as required for policy-managed databases in a Flex Cluster.

Action: Modify the server pool to use a server category that has the hub active CSS role or modify the server category to use ACTIVE_CSS_ROLE=HUB.

PRCS-01095: Conflicting specification of 'servers' and 'category' arguments for the serverpool {0}

Cause: Both 'servers' and 'category' arguments were specified on the command.

Action: Retry the request with either 'servers' or 'category' argument.

PRCS-01096: The serverpool {0} already contains the server names

Cause: The command 'srvctl modify srvpool' specified 'category' option, but the server pool already has a server names attribute.

Action: Remove the server names attribute by issuing the command 'srvctl modify srvpool -serverpool <pool_name> -servers ""'

PRCS-01097: The serverpool {0} already contains the server category

Cause: A 'srvctl modify srvpool' command specified 'servers' but the server pool already has a server category attribute.

Action: Remove the server category attribute by issuing the command 'srvctl modify srvpool -serverpool <pool_name> -category ""'

PRCS-01098: Active CSS role of the server category {0} of PQ server pool {1} is not set

Cause: The server category of the server pool did not specify ACTIVE_CSS_ROLE.

Action: Modify the PQ server pool to use a server category that has a valid active CSS role or modify the server category to set ACTIVE_CSS_ROLE.

PRCS-01099: Nodes {0} of the server pool {1} do not have HUB active CSS roles

Cause: The server pool did not have nodes with ACTIVE_CSS_ROLE=HUB as required for policy-managed databases in a Flex Cluster.

Action: Modify the server pool to use nodes that have HUB active CSS roles.

PRCS-01100: Nodes {0} of the PQ server pool {1} do not have LEAF active CSS roles

Cause: The server pool did not have nodes with ACTIVE_CSS_ROLE=LEAF as required for policy-managed databases in a Flex Cluster.

Action: Modify the server pool to use nodes that have LEAF active CSS roles.

PRCS-01101: Unable to create GNS resource because it already exists.

Cause: An attempt was made to add the GNS resource but the resource already exists.

Action: Either remove the GNS resource and then add it, or avoid adding an already existing resource.

PRCS-01102: Could not find any Single Client Access Name (SCAN) Virtual Internet Protocol (VIP) resources using filter {0} on network {1}

Cause: An attempt to retrieve the SCAN VIP resources on the indicated network failed.

Action: Ensure that the resource name supplied is correct. Examine the accompanying error messages for additional details.

PRCS-01103: Could not find any Single Client Access Name (SCAN) listener resources using filter {0} on network {1}

Cause: An attempt to retrieve the SCAN listener resources on the indicated network failed.

Action: Ensure that the resource name supplied is correct. Examine the accompanying error messages for additional details.

PRCS-01104: Could not find the Single Client Access Name (SCAN) listener with ordinal number {0} on network {1}

Cause: An attempt to find the SCAN listener for the specified ordinal number and network failed.

Action: Use the command 'srvctl config scan_listener -netnum' to check the available ordinal numbers on the given network.

PRCS-01105: Server category {0} of Parallel Query server pool {1} has the following non-leaf active CSS role: {2}

Cause: The server category of the server pool did not have ACTIVE_CSS_ROLE=LEAF as required for the parallel query helper service of the policy-managed databases in a Flex Cluster.

Action: Modify the Parallel Query server pool to use a server category that has the leaf active CSS role or modify the server category to use ACTIVE_CSS_ROLE=LEAF.

PRCS-01106: Nodes {0} of the Parallel Query server pool {1} do not have the leaf active CSS role

Cause: The server pool did not have nodes with ACTIVE_CSS_ROLE=LEAF as required for policy-managed databases in a Flex Cluster.

Action: Modify the server pool to use nodes that have the leaf active CSS role.

PRCS-01107: Cannot add resource on network {0}, which is configured as leaf.

Cause: An attempt to add a resource using a network configured as 'leaf' was made.

Action: Add the resource on a network not configured as 'leaf'.

PRCS-01108: Cannot modify resource to use network {0}, which is configured as leaf.

Cause: An attempt to modify a resource using a network configured as 'leaf' was made.

Action: Provide a network not configured as 'leaf'.

PRCS-01110: Single Client Access Name (SCAN) {0} does not resolve to {1} addresses although it should resolve to both IPv4 and IPv6 addresses

Cause: An attempt to modify the SCAN name while the network type was 'BOTH' was rejected because the specified SCAN name did not resolve to both IPv4 and IPv6 addresses required by the network.

Action: Make sure that the specified SCAN name resolves to both IPv4 and IPv6 addresses.

PRCS-01111: Could not modify GNS VIP because registered type and IP address type are different

Cause: The IP address type specified for the GNS VIP to be added differed from the registered network type.

Action: Specify an IP address of the type that is registered.

PRCS-01112: Server {0} is not assigned to any server pool.

Cause: The given server was not yet recognized by Oracle Clusterware and therefore was not active in any server pool.

Action: Check the state of the server using the command 'crsctl status server <varname>server</varname> -f'.

PRCS-01113: The Single Client Access Name (SCAN) VIP address "{0}" does not belong to network {1} which has only an {2} subnet.

Cause: The network modification failed because the type of the specified SCAN VIP address was incompatible with the subnet of the specified network.

Action: Either modify the network via the command 'srvctl modify network -subnet' to include the missing type or make sure that the SCAN VIP is an address of the same type as the network.

PRCS-01115: An attempt to retrieve the Rapid Home Provisioning Server host name and port number failed with the following error:\n{0}

Cause: While looking up Rapid Home Provisioning Server connection details in Grid Naming Service (GNS), an attempt to retrieve the host name and port number failed.

Action: Address the accompanying error message. Make sure that both the GNS and the Rapid Home Provisioning Server are running on the RHPS cluster.

PRCS-01116: no SRV record for service {0} found in the Grid Naming Service (GNS)

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCS-01117: invalid format for SRV record {0} returned from the Grid Naming Service (GNS)

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCS-01118: The supplied GNS VIP name "{0}" resolves to multiple IP addresses.

Cause: Multiple addresses were found while looking up the specified GNS VIP name.

Action: Supply a GNS VIP name that resolves to exactly one address, or supply a numeric GNS VIP address.

PRCT-01000 to PRCT-01454

PRCT-01000: File path is null

Cause: The supplied path is set to null.

Action: Oracle internal error. Contact Oracle Support Services..

PRCT-01001: Node name is null

Cause: The supplied node name is set to null.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01003: Failed to run "{0}" on node "{1}"

Cause: Failed to execute the specified command on the specified node.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01004: Directory name passed was null

Cause: The supplied directory name is set to null.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01005: Directory {0} does not exist

Cause: The supplied directory path does not exist.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01006: Failed to retrieve cluster name from node "{0}"

Cause: Failed to get the cluster name using the command 'olsnodes -c' from the specified node.

Action: Execute the command 'olsnodes -c' from the specified node and check the output of the command. Fix the problem according to the error message given in the command output.

PRCT-01007: Failed to retrieve local node name

Cause: Underlying call failed to get the local hostname.

Action: Please check the accompanying error message.

PRCT-01008: Failed to retrieve node names

Cause: Failed to get the node names using the command 'olsnodes'.

Action: Execute the command 'olsnodes' and check the output of the command. Fix the problem according to the error message given in the command output.

PRCT-01009: crsctl execution failed. Detailed error:\n{0}

Cause: Failed to execute crsctl command.

Action: Examine the accompanying error message for details.

PRCT-01010: crsctl execution failed on node {0}. Detailed error:\n{1}

Cause: Failed to execute crsctl command on the specified node.

Action: Examine the accompanying error message for details.

PRCT-01011: Failed to run "{0}". Detailed error: {1}

Cause: Failed to execute the specified command on the local node.

Action: Execute the specified command from the console and check the result. Fix the problem according to the error message given in the command output.

PRCT-01012: Invalid file path {0}

Cause: The supplied path does not exist.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01013: Failed to start remote execution server on local node.

Cause: A remote execution server is required on this platform, but an attempt to start one on this node failed. This message is accompanied by other(s) providing details on the failure.

Action: Correct the problem indicated by the accompanying error messages. On Windows systems, make sure that the current user has authority to remove and create directories and files in the Temp directory and to create and delete registry entries.

PRCT-01014: Internal error: {0}

Cause: An internal error occurred. The included value is an internal identifier.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01015: Version supplied is null

Cause: The supplied version was set to null.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01050: Failed to parse output returned by kfod when executing kfod at location {0}

Cause: Failed to parse the output returned by executing kfod because the output string is null or has fewer rows than expected

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01051: Failed to parse the output returned by kfod for node {0} when executing kfod at location {1}

Cause: Failed to parse the output returned by executing kfod on the specified node because the output string is null or has fewer rows than expected.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01052: Failed to parse output {0} returned by kfod when executing kfod at location {1}

Cause: Failed to parse the output returned by executing kfod because the output has fewer columns than expected.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01053: Failed to parse output {0} returned by kfod for node {1} when executing kfod at location {2}

Cause: Failed to parse the output returned by executing kfod on the specified node because the output has fewer columns than expected.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01054: Fail to retrieve ASM active version for local node

Cause: Failed to get the active version of ASM by executing 'kfod nohdr=true op=version hostlist=<varname>hostlist</varname>'.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01055: Fail to retrieve ASM active version for node {0}. kfod execution failed at location {1}. Detailed error:\n{2}

Cause: Failed to get the active version of ASM by executing 'kfod nohdr=true op=version hostlist=<varname>hostlist</varname>' on the specified node.

Action: Examine the accompanying error messages for details.

PRCT-01056: Fail to retrieve ASM instance type. kfod execution failed at location {0}. Detailed error:\n{1}

Cause: Failed to get the instance type for ASM instance by executing 'kfod nohdr=true op=version'.

Action: Examine the accompanying error messages for details.

PRCT-01057: The value of ASM instance type {0} is not correct

Cause: The value of ASM instance type is invalid.

Action: The instance type of ASM can only be YES or NO.

PRCT-01058: Fail to check if ASM is running on node {0}. kfod execution failed at location {1}. Detailed error:\n{2}

Cause: Failed to check whether ASM is running by executing 'kfod nohdr=true op=insts hostlist=<varname>hostlist</varname>'.

Action: Examine the accompanying error messages for details.

PRCT-01059: Fail to retrieve list of disk group names for node {0}. kfod execution failed at location {1}. Detailed error:\n{2}

Cause: Failed to get the diskgroup names by executing 'kfod nohdr=true op=groups hostlist=<varname>hostlist</varname>'.

Action: Examine the accompanying error messages for details.

PRCT-01060: Fail to check if ASM is in rolling migration. kfod execution failed at location {1}. Detailed error:\n{2}

Cause: Failed to check whether ASM is in rolling migration by executing 'kfod nohdr=true op=rm'.

Action: Examine the accompanying error messages for details.

PRCT-01061: Failed to verify ASM client credentials file "{0}"\n{1}

Cause: An attempt to verify that the ASM client credentials file specified is a valid credentials file failed.

Action: Examine the accompanying error messages for details.

PRCT-01062: Failed to verify ASM client credentials.\n{0}

Cause: An attempt to verify the ASM credentials for this client cluster failed.

Action: Examine the accompanying error messages for details.

PRCT-01063: Failed to get list of disks managed by ASM on node "{0}"\n{1}

Cause: An attempt to obtain the list of disks that are managed by ASM on the specified node failed.

Action: Examine the accompanying error messages for details.

PRCT-01064: Failed to get ASM default disk discovery string \n {0}

Cause: An attempt to obtain the ASM default disk string failed.

Action: Examine the accompanying error messages for details.

**PRCT-01065: Failed to verify the size consistency of ASM disks on node "{0}".
kfod execution failed at location "{1}". Detailed error:\n{2}**

Cause: An attempt to verify the consistency of ASM disk sizes failed on the identified node with the indicated error message.

Action: Examine the accompanying error messages for details.

PRCT-01100: Failed to retrieve ACFS active version for local node

Cause: Failed to execute acfsutil to retrieve the ACFS active version on the local node.

Action: Review the accompanying error messages that provides the details of why acfsutil execution failed. Resolve the reported problem and retry.

**PRCT-01101: Failed to retrieve ACFS active version for node {0}. acfsutil
execution failed at file location {1}. Detailed error:\n{2}**

Cause: Failed to execute acfsutil to retrieve the ACFS active version on the supplied node.

Action: Review the accompanying error messages that provides the details of why acfsutil execution failed. Resolve the reported problem and retry.

PRCT-01102: Failed to parse output when executing acfsutil at file location {0}

Cause: Unable to parse output returned by acfsutil.

Action: Oracle internal error. Contact Oracle Support Services.

**PRCT-01103: Failed to parse the output for node {0} when executing acfsutil at
file location {1}**

Cause: Unable to parse output returned by acfsutil on the supplied node.

Action: Oracle internal error. Contact Oracle Support Services.

**PRCT-01104: Failed to parse output {0} when executing acfsutil at file location
{1}**

Cause: Unable to parse output returned by acfsutil at specified location.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01105: Failed to parse output {0} for node {1} when executing acfsutil at file location {2}

Cause: Unable to parse output returned by acfsutil at specified location on the supplied node.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01109: Failed to get diskgroup names for node {0}

Cause: Unable to parse diskgroup names returned by acfsutil on the supplied node.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01111: Received empty result while getting ACFS Mount Points on node {1}

Cause: The output returned by acfsutil is empty.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01114: Execution of acfsutil command failed on node {0} for location {1}

Cause: Failed to execute acfsutil on the supplied node at the specified location.

Action: Review the accompanying error messages that provides the details of why acfsutil execution failed. Resolve the reported problem and retry.

PRCT-01115: Execution of acfsutil failed on node {0} with result {1}

Cause: Failed to execute acfsutil on the supplied node.

Action: Review the accompanying error messages that provides the details of why acfsutil execution failed. Resolve the reported problem and retry.

PRCT-01116: Invalid partition path {0} specified to acfsutil on node {1}

Cause: The supplied path did not exist.

Action: Supply a valid partition path and retry.

PRCT-01117: Received empty result while getting ACFS Disk Groups on node {1}

Cause: The output returned by acfsutil is empty.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01118: Received empty result while getting total space at file location {0} on node {1}

Cause: The output returned by acfsutil is empty.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01119: Received empty result while getting free space at file location {0} on node {1}

Cause: The output returned by acfsutil is empty.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01120: A NULL path has been specified for the location on node {0}

Cause: A null path was provided for the location.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01121: Execution of acfsutil failed on local node with result {0}

Cause: Execution of acfsutil failed on the local node.

Action: Review the accompanying error messages that provides the details of why acfsutil execution failed. Resolve the reported problem and retry.

PRCT-01122: Received empty result while getting mountpoint for path {0} on the local node

Cause: acfsutil returned an empty value when querying for the mountpoint of a specified path.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01123: The mountpoint is either set to null or empty

Cause: The supplied mountpoint is either an empty string or is set to null.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01124: Received empty result while getting volume device for mountpoint {0} on the local node

Cause: acfsutil returned an empty value when querying for the volume device of a specified mountpoint.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01125: The volume device is either set to null or empty

Cause: The supplied volume device is either an empty string or is set to null.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01126: Received empty result while getting mountpoint for volume device {0} on the local node

Cause: acfsutil returned an empty value when querying for the volume device of a specified mountpoint.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01127: Received empty result while getting all volume devices on the local node

Cause: No ACFS volume devices has been created.

Action: Use usmca to create ACFS volume devices.

PRCT-01128: ACFS is not supported on this operating system

Cause: ACFS is not supported on the accompanying operating system.

Action: Run `srvctl filesystem` command on a supported operating system.

PRCT-01129: Execution of ACFS driver state check failed on local node with result {0}

Cause: Execution of ACFS driver state check failed on the local node

Action: Review the accompanying error messages that provides the details of why ACFS driver state check execution failed. Resolve the reported problem and retry.

PRCT-01130: Execution of advmutil failed on local node with result {0}

Cause: Execution of advmutil failed on the local node

Action: Review the accompanying error messages that provides the details of why advmutil execution failed. Resolve the reported problem and retry.

PRCT-01131: Failed to retrieve mount point for volume device {0}

Cause: No ACFS filesystem was mounted for the specified volume device.

Action: Mount the filesystem and retry.

PRCT-01132: ACFS driver state check with "{0}" option on local node failed to display any output

Cause: No output was captured when executing ACFS driver state check with the specified option on the local node.

Action: Internal error. Contact Oracle Support Services.

PRCT-01133: ACFS driver state check with "{0}" option on node {1} failed to display any output

Cause: No output was captured when executing ACFS driver state check with the specified option on the specified node.

Action: Internal error. Contact Oracle Support Services.

PRCT-01134: Execution of ACFS driver state check failed on node {0} with result {1}

Cause: Execution of ACFS driver state check failed on the specified node.

Action: Review the accompanying error messages that provides the details of why ACFS driver state check execution failed. Resolve the reported problem and retry.

PRCT-01135: This platform does not support a default location for "{0}"

Cause: An attempt to run the 'acfsutil' command did not provide a location of this binary

Action: Internal error. Contact Oracle Support Services.

PRCT-01136: Invalid mount point

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRCT-01137: acfsutil command failed as the Snapshot {0} does not exist

Cause: The acfsutil command to delete the snapshot with the specified name failed as it does not exist.

Action: Create the snapshot with the specified name and retry the operation.

PRCT-01138: acfsutil command failed as the snapshot {0} already exists

Cause: The acfsutil command to create a snapshot failed because the snapshot with the specified name already existed.

Action: Retry the operation with a different snapshot name.

PRCT-01149: Failed to retrieve cluster name

Cause: The olsnodes command executed successfully, but there was no output.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01150: Failed to retrieve cluster name

Cause: Clusterware is not running.

Action: Make sure the clusterware is running.

PRCT-01151: Failed to retrieve cluster nodes status

Cause: Clusterware is not running.

Action: Make sure the clusterware is running.

PRCT-01152: Received empty result while getting cluster nodes Status Map

Cause: The olsnodes command executed successfully, but there was no output.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01153: Received empty result while getting a list of pinned and unpinned nodes in the cluster

Cause: The olsnodes command executed successfully, but there was no output.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01154: Failed to retrieve private host name for all cluster nodes. Detailed error:\n{0}

Cause: Clusterware is not running.

Action: Make sure the clusterware is running.

PRCT-01155: Received empty result while getting the private interconnect for nodes in the cluster

Cause: The olsnodes command executed successfully, but there was no output.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01200: Failed to retrieve disk group name for volume device {0}. asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: Unable to retrieve the disk group name for the specified volume device

Action: Check that ASM instance is running on the local node.

PRCT-01201: Failed to retrieve volume name for volume device {0}. asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: Unable to retrieve the volume name for the specified volume device

Action: Check that ASM instance is running on the local node.

PRCT-01202: Failed to parse output returned by asmcmd when executing asmcmd at location {0}

Cause: Unable to parse output returned by asmcmd.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01203: Failed to parse the output returned by asmcmd for node {0} when executing asmcmd at location {1}

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCT-01204: Failed to find volume device {0}. asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: Volume device does not exist.

Action: Create the volume device using asm tools.

PRCT-01205: Failed to parse output {0} returned by asmcmd when executing asmcmd at location {1}

Cause: Unable to parse the specified output returned by asmcmd.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01206: Failed to parse output {0} returned by asmcmd for node {1} when executing asmcmd at location {2}

Cause: Unable to parse the specified output returned by asmcmd on specified node.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01207: Failed to set the ORACLE_SID for running asmcmd from CRS home location {0}

Cause: Unable to retrieve the ASM instance name on the local node to generate the ORACLE_SID value.

Action: Use crsctl to make sure that the CRS stack is up; use the command 'srvctl status asm' to make sure that the ASM resource is running on the local node.

PRCT-01208: Failed to create volume {0}. asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: An attempt to execute asmcmd to create the volume device for the specified volume name failed.

Action: Review the accompanying error messages that provide the details of why asmcmd execution failed. Resolve the reported problem and retry.

PRCT-01209: Diskgroup {0} does not have enough space. asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: Failed to execute asmcmd because the diskgroup does not have enough space for the specified operation.

Action: Add more disks to the diskgroup and re-try the operation.

PRCT-01210: Disk group {0} does not exist. asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: An attempt to execute asmcmd to perform an operation with the disk group failed.

Action: Review the accompanying error messages that provide the details of why asmcmd execution failed. Resolve the reported problem and retry.

PRCT-01211: Volume {0} is in use. asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: An attempt to execute asmcmd to create a volume with the specified volume name failed because this name is already being used by another volume.

Action: Retry the operation with a different volume name.

PRCT-01212: Failed to delete volume device {0}.asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: An attempt to execute asmcmd to delete the volume device for the specified volume name failed.

Action: Review the accompanying error messages that provide the details of why asmcmd execution failed. Resolve the reported problem and retry.

PRCT-01213: Failed to get volume device for volume {0}.asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: An attempt to execute asmcmd to get the volume device for the specified volume name failed.

Action: Review the accompanying error messages that provide the details of why asmcmd execution failed. Resolve the reported problem and retry.

PRCT-01214: Command 'asmcmd' could not be executed from directory {1}. Failed to retrieve discovery string for ASM instance. Detailed error:\n{2}

Cause: An attempt to retrieve the discovery string used by ASM instance failed.

Action: Look at the accompanying messages and respond accordingly.

PRCT-01215: Command 'asmcmd' could not be executed from directory {1}. Failed to retrieve the list of disks from ASM instance. Detailed error:\n{2}

Cause: An attempt to retrieve the list of disks from ASM instance failed.

Action: Look at the accompanying messages and respond accordingly.

PRCT-01217: Command 'asmcmd' could not be executed from directory {0}. Failed to resize volume {1}. Detailed error:\n{2}

Cause: An attempt to resize the volume failed.

Action: Review the accompanying error messages that provide the details of the failure. Resolve the reported problem and retry.

PRCT-01218: Command 'asmcmd' could not be executed from directory {1}. Failed to retrieve information of disk groups from ASM instance. Detailed error:\n{2}

Cause: An attempt to retrieve the list of disk groups from ASM instance failed.

Action: Look at the accompanying messages and respond accordingly.

PRCT-01219: Command 'asmcmd spget' could not be executed from directory {0}. Failed to retrieve the ASM SPFILE location for ASM instance. Detailed error:\n{1}

Cause: An attempt to retrieve the SPFILE used by an ASM instance failed.

Action: Look at the accompanying messages and respond accordingly.

PRCT-01220: Received empty result while getting the ASM SPFILE location for ASM instances using command 'asmcmd spget' from directory {0}

Cause: The indicated ASMCMD command executed successfully, but there was no output.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01300: oifcfg execution failed. Detailed error:\n{0}

Cause: Failed to execute the oifcfg command for the local node. See the accompanying error message for further details.

Action: Try to execute the oifcfg command manually.

PRCT-01301: oifcfg execution failed on node {0}. Detailed error:\n{1}

Cause: Failed to execute the oifcfg command for the remote node. See the accompanying error message for further details.

Action: Try to execute the oifcfg command manually.

PRCT-01302: The specified address "{0}" has an invalid IP address format

Cause: The format of the subnet number and/or the subnet mask was an invalid IP address format.

Action: Make sure that both the subnet number and the subnet mask have a valid IP address format.

PRCT-01303: The oifcfg command returned as result the line "{0}" that has less than 4 fields

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCT-01304: The specified IPv6 prefix length "{0}" is not between 0 and 128

Cause: The IPv6 prefix length was either not an integer or was out of the allowed range.

Action: Make sure that the IPv6 prefix length is an integer from 0 to 128.

PRCT-01305: The specified interface name "{0}" does not match the existing network interface name "{1}"

Cause: The interface name did not match the existing network interface name.

Action: Either omit the interface name or make sure it is the same as the existing one for this network.

PRCT-01306: Setting the address type to "ipv4" is not allowed because the existing network address type is "ipv6"

Cause: An attempt to change the address type from 'ipv6' to 'ipv4' directly was rejected, because the address type must first be changed to 'both', then to 'ipv4'.

Action: Use the command 'srvctl modify network' to change the network type to 'both' by adding an IPv4 subnet, then retry the command.

PRCT-01307: Setting the address type to "ipv6" is not allowed because the existing network address type is "ipv4"

Cause: An attempt to change the address type from 'ipv4' to 'ipv6' directly was rejected, because the address type must first be changed to 'both', then to 'ipv6'.

Action: Use the command 'srvctl modify network' to change the network type to 'both' by adding an IPv6 subnet, then retry the command.

PRCT-01308: Modifying the VIP is not allowed because the VIP name "{0}" resolved to both IPv4 and IPv6 addresses

Cause: The existing VIP name maps to both IPv4 and IPv6 addresses and the user tried to modify one of them.

Action: Remove the VIP resource, issue the command 'srvctl add vip' providing either the IPv4 or IPv6 address the VIP name resolves to and then rerun the 'srvctl modify vip' command.

PRCT-01309: The USR_ORA_AUTO_VALUE attribute value "{0}" does not include both an IPv4 and an IPv6 value

Cause: Expected both an IPv4 value and an IPv6 value to coexist.

Action: Internal error. Contact Oracle Support Services.

PRCT-01400: getcrshome execution failed. Detailed error:\n{0}

Cause: Failed to execute the getcrshome command. See the accompanying error message for further details.

Action: Try to execute the getcrshome command manually.

PRCT-01401: getcrshome execution failed on node {0}. Detailed error:\n{1}

Cause: Failed to execute the getcrshome command. See the accompanying error message for further details.

Action: Try to execute the getcrshome command manually.

PRCT-01402: Attempt to retrieve version of SRVCTL from Oracle Home {0} failed. Detailed error: \n {1}

Cause: Failed to execute the 'srvctl -V' command. See the accompanying error message for further details.

Action: Verify that the 'bin' directory under the indicated oracle home contains the 'srvctl' binary, and verify execution of the command 'srvctl -V' manually on that oracle home.

PRCT-01403: Failed to parse output returned by srvctl -V when executing command at Oracle home {0}

Cause: Failed to parse the output returned by executing the command 'srvctl -V' because the output string is null or has unexpected result

Action: Verify execution of the command 'srvctl -V' manually at oracle home or Contact Oracle Support Services.

PRCT-01404: Attempt to retrieve version of SRVCTL on node {0} from Oracle Home {1} failed. Detailed error: \n {2}

Cause: Failed to execute the command 'srvctl -V' command. See the accompanying error message for further details.

Action: Verify that the 'bin' directory in specified node under the indicated oracle home contains the 'srvctl' binary, and verify execution of the command 'srvctl -V' manually on that oracle home.

PRCT-01405: Failed to parse output returned by srvctl -V when executing command at node {0} and Oracle home {1}

Cause: Failed to parse the output returned by executing the command 'srvctl -V' at specified node and because the output string is null or has unexpected result

Action: Verify execution of the command 'srvctl -V' manually at given node and oracle home or Contact Oracle Support Services.

PRCT-01406: Oracle Home location: {0} does not contain {1}

Cause: The current Oracle Home directory does not contain the specified utility.

Action: Provide the correct Oracle Home directory.

PRCT-01407: failed to execute the olsnodes command to retrieve active node roles. Detailed error:\n{0}

Cause: An attempt to execute the command 'olsnodes -a' failed.

Action: Check the accompanying error messages.

PRCT-01408: Encountered unexpected output during the olsnodes command execution to retrieve active node roles

Cause: An attempt to execute olsnodes -a command failed.

Action: Check the accompanying error messages.

PRCT-01409: Received empty result while getting the active node roles for nodes in the cluster

Cause: The olsnodes command executed successfully, but there was no output.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01410: Failed to execute the crsctl command to retrieve configured node roles. Detailed error:\n{0}

Cause: An attempt to execute crsctl get node role config -all command failed.

Action: Check the accompanying error messages.

PRCT-01411: Encountered unexpected output during the crsctl command execution to retrieve configured node roles

Cause: An attempt to execute crsctl get node role config -all command failed.

Action: Check the accompanying error messages.

PRCT-01412: Received empty result while getting the configured node roles for nodes in the cluster

Cause: The crsctl command executed successfully, but there was no output.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01413: Failed to retrieve the configured node role of the node {0}

Cause: An attempt to execute crsctl get node role config -node command failed.

Action: Check the accompanying error messages.

PRCT-01414: Execution of the command {0} on the local node failed

Cause: An attempt to clone an Oracle Home using the given command failed.

Action: Check the accompanying error messages.

PRCT-01415: More than one ACFS resource was found for the mount point path {0}

Cause: When looking up the ACFS resource for a mount point, more than one resource was found.

Action: Remove all but one of the ACFS resources that contains the duplicate mount point path.

PRCT-01416: Unable to validate the interface type for subnet "{0}"

Cause: An attempt to validate the interface type for the given subnet failed.

Action: Check the accompanying error messages.

PRCT-01417: Failed to retrieve administrator groups. 'osdbagrp' execution failed at location {0}. Detailed error:\n{1}

Cause: During retrieval of administrator group, execution of the 'osdbagrp' command to retrieve administrator OS group names failed.

Action: Examine the accompanying error messages for details.

PRCT-01418: Failed to modify the VIP for node {0} because the specified VIP name "{1}" does not resolve to both an IPv4 and IPv6 address, which is required by the network, because it has both IPv4 and IPv6 subnets

Cause: Both IPv4 and IPv6 configured VIP addresses existed, but the specified VIP name did not resolve to both IPv4 and IPv6 addresses.

Action: Ensure that the specified VIP name resolves to both IPv4 and IPv6 addresses.

PRCT-01419: Failed to modify the VIP for node {0} as the specified VIP name "{1}" does not resolved to an IPv4 address

Cause: An IPv4 configured VIP address existed, but the specified VIP name did not resolve to an IPv4 address.

Action: Make sure that the specified VIP name resolves to an IPv4 address.

PRCT-01420: Failed to modify the VIP for node {0} as the specified VIP name "{1}" does not resolved to an IPv6 address

Cause: An IPv6 configured VIP address existed, but the specified VIP name did not resolve to an IPv6 address.

Action: Make sure that the specified VIP name resolves to an IPv6 address.

PRCT-01421: Failed to modify the VIP for node {0} because the specified VIP name or address "{1}" does not resolve to an IPv4 address

Cause: The configured VIP name resolved to an IPv4 address, but the specified VIP name or IP address did not resolve to an IPv4 address.

Action: Make sure that the specified VIP name or address resolves to an IPv4 address.

PRCT-01422: Failed to modify the VIP for node {0} because the specified VIP name or address "{1}" does not resolve to an IPv6 address

Cause: The configured VIP name resolved to an IPv6 address, but the specified VIP name or IP address did not resolve to an IPv6 address.

Action: Make sure that the specified VIP name or address resolves to an IPv6 address.

PRCT-01423: Failed to copy the directory contents from {0} to {1} on node {2}. Detailed error:\n{2}

Cause: An attempt to execute srvmhlp to copy the directory contents failed.

Action: Examine the accompanying error messages.

PRCT-01424: Rapid Home Provisioning credentials creation failed while executing the Management Database configuration assistant on node {0}.

Cause: An attempt to execute the Management Database configuration assistant to create the Rapid Home Provisioning credentials failed.

Action: Examine the accompanying error messages for details.

PRCT-01425: The specified VIP name "{0}" does not resolve to an IPv4 address

Cause: The configured VIP name resolved to an IPv4 address, but the specified VIP name did not resolve to a single IPv4 address.

Action: Specify a VIP name that resolves to a single IPv4 address. Use 'nslookup <varname>vipname</varname>' to display the addresses to which the VIP name resolves.

PRCT-01426: The specified VIP name "{0}" resolves to multiple addresses

Cause: The specified VIP name resolved to more than one IPv4 or IPv6 address.

Action: Specify a VIP name that resolves to one address. Use 'nslookup <varname>vipname</varname>' to display the addresses to which the VIP name resolves.

PRCT-01427: Failed to create the NFS resource on mount path "{0}". Detailed error:\n{1}

Cause: An attempt to create the NFS resource failed.

Action: Examine the accompanying error messages.

PRCT-01428: Failed to execute Management Database configuration assistant for user "{0}" on node "{1}". Detailed error:\n{2}

Cause: An attempt to run Management Database configuration assistant failed.

Action: Examine the accompanying error messages.

PRCT-01429: Failed to create wallet for Rapid Home Provisioning for user "{0}". Detailed error:\n{1}

Cause: An attempt to create the wallet for Rapid Home Provisioning failed.

Action: Examine the accompanying error messages.

PRCT-01430: Failed to retrieve the Oracle ASM Dynamic Volume Manager compatibility attribute for disk group {0}. asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: An attempt to retrieve the 'compatible.advm' attribute for the specified disk group failed.

Action: Examine the accompanying error messages for details and take appropriate corrective action.

PRCT-01431: The Oracle ASM Dynamic Volume Manager compatibility attribute is not set for disk group {0}.

Cause: An attempt to execute asmcmd against the specified disk group failed because the command requires the retrieval of the 'compatible.advm' attribute which has not been set for that disk group.

Action: Set the 'compatible.advm' attribute for the specified disk group to a version above 11.2.0.3 with the ASM Configuration Assistant (asmca) and retry adding a Rapid Home Provisioning Server using 'srvctl add rhpserver' command.

PRCT-01432: Failed to modify the VIP for node {0} because the specified VIP address "{1}" is not an IPv4 address

Cause: An attempt to modify a node VIP failed because the specified address was not of type IPv4 as required by the configured VIP.

Action: Retry the command making sure that the specified VIP address is an IPv4 address.

PRCT-01433: Failed to modify the VIP for node {0} because the specified VIP address "{1}" is not an IPv6 address

Cause: An attempt to modify a node VIP failed because the specified address was not of type IPv6 as required by the configured VIP.

Action: Retry the command making sure that the specified VIP address is an IPv6 address.

PRCT-01434: Failed to modify the VIP because the specified VIP name "{0}" does not resolve to an IPv4 address as required by network {1}

Cause: The configured network had an IPv4 subnet, but the specified VIP name or IP address did not resolve to an IPv4 address.

Action: Make sure that the specified VIP name or address resolves to an IPv4 address.

PRCT-01435: Failed to modify the VIP because the specified VIP name "{0}" does not resolve to an IPv6 address as required by network {1}

Cause: The configured network had an IPv6 subnet, but the specified VIP name or IP address did not resolve to an IPv6 address.

Action: Make sure that the specified VIP name or address resolves to an IPv6 address.

PRCT-01436: Volume {0} does not exist for disk group {1}. Detailed error:\n{2}

Cause: An attempt to execute 'asmcmd' to delete the volume for the disk group failed.

Action: Review the accompanying error messages that provide the details of why ASMCMD execution failed. Resolve the reported problem and retry.

PRCT-01437: Execution of the 'opatch lspatches -oh' command failed on local node with result {0}

Cause: Execution of the 'opatch lspatches -oh' failed on the local node.

Action: Review the accompanying error messages that provide the details of why the 'opatch lspatches -oh' execution failed. Resolve the reported problem and retry.

PRCT-01438: Failed to get the difference between the patches installed in {0} and {1} Oracle homes. Detailed error:\n{2}

Cause: An attempt to get the difference between the patches installed in the Oracle homes failed.

Action: Examine the accompanying error messages.

PRCT-01439: Failed to create the directory {0} in nodes {1}. Detailed error:\n{2}

Cause: An attempt to execute srvmhlp to create the directory failed. Specifics of failure shown in appended error message.

Action: Examine the accompanying error messages for details. Resolve the problems reported and retry.

PRCT-01440: Failed to determine if database is administrator-managed\n{1}

Cause: An attempt to execute an internal command to determine if the database is administrator-managed failed. Specifics of the failure are shown in the appended error message.

Action: Examine the accompanying error messages for details. Resolve the problems reported and retry.

PRCT-01441: Failed to retrieve configured nodes for an administrator-managed database\n{1}

Cause: An attempt to execute an internal command to retrieve configured nodes for an administrator-managed database failed. Specifics of the failure are shown in the appended error message.

Action: Examine the accompanying error messages for details. Resolve the problems reported and retry.

PRCT-01442: Failed to execute srvmhlp command because command {0} does not exist

Cause: The srvmhlp script did not exist or was not accessible to the invoking user.

Action: Check whether the specified srvmhlp script exists. Also, check whether the user has execute permission on the srvmhlp script.

PRCT-01443: Setting of password for user GHSUSER failed while executing the Management Database configuration assistant on node {0}.

Cause: An attempt to execute the Management Database configuration assistant to set GHSUSER's password failed.

Action: Examine the accompanying error messages for details.

PRCT-01444: Attempt to retrieve version of SQL*Plus from Oracle home {0} failed. Detailed error: \n {1}

Cause: An attempt to execute the 'sqlplus -V' command failed. See the accompanying error message for further details.

Action: Verify that the 'bin' directory under the indicated Oracle home contains the 'sqlplus' binary, and verify execution of the command 'sqlplus -V' manually on that Oracle home.

PRCT-01445: Failed to parse output returned by sqlplus -V when executing command at Oracle home {0}. Detailed error: \n {1}

Cause: An attempt to parse the output returned by executing the command 'sqlplus -V' failed because the output string is null or has unexpected results.

Action: Verify execution of the command 'sqlplus -V' manually at the Oracle home or contact Oracle Support Services.

PRCT-01446: Attempt to retrieve version of SQL*Plus on node {0} from Oracle home {1} failed. Detailed error: \n {2}

Cause: An attempt to execute the 'sqlplus -V' command failed. See the accompanying error message for further details.

Action: Verify that the 'bin' directory in the specified node under the indicated Oracle home contains the 'sqlplus' binary, and verify execution of the command 'sqlplus -V' manually on that Oracle home.

PRCT-01447: Failed to parse output returned by sqlplus -V when executing command at node {0} and Oracle home {1}. Detailed error: \n {1}

Cause: An attempt to parse the output returned by executing the command 'sqlplus -V' at specified node failed because the output string is null or has unexpected results.

Action: Verify execution of the command 'sqlplus -V' manually at the given node and Oracle home or contact Oracle Support Services.

PRCT-01448: Oracle home location: {0} does not contain {1}

Cause: The current Oracle home directory did not contain the specified utility.

Action: Provide the correct Oracle home directory.

PRCT-01449: Execution of command 'orabase' failed. Detailed error:\n{0}

Cause: Execution of the 'orabase' command failed. See the accompanying error message for further details.

Action: Correct the problem indicated by the accompanying message.

PRCT-01450: The ORACLE_BASE registry key {0} has an empty value on node {1}.

Cause: The ORACLE_BASE registry key did not exist or its value was null.

Action: Clone the existing ORACLE_HOME to re-create the registry entries using the command 'clone.pl'.

PRCT-01451: Error accessing file 'oracle.key'

Cause: An attempt to access the 'oracle.key' file to determine the location of registry containing ORACLE_BASE failed.

Action: Clone the existing ORACLE_HOME to re-create the 'oracle.key' file using the command 'clone.pl'.

PRCT-01452: Execution of the command 'opatch lsinventory -patch -oh' failed on local node with result {0}.

Cause: Execution of the command 'opatch lsinventory -patch -oh' failed on the local node. Details reported in accompanying messages.

Action: Review the accompanying error messages that provide the details of why the 'opatch lsinventory -patch -oh' execution failed. Resolve the reported problem and retry executing the command.

PRCT-01453: Failed to execute the crsctl command to retrieve cluster GUID. Detailed error:\n{0}

Cause: An attempt to execute the command 'crsctl get css clusterguid' failed.

Action: Examine the accompanying error messages, resolve reported problems and retry executing the command.

PRCT-01454: Received empty result while getting the cluster GUID

Cause: The crsctl command executed successfully, but there was no output.

Action: This is an internal error. Contact Oracle Support Services.

PRCW-01001 to PRCW-01017

PRCW-01001: Could not allocate new memory

Cause: Could not allocation any new memory.

Action: Retry after make more memory available.

PRCW-01002: Network Security error code {0}

Cause: Failed to perform the network security operation.

Action: Look at the network security error for the appropriate action.

PRCW-01003: Failed to do the cluster wallet operation {0}

Cause: Failed to perform the cluster wallet operation.

Action: Look at the cluster wallet error for the appropriate action.

PRCW-01004: Could not open the wallet {0} due to error {1} : {2}

Cause: Failed to open the cluster wallet.

Action: Look at the cluster wallet error for the appropriate action.

PRCW-01005: Wallet {1} did not exist due to error code {1}

Cause: The cluster wallet did not exist.

Action: Need to create the cluster wallet.

PRCW-01006: Alias {0} in Wallet {1} did not exist

Cause: The alias within the cluster wallet did not exist.

Action: Need to create the alias within the cluster wallet.

PRCW-01007: Alias {0} in Wallet {1} could not be read due to error {2}

Cause: Could not read the alias within the cluster wallet.

Action: Look at the network security error for the appropriate action.

PRCW-01008: Alias {0} in Wallet {1} could not be written due to error code {2}

Cause: Could not write the secret of the alias to the cluster wallet.

Action: Look at the network security error for the appropriate action.

PRCW-01009: Wallet {0} could not be saved due to error code {1}

Cause: Could not save the cluster wallet.

Action: Look at the cluster wallet error for the appropriate action.

PRCW-01010: Wallet {0} could not be created due to error {1}: {2}

Cause: Could not create the cluster wallet.

Action: Look at the cluster wallet error for the appropriate action.

PRCW-01011: Wallet {0} could not be accessed due to error code {1}

Cause: Could not access the cluster wallet.

Action: Use the correct cluster wallet password.

PRCW-01012: Wallet {0} could not be deleted due to error code {1}

Cause: Could not delete the cluster wallet.

Action: Look at the cluster wallet error for the appropriate action.

PRCW-01013: Failed to initialize cluster wallet context due to error code {0}

Cause: Could not initialize the cluster wallet context.

Action: Look at the cluster wallet error for the appropriate action.

PRCW-01014: Failed to terminate cluster wallet context due to error code {0}

Cause: Could not terminate the cluster wallet context.

Action: Look at the cluster wallet error for the appropriate action.

PRCW-01015: Wallet {0} does not exist. {1}

Cause: An attempted wallet operation could not find the specified wallet.

Action: Ensure that the correct wallet type was supplied, or create the wallet if appropriate.

PRCW-01016: Wallet name is missing for wallet type {0}

Cause: An attempted wallet operation failed as wallet name was not specified.

Action: This is an internal error. Contact Oracle Support Services.

PRCW-01017: Cluster wallet context to be terminated does not exist

Cause: An attempt to terminate the cluster wallet context failed as it has not been initialized.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01000 to PRCZ-02051

PRCZ-01000: User name cannot be null or empty

Cause: An invalid value was supplied as user name.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01001: Password cannot be null

Cause: A null value was supplied as password parameter to this API.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01002: Local node name cannot be null or empty

Cause: An invalid value was supplied as local node name parameter to this API.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01003: Remote node name cannot be null

Cause: An invalid value was supplied as remote node names parameter to this API.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01004: User name "{0}" does not contain a domain name

Cause: User name that was supplied was not in DOMAINNAME\USERNAME format.

Action: User name needs to be supplied in DOMAINNAME\USERNAME format.

PRCZ-01005: Remote node name list contains null or empty node names

Cause: An invalid value was contained in remote node names list.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01006: Parameter {0} value is not valid

Cause: This is an internal error. The value for the specified parameter is null or empty string.

Action: Contact Oracle Support Services.

PRCZ-01007: Unable to determine if user "{0}" has Windows administrator authority.

Cause: An attempt to determine if user specified has Windows administrator authority failed.

Action: Examine the accompanying error messages for details.

PRCZ-01008: Unable to determine if user "{0}" has Windows administrator authority on nodes "{1}"

Cause: An attempt to determine if user specified has Windows administrator authority on specified nodes failed.

Action: Examine the accompanying error messages for details.

PRCZ-01010: Cannot create an instance of Windows Security Services on this platform

Cause: An attempt was made to create an instance of Windows Security Services on a non-Microsoft Windows platform.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01011: Unable to determine if user "{0}" is a Windows domain user

Cause: An attempt to determine if user specified is a Windows domain user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01012: Unable to determine if user "{0}" is a valid Windows user

Cause: An attempt to determine if user name and password for user specified are valid failed.

Action: Examine the accompanying error messages for details.

PRCZ-01013: Unable to determine if user "{0}" is a Windows managed service account user

Cause: An attempt to determine if user name specified is a Windows managed service account user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01014: Windows user "{0}" could not be created

Cause: An attempt to create the specified Windows user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01015: Could not create Windows user "{0}" because user name is a domain user

Cause: The user name was in DOMAINNAME\USERNAME format.

Action: If a domain user should own the Oracle home make sure that the domain administrator has created the user. If a new user should be created specify the user name without the domain name.

PRCZ-01016: Windows user "{0}" could not be deleted

Cause: An attempt to delete the specified Windows user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01017: Could not delete Windows user "{0}" because user name is a domain user

Cause: The user name was in DOMAINNAME\USERNAME format.

Action: Only the domain administrator can delete a domain user. Specify a user name without the domain name and the user will be deleted from the local machine.

PRCZ-01018: Failed to set user "{0}" as Oracle home service user for home "{1}"

Cause: An attempt to set specified user as the Oracle home service user for specified home failed.

Action: Examine the accompanying error messages for details.

PRCZ-01019: Failed to set user "{0}" as Oracle home service user for home "{1}" on nodes "{2}"

Cause: An attempt to set specified user as the Oracle home service user for specified home on the specified nodes failed.

Action: Examine the accompanying error messages for details.

PRCZ-01020: Failed to get the Oracle home service user

Cause: An attempt to get the Oracle home service user for current Oracle home failed.

Action: Examine the accompanying error messages for details.

PRCZ-01021: Failed to get the Oracle home service user for Oracle home "{0}"

Cause: An attempt to get the Oracle home service user for Oracle home at the path specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01022: Failed to get the Oracle home service user for Oracle home "{0}" on nodes "{1}"

Cause: An attempt to get the Oracle home service user for Oracle home at the path specified on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01023: The Oracle home path "{0}" is invalid

Cause: An invalid value was supplied as Oracle home path.

Action: The path of Oracle home must be between 0 and 260 characters long and the directory must exist. The path must not contain wild card characters.

PRCZ-01024: Failed to determine if the Oracle home service user for Oracle home "{0}" is a Windows managed service account user

Cause: An attempt to determine if the Oracle home service user for the Oracle home specified is a Windows managed service account user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01025: Failed to determine if the Oracle home service user for Oracle home "{0}" is the built in LocalSystem account

Cause: An attempt to determine if the Oracle home service user for the Oracle home specified is the built in LocalSystem account failed.

Action: Examine the accompanying error messages for details.

PRCZ-01026: Failed to determine if the Oracle home service user for Oracle home "{0}" is the built in LocalService account

Cause: An attempt to determine if the Oracle home service user for the Oracle home specified is the built in LocalService account failed.

Action: Examine the accompanying error messages for details.

PRCZ-01027: Unable to determine if the Oracle home service user for Oracle home "{0}" is a Windows built in user or managed service account user

Cause: An attempt to determine if user specified is a Windows built in user or managed service account user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01028: Unable to determine if the Oracle home service user for Oracle home "{0}" is a Windows built in user or managed service account user on nodes "{1}"

Cause: An attempt to determine if user specified is a Windows built in user or managed service account user on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01029: Failed to set the Oracle home type as "{0}" for Oracle home "{1}"

Cause: An attempt to set specified type as the Oracle home type for specified Oracle home failed.

Action: Examine the accompanying error messages for details.

PRCZ-01030: Failed to set the Oracle home type as "{0}" for home "{1}" on nodes "{2}"

Cause: An attempt to set specified type as the Oracle home type for specified home on the specified nodes failed.

Action: Examine the accompanying error messages for details.

PRCZ-01031: Failed to get the Oracle home type for Oracle home "{0}"

Cause: An attempt to get the Oracle home type for Oracle home at the path specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01032: Failed to get the Oracle home type for Oracle home "{0}" on nodes "{1}"

Cause: An attempt to get the Oracle home type for Oracle home at the path specified on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01033: Failed to get the Oracle home service user on node "{0}"

Cause: An attempt to get the Oracle home service user for current Oracle home on the node specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01034: Failed to determine if Oracle home service user for Oracle home "{0}" is the built in LocalSystem account on node "{1}"

Cause: An attempt to determine if the Oracle home service user for the Oracle home specified on the nodes specified is the built in LocalSystem account failed.

Action: Examine the accompanying error messages for details.

PRCZ-01035: Failed to locate Oracle home

Cause: An error occurred while attempting to retrieve value of environment variable ORACLE_HOME.

Action: Set ORACLE_HOME environment variable to point to current Oracle home path.

PRCZ-01036: Failed to determine the operating system privileges granted to Windows user "{0}"

Cause: An attempt to determine the operating system privileges granted to Windows user specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01037: Failed to determine the operating system privileges granted to Windows user "{0}" on nodes "{1}"

Cause: An attempt to determine the operating system privileges granted to Windows user specified on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01038: Failed to grant Windows user "{0}" operating system privileges required for Oracle home type "{1}"

Cause: An attempt to grant the required operating system privileges for specified Oracle home type to specified Windows user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01039: Failed to grant Windows user "{0}" operating system privileges required for Oracle home type "{1}" on nodes "{2}"

Cause: An attempt to grant the required operating system privileges for specified Oracle home type to specified Windows user on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01040: Failed to revoke operating system privileges from Windows user "{0}" granted for owning Oracle home type "{1}"

Cause: An attempt to revoke operating system privileges granted to specified Windows user for owning specified Oracle home type failed.

Action: Examine the accompanying error messages for details.

PRCZ-01041: Failed to revoke operating system privileges from Windows user "{0}" granted for Oracle home type "{1}" on nodes "{2}"

Cause: An attempt to revoke operating system privileges granted to specified Windows user for owning specified Oracle home type on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01042: Failed to add Windows access control list (ACL) entry for user "{0}" for path "{1}"

Cause: An attempt to add Windows access control list entry for user specified to the path specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01043: Failed to add Windows access control list (ACL) entry for user "{0}" for path "{1}" on nodes "{2}"

Cause: An attempt to add Windows access control list entry for user specified to the path specified failed on nodes specified.

Action: Examine the accompanying error messages for details.

PRCZ-01044: Failed to remove Windows access control list (ACL) entry for user "{0}" for path "{1}"

Cause: An attempt to remove Windows access control list entry for user specified from the path specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01045: Failed to remove Windows access control list (ACL) entry for user "{0}" for path "{1}" on nodes "{2}"

Cause: An attempt to remove Windows access control list entry for user specified from the path specified failed on nodes specified.

Action: Examine the accompanying error messages for details.

PRCZ-01046: Failed to verify if Windows access control list (ACL) entry exists for user "{0}" for path "{1}"

Cause: An attempt to verify if Windows access control list entry exists for user specified for the path specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01047: Failed to verify Windows access control list (ACL) entry for user "{0}" for path "{1}" on nodes "{2}"

Cause: An attempt to verify if Windows access control list entry exists for user specified for the path specified failed on nodes specified.

Action: Examine the accompanying error messages for details.

PRCZ-01048: Windows user "{0}" does not have privileges "{1}" required for owning Oracle home "{2}"

Cause: An attempt to verify if the specified Windows user has all privileges required for owning Oracle home type specified found that user did not have some of the privileges required.

Action: Grant the privileges specified to the user.

PRCZ-01049: Windows user "{0}" does not have privileges "{1}" required for owning Oracle home "{2}" on node "{3}"

Cause: An attempt to verify if the specified Windows user has all privileges required for owning Oracle home type specified on node specified found that user did not have some of the privileges required.

Action: Grant the privileges specified to the user.

PRCZ-01050: The path "{0}" specified as Windows service executable file for Windows service "{1}" is invalid

Cause: An invalid value was supplied as Windows service executable file for the specified Windows service.

Action: Specify the full file system path to a valid executable file, without wild card characters and not exceeding 260 characters long.

PRCZ-01051: Failed to update executable file to "{1}" for the Windows service "{0}"

Cause: An attempt to update the file from which specified Windows service runs to specified file failed.

Action: Examine the accompanying error messages for details.

PRCZ-01052: Failed to update executable file to "{1}" for the Windows service "{0}" on nodes "{2}"

Cause: An attempt to update the file from which specified Windows service runs to specified file on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01053: Failed to update the Windows service "{0}" user password for Windows user "{1}"

Cause: An attempt to update the password for specified Windows user in the specified Windows service failed.

Action: Examine the accompanying error messages for details.

PRCZ-01054: Failed to update the Windows service "{0}" user password for Windows user "{1}" on nodes "{2}"

Cause: An attempt to update the password for specified Windows user in the specified Windows service on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01055: Failed to update executable file to "{2}" and username and password for Windows user "{1}" for the Windows service "{0}"

Cause: An attempt to update the executable file, username and password to specified values for specified Windows service failed.

Action: Examine the accompanying error messages for details.

PRCZ-01056: Failed to update executable file to "{2}" and username and password for Windows user "{1}" for the Windows service "{0}" on nodes "{3}"

Cause: An attempt to update the executable file, username and password to specified values for specified Windows service on specified nodes failed.

Action: Examine the accompanying error messages for details.

PRCZ-01057: Invalid value {0} specified for Windows service access type parameter while creating the service "{1}"

Cause: An invalid value was supplied for Windows service access type parameter while creating specified Windows service.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01058: Service dependency list contains null or empty Windows service names while creating Windows service "{0}"

Cause: An invalid value was contained in service dependency list supplied while creating the specified Windows service.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01059: Failed to create Windows service "{0}"

Cause: An attempt to create specified Windows service failed.

Action: Examine the accompanying error messages for details.

PRCZ-01060: Failed to create Windows service "{0}" on nodes "{1}"

Cause: An attempt to create specified Windows service on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01061: Failed to delete Windows service "{0}"

Cause: An attempt to delete specified Windows service failed.

Action: Examine the accompanying error messages for details.

PRCZ-01062: Failed to delete Windows service "{0}" on nodes "{1}"

Cause: An attempt to delete specified Windows service on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01063: Failed to determine if the Windows service "{0}" will run as the built in LocalSystem account

Cause: An attempt to determine if the specified Windows service will run as the built in LocalSystem account failed.

Action: Examine the accompanying error messages for details.

PRCZ-01064: Failed to determine if the Windows service "{0}" will run as the built in LocalSystem account on nodes "{1}"

Cause: An attempt to determine if the specified Windows service on the nodes specified will run as the built in LocalSystem account failed.

Action: Examine the accompanying error messages for details.

PRCZ-01065: Failed to get the user account for the Windows service "{0}"

Cause: An attempt to get the user account the specified Windows service runs as failed.

Action: Examine the accompanying error messages for details.

PRCZ-01066: Failed to get the user account for the Windows service "{0}" on nodes "{1}"

Cause: An attempt to get the user account the specified Windows service runs as on specified nodes failed.

Action: Examine the accompanying error messages for details.

PRCZ-01067: Failed to retrieve a list of all Windows services that run as Windows user "{0}" from Oracle home "{1}"

Cause: An attempt to get a list of all Windows services that run as specified Windows user from specified Oracle home failed.

Action: Examine the accompanying error messages for details.

PRCZ-01068: Failed to obtain a list of all Windows services that run as Windows user "{0}" from Oracle home "{1}" on nodes "{2}"

Cause: An attempt to get a list of all Windows services that run as specified Windows user from specified Oracle home on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01069: Failed to update Windows user's password of all Windows services that run as Windows user "{0}" from Oracle home "{1}"

Cause: An attempt to update Windows user's password of all Windows services that run as specified Windows user from specified Oracle home failed.

Action: Examine the accompanying error messages for details.

PRCZ-01070: Failed to update Windows user's password of all Windows services that run as Windows user "{0}" from Oracle home "{1}" on nodes "{2}"

Cause: An attempt to update Windows user's password of all Windows services that run as specified Windows user from specified Oracle home on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01071: Failed to update Windows service "{0}" username to "{1}" because it differs from Oracle home user "{2}"

Cause: An attempt to update the Windows service execution user account failed because the specified user is not the Oracle home service user.

Action: All services from a home will run as the Oracle home service user.

PRCZ-01072: Failed to obtain a list of all Windows services that run as Windows user "{0}"

Cause: An attempt to obtain a list of all Windows services that run as specified Windows user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01073: Failed to obtain a list of all Windows services that run as Windows user "{0}" on nodes "{1}"

Cause: An attempt to get a list of all Windows services that run as specified Windows user on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01074: Failed to update Windows user's password for all Windows services that run as Windows user "{0}"

Cause: An attempt to update Windows user's password for all Windows services that run as specified Windows user from specified Oracle home failed.

Action: Examine the accompanying error messages for details.

PRCZ-01075: Failed to update Windows user's password for all Windows services that run as Windows user "{0}" on nodes "{1}"

Cause: An attempt to update Windows user's password for all Windows services that run as specified Windows user from specified Oracle home on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01076: Windows group "{0}" could not be created

Cause: An attempt to create the specified Windows group failed.

Action: Examine the accompanying error messages for details.

PRCZ-01077: Windows user "{0}" could not be created on nodes "{1}"

Cause: An attempt to create the specified Windows group on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01078: Windows group "{0}" could not be removed

Cause: An attempt to remove the specified Windows group failed.

Action: Examine the accompanying error messages for details.

PRCZ-01079: Windows group "{0}" could not be removed on nodes "{1}"

Cause: An attempt to remove the specified Windows group on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01080: Unable to determine if Windows group "{0}" exists

Cause: An attempt to determine if the specified Windows group exists failed.

Action: Examine the accompanying error messages for details.

PRCZ-01081: Unable to determine if Windows group "{0}" exists on nodes "{1}"

Cause: An attempt to determine if the specified Windows group exists on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01082: Failed to add Windows user or Windows group "{1}" to Windows group "{0}"

Cause: An attempt to add the specified Windows user or Windows group as member of the specified Windows group failed.

Action: Examine the accompanying error messages for details.

PRCZ-01083: Failed to add Windows user or Windows group "{1}" to Windows group "{0}" on nodes "{2}"

Cause: An attempt to add the specified Windows user or Windows group as a member of the specified Windows group on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01084: Failed to remove Windows user or Windows group "{1}" from Windows group "{0}"

Cause: An attempt to remove the specified Windows user or Windows group from the specified Windows group failed.

Action: Examine the accompanying error messages for details.

PRCZ-01085: Failed to remove Windows user or Windows group "{1}" from Windows group "{0}" on nodes "{2}"

Cause: An attempt to remove the specified Windows user or Windows group from the specified Windows group on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01086: Unable to determine if Windows user or Windows group "{1}" is a member of Windows group "{0}"

Cause: An attempt to determine if the specified Windows user or Windows group is a member of the specified Windows group failed.

Action: Examine the accompanying error messages for details.

PRCZ-01087: Unable to determine if Windows user or Windows group "{1}" is a member of Windows group "{0}" on nodes "{1}"

Cause: An attempt to determine if the specified Windows user or Windows group is a member of the specified Windows group on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01088: The Windows group name "{0}" is invalid

Cause: An invalid value was supplied as Windows group name.

Action: The Windows group name must be between 0 and 256 characters long.

PRCZ-01089: The description text "{0}" for Windows group "{1}" is invalid

Cause: An invalid value was supplied as description text for specified Windows group name.

Action: The description text supplied must be between 0 and 256 characters long.

PRCZ-01090: {0} Element in remote node name list contains null or empty node name

Cause: An invalid value was contained in remote node names list.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01091: Failed to verify that user name "{0}" is a valid Windows user

Cause: An attempt to verify if the specified user name is a valid Windows user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01092: The user name "{0}" does not exist as a Windows user

Cause: The specified user name was not a valid Windows user name.

Action: Specify a valid Windows user name.

PRCZ-01093: Failed to convert Windows security identifier "{0}" to a Windows user name

Cause: An attempt to convert the specified Windows security identifier to a Windows user name failed.

Action: Examine the accompanying error messages for details.

PRCZ-01094: Failed to add a Windows access control entry for user "{0}" to Windows access control list for path "{1}"

Cause: An attempt to add Windows access control list entry the specified user and path failed.

Action: Examine the accompanying error messages for details.

PRCZ-01095: Failed to add a Windows access control entry for user "{0}" to Windows access control list for path "{1}" on nodes "{2}"

Cause: An attempt to add Windows access control list entry for the specified user and path failed on nodes specified.

Action: Examine the accompanying error messages for details.

PRCZ-01096: Unable to determine if the password meets the requirements of the password policy

Cause: An attempt to determine if password meets the policy has failed.

Action: Examine the accompanying error messages for details.

PRCZ-01097: Unable to determine if a local account for user "{0}" exists on node "{1}"

Cause: An attempt to determine if the indicated local user account exists on the identified node has failed.

Action: Examine the accompanying error messages for details.

PRCZ-01098: Unable to determine the Windows domain name for user "{0}"

Cause: An attempt to determine the Windows domain name of indicated user account has failed.

Action: Examine the accompanying error messages for details.

PRCZ-01099: failed to migrate database services from Windows group "ORA_ASMDBA" to Windows group "ORA_ASMADMIN"

Cause: During the Oracle Clusterware upgrade, an attempt to migrate database services from Windows group 'ORA_ASMDBA' to Windows group 'ORA_ASMADMIN' failed.

Action: Examine the accompanying error messages for details.

PRCZ-01100: failed to migrate database services from Windows group "ORA_ASMADMIN" to Windows group "ORA_ASMDBA"

Cause: During the Oracle Clusterware downgrade, an attempt to migrate database services from Windows group 'ORA_ASMADMIN' to Windows group 'ORA_ASMDBA' failed.

Action: Examine the accompanying error messages for details.

PRCZ-02000: Failed to verify the password for user "{0}" on nodes "{1}"

Cause: An attempt to verify the specified user's password on nodes specified failed.

Action: Make sure that the password specified is correct and is same across all nodes of the cluster. Examine the accompanying error messages for details.

PRCZ-02001: File "{0}" was not found on nodes "{1}"

Cause: An attempt to verify that the specified file exists failed on the nodes specified.

Action: Make sure that the path to the specified file exists on all nodes. Make sure that the currently logged in user has read and execute permission on the file specified on nodes specified. Also look at the accompanying error messages for details.

PRCZ-02002: Failed to execute command "{0}" using 'sudo' from path "{1}" as user "{2}" on nodes "{3}"

Cause: An attempt to run the specified command as using 'sudo' from directory specified using the specified username and password on specified nodes failed.

Action: Make sure that the path specified for the sudo command exists on all nodes. Make sure that the specified user has permission to run the sudo command on all nodes. Make sure that the command specified exists on all nodes. Make sure that the correct password was specified for the specified user. Make sure that the specified

user has sudo privileges granted on all nodes. Also look at the accompanying error messages for details.

PRCZ-02003: Failed to verify the password for user "{0}"

Cause: An attempt to verify specified user's password failed.

Action: Make sure that the password specified is correct and is same across all nodes of the cluster. Examine the accompanying error messages for details.

PRCZ-02004: File "{0}" was not found

Cause: An attempt to verify that the specified file exists failed.

Action: Make sure that the path to the specified file exists. Make sure that the currently logged in user has read and execute permissions on the file specified. Also look at the accompanying error messages for details.

PRCZ-02005: Failed to execute command "{0}" using 'sudo' from path "{1}" as user "{2}"

Cause: An attempt to run the specified command as using 'sudo' from the path specified using the specified username failed.

Action: Make sure that the path specified for the sudo command exists. Make sure that the specified user has permission to run the sudo command. Make sure that the command specified exists. Make sure that the correct password was specified for the specified user. Also look at the accompanying error messages for details.

PRCZ-02006: Unable to establish SSH connection to node "{0}" to execute command "{1}"

Cause: An attempt to connect to specified node to execute specified command using SSH failed.

Action: Make sure that the specified node is reachable. Make sure that SSH daemon on the specified node is alive. Also look at the accompanying error messages for details.

PRCZ-02007: Failed to execute the command "{0}"

Cause: An attempt to execute the specified command failed.

Action: Make sure that the path to the specified command exists. Make sure that the currently logged in user has read and execute permissions on the file specified on nodes specified. Also look at the accompanying error messages for details.

PRCZ-02008: Failed to execute the command "{0}" on nodes "{1}"

Cause: An attempt to execute the specified command failed on the nodes specified.

Action: Make sure that the path to the specified command exists on all nodes. Make sure that the currently logged in user has read and execute permissions on the file specified on nodes specified. Also look at the accompanying error messages for details.

PRCZ-02009: Failed to execute command "{0}" as root within {1} seconds on nodes "{2}"

Cause: An attempt to run the specified command within the specified time on the nodes specified failed.

Action: Make sure that the specified command exists on all nodes. Make sure that the specified command has execute permission on all nodes. Make sure that the root user password specified is correct. Also look at the accompanying error messages for details.

PRCZ-02010: Failed to execute command "{0}" using 'sudo' from location "{1}" as user "{2}" within {3} seconds on nodes "{4}"

Cause: An attempt to run the specified command using 'sudo' from location specified as specified user within the specified time on the nodes specified failed.

Action: Make sure that the specified command exists on all nodes. Make sure that the specified command has execute permission on all nodes. Make sure that the location specified for sudo is correct. Make sure that the user specified has sudo privileges. Make sure that the correct password was specified for the user. Also look at the accompanying error messages for details.

PRCZ-02011: Failed to execute command "{0}" using 'pbrun' from location "{1}" as user "{2}" within {3} seconds on nodes "{4}"

Cause: An attempt to run the specified command using 'pbrun' from location specified as specified user within the specified time on the nodes specified failed.

Action: Make sure that the specified command exists on all nodes. Make sure that the specified command has execute permission on all nodes. Make sure that the location specified for pbrun is correct. Make sure that the user specified has pbrun privileges. Make sure that the correct password was specified for the user. Also look at the accompanying error messages for details.

PRCZ-02014: Failed to execute command "{0}" on nodes "{1}"

Cause: An attempt to run the specified command on the nodes specified failed.

Action: Examine the accompanying error messages for details. Ensure that the command exists and is executable on the indicated nodes.

PRCZ-02015: Upgrade pending on following active nodes "{0}"

Cause: An attempt to forcibly complete the upgrade was rejected because some nodes are active and have not yet been upgraded.

Action: Upgrade the active nodes.

PRCZ-02016: could not navigate to domain {0}, CLS credentials return string: {1}, error details: {2}

Cause: An error was encountered when looking for the specified domain of a credentials set.

Action: Ensure that an existing domain is being specified.

PRCZ-02017: could not obtain root credentials domain, CLS credentials return string: {0}, error details: {1}

Cause: An error was encountered when initializing credentials root domain. The root domain is part of the OCR within which all credentials domains are stored. A domain is part of the OCR tree used to store credentials.

Action: Check the included error details.

PRCZ-02018: deletion of credentials set failed, CLS credentials return string: {0}, error details: {1}

Cause: An error was encountered when deleting a credentials set.

Action: Check the included error details.

PRCZ-02019: Credential set was not found in domain {0}. \n Return string: {1}, error details: {2}

Cause: Could not find the credentials set within the specified domain.

Action: Ensure that an existing domain is being specified, or insert appropriate credentials into the specified domain.

PRCZ-02020: the creation of domain {0} failed, CLS credentials return string: {1}, error details: {2}

Cause: An error occurred while creating the credentials domain.

Action: Check the included error details.

PRCZ-02021: the creation of the credentials set failed, CLS credentials return string: {0}, error details: {1}

Cause: An error occurred while creating the credentials set.

Action: Check the included error details.

PRCZ-02022: could not import wallet in file {0}, CLS credentials return string: {1}, error details: {2}

Cause: An error occurred while importing the wallet. The wallet must be stored in an auto-login wallet file.

Action: Check the wallet specified exists and that it is an auto-login wallet file with read permission on the file system.

PRCZ-02023: initialization of OCR context failed, error details: {0}

Cause: An error occurred when initializing the OCR context

Action: Check the included error details.

PRCZ-02024: deletion of credentials set member in domain {0} failed, CLS credentials return string: {1}, error details: {2}

Cause: An error occurred while deleting a credentials set member.

Action: Ensure the domain being specified exists and that the credentials set member was previously imported into the OCR.

PRCZ-02025: The 'sudo' credentials cache could not be invalidated using the command "{0}"

Cause: An attempt to invalidate the 'sudo' credentials cache using the specified command failed.

Action: Make sure that the path to the specified command exists. Make sure that the user currently logged in has read and execute permissions on the file specified. Also, look at the accompanying error messages for details.

PRCZ-02026: The 'sudo' credentials cache could not be invalidated using the command "{0}" on nodes "{1}"

Cause: An attempt to invalidate the 'sudo' credentials cache using the specified command failed on the nodes specified.

Action: Make sure that the path to the specified command exists. Make sure that the currently logged in user has read and execute permissions on the file specified on the nodes specified. Also, look at the accompanying error messages for details.

PRCZ-02027: failed to get the connection information

Cause: An error occurred while retrieving the connection information.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-02028: There is no connection information.

Cause: An error occurred while retrieving the connection information because the connection information does not exist.

Action: Use 'crsctl check crs' to make sure that the CRS stack is up; use the command 'srvctl status asm' to make sure that the ASM resource is running.

PRCZ-02029: failed to get the connection information because the connection information fetch would exceed buffer

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRCZ-02030: unable to determine the existence of operating system user account "{0}"

Cause: An attempt to determine existence of the indicated operating system user account failed.

Action: Examine the accompanying error messages for details.

PRCZ-02031: unable to determine if operating system user account "{0}" exist on nodes "{1}"

Cause: An attempt to determine if the indicated operating system user account exist on the identified nodes failed.

Action: Examine the accompanying error messages for details.

PRCZ-02032: The deletion of credentials domain {0} failed. Error details:\n{1}

Cause: An error occurred while deleting the credentials domain.

Action: Respond based on the accompanying messages.

PRCZ-02033: Failed to set attributes of credentials domain {0}. Error details:\n{1}

Cause: An error occurred while setting attributes of the credentials domain.

Action: Respond based on the accompanying messages.

PRCZ-02034: Failed to get attributes of credentials domain {0}. Error details:\n{1}

Cause: An error occurred while getting attributes of the credentials domain.

Action: Respond based on the accompanying messages.

PRCZ-02035: Failed to set user name and password credentials for user {0}. Error details:\n{1}

Cause: An error occurred while setting user name and password credentials.

Action: Respond based on the accompanying messages.

PRCZ-02036: Failed to import credentials from wallet path {0}. Error details:\n{1}

Cause: An error occurred while importing credentials from the specified wallet path.

Action: Respond based on the accompanying messages.

PRCZ-02037: Failed to set user {0} as the owner of credentials domain {1}. Error details:\n{2}

Cause: An error occurred while setting the specified user as the owner of the credentials domain.

Action: Respond based on the accompanying messages.

PRCZ-02038: Failed to find credentials domain {0} under parent domain {1}. Error details:\n{2}

Cause: The specified domain did not exist under the specified parent domain.

Action: Ensure that an existing domain is being specified.

PRCZ-02039: Credentials domain {0} already exists under parent domain {1} when the domain is not expected to exist. Error details:\n{2}

Cause: The specified domain was already in existence under the specified parent domain.

Action: Ensure that a nonexisting domain is being specified.

PRCZ-02040: failed to retrieve Oracle VM Manager information because Oracle VM Manager is not configured

Cause: An attempt to retrieve Oracle VM Manager information failed because it was not configured.

Action: Configure Oracle VM Manager in the cluster.

PRCZ-02041: failed to remove Oracle VM Manager because Oracle VM Manager is not configured

Cause: An attempt to remove Oracle VM Manager failed because it was not configured.

Action: Configure Oracle VM Manager in the cluster.

PRCZ-02042: Failed to remove Oracle VM Manager because one or more VM resources is configured. Names of the configured VM resources: {0}

Cause: An attempt to remove Oracle VM Manager failed because one or more VM resources was still configured.

Action: Ensure that all VM resources are removed before issuing this command.

PRCZ-02043: Failed to find credentials domain {0} under the root domain. Error details:\n{1}

Cause: The specified domain did not exist under the root domain.

Action: Ensure that an existing domain is being specified.

PRCZ-02044: failed to create Oracle VM Manager because a credentials error occurred

Cause: An attempt to create Oracle VM Manager failed because an error related to the credentials occurred.

Action: Examine the accompanying error messages for details.

PRCZ-02045: failed to create Oracle VM Manager because the Grid Infrastructure user could not be identified

Cause: An attempt to create Oracle VM Manager failed because an error occurred while retrieving the Grid Infrastructure user.

Action: Examine the accompanying error messages for details.

PRCZ-02046: failed to modify Oracle VM Manager information because a credentials error occurred

Cause: An attempt to modify Oracle VM Manager information failed because an error related to the credentials occurred.

Action: Examine the accompanying error messages for details.

PRCZ-02047: failed to modify Oracle VM Manager because the Grid Infrastructure user could not be identified

Cause: An attempt to modify Oracle VM Manager failed because an error occurred while retrieving the Grid Infrastructure user.

Action: Examine the accompanying error messages for details.

PRCZ-02048: failed to retrieve Oracle VM Manager information because a credentials error occurred

Cause: An attempt to retrieve Oracle VM Manager failed because an error related to the credentials occurred.

Action: Examine the accompanying error messages for details.

PRCZ-02049: failed to remove Oracle VM Manager because a credentials error occurred

Cause: An attempt to remove Oracle VM Manager failed because an error related to the credentials occurred.

Action: Examine the accompanying error messages for details.

PRCZ-02050: failed to remove Oracle VM Manager because the details on VM resources could not be retrieved

Cause: An attempt to remove Oracle VM Manager failed because an error occurred while retrieving the details on the configured VM resources.

Action: Examine the accompanying error messages for details.

PRCZ-02051: failed to import credentials because a wallet did not exist at the specified path {0}

Cause: An error occurred while importing credentials because the specified path did not contain a wallet.

Action: Retry the operation making sure to specify the path of an existing wallet file.

PRGH-01001 to PRGH-01018

PRGH-01001: Failed to get the name of the local node

Cause: An attempt to retrieve local host name failed.

Action: Examine the accompanying error messages.

PRGH-01002: Failed to copy files from {0} to {1}

Cause: An attempt to copy the files failed.

Action: Examine the accompanying error messages.

PRGH-01003: Provisioning of Oracle home at location {0} failed

Cause: One or more steps in provisioning the Oracle home failed.

Action: Examine the accompanying error messages.

PRGH-01004: Cloning operation for the Oracle home at location {0} failed

Cause: An attempt to clone an Oracle Database home directory created from a Rapid Home Provisioning image failed.

Action: Examine the accompanying error messages.

PRGH-01005: Creation of database {0} at Oracle home location {1} failed

Cause: An attempt to create database failed.

Action: Examine the accompanying error messages.

PRGH-01006: Changing the ownership for the software home at location {0} failed

Cause: An attempt to change the ownership of software home failed.

Action: Check the accompanying error messages.

PRGH-01007: Changing the group ownership for the software home at location {0} failed

Cause: An attempt to change the group of software home failed.

Action: Examine the accompanying error messages.

PRGH-01008: Deletion of database {0} at Oracle home location {1} failed

Cause: An attempt to delete the database failed.

Action: Correct the problem indicated by the accompanying messages and retry the failed command

PRGH-01009: Deletion of Oracle home location {0} from inventory failed

Cause: An attempt to detach the Oracle home failed

Action: Correct the problem indicated by the accompanying messages and retry the failed command

PRGH-01010: Removal of Oracle home {0} failed

Cause: An attempt to remove the Oracle home failed

Action: Correct the problem indicated by the accompanying messages and retry the failed command.

PRGH-01011: Move of database {0} to Oracle home location {1} failed

Cause: An attempt to move the database to the new Oracle home failed.

Action: Examine the accompanying error messages.

PRGH-01012: Failed to execute sqlpatch for database {0} from Oracle home {1} on node {2}

Cause: An attempt to execute sqlpatch on the database failed.

Action: Examine the accompanying error messages.

PRGH-01013: The destination working copy at {0} on cluster {1} has the following Oracle patches installed: {2}. Execute the post-patch SQL scripts for these databases: {3}.

Cause: The post-patch SQL scripts were not executed because auto execution of the SQL script was not supported for this database version. Auto execution of the SQL script is not supported for Oracle Database versions prior to 12c.

Action: Execute the 'postinstall.sql' script for these patches if they are located under the SQL patch directory in the Oracle home. Also refer to the patch documentation for these patches and perform any applicable post-patch steps manually.

PRGH-01014: Creation of database {0} at Oracle home location {1} failed because the nodes {2} specified in "-nodes" option are not active

Cause: An attempt to create a database was rejected because the nodes specified in the "-nodes" option were not active.

Action: Specify nodes in the "-nodes" option that are active.

PRGH-01015: Database {0} does not exist

Cause: An attempt to delete a database failed because the specified database did not exist.

Action: Specify a database name of a database that exists within the working copy.

PRGH-01017: failed to retrieve the platform information from the specified Oracle home path "{0}"

Cause: An error occurred while attempting to retrieve the platform information.

Action: Examine the accompanying errors for more information.

PRGH-01018: The creation of database "{0}" at Oracle home location "{1}" failed because the patches for bugs {2} have not been applied.

Cause: An attempt to create a database was rejected because the required patches were not applied to the Oracle home.

Action: Apply the required patches and retry the command.

PRGO-01003 to PRGO-11371

PRGO-01003: Invalid option specified when granting a role to a client user or another role

Cause: The '-role' option was specified but neither '-user' nor '-grantee' was specified.

Action: Supply the '-user' option or the '-grantee' option when running 'rhpctl grant role' with '-role' option.

PRGO-01004: Invalid option specified when revoking a role from client user or another role

Cause: The '-role' option was specified but neither '-user' nor '-grantee' was specified.

Action: Supply the '-user' option or '-grantee' option when running 'rhpctl revoke role' with '-role' option.

PRGO-01005: Invalid container type "{0}"

Cause: Internal error.

Action: Contact Oracle Support Services.

PRGO-01006: An unsupported 'rhpctl' command was issued on Rapid Home Provisioning Client

Cause: A 'rhpctl' command was submitted on Rapid Home Provisioning Client.

Action: Run the 'rhpctl' command on Rapid Home Provisioning Server.

PRGO-01007: Unable to retrieve Rapid Home Provisioning Server host name

Cause: While accessing GNS, an attempt to retrieve the host name failed.

Action: Make sure that both the GNS and the Rapid Home Provisioning Server are running.

PRGO-01019: Invalid option specified when adding visibility to an image for either client user or role

Cause: Neither the '-identity' option nor the '-role' option was specified

Action: Supply the '-identity' option or the '-role' option when running 'rhpctl allow image'.

PRGO-01020: Invalid option specified when removing visibility from an image for either client user or role

Cause: Neither the '-identity' option nor the '-role' option was specified

Action: Supply the '-identity' option or the '-role' option when running 'rhpctl disallow image'.

PRGO-01021: Invalid option specified when retrieving information for image series

Cause: An invalid combination of the '-series', '-image' and '-client' options was specified.

Action: Supply the correct combination of the '-series', '-image' and '-client' options when running 'rhpctl query series'. Only the following combinations are allowed: 1) no option 2) -client option only 3) -image option only 4) -series option only 5) -series and -client options only

PRGO-01022: Working copy "{0}" already exists.

Cause: An existing working copy of the same name was found when adding a new working copy.

Action: Supply another working copy name or delete the working copy and retry.

PRGO-01028: Disk group "{0}" already exists.

Cause: An existing disk group of the same name was found when adding a new disk group.

Action: Supply another disk group name and retry the operation.

PRGO-01029: Disk group "{0}" does not exist.

Cause: Removal of a disk group failed because the specified disk group was not configured for Rapid Home Provisioning Server.

Action: Supply the name of a disk group that is configured for Rapid Home Provisioning Server.

PRGO-01030: Disk group "{0}" is in use.

Cause: Removal of the disk group failed because the specified disk group was in use for data storage by the Rapid Home Provisioning Server.

Action: Supply another disk group and retry the operation.

PRGO-01031: User "{0}" lacks the authority to perform the 'add role' operation.

Cause: The user running the 'rhpctl add role' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01032: User "{0}" lacks the authority to perform the 'query role' operation.

Cause: The user running the 'rhpctl query role' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01033: User "{0}" lacks the authority to perform the 'delete role' operation.

Cause: The user running the 'rhpctl delete role' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01034: User "{0}" lacks the authority to perform the 'grant role' operation.

Cause: The user running the 'rhpctl grant role' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01035: User "{0}" lacks the authority to perform the 'revoke role' operation.

Cause: The user running the 'rhpcctl revoke role' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01036: User "{0}" lacks the authority to perform the 'add image' operation.

Cause: The user running the 'rhpcctl add image' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01037: User "{0}" lacks the authority to perform the 'import image' operation.

Cause: The user running the operation on the image did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01038: User "{0}" lacks the authority to perform the 'delete image' operation.

Cause: The user running the 'rhpcctl delete image' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01039: User "{0}" lacks the authority to perform the 'query image' operation.

Cause: The user running the 'rhpcctl query image' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01040: User "{0}" lacks the authority to grant viewing access to image "{1}".

Cause: The user running the 'rhpcctl allow image' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01041: User "{0}" lacks the authority to disallow viewing access to image "{1}".

Cause: The user running the 'rhpcctl disallow image' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01042: User "{0}" lacks the authority to add a new series.

Cause: The user running the 'rhpcctl add series' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01043: User "{0}" lacks the authority to add an image to a series.

Cause: The user running the 'rhpcctl insertimage series' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01044: User "{0}" lacks the authority to delete a series.

Cause: The user running the 'rhpcctl delete series' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01045: User "{0}" lacks the authority to delete an image from a series.

Cause: The user running the 'rhpcctl deleteimage series' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01046: User "{0}" lacks the authority to view series.

Cause: The user running the 'rhpcctl query series' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01047: User "{0}" lacks the authority to perform the 'delete workingcopy' operation.

Cause: The user running the 'rhpcctl delete workingcopy' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01048: User "{0}" lacks the authority to perform the 'query workingcopy' operation.

Cause: The user running the 'rhpcctl query workingcopy' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01049: Rapid Home Provisioning operations cannot be registered with the managed object server

Cause: Operations for the Rapid Home Provisioning application were not registered with the managed object server.

Action: Make sure that the management database is up and running and either the Rapid Home Provisioning Server or the Rapid Home Provisioning Client resource is registered with CRS.

PRGO-01058: The client name "{0}" supplied is a Rapid Home Provisioning Server (RHPS).

Cause: A RHPS name was received when a Rapid Home Provisioning Client (RHPC) name was expected.

Action: Provide only GHC names to the command.

PRGO-01059: Image "{0}" already exists.

Cause: An existing image of the same name was found when adding a new image.

Action: Supply another image name or delete the existing image and retry.

PRGO-01060: Role "{0}" already exists.

Cause: An existing role of the same name was found when adding a new role.

Action: Supply another role name or delete the existing role and retry.

PRGO-01062: Unable to remove image series "{0}" because it contains images and the '-force' option was not specified.

Cause: An attempt to delete an image series was rejected because the image series contained images.

Action: Either specify the '-force' flag, or delete all images in the image series before attempting to delete the image series.

PRGO-01067: No disk group has been configured for Rapid Home Provisioning Server

Cause: An attempt to retrieve the disk group resources failed because no disk group was configured.

Action: Use the 'rhpctl add diskgroup' command to add a disk group and retry.

PRGO-01068: Failed to connect to Rapid Home Provisioning Server (RHPS)

Cause: An attempt to connect to Rapid Home Provisioning Server (RHPS) failed, possibly because it was not running.

Action: Start Rapid Home Provisioning Server (RHPS) using 'srvctl start rhps' and retry the command.

PRGO-01069: Internal error [{0} #].

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRGO-01070: Working copy "{0}" cannot be deleted from Rapid Home Provisioning Client cluster "{1}".

Cause: An attempt to delete a working copy failed because the specified working copy had not been created by this Rapid Home Provisioning Client.

Action: Execute the command from the cluster that created this working copy or specify a working copy that was created on this client cluster.

PRGO-01071: Image "{0}" already exists in the series "{1}".

Cause: An attempt to add an image to a series failed because the image was already added to the series.

Action: Supply another image name or delete the existing image and retry.

PRGO-01072: Image "{0}" does not exist in the series "{1}".

Cause: An attempt to delete an image from a series failed because the image was not found in the series.

Action: Supply an existing image name and retry.

PRGO-01073: Rapid Home Provisioning Client "{0}" is disabled.

Cause: The client was disabled and could not run RHPCTL commands.

Action: Contact the Rapid Home Provisioning Server site administrator to enable the client.

PRGO-01074: failed while checking if cluster "{0}" is enabled to run rhpctl commands

Cause: An error occurred while checking if the cluster was enabled.

Action: Examine the accompanying errors for more information.

PRGO-01076: Incorrect syntax in the '-maproles' option: "{0}"

Cause: The syntax of the '-maproles' option supplied was incorrect.

Action: Modify the '-maproles' argument to use the following syntax and retry the command: '`<varname>role</varname>=<varname>username</varname>[+<varname>username</varname>...][,<varname>role</varname>=<varname>username</varname>[+<varname>username</varname>...]...]`'.

PRGO-01077: Unable to retrieve Rapid Home Provisioning client host name and port number

Cause: While looking up Rapid Home Provisioning Client connection details in GNS, an attempt to retrieve the host name and port number failed.

Action: Make sure that both the GNS and the Rapid Home Provisioning client are running.

PRGO-01078: unable to retrieve Rapid Home Provisioning Server host name and port number

Cause: While looking up Rapid Home Provisioning Server connection details in Grid Naming Service (GNS), an attempt to retrieve the host name and port number failed.

Action: Make sure that both the GNS and the Rapid Home Provisioning Server are running on the RHPS cluster.

PRGO-01079: Unable to remove image "{0}" because working copies "{1}" have been configured for this image.

Cause: An attempt to delete an image failed because there were working copies configured for the image.

Action: Use the 'rhpcctl remove workingcopy' command to remove associated working copies and retry.

PRGO-01081: User "{0}" does not have the role "{1}". The list of roles that the user has is:\n{2}

Cause: An attempt to remove a role from a user failed because the user does not have that role.

Action: Check the arguments supplied and retry the command.

PRGO-01082: User "{0}" for cluster "{1}" was already allowed access to image {2}.

Cause: An attempt to allow access privilege to the user was rejected because the user had already been granted access privilege to the image using the 'rhpcctl allow image' command.

Action: Make sure the correct user was specified.

PRGO-01083: Role "{0}" was already allowed access to image "{1}".

Cause: An attempt to allow access privilege to the role was rejected because the role had already been granted access privilege to the image using the 'rhpcctl allow image' command.

Action: Make sure the correct role was specified.

PRGO-01084: User "{0}" for cluster "{1}" has never been granted access to image {2}.

Cause: An attempt to disallow the user from access privilege to the image failed because the user had never been granted access privilege to the image using the 'rhpcctl allow image' command.

Action: Use the 'rhpcctl disallow image' command to disallow access privilege from another user.

PRGO-01085: Role "{0}" has never been granted access to image "{1}".

Cause: An attempt to disallow the role from access privilege to the image failed because the role had never been granted access privilege to the image using the 'rhpcctl allow image' command.

Action: Use the 'rhpcctl disallow image' command to disallow access privilege from another role.

PRGO-01087: READ privilege cannot be granted for image "{0}" because the image state is NEW.

Cause: An attempt to grant READ privilege for the specified image failed because the image state is NEW."

Action: Use the 'rhpcctl promote image' command to promote the image to TESTABLE, RESTRICTED or PUBLISHED state before retrying.

PRGO-01088: READ privilege cannot be removed for image "{0}" because the image state is NEW.

Cause: An attempt to remove READ privilege for the specified image failed because the image state is NEW."

Action: Use the 'rhpcctl promote image' command to promote the image to TESTABLE, RESTRICTED or PUBLISHED state before retrying.

PRGO-01090: failed to retrieve the owner of the image "{0}"

Cause: An attempt to retrieve the owner of the image failed.

Action: Examine the accompanying error messages for more information.

PRGO-01091: failed to retrieve the owner of the working copy "{0}"

Cause: An attempt to retrieve the owner of the working copy failed.

Action: Examine the accompanying error messages for more information.

PRGO-01092: Failed to update Rapid Home Provisioning Client's GNS information

Cause: An error occurred while updating the Rapid Home Provisioning Client's GNS information.

Action: Examine the accompanying error messages for more information.

PRGO-01097: Grant operation failed because role "{0}" is already granted to user "{1}".

Cause: An attempt to grant a role to a given user failed because the role was already granted to that user.

Action: Confirm that the role and the user supplied are correct and retry if either is not.

PRGO-01098: Revoke operation failed because role "{0}" is not granted to user "{1}".

Cause: An attempt to revoke a role from a given user failed because the role was not granted to that user.

Action: Confirm that the role and the user supplied are correct and retry if either is not.

PRGO-01099: root user is not allowed to add working copy "{0}"

Cause: An attempt was made to create a working copy owned by the root user.

Action: Either run 'rhpcctl add workingcopy' command as a non-root user or specify the '-user' option with a non-root user.

PRGO-01100: Failed to connect to the management database because it is not running

Cause: An attempt to connect to the management database failed because it was not running.

Action: Use 'srvctl start mgmtldb' command to start the management database.

PRGO-01101: Missing Oracle base for working copy "{0}" for image "{1}" because image type is {2}.

Cause: The '-oraclebase' option was omitted for an image type that requires it.

Action: Supply the '-oraclebase' option with the 'rhpcctl add workingcopy' command.

PRGO-01103: add image "{0}" failed

Cause: An attempt was made to perform an add image operation with the same image name during a rerun of the failed import image operation.

Action: Rerun the failed import image command to complete the image creation.

PRGO-01104: import image "{0}" failed

Cause: An attempt was made to perform an import image operation with the same image name during a rerun of the failed add image operation.

Action: Rerun the failed add image command to complete the image creation.

PRGO-01105: The specified '-oraclebase' option value "{0}" is a non-writable directory or cannot be created on nodes "{1}".

Cause: The specified '-oraclebase' option value was a non-writable path to the Grid user or cannot be created by the Grid user.

Action: Ensure that the Oracle base path directory or its parent directory is writable by the Grid user or the directory path can be created by the Grid user.

PRGO-01106: The specified path "{0}" does not exist on nodes "{1}".

Cause: The mount path specified did not exist on all cluster nodes.

Action: Ensure that the path corresponds to an existing directory on all cluster nodes.

PRGO-01107: Database "{0}" already exists.

Cause: The specified database resource was already registered in Oracle Clusterware.

Action: Specify another database name and retry the command.

PRGO-01108: The specified disk group "{0}" does not exist.

Cause: The resource for the specified disk group could not be found. Either the disk group name was misspelled or the disk group has not been mounted.

Action: Correct the disk group spelling or use SQL*Plus to create the disk group.

PRGO-01109: The specified path "{0}" is not a shared path.

Cause: An attempt to add a working copy failed because the specified storage path was not shared among the cluster nodes.

Action: Specify a path that is shared by all cluster nodes.

PRGO-01110: The specified nodes "{0}" do not exist on the cluster.

Cause: The specified nodes could not be found on the cluster.

Action: Reissue the command with the correct node list.

PRGO-01111: An administrator-managed database cannot be created on specified Leaf Nodes "{0}".

Cause: An attempt to create a working copy failed because some or all of the specified nodes are Leaf Nodes.

Action: Specify only Hub Nodes for an administrator-managed database and retry the command.

PRGO-01112: The specified server pool "{0}" does not exist.

Cause: The specified server pool was not found.

Action: Specify another server pool name or create a server pool with the given name and retry the command.

PRGO-01113: server pool "{0}" category of 'leaf' not supported for policy-managed database

Cause: An attempt to create a working copy was rejected because the specified server pool has a category with CSS_ACTIVE_ROLE=LEAF.

Action: Specify a server pool that can only contain Hub servers for a policy-managed database.

PRGO-01114: invalid use of -pqpool option for provisioning database on cluster "{0}"

Cause: The '-pqpool' option was specified for provisioning a database on a target cluster that was not an Oracle Flex Cluster.

Action: Omit the '-pqpool' option if the cluster where the database needs to be provisioned is not an Oracle Flex Cluster, or choose a target cluster for database provisioning that is an Oracle Flex Cluster and would, therefore, accept the '-pqpool' option.

PRGO-01115: -newpqpool and -pqcardinality options can not be specified for provisioning database on Rapid Home Provisioning Server (RHPS).

Cause: An attempt to create workingcopy failed because RHPS does not support the '-newpqpool' and '-pqcardinality' options.

Action: Omit the '-newpqpool' and '-pqcardinality' options when provisioning databases on RHPS.

PRGO-01116: User equivalence does not exist on nodes "{0}".

Cause: User equivalence did not exist among the nodes indicated.

Action: Ensure that user equivalence exists on all cluster nodes.

PRGO-01117: The specified user name "{0}" does not exist in the operating system.

Cause: An attempt to create a working copy failed because the user did not exist.

Action: Ensure that the user exists and retry.

PRGO-01118: The specified storage path "{0}" is not a directory.

Cause: An attempt to create a working copy failed because the specified storage path is not a directory.

Action: Ensure that the specified storage option value is an absolute directory path or a disk group name and retry.

PRGO-01119: The specified storage path "{0}" does not exist.

Cause: An attempt to create a working copy failed because the specified storage path did not exist.

Action: Ensure that the specified storage path exists or specify an existing disk group name and retry.

PRGO-01125: Delete operation failed because role "{0}" has the following roles: "{1}".

Cause: An attempt to delete a role failed because the role has been granted one or more roles.

Action: Revoke or delete the roles granted to this role and retry.

PRGO-01126: Delete operation failed because role "{0}" has been granted to the following users: "{1}".

Cause: An attempt to delete a role failed because the role has been granted to one or more users.

Action: Revoke this role from the users and retry.

PRGO-01128: An unsupported 'rhpctl' command was issued on Rapid Home Provisioning server

Cause: A Rapid Home Provisioning client 'rhpctl' command was submitted on the Rapid Home Provisioning server.

Action: Run the 'rhpctl' command on a Rapid Home Provisioning client.

PRGO-01129: failed to connect to Rapid Home Provisioning Client (RHPC)

Cause: An attempt to connect to Rapid Home Provisioning Client (RHPC) failed, possibly because it was not running on the remote cluster.

Action: Start Rapid Home Provisioning Client (RHPC) using 'srvctl start rhpcclient' on the remote cluster and retry the command.

PRGO-01130: Database name "{0}" contains invalid characters.

Cause: The supplied database name contained invalid characters.

Action: Supply a valid database name. The valid character set for database names is [a-z, A-Z, 0-9, \$, #, _].

PRGO-01131: Delete operation failed, client "{0}" has the following working copies: "{1}".

Cause: A delete client operation failed because one or more working copies exist on the specified client.

Action: Delete the specified working copies and retry the operation.

PRGO-01132: Rapid Home Provisioning Server (RHPS) user "{0}" does not exist in the repository.

Cause: A repository query failed unexpectedly. This is an internal error.

Action: Contact Oracle Support Services.

PRGO-01133: User "{0}" lacks the authority to perform the 'promote image' operation.

Cause: The user running the 'rhpctl promote image' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01134: built-in role "{0}" cannot be deleted

Cause: A request was made to delete a built-in role.

Action: Refer to the product documentation.

PRGO-01135: User "{0}" lacks the authority to perform the 'add client' operation.

Cause: The user running the 'rhpctl add client' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01136: User "{0}" lacks the authority to perform the 'add workingcopy' operation.

Cause: The user running the 'rhpctl add workingcopy' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01137: User "{0}" lacks the authority to perform the 'query client' operation.

Cause: The user running the 'rhpctl query client' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01138: User "{0}" lacks the authority to perform the 'delete client' operation.

Cause: The user running the 'rhpctl delete client' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01139: User "{0}" lacks the authority to perform the 'delete workingcopy' operation.

Cause: The user running the 'rhpctl delete workingcopy' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01140: User "{0}" lacks the authority to perform the 'modify client' operation.

Cause: The user running the 'rhpctl modify client' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01141: built-in GH_SA role cannot be revoked from Oracle Grid Infrastructure user "{0}"

Cause: An attempt was made to revoke the built-in GH_SA role from the user of the Oracle Grid Infrastructure home.

Action: Specify another user name or role name in the 'rhpctl revoke role' command.

PRGO-01142: built-in GH_CA role cannot be revoked from Oracle Grid Infrastructure user "{0}" of cluster "{1}"

Cause: An attempt was made to revoke the built-in GH_CA role from the user of the Oracle Grid Infrastructure home.

Action: Specify another user name or role name in the 'rhpctl revoke role' command.

PRGO-01143: built-in GH_SA role cannot be revoked from role "{0}" by user "{1}" at cluster {2}

Cause: The user running 'rhctl revoke role' command did not have the privilege to revoke the built-in GH_SA role from the specified role.

Action: Grant the GH_SA role to the user running 'rhctl revoke role' command.

PRGO-01144: built-in GH_CA role cannot be revoked from role "{0}" by user "{1}" at cluster {2}

Cause: The user running 'rhctl revoke role' command did not have the privilege to revoke the built-in GH_CA role from the specified role.

Action: Grant the GH_CA and GH_ROLE_ADMIN roles, or the GH_SA role, to the user running the 'rhctl revoke role' command.

PRGO-01145: User "{0}" on cluster "{1}" cannot grant the built-in GH_SA role to another user.

Cause: The user running 'rhctl grant role' command did not have the privilege to grant the built-in GH_SA role to another user.

Action: Grant the GH_SA role to the user running 'rhctl grant role' command.

PRGO-01146: User "{0}" on cluster "{1}" cannot grant the built-in GH_CA role to another user.

Cause: The user running 'rhctl grant role' command did not have the privilege to grant the built-in GH_CA role to another user.

Action: Grant the GH_CA and GH_ROLE_ADMIN roles, or the GH_SA role, to the user running the 'rhctl grant role' command.

PRGO-01147: User "{0}" on cluster "{1}" cannot grant the built-in GH_SA role to another role.

Cause: The user running 'rhctl grant role' command did not have the privilege to grant the built-in GH_SA role to another role.

Action: Grant the GH_SA role to the user running 'rhctl grant role' command.

PRGO-01148: User "{0}" on cluster "{1}" cannot grant the built-in GH_CA role to another role.

Cause: The user running 'rhctl grant role' command did not have the privilege to grant the built-in GH_CA role to another role.

Action: Grant the GH_CA and GH_ROLE_ADMIN roles, or the GH_SA role, to the user running the 'rhctl grant role' command.

PRGO-01149: The source working copy version and the patched working copy version are different.

Cause: An attempt to move the database failed because the source and patched working copy versions are different.

Action: Ensure that the source and patched working copy versions are the same for the move database operation.

PRGO-01150: The source working copy owner and the patched working copy owner are different.

Cause: An attempt to move the database failed because the source and patched working copy owners are different.

Action: Ensure that the source and patched working copy owners are the same for the move database operation.

PRGO-01151: The database 'move' for the specified workingcopy cannot be performed from Rapid Home Provisioning Client (RHPC) "{0}".

Cause: The working copy was not created by this Rapid Home Provisioning Client.

Action: Execute the command from the cluster that created this working copy.

PRGO-01152: operation not allowed because client authentication failed

Cause: A 'rhpcctl' request was not processed because client authentication failed at the server.

Action: Run the 'rhpcctl' command from a valid Rapid Home Provisioning client.

PRGO-01153: failed to validate the client authentication

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRGO-01158: User "{0}" on cluster "{1}" cannot revoke the built-in GH_SA role from another user.

Cause: The user issuing a 'rhpcctl revoke role' command did not have the privilege to revoke the built-in GH_SA role from another user.

Action: To enable the revocation, grant the GH_SA role to the user.

PRGO-01159: User "{0}" on cluster "{1}" cannot revoke the built-in GH_CA role from another user.

Cause: The user issuing a 'rhpcctl revoke role' command did not have the privilege to revoke the built-in GH_CA role from another user.

Action: Grant the GH_CA and GH_ROLE_ADMIN roles, or the GH_SA role, to the user running the 'rhpcctl revoke role' command.

PRGO-01160: User "{0}" lacks the authority to perform the 'export client' operation.

Cause: The user running the 'rhpcctl export client' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01161: The source working copy and the patched working copy cannot be the same.

Cause: An attempt to move the database was rejected because the specified source and patched working copies are the same.

Action: Ensure that the source and patched working copy are different for the move database operation.

PRGO-01162: operation not allowed because user authentication failed for user "{0}"

Cause: A RHPCTL request was not processed because user authentication failed at the server.

Action: Run the 'rhpctl' command as a user whose primary group is the 'oinstall' group.

PRGO-01163: unable to create working copy "{0}" because maximum number of snapshots has been reached for image "{1}"

Cause: An attempt to create a working copy failed because the maximum number of snapshots has been reached for the image.

Action: Import a copy of the same image by running 'rhpctl import image' command and then retry the operation.

PRGO-01164: failed to create a volume for import image because the configured disk group "{0}" does not have enough available space. Detailed error:\n{1}

Cause: An attempt to create a volume for an import image failed because the configured disk group did not have enough available space.

Action: Add more disks to the configured disk group.

PRGO-01165: unable to create volume because the generated volume name already exists

Cause: An attempt to create a volume failed because the number of tries attempted for generating the volume name was exhausted.

Action: Retry the command.

PRGO-01166: unable to create image "{0}" from working copy "{1}" because maximum number of snapshots has been reached

Cause: An attempt to create a image from the working copy failed because the maximum number of snapshots has been reached.

Action: Issue 'rhpctl import image' specifying the working copy path for '-path' to create a new image.

PRGO-01167: HA VIP resource does not exist in Oracle Clusterware.

Cause: An attempt to add Rapid Home Provisioning Client failed because no HA VIP resource was registered with Oracle Clusterware.

Action: Use the command 'srvctl add havip' on the Rapid Home Provisioning Server cluster to create a HA VIP resource.

PRGO-01170: The default templates directory "{0}" does not exist in the image specified.

Cause: The image created on the Rapid Home Provisioning Server did not contain the templates directory.

Action: Specify an image that includes the templates directory as shown in the message.

PRGO-01188: failed to add client on Rapid Home Provisioning Server (RHPS) because neither GNS server nor GNS client are configured on this cluster

Cause: A 'rhpctl add client' command failed because neither GNS server nor GNS client was configured on this cluster.

Action: Configure either GNS server or GNS client using the command 'srvctl add gns' in this cluster and retry the command.

PRGO-01189: provisioning of databases not supported on working copy of image type "{0}"

Cause: An attempt to create or delete a database was rejected because the working copy was not created from an image of type ORACLEDBSOFTWARE.

Action: Specify a working copy that was created from an image of type ORACLEDBSOFTWARE.

PRGO-01190: The database "{0}" was not created using working copy "{1}".

Cause: An attempt to delete the specified database was rejected because the working copy specified was not the one used to create the database.

Action: Specify a working copy with which the database was created.

PRGO-01191: The specified working copy "{0}" is not provisioned on the cluster "{1}".

Cause: An attempt to add a database was rejected because the specified working copy was not provisioned on this cluster.

Action: Specify a working copy that is provisioned on the cluster on which the 'rhpcctl add database' is issued.

PRGO-01192: failed to create database "{0}" because the specified working copy was not created properly

Cause: An attempt to add a database was rejected because the specified working copy was not created properly.

Action: Specify the command 'rhpcctl add workingcopy' to properly create the working copy and retry the command.

PRGO-01195: The '-path' option required for creating working copy on the client cluster is not specified.

Cause: The attempt to move database using 'rhpcctl move database' was rejected because

Action: Retry the 'rhpcctl move database' command specifying the '-path' option.

PRGO-01196: The '-image' option required for creating the working copy is not specified.

Cause: The attempt to move the database using 'rhpcctl move database' failed because the '-image' option was not specified. The '-image' option is required to create a new working copy to specify the image from which to create the working copy.

Action: Either request a new working copy using both -image and -patchedwc or specify an existing working copy using the -patchedwc option.

PRGO-01197: The patched working copy was not created from an image of type ORACLEDBSOFTWARE.

Cause: An attempt to move the database failed because the patched working copy was not created from an image of type ORACLEDBSOFTWARE.

Action: Ensure that the patched working copy is created from an image of type ORACLEDBSOFTWARE.

PRGO-01198: The source working copy is incomplete.

Cause: The source working copy was in a partially completed state.

Action: Retry the 'rhpctl move database' command after ensuring that the source working copy has been created successfully.

PRGO-01201: cannot add image from working copy "{0}" because creation of this working copy was not complete.

Cause: An attempt to add an image from a working copy was rejected because creation of the specified working copy was not complete.

Action: Specify a complete working copy from which add the image.

PRGO-01202: Nothing to modify.

Cause: No options were specified to modify.

Action: Specify at least one option to modify. See the command usage for available options.

PRGO-01203: cannot add working copy from image "{0}" because creation of this image was not complete

Cause: An attempt to add a working copy from an image was rejected because creation of the specified image was not complete.

Action: Specify a complete image from which to add the working copy.

PRGO-01204: The specified working copy has no databases to move.

Cause: An attempt to move a database from a working copy failed because the specified working copy did not have a database configured.

Action: Specify a working copy that has at least one database.

PRGO-01205: The source working copy was not created from an image of type ORACLEDBSOFTWARE.

Cause: An attempt to move a database failed because the source working copy was not created from an image of type ORACLEDBSOFTWARE.

Action: Ensure that the source working copy was created from an image of type ORACLEDBSOFTWARE for the move database operation.

PRGO-01206: The '-oraclebase' option is not allowed when creating working copy "{0}" for image "{1}" because the image type of this working copy is not ORACLEDBSOFTWARE.

Cause: An attempt to add a working copy was rejected because the '-oraclebase' option was specified to create a working copy from an image with the type SOFTWARE. The '-oraclebase' option is valid only for images of type ORACLEDBSOFTWARE.

Action: Retry the command 'rhpctl add workingcopy' without the '-oraclebase' option or specify a working copy that was created from an image of type ORACLEDBSOFTWARE.

PRGO-01207: failed to delete database "{0}" because the specified working copy {0} is not provisioned on this cluster

Cause: An attempt to delete a database was rejected because the specified working copy was not provisioned on this cluster.

Action: Specify a working copy that is provisioned on the cluster on which the 'rhpctl delete database' is issued.

PRGO-01208: Shared storage verification failed for path "{0}". Detailed error: "{1}"

Cause: An invalid value was specified for the '-storage' option. Either the storage does not exist, or it is not shared.

Action: Ensure that the location specified with the '-storage' option exists, is shared and is writable, and rerun the command.

PRGO-01209: unable to delete working copy "{0}" because it contains databases and the force option was not specified

Cause: An attempt to delete the working copy was rejected because databases were configured to run from the working copy and the '-force' option was not specified.

Action: Either specify the '-force' option or delete all databases in the working copy before attempting to delete the working copy.

PRGO-01210: unable to delete working copy "{0}" because it contains one or more running databases

Cause: An attempt to delete the working copy was rejected because the working copy contained one or more running databases.

Action: Either stop the running databases using 'srvctl stop database' or delete all databases configured to run from the working copy and retry the 'delete' command.

PRGO-01211: User "{0}" lacks the authority to perform the operation.

Cause: The user did not have the required authorization to run the command.

Action: Request the authorization from your administrator or perform the operation as a user ID that has the required authorization.

PRGO-01212: unable to delete user "{0}" because working copies "{1}" are owned by this user

Cause: An attempt to delete a given user failed because the user owned one or more working copies in the repository.

Action: Delete the working copies owned by the user supplied and then delete the user.

PRGO-01213: option "{0}" is not allowed from a Rapid Home Provisioning Client

Cause: An option was supplied which can only be used from a Rapid Home Provisioning Server.

Action: Either execute the command with the option from a Rapid Home Provisioning Server or avoid the use of the option from a Rapid Home Provisioning Client.

PRGO-01217: Invalid value "{0}" specified for database template option.

Cause: The '-dbtemplate' option value specified is neither an absolute path nor of the form '<image_name>:<relative_path_of_template>'.

Action: Supply a valid dbtemplate path and retry.

PRGO-01218: failed to export the image file system specified by the database template option value "{0}"

Cause: An error occurred while attempting to export the database template image file system.

Action: Examine the accompanying errors for more information.

PRGO-01219: failed to remove the export file system for the image specified by the database template option

Cause: An error occurred while attempting to remove the export file system for the database template image.

Action: Examine the accompanying errors for more information.

PRGO-01220: failed to export the database template image file system because creation of the image "{0}" was not complete

Cause: An attempt to export a database template image file system was rejected because creation of the specified image was not complete.

Action: Specify a complete image and retry the operation.

PRGO-01222: The specified database template path "{0}" does not exist

Cause: An attempt to create a database failed because the specified database template path does not exist.

Action: Ensure that the specified database template path exists and retry.

PRGO-01223: The specified template file "{0}" does not exist on nodes {1}.

Cause: The specified database template file did not exist either on all of the specified nodes for administration managed database, or on all of the cluster nodes for policy managed database.

Action: Ensure that the database template file specified with the '-dbtemplate' option exists either on all of the specified nodes for administration managed database, or on all of the cluster nodes for policy managed database.

PRGO-01224: cannot create a single instance database on multiple nodes "{0}"

Cause: The value specified for the '-node' option contained multiple nodes.

Action: Specify a single node that is part of the cluster for the '-node' option and retry.

PRGO-01225: failed to add a working copy from image {0} because file system {1} contained within volume device {2} is offline

Cause: An attempt to add a working copy failed because the file system resource of the image supplied was offline.

Action: Use the 'srvctl start filesystem' command with corresponding volume device to start the file system resource for the image; then retry the command.

PRGO-01226: The source working copy is configured in a different cluster from the patched working copy

Cause: An attempt to move the database failed because the source and patched working copies are configured in different clusters.

Action: Ensure that the source and patched working copies are configured in the same cluster.

PRGO-01227: The '-path' option is not allowed when moving a database on Rapid Home Provisioning Server (RHPS).

Cause: An attempt to move a database on a Rapid Home Provisioning Server failed because the '-path' option was specified without remote provisioning.

Action: Retry the command 'rhpctl move database' without the '-path' option.

PRGO-01228: failed to write a checkpoint for the operation because the checkpoint file system "{0}" is not mounted

Cause: Writing the checkpoint for the previous operation failed because the checkpoint file system was offline.

Action: Use the 'srvctl start filesystem' command to start the file system resource for checkpoints and retry the command.

PRGO-01229: No disk group has been configured for Rapid Home Provisioning Client.

Cause: An attempt to create a local file system failed because no disk group was configured.

Action: Use 'srvctl modify rhpclient' command to add a disk group and retry.

PRGO-01233: The specified '-path' option value "{0}" is on ACFS

Cause: The working copy could not be added because '-path' option value was on ACFS.

Action: Ensure that the '-path' option value is a shared path that is not on ACFS.

PRGO-01234: unable to add image "{0}" from workingcopy "{1}" using local storage

Cause: The working copy was stored on local storage on the Rapid Home Provisioning Client cluster.

Action: Use 'rhpctl import image' to add the image.

PRGO-01235: path "{0}" is not writable by "{1}"

Cause: The specified path for local storage on the Rapid Home Provisioning Client did not have write access by the user.

Action: Ensure that the '-path' option value has writable permission for the user.

PRGO-01236: path "{0}" does not have "{1}" KB of free space on nodes {2}

Cause: There was insufficient free space on the nodes to copy the working copy.

Action: Ensure that the specified path has sufficient free space on all nodes of the cluster.

PRGO-01237: cannot delete built-in user "{0}"

Cause: An attempt to delete a given user failed because the specified user was a built-in user.

Action: Do not try to delete a built-in user.

PRGO-01238: specified server pool "{0}" has no candidate server for single instance database "{1}"

Cause: An attempt to create a single instance database failed because the specified server pool did not have a configured candidate server.

Action: Specify a different server pool with a maximum of one server, or modify the specified server pool using the command 'srvctl modify srvpool' with '-servers' option to configure exactly one candidate server.

PRGO-01239: specified server pool "{0}" has a maximum size "{1}" too large for single instance database {2}

Cause: An attempt to create a single instance database failed because a server pool with maximum size greater than one server was specified.

Action: Specify a different server pool with maximum size of one, or modify the specified server pool using the command 'srvctl modify srvpool' with '-max 1' option to have at most one server.

PRGO-01240: specified server pool "{0}" has more than one candidate server

Cause: An attempt to create a single instance database failed because a server pool with more than one candidate server was specified.

Action: Specify a different server pool with a maximum of one server, or modify the specified server pool using the command 'srvctl modify srvpool' with '-servers' option to configure exactly one candidate server.

PRGO-01241: The path "{0}" specified for the working copy duplicates the internal path used to mount working copy.

Cause: An attempt to add a working copy was rejected because the specified path duplicates the internal path used to mount the working copy.

Action: Specify a different path and retry.

PRGO-01242: failed to add a working copy with local storage type because no path option was specified and no disk group was configured for the Rapid Home Provisioning Client cluster

Cause: A command to add a working copy with local storage type was issued without the path option and for a Rapid Home Provisioning Client cluster that had no configured disk group.

Action: Specify the '-path' option or configure a disk group for the Rapid Home Provisioning client with 'srvctl modify rhpclient' and retry the command.

PRGO-01243: An attempt to create a working copy from image "{0}" failed because it is for the "{1}" platform, whereas the detected platform is {2}.

Cause: The image supplied was for a different platform than the one for which the working copy was requested.

Action: Retry the command specifying an image created for the target platform.

PRGO-01244: Cannot grant any role to a root user

Cause: An attempt was made to grant a role to a root user.

Action: Specify a different user and retry.

PRGO-01245: User "{0}" for cluster "{1}" is the owner of image "{2}".

Cause: An attempt to disallow the user access from the image failed because the user owned the image.

Action: Specify a different user and retry.

PRGO-01246: Role "{0}" cannot be disallowed from image "{1}".

Cause: An attempt to disallow the role access from the image failed because the role was a built-in role associated with the image and was not granted access using the 'rhpctl allow image' command.

Action: Specify a different role and retry.

PRGO-01247: Role "{0}" cannot be allowed for image "{1}".

Cause: An attempt to allow the role access to the image failed because the role was a built-in role associated with the image.

Action: Specify a different role and retry.

PRGO-01248: cannot grant role "{0}" to a built-in role "{1}"

Cause: An attempt was made to grant a role to a built-in role.

Action: Specify a non built-in role for the '-grantee' option and retry.

PRGO-01249: cannot revoke role "{0}" from a built-in role "{1}"

Cause: An attempt was made to revoke a role from a built-in role.

Action: Specify a non built-in role for the '-grantee' option and retry.

PRGO-01250: cannot revoke role "{0}" from role "{1}" because role "{1}" has only one associated role

Cause: An attempt to revoke a role from another role with only one associated role failed because that role was a user defined role.

Action: Specify a user defined role with more than one associated roles for the '-grantee' option and retry.

PRGO-01251: Role "{0}" cannot start with "GH_".

Cause: An attempt to add a role starting with "GH_" failed because "GH_" is a prefix reserved by Oracle for built-in roles.

Action: Specify another role name and retry.

PRGO-01257: failed to import image "{0}"

Cause: An error occurred while attempting to import an image.

Action: Examine the accompanying error messages for more information.

PRGO-01258: The specified patched working copy is incomplete.

Cause: The patched working copy was in a partially completed state.

Action: Use the 'rhpctl add workingcopy' command to create a complete patched working copy. Ensure that options such as '-oraclebase', '-user', and '-client' are set the same as in the source working copy. Then retry 'rhpctl move database' command.

PRGO-01260: Cluster Verification checks for database home provisioning failed for the specified working copy {0}.

Cause: One or more Cluster Verification checks for database home provisioning failed.

Action: Review the underlying error messages and take appropriate action.

PRGO-01261: unable to add database {0} because the specified working copy {1} already exists

Cause: An attempt to add the specified database using 'rhpctl add workingcopy' was rejected because the working copy specified was already in existence.

Action: Use 'rhpctl add database' command to create the database on an existing working copy or use 'rhpctl add workingcopy' specifying a different working copy.

PRGO-01262: unable to verify the existence of the specified file {0} on nodes {1}

Cause: An error occurred while attempting to access the specified database template file.

Action: Examine the accompanying errors for more information.

PRGO-01263: The options '-storagetype LOCAL' and '-path' with non-ACFS path are required for provisioning pre 11.2 version database home

Cause: An attempt to provision a pre 11.2 version database home was rejected because it can only be provisioned on local, non-ACFS storage.

Action: Retry the operation with the option '-storagetype LOCAL' and a non-ACFS path specified for the '-path' option.

PRGO-01264: The '-nodes' option is required for pre 11.2 version database because it cannot be policy-managed.

Cause: An attempt to create a policy-managed database failed because only administrator-managed databases are supported in pre 11.2 version.

Action: Retry the operation with '-nodes' option to create an administrator-managed database.

PRGO-01265: The version of the specified home is {0} and is not 10.2.0.5.

Cause: An attempt to import a version 10.2 image was rejected because the specified Oracle home was not version 10.2.0.5.

Action: Retry the operation with a version 10.2.0.5 Oracle home specified for the '-path' option.

PRGO-01266: The version of the specified home is {0} and is not supported.

Cause: An attempt to import a version 11.1 image was rejected because this version is not supported.

Action: Retry the operation specifying a valid version (10.2.0.5 or 11.2 and above) of Oracle home for the '-path' option.

PRGO-01267: failed to add a database {0} using working copy {1} because the image file system {2} using the volume device {3} is offline

Cause: An attempt to add a database failed because the file system resource of the image containing the working copy supplied was offline.

Action: Use the 'srvctl start filesystem' command with the corresponding volume device to start the file system resource for the image containing the working copy; then retry the command.

PRGO-01268: failed to add a database {0} using working copy {1} because the file system {2} using volume device {3} is offline in the Rapid Home Provisioning Client cluster

Cause: An attempt to add a database failed because the file system resource in the Rapid Home Provisioning Client containing the working copy supplied was offline.

Action: Use the 'srvctl start filesystem' command in the Rapid Home Provisioning Client cluster with the corresponding volume device to start the indicated file system resource; then retry the command.

PRGO-01269: failed to delete a working copy {0} because the image file system {1} using the volume device {2} is offline

Cause: An attempt to delete a working copy failed because the file system resource of the image containing the working copy supplied was offline.

Action: Use the 'srvctl start filesystem' command with the corresponding volume device to start the file system resource for the image containing the working copy; then retry the command.

PRGO-01270: failed to delete a working copy {0} because the file system {1} using volume device {2} is offline in the Rapid Home Provisioning Client cluster

Cause: An attempt to delete a working copy failed because the file system resource in the Rapid Home Provisioning Client containing the working copy supplied was offline.

Action: Use the 'srvctl start filesystem' command in the Rapid Home Provisioning Client cluster with the corresponding volume device to start the indicated file system resource; then retry the command.

PRGO-01271: failed to move database using working copy {0} because the image file system {1} using the volume device {2} is offline

Cause: An attempt to move database failed because the file system resource of the image containing the working copy supplied was offline.

Action: Use the 'srvctl start filesystem' command with the corresponding volume device to start the file system resource for the image containing the working copy; then retry the command.

PRGO-01272: failed to move database using working copy {0} because the file system {1} using volume device {2} is offline in the Rapid Home Provisioning Client cluster

Cause: An attempt to move database failed because the file system resource in the Rapid Home Provisioning Client containing the working copy supplied was offline.

Action: Use the 'srvctl start filesystem' command in the Rapid Home Provisioning Client cluster with the corresponding volume device to start the indicated file system resource; then retry the command.

PRGO-01273: The specified Oracle home path {0} is already in use by working copy {1} on site {2}.

Cause: An attempt to add the specified working copy was rejected because the specified Oracle home path was already in use.

Action: Retry the command specifying the path for an Oracle home that is not already in use.

PRGO-01274: The directory indicated by the specified NFS Oracle home path {0} was not empty on nodes {1}.

Cause: An attempt to add the specified working copy was rejected because the working copy will be NFS mounted on the directory specified by the path, making the existing files inaccessible.

Action: Retry the command specifying the path for an Oracle home that is empty.

PRGO-01275: failed to verify the emptiness of the specified directory {0} on nodes {1}

Cause: An error occurred while attempting to access the specified directory.

Action: Examine the accompanying errors for more information.

PRGO-01276: failed to delete Rapid Home Provisioning Client (RHPC) because it was running

Cause: An attempt to delete a Rapid Home Provisioning Client (RHPC) failed because it was running on the client cluster.

Action: Either specify the '-force' option on the delete command, or first issue 'srvctl stop rhpcclient' on the client cluster.

PRGO-01277: The directory indicated by the specified local Oracle home path {0} was not empty on nodes {1}.

Cause: An attempt to add the specified working copy was rejected because a non-empty directory may contain files that belong to other Oracle software homes when the storage type is LOCAL.

Action: Retry the command specifying the path for an Oracle home that is empty.

PRGO-01280: The revoke operation failed because role "{0}" is not granted to role "{1}".

Cause: An attempt to revoke a role from the grantee role failed because the role had not been granted to the grantee role.

Action: Specify a role that is part of the associated roles of the grantee role.

PRGO-01281: failed to add a working copy because the database version is not compatible with ASM client

Cause: An attempt to add a working copy on an ASM client cluster was rejected because the database version was 12.1.0.1 or lower. ASM client access is supported only for database versions 12.1.0.2 or higher.

Action: Retry the command with a database version of 12.1.0.2 or higher, or on a cluster including the ASM server.

PRGO-01282: The '-path' option required for creating a working copy using local storage on an ASM client cluster is not specified.

Cause: The attempt to create a working copy using local storage on an ASM client cluster was rejected because the '-path' option was not specified.

Action: Retry the 'rhpctl add workingcopy' command specifying the '-path' option.

PRGO-01283: Authentication failure while connecting to Rapid Home Provisioning Client (RHPC)

Cause: An attempt to connect to the Rapid Home Provisioning Client failed because the connection could not be authenticated.

Action: Perform the following steps and retry the command: 1) Generate the credentials file at Rapid Home Provisioning Server using the 'rhpctl export client' command 2) Securely transfer the credentials file from Rapid Home Provisioning Server to Rapid Home Provisioning Client 3) Modify the Rapid Home Provisioning Client credentials with the credentials file using the 'srvctl modify rhpcclient' command on the client cluster.

PRGO-01284: Rapid Home Provisioning Client "{0}" was never started.

Cause: The Rapid Home Provisioning Client daemon did not register its endpoint with the Rapid Home Provisioning Server.

Action: Add and start Rapid Home Provisioning Client on the remote cluster.

PRGO-01285: failed to create database "{0}" because the database version {1} does not support the options '-cdb', '-numberOfPDBs' and '-pdbName'

Cause: An attempt to add a database was rejected because the database version was 12.1.0.0 or lower. The options '-cdb', '-numberOfPDBs' and '-pdbName' are supported only for database versions 12.1.0.1 or higher.

Action: Retry the command with a database version of 12.1.0.1 or higher, or do not use the options '-cdb', '-numberOfPDBs' and '-pdbName'.

PRGO-01286: Option -datafileDestination does not specify the absolute path to create a database of a version before 11.2.

Cause: An attempt to create a database of a version before 11.2 failed because the '-datafileDestination' argument was not an absolute path.

Action: Supply an absolute path for the '-datafileDestination' option and retry the command.

PRGO-01287: failed to move database because the software home path for working copy {0} is shared and the one for working copy {1} is not

Cause: An attempt to move a database between Oracle homes was rejected because one Oracle home was shared and the other was not.

Action: Either specify source and destination Oracle homes that are both shared, or specify source and destination Oracle homes that are both non-shared.

PRGO-01289: failed to move database because the path was not provided for the patched working copy

Cause: An attempt to move a database between Oracle homes was rejected because the source working copy is not shared and the path was not provided for the patched working copy.

Action: Either specify source and destination Oracle homes that are both shared, or specify a valid path for the patched working copy.

PRGO-01290: unable to create snapshot for the database template because maximum number of snapshots has been reached for image "{0}"

Cause: An attempt to create a database failed because the maximum number of snapshots had been reached for the image.

Action: Import a copy of the same image by running the command 'rhpctl import image' and retry the operation specifying the new image.

PRGO-01293: Rerun of 'add workingcopy' rejected because -{0} option differs from the one originally specified: {1}.

Cause: A rerun of an 'add workingcopy' request failed because one of the options specified did not match the one used originally.

Action: Retry the command with the same option entered on the first run of the command.

PRGO-01294: The '-nonrolling' option is required for moving a release 11.1 or earlier database.

Cause: The attempt to move a release 11.1 or earlier database was rejected because the '-nonrolling' option was not specified.

Action: Retry the command with a release 11.2 or higher database, or specify the '-nonrolling' option.

PRGO-01296: failed to get the directory size of path "{0}" during import image of "{1}"

Cause: An attempt to determine directory size during import image failed because either the current user or the owner specified does not have read and execute permissions for the specified directory.

Action: Ensure that either the current user or the owner specified with '-pathowner' has read and execute permissions for the specified directory. Examine the accompanying error messages for more information.

PRGO-01299: failed to move database because the user specified '-path' or '-image' option for an existing patched working copy

Cause: An attempt to move database was rejected because the '-path' or '-image' option was specified. The '-path' or '-image' option should not be entered if the patched working copy has been created.

Action: Retry the command without the '-path' or '-image' option.

PRGO-01300: Database "{0}" is not configured in working copy "{1}".

Cause: The specified database did not exist in the supplied working copy.

Action: Specify a database which is configured in the supplied working copy.

PRGO-01301: Rapid Home Provisioning Client cluster "{0}" GUID {1} does not match the value stored in repository {2}

Cause: An attempt to connect to the Rapid Home Provisioning Server failed because the cluster GUID of the Rapid Home Provisioning Client did not match the cluster GUID stored in the Rapid Home Provisioning Server repository.

Action: Contact the Rapid Home Provisioning Server site administrator to enable the client.

PRGO-01303: The '-pqpool' option is not supported in a non-Exadata environment.

Cause: The '-pqpool' option was specified in a non-Exadata environment.

Action: Reissue the command without the '-pqpool' option or with the '-pqpool' option in an Exadata environment.

PRGO-01304: The '-newpqpool' option is not supported in a non-Exadata environment.

Cause: The '-newpqpool' option was specified in a non-Exadata environment.

Action: Reissue the command without the '-newpqpool' option or with the '-newpqpool' option in an Exadata environment.

PRGO-01305: PQ pool is supported only on Flex cluster, this cluster {0} is a regular cluster.

Cause: The '-pqpool' option was specified on a regular cluster.

Action: Reissue the command without the '-pqpool' option or with the '-pqpool' option on a flex cluster.

PRGO-01306: New PQ Pool is supported only on Flex cluster, this cluster {0} is a regular cluster.

Cause: The '-newpqpools' option was specified on a regular cluster.

Action: Reissue the command without the '-newpqpools' option or with the '-newpqpools' option on a flex cluster.

PRGO-01307: ACFS is not available on PQ nodes.

Cause: The ACFS storage type is not available on PQ nodes.

Action: Use '-pqpools' or '-newpqpools' option with non-ACFS storage types.

PRGO-01308: missing '-oraclebase' option for creating the non-existing patched working copy: {0}

Cause: An attempt to create a patched working copy was rejected because the '-oraclebase' option required for creating a new working copy was not specified.

Action: Supply '-oraclebase' option with the 'rhpctl move database' command.

PRGO-01309: Improper '-oraclebase' option specified for existing working copy: {0}.

Cause: An attempt to move the databases was rejected because the '-oraclebase' option was specified for an existing patched working copy that does not require it.

Action: Rerun the 'rhpctl move database' command without '-oraclebase' option.

PRGO-01310: failed to move database because the software home path {0} is shared and the one for working copy {1} is not

Cause: An attempt to move a database between Oracle homes was rejected because one Oracle home was shared and the other was not.

Action: To move databases between Oracle homes, specify source and destination Oracle homes that are either both shared or both non-shared.

PRGO-01311: Invalid value "{0}" specified for the platform option. The valid options are the following:\n{1}

Cause: The command was rejected because the value specified for the '-platform' option was not a valid OS platform.

Action: Supply a valid platform and retry the command.

PRGO-01313: failed to move database because the path was not provided for the patched working copy

Cause: An attempt to move a database between Oracle homes was rejected because the source working copy is shared and a shared path was not provided for the patched working copy.

Action: Either specify source and destination Oracle homes that are both local non-shared, or specify a valid shared path for the patched working copy.

PRGO-01314: An attempt to import image "{0}" failed because the software home specified is for the "{1}" platform, whereas the cluster platform is "{2}".

Cause: The software home supplied was for a different platform than the one on cluster.

Action: Retry the command specifying a software home that matches the cluster platform.

PRGO-01315: Database type RacOneNode is not supported in pre-11.2 versions.

Cause: An attempt to create a database of type 'RacOneNode' was rejected because database type RacOneNode is not supported in pre-11.2 versions.

Action: Retry the operation specifying a supported database type.

PRGO-01316: The options {0} are not allowed and the '-nodes' option is required for pre 11.2 version database because they cannot be policy-managed.

Cause: An attempt to create a policy-managed database failed because only administrator-managed databases are supported in pre 11.2 version.

Action: Retry the operation with '-nodes' option to create an administrator-managed database.

PRGO-10211: Invalid option specified when retrieving information for image series

Cause: An invalid combination of the '-series', '-image' and '-client' options was specified.

Action: Supply the correct combination of the '-series', '-image' and '-client' options when running 'rhpctl config series'. Only the following combinations are allowed: 1) no option 2) -client option only 3) -image option only 4) -series option only 5) -series and -client options only

PRGO-10321: User "{0}" lacks the authority to perform the 'config role' operation.

Cause: The user running the 'rhpctl config role' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-10391: User "{0}" lacks the authority to perform the 'config image' operation.

Cause: The user running the 'rhpctl config image' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-10461: User "{0}" lacks the authority to query series.

Cause: The user running the 'rhpctl query series' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-10481: User "{0}" lacks the authority to perform the 'config working copy' operation.

Cause: The user running the 'rhpctl config workingcopy' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-11371: User "{0}" lacks the authority to perform the 'query client' operation.

Cause: The user running the 'rhctl query client' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGR-00100 to PRGR-00133

PRGR-00100: The specified state "{0}" is invalid.

Cause: An incorrect image state was specified.

Action: Specify one of TESTABLE, RESTRICTED, or PUBLISHED.

PRGR-00101: The specified privilege "{0}" is invalid.

Cause: An incorrect privilege name was specified.

Action: Specify one of READ, WRITE, or DELETE.

PRGR-00102: Failed to connect to repository database "{0}": {1}

Cause: An attempt to establish a database connection for the Grid Infrastructure Management Repository database failed.

Action: Address the accompanying error messages and retry the command.

PRGR-00103: The repository object already exists in the database : \n{0}

Cause: An attempt was made to store a repository object to the database when it was already present in it.

Action: Either delete the currently stored repository object, or avoid rewriting the same repository object into the database.

PRGR-00104: The database connection context is in incorrect state and therefore cannot be written to the database.

Cause: The connection to the database may have been closed.

Action: Ensure that the database and the listener are running and retry.

PRGR-00105: Illegal argument passed to the entity manager.

Cause: An illegal argument was passed to an entity manager operation.

Action: Internal error. Contact your Oracle representative.

PRGR-00106: Storing this repository object requires a transaction but no transaction exists.

Cause: Internal error.

Action: Please contact Oracle Support Services.

PRGR-00107: Failed to close database connection context.

Cause: An attempt to close database connection context for repository failed.

Action: The database may have gone offline. Restart the database.

PRGR-00108: Failed to get current OS user.

Cause: An attempt to get current OS user failed.

Action: Look at the accompanying message for more details.

PRGR-00109: Invalid repository object version "{0}".

Cause: The repository object had previously been stored with invalid version.

Action: Delete the repository object from the database and store it with the correct version.

PRGR-00110: Repository object "{0}" of class "{1}" does not exist.

Cause: The specified repository object does not exist in the repository database.

Action: Specify the correct repository object name.

PRGR-00111: The site type specified "{0}" is invalid; allowed values are "{1}".

Cause: An invalid site type was specified.

Action: Specify the correct site type from the list of values indicated in the error message.

PRGR-00112: Failed to get current cluster name.

Cause: An attempt to get the current cluster name failed.

Action: Internal error. Contact Oracle Support Services.

PRGR-00113: Invalid access control entry type specified.

Cause: The access control entry type can only be USER or ROLE, but an invalid type was specified.

Action: Internal Error. Contact Oracle Support Services.

PRGR-00114: Image "{0}" does not exist.

Cause: An attempt to fetch the specified image from the repository failed because the object does not exist in the repository.

Action: Fetch an image that already exists, or store the specified image into the repository before attempting to fetch it.

PRGR-00115: Image series "{0}" does not exist.

Cause: An attempt to fetch the specified image series from the repository failed because the object does not exist in the repository.

Action: Fetch an image series that already exists, or store the specified image series into the repository before attempting to fetch it.

PRGR-00116: User "{0}" does not exist.

Cause: An attempt to fetch the specified user from the repository failed because the object does not exist in the repository.

Action: Fetch a user that already exists, or store the specified user into the repository before attempting to fetch it.

PRGR-00117: Role "{0}" does not exist.

Cause: An attempt to fetch the specified role from the repository failed because the object does not exist in the repository.

Action: Fetch a role that already exists, or store the specified role into the repository before attempting to fetch it.

PRGR-00118: Working copy "{0}" does not exist.

Cause: An attempt to fetch the specified working copy from the repository failed because the object does not exist in the repository.

Action: Fetch a working copy that already exists, or store the specified working copy into the repository before attempting to fetch it.

PRGR-00119: Site "{0}" does not exist.

Cause: An attempt to fetch the specified site data from the repository failed because the object does not exist in the repository.

Action: Fetch data for a site that already exists, or store the specified site data into the repository before attempting to fetch it.

PRGR-00120: Failed to get an image name.

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRGR-00121: Image {0} was not found in this series. Make sure the series and image names are correct.

Cause: The specified image name was not found in the image list of the series.

Action: Make sure the series and image names are correct.

PRGR-00122: The specified image type "{0}" is invalid.

Cause: An incorrect image type was specified.

Action: Specify either ORACLEDBSOFTWARE or SOFTWARE.

PRGR-00123: Image "{0}" already exists.

Cause: An attempt to add the specified image to the repository failed because the object already exists in the repository.

Action: Add an image that does not exist, or delete the specified image from the repository before attempting to add it.

PRGR-00124: Image series "{0}" already exists.

Cause: An attempt to add the specified image series to the repository failed because the object already exists in the repository.

Action: Add an image series that does not exist, or delete the specified image series from the repository before attempting to add it.

PRGR-00125: User "{0}" already exists.

Cause: An attempt to add the specified user to the repository failed because the object already exists in the repository.

Action: Add a user that does not exist, or delete the specified user from the repository before attempting to add it.

PRGR-00126: Role "{0}" already exists.

Cause: An attempt to add the specified role to the repository failed because the object already exists in the repository.

Action: Add a role that does not exist, or delete the specified role from the repository before attempting to add it.

PRGR-00127: Working copy "{0}" already exists.

Cause: An attempt to add the specified working copy to the repository failed because the object already exists in the repository.

Action: Add a working copy that does not exist, or delete the specified workingcopy from the repository before attempting to add it.

PRGR-00128: Site "{0}" already exists.

Cause: An attempt to add the specified site to the repository failed because the object already exists in the repository.

Action: Add a site that does not exist, or delete the specified site from the repository before attempting to add it.

PRGR-00129: Invalid holder type "{0}" specified, allowed values are "{1}"

Cause: This is an Oracle internal error.

Action: Call Oracle Support Service.

PRGR-00130: Invalid ACE string: "{0}"

Cause: This is an internal error.

Action: Call Oracle Support Services.

PRGR-00131: Failed to access the database: {0}

Cause: An attempt to access the Grid Infrastructure Management Repository database failed.

Action: Address the accompanying error messages and retry the command. If the database was recently restarted, wait a minute before retrying the command.

PRGR-00132: Client cluster name {0} is the same as the Rapid Home Provisioning Server cluster name.

Cause: An attempt to add the specified client cluster to the repository failed because the client cluster name is the same as the Rapid Home Provisioning Server cluster name.

Action: Specify a different client cluster name.

PRGR-00133: failed to retrieve the platform information from the specified Oracle home path "{0}"

Cause: An error occurred while attempting to retrieve the platform information.

Action: Examine the accompanying errors for more information.

PRGS-00100 to PRGS-00122

PRGS-00100: Failed to create volume {0}

Cause: An attempt to create a volume device for the specified volume name failed.

Action: Review the accompanying error messages that provide the details of why the volume creation failed. Resolve the reported problem and retry.

PRGS-00101: Insufficient space in diskgroup {0}

Cause: Diskgroup does not have enough space for the specified operation.

Action: Add more disks to the diskgroup and re-try the operation.

PRGS-00102: Volume {0} already in use

Cause: The volume name specified was already being used by another volume device.

Action: Specify a different volume name and retry.

PRGS-00103: Disk group {0} does not exist

Cause: The specified disk group was either not created or was not accessible.

Action: Review the accompanying error messages that provide the details. Resolve the reported problem and retry.

PRGS-00104: volume {0} does not exist

Cause: The specified volume did not exist.

Action: Create the specified volume or specify a volume that exists and retry the operation.

PRGS-00105: Failed to get volume device for volume {0}

Cause: An attempt to get the volume device path for the specified volume failed.

Action: Review the accompanying error messages that provide the details. Resolve the reported problem and retry.

PRGS-00106: Failed to delete volume {0}

Cause: An attempt to delete the volume device for the specified volume name failed.

Action: Review the accompanying error messages that provide the details of why the volume creation failed. Resolve the reported problem and retry.

PRGS-00107: Failed to create ACFS on volume device {0}

Cause: The operation to create an Oracle ASM Cluster File System on the specified volume device failed.

Action: Review the accompanying error messages that provide the details of why the file system creation failed. Resolve the reported problem and retry.

PRGS-00108: Failed to delete ACFS on volume device {0}

Cause: The operation to delete an Oracle ASM Cluster File System on the specified volume device failed.

Action: Review the accompanying error messages that provide the details of why the file system creation failed. Resolve the reported problem and retry.

PRGS-00109: Failed to create snapshot {0}

Cause: An attempt to create a snapshot on the Oracle ASM Cluster File System failed.

Action: Review the accompanying error messages that provide the details of why the snapshot creation failed. Resolve the reported problem and retry.

PRGS-00110: Failed to delete snapshot {0}

Cause: An attempt to delete a snapshot on the Oracle ASM Cluster File System failed.

Action: Review the accompanying error messages that provide the details of why the snapshot deletion failed. Resolve the reported problem and retry.

PRGS-00111: Unable to create snapshot {0} as the limit is reached

Cause: The maximum number of snapshots is already reached on the specified ASM Cluster File System.

Action: Reduce the number of snapshots and retry.

PRGS-00112: snapshot {0} already exists

Cause: The specified snapshot name is being already used by another snapshot in the specified ASM Cluster File System.

Action: Specify a different snapshot name and retry.

PRGS-00113: snapshot {0} does not exist

Cause: Snapshot with the specified name did not exist.

Action: Create the snapshot or specify a snapshot that exists and retry the operation.

PRGS-00114: snapshot type {0} is not valid

Cause: An invalid snapshot type was passed for snapshot creation.

Action: Pass either read-only or read-write as snapshot type to create the snapshot.

PRGS-00115: mount type {0} is not valid

Cause: An invalid mount type was specified for mount operation.

Action: Internal error. Contact Oracle Support Services.

PRGS-00116: Failed to resize volume {0} for file system path {1}

Cause: An attempt to resize the volume for the specified file system path failed when creating a snapshot.

Action: Review the accompanying error messages that provide details of the failure. Resolve the reported problem and retry.

PRGS-00117: failed to configure Oracle Layered File System

Cause: An attempt to configure Oracle Layered File System failed because the new file system drivers could not be installed.

Action: Examine the accompanying error messages, address the issues described, and then retry.

PRGS-00118: failed to mount the gold image path '{0}' and read-write path '{1}' on the Oracle Grid Infrastructure home path '{2}'

Cause: An attempt to instantiate the home path failed because the 'mount' command completed with errors.

Action: Examine the accompanying error messages, address the issues described, and then retry.

PRGS-00119: failed to configure Oracle Layered File System on nodes {0}

Cause: An attempt to configure Oracle Layered File System failed because the new file system drivers could not be installed.

Action: Examine the accompanying error messages, address the issues described, and then retry.

PRGS-00120: failed to mount the gold image path '{0}' and read-write path '{1}' on the Oracle Grid Infrastructure home path '{2}' on nodes '{3}'

Cause: An attempt to instantiate the home path failed because the 'mount' command completed with errors.

Action: Examine the accompanying error messages, address issues described and retry.

PRGS-00121: Failed to start Oracle ACFS clone listener on '{0}'.

Cause: An attempt to start an Oracle ASM Cluster File System (ACFS) clone listener on the indicated host failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying error messages, resolve the problems reported, and then retry the operation.

PRGS-00122: Failed to replicate image home path '{0}' to destination Oracle ACFS mount path '{1}' on host '{2}'.

Cause: The operation failed to replicate the specified Oracle ASM Cluster File System (ACFS) image home path to the indicated ACFS mount path on the indicated host. The accompanying messages provide detailed failure information.

Action: Review the accompanying error messages, resolve the problems reported, and then retry the operation.

PRIF-00001 to PRIF-00053

PRIF-00001: invalid format for network interface

Cause: An invalid network interface was given.

Action: Supply a network interface of the form <if_name>/<varname>subnet</varname>:<if_type>.

PRIF-00002: invalid network interface type

Cause: An invalid network interface type was given.

Action: Supply one of the valid interface types PUBLIC, CLUSTER_INTERCONNECT or ASM.

PRIF-00003: cannot find the input interface configured

Cause: An attempt was made to access an interface that is not already configured.

Action: Check if the input interface is configured through the "getif" command option.

PRIF-00004: OCR error while deleting the configuration for the given interface

Cause: OCR may have been configured incorrectly or an OCR API failed.

Action: Check if OCR is configured correctly by running ocrdump.

PRIF-00005: invalid syntax for the setif command option

Cause: An invalid syntax was specified for the oifcfg setif command option.

Action: Make sure the syntax for setif is "oifcfg setif {-node <varname>nodename</varname> | -global} {<if_name>/<varname>subnet</varname>:<if_type>}..."

PRIF-00006: invalid syntax for the getif command option

Cause: An invalid syntax was specified for the oifcfg getif command option.

Action: Make sure the syntax for getif is "oifcfg getif [-node <varname>nodename</varname> | -global] [-if <if_name>/<varname>subnet</varname>] [-type <if_type>]]."

PRIF-00007: invalid syntax for the delif command option

Cause: An invalid syntax was specified for the oifcfg delif command option.

Action: Make sure the syntax for delif is "oifcfg delif {{-node <varname>nodename</varname> | -global} [<if_name>/<varname>subnet</varname>]] [-force] | -force}. "

PRIF-00008: failed to initialize the prifcg context

Cause: There was a system error.

Action: Check the messages in the log file oifcfg.log.

PRIF-00009: incorrect usage

Cause: Invalid command line options specified for the oifcfg tool.

Action: Run "oifcfg -help" to check the usage for the oifcfg tool.

PRIF-00010: failed to initialize the cluster registry

Cause: The cluster registry was not configured correctly.

Action: Run "ocrdump" to see if the cluster registry was configured properly.

PRIF-00011: cluster registry error

Cause: There was an internal error while operating on the cluster registry.

Action: Check the messages in the log file oifcfg.log.

PRIF-00012: failed to initialize cluster support services

Cause: The cluster support services module was not configured correctly.

Action: Check the messages in the log file oifcfg.log.

PRIF-00013: cluster support services error

Cause: There was an internal error while accessing cluster support services.

Action: Check if Cluster Support Services is running properly.

PRIF-00014: invalid node name

Cause: The node name does not match any of the configured nodes.

Action: Ensure that the supplied node name is one of the node names returned by 'olsnodes'.

PRIF-00015: invalid format for subnet

Cause: An invalid subnet was given.

Action: Supply a subnet of the form a.b.c.d where a, b, c and d is a value between 0 and 254 (inclusive).

PRIF-00016: invalid syntax for the iflist command option

Cause: An invalid syntax was specified for the oifcfg iflist command option.

Action: Make sure the syntax for iflist is "oifcfg iflist [-p [-n]]."

PRIF-00017: Error in getting the host names in a cluster

Cause: There was an internal error while calling clsgpnp_crs_getcsshosts.

Action: Check the underlying errors shown with this.

PRIF-00018: Error in deleting network information from GPnP profile

Cause: There was an internal error while calling clsgpnp_x_prfDelHostNetInfo.

Action: Check the underlying errors shown with this.

PRIF-00019: Error in getting the network attribute values from GPnP profile

Cause: There was an internal error while calling clsgpnp_x_prfGetNetAttrVal.

Action: Check the underlying errors shown with this.

PRIF-00020: Error in getting the lock for GPnP profile

Cause: There was an internal error while calling clsgpnp_crs_cssLockUpdates.

Action: Check the underlying errors shown with this.

PRIF-00021: Error in getting the GPnP profile

Cause: There was an internal error while calling `clsgpnp_getProfile`.

Action: Check the underlying errors shown with this.

PRIF-00022: Error in cloning the GPnP profile

Cause: There was an internal error while calling `clsgpnp_getProfile`.

Action: Check the underlying errors shown with this.

PRIF-00023: Error in getting network interface from GPnP profile

Cause: There was an internal error while calling `clsgpnp_xprfGetHostNetInfo`.

Action: Check the underlying errors shown with this.

PRIF-00024: Error in retrieving the network interface from GPnP profile

Cause: Failed to retrieve the network interface information because of underlying errors.

Action: Check the underlying errors shown with this.

PRIF-00025: Error in setting network attribute value in GPnP profile

Cause: There was an internal error while calling `clsgpnp_xprfSetNetAttrVal`.

Action: Check the underlying errors shown with this.

PRIF-00026: Error in update the profiles in the cluster

Cause: There was an internal error while calling `clsgpnp_crs_ensureSignAndPush`.

Action: Check the underlying errors shown with this.

PRIF-00027: Error in releasing the in memory presentation of GPnP profile

Cause: There was an internal error while calling `clsgpnp_profileDestroy`.

Action: Check the underlying errors shown with this.

PRIF-00028: Error in unlock the GPnP profile

Cause: There was an internal error while calling `clsgpnp_crs_cssUnlockUpdates`.

Action: Check the underlying errors shown with this.

PRIF-00029: Warning: wildcard in network parameters can cause mismatch among GPnP profile, OCR, and system.

Cause: Wildcard syntax was detected in one or more network-related parameters. Although this is allowed, be aware that network particulars (such as interface names and subnets) must be identical on all nodes of the cluster. Using wildcard syntax in network parameters does not allow the network configuration to vary across nodes. This problem with wildcard syntax is limited to 10.2 and 11.1 databases.

Action: If wildcard causes the problem, provide interface name and subnet without wildcard for 10.2 and 11.1 databases.

PRIF-00030: Network information in OCR and GPnP profile differs

Cause: There was mismatched network information in OCR.

Action: Use 'oifcfg setif' to synchronize the network information from GPnP profile to OCR.

PRIF-00031: Failed to delete the specified network interface because it is the last private interface

Cause: A request to delete the only private network interface was refused because force was not specified.

Action: Specify the '-force' option to delete the last private interface, but be aware this may render Oracle Clusterware inoperative.

PRIF-00032: Error in checking for profile availability for host <varname>string</varname>\n <varname>string</varname>

Cause: Failed to set or delete interface because the profile was not available on the specified node.

Action: Make sure that profile is available on all cluster nodes before setting interface or deleting the interface. Examine the accompanying error messages and respond accordingly.

PRIF-00033: Failed to set or delete interface because hosts could not be discovered\n <varname>string</varname>

Cause: An attempt to set or delete an interface failed because hosts could not be discovered or their GPnP profiles could not be accessed.

Action: Ensure that the Oracle GPnP and mDNS daemons are running on all cluster nodes and resolve any other issues reported in accompanying error messages.

PRIF-00034: IPv6 subnets are not supported for cluster interconnect or Oracle ASM network

Cause: An attempt was made to classify an IPv6 subnet as Oracle ASM network or cluster interconnect.

Action: Use an IPv4 subnet for Oracle ASM network and cluster interconnect.

PRIF-00035: Failed to retrieve the OCR registry key [<varname>string</varname>] for global interface [<varname>string</varname>]

Cause: An attempt to get the registry key for the specified global interface from OCR failed.

Action: Delete the interface with invalid key using 'oifcfg delif -global <if_name> [-force]'. Reset the interface using 'oifcfg setif -global <if_name>/<varname>subnet</varname>:<if_type>'.

PRIF-00036: Failed to retrieve the OCR registry key [<varname>string</varname>] for interface <varname>string</varname> on node <varname>string</varname>

Cause: An attempt to get the registry key for the specified interface from OCR failed.

Action: Delete the interface with invalid key using 'oifcfg delif -node <varname>nodename</varname> <if_name> [-force]'. Reset the interface using 'oifcfg setif -node <varname>nodename</varname> <if_name>/<varname>subnet</varname>:<if_type>'.

PRIF-00050: duplicate interface is given in the input

Cause: Duplicate interface is given in the input.

Action: Warning: Supply a network interface of the form <if_name>/<varname>subnet</varname>:<if_type>. Make sure to provide unique combination for <if_name>/<varname>subnet</varname>:<if_type> if multiple inputs are provided in the same command line or if the entry already exists.

PRIF-00051: Warning: interface [<varname>string</varname>] is set to both public and cluster_interconnect

Cause: The interface is set to both public and cluster_interconnect.

Action: Warning: Make sure that the interface is not set to both public and cluster_interconnect.

PRIF-00052: Could not get an immediate lock for GPnP profile. Wait to get the lock ...

Cause: The command was unable to take an exclusive CSS lock with the nowait option.

Action: Ctrl-C if wait for too long. Check the setup of clusterware.

PRIF-00053: Invalid type combination specified for interface [<varname>string</varname>]

Cause: A network interface specification included both 'public' and 'asm' types.

Action: Make sure that the interface is not set to both 'public' and 'asm'.

PRKA-02001 to PRKA-02005

PRKA-02001: GSD already exists

Cause: An attempt was made to create the Global Services Daemon (GSD) application while there was a running GSD application.

Action: Stop and remove the GSD and create the GSD application again using 'srvctl add nodeapps'.

PRKA-02002: Listener already exists

Cause: An attempt was made to create a Listener application while there was a running Listener application.

Action: Stop and remove the running Listener and create the Listener application again using 'srvctl add nodeapps'.

PRKA-02003: EM Agent already exists

Cause: An attempt was made to create an Agent application while there was a running Agent application.

Action: Stop the running Agent and create the Agent application again using 'srvctl add nodeapps'.

PRKA-02005: Netmasks are different for starting and ending IP addresses

Cause: An invalid range of VIP addresses was specified for the cluster

Action: Check if the starting and ending addresses in the VIP range belong to the same netmask.

PRKC-01000 to PRKC-01177

PRKC-01000: No active nodes detected in the cluster

Cause: The active node list of the cluster could not be retrieved. This could occur if the operating system dependent clusterware was not functioning properly in one or more nodes in the cluster, or because there was no clusterware installed on the system.

Action: Check the state of the cluster by running 'lsnodes' binary from your ORACLE_HOME/bin and see if it prints the node list correctly.

PRKC-01001: Error submitting commands in the buffer

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRKC-01002: Not all the submitted commands completed successfully.

Cause: Some of the submitted commands failed to complete on the nodes specified either because the node in question failed or because communication between the nodes was disrupted.

Action: Check that all the specified nodes are up and running or check the details of the failures on the given nodes.

PRKC-01004: Problem in copying file to nodes

Cause: Attempted file copy operation(s) from the local node to one or more nodes in the cluster and one or multiple of those copy file operations failed. Possible causes: 1) One or more file copy operations to nodes in the cluster failed. 2) The destination directory did not have write permission for the user on one or more of the nodes. 3) The source file did not exist. 4) The 'rcp' command to one or more nodes failed on UNIX platforms.

Action: 1) Check that the source file exists. 2) Check that all nodes in the cluster are up. 3) Check that destination directory has write permission for the user. 4) On UNIX based platforms check that user can do 'rcp' to all the nodes.

PRKC-01005: Problem in removing file from nodes

Cause: Attempted file remove operation(s) from the local node to one or more nodes in the cluster and one or multiple of those file remove operations failed. Possible causes: 1) One or more nodes failed during the operation. 2) The destination directory did not have write permission for the user on one or more of the nodes. 3) The source file did not exist. 4) The 'rcp' command to one or more nodes failed on UNIX platforms.

Action: Check the accompanying error messages for details.

PRKC-01006: Problem in moving file to nodes

Cause: Attempted file move operation(s) from the local node to one or more nodes in the cluster and one or multiple of those move file operations failed. Possible causes: 1) One or more nodes failed during the operation. 2) The destination directory did not

have write permission for the user on one or more of the nodes. 3) The source file did not exist. 4) The 'rcp' command to one or more nodes failed on UNIX platforms.

Action: Check the accompanying error messages for details.

PRKC-01007: Problem in creating directories on the nodes

Cause: Attempted directory create operation(s) from the local node to one or more nodes in the cluster and one or multiple of those directory create operations failed. Possible causes: 1) One or more nodes failed during the operation. 2) The destination directory did not have write permission for the user on one or more of the nodes. 3) The 'rcp' command to one or more nodes failed on UNIX platforms.

Action: Check the accompanying error messages for details.

PRKC-01009: Failed to start the service on all nodes

Cause: The service failed to start on one or more nodes of the cluster.

Action: Check if all the nodes in cluster are up and look in the clusterware alert log.

PRKC-01010: Failed to stop the service on all nodes

Cause: The service failed to stop on one or more nodes of the cluster.

Action: Check if all the nodes in cluster are up and service is still up on failed nodes. Look in the clusterware alert log.

PRKC-01011: Failed to delete the service from all nodes

Cause: The service failed to be deleted on one or more nodes of the cluster.

Action: Check if all the nodes in cluster are up and service is still registered. Look in the clusterware alert log.

PRKC-01012: Failed to create the service on all nodes

Cause: The service failed to be created on one or more nodes of the cluster.

Action: Check if all the nodes in cluster are up. Look in the clusterware alert log.

PRKC-01016: Failed to retrieve value of the environment variable "{0}", {1}

Cause: A required environment variable was not defined.

Action: Define the environment variable.

PRKC-01017: Problem restarting GSD

Cause: GSD (Global Services Daemon) could not be started on the local node. This could occur if the operating system dependent clusterware was not functioning properly or there is already a running GSD.

Action: Check the state of your clusterware by running 'lsnodes' from ORACLE_HOME/bin. It should list the nodes in the cluster. Try 'gsdctl stop' and then 'gsdctl start' again.

PRKC-01018: Error getting coordinator node

Cause: This could occur if the operating system dependent clusterware was not functioning properly.

Action: Use 'gsdctl stop' on each node to stop the GSDs. Use 'gsdctl start' on each node in the cluster.

PRKC-01019: Error creating handle to GSD daemon on the node {0}

Cause: Global Services Daemon was not running on the node.

Action: Use 'gsdctl stat' to check the status of the daemon. Use 'gsdctl start' to start it.

PRKC-01020: Exception while executing the operation on the remote node {0}

Cause: Attempted to execute an operation on the remote node when the Global Services Daemon was not up on the remote node {0}.

Action: Start the Global Services Daemon on the remote node using 'gsdctl start'.

PRKC-01021: Problem in the clusterware

Cause: The operating system dependent clusterware could not be contacted. This could occur because the operating system dependent clusterware was not functioning properly.

Action: Check the state of the operating system dependent clusterware.

PRKC-01022: Could not get node name for node {0} in {1}

Cause: The operating system dependent clusterware could not be contacted. This could occur because the operating system dependent clusterware was not functioning properly.

Action: Check the state of the operating system dependent clusterware using 'lsnodes -n'.

PRKC-01023: Invalid IP address format: {0}

Cause: The provided IP address was neither an IPv4 nor an IPv6 valid address.

Action: Make sure that the IP address is a valid IPv4 or IPv6 address.

PRKC-01025: Failed to create a file under the filepath {0} because the filepath is not executable or writable

Cause: The directory of the specified filepath did not have execute or write permission. So the temporary file could not be created to test whether the filepath was shared among nodes.

Action: Make the directory of the specified filepath executable and writable.

PRKC-01141: Oracle Restart is not supported in version {0}. It is supported from version {1} onwards

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRKC-01144: File "{0}" not found.

Cause: The file was not found in the file system.

Action: Make sure that the file exists in the file system.

PRKC-01148: Failed to get host name for the local computer

Cause: An error occurred while attempting to retrieve the TCP/IP host name

Action: Correct the problem indicated by the accompanying error messages.

PRKC-01149: Failed to get OCR locations

Cause: An error occurred while attempting to retrieve the OCR locations, possibly due to missing or incorrect OCR locations file, or incomplete OCR configuration, or due to missing or incorrect SRVM shared libraries.

Action: Verify that the Clusterware has been correctly installed and configured. Verify that the ocr.loc file is present and readable in the appropriate location for your platform.

PRKC-01150: Failed to get drive letters used on following nodes: "{0}"

Cause: An error occurred while attempting to retrieve used drive letters on one or more nodes.

Action: Look at the accompanying messages and fix the error(s). The messages typically relate to a node not being reachable, or the remote execution service not running on the node, or some permissions issue when attempting to use the remote execution service on the remote node.

PRKC-01151: The given path "{0}" does not exist

Cause: The specified path may not have been created or an incorrect path has been specified.

Action: Make sure that the given path exists by specifying a correct existing path.

PRKC-01152: The specified path "{0}" is not a directory

Cause: The specified path may be a file, not a directory, or an incorrect path may have been specified.

Action: Make sure to specify a path that is a valid directory path.

PRKC-01153: No directory is available on the remote node "{0}" to copy the binary RemoteExecService.exe

Cause: Either the path defined by value of registry key HKEY_LOCAL_MACHINE/System/CurrentControlSet/Services/OracleRemExecService is not available on the remote node, or the c:/temp/ directory is not available or not accessible on the specified remote node.

Action: Make sure that the required path is available on the remote node.

PRKC-01155: The node list provided had only one entry or had multiple entries that were duplicates of a single nodename entry

Cause: The list of nodes provided for the shared path check was either only one node, or the list included entries that were duplicates of the same single node.

Action: Please provide the correct nodelist for the cluster on which the check is being called, making sure that there are at least two distinct entries.

PRKC-01156: Failed to validate raw device "{0}" -- Details: {1}

Cause: The raw device was not an existing device that could be opened and recognized by the OS as a "raw/character" device type.

Action: Make sure the supplied value identifies a valid raw device that can be opened as a "raw/character" device type.

PRKC-01157: Failed to validate raw device "{0}"

Cause: The raw device was not an existing device that could be opened and recognized by the OS as a "raw/character" device type.

Action: Make sure the supplied value identifies a valid raw device that can be opened as a "raw/character" device type.

PRKC-01158: Failed to validate raw device "{0}" -- Details: {1}

Cause: The device was not an existing device that could be opened and recognized by the OS as either "raw/character" or a "block" device type.

Action: Make sure the supplied value identifies a valid device that can be opened as a "raw/character" or "block" device type.

PRKC-01159: Failed to validate device "{0}"

Cause: The device was not an existing device that could be opened and recognized by the OS as either "raw/character" or a "block" device type.

Action: Make sure the supplied value identifies a valid device that can be opened as a "raw/character" or "block" device type.

PRKC-01160: Failed to retrieve the value of environment variable "{0}" on following nodes: "{1}", [{2}]

Cause: An error occurred while attempting to retrieve value of environment variable on one or more nodes due to the node not being reachable, or the remote execution service not running on the node, or some permissions issue when attempting to use the remote execution service on the remote node.

Action: Look at the accompanying messages and respond accordingly.

PRKC-01161: Failed to retrieve the Windows domain on following nodes: "{0}"

Cause: An error occurred while attempting to retrieve the Windows domain on one or more nodes. The possible causes include: - A node is not reachable. - Remote execution service is not running on the node. - Permissions problems prevented use of remote execution service on a node.

Action: Look at the accompanying messages and respond accordingly.

PRKC-01162: "{0}" is not a file

Cause: The indicated object was expected to be a file, but it was not.

Action: Make sure that the indicated object is a file and not a directory.

PRKC-01163: {0} Exception occurred while determining validity of storage type.

Cause: An error occurred while getting storage type of the given path. Null arguments might have been passed.

Action: Make sure that the native api is passing non null arguments.

PRKC-01164: invalid command or arguments

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRKC-01165: Failed to set up Windows service OracleRemoteExecService on node '{0}'

Cause: An error occurred while setting up OracleRemoteExecService on the specified nodes."

Action: Look at the accompanying messages and respond accordingly.

PRKC-01166: Storage is partially shared. Details: {0}

Cause: A subset of the nodes provided shared the given filesystem path with the local node.

Action: Mount the NFS filesystem on the node(s) that do not share the filesystem path.

PRKC-01167: Failed to resolve the specified path "{0}" to its physical path on following nodes: "{1}", [{2}]

Cause: An error occurred while attempting to resolve the path on one or more nodes due to the node not being reachable, the remote execution service not running on the node, or some permissions issue when attempting to use the remote execution service on the remote node.

Action: Look at the accompanying messages and respond accordingly.

PRKC-01168: The supplied IP address "{0}" is invalid or specifies an unknown host name

Cause: The provided string had an invalid IP address format or could not be resolved to a known host name.

Action: Make sure that the IP address has a valid IPv4 or IPv6 address format or that it resolves to a known host name.

PRKC-01169: The supplied IPv6 address "{0}" is invalid

Cause: The provided string had not the correct IPv6 address format.

Action: Make sure that the IP address has a valid IPv6 address format.

PRKC-01170: The IPv6 prefix length "{0}" is out of the allowed range of 0 to 128

Cause: The specified IPv6 prefix length was out of the allowed range.

Action: Make sure that the IPv6 prefix length is an integer from 0 to 128.

PRKC-01171: Internal error: {0}

Cause: An internal error occurred. The included value is an internal identifier.

Action: Oracle internal error. Contact Oracle Support Services.

PRKC-01172: The supplied IPv6 prefix length "{0}" is not an integer

Cause: The provided string for the IPv6 prefix length was not an integer.

Action: Make sure that the IPv6 prefix length is an integer from 0 to 128.

PRKC-01173: VIP name "{0}" does not resolve to an {1} address matching the netmask or prefix length {2}

Cause: The VIP name did not resolve to the IP address type specified by the netmask or prefix lengths.

Action: Make sure that the VIP name resolves to the IP address type which is indirectly specified by the netmask or prefix length.

PRKC-01174: Failed to verify whether the following IP addresses are reachable or not: {0}

Cause: A network error occurred while attempting to reach the specified IP addresses.

Action: Use an Operating System command such as 'ping' or 'traceroute' to determine accessibility of the IP address.

PRKC-01175: Failed to copy directories "{0}" to one or more nodes

Cause: An attempt to copy file system directories from the local node to one or more nodes in the cluster failed. Possible causes: 1) One or more nodes failed during the copy operation. 2) The user does not have write permission for a given destination directory on one or more of the nodes. 3) The user does not have read access to files or directories being copied. 4) On UNIX or Linux platforms, the 'scp' command failed.

Action: Check the accompanying error messages for details.

PRKC-01176: Failed to list contents of directory "{0}" on nodes "{1}"

Cause: An attempt to list the contents of the indicated directory failed. Possible causes: 1) The specified directory does not exist. 2) One or more nodes failed during the operation.

Action: Check the accompanying error messages for details.

PRKC-01177: The format of the specified version "{0}" is invalid.

Cause: An attempt to compare the target version against the software version failed because the specified version was not valid.

Action: Specify a version number that is one to five sequences of decimal digits separated by periods.

PRKE-01008 to PRKE-01011

PRKE-01008: Failed to get list of active nodes from Clusterware

Cause: Possible causes: 1) Not operating in cluster mode. 2) Failed to load SRVM libraries. 3) Failed to initialize clusterware context.

Action: Check for the health of clusterware using "lsnodes" utility to get the list of active nodes in the cluster. Also, check for the presence of srvm libraries in the load library path. If these two checks get cleared, please contact Oracle Support Services.

PRKE-01009: Failed to start GSD on local node

Cause: GSD is already running on the local node, or GSD could not be started because of some other reason.

Action: Run "gsdctl stat" to check if a daemon is already running on the local node. If a daemon is not running on local node, please contact Oracle Support Services to check for the other reasons for failure.

PRKE-01010: Failed to stop GSD on local node

Cause: GSD is not running on the local node, or GSD could not shut down gracefully.

Action: Run "gsdctl stat" to check if a GSD is running on the local node. If a GSD is running, please contact Oracle Support Services to check for other reasons for failure.

PRKE-01011: Failed to get status of GSD on local node

Cause: Failure to get the list of active nodes from the cluster, or failure to query the list of live daemons from the clusterware.

Action: Run "lsnodes" to check the health of the clusterware. If the clusterware is working fine, check for the presence of SRVM libraries in the load library path. If the libraries are present, please contact Oracle Support Services for further assistance.

PRKF-01000 to PRKF-01258

PRKF-01000: Empty value for command line option {0} for command {1}

Cause: An empty value was specified for this command line option.

Action: Provide a value following the specific command line option.

PRKF-01001: Maximum character length ({0}) exceeded for command line option {1}

Cause: The user entered more characters than the maximum length for this command line option value.

Action: Provide a value with no more characters than the maximum limit.

PRKF-01002: Type: {0}

Cause: Mount options

Action: None

PRKF-01003: Mount options: {0}

Cause: Mount options

Action: None

PRKF-01004: Nodes: {0}

Cause: Node list

Action: None

PRKF-01005: Server pools: {0}

Cause: Serverpool list

Action: None

PRKF-01006: Application ID: {0}

Cause: Application ID

Action: None

PRKF-01011: Invalid file system type "{0}"

Cause: An invalid file system type was specified for the file system resource.

Action: The file system type must be either 'ACFS', 'NTFS', 'ZFS', 'JFS', 'EXT3' or 'EXT4'

PRKF-01012: Invalid 'autostart' option value "{0}"

Cause: An invalid value was specified for the command option 'autostart'.

Action: The 'autostart' option value must be either 'always', 'never' or 'restore'

PRKF-01013: Options "{0}" and "{1}" are in conflict

Cause: The specified options were set although mutually exclusive.

Action: Make sure that only one of the options is set.

PRKF-01014: An application ID is allowed only for node-local file systems. "{0}" is valid only if "{1}" or "{2}" is present.

Cause: An application ID was provided for a node-local file system.

Action: Make sure that use the application ID option only for non node-local file systems.

PRKF-01015: Either option "{0}" or "{1}" is required to be specified for file system "{2}"

Cause: For non-ACFS file systems, the user did not provide a nodelist or a server pool list.

Action: For non-ACFS file systems, make sure that either a nodelist or a server pool list is provided.

PRKF-01016: One or more nodes in the list of nodes ("{0}") is empty

Cause: A list of nodes included an empty node name.

Action: Make sure that no empty string is provided as part of the node list.

PRKF-01017: The file system found for volume device "{0}" is added for all nodes

Cause: The file system with the given volume device path was configured as a global file system.

Action: Either change the volume device path or do not use the '-nodes' and '-serverpools' options as part of the command 'srvctl modify filesystem'. To specify placement for an existing global file system, remove it and re-create it.

PRKF-01018: An attempt to modify the port of the Rapid Home Provisioning Server failed because the Rapid Home Provisioning Server is running. Use -force to force stop and restart of Rapid Home Provisioning Server.

Cause: A request to modify the port number of Rapid Home Provisioning Server was rejected because such modification requires Rapid Home Provisioning Server to be stopped and restarted.

Action: Use '-force' option to force restart of Rapid Home Provisioning Server.

PRKF-01019: An attempt to modify the Rapid Home Provisioning Client failed because the Rapid Home Provisioning Client is running.

Cause: A request to modify the Rapid Home Provisioning Client was rejected because such modification requires the Rapid Home Provisioning Client to be stopped and restarted.

Action: Stop the Rapid Home Provisioning Client with the 'srvctl stop rhpcient' command, reissue the 'srvctl modify rhpcient' and restart with the 'srvctl start rhpcient' command.

PRKF-01020: No other option is allowed when the '-clientdata' option is specified.

Cause: During the command 'srvctl add gns', '-clientdata' option was specified along with other options which are not allowed with '-clientdata'.

Action: Only specify the '-clientdata' option.

PRKF-01022: The "-{0}" option requires one of the options "-{1}", "-{2}", "-{3}" or "-{4}".

Cause: An option was specified that required one of the other possible options to be specified at the same time.

Action: Specify only one of the possible options.

PRKF-01023: Cannot specify both of the "-{0}" and "-{1}" options.

Cause: An invalid combination of options was specified.

Action: Specify only one of the indicated options.

PRKF-01024: The "-{0}" option is not allowed when the "-weight", "-priority", "-port" or "-instance" options are specified.

Cause: The '-createsrv' option was not specified with '-weight', '-priority', '-port' or '-instance' options.

Action: Only specify the '-createsrv', '-target' and '-protocol' options with the '-weight', '-priority', '-port' or '-instance' options.

PRKF-01025: Only "-createsrv" or "-deletesrv" options are allowed when the "-{0}" option is specified.

Cause: An option other than '-createsrv' or '-deletesrv' was specified.

Action: Only specify the '-createsrv' or '-deletesrv' options with the '-protocol' option.

PRKF-01026: The "-{0}" option cannot be specified with the "-timetolive" option.

Cause: An invalid combination of options were specified with the '-timetolive' option.

Action: Specify only valid combination of options with the '-timetolive' option.

PRKF-01027: Only "-createtxt" or "-createptr" command options are allowed when the "-nametl" option is specified.

Cause: A command option other than '-createtxt' or '-createptr' was specified with the '-nametl' option.

Action: Only specify the '-createtxt' or '-createptr' command options with the '-nametl' option.

PRKF-01028: This action is not permitted on the management database

Cause: An attempt to perform the requested action on the management database was rejected.

Action: Try the action on a non-management database or use the commands 'srvctl <varname>verb</varname> mgmtldb'.

PRKF-01033: Invalid command option {0} specified for Standard ASM

Cause: An option was specified that only can be used with Flex ASM, but Standard ASM is currently configured.

Action: Retry the command omitting the specified invalid option.

PRKF-01036: Option '-eval' cannot be used to evaluate modifications of a administrator-managed database without the '-srvpool' option

Cause: The command 'srvctl modify database -db <db_name> -eval' request was issued without the '-srvpool' option. The only '-eval' option modification that can be evaluated for an administrator-managed database is the conversion of that database to a policy-managed database, which is what is requested with the '-srvpool' option.

Action: To evaluate effects of modifications on administrator-managed database provide '-srvpool' option.

PRKF-01065: Option '-eval' cannot be used to evaluate relocation of a database without the '-node' option

Cause: The command 'srvctl relocate database -db <db_name> -eval' request was issued without the '-node' option.

Action: To evaluate effects of database relocation, specify the '-node' option.

PRKF-01066: Cannot export server data because GNS is not configured with a domain

Cause: An attempt to export server data failed because Grid Naming Service (GNS) was not configured with a domain.

Action: Add GNS using the command 'srvctl add gns -domain' and retry the command.

PRKF-01067: Option "-delete" can be specified only with a non-mandatory "-address" option

Cause: An invalid combination of options was specified with the '-delete' option.

Action: Specify only '-address' option with the '-delete' option and retry the command.

PRKF-01068: Command line options "{0}" and "{1}" cannot be used together

Cause: Conflicting options were specified on a srvctl command.

Action: Reissue the command with the correct options.

PRKF-01070: Modify client data operation is not allowed because GNS is configured

Cause: An attempt to modify client data failed because GNS was configured. Client data can only be modified on a GNS client cluster.

Action: Remove the GNS configuration and retry the command.

PRKF-01071: Unable to add Rapid Home Provisioning Server because the resource for diskgroup {0} could not be found. {1}

Cause: The resource for the specified disk group was not found. Either the diskgroup name was misspelled or the diskgroup has not been mounted.

Action: Correct the diskgroup spelling or use SQL*Plus or ASMCA to create the diskgroup.

PRKF-01072: The '-file' option value "{0}" does not exist or cannot be read

Cause: The '-file' option value specified a nonexistent or non-readable file pathname.

Action: Ensure that the '-file' option value corresponds to an existing readable file pathname.

PRKF-01073: One or more server pool names in the list of server pools ("0") is empty

Cause: While adding a filesystem, the specified list of server pools included an empty server pool name.

Action: Make sure that no empty string is provided as part of the server pool list.

PRKF-01074: Invalid command line options. "-subnet" option must be specified with either "-asmlistener" or "-leaflistener".

Cause: An invalid combination of options was specified.

Action: If issuing the command with the '-subnet' option, include either '-asmlistener' or '-leaflistener' option.

PRKF-01075: Missing required option '-available'

Cause: The '-toprefer' option was specified on the command 'srvctl modify service' request without required '-available' option.

Action: Make sure that the required option is provided.

PRKF-01076: Option '-eval' cannot be used to evaluate effects of addition of service {0} with an administrator-managed database {1}

Cause: The '-eval' option was specified on the command 'srvctl add service' request with an administrator-managed database.

Action: Specify a policy-managed database.

PRKF-01077: Server pool or node list cannot be modified because the file system for volume device {0} is a cluster-wide file system

Cause: An attempt to modify the server pool or node list attributes of a cluster file system was rejected because the filesystem resource was a local resource. Placement attributes like server pools or node names apply only to cluster resources.

Action: Do not specify node names and server pools, or remove the local resource and add a cluster resource using the command 'srvctl add filesystem {-serverpools <serverpool_list>|-nodes <node_list>}'

PRKF-01078: Option '-eval' cannot be used to evaluate effects of modification of service {0} with an administrator-managed database {1}

Cause: The '-eval' option was specified on the command 'srvctl modify service' request with an administrator-managed database.

Action: Specify a policy-managed database.

PRKF-01079: Option '-eval' cannot be used to evaluate effects of starting service {0} with an administrator-managed database {1}

Cause: The '-eval' option was specified on the command 'srvctl start service' request with an administrator-managed database.

Action: Specify a policy-managed database.

PRKF-01080: Option '-eval' cannot be used to evaluate effects of stopping service {0} with an administrator-managed database {1}

Cause: The '-eval' option was specified on the command 'srvctl stop service' request with an administrator-managed database.

Action: Specify a policy-managed database.

PRKF-01083: Port "{0}" is already configured for use as a local, remote or Enterprise Manager by the ONS daemon

Cause: The specified port was already in use by an ONS daemon.

Action: Specify a port that is not already configured.

PRKF-01084: Port "{0}" is used in multiple ONS ports

Cause: The specified port was provided as two or more ONS ports.

Action: Ensure that the specified port is different from the local ONS, remote ONS and Enterprise Manager ports.

PRKF-01085: Command "{0}" is not supported for object "{1}"

Cause: An unsupported command and object combination was specified.

Action: Re-issue the command using one of the supported usages.

PRKF-01086: Command option {0} and {1} cannot be used together

Cause: Conflicting command line options were supplied.

Action: Check the command line options entered and make sure that all the required options in one set are specified.

PRKF-01087: Missing required option {0} when {1} was specified

Cause: The specified command option is missing.

Action: Use the command 'srvctl' with the '-help' option to display option details for the command and make sure that all the required options are specified.

PRKF-01088: Failed to add PQ service {0} using PQ server pool {1}. Administrator-managed database {2} does not support PQ services

Cause: An attempt to add a PQ service to the specified database was rejected because only policy-managed databases support PQ services.

Action: Do not add PQ services to administrator-managed databases.

PRKF-01089: Specified command option {0} can only be used in Flex Cluster

Cause: The cluster was configured as a regular cluster. The specified command option is only valid for Flex Cluster.

Action: Do not specify options that are only valid in Flex Cluster mode when the cluster is configured as a regular cluster.

PRKF-01090: Existing service {0} cannot be registered as the parallel query helper of the primary service {1}

Cause: An attempt to register a parallel query service specified a service that already exists.

Action: Use a different parallel query service name.

PRKF-01091: Failed to start service {0} of database {1} on server pool {2} that was not configured for service

Cause: The service was not configured to run on the specified serverpool.

Action: Start the services on already configured serverpool or modify the service to run on the specified serverpool.

PRKF-01092: The parallel query service name {0} was specified when the primary service name {1} is required

Cause: An attempt was made to operate on a database service via its parallel query helper service name rather than the primary service name.

Action: Specify the primary service name.

PRKF-01093: Failed to stop service {0} of database {1} on server pool {2} that was not configured for service

Cause: The service was not running on the specified serverpool.

Action: Stop the service on the serverpool on which it is running.

PRKF-01094: Failed to set the parallel query pool {0} because the parallel query helper service does not exist

Cause: An attempt was made to set a parallel query pool for the service that does not have a parallel query helper service configured or whose configured parallel query helper service would be removed by the '-pqservice' argument.

Action: Issue the command "srvctl modify service -db <database_name> -service <primary_service_name> -pqservice <pq_service_name> -pqpool <pq_pool_name>" to configure parallel query service for the specified parallel query server pool.

PRKF-01097: Invalid command line option -{0} for "srvctl config gns" command on GNS client cluster

Cause: An invalid command line option was specified for 'srvctl config gns' command on Grid Naming Service (GNS) client cluster.

Action: Re-issue the command using one of the supported options.

PRKF-01098: Nothing to modify

Cause: No options were specified to modify.

Action: Specify at least one option with the modify command.

PRKF-01102: Cannot issue " srvctl {0} asm " in ASM Client Cluster

Cause: A srvctl command that operates on ASM was issued in an ASM Client Cluster.

Action: Issue the specified command in the cluster that ASM Client Cluster connects to.

PRKF-01103: Export of client data is not allowed on client cluster.

Cause: The command 'srvctl export gns' request was issued while the cluster was configured as Client.

Action: Rerun the command on the Grid Naming Service (GNS) Server Cluster.

PRKF-01104: Import file "{0}" does not exist

Cause: An attempt to import a GNS instance failed because the import file could not be found.

Action: Provide the name of an existing file to import.

PRKF-01105: Failed to add PQ service {0} because it has the same name as the core service {1}

Cause: An attempt to add PQ service was rejected because it has the same name as that of core service.

Action: Issue the command using a different PQ service name.

PRKF-01106: Invalid command line options. "-user" option cannot be specified with "-asmlistener" or "-leaflistener".

Cause: An invalid combination of options was specified.

Action: If issuing the command with the '-user' option, do not include '-asmlistener' or '-leaflistener' options.

PRKF-01107: GNS server already configured

Cause: An attempt to add a GNS server failed because a GNS server was already configured.

Action: Remove GNS server using the command 'srvctl remove gns' and retry the command.

PRKF-01108: Database {0} is an administrator-managed database, and therefore cannot accept only "-pqpool" option without "-serverpool" option for the conversion to a policy-managed database

Cause: An option was specified that only can be used on a policy-managed database. The '-pqpool' option alone is not sufficient to convert an administrator-managed database to a policy-managed database.

Action: Retry the command omitting the '-pqpool' option or convert the database to a policy-managed database by specifying one or more hub serverpools with the '-serverpool' option also in addition to the '-pqpool' option specified on the command line.

PRKF-01109: Missing -asm or -remove option to remove ASM listener

Cause: An invalid combination of options was specified. Either '-asm' or '-remove' option was missing.

Action: Issue the command with both '-asm' and '-remove' options.

PRKF-01110: Neither GNS server nor GNS client is configured on this cluster

Cause: The specified GNS command failed because neither GNS server nor GNS client was configured on this cluster.

Action: Configure either GNS server using the command 'srvctl add gns -vip {<vip_name> | <varname>ip</varname>} [-domain <varname>domain</varname>]' or GNS client using the command 'srvctl add gns -clientdata <varname>filename</varname>' in this cluster and retry the command.

PRKF-01111: GNS client already configured

Cause: An attempt to add a GNS client failed because a GNS client was already configured.

Action: Remove GNS client using the command 'srvctl remove gns' and retry the command.

PRKF-01112: Option -pq conflicts with -instance for service {0} of database {1}

Cause: An attempt to start or stop a parallel query helper service was rejected because -pq cannot be specified with -instance.

Action: Issue the command without the -pq option or without the -instance option.

PRKF-01113: Server pool {0} is not valid for services {1} of the database {2}

Cause: An attempt to start or stop services on the server pool was rejected because the specified server pool was not one of the server pools of the specified services.

Action: Examine the server pools for the specified services using 'srvctl config service' and issue the command specifying a server pool of the service.

PRKF-01114: Unable to export client data: GNS is not running

Cause: An attempt was made to export GNS client data when Grid Naming Service (GNS) was not running.

Action: Start GNS with 'srvctl start gns' and reissue the request.

PRKF-01115: Import of instance is not allowed on client cluster.

Cause: The command 'srvctl import gns' request was issued while the cluster was configured as Client.

Action: Rerun the command on the Grid Naming Service (GNS) Server Cluster.

PRKF-01116: This command cannot be executed on a GNS client cluster.

Cause: An attempt to execute a command supported only on GNS server clusters failed because this cluster is configured as a GNS client.

Action: Execute this command on the GNS server cluster.

PRKF-01117: GNS server is not configured in this cluster.

Cause: A command that applies only to a GNS server cluster was rejected because this cluster has not been configured as a GNS server.

Action: If GNS server is to run in this cluster, use the 'srvctl add gns' command to configure it.

PRKF-01125: multiple values specified for the single value option "{0}":

Cause: Multiple values were specified for an option which accepts only a single value.

Action: Check the values printed following the message and reissue the command specifying a single value for the indicated option.

PRKF-01128: Environment variable {0} is not defined.

Cause: The command specified an environment variable which had no value defined.

Action: None

PRKF-01129: Specified option "{0}" is not supported on Windows

Cause: An option was provided which is not supported on Windows.

Action: Reissue the command after removing the indicated option.

PRKF-01130: Failed to monitor a database

Cause: An attempt to monitor the specified database failed.

Action: Examine the accompanying error messages for details.

PRKF-01131: Failed to stop monitoring a database

Cause: An attempt to stop monitoring the specified database failed.

Action: Examine the accompanying error messages for details.

PRKF-01132: Failed to monitor a host

Cause: An attempt to monitor the specified host failed.

Action: Examine the accompanying error messages for details.

PRKF-01133: Failed to stop monitoring a host

Cause: An attempt to stop monitoring the specified host failed.

Action: Examine the accompanying error messages for details.

PRKF-01137: Failed to retrieve the status for Oracle Cluster Health Analysis Service

Cause: An attempt to retrieve the status for Oracle Cluster Health Analysis Service failed.

Action: Examine the accompanying error messages for details.

PRKF-01142: The GNS subdomain {0} inside the instance file {1} does not match with configured GNS subdomain {2}.

Cause: An attempt to import a GNS instance file into a Grid Naming Service (GNS) instance failed because the subdomain of the destination instance did not match the subdomain in the file.

Action: Configure GNS with a subdomain name that matches the instance file subdomain and attempt the import again.

PRKF-01143: Command option {0} is not supported on an ASM client cluster.

Cause: The command option specified on the command line was not valid for an ASM client cluster.

Action: Command options for ASM Listener, ASM, DISKGROUP, VOLUME, and ACFS are not supported on an ASM client cluster. Remove the invalid option and retry the command.

PRKF-01150: InOracle Cluster Health Analysis Service got errors:\n{0}

Cause: An attempt to get the status of Oracle Cluster Health Analysis Service failed.

Action: Examine the accompanying error messages for details.

PRKF-01152: The specified option combination, -node with -model, is not permitted when server pools are configured.

Cause: An attempt to start monitoring the target was rejected since the specified option combination, -node with -model, is not permitted when server pools are configured.

Action: Check the specified option combination.

PRKF-01153: The specified option, -serverpool, is not permitted when server pools are not configured.

Cause: An attempt to start or stop monitoring the target was rejected since the specified option, -serverpool, is not permitted when server pools are not configured.

Action: Check the specified option.

PRKF-01215: Command option -{0} is not supported on GNS client cluster.

Cause: The command option specified on the command line was not valid for GNS client cluster.

Action: Remove the invalid option and retry the command.

PRKF-01216: Option '-node' cannot be used with option '-db' or '-serverpool'.

Cause: A 'srvctl config cha' command specified conflicting options.

Action: Reissue the command with the correct options.

PRKF-01217: Failed to retrieve Oracle Cluster Health Analysis Service configuration for the specified node {0}.

Cause: An attempt to retrieve Oracle Cluster Health Analysis Service configuration for the specified node failed.

Action: Examine the accompanying error messages for details.

PRKF-01218: Failed to retrieve server pool configuration for node {0}.

Cause: An attempt to retrieve server pool configuration from the Oracle Cluster Health Analysis Service for the given node failed.

Action: Examine the accompanying error messages for details.

PRKF-01219: Failed to retrieve server pool {0} configuration for the database {1}.

Cause: An attempt to retrieve Oracle Cluster Health Analysis Service configuration for the specified database on the server pool failed.

Action: Examine the accompanying error messages for details.

PRKF-01220: Failed to retrieve Oracle Cluster Health Analysis Service configuration for the specified database {0}.

Cause: An attempt to retrieve Oracle Cluster Health Analysis Service configuration for the specified database failed.

Action: Examine the accompanying error messages for details.

PRKF-01221: Failed to retrieve Oracle Cluster Health Analysis Service configuration for the specified server pool {0}.

Cause: An attempt to retrieve Oracle Cluster Health Analysis Service configuration details for the specified serverpool failed.

Action: Examine the accompanying error messages for details.

PRKF-01222: Failed to retrieve cluster configuration for Oracle Cluster Health Analysis Service.

Cause: An attempt to retrieve cluster configuration for Oracle Cluster Health Analysis Service failed.

Action: Examine the accompanying error messages for details.

PRKF-01223: An SQL error occurred while retrieving information from Grid Information Management Repository.

Cause: An SQL error occurred while connecting to or reading from Grid Information Management Repository.

Action: Examine the accompanying error messages for details.

PRKF-01224: failed to retrieve server pool status

Cause: An attempt to retrieve the status of server pools failed.

Action: Examine the accompanying error messages for details.

PRKF-01225: failed to retrieve the status of server pool {0}

Cause: An attempt to retrieve the status of the specified server pool failed.

Action: Examine the accompanying error messages for details.

PRKF-01231: Process cancelled by user.

Cause: A 'srvctl add service' request was interrupted before completion by Ctl-C or a similar mechanism. The operation has been cancelled.

Action: None

PRKF-01232: required '-address' option missing for static network type

Cause: An attempt to add a VIP resource for a static network type was rejected because no address was specified with the -address option.

Action: Retry the command with '-address' option.

PRKF-01233: Invalid option '-fixed' supplied while adding a non-single-instance database.

Cause: The '-fixed' option can be supplied only when adding a single-instance database.

Action: Reissue the command without the '-fixed' option.

PRKF-01235: Option '-node' is invalid for database {0} of type {1}

Cause: An attempt to modify the node of a non-single-instance database was rejected because '-node' can be specified only for a single-instance database.

Action: Reissue the command again without the '-node' option.

PRKF-01236: Options '-fixed' and '-serverpool' cannot be used together.

Cause: An attempt to create a policy-managed single-instance database with the '-fixed' option was rejected because '-fixed' can be specified only for an non-policy-managed single-instance database.

Action: Reissue the command again without the '-fixed' option.

PRKF-01237: Options '-serverpool' and '-node' are invalid for single-instance fixed database {0}

Cause: An attempt to modify the SERVER_POOLS or HOSTING_MEMBERS attributes of a fixed single-instance database was rejected because a fixed single-instance database is not hosted on a serverpool and the HOSTING_MEMBERS attributes cannot be modified.

Action: Reissue the command again without the '-serverpool' and '-node' options.

PRKF-01238: Option '-node' cannot be specified without '-startoption'.

Cause: An invalid combination of options was specified.

Action: Reissue the command again with the '-startoption' option.

PRKF-01239: One of the mandatory options {0} or {1} should be supplied.

Cause: An attempt to execute a 'srvctl' command failed because none of the mandatory options was specified.

Action: Reissue the command with the mandatory options.

PRKF-01240: Options {0} and {1} cannot be specified together.

Cause: An attempt to execute a 'srvctl' command failed because an invalid option combination was specified.

Action: Reissue the command with valid options.

PRKF-01241: invalid use of '-node' option on start of single-instance database {0}

Cause: The '-node' option was specified to start a single-instance database, but this option is only applicable to a RAC One Node database.

Action: Reissue the command without the '-node' option.

PRKF-01242: Command option '-auxvolumes' is not supported on this operating system.

Cause: The option '-auxvolumes' was specified for an unsupported operating system.

Action: Reissue the command without the '-auxvolumes' option.

PRKF-01246: failed to query the status of VM resource {0} due to errors:\n{1}

Cause: An attempt to query the status of the specified VM resource failed.

Action: Examine the accompanying error messages for details.

PRKF-01248: Oracle VM Manager port "{0}" is not valid.

Cause: The specified Oracle VM Manager port was not valid. A valid Oracle VM Manager port is a nonnegative number.

Action: Specify a valid Oracle VM Manager port number.

PRKF-01250: OC4J HTTP port could not be modified

Cause: An error occurred while trying to modify the OC4J HTTP port.

Action: Examine the accompanying error messages for details.

PRKF-01251: nothing to modify

Cause: No options were specified to modify.

Action: Specify at least one option with the 'modify' command.

PRKF-01252: Oracle VM Manager password is not valid.

Cause: The specified Oracle VM Manager password was not valid. The length of the password should be at least one character.

Action: Specify a valid Oracle VM Manager password.

PRKF-01253: Oracle VM Manager is already configured.

Cause: An attempt to add Oracle VM Manager failed because it was already configured.

Action: None

PRKF-01254: failed to modify Oracle VM Manager information because Oracle VM Manager is not configured

Cause: An attempt to modify Oracle VM Manager information failed because it was not configured.

Action: Configure Oracle VM Manager in the cluster.

PRKF-01255: failed to read password from console

Cause: An error occurred during an attempt to read a password from the console or input device.

Action: Examine the accompanying error messages for details.

PRKF-01256: failed to remove Oracle VM Manager

Cause: An attempt to remove Oracle VM Manager failed.

Action: Examine the accompanying error messages for details.

PRKF-01257: Oracle VM Manager does not exist.

Cause: An attempt to remove Oracle VM Manager failed because it did not exist. It was either not added or already removed.

Action: None

PRKF-01258: failed to add Oracle VM Manager configuration because a wallet did not exist at the specified path {0}

Cause: An error occurred while creating the Oracle VM Manager configuration because the specified path did not contain a wallet.

Action: Retry the command specifying the path of an existing wallet file.

PRKH-01014 to PRKH-03450

PRKH-01014: Current user "{0}" is not the oracle owner user "{1}" of oracle home "{2}"

Cause: The command was run as a different user than the owner user of the oracle home path.

Action: Retry the command as the user who owns the specified oracle home.

PRKH-01016: Failed to get CSS mode

Cause: An error occurred on a Cluster Synchronization Services request. This message may be accompanied by others identifying the specific problem.

Action: Correct the problem indicated by the accompanying messages, if possible. Otherwise, contact Oracle Support Services.

PRKH-01050: Buffer is too small

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-01051: Cluster software (skgxn) error

Cause: An error occurred when Cluster Synchronization Services attempted to use non-Oracle vendor clusterware. This message may be accompanied by others identifying the specific problem.

Action: Correct the problem indicated by the accompanying messages, if possible. Otherwise, contact Oracle Support Services.

PRKH-01052: Invalid arguments

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-01053: Cluster synchronization services are not active

Cause: CSS daemon is not running or unable to authenticate with CSS daemon

Action: Use 'crsctl check css' to ensure that CSS daemon is running. If CSS daemon is not running, execute 'crsctl start crs' command.

PRKH-01054: Communications error

Cause: CSS daemon is not running on the local node or unable to authenticate with CSS daemon

Action: Use 'crsctl check css' to ensure that CSS daemon is running. If CSS daemon is not running, execute 'crsctl start crs' command.

PRKH-01055: Oracle Cluster Registry error

Cause: OCR returned an error while processing a CSS request

Action: Ensure that CRSD daemon is running e.g. with crsctl check clusterware

PRKH-01056: Unexpected CSS error

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-01057: Check for node with node number 0 failed.

Cause: CSS daemon is not running on local node or unable to authenticate with CSS daemon.

Action: Use 'crsctl check css' to ensure that CSS daemon is running. If CSS daemon is not running, execute 'crsctl start crs' command.

PRKH-01058: Node number specified for the node name lookup is beyond the allowed node number range

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-01059: Failed to get ASM mode

Cause: An error occurred on an Oracle Clusterware request. This message may be accompanied by others identifying the specific problem.

Action: Correct the problem indicated by the accompanying messages, if possible. Otherwise, contact Oracle Support Services.

PRKH-03002: Vendor cluster software error occurred in Cluster Synchronization Services

Cause: An error occurred when Cluster Synchronization Services attempted to use non-Oracle vendor clusterware. This message may be accompanied by others identifying the specific problem.

Action: Correct the problem indicated by the accompanying messages, if possible. Otherwise, contact Oracle Support Services.

PRKH-03003: An attempt to communicate with the CSS daemon failed

Cause: CSS daemon is not running.

Action: Ensure that CSS daemon is running.

PRKH-03004: Failed due to insufficient memory for Cluster Synchronization Services

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03005: Entity {0} was not registered with CSS

Cause: The given entity (e.g. instance) was not registered with CSS.

Action: Start the entity before retrying the operation.

PRKH-03009: An attempt was made by Cluster Synchronization Services to release a lock that was not held

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03011: Cluster Synchronization Services was started but has not completed startup

Cause: An attempt to connect to CSS failed because initialization is still in progress.

Action: None

PRKH-03013: An improper buffer argument was supplied to Cluster Synchronization Services

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRKH-03016: Invalid arguments

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03050: Unexpected error ({0}) returned from Cluster Synchronization Services

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03101: GIPC Error returned from DHCP module

Cause: A communication error occurred on a DHCP operation. This message may be accompanied by others identifying the specific problem.

Action: Correct the problem indicated by the accompanying messages, if possible. Otherwise, contact Oracle Support Services.

PRKH-03150: Unexpected error ({0}) returned from DHCP module

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03202: An error occurred in Oracle Clusterware during an Operating System function call or request

Cause: An error occurred in Oracle Clusterware. This message may be accompanied by others identifying the specific problem.

Action: Correct the problem indicated by the accompanying messages, if possible. Otherwise, contact Oracle Support Services.

PRKH-03203: Required password not supplied

Cause: A requested operation requires a password but none was supplied. This message may be accompanied by others identifying the specific problem.

Action: Correct the problem indicated by the accompanying messages, if possible. Otherwise, contact Oracle Support Services.

PRKH-03204: An improper buffer argument was supplied to Oracle Clusterware

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03205: Internal error in Oracle Clusterware

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03250: Unexpected error ({0}) returned from Oracle Clusterware

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03301: Invalid arguments

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03302: Oracle Clusterware database support layer returned OCR error

Cause: This message may be accompanied by others identifying the specific problem.

Action: Correct the problem indicated by the accompanying messages, if possible.
Otherwise, contact Oracle Support Services.

PRKH-03303: Oracle Clusterware database support layer returned OSD error

Cause: This message may be accompanied by others identifying the specific problem.

Action: Correct the problem indicated by the accompanying messages, if possible.
Otherwise, contact Oracle Support Services.

PRKH-03304: Internal error returned from Oracle Clusterware database support layer

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03306: Internal error returned from Oracle Clusterware database support layer

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03307: Internal error returned from Oracle Clusterware database support layer

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03340: Following VIP error occurred from Oracle Clusterware database support layer

Cause: An error occurred while processing a VIP request. This message may be accompanied by others identifying the specific problem.

Action: Correct the problem indicated by the accompanying messages, if possible.
Otherwise, contact Oracle Support Services.

PRKH-03350: Unexpected error returned from Oracle Clusterware database support layer

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03401: An improper buffer argument was supplied to an internal interface

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03402: OCR error returned from an internal interface

Cause: An internal interface encountered an error in OCR processing. This message may be accompanied by others identifying the specific problem.

Action: Correct the problem indicated by the accompanying messages, if possible. Otherwise, contact Oracle Support Services.

PRKH-03450: Unexpected error ({0}) returned from an internal interface

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKN-01031 to PRKN-01041

PRKN-01031: Failed to retrieve local host name

Cause: An attempt to retrieve the local host name using Java network functions failed.

Action: Ensure that the 'localhost' entry exists in the hosts configuration file.

PRKN-01032: error occurred while reading input from user's terminal session.

Cause: An attempt to read input from the standard input failed.

Action: Use an operating system command line to run the proper command.

PRKN-01033: The following nodes do not share the filesystem path "{0}" with node {1}: {2}

Cause: A subset of the nodes provided shared the given filesystem path with the local node.

Action: Mount the NFS filesystem on the node(s) that do not share the filesystem path.

PRKN-01034: Failed to retrieve IP address of host "{0}"

Cause: An attempt to retrieve IP address for the host specified failed.

Action: Run 'nslookup' on the host name and make sure the name is resolved or add the host name to OS hosts file.

PRKN-01035: Host "{0}" is unreachable

Cause: An attempt to reach the specified host via IP failed.

Action: Make sure that the host is up and there are no firewalls blocking connectivity between local node and remote host.

PRKN-01036: Windows registry key "{0}" not found on node "{1}"

Cause: Could not find the specified Windows registry key on the identified node.

Action: Contact Oracle Support Services.

PRKN-01037: Unexpected command output on node {0}: "{1}"

Cause: A remotely-executed command produced output when none was expected.

Action: Ensure that ssh or rsh is configured properly on the target node. If it is, contact Oracle Support Services for assistance.

PRKN-01038: The command "{0}" run on node "{1}" gave an unexpected output: "{2}"

Cause: A remote-shell command produced an output when none was expected.

Action: Ensure that ssh or rsh is configured properly on the specified nodes. If it is, contact Oracle Support Services for assistance.

PRKN-01039: Failed to create directory "{0}" on node "{1}"

Cause: The specified directory could not be created on the specified node.

Action: Ensure that the user is an administrator on the specified node, that the specified drive has default share configured on it, and that there is enough space in the specified location. Look at accompanying error messages and respond accordingly.

PRKN-01040: Failed to remove directory "{0}" on node "{1}"

Cause: The specified directory could not be removed on the specified node.

Action: Ensure that the user is an administrator on the specified node, that the specified drive has default share configured on it. Look at accompanying error messages and respond accordingly.

PRKN-01041: Failed to retrieve the current Windows user name: {0}

Cause: An attempt to retrieve the current Windows user name failed with the error cited in the message.

Action: Ensure that the Windows Domain Server is reachable; log in to the OS as a domain user.

PRKO-00371 to PRKO-09089

PRKO-00371: No option specified for "modify gns"

Cause: No option was specified for the "modify gns" command.

Action: Specify at least one option.

PRKO-00372: The "-{0}" option requires the specification of the "-{1}" option.

Cause: An option was specified which requires that another option to be specified at the same time.

Action: Specify the required option.

PRKO-00373: Invalid host name or address: "{0}".

Cause: The host name or address specified for the address on which GNS is to listen was not valid.

Action: Specify a valid host name or IP address. If an IP address is used, it must be one of the following: 1. A valid IPv4 address (N.N.N.N); 2. A valid IPv6 address (N[:N]*).

PRKO-00374: The "-{0}" option may not be used with the "-{1}" option.

Cause: The two options may not be used together.

Action: Run `srvctl` with each option specified separately.

PRKO-00375: No option was specified for the GNS "modify" command.

Cause: An option was not specified for the modify command.

Action: Specify an option.

PRKO-00377: The "-{0}" option requires the specification of either the "-{1}" or the "-{2}" option.

Cause: An option was specified which requires that one of the other possible options to be specified at the same time.

Action: Specify the one of the other options.

PRKO-00378: Both "-{0}" and "-{1}" options may not be specified with the "-{2}" option.

Cause: An invalid combination of options was specified.

Action: Specify only one of the other possible options.

PRKO-00380: No other option is allowed when the '-loglevel' option is specified.

Cause: If the '-loglevel' option is specified, no other option may be given.

Action: Only specify the '-loglevel' option.

PRKO-00381: Both '-serverpool' and '-node' options are required to set server pool {0} for single instance database {1} on the cluster.

Cause: Option '-node' is not specified in 'srvctl modify database' command for a single instance database on the cluster.

Action: Specify both -serverpool and -node options in 'srvctl modify database' and retry.

PRKO-00382: The number of candidate servers {0} in server pool {1} should be one for single instance database {2}

Cause: The server pool specified in 'srvctl modify database' command for a single instance database contained more than 1 candidate servers.

Action: Either modify the given server pool via 'srvctl modify srvpool' command to have only one candidate server specified via -node argument or specify another server pool that contains only one candidate server specified via -node argument.

PRKO-00383: Invalid IP address for name "{0}": "{1}"

Cause: The address used for a name was not valid.

Action: Specify a valid IP address. It must be one of the following: 1. A valid IPv4 address (N.N.N.N); 2. A valid IPv6 address (N[:N]*).

PRKO-00384: No option was specified for the GNS "update" command.

Cause: An option was not specified for the update command.

Action: Specify an option.

PRKO-02000: Invalid command line syntax for a single instance database

Cause: user specified invalid command line syntax.

Action: Look at the usage provided for this command and specify all mandatory options.

PRKO-02001: Invalid command line syntax

Cause: The syntax of the command is incorrect.

Action: Look at the usage provided for this command and use the correct syntax.

PRKO-02002: Invalid command line option: {0}

Cause: Invalid command line option was specified.

Action: Check the value printed along with the exception and specify the correct value.

PRKO-02003: Invalid command line option value:

Cause: Invalid command line option was specified.

Action: Check the value printed along with the exception and specify the correct value.

PRKO-02004: Repetition of command line option: -{0}

Cause: The command line option printed along with the exception was repeated.

Action: Delete the repeated command line option and try the command again.

PRKO-02005: Failure in getting Cluster Database Configuration for:

Cause: The specified database does not exist.

Action: Check the specified database name and try again.

PRKO-02006: Invalid node name: {0}

Cause: Unable to get the hostname for the given node/machine name.

Action: Check the node name and try again.

PRKO-02007: Invalid instance name: {0}

Cause: Unable to obtain the node name on which the instance name specified was running.

Action: Check the instance name specified and try again.

PRKO-02008: Invalid connect string:

Cause: The connect string specified was not in the format username/password [as {SYSDBA|SYSOPER}]

Action: Check the connect string and try again.

PRKO-02009: Invalid name/value string: {0}

Cause: The name value string should be of the form name = value

Action: check the input name/value pair and try again.

PRKO-02010: Invalid command specified on command line: {0}

Cause: The <varname>command</varname> specified on the command line was not recognized.

Action: Valid commands are enable|disable|start|stop|relocate|status|add|remove|modify|getenv|setenv|unsetenv|config. Usage of srvctl is printed with this error. Check the usage and specify a valid command.

PRKO-02011: Invalid object specified on command line: {0}

Cause: The <varname>object</varname> specified on the command line was not recognized.

Action: Valid objects are database|instance|service|nodeapps|vip|network|asm|diskgroup|listener|srvpool|scan|scan_listener|oc4j|home|filesystem|gns|cvu|havip|exportfs|volume|mgmt|db|mgmt|lsnr|rhpserver|rhpcclient. Usage for the 'srvctl' command is displayed with this exception. Check the usage printed with this error and use a valid object.

PRKO-02012: {0} object is not supported in Oracle Restart

Cause: The <varname>object</varname> specified on the command line was not a valid object for the Oracle Restart mode.

Action: Valid objects for Oracle Restart mode are database|service|asm|diskgroup|listener|home|ons. Usage for the 'srvctl' command is displayed with this exception. Check the usage printed with this error and use a valid object.

PRKO-02013: {0} object is not supported in Oracle Clusterware

Cause: The <varname>object</varname> specified on the command line was not a valid object for the Oracle Clusterware mode.

Action: Valid objects for Oracle Clusterware are database|instance|service|nodeapps|vip|network|asm|diskgroup|listener|srvpool|scan|scan_listener|oc4j|home|filesystem|gns|cvu|havip|exportfs|volume|mgmt|db|mgmt|snr. Usage for the 'srvctl' command is displayed with this exception. Check the usage printed with this error and use a valid object.

PRKO-02014: The -all option must be specified with '-db <db_unique_name>' for 'srvctl config database' command

Cause: The '-all' option was specified without the required '-db' option specifying for which database to retrieve configuration.

Action: To retrieve the full configuration of the database, specify both '-db' and '-all' option with the command 'srvctl config database'.

PRKO-02016: Database {0} has no services configured

Cause: 'srvctl config database' request found no services configured for the database.

Action: Use the command 'srvctl add service' to configure services for the database and then retry.

PRKO-02017: Service {0} does not exist for database {1}.

Cause: The service being updated was not defined for the given database.

Action: Specify a service that is defined for the database, or create the service if appropriate.

PRKO-02018: No databases are configured

Cause: No databases were configured.

Action: Use the command 'srvctl add database' to configure databases.

PRKO-02049: Invalid name-value string: {0}

Cause: The name=value string specified is not in valid format.

Action: The format for the string should be name=value. Check input and correct the error.

PRKO-02050: Error in enabling ASM instance on node {0}. {1}

Cause: ASM could not be enabled.

Action: Make sure that the node name is correct and that ASM exists on the specified node and it is not already enabled on the node. The current state of the ASM can be found using the command 'srvctl status asm'. To check if ASM is configured or not, use the command 'srvctl config asm'.

PRKO-02053: Error in disabling ASM instance on node {0}. {1}

Cause: ASM could not be disabled.

Action: Make sure that the node name is correct and that ASM exists on the specified node and it is not already disabled on the node. The current state of the ASM can be found using the command 'srvctl status asm'. To check if ASM is configured or not, use the command 'srvctl config asm'.

PRKO-02054: Invalid command line syntax, mandatory options are either {0} or {1}, but not both.

Cause: The command requires exactly one set of mandatory command line options. But either some options in one set were missing or the options from both sets were specified.

Action: Check the command line options entered and make sure that all the mandatory options in one set are specified.

PRKO-02056: Error occurred while checking dependent resources on network {0}. Network was not removed.

Cause: An attempt to check if any resources are dependent on the given network failed.

Action: Make sure that the network is up. Make sure that the user has sufficient permission to remove network. If force flag was not specified in the remove command then specify force flag and try the command again.

PRKO-02058: Scan name {0} cannot be the same as a cluster node name: {1}

Cause: Scan name is same as a cluster node name.

Action: Choose a different scan name and issue the command.

PRKO-02065: Only one server pool should be provided for a single instance database on a cluster

Cause: An attempt to create a single instance database failed because more than one server pool was specified.

Action: Provide only one server pool while creating the single instance database.

PRKO-02067: The size of server pool should be one for single instance database

Cause: An attempt to create a single instance database failed because a server pool with more than one server was specified.

Action: Provide a server pool with only one server while creating a single instance database.

PRKO-02069: OC4J could not be created as it already exists

Cause: A new OC4J instance could not be created, as there is an existing instance of OC4J.

Action: Only one instance of OC4J can exist at any given time.

PRKO-02070: OC4J creation failed

Cause: A new OC4J instance could not be added because of OC4J exception.

Action: Resolve the OC4J exception and then try the OC4J addition again.

PRKO-02072: OC4J is not configured

Cause: OC4J is not configured on the cluster.

Action: Check the exception printed with this message. If OC4J is not configured then OC4J instance can be created using the command 'srvctl add oc4j'. If there are other errors shown with this error then check the cause/action messages of underlying exception.

PRKO-02074: OC4J is still running. It must be stopped before removing.

Cause: 'srvctl remove oc4j' command was issued while OC4J instance was running.

Action: Stop the oc4j instance using the command 'srvctl stop oc4j' and then try removing.

PRKO-02075: OC4J could not be removed

Cause: OC4J instance could not be removed because it does not exist.

Action: The current OC4J configuration can be checked using the command 'srvctl config oc4j'. Make sure that OC4J instance is running on that port. If there are other underlying messages printed then check the cause/action for the underlying errors shown with this.

PRKO-02077: OC4J RMI port could not be modified

Cause: An error occurred while trying to modify the OC4J Java Remote Method Invocation (RMI) port.

Action: Examine the accompanying error messages for details.

PRKO-02079: OC4J could not be started

Cause: The start of OC4J instance failed.

Action: Make sure that OC4J instance exists and is not already started.

PRKO-02081: OC4J failed to stop

Cause: The OC4J instance could not be stopped.

Action: Make sure that OC4J instance exists and are not already stopped.

PRKO-02082: Missing mandatory option {0}

Cause: The specified mandatory command option is missing.

Action: Use srvctl with the -help option to display option details for the command and make sure that all the mandatory options are specified.

PRKO-02087: OC4J could not be enabled

Cause: OC4J instance could not be enabled.

Action: Make sure that node name is correct and that OC4J instance exists and is not already enabled. The current state of the OC4J instance can be found using the command 'srvctl status oc4j' command. To check if OC4J instance is configured or not use 'srvctl config oc4j' command.

PRKO-02090: OC4J could not be disabled

Cause: OC4J instance could not be disabled.

Action: Make sure that Node name is correct and that OC4J instance exists and is not already disabled. The current state of the OC4J instance can be found using the command 'srvctl status oc4j'. To check if OC4J instance is configured or not use the command 'srvctl config oc4j'.

PRKO-02093: OC4J could not be relocated

Cause: OC4J instance could not be relocated to given node.

Action: If the node name was passed in the command line make sure that the node name is valid. Also make sure that OC4J instance exists on the cluster and is running.

PRKO-02100: Cannot update service {0} because database {1} is not administrator-managed

Cause: An attempt to update the service using '-update' option failed because this option can be used with administrator-managed databases only.

Action: Make sure that you provide correct options for the command 'srvctl add service'.

PRKO-02102: Failed to create server pool {0}: {1}

Cause: An attempt to create the specified server pool failed because of the reason provided by the accompanying error.

Action: Examine the accompanying error messages for details.

PRKO-02103: The '-available' and '-preferred' options cannot both be supplied with '-update'

Cause: Command 'srvctl add service' with '-update' option failed because both options '-available' and '-preferred' were provided.

Action: Reissue the command with the correct options.

PRKO-02104: Option '-available' or '-preferred' must be supplied with '-update'

Cause: Command 'srvctl add service' with option '-update' failed because it requires option '-available' or '-preferred' to be provided.

Action: Reissue the command with the correct options.

PRKO-02105: Option '-serverpool' cannot be used with option '-preferred', '-available' or '-tafpolicy'

Cause: A 'srvctl add service' command specified conflicting options.

Action: Reissue the command with the correct options.

PRKO-02106: There is no server pool associated with database {0}

Cause: Command 'srvctl add service' failed because the given database doesn't have an associated server pool.

Action: Oracle internal error. Contact customer support.

PRKO-02108: Command line options '-instance' and '-node' cannot be used together

Cause: Conflicting options were specified on a 'srvctl add service' command.

Action: Reissue the command with the correct options.

PRKO-02109: Options '-server', '-instance', or '-timeout' can only be supplied with option '-dbtype'

Cause: Incorrect usage of '-server', '-instance' and '-timeout' options.

Action: Reissue the command with the correct options.

PRKO-02110: The '-cardinality' option was specified on a 'create service' request for an administrator-managed database {0}

Cause: Incorrect usage of '-cardinality' option.

Action: Remove '-cardinality' option and issue command again.

PRKO-02111: Invalid number {0} for command line option {1}

Cause: Invalid value was specified for the command line option that requires a number in a certain range.

Action: Check the value printed and specify a number within the required range.

PRKO-02112: Options '-node' and '-policy' were specified to create RAC One Node database {0}

Cause: Incorrect usage of '-node' and '-policy' options.

Action: Remove '-node' and '-policy' options and issue command again.

PRKO-02115: OC4J is already disabled

Cause: OC4J instance could not be disabled because it is already disabled.

Action: None required.

PRKO-02116: OC4J is already enabled

Cause: OC4J instance could not be enabled because it is already enabled.

Action: None required.

PRKO-02117: Options '-serverpool' and '-server' cannot be used together

Cause: Options '-serverpool' and '-server' were used incorrectly.

Action: Correct options and issue command again.

PRKO-02118: Options '-serverpool' and '-instance' were specified together

Cause: Incorrect usage of '-serverpool' and '-instance' options.

Action: Correct options and issue command again.

PRKO-02119: Only one server pool can be specified with the -serverpool option for a RAC One Node database

Cause: Incorrect number of serverpools was supplied with the '-serverpool' option.

Action: Specify one server pool with the '-serverpool' option and issue command again.

PRKO-02120: Options '-node' and '-policy' cannot be used to modify RAC One Node database

Cause: Options '-node' and '-policy' were used incorrectly.

Action: Remove '-node' and '-policy' options and issue command again.

PRKO-02121: Options '-server' and '-timeout' cannot be used to modify a database that is not RAC One Node

Cause: Options '-server' and '-timeout' were used incorrectly.

Action: Remove '-server' and '-timeout' options and issue command again.

PRKO-02122: Database type can only be 'RAC' or 'RACONENODE

Cause: Incorrect database type was specified for the command 'srvctl convert database'.

Action: Specify 'RAC' or 'RACONENODE' when running the command 'srvctl convert database'.

PRKO-02126: Options '-node', '-timeout' and '-stopoption' cannot be used with options '-abort' and '-revert'

Cause: Options '-node' or '-timeout' or '-stopoption' could not be used with '-abort' or '-revert'.

Action: Remove the options that are not required and issue the command again.

PRKO-02127: Either option '-server' or '-serverpool' must be supplied for adding RAC One Node database

Cause: Options '-server' and '-serverpool' were not specified when adding an Oracle RAC One Node database.

Action: Use the command 'srvctl add database' with either '-server' or '-serverpool' option.

PRKO-02128: Specified cardinality {0} is not valid for policy-managed RAC One Node service {1}

Cause: Given cardinality was not applicable to an Oracle RAC One Node service.

Action: Use the 'srvctl add service' without the '-cardinality' option or specify SINGLETON value for the '-cardinality' option.

PRKO-02129: Online relocation timeout value {0} is not within the range of {1} and {2}

Cause: Online relocation timeout value was not within the required range.

Action: Supply a value within the required range.

PRKO-02130: Supplied node {0} must be in the candidate list of the administrator-managed database {1}

Cause: The supplied node name was not in the candidate list of the administrator-managed database.

Action: Supply a node in the candidate list of the database and rerun the command 'srvctl start database'.

PRKO-02131: Supplied node {0} must be in the server pool of the policy-managed database {1}

Cause: The supplied node name was not in the server pool of the policy-managed database.

Action: Supply a node from the server pool of the database and rerun the command 'srvctl start database'.

PRKO-02132: Options '-serverpool', '-preferred' and '-available' cannot be used to add services for RAC One Node database {0}

Cause: Failed to add specified service because provided options cannot be used to add a service for an Oracle RAC One Node database.

Action: Use the command 'srvctl add service' without options '-serverpool', '-preferred' or '-available'.

PRKO-02133: Options '-serverpool', '-preferred' and '-available' cannot be used to modify services for RAC One Node database {0}

Cause: Failed to modify specified service because provided options cannot be used to modify a service for an Oracle RAC One Node database.

Action: Use the command 'srvctl modify service' without options '-serverpool', '-preferred' or '-available'.

PRKO-02134: 'srvctl add instance' command is not supported with RAC One Node databases

Cause: The specified database does not support 'srvctl add instance' command.

Action: Convert the Oracle RAC One Node database to an Oracle RAC database by using the command 'srvctl convert database' and then rerun using the command 'srvctl add instance'.

PRKO-02135: 'srvctl remove instance' command is not supported with RAC One Node databases

Cause: The one instance of the Oracle RAC One Node database cannot be removed by using the command 'srvctl remove instance'.

Action: Run the command 'srvctl remove database'.

PRKO-02136: 'srvctl start/stop/enable/disable/modify/status/setenv/getenv/unsetenv instance' commands are not supported with RAC One Node databases

Cause: The supplied instance command is not supported with an Oracle RAC One Node database.

Action: Perform srvctl operations on the 'database' noun instead of 'instance' with an Oracle RAC One Node database.

PRKO-02137: Option '-node' must not be supplied to convert policy-managed RAC One Node database to RAC database

Cause: Failed to convert database because provided option cannot be used to convert policy-managed Oracle RAC One Node database.

Action: Use the command 'srvctl convert database' without '-node' option.

PRKO-02138: Database {0} is not of RAC One Node database type

Cause: The supplied database was not an Oracle RAC One Node database.

Action: Run the command 'srvctl convert database' with database of type Oracle RAC One Node.

PRKO-02139: Supplied nodes {0} should contain node {1} where database {1} is already running on

Cause: Supplied nodes did not include the node that the database was running on.

Action: Make sure given nodes include the node that the database is running on.

PRKO-02140: Option '-node' must be supplied when adding single instance database

Cause: Option '-node' was not supplied when adding single instance database.

Action: Supply '-node' option and issue command again.

PRKO-02141: Option '-revert' requires option '-abort'

Cause: Command 'srvctl relocate database' with option '-revert' failed because it requires option '-abort' to be provided.

Action: Correct options and issue command again.

PRKO-02142: Cannot start RAC One Node database when an online relocation request for the database is already active

Cause: Unable to start the supplied Oracle RAC One Node database because it already has an active online relocation request.

Action: Specify another database to start.

PRKO-02143: Cannot stop RAC One Node database when an online relocation request for the database is already active

Cause: Unable to stop the supplied Oracle RAC One Node database because it already has an active online relocation request.

Action: Either wait for the online relocation request to complete or specify another database to stop.

PRKO-02144: Option '-server' cannot be used with RAC One Node policy-managed database {0}

Cause: The '-server' option was specified to modify the candidate server list for an Oracle RAC One Node policy-managed database.

Action: Either use the command 'srvctl modify srvpool' to modify the candidate server list or specify '-serverpool' option with the command 'srvctl modify database' to modify the server pool.

PRKO-02145: 'srvctl remove instance' command is not supported with single instance databases

Cause: The single instance database cannot be removed by the 'srvctl remove instance' command.

Action: Run the command 'srvctl remove database'.

PRKO-02147: A 'srvctl add database' command specified the '-server', '-instance' or '-timeout' option for a database that is not Oracle RAC One Node

Cause: A 'srvctl add database' command was issued that included either the '-server', '-instance', or '-timeout' option but did not include a '-dbtype' option specifying that the database being added was Oracle RAC One Node. These options are permitted only for Oracle RAC One Node databases.

Action: Either remove the '-server', '-instance' or '-timeout' option or specify the '-dbtype' option with type Oracle RAC One Node.

PRKO-02148: Option '-node' must be supplied when running 'srvctl relocate database' for administrator-managed RAC One Node database

Cause: Option '-node' was not specified when executing relocate on administrator-managed Oracle RAC One Node database.

Action: Use the command 'srvctl relocate database' with '-node' option.

PRKO-02149: A 'srvctl modify database' command specified the '-instance' option for a RAC database

Cause: Option '-instance' in "srvctl modify database" command can be used to modify the instance name of a single instance database or instance name prefix of a Oracle RAC One Node database.

Action: Try 'srvctl modify instance' command to modify the instance name of the Oracle RAC database.

PRKO-02156: Instance name {0} is not valid

Cause: The supplied instance name is not the correct format for Oracle RAC One Node database.

Action: Make sure that the instance name is of the format <instance_name_prefix>_1 or <instance_name_prefix>_2. Use the command 'crsctl modify resource' to correct the instance name.

PRKO-02157: Option '-instance' must not specified to convert policy-managed RAC database to RAC One Node database

Cause: Failed to convert database because the provided option can not be used to convert policy-managed Oracle RAC database to an Oracle RAC One Node database.

Action: Use the command 'srvctl convert database' without '-instance' option.

PRKO-02158: Option '-node' must not be specified to convert a RAC database to RAC One Node database

Cause: Failed to convert database because the provided option '-node' should not be supplied to convert an Oracle RAC database to an Oracle RAC One Node database.

Action: Use the command 'srvctl convert database' without '-node' option.

PRKO-02159: Option '-instance' must be specified to convert an administrator-managed RAC database to its equivalent RAC One Node database configuration

Cause: Failed to convert database because the option '-instance' was not specified to convert administrator-managed Oracle RAC database to its equivalent Oracle RAC One Node database configuration.

Action: Use the command 'srvctl convert database' with '-instance' option.

PRKO-02160: Option '-timeout' must not be specified to convert a RAC One Node database to its equivalent RAC database configuration

Cause: Failed to convert database because option '-timeout' was specified to convert an Oracle RAC One Node database to its equivalent Oracle RAC database configuration.

Action: Use the command 'srvctl convert database' without '-timeout' option.

PRKO-02165: VIP does not exist on node(s) : {0}

Cause: VIP was not configured on the nodes.

Action: Add VIP using the command 'srvctl add nodeapps' or 'srvctl add vip' and try this command again.

PRKO-02166: GSD does not exist on node(s): {0}

Cause: GSD was not configured on the nodes

Action: Add GSD using the command 'srvctl add nodeapps' and try this command again.

PRKO-02167: VIP {0} does not exist.

Cause: VIP with the specified name was not configured.

Action: Add VIP using the command 'srvctl add nodeapps' or 'srvctl add vip' and try this command again.

PRKO-02168: Node applications are still running on node:

Cause: Node applications are still running on node when a remove was attempted.

Action: Stop the node applications before removing them or use force flag when attempting removal.

PRKO-02172: Some or all node applications are not removed successfully on node:

Cause: Not all node applications were removed on the node.

Action: Make sure that all resources that depend on node applications are stopped before attempting to remove node applications. Also if force flag was not specified, reissue this command with the force flag specified.

PRKO-02173: Instance {0} is already a preferred instance for service {1}.

Cause: Given instance is already a preferred instance for the service.

Action: Specify an instance other than the preferred instances of this service.

PRKO-02174: Instance {0} is already an available instance for service {1}.

Cause: Given instance is already an available instance for the service.

Action: Specify an instance other than the available instances of this service.

PRKO-02175: Failed to remove service {0} because this is the last service of RAC One Node database {1}

Cause: An attempt was made to remove the last service of an Oracle RAC One Node

Action: Add another service, for example by using the command 'srvctl add service', before removing the given service. Otherwise, if you are trying to deconfigure database, then remove the database directly, for example by using the command 'srvctl remove database'.

PRKO-02176: ONS daemon does not exist on node(s): {0}

Cause: ONS was not configured on the nodes.

Action: Add ONS using the command 'srvctl add nodeapps' and try this command again.

PRKO-02182: eONS daemon does not exist on node(s): {0}

Cause: eONS was not configured on the nodes.

Action: Add eONS using the command 'srvctl add nodeapps' and try this command again.

PRKO-02183: Node applications run on default network only. The netmask given {0} doesn't match default networks netmask {1}

Cause: The netmask given in the modify command doesn't match with default network's netmask.

Action: Modify the default network first using the command 'srvctl modify nodeapps -subnet <varname>options</varname>' and then try modifying the VIP.

PRKO-02184: Node applications run on default network only. The interface given {0} doesn't match default networks interface {1}

Cause: The interface specified in the modify command doesn't match with default network's interface.

Action: Modify the default network's interface using the command 'srvctl modify nodeapps -subnet <varname>options</varname>' and then try modifying the VIP.

PRKO-02185: The new VIP address given is same as the current VIP address

Cause: The VIP address given for modification is same as the current VIP. So there is nothing to modify.

Action: Check the VIP address you want to modify and specify the correct value.

PRKO-02186: The command line parameter host port list should be in the form <varname>host</varname>[:<varname>port</varname>][,<varname>host</varname>[:<varname>port</varname>]...]

Cause: The command line parameter -remoteservers <host_port_list> was not in the format <varname>host</varname>[:<varname>port</varname>][,<varname>host</varname>[:<varname>port</varname>]...] with port being numeric.

Action: Check the input and correct any error and try the command again.

PRKO-02187: The network resource has been modified successfully. VIP and other resources that depend on it might not start up unless they are modified

Cause: When underlying network resource has been modified the VIP should be updated to the new network resource. This is not a error and is just a status message.

Action: Use the command 'srvctl modify nodeapps -address <varname>options</varname>' to update the VIP to the new network.

PRKO-02188: All the node applications already exist. They were not recreated.

Cause: The command 'srvctl add nodeapps' was attempted when all the node applications already existed.

Action: If you want to modify node applications you should use the command 'srvctl modify nodeapps'.

PRKO-02190: VIP exists for node {0}, VIP name {1}

Cause: The VIP being added already exists.

Action: Check the input and if VIP needs to be modified use 'srvctl modify VIP' command.

PRKO-02199: Invalid address string:

Cause: VIP address being passed on the command line is not a valid address string.

Action: Address string should be of the format {<varname>name</varname>|<varname>ip</varname>}/<varname>netmask</varname>/[if1[[if2...]]. Check the usage and correct the address format.

PRKO-02200: Invalid interface specified on command line: {0}

Cause: VIP address specification '-address {<varname>name</varname>|<varname>ip</varname>}/<varname>netmask</varname>/[if1[[if2...]]' or the network address specification '-subnet <varname>subnet</varname>/<varname>netmask</varname>/[if1[[if2...]]' on the command line contained interfaces names, none of which exist on current node.

Action: Check the interfaces listed in the address string and make sure that they are enabled and are up. Use network interface names on the command line if there is more than one interfaces that connect to the same network.

PRKO-02207: Warning: -{0} option has been deprecated and will be ignored.

Cause: Deprecated option has been used in the command line. The option will be ignored.

Action: Check the documentation for the new syntax of the command.

PRKO-02208: {0} command has been deprecated and will be ignored.

Cause: The command being executed has been deprecated and will not do any action.

Action: Check the documentation for the commands supported by srvctl.

PRKO-02209: {0} command is not supported for configuration using server pool.

Cause: The given command failed because it isn't applicable to instances of policy managed-databases.

Action: Check the documentation on the commands that are applicable to policy-managed databases.

PRKO-02211: ASM listener was not found

Cause: ASM listener does not exist.

Action: Use the command 'srvctl modify asm -listener <lsnr_name>' to set the listener that ASM should register with.

PRKO-02214: Specified server pool {0} cannot be used to host single instance database {1}

Cause: An attempt to create a single instance database failed because the specified server pool had no configured candidate server.

Action: Use the command 'srvctl modify srvpool' with '-servers' option to configure a candidate server for the server pool. Make sure that the candidate server name specified with the '-servers' option matches that of the '-node' option in the command 'srvctl add database'.

PRKO-02215: Specified server pool {0} has more than one candidate server

Cause: An attempt to create a single instance database failed because a server pool with more than one candidate server was specified.

Action: Provide a server pool with only one candidate server when creating a single instance database.

PRKO-02310: VIP does not exist on node {0}.

Cause: VIP was not configured on that node on which modification was attempted.

Action: VIP must be added using the command 'srvctl add nodeapps', before it can be modified.

PRKO-02313: A VIP named {0} does not exist.

Cause: An attempt was made to operate on a VIP with the specified VIP name. No such VIP was configured on the cluster.

Action: Check the status of VIPs using the command 'srvctl status vip'. VIP must be added using the command 'srvctl add vip' before any operation on it.

PRKO-02318: Target instance {0} already supports service {1}.

Cause: Given database instance already provides the given service.

Action: Specify an instance that is not a preferred or available instance for this service.

PRKO-02331: ONS daemon does not exist.

Cause: ONS daemon was not configured on this cluster.

Action: ONS daemon can be configured using the 'srvctl add nodeapps' command.

PRKO-02339: eONS daemon does not exist.

Cause: eONS daemon was not configured on this cluster.

Action: eONS daemon can be configured using the command 'srvctl add nodeapps'.

PRKO-02377: eONS already uses {0} as listening port. Nothing to modify.

Cause: The listening port specified in this command is already in use by eONS.

Action: Check the input and if the listening port needs to be changed then specify a different port.

PRKO-02380: VIP {0} is still running on node: {1}

Cause: VIP to be removed is still running on a node.

Action: Stop the VIP before attempting to remove it or retry the command with force flag.

PRKO-02381: VIP {0} is not removed successfully:

Cause: VIP remove action failed because VIP was running and force flag was not specified or an exception occurred during the removal.

Action: Make sure that any applications, like for example listener, that depend on VIP are down. Try using -force option to remove the VIP. If you use force option to remove VIP then any application that depends on this VIP will stop working. Look at the help message for the accompanying exception.

PRKO-02383: Network {0} is not removed successfully:

Cause: Since there were no VIPs hosted on the network an attempt was made to remove the network and network removal failed.

Action: Make sure that all other applications that depend on default network are stopped. If force flag was not specified then specify force flag and try the command again.

PRKO-02385: The specified hostname or address {0} cannot be resolved.

Cause: An invalid IP address or irresolvable hostname was specified.

Action: If IP address is specified then make sure that it is of legal length. If a host name is specified then make sure that the host name resolves to an IP address.

PRKO-02386: Netmask is missing in address string:

Cause: NETMASK is missing in the VIP address that was passed in the command string.

Action: VIP address is of form <ip_or_name>/<varname>netmask</varname>[/<varname>interface1</varname>[[<varname>interface2</varname>...]]. Specify the netmask.

PRKO-02387: -node <node_name> option has been deprecated.

Cause: '-node <node_name>' option has been deprecated in this release.

Action: Remove the usage of '-node <node_name>' option in the command.

PRKO-02388: Command line option {0} should be followed by a value.

Cause: The value needs to be specified by the command line option.

Action: Look at the usage and of the command and specify an appropriate value.

PRKO-02389: Invalid command line options. Neither -address nor -node can be specified with -subnet.

Cause: Invalid combination of options specified for add/modify node application command. Option '-address' is node-specific and has to be used with '-node' option. '-subnet' option is a global option and it cannot be used with '-address' or '-node' option.

Action: Issue the command using either '-address' and '-node' options together or '-subnet' option without '-address' or '-node' option.

PRKO-02390: -node <node_name> option has been deprecated and is ignored.

Cause: '-node <node_name>' option has been deprecated and is ignored from this release. It has no effect on the command.

Action: Remove the usage of '-node <node_name>' from the command line.

PRKO-02391: Network resource {0},{1} already exists. Nothing to modify

Cause: The subnet specified is already the default subnet.

Action: Check the input and if the subnet needs to be modified then specify a different subnet.

PRKO-02392: eONS already uses {0} as Multicast address. Nothing to modify.

Cause: The Multicast address specified in this command is already in use by eONS.

Action: Check the input and if the Multicast address needs to be changed then specify a different address.

PRKO-02393: eONS already uses {0} as Multicast port. Nothing to modify.

Cause: The Multicast port specified in this command is already in use by eONS.

Action: Check the input and if the Multicast port needs to be changed then specify a different port.

PRKO-02394: ONS already uses {0} as port for local connections. Nothing to modify.

Cause: The modify node applications command failed because the ONS port for local connections is already used by ONS for local connections.

Action: Check the input and if the port used by ONS for local connections need to be modified specify a different address.

PRKO-02395: ONS already uses {0} as port for remote connections. Nothing to modify.

Cause: The modify node applications command failed because the ONS port for remote connections is already used by ONS for remote connections.

Action: Check the input and if the port used by ONS for remote connections need to be modified specify a different address.

PRKO-02396: The list of remote host/port ONS pairs matches the current list : {0}. Nothing to modify.

Cause: The modify node applications command failed because the remote host/port ONS pairs matches the current list.

Action: Check the input and if the remote host/port pairs need to be modified and specify a different host/port list.

PRKO-02405: Network resource does not exist on the cluster nodes.

Cause: Network resource does not exist on the cluster nodes.

Action: Node applications can be added by using the command 'srvctl add nodeapps'.

PRKO-02409: GSD is already disabled on node(s): {0}

Cause: The disable node applications command failed because GSD was already disabled.

Action: None required.

PRKO-02410: VIP is already disabled on node(s): {0}

Cause: The disable node applications command failed because VIP was already disabled.

Action: None required.

PRKO-02411: Network resource is already disabled.

Cause: The disable node applications command failed because Network resource was already disabled.

Action: None required.

PRKO-02412: ONS is already disabled on node(s): {0}

Cause: The disable node applications command failed because ONS was already disabled.

Action: None required.

PRKO-02413: eONS is already disabled on node(s): {0}

Cause: The disable node applications command failed because eONS was already disabled.

Action: None required.

PRKO-02414: GSD is already enabled on node(s): {0}

Cause: The enable node applications command failed because GSD is already enabled.

Action: None required.

PRKO-02415: VIP is already enabled on node(s): {0}

Cause: The enable node applications command failed because VIP is already enabled.

Action: None required.

PRKO-02416: Network resource is already enabled.

Cause: The enable node applications command failed because Network resource is already enabled.

Action: None required.

PRKO-02417: ONS is already enabled on node(s): {0}

Cause: The enable node applications command failed because ONS is already enabled.

Action: None required.

PRKO-02418: eONS is already enabled on node(s): {0}

Cause: The enable node applications command failed because eONS is already enabled.

Action: None required.

PRKO-02419: GSD is already started on node(s): {0}

Cause: The start node applications command failed because GSD is already started.

Action: None required.

PRKO-02420: VIP {0} is already started on nodes: {1}

Cause: The start node applications command failed because VIP was already started.

Action: None required.

PRKO-02421: Network resource is already started on node(s): {0}

Cause: The start node applications command failed because Network resource is already started.

Action: None required.

PRKO-02422: ONS is already started on node(s): {0}

Cause: The start node applications command failed because ONS is already started.

Action: None required.

PRKO-02423: eONS is already started on node(s): {0}

Cause: The start node applications command failed because eONS is already started.

Action: None required.

PRKO-02424: GSD is already stopped on node(s): {0}

Cause: The stop node applications command failed because GSD is already stopped.

Action: None required.

PRKO-02425: VIP is already stopped on node(s): {0}

Cause: The stop node applications command failed because VIP is already stopped.

Action: None required.

PRKO-02426: ONS is already stopped on node(s): {0}

Cause: The stop node applications command failed because ONS is already stopped.

Action: None required.

PRKO-02427: eONS is already stopped on node(s): {0}

Cause: The stop node applications command failed because eONS is already stopped.

Action: None required.

PRKO-02428: VIP is running on the node {0} and cannot be modified.

Cause: Modify nodeapps command failed because VIP being modified is running on a node.

Action: Stop the node application by issuing the command 'srvctl stop nodeapps' and retry the modify again.

PRKO-02429: -node <node_name> should be specified with -address {<varname>name</varname>[<varname>ip</varname>]/netmask[/if1[[if2]]} for modifying VIP.

Cause: If '-node <node_name>' option is specified then '-address' option must also be specified for modifying VIP.

Action: If you want to modify the VIP then specify both the '-node' and '-address' options. Otherwise remove the '-node <node_name>' option.

PRKO-02430: Missing required '-node' option for 'srvctl modify nodeapps -address' VIP modification.

Cause: '-address <varname>options</varname>' was specified for the 'modify nodeapps' command without specifying which node VIP needs to be modified.

Action: Specify the node whose VIP needs to be modified by using '-node' option.

PRKO-02431: Warning: the -node option is obsolescent; 'srvctl remove vip' is preferred for removing per-node VIP resource

Cause: The command 'srvctl remove nodeapps' was issued with the '-node' option specifying one or more nodes. Support for this option will be removed in a future release, at which time you must use the preferred command 'srvctl remove vip -vip <vip_list>'.

Action: The command is processed normally and attempts to remove VIP resources for the specified node(s). This message is displayed only to alert you to a future change. Use the command 'srvctl remove nodeapps' to remove all node applications from the last node of the cluster.

PRKO-02438: Network resource does not exist.

Cause: Network resource to be started/stopped/modified/enabled/disabled does not exist.

Action: Network resource can be created using the command 'srvctl add nodeapps'.

PRKO-02439: VIP does not exist.

Cause: VIP to be started/stopped/modified/enabled/disabled does not exist.

Action: VIP can be created using the command 'srvctl add nodeapps'.

PRKO-02440: Network resource is already stopped.

Cause: The stop node applications command failed because network resource was already stopped.

Action: None required.

PRKO-02452: ONS already exists

Cause: A new instance of ONS daemon could not be created, as there is an existing instance of ONS.

Action: None required.

PRKO-02453: eONS already exists

Cause: A new instance of eONS daemon could not be created, as there is an existing instance of eONS.

Action: None required.

PRKO-02458: ONS does not exist

Cause: ONS daemon was not configured on this instance of Oracle Restart.

Action: Add ONS daemon using the command 'srvctl add ons' and try this command again.

PRKO-02463: eONS does not exist

Cause: eONS daemon was not configured on this instance of Oracle Restart.

Action: Add eONS daemon using the command 'srvctl add eons' and try this command again.

PRKO-02465: ONS does not exist.

Cause: ONS daemon was not configured on this instance of Oracle Restart.

Action: ONS daemon can be configured using the command 'srvctl add ons'.

PRKO-02466: Both '-address' and '-iptype' options cannot be specified when modifying VIP

Cause: Both '-address' and '-iptype' options were specified in the modify VIP command.

Action: Specify either '-address' or '-iptype' but not both in the modify VIP command.

PRKO-02467: adminhelper does not exist

Cause: adminhelper was not configured on this cluster.

Action: Configure the adminhelper with the 'srvctl add rhpsrv' or 'srvctl add rhpsrv' command.

PRKO-02468: adminhelper is already started on nodes: {0}

Cause: The adminhelper start command failed because adminhelper is already started.

Action: None required.

PRKO-02469: adminhelper is already stopped on nodes: {0}

Cause: The command to stop adminhelper failed because adminhelper is already stopped.

Action: None required.

PRKO-02470: adminhelper is already enabled on nodes: {0}

Cause: The adminhelper enable command failed because adminhelper is already enabled.

Action: None required.

PRKO-02471: adminhelper is already disabled on nodes: {0}

Cause: The adminhelper disable command failed because adminhelper is already enabled.

Action: None required.

PRKO-02567: eONS daemon does not exist.

Cause: eONS daemon was not configured on this instance of Oracle Restart.

Action: eONS daemon can be configured using the command 'srvctl add eons'.

PRKO-02569: ONS is already started.

Cause: The command 'srvctl start ons' failed because the ONS daemon was already started.

Action: None required.

PRKO-02571: eONS is already started.

Cause: The command 'srvctl start eons' failed because the eONS daemon was already started.

Action: None required.

PRKO-02573: ONS daemon is already stopped.

Cause: The command 'srvctl stop ons' failed because the ONS daemon was already stopped.

Action: None required.

PRKO-02575: eONS daemon is already stopped.

Cause: The command 'srvctl stop eons' failed because the eONS daemon was already stopped.

Action: None required.

PRKO-02576: ONS is already enabled.

Cause: The command 'srvctl enable ons' failed because the ONS was already enabled.

Action: None required.

PRKO-02579: eONS is already enabled.

Cause: The command 'srvctl enable eons' failed because the eONS was already enabled.

Action: None required.

PRKO-02581: ONS is already disabled.

Cause: The command 'srvctl disable ons' failed because the ONS was already disabled.

Action: None required.

PRKO-02583: eONS is already disabled.

Cause: The command 'srvctl disable eons' failed because the eONS was already disabled.

Action: None required.

PRKO-02588: ONS daemon could not be removed because it is still running.

Cause: The command 'srvctl remove ons' failed because ONS daemon was still running.

Action: Stop the ons daemon by using the command 'srvctl stop ons' and then attempt to remove it. You can also use the '-force' option to remove a running ons daemon.

PRKO-02589: eONS daemon could not be removed because it is still running.

Cause: The command 'srvctl remove eons' failed because eONS daemon was still running.

Action: Stop the ons daemon by using the command 'srvctl stop eons' and then attempt to remove it. You can also use the '-force' option to remove a running eons daemon.

PRKO-02590: None of the ONS daemon parameters were modified.

Cause: The configuration of the ONS daemon has remained the same after the 'srvctl modify ons' command.

Action: Make sure that at least one of the optional modification parameters was specified on the command line. The current values of parameters of the ONS daemon can be found by using 'srvctl config ons' command. Specify at least one value different then current value while issuing the 'srvctl modify ons' command.

PRKO-02591: None of the eONS daemon parameters were modified.

Cause: The configuration of the eONS daemon has remained the same after the 'srvctl modify eons' command.

Action: Make sure that at least one of the optional modification parameters was specified on the command line. The current values of parameters of the eONS

daemon can be found by using the command 'srvctl config eons'. Specify at least one value different than current value while issuing the command 'srvctl modify eons'.

PRKO-02593: enable of GNS failed.

Cause: Enabling the GNS server failed.

Action: Examine the accompanying exception for details.

PRKO-02595: modify of GNS failed.

Cause: Modification the GNS server failed.

Action: Examine the accompanying exception for details.

PRKO-02597: disable of GNS failed.

Cause: Disabling the GNS server failed.

Action: Examine the accompanying exception for details.

PRKO-02599: relocation of GNS failed.

Cause: Relocation of the GNS server failed.

Action: Examine the accompanying exception for details.

PRKO-02601: removal of GNS failed.

Cause: Removal of the GNS server failed.

Action: Examine the accompanying exception for details.

PRKO-02603: addition of GNS failed.

Cause: The addition of the GNS server failed.

Action: Examine the accompanying exception for details.

PRKO-02604: Add client data operation is not allowed because GNS is configured

Cause: An attempt to add client data failed because GNS was configured. Client data can only be added on a GNS client cluster.

Action: Remove the GNS configuration and retry the command.

PRKO-02611: GNS VIP does not exist. Specify the {0} option to create one.

Cause: The attempt to add GNS failed because the VIP associated with it does not exist.

Action: Create the VIP.

PRKO-02621: The '-node <varname>node</varname>' option cannot be used to create RAC database {0}

Cause: The '-node' option was supplied to create a single-instance database, along with '-dbtype RAC' requesting a Oracle RAC database.

Action: Specify '-dbtype SINGLE' with '-node <varname>node</varname>' or omit '-node' option and reissue the command.'

PRKO-02700: The CVU resource is not configured

Cause: The CVU resource was not configured on the cluster or an unexpected error occurred while querying Clusterware for the CVU resource.

Action: If the CVU resource was not configured then a new resource can be created using the command 'srvctl add cvu'. If the resource was configured, look at any accompanying error messages.

PRKO-02702: CVU is already disabled

Cause: CVU resource could not be disabled because it is already disabled.

Action: None required.

PRKO-02703: CVU is already enabled

Cause: CVU resource could not be enabled because it is already enabled.

Action: None required.

PRKO-02707: CVU resource must be stopped before removing

Cause: The command 'srvctl remove cvu' was issued while CVU instance was running.

Action: Stop the CVU resource using the command 'srvctl stop cvu' and then try removing.

PRKO-02708: Unable to convert RAC One Node database because it has an active online relocation request

Cause: Failed to convert an Oracle RAC One Node database to an Oracle RAC database because there was an active online relocation request for the database.

Action: Wait for the online relocation request to complete and then run the command 'srvctl convert database'.

PRKO-02709: Unable to convert RAC One Node database because it has a failed online relocation request

Cause: An attempt to convert an Oracle RAC One Node database to an Oracle RAC database failed because there was a failed online relocation request for the database.

Action: Use the command 'srvctl status database' to show the target node of the failed online relocation request process. Run the command 'srvctl relocate database' with either the '-abort' option or with '-node' option with the correct target node. Then run the command 'srvctl convert database'.

PRKO-02710: Option '-node' cannot be used to start RAC database {0}

Cause: The '-node' option was specified to start an Oracle RAC database, but '-node' option is only applicable to an Oracle RAC One Node databases.

Action: Either use the command 'srvctl start instance' to start an Oracle RAC database instance on the given node or use the command 'srvctl start database' without '-node' option to start the Oracle RAC database.

PRKO-02712: Administrator-managed database {0} is not supported with -eval option

Cause: A request with the '-eval' option specified an administrator-managed database.

Action: Specify a policy-managed database when using the '-eval' option.

PRKO-02713: Oracle Restart database {0} is not supported with -eval option

Cause: A request with the '-eval' option specified an oracle restart database.

Action: Specify a policy-managed database when using the '-eval' option.

PRKO-03026: Only one instance can be listed in -instance <inst_name_list> when -node option is specified

Cause: More than one instance was specified for '-instance' option when both '-instance' and '-node' options were used.

Action: Supply one instance name for '-instance' option when using both '-instance' and '-node' option.

PRKO-03031: Server pool {0} already exists

Cause: The command 'srvctl add serverpool' failed because the given server pool already exists.

Action: Make sure that the name of server pool is correct and a server pool with the given name doesn't exist.

PRKO-03032: Invalid instance name(s): {0}

Cause: Some of the supplied instance names do not exist in the database configuration.

Action: Please supply valid instance names and retry.

PRKO-03077: Failed to remove database {0}:

Cause: Failed to remove the database.

Action: Examine the accompanying message(s) for details of the error, and respond accordingly.

PRKO-03081: No such environment variable setting: {0}

Cause: The environment variable(s) does not exist for the specified resource.

Action: Supply a valid environment variable.

PRKO-03085: Volume device: {0}

Cause: Volume device label

Action: None

PRKO-03086: Mountpoint path: {0}

Cause: Mountpoint path label

Action: None

PRKO-03087: User: {0}

Cause: User label

Action: None

PRKO-03113: Administrator-managed database {1} can not support policy-managed service {0}.

Cause: The specified database does not support policy-managed services.

Action: Provide a database which supports policy-managed services.

PRKO-03114: Policy-managed database {1} can not support administrator-managed service {0}.

Cause: The specified database does not support administrator-managed services.

Action: Provide a database which supports administrator-managed services.

PRKO-03115: -tafpolicy option cannot be used with policy-managed service {0}.

Cause: The '-tafpolicy' option was specified for a policy-managed service.

Action: Use the '-failovermethod' option to specify failover processing for a policy-managed service.

PRKO-03116: '-serverpool' or '-preferred' option must be provided

Cause: An add service command was issued with neither '-serverpool' nor '-preferred'.

Action: Make sure that one of specified options is included on the command line.

PRKO-03117: Service {0} already exists in database {1}

Cause: The service being added already exists.

Action: If the service needs to be modified use the command 'srvctl modify service'.

PRKO-03118: Failed to check if service {0} exists: {1}

Cause: Failed to get the service data.

Action: Make sure that Oracle Clusterware is active.

PRKO-03119: Database {0} cannot be started since it has no configured instances.

Cause: The specified database is an administrator-managed database and it cannot be started because no instances were configured.

Action: Use the command 'srvctl add instance' to configure the instance and then retry.

PRKO-03120: Database {0} cannot be stopped since it has no configured instances.

Cause: The specified database is an administrator-managed database and it could not be stopped because no instances were configured.

Action: Use the command 'srvctl add instance' to configure the instance and then retry.

PRKO-03121: -instance option or -node option is required for starting an instance on the administrator-managed database {0}.

Cause: The specified database is an administrator-managed database and the srvctl start instance command requires the instance name or nodename to be specified.

Action: Use the commane 'srvctl start instance' with either the '-instance' or '-node' option to start the instance.

PRKO-03122: -instance option or -node option is required for stopping an instance of database {0}

Cause: Neither the instance name nor the nodename was provided during the command 'srvctl stop instance' invocation.

Action: Use the command 'srvctl stop instance' with either the '-instance' or '-node' option to specify which instance to stop.

PRKO-03125: Invalid value {0} for command line option {1}

Cause: Invalid value was specified for the command line option.

Action: Check the value printed and specify the correct value.

PRKO-03126: Invalid GNS logging level: "{0}"

Cause: The level of logging specified was not a positive integer.

Action: Specify a positive integer.

PRKO-03128: Unable to add database because the resource for diskgroup {0} could not be found. {1}

Cause: The resource for the specified disk group could not be found. Either the diskgroup name was misspelled or the diskgroup has not been mounted.

Action: Correct the diskgroup spelling or use sqlplus to create the diskgroup.

PRKO-03129: Unable to modify database because the resource for diskgroup {0} could not be found. {1}

Cause: The resource for the specified disk group could not be found. Either the diskgroup name was misspelled or the diskgroup has not been mounted.

Action: Correct the diskgroup spelling or use sqlplus to create the diskgroup.

PRKO-03130: Server pool {0} is internally managed as part of administrator-managed database configuration and therefore cannot be modified directly via srvpool object.

Cause: An attempt was made to alter configuration of an internally managed server pool that is hosting an administrator-managed configuration.

Action: Do not modify this server pool via srvpool object directly. Instead use the command 'srvctl add/remove instance' or use the command 'srvctl modify database/service' to alter this server pool's configuration.

PRKO-03132: -instance option or -node option is required for checking the status of an instance of database {0}

Cause: Neither the instance name nor the nodename was provided during 'srvctl status instance' command invocation.

Action: Use the command 'srvctl status instance' with either the '-instance' or '-node' option to check the status of the instance.

PRKO-03133: Database {0} has no instance on node {1}

Cause: The indicated database did not have an instance configured on the indicated node.

Action: Either the command 'srvctl add instance' or the command 'srvctl modify instance' can be used to change instance-node mapping in administrator-managed databases. For a policy-managed database, either use the command 'srvctl start instance' with the '-node' option to start the instance on the specified node or use the command 'srvctl modify instance' to configure an instance for that node.

PRKO-03134: -node option cannot be specified with -nonode option

Cause: '-node' and '-nonode' options were both provided during 'srvctl modify instance' command invocation.

Action: Use the command 'srvctl modify instance' with either the '-node' or '-nonode' option to modify the node instance mapping of the database instance.

PRKO-03135: -node option cannot be empty when used with administrator-managed database {0}

Cause: The '-node' option was specified as an empty string in an attempt to remove node to instance mapping of administrator-managed database.

Action: Use the command 'srvctl remove instance' to remove node instance mapping of an administrator-managed database.

PRKO-03136: Option '-cardinality' cannot be used with administrator-managed service {0}

Cause: The '-cardinality' option was specified for administrator-managed service.

Action: Reissue the command without the '-cardinality' option.

PRKO-03138: Node {0} does not belong to server pool {1} which defines nodes for service {2}

Cause: Node doesn't belong to the server pool which defines nodes which can be used to run the specified service.

Action: Supply a node which belongs to specified server pool.

PRKO-03139: Options '-oldinst' and '-newinst' cannot be used with policy-managed service {0}

Cause: The '-oldinst' and '-newinst' options were specified to relocate a policy-managed service.

Action: Use options '-currentnode' and '-targetnode' to relocate a policy-managed service.

PRKO-03140: Options '-currentnode' and '-targetnode' cannot be used with administrator-managed service {0}

Cause: The '-currentnode' and '-targetnode' options were specified to relocate an administrator-managed service.

Action: Use options '-oldinst' and '-newinst' to relocate a administrator-managed service.

PRKO-03141: Database {0} could not be removed because it was running

Cause: The command 'srvctl remove database' failed because the database was running.

Action: Stop the database by using the command 'srvctl stop database' and then attempt to remove it. You can also use the '-force' option to remove the running database.

PRKO-03142: Option '-instance' cannot be used to enable or disable services for policy-managed database {0}

Cause: An attempt to enable or disable a policy-managed database service specified the '-instance' option.

Action: Use the '-node <varname>node</varname>' option to specify nodes on which to enable or disable services for this policy-managed database.

PRKO-03143: Options '-preferred', '-toprefer', '-modifyconfig' and '-available' were specified to modify policy-managed service {0}

Cause: Options '-preferred', '-toprefer', '-modifyconfig' and '-available' can be used to modify administrator-managed service only.

Action: Make sure that the service you are going to modify is an administrator-managed service.

PRKO-03144: Option '-available' was specified without '-modifyconfig', '-toprefer' or '-preferred'

Cause: The option '-available' was specified without options '-modifyconfig', '-toprefer' or '-preferred'.

Action: Make sure that options -modifyconfig, -toprefer, -preferred or -available are provided.

PRKO-03145: Option '-preferred' requires '-modifyconfig' option to be specified

Cause: Option '-preferred' was specified without required '-modifyconfig' option.

Action: Make sure that required option is provided according to the command 'srvctl modify service' syntax.

PRKO-03146: Missing required '-preferred' option

Cause: Options '-available' or '-modifyconfig' were specified without required option '-preferred'.

Action: Make sure that required option is provided according to command 'srvctl modify service' syntax.

PRKO-03147: Instance {0} cannot be removed because it is the only preferred instance for service(s) {1} for database {2}

Cause: An attempt was made to remove the instance which is the only preferred instance for specified services.

Action: Make sure that specified services have more than one preferred instance or modify services to not have the instance as a preferred instance.

PRKO-03148: Instance {0} does not support service {1}.

Cause: The given database instance is not defined as a preferred or available instance for the given service.

Action: Specify an instance that is defined as preferred or available instance for the given service.

PRKO-03149: The candidate server {0} of server pool {1} is different from the server {2} specified with the '-node' option

Cause: Specified server must be the candidate server of the specified server pool.

Action: Make sure that the server specified with '-node' option is the same as the candidate server of the given server pool.

PRKO-03150: The server pools {0} specified with the '-serverpool' cannot be used to add an administrator-managed database

Cause: A request to add an administrator-managed database specified the '-serverpool' option.

Action: Use the command 'srvctl add database' without the '-serverpool' option to add an administrator-managed database.

PRKO-03151: Option '-serverpool' cannot have more than one specified server pool when converting an administrator-managed database to a policy-managed database

Cause: An attempt was made to convert an administrator-managed database to a policy-managed database by specifying more than one server pool.

Action: Make sure to specify only one server pool with the '-serverpool' option when converting an administrator-managed database to a policy-managed database.

PRKO-03152: The server pools {0} specified with the '-serverpool' option are subpools of Generic and therefore cannot be used to modify the server pool value of a policy-managed database

Cause: The supplied server pools are meant for managing administrator-managed databases because they are subpools of Generic.

Action: Make sure that none of the supplied server pools are meant for managing administrator-managed database. Only supply server pools meant for managing policy-managed databases to the '-serverpool' option of the command 'srvctl modify database'. Use the command 'srvctl config srvpool' to list the qualified server pools meant for managing policy managed databases.

PRKO-03153: -instance option or -node option is required for starting an instance on the policy-managed database {0}.

Cause: The specified database is a policy-managed database and the command 'srvctl start instance' requires the instance name or nodename to be specified.

Action: Use the command 'srvctl start instance' with either the '-instance' or '-node' option or both '-instance' and '-node' options to start the instance.

PRKO-03154: Both -instance and -node options are specified for starting an instance on the administrator-managed database {0}.

Cause: The specified database is an administrator-managed database and the command 'srvctl start instance' requires either the instance name or nodename to be specified but not both.

Action: Use the command 'srvctl start instance' with either the '-instance' or '-node' option to start the instance.

PRKO-03155: Can not start the instance {0} on the specified node {1} because the node is assigned to another user configured instance {2}

Cause: The database specified on the command 'srvctl start instance' was policy managed and had another instance already configured on the node name specified with the '-node' option.

Action: Either reformulate the command 'srvctl start instance' so that there is no conflict with configured instances' nodes, or use the command 'srvctl modify instance' to change configured instances' nodes.

PRKO-03160: Server pool {0} is internally managed as part of administrator-managed database configuration and therefore cannot be queried directly via srvpool object.

Cause: An attempt was made to query configuration of an internally managed server pool that is hosting an administrator-managed configuration.

Action: Do not query this server pool via srvpool object directly. Instead use srvctl config/status database/service command to query servers that are part of this pool's configuration.

PRKO-03161: Server pool {0} is internally managed as part of administrator-managed database configuration and therefore cannot be removed directly via srvpool object.

Cause: An attempt was made to remove configuration of an internally managed server pool that is hosting an administrator-managed configuration.

Action: Do not remove this server pool via srvpool object directly. Instead use the command 'srvctl remove service/database' to remove this server pool and any service/database hosted by the server pool.

PRKO-03162: The actions setenv, getenv, and unsetenv are not supported for Single Client Access Name listener {0}

Cause: Failed to use the command 'srvctl setenv, getenv, and unsetenv listener' for specified Single Client Access Name Listener. The environment variables for Single Client Access Name Listener cannot be changed.

Action: Do not set, get, and unset environment variables for Single Client Access Name Listener.

PRKO-03163: Options '-update', '-preferred', '-available', '-serverpool' and '-cardinality' cannot be used to add service {0} for single instance database {1}

Cause: Failed to add specified service because provided options can not be used to add a service for single instance database.

Action: use the command 'srvctl add service' without options '-update', '-preferred', '-available', '-serverpool' or '-cardinality'.

PRKO-03164: Options '-toprefer', '-force', '-modifyconfig', '-instance', '-edition', '-available', '-cardinality' and '-dtp' cannot be used to modify service {0} for single instance database {1}

Cause: Failed to modify specified service because provided options can not be used to modify a service for single instance database.

Action: Use the command 'srvctl modify service' without options '-toprefer', '-force', '-modifyconfig', '-instance', '-edition', '-available', '-cardinality' or '-dtp'.

PRKO-03165: Service {0} is defined for single instance database {1} and therefore cannot be relocated

Cause: Failed to relocate specified service because provided options can not be used to relocate a service for single instance database.

Action: Make sure that you issue the command 'srvctl relocate service' for the service which is not defined for a single instance database.

PRKO-03166: Invalid GNS parameter: "{0}"

Cause: An invalid parameter value was specified.

Action: A parameter value must have the following format: <varname>name</varname>:<varname>value</varname>. The name may not contain a colon (":"). The value may not contain a comma (",").

PRKO-03167: EONS has been deprecated and ONS should be used to set and modify the local port for Enterprise Manager.

Cause: The command being executed has been deprecated and will not do any action.

Action: Use the command 'srvctl -help' for online help or check the documentation for the commands supported by srvctl.

PRKO-03174: 'srvctl relocate service' command is not supported on RAC One Node database service {0}

Cause: An attempt was made to relocate a Oracle RAC One Node database service using the command 'srvctl relocate service'.

Action: Use the command 'srvctl relocate database' to relocate the RAC One Node database and its services to the target server.

PRKO-03175: TAF policy 'PRECONNECT' cannot be used to add a service for single instance database {0}

Cause: Failed to add specified service because provided TAF specification can not be used with a single instance database.

Action: Use the command 'srvctl add service' without 'PRECONNECT' TAF policy.

PRKO-03176: Option '-serverpool' cannot be used with administrator-managed service {0}

Cause: An attempt to change the server pool of service was rejected because the '-serverpool' option cannot be used with administrator-managed service.

Action: Change the preferred and available instances of the service via the command 'srvctl modify service' to manage placement of administrator-managed service.

PRKO-03226: Upgrade from version {0} to version {1} using 'srvctl upgrade model' command of version {2} is not supported

Cause: The command 'srvctl upgrade model' was issued for a version change that is other than an increase in patch set level.

Action: Check that the versions provided are correct.

PRKO-03229: Option '-instance' cannot be used to enable or disable services {0} for single instance database {1}

Cause: Failed to enable/disable specified service because its database is a single instance database.

Action: Make sure that you issue the command 'srvctl enable/disable service' without option '-instance'.

PRKO-03241: The '-oraclehome <oracle_home>' option value "{0}" corresponds to a pathname that does not exist or is not a directory

Cause: The '-oraclehome <oracle_home>' option value did not resolve to an existing directory pathname.

Action: Ensure that the '-oraclehome <oracle_home>' option value corresponds to an existing directory pathname.

PRKO-03242: The '-statfile <state_file>' option value "{0}" is a directory

Cause: The '-statfile <state_file>' option value resolved to an existing directory pathname instead of a file pathname.

Action: Ensure that the '-statfile <state_file>' option value corresponds to file.

PRKO-03243: The '-statfile <state_file>' option value "{0}" is a file under a non-writable directory

Cause: The '-statfile <state_file>' option value resolved to a non-writable pathname.

Action: Ensure that the state file parent directory has write permissions.

PRKO-03244: The '-statfile <state_file>' option value "{0}" already exists

Cause: The '-statfile <state_file>' option value resolved to an existing file pathname.

Action: Ensure that the '-statfile <state_file>' option value corresponds to a non-existing file pathname.

PRKO-03245: Cannot determine the canonical path to the state file "{0}"

Cause: The '-statfile <state_file>' option value specified a pathname for which the canonical path cannot be retrieved.

Action: Provide the absolute pathname for '-statfile <state_file>' option value.

PRKO-03246: The '-statfile <state_file>' option value "{0}" does not exist or cannot be read

Cause: The '-statfile <state_file>' option value mapped to a non-existing or non-readable file pathname.

Action: Ensure that the '-statfile <state_file>' option value corresponds to an existing readable file pathname.

PRKO-03249: Failed to add service {0} with PRECONNECT TAF policy because PRECONNECT TAF policy requires at least one available instance

Cause: An attempt to add a service with the PRECONNECT TAF policy was rejected because an available instance was not specified.

Action: Specify at least one available instance with the '-available' option using the command 'srvctl add service' if the service TAF policy is to be PRECONNECT.

PRKO-03250: Failed to stop VIPs on node {0} because no VIP was running on the given node

Cause: An attempt to stop VIPs on a given node was rejected because VIP was not running on the given node.

Action: Check the status of VIPs running on the given node using the command 'srvctl status vip' and issue the command 'srvctl stop vip' only if there are VIPs running on the given node.

PRKO-03251: Failed to relocate as relocation is not supported in Oracle Restart mode

Cause: An attempt to relocate failed because relocation was not supported in Oracle Restart.

Action: Ensure you are in a cluster environment to relocate managed entities.

PRKO-03252: Failed to convert as convert action is not supported in Oracle Restart Mode

Cause: An attempt to convert failed because conversion is not supported in Oracle Restart.

Action: Ensure you are in a cluster environment to convert managed entities.

PRKO-03253: An attempt to modify the OC4J port failed because OC4J is running. Use -force to force stop/restart of OC4J.

Cause: A request to modify the port number of OC4J was rejected because such modification requires OC4J to be stopped and restarted.

Action: Use '-force' option to force restart of OC4J.

PRKO-03268: Unable to add ASM because the resource for diskgroup {0} could not be found. {1}

Cause: An attempt to add ASM has failed because the specified disk group could not be found. Either the diskgroup name was misspelled or the diskgroup has not been mounted.

Action: Correct the diskgroup spelling or use sqlplus to create the diskgroup.

PRKO-03269: Unable to modify ASM because the resource for diskgroup {0} could not be found. {1}

Cause: An attempt to add ASM has failed because the specified disk group could not be found. Either the diskgroup name was misspelled or the diskgroup has not been mounted.

Action: Correct the diskgroup spelling or use sqlplus to create the diskgroup.

PRKO-03270: The specified password file {0} does not conform to an ASM path syntax

Cause: When adding or modifying a database or an ASM, a password file that was not ASM syntax was supplied.

Action: Specify a password file in ASM syntax.

PRKO-03285: Leaf listener was not found

Cause: No leaf listener was found registered during the operation.

Action: Resolve the issue reported by the included error message and then retry the command. If the leaf listener does not exist, use 'srvctl add listener -leaflistener' to register it.

PRKO-03287: Cluster ASM listener was not found

Cause: Check the reported message, cluster ASM listener may not exist.

Action: Use the command 'srvctl add listener -asmlistener' to register the ASM listener.

PRKO-03303: Option '-eval' cannot be used to evaluate effects of modifications on administrator-managed service {0}

Cause: The '-eval' option can be used to evaluate modification on policy-managed service only.

Action: Make sure that the service you are going to evaluate modification is a policy-managed service.

PRKO-03304: Option '-eval' cannot be used to evaluate effects of relocation of administrator-managed service {0}

Cause: The '-eval' option can be used to evaluate relocation of policy-managed service only.

Action: Make sure that the service you are going to evaluate relocation is a policy-managed service.

PRKO-03305: Option '-eval' cannot be used without '-service' option

Cause: The '-eval' option can be used to evaluate only for one service.

Action: Supply a valid '-service' argument.

PRKO-03346: Unable to export instance: GNS is running

Cause: The command 'srvctl export gns' request was issued while Grid Naming Service (GNS) was running.

Action: Stop GNS by using the command 'srvctl stop gns' and reissue the request.

PRKO-03347: Unable to import instance: GNS is running

Cause: The command 'srvctl import gns' request was issued while Grid Naming Service (GNS) was running.

Action: Stop GNS by using the 'srvctl stop gns' and reissue the request.

PRKO-03350: '-node' option conflicts with multiple instance names {0} specified for '-instance <instance_list>'

Cause: Conflicting options were specified on a 'srvctl start service' or 'srvctl stop service' command. Can't start or stop multiple instances on one node.

Action: Reissue the command for one instance or without '-node' option.

PRKO-03351: Failed to add GNS with -client option because this cluster running as a GNS server

Cause: The command 'srvctl add gns -client <varname>filename</varname>' request was issued on the cluster where the GNS server is running.

Action: Remove GNS by using the command 'srvctl remove gns' and reissue the request.

PRKO-09059: Invalid command line options for listener. '-all' cannot be specified with '-listener'.

Cause: Invalid combination of options specified for listener command.

Action: Issue the command using either '-listener <listener_name>' or '-all' option.

PRKO-09063: Single Client Access Name must start with a letter unless it is an IP address

Cause: A SCAN was supplied which did not begin with a letter, however SCAN names must begin with a letter.

Action: Supply a SCAN name that begins with a letter.

PRKO-09066: Invalid upgrade phase "{0}" for upgrade model command

Cause: An invalid value was specified for upgrade phase.

Action: Upgrade phase must be either 'first' or 'last'.

PRKO-09067: Invalid network server type "{0}"

Cause: An invalid value was specified for network server type.

Action: Reissue the command specifying a network server type of 'static', 'mixed', 'dhcp', or 'autoconfig'.

PRKO-09068: Invalid port number {0}

Cause: A supplied port number was not in the valid, non-privileged range 1024-65535.

Action: Specify a port number that is bigger than 1023.

PRKO-09070: Invalid address type "{0}"

Cause: An invalid address type was specified for network or the VIP resource.

Action: The address type must be either 'IPv4' or 'IPv6'.

PRKO-09071: The specified network server type "{0}" is invalid for an "IPv4" network

Cause: An invalid value was specified for network server type.

Action: Network server type must be 'static' or 'dhcp' or 'mixed'.

PRKO-09072: The specified network server type "{0}" is invalid for an "IPv6" network

Cause: An invalid value was specified for network server type.

Action: Network server type must be 'static' or 'autoconfig' or 'mixed'.

PRKO-09082: Oracle Home is not set

Cause: Command failed to execute because Oracle Home was not set.

Action: Set the ORACLE_HOME environment variable to the Grid Infrastructure home directory path and retry.

PRKO-09083: Invalid content in file: {0}

Cause: An attempt to import a GNS instance failed because the supplied import file contains invalid content.

Action: Provide a correct import file as generated by using the command 'srvctl export gns'.

PRKO-09084: Invalid GNS version found in import file: {0}

Cause: An attempt to import a GNS instance failed because an invalid GNS version was found in import file.

Action: GNS import is supported on 12.1.0.0.0 or later.

PRKO-09085: Invalid key name in import file: {0}

Cause: An attempt to import a GNS instance failed because an OCR key other than GNS was found in the supplied import file.

Action: Provide a correct import file as generated by using the 'srvctl export gns'.

PRKO-09086: Failed to import GNS instance from file: {0}

Cause: An attempt to import a GNS instance failed due to an internal error.

Action: Contact Oracle Support Services.

PRKO-09087: Failed to export GNS instance to file: {0}.

Cause: An attempt to export a GNS instance was failed due to an internal error.

Action: Contact Oracle Support Services.

PRKO-09088: Invalid command options; either {0} must be supplied or both {1} and {2} must be supplied

Cause: Incomplete or conflicting command line options were supplied.

Action: Check the command line options entered and make sure that all the mandatory options in one set are specified.

PRKO-09089: The '-global_override' option was not specified for global services {0}.

Cause: The command 'srvctl modify/enable/disable/start/stop/remove service' request for a global service did not specify the '-global_override' option.

Action: Reissue the command with '-global_override' option.

PRKP-01000 to PRKP-01088

PRKP-01000: Cannot retrieve configuration for cluster database {0}

Cause: The cluster database configuration could not be retrieved from the repository. This could occur either because the database was never registered, or because the repository itself had not been created.

Action: Check if the database has been configured by printing a list of all cluster databases using 'srvctl config'. If the repository has not been created, use 'srvconfig - init' to create it.

PRKP-01001: Error starting database instance {0} on node {1}

Cause: The instance could not be started using the SQL*Plus startup command.

Action: Try starting the named instance manually using SQL*Plus to see why it failed and examine the database instance alert log.

PRKP-01002: Error stopping database instance {0} on node {1}

Cause: The SQL*Plus shutdown command returned an error while stopping the instance.

Action: Try stopping the named instance manually using SQL*Plus to see why it failed and examine the database instance alert log.

PRKP-01003: Startup operation partially failed

Cause: Some components of the cluster database could not be started.

Action: Check the accompanying error messages for details.

PRKP-01004: Shutdown operation partially failed

Cause: Some components of the cluster database reported errors while being stopped.

Action: Check the accompanying error messages for details.

PRKP-01005: Failed to start up cluster database {0}

Cause: The cluster database could not be started.

Action: Check the accompanying error messages for details.

PRKP-01006: Failed to shut down cluster database {0}

Cause: The cluster database reported errors while being shut down.

Action: Check the accompanying error messages for details.

PRKP-01007: Failed to start all the listeners associated with all the instances of cluster database {0}

Cause: Internal error.

Action: Contact your customer support representative.

PRKP-01008: Failed to start listeners associated with instance {0} on node {1}

Cause: Internal error.

Action: Contact your customer support representative.

PRKP-01009: Failed to stop all the listeners associated with all the instances of cluster database {0}

Cause: Either the listener name associated with an instance could not be determined, or 'lsnrctl stop' failed for a listener.

Action: Verify that listener.ora contains a SID_LIST entry for each instance of the named database, and that the 'lsnrctl stop' command succeeds for those listeners.

PRKP-01010: Failed to stop all the listeners associated with instance {0} on node {1}

Cause: Either the listener name associated with an instance could not be determined, or 'lsnrctl stop' failed for a listener.

Action: Verify that listener.ora contains a SID_LIST entry for each instance of the named database, and that the 'lsnrctl stop' command succeeds for those listeners.

PRKP-01011: Failed to get all the listeners associated with instance {0} on node {1}

Cause: The listener name associated with an instance could not be determined.

Action: Ensure that listener.ora contains a SID_LIST entry for the named instance.

PRKP-01012: Invalid environment variable {0} setting for cluster database {1}

Cause: The argument to the -t option was not of the form <varname>name</varname>=<varname>value</varname> or it contained special characters.

Action: Ensure that the -t option has an argument of the form <varname>name</varname>=<varname>value</varname>. Enclose the argument to the -t flag in quotes.

PRKP-01013: {0}: undefined environment variable for cluster database {1}

Cause: The named environment variable is not defined for the named cluster database

Action: Set a value for the variable with 'srvctl setenv'.

PRKP-01014: {0}: undefined environment variable for instance {1} of cluster database {2}

Cause: The named environment variable is not defined for the given instance

Action: Set a value for the variable with 'srvctl setenv'.

PRKP-01015: {0}: undefined environment variable

Cause: The named environment variable is not defined

Action: Set a value for the named environment variable with 'srvctl setenv'.

PRKP-01084: Database "{0}" cannot have more than "{1}" services

Cause: Attempt to add a new service to database was rejected because database has already reached the maximum services limit.

Action: Retry after removing a service of this database via 'srvctl remove service' command, or contact Oracle Support Services.

PRKP-01088: Failed to retrieve configuration of cluster database {0}

Cause: Attempt to retrieve configuration of cluster database failed. This failure is most likely due to user incorrectly using a tool, such as SRVCTL, that is of different version than that of database's configuration.

Action: If error is due to user using SRVCTL that is of different version than than of the database's, then run SRVCTL tool from the ORACLE_HOME reported in the error message. Otherwise, contact Oracle support services.

PRKR-01001 to PRKR-01082

PRKR-01001: cluster database {0} does not exist

Cause: The cluster database was never registered in the repository.

Action: Check if the database has been configured by printing a list of all cluster databases using 'srvctl config'.

PRKR-01002: cluster database {0} already exists

Cause: An attempt was made to register a cluster database which already existed in the repository.

Action: Check if the database has already been configured by printing a list of all cluster databases using 'srvctl config'.

PRKR-01003: instance {0} does not exist

Cause: The named instance was never registered in the repository.

Action: Use 'srvctl config instance' to check if the instance is registered in the repository.

PRKR-01005: adding of cluster database {0} configuration failed, {1}

Cause: Internal error.

Action: Contact your customer support representative.

PRKR-01006: deleting of cluster database {0} configuration failed, {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01007: getting of cluster database {0} configuration failed, {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01008: adding of instance {0} on node {1} to cluster database {2} failed.

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01009: deleting of instance {0} from cluster database {1} failed, {2}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01010: moving of instance {0} to node {1} of cluster database {2} failed.

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01011: renaming of instance {0} to instance {1} of cluster database {2} failed, {3}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01012: error {0} while serializing configuration of cluster database {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01013: error {0} while deserializing configuration of cluster database {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01014: error {0} while serializing directory

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01015: error {0} while deserializing directory

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01016: reading of cluster database {0} configuration failed, {1}, {2}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01017: writing of cluster database {0} configuration failed, {1}, {2}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01018: reading of directory failed, {0}, {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01019: writing of directory failed, {0}, {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01020: reading of version information failed, {0}, {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01021: writing of version information failed, {0}, {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01022: Cluster registry {0} contains incompatible version, {1} != {2}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01023: file {0} does not exist

Cause: The named file did not exist.

Action: Specify a file that exists.

PRKR-01024: file {0} does not have {1} permissions

Cause: The named file did not have the specified permission.

Action: Try changing the permission on the file to the specified permission.

PRKR-01025: file {0} does not contain property {1}

Cause: The file did not contain the specified property.

Action: Contact Oracle Support Services.

PRKR-01026: property {0} not set in file {1}

Cause: The file did not contain the specified property.

Action: Contact Oracle Support Services.

PRKR-01027: failed to retrieve list of cluster databases

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01028: Cluster registry {0} is invalid\n[HINT: initialize cluster registry by using "srvconfig" tool]

Cause: The management repository was never initialized.

Action: Use 'srvconfig -init' to initialize the repository.

PRKR-01039: invalid option {0} specified

Cause: The specified option was invalid.

Action: Check the command documentation or the inline help display for usage details.

PRKR-01040: missing <varname>file</varname> argument for {0} option

Cause: The specified option was invalid for srvconfig.

Action: Check the command documentation or the inline help display for usage details.

PRKR-01050: file {0} creation in {1} directory failed

Cause: Either the directory did not exist or it did not have the required permissions.

Action: Create the directory if it did not exist or change the permission of the directory.

PRKR-01051: file {0} does not contain an entry for dbname {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01052: file name {0} is not of <varname>cluster database name</varname>.conf form

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01053: invalid range {0} specified in node_list = {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01054: invalid parameter {0} specified in inst_oracle_sid = {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01055: invalid extra arguments {0} specified to {1} option

Cause: Provided invalid arguments to srvconfig.

Action: Check the command documentation or the inline help display for usage details.

PRKR-01056: invalid registry entry {0} found; should be of form {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01057: environment variable does not exist

Cause: Attempted to retrieve non existing environment variable.

Action: Set the environment variable.

PRKR-01078: Database {0} of version {1} cannot be administered using current version of srvctl. Instead run srvctl from {2}

Cause: An attempt was made to access configuration of database using srvctl that was of different version than that of the database.

Action: Perform the operation using srvctl from the ORACLE_HOME mentioned in the error message.

PRKR-01082: Failed to get OCR locations

Cause: An error occurred while attempting to retrieve the OCR locations, possibly due to missing or incorrect OCR locations file, or incomplete OCR configuration, or due to missing or incorrect SRVM shared libraries.

Action: Verify that the Clusterware has been correctly installed and configured. Verify that the ocr.loc file is present and readable in the appropriate location for your platform.

PRKU-01001 to PRKU-01060

PRKU-01001: Unexpected argument {0}.

Cause: The command line argument reported in above error message is not expected the by tool

Action: Refer to the tool's inline help display or to the product documentation of the command line tool for valid options and arguments, and then rerun the tool.

PRKU-01002: The option {0} is required.

Cause: The command line option reported by the above error message is a mandatory option required by the tool

Action: Review the tool's inline help display or to the product documentation of the command line tool for type of value required for this option. And then rerun the command specifying the above option in command line options.

PRKU-01003: The parameter {0} requires an argument.

Cause: The command line parameter reported in error message needs a value.

Action: Review the tool's inline help display or to the product documentation of the command line tool for type of value required for this option. And then rerun the command specifying the above option in command line options.

PRKU-01015: Oracle Clusterware is not properly stopped and de-configured on node "{0}". The files "{1}" exist as configured.

Cause: The files init.ohasd, or ocr.loc and/or directory scls_scr still exists on this node which makes the tool believe that the clusterware stack is not shutdown properly

Action: Run the Oracle clusterware deconfiguration utility to completely cleanup the configuration. The Clusterware deconfiguration tool is available in Oracle clusterware home and also on Oracle OTN (Technology Network) page.

PRKU-01016: Failed to stop Oracle Clusterware on nodes "{0}". Run the command "{1}" after fixing the problem.

Cause: The clusterware deconfiguration tool has failed to stop Oracle clusterware stack. The reason for failure can be found browsing through clusterware alert logs found in log/<varname>hostname</varname>/alert<varname>hostname</varname>.log directory under Oracle clusterware.

Action: You should browse through daemon logs in log/<varname>hostname</varname> under Oracle clusterware home and manually correct the problem to stop clusterware stack. And then rerun the command specified in above error message.

PRKU-01018: Run the following command as the root user on node "{0}".

Cause: The clusterware deconfiguration that is run as non-root user cannot automatically run the command specified in above message.

Action: You should login to another session as a privileged user and run the command specified in above message

PRKU-01019: Run the following command as administrator.

Cause: The clusterware deconfiguration which is run as non-root user cannot automatically run the command specified in above message.

Action: You should login to another session as a privileged user and run the command specified in above message

PRKU-01021: As the privileged user, Execute "{0}" on every node in this cluster except for this node, and then execute "{1}" on this node to remove the configuration of the Oracle Clusterware and to completely remove the Oracle software

Cause: This is the message reported by Oracle clusterware deconfiguration tool when it is run in non-interactive (or silent) mode.

Action: Execute the identified scripts as described. Deconfiguring Oracle Clusterware in silent mode requires one set of operations on all nodes but the last followed by a special set of operations on the last node.

PRKU-01023: Oracle Clusterware is not stopped and de-configured on node "{0}" due to error "{1}"

Cause: The tool failed to deconfigure Oracle clusterware stack on the node because of errors reported in the above message

Action: You should review the error messages reported in above message to perform corrective actions and then rerun the tool

PRKU-01024: The stopping and de-configuring of Oracle Clusterware failed on some nodes. Fix the problem and rerun this tool to completely remove the Oracle Clusterware configuration and the software

Cause: This is a message reported by the tool to inform you that the Oracle clusterware deconfiguration did not happen on some of the nodes in the cluster.

Action: You should review the error messages reported by the tool for failing to deconfigure clusterware stack on each node, perform corrective actions after reviewing the error messages, and rerun the tool to completely deconfigure Oracle clusterware stack

PRKU-01025: You must delete or downgrade Clusterware-managed Oracle databases and de-install Clusterware-managed Oracle homes before attempting to remove the Oracle Clusterware home.

Cause: An attempt was made to deconfigure the Oracle Clusterware when one or more Clusterware-managed Oracle databases still exist.

Action: Run the Oracle Clusterware deconfiguration tool from Clusterware-managed Oracle homes to delete, deconfigure or downgrade Oracle database and then run the same tool from Oracle Clusterware home to deconfigure Clusterware.

PRKU-01029: The node "{0}" is currently not responding.

Cause: The host reported in the above message may have rebooted or hung

Action: Login to the host if possible and review system logs, correct the problem

PRKU-01035: The stopping and de-configuring of Oracle Restart failed. Fix the problem and rerun this tool to completely remove the Oracle Restart configuration and the software

Cause: The Oracle Restart stack couldn't be stopped cleanly before de-configuring.

Action: Review the error messages reported by the tool for failing to deconfigure Oracle Restart stack, perform corrective actions after reviewing the error messages, and rerun the tool to completely deconfigure Oracle Restart stack.

PRKU-01036: The deinstall tool failed to create the script file "{0}" that needs to be run in silent mode due to error "{1}"

Cause: The tool failed to create silent mode script file because of errors reported in the above message.

Action: You should review the error messages reported in above message to perform corrective actions and then rerun the tool.

PRKU-01037: As the privileged user, execute "{0}" on this node to remove the configuration of the Oracle Restart and to completely remove the Oracle software

Cause: This is the message reported by Oracle Restart deconfiguration tool when it is run in non-interactive (or silent) mode.

Action: Execute the identified scripts as described.

PRKU-01039: Can't deconfigure Oracle Restart before removing or downgrading managed Oracle databases.

Cause: A request to deconfigure Oracle Restart found one or more managed Oracle database homes, so the request was rejected.

Action: Run the Oracle deconfiguration tool from Oracle database homes to delete, deconfigure or downgrade Oracle database and then run the same tool from Oracle Restart home to deconfigure the Oracle Restart stack.

PRKU-01057: The home being deconfigured is NOT a configured Grid Infrastructure home ({0})

Cause: The home that was deconfigured has a different path from the configured Infrastructure home.

Action: If it is required to deconfigure the active CRS home, specify the configured CRS home in the deinstall command argument, or run deinstall from the configured CRS home.

PRKU-01059: Root script execution failed on nodes {0}

Cause: Root script execution failed on one or more nodes.

Action: Examine the accompanying output messages from the root script and correct the issue reported, if possible. Otherwise, contact Oracle Support Services.

PRKU-01060: Deleting the last node of a cluster using 'deinstall -local' is not allowed. Rerun deinstall without the '-local' flag.

Cause: The '-local' flag was specified with the 'deinstall' command on the last node.

Action: Rerun deinstall without the '-local' flag.

PRKZ-01029 to PRKZ-01085

PRKZ-01029: HAVIP {0} is already disabled

Cause: The 'disable havip' command failed because HAVIP was already disabled.

Action: If this is the expected state then this is not an error. If it is not then HAVIP can be enabled by 'srvctl enable havip' command.

PRKZ-01030: export file system {0} is already disabled

Cause: The 'disable exportfs' command failed because it was already disabled.

Action: If this is the expected state then this is not an error. If it is not then it can be enabled by 'srvctl enable exportfs' command.

PRKZ-01031: HAVIP {0} is already enabled

Cause: The 'enable havip' failed because HAVIP was already enabled.

Action: If this is the expected state then this is not an error. If it is not then HAVIP can be disabled by 'srvctl disable havip' command.

PRKZ-01032: export file system {0} is already enabled

Cause: The 'enable exportfs' command failed because it was already enabled.

Action: If this is the expected state then this is not an error. If it is not then it can be disabled by 'srvctl disable exportfs' command.

PRKZ-01058: HAVIP exists for address {0}

Cause: An attempt to add a HAVIP found that it already exists

Action: Check the input and if HAVIP needs to be modified use the command 'srvctl modify havip'.

PRKZ-01059: HAVIP with ID {0} does not exist

Cause: The 'add exportfs' failed because the HAVIP with the specified ID does not exist.

Action: Specify the ID of an HAVIP that exists, or create the HAVIP for the specified ID using the command 'srvctl add havip -id <varname>id</varname> -address <varname>vip</varname>'.

PRKZ-01060: Export file system {0} does not exist

Cause: The export file system resource with the specified name does not exist.

Action: Check the name and retry with the export file system name that is already configured.

PRKZ-01062: Cannot determine which subnet to modify to network type "{0}". The network resource has two subnets configured with network type "{1}".

Cause: The command 'srvctl modify network -nettype' failed because the network had both IPv4 and IPv6 subnets, thus the subnet to modify could not be determined.

Action: Specify the '-subnet' option with the command 'srvctl modify network -nettype' to indicate whether to change type for IPv4 or IPv6 subnet.

PRKZ-01065: Invalid combination of options specified

Cause: The '-name' and '-id' options cannot be combined together.

Action: Issue the command with either '-name' or '-id' option.

PRKZ-01066: Invalid subnet string: "{0}"

Cause: The given subnet string was not a valid IPv4 or IPv6 subnet number in dotted-decimal format.

Action: Make sure that the subnet string is a valid IPv4 or IPv6 subnet number in dotted-decimal format.

PRKZ-01067: Invalid subnet mask string: "{0}"

Cause: The given subnet mask string was not a valid IPv4 subnet mask in dotted-decimal format or IPv6 prefix length.

Action: Make sure that the subnet mask string is a valid IPv4 subnet mask in dotted-decimal format or IPv6 prefix length.

PRKZ-01068: {0} object is not supported on Windows Operating System

Cause: The <varname>object</varname> specified on the command line was not a valid object on Windows Operating System.

Action: Objects rhpservice|rhpcclient|havip|exportfs are not valid on Windows Operating System. Use a valid object.

PRKZ-01069: "srvctl modify network -iptype both" cannot include the {0} option

Cause: The command 'srvctl modify network -iptype both' request included conflicting options.

Action: Issue the command 'srvctl modify network -iptype both' separate from other network changes.

PRKZ-01070: Changing network type from {0} to {1} requires new VIP addresses

Cause: The command 'srvctl modify nodeapps -nettype mixed' was issued without specifying the VIP address when the IPv4 or IPv6 network type was dynamic.

Action: Issue the command 'srvctl modify nodeapps -nettype mixed -address' to specify the new VIP address.

PRKZ-01071: '-netnum' option cannot be supplied without '-address' option

Cause: The command 'srvctl modify havip -netnum' was issued without specifying a VIP address that matches the new network Subnet.

Action: Retry the command 'srvctl modify havip' using '-address' option along with '-netnum' option to specify a new address for the HAVIP resource.

PRKZ-01072: SCAN name "{0}" is already registered on network {1}

Cause: The command 'srvctl add scan -scanname' was issued for a Single Client Access Name (SCAN) name that was already registered on the specified network.

Action: Use a distinct SCAN name.

PRKZ-01073: Cannot modify network type to 'mixed' because GNS is not configured.

Cause: An attempt to modify the network type to 'mixed' failed because Grid Naming Service (GNS) was not configured.

Action: Configure Grid Naming Service (GNS) and retry 'srvctl modify network' command.

PRKZ-01074: Failed to modify network type because the specified subnet "{0}" does not match any configured subnet.

Cause: The specified subnet did not match any configured subnet in the network resource.

Action: Specify a configured subnet to modify its network type.

PRKZ-01075: '-iptype' option cannot be given along with '-subnet'

Cause: A command attempted to modify both the network IP type and its subnet.

Action: Use 'srvctl modify network' with '-subnet' or '-iptype', not both.

PRKZ-01076: Cannot modify network with network type 'mixed'

Cause: An attempt to modify the subnet or IP type of a network resource with network type 'mixed' was issued.

Action: Use 'srvctl modify network -nettype' to modify the network type to STATIC, DHCP or AUTOCONFIG, before making any other change.

PRKZ-01078: Object {0} is not supported on an ASM client cluster.

Cause: The <varname>object</varname> specified on the command line was not a valid object for an ASM client cluster.

Action: Objects ASM, DISKGROUP, and VOLUME are not supported on an ASM client cluster. Use a valid object.

PRKZ-01079: Invalid subnet value {0} for '-invitedsubnets' option

Cause: The command was rejected because the invited subnets value was specified using incorrect syntax.

Action: Reissue the command specifying the invited subnets using either Classless Inter-Domain Routing (CIDR) syntax (e.g. 192.196.16.0/24) or wild cards.

PRKZ-01080: '-netnum' and '-vip' options conflict.

Cause: The 'srvctl start|stop vip' command was rejected because the '-netnum' option was specified along with the '-vip' option.

Action: Use the command 'srvctl start|stop vip' with either '-netnum' or '-vip', not both.

PRKZ-01082: The VIP name "{0}" cannot be resolved.

Cause: An unresolvable VIP name was specified.

Action: Make sure that the VIP name resolves to an IP address.

PRKZ-01083: The VIP name "{0}" resolves to "{1}" which cannot be found in any VIP.

Cause: An attempt to find a VIP with one of the specified addresses to which the VIP name resolved failed."

Action: Specify a VIP name that resolves to an address that is found in a VIP resource.

PRKZ-01084: The network type for the specified subnet ({0}) that is added cannot be set to 'mixed'.

Cause: An attempt was made to add an IPv4 or IPv6 subnet and set its network type directly to 'mixed'.

Action: Reissue the command and use a different value than 'mixed' for the -nettype option.

PRKZ-01085: Internal error: {0}

Cause: An internal error occurred. The included value is an internal identifier.

Action: Oracle internal error. Contact Oracle Support Services.

PROCL-00001 to PROCL-00110

PROCL-00001: Oracle Local Registry cannot be initialized.

Cause: An invalid init level was passed to initialize Oracle Local Registry.

Action: Initialize Oracle Local Registry with a valid init level.

PROCL-00002: Cannot perform local registry operation at the current init level.

Cause: Program tried a local registry operation which is not permitted at the init level.

Action: Initialize Oracle Local Registry with an appropriate init level.

PROCL-00003: Cannot perform local registry operation because context is invalid.

Cause: The Oracle Local Registry context passed was invalid.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00004: The local registry key to be operated on does not exist.

Cause: Program tried a local registry operation on a key which does not exist.

Action: Check to see if the key exists and try the operation again.

PROCL-00005: User does not have permission to perform a local registry operation on this key.

Cause: Program tried an operation on a local registry key for which it does not have permission.

Action: Check to see if program is run as the correct user.

PROCL-00006: User does not have permission to perform a local registry operation on this key.

Cause: Program tried a local registry operation on a key for which it does not have permission.

Action: Check to see if program is run as the correct user.

PROCL-00007: Cannot perform local registry operation because the key or batch handle is invalid.

Cause: The local registry key or batch handle passed was invalid.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00008: Cannot perform local registry operation because one of the parameters is invalid.

Cause: Program tried a local registry operation using an invalid parameter.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00009: Cannot perform local registry operation because the buffer passed is too small.

Cause: The amount of memory allocated for the buffer was insufficient.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00010: Cannot delete the local registry key as subkeys exist.

Cause: The program tried to delete a key for which subkeys exist.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00011: Cannot perform local registry operation because key is NULL.

Cause: The local registry key passed was NULL.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00012: Out of heap memory.

Cause: The program ran out of heap memory.

Action: Contact Oracle Support Services.

PROCL-00013: Cannot perform local registry operation because one of the parameters is NULL.

Cause: Program tried a local registry operation using an NULL parameter.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00014: Unknown error occurred

Cause: This is generic internal error for Oracle Local Registry.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00015: Failed to initialize the local registry

Cause: The Oracle Local Registry could not be accessed. The possible causes are: 1. The local registry has not been formatted. 2. The local registry file is not accessible. 3. The local registry file has incorrect permissions. 4. Oracle Clusterware is not running.

Action: 1. Run the 'ocrcheck -local' command to confirm that the OLR is formatted and usable. 2. Run 'ocrcheck -local -config' command to retrieve the configured file, and verify that the file is accessible and has the correct permissions via native platform or OS methods 3. Run 'crsctl check crs' command to verify that Oracle Clusterware is running.

PROCL-00016: Cannot retrieve any more subkeys for the given keyhandle

Cause: The key has no more subkeys to enumerate.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00017: Unimplemented feature

Cause: Requested feature has not been implemented in the current release.

Action: Try the feature again in the upcoming Oracle release.

PROCL-00018: The value size passed is too large

Cause: Cannot set a value of the given size.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00019: Cannot create more subkeys for the key

Cause: An attempt was made to create more subkeys under a key that is not permitted by the local registry.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00020: ORACLE_HOME environment not set

Cause: ORACLE_HOME environment not set.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported.

PROCL-00021: Maximum permitted depth of the OLR tree is reached

Cause: An attempt was made to create subkeys under a key which is already at depth PROC_MAX_KEY_DEPTH

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00022: The OLR backend has an invalid format

Cause: An attempt was made to use OLR before initializing it.

Action: Use the root.sh script. The 'ocrconfig -local -upgrade' command will initialize OLR.

PROCL-00023: Error in retrieving hostname

Cause: An error occurred while retrieving hostname.

Action: Contact Oracle Support Services.

PROCL-00024: Error in the messaging layer

Cause: An error occurred in the messaging layer while performing a local registry operation.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00025: Error in the NLS services

Cause: An error occurred in the NLS services while performing a local registry operation.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00026: Error while accessing the physical storage

Cause: The Oracle Local Registry could not be accessed. The possible causes are: 1. The local registry has not been formatted. 2. The local registry file is not accessible. 3. The local registry file has incorrect permissions.

Action: 1. Run the 'ocrcheck -local' command to confirm that the OLR is formatted and usable. 2. Run 'ocrcheck -local -config' command to retrieve the configured file, and verify that the file is accessible and has the correct permissions via native platform or OS methods

PROCL-00027: Error in authentication layer

Cause: An error occurred in the authentication layer while performing a local registry operation.

Action: Contact Oracle Support Services.

PROCL-00028: Oracle Local Registry already in current version

Cause: An attempt to upgrade the local registry which has already been upgraded.

Action: No action required.

PROCL-00029: Error in logging layer

Cause: An error occurred in the logging layer while performing a local registry operation.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00031: Storage device for the local registry is too small

Cause: The configured storage device for local registry was too small.

Action: Refer to the documentation and configure a storage device that is large enough for use by local registry.

PROCL-00032: Oracle High Availability Services on the local node is not running

Cause: Oracle High Availability Services on the local node was not running

Action: Run 'crsctl start crs' command to start the Oracle High Availability Services on the local node.

PROCL-00033: Oracle Local Registry is not configured

Cause: Oracle Local Registry configuration was not present on the node.

Action: Install and configure Oracle Clusterware.

PROCL-00035: Cannot perform local registry operation due to invalid version

Cause: The operation cannot be performed for this local active version

Action: Complete the upgrade before retrying the operation

PROCL-00036: No free space to perform this operation

Cause: There is no free space left to perform the requested operation

Action: Free up space and retry the operation

PROCL-00037: Oracle Local Registry does not support the storage type configured

Cause: The configured storage type for local registry is not supported

Action: Change the configuration of the local registry to a supported storage type. Refer to Oracle documentation for an exhaustive list for each platform.

PROCL-00038: Requested block number is not allocated from Oracle Local Registry

Cause: The requested block number is not allocated from Oracle Local Registry

Action: Retry the operation with another block number

PROCL-00039: Requested block has an invalid header

Cause: The requested block has an invalid header

Action: Retry the operation with another block number

PROCL-00040: Cannot add more operations to the batch

Cause: An attempt was made to add an operation to a batch that already has the maximum allowed operations.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00041: Oracle Local Registry is incorrectly configured

Cause: The local registry is incorrectly configured.

Action: Correct the local registry configuration.

PROCL-00042: User cannot access Oracle Local Registry configuration

Cause: Program encountered an error accessing the local registry configuration.

Action: Check to see if program is run as the correct user. Check that the local registry configuration has the correct permissions.

PROCL-00044: Error in network address and interface operations

Cause: An error occurred in the network address and interface operations layer while performing a local registry operation.

Action: Contact Oracle Support Services.

PROCL-00046: Cannot perform local registry operation because the batch is empty.

Cause: An attempt was made to execute the batch without any operations in it.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00048: Cannot perform the Oracle Local Registry operation due to a transient error.

Cause: A transient error occurred while performing the requested Oracle Local Registry operation. The operation was aborted without retrying, as requested by the client.

Action: Retry the operation.

PROCL-00049: The specified Oracle Local Registry backup location is inaccessible on the local node.

Cause: The backup location did not exist or the required permissions were not granted.

Action: Ensure that the location exists and the required file creation permissions are granted.

PROCL-00051: Error in patch management layer

Cause: An error occurred in the patch management layer while performing a local registry operation.

Action: Contact Oracle Support Services.

PROCL-00053: The configured patch level does not match the release patch level

Cause: The possible causes are: 1. Oracle Clusterware was started before the patch application had completed. 2. Oracle Clusterware was started from a location other than the Grid Infrastructure home that was most recently patched.

Action: Check the Oracle High Availability Service (OHASD) log file for details. 1. Complete applying the patch on this node. 2. Ensure the Oracle Clusterware is started from the Grid Infrastructure home that was most recently patched. Verify the patch

level matches using the 'crsctl query crs releasepatch' and the 'crsctl query crs softwarepatch' commands. If the problem persists, contact Oracle Support Services.

PROCL-00054: The requested OLR operation is not supported.

Cause: An attempt was made to use an operation that is not supported.

Action: Verify the operation is valid before resubmitting it.

PROCL-00055: cannot create and set the local registry key because the key already exists

Cause: The program tried to create and set the local registry key when the key already exists.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00056: user does not have privilege to access the Oracle Local Registry

Cause: An operation that accesses the Oracle Local Registry was requested by a user with insufficient privileges.

Action: Run the command as root or administrator user.

PROCL-00057: Oracle Local Registry contains inconsistent data.

Cause: Inconsistent data was detected in the Oracle Local Registry.

Action: Check the availability of Oracle Local Registry backups using the 'ocrconfig -local -showbackup' command and restore a compatible backup. If you are not able to resolve the problem, contact Oracle Support Services.

PROCL-00101: Operating System error [<varname>string</varname>]

Cause: An error occurred in the operating system layer while performing a local registry operation

Action: Contact Oracle Support Services.

PROCL-00102: Cluster services error [<varname>string</varname>]

Cause: An error occurred in the cluster services layer while performing a local registry operation.

Action: Contact Oracle Support Services.

PROCL-00103: Messaging error [<varname>string</varname>]

Cause: An error occurred in the messaging layer while performing a local registry operation.

Action: Contact Oracle Support Services.

PROCL-00104: Authentication error [<varname>string</varname>]

Cause: An error occurred in the authentication layer while performing a local registry operation.

Action: Contact Oracle Support Services.

PROCL-00105: Logging error

Cause: An error occurred in the logging layer while while performing a local registry operation.

Action: Contact Oracle Support Services.

PROCL-00106: Unidentified component error

Cause: An error occurred in an unidentified layer while performing a local registry operation.

Action: Contact Oracle Support Services.

PROCL-00107: Storage layer error [<varname>string</varname>]

Cause: An error occurred in the storage layer while performing a local registry operation.

Action: Contact Oracle Support Services.

PROCL-00109: Network address and interface operations error

Cause: An error occurred in the network address and interface operations layer while performing a local registry operation.

Action: Contact Oracle Support Services.

PROCL-00110: Patch and upgrade error [<varname>string</varname>]

Cause: An error occurred in the patch and upgrade management layer while performing a local registry operation.

Action: Contact Oracle Support Services.

PROC-00001 to PROC-00110

PROC-00001: Oracle Cluster Registry cannot be initialized.

Cause: An invalid init level was passed to initialize Oracle Cluster Registry.

Action: Initialize Oracle Cluster Registry with a valid init level.

PROC-00002: Cannot perform cluster registry operation at the current init level.

Cause: Program tried a cluster registry operation which is not permitted at the init level.

Action: Initialize Oracle Cluster Registry with an appropriate init level.

PROC-00003: Cannot perform cluster registry operation because context is invalid.

Cause: The Oracle Cluster Registry context passed was invalid.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00004: The cluster registry key to be operated on does not exist.

Cause: Program tried a cluster registry operation on a key which does not exist.

Action: Check to see if the key exists and try the operation again.

PROC-00005: User does not have permission to perform a cluster registry operation on this key.

Cause: Program tried an operation on a cluster registry key for which it does not have permission.

Action: Check to see if program is run as the correct user.

PROC-00006: User does not have permission to perform a cluster registry operation on this key.

Cause: Program tried a cluster registry operation on a key for which it does not have permission.

Action: Check to see if program is run as the correct user.

PROC-00007: Cannot perform cluster registry operation because key or batch handle is invalid.

Cause: The cluster registry key or batch handle passed was invalid.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00008: Cannot perform cluster registry operation because one of the parameters is invalid.

Cause: Program tried a cluster registry operation using an invalid parameter.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00009: Cannot perform cluster registry operation because the buffer passed is too small.

Cause: The amount of memory allocated for the buffer was insufficient.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00010: Cannot delete the cluster registry key as subkeys exist.

Cause: The program tried to delete a key for which subkeys exist.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00011: Cannot perform cluster registry operation because key is NULL.

Cause: The cluster registry key passed was NULL.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00012: Out of heap memory.

Cause: The program ran out of heap memory.

Action: Contact Oracle Support Services.

PROC-00013: Cannot perform cluster registry operation because one of the parameters is NULL.

Cause: Program tried a cluster registry operation using an NULL parameter.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00014: Unknown error occurred

Cause: This is generic internal error for Oracle Cluster Registry.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00015: Failed to initialize the cluster registry

Cause: The Oracle Cluster Registry could not be accessed. The possible causes are:

1. The cluster registry has not been formatted. 2. The cluster registry location is not accessible. 3. The cluster registry location has incorrect permissions. 4. Oracle Clusterware is not running.

Action: 1. Run the 'ocrcheck' command to confirm that the OCR is formatted and usable. 2. Run 'ocrcheck -config' command to retrieve the configured locations, and verify that each location is accessible and has the correct permissions via native platform or OS methods. If a location is an ASM disk group, verify that the disk group exists and is mounted. 3. Run 'crsctl check crs' command to verify that Oracle Clusterware is running.

PROC-00016: Cannot retrieve any more subkeys for the given keyhandle

Cause: The key has no more subkeys to enumerate.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00017: Unimplemented feature

Cause: Requested feature has not been implemented in the current release.

Action: Try the feature again in the upcoming Oracle release.

PROC-00018: The value size passed is too large

Cause: Cannot set a value of the given size.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00019: Cannot create more subkeys for the key

Cause: An attempt was made to create more subkeys under a key that is not permitted by the cluster registry.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00020: ORACLE_HOME environment not set

Cause: ORACLE_HOME environment not set.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported.

PROC-00021: Maximum permitted depth of the OCR tree is reached

Cause: An attempt was made to create subkeys under a key which is already at depth PROC_MAX_KEY_DEPTH

Action: This is an internal error. Contact Oracle Support Services.

PROC-00022: The OCR backend has an invalid format

Cause: An attempt was made to use OCR before initializing it.

Action: Use the root.sh script. The 'ocrconfig -upgrade' command will initialize OCR.

PROC-00023: Error in cluster services layer

Cause: An error occurred in the cluster services layer while performing a cluster registry operation.

Action: Contact Oracle Support Services.

PROC-00024: Error in the messaging layer

Cause: An error occurred in the messaging layer while performing a cluster registry operation.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00025: Error in the NLS services

Cause: An error occurred in the NLS services while performing a cluster registry operation.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00026: Error while accessing the physical storage

Cause: The Oracle Cluster Registry could not be accessed. The possible causes are: 1. The cluster registry has not been formatted. 2. The cluster registry location is not accessible. 3. The cluster registry location has incorrect permissions. 4. Oracle Clusterware is not running.

Action: 1. Run the 'ocrcheck' command to confirm that the OCR is formatted and usable. 2. Run 'ocrcheck -config' command to retrieve the configured locations, and verify that each location is accessible and has the correct permissions via native platform or OS methods. If a location is an ASM disk group, verify that the disk group exists and is mounted. 3. Run 'crsctl check crs' command to verify that Oracle Clusterware is running.

PROC-00027: Error in authentication layer

Cause: An error occurred in the authentication layer while performing a cluster registry operation.

Action: Contact Oracle Support Services.

PROC-00028: Oracle Cluster Registry already in current version

Cause: An attempt to upgrade the cluster registry which has already been upgraded.

Action: No action required.

PROC-00029: Error in logging layer

Cause: An error occurred in the logging layer while performing a cluster registry operation.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00030: Oracle Cluster Registry IDs do not match

Cause: The cluster registry storage seen by the client was not the same as the one seen by the server. This may be caused by a misconfiguration.

Action: Contact Oracle Support Services.

PROC-00031: Storage device for the cluster registry is too small

Cause: The configured storage device or the storage device to be newly added to the cluster registry was too small.

Action: Refer to the documentation and configure a storage device that is large enough for use by cluster registry. In case the cluster registry is already configured, execute the 'ocrcheck' command to retrieve the total size, and ensure that the size of the device to be added is large enough for use by cluster registry.

PROC-00032: Cluster Ready Services on the local node is not running

Cause: The Cluster Ready Services on the local node was not running.

Action: Use the 'crsctl start crs' command to start the Cluster Ready Services on the local node.

PROC-00033: Oracle Cluster Registry is not configured

Cause: Oracle Cluster Registry configuration was not present on the node.

Action: Install and configure Oracle Clusterware.

PROC-00034: Oracle Cluster Registry configurations are not compatible

Cause: Cluster registry configuration on this node did not match with another node in the cluster.

Action: Retrieve the cluster registry configuration using 'ocrcheck -config' command on all nodes in the cluster. Fix the configuration on this node and make it consistent using 'ocrconfig -repair' command.

PROC-00035: Cannot perform cluster registry operation due to invalid version

Cause: The operation cannot be performed for this cluster active version

Action: Complete the upgrade before retrying the operation

PROC-00036: No free space to perform this operation

Cause: There is no free space left to perform the requested operation.

Action: Free up space and retry the operation.

PROC-00037: Oracle Cluster Registry does not support the storage type configured

Cause: The configured storage type for cluster registry is not supported

Action: Change the configuration of the cluster registry to a supported storage type. Refer to Oracle documentation for an exhaustive list for each platform.

PROC-00038: Requested block number is not allocated from Oracle Cluster Registry

Cause: The requested block number is not allocated from Oracle Cluster Registry.

Action: Retry the operation with another block number.

PROC-00039: Requested block has an invalid header

Cause: The requested block has an invalid header.

Action: Retry the operation with another block number.

PROC-00040: Cannot add more operations to the batch

Cause: An attempt was made to add an operation to a batch that already has the maximum allowed operations.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00041: Oracle Cluster Registry is incorrectly configured

Cause: The cluster registry is incorrectly configured.

Action: Correct the cluster registry configuration.

PROC-00042: User cannot access Oracle Cluster Registry configuration

Cause: Program encountered an error accessing the cluster registry configuration.

Action: Check to see if program is run as the correct user. Check that the cluster registry configuration has the correct permissions.

PROC-00043: Error in the ASM access layer

Cause: An error occurred in the layer used to access OCR when configured on ASM managed storage.

Action: Contact Oracle Support Services.

PROC-00044: Error in network address and interface operations

Cause: An error occurred in the network address and interface operations layer while performing a cluster registry operation.

Action: Contact Oracle Support Services.

PROC-00045: Error in the Oracle Clusterware API layer

Cause: An error occurred in the Oracle Clusterware API layer.

Action: Contact Oracle Support Services.

PROC-00046: Cannot perform cluster registry operation because the batch is empty.

Cause: An attempt was made to execute the batch without any operations in it.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00047: Cannot proceed while the Oracle Cluster Registry format upgrade is in progress.

Cause: An Oracle Cluster Registry operation was requested, but found that an Oracle Cluster Registry format upgrade was in progress.

Action: Retry the operation after the format upgrade completes.

PROC-00048: Cannot perform the Oracle Cluster Registry operation due to a transient error.

Cause: A transient error occurred while performing the requested Oracle Cluster Registry operation. The operation was aborted without retrying, as requested by the client.

Action: Retry the operation.

PROC-00049: The specified Oracle Cluster Registry backup location is inaccessible on nodes <varname>string</varname>.

Cause: The Oracle Cluster Registry backup location did not exist, was not mounted correctly or did not have the required permissions on the above listed nodes.

Action: Ensure that the backup location exists with appropriate permissions on the above listed nodes. If the backup location is an ASM disk group, the disk group must be mounted correctly; also check the entries in the ASM alert log file for more details.

PROC-00050: The Oracle Cluster Registry location to be added is inaccessible on nodes <varname>string</varname>.

Cause: The Oracle Cluster Registry location to be added did not exist, was not mounted correctly or did not have the required permissions on the above listed nodes.

Action: Ensure that the location exists with appropriate permissions on the above listed nodes. If the location is an ASM disk group, the disk group must be mounted correctly; also check the entries in the ASM alert log file for more details.

PROC-00051: Error in patch management layer

Cause: An error occurred in the patch management layer while performing a cluster registry operation.

Action: Contact Oracle Support Services.

PROC-00052: Failed to update the Oracle High Availability Service (OHASD) resource dependencies on nodes <varname>string</varname>.

Cause: An error occurred while updating the OHASD resource dependencies on the above listed nodes.

Action: Contact Oracle Support Services.

PROC-00053: The configured patch level does not match the release patch level

Cause: The possible causes are: 1. Oracle Clusterware was started before the patch application had completed. 2. Oracle Clusterware was started from a location other than the Grid Infrastructure home that was most recently patched.

Action: Check the Cluster Ready Services (CRSD) log file for details. 1. Complete applying the patch on this node. 2. Ensure the Oracle Clusterware is started from the Grid Infrastructure home that was most recently patched. Verify the patch level matches using the 'crsctl query crs releasepatch' and the 'crsctl query crs softwarepatch' commands. If the problem persists, contact Oracle Support Services.

PROC-00054: The requested OCR operation is not supported.

Cause: An attempt was made to use an operation that is not supported.

Action: Verify the operation is valid before resubmitting it.

PROC-00055: cannot create and set the cluster registry key because the key already exists

Cause: The program tried to create and set the cluster registry key when the key already exists.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00056: user does not have privilege to access the Oracle Cluster Registry

Cause: An operation that accesses the Oracle Cluster Registry was requested by a user with insufficient privileges.

Action: Run the command as root or administrator user.

PROC-00057: Oracle Cluster Registry contains inconsistent data.

Cause: Inconsistent data was detected in the Oracle Cluster Registry.

Action: Check the availability of Oracle Cluster Registry backups using the 'ocrconfig -showbackup' command and restore a compatible backup. If you are not able to resolve the problem, contact Oracle Support Services.

PROC-00101: Operating System error [<varname>string</varname>]

Cause: An error occurred in the operating system layer while performing a cluster registry operation

Action: Contact Oracle Support Services.

PROC-00102: Cluster services error [<varname>string</varname>]

Cause: An error occurred in the cluster services layer while performing a cluster registry operation.

Action: Contact Oracle Support Services.

PROC-00103: Messaging error [<varname>string</varname>]

Cause: An error occurred in the messaging layer while performing a cluster registry operation.

Action: Contact Oracle Support Services.

PROC-00104: Authentication error [<varname>string</varname>]

Cause: An error occurred in the authentication layer while performing a cluster registry operation.

Action: Contact Oracle Support Services.

PROC-00105: Logging error

Cause: An error occurred in the logging layer while performing a cluster registry operation.

Action: Contact Oracle Support Services.

PROC-00106: Unidentified component error

Cause: An error occurred in an unidentified layer while performing a cluster registry operation.

Action: Contact Oracle Support Services.

PROC-00107: Storage layer error [<varname>string</varname>]

Cause: An error occurred in the storage layer while performing a cluster registry operation.

Action: Contact Oracle Support Services.

PROC-00108: ASM error [<varname>string</varname>]

Cause: An error occurred in the asm layer while performing a cluster registry operation.

Action: Contact Oracle Support Services.

PROC-00109: Network address and interface operations error

Cause: An error occurred in the network address and interface operations layer while performing a cluster registry operation.

Action: Contact Oracle Support Services.

PROC-00110: Patch and upgrade error [<varname>string</varname>]

Cause: An error occurred in the patch and upgrade management layer while performing a cluster registry operation.

Action: Contact Oracle Support Services.

PROTL-00001 to PROTL-00604

PROTL-00001: Failed to initialize ocrconfig

Cause: Unable to initialize and start ocrconfig.

Action: Check log file for details about the failure.

PROTL-00002: Export file '<varname>string</varname>' already exists

Cause: Requested export file exists in the given path.

Action: Change the location for export file or remove the old export file.

PROTL-00003: Failed to create export file '<varname>string</varname>'

Cause: Unable to create or open file for exporting local registry data.

Action: Check access privilege or disk space of the requested path.

PROTL-00004: Failed to retrieve data from the local registry

Cause: Unable to retrieve necessary information from the local registry.

Action: Check the availability of the local registry and the details of the failure from the log file.

PROTL-00006: The specified import file '<varname>string</varname>' cannot be found

Cause: The import file did not exist.

Action: Check the file and its correct path and try again.

PROTL-00007: Failed to open the specified import file '<varname>string</varname>'

Cause: Unable to access the specified import file.

Action: Check access privilege of the import file.

PROTL-00008: Failed to import data from specified file to the local registry

Cause: Unable to read data from the import file and import to the local registry.

Action: Check availability of the local registry and the details of the failure from the log file.

PROTL-00010: Failed to open the specified source local registry

Cause: Unable to access the specified source local registry.

Action: Check access privilege and location of the source local registry, and the log file for more detail.

PROTL-00011: Failed to open the specified destination local registry

Cause: Unable to access the specified destination local registry.

Action: Check access privilege and location of the destination local registry. Also check the log file for more details.

PROTL-00012: Oracle Local Registry to be upgraded has an unsupported version

Cause: Oracle Local Registry to be upgraded had an unsupported version.

Action: Upgrade Oracle Local Registry to a version supported.

PROTL-00013: Oracle Local Registry is in current version

Cause: Oracle Local Registry was in current version.

Action: No action required.

PROTL-00015: Unimplemented feature

Cause: Requested feature has not been implemented in current release.

Action: Try the feature again in the next release.

PROTL-00016: Internal Error

Cause: This is a generic internal error for ocrconfig.

Action: Contact Oracle Support Services.

PROTL-00017: Fatal Error

Cause: This is a generic fatal error for ocrconfig.

Action: Contact Oracle Support Services.

PROTL-00018: Failed to open the specified backup file '<varname>string</varname>'

Cause: File did not exist or user did not have permission to open the file.

Action: Ensure that the file exists and its permissions are correct. Also check the log file for more details.

PROTL-00019: Cannot proceed while the Oracle High Availability Service is running

Cause: The Oracle High Availability Service was running.

Action: Use the 'crsctl stop crs' command to shutdown the Oracle High Availability Service on the local node.

PROTL-00020: Insufficient permission to proceed. Require privileged user

Cause: User was not a privileged user.

Action: Run the command again using a privileged user.

PROTL-00021: Invalid parameter

Cause: Input parameter was not valid.

Action: Check log file for more information.

PROTL-00023: failed to back up Oracle Local Registry

Cause: An attempt to back up the Oracle Local Registry failed.

Action: Confirm that the registry exists ('ocrcheck -local') and that the clusterware stack is running ('crsctl check crs'). Ensure that there is sufficient free space at the backup location for the OLR size reported by ocrcheck. If necessary, use 'ocrconfig -local -backuploc' to specify a different location.

PROTL-00025: Manual backups for the Oracle Local Registry are not available

Cause: Manual backups for the Oracle Local Registry were not yet created.

Action: Manual backups can be created using 'ocrconfig -local -manualbackup' command.

PROTL-00035: The configured OLR location is not accessible

Cause: The configured Oracle local Registry (OLR) location did not exist, did not have the required permissions, or did not have sufficient disk space..

Action: Ensure that the location exists, that its permissions are correct, and that it has sufficient disk space. Also check the Clusterware alert log file for more details.

PROTL-00039: The specified file '<varname>string</varname>' has an invalid format

Cause: The specified file was not a valid Oracle Local Registry export/import file.

Action: Specify a valid Oracle Local Registry file which was created using the 'ocrconfig -local -export' command.

PROTL-00040: The specified file '<varname>string</varname>' has an invalid format

Cause: The specified file was not a valid Oracle Local Registry backup file.

Action: Use the 'ocrconfig -local -showbackup' command to list all available backups. Specify a valid Oracle Local Registry backup file listed by the above command.

PROTL-00041: The specified backup location '<varname>string</varname>' is not accessible

Cause: The backup location did not exist or the required permissions were not granted.

Action: Ensure that the location exists and the required file creation permissions are granted.

PROTL-00042: The specified backup location '<varname>string</varname>' is not a directory

Cause: The specified backup location was not a directory.

Action: Specify a directory.

PROTL-00049: The Oracle Local Registry (OLR) integrity check failed.

Cause: The integrity check failed for the configured Oracle Local Registry location.

Action: Check availability of backups using 'ocrconfig -local -showbackup' command and restore a compatible backup. If you are not able to resolve the problem, contact Oracle Support Services.

PROTL-00052: failed to retrieve backup location of Oracle Local Registry

Cause: An attempt to display the backup location for the Oracle Local Registry failed because the Oracle Local Registry was not accessible.

Action: Check the accessibility of Oracle Local Registry.

PROTL-00054: failed to copy the Oracle Local Registry backup file to the specified destination '<varname>string</varname>'

Cause: An attempt to copy the Oracle Local Registry backup file to the specified location failed because it was not writable by the user or did not have sufficient space.

Action: Ensure that the destination is writable by the user and that there is sufficient free space for the file.

PROTL-00056: The file name [<varname>string</varname>] specified for the 'ocrconfig -local -copy' command is invalid.

Cause: An attempt to copy an Oracle Local Registry file failed because the specified destination file name argument did not specify a complete path name.

Action: Reissue the command specifying a complete path name for the destination file.

PROTL-00302: Failed to initialize ocrdump

Cause: Unable to initialize and start ocrdump .

Action: Check log file for details about the failure.

PROTL-00303: Dump file already exists [<varname>string</varname>]

Cause: Requested dump file exists in the given path.

Action: Change the location for the dump file or remove the old dump file.

PROTL-00304: Failed to create dump file [<varname>string</varname>]

Cause: Unable to create or open file for dumping local registry data.

Action: Check access privilege or disk space of the requested path.

PROTL-00305: Failed to write to dump file [<varname>string</varname>]

Cause: Unable to write to dump file while dumping local registry data.

Action: Check access privilege or disk space of the requested path.

PROTL-00306: Failed to retrieve local registry data

Cause: Unable to read local registry data.

Action: Check log file for details about the failure.

PROTL-00307: The specified key does not exist in local registry

Cause: Unable to retrieve the specified key from local registry.

Action: Check log file for the key name.

PROTL-00309: Failed to access the Oracle Local Registry backup file.

Cause: The Oracle Local Registry backup file either did not exist or the user did not have the permission to open the file.

Action: Ensure that the file exists and its permissions are correct.

PROTL-00310: Not all keys were dumped due to permissions.

Cause: An attempt was made to dump one or more Oracle Local Registry keys for which the user does not have access permission.

Action: Log on as a different user and retry.

PROTL-00312: The specified file '<varname>string</varname>' has an invalid format.

Cause: The file argument to the ocrdump command specified a file that was not a valid Oracle Local Registry backup file.

Action: Use the 'ocrconfig -local -showbackup' command to list all available backups. Reissue the ocrdump command specifying a valid Oracle Local Registry backup file as listed by the ocrconfig command.

PROTL-00601: Failed to initialize ocrcheck

Cause: Unable to initialize and start ocrcheck.

Action: Check log file for details about the failure.

PROTL-00602: Failed to retrieve data from the local registry

Cause: Unable to retrieve necessary information from the local registry.

Action: Check the availability of the local registry and the details of the failure from the log file.

PROTL-00603: Oracle Local Registry is logically corrupted

Cause: A logical corruption was detected in the Oracle Local Registry.

Action: Check the log file for more information.

PROTL-00604: Failed to retrieve the configured location of the local registry

Cause: Unable to retrieve the location of local registry.

Action: Check log file for details about the failure.

PROT-00001 to PROT-00606

PROT-00001: Failed to initialize ocrconfig

Cause: Unable to initialize and start ocrconfig.

Action: Check log file for details about the failure.

PROT-00002: Export file '<varname>string</varname>' already exists

Cause: Requested export file exists in the given path.

Action: Change the location for export file or remove the old export file.

PROT-00003: Failed to create export file '<varname>string</varname>'

Cause: Unable to create or open file for exporting cluster registry data.

Action: Check access privilege or disk space of the requested path.

PROT-00004: Failed to retrieve data from the cluster registry

Cause: Unable to retrieve necessary information from the cluster registry.

Action: Check the availability of the cluster registry and the details of the failure from the log file.

PROT-00005: Clusterware is not running properly

Cause: Unable to register with clusterware for access to the cluster registry.

Action: Check the status of clusterware running on the machine.

PROT-00006: The specified import file '<varname>string</varname>' cannot be found

Cause: The import file did not exist.

Action: Check the file and its correct path and try again.

PROT-00007: Failed to open the specified import file '<varname>string</varname>'

Cause: Unable to access the specified import file.

Action: Check access privilege of the import file.

PROT-00008: Failed to import data from specified file to the cluster registry

Cause: Unable to read data from the import file and import to the cluster registry.

Action: Check availability of the cluster registry and the details of the failure from the log file.

PROT-00010: Failed to open the specified source cluster registry

Cause: Unable to access the specified source cluster registry.

Action: Check access privilege and location of the source cluster registry, and the log file for more detail.

PROT-00011: Failed to open the specified destination cluster registry

Cause: Unable to access the specified destination cluster registry.

Action: Check access privilege and location of the destination cluster registry. Also check the log file for more details.

PROT-00012: Oracle Cluster Registry to be upgraded has an unsupported version

Cause: Oracle Cluster Registry to be upgraded had an unsupported version.

Action: Upgrade Oracle Cluster Registry to a version supported.

PROT-00013: Oracle Cluster Registry is in current version

Cause: Oracle Cluster Registry was in current version.

Action: No action required.

PROT-00014: Oracle Cluster Registry to be downgraded has an earlier version

Cause: Oracle Cluster Registry to be downgraded had an earlier version.

Action: No action required.

PROT-00015: Unimplemented feature

Cause: Requested feature has not been implemented in current release.

Action: Try the feature again in the next release.

PROT-00016: Internal Error

Cause: This is a generic internal error for ocrconfig.

Action: Contact Oracle Support Services.

PROT-00017: Fatal Error

Cause: This is a generic fatal error for ocrconfig.

Action: Contact Oracle Support Services.

PROT-00018: Failed to open the specified backup file '<varname>string</varname>'

Cause: File did not exist or user did not have permission to open the file.

Action: Ensure that the file exists and its permissions are correct. Also check the log file for more details.

PROT-00019: Cannot proceed while the Cluster Ready Service is running

Cause: The Cluster Ready Service was running.

Action: Use the 'crsctl stop crs' command to shutdown the Cluster Ready Service on the local node.

PROT-00020: Insufficient permission to proceed. Require privileged user

Cause: User was not a privileged user.

Action: Run the command again using a privileged user.

PROT-00021: Invalid parameter

Cause: Input parameter was not valid.

Action: Check log file for more information.

PROT-00022: Storage too small

Cause: Specified storage was too small to mirror OCR content.

Action: Execute the 'ocrcheck' command to retrieve the total size, and ensure that the size of the device to be added is large enough for use by cluster registry.

PROT-00023: Failed to backup OCR

Cause: Unable to take a backup of OCR.

Action: Check availability of the cluster registry and the available free space on the file system where the manual backup will be stored. Use ocrconfig -backuploc to specify a new backup location if necessary. Check the CRS log file for more information.

PROT-00024: Auto backups for the Oracle Cluster Registry are not available

Cause: Auto backups for the Oracle Cluster Registry were not yet created. They are created once every four hours.

Action: No action required.

PROT-00025: Manual backups for the Oracle Cluster Registry are not available

Cause: Manual backups for the Oracle Cluster Registry were not yet created.

Action: Manual backups can be created using 'ocrconfig -manualbackup' command.

PROT-00026: Oracle Cluster Registry backup locations were retrieved from a local copy

Cause: The Oracle Cluster Registry files were not accessible. Information about the cluster registry backups is also maintained in the Oracle Local Registry. The information displayed has been retrieved from the Oracle Local Registry. This information may be outdated.

Action: Run 'ocrconfig -showbackup' command from another node in the cluster. Compare the output of the 'ocrconfig -showbackup' on this node with output of the same command from other nodes in the cluster to determine the latest backup copy.

PROT-00027: Cannot configure another Oracle Cluster Registry location because the maximum number of Oracle Cluster Registry locations (5) have been configured

Cause: The maximum number of Oracle Cluster Registry locations (5) had been configured.

Action: (Optional) Verify the configuration using the 'ocrcheck -config' command. Delete an Oracle Cluster Registry device by executing 'ocrconfig -delete <varname>existing location</varname>' command, and retry the operation.

PROT-00028: Cannot delete or replace the only configured Oracle Cluster Registry location.

Cause: A delete or replace operation was performed when there was only 1 configured Oracle Cluster Registry location. The above listed operation can only be performed when there are at least 2 configured Oracle Cluster Registry locations.

Action: Execute 'ocrconfig -add <varname>new location</varname>' to add the new Oracle Cluster Registry location followed by 'ocrconfig -delete <varname>existing location</varname>' command.

PROT-00029: The Oracle Cluster Registry location is already configured

Cause: The location to be added was identical to a configured Oracle Cluster Registry location.

Action: Verify the configuration using the 'ocrcheck -config' command. Ensure that the location to be added is not already configured.

PROT-00030: The Oracle Cluster Registry location to be added is not usable

Cause: The Oracle Cluster Registry location to be added did not exist, wasn't mounted correctly, did not have the required permissions, or did not have the sufficient disk space.

Action: Ensure that the location exists, that it is mounted correctly and visible to all nodes in the cluster, that its permissions are correct, and that it has sufficient disk space. If trying to add an ASM Oracle Cluster Registry location, check for related entries in the ASM alert log file for more details.

PROT-00031: The Oracle Cluster Registry location to be added is an ASM disk

Cause: The Oracle Cluster Registry location to be added is already in use by ASM.

Action: Specify a Oracle Cluster Registry location that is not currently in use. Use the 'crsctl query css votedisk' command to get the list of voting files used by CSS. Use the 'asmcmd lsdisk --member' command to get the list of disks used by ASM. Specify a location that is not in either list.

PROT-00032: The Oracle Cluster Registry location to be added is a CSS voting file

Cause: The Oracle Cluster Registry location to be added is already configured as a CSS voting file.

Action: Specify a Oracle Cluster Registry location that is not currently in use. Use the 'crsctl query css votedisk' command to get the list of voting files used by CSS. Use the 'asmcmd lsdisk --member' command to get the list of disks used by ASM. Specify a location that is not in either list.

PROT-00033: Oracle High Availability Services on the local node is not running

Cause: Oracle High Availability Services on the local node was not running

Action: Run 'crsctl start crs' command to start the Oracle High Availability Services on the local node.

PROT-00034: The Oracle Cluster Registry location to be deleted is not configured

Cause: The location to be deleted was not already configured as an Oracle Cluster Registry location.

Action: Run 'ocrcheck -config' command to get the list of configured Oracle Cluster Registry locations. Ensure that the location to be deleted is already configured.

PROT-00035: The configured OCR locations are not accessible

Cause: The configured Oracle Cluster Registry (OCR) locations did not exist, were not mounted correctly, did not have the required permissions, or did not have sufficient disk space.

Action: Ensure that the locations exist, that they are mounted correctly and visible to all nodes in the cluster, that their permissions are correct, and that they have sufficient

disk space. If using an Oracle Automatic Storage Management (Oracle ASM) OCR location, check for entries in the Oracle ASM alert log file for more details.

PROT-00036: Duplicate or previously used Oracle Cluster Registry location <varname>string</varname> cannot be added

Cause: The Oracle Cluster Registry location to be added had the same contents as that of currently configured locations. This might be due to the location to be added was either duplicate of one of the currently configured locations with a different path or previously used.

Action: Make sure that the location to be added is not currently configured with a different path. If the location was previously configured as an Oracle Cluster Registry location, ensure that the contents are erased before adding it again.

PROT-00037: The Oracle Cluster Registry location <varname>string</varname> cannot be deleted because it is required for the OCR to be available

Cause: A delete operation was requested when there were minimum configured Oracle Cluster Registry locations available. The above listed operation can only be performed when a majority of configured Oracle Cluster Registry locations are accessible and online.

Action: Run 'ocrcheck' command to get the current status of the configured Oracle Cluster Registry locations. Execute 'ocrconfig -add <varname>new location</varname>' to add the new Oracle Cluster Registry location followed by 'ocrconfig -delete <varname>existing location</varname>' command.

PROT-00038: The Oracle Cluster Registry location cannot be added because another configured location is offline.

Cause: An add or replace operation was requested when there was at least one configured Oracle Cluster Registry location which was not accessible or online. The above listed operation can only be performed when the inaccessible Oracle Cluster Registry location has been deleted or replaced.

Action: Run 'ocrcheck' command to get the current status of the configured Oracle Cluster Registry locations. Execute 'ocrconfig -delete <varname>offline location</varname>' command to delete the inaccessible Oracle Cluster Registry location followed by 'ocrconfig -add <varname>new location</varname>' command.

PROT-00039: The specified file '<varname>string</varname>' has an invalid format

Cause: The specified file was not a valid Oracle Cluster Registry export/import file.

Action: Specify a valid Oracle Cluster Registry file which was created using the 'ocrconfig -export' command.

PROT-00040: The specified file '<varname>string</varname>' has an invalid format

Cause: The specified file was not a valid Oracle Cluster Registry backup file.

Action: Use the 'ocrconfig -showbackup' command to list all available backups. Specify a valid Oracle Cluster Registry backup file listed by the above command.

PROT-00041: The specified backup location '<varname>string</varname>' is not accessible

Cause: The backup location did not exist or the required permissions were not granted.

Action: Ensure that the location exists and the required file creation permissions are granted.

PROT-00042: The specified backup location '<varname>string</varname>' is not a directory or an ASM disk group

Cause: The specified backup location was not a directory or an ASM disk group.

Action: Specify a directory or an ASM disk group.

PROT-00043: Administering the Oracle Cluster Registry from a Leaf node is not supported.

Cause: An attempt was made to execute the 'ocrconfig' command with the specified option from a Leaf node, which is not supported.

Action: Execute the 'ocrconfig' command from a Hub node.

PROT-00044: Cannot change the Oracle Cluster Registry backup location to an ASM disk group.

Cause: An attempt was made to change the Oracle Cluster Registry backup location to an ASM disk group when the Oracle Cluster Registry was not configured on ASM.

Action: Migrate the Oracle Cluster Registry to ASM before changing the Oracle Cluster Registry backup location to an ASM disk group.

PROT-00045: The specified Oracle Cluster Registry backup location <varname>string</varname> is inaccessible.

Cause: Oracle Cluster Registry backup location did not exist, was not mounted correctly, or did not have the required permissions.

Action: Ensure that the backup location exists, that it is mounted correctly, and that its permissions are correct. Check the entries in the ASM alert log file for more details.

PROT-00046: Failed to repair the Oracle Cluster Registry configuration while adding the location '<varname>string</varname>' on the local node.

Cause: The Oracle Cluster Registry location to be added did not exist, was not mounted correctly, did not have the required permissions or the OCR file in the disk group did not exist.

Action: Ensure that the location exists with appropriate permissions. If the location is an ASM disk group, then the OCR file in the disk group must already exist, the disk group must be mounted correctly; also check the entries in the ASM alert log file for more details.

PROT-00047: Cannot change the Oracle Cluster Registry backup location to the specified ASM disk group <varname>string</varname>.

Cause: An attempt was made to change the Oracle Cluster Registry backup location to an ASM disk group which was the same as the only configured ASM Oracle Cluster Registry location.

Action: Add another ASM Oracle Cluster Registry location before changing the Oracle Cluster Registry backup location to the specified ASM disk group or specify a different ASM disk group for the Oracle Cluster Registry backup location.

PROT-00048: The Oracle Cluster Registry location <varname>string</varname> cannot be deleted because the OCR backup location is an ASM disk group.

Cause: An attempt was made to delete the only ASM Oracle Cluster Registry location which is on a different ASM disk group than the ASM Oracle Cluster Registry backup location.

Action: Ensure that there is at least one ASM Oracle Cluster Registry location which is on a different ASM disk group than the ASM Oracle Cluster Registry backup location. Alternatively, migrate the Oracle Cluster Registry backup location to a file system using 'ocrconfig -backuploc <varname>directory name</varname>' command, and retry the operation.

PROT-00049: The Oracle Cluster Registry (OCR) integrity check failed.

Cause: The integrity check failed for one or more of the configured Oracle Cluster Registry locations.

Action: Use 'ocrcheck' command to validate the block integrity of the configured Oracle Cluster Registry locations. Delete the corrupt locations using the command 'ocrconfig -delete <varname>corrupt location</varname>'. If all configured Oracle Cluster Registry locations are corrupted, check the availability of backups using the 'ocrconfig -showbackup' command and restore a compatible backup. If you are not able to resolve the problem, contact Oracle Support Services.

PROT-00050: OCR is local-only. '-repair -add' and '-repair -delete' options are not supported for local-only OCR.

Cause: An attempt was made to use the '-repair -add' or '-repair -delete' options with a local-only Oracle Cluster Registry, which is not supported.

Action: None

PROT-00051: reserved file or device name specified for Oracle Cluster Registry location

Cause: One of the commands 'ocrconfig -add', 'ocrconfig -repair', or 'ocrconfig -replace' was issued specifying a reserved file or device name. The names week.ocr, day.ocr, backup00.ocr, backup01.ocr, and backup02.ocr are reserved for Oracle.

Action: Choose an OCR location that is not one of the reserved names.

PROT-00052: failed to retrieve backup location of Oracle Cluster Registry

Cause: An attempt to display the backup location for the Oracle Cluster Registry failed because the Oracle Cluster Registry was not accessible.

Action: Check the accessibility of Oracle Cluster Registry.

PROT-00053: The filename specified for the 'ocrconfig -repair', 'ocrconfig -add' or 'ocrconfig -replace' command designates an invalid storage type for the Oracle Cluster Registry.

Cause: One of the commands 'ocrconfig -add', 'ocrconfig -repair' or 'ocrconfig -replace' was issued using a filename which designates an invalid storage type for Oracle Cluster Registry.

Action: Check the storage type of the device being added, repaired or replaced.

PROT-00054: failed to copy the Oracle Cluster Registry backup file to the specified destination '<varname>string</varname>'

Cause: An attempt to copy the Oracle Cluster Registry backup file to the specified location failed because it was not writable by the user or did not have sufficient space.

Action: Ensure that the destination is writable by the user and that there is sufficient free space for the file.

PROT-00055: The file name [<varname>string</varname>] specified for the 'ocrconfig -manualbackup -filename' command is invalid.

Cause: An attempt to configure a manual backup file for Oracle Cluster Registry failed because the specified file name argument did not specify a complete path name.

Action: Reissue the command specifying a complete path name for the backup file.

PROT-00056: The file name [<varname>string</varname>] specified for the 'ocrconfig -copy' command is invalid.

Cause: An attempt to copy an Oracle Cluster Registry file failed because the specified destination file name argument did not specify a complete path name.

Action: Reissue the command specifying a complete path name for the destination file.

PROT-00301: Dump is not feasible when clusterware is running

Cause: Unable to dump cluster registry data when clusterware is running.

Action: Stop the clusterware before retrying ocrdump.

PROT-00302: Failed to initialize ocrdump

Cause: Unable to initialize and start ocrdump.

Action: Check log file for details about the failure.

PROT-00303: Dump file already exists [<varname>string</varname>]

Cause: Requested dump file exists in the given path.

Action: Change the location for the dump file or remove the old dump file.

PROT-00304: Failed to create dump file [<varname>string</varname>]

Cause: Unable to create or open file for dumping cluster registry data.

Action: Check access privilege or disk space of the requested path.

PROT-00305: Failed to write to dump file [<varname>string</varname>]

Cause: Unable to write to dump file while dumping cluster registry data.

Action: Check access privilege or disk space of the requested path.

PROT-00306: Failed to retrieve cluster registry data

Cause: Unable to read cluster registry data.

Action: Check log file for details about the failure.

PROT-00307: The specified key does not exist in cluster registry

Cause: Unable to retrieve the specified key from cluster registry.

Action: Check log file for the key name.

PROT-00308: The 'ocrdump' command is not supported from a Leaf node when the Oracle Clusterware is not running.

Cause: An attempt was made to execute the 'ocrdump' command from a Leaf node when the Oracle Clusterware was not running on the local node.

Action: Start the Oracle Clusterware using the command 'crsctl start crs' command, and retry the command. Optionally, execute the same command from a Hub node.

PROT-00309: Failed to access the Oracle Cluster Registry backup file.

Cause: The Oracle Cluster Registry backup file either did not exist or the user did not have the permission to open the file.

Action: Ensure that the file exists and its permissions are correct.

PROT-00310: Not all keys were dumped due to permissions.

Cause: An attempt was made to dump one or more Oracle Cluster Registry keys for which the user does not have access permission.

Action: Log on as a different user and retry.

PROT-00311: insufficient permission to proceed

Cause: The user was not a privileged user.

Action: Log on as root or administrator user and reissue the command.

PROT-00312: The specified file '<varname>string</varname>' has an invalid format.

Cause: The file argument to the ocrdump command specified a file that was not a valid Oracle Cluster Registry backup file.

Action: Use the 'ocrconfig -showbackup' command to list all available backups. Reissue the ocrdump command specifying a valid Oracle Cluster Registry backup file as listed by the ocrconfig command.

PROT-00601: Failed to initialize ocrcheck

Cause: Unable to initialize and start ocrcheck.

Action: Check log file for details about the failure.

PROT-00602: Failed to retrieve data from the cluster registry

Cause: Unable to retrieve necessary information from the cluster registry.

Action: Check the availability of the cluster registry and the details of the failure from the log file.

PROT-00603: Oracle Cluster Registry is logically corrupted

Cause: A logical corruption was detected in the Oracle Cluster Registry.

Action: Check the log file for more information. Check availability of backups using 'ocrconfig -showbackup' command. Restore a compatible backup, and verify using ocrcheck.

PROT-00604: Failed to retrieve the configured location(s) of the cluster registry.

Cause: Unable to retrieve the configured location(s) of the cluster registry.

Action: Check log file for details about the failure.

PROT-00605: The 'ocrcheck' command is not supported from a Leaf node.

Cause: An attempt was made to execute the 'ocrcheck' command from a Leaf node, which is not supported.

Action: Execute the 'ocrcheck' command from a Hub node.

PROT-00606: insufficient permission to proceed

Cause: The user was not a privileged user.

Action: Log on as root or administrator user and reissue the command.

PRVE-00004 to PRVE-10168

PRVE-00004: The given operator is not supported.

Cause: This is an internal error.

Action: Please contact Oracle Support.

PRVE-00005: The string does not represent a numeric value.

Cause: This is an internal error.

Action: Please contact Oracle Support.

PRVE-00008: Could not find command name in description of executable

Cause: This is an internal error.

Action: Please contact Oracle Support.

PRVE-00009: Failed to resolve variable "{0}"

Cause: This is an internal error.

Action: Please contact Oracle Support.

PRVE-00010: Properly formatted RESULT tags are not found in the command output: "{0}".

Cause: This is an internal error.

Action: Please contact Oracle Support.

PRVE-00011: Properly formatted COLLECTED tags are not found in the command output.

Cause: This is an internal error.

Action: Please contact Oracle Support.

PRVE-00012: Execution of verification executable failed.

Cause: An error was encountered while executing verification executable.

Action: Look at the accompanying messages for details on the cause of failure.

PRVE-00013: Execution of analyzer failed.

Cause: An error was encountered while executing analyzer.

Action: Look at the accompanying messages for details on the cause of failure.

PRVE-00016: Unable to write data to file "{0}".

Cause: The path specified is not writeable.

Action: Ensure that write access exists for the specified path.

PRVE-00018: Encountered a NULL executable argument.

Cause: This is an internal error.

Action: Please contact Oracle Support.

PRVE-00021: HugePages feature is not enabled on nodes "{0}"

Cause: Available memory is greater than 4GB, but OS HugePages feature is not enabled.

Action: If available memory is greater than 4GB, Oracle recommends configuring HugePages. Refer to OS documentation to configure HugePages.

PRVE-00022: Could not get available memory on node "{0}"

Cause: An error occurred accessing /proc/meminfo to determine available system memory.

Action: Ensure that the OS /proc virtual file system is functioning correctly and that /proc/meminfo is accessible.

PRVE-00023: HugePages feature is not supported on node "{0}"

Cause: HugePages feature of Linux operating system was not found supported on the indicated node.

Action: Oracle recommends enabling the database Automatic Memory Management feature on database instances that run on a Linux operating system that does not support HugePages.

PRVE-00024: Transparent HugePages feature is enabled on node "{0}"

Cause: Transparent HugePages feature was found always enabled on the indicated node.

Action: Oracle recommends disabling Transparent HugePages on all servers running Oracle databases. To disable the Transparent HugePages feature add "transparent_hugepage=never" to the kernel boot line in the "/etc/grub.conf" file of the indicated node and reboot the node to make the changes effective.

PRVE-00027: Hardware clock synchronization could not be determined on node "{0}"

Cause: The hwclock command is used in the shutdown script, but it is not possible to establish that the --systohc option is enabled.

Action: Check the shutdown/halt script and verify manually whether this script executes the command 'hwclock --systohc'.

PRVE-00028: Hardware clock synchronization could not be established as halt script does not exist on node "{0}"

Cause: The shutdown or halt script /etc/rc.d/init.d/halt does not exist or is missing.

Action: Check for the existence of the shutdown or halt script and ensure this script executes the command 'hwclock --systohc'.

PRVE-00029: Hardware clock synchronization check could not run on node "{0}"

Cause: The shutdown or halt script may not be accessible or a command may have failed.

Action: Contact Oracle Support.

PRVE-00033: Core files are not enabled on node "{0}"

Cause: The core file setting currently prevents the creation of a core file for process aborts and exceptions.

Action: Oracle recommends enabling core file creation.

PRVE-00034: Error encountered while trying to obtain the core file setting on node "{0}"

Cause: An error occurred while attempting to determine the core file setting.

Action: Oracle recommends enabling core file creation.

PRVE-00038: The SSH LoginGraceTime setting on node "{0}" may result in users being disconnected before login is completed

Cause: The LoginGraceTime timeout value is too low which is causing users to be disconnected before their login completes.

Action: Oracle recommends setting the LoginGraceTime to a value of zero (unlimited), Restart the SSH daemon on the identified node to make the changes effective.

PRVE-00039: Error encountered while trying to obtain the LoginGraceTime setting on node "{0}"

Cause: An error occurred while attempting to obtain the LoginGraceTime setting.

Action: Oracle recommends setting the LoginGraceTime to a value of zero (unlimited).

PRVE-00042: Maximum locked memory when Automatic Memory Management is enabled is less than the recommended value [Expected = "{0}", Retrieved="{1}"] on node "{2}"

Cause: The value of maximum locked memory is less than the recommended value for Automatic Memory Management.

Action: Increase the value of locked memory in /etc/security/limits.conf . Refer your operating system documentation for details.

PRVE-00043: Error encountered when checking maximum locked memory limit on node "{0}"

Cause: An error was encountered when retrieving the value of maximum locked memory.

Action: Modify the value of max locked memory. Refer your operating system documentation for details.

PRVE-00044: No entry in configuration file when checking locked memory limit on node "{0}"

Cause: No entry for maximum locked memory limit was found in /etc/security/limits.conf.

Action: Specify or correct the value of locked memory by modifying /etc/security/limits.conf. Refer your operating system documentation for details.

PRVE-00047: Error when checking IP port availability

Cause: Command failed when checking port availability.

Action: Contact Oracle Support Services.

PRVE-00048: Check for IP port "{0}" availability failed

Cause: IP Port 8888 not available.

Action: Stop any applications listening on port 8888 as it is needed for oc4j.

PRVE-00052: The syslog.conf log file sync setting on node "{0}" may result in users being disconnected before logins are completed

Cause: Not all log file specifications in /etc/syslog.conf are prefixed by the '-' character which will cause log messages being written to disk before control is released. This may cause users to be disconnected before their login completes.

Action: Oracle recommends prefixing all log file specifications in /etc/syslog.conf with the '-' character which result in the log messages being written to system cache and flushed to disk later.

PRVE-00053: Error encountered while trying to obtain the syslog.conf log file sync settings on node "{0}"

Cause: An error occurred while attempting to read the log file sync settings specified in file: /etc/syslog.conf.

Action: Verify read access to file '/etc/syslog.conf'. Oracle recommends prefixing all log file specifications in /etc/syslog.conf with the '-' character which will result in the log messages being written to system cache and flushed to disk later.

PRVE-00054: File '/etc/syslog.conf' not found on node "{0}"

Cause: An error occurred while attempting to read the log file sync settings specified in file: '/etc/syslog.conf'. The file '/etc/syslog.conf' was not found on the system.

Action: Please verify that the file '/etc/syslog.conf' exists on the system.

PRVE-00055: Cannot read the file '/etc/syslog.conf' on node "{0}"

Cause: The user did not have permissions to read the '/etc/syslog.conf' file on the system.

Action: Please verify that the current user has read access to the file.

PRVE-00060: Cannot read the shutdown script file "{0}"

Cause: The current user did not have read access to the indicated file.

Action: Ensure that the current user has read access to the indicated file.

PRVE-00067: Maximum locked memory setting is less than the recommended value [Expected = "{0}", Actual="{1}"] on node "{2}"

Cause: Check of maximum locked memory settings determined that the value of maximum locked memory was less than the recommended value of 3GB in the /etc/security/limits.conf for the current user.

Action: Oracle recommends that the maximum locked memory be at least 3GB. Increase the value of maximum locked memory specified in the /etc/security/limits.conf file of the identified node. Refer to the operating system documentation or issue the command 'man limits.conf' for details.

PRVE-00068: Maximum locked memory setting is less than the recommended value [Expected = "{0}", Actual="{1}"] when huge pages are enabled on node "{2}"

Cause: Check of maximum locked memory settings determined that the value of maximum locked memory specified for the current user in the /etc/security/limits.conf

file was less than the recommended value of maximum locked memory when huge pages are enabled on the indicated node.

Action: Oracle recommends that the maximum locked memory be at least 90 percent of the installed physical memory when huge pages are enabled. Increase the value of maximum locked memory specified in the `/etc/security/limits.conf` file of the identified node. Refer to the operating system documentation or issue the command `'man limits.conf'` for details.

PRVE-00234: Error encountered while trying to obtain the hangcheck_timer setting on node "{0}"

Cause: An error occurred while attempting to determine the hangcheck_timer setting.

Action: n/a

PRVE-00243: CSS diagwait is not set to recommended value of 13 on node "{0}"

Cause: CSS diagwait does not meet the recommendation

Action: Set the diagwait to the recommended setting using the `'$CRS_HOME/bin/crsctl set css diagwait'` command.

PRVE-00244: Error encountered while trying to obtain the CSS diagwait setting on node "{0}"

Cause: An error occurred while attempting to determine the CSS diagwait setting.

Action: n/a

PRVE-00253: CSS misscount is not set to recommended on node "{0}"

Cause: CSS misscount does not meet the requirement

Action: Set the misscount to the recommended setting using the `'$CRS_HOME/bin/crsctl set css misscount'` command.

PRVE-00254: Error encountered while trying to obtain the CSS misscount setting on node "{0}"

Cause: An error occurred while attempting to determine the CSS misscount setting.

Action: n/a

PRVE-00263: CSS reboottime is not set to recommended value of 3 seconds on node "{0}"

Cause: CSS reboottime does not meet the requirement

Action: Set the reboottime to the recommended setting using the `'$CRS_HOME/bin/crsctl set css reboottime'` command.

PRVE-00264: Error encountered while trying to obtain the CSS reboottime setting on node "{0}"

Cause: An error occurred while attempting to determine the CSS reboottime setting.

Action: n/a

PRVE-00274: Error encountered while trying to obtain the network parameter setting on node "{0}"

Cause: An error occurred while attempting to retrieve network parameter setting.

Action: n/a

PRVE-00284: Error encountered while trying to obtain the virtual memory parameter setting on node "{0}"

Cause: An error occurred while attempting to retrieve virtual memory parameter setting.

Action: n/a

PRVE-00294: Error trying to obtain the MTU setting on node "{0}"

Cause: An error occurred while attempting to retrieve MTU setting.

Action: n/a

PRVE-00296: Error retrieving cluster interfaces on node "{0}"

Cause: Cluster interfaces could not be retrieved on the specified node using 'oifcfg getif'.

Action: Ensure that the Oracle Clusterware is configured and that the Oracle Clusterware stack is running.

PRVE-00304: Error while checking flow control settings in the E1000 on node "{0}"

Cause: An error occurred while attempting to retrieve E1000 flow control settings.

Action: n/a

PRVE-00314: Error while checking default gateway subnet on node "{0}"

Cause: An error occurred while attempting to retrieve subnet of default gateway.

Action: n/a

PRVE-00315: Error while checking VIP subnet on node "{0}"

Cause: An error occurred while attempting to retrieve subnet of VIP.

Action: n/a

PRVE-00324: Error while checking VIP restart configuration on node "{0}"

Cause: An error occurred while attempting to retrieve VIP restart configuration.

Action: n/a

PRVE-00334: Error while checking TCP packet re-transmit rate on node "{0}"

Cause: An error occurred while attempting to retrieve TCP packet re-transmit rate.

Action: n/a

PRVE-00343: Network packet reassembly occurring on node "{1}".

Cause: A possible cause is the difference in the MTU size across network

Action: Ensure that the MTU size is same across network

PRVE-00344: Error while checking network packet reassembly on node "{0}"

Cause: An error occurred while attempting to check network packet reassembly.

Action: n/a

PRVE-00354: Error encountered while trying to obtain the CSS disktimeout setting

Cause: An error occurred while attempting to determine the CSS disktimeout setting.

Action: n/a

PRVE-00384: Error encountered while trying to obtain the hangcheck reboot setting on node "{0}"

Cause: An error occurred while attempting to determine the hangcheck reboot setting.

Action: n/a

PRVE-00394: Error encountered while trying to obtain the hangcheck tick setting on node "{0}"

Cause: An error occurred while attempting to determine the hangcheck tick setting.

Action: n/a

PRVE-00404: Error encountered while trying to obtain the hangcheck margin setting on node "{0}"

Cause: An error occurred while attempting to determine the hangcheck margin setting.

Action: n/a

PRVE-00414: Error encountered while trying to obtain the listener name on node "{0}"

Cause: An error occurred while attempting to determine the listener name.

Action: n/a

PRVE-00420: /dev/shm is not found mounted on node "{0}"

Cause: During database installation it is recommended to have /dev/shm mounted as a RAM file system.

Action: Mount /dev/shm as RAM file system with appropriate size.

PRVE-00421: No entry exists in /etc/fstab for mounting /dev/shm

Cause: The file /etc/fstab did not have an entry specifying /dev/shm and its size to be mounted.

Action: Modify /etc/fstab to mount /dev/shm with appropriate size.

PRVE-00422: The size of in-memory file system mounted at /dev/shm is "{0}" megabytes which does not match the size in /etc/fstab as "{1}" megabytes

Cause: The size of the mounted RAM file system did not equal the value configured for system startup.

Action: Modify /etc/fstab to mount /dev/shm with appropriate size.

PRVE-00423: The file /etc/fstab does not exist on node "{0}"

Cause: The file /etc/fstab should exist on the node.

Action: Recreate or retrieve the /etc/fstab file.

PRVE-00426: The size of in-memory file system mounted as /dev/shm is "{0}" megabytes which is less than the required size of "{1}" megabytes on node "{2}"

Cause: The in-memory file system was found mounted a smaller size than required size on the identified node.

Action: Ensure that /dev/shm is correctly mounted with greater than or equal to the required size.

PRVE-00427: Failed to retrieve the size of in-memory file system mounted as /dev/shm on node "{0}"

Cause: An attempt to retrieve the in-memory file system size failed on the identified node.

Action: Ensure that /dev/shm is correctly mounted and that the current user has the permissions required to access the /dev/shm mount information.

PRVE-00453: Reverse path filter parameter "rp_filter" for private interconnect network interfaces "{0}" is not set to 0 or 2 on node "{1}"

Cause: Reverse path filter parameter 'rp_filter' was not set to 0 or 2 for identified private interconnect network interfaces on specified node.

Action: Ensure that the 'rp_filter' parameter is correctly set to the value of 0 or 2 for each of the interface used in the private interconnect classification, This will disable or relax the filtering and allow Oracle Clusterware to function correctly. Use 'sysctl' command to modify the value of this parameter.

PRVE-00454: Error encountered while trying to retrieve the value of "rp_filter" parameter of "{0}" network interfaces on node "{1}"

Cause: An error occurred while attempting to retrieve reverse path filter parameter 'rp_filter' value on specified node.

Action: n/a

PRVE-00463: Network bonding feature is enabled on node "{0}" with bonding mode "{1}" which is not an allowed value of 0 "balance-rr" or 1 "active-backup" for private interconnect network interfaces "{2}"

Cause: The bonding mode specified for the network interfaces used as private cluster interconnect was not an allowed value.

Action: Configure network bonding mode 0 or 1 on interfaces used for private cluster interconnect.

PRVE-00464: Network bonding feature is enabled on nodes "{0}" with a bonding mode that conflicts with cluster private interconnect usage.

Cause: An incorrect bonding mode was used for the network bonds in which private interconnect network interfaces participate on the indicated nodes.

Action: Ensure that the network bonding mode is set to the allowed value of 0 or 1 for all the network bonds in which private interconnect network interfaces participate.

PRVE-00465: Network bonding mode used on interfaces classified for private cluster interconnect on nodes "{0}" is inconsistent. Network bonding details are as follows:\n{1}

Cause: An inconsistent network bonding mode was used for the network bonds in which cluster interconnect interfaces participate on the indicated nodes.

Action: Ensure that the network bonding mode used for all the network bonds in which cluster interconnect interfaces participate is consistent across all the nodes.

PRVE-00466: Private interconnect network interface list for current network configuration was not available

Cause: An attempt to retrieve cluster private network classifications failed.

Action: Ensure that the configuration of public and private network classifications was done correctly during the installation process. If Oracle Clusterware is already configured then issue 'oifcfg getif' command to list the current network configuration.

PRVE-00473: Berkeley Packet Filter device "{0}" is created with major number "{1}" which is already in use by devices "{2}" on node "{3}"

Cause: The indicated Berkeley Packet Filter device was found to be using a major number which is also in use by the indicated devices

Action: Ensure that the major number of the indicated Berkeley Packet Filter device is not in use by any other device on the indicated node.

PRVE-00474: Berkeley Packet Filter devices do not exist under directory /dev on nodes "{0}"

Cause: Berkeley Packet Filter devices /dev/bpf* were not found under the /dev directory on the indicated nodes.

Action: Create the Berkeley Packet Filter devices using the 'mknod' command on the indicated nodes and ensure that the devices are created using unique major and minor numbers.

PRVE-00475: Berkeley Packet Filter devices "{0}" are using same major number "{1}" and minor number "{2}" on node "{3}"

Cause: The indicated devices were found using same major and minor number on the identified node.

Action: Ensure that the minor number of each Berkeley Packet Filter device is unique on the identified node.

PRVE-00476: Failed to list the devices under directory /dev on node "{0}"

Cause: An attempt to read the attributes of all the devices under /dev directory failed on the identified node.

Action: Ensure that the current user has permission to list and read the attributes of devices listed under directory /dev on the identified node.

PRVE-02503: FAST_START_MTTR_TARGET should be 0 when _FAST_START_INSTANCE_RECOVERY_TARGET > 0 on rac.

Cause: FAST_START_MTTR_TARGET > 0, when
_FAST_START_INSTANCE_RECOVERY_TARGET > 0

Action: set FAST_START_MTTR_TARGET to 0 when
_FAST_START_INSTANCE_RECOVERY_TARGET > 0

PRVE-02504: Error while checking FAST_START_MTTR_TARGET

Cause: An error occurred while attempting to retrieve
FAST_START_MTTR_TARGET.

Action: n/a

**PRVE-02734: Error while checking
_FAST_START_INSTANCE_RECOVERY_TARGET**

Cause: An error occurred while attempting to retrieve
_FAST_START_INSTANCE_RECOVERY_TARGET.

Action: n/a

PRVE-10073: Required /boot data is not available on node "{0}"

Cause: The file '/boot/symvers-<kernel_release>.gz', required for proper driver
installation, was not found on the indicated node.

Action: Ensure that /boot is mounted and /boot/symvers-<kernel_release>.gz is
available on the node.

**PRVE-10077: NOZEROCONF parameter was not specified or was not set to 'yes'
in file "/etc/sysconfig/network" on node "{0}"**

Cause: During NOZEROCONF check, it was determined that NOZEROCONF
parameter was not specified or was not set to 'yes' in /etc/sysconfig/network file.

Action: Ensure NOZEROCONF is set to 'yes' in /etc/sysconfig/network to disable
169.254/16 being added to the routing table.

**PRVE-10078: LINKLOCAL_INTERFACES network parameter was defined in the
file "/etc/sysconfig/network/config" on node "{0}"**

Cause: During LINKLOCAL_INTERFACES parameter check, it was determined that
the LINKLOCAL_INTERFACES network parameter was defined in the /etc/sysconfig/
network/config file.

Action: Ensure that the LINKLOCAL_INTERFACES network parameter is not defined
in the /etc/sysconfig/network/config file to avoid having the link local addresses
169.254/16 added to the routing table.

PRVE-10083: Java Virtual Machine is not installed properly

Cause: There were not enough JAVA objects in DBA_OBJECTS table.

Action: Refer to MOS note 397770.1 to take corrective action

PRVE-10084: Error while checking JAVAVM installation in the database

Cause: An error occurred while performing the check.

Action: Look at the accompanying messages for details on the cause of failure.

PRVE-10094: Error while checking Time Zone file

Cause: An error occurred while performing the check.

Action: Look at the accompanying messages for details on the cause of failure.

PRVE-10104: Error while checking standby databases

Cause: An error occurred while checking standby databases.

Action: Look at the accompanying messages for details on the cause of failure.

PRVE-10113: "multi-user-server" service is "{0}" on node "{1}"

Cause: The 'svcs svc:/milestone/multi-user-server' command reported that the multi-
user-server was not online on the specified node.

Action: Consult the OS documentation/System Administrator to bring up multi-user-server service.

PRVE-10114: "multi-user" service is "{0}" on node "{1}"

Cause: The 'svcs svc:/milestone/multi-user' command reported that the multi-user was not online on the specified node.

Action: Consult the OS documentation/System Administrator to bring up multi-user service.

PRVE-10115: Error while checking multiuser service

Cause: An error occurred while checking multiuser service

Action: Look at the accompanying messages for details on the cause of failure.

PRVE-10123: Selected "{0}" group "{1}" is not same as the currently configured group "{2}" for existing Oracle Clusterware home "{3}"

Cause: An attempt to upgrade the database was rejected because the selected group was not the group configured for the existing Oracle Clusterware installation.

Action: Select the same groups as the currently configured groups of the existing Oracle Clusterware installation.

PRVE-10124: Current selection of the "{0}" group could not be retrieved

Cause: The indicated group was not found selected or set to any valid operating system group name.

Action: Ensure that the indicated group is selected and set to some valid operating system group name.

PRVE-10125: Error while checking privileged groups consistency. lnError: {0}

Cause: An error occurred while checking privileged groups consistency.

Action: Look at the accompanying messages for details on the cause of failure.

PRVE-10126: Configured "{0}" group for Oracle Clusterware home "{1}" could not be retrieved

Cause: The indicated group could not be retrieved using the 'osdbagrp' utility from the identified Oracle Clusterware home.

Action: Ensure that the indicated group is configured correctly and that the 'osdbagrp' utility reports it correctly from the identified Oracle Clusterware home.

PRVE-10128: Selected "{0}" group "{1}" is not same as the currently configured group "{2}" for existing database home "{3}"

Cause: An attempt to upgrade the database was rejected because the selected group was not the group configured for the existing database installation.

Action: Select the same groups as the currently configured groups of the existing database installation.

PRVE-10129: Configured "{0}" group for database home "{1}" could not be retrieved

Cause: The indicated group could not be retrieved using the 'osdbagrp' utility from the identified database home.

Action: Ensure that the indicated group is configured correctly and that the 'osdbagr' utility reports it correctly from the identified database home.

PRVE-10138: FILESYSTEMIO_OPTIONS is not set to the recommended value of setall

Cause: An attempt to match the value of parameter FILESYSTEMIO_OPTIONS with the recommended value failed.

Action: Set the FILESYSTEMIO_OPTIONS to the recommended value using SQL statement 'alter system set'.

PRVE-10139: Error while checking FILESYSTEMIO_OPTIONS

Cause: An attempt to check the value of the parameter FILESYSTEMIO_OPTIONS failed because the database was not configured correctly.

Action: Ensure that the database is configured correctly and retry the operation.

PRVE-10150: The current IP hostmodel configuration for both IPV4 and IPV6 protocols does not match the required configuration on node "{0}". [Expected = "{1}" ; Found = "{2}"]

Cause: The IP hostmodel configuration on the indicated node for the specified protocols was 'strong' and should have been 'weak'.

Action: Modify the IP hostmodel configuration to meet the required configuration. Use command 'ipadm set-prop -p hostmodel=weak [ipv4|ipv6]' to modify the IP hostmodel configuration.

PRVE-10151: The current IP hostmodel configuration for "{0}" protocol does not match the required configuration on node "{1}". [Expected = "{2}" ; Found = "{3}"]

Cause: The IP hostmodel configuration on the indicated node for the specified protocol was 'strong' and should have been 'weak'.

Action: Modify the IP hostmodel configuration to meet the required configuration. Use command 'ipadm set-prop -p hostmodel=weak [ipv4|ipv6]' to modify the IP hostmodel configuration.

PRVE-10155: GSD resource is running and enabled on node "{0}".

Cause: GSD was found to be running and enabled on the indicated node.

Action: Stop and disable GSD using the commands 'srvctl stop nodeapps -g' and 'srvctl disable nodeapps -g' respectively.

PRVE-10156: GSD resource is enabled on node "{0}".

Cause: GSD was found to be enabled on the indicated node.

Action: Disable GSD using the command 'srvctl disable nodeapps -g'.

PRVE-10167: I/O Completion Ports (IOCP) device status did not match the required value on node "{0}". [Expected = "Available"; Found = "{1}"]

Cause: IOCP device status was not 'Available' on the indicated node. The IOCP device status must be 'Available' in order to list the candidate disks when creating ASM disk group.

Action: Login as the root user and change the IOCP device status to 'Available' using the command '/bin/smitty iocp' and reboot the node for the changes to take effect.

PRVE-10168: Failed to obtain the I/O Completion Ports (IOCP) device status using command "{0}" on node "{1}"

Cause: An attempt to obtain the status of IOCP device failed on the indicated node.

Action: Ensure that the identified command exists and the current user has read/execute permissions for it.

PRVF-00001 to PRVF-10409

PRVF-00001: Could not retrieve static nodelist. Verification cannot proceed

Cause: Error running lsnodes/olsnodes.

Action: Ensure that the executable exists and that it is executable by your OS userid.

PRVF-00002: could not retrieve local node name

Cause: The local node name could not be determined because the Java networking support functions failed to return a value.

Action: Ensure that host name is defined correctly using the 'hostname' command. On Linux machines, examine the files '/etc/sysconfig/network' and '/etc/resolv.conf' and ensure that the command 'hostname -f' succeeds.

PRVF-00006: Unable to check the existence of Oracle Home "{0}"

Cause: Could not verify the existence of the Oracle Home specified.

Action: Ensure that the Oracle Home location exists and is writeable by your user ID.

PRVF-00020: "{0}" is not writeable

Cause: The path specified is not writeable.

Action: Ensure that write access exists for the specified path.

PRVF-00040: The Remote Shell "{0}" requested by the client does not exist

Cause: Could not locate remote shell requested by the user.

Action: Ensure that the remote shell exists on all the nodes participating in the operation.

PRVF-00041: The Remote shell "{0}" requested by the client is not an executable file

Cause: The remote shell requested by the user is not a file.

Action: Ensure that the remote shell exists on all the nodes participating in the operation and that it is a file with execute permissions.

PRVF-00042: The Remote Copy command "{0}" requested by the client does not exist

Cause: Cannot locate remote copy command requested by the user.

Action: Ensure that the remote copy command exists on all the nodes participating in the operation.

PRVF-00045: The Secure Shell "{0}" requested by the client does not exist

Cause: Could not locate the secure shell executable specified.

Action: Ensure that the executable file specified exists.

PRVF-00046: The Secure Copy command "{0}" requested by the client does not exist

Cause: Could not locate the secure copy executable specified.

Action: Ensure that the executable file specified exists.

PRVF-00047: Unable to execute the Secure Shell "{0}" requested by the client

Cause: Could not execute the secure shell specified.

Action: Ensure that the secure shell specified allows execute access for the current user ID.

PRVF-00048: Unable to execute the Secure Copy command "{0}" requested by the client

Cause: Could not execute the secure copy specified.

Action: Ensure that the secure copy specified allows execute access for the current user ID.

PRVF-00051: The Remote Copy command "{0}" requested by the client is not an executable file

Cause: The remote copy command requested by the user was not an executable file.

Action: Ensure that the remote copy command exists on all the nodes participating in the operation and that it is a file with execute permissions.

PRVF-00054: Unable to find oifcfg executable file in directory "{0}"

Cause: An attempt to locate oifcfg executable file in specified directory failed.

Action: This is an internal error. Contact Oracle Support Services.

PRVF-00055: User "{0}" does not have administrative privileges to run this command

Cause: An attempt to run the Cluster Verification Utility (CVU) command failed because the user did not have sufficient authority to run it.

Action: The commands can be run as root user (uid=0) or by using the command line option '-method' to specify one of the privilege delegation methods.

PRVF-00056: User "{0}" does not have sufficient authorization to run this command

Cause: An attempt to run the CVU command failed because the user does not have sufficient authority to run it.

Action: The command can be run only by the Oracle installation owner. Make sure that you run these commands as appropriate user.

PRVF-02409: The device file "{0}" does not exist on node "{1}"

Cause: The expected device file could not be found.

Action: To enable asynchronous input-output operations using the asynchronous device driver, create the device file.

PRVF-02410: The device file "{0}" does not exist on nodes:

Cause: The expected device file could not be found.

Action: To enable asynchronous input-output operations using the asynchronous device driver, create the device file.

PRVF-02411: The file "{0}" is not a device file on nodes:

Cause: The file was not a device file.

Action: Ensure that the correct path and filename specified for the device file.

PRVF-02412: The file "{0}" is not a device file on node "{1}"

Cause: The file was not a device file.

Action: Ensure that the correct path and filename are specified for the device file.

PRVF-02413: Failed to retrieve details of the device file "{0}" on nodes:

Cause: An attempt to retrieve the attributes of a device file failed.

Action: Ensure that the file exists on the system and user has correct permissions to retrieve the details of specified device file.

PRVF-02414: Failed to retrieve details of the device file "{0}" on node "{1}"

Cause: An attempt to retrieve the attributes of a device file failed.

Action: Ensure that the file exists on the system and user has correct permissions to retrieve the details of specified device file.

PRVF-02415: The minor number of device file "{0}" is incorrect on the nodes:

Cause: The minor number of a device file was found incorrect as per the requirement.

Action: The third least significant bit (the 0x4 bit hexadecimal) of the minor number must be set.

PRVF-02416: The minor number of device file "{0}" is incorrect on the node "{1}"

Cause: The minor number of a device file was found incorrect as per the requirement.

Action: The third least significant bit (the 0x4 bit hexadecimal) of the minor number must be set.

PRVF-02417: Failed to retrieve the ID for device file "{0}" on the node "{1}"

Cause: Device file ID could not be retrieved on the node.

Action: Ensure that the device file exists at the specified path and is set to correct device ID.

PRVF-02418: Failed to retrieve minor number value for the device file "{0}" on the node "{1}"

Cause: The device file ID does not contain the correct minor number.

Action: Ensure the value of the minor number of the device file is correct.

PRVF-03911: Length of value of environment variable "{0}" exceeds the maximum recommended length of "{1}" on the nodes:

Cause: Length of the value of environment variable exceeds the recommended length.

Action: Ensure that the value of the environment variable does not exceed the standard operating system specified limit.

PRVF-03912: Length of value of environment variable "{0}" exceeds the maximum recommended length of "{1}" on the node "{2}"

Cause: Length of the value of environment variable exceeds the recommended length.

Action: Ensure that the value of the environment variable does not exceed the standard operating system specified limit. Restart the installer after changing the setting for environment variable.

PRVF-03913: Environment variable name "{0}" is set on nodes:

Cause: The environment variable was set on the nodes indicated.

Action: Ensure that the environment variable is not set to any value.

PRVF-03914: Environment variable name "{0}" is set on node "{1}"

Cause: The environment variable was set on the node indicated.

Action: Ensure that the environment variable is not set to any value. Restart the installer after changing the setting for environment variable.

PRVF-03915: Environment variable name "{0}" is not set on nodes:

Cause: Environment variable value could not be determined.

Action: Ensure that the environment variable is set and access permissions for the Oracle user allow access to read the environment variables.

PRVF-03916: Environment variable name "{0}" is not set on node "{1}"

Cause: Environment variable value could not be determined.

Action: Ensure that the environment variable is set and access permissions for the Oracle user allow access to read the environment variables. Restart the installer after changing the setting for environment variable.

PRVF-03917: Environment variable check for variable "{0}" cannot be performed on nodes:

Cause: Environment Variable value could not be determined.

Action: Ensure that the environment variable is set in either system or user environment and access permissions for the Oracle user allow access to read the environment variables.

PRVF-03918: Can not read environment variable "{0}" from node "{1}"

Cause: Environment variable value could not be determined.

Action: Check user equivalence and whether the user has administrative privileges on the node.

PRVF-03919: Failed to retrieve value of environment variable "{0}"

Cause: Environment variable value could not be determined.

Action: Check user equivalence and whether the user has administrative privileges on the node.

PRVF-03920: Environment variable name "{0}" is invalid for this operating system.

Cause: Environment variable name does not meet operating system standards.

Action: Ensure that the environment variable name is as per the operating system standards. Restart the installer after changing the setting for environment variable.

PRVF-03921: Environment variable name not specified.

Cause: Environment variable name was not specified.

Action: Ensure that a valid environment variable name is specified.

PRVF-03928: Adding the Oracle binary location to the PATH environment variable will exceed the OS length limit of ["{0}"], The maximum allowed length for PATH environment variable is ["{1}"] on the nodes:

Cause: The environment variable PATH needs to be updated to include the value "%ORACLE_HOME%/bin;". However, doing so will cause PATH to exceed the maximum allowable length that this operating system allows.

Action: Ensure that the length of your current PATH environment variable is less than that of specified maximum allowed length, so that adding of "%ORACLE_HOME%/bin;" does not exceed the operating system's environment variable length limit.

PRVF-03929: Adding the Oracle binary location to the PATH environment variable will exceed the OS length limit of ["{0}"], The maximum allowed length for PATH environment variable is ["{1}"] on the node "{2}"

Cause: The installer needs to update the PATH environment variable to include the value "%ORACLE_HOME%/bin;". However, doing so will cause PATH to exceed the maximum allowable length that this operating system allows.

Action: Ensure that the length of your current PATH environment variable is less than that of specified maximum allowed length, so that adding of "%ORACLE_HOME%/bin;" does not exceed the system's environment variable length limit. Restart the installer after changing the setting for environment variable.

PRVF-04001: Check: Space available on "{0}"

Cause: Could not determine mount point for location specified.

Action: Ensure that the location specified is available.

PRVF-04007: User equivalence check failed for user "{0}"

Cause: User equivalence for the specified user did not exist among all the nodes participating in the operation.

Action: Verify user equivalence on all the nodes participating in the operation, see "Enabling SSH User Equivalency on Cluster Member Nodes" documentation.

PRVF-04008: User equivalence unavailable on all the specified nodes

Cause: User equivalence doesn't exist between the local node and the remote node(s).

Action: Ensure that user equivalence exists on all the nodes specified.

PRVF-04020: Inconsistent group IDs found for group "{0}"

Cause: The group ID for the specified group is not the same across all the nodes.

Action: Make sure that the group has the same group ID across all the nodes.

PRVF-04025: Inventory configuration file "{0}" does not exist

Cause: Cannot locate the inventory configuration file specified.

Action: Ensure that the correct inventory location was supplied and that the inventory file is there.

PRVF-04037: CRS is not installed on any of the nodes

Cause: Could not identify a CRS installation on any node.

Action: Ensure that CRS is installed on all the nodes participating in the operation.

PRVF-04038: CRS is not installed on nodes:

Cause: An attempt to identify Oracle Clusterware installation failed on specified nodes.

Action: Ensure that Oracle Clusterware is installed on all the nodes participating in the operation.

PRVF-04041: CSS is probably working with a non-clustered, local-only configuration on all the nodes

Cause: Oracle CSS was found to be configured to run in a local-only (non-clustered) environment on all the nodes.

Action: Ensure that cluster setup is correct and reconfigure Cluster Synchronization Services (CSS) as necessary on the nodes that are supposed to be executing in a clustered environment. See Oracle Cluster Synchronization Services documentation for further information.

PRVF-04042: CSS is probably working with a non-clustered, local-only configuration on nodes:

Cause: Oracle CSS was found to be configured to run in a local-only (non-clustered) environment on the nodes specified.

Action: Ensure that cluster setup is correct and reconfigure CSS as necessary on the nodes that are supposed to be executing in a clustered environment, see documentation regarding usage of the 'localconfig' script.

PRVF-04043: Unable to obtain OCR integrity details from any of the nodes

Cause: OCR was not found to be in a healthy state on any of the nodes.

Action: Verify the state of OCR on each of the nodes using 'ocrcheck'.

PRVF-04044: Unable to obtain OCR integrity details from nodes:

Cause: OCR was not found to be in a healthy state on some of the nodes.

Action: Verify the state of OCR on each of the nodes identified using 'ocrcheck'.

PRVF-04046: OCR ID is inconsistent among the nodes

Cause: Multiple OCR ID's found across the cluster nodes specified.

Action: Verify Oracle Clusterware configuration and setup with 'ocrcheck' on each node specified. See 'ocrcheck' documentation for further information.

PRVF-04048: Version of OCR found "{0}", expected version of OCR for this release is "{1}"

Cause: An incorrect version of OCR was found running on all the nodes.

Action: Verify version of OCR running on all the nodes using 'ocrcheck'.

PRVF-04049: OCR version is inconsistent amongst the nodes

Cause: Found different version of OCR running on the cluster nodes.

Action: Ensure that the correct version of OCR is running on all the nodes using 'ocrcheck'.

PRVF-04052: Total space in OCR device is inconsistent amongst the nodes

Cause: Found possible different devices in use across the nodes.

Action: Verify that the same OCR devices are used across the cluster nodes using 'ocrcheck'.

PRVF-04055: OCR integrity is invalid

Cause: Cluster registry integrity check failed.

Action: Verify state of cluster registry using ocrcheck on the nodes participating in the verification operation.

PRVF-04056: OCR integrity results are inconsistent amongst the nodes

Cause: Cluster registry integrity check failed on some of the nodes.

Action: Verify state of cluster registry using ocrcheck on the nodes participating in the verification operation.

PRVF-04060: Unable to retrieve storage information

Cause: Internal error encountered while trying to retrieve storage information.

Action: If problem persists report issue to Oracle support and provide trace files generated when the cluvfy command is executed. Trace files should be located under <varname>CRSHOME</varname>/cv/log.

PRVF-04079: The number of addresses does not match the number of node

Cause: Cannot determine IP address for every node.

Action: Verify each node in the cluster has a valid IP address.

PRVF-04080: Network interface information cannot be obtained from any of the node

Cause: Could not find any network interface on any node in the cluster.

Action: Verify network interface(s) operational status on the cluster nodes.

PRVF-04083: Node reachability check failed from node "{0}"

Cause: Network link to target node could not be verified using PING.

Action: Verify network link to target node using the PING utility.

PRVF-04084: Make sure IP address "{0}" is up and is a valid IP address on node "{1}"

Cause: The network interface, IP address and subnet identified as "<varname>network interface</varname> : <varname>IP address</varname> [<varname>subnet</varname>]" is not available or is not functioning correctly.

Action: Please verify that the network interface identified is functioning as intended.

PRVF-04087: Node connectivity check failed

Cause: Encountered errors attempting to verify node connectivity using the "OS ping" utility.

Action: Ensure that the IP addresses that failed can be reached using the OS ping utility and resolve any issues found with those IP addresses/interfaces.

PRVF-04090: Node connectivity failed for interface "{0}"

Cause: Unable to verify connectivity to the interface indicated using the "OS ping" utility.

Action: Verify that the interface indicated is available.

PRVF-04095: Unable to reach any of the nodes

Cause: Unable to reach any of the nodes using the OS ping command.

Action: Ensure that the nodes specified are accessible.

PRVF-04097: Node "{0}" is not reachable

Cause: Unable to reach the node specified using the OS ping command.

Action: Ensure that the node specified is accessible.

PRVF-04098: User equivalence not found for node "{0}"

Cause: Cannot access node specified using user equivalence.

Action: Ensure that user equivalence is setup between the local node and the node specified.

PRVF-04101: Could not find a suitable set of interfaces for VIPs

Cause: Could not find a set of network interface adapters suitable for Virtual IP communication in the cluster .

Action: Ensure that the network interface adapters are installed and configured correctly on each node in the cluster and that each interface can communicate with a network gateway.

PRVF-04102: Could not find a suitable set of interfaces for the private interconnect

Cause: Could not find a set of network interface adapters suitable for Private communication in the cluster.

Action: Ensure that the network interface adapters are installed and configured correctly on each node in the cluster according to RFC 1918, or that the interfaces are not accessible from the public network.

PRVF-04107: Source node "{0}" is not reachable from local node

Cause: Unable to reach the source node specified using the OS ping command.

Action: Ensure that the source node specified is accessible.

PRVF-04108: User equivalence not found for source node "{0}"

Cause: Cannot access source node specified using user equivalence.

Action: Ensure that user equivalence is setup between the local node and the source node specified.

PRVF-04112: Cannot identify Oracle Restart installation

Cause: Cannot determine location of Oracle Restart installation.

Action: Ensure that the Oracle Restart environment is setup correctly.

PRVF-04113: Unable to obtain OLR integrity details from the local node

Cause: Could not verify the state of OLR on the local node.

Action: Check the status of OLR on the local node using the command 'ocrcheck -local'.

PRVF-04118: Unable to obtain Oracle Restart integrity details from the local node

Cause: Encountered an error when trying to run 'crsctl check has', or OHASD was found to be offline.

Action: Check the status of Oracle Restart using the 'crsctl check has' command on the local node.

PRVF-04123: Inconsistent user IDs found for user "{0}"

Cause: The user ID for the specified user is not the same across all the nodes.

Action: Make sure that the user has the same user ID across all the nodes.

PRVF-04125: Failed to retrieve storage type for "{0}"

Cause: The storage location specified may be non-existent or invalid or the user running the check may not have permissions to access the specified storage.

Action: Specify a valid existing location, and ensure that the user running the check has valid read permissions to this location.

PRVF-04126: Global failure for all nodes during execution of space check command

Cause: CVU's attempt to execute the space check command on all nodes had a total failure.

Action: Make sure that the location specified is a valid location and available on all nodes.

PRVF-04127: Unable to obtain OLR location

Cause: Could not verify the state of OLR.

Action: Check the status of OLR using the command 'ocrcheck -config -local'.

PRVF-04132: Multiple users "{0}" with UID "{1}" exist on nodes "{2}".

Cause: More than one user was found to have the same user ID as indicated in the error message.

Action: Ensure that the indicated user ID is not shared among two or more users. If Network Information Service (NIS) or Lightweight Directory Access Protocol (LDAP) is used, then ensure that the user ID is not duplicated between users in NIS or LDAP and the local user database.

PRVF-04143: Media Sensing of TCP/IP is enabled on the nodes:

Cause: Media Sensing setting for TCP/IP is enabled.

Action: To disable Media Sensing for TCP/IP, add the REG_DWORD registry entry by name 'DisableDHCPMediaSense' and value 1 to the 'HKEY_LOCAL_MACHINE\System\CurrentControlSet\Services\Tcpip\Parameters' subkey. It is recommended to backup the Windows Registry before proceeding with any changes, Restart your system to make your changes effective after changing the registry.

PRVF-04144: Media Sensing status check for TCP/IP cannot be performed on nodes:

Cause: Media Sensing status could not be determined.

Action: Ensure that the access permissions for the Oracle user allow access to the Windows Registry and Registry has the REG_WORD entry named 'DisableDHCPMediaSense' with value 1 under 'HKEY_LOCAL_MACHINE\System\CurrentControlSet\Services\Tcpip\Parameters' sub key on the node. It is recommended to backup the Windows Registry before proceeding with any changes, Restart your system to make your changes effective after changing the registry.

PRVF-04145: Error reading Registry sub key 'HKEY_LOCAL_MACHINE\System\CurrentControlSet\Services\Tcpip\Parameters' from Windows Registry

Cause: Windows Registry sub key 'HKEY_LOCAL_MACHINE\System\CurrentControlSet\Services\Tcpip\Parameters' could not be read.

Action: Ensure that the access permissions for the Oracle user allow access to the Windows Registry.

PRVF-04146: Error reading Registry sub key 'HKEY_LOCAL_MACHINE\Cluster\Parameters' from Windows Registry

Cause: Windows Registry sub key 'HKEY_LOCAL_MACHINE\Cluster\Parameters' could not be read.

Action: Ensure that the access permissions for the Oracle user allow access to the Windows Registry.

PRVF-04147: Error reading Registry value 'DisableDHCPMediaSense' for Windows Media Sensing

Cause: Could not read Windows Registry value 'DisableDHCPMediaSense' under 'HKEY_LOCAL_MACHINE\System\CurrentControlSet\Services\Tcpip\Parameters' sub key.

Action: Ensure that the access permissions for the Oracle user allow access to the Windows Registry and the Registry value 'DisableDHCPMediaSense' under 'HKEY_LOCAL_MACHINE\System\CurrentControlSet\Services\Tcpip\Parameters' sub key is present on the node.

PRVF-04148: Error reading Registry value 'DisableClusSvcMediaSense' for Windows Media Sensing

Cause: Could not read Windows Registry value 'DisableClusSvcMediaSense' under 'HKEY_LOCAL_MACHINE\Cluster\Parameters' sub key.

Action: Ensure that the access permissions for the Oracle user allow access to the Windows Registry and the Registry value 'DisableClusSvcMediaSense' under 'HKEY_LOCAL_MACHINE\Cluster\Parameters' sub key is present on the node.

PRVF-04151: Found different access permissions for the above storage location across the nodes specified

Cause: The access permissions for the path specified (i.e. read, write, execute) are different, or could not be determined, across the nodes specified.

Action: Ensure that the access permissions allow access for the Oracle user on all the nodes specified.

PRVF-04152: The access permissions for the above storage location do not allow the user access across the nodes specified

Cause: The access permissions for the path specified (i.e. read, write, execute) do not allow the user access.

Action: Ensure that the access permissions allow access for the Oracle user on all the nodes specified.

PRVF-04164: Size of the OCR location "{0}" does not meet the requirement. [Expected="{1}" ; Found="{2}"]

Cause: Size of the ocr device does not meet the requirement

Action: Increase the size of the ocr device

PRVF-04190: Verification of the hosts config file failed

Cause: The '/etc/hosts' file(s) contain incorrect, or incomplete, network host information.

Action: Review the contents of the node's '/etc/hosts' file and ensure that each entry contains a valid IP address and a canonical host name for the specified IP address.

PRVF-04192: Encountered error while trying to check hosts file

Cause: An attempt to verify the contents of the '/etc/hosts' file failed.

Action: Review the node's 'hosts' file and ensure that it exists, has the necessary permissions and each entry contains at least an IP address and a host name for the IP address specified.

PRVF-04211: The specified OCR location "{0}" is not a partition

Cause: The location specified should be a disk partition rather than the disk itself.

Action: Specify a disk partition as the OCR storage.

PRVF-04212: The specified Voting Disk location "{0}" is not a partition

Cause: The location specified should be a disk partition rather than the disk itself.

Action: Specify a disk partition as the Voting Disk storage.

PRVF-04213: Encountered issues with the following OCR Device/Files

Cause: 'ocrcheck' returned failure, or warning, messages with the Device(s)/File(s) listed.

Action: Run 'ocrcheck' and resolve issues reported.

PRVF-04253: CRS integrity check passed, but encountered some warnings

Cause: Some warnings were encountered while verifying CRS integrity.

Action: Review warnings and make modifications as necessary.

PRVF-04309: The effective group id "{0}" differs from the primary group id "{1}" of user "{2}"

Cause: The user is currently logged into a group that is not user's primary group.

Action: Invoke the application after logging in to the primary group (using command 'newgrp <varname>primary group</varname>').

PRVF-04314: There is no primary group on this Operating System

Cause: An attempt was made to check users primary group on an Operating System where there are no primary groups.

Action: This is an internal error; contact Oracle Support.

PRVF-04317: User "{0}" is part of group "{1}". Check failed

Cause: The user who was executing this check was found to be part of root group.

Action: Use the 'id' command to check if the user is part of root group. Remove the user from root group using the 'usermod' command and try again.

PRVF-04318: Checking that user "{0}" is not part of "{1}" group could not be performed on node "{2}"

Cause: A node specific error occurred while checking if user is not part of root group.

Action: Check that the node is accessible and user equivalence exists between the node on which command was executed and the node on which the check failed.

**PRVF-04353: Proper soft limit for resource "{0}" not found on node "{1}"
[Expected = "{2}" ; Found = "{3}"]**

Cause: Soft limit for the resource does not meet the requirement on the specified node.

Action: Modify the resource limits to meet the requirement.

**PRVF-04354: Proper hard limit for resource "{0}" not found on node "{1}"
[Expected = "{2}" ; Found = "{3}"]**

Cause: Hard limit for the resource does not meet the requirement on the specified node.

Action: Modify the resource limits to meet the requirement.

PRVF-04355: Resource soft limit check for "{0}" failed on node "{1}"

Cause: Soft limit of the resource could not be determined.

Action: Ensure that the resource limit configuration is accessible.

PRVF-04356: Resource hard limit check for "{0}" failed on node "{1}"

Cause: Hard limit of the resource could not be determined.

Action: Ensure that the resource limit configuration is accessible.

PRVF-04363: Persistent configuration check for cluster nodes failed

Cause: The nodes IP address configuration was not found to be persistent.

Action: Make the nodes IP address configuration persistent using the 'crsctl pin css' command, see Oracle documentation 'Pinning Cluster Nodes for Oracle Database Release' for further information."

PRVF-04528: Check for existence of config file "{0}" could not be performed on node "{1}"

Cause: Could not verify existence of configuration file specified.

Action: Verify access to node indicated and that the config file exists.

PRVF-04529: Host-guid of node "{0}" is not unique

Cause: The system guid value is not unique across all the cluster nodes.

Action: Ensure that the guid value is unique across all cluster nodes using 'ocrcheck'.

PRVF-04530: OCFS is not configured in runlevel 3,4 and 5 on the node

Cause: Runlevel was not configured with levels 3,4 and 5 all being on.

Action: Check OCFS configuration and ensure the run levels indicated are on.

PRVF-04554: Unable to retrieve {0} resource name from node {1}.

Cause: Could not identify node application resource name specified on the node specified.

Action: Ensure that the node application resource name specified is available for the node specified.

PRVF-04555: Node application "{0}" does not exist on node "{1}"

Cause: Could not identify resource specified on the node specified.

Action: Ensure that the resource specified is available for the node specified.

PRVF-04556: Failed to check existence of node application "{0}" on node "{1}"

Cause: Could not verify existence of the nodeapp identified on the node specified .

Action: Ensure that the resource specified is available on the node specified, see 'srvctl add nodeapps' for further information.

PRVF-04567: Failed to check existence of VIP node application on nodes "{0}"

Cause: An attempt to verify existence of the VIP on the nodes specified failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVF-04570: Failed to check existence of NETWORK node application on nodes "{0}"

Cause: An attempt to verify existence of the NETWORK node application on the nodes specified failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVF-04573: Failed to check existence of GSD node application on nodes "{0}"

Cause: An attempt to verify existence of the GSD node application on the nodes specified failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVF-04576: Failed to check existence of ONS node application on nodes "{0}"

Cause: An attempt to verify existence of the ONS node application on the nodes specified failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVF-04578: Failed to check existence of node applications on nodes "{0}"

Cause: An attempt to verify existence of node applications on the nodes specified failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVF-04579: An error occurred while parsing the output of the command "{0}" for node application resource "{1}". The output is: "{2}"

Cause: An error occurred while parsing output of the command listed for the resource listed.

Action: This is an internal error. Contact Oracle Support Services.

PRVF-04580: Node applications do not exist on any node of the cluster

Cause: Node applications were not configured on the cluster nodes.

Action: Node applications are created when root scripts are run. They can be also be created using the command 'srvctl add nodeapps'.

PRVF-04606: User equivalence not found for reference node "{0}"

Cause: Cannot access reference node using user equivalence.

Action: Ensure that user equivalence is configured between the local node and the node specified. See Enabling SSH User Equivalency on Cluster Member Nodes documentation for further information.

PRVF-04657: Name resolution setup check for "{0}" (IP address: {1}) failed

Cause: Inconsistent IP address definitions found for the SCAN name identified using DNS and configured name resolution mechanism(s).

Action: Look up the SCAN name with nslookup, and make sure the returned IP addresses are consistent with those defined in NIS and /etc/hosts as configured in /etc/nsswitch.conf by reconfiguring the latter. Check the Name Service Cache Daemon (/usr/sbin/nscd) by clearing its cache and restarting it.

PRVF-04661: Found inconsistent 'hosts' entry in /etc/nsswitch.conf on node {0}

Cause: The 'hosts' specifications in the /etc/nsswitch.conf file is different the node specified.

Action: Ensure that the 'hosts' entries define the same lookup order in the /etc/nsswitch.conf file across all cluster nodes.

PRVF-04663: Found configuration issue with the 'hosts' entry in the /etc/nsswitch.conf file

Cause: The 'hosts' specifications in the /etc/nsswitch.conf file should specify 'dns' before 'nis' to ensure proper IP address to name mapping.

Action: Ensure that the 'hosts' entries across the cluster nodes define 'dns' lookup before 'nis' lookup.

PRVF-04664: Found inconsistent name resolution entries for SCAN name "{0}"

Cause: The nslookup utility and the configured name resolution mechanisms, as defined in /etc/nsswitch.conf, returned inconsistent IP address information for the SCAN name identified.

Action: Check the Name Service Cache Daemon (/usr/sbin/nscd), the Domain Name Server (nslookup) and the /etc/hosts file to make sure the IP address for the SCAN names is registered correctly. Clear the stale IP addresses from the name service cache using the command '/usr/sbin/nscd -i hosts'.

PRVF-04758: 'lsnodes' could not be executed on the node

Cause: Error running 'lsnodes'.

Action: Ensure that the executable exists and that it is executable by your OS userid.

PRVF-04759: 'lsnodes' execution failed on the node

Cause: Error running 'lsnodes'.

Action: Ensure that the executable <varname>CRSHOME</varname>/bin/lsnodes exists and that it is executable by your OS userid.

PRVF-04761: Multiple partitions found. Cluster is fragmented.

Cause: An attempt to verify that the list of nodes that constitute the cluster is same on all nodes failed because different lists of cluster nodes were obtained on different nodes.

Action: Make sure that all nodes specified in the command belong to the same cluster. Make sure that all nodes share the same voting disk.

PRVF-04859: Location "{0}" not accessible on node(s) to be added.

Cause: Location does not exist, or cannot be created, on node(s) to be added.

Action: Ensure that the location either exists or can be created on the node(s) to be added.

PRVF-04864: Path "{0}" exists but the current user has no write access on the following nodes: "{1}"

Cause: During write access verification, the path (or its parent) could not be written by the current user.

Action: Verify writeable access, by the current user, to entire path specified on the nodes(s) listed.

PRVF-04866: Device location check failed for: "{0}"

Cause: Cannot verify location specified.

Action: Verify location specified is accessible across cluster node(s).

PRVF-04868: Virtual IP (VIP) "{0}" found for node "{1}"

Cause: The VIP node application identified was found on the node specified.

Action: Removed the specified VIP node application from the node specified.

PRVF-04869: Shared OCR location check failed

Cause: Problem reading inventory file for CRS home location.

Action: Verify inventory file integrity.

PRVF-04950: Error checking Operating System Version compatibility for Universal Storage Manager on node "{0}"

Cause: A remote operation to check Operating System version on the remote node failed.

Action: See the action for the additional error message displayed.

PRVF-04954: Version "{0}" is NOT supported for installing ACFS on node "{1}"

Cause: The version of operating system on the node is not compatible for installing ACFS.

Action: Check documentation for compatible version and install compatible version.

PRVF-05054: Verification of SCAN VIP and listener setup failed

Cause: Could not identify any SCAN, or SCAN listener, resources on the cluster.

Action: Verify SCAN configuration using 'srvctl config scan'.

PRVF-05056: SCAN listener "{0}" not running

Cause: The identified listener was not in the running state.

Action: Start the identified listener using 'srvctl start scan_listener'.

PRVF-05057: SCAN listener port for listener "{0}" does not match other ports

Cause: The port number used for the listener did not match those of all the instances of the listener that were started.

Action: Ensure that all the port numbers for the identified listener match. Check the documentation to get the details about the commands 'srvctl config scan' and 'srvctl modify scan' used for inspecting and modifying details of SCAN resource port numbers.

PRVF-05059: An error was encountered while verifying the SCAN configuration

Cause: An error was encountered while obtaining SCAN information.

Action: Review additional messages displayed for details of the error that was encountered.

PRVF-05060: SCAN listener processing error

Cause: An error was encountered while obtaining SCAN listener information.

Action: Review additional messages displayed for details of the error that was encountered.

PRVF-05061: SCAN VIP "{0}" not running

Cause: The SCAN VIP resources is not in the 'running' state.

Action: Start the SCAN VIP resource using using 'srvctl start scan -i <varname>num</varname>'.

PRVF-05062: SCAN VIP "{0}" and Scan listener "{1}" not running

Cause: The SCAN VIP and SCAN listener resources are not in the 'running' state.

Action: Start the SCAN VIP and SCAN listener resources using 'srvctl'.

PRVF-05064: SCAN and SCAN listener may not function correctly

Cause: Either the SCAN VIP or the SCAN listener was not running, or the port numbers used for the listeners did not match across the nodes.

Action: Either start the SCAN VIP or the SCAN listener, or ensure that the port numbers used for the SCAN listeners match across the nodes in the cluster.

PRVF-05065: Warning: all SCAN VIPs and SCAN listeners are running on node "{0}"

Cause: All the SCAN VIPs and SCAN listeners were found to be running on specified node.

Action: Relocate scan using 'srvctl relocate scan' command to different nodes of the cluster.

PRVF-05067: TCP connectivity check for SCAN listener "{0}" failed on node "{1}"

Cause: An attempt to connect to SCAN listener specified failed from the node specified.

Action: Examine the accompanying TNS error messages and respond accordingly.

PRVF-05109: ASM Running check failed. ASM is not running on all specified nodes

Cause: ASM was not running on all the specified nodes.

Action: Ensure that ASM is running on all the nodes specified, see 'srvctl start asm' for further information.

PRVF-05110: ASM is not running on nodes: "{0}"

Cause: ASM was not running on the cluster nodes specified.

Action: Ensure that ASM is running on all the cluster nodes.

PRVF-05114: Disk Group check failed. No Disk Groups configured

Cause: No ASM disk groups were found configured on the ASM instance.

Action: Ensure that the necessary disk groups are configured in ASM.

PRVF-05137: Failure while checking ASM status on node "{0}"

Cause: Could not verify ASM running on node specified.

Action: Ensure that ASM is running on the node specified.

PRVF-05144: ASM Disk group "{0}" is unavailable on nodes "{1}"

Cause: Could not verify existence of ASM disk group specified on the nodes indicated.

Action: Verify existence of ASM group identified on the specified nodes, see 'asmcmd' for further information.

PRVF-05145: ASM Disk group "{0}" is unavailable on all nodes

Cause: Could not verify existence of ASM disk group specified on all the nodes.

Action: Verify existence of ASM group identified on the cluster nodes.

PRVF-05157: Could not verify ASM group "{0}" for Voting Disk location "{1}"

Cause: The ASM group specified was not found running on the system.

Action: Ensure that the ASM group is configured correctly and running, and ensure that the Voting Disk locations are configured correctly.

PRVF-05174: ACFS Driver version is not compatible with Operating System version on node "{0}"

Cause: The version of ACFS driver is not compatible with the Operating system version on the node.

Action: Check documentation for compatible version and install compatible version.

PRVF-05175: Failed to retrieve ACFS driver version on node "{0}". Driver version compatibility check cannot be performed

Cause: The version of the ACFS driver could not be retrieved from specified nodes.

Action: Make sure that ACFS driver is installed on these nodes.

PRVF-05176: Failed to retrieve Operating System version on the local node. ACFS driver version compatibility check will not be performed

Cause: Operating system version on local node could not be determined.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-05177: Global failure when attempting to query ACFS driver state option "{0}" on all nodes

Cause: ACFS driver state could not be obtained on all the nodes.

Action: Make sure that user executing this check has execute permissions on the `usm_driver_state` command.

PRVF-05184: Check of following Udev attributes of "{0}" failed: {1} \nData used for above verification obtained from file: \n{2}\nRule used from above file: \n{3}

Cause: Found incorrect attributes for the specified device.

Action: Ensure that the device attributes are set correctly. See Configurable Dynamic Device Naming documentation (udev) for further information.

PRVF-05193: No devices found matching discovery string "{0}"

Cause: The specified device may not exist on the node being tested.

Action: Specify a correct discovery string that matches to existing devices on the node being tested.

PRVF-05195: No shared devices found

Cause: No shared storage was found based on the discovery string used in the verification.

Action: A message should have been displayed for each shared storage check failure. For each such message, perform the suggested action for that message.

PRVF-05196: Failed to retrieve OCR locations

Cause: An attempt to retrieve the OCR locations failed, possibly due to incorrect or incomplete Clusterware install, or due to incorrect configuration of the OCR, or due to invalid or incorrect OCR location file `ocr.loc`.

Action: Make sure that the Clusterware installation and Clusterware configuration has been correctly completed, and the `ocr.loc` file is present and accessible.

PRVF-05197: Failed to retrieve voting disk locations

Cause: An attempt to retrieve the voting disk locations failed, possibly due to incorrect or incomplete Clusterware install, or due to incorrect configuration of the Clusterware.

Action: Make sure that the Clusterware installation and Clusterware configuration has been correctly completed.

PRVF-05205: GNS VIP resource configuration check failed.

Cause: An error occurred while trying to obtain GNS VIP resource configuration information.

Action: Look at the accompanying messages for details on the cause of failure.

PRVF-05210: GNS resource is running on multiple nodes "{0}"

Cause: GNS resource should be running on only one node in the cluster at any given time. It was found to be running on multiple nodes at the same time.

Action: Stop the GNS resources running on various nodes using 'srvctl stop gns' command and leave it running on just one node of the cluster.

PRVF-05211: GNS resource is not running on any node of the cluster

Cause: GNS resource should be running on one node of the cluster. GNS resource wasn't running on any node.

Action: GNS can be configured using 'srvctl add gns' command. Use 'srvctl start gns' command to start GNS.

PRVF-05213: GNS resource configuration check failed

Cause: An error occurred while trying to obtain GNS resource configuration information.

Action: Look at the accompanying messages for details on the cause of failure.

PRVF-05216: The following GNS resolved IP addresses for "{0}" are not reachable: "{1}"

Cause: The listed IP addresses for the fully domain qualified name (FDQN) listed in the message and resolved by GNS were not reachable.

Action: Make sure that the configuration of GNS resource is proper using 'srvctl config gns' command. If GNS is configured correctly make sure that the network administrator has provided a set of IP addresses for the subdomain of the cluster and Domain Name Server (DNS) is forwarding requests for these to the GNS.

PRVF-05217: An error occurred while trying to look up IP address for "{0}"

Cause: An error occurred while trying to translate the fully domain qualified name (FDQN), listed in the message, to IP addresses.

Action: These IP address requests should have been forwarded to GNS by the Domain Name Server (DNS). Check the configuration of GNS resource using 'srvctl config gns' command. If GNS is configured correctly make sure that the network administrator has provided a set of IP addresses for the subdomain of the cluster and DNS is forwarding requests for these to the GNS.

PRVF-05218: "{0}" did not resolve into any IP address

Cause: The fully domain qualified name (FDQN) listed in the message did not resolve into any IP address.

Action: Make sure that the configuration of GNS resource is proper using 'srvctl config gns' command. If GNS is configured correctly make sure that the network administrator has provided a set of IP addresses for the subdomain of the cluster and Domain Name Server (DNS) is forwarding requests for these to the GNS.

PRVF-05219: GNS and GNS VIP resources are running on different nodes. GNS is running on nodes "{1}" while GNS VIP is running on "{0}".

Cause: The GNS and GNS VIP resources were running on different nodes.

Action: If GNS should be running on one node of the cluster at any given point of time. Make sure that GNS is not running on multiple nodes of the cluster using 'srvctl config gns' command. If GNS is running on multiple nodes then shut down all but one using 'srvctl stop gns' command.

PRVF-05220: GNS VIP resource was not running on any node of the cluster

Cause: The GNS VIP resource was not running on any nodes of the cluster.

Action: Make sure that the VIP name specified in 'srvctl add gns' command is an unused address belonging to one of the public networks of the cluster nodes.

PRVF-05223: The GNS subdomain name "{0}" is not a valid domain name

Cause: The GNS domain name specified was not a valid domain name.

Action: A valid domain name starts with an alphabet and contain characters [A-Z], [a-z], [0-9], '.', '-'. Refer to RFC-1035 for more information.

PRVF-05227: GNS VIP "{0}" does not resolve to a valid IP address

Cause: The specified GNS VIP does not resolve to an IP address.

Action: Make sure that the VIP name is spelled correctly. Make sure that the VIP name is registered with the DNS. Make sure that there are no firewalls between the cluster and the DNS server.

PRVF-05229: GNS VIP is active before Clusterware installation

Cause: GNS VIP was found to be active on the public network before Clusterware installation.

Action: If you are upgrading an older release of Clusterware this is not an error. In case of new installation GNS VIP will be brought up by GNS resource after Clusterware installation. Make sure that GNS VIP is configured to be an unused IP address.

PRVF-05230: GNS VIP is inactive after Clusterware installation

Cause: GNS VIP was not reachable after Clusterware installation.

Action: Bring the GNS resource online using 'srvctl start gns' command.

PRVF-05232: The GNS subdomain qualified host name "{0}" was resolved into an IP address

Cause: The specified GNS subdomain qualified host name was resolved into an IP address before Clusterware installation.

Action: Ensure that the DNS is configured to forward (rather than resolve) names in the GNS subdomain.

PRVF-05233: There are no public networks that match the GNS VIP "{0}"

Cause: GNS VIP subnet number did not match any of the public networks on the node.

Action: Specify an address that matches the public subnet number for GNS VIP.

PRVF-05253: Command "{0}" executed to retrieve GPNP resource status failed on all of the nodes

Cause: An attempt to execute the displayed command failed on all of the nodes.

Action: Make sure that the nodes of the cluster are accessible from the current node. Make sure that the user executing the check has permission to execute commands on nodes using 'ssh'.

PRVF-05254: Command "{0}" executed on node "{1}" produced no output

Cause: An attempt to run the command listed on the node listed produced no output.

Action: This is an internal error. Contact Oracle support services.

PRVF-05255: The GPNP resource is not in ONLINE status on the following node(s): {0}

Cause: The GPNP resource was found to be in OFFLINE or UNKNOWN state on the nodes listed.

Action: This is not an error if the GPNP resource was shutdown. If it is not the expected state then use the command 'crsctl start res ora.gnpnd -init' to start the GPNP resource.

PRVF-05256: Command "{0}" executed to retrieve the GPNP resource status failed on node(s): {1}

Cause: An attempt to run the command listed failed on the node listed.

Action: Make sure that the nodes listed are accessible from the current node. Make sure that the user executing the check has permission to execute commands on the node(s) listed using 'ssh'.

PRVF-05300: Failed to retrieve active version for CRS on this node

Cause: Could not identify location of CRS home.

Action: Ensure that correct installation of CRS exists.

PRVF-05301: Failed to locate CRS home

Cause: Could not locate the CRS home.

Action: Ensure that the install of CRS has completed successfully and the CRS home is setup correctly.

PRVF-05302: Failed to execute the exectask command on node "{0}"

Cause: Could not execute command specified on node listed.

Action: Verify command specified can be executed on node listed.

PRVF-05305: The Oracle Clusterware is not healthy on node "{0}"

Cause: An error was found with the Oracle Clusterware on the node specified.

Action: Review the error reported and resolve the issue specified.

PRVF-05307: Failed to retrieve Oracle Restart home

Cause: Could not identify location of Oracle Restart home.

Action: Ensure that Oracle Local Repository (OLR) was created correctly. See Oracle Local Repository documentation for further information.

PRVF-05308: ohasd is either not running or could not be contacted on node "{0}"

Cause: CRSCTL did not report that OHAS was online.

Action: Review the error information displayed and verify the state of OHAS on the node identified.

PRVF-05310: Check for existence of file "{0}" could not be performed on node "{1}".

Cause: An attempt to verify the existence of the indicated file failed on the indicated node.

Action: Examine the accompanying error messages for details.

PRVF-05311: File "{0}" either does not exist or is not accessible on node "{1}".

Cause: Cannot access the file specified.

Action: Verify that the specified file exists and can be access on the node identified.

PRVF-05312: No ohasd entry was found in /etc/inittab file

Cause: Did not find 'respawn:/etc/init.d/init.ohasd' line in '/etc/inittab' file.

Action: Ensure that the OHASD environment has been setup correctly.

PRVF-05313: Failed to search for ohasd entry in /etc/inittab file on node "{0}"

Cause: An error was encountered trying to search for OHASD information in /etc/inittab.

Action: Ensure that the OHASD environment has been setup correctly and that /etc/inittab is accessible on the specified node.

PRVF-05314: Could not find CRS, or Oracle Restart, installed on the local node

Cause: Could not locate the CRS, or Oracle Restart, installation from the local node.

Action: Ensure that the install of CRS, or Oracle Restart, has completed successfully and the CRS, or Oracle Restart, home is setup correctly.

PRVF-05316: Failed to retrieve version of CRS installed on node "{0}"

Cause: Could not identify location of CRS home.

Action: Verify installation of CRS on the identified node.

PRVF-05317: The Clusterware is currently being upgraded to version: "{0}".\n The following nodes have not been upgraded and are\n running Clusterware version: "{1}".\n "{2}"

Cause: The CRS integrity may have discovered that your Oracle Clusterware stack is partially upgraded.

Action: Review warnings and make modifications as necessary. If the warning is due to partial upgrade of Oracle Clusterware stack then continue with upgrade and finish it.

PRVF-05318: No Oracle Restart is found configured on the local node

Cause: Could not locate the Oracle Restart configuration on the specified node.

Action: Ensure that the install of Oracle Restart has completed successfully and the Oracle Restart home is set up correctly.

PRVF-05319: Oracle Cluster Synchronization Services do not appear to be online.

Cause: An error was encountered when trying to verify the status of Oracle Cluster Synchronization Services.

Action: Verify the state of the Oracle Cluster Synchronization Services using 'crsctl check cluster'.

PRVF-05321: Failed to get the CRS or Oracle Restart home

Cause: Could not locate the CRS, or Oracle Restart, home.

Action: Ensure that the install of CRS, or Oracle Restart, has completed successfully and the CRS, or Oracle Restart, home is setup correctly.

PRVF-05322: Failed to get the CRS user name for CRS home "{0}"

Cause: An attempt to obtain the Clusterware owner information from CRS home failed.

Action: Ensure that the user executing the CVU check has read permission for CRS or Oracle Restart home.

PRVF-05323: Failed to get information for file "{0}"

Cause: An attempt to read information for a file failed.

Action: Make sure that the user executing the CVU check has read permission for the file and the file exists in the specified path.

PRVF-05324: Could not find CRS installed on the node "{0}"

Cause: Could not locate the CRS installation on the specified node.

Action: Ensure that the install of CRS has completed successfully and the CRS home is setup correctly.

PRVF-05325: Failed to retrieve release version for Oracle Restart

Cause: Could not get release version for Oracle Restart.

Action: Ensure that the install of Oracle Restart has completed successfully.

PRVF-05401: Clock synchronization check using Network Time Protocol(NTP) failed

Cause: One or more of the Clock Synchronization checks failed.

Action: Correlate with the other failure messages displayed and fix those failures.

PRVF-05402: Warning: Could not find NTP configuration file "{0}" on node "{1}"

Cause: NTP might not have been configured on the node, or NTP might have been configured with a configuration file different from the one indicated.

Action: Configure NTP on the node if not done so yet. Refer to your NTP vendor documentation for details.

PRVF-05403: Operation to check presence of NTP configuration file "{0}" failed on node "{1}"

Cause: The operation to check NTP configuration file failed on node indicated. The failure is due to a reason like incorrect permissions on the configuration file, communications error with the node, missing or inaccessible remote execution binary on the node, etc.

Action: Review the error messages that follow this message and fix the problem(s) indicated.

PRVF-05405: The NTP configuration file "{0}" does not exist on all nodes

Cause: The configuration file specified was not available or was inaccessible on the given nodes.

Action: If you want to use NTP for time synchronization, create this file and setup its configuration as described in your vendor's NTP document. If you plan to use CTSS for time synchronization then NTP configuration should be uninstalled on all nodes of the cluster. Refer to "Preparing Your Cluster" of "Oracle Database 2 Day + Real Application Clusters Guide".

PRVF-05406: NTP Configuration file Check failed

Cause: Attempt to check presence of configuration file failed on one or more nodes.

Action: Look at the related error messages and fix them.

PRVF-05408: NTP Time Server "{0}" is common only to the following nodes "{1}"

Cause: One or more nodes in the cluster do not synchronize with the NTP Time Server indicated.

Action: At least one common NTP Time Server is required for a successful Clock Synchronization check. If there are none, reconfigure all of the nodes in the cluster to synchronize with at least one common NTP Time Server.

PRVF-05410: Check of common NTP Time Server failed

Cause: The NTP query command showed there is no common time server among all of the nodes in the cluster.

Action: At least one common NTP Time Server is required for a successful Clock Synchronization check. Reconfigure all of the nodes in the cluster to synchronize with at least one common NTP Time Server. If you plan to use CTSS for time synchronization then NTP configuration should be uninstalled on all nodes of the cluster. Refer to "Preparing Your Cluster" of "Oracle Database 2 Day+ Real Application Clusters Guide".

PRVF-05411: Query of NTP daemon failed on all nodes on which NTP daemon is running

Cause: Attempt to query the NTP daemon failed on all of the nodes of the cluster because the 'ntpq' command could not be found.

Action: Make sure that the NTP query command 'ntpq' is available on all nodes and the user running the CVU check has execute privilege for it.

PRVF-05413: Node "{0}" has a time offset of {1} that is beyond permissible limit of {2} from NTP Time Server "{3}"

Cause: The time offset for the given node clock with the specified NTP Time Server is beyond permissible limits, possibly due to a clock drift, or due to an incorrectly functioning time server.

Action: Make sure that the Time Server is functioning properly, and if yes, adjust the system clock so that the offset is within limits.

PRVF-05414: Check of NTP Config file failed on all nodes. Cannot proceed further for the NTP tests

Cause: Attempt to check existence of config file failed on all nodes.

Action: Look at the individual error messages displayed for the respective nodes and the overall result message and take appropriate action.

PRVF-05415: Check to see if NTP daemon or service is running failed

Cause: Attempt to check if the NTP daemon was running failed on nodes of the cluster.

Action: Look at the accompanying error messages for the nodes on which the check failed and fix the problem. If you plan to use CTSS for time synchronization then NTP configuration should be uninstalled on all nodes of the cluster. Refer to "Preparing Your Cluster" of "Oracle Database 2 Day+ Real Application Clusters Guide".

PRVF-05416: Query of NTP daemon failed on all nodes

Cause: An attempt to query the NTP daemon using the 'ntpq' command failed on all nodes.

Action: Make sure that the NTP query command 'ntpq' is available on all nodes and make sure that user running the CVU check has permissions to execute it.

PRVF-05421: NTP configuration file check failed on the following nodes:

Cause: Check of existence of NTP configuration file failed on nodes listed because NTP was not configured on those nodes.

Action: If you plan to use NTP for time synchronization across nodes of the cluster then configure NTP on all of the nodes. If you plan to use CTSS for time synchronization then NTP configuration should be uninstalled on all nodes of the cluster. Refer to "Preparing Your Cluster" of "Oracle Database 2 Day+ Real Application Clusters Guide".

PRVF-05424: Clock time offset check failed

Cause: Offsets on all of the nodes in the cluster were not within limits for any Time Server.

Action: Look at the individual messages displayed and fix the problems indicated.

PRVF-05428: Network Time Protocol(NTP) configuration file not found on any of the nodes. Oracle Cluster Time Synchronization Service(CTSS) can be used instead of NTP for time synchronization on the cluster nodes

Cause: NTP is not configured on the cluster nodes.

Action: This is not an error if the system administrator intended to use Oracle Cluster Time Synchronization Service (CTSS) for clock synchronization on the cluster. If not

then install NTP on all nodes of the cluster according to your NTP vendor documentation.

PRVF-05430: Voting disk configuration does not meet Oracle's recommendation of three voting disk locations

Cause: For high availability, Oracle recommends that you have a minimum of three voting disk locations.

Action: Add additional voting disk locations to meet the Oracle recommended amount of three voting disks.

PRVF-05431: Oracle Cluster Voting Disk configuration check failed

Cause: The Voting Disk configuration does not meet Oracle's recommendations.

Action: Review Clusterware and Voting Disk configuration.

PRVF-05433: The current voting disk state is at high risk

Cause: The current state of the voting disk locations is susceptible to the loss of one voting disk location resulting in failure of the cluster.

Action: Add additional voting disk locations, or bring existing locations online, to reduce the risk of losing one voting disk location.

PRVF-05434: Cannot identify the current CRS software version

Cause: Unable to obtain CRS version from CRSCTL.

Action: Ensure that CRSCTL is accessible on the nodes being verified.

PRVF-05435: Voting disk configuration does not meet Oracle's recommendation

Cause: For high availability, Oracle recommends that you have more than two voting disk locations.

Action: Add additional voting disk locations.

PRVF-05436: The NTP daemon running on one or more nodes lacks the slewing option "{0}"

Cause: NTP daemon on one or more nodes lacked slewing option.

Action: Shut down and restart the NTP daemon after setting the slewing option as follows: For Linux, edit /etc/sysconfig/ntpd and add -x to the command line option. For SUSE Linux, edit /etc/sysconfig/ntp and add -x to the OPTIONS variable. For AIX, edit /etc/rc.tcpip and add -x to the command line option. For HP-UX, edit /etc/rc.config.d/netdaemons and add -x to the command line option. For Solaris release 10 or earlier, edit /etc/inet/ntp.conf and add 'slewalways yes' and 'disable pll' to the file. For Solaris release 11 and higher, logon as root user and issue command: /usr/sbin/svccfg -s svc:/network/ntp:default setprop config/slew_always = true to change the setting, then refresh the service by issuing: svcadm refresh svc:/network/ntp:default

PRVF-05442: Could not obtain NTP daemon's command line on any node

Cause: An attempt to obtain the command line options for the NTP daemon's failed on all nodes.

Action: Make sure that the NTP daemon is running on all the nodes. Make sure that slewing option is set on all the nodes of the cluster.

PRVF-05447: Could not verify sharedness of Oracle Cluster Voting Disk configuration

Cause: Unable to obtain list of nodes with CRS installed.

Action: Ensure that Clusterware is up and running and verify Voting Disk configuration.

PRVF-05448: Voting Disk location "{0}" is not shared across cluster nodes

Cause: Voting Disk location specified is not shared across all cluster nodes.

Action: Verify Voting Disk configuration and ensure all Voting Disk locations are shared across all cluster nodes and are of the same storage type.

PRVF-05449: Check of Voting Disk location "{0}" failed on the following nodes:

Cause: Voting Disk location specified did not have owner, group or permissions set correctly on the nodes identified.

Action: Correct the owner, group or permissions settings on the location indicated as mentioned in one of the accompanying message.

PRVF-05450: Constraint type does not match

Cause: The specified constraint does not relate to space checks.

Action: Make sure that the space constraint data is well formed and consistent in the constraint xml.

PRVF-05451: Missing key data "{0}"

Cause: The data required for constraint check is missing.

Action: Verify that the space constraint data is correctly specified in the constraint xml.

PRVF-05452: Missing key reference data "{0}"

Cause: The reference data required for constraint check is missing.

Action: For a greater than/equal comparison, reference data is required. Verify that the space constraint check reference data is correctly specified in the constraint xml.

PRVF-05453: Invalid data set for "{0}", EXPECTED:"{1}", FOUND: "{2}"

Cause: The specified data is invalid for the space constraint check being performed.

Action: Make sure that correct data is specified, using the values indicated in the message.

PRVF-05454: Qualifier "{0}" is not supported for "{1}"

Cause: The indicated qualifier is not supported for the class indicated in the message.

Action: Make sure that the correct qualifier is specified.

PRVF-05455: Cannot apply invalid constraint

Cause: The specified constraint is invalid.

Action: Specify the correct constraint.

PRVF-05456: Invalid constraint. Compatibility check cannot proceed

Cause: The specified constraint is invalid.

Action: Specify the correct constraint for the compatibility check.

PRVF-05461: Encountered an invalid setting for internal variable "{0}"

Cause: This is an internal error.

Action: Please contact Oracle Support.

PRVF-05470: The NTP daemon's boot time configuration, in file "{0}", on one or more nodes lacks the slewing option "{1}"

Cause: NTP daemon boot time configuration on one or more nodes lacked slewing option.

Action: Make sure that the slewing option is specified in the file listed. For a list of nodes on which this check failed look at the accompanying error messages.

PRVF-05473: NTP daemon's boot time configuration check could not be performed on node "{0}"

Cause: An attempt to obtain the NTP daemon's boot time configuration file failed on the node specified.

Action: Make sure that the NTP daemon is configured on the node and will be started when the node boots up. Make sure that the user running this check has access to the configuration file specified. Also look at other messages accompanying this message.

PRVF-05475: Could not obtain NTP daemon's boot time configuration on any node

Cause: An attempt to obtain the command line options for the NTP daemon's failed on all nodes.

Action: Make sure that the NTP daemon is running on all the nodes. Make sure that slewing option is set on all the nodes of the cluster.

PRVF-05478: TZ value missing in configuration file "{0}" on node "{1}".

Cause: Time Zone value is missing in specified configuration file.

Action: Enter appropriate Time Zone value in the specified configuration file on the indicated node.

PRVF-05479: Time zone is not the same on all cluster nodes.

Cause: Nodes have different time zone settings.

Action: Ensure that time zone is same on all nodes.

PRVF-05486: The NTP daemon on the indicated nodes is not using UDP port 123

Cause: The port 123 for udp is not opened for the NTP daemon or service.

Action: For Unix, edit the /etc/services file appropriately.

PRVF-05492: Warning: Could not find NTP Daemon or Service running on node "{0}".

Cause: NTP Daemon may have aborted , shut down or may not have been installed.

Action: Restart NTP Daemon on the indicated node or install if necessary.

PRVF-05493: Operation to check presence of NTP Daemon or Service failed on node "{0}".

Cause: The operation to check NTP Daemon or service failed on node indicated. The failure is due to a reason like incorrect setup, communications error with the node, missing or inaccessible remote execution binary on the node, etc.

Action: Review the error messages that follow this message and fix the problem(s) indicated.

PRVF-05494: The NTP Daemon or Service was not alive on all nodes

Cause: The NTP Daemon was not alive on all the nodes.

Action: Examine the status of ntp on each of the nodes indicated after this message and restart the daemon or install the NTP software if necessary.

PRVF-05495: The Check for NTP Daemon or Service status failed on some nodes

Cause: The NTP Daemon was not accessible or there was some unknown failure in the check. The failure is due to a reason like incorrect setup, communications error with the node, missing or inaccessible remote execution binary on the node, etc.

Action: Review the error that follow this message and fix the problem(s) in the indicated nodes.

PRVF-05498: Timezone file "{0}" missing on node "{1}".

Cause: A check for the indicated timezone file did not find it on the node shown.

Action: Restore the file on the indicated node by reinstalling timezone patches for your operating system.

PRVF-05499: There are more than one NTP daemons or Services running on various nodes of the cluster

Cause: An attempt to check if NTP daemons or Service were running on nodes of the cluster found that more than one NTP daemons or Services were active.

Action: The accompanying messages will list the NTP daemon or service names along with the nodes on which they are running. Make sure that only one time synchronization service is active on all nodes of the cluster at any given time by shutting down others.

PRVF-05501: The user "{0}" is currently logged in to the group "{1}" which is not the primary group for the user

Cause: The user is currently logged into a group that is not user's primary group.

Action: Invoke the application after logging in to the primary group (using command `newgrp <varname>primary group</varname>`).

PRVF-05502: Current group ID check cannot be performed

Cause: Attempt to check if the current group ID matches with primary group ID failed.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-05505: The NTP daemon on node "{0}" is not using UDP port 123

Cause: The port 123 for UDP was not being used by the NTP daemon or service.

Action: For Unix, edit the /etc/services file appropriately.

PRVF-05506: Check for UDP port 123 being used by NTP daemon or service could not be performed on node "{0}"

Cause: Attempt to check for UDP port 123 being used by NTP daemon or service failed.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-05507: NTP daemon or service is not running on any node but NTP configuration file exists on the following node(s):

Cause: The configuration file was found on at least one node though no NTP daemon or service was running.

Action: If you plan to use CTSS for time synchronization then NTP configuration must be uninstalled on all nodes of the cluster.

PRVF-05508: NTP configuration file is present on at least one node on which NTP daemon or service is not running.

Cause: An NTP configuration file was found on at least one node where the NTP daemon or service was not running.

Action: NTP configuration must be uninstalled on all nodes of the cluster.

PRVF-05555: Automount feature is disabled on nodes:

Cause: Automount feature for new volumes was found disabled.

Action: To enable Automount feature for new volumes, use 'mountvol /e' or use the 'diskpart' utility's 'automount enable' command. Restart your system to make your changes effective after enabling the Automount feature.

PRVF-05556: Automount feature is disabled on the node "{0}"

Cause: Automount feature for new volumes was found disabled on specified node.

Action: To enable Automount feature for new volumes, use 'mountvol /e' or use the 'diskpart' utility's 'automount enable' command. Restart your system to make your changes effective after enabling the Automount feature.

PRVF-05557: Error reading Registry subkey "{0}" from Windows Registry on node "{1}"

Cause: Windows Registry subkey 'HKEY_LOCAL_MACHINE\System\CurrentControlSet\Services\MountMgr' could not be read on specified node.

Action: Ensure that the specified subkey exists in registry and access permissions for the Oracle user allow access to the Windows Registry. Restart your system to make your changes effective after changing the registry.

PRVF-05558: Check for status of Automount feature cannot be performed on nodes:

Cause: Windows Registry subkey 'HKEY_LOCAL_MACHINE\System\CurrentControlSet\Services\MountMgr' could not be read.

Action: Ensure that the specified subkey exists in registry and the access permissions for the Oracle user allow access to the Windows Registry. Restart your system to make your changes effective after changing the registry.

PRVF-05559: Failed to perform the Automount status verification.

Cause: An error occurred while attempting to retrieve the information about Automount feature.

Action: Look at the accompanying messages and respond accordingly.

PRVF-05600: On node "{0}" The following lines in file "{1}" could not be parsed as they are not in proper format: {2}

Cause: Invalid lines were found in the file resolv.conf at the location and on the node indicated.

Action: Correct the errors indicated. On UNIX the general format of file resolv.conf is "<varname>keyword</varname> <value(s)>". For more details refer to resolv.conf man page.

PRVF-05603: 'domain' entry does not exist in file "{0}" on nodes: "{1}"

Cause: The 'domain' was not found in the resolv.conf file on nodes indicated while it was present in others.

Action: Look at the file specified on all nodes. Make sure that either 'domain' entry is defined on all nodes or is not defined on any nodes.

PRVF-05604: 'domain' entry in file "{0}" on node "{1}" is "{2}" which differs from reference node

Cause: The 'domain' entry on the node specified was not the same as the reference node 'domain' option specified above.

Action: Make sure that all nodes of the cluster have same 'domain' entry in the file specified.

PRVF-05605: File "{0}" does not exist on following nodes: {1}

Cause: File specified did not exist on the nodes listed, but exists on other nodes.

Action: Make sure that the file is either present on all nodes or is not present on any node.

PRVF-05607: The file "{0}" on following nodes have more than "{1}" 'nameserver' entries: {2}

Cause: The file specified had more than allowed number of 'nameserver' entries.

Action: Reduce the number of 'nameserver' entries on the nodes specified to the allowed number.

PRVF-05608: The file "{0}" on the following nodes have more than one 'attempts' entry: {1}

Cause: More than one 'option attempts:' entry was found on nodes specified.

Action: Make sure that there is only one 'option attempts:' entry in the file specified.

PRVF-05609: The following nodes have multiple 'domain' entries defined in file "{0}": {1}

Cause: The nodes specified had multiple 'domain' entry defined in the file specified.

Action: Make sure that the file specified has only one 'domain' entry.

PRVF-05610: The file "{0}" on the following nodes have more than one 'search' entry: {1}

Cause: More than one 'search' entry was found on nodes specified, in the file specified.

Action: Make sure that there is only one 'search' entry in the file specified. Multiple domains can be listed in the same search entry.

PRVF-05613: 'nameserver' entry does not exist in file "{0}" on nodes: "{1}"

Cause: The 'nameserver' entry was not found on nodes indicated while it was present in others.

Action: Look at the file specified on all nodes. Make sure that either 'nameserver' entry is defined on all nodes or is not defined any nodes.

PRVF-05614: 'nameserver' entry in file "{0}" on node "{1}" is "{2}" which differs from reference node

Cause: The 'nameserver' entry on the node specified was not the same as the reference node 'nameserver' option specified above.

Action: Make sure that all nodes of the cluster have same 'nameserver' entry in the file specified.

PRVF-05622: 'search' entry does not exist in file "{0}" on nodes: "{1}"

Cause: The 'search' entry was not found on nodes indicated while it was present in others.

Action: Look at the file specified on all nodes. Make sure that either 'search' entry is defined on all nodes or is not defined any nodes.

PRVF-05623: 'search' entry in file "{0}" on node "{1}" is "{2}" which differs from reference node

Cause: The 'search' entry on the node specified was not the same as the reference node 'search' option specified above.

Action: Make sure that all nodes of the cluster have same 'search' entry in the file specified.

PRVF-05629: Unable to read file "{0}" copied to local scratch area from node {1}

Cause: An error occurred while trying to read file specified.

Action: Make sure that the CV_DESTLOC area was not being used by another process. Make sure that CV_DESTLOC has sufficient permissions. Also look for messages accompanying this message for details.

PRVF-05636: The DNS response time for an unreachable node exceeded "{0}" ms on following nodes: {1}

Cause: The DNS response time for an unreachable node exceeded the value specified on nodes specified.

Action: Make sure that 'options timeout', 'options attempts' and 'nameserver' entries in file resolv.conf are proper. On HPUX these entries will be 'retrans', 'retry' and 'nameserver'. On Solaris these will be 'options retrans', 'options retry' and 'nameserver'. Make sure that the DNS server responds back to name lookup request within the specified time when looking up an unknown host name.

PRVF-05637: DNS response time could not be checked on following nodes: {0}

Cause: An attempt to check DNS response time for unreachable node failed on nodes specified.

Action: Make sure that 'nslookup' command exists on the nodes listed and the user executing the CVU check has execute privileges for it.

PRVF-05640: Both 'search' and 'domain' entries are present in file "{0}" on the following nodes: {1}

Cause: Both 'search' and 'domain' entries were found in resolv.conf file on the nodes specified.

Action: Make sure that only one of these entries exist in file resolv.conf. It is preferable to use entry 'search' in resolv.conf.

PRVF-05642: Unable to create the directory "{0}"

Cause: An attempt to create the directory specified failed on local node.

Action: Make sure that the user running CVU has read and write permissions on directory specified or specify a different work area using CV_DESTLOC environment variable where user has write permission.

PRVF-05643: Unable to delete files from directory "{0}"

Cause: An attempt to remove files from the directory specified failed.

Action: Make sure that the user running CVU has read and write permissions on directory specified or specify a different work area using CV_DESTLOC environment variable where user executing this check has write permission.

PRVF-05704: No DHCP server were discovered on the public network listening on port {0}

Cause: No reply was received for the DHCP discover packets sent on the specified port.

Action: Contact the network administrator to make sure that DHCP servers exist on the network. If the DHCP servers are listening to a different port then specify it by using -port option.

PRVF-05707: DHCP server was not able to provide sufficient IP addresses (required "{1}" , provided "{0}")

Cause: DHCP server was unable to provide sufficient number of IP address.

Action: An IP is required for each node VIP. Three IP addresses are needed for SCAN VIP. One IP address is required for each application VIP specified. Make sure that the DHCP server listening on port specified in above messages has sufficient number of IP addresses to give out.

PRVF-05711: DHCP server response time could not be measured

Cause: An attempt to measure DHCP server response time using 'crsctl discover' command failed.

Action: Look at messages accompanying this message for more information.

PRVF-05712: Warning: The DHCP server response time of {0} seconds is greater than VIP resource's SCRIPT_TIMEOUT attribute of {1} seconds

Cause: An attempt to obtain a DHCP lease took more time than VIP resource's SCRIPT_TIMEOUT attribute.

Action: This check is network load sensitive and can yield different result at different times. Make sure that the DHCP server and the network is not overloaded. Also consider a higher SCRIPT_TIMEOUT value.

PRVF-05713: Command "{0}" executed on node "{1}" produced no output

Cause: An attempt to run the command listed on the node listed produced no output.

Action: This is an internal error. Contact Oracle Support Services.

PRVF-05714: An error occurred while parsing the output of the command "{0}". The output is: "{1}"

Cause: An attempt to parse output of the command listed failed.

Action: This is an internal error. Contact Oracle Support Services.

PRVF-05715: The number of IP addresses assigned to the network interface "{0}" exceeds recommended value (recommended {1}, actual {2})

Cause: Too many IP addresses were assigned to the specified interface.

Action: If there are IP addresses that are not needed stop them in the operating system specific way. If too many resources are running on this node then relocate them to other nodes of the cluster relocate using 'srvctl relocate' command.

PRVF-05716: Unable to obtain network interface details on local node

Cause: An attempt to obtain network interface details on local node failed.

Action: Make sure that the user executing CVU has sufficient permissions to query network interfaces on the node. Also look at accompanying messages and take action as per those messages.

PRVF-05718: Command "{0}" failed to execute on node "{1}". The output produced by the command is: "{2}"

Cause: An attempt to execute specified command on the node specified failed.

Action: Refer to the specified output and fix the error.

PRVF-05801: Failed to execute command "{0}" on all nodes

Cause: CVU's attempt to execute the specified command failed on all of the nodes.

Action: Examine the messages displayed for each node and take action as per those messages.

PRVF-05803: An error occurred while starting the IP address "{0}" on node "{1}"

Cause: An attempt to start the specified IP address on the node specified failed.

Action: Look at messages accompanying this message for more information.

PRVF-05805: Unable to start the test DNS server

Cause: An attempt to start the test DNS server failed with errors.

Action: Look at messages accompanying this message for more information.

PRVF-05809: Unable to start the test DNS server on address: "{0}", listening on port: {1}

Cause: An attempt to start the test DNS server failed with errors.

Action: Look at messages accompanying this message for more information.

PRVF-05810: Unable to stop the test DNS server on address: "{0}", listening on port: {1}

Cause: An attempt to stop the test DNS server failed with errors.

Action: Look at messages accompanying this message for more information.

PRVF-05811: Unable to stop the IP address "{0}" on node "{1}"

Cause: An attempt to stop the IP address specified on the node specified failed.

Action: Look at messages accompanying this message for more information.

PRVF-05813: Unable to reach the IP address "{0}" from local node

Cause: An attempt to reach the specified IP address from current node failed.

Action: Make sure that the specified IP address is a valid IP address. Check messages of the 'cluvfy comp dns -server' instance to make sure that there are no errors. If the address has been started then make sure that there are no firewalls between the local node and node on which this IP address has been started.

PRVF-05816: Unable to query the test DNS server started on address "{0}", listening on port {1}

Cause: An attempt to query the test DNS server, started on specified address and port, failed.

Action: Look at messages on the 'cluvfy comp dns -server' instance to make sure that the test DNS server was started. Also look at any messages accompanying this message.

PRVF-05819: Failed to verify DNS delegation of the GNS subdomain "{0}"

Cause: An attempt to perform name resolution for nodename.<gns_subdomain> failed as DNS did not forward requests to the test DNS server.

Action: Look at messages accompanying this message for more information. Also look at any messages from 'cluvfy comp dns -server' invocation for CVU.

PRVF-05821: Unable to reach the IP address "{0}" from local node

Cause: An attempt to reach the specified IP address failed.

Action: Make sure that the specified IP address is a valid IP address and is assigned to an interface on the node on which 'cluvfy comp dns -server' was run. Make sure that there are no firewalls between local node and node on which specified IP address is assigned.

PRVF-05822: Name lookup for FDQN "{0}" failed with test DNS server running on address "{1}", listening on port {2}

Cause: An attempt to query specified FDQN on the test DNS server running on specified address and port failed.

Action: Make sure that the specified address and port is correct. Make sure that there are no firewalls between the node on which 'cluvfy comp dns -server' was run and the node on which this command was run. Also look at any error messages on the node on which 'cluvfy comp dns -server' was run.

PRVF-05823: Name lookup for FDQN "{0}" failed

Cause: An attempt to query DNS servers for FDQN specified failed.

Action: Make sure that there are no firewalls between the local node and the DNS. Make sure that there are no firewalls between DNS and the node on which 'cluvfy comp dns -server' was run. Make sure that GNS subdomain delegation was setup correctly in the DNS. Also look at any error messages on the node on which 'cluvfy comp dns -server' was run.

PRVF-05826: The domain name "{0}" is not valid

Cause: The GNS domain name specified did not conform to the industry standard.

Action: A valid domain name starts with an alphabetic character and consists only of characters [A-Z], [a-z], [0-9], '.', '-'. Refer to the RFC-1035 standard for more information.

PRVF-05827: The response time for name lookup for name "{1}" exceeded {0} seconds

Cause: The DNS response time for the name specified exceeded the value specified.

Action: On Linux and AIX make sure that 'options timeout', 'options attempts' and 'nameserver' entries in file resolv.conf are proper. On HPUX these entries will be 'retrans', 'retry' and 'nameserver'. On Solaris these will be 'options retrans', 'options retry' and 'nameserver'. On windows look at registry key 'HKEY_LOCAL_MACHINE\System\CurrentControlSet\Services\VxD\MSTCP' for values 'BcastQueryTimeout' and 'MaxConnectRetries'.

PRVF-06001: Could not get required information about the interface "{0}"

Cause: Could not get interface information for the interface specified.

Action: Ensure that the interface is installed and online on the nodes in the cluster.

PRVF-06002: Unable to get information about interface "{0}" on the following nodes:

Cause: Could not get interface information for the interface specified on the nodes listed.

Action: Ensure that the interface is installed and online on the nodes specified.

PRVF-06003: Unable to get network information from node: {0}

Cause: Could not obtain any network interface information from the node specified.

Action: Verify state of network interface adapters on the specified node.

PRVF-06005: Could not find a fully connected subnet that covers all the nodes

Cause: Could not find a network interface adapter that exists in the same subnet on every node in the cluster .

Action: Ensure that the network interface adapters are installed and configured correctly on each node in the cluster.

PRVF-06006: unable to reach the IP addresses "{0}" from the local node

Cause: During a verification operation to check that the specified IP addresses are reachable from the local node using the 'ping' command, the verification failed to reach any of the addresses specified. Either the addresses did not resolve correctly or the nodes were unreachable.

Action: Ensure that the specified IP addresses are accessible with the 'ping' command. If the host names do not resolve correctly, ensure that the domain naming

services cache has been purged using the command 'etc/rc.d/init.d/nscd restart' on Linux and UNIX machines and the command 'ipconfig /flushdns' on Windows operating system machines.

PRVF-06011: Network interface unavailable on node "{0}"

Cause: Could not find any network interface on the node.

Action: Verify network interface(s) operational status on the node identified.

PRVF-06019: Interface subnet "{0}" does not have a gateway defined

Cause: Could not identify the gateway for the subnet identified.

Action: Define a gateway for the specified subnet.

PRVF-06020: Different MTU values used across network interfaces in subnet "{0}"

Cause: Different MTU values found for the network adapter used between cluster nodes across the specified subnet.

Action: Set the MTU value for that network adapter/subnet to be the same on each node in the cluster.

PRVF-06402: Core file name pattern is not same on all the nodes.

Cause: The core file name pattern is not same on all the nodes.

Action: Ensure that the mechanism for core file naming works consistently on all the nodes. Typically for Linux, the elements to look into are the contents of two files /proc/sys/kernel/core_pattern or /proc/sys/kernel/core_uses_pid. Refer OS vendor documentation for platforms AIX, HP-UX, and Solaris.

PRVF-06407: Core file name pattern can not be obtained from nodes "{0}".

Cause: Unable to execute commands on the nodes specified.

Action: Ensure the ability to communicate with, and execute commands on, nodes specified .

PRVF-07017: Package cvuqdisk not installed

Cause: The required cvuqdisk package to perform this operation was found missing.

Action: Ensure that the required version of cvuqdisk package is installed on all the nodes participating in the operation.

PRVF-07019: OCFS file system does not exist on location "{0}"

Cause: OCFS file system was not found on the specified location.

Action: Ensure that OCFS file system is correctly created on the specified location.

PRVF-07020: Cannot verify the shared state for device {0} due to Universally Unique Identifiers (UUIDs) not being found, or different values being found, for this device across nodes:

Cause: An attempt to retrieve devices' Universally Unique Identifier (UUID) failed, or UUID's do not match, on the nodes indicated.

Action: Ensure the devices' UUID can be obtained and that the UUID value matches across all the nodes indicated.

**PRVF-07036: Mount options did not meet the requirements for this platform
[Expected = "{0}" ; Found = "{1}"]**

Cause: The mount options found did not match the minimum set of mount options that must be used while mounting NFS volumes.

Action: Ensure that all of the required mount options are specified.

PRVF-07037: Reserve_policy setting prevents sharing of {0} on node(s):

Cause: The reserve_policy setting for the device is preventing the device from being shared on the nodes indicated.

Action: Change the reserve_policy setting for the device. See the chdev command for further details.

PRVF-07038: Reserve_lock setting prevents sharing of {0} on node(s):

Cause: The reserve_lock setting for the device is preventing the device from being shared on the nodes indicated.

Action: Change the reserve_lock setting for the device. See the chdev command for further details.

PRVF-07039: File system exists on location "{0}"

Cause: Existing file system found on the specified location.

Action: Ensure that the specified location does not have an existing file system.

**PRVF-07501: Sufficient space is not available at location "{0}" on node "{1}"
[Required space = {2}]**

Cause: Not enough free space at location specified.

Action: Free up additional space or select another location.

PRVF-07524: Kernel version is not consistent across all the nodes.

Cause: The operating system kernel versions do not match across cluster nodes.

Action: Update the kernel version where necessary to have all cluster nodes running the same kernel version.

**PRVF-07530: Sufficient physical memory is not available on node "{0}"
[Required physical memory = {1}]**

Cause: Amount of physical memory (RAM) found does not meet minimum memory requirements.

Action: Add physical memory (RAM) to the node specified.

PRVF-07531: Physical memory check cannot be performed on node "{0}"

Cause: Could not perform check of physical memory on the node indicated.

Action: Ensure the ability to access the node specified and view memory information.

PRVF-07532: Package "{0}" is missing on node "{1}"

Cause: A required package is either not installed or, if the package is a kernel module, is not loaded on the specified node.

Action: Ensure that the required package is installed and available.

PRVF-07533: Proper version of package "{0}" is not found on node "{1}" [Required = "{2}" ; Found = "{3}"].

Cause: Package does not meet the requirement.

Action: Upgrade the package to meet the requirement.

PRVF-07534: Package check cannot be performed on node "{0}"

Cause: Package configuration could not be determined.

Action: Ensure that the package configuration is accessible.

PRVF-07535: Proper architecture is not found on node "{0}" [Expected = "{1}" ; Found = "{2}"]

Cause: System architecture does not meet the requirement.

Action: Ensure that the correct software bundle is being used.

PRVF-07536: Architecture check cannot be performed on node "{0}"

Cause: System architecture could not be determined.

Action: Ensure that the correct software bundle is being used.

PRVF-07537: User "{0}" does not exist on node "{1}"

Cause: The specified user does not exist on the specified node.

Action: Create the user on the specified node.

PRVF-07538: User existence check cannot be performed on node "{0}"

Cause: Attempt to check the existence of user on the specified node failed.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-07539: Group "{0}" does not exist on node "{1}"

Cause: The specified group does not exist on the specified node.

Action: Create the group on the specified node.

PRVF-07540: Group existence check cannot be performed on node "{0}"

Cause: Attempt to check the existence of group on the specified node failed.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-07542: Kernel version check cannot be performed on node "{0}"

Cause: Unable to execute commands on node specified.

Action: Ensure the ability to communicate with, and execute commands on, node specified .

PRVF-07543: OS Kernel parameter "{0}" does not have proper value on node "{1}" [Expected = "{2}" ; Found = "{3}"].

Cause: Kernel parameter value does not meet the requirement.

Action: Modify the kernel parameter value to meet the requirement.

PRVF-07544: Check cannot be performed for kernel parameter "{0}" on node "{1}"

Cause: Kernel parameter value could not be determined.

Action: Ensure that the correct software bundle is being used.

PRVF-07562: Sufficient available memory is not available on node "{0}" [Required available memory = {1}]

Cause: Amount of available memory (RAM) does not meet minimum memory requirements.

Action: Add physical memory (RAM) to the node specified, or free memory being used.

PRVF-07563: Available memory check cannot be performed on node "{0}"

Cause: Could not perform check of available memory on the node indicated.

Action: Ensure the ability to access the node specified and view memory information.

PRVF-07564: The runlevel found on node "{0}" did not match a supported runlevel. [Expected="{1}"; Found="{2}"]

Cause: The runlevel mode of operation for the computer operating system was found to be an unsupported runlevel on the node specified.

Action: Reboot the specified node with one of the correct runlevels indicated.

PRVF-07565: Could not perform the runlevel verification check on node "{0}"

Cause: Errors were encountered when trying to obtain the runlevel set on the system.

Action: Ensure that the command used to obtain the runlevel value 'who -r' can be run on the specified node and the file accessed by this command '/var/run/utmp' has read access for the current user.

PRVF-07566: User "{0}" does not belong to group "{1}" on node "{2}"

Cause: The specified user is not a member of the specified group on the specified node.

Action: Make the user a member of the group on the specified node.

PRVF-07567: Group "{0}" is not the primary group for user "{1}" on node "{2}"

Cause: The specified group is not the primary group for the specified user.

Action: Make the specified group as the primary group for the user.

PRVF-07568: Check cannot be performed for membership of user "{0}" with group "{1}" on node "{2}"

Cause: Attempt to check the group membership of the user on the specified node failed.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-07571: Process "{0}" not running on node "{1}"

Cause: Required process not running on the specified node.

Action: Ensure that the identified process can be started on the node .

PRVF-07572: Process running check cannot be performed on node "{0}"

Cause: Could not collect process information from the specified node.

Action: Ensure the access to node specified and ability to view process information.

PRVF-07573: Sufficient swap size is not available on node "{0}" [Required = {1} ; Found = {2}]

Cause: The swap size found does not meet the minimum requirement.

Action: Increase swap size to at least meet the minimum swap space requirement.

PRVF-07574: Swap size check cannot be performed on node "{0}"

Cause: Could not perform check of swap space on the node indicated.

Action: Ensure the ability to access the node specified and view swap space information.

PRVF-07575: Encountered an internal error. The range of reference data for verifying swap size has not been correctly defined

Cause: Swap size could not be determined based on the physical memory available.

Action: This is an internal error that should be reported to Oracle.

PRVF-07584: Multiple versions of package "{0}" found on node {1}: {2}

Cause: Multiple versions of the package were found when only one version was expected.

Action: Ensure that the specified package is installed correctly.

PRVF-07590: "{0}" is not running on node "{1}"

Cause: The process identified is not running on the specified node.

Action: Ensure that the identified process is started and running on the specified node. If it is one of the Clusterware daemons then you can use 'crsctl check' command to check status.

PRVF-07591: Daemon process check cannot be performed for process "{0}" on node "{1}"

Cause: An error was encountered while trying to determine if the identified process was running on the specified node.

Action: Ensure that the user has the ability to execute the command displayed.

PRVF-07592: Space availability check for location "{0}" cannot be performed on node "{1}"

Cause: Unable to determine amount of free space available for the specified location on the node identified.

Action: Ensure the ability to communicate with the specified node and the ability to access the location identified.

PRVF-07593: CRS is not found to be installed on node "{0}"

Cause: Could not identify CRS installation on the specified node.

Action: Ensure that CRS is installed on the specified node.

PRVF-07594: {0} is running but is not working effectively on node "{1}"

Cause: Could not communicate with the process specified on the node indicated.

Action: Verify state of CRS on the node indicated using the 'crsctl check' command.

PRVF-07595: CRS status check cannot be performed on node "{0}"

Cause: Could not verify the status of CRS on the node indicated using 'crsctl check'.

Action: Ensure the ability to communicate with the specified node. Make sure that Clusterware daemons are running using 'ps' command. Make sure that the Clusterware stack is up.

PRVF-07596: CSS is probably working with a non-clustered, local-only configuration on node "{0}"

Cause: Oracle CSS was found to be configured to run in a local-only (non-clustered) environment on the specified node.

Action: Ensure that cluster setup is correct and reconfigure Cluster Synchronization Services (CSS) as necessary on the nodes that are supposed to be executing in a clustered environment. See Oracle Cluster Synchronization Services documentation for further information.

PRVF-07597: Unable to obtain OCR integrity details from node "{0}"

Cause: OCR was not found to be in a healthy state on the node specified.

Action: Verify the state of OCR on the node specified using 'ocrcheck'.

PRVF-07610: Cannot verify user equivalence/reachability on existing cluster nodes

Cause: Attempts to verify user equivalence, or node reachability, failed for all the existing cluster nodes.

Action: Verify that all the cluster nodes have user equivalence and are reachable.

PRVF-07611: Proper user file creation mask (umask) for user "{0}" is not found on node "{1}" [Expected = "{2}" ; Found = "{3}"]

Cause: The user's OS file creation mask (umask) was not the required setting.

Action: Set appropriate user file creation mask. Modify the users .profile or .cshrc or .bashrc to include the required umask.

PRVF-07612: User file creation mask check cannot be performed for user "{0}" on node "{1}"

Cause: Attempt to check the file creation mask of user on the specified node failed.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-07615: Unable to obtain network interface list using the "{0}" tool from Oracle Clusterware home "{1}"

Cause: The Oracle Interface Configuration Tool (OIFCFG) executable did not return the network interface list.

Action: Ensure that the 'oifcfg getif' command returns the valid interface list.

PRVF-07616: Node connectivity failed for subnet "{0}" between "{1}" and "{2}"

Cause: Node connectivity for the mentioned <varname>subnet</varname> could not be verified between the two interfaces identified (<varname>node</varname> - <varname>interface</varname> : <varname>IP addr</varname>).

Action: Verify the interface configurations for the network interfaces identified on the nodes indicated using utilities like ipconfig or ping.

PRVF-07617: Node connectivity between "{0}" and "{1}" failed

Cause: Node connectivity between the two interfaces identified (<varname>node</varname> : <varname>IP addr</varname>) could not be verified.

Action: Verify the interface configurations for the network interfaces identified on the nodes indicated using utilities like ipconfig or ping.

PRVF-07650: Remote execution files could not be copied to "{0}" on the following nodes:

Cause: An attempt to copy files to the directory specified failed.

Action: Make sure that the user running CVU has read and write permissions on directory specified or specify a different work area using CV_DESTLOC environment variable where user executing this check has write permission.

PRVF-07700: Path for fixup root directory is either null or is an empty string

Cause: Provided fixup root directory path is either null or an empty string.

Action: Provide appropriate and absolute path for fixup root directory.

PRVF-07701: Path "{0}" for fixup root directory is invalid. It must be specified as an absolute pathname

Cause: Fixup root directory was not specified as an absolute pathname.

Action: Respecify fixup root directory as an absolute pathname.

PRVF-07702: The path "{0}" for fixup root directory is not a valid directory

Cause: Fixup root directory path was not a valid directory.

Action: Respecify fixup root path as a valid directory where files can be created and executed from.

PRVF-07703: The fixup root directory "{0}" is not writeable

Cause: Directory identified is not writeable.

Action: Verify write access to directory specified.

PRVF-07704: The fixup root directory "{0}" cannot be created

Cause: Could not create fixup root directory specified.

Action: Ensure that write access exists for the path for the directory specified.

PRVF-07705: Directory "{0}" cannot be created

Cause: Could not create directory specified.

Action: Ensure that write access exists for the path for the directory specified.

PRVF-07706: File "{0}" cannot be created

Cause: Could not create file specified.

Action: Ensure that write access exists for file location.

PRVF-07709: File "{0}" cannot be copied to file "{1}" on node "{2}"

Cause: Could not copy the source file specified to the target file specified on the identified node.

Action: Ensure that the node identified and the target location for the file specified can be accessed.

PRVF-07710: Invalid path has been specified for fixup root directory

Cause: The path specified for the fixup root directory is not correct.

Action: Specify an absolute path for a directory that exists and is writeable by the user performing the verification.

PRVF-07720: Fixup cannot be generated for creating group "{0}" on node "{1}"

Cause: Attempt to generate fixup for group creation on the specified node failed.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-07721: Fixup cannot be generated for creating user "{0}" on node "{1}"

Cause: Attempt to generate fixup for user creation on the specified node failed.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-07722: Fixup cannot be generated for setting kernel param "{0}" on node "{1}"

Cause: Attempt to generate fixup for kernel param on the specified node failed.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-07723: Fixup cannot be generated for setting soft limit for resource "{0}" on node "{1}"

Cause: Attempt to generate fixup for resource soft limit on the specified node failed.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-07724: Fixup cannot be generated for setting hard limit for resource "{0}" on node "{1}"

Cause: Attempt to generate fixup for resource hard limit on the specified node failed.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-07725: Fixup cannot be generated for setting runlevel "{0}" on node "{1}"

Cause: Attempt to generate fixup for run level on the specified node failed.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-07726: Fixup cannot be generated for setting membership of user "{0}" with group "{1}" on node "{2}"

Cause: Attempt to generate fixup for group membership on the specified node failed.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-07728: Could not access or create trace file path "{0}". Trace information could not be collected

Cause: Trace file location could not be created, or is not writeable.

Action: Make sure user has write access to location specified, or specify a different location using the environmental variable CV_TRACELOC.

PRVF-07729: Fixup cannot be generated for user "{0}", group "{1}", on node "{2}" because the user is not defined locally on the node

Cause: Fixup for group membership could not be generated because user was not found to be locally defined on the specified node.

Action: The fixup will have to be done manually. The user could be a Network Information Service (NIS) or Lightweight Directory Access Protocol (LDAP) user. Based on where the user is defined use appropriate tools to modify the user account.

PRVF-07730: Fixup cannot be generated for user "{0}", group "{1}", on node "{2}" because the group is not defined locally on the node

Cause: Fixup for group membership could not be generated because the group was not found to be locally defined on the specified node.

Action: The fixup will have to be done manually. The group could be a Network Information Service (NIS) or Lightweight Directory Access Protocol (LDAP) user. Based on where the group is defined use appropriate tools to modify the user account.

PRVF-09041: String has bad format: "{0}"

Cause: A parsing exception has occurred, and the string displayed could not be parsed.

Action: This message should be part of one or more other messages. Please look at those messages and take appropriate action.

PRVF-09105: Linux RPM package version found to be lower than minimum required version of <"{0}"> on nodes:

Cause: Linux RPM package version found to be older than recommended version.

Action: Ensure that the Linux RPM package version installed on the system is version 4.4.2.3 or higher.

PRVF-09106: Linux RPM package version was lower than the expected value. [Expected = "{0}" ; Found = "{1}"] on node "{2}"

Cause: Linux RPM package version found to be older than recommended version.

Action: Ensure that the Linux RPM package version installed on the system is version 4.4.2.3 or higher.

PRVF-09107: Could not retrieve the version of Linux RPM package on node:

Cause: An error occurred while running rpm command on system to determine the current version of Linux RPM package.

Action: Ensure that the Linux RPM package is correctly installed and is accessible to current user.

PRVF-09108: Could not retrieve the version of Linux RPM package on node "{0}"

Cause: An error occurred while running rpm command on system to determine the current version of Linux RPM package.

Action: Ensure that the Linux RPM package is correctly installed and is accessible to current user.

PRVF-09306: OCFS2 is not configured in runlevel 3,4 and 5 on all the nodes

Cause: Runlevel was not configured with levels 3,4 and 5 all being on.

Action: Check OCFS2 configuration and ensure the run levels indicated are on.

PRVF-09555: Current installation user "{0}" is not the owner "{1}" of the existing CRS installation

Cause: The current user was not found to be an owner of an existing CRS installation.

Action: Ensure that the user upgrading the CRS installation is an owner of the already existing installation.

PRVF-09556: Failed to get the CRS user name for an existing CRS installation

Cause: An attempt to obtain the Clusterware owner information from an existing CRS installation failed.

Action: Ensure that the user executing the CVU check has read permission for CRS or Oracle Restart home.

PRVF-09653: Command "{0}" to check CTSS status failed on all of the nodes

Cause: CVU attempts to execute the displayed command failed on all of the nodes.

Action: Examine the messages displayed for each node and take action as per those messages.

PRVF-09654: CTSS status check command "{0}" executed successfully on node "{1}", but there was a failure in retrieving the output of this command

Cause: Reason for failure to retrieve output could be due to improper execution.

Action: Try the command manually on the node to verify proper execution, and fix any issues arising out of this.

PRVF-09655: Query of CTSS for time offset and reference produced invalid output on node "{0}" \nOutput: "{1}"

Cause: Failure to correctly parse output could be due to improper execution.

Action: Try the command manually on the node to verify proper execution, and fix any issues arising out of this.

PRVF-09656: The CTSS command to query time offset and reference failed on node "{0}" with error message "{1}"

Cause: Reason for failure to retrieve output could have been be due to improper execution.

Action: Try the command manually on the node to verify proper execution, and fix any issues arising out of this.

PRVF-09657: The CTSS command "{0}" failed to execute correctly or failed to produce valid output on all of the nodes

Cause: Reason for failure could be due to improper execution.

Action: Look at the individual messages for each node and take action as per those messages.

PRVF-09659: The time offset of "{1}" on node "{0}" against reference node "{3}" is NOT within specified limit of "{2}" milliseconds

Cause: One of the clocks, either on the current node, or on the reference node has drifted beyond limits.

Action: Monitor the offset over a longer duration and verify if the offset reduces over this period and falls within the threshold limits. Oracle Time Synchronization Service does periodic adjustments of the clock to attempt to bring it within threshold limits. If the threshold does not fall within limits over a period of time possibly due to a large deviation or drift, it is recommended that the Oracle processes on this node be shutdown, and the clock be adjusted on the problematic node suitably. It is NOT recommended to set a clock backwards.

PRVF-09661: Time offset is greater than acceptable limit on node "{0}" [actual = "{1}", acceptable = "{2}"]

Cause: System clock has drifted from the clock on the reference node for the specified set of nodes.

Action: Look at the individual messages for each node and take action as per those messages.

PRVF-09664: CTSS is in an inconsistent state with some nodes in Observer state and some nodes in Active state. All nodes must be either in Observer state or in Active state.\nNodes with CTSS in Active state:"{0}"\nNodes with CTSS in Observer state:\n"{1}"

Cause: Some nodes may have NTP configured and some other nodes may not have NTP configured, resulting in an inconsistent state of CTSS.

Action: Stop Oracle CTSS service on all nodes and restart. Ensure that NTP is either configured on all nodes or not configured on any node.

PRVF-09665: Check of Clusterware install failed on some nodes. Clock Synchronization check will proceed with remaining nodes

Cause: A valid CRSHome was not found on one or more nodes. The messages displayed prior to this message indicate the list of nodes where a valid Clusteerware install was not found.

Action: Specify the correct set of nodes that contain a valid Clusterware installation, or complete the Clusterware installation on those node(s) and repeat this CVU verification.

PRVF-09666: CTSS is in Observer state. Switching over to clock synchronization checks using NTP

Cause: All of the nodes queried for CTSS state indicate they are in Observer state. In the Observer state, CTSS is not performing active clock synchronization adjustments, but letting the underlying NTP handle this action.

Action: None. This is a normal state.

PRVF-09667: CTSS is in Observer state. Switching over to Windows-specific time synchronization checks

Cause: All of the nodes queried for CTSS state indicate they are in Observer state. In the Observer state, CTSS is not performing active clock synchronization adjustments, but letting the underlying Windows time synchronization mechanisms handle this action.

Action: Look at the results of the Windows time synchronization checks displayed following this message. If there are any errors reported, perform action suggested for those error messages.

PRVF-09668: Command "{0}" executed to retrieve CTSS resource status failed on all of the nodes

Cause: CVU attempts to execute the displayed command failed on all of the nodes.

Action: Examine the messages displayed for each node and take action as per those messages.

PRVF-09669: Failure to query CTSS resource on all nodes in the cluster

Cause: Attempt to query CTSS resource on all of the nodes in the cluster failed. Possibly because Clusterware may not be running on the nodes.

Action: Look at the specific error messages reported for each of the nodes and take action as per those messages.

PRVF-09670: Failure checking status of CTSS on node "{1}" using command "{0}"

Cause: CTSS may not OFFLINE, or may not be running, or the remote node may not be accessible.

Action: Try running in the indicated command directly on the specified node and ensure it is up and running, check that the remote node, and check user equivalence.

PRVF-09671: CTSS on node "{1}" is not in ONLINE state, when checked with command "{0}"

Cause: The CTSS daemon is not running on the node, it may have died or may have been stopped.

Action: Restart the CTSS daemon on the specified node.

PRVF-09672: All nodes for which CTSS state was checked failed the check: Nodes: "{0}"

Cause: CTSS is not in ONLINE state on any of nodes, possibly due to node accessibility, or being stopped.

Action: Look at the individual messages displayed for each node and perform the suggested action for those messages.

PRVF-09676: Clusterware is not installed on all nodes checked : "{0}"

Cause: A valid Clusterware installation was not found on these nodes.

Action: Make sure the correct nodes are being specified in this check, or make sure that Clusterware is fully installed on the nodes before running this check for those nodes.

PRVF-09691: Clock Synchronization check without Oracle Cluster Time Synchronization Service (CTSS) is not supported on this platform

Cause: The command line parameter, '-noctss', was specified on the command line which indicates that Clock Synchronization check should be performed without Oracle Cluster Time Synchronization Service (CTSS). This is not supported on this platform.

Action: Run the Clock Synchronization check without the '-noctss' flag.

PRVF-09692: CRS Active version is less than 11.2, performing NTP checks

Cause: CTSS is supported only from release 11.2 onwards. Therefore, the clocksync component check can only run NTP checks.

Action: None

PRVF-09695: Failed to determine operating system patch status on the node "{0}"

Cause: Operating system patch status could not be determined.

Action: Ensure that the operating system configuration is accessible.

PRVF-09800: An exception occurred while attempting to determine storage type for location "{0}"

Cause: The location indicated may not be available on the node, or may have insufficient permissions for access by the user running the CVU check.

Action: Make sure that the location is available on the node, and has the right permissions to allow the user running the CVU check to read its attributes.

PRVF-09801: The storage location "{0}" is not a device, and therefore invalid for running Udev permissions check

Cause: UDev permissions check are valid only for storage devices, and not valid for any kind of file system.

Action: Make sure that a valid storage device location is specified. If the location is derived from an ASM discovery string, make sure that the discovery string specified points to one or more storage devices, and not filesystems.

PRVF-09802: Attempt to get 'udev' information from node "{0}" failed

Cause: An attempt to read the 'udev' permission or rule file failed, or the permission or rule file did not contain any rules for the specified device or devices.

Action: Make sure that the 'udev' permission or rule directory is created, the 'udev' permission or rule file is available and accessible by the user running the check and that the permission or rule file contains the correct 'udev' rule for the device or devices being checked.

PRVF-09806: Failed to get storage attributes to compare udev attributes against, udev attributes check aborted

Cause: In order to compare Udev attributes for a given storage location, the expected storage attributes are required to compare against. There was a failure to get these attributes, possibly due to invalid or non-existing Clusterware installation.

Action: Make sure that a valid Clusterware install exists on the node.

PRVF-09807: Encountered an internal error. The range of reference data for verification of kernel param "{0}" has not been correctly defined for node "{1}"

Cause: No reference range defined to be used to calculate expected value.

Action: Define a reference range.

PRVF-09809: Proper OS Patch is not found on node "{0}" [Expected = "{1}" ; Found = "{2}"]

Cause: Required OS Patch is not applied.

Action: Apply the required OS Patch.

PRVF-09810: No prereq file defined

Cause: Prereq file was not set.

Action: Set prereq file.

PRVF-09811: Reference data is not available for release "{0}" on the operating system distribution "{1}"

Cause: No reference data was found for this operating system distribution.

Action: Consult the installation guide for the Oracle product and platform (for example, the Oracle Grid Infrastructure Installation Guide for Linux) for a list of supported operating system distributions.

PRVF-09903: Check of Clusterware install failed on some nodes. Oracle patch check will proceed with remaining nodes

Cause: A valid CRS home was not found on one or more nodes. The messages displayed prior to this message indicate the list of nodes where a valid Clusterware install was not found.

Action: Specify the correct set of nodes that contain a valid Clusterware installation, or complete the Clusterware installation on those node(s) and repeat this CVU verification.

PRVF-09905: Clusterware is not installed on the following nodes : "{0}"

Cause: A valid Clusterware installation was not found on these nodes.

Action: Make sure the correct nodes are being specified, and that the Clusterware is fully installed on the nodes before running this check for those nodes.

PRVF-09907: Failed to query patch information from OPatch inventory

Cause: The execution of opatch lsinventory command failed.

Action: Make sure that the install inventory is readable by the user.

PRVF-09908: Failed to query patch information from Oracle executable

Cause: Oracle executable could not be queried for patch information.

Action: Make sure that Oracle executable is present and is readable by the user running CVU.

PRVF-09909: Patch information from OPatch did not match patch information from Oracle executable

Cause: Bug information from OPatch inventory does not match patch information recorded with Oracle executable.

Action: Make sure that all patches are applied correctly, refer to the OPatch user guide for information on patch application. Make sure that Oracle executable is relinked, refer to the Oracle Administrator Guide for information on relinking executables.

PRVF-09910: Patch information is not consistent across nodes

Cause: Bug information from OPatch do not match between the nodes.

Action: Make sure that all patches are applied correctly on all nodes, refer to the OPatch user guide for information on patch application.

PRVF-09913: Patch information from OPatch did not match patch information from Oracle executable on the following nodes:

Cause: Bug information from OPatch inventory does not match patch information recorded with Oracle executable.

Action: Make sure that all patches are applied correctly, refer to the OPatch user guide for information on patch application. Make sure that Oracle executable is relinked, refer to the Oracle Administrator Guide for information on relinking executables.

PRVF-09914: bug list did not match across nodes for the following nodes

Cause: Bug information from OPatch do not match between the nodes.

Action: Make sure that all patches are applied correctly on all nodes, refer to the OPatch user guide for information on patch application.

PRVF-09990: Antivirus software is running

Cause: Antivirus software was detected to be running.

Action: Oracle recommends that the Antivirus software be disabled. Antivirus may introduce delays in processing that interfere with time-sensitive cluster operations.

PRVF-09991: Owner of device "{0}" did not match the expected owner. [Expected = "{1}"; Found = "{2}"] on nodes: {3}

Cause: Owner of the device listed was different than required owner.

Action: Change the owner of the device listed or specify a different device.

PRVF-09992: Group of device "{0}" did not match the expected group. [Expected = "{1}"; Found = "{2}"] on nodes: {3}

Cause: Group of the device listed was different than required group.

Action: Change the group of the device listed or specify a different device.

PRVF-09993: Permissions of device "{0}" did not match the expected permissions. [Expected = "{1}"; Found = "{2}"] on nodes: {3}

Cause: Permissions of the device listed was different than the required permissions.

Action: Change the permissions on the device listed or specify a different device.

PRVF-09994: Owner, group, permission information could not be obtained for device(s) "{0}" on node "{1}"

Cause: Owner, group and permission information could not be obtained for devices listed on the nodes listed.

Action: "Ensure that the correct devices were specified and that they are created on the indicated node. Make sure that the path exists and is accessible by the user.

PRVF-09995: Owner, group, permission information could not be obtained for all devices on node "{1}"

Cause: Owner, group and permission information could not be obtained for all devices on the node listed.

Action: Make sure that the node is up. Make sure that user equivalence exists on the node listed.

PRVF-09998: User "{0}" could not be verified as a domain user, domain "{1}" is either an invalid domain or can not be contacted

Cause: Current user could not be verified as domain user. The identified domain name was either an invalid domain name or the domain could not be contacted.

Action: Ensure that the Windows Domain Server is reachable; log in to the OS as a domain user.

PRVF-10002: Node "{0}" is not yet deleted from the Oracle inventory node list

Cause: The indicated node still exists in the list of nodes for the CRS home in the Oracle inventory.

Action: Use 'runInstaller -updateNodeList' to remove the indicated node from the CRS home node list.

PRVF-10014: Clusterware home "{0}" is located under Oracle base directory "{1}" on nodes "{2}"

Cause: Clusterware home directory was found to be located in a subdirectory of ORACLE_BASE.

Action: Choose a Clusterware home directory that is not a subdirectory of the ORACLE_BASE. After Clusterware installation the owner will be changed to root for all of the directories above Clusterware home.

PRVF-10015: Clusterware home "{0}" is located under Oracle base directory "{1}" on node "{2}"

Cause: Clusterware home directory was found to be located in a subdirectory of ORACLE_BASE.

Action: Choose a Clusterware home directory that is not a subdirectory of the ORACLE_BASE. After Clusterware installation the owner will be changed to root for all of the directories above Clusterware home.

PRVF-10016: Unable to check for the locations of Clusterware home and Oracle Base directory on nodes "{0}"

Cause: Clusterware home or Oracle Base is not accessible or do not exist.

Action: Ensure that Oracle Base and Clusterware home exist and are accessible.

PRVF-10017: Unable to check for the locations of Clusterware home and Oracle Base directory on node "{0}"

Cause: Clusterware home or Oracle Base is not accessible or do not exist.

Action: Ensure that Oracle Base and Clusterware home exist and are accessible.

PRVF-10018: Clusterware home "{0}" is located under Oracle base directory "{1}"

Cause: The Clusterware home directory was found to be a subdirectory of the Oracle base directory.

Action: Choose a Clusterware home directory that is not a subdirectory of the Oracle base directory. After Clusterware installation the owner will be changed to root for all of the directories above Clusterware home.

PRVF-10035: OCR location is not the same across the cluster nodes

Cause: More than one OCR location was found across the cluster nodes.

Action: Ensure that the OCR location is the same across the cluster nodes.

PRVF-10037: Failed to retrieve storage type for "{0}" on node "{1}"

Cause: The storage location specified may be non-existent or invalid or the user running the check may not have permissions to access the specified storage.

Action: Specify a valid existing location, and ensure that the user running the check has valid read permissions to this location.

PRVF-10038: Could not find any OCR Locations

Cause: OCR Locations were not passed to the check.

Action: Pass Oracle locations to the check.

PRVF-10105: ASMLib is not installed on the nodes:

Cause: The ASMLib installation file /etc/init.d/oracleasm was not found or could not be accessed on one or more nodes.

Action: Ensure that the ASMLib is correctly installed on all the nodes, or is not installed on any node.

PRVF-10106: ASMLib is not installed on the node "{0}"

Cause: The ASMLib installation file /etc/init.d/oracleasm was not found or could not be accessed on the indicated node.

Action: Ensure that the ASMLib is correctly installed on the specified node, or is not installed on any node.

PRVF-10107: Failed to retrieve ASMLib information on the nodes:

Cause: The check for ASMLib installation was unable to retrieve the required information on one or more nodes.

Action: Ensure that the ASMLib is correctly installed on all the nodes and that the user has the necessary access privileges.

PRVF-10108: Failed to retrieve ASMLib information on the node "{0}"

Cause: The check for ASMLib installation was unable to retrieve the required information on the indicated node.

Action: Ensure that the ASMLib is correctly installed on all the nodes and that the user has the necessary access privileges.

PRVF-10109: ASMLib is not configured correctly on the nodes:

Cause: ASMLib was found configured on some nodes, but not on the listed nodes.

Action: Ensure that the ASMLib is configured correctly and enabled on all the nodes, or is not configured on any node.

PRVF-10110: ASMLib is not configured correctly on the node "{0}"

Cause: ASMLib was found configured on some nodes, but not on the indicated node.

Action: Ensure that the ASMLib is configured correctly and enabled on all the nodes, or is not configured on any node.

PRVF-10111: ASMLib does not identify the disks "{0}" on the nodes:

Cause: ASMLib could not list all the disks on one or more nodes.

Action: Ensure that the ASMLib is configured correctly to list all the created disks, To refresh the list of disks execute `"/etc/init.d/oracleasm scandisks"`.

PRVF-10112: ASMLib does not identify the disks "{0}" on the node "{1}"

Cause: ASMLib could not list all the disks on the indicated node.

Action: Ensure that the ASMLib is configured correctly to list all the created disks, To refresh the list of disks execute `"/etc/init.d/oracleasm scandisks"`.

PRVF-10208: Following error occurred during the VIP subnet configuration check

Cause: An error occurred while performing the VIP subnet check.

Action: Look at the accompanying messages for details on the cause of failure.

PRVF-10209: VIPs "{0}" are active before Clusterware installation

Cause: Node VIPs were found to be active on the network before Clusterware installation.

Action: If you are upgrading an older release of Clusterware this is not an error. In case of new installation, make sure that the IP addresses to be configured as VIPs are currently unused.

PRVF-10210: VIPs "{0}" are not active after Clusterware installation

Cause: Node VIPs were found to be not active on the network after Clusterware installation.

Action: Please run the command `'srvctl start nodeapps'` to bring up VIPs

PRVF-10211: Failed lookup of IP address for host "{0}"

Cause: An error occurred while trying to get IP address of the node VIP name.

Action: Run `'nslookup'` on the name and make sure the name is resolved or add the node VIP name into OS hosts file.

PRVF-10304: IPMI device driver does not exist on nodes {0}

Cause: Open IPMI device driver is not installed on the nodes.

Action: Install Open IPMI device drivers.

PRVF-10306: Error occurred while retrieving IP address of IPMI device on nodes {0}

Cause: An internally-issued `'crsctl get css ipmiaddr'` on the nodes failed.

Action: Configure IPMI device over LAN and run command `'crsctl set css ipmiaddr'` command on the nodes to set the IP address.

PRVF-10307: IPMI IP address {0} on node {1} is not reachable

Cause: A timeout occurred while receiving IPMI ping response. Usually this results from having the wrong IP address.

Action: Run 'crsctl set css ipmiaddr' command to set the correct IP address.

PRVF-10308: Login to node {0} BMC device using stored credentials failed

Cause: An attempt to login to BMC on the node using username and password present in IPMI wallet failed.

Action: Run 'crsctl set css ipmiadmin' command to set correct credentials.

PRVF-10405: Path "{0}" is not suitable for usage as RAC database software for release "{1}"

Cause: The specified path is not found suitable for usage as RAC database software

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVF-10406: Path "{0}" is not suitable for usage as RAC database file for release "{1}"

Cause: The specified path is not found suitable for usage as RAC database file

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVF-10407: Path "{0}" is not suitable for usage as Oracle Clusterware storage for release "{1}"

Cause: The specified path is not found suitable for usage as Oracle Clusterware storage(OCR or Voting Disk).

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVF-10408: Path "{0}" is not suitable for usage as Single Instance database software for release "{1}"

Cause: The specified path is not found suitable for usage as Single Instance database software

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVF-10409: Path "{0}" is not suitable for usage as Single Instance database file for release "{1}"

Cause: The specified path is not found suitable for usage as Single Instance database file

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVG-00219 to PRVG-12887

PRVG-00219: Authorization error establishing connection to database "{0}" using user "{1}". Verification will be skipped for this database.

Cause: Authorization error occurred while establishing connection to the database using the specified user. This may be because the user does not exist, password is wrong, or user account is locked.

Action: Make sure that the specified user exists in the database, account is unlocked and the supplied password is correct.

PRVG-00221: Cannot launch browser to display the report. Check if the DISPLAY variable is set.

Cause: DISPLAY environment variable is not set

Action: set DISPLAY

PRVG-00222: Error establishing connection to database "{0}" using user "{1}". Verification will be skipped for this database.

Cause: Error occurred while establishing connection with the database using the specified user.

Action: Examine the accompanying error message for details.

PRVG-00258: Baseline collection for database "{0}" failed.

Cause: An error occurred while collecting baseline for the database.

Action: Examine the accompanying messages for details on the cause of failure.

PRVG-00277: Specified ASM disk group name is null or an empty string

Cause: Internal error.

Action: Contact Oracle Support Services.

PRVG-00278: ASM disk group name cannot contain wildcards

Cause: Internal error.

Action: Contact Oracle Support Services.

PRVG-00329: Failed to check "{0}" port availability for port number "{1}" on nodes "{2}"

Cause: An attempt to check port availability of an indicated port failed on the identified nodes.

Action: Ensure that the nodes are reachable and the user running this command has required privileges on the nodes identified.

PRVG-00330: "{0}" port number "{1}" required for component "{2}" is already in use on nodes "{3}"

Cause: Indicated IP port was found to be in use on the identified nodes.

Action: Stop any applications listening on the indicated port on the identified nodes.

PRVG-00341: Failed to retrieve the current login shell from nodes "{0}"

Cause: An attempt to retrieve the current login shell from indicated nodes failed.

Action: Ensure that the required login shell settings for current user are correct on the indicated nodes.

PRVG-00360: Location "{0}" file system is not NFS

Cause: An existing file system other than NFS was found on the specified location.

Action: Ensure that the specified location has either an NFS file system or no file system.

PRVG-00361: Incorrect NFS mount options "{0}" used for "{1}":"{2}" mounted on: "{3}"

Cause: An incorrect NFS mount option was found being used for the intended use of the NFS file system mount.

Action: Ensure that the file system is mounted with the correct options, Refer the Grid Infrastructure Installation Guide for detailed information on NFS mount options requirement.

PRVG-00540: An incorrect value was specified for "{0}"

Cause: Incorrect value was specified for the identified command line option.

Action: Ensure that the correct value is specified for the identified command line option.

PRVG-00550: Failed to retrieve the value of an OCR key "{0}"

Cause: An attempt to read the specified OCR key from the local node failed.

Action: Ensure that current user has required privileges to access 'ocrdump'.

PRVG-00551: The OCR key "{0}" was not found in OCR

Cause: Could not find the specified OCR key in OCR.

Action: Ensure that current user has required privileges to access 'ocrdump'.

PRVG-00601: The current source software is already version "{0}"

Cause: Verification of pre-upgrade conditions determined that the software is already at the specified upgrade version.

Action: Ensure that the correct '-dest_version' was specified.

PRVG-00602: Failed to retrieve database version of database home "{0}"

Cause: An error occurred while retrieving database version of the database home.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-00700: Invalid target hub size

Cause: An invalid target hub size was specified

Action: Specify a valid target hub size

PRVG-00710: CRS stack must be running on the local node for performing rolling upgrade.

Cause: CRS stack is not running on the local node.

Action: Start the stack on the local node.

PRVG-00712: Cannot upgrade: Oracle Clusterware stack not running on this node.

Cause: An upgrade was requested on a node where the CRS stack was not running.

Action: Start the stack on the local node using the command 'crsctl start crs'.

PRVG-00713: Cannot upgrade: Oracle Clusterware stack not running on the local node, but the Oracle Clusterware stack was found running on nodes "{0}".

Cause: An upgrade was requested with Oracle Clusterware stack not running on the local node but one or more remote node had the stack up.

Action: Start the stack on the local node using the command 'crsctl start crs'.

PRVG-00714: Oracle Clusterware stack is not running on the local node. It is recommended that the upgrade be performed with the Oracle Clusterware stack running.

Cause: An upgrade was requested on a node with Oracle Clusterware stack not running.

Action: Start the stack on the local node using the command 'crsctl start crs'.

PRVG-01001: Insufficient number of arguments while executing "{0}"

Cause: An attempt was made to execute the specified script with insufficient number of arguments.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-01002: Command "{0}" to obtain SCAN configuration failed

Cause: An attempt to execute the displayed command failed.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-01003: Command "{0}" to check if OCR locations are on shared storage failed

Cause: An attempt to execute the displayed command failed.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-01004: Command "{0}" to obtain GNS domain and GNS-VIP configuration failed

Cause: An attempt to execute the displayed command failed.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-01005: Command "{0}" to obtain GNS and GNS-VIP status failed

Cause: An attempt to execute the displayed command failed.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-01006: Command "{0}" to check if ASM instance is running failed

Cause: An attempt to execute the displayed command failed.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-01007: Command "{0}" to get ASM disk groups configured on local node failed

Cause: An attempt to execute the displayed command failed.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-01008: ASM status could not be verified on nodes "{0}"

Cause: An attempt to verify whether ASM was running on the specified nodes failed.

Action: Look at the error messages that accompany this message.

PRVG-01009: Command "{0}" to obtain SCAN name failed

Cause: An attempt to execute the displayed command failed.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-01010: Command "{0}" to obtain configuration of network resource for network number {1} failed

Cause: An attempt to execute the displayed command failed.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-01011: The CRS software versions found on cluster nodes "{0}" and "{1}" do not match

Cause: The CRS software version found on the two nodes indicated do not match, or the CRS software version could not be obtained from one of the nodes indicated.

Action: Make sure the existing cluster nodes have the same CRS software version installed before trying to add another node to the cluster.

PRVG-01012: The shared state of the CRS home path "{0}" on nodes to be added does not match the shared state on existing cluster nodes

Cause: The CRS home IS shared on the existing cluster and NOT shared on the nodes to be added, or the CRS home is NOT shared on the existing cluster nodes and IS shared on the nodes to be added.

Action: The CRS home must be shared by all nodes or by none.

PRVG-01013: The path "{0}" does not exist or cannot be created on the nodes to be added

Cause: The path does not exist on the nodes being added and the parent path is not writable.

Action: Ensure that the path identified either exists or can be created.

PRVG-01015: Time server "{0}" has time offsets that are not within permissible limit "{1}" on nodes "{2}".

Cause: Offsets on the identified nodes in the cluster were not within limits for specified Time Server.

Action: Ensure that the offsets for specified time server are within limits on each node of the cluster.

PRVG-01016: The Oracle Clusterware configuration check is not valid in an environment in which Oracle Clusterware is not configured

Cause: A check valid only for an environment with Oracle Clustware was attempted.

Action: Ensure that the Clusterware has been correctly installed and configured before attempting the check.

PRVG-01017: NTP configuration file is present on nodes "{0}" on which NTP daemon or service was not running

Cause: NTP configuration file was found on specified nodes where the NTP daemon or service was not running.

Action: NTP configuration must be uninstalled on all nodes of the cluster.

PRVG-01018: NTP daemon or service was running on nodes "{0}" on which NTP configuration file was not found

Cause: NTP daemon or service was running on specified nodes on which no NTP configuration file was found.

Action: NTP configuration must be uninstalled on all nodes of the cluster.

PRVG-01019: The NTP configuration file "{0}" does not exist on nodes "{1}"

Cause: The configuration file specified was not available or was inaccessible on the specified nodes.

Action: To use NTP for time synchronization, create this file and set up its configuration as described in your vendor's NTP document. To use CTSS for time synchronization the NTP configuration should be uninstalled on all nodes of the cluster. Refer to section "Preparing Your Cluster" of the book "Oracle Database 2 Day + Real Application Clusters Guide".

PRVG-01020: Check for NTP configuration file "{0}" could not be performed on nodes "{1}"

Cause: Check of existence of NTP configuration file failed as its existence could not be determined.

Action: Look at the accompanying error messages and respond accordingly.

PRVG-01021: NTP configuration file "{0}" found on nodes "{1}"

Cause: During an add node operation a NTP configuration file was found on the new node being added, but it was missing from existing cluster nodes.

Action: To use NTP for time synchronization, create this file and set up its configuration as described in your vendor's NTP document on all nodes of the cluster. If you plan to use CTSS for time synchronization then NTP configuration should be uninstalled on all nodes of the cluster. Refer to section "Preparing Your Cluster" of the book "Oracle Database 2 Day + Real Application Clusters Guide".

PRVG-01024: The NTP Daemon or Service was not running on any of the cluster nodes.

Cause: The NTP Daemon was not running on any of the cluster nodes.

Action: Look at the accompanying error messages and respond accordingly.

PRVG-01025: Validation of the state of the GNS server and DNS domain delegation failed from the client cluster.

Cause: Proper functioning of the GNS server cluster could not be validated using client data file for the GNS client cluster. Possibly GNS is not up on the server cluster, or the DNS domain is not delegated to the GNS server cluster.

Action: Examine the accompanying error messages and respond accordingly to ensure that GNS is up on the GNS server cluster and that the domain delegation is operating correctly. The integrity of GNS can be validated by executing the command 'cluvfy comp gns -postcrsinst' on the GNS server cluster.

PRVG-01026: Node "{0}" is a member of cluster "{1}".

Cause: The cluster name returned from the execution of olsnodes on the node specified does not match the cluster name from the execution of olsnodes on the local node. The node indicated in the message could not be added to this cluster because it was already a member of the indicated cluster.

Action: Ensure that the node being added is not part of another cluster before attempting to add the node to this cluster.

PRVG-01030: Command "{0}" to get ASM home failed

Cause: An attempt to execute the displayed command failed.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-01031: Command "{0}" executed to get ASM SID failed

Cause: An attempt to execute the displayed command failed.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-01032: slewing option "{0}" not found on the NTP Daemon command line on nodes "{1}"

Cause: The specified slewing option was not found on the command line of the Network Time Protocol (NTP) Daemon on the specified nodes.

Action: Shut down and restart the NTP Daemon with the slewing option set. In each case add -x to the NTPD command line options. For Linux, edit /etc/sysconfig/ntpd. For SUSE Linux, edit /etc/sysconfig/ntp and add -x to the OPTIONS variable. For AIX, edit /etc/rc.tcpip. For HP-UX edit /etc/rc.config.d/netdaemons. For Solaris release 10 or earlier, edit /etc/inet/ntp.conf. For Solaris release 11, set the 'slew_always' property by running the command '/usr/sbin/svccfg -s svc:/network/ntp:default setprop config/slew_always = true' as root user and refresh the service by running the command 'svcadm refresh svc:/network/ntp:default'.

PRVG-01033: Inspection of the NTP Daemon command line arguments for slewing option "{0}" could not be performed on nodes "{1}".

Cause: An attempt to obtain the command line of the Network Time Protocol (NTP) Daemon process running on the specified nodes failed.

Action: Ensure that the specified nodes are accessible. Make sure that the NTP Daemon is running on the specified nodes. Also, look at other messages accompanying this message.

PRVG-01036: NTP Daemon boot time configuration file "{0}" does not have slewing option "{1}" set on nodes "{2}".

Cause: The Network Time Protocol (NTP) Daemon boot time configuration on the specified nodes did not have the specified slewing option set.

Action: Ensure that the slewing option is set in the configuration file on the nodes specified. For more information on the NTP Daemon slewing option, refer to NTP Daemon manual pages.

PRVG-01037: NTP Daemon boot time configuration file "{0}" could not be inspected for slewing option "{1}" on nodes "{2}".

Cause: An attempt to obtain the Network Time Protocol (NTP) Daemon boot time configuration file to check if specified slewing option is set failed on the nodes specified.

Action: Ensure that the user running this check has access to the configuration file specified. Also, look at other messages accompanying this message.

PRVG-01050: Voting disk locations with the voting disk identification numbers "{0}" are offline.

Cause: Voting disk locations were found to be offline.

Action: Voting disk must be brought online or should be removed from the configuration by executing 'crsctl delete css votedisk <varname>vdiskGUID</varname> [...]'.
 varname> [...].

PRVG-01051: The Oracle Clusterware stack is not running on any hub node.

Cause: The Oracle Clusterware stack is not running on any hub node.

Action: Start the Oracle Clusterware stack on at least one hub node.

PRVG-01060: Failed to retrieve the network interface classification information from an existing CRS home at path "{0}" on the local node

Cause: An attempt to obtain the network interface classification information by running 'oifcfg getif' from an existing CRS home failed on the local node.

Action: Ensure that the user executing the CVU check has read permission for the indicated CRS or Oracle Restart home and that the indicated CRS home path is not left over due to partial clean-up of any previous CRS installation attempts.

PRVG-01100: Found inconsistent 'hosts' entry in file "{0}" on node {1}

Cause: Cluster verification found an inconsistency in the 'hosts' specification entry in name service switch configuration file on the indicated node.

Action: Ensure the 'hosts' entries define the same lookup order in the name service switch configuration file across all cluster nodes.

PRVG-01101: SCAN name "{0}" failed to resolve

Cause: An attempt to resolve specified SCAN name to a list of IP addresses failed because SCAN could not be resolved in DNS or GNS using 'nslookup'.

Action: Check whether the specified SCAN name is correct. If SCAN name should be resolved in DNS, check the configuration of SCAN name in DNS. If it should be resolved in GNS make sure that GNS resource is online.

PRVG-01102: Command "{0}" to get network information failed.

Cause: An attempt to execute the displayed command failed.

Action: Examine the accompanying error messages for details. Address issues found and retry the command.

PRVG-01103: Command "{0}" to get OCR information failed.

Cause: An attempt to execute the displayed command failed.

Action: Examine the accompanying error messages for details.

PRVG-01104: Unable to create the directory "{0}"

Cause: An attempt to create the directory specified failed on local node.

Action: Ensure that the user running CVU has read and write access to the specified directory, or set the CV_DESTLOC environment variable to a different directory to which the user has read and write access.

PRVG-01105: Error copying file "{0}" to the local node from the source node "{1}"

Cause: The specified file could not be copied from the specified source node to the destination node.

Action: Examine the accompanying error message for details.

PRVG-01106: The OCR locations are not up to date on node "{0}". It has extra locations "{1}".

Cause: The OCR integrity check found that some extra OCR locations are in list on the specified node.

Action: Use the 'ocrconfig -repair' utility to repair the OCR locations on the specified node.

PRVG-01107: The OCR locations are not up to date on node "{0}". The locations "{1}" are not present.

Cause: The OCR integrity check found that some OCR locations were missing from the OCR location list on the specified node.

Action: Use the 'ocrconfig -repair' utility to repair the OCR locations on the specified node.

PRVG-01108: Failed to check OCR locations consistency on node "{0}"

Cause: An attempt to verify OCR locations failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-01110: failed to validate the client GNS file

Cause: An attempt to execute an internal operation to validate the client GNS file failed. This is an internal error.

Action: Contact Oracle Support Services.

PRVG-01111: failed to validate the GNS VIP

Cause: An attempt to execute an internal operation to validate the Grid Naming Service (GNS) VIP failed. This is an internal error.

Action: Contact Oracle Support Services.

PRVG-01112: failed to obtain the list of all users that own CRS resources

Cause: During CRS user verification, an attempt to obtain the list of all users that own CRS resources failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-01153: Easy Connect is not configured in the sqlnet.ora in the location "{0}" on the following nodes:

Cause: names.directory_path entry in the sqlnet.ora does not contain 'ezconnect' as one of the name resolution methods

Action: add 'ezconnect' to names.directory_path entry in the sqlnet.ora

PRVG-01154: Easy Connect is not configured in the sqlnet.ora in the location "{0}" on node "{1}"

Cause: names.directory_path entry in the sqlnet.ora does not contain 'ezconnect' as one of the name resolution methods

Action: add 'ezconnect' to names.directory_path entry in the sqlnet.ora

PRVG-01155: Easy Connect configuration could not be determined.

Cause: Easy Connect configuration check could not be completed

Action: Contact Oracle Support Services.

PRVG-01162: The OS kernel is not running in 64-bit mode on node "{0}".

Cause: The OS kernel was not found to be running in 64-bit mode on the specified node.

Action: Make the kernel run in 64-bit mode on the cluster node. This might involve setting up the symlink /unix -> /usr/lib/boot/unix_64 and rebooting the node.

PRVG-01164: Failed to check the running mode of OS kernel in use

Cause: An attempt to obtain the type (32-bit or 64-bit) of OS kernel using command '/usr/sbin/prtconf -k' failed.

Action: Run the command '/usr/sbin/prtconf -k' manually and follow the command output to fix any issues associated with its execution.

PRVG-01170: Private host name "{0}" with private IP address "{1}" on node "{2}" does not belong to any subnet classified for private interconnect

Cause: Private IP retrieved from the current configuration do not belong to any subnet classified for private interconnect.

Action: Ensure that the private host name is configured correctly, use 'oifcfg' tool to classify the subnet containing the private IPs as private using 'oifcfg setif -global <if_name>/<varname>subnet</varname>:cluster_interconnect' command.

PRVG-01171: Failed to resolve the private host name "{0}" to an IP address on node "{1}"

Cause: IP address for the private host name could not be retrieved.

Action: Ensure that the identified private host name can be resolved to a private IP address.

PRVG-01172: The IP address "{0}" is on multiple interfaces "{1}" on nodes "{2}"

Cause: The given IP address was found on multiple interfaces, when an IP address can be on at most one interface.

Action: Remove the given IP address from all but one interface on each node.

PRVG-01185: Current OS user is not the owner of the existing database installation. [Expected = "{0}" ; Available = "{1}"]

Cause: Current OS user was not found to be the owner of the existing database installation.

Action: Ensure that the OS user upgrading database installation is the owner of the already existing installation.

PRVG-01186: Failed to get the owning OS user name for the database home "{0}"

Cause: An attempt to obtain the database owner information from an existing database installation failed.

Action: Ensure that the OS user executing the CVU check has read permission for database.

PRVG-01191: Failed to check existence of ASM resource

Cause: An attempt to verify existence of ASM resource failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-01192: ASM (pre-11.2) is not at the same version as CRS version {0}

Cause: The ora.asm resource was not found.

Action: Ensure that ASM Configuration Assistant 'asmca -upgradeASM' has been run and ASM has been upgraded.

PRVG-01195: Upgrade checks can only be performed when upgrading to versions greater than or equal to 11.2.0.1.0

Cause: The -dest_version specified was lower than 11.2.0.1.0.

Action: Specify -dest_version greater than or equal to 11.2.0.1.0.

PRVG-01201: OS kernel parameter "{0}" does not have expected configured value on node "{1}" [Expected = "{2}" ; Current = "{3}"; Configured = "{4}"].

Cause: A check of the configured value for an OS kernel parameter did not find the expected value.

Action: Modify the kernel parameter configured value to meet the requirement.

PRVG-01205: OS kernel parameter "{0}" does not have expected current value on node "{1}" [Expected = "{2}" ; Current = "{3}"; Configured = "{4}"].

Cause: A check of the current value for an OS kernel parameter did not find the expected value.

Action: Modify the kernel parameter current value to meet the requirement.

PRVG-01206: Check cannot be performed for configured value of kernel parameter "{0}" on node "{1}"

Cause: Kernel parameter value could not be determined.

Action: Examine the accompanying error message for details.

PRVG-01253: Required Oracle patch is not found on node "{0}" in home "{1}".

Cause: Required Oracle patch is not applied.

Action: Apply the required Oracle patch.

PRVG-01254: Failed to determine Oracle patch status on the node "{0}"

Cause: Oracle patch status could not be determined.

Action: Ensure that OPatch is functioning correctly.

PRVG-01260: Command "{0}" to obtain Oracle patch status failed

Cause: An attempt to execute the displayed command failed.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-01265: Failed to determine operating system patch status for patch "{1}" on node "{0}"

Cause: Unable to determine the patch existence.

Action: Manual o/s verification required. Contact IBM support for assistance if needed.

PRVG-01274: Source home "{0}" is not suitable for upgrading to version "{1}".

Cause: The source home version was not suitable for upgrading to the specified version.

Action: Upgrade to a supported version before proceeding to upgrade to the specified version.

PRVG-01297: The following device paths point to the same physical device:"{0}"

Cause: An attempt to check the suitability of listed or discovered device paths for ASM disk group creation found that multiple device paths point to the same physical device.

Action: Ensure that all listed or discovered device paths point to distinct physical devices.

PRVG-01299: ACFS file system does not exist at path "{0}".

Cause: Attempt to verify ACFS file system at the specified file path failed because no ACFS file system was found.

Action: Ensure that ACFS file system is correctly created on the specified location.

PRVG-01300: ACFS verification is not supported on this platform

Cause: ADVN/ACFS device drivers have not yet been ported to this OS or CPU type.

Action: None

PRVG-01359: Daemon process "{0}" is configured on node "{1}"

Cause: The identified daemon process was found configured on the indicated node.

Action: Ensure that the identified daemon process is not configured on the indicated node.

PRVG-01360: Daemon process "{0}" is running on node "{1}"

Cause: The identified daemon process was found running on the indicated node.

Action: Ensure that the identified daemon process is stopped and not running on the indicated node.

PRVG-01450: Oracle Clusterware is not installed on nodes "{0}".

Cause: A valid Oracle Clusterware installation was not found on the specified nodes.

Action: Ensure that Oracle Clusterware is installed on the nodes before running this check.

PRVG-01452: CTSS resource status check using command "{0}" failed as the command did not produce output on nodes "{1}"

Cause: An attempt to check the status of the Oracle Cluster Time Synchronization Service (CTSS) resource failed because the command specified did not produce output on the node specified.

Action: Ensure that the command specified exists and the current user has execute permission.

PRVG-01453: Oracle CTSS resource is not in ONLINE state on nodes "{0}"

Cause: The Oracle Cluster Time Synchronization Service (CTSS) resource was either in OFFLINE or UNKNOWN state on the nodes specified.

Action: Check the status of the Oracle CTSS resource using the command 'crsctl check ctss'. If CTSS is not running then restart the Clusterware stack.

PRVG-01454: CTSS resource status check using command "{0}" on node "{1}" failed.

Cause: An attempt to check the status of the Oracle Cluster Time Synchronization Service (CTSS) resource failed because the command specified failed.

Action: Look at the accompanying error messages and respond accordingly.

PRVG-01455: The command "{0}" to query CTSS time offset and reference failed on node "{1}"

Cause: An attempt to query Oracle Cluster Time Synchronization Service (CTSS) for time offset and reference using specified command failed on the node specified.

Action: Look at the accompanying error messages and respond accordingly.

PRVG-01456: The CTSS time offset and reference could not be determined on any node of the cluster.

Cause: An attempt to query CTSS for time offset and reference failed on all nodes of the cluster.

Action: Look at the accompanying error messages and respond accordingly.

PRVG-01457: Query of CTSS for time offset failed on nodes "{0}".

Cause: An attempt to query CTSS for time offset and reference failed on the nodes displayed in the message.

Action: Look at the accompanying error messages and respond accordingly.

PRVG-01508: IPMP fail-over group "{0}" with interface list "{1}" on node "{2}" has interfaces "{3}" which are not part of current private network classifications "{4}"

Cause: Found an additional fail-over dependency on an interface in an IPMP group which is not classified as a cluster interconnect on the identified node.

Action: Ensure that all the identified non-participating network interfaces in the IPMP group are classified as a cluster interconnect on the identified node. Use command 'oifcfg setif -global <if_name>/<varname>subnet</varname>:cluster_interconnect' to classify the network interface as private.

PRVG-01509: IPMP fail-over group "{0}" with interface list "{1}" on node "{2}" has interfaces "{3}" which are not part of current public network classifications "{4}"

Cause: Found an additional fail-over dependency on an interface in an IPMP group which is not classified as a public interface on the identified node.

Action: Ensure that all the identified non-participating network interfaces in the IPMP group are classified as public network interface on the identified node. Use command 'oifcfg setif {-node <varname>nodename</varname> | -global} {<if_name>/<varname>subnet</varname>:public}' to classify the network interface as public.

PRVG-01510: IPMP configuration information cannot be obtained from any of the nodes

Cause: Failed to retrieve the information about IPMP configuration from all nodes.

Action: Ensure that current user has required privileges to retrieve IPMP configuration information if IPMP is required to be configured on the cluster nodes.

PRVG-01511: Failed to get IPMP configuration information from node "{0}"

Cause: Failed to retrieve the information about IPMP configuration from identified node.

Action: Ensure that current user has required privileges to retrieve IPMP configuration information if IPMP is required to be configured on the identified node.

PRVG-01512: Failed to retrieve current selection of public and private network classifications

Cause: Could not retrieve the list of public and private network classifications selected in current configuration.

Action: Ensure that the configuration of public and private network classifications is done correctly during the installation process.

PRVG-01513: Failed to retrieve current selection of public and private network classifications for node "{0}"

Cause: Could not retrieve the list of public and private network classifications selected in current configuration.

Action: Ensure that the configuration of public and private network classifications is done correctly during the installation process.

PRVG-01515: Solaris IPMP daemon "{0}" is not running on node "{1}"

Cause: The indicated daemon process was not running. It may have aborted, been shut down, or simply not have been started.

Action: Install and configure the program if necessary, then start it.

PRVG-01516: Operation to check presence of "{0}" daemon or process failed on node "{1}"

Cause: The operation to check indicated daemon or process failed on node identified.

Action: Ensure that the node is accessible and IPMP configuration on the node is correct.

PRVG-01517: The check for "{0}" daemon or process status failed on nodes "{1}"

Cause: The indicated daemon was not accessible or there was some unknown failure in the check.

Action: Review the messages that accompany this message and fix the problem(s) on the indicated nodes.

PRVG-01521: The NIC configuration file at path "{0}" does not exist for IPMP interface "{1}" on node "{2}"

Cause: The network interface card (NIC) configuration file required for consistent IP network multipathing (IPMP) configuration of the interface across reboots was missing at the indicated path for the identified interface on the node.

Action: Ensure that the IPMP configuration for the indicated network interface is correct and that the NIC configuration file at the identified path exists.

PRVG-01522: The NIC configuration file does not exist for some or all the IPMP interfaces on nodes "{0}"

Cause: The network interface card (NIC) configuration file required for consistent IP network multipathing (IPMP) configuration of the interface across reboots was missing at the indicated path for the identified interface on the indicated nodes.

Action: Ensure that the IPMP configuration for the indicated network interface is correct and that the NIC configuration file at the identified path exists.

PRVG-01526: The IPMP interface "{0}" participating in an IPMP group "{1}" has deprecated flag set on node "{2}"

Cause: The identified IPMP interface was found with deprecated flag set on the indicated node.

Action: Ensure that none of the classified IPMP interfaces have the deprecated flag set to ensure the correct functioning of IPMP on the node.

PRVG-01527: Some of the IPMP interfaces have deprecated flag set on nodes "{0}"

Cause: Some of the IPMP interfaces were found with deprecated flag set on the indicated nodes.

Action: Ensure that none of the classified IPMP interfaces have the deprecated flag set to ensure the correct functioning of IPMP on the indicated nodes.

PRVG-01528: Warning: The IPMP interface "{0}" participating in an IPMP group "{1}" is classified as private interconnection interfaces on node "{2}"

Cause: The identified interface classified as private interconnection interface was found to be a member of an IPMP group on the indicated node. The Highly Available IP Address (HAIP) is not supported on Solaris 11 if IPMP interfaces are classified as private interconnection.

Action: If HAIP support is required then ensure that only non-IPMP interfaces are classified as private interconnection.

PRVG-01529: Warning: Some of the IPMP interfaces are classified as private interconnection interfaces on nodes "{0}"

Cause: The interfaces classified as private interconnection interfaces were found to be a member of an IPMP group on the indicated nodes. The Highly Available IP Address (HAIP) is not supported on Solaris 11 if IPMP interfaces are classified as private interconnection.

Action: If HAIP support is required then ensure that only non-IPMP interfaces are classified as private interconnection.

PRVG-01533: The IPMP interfaces "{0}" classified as public network do not belong to the subnet "{1}" on node "{2}"

Cause: The identified IPMP interfaces classified as public networks were found to have different subnet on the indicated node.

Action: If IPMP interfaces are classified as public network for the clusterware configuration then all the configured interfaces must belong to same subnet.

PRVG-01534: The IPMP interfaces classified as public network do not belong to the public subnet on nodes "{0}"

Cause: The IPMP interfaces classified as public networks were found to have different subnet on the indicated nodes.

Action: If IPMP interfaces are classified as public network for the clusterware configuration then all the configured interfaces must belong to same subnet.

PRVG-01538: The IPMP interfaces "{0}" classified as private interconnection do not belong to the subnet "{1}" on node "{2}"

Cause: The identified IPMP interfaces classified as private interconnection were found to have different subnet on the indicated node.

Action: If IPMP interfaces are classified as private interconnection for the clusterware configuration then all the configured interfaces must belong to same subnet.

PRVG-01539: The IPMP interfaces classified as private interconnection do not belong to the private subnet on nodes "{0}"

Cause: The IPMP interfaces classified as private interconnection were found to have different subnet on the indicated nodes.

Action: If IPMP interfaces are classified as private interconnection for the clusterware configuration then all the configured interfaces must belong to same subnet.

PRVG-01543: The IPMP interfaces "{0}" share MAC or hardware address on node "{1}"

Cause: The identified interfaces were found to share the same MAC or hardware address on indicated node.

Action: If an IPMP interface is classified as private or public network then it must have a unique MAC or hardware address configured.

PRVG-01544: Some or all of the IPMP interfaces share MAC or hardware address on nodes "{0}"

Cause: The IPMP interfaces were found to share the same MAC or hardware address on indicated nodes.

Action: If an IPMP interface is classified as private or public network then it must have a unique MAC or hardware address configured.

PRVG-01545: Some of the IPMP group interfaces are not classified as private or public network interfaces on nodes "{0}"

Cause: Found an additional fail-over dependency on an interface in an IPMP group which is not classified as a public or private interconnect interfaces on the identified nodes.

Action: Ensure that all the IPMP group interfaces are classified as public or private interconnect interfaces on the identified nodes. Use command 'oifcfg setif {-node <varname>nodename</varname> | -global} {<if_name>/<varname>subnet</varname>:public/cluster_interconnect}' to classify the network interface as public or private interconnect interface.

PRVG-01546: IPMP group configuration check is skipped. The network configuration command line failed to specify network classifications PUBLIC or PRIVATE.

Cause: The IPMP configuration check could not be performed because the public and private network classifications were omitted from command line input.

Action: Ensure that the configuration of public and private network classifications is specified correctly in the command line input.

PRVG-01550: Failed to retrieve the list of IP addresses on private network from node "{0}"

Cause: An attempt to retrieve the list of private network IP addresses for the private network classifications failed on the indicated node.

Action: Ensure that the configuration of private network classifications is done correctly on the indicated node.

PRVG-01551: Failed to retrieve the list of IP addresses on public network from node "{0}"

Cause: An attempt to retrieve the list of public network IP addresses for the public network classifications failed on the indicated node.

Action: Ensure that the configuration of public network classifications is done correctly on the indicated node.

PRVG-01560: Temporary directory path "{0}" is shared on nodes "{1}"

Cause: The temporary directory path was found to be shared by two or more nodes.

Action: Ensure that the temporary directory path is not shared between the nodes specified.

PRVG-01561: Setting ORA_CRS_HOME variable is not supported

Cause: The environment variable ORA_CRS_HOME has been set before starting an installation or upgrade.

Action: Unset environment variable ORA_CRS_HOME.

PRVG-01600: ASM network not specified

Cause: An ASM network was not specified when ASM presence was 'flex'.

Action: Make sure that there is at least one network of type 'ASM' or 'ASM-PRIV' selected in the Network Interface dialog screen of Oracle Universal Installer.

PRVG-01601: ASM network was not configured

Cause: An attempt to verify if the ASM network was configured failed when ASM presence was 'flex'.

Action: Make sure that there is at least one ASM network configured using the 'oifcfg setif' command.

PRVG-01604: Failed to validate ASM credentials in file "{0}"

Cause: An attempt to verify if the ASM credentials in specified credentials file are valid failed.

Action: Make sure that the path to specified file is correct. Also look at accompanying messages and respond accordingly.

PRVG-01605: Failed to validate ASM credentials

Cause: An attempt to verify ASM credentials are valid failed.

Action: Look at the accompanying messages and respond accordingly.

PRVG-01608: Network connectivity check across cluster nodes on the ASM network failed

Cause: An attempt to verify connectivity of cluster nodes on the ASM network failed.

Action: Look at the accompanying messages and respond accordingly.

PRVG-01611: ASM network not specified

Cause: An ASM network was not specified when ASM presence was 'flex'.

Action: Make sure that there is at least one ASM network specified using the - networks command line parameter.

PRVG-01612: ASM disk groups could not be retrieved

Cause: During ASM integrity verification, an attempt to retrieve ASM disk groups failed.

Action: Look at the accompanying messages and respond accordingly.

PRVG-01613: ASM disk group "{0}" did not resolve to any disk

Cause: An attempt to retrieve an associated disk path for the indicated ASM disk group did not resolve to any disk paths.

Action: Ensure that the ASM disk group is correctly configured with valid disk paths and that the ASM filter driver if used lists the associated devices for this disk group when the command 'afdtool -getdevlist' is issued. If ASM filter driver is not in use then ensure that the ASM kfod command 'kfod op=DISKS disks=all dscvgroup=TRUE' lists the associated disks for the indicated ASM disk group.

PRVG-01650: failed to create required native library context.

Cause: An attempt to initialize a required native library context failed.

Action: Ensure that the Grid user has write authority on Oracle base path.

PRVG-02000: "search" entry in the existing "{0}" files is inconsistent

Cause: A check of nodes' resolv.conf files found inconsistent 'search' entries.

Action: Make sure that all nodes of the cluster have same 'search' entry in the file specified.

PRVG-02002: Encountered error in copying file "{0}" from node "{1}" to node "{2}"

Cause: The specified file could not be copied from the specified source node to the destination node.

Action: Examine the accompanying error message for details.

PRVG-02012: "domain" entry in the existing "{0}" files is inconsistent

Cause: A check of nodes' resolv.conf files found inconsistent 'domain' entries.

Action: Make sure that all nodes of the cluster have same 'domain' entry in the file specified.

PRVG-02016: "search" and "domain" entries coexist in file "{0}" on node "{1}"

Cause: Both 'search' and 'domain' entries were found in resolv.conf file on the node specified.

Action: Make sure that only one of these entries exist in file resolv.conf. It is preferable to use entry 'search' in resolv.conf.

PRVG-02019: Check for equivalence of user "{0}" from node "{1}" to node "{2}" failed

Cause: User equivalence doesn't exist between the specified nodes.

Action: Ensure that user equivalence exists between the specified nodes.

PRVG-02020: No OHASD entry was found in /etc/inittab file on node "{0}"

Cause: A check of file /etc/inittab did not find the expected entry for OHASD.

Action: Deconfigure Grid Infrastructure and reconfigure it.

PRVG-02026: no response for name "{0}" from the DNS server "{1}" specified in "resolv.conf"

Cause: An attempt to look up the name in DNS has failed.

Action: Make sure that all DNS servers specified in the file 'resolv.conf' respond to all the nodes.

PRVG-02027: Owner of file "{0}" is inconsistent across nodes. [Found = "{1}" on Nodes = "{2}"]

Cause: Ownership of the indicated file was not the same on all cluster nodes.

Action: Change the owner of the indicated file to ensure it is the same on all nodes.

PRVG-02028: Group of file "{0}" is inconsistent across nodes. [Found = "{1}"]

Cause: Ownership group of the indicated file was not the same on all cluster nodes.

Action: Change the group of the indicated file to ensure it is the same on all nodes.

PRVG-02029: Octal permissions of file "{0}" are inconsistent across nodes. [Found = "{1}"]

Cause: Octal permissions of the indicated file were not the same on all cluster nodes.

Action: Change the permissions of the indicated file to ensure they are the same on all nodes.

PRVG-02030: Failed to check attributes of file "{0}" on node "{1}"

Cause: An attempt to retrieve the file system attributes of the specified file failed.

Action: Ensure that the file exists on the system and user has permissions to retrieve the details of specified file.

PRVG-02031: Owner of file "{0}" did not match the expected value on node "{1}". [Expected = "{2}" ; Found = "{3}"]

Cause: A check for file system attributes found that the owner of the indicated file on the indicated node was different from the required owner.

Action: Change the owner of the indicated file to match the required owner.

PRVG-02032: Group of file "{0}" did not match the expected value on node "{1}". [Expected = "{2}" ; Found = "{3}"]

Cause: A check for file system attributes found that the group of the indicated file on the indicated node was different from the required group.

Action: Change the group of the indicated file to match the required group.

PRVG-02033: Permissions of file "{0}" did not match the expected octal value on node "{1}". [Expected = "{2}" ; Found = "{3}"]

Cause: A check for file system attributes found that the permissions of the indicated file on the indicated node were different from the required permissions.

Action: Change the permissions of the indicated file to match the required permissions.

PRVG-02034: Command "{0}" executed on node "{1}" exited with status value "{2}" and gave the following output:

Cause: An executed command produced unexpected results.

Action: Respond based on the failing command and the reported results.

PRVG-02035: Command "{0}" executed on node "{1}" exited with status value "{2}" and gave no output

Cause: An executed command produced unexpected results.

Action: Respond based on the failing command and the reported results.

PRVG-02042: Unable to obtain OLR location from node "{0}"

Cause: A check of the Oracle Local Registry (OLR) could not determine that file's location on the indicated node.

Action: Check the status of OLR using the command 'ocrcheck -config -local' on the indicated node.

PRVG-02043: Command "{0}" failed on node "{1}" and produced the following output:

Cause: An executed command failed.

Action: Respond based on the failing command and the reported results.

PRVG-02044: Command "{0}" failed on node "{1}" and produced no output.

Cause: An executed command failed.

Action: Respond based on the failing command.

PRVG-02045: Operating system function "{0}" failed on node "{1}" with error data: "{2}".

Cause: A call to an Operating System dependent service or function returned an error indication. The message includes the name of the function and the returned error data. The latter varies by platform but typically is numeric; on most platforms it is the value of C "errno" after the failing call.

Action: This error normally is accompanied by other (higher-level) messages describing the operation that is affected by the failure. It may also include one or more of messages PRVG-2046 and PRVG-2047 providing additional error details. All of the messages should be examined to assess the error, which may have a very ordinary cause and correction, such as an input file failing to open because the supplied name was misspelled.

PRVG-02046: Operating system error message: "{0}"

Cause: This message accompanies message PRVG-2045 above when the Operating System dependent error data can be converted into a text message. On most Oracle platforms the message is a text representation of the C "errno" value reported in message PRVG-2045.

Action: See message PRVG-2045.

PRVG-02047: Additional information: "{0}"

Cause: This message accompanies message PRVG-2045 and supplies additional information related to the error condition. A single error may include multiple lines of additional information.

Action: See message PRVG-2045.

PRVG-02048: no response for name "{0}" from the DNS server "{1}" specified in "resolv.conf"

Cause: An attempt to look up the name in DNS using the indicated name server has failed.

Action: Remove the obsolete DNS servers specified in the file 'resolv.conf'.

PRVG-02052: "hosts" entry does not exist in file "{0}" on nodes: "{1}"

Cause: The 'hosts' entry was not found in the specified name service switch configuration file on nodes indicated while it was present in others.

Action: Look at the file specified on all nodes. Make sure that either 'hosts' entry is defined on all nodes or is not defined on any nodes.

PRVG-02054: The following nodes have multiple "hosts" entries defined in file "{0}": {1}

Cause: The nodes specified had multiple 'hosts' entries defined in the file specified.

Action: Make sure that the file specified has only one 'hosts' entry.

PRVG-02058: "hosts" entry in the existing "{0}" files is inconsistent

Cause: A check of nodes' name service switch configuration files found inconsistent 'hosts' entries.

Action: Make sure that all nodes of the cluster have same 'hosts' entry in the file specified.

PRVG-02070: Disk group for ocr location "{0}" is not available on the following nodes:

Cause: Disk group was not found on the specified nodes.

Action: Ensure that the disks underlying the disk group are accessible from the specified nodes.

PRVG-02071: Disk group for ocr location "{0}" is not available on "{1}"

Cause: Disk group was not found on the specified node.

Action: Ensure that the disks underlying the disk group are accessible from the specified node.

PRVG-04000: Windows registry key "{0}" is absent on node "{1}"

Cause: Could not find the specified Windows registry key on the identified node.

Action: Contact Oracle Support Services.

PRVG-04001: Failed to check existence of Windows registry key "{0}" on node "{1}", [{2}]

Cause: Could not check the existence of specified Windows registry key on the identified node.

Action: Look at the accompanying messages and respond accordingly.

PRVG-04002: Missing '-user <user_name>' argument for selected privilege delegation method "{0}".

Cause: A user name was not specified on the command line for the specified privilege delegation method.

Action: Specify a user name using the '-user' option following the privilege delegation method on the command line.

PRVG-04500: Parameter "{0}" value is not valid

Cause: This is an internal error. The value for the specified parameter is null or empty string.

Action: Contact Oracle Support Services.

PRVG-04505: Windows user "{0}" cannot be the service user

Cause: An attempt was made to specify the built-in Windows user 'nt authority\local service' as the service owner.

Action: Specify either the Windows user 'nt authority\local system' or a Windows domain user without administrative privilege as the service owner.

PRVG-04506: Windows user "{0}" is not a domain user

Cause: An attempt was made to specify a Windows user account local to this system as the service owner.

Action: Specify either the Windows user 'nt authority\\local system' or a Windows domain user without administrative privilege as the service owner.

PRVG-04510: Windows user "{0}" is an administrator on the nodes "{1}"

Cause: The specified Windows user was found to be an administrator on the nodes specified.

Action: Make sure that the Windows user name specified as service user is not an administrator on any of the nodes.

PRVG-04513: User name or password is invalid for Windows user "{0}"

Cause: An attempt to verify the Windows user name and password failed as user name or password is not valid.

Action: Make sure that the Windows user name and password specified are correct.

PRVG-04515: Unable to determine if the Windows user "{0}" is a domain user

Cause: An attempt to determine if the specified Windows user account is a domain user failed.

Action: Examine the accompanying error messages for details.

PRVG-04516: Failed to verify Windows user "{0}" is not an administrator on nodes "{1}"

Cause: An attempt to determine if the specified Windows user is an administrator on the specified nodes failed.

Action: Examine the accompanying error messages for details.

PRVG-04517: Failed to validate the user name and password for Windows user "{0}"

Cause: An attempt to determine if the specified Windows user name and password are valid failed.

Action: Examine the accompanying error messages for details.

PRVG-04520: The OSUSER wallet contains incorrect password for Windows user "{0}"

Cause: An attempt to verify the password stored in OSUSER wallet for the specified Windows user found that the password is invalid.

Action: Use the command 'crsctl modify wallet -type OSUSER' to update the password in the wallet for the specified user.

PRVG-04521: Failed to verify the password stored in OSUSER wallet for Windows user "{0}"

Cause: An attempt to determine if the password stored in OSUSER wallet for specified Windows user is valid failed.

Action: Examine the accompanying error messages for details.

PRVG-04522: Failed to check if Windows user "{0}" can be used as service user

Cause: An attempt to determine if the specified Windows user can be used as a service user failed.

Action: Examine the accompanying error messages for details.

PRVG-04524: Windows user "{0}" is not a member of Windows group "{2}" on nodes "{1}"

Cause: The specified Windows user was not a member of specified Windows group on the nodes specified.

Action: Add the specified Windows user to the specified Windows group using the 'net group' command.

PRVG-04526: Failed to verify if Windows user "{0}" is a member of Windows group "{1}"

Cause: An attempt to determine if the specified Windows user is a member of specified windows group failed.

Action: Examine the accompanying error messages for details.

PRVG-04531: Windows user "{0}" does not have permissions on directory "{1}" on nodes "{2}"

Cause: The specified Windows user did not have permissions on directory specified on the nodes specified.

Action: Grant full control to the directory specified to the Windows user specified on the nodes specified. Use Windows Explorer or a comparable mechanism to grant full control.

PRVG-04532: Windows user "{0}" does not have permissions on file "{1}" on nodes "{2}"

Cause: The specified Windows user did not have permissions on file specified on the nodes specified.

Action: Grant full control to the file specified to the Windows user specified on the nodes specified. Use Windows Explorer or a comparable mechanism to grant full control.

PRVG-04533: Windows user "{0}" does not have permissions on Windows registry key "{1}" on nodes "{2}"

Cause: The specified Windows user did not have permissions on Windows registry key specified on the nodes specified.

Action: Grant full control to the Windows registry key specified to the Windows user specified on the nodes specified. Use Windows registry tool to grant permissions.

PRVG-04537: Failed to verify Windows user "{0}" has permissions on directory "{2}" on nodes "{1}"

Cause: An attempt to determine if the specified Windows user has permissions on the directory specified on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRVG-04538: Failed to verify Windows user "{0}" has permissions on file "{2}" on nodes "{1}"

Cause: An attempt to determine if the specified Windows user has permissions on the file specified on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRVG-04539: Failed to verify Windows user "{0}" has permissions on Windows registry key "{2}" on nodes "{1}"

Cause: An attempt to determine if the specified Windows user has permissions on the Windows registry key specified on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRVG-04558: ASM instance was found to be configured and running on nodes "{0}" and not running on the node "{1}" on which upgrade is requested

Cause: An ASM instance was found configured and running on the indicated nodes and not on the identified node on which upgrade was requested.

Action: Ensure that the upgrade is performed on one of the indicated nodes on which the ASM instance is currently configured and running.

PRVG-04560: Default listener for node "{0}" was found configured and running on node "{1}"

Cause: A default listener was found configured and running on the indicated node and not on the node on which the upgrade was requested.

Action: Ensure that the default listener, if configured, is running on the node on which the upgrade is being performed.

PRVG-04562: Failed to determine the status of an ASM instance configuration. Error: {0}

Cause: Attempt to retrieve an information about the current configuration of an ASM instance failed with the indicated error.

Action: Ensure that the ASM instance, if configured, is correctly configured and an ASM instance is up and running on one of the cluster nodes.

PRVG-04563: Failed to determine the status of default listener on the node "{0}" on which upgrade is requested. Error: {1}

Cause: Attempt to retrieve the status of the default listener on the node on which upgrade is requested failed with the indicated error.

Action: Ensure that the default listener, if configured, for the node on which upgrade is requested is correctly configured and is running from the node.

PRVG-04564: File "{0}" could not be created

Cause: ASM disk ownership, group, permission and size checks failed because ASM discovery string processing was unable to create a temporary file.

Action: Ensure that there is at least 1GB space in the location where the file is being created. Ensure that the user executing the check has write permission at the specified location.

PRVG-04567: An ASM instance was found to be configured but the ASM parameter file used for this instance was not found on the node "{0}" on which upgrade is requested.

Cause: An ASM parameter file for an ASM instance configured on the indicated node was not found.

Action: Ensure that the ASM instance is configured using an existing ASM parameter file, SPFILE or PFILE, on the indicated node.

PRVG-04568: An ASM instance was found to be configured but the ASM parameter file does not exist at location "{0}" on the node "{1}" on which upgrade is requested.

Cause: The indicated ASM parameter file did not exist at the identified location.

Action: Ensure that the ASM instance is configured using an existing ASM parameter file, SPFILE or PFILE, on the indicated node.

PRVG-04600: Nodes "{0}" do not have VIPs configured

Cause: An attempt to verify if the specified nodes that are configured as 'auto' and are currently Leaf nodes but can become Hub nodes have Virtual Internet Protocol (VIP) addresses configured failed because no IP addresses were assigned for the node VIPs.

Action: Ensure that the nodes specified have node VIPs that are configured but not in use.

PRVG-04601: Node VIPs for nodes "{0}" are active

Cause: An attempt to verify if the specified nodes that are configured as 'auto' and are currently Leaf nodes but can become Hub nodes have Virtual Internet Protocol (VIP) addresses that are not active failed because the VIPs for the specified nodes were active.

Action: Ensure that the node VIPs for the nodes specified have VIP's that are not active.

PRVG-04610: Nodes "{0}" do not have VIPs configured

Cause: It was found that specified hub nodes do not have node VIPS configured.

Action: Ensure that the nodes specified have node VIPs that are configured but not in use.

PRVG-04611: Node VIPs for nodes "{0}" are active

Cause: The VIPs for the specified hub nodes were found to be reachable.

Action: Ensure that the node VIPs for the nodes specified have VIP's that are not reachable using ping.

PRVG-04654: Disk discovery string mismatch between ASM instance and GPnP profile. GPnP profile: "{0}", ASM Instance: "{1}".

Cause: Disk discovery strings in the ASM instance and GPnP profile were different.

Action: Use the command 'asmcmd dsset' to set the ASM discovery string to the correct value in both places.

PRVG-04655: The command "{0}" to retrieve ASM discovery string failed

Cause: The specified command executed to retrieve ASM discovery string failed.

Action: Look at the accompanying messages and respond accordingly.

PRVG-04656: The command "{0}" to obtain the list of ASM disks failed

Cause: The specified command executed to retrieve list of ASM disks failed.

Action: Look at the accompanying messages and respond accordingly.

PRVG-04657: The permissions for block devices "{0}" are incorrect on node "{1}" [Expected = {2} octal, Actual = {3}]

Cause: The permissions of the indicated block devices were incorrect on the specified node. Starting in 12g the default ASM disk discovery string was changed from '/dev/raw/raw*' to '/dev/sd*'. The disks corresponding to the block device files in the message were members of ASM disk groups and were accessed using the raw devices (matched by '/dev/raw/raw*' prior to 12g) with the correct permissions. However, the block devices in the message corresponding to the same disks and found with '/dev/sd*' do not have the correct permissions. To ensure continued working of ASM, all disks that were members of disk groups must continue to be members.

Action: Make sure that the permissions for the specified block devices matches the expected value (this will be necessary in the long run because raw devices are being deprecated). Alternatively set the string '/dev/raw/raw*' as the disk discovery path using command 'asmcmd dsset --normal <varname>discovery string</varname>' in ASM 11.2 or later, using command 'alter system set asm_diskstring=<varname>discovery string</varname> scope=spfile;' in 11.1 or earlier ASM.

PRVG-04664: Failed to obtain block device corresponding to raw disk "{0}" on node "{1}"

Cause: An attempt to obtain block device corresponding to specified raw disk failed on node specified. Starting in 12g the default ASM disk discovery string was changed from '/dev/raw/raw*' to '/dev/sd*'. The specified disks were picked up by using the old default disk discovery string '/dev/raw/raw*'. To ensure continued working of ASM, all disks that were members of disks groups must continue to be members.

Action: Look at the accompanying error message and respond accordingly.

PRVG-04665: The owner for block devices "{0}" are incorrect on node "{1}" [Expected = {2}, Actual = {3}]

Cause: The owner of the block device on the node specified were incorrect. Starting in 12g the default ASM disk discovery string was changed from '/dev/raw/raw*' to '/dev/sd*'. The disks corresponding to the block device files in the message were members of ASM disk groups and were accessed using the raw devices (matched by '/dev/raw/raw*' prior to 12g) with the correct ownership. However, the block devices in the message corresponding to the same disks and found with '/dev/sd*' do not have the correct ownership. To ensure continued working of ASM, all disks that were members of disk groups must continue to be members.

Action: Make sure that the owner of the specified block devices matches the expected value (this will be necessary in the long run because raw devices are being deprecated). Alternatively set the string '/dev/raw/raw*' as the disk discovery path using command 'asmcmd dsset --normal <varname>discovery string</varname>' in ASM 11.2 or later, using command 'alter system set asm_diskstring=<varname>discovery string</varname> scope=spfile;' in 11.1 or earlier ASM.

PRVG-04666: The group for block devices "{0}" are incorrect on node "{1}" [Expected = {2}, Actual = {3}]

Cause: The group ownership of the block devices on the node specified were incorrect. Starting in 12g the default ASM disk discovery string was changed from '/dev/raw/raw*' to '/dev/sd*'. The disks corresponding to the block device files in the message were members of ASM disk groups and were accessed using the raw devices (matched by '/dev/raw/raw*' prior to 12g) with the correct group ownership.

However, the block devices in the message corresponding to the same disks and found with '/dev/sd*' do not have the correct group ownership. To ensure continued working of ASM, all disks that were members of disk groups must continue to be members.

Action: Make sure that the group of the specified block devices matches the expected value (this will be necessary in the long run because raw devices are being deprecated). Alternatively set the string '/dev/raw/raw*' as the disk discovery path using command 'asmcmd dsset --normal <varname>discovery string</varname>' in ASM 11.2 or later, using command 'alter system set asm_diskstring=<varname>discovery string</varname> scope=spfile;' in 11.1 or earlier ASM.

PRVG-04669: Could not determine ASM disk discovery string on node "{0}"

Cause: ASM disk ownership, group, permission and size checks failed because the ASM discovery string could not be determined.

Action: Examine the accompanying error messages and correct the problem indicated.

PRVG-04670: File "{0}" could not be read

Cause: An error occurred while reading the specified file while trying to determine whether default ASM discovery string was being used.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-04671: Failed to match the block device "{0}" with the new default discovery string

Cause: The specified block device could not be discovered with the new default discovery string. Starting in 12g the default ASM disk discovery string was changed from '/dev/raw/raw*' to '/dev/sd*'. To ensure proper upgrade of ASM, all disks that were member disks of diskgroups prior to upgrade must continue to be discovered as member disks after upgrade.

Action: Make sure that the specified devices are discoverable using the new default discovery string (this will be necessary in the long run because raw devices are being deprecated). Alternatively set the string '/dev/raw/raw*' as the disk discovery path using command 'asmcmd dsset --normal <varname>discovery string</varname>' in ASM 11.2 or later, using command 'alter system set asm_diskstring=<varname>discovery string</varname> scope=spfile;' in 11.1 or earlier ASM.

PRVG-05150: could not determine if path {0} is a valid path on all nodes

Cause: Attempts to identify the device referenced by the path failed.

Action: Ensure that the path exists on all of the nodes participating in the operation and that the user has read access to '/etc/multipath.conf'.

PRVG-05317: The Clusterware is currently being upgraded to version: "{0}".\n The following nodes have not been upgraded and are\n running Clusterware version: "{1}".\n "{2}"

Cause: The CRS integrity may have discovered that your Oracle Clusterware is partially upgraded.

Action: Review warnings and make modifications as necessary. If the warning is due to partial upgrade of Oracle Clusterware stack then continue with upgrade and finish it.

PRVG-05500: Failed to retrieve the disk information for path "{0}"

Cause: Could not retrieve the disk information for the specified path on all nodes.

Action: Ensure that the path specified is an existing path and current user has access permission for this path on all nodes.

PRVG-05501: Failed to retrieve the disk information for path "{0}" on node "{1}"

Cause: Could not retrieve the disk information for the specified path on identified node.

Action: Ensure that the path specified is an existing path and current user has access permission for this path on identified node.

PRVG-05723: Network CRS resource is configured to use DHCP provided IP addresses

Cause: The network Cluster Ready Services (CRS) resource that was configured to request the Dynamic Host Configuration Protocol (DHCP) server for IP addresses was online. DHCP server check must not be performed while the network CRS resource configured to use the DHCP provided IP address is online.

Action: No action is required.

PRVG-05725: The TCP server process with PID "{0}" on node "{1}" failed to exit normally

Cause: The TCP server process with the PID specified, running on the node indicated, failed to exit normally.

Action: Use OS commands to terminate the TCP server process with the indicated PID.

PRVG-05726: Failed to discover DHCP servers on public network listening on port "{0}" using command "{1}"

Cause: An attempt to discover DHCP servers listening on public network on port specified using command specified failed.

Action: Contact the network administrator to make sure that DHCP servers exist on the network. If the DHCP servers are listening to a different port then specify it by using -port option.

PRVG-05727: Command "{0}" to generate DHCP client ID failed

Cause: An attempt to generate client ID using specified command required for 'crsctl discover dhcp', 'crsctl request dhcp' and 'crsctl release dhcp' commands failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-05730: DHCP servers on public network listening on port "{0}" could not provide an IP address for node VIP on node "{1}"

Cause: An attempt to verify if DHCP servers respond to DHCP discover packets sent on the specified port for specified node's node VIP failed, as no response was received.

Action: Contact the network administrator to make sure that DHCP servers exist on the network. If the DHCP servers are listening to a different port then specify it by

using -port option. Make sure that DHCP servers can provide VIPs for all nodes in the cluster that can start as a 'hub' node.

PRVG-05731: DHCP servers on network "{2}" listening on port "{0}" could not provide an IP address for node VIP on node "{1}"

Cause: An attempt to verify if DHCP servers respond to DHCP discover packets sent on the specified network and port for specified node's node VIP failed, as no response was received.

Action: Contact the network administrator to make sure that DHCP servers exist on the network specified. If the DHCP servers are listening to a different port then specify it by using -port option. Make sure that DHCP servers can provide VIPs for all nodes in the cluster that can start as a 'hub' node.

PRVG-05732: No DHCP server were discovered on the network "{1}" listening on port {0}

Cause: No reply was received for the DHCP discover packets sent on the specified network and port.

Action: Contact the network administrator to make sure that DHCP servers exist on the network. If the DHCP servers are listening to a different port then specify it by using -port option.

PRVG-05733: Failed to discover DHCP servers on network "{2}" listening on port "{0}" using command "{1}"

Cause: An attempt to discover DHCP servers listening on specified network and port using command specified failed.

Action: Contact the network administrator to make sure that DHCP servers exist on the network. If the DHCP servers are listening to a different port then specify it by using -port option.

PRVG-05736: The "{0}" command returned error "{1}"

Cause: An attempt to discover DHCP servers using specified command failed. The command returned error specified.

Action: Since CVU is operating not operating from a clusterware home it does not have access to all error messages. Look at the Oracle database error messages manual for the exact error message and act accordingly.

PRVG-05737: The file "{0}" could not be copied to "{1}" on local node.

Cause: While attempting to discover DHCP servers, the specified source file could not be copied to the specified destination file on the local node. Details are provided by the accompanying messages.

Action: Examine the accompanying messages and respond accordingly.

PRVG-05740: Oracle Restart installed, requested check is not valid in this environment

Cause: A check invalid for the Oracle Restart environment was attempted.

Action: Check the documentation and use a valid command for this environment.

PRVG-05741: Oracle Restart installed, multiple nodes not valid in this environment

Cause: Multiple nodes were specified as part of the nodelist in an Oracle Restart configuration.

Action: Specify the node on which Oracle Restart has been configured.

PRVG-05745: CRS Configuration detected, Restart configuration check not valid in this environment

Cause: A check valid for the Oracle Restart configuration was attempted in a multi-node cluster environment.

Action: Try a valid check for a multi-node cluster environment.

PRVG-05818: GNS resource is configured to listen on virtual IP address "{0}" for domain "{1}"

Cause: An attempt was made to run 'cluvfy comp dns' command against GNS resource configured to listen to specified domain at specified GNS-VIP while it was online.

Action: If GNS needs to be verified use 'cluvfy comp gns' command. If DNS setup needs to be checked then stop the GNS resource and start 'cluvfy comp dns -server'.

PRVG-05819: VIP address "{0}" is already in use

Cause: The identified VIP address was found to be active on the public network.

Action: Specify a VIP address that is not in use.

PRVG-05820: Failed to retrieve IP address of host "{0}"

Cause: An attempt to retrieve an IP address for the indicated host failed.

Action: Run 'nslookup' on the host name and make sure the name is resolved.

PRVG-05830: None of the currently configured VIP addresses belong to the public subnet "{0}" on the network interface "{1}" of the node "{2}".

Cause: No VIP addresses were found on the indicated public subnet on the identified node.

Action: Ensure that the indicated public subnet has at least one VIP address configured on it or deconfigure the public subnet.

PRVG-05831: Public subnet "{0}" has no public IP address except active VIP addresses "{1}" on the node "{2}".

Cause: The identified public subnet did not have any additional IP address other than the configured VIP addresses active on the node.

Action: Ensure that the indicated public subnet has at least one active public IP in addition to the identified VIP address.

PRVG-05834: Failed to retrieve the configured VIP address information for network resource on each of the cluster nodes.

Cause: An attempt to retrieve the configured node VIP address information failed.

Action: Ensure that the clusterware is up and running and also examine the accompanying messages and respond accordingly.

PRVG-05905: Windows firewall is enabled on nodes:

Cause: Windows firewall status was found to be enabled.

Action: To disable Windows firewall, on Windows 2003 or earlier run 'netsh firewall set opmode DISABLE'; on Windows 2008 or later run 'netsh advfirewall set allprofiles state off' at command prompt as an administrator on all the indicated nodes.

PRVG-05906: Windows firewall is enabled on the node "{0}"

Cause: Windows firewall status was found to be enabled.

Action: To disable Windows firewall, on Windows 2003 or earlier run 'netsh firewall set opmode DISABLE'; on Windows 2008 or later run 'netsh advfirewall set allprofiles state off' at command prompt as an administrator on the indicated node.

PRVG-05907: Windows firewall status check cannot be performed on nodes:

Cause: An attempt to determine the status of Windows firewall failed.

Action: Ensure that the access permissions for the Oracle user allow access to the Windows Registry and the registry has the REG_DWORD entry named 'EnableFirewall' with value 0 under 'HKEY_LOCAL_MACHINE\System\CurrentControlSet\Services\SharedAccess\Parameters\FirewallPolicy\StandardProfile' and 'HKEY_LOCAL_MACHINE\System\CurrentControlSet\Services\SharedAccess\Parameters\FirewallPolicy\DomainProfile' sub-keys on the node. It is recommended to back up the Windows Registry before proceeding with any changes. Restart your system to make your changes effective.

PRVG-05908: Windows firewall status check cannot be performed on node "{0}"

Cause: An attempt to determine the status of Windows firewall failed.

Action: Ensure that the access permissions for the Oracle user allow access to the Windows Registry and the registry has the REG_DWORD entry named 'EnableFirewall' with value 0 under 'HKEY_LOCAL_MACHINE\System\CurrentControlSet\Services\SharedAccess\Parameters\FirewallPolicy\StandardProfile' and 'HKEY_LOCAL_MACHINE\System\CurrentControlSet\Services\SharedAccess\Parameters\FirewallPolicy\DomainProfile' sub-key on the node. It is recommended to back up the Windows Registry before proceeding with any changes. Restart your system to make your changes effective.

PRVG-05909: Error reading key "{0}" from Windows Registry on node "{1}"

Cause: Specified Windows Registry key could not be read.

Action: Ensure that the specified key exists in Windows Registry and access permissions for the Oracle user allow access to the Windows Registry.

PRVG-05910: Error reading value 'EnableFirewall' under key "{0}" for Windows firewall status on node "{1}"

Cause: Could not read Windows Registry value 'EnableFirewall' under specified key.

Action: Ensure that the access permissions for the Oracle user allow access to the Windows Registry and the Registry value 'EnableFirewall' under specified key is present on the node.

PRVG-06000: OCR "{0}" is on raw or block device storage

Cause: An attempt was made to add OCR storage on a raw or block device.

Action: Choose a different location for storing OCR.

PRVG-06007: The OCR backup location "{0}" does not have enough space. [Expected="{1}" ; Found="{2}"]

Cause: Size of the OCR backup location was found to be insufficient.

Action: Increase the size of the OCR backup location or move the OCR backup to a location with sufficient space.

PRVG-06013: Failed to retrieve CRS active version from OCR dump on node "{0}"

Cause: An attempt to query the CRS active version key from OCR dump failed.

Action: Make sure Oracle Clusterware is up and running. Examine any accompanying error messages for details.

PRVG-06014: Failed to parse OCR dump output: "{0}"

Cause: An attempt to parse OCR dump failed.

Action: Make sure Oracle Clusterware is up and running. Examine any accompanying error messages for details.

PRVG-06015: Error retrieving output of OCR dump command on node "{0}"

Cause: Command 'ocrdump -stdout -xml' produced no output.

Action: Examine any accompanying error messages for details.

PRVG-06016: Failed to retrieve the OCR backup location from node "{0}". Command "{1}" failed with errors.

Cause: An attempt to retrieve the backup location of OCR failed on indicated node.

Action: Make sure Oracle Clusterware is up and running. Examine any accompanying error messages for details.

PRVG-06020: failed to retrieve CRS active version from node "{0}"

Cause: An attempt to query the CRS active version from the CRS home on the indicated node failed.

Action: Make sure Oracle Clusterware is up and running, address any issues described in accompanying error messages, and retry.

PRVG-06025: Voting disk "{0}" is on RAW or Block storage

Cause: An attempt was made to add voting disk storage on a raw or block device.

Action: Choose a different location for storing Voting disk.

PRVG-06056: Insufficient ASM instances found. Expected {0} but found {1}, on nodes "{2}"

Cause: Fewer than the configured ASM instance count were found running.

Action: Make sure that ASM is started on enough nodes by using the 'srvctl start asm' command.

PRVG-06057: Command "{0}" to check if ASM I/O server resource instances are running failed

Cause: An attempt to execute the displayed command failed.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-06059: ASM I/O servers are not running on sufficient number of nodes. [Required= {0}; Found= {1}]

Cause: An attempt to verify that ASM I/O servers are running on sufficient number of nodes failed as they running on less number of nodes than I/O server count.

Action: Make sure that ASM I/O servers are started on sufficient number of nodes by using 'srvctl start ioserver' command. If required count is greater than number of

nodes in the cluster make sure that the ASM I/O servers are started on all nodes of the cluster.

PRVG-06061: ASM I/O servers running on nodes "{0}" are running on nodes that do not have an ASM instance

Cause: An attempt to determine if all ASM I/O server instances are running on nodes with ASM instances found that on nodes specified I/O servers were running but there were no ASM instances.

Action: The ASM I/O servers can be relocated using the command 'srvctl relocate ioserver' to nodes on which ASM instances are running on.

PRVG-06062: ASM filter driver library is not loaded on nodes "{0}"

Cause: An attempt to check if ASM filter driver library was loaded failed on the nodes specified because the filter driver library was not loaded.

Action: Make sure that the ASM filter driver is installed on all nodes of the cluster and the ASM filter driver is managing all ASM managed disks.

PRVG-06063: Failed to check if the ASM filter driver library is installed on nodes "{0}"

Cause: An attempt to check if ASM filter driver library was loaded failed / on the nodes specified because the ASM filter driver status could not be determined.

Action: Look at the accompanying messages and respond accordingly.

PRVG-06066: Failed to obtain the list of disks managed by ASM on nodes "{0}"

Cause: An attempt to obtain the list of disks managed by ASM on the specified nodes failed.

Action: Look at the accompanying messages and respond accordingly.

PRVG-06067: The command "{0}" failed to run on nodes "{0}"

Cause: An attempt to obtain the list of disks managed by ASM filter driver failed on the nodes specified because the command could not be executed.

Action: Look at the accompanying messages and respond accordingly.

PRVG-06068: The command "{0}" failed to produce any output on nodes "{0}"

Cause: An attempt to obtain the list of disks managed by ASM filter driver failed on the nodes specified because the command did not produce any output.

Action: This is an internal error. Contact Oracle support services.

PRVG-06069: The disks "{0}" are not managed by ASM filter driver on node "{1}"

Cause: The indicated disks were listed by the ASM filter driver on one or more nodes but were not listed by ASM filter driver on the indicated node.

Action: Ensure that the disks listed by the ASM filter driver are consistent across all the cluster nodes.

PRVG-06070: failed to execute command "{0}" on node "{1}"

Cause: An attempt to execute the specified command on the node specified failed.

Action: Look at the accompanying messages and respond accordingly.

PRVG-06074: The ASM filter driver library is not installed on nodes "{0}".

Cause: The ASM filter driver library was not found installed on the indicated nodes.

Action: Ensure that the ASM filter driver library is consistently installed and loaded across all the cluster nodes.

PRVG-06075: failed to check if the ASM filter driver library is loaded on nodes "{0}".

Cause: An attempt to check whether the ASM filter driver library was loaded failed on the nodes specified because the ASM filter driver status could not be determined.

Action: Look at the accompanying messages and respond accordingly.

PRVG-06078: ASM filter driver library is not supported on current platform for this release "{0}".

Cause: The ASM filter driver library have not been ported for the indicated release on this OS platform.

Action: None

PRVG-06081: The disks "{0}" are not managed by ASM filter driver on node "{1}".

Cause: An attempt to verify that all disks that are managed by ASM are also managed by ASM filter driver failed because the specified disks were being managed by ASM but not by ASM filter driver.

Action: Use the command 'afdtool' to stamp the disks for management by ASM filter driver.

PRVG-07040: Failed to get LV count for "{0}"

Cause: Could not get Logical Volume information for the device specified.

Action: Ensure that the device specified is available.

PRVG-07050: No part of location "{0}" matches an existing path on node "{1}"

Cause: Neither the specified location nor any leading portion thereof matched existing file system paths on the indicated node.

Action: Ensure that the path is absolute and at least some leading portion of it matches an existing file system path on the indicated node.

PRVG-07051: No part of location "{0}" matches an existing path with write permissions for current user on node "{1}"

Cause: Neither the specified location nor any leading portion thereof matched existing file system paths with write permissions on the indicated node.

Action: Ensure that the path is absolute and at least some leading portion of it matches an existing file system path writable by the current user on the indicated node.

PRVG-07080: Failed to retrieve the 'srvctl' version on node "{0}", [{1}]

Cause: Could not get the version of 'srvctl' utility on the identified node.

Action: Look at the accompanying messages and respond accordingly.

PRVG-07090: An internal error occurred within cluster verification fix up framework

Cause: An error occurred while performing the selected fix up operations.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-07091: Unknown privilege delegation method specified

Cause: An unknown privilege delegation method was specified.

Action: Specify a valid value for the privilege delegation method. 'sudo' and 'root' are the only acceptable method values.

PRVG-07092: User "{0}" does not have sufficient authorization to run this command.

Cause: An attempt to run the Cluster Verification Utility (CVU) command failed because the user did not have sufficient authority to run it.

Action: Use the command line option '-method' to specify one of the privilege delegation methods.

PRVG-07500: File "{0}" not found

Cause: The specified file was not found.

Action: Ensure that the file exists and is readable.

PRVG-07501: An error occurred while parsing file "{0}"

Cause: An error occurred while parsing the document.

Action: Ensure that the document is well formatted and a valid XML document.

PRVG-07503: An I/O error occurred while reading file "{0}"

Cause: An I/O error occurred while parsing the document.

Action: Ensure that the document is accessible. Copy the document to a new location and retry.

PRVG-07504: An internal error occurred while parsing file "{0}"

Cause: An internal error occurred while parsing the document.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-08001: CRS home "{0}" is not a valid directory.

Cause: While attempting to determine the nodes on which to perform the verification operation, the Oracle Clusterware home discovered was not a valid directory.

Action: Ensure that any previous Oracle Clusterware installation has been deinstalled properly.

PRVG-08002: The required executable "olsnodes" is missing from the directory "{0}".

Cause: While attempting to determine the nodes on which to perform the verification operation, the 'olsnodes' executable was not found in the Oracle Clusterware home.

Action: Ensure that the Oracle Clusterware was installed properly. Ensure that any previous Oracle Clusterware configuration files have been cleaned up.

PRVG-08003: Unable to retrieve node list from the Oracle Clusterware.

Cause: While attempting to determine the nodes on which to perform the verification operation, the nodes that belonged to the cluster could not be obtained from the Oracle Clusterware.

Action: Ensure that the Oracle Clusterware stack is up so that Cluster Verification Utility (CVU) can retrieve the node list. The node list can be specified using the command line option '-n <varname>nodelist</varname>' or using CV_NODE_ALL property in the 'cvu_config' file so that CVU perform verification operation on those nodes.

PRVG-09001: Failed to read input from command line standard input

Cause: Failed to read the response from standard input.

Action: Ensure that the input is correctly entered on standard input.

PRVG-09003: Failed to read the "{0}" user credentials

Cause: Failed to read the response from standard input.

Action: Ensure that the input is correctly entered on standard input.

PRVG-09015: Failed to execute command "{0}" using "{1}" credentials on node "{2}" with error "{3}"

Cause: An attempt to execute the command with the credentials provided for the identified user across all the nodes failed.

Action: Ensure that the credentials provided are correct.

PRVG-09016: Failed with an error "{0}" on node "{1}"

Cause: An operating system error occurred while executing the fix up on the specified node.

Action: Look at the error details and respond accordingly.

PRVG-09018: Privilege delegation method and credentials are not specified

Cause: The privilege delegation method and credentials were not specified.

Action: Ensure that the privilege delegation method and its credentials are specified.

PRVG-09019: Copying required fix up files to directory "{0}" failed on all nodes

Cause: An attempt to copy fix up files to the indicated directory failed on all cluster nodes.

Action: Make sure that the user running fix up has read and write permissions on the indicated directory.

PRVG-09020: Executable file "{0}" not found on node "{1}"

Cause: Indicated executable file was not found at the indicated path on the identified node.

Action: Ensure that the executable file exists at the indicated path.

PRVG-09021: File "{0}" not found on nodes "{1}"

Cause: Indicated file was not found at the indicated path on the identified nodes.

Action: Ensure that the file exists at the indicated path.

PRVG-09023: Manual fix up command "{0}" was not issued by root user on node "{1}"

Cause: The indicated manual command to perform a fix up action was either not issued or was issued by an user other than root.

Action: Ensure that the indicated manual fix up command is executed as root user on the identified node.

PRVG-09025: Failed to update the value of parameter "{0}" in configuration file "{1}" on node "{2}"

Cause: An attempt to update the value of indicated parameter in the configuration file on the identified node failed.

Action: Ensure that the file exists and the privilege delegation method used to run this command is run with correct credentials.

PRVG-09026: Failed to adjust the value of parameter "{0}" using command "{1}" on node "{2}"

Cause: An attempt to update the system parameter value using indicated command failed on the indicated node.

Action: Examine the accompanying error messages for details and also ensure that the command executable exists at the identified path and the privilege delegation method used to run this command is run with correct credentials.

PRVG-09027: Failed to retrieve the current value of parameter "{0}" using command "{1}" on node "{2}"

Cause: An attempt to retrieve the current value of indicated system parameter using identified command failed on the indicated node.

Action: Examine the accompanying error messages for details and also ensure that the command executable exists at the identified path and the privilege delegation method used to run this command is run with correct credentials.

PRVG-09028: Failed to set an environment variable "{0}" on node "{1}"

Cause: An attempt to set an environment variable failed on indicated node.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-09030: Failed to open configuration file "{0}" on node "{1}"

Cause: An attempt to open the indicated file for read and write operations failed on the indicated node.

Action: Ensure that the file exists and the privilege delegation method used to run this command is run with correct credentials.

PRVG-09031: Missing required data in fix up data file.

Cause: An internal error occurred while performing the selected fix up operations.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-09032: Failed to create new user "{0}" on node "{1}", command "{2}" failed with error {3}

Cause: An attempt to add specified new user failed on the indicated node.

Action: Ensure that the privilege delegation method used to run this command is run with correct credentials.

PRVG-09033: Failed to create new group "{0}" on node "{1}"

Cause: An attempt to add specified new group failed on the indicated node.

Action: Ensure that the privilege delegation method used to run this command is run with correct credentials.

PRVG-09034: User "{0}" does not exist on node "{1}"

Cause: The specified user name was not known to the operating system on the indicated node.

Action: Ensure that the user account exists on the indicated node.

PRVG-09035: Group "{0}" does not exist on node "{1}"

Cause: The specified group name was not known to the operating system on the indicated node.

Action: Ensure that the group account exists on the indicated node.

PRVG-09036: Failed to add user "{0}" to group "{1}" on node "{2}"

Cause: An attempt to add the indicated user to the group failed on the specified node.

Action: Ensure that the privilege delegation method used to run this command is run with correct credentials and the user and group exist on the node.

PRVG-09037: Failed to get the list of groups for user "{0}" on node "{1}"

Cause: An attempt to retrieve the operating system groups to which the specified user belongs failed on the indicated node.

Action: Ensure that the user account exists on the node.

PRVG-09038: Failed to modify user "{0}" user ID to "{1}" on node "{2}"

Cause: An attempt to modify identified user's ID failed on the indicated node.

Action: Ensure that the privilege delegation method used to run this command is run with correct credentials.

PRVG-09039: Failed to modify group "{0}" group ID to "{1}" on node "{2}"

Cause: An attempt to modify identified group's ID failed on the indicated node.

Action: Ensure that the privilege delegation method used to run this command is run with correct credentials.

PRVG-09040: Failed to get available unique user ID from nodes "{0}"

Cause: An attempt to retrieve an unused unique user ID from the indicated nodes failed.

Action: Ensure that the node is reachable and the user running the command has required privileges to retrieve the information from user accounts database.

PRVG-09041: Failed to get available unique group ID from nodes "{0}"

Cause: An attempt to retrieve an unused unique group ID from the indicated nodes failed.

Action: Ensure that the node is reachable and the user running the command has required privileges to retrieve the information from group accounts database.

PRVG-09042: Failed to get available user ID from node "{0}"

Cause: An attempt to retrieve an unused user ID from the indicated node failed.

Action: Ensure that the node is reachable and the user running the command has required privileges to retrieve the information from user accounts database.

PRVG-09043: Failed to get available group ID from node "{0}"

Cause: An attempt to retrieve an unused group ID from the indicated node failed.

Action: Ensure that the node is reachable and the user running the command has required privileges to retrieve the information from group accounts database.

PRVG-09044: Failed to adjust the 'runlevel' value in file "{0}" on node "{1}"

Cause: An attempt to adjust the 'runlevel' value in entry inside the indicated file failed on the specified node.

Action: Ensure that the indicated file is in correct format and that the entry for 'initdefault' runlevel exists in the file.

PRVG-09045: Failed to install the package "{0}" from source location "{1}" on node "{2}"

Cause: An attempt to install the indicated package failed on the identified node.

Action: Ensure that the package source file exists at the identified location and the 'rpm' tool is available on the node.

PRVG-09046: Fix up for this verification failure is not supported

Cause: An internal error occurred while performing the selected fix up operations.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-09047: Fix up initial framework setup is not performed, cannot perform fix up operations

Cause: An internal error occurred while performing the selected fix up operations.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-09048: Fix up is not supported for Operating System parameter "{0}"

Cause: An internal error occurred while performing the selected fix up operations.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-09049: Failed to create home directory at path "{0}" for newly created user "{1}" on node "{2}"

Cause: An attempt to create the home directory at the indicated path failed for the newly created user on the indicated node.

Action: Manually create the home directory at the indicated path for the newly added user account.

PRVG-09050: Failed to determine the Operating System version on node "{0}"

Cause: An attempt to retrieve the operating system version failed on the identified node.

Action: Ensure that the command is being run in the correct operating system environment.

PRVG-09051: Fix up is not supported for the Operating System parameter "{0}" on current version of the Operating System on node "{1}"

Cause: A fix up operation was requested for an Operating System version that does not support that operation.

Action: None, or address the situation manually on the indicated node.

PRVG-09052: Failed to adjust the value of parameter "{0}" using operating system function call "{1}" on node "{2}" with error {3}

Cause: An attempt to update the system parameter value using the indicated system call failed on the indicated node.

Action: Examine the accompanying error messages for details.

PRVG-09053: Failed to retrieve the current value of parameter "{0}" using operating system function call "{1}" on node "{2}" with error {3}

Cause: An attempt to retrieve the current value of the indicated system parameter using the identified operating system function call failed on the indicated node.

Action: Examine the accompanying error messages for details.

PRVG-09055: Failed to verify the existence of Solaris Project name "{0}" on node "{1}"

Cause: An attempt to check the existence of the indicated Solaris Projects failed on the identified node.

Action: Ensure that the project specific configuration is correct on the identified node.

PRVG-09056: Failed to create the Solaris Project "{0}" for Oracle user on node "{1}"

Cause: An attempt to create the indicated Solaris Projects for Oracle user failed on the identified node.

Action: Ensure that the Solaris Project specific configuration is correct on the identified node.

PRVG-09057: Failed to retrieve the home directory of user "{0}" on node "{1}"

Cause: An attempt to retrieve the home directory of the identified user failed on the indicated node.

Action: Ensure that the file /etc/passwd is in correct format and that the contents of this file are correct on the indicated node.

PRVG-09060: Fix up is not supported for daemon or process "{0}"

Cause: An unsupported daemon or process was requested for fix up.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-09061: Daemon or process "{0}" could not be stopped on node "{1}", command "{2}" failed with error: {3}

Cause: An attempt to stop the indicated daemon or process failed on the identified node.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-09062: Daemon or process "{0}" could not be stopped permanently on node "{1}", command "{2}" failed with error: {3}

Cause: An attempt to permanently stop the indicated daemon or process failed on the identified node.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-09063: Daemon or process "{0}" is not running on node "{1}"

Cause: Indicated daemon or process was not found running on the identified node.

Action: Ensure that the daemon name is correct and it is running on the node indicated.

PRVG-09064: Failed to restart the ASMLib driver on node "{0}" using command "{1}". Detailed error: {2}

Cause: An attempt to restart the ASMLib driver failed on the identified node.

Action: Ensure that ASMLib is configured correctly and look at the accompanying messages for details. If the problem persists, contact Oracle Support Services.

PRVG-09065: Failed to retrieve the unpinned nodes using OLSNODES command "{0}" on node "{1}". Detailed error: {2}

Cause: An attempt to determine the pinned status of the cluster nodes using an OLSNODES command failed on the indicated node.

Action: Ensure that the 'olsnodes' executable tool exists at the specified location and look at the accompanying messages for details.

PRVG-09066: Failed to pin the nodes "{0}" using CRSCTL command "{1}" on node "{2}". Detailed error: {3}

Cause: An attempt to pin the specified nodes using a CRSCTL command failed on the indicated node.

Action: Ensure that the 'crsctl' executable tool exists at the specified location and look at the accompanying messages for details.

PRVG-09067: Huge page support is not enabled for Linux kernel on node "{0}".

Cause: Huge pages support was not found configured for the Linux kernel on indicated node.

Action: Ensure that the huge pages support is enabled for the Linux kernel on the indicated node.

PRVG-09068: Failed to determine the recommended value for huge pages on node "{0}".

Cause: An attempt to calculate the recommended value for huge pages failed on the indicated node.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-09070: Failed to update the settings of device file "{0}" using command "{1}" on node "{2}". Detailed error: {3}

Cause: An attempt to update the major and minor number of the indicated device file failed with the indicated error.

Action: Ensure that the indicated command exists at the specified location and look at the accompanying messages for details.

PRVG-09071: Failed to start the daemon "{0}" using command "{1}" on node "{2}". Detailed error: {3}

Cause: An attempt to start the identified daemon failed on the indicated node. Further details are supplied in the additional messages included.

Action: Rectify the issues described in the detailed messages and retry.

PRVG-09072: failed to disable the resource "{0}" using srvctl command "{1}" on node "{2}". Detailed error: {3}

Cause: An attempt to disable the identified resource failed on the indicated node. See included messages for details.

Action: Ensure that the 'srvctl' executable exists at the specified location and look at the accompanying messages for details.

PRVG-09073: failed to stop the resource "{0}" using srvctl command "{1}" on node "{2}". Detailed error: {3}

Cause: An attempt to stop the identified resource failed on the indicated node. See included messages for details.

Action: Ensure that the 'srvctl' executable exists at the specified location and look at the accompanying messages for details.

PRVG-09074: failed to get the resource "{0}" status using srvctl command "{1}" on node "{2}". Detailed error: {3}

Cause: An attempt to determine the identified resource status on the indicated node. See included messages for details.

Action: Ensure that the 'srvctl' executable exists at the specified location and look at the accompanying messages for details.

PRVG-10005: unable to determine local hostname

Cause: The hostname could not be determined.

Action: Check that the hostname for the local machine is valid. Look at the accompanying messages. If the problem persists, contact Oracle Support Services.

PRVG-10006: APPVIP type needs a VIP name. Specify a VIP name using -vip command line option.

Cause: VIP resource name was missing in the command line for APPVIP type.

Action: Specify a VIP name using -vip option.

PRVG-10008: unable to generate client ID for VIP type "{0}", cluster name "{1}", VIP resource name "{2}"

Cause: An attempt to generate client ID for specified cluster name, VIP type and resource name failed.

Action: Make sure that cluster name and VIP resource name do not exceed 252 characters. Make sure that VIP type is a valid VIP type. Refer to 'crsctl get clientid - help' for more information.

PRVG-10010: unable to discover DHCP server in the network listening on port "{0}" for client ID "{1}"

Cause: An attempt to discover DHCP server listening on port specified failed.

Action: Make sure that DHCP servers exist on the network and are listening on port specified. If they are listening on a different port then specify that port using the -port option. For more information refer to help for 'crsctl discover dhcp' command.

PRVG-10011: unable to request DHCP lease for client ID "{0}" on port "{1}"

Cause: An attempt to request DHCP lease for the specified client ID on specified port failed.

Action: Make sure that there are DHCP servers with IP addresses available on the network. If other DHCP servers are available which are listening on a different port specify an alternative port using the -port option. For more information refer to help for 'crsctl request dhcp' command.

PRVG-10013: unable to release DHCP lease for client ID "{0}", on port "{1}"

Cause: An attempt to release DHCP lease for the specified client ID on specified port failed.

Action: Make sure that there are DHCP servers listening on port specified. If the DHCP server is listening on a different port specify an alternative port using -port option. For more information refer to help for 'crsctl release dhcp' command.

PRVG-10014: HOSTVIP type needs a node name. Specify a node name using -n option.

Cause: Node name was missing in the command line for HOSTVIP type.

Action: For HOSTVIP type node name needs to be specified via -n option.

PRVG-10015: VIP type "{0}" is invalid

Cause: An invalid VIP type was specified for DHCP client ID generation.

Action: Make sure that VIP type is a valid VIP type. Refer to 'crsctl get clientid -help' for more information.

PRVG-10036: value for command line parameter "{0}" is not an integer

Cause: An invalid value was specified for the specified command line parameter.

Action: Re-submit the request with an integer value.

PRVG-10039: invalid subnet "{0}" specified

Cause: An invalid IPv4 or IPv6 subnet was supplied on command line.

Action: Supply a subnet address that conforms to IETF RFC-950 or IETF RFC-5942.

PRVG-10040: unable to get list of network interfaces

Cause: An attempt to get the list of network interfaces failed.

Action: Look at the accompanying messages for more information.

PRVG-10041: subnet "{0}" is not configured on the node

Cause: The subnet specified did not match subnet of any network interface on this node.

Action: Specify a subnet that matches at least one network interface's subnet on this node.

PRVG-10044: invalid cluster name "{0}" specified

Cause: An invalid cluster name was supplied on the command line.

Action: Specify a cluster name which is at least one character but no more than 15 characters in length. The cluster name must be alphanumeric, it cannot begin with a numeric character, and it may contain hyphen (-) characters. However, it cannot end with a hyphen (-) character.

PRVG-10045: invalid node name "{0}" specified

Cause: An invalid node name was supplied on the command line.

Action: Specify a node name which is at least one character but no more than 63 characters in length. The node name must be alphanumeric, it cannot begin with a numeric character, and it may contain hyphen (-) characters. However, it cannot end with a hyphen (-) character.

PRVG-10120: Failed to access ASMLib configuration file on the node "{0}"

Cause: ASMLib configuration file '/etc/sysconfig/oracleasm-_dev_oracleasm' or link '/etc/sysconfig/oracleasm' was not found or cannot be accessed on the indicated node.

Action: Ensure that the ASMLib is correctly installed and configured, and specified file is present at the given path and that the user has the necessary access privileges for the configuration file.

PRVG-10121: Failed to retrieve ASMLib configuration value from ASMLib configuration file "{0}" on the node "{1}"

Cause: The check for ASMLib configuration was unable to retrieve the required information from specified configuration file on the indicated node.

Action: Ensure that the ASMLib is correctly installed and configured on all the nodes and that the user has the necessary access privileges for the configuration file.

PRVG-10122: ASMLib configuration value set to configuration parameter "{0}" on the node "{1}" does not match with cluster nodes

Cause: The ASMLib configuration check found inconsistent settings across cluster nodes.

Action: Ensure that the ASMLib is correctly installed and configured on all the nodes with same configuration settings and that the user has the necessary access privileges for the configuration file.

PRVG-10123: ASMLib command utility is absent at path "{0}" on the nodes "{1}"

Cause: ASMLib command utility was absent at the identified file system path on the indicated nodes.

Action: Ensure that the ASMLib is correctly configured on all the cluster nodes with same configuration settings and that the ASMLib version is the same on all cluster nodes.

PRVG-10130: Unable to determine whether file path "{0}" is shared by nodes "{1}"

Cause: An attempt to determine whether the file path is shared across nodes failed.

Action: Examine the accompanying error messages for details.

PRVG-10501: Check of hostname length could not be performed on node "{0}"

Cause: The length of the host name could not be retrieved on the node indicated.

Action: Ensure that nodes that will run Oracle database releases prior to 11gR2 have an unqualified host name less than or equal to 8 characters.

PRVG-10502: The length of the host name was greater than 8 characters on node "{0}"

Cause: Length of the hostname should be less than or equal to 8 characters or pre-11gR2 Database releases may not run properly.

Action: Rename the host to have a length less than or equal to 8 characters.

PRVG-10510: User "{0}" is not a domain user, domain name absent

Cause: Could not identify domain name of current user.

Action: Log in to the OS as a domain user.

PRVG-10520: ASM disk label "{0}" did not resolve to any device path on node "{1}"

Cause: ASM disk label could not be resolved to any device on specified node.

Action: Ensure that the specified ASM label is correctly stamped on a shared device on the node specified. To verify the label to disk mapping use tools 'Asmtoolg' on Windows operating system platforms and 'oracleasm' on the Linux operating system platform.

PRVG-10521: Failed to resolve ASM disk label "{0}" to device path on node "{1}"

Cause: Failed to resolve ASM disk label to any device on specified node.

Action: Ensure that the specified ASM label is correctly stamped on a shared device on the node specified and that the labeled devices are accessible to current user. To verify the label to disk mapping use tools 'Asmtoolg' on Windows operating system platforms and 'oracleasm' on the Linux operating system platform.

PRVG-10523: Disk "{0}" is not identified by ASMLib.

Cause: The indicated disk was not identified by ASMLib.

Action: Ensure that the ASMLib is correctly configured on all the cluster nodes and that the indicated disk is listed by 'oracleasm' on the Linux operating system platform.

PRVG-10524: failed to determine whether disk "{0}" is managed by ASMLib

Cause: An attempt to validate whether the indicated disk was managed by ASMLib failed.

Action: Ensure that the ASMLib is correctly configured on all the cluster nodes and that the indicated disk is listed by 'oracleasm' on the Linux operating system platform.

PRVG-10530: Internal error: {0}

Cause: An internal error occurred. The included value is an internal identifier.

Action: Oracle internal error. Contact Oracle Support Services.

PRVG-10605: Release version [{0}] is consistent across nodes but does not match the active version [{1}].

Cause: During pre-upgrade validation, the Clusterware release version was consistent but did not match the active version. Usually this results from a failed upgrade.

Action: A forced upgrade may be required.

PRVG-10606: Release versions [{0}] are inconsistent across nodes.

Cause: Inconsistent release versions were found on two or more nodes. This might be caused by an upgrade in progress.

Action: Ensure that any pending upgrade is complete.

PRVG-10705: Database version "{0}" is not compatible with the Clusterware version "{1}".

Cause: Clusterware version has to be equal to or greater than the database version.

Action: Upgrade Clusterware to a higher version.

PRVG-10952: Check for consistency of root users primary group failed on the following nodes: "{0}"

Cause: The primary group and group id of the root user was not consistent across all the nodes.

Action: Ensure that the root user's primary group name and ID exists on all the nodes and that the root user is a member of this group.

PRVG-10953: Check for consistency of root users primary group had a command failure on the following nodes: "{0}"

Cause: An OS command issued while checking user group information failed unexpectedly.

Action: Contact Oracle Support.

PRVG-10958: Check for consistency of root users primary group "{0}" on node: "{1}" failed. The group membership of root user for group "{2}" does not exist on the following nodes: "{3}"

Cause: The indicated primary group and group id of the root user was not found in the existing membership groups of the root users on the identified nodes.

Action: Ensure that the indicated primary group name and ID of the root user exists on all the cluster nodes, and that the root user has membership in the indicated group on each of the cluster nodes.

PRVG-10959: Check for consistency of root users primary group had a command failure on the following node: "{0}"

Cause: An OS command issued while checking user group information failed unexpectedly.

Action: Contact Oracle Support.

PRVG-11000: Invalid usage of CVU internal function

Cause: This is an internal error.

Action: Please contact Oracle Support.

PRVG-11001: Failed to execute command "{0}" on node "{1}"

Cause: An error occurred while executing the command.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-11003: SCAN is not configured

Cause: An attempt to retrieve SCAN failed.

Action: Ensure that SCAN is properly defined in this cluster. Use 'srvctl add scan' to add SCAN.

PRVG-11004: SCAN listener is not configured

Cause: An attempt to retrieve SCAN listener configuration failed.

Action: Ensure that SCAN is properly defined in this cluster. Use 'srvctl add scan_listener' to add SCAN listener.

PRVG-11005: Database "{0}" is not defined in this cluster

Cause: An attempt to retrieve cluster-specific metadata about the database failed.

Action: Ensure that the database name was specified correctly. Use 'srvctl add database' to enable Clusterware support for the database.

PRVG-11006: VIPs are not defined for the nodes on which database "{0}" is running

Cause: An attempt to retrieve the VIP on which the indicated database is running failed.

Action: Ensure that VIPs are properly defined in this cluster. Use 'srvctl add vip' to add VIP.

PRVG-11007: No instances are defined for database "{0}"

Cause: An attempt to retrieve database instances for the database failed.

Action: Ensure that at least one database instance is defined. Use 'srvctl add instance' to add database instance.

PRVG-11008: An internal command "cvuhelper" returned "{0}" while fetching the node list for database unique name "{1}".

Cause: An attempt to execute an internal cvuhelper command failed.

Action: Examine the accompanying error messages for details. Address issues found and retry the operation.

PRVG-11009: An internal command "cvuhelper" exited unexpectedly while fetching the node list for database "{0}".

Cause: An attempt to execute an internal cvuhelper command exited unexpectedly.

Action: Examine the accompanying error messages for details. Address issues found and retry the operation.

PRVG-11049: Interface "{0}" does not exist on nodes "{1}"

Cause: The interface was classified as cluster interconnect or public but the interface was not found on the nodes.

Action: Ensure that the same network interface is defined on each node of Cluster.

PRVG-11050: No matching interfaces "{0}" for subnet "{1}" on nodes "{2}"

Cause: The interfaces classified as cluster interconnect or public were not found on the specified subnet on the nodes.

Action: Ensure that at least one interface with specified name is on the specified subnet on each node of Cluster.

PRVG-11051: network list is in invalid format

Cause: The processing of a network list argument encountered a syntax error.

Action: Network list is a comma separated list of networks. Each network can be specified in the format "if_name"[:subnet_id[:public|cluster_interconnect]]. if_name can have "*" as in "eth*" to match interfaces like eth1, eth02, etc. Provide network list in valid format.

PRVG-11052: Interface name is not enclosed within double quotes

Cause: Interface name in the interface list was not enclosed within double quotes.

Action: Provide interface name within double quotes.

PRVG-11053: Invalid subnet type

Cause: Invalid subnet type was specified in interface list.

Action: Provide public or cluster_interconnect as subnet type.

PRVG-11054: Interface "{0}" not found on this node

Cause: Failed to locate the interface on this node.

Action: Provide interface names configured on the node on which CVU is running.

PRVG-11055: Interfaces configured with subnet number "{0}" have multiple subnets masks

Cause: Interfaces of some nodes were configured with different subnet masks for the same subnet number.

Action: This message is accompanied by another message that lists the subnet masks information on the nodes. Configure interfaces on the nodes with same subnet mask for a subnet number.

PRVG-11056: subnet masks "{0}" are configured with subnet number "{1}" on nodes "{2}"

Cause: NO

Action: n/a

PRVG-11057: Checking subnet mask consistency...

Cause: NO

Action: n/a

PRVG-11058: Subnet mask consistency check passed.

Cause: NO

Action: n/a

PRVG-11059: Subnet mask consistency check passed for subnet "{0}".

Cause: NO

Action: n/a

PRVG-11060: Subnet mask consistency check failed.

Cause: NO

Action: n/a

PRVG-11061: Different MTU values used across cluster interconnect network interfaces on subnets "{0}"

Cause: Different MTU values found for the cluster interconnect interfaces on the specified subnets.

Action: Set the same MTU value for all cluster interconnect interfaces on the specified subnets.

PRVG-11065: Node connectivity checks will not be performed on network interfaces "{0}" on node "{1}" as they were down

Cause: The indicated network interfaces were not checked because they were down.

Action: If the indicated interfaces are to be used by the cluster bring them up and repeat this test.

PRVG-11067: TCP connectivity from node "{0}": "{1}" to node "{2}": "{3}" failed

Cause: Errors occurred while attempting to establish TCP connectivity between the identified two interfaces.

Action: Ensure that there are no firewalls blocking TCP operations and no process monitors running that can interfere with programs' network operations.

PRVG-11069: IP address "{0}" of network interface "{1}" on the node "{2}" would conflict with HAIP usage.

Cause: One or more network interfaces have IP addresses in the range (169.254.*.*), the range used by HAIP which can create routing conflicts.

Action: Make sure there are no IP addresses in the range (169.254.*.*) on any network interfaces.

PRVG-11070: IP address "{0}" of non-private network interface "{1}" on the node "{2}" would conflict with HAIP usage.

Cause: One or more non-private network interfaces have IP addresses in the range (169.254.*.*), the range used by HAIP which can create routing conflicts.

Action: Make sure there are no IP addresses in the range (169.254.*.*) on any non-private network interfaces.

PRVG-11071: IP address "{0}" of private network interface "{1}" on the node "{2}" with subnet mask "{3}" would conflict with HAIP usage.

Cause: One or more private network interfaces have IP addresses in the range (169.254.*.*) and subnet mask which is not 16-18 bits, the range used by HAIP which can create routing conflicts

Action: Make sure there are no IP addresses in the range (169.254.*.*) with subnet mask which is not 16-18 bits on any private network interfaces.

PRVG-11072: Private network Interface "{0}" on node "{1}" with IP address "{2}" is not Infiniband.

Cause: One or more private network interfaces on the system were not Infiniband. In an Exadata environment, if private interfaces are not Infiniband, connection failures will result.

Action: Make sure all the private interfaces in an Exadata environment are Infiniband type.

PRVG-11073: Subnet on interface "{0}" of node "{1}" is overlapping with the subnet on interface "{2}". IP address range ["{3}"-"{4}"] is overlapping with IP address range ["{5}"-"{6}"].

Cause: IP ranges were overlapping on one or more subnets. This would result in routing failures.

Action: Ensure that subnets do not have overlapping IP address ranges.

PRVG-11101: The disk free space could not be determined for file system path "{0}" on nodes "{1}".

Cause: An attempt to determine the disk space for the specified file system path failed on the nodes specified.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-11103: The Free Space Component check failed on node(s) "{0}"

Cause: The free space in the CRS home directory is below the threshold.

Action: Free up space in this directory to avoid disk free space issues.

PRVG-11104: The disk free space for file system path "{0}" on node "{1}" is below "{2}" percent of total disk space. The required free space is "{3}", the available free space is "{4}" and the total disk size is "{5}".

Cause: The disk free space in the specified file system was below the specified minimum threshold as a percentage of total disk space on the node specified.

Action: Ensure that the specified file system has at least the specified required free space.

PRVG-11105: The disk free space for file system path "{0}" on node "{1}" is below required threshold. The required free space is "{2}" and the available free space is "{3}".

Cause: The disk free space in the specified file system was below the specified required minimum threshold on the node specified.

Action: Ensure that the specified file system has at least the required free space.

PRVG-11110: The specified database file location "{0}" did not have read and write access to user "{1}" on node "{2}"

Cause: The database file location did not have read and write permissions to the user on some nodes.

Action: If the current user intends to be the Oracle installation owner, ensure that the user has read and write access to the database file location

PRVG-11111: Path "{0}" is not shared by at least {1} node.

Cause: The path was not shared by sufficient nodes to meet the target hub size.

Action: Select a different path.

PRVG-11112: Path "{0}" is not shared by the following hub nodes: {1}

Cause: Specified hub nodes do not share the path.

Action: Select a path that is shared by all of the hub nodes.

PRVG-11115: Following error occurred while establishing connection to database "{0}"

Cause: An attempt to connect to database failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-11123: AUDIT_FILE_DEST location "{0}" is shared among instances "{1}" of database "{2}"

Cause: Two or more instances of the database were found to be using the same AUDIT_FILE_DEST location on shared storage.

Action: Ensure that AUDIT_FILE_DEST location is not shared among instances.

PRVG-11125: Following error occurred during shared AUDIT_FILE_DEST location check

Cause: An error occurred while performing shared AUDIT_FILE_DEST locations check.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-11126: Oracle home from which database "{0}" is running could not be determined.

Cause: Checks on the directory location pointed to by the database initialization parameter 'AUDIT_FILE_DEST' failed to determine the Oracle home from which the specified database was running.

Action: Examine the accompanying messages for details on the cause of failure, address the issues described and retry.

PRVG-11127: skipping AUDIT_FILE_DEST location check for database "{0}" as software owner "{1}" of the associated Oracle home "{2}" is not same as current OS user "{3}".

Cause: Checks for the directory location pointed to by the database initialization parameter 'AUDIT_FILE_DEST' for the specified database could not be performed as the software owner of the associated Oracle home was not same as the current operating system user.

Action: Run this check as the specified software owner.

PRVG-11134: Interface "{0}" on node "{1}" is not able to communicate with interface "{2}" on node "{3}"

Cause: The specified interfaces were not able to communicate using a multicast address.

Action: Ensure that multicast is enabled on the specified interfaces and network path exists between the interfaces.

PRVG-11137: Following error occurred during multicast check

Cause: An error occurred while performing multicast check.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-11138: Interface "{0}" on node "{1}" is not able to communicate with interface "{2}" on node "{3}" over multicast group "{4}"

Cause: The specified interfaces were not able to communicate using a multicast address.

Action: Ensure that multicast is enabled on the specified interfaces and that a network path exists between the interfaces.

PRVG-11139: Specified subnets "{0}" could not be found in the cluster network interface configured subnets "{1}"

Cause: The subnets provided in the -network option were not configured in the cluster network interfaces.

Action: Ensure that the subnets specified in the -network option are configured in the cluster and are up and running.

PRVG-11143: The following error occurred during stale database schema statistics check.

Cause: An error occurred while performing database stale schema check.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-11144: Schema objects "{0}" have stale statistics in the database "{1}"

Cause: The specified schema objects were found to have stale statistics in the database.

Action: Refer to MOS note 560336.1 at oracle support to fix the issue.

PRVG-11170: Skipping DHCP check for cluster which has only IPv6 interfaces

Cause: All the public interfaces in a cluster were IPv6.

Action: IPv6 addresses are automatically generated, hence the check is not required.

PRVG-11171: DHCP check failed

Cause: An error occurred while reading network interface information.

Action: n/a

PRVG-11300: Parameter "{0}" value is not valid

Cause: This is an internal error. The value for the specified parameter is null or empty string.

Action: Contact Oracle Support Services.

PRVG-11301: 'root' user "{0}" password is not valid on the following nodes "{1}"

Cause: An attempt to validate the specified superuser password failed.

Action: Make sure that the 'root' user password specified is correct and valid. Make sure that the password is same across all nodes of the cluster.

PRVG-11302: 'sudo' command does not exist at location "{0}" on nodes "{1}"

Cause: An attempt to verify that the specified user has permission to run sudo command from specified path on specified nodes failed.

Action: Make sure that the specified path to sudo command exists on all nodes. Make sure that the permission to read and execute exists for current user.

PRVG-11303: Commands could not be executed as 'root' using 'sudo' on nodes "{0}"

Cause: An attempt to run commands as 'root' using 'sudo' on specified nodes failed.

Action: Make sure that the 'sudo' command exists on all nodes. Make sure that 'id' command can be executed using 'sudo'.

PRVG-11304: Executing commands as root not permitted

Cause: An attempt was made to execute a command as 'root' user when root execution method and credentials were not specified.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-11305: Commands could not be executed as user 'root' on nodes "{0}"

Cause: An attempt to run commands as user 'root' on the specified nodes failed.

Action: Look at the accompanying error messages for details and make sure that: - The command exists on the nodes specified. - The specified command has execute permission on the node specified. - The 'root' user password specified is correct.

PRVG-11310: "{0}" nodes were not found in the cluster

Cause: Zero nodes of specified type were found in the cluster.

Action: If this message is accompanied by error messages, respond according to those messages.

PRVG-11314: The operating system groups for the following databases are not consistent across all nodes: {0}

Cause: An operating system group was not found or did not have the same name on all nodes where the corresponding database is present.

Action: Ensure that the same operating system groups exist and have the same name on all nodes where the corresponding database is present.

PRVG-11318: The following error occurred during database operating system groups check. "{0}"

Cause: An error occurred while performing database operating system groups check.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-11320: The database operating system group {0} is inconsistent across nodes {1} for database {2}.

Cause: The specified operating system group was not found or did not have the same group name on all the identified nodes where the database is present.

Action: Ensure that the operating system group exist and have the same group name on all the nodes where the database is present, and invoke the cluster verification utility post-database-install check to ensure the configuration is correct.

PRVG-11321: One of the elements of parameter "{0}" value is not valid

Cause: This is an internal error. The value for one of the array elements for the specified parameter is null or empty string.

Action: Contact Oracle Support Services.

PRVG-11322: One or more node names "{0}" contain one or more of the following invalid characters "{1}"

Cause: One or more invalid node names were supplied.

Action: Ensure that all node names supplied use only valid characters. Only alphanumeric characters and hyphen are allowed as per RFC-952.

PRVG-11330: Database operating system groups consistency check failed for the databases "{0}" on nodes "{1}"

Cause: One or more operating system groups were not found or did not have the same group name on all the identified nodes where the database is present.

Action: Ensure that the operating system groups exist and have the same group name on all the nodes where the database is present, and invoke the cluster verification utility post-database-install check to ensure the configuration is correct.

PRVG-11352: Interface "{0}" on node "{1}" is not able to communicate with interface "{2}" on node "{3}" with broadcast address "{4}"

Cause: The specified interfaces were not able to communicate using the broadcast address.

Action: Ensure that broadcast is enabled on the specified interfaces and that the network path allows broadcast.

PRVG-11353: Broadcast packets sent on subnet "{0}" with broadcast address "{1}" were not received

Cause: All the interfaces on the subnet were not able to communicate using the broadcast address.

Action: Ensure that broadcast is enabled on all interfaces and that the network path allows broadcast.

PRVG-11356: Following error occurred during broadcast check

Cause: An error occurred while performing broadcast check.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-11366: SCAN IP addresses "{0}" of SCAN "{1}" was not on subnet "{2}"

Cause: SCAN IP was found to be on a different subnet than the one chosen as a public subnet.

Action: Select a different public subnet or change the IP addresses that the SCAN resolves to.

PRVG-11367: SCAN IP addresses "{0}" of SCAN "{1}" were not on subnet "{2}"

Cause: Subnet of network associated with the SCAN were modified but SCAN IP addresses were not modified.

Action: If network associated with the SCAN is DHCP, restart SCAN using 'srvctl stop' and 'srvctl start' commands. If network is static, configure SCAN IP addresses to be on the subnets of network. If IP addresses were already configured, recreate the SCAN using 'srvctl remove scan' and 'srvctl add scan' commands.

PRVG-11368: A SCAN is recommended to resolve to "{0}" or more IP addresses, but SCAN "{1}" resolves to only "{2}"

Cause: An insufficient number of SCAN IP addresses were defined for the specified SCAN.

Action: Define at least specified number of SCAN IP addresses in DNS for the SCAN.

PRVG-11369: SCAN IP addresses "{0}" of SCAN "{1}" were active before Clusterware installation

Cause: SCAN IP addresses were found to be active on the network before Clusterware installation.

Action: Make sure that the SCAN IP addresses are currently unused.

PRVG-11372: Number of SCAN IP addresses that SCAN "{0}" resolved to did not match the number of SCAN VIP resources

Cause: It was found that the SCAN IP addresses that SCAN resolves to were modified after the SCAN was created.

Action: Modify SCAN using 'srvctl modify scan -n <scan_name>' and listener using 'srvctl modify scan_listener -u'.

PRVG-11373: IPV4 and IPV6 addresses of SCAN VIP resources of SCAN "{0}" were not consistent

Cause: The SCAN resolved to differing numbers of IPv4 and IPv6 addresses.

Action: Recreate the SCAN using 'srvctl remove' and 'srvctl add' commands.

PRVG-11374: SCAN "{0}" was not resolved

Cause: A static SCAN was not resolved to IP addresses.

Action: Make sure that the SCAN is resolved.

PRVG-11400: Node role value is not valid

Cause: This is an internal error. The value for the specified parameter must be 'hub', 'leaf' or 'auto'.

Action: Contact Oracle Support Services.

PRVG-11401: New nodes having both nodes with 'auto' role and nodes with 'hub' or 'leaf' role cannot be specified

Cause: The supplied list of new nodes consisted of a mix of nodes with the 'auto' role in combination with nodes having the 'hub' or 'leaf' role.

Action: Either supply a list of new nodes that all have the 'auto' role or supply a list of new nodes that have the 'hub' or 'leaf' role specified for each node, but not both.

PRVG-11402: New nodes cannot have AUTO node role unless the existing cluster consists entirely of AUTO nodes

Cause: An attempt to validate new nodes for addition supplied one or more AUTO role nodes for a cluster with no AUTO role nodes.

Action: Supply a list of new nodes with AUTO role only when the existing cluster contains nodes with AUTO role.

PRVG-11403: A Leaf node cannot be added unless existing cluster contains at least one Hub node

Cause: An attempt was made to add a node with the 'leaf' role when the cluster did not have at least one node with the 'hub' role.

Action: Supply a list of new nodes with the 'leaf' role only when the existing cluster contains at least one node with the 'hub' role.

PRVG-11404: The addition of hub nodes will exceed the target hub size[{0}]

Cause: The request to validate new nodes specified enough hub nodes that the cluster target hub size would be exceeded.

Action: Specify fewer hub nodes.

PRVG-11405: API with node roles argument should be called for Flex Cluster only

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRVG-11406: API with node roles argument must be called for Flex Cluster

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRVG-11407: API called with unequal sized arrays for nodes and VIPs

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRVG-11408: API called with unequal sized arrays for nodes, VIPs and node roles

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRVG-11409: These nodes already appear to be part of the cluster: "{0}"

Cause: The supplied list of new nodes contains some nodes which are already part of the cluster.

Action: Specify new nodes that are not already in the cluster.

PRVG-11415: Password entry for user "{0}" in the database "{1}" did not exist in CVUDB wallet

Cause: No password entry for the specified user for the specified database was found in the CVUDB wallet.

Action: Add a password entry for the user to the CVUDB wallet using 'crsctl add wallet -type CVUDB -name <varname>dbname</varname>'

PRVG-11420: Storage type of the path "{0}" could not be determined

Cause: There was an error in determining storage type of the path.

Action: Examine any accompanying error messages for details.

PRVG-11421: Storage type of the path "{0}" could not be determined

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRVG-11422: Missing GNS subdomain name.

Cause: GNS subdomain name was not provided.

Action: The subdomain name for GNS must be provided via the '-domain' parameter in Oracle Clusterware Version 11.2.

PRVG-11423: The password provided on the command line is not valid for user "{0}"

Cause: The provided password was wrong.

Action: Provide the correct password.

PRVG-11424: Missing GNS subdomain for dynamic public network

Cause: When checking GNS integrity, the public VIPs were configured to use dynamic addresses (DHCP or autoconfig), but the required GNS subdomain was not configured.

Action: Configure a GNS subdomain by using the command 'srvctl add gns'.

PRVG-11425: Failed to validate GNS credential in file "{0}"

Cause: An attempt to validate the Grid Naming Service (GNS) credential failed.

Action: Ensure that the credential file provided has been generated in a GNS server cluster by 'srvctl export gns -clientdata <varname>filename</varname>'.

PRVG-11500: ACFS file systems are not available on Leaf nodes "{1}"

Cause: The specified ACFS path was not suitable for Leaf nodes.

Action: Ensure that you have selected a path that is suitable for all the nodes.

PRVG-11501: Path "{0}" of type "{1}" is not suitable for usage as RAC database software for release "{2}". Supported storage types are "{3}".

Cause: The specified path is not found suitable for usage as RAC database software

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVG-11502: Path "{0}" of type "{1}" is not suitable for usage as RAC database file for release "{2}". Supported storage types are "{3}".

Cause: The specified path is not found suitable for usage as RAC database file

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVG-11503: Path "{0}" of type "{1}" is not suitable for usage as Oracle Clusterware storage for release "{2}". Supported storage types are "{3}".

Cause: The specified path is not found suitable for usage as Oracle Clusterware storage(OCR or Voting Disk).

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVG-11504: Path "{0}" of type "{1}" is not suitable for usage as Single Instance database software for release "{2}". Supported storage types are "{3}".

Cause: The specified path is not found suitable for usage as Single Instance database software

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVG-11505: Path "{0}" of type "{1}" is not suitable for usage as Single Instance database file for release "{2}". Supported storage types are "{3}".

Cause: The specified path is not found suitable for usage as Single Instance database file

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVG-11506: Path "{0}" of type "{1}" is not suitable for ASM for release "{2}". Supported storage types are "{3}".

Cause: The specified path is not found suitable for ASM

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVG-11515: Nodes with mix of 'auto', 'hub' and 'leaf' roles were found in the Flex Cluster

Cause: The Flex Cluster node role check found nodes with both the 'auto' role and either the 'hub' or 'leaf' roles defined.

Action: Use the 'crsctl set node role' command to make all node roles 'auto', or to make node roles a mix of 'hub' and 'leaf'.

PRVG-11516: New nodes "{0}" with 'hub' or 'leaf' role cannot be added to an Flex Cluster which has 'auto' role nodes

Cause: An attempt was made to add nodes with the 'hub' or 'leaf' role to an Flex Cluster already having nodes with the 'auto' role.

Action: Only add nodes with the 'auto' role to the cluster.

PRVG-11517: New nodes "{0}" with 'auto' role cannot be added to an Flex Cluster already having nodes with the 'hub' and 'leaf' role

Cause: An attempt was made to add nodes with the 'auto' role to an Flex Cluster already having nodes with the 'hub' and 'leaf' role.

Action: Only add nodes with the 'hub' or 'leaf' role to the cluster.

PRVG-11518: Following error occurred during Flex Cluster node role configuration check

Cause: An error occurred while performing the Flex Cluster node role configuration check.

Action: Look at the accompanying messages for the cause of the failure.

PRVG-11550: Package "{0}" is missing on node "{1}"

Cause: The cvuqdisk RPM is not installed on the specified node. This package is required for shared disk validations. During installation, ASM disk validation cannot be performed without this RPM.

Action: Install the required version of the cvuqdisk RPM using fix up action or manual steps as listed in the documentation.

PRVG-11551: Required version of package "{0}" was not found on node "{1}" [Required = "{2}" ; Found = "{3}"].

Cause: The version of installed cvuqdisk RPM does not meet the requirement on the specified node. This package is required for shared disk validations. During installation, ASM disk validation cannot be performed without this RPM.

Action: Install the required version of the cvuqdisk RPM using fix up action or manual steps as listed in the documentation.

PRVG-11635: The ASM disks "{0}" are incorrectly sized

Cause: The indicated ASM disks had incorrect size information in the disk header.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-11640: The check "{0}" was not performed as it is disabled

Cause: The indicated check was suppressed.

Action: Suppressed checks usually occur at the request of Oracle Support; if this is unexpected, contact Oracle Support Services.

PRVG-11644: Failed to copy baseline to the remote nodes: "{0}"

Cause: An error occurred while copying the report to the remote nodes

Action: Examine the accompanying error messages for details.

PRVG-11750: File "{0}" exists on node "{1}".

Cause: The specified file is not expected to be present on the node.

Action: Remove the specified file from the node.

PRVG-11754: Check for existence of directory "{0}" could not be performed on node "{1}".

Cause: An error occurred while checking the existence of the directory on the specified node.

Action: Examine the accompanying error messages for details.

PRVG-11755: Property "{0}" was not found in configuration file "{1}"

Cause: Could not find the specified property in the configuration file.

Action: Define the specified property in the configuration file. Otherwise, the validations needing this property will not be performed.

PRVG-11774: NIC bind order check failed on nodes: "{0}"

Cause: The NIC bind order on the specified nodes did not prioritize the public network above the private network.

Action: Ensure that the public network NIC takes precedence over the private network NIC in the configured network bind order.

PRVG-11775: Failed to retrieve the NIC bind order information on nodes: "{0}"

Cause: An attempt to retrieve the NIC bind order failed on the indicated nodes.

Action: Contact Oracle Support Services.

PRVG-11776: Failed to retrieve the NIC bind order information from all the nodes

Cause: An attempt to retrieve the NIC bind order information failed on all the nodes.

Action: Contact Oracle Support Services.

PRVG-11779: Metric value "{0}" for public interface "{1}" is higher than or equal to metric value "{2}" for private interface "{3}" on node "{4}".

Cause: The identified public interface metric value was higher or equal to the identified private interface metric value on the indicated node.

Action: Change the identified public interface metric value to a lower value than the identified private interface metric value.

PRVG-11780: Failed to convert string "{0}" to integer value

Cause: The network interface metric value could not be determined as the identified string to integer conversion failed.

Action: Look at the accompanying messages for details.

PRVG-11800: Failed to discover any devices using the discovery string "{0}" on node "{1}"

Cause: The specified discovery string could not discover any devices on the identified node.

Action: Specify a discovery string that will discover the devices on the given node and make sure the devices to be used as ASM disks have permissions that allow them to be discovered.

PRVG-11816: Windows user "{0}" is a domain user but a conflicting local user account "{1}" exists on node "{2}"

Cause: A conflicting local user account as indicated was found on the identified node.

Action: Ensure that the Windows user account used for Oracle installation and configuration is defined as a domain user on all nodes or as a local user on all nodes, but not a mixture of the two.

PRVG-11817: Windows user "{0}" is a local user but a matching local user account does not exist on nodes "{1}"

Cause: A local user account for an Oracle installation user was not found on the identified nodes.

Action: Ensure that the Windows user account used for Oracle installation and configuration is defined as a domain user on all nodes or as a local user on all nodes, but not a mixture of the two.

PRVG-11818: Windows user "{0}" is a domain user but a conflicting local user account was found on nodes "{1}"

Cause: A conflicting local user account as indicated was found on the identified nodes.

Action: Ensure that the Windows user account used for Oracle installation and configuration is defined as a domain user on all nodes or as a local user on all nodes, but not a mixture of the two.

PRVG-11819: Current Oracle Home User "{0}" is not a domain user

Cause: The current Oracle Home User was found to be a Windows user account local to this system.

Action: Specify a Windows domain user as the Oracle Home User.

PRVG-11820: Error retrieving the account details for user "{0}" from nodes "{1}"

Cause: An error occurred while retrieving the account details of indicated user.

Action: Examine the accompanying error messages for details.

PRVG-11825: Failed to get the Oracle Home user name for Oracle Home "{0}"

Cause: An attempt to retrieve the Oracle Home User for the indicated Oracle Home failed.

Action: Examine the accompanying error messages for details.

PRVG-11850: The system call "{0}" failed with error "{1}" while executing exectask on node "{2}"

Cause: An attempt to execute exectask on the specified node failed.

Action: Examine the accompanying error message for details or contact Oracle Support Services.

PRVG-11884: Policy managed database home availability check failed

Cause: One or more policy managed database homes were not found on the nodes being added to the cluster.

Action: Ensure that all the policy managed database homes exist on the nodes being added to the cluster.

PRVG-11885: Oracle Home "{0}" for policy managed database "{1}" does not exist on nodes "{2}"

Cause: The identified Oracle Home for policy managed database was not found on the indicated nodes.

Action: Ensure that the identified Oracle Home exists on the indicated nodes by running addNode.sh from the indicated Oracle Home.

PRVG-11886: Command "{0}" to get the policy managed database information failed

Cause: An attempt to execute the displayed command failed.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-11890: failed to determine the space used by directory "{0}" on node "{1}"

Cause: An attempt to determine the space used by the identified directory failed on the indicated node.

Action: Ensure that the current user has read and execute permissions for the directory cited in the message and its subdirectories. Look at the accompanying messages for more details.

PRVG-11900: Oracle Clusterware is not installed on this node.

Cause: An attempt to execute the command 'cluvfy comp software' was requested, but files associated with Oracle Clusterware installation were not found.

Action: Execute the 'cluvfy comp software' command only on nodes where Oracle Clusterware is installed.

PRVG-11901: Oracle Clusterware is not running on this node.

Cause: An attempt to execute the command 'cluvfy comp software' was requested, but Oracle Clusterware was not running on the node.

Action: Ensure that the Clusterware stack is running; if appropriate, issue 'crsctl start crs' to start it.

PRVG-11902: Oracle Clusterware is not configured on node {0}.

Cause: A 'cluvfy comp software' command was issued on a system that does not have an Oracle Clusterware configuration.

Action: Issue the 'cluvfy comp software' command only on nodes where Oracle Clusterware is configured.

PRVG-11903: The specified destination CRS home {0} is the same as the currently configured CRS home {1}.

Cause: The pre-upgrade prerequisites check failed because the specified destination CRS home was the same as the currently configured CRS home.

Action: Retry the upgrade using the '-dest_crshome' option to specify a CRS home that is different from the currently configured CRS home.

PRVG-11904: The file 'oracle.key' does not exist for Oracle home {0} on node {1}.

Cause: The command 'cluvfy comp software' failed for the indicated node because it does not appear to have a valid Oracle home.

Action: Verify that the installation of Oracle software has completed successfully.

PRVG-11905: The file 'oracle.key' cannot be read on node {0}.

Cause: The command 'cluvfy comp software' failed for the indicated node because it does not have a valid 'oracle.key' file.

Action: Verify that the installation of Oracle software has completed successfully.

PRVG-11906: The Oracle home {0} does not exist.

Cause: The command 'cluvfy comp software' failed because the specified Oracle home could not be found.

Action: Verify that the installation of Oracle software has completed successfully.

PRVG-11907: The Oracle database edition cannot be obtained from file {0} on node {1}.

Cause: The command 'cluvfy comp software' failed because the file which indicates the database edition could not be accessed on the indicated node.

Action: Verify that the installation of Oracle software has completed successfully and that the specified file exists and is readable.

PRVG-11910: failed to locate Oracle base for home "{0}" on node "{1}"

Cause: An attempt to retrieve Oracle base using command <ORACLE_HOME>/bin/orabase failed.

Action: Verify that the installation of the Oracle software has completed successfully and that the Oracle home is set up correctly.

PRVG-11911: Database services count is not available for Oracle Clusterware versions prior to 11.2.

Cause: An attempt was made to retrieve the database services count for an Oracle Clusterware version lower than 11.2.

Action: Make sure that the configured Oracle Clusterware is version 11.2 or greater.

PRVG-11912: Command '{0}' to retrieve database services count failed.

Cause: An attempt to execute the displayed command failed. This is an internal error.

Action: Contact Oracle Support Services.

PRVG-11913: Syntax errors in the following lines from ONS configuration file "{1}" on node "{0}" :

Cause: Invalid lines were found in the ons.config file at the location and node indicated.

Action: Contact Oracle Support Services.

PRVG-11914: The ONS configuration file "{0}" does not exist on following nodes: {1}

Cause: The file specified did not exist on the nodes listed, but exists on other nodes.

Action: Contact Oracle Support Services.

PRVG-11915: ONS configuration file "{0}" does not exist on any node of the cluster. Skipping further checks.

Cause: The ONS configuration file was missing from all of the nodes.

Action: Contact Oracle Support Services.

PRVG-11919: Unable to create work area directory "{0}"

Cause: An attempt to create the specified directory failed on the local node.

Action: Make sure that the user running Cluster Verification Utility has the authority to create the indicated directory or specify a different (usable) directory with the CV_DESTLOC environment variable.

PRVG-11920: Unable to delete CVU work files from directory "{0}"

Cause: An attempt to remove files from the specified directory failed.

Action: Make sure that the user running Cluster Verification Utility has the authority to create the indicated directory or specify a different (usable) directory with the CV_DESTLOC environment variable.

PRVG-11921: Error copying ONS configuration file "{0}" from node "{1}" to node "{2}"

Cause: The specified file could not be copied from the specified source node to the destination node.

Action: Examine the accompanying error message for details.

PRVG-11924: Local and remote ONS ports are same on node "{0}"

Cause: The local and remote port specified in the ons.config were the same.

Action: Ensure that different local and remote ports were specified in the ONS configuration file.

PRVG-11928: 'remotepoint' entry in the existing ONS configuration file "{0}" is inconsistent

Cause: The ONS configuration file had inconsistent 'remotepoint' entries.

Action: Make sure that all nodes of the cluster have the same 'remotepoint' entry in the specified file.

PRVG-11930: Path "{0}" is not writeable on nodes "{1}".

Cause: The identified path was not writeable on the indicated nodes.

Action: Ensure that write access is enabled for the current user on the identified path.

PRVG-11931: Path "{0}" is not writeable on node "{1}".

Cause: The identified path was not writeable by current user on the indicated node.

Action: Ensure that write access is enabled for the identified path by the current user.

PRVG-11932: Path "{0}" cannot be created on node "{1}".

Cause: The identified path can not be created on the indicated node.

Action: Ensure that the current user has authorization to create the identified path.

PRVG-11935: Unable to read file "{0}" copied to local scratch area from node: {1}

Cause: An error occurred while trying to read the specified file.

Action: Ensure that the user running Cluster Verification Utility has the authority to create the indicated directory, or specify a different (usable) directory with the CV_DESTLOC environment variable. Also, look for messages accompanying this message for details.

PRVG-11937: Oracle Database is not configured to run on nodes "{0}".

Cause: Oracle Database was not configured to run on the indicated nodes. For administrator-managed databases, the database instances were not configured to run on the indicated nodes. For policy-managed databases, the indicated nodes were not in any of the server pools of the database.

Action: Remove the nodes from the command line and rerun the check.

PRVG-11938: Oracle Database is not configured to run on any of the specified nodes.

Cause: Oracle Database was not configured to run on any of the specified nodes.

Action: Ensure that Oracle Database is configured to run on the specified nodes. For administrator-managed databases, ensure that the database instances are configured to run on the nodes. For policy-managed databases, ensure that the nodes are in the server pools of the database.

PRVG-11946: Ping Target "{0}" is not reachable

Cause: Unable to reach the Ping Target specified using the OS ping command.

Action: Ensure that the Ping Target specified is accessible.

PRVG-11950: Executable "{0}" does not exist on any node. The specified home "{1}" is not a valid Oracle home.

Cause: The 'oracle' executable was not found in the expected location on any node.

Action: Specify a valid Oracle home.

PRVG-11951: Executable "{0}" does not exist on node "{1}".

Cause: The 'oracle' executable was not found in the expected location on the specified node.

Action: Ensure that the specified home is a valid Oracle home on the specified node.

PRVG-11960: Set user ID bit is not set for file "{0}" on node "{1}".

Cause: The Set user ID bit was not set for the identified file on the indicated node.

Action: Login as the root user and set the Set user ID bit for the identified file using command 'chmod +s <varname>file</varname>'.

PRVG-11961: failed to check the set user ID bit for file "{0}" on nodes "{1}"

Cause: An attempt to verify the Set user ID bit for the identified file failed on the indicated nodes.

Action: Ensure that the identified file exists and that the user has read and execute permissions on it.

PRVG-11971: Grid Infrastructure home check failed

Cause: The Grid Infrastructure home path was not writable.

Action: Ensure that the Grid Infrastructure user has write permissions for the indicated path.

PRVG-12802: ASM devices "{0}" are not ASM Filter Driver capable.

Cause: The indicated devices were not ASM filter driver capable.

Action: To make them AFD capable, ensure that the devices selected for ASM are configured as block devices on Linux or character devices on AIX and Solaris operating system platforms.

PRVG-12805: Device "{0}" cannot be managed by the ASM Filter Driver on node "{1}".

Cause: The indicated ASM device did not have a correct device type and hence was identified as not AFD capable.

Action: If you intend to use the ASM Filter Driver to manage this device, ensure that the device selected for ASM is a block device on Linux or a character device on AIX and Solaris operating system platforms.

PRVG-12806: failed to discover the device type of devices "{0}" on nodes "{1}"

Cause: An attempt to retrieve the device type of the indicated device failed on the identified nodes.

Action: Ensure that the device is correctly configured on the indicated node and that the user has permission to read its attributes.

PRVG-12807: failed to retrieve the device type of device "{0}" on node "{1}"

Cause: An attempt to retrieve the device type of the indicated devices failed on all the nodes.

Action: Ensure that the device is correctly configured and that the user has permission to read the device attributes. Examine the accompanying error messages for details.

PRVG-12855: Configured private sub-network "{0}" with sub-network mask "{1}" does not exist on node "{2}".

Cause: The indicated CRS private sub-network did not match any sub-network available on the identified node.

Action: The network configuration used for the existing CRS installation must be available networks on each of the cluster nodes. Use the 'oifcfg setif' command to correctly configure the sub-network for the existing installation.

PRVG-12856: Configured public sub-network "{0}" with sub-network mask "{1}" does not exist on node "{2}".

Cause: The indicated CRS public sub-network did not match any sub-network available on the identified node.

Action: The network configuration used for the existing CRS installation must be available networks on each of the cluster nodes. Use the 'oifcfg setif' command to correctly configure the sub-network for the existing installation.

PRVG-12857: Classified sub-network configuration of the current CRS home "{0}" does not match any existing sub-networks on nodes "{1}".

Cause: The indicated CRS sub-network did not match any sub-network available on the identified nodes.

Action: The network configuration used for the existing CRS installation must be available networks on each of the cluster nodes. Use the 'oifcfg setif' command to correctly configure the sub-network for the existing installation.

PRVG-12858: Following error occurred during the network configuration consistency checks.

Cause: An error occurred while performing the network configuration consistency checks.

Action: Examine the accompanying messages for specific details on the network configuration problem, and rectify the issues.

PRVG-12884: Maximum (MTU) size packet check failed on subnets "{0}"

Cause: The network switch was not configured with jumbo frames or the

Action: Ensure that the network switch is configured with jumbo frames

PRVG-12885: ICMP packet of MTU size "{0}" does not go through subnet "{1}".

Cause: The network switch was not configured with jumbo frames or

Action: Ensure that the network switch is configured with jumbo frames

PRVG-12886: Interface "{0}" has an invalid MTU value "{1}".

Cause: The retrieved MTU value from ip command contained other than decimal digits.

Action: Configure an MTU value for the identified interface with decimal digits only. Look at the accompanying messages for more details.

PRVG-12887: failed to get the MTU value for interface "{0}" using ip command "{1}" on node "{2}"

Cause: An attempt to obtain the MTU value for the identified interface failed on the indicated node.

Action: Ensure that the indicated executable accessible on the node. Look at the accompanying messages for more details.

PRVP-01041 to PRVP-03563

PRVP-01041: value specified "{0}" for command line option '-port' is not a number

Cause: A non-numeric value was specified for command line option '-port'.

Action: Specify a numeric value for the command line option '-port'.

PRVP-01044: Error occurred while opening configuration file "{0}"

Cause: Configuration file could not be opened. It either does not exist or you are not allowed read access.

Action: Provide a usable configuration file.

PRVP-01049: Failed to read the root user password from standard input

Cause: An attempt to read the password for the root user from standard input failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVP-01050: Failed to read the password for 'sudo' user "{1}" from standard input

Cause: An attempt to read the password for specified 'sudo' user from standard input failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVP-01051: Failed to read the password for 'pbrun' user "{1}" from standard input

Cause: An attempt to read the password for specified 'pbrun' user for from standard input failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVP-01052: Command line option -method required when -dhcport is less than 1024. The DHCP port value used is "{0}".

Cause: An attempt to check DHCP was rejected because the user did not have sufficient authority to listen on the specified DHCP port.

Action: DHCP checks when command line option -dhcport is less than 1024 can be run only as root user. When command line option -dhcport is not specified the default value of DHCP port used is 67. Make sure that required credentials are supplied using the command line option -method.

PRVP-01055: -d <oracle_home> cannot be specified in combination with -collect cluster.

Cause: -d <oracle_home> cannot be combined with -collect cluster.

Action: Remove the -d <oracle_home> specification.

PRVP-01061: Ignoring domains for the following node names specified with domain "{0}". Verification will proceed with nodes "{1}"

Cause: Node names were specified with domain names, and the domain names were ignored.

Action: Make sure that node names are specified without domain names.

PRVP-03514: -saverdir flag not specified.

Cause: The -saverdir flag was not specified while running the baseline collection command through 'runcluvfy'.

Action: Specify a valid value for -saverdir flag.

PRVP-03563: Invalid command line option specified. The option '-serviceuser' is not valid with version "{0}".

Cause: Command line option -serviceuser was specified with release version earlier than 12g.

Action: Use -serviceuser option with 12g or later release.

QSM-00501 to QSM-03287

QSM-00501: unable to initialize Summary Advisor environment

Cause: The Summary Advisor external procedure initialization process failed.

Action: Contact Oracle Worldwide Support.

QSM-00502: OCI error

Cause: A OCI callback routine reported an error

Action: Contact Oracle Worldwide Support.

QSM-00503: out of memory

Cause: Summary Advisor failed to allocate the necessary memory.

Action: Contact Oracle Worldwide Support.

QSM-00504: internal error

Cause: An internal error occurred.

Action: Contact Oracle Worldwide Support.

QSM-00505: syntax error

Cause: A syntax error occurred.

Action: Correct syntax error if possible or contact Oracle Worldwide Support.

QSM-00506: no fact-tables could be found

Cause: The fact-filter is not specified, and there are no fact-tables in the warehouse. A fact-table is a table having foreign-key constraints to one or more of the dimension-tables in the data warehouse.

Action: Check the fact-filter is correctly specified; check that appropriate constraints exist; and the user has privileges to access the tables

QSM-00507: no dimensions could be found

Cause: The database does not have any dimensions

Action: Create the dimensions in your warehouse

QSM-00508: statistics missing on tables/columns

Cause: The system metadata does not contain statistics on one or more tables or columns. The Advisor needs cardinalities of all fact-tables, and of the level-keys of all dimensions in the data warehouse.

Action: Run ANALYZE on the tables and summaries in the warehouse to collect statistics

QSM-00509: invalid parameter

Cause: The indicated parameter has an invalid value

Action: Supply a value in the proper range

QSM-00510: statistics missing on materialized views

Cause: The system metadata does not contain statistics on one or more materialized views. The Advisor needs cardinalities of all materialized views in the data warehouse.

Action: Run ANALYZE on the tables and materialized views in the warehouse to collect statistics.

QSM-00511: invalid fact-tables specified in fact-filter

Cause: The tables specified in the fact-filter are not valid fact-tables. A fact-table must have foreign-key constraints to one or more of the dimension-tables in the data warehouse.

Action: Check the fact-filter is correctly specified; check that appropriate constraints exist; and the user has privileges to access the tables

QSM-00512: invalid summaries specified in the retention-list

Cause: The summaries specified in the retention-list are not valid.

Action: Check the spelling of the summary-names; check that they are valid; and the user has privileges to access them.

QSM-00513: one or more of the workload tables is missing

Cause: One or both of the workload tables are missing. The two workload tables which should be present in the user's schema are V_192216243_F_5_E_14_8_1 and V_192216243_F_5_E_15_8_1; the former is mapped to WORK\$_IDEAL_MVIEW and the latter to WORK\$_MVIEW_USAGE. The workload tables are created by the Oracle Trace Formatter when the data-collection-file (oraclesm.dat) is formatted by the user.

Action: Check whether the Formatter succeeded in formatting the data collection. Sometimes the V_192216243_F_5_E_14_8_1 (i.e WORK\$_IDEAL_MVIEW) may not be created whereas the other table is created. The most likely cause of this is the init.ora parameters needed to invoke mview-rewrite are not enabled. Check your documentation for all the init.ora parameters which need to be set for mview-rewrite to occur. Another possibility is no GROUP BY queries were issued during the time the data was collected, in which case, run the Trace collection for a longer time to get a representative sampling of the queries issued in the data warehouse.

QSM-00514: the size of must-retain summaries exceeds specified space limit

Cause: The specified space limit is greater than the size of must-retain summaries.

Action: Reduce the number of must-retain summaries or increase the space limit

QSM-00515: operation cancelled by user

Cause: The operation has been cancelled by the user

Action: None

QSM-00516: illegal status detected for run

Cause: The run has encountered an illegal value in the status field of the mview\$_adv_log table. This could be internal error or an application error.

Action: Contact Oracle Worldwide Support.

QSM-00517: Summary Advisor requires a COMPATIBLE setting of 8.1.0.0 or greater

Cause: The current database has a compatibility setting that is earlier than the supported server version.

Action: Adjust the instance parameter COMPATIBLE to 8.1.0.0 or greater.

QSM-00518: Java is not enabled. Please execute INITJVM.SQL and INITQSMA.SQL

Cause: The current database has not been created or upgraded to support Java stored procedures. Summary Advisor requires Java stored procedures.

Action: Log into the database with SYSDBA privileges. Execute the INITJVM.SQL script which is found in the ORACLE home directory under JAVAVM. Next, execute the INITQSMA.SQL script found in the ADMIN directory under the ORACLE home.

QSM-00519: Summary Advisor is not installed. Please execute INITQSMA.SQL.

Cause: The current database has not been created or upgraded to support Summary Advisor. Summary Advisor requires several Java stored procedures.

Action: Log into the database with SYSDBA privileges. Execute the INITQSMA.SQL script found in the ADMIN directory under the ORACLE home. **** Messages 520-700 are in the 9i Summary Advisor Java modules 701-708 are Hypothetical Workload generator journal messages

QSM-00710: data access error in module <varname>string</varname>

Cause: SQL Access Advisor detected a severe error while accessing the advisor repository.

Action: See the accompanying error message for appropriate actions.

QSM-00750: the specified value <varname>string</varname> for parameter <varname>string</varname> is invalid or contains an invalid item

Cause: The user attempted to set a task parameter using invalid data.

Action: Adjust the data value and retry the operation.

QSM-00751: the file <varname>string</varname> could not be opened for write access

Cause: Access Advisor could not create the script or report due to a file system error.

Action: Verify the location for file write access and retry the operation.

QSM-00752: the parameter <varname>string</varname> contains an invalid combination of options <varname>string</varname>

Cause: The user specified correct option keywords, but entered a combination that is not supported within Access Advisor.

Action: Validate the correct option usage and retry the operation.

QSM-00753: the specified value <varname>string</varname> is out of the acceptable range of <varname>string</varname> to <varname>string</varname> for parameter <varname>string</varname>

Cause: The user attempted to set a task parameter using invalid data.

Action: Adjust the data value and retry the operation.

QSM-00754: task <varname>string</varname> does not reference a valid workload and therefore cannot be executed

Cause: The user attempted to execute a advisor task that requires a workload.

Action: Specify a workload for the task and retry the operation.

QSM-00755: a set of workload statements already exists for workload <varname>string</varname>

Cause: The user attempted to save workload data into an existing workload that already contains data without specifying APPEND or REPLACE.

Action: Validate the import mode retry the operation.

QSM-00756: the specified workload <varname>string</varname> is being used by one or more advisor tasks

Cause: The user attempted to modify or delete a workload that is currently being used by another task.

Action: Remove the workload reference from the advisor task and retry the operation.

QSM-00757: the specified workload <varname>string</varname> is not referenced by task <varname>string</varname>

Cause: The user attempted to delete invalid workload reference from the task.

Action: Validate the workload reference and retry the operation.

QSM-00758: the specified parameter <varname>string</varname> is not valid for workload <varname>string</varname>

Cause: The user attempted to access a workload parameter that does not exist for the specified workload. The parameter may be misspelled or the user selected a parameter that is not supported by the particular advisor.

Action: Validate the parameter name and retry the operation.

QSM-00759: the user <varname>string</varname> does not exist for the specified workload statement

Cause: The user attempted to add a new SQL statement with an invalid username.

Action: Adjust the name and retry the operation.

QSM-00760: the import mode <varname>string</varname> is invalid for the current operation

Cause: The user attempted to store data in the repository with an invalid import mode.

Action: Use one of the following valid values: NEW, APPEND, or REPLACE.

QSM-00761: the priority <varname>string</varname> is invalid for the current operation

Cause: The user attempted to store data in the repository with an invalid priority.

Action: Use one of the following valid values: 1, 2, 3.

QSM-00762: the specified Summary Advisor workload <varname>string</varname> does not exist

Cause: The user attempted to import an advisor workload from an invalid or non-existent Summary Advisor workload.

Action: Validate the Summary Advisor workload identifier and retry the operation.

QSM-00763: the owner <varname>string</varname> was not found while validating user-defined workload <varname>string</varname>.<varname>string</varname>

Cause: The user attempted to import an advisor workload from a user who may not access to the table.

Action: Validate the location of the user-defined workload.

QSM-00764: the column <varname>string</varname> was not found in the user-defined workload table <varname>string</varname>.<varname>string</varname>

Cause: The user attempted to import an advisor workload from a user table that does not contain the required column.

Action: Validate the user-defined workload table and retry the operation.

QSM-00765: cannot validate user-defined workload because table <varname>string</varname>.<varname>string</varname> is invalid.

Cause: The user attempted to import an advisor workload from a table that is not accessible.

Action: Validate the location of the user-defined workload.

QSM-00766: a SQL statement is required for the current workload operation

Cause: The user attempted to create an entry in a workload collection without specifying a SQL statement.

Action: Validate the SQL statement and retry the operation.

QSM-00767: a SQL cache is not available to user <varname>string</varname>

Cause: The user attempted to collect a workload from the SQL without having authorization.

Action: Validate the user account and retry the operation.

QSM-00768: the search condition is invalid for the requested operation

Cause: The user provided a invalid SEARCH argument to an Access Advisor workload operation. A search condition must be a valid SQL search condition using only the column names specified in the procedure documentation.

Action: Correct the search condition and retry the operation.

QSM-00769: the SQL statement <varname>string</varname> was not found for workload <varname>string</varname>

Cause: The user attempted to access a SQL statement that does not exist in the workload.

Action: Validate the SQL statement identifier and retry the operation.

QSM-00770: the specified workload <varname>string</varname> is already referenced by task <varname>string</varname>

Cause: The user attempted to add a workload reference to a task when the task already contains the reference.

Action: Validate the workload reference and retry the operation.

QSM-00771: the specified SQL statement cannot be stored in the workload because it has no valid table references

Cause: The user attempted to add a workload statement that contains table references that are either system-specified or user-specified invalid tables.

Action: Validate the workload statement and retry the operation.

QSM-00772: the specified SQL statement cannot be stored in the workload due to a statement error

Cause: The user attempted to add a workload statement that contains invalid SQL syntax or an invalid column reference.

Action: Validate the workload statement and retry the operation.

QSM-00773: the parameter <varname>string</varname> contains the invalid <varname>string</varname> name <varname>string</varname>

Cause: The task or workload parameter contains a name that is either too long or does not exist in the database.

Action: Validate the parameter value and retry the operation.

QSM-00774: there are no SQL statements to process for task <varname>string</varname>

Cause: While executing, the specified task found no valid SQL statements to analyze. Possible causes are: an empty workload, table filtering, or username filtering.

Action: Validate the workload and the appropriate task parameters and retry the operation.

QSM-00775: the specified SQL statement cannot be stored in the workload due to invalid table references

Cause: The user attempted to add a workload statement that contains one or more invalid identifier for the parsing user.

Action: Validate the workload statement and retry the operation.

QSM-00776: the user-defined workload <varname>string</varname> is missing the following column: <varname>string</varname>

Cause: The user attempted to import a workload from an external table; however, the table does not contain all of the required columns.

Action: Adjust the target workload table and retry the operation.

QSM-00777: the specified directive <varname>string</varname> is unsupported at this time

Cause: The user attempted to create a directive that is not currently supported.

Action: Check the advisor documentation for valid directives.

QSM-00778: the specified output filename <varname>string</varname> is invalid or cannot be accessed

Cause: The user attempted to create a report or script in a file that cannot be written or created.

Action: Adjust the file name or directory and retry the operation.

QSM-00779: the specified directive conflicts with the existing directive <varname>string</varname>

Cause: The user attempted to add a directive that cannot operate with an existing directive.

Action: Check the advisor documentation for valid directives.

QSM-00780: the task <varname>string</varname> could not be executed because the workload <varname>string</varname> is being modified

Cause: While attempting to execute a task, Access Advisor checks for exclusive access to all of the referenced workloads. If any cannot be reserved, then the execution fails.

Action: Wait until the referenced workloads are free for exclusive access retry the operation.

QSM-00781: the specified value <varname>string</varname> is invalid for parameter <varname>string</varname>. Valid keywords are <varname>string</varname>

Cause: The user attempted to set a task parameter using invalid data.

Action: Adjust the data value and retry the operation

QSM-00782: the specified value <varname>string</varname> is an invalid date format for parameter <varname>string</varname>

Cause: The user attempted to set a task parameter using invalid date formatting directives.

Action: See the Oracle documentation for valid date-formatting and retry the operation.

QSM-00783: the specified value <varname>string</varname> contains an invalid date for parameter <varname>string</varname>

Cause: The user attempted to set a task parameter using invalid date formatting.

Action: A date literal must be in the form DD/MM/YYYY HH24:MI:SS.

QSM-00784: the <varname>string</varname> <varname>string</varname> referenced in the list <varname>string</varname> is invalid for parameter <varname>string</varname>

Cause: The user attempted to set a task parameter using an invalid username or table specification.

Action: Validate the object name and retry the operation.

QSM-00785: the directive <varname>string</varname> is not supported for task <varname>string</varname> at this time

Cause: The user attempted to add an invalid directive to the current task.

Action: Validate the directive and retry the operation.

QSM-00786: the name <varname>string</varname> is invalid for directive <varname>string</varname>

Cause: The user attempted to add a directive that contains an empty or invalid object name.

Action: Correct the name and retry the operation.

QSM-00787: the tablespace <varname>string</varname> is invalid for directive <varname>string</varname>

Cause: The user attempted to add a directive that contains an empty or invalid tablespace name.

Action: Correct the name and retry the operation.

QSM-00788: The requested recommendation does not support direct implementation

Cause: The user attempted to use the DBMS_ADVISOR.IMPLEMENT_TASK procedure to implement a SQL Access Advisor recommendation that cannot be implemented due to its complexity.

Action: The user must generate a script and implement the recommendation outside of the SQL Access Advisor.

QSM-00789: The requested recommendation requires user editing and cannot be implemented

Cause: The user attempted to use the DBMS_ADVISOR.IMPLEMENT_TASK procedure to implement a SQL Access Advisor recommendation that cannot be implemented because it requires additional scripting information from the user.

Action: The user must generate a script and edit the results.

QSM-00790: the workload <varname>string</varname> cannot be modified or changed because it is being used by task <varname>string</varname>

Cause: The user attempted to change or delete a workload that is referenced by an active task.

Action: Remove references to a workload from any tasks that reference that workload, unless the task is in its initial task state.

QSM-00791: the specified SQL statement cannot be stored in the workload because it contains unsupported statement type

Cause: The user attempted to add a workload statement that contains an invalid statement type. Supported statement types are INSERT, DELETE, UPDATE, SELECT and MERGE.

Action: Validate the workload statement and retry the operation.

QSM-00792: the specified SQL statement cannot be stored in the workload because one or more tables have missing statistics

Cause: The user attempted to add a workload statement that contains a table without statistics. Access Advisor requires all referenced tables to have valid statistics.

Action: Validate the workload statement and retry the operation.

QSM-00793: the specified SQL Tuning Set <varname>string</varname> does not exist

Cause: The user specified a SQL Tuning Set that has not been defined in the SQL Tuning Set repository.

Action: Correct the SQL Tuning Set name and retry the operation.

QSM-00794: the statement can not be stored due to a violation of the <varname>string</varname> filter

Cause: The user attempted to manually add a workload statement that failed a filter test. Manual statements must meet the same filtering guidelines as imported statements.

Action: Adjust the attributes or the filter and retry the operation.

QSM-00795: the SQL Tuning Set repository has not been implemented

Cause: The user attempted to collect a workload from a SQL Tuning Set repository that has not yet been implemented or enabled.

Action: Validate the existence of the repository and retry the operation.

QSM-00796: the specified SQL statement cannot be stored in the workload because table <varname>string</varname> does not have valid statistics

Cause: The user attempted to add a workload statement that references a table with missing statistics.

Action: Gather statistics for the referenced table and retry the operation.

QSM-00797: the specified workload <varname>string</varname> does not exist for the current user

Cause: The user attempted to reference an Access Advisor workload using a name that does not exist in the Advisor repository.

Action: Adjust the name and retry the operation.

QSM-00798: the specified workload <varname>string</varname> already exists

Cause: The user attempted to create the specified workload using a name that already exists in the Advisor repository. Task names must be unique to the database user.

Action: Adjust the name and retry the operation.

QSM-00799: the user-defined workload table <varname>string</varname> cannot be found

Cause: The user has attempted to import a workload from an external table that does not exist or cannot be accessed.

Action: Adjust the target workload table and retry the operation.

QSM-00800: the specified workload name <varname>string</varname> is invalid

Cause: The user has specified an invalid workload name.

Action: Adjust the target workload name and retry the operation.

QSM-00801: the specified username <varname>string</varname> is invalid

Cause: The user has specified an invalid username.

Action: Adjust the target username and retry the operation.

QSM-00802: An error occurred while implementing action <varname>string</varname> (<varname>string</varname>)\n<varname>string</varname>.

Cause: While performing IMPLEMENT_TASK, a specific action operation failed.

Action: Make the necessary adjustments as specified in the secondary message and retry the operation.

QSM-00803: The STORAGE_CHANGE parameter value <varname>string</varname> cannot be zero or negative for partial workloads.

Cause: While performing EXECUTE_TASK, the user specified a STORAGE_CHANGE value that is incompatible with the type of workload data.

Action: Set a positive STORAGE_CHANGE value.

QSM-00804: not enough space for mandatory access structures

Cause: While performing EXECUTE_TASK, the user specified a STORAGE_CHANGE value that leaves no space for mandatory access structures, such as primary key indexes.

Action: Set a greater STORAGE_CHANGE value.

QSM-00805: the specified recommendation <varname>string</varname> value <varname>string</varname> is invalid

Cause: The user has specified an invalid value when attempting to change a recommendation attribute.

Action: Adjust the target attribute value and retry the operation.

QSM-00806: the <varname>string</varname> parameter value must be specified when STORAGE_MODE is set to TOTAL

Cause: While performing EXECUTE_TASK, the user specified a STORAGE_MODE of TOTAL, but failed to set the DEF_MVIEW_OWNER and DEF_INDEX_OWNER to valid owner names.

Action: Set the specified owner to a valid name

QSM-00807: the ANALYSIS_SCOPE parameter value contains an incomplete or invalid combination of options.

Cause: Though the ANALYSIS_SCOPE parameter supports several options, some combination are not supported.

Action: Enter a valid combination of options.

QSM-00808: parameter <varname>string</varname> only permits a single keyword. Choose one of the following: <varname>string</varname>

Cause: The user attempted to set a task parameter using multiple keywords.

Action: Adjust the data value and retry the operation

QSM-00809: the selected number of recommendations exceeds the maximum value of <varname>string</varname>

Cause: While executing GET_TASK_SCRIPT, an attempt was made to fetch a script having too many recommendations. The limit has been set in order to avoid possible performance and out-of-memory errors.

Action: Select a small set of recommendations prior to fetching the script

QSM-00999: Advisor feature is not currently implemented

Cause: The user attempted to execute an unsupported advisor operation.

Action: Verify the availability of the operation.

QSM-01001: query rewrite not enabled

Cause: When query rewrite is disabled, no query rewrite will take place.

Action: Enable query rewrite with ALTER SESSION SET QUERY_REWRITE ENABLE command.

QSM-01002: no query rewrite when OPTIMIZER_MODE is rule based

Cause: Query rewrite did not occur because the OPTIMIZER_MODE was set to RULE.

Action: Change the optimizer mode using the OPTIMIZER_MODE parameter.

QSM-01003: no query rewrite on DDL queries

Cause: If query contains any data definition operations, no query rewrite will take place.

Action: None

QSM-01004: no query rewrite before view merging

Cause: Internal session parameter _QUERY_REWRITE_2 is set to FALSE

Action: Change session parameter with ALTER SESSION command.

QSM-01005: no query rewrite when query has slave SQL

Cause: Current process is a kxfx slave

Action: None

QSM-01006: query rewrite disabled for this query block

Cause: During query rewrite, certain view query blocks cannot be rewritten.

Action: None

QSM-01007: query has NOREWRITE hint

Cause: When query contains a NOREWRITE hint, no query rewrite will take place for that query block.

Action: Remove the NOREWRITE hint from the query

QSM-01008: no query rewrite for update queries

Cause: If a query or part of it has any DML update operations, no query rewrite will take place.

Action: None

QSM-01009: query rewritten with materialized view, <varname>string</varname>, using text match algorithm

Cause: The query was rewritten using a materialized view, because query text matched the definition of the materialized view

Action: None

QSM-01010: table(s) in the query not found in materialized view, <varname>string</varname>

Cause: If the materialized view does not reference the base tables found in the query, it cannot be used for rewrite

Action: None

QSM-01011: when heuristic rewrite not set, rewrite hint required

Cause: When using a stored outline, a rewrite hint is required for query rewrite

Action: None

QSM-01012: SAMPLE clause present in FROM

Cause: If a query contains a SAMPLE clause, query rewrite will not take place

Action: None

QSM-01013: nested aggregates or CONNECT BY/START WITH clause present

Cause: If the query contains nested aggregates, CONNECT BY clause, or START WITH clause, query rewrite will not take place

Action: None

QSM-01014: top level operator in WHERE clause of the query is an OR

Cause: If the top-level operator in the WHERE clause is an OR and there is more than one table in the FROM list, then query rewrite will not take place.

Action: None

QSM-01015: GROUP BY clause has non-columns

Cause: No query rewrite, if there is no valid column in the GROUP BY clause.

Action: None

QSM-01016: Query rewrite does not support, aggregate, <varname>string</varname>

Cause: No query rewrite, if the query contains any DISTINCT aggregates other than COUNT, MIN or MAX.

Action: None

QSM-01017: aggregate argument cannot be converted to canonical form

Cause: Argument of each aggregate in the query needs to be convertible into a canonical form for query rewrite.

Action: None

QSM-01018: single table materialized join view rewrite not required

Cause: Materialized join view is more expensive for rewrite than using the base table

Action: None

QSM-01019: no suitable materialized view found to rewrite this query

Cause: There doesn't exist any materialized view in the dataware house that can be used to rewrite this query.

Action: Consider creating a new materialized view.

QSM-01020: materialized view, <varname>string</varname>, is ineligible

Cause: Materialized view is probably disabled or stale.

Action: Consider enabling the materialized view for rewrite or refreshing it.

QSM-01021: materialized view, <varname>string</varname>, not found in the hint list

Cause: There is a rewrite hint list specified in the query, but this materialized view is not among the hinted ones.

Action: Include this materialized view in the rewrite hint list.

QSM-01022: a more optimal materialized view than <varname>string</varname> was used to rewrite

Cause: Query Rewrite always chooses the most optimal materialized view based on certain parameters, such as cardinality of the materialized view, number of joins etc. The materialized view specified was found to be less optimal.

Action: To force using a materialized view, consider using a rewrite hint.

QSM-01023: materialized view, <varname>string</varname>, has GRANT errors

Cause: Materialized view probably has some metadata errors.

Action: Consider recreating it.

QSM-01024: materialized view, <varname>string</varname>, has unknown compile errors

Cause: Materialized view probably has some metadata errors.

Action: Consider recreating it.

QSM-01025: materialized view, <varname>string</varname>, not found

Cause: The specified materialized view is not found in the database.

Action: Check the spelling or create a new materialized view

QSM-01026: query rewrite is disabled for, <varname>string</varname>

Cause: Query rewrite could not use this materialized view, because query rewrite was not enabled for it.

Action: Enable query rewrite for the materialized view with ALTER MATERIALIZED VIEW "mv" ENABLE QUERY REWRITE command, where "mv" is the name of the materialized view.

QSM-01027: materialized view, <varname>string</varname>, is unusable

Cause: Materialized view probably has some metadata errors.

Action: Consider recreating it.

QSM-01028: materialized view, <varname>string</varname>, is currently being refreshed

Cause: Materialized view cannot be used for query rewrite while it is being refreshed

Action: Rerun the query, after the refresh operation is completed.

QSM-01029: materialized view, <varname>string</varname>, is stale in ENFORCED integrity mode

Cause: A stale materialized view cannot be used for query rewrite when the query rewrite integrity mode is set to ENFORCED.

Action: Refresh the materialized view or alter the rewrite integrity mode with ALTER SESSION QUERY_REWRITE_INTEGRITY = STALE TOLERATED command.

QSM-01030: materialized view, <varname>string</varname>, has PL/SQL functions in ENFORCED integrity mode

Cause: A materialized view with PL/SQL functions in its definition cannot be used for query rewrite when query rewrite integrity is set to ENFORCED.

Action: Consider running the query in STALE TOLERATED mode.

QSM-01031: materialized view, <varname>string</varname>, is stale in TRUSTED integrity mode

Cause: A stale materialized view cannot be used for query rewrite when the query rewrite integrity mode is set to TRUSTED.

Action: Refresh the materialized view or alter the rewrite integrity mode with ALTER SESSION QUERY_REWRITE_INTEGRITY = STALE TOLERATED command.

QSM-01032: materialized view, <varname>string</varname>, not found

Cause: There was no associated metadata for the materialized view.

Action: Check the spelling and re-run the query.

QSM-01033: query rewritten with materialized view, <varname>string</varname>

Cause: The specified materialized view was used to rewrite the given query.

Action: None

QSM-01034: materialized view, <varname>string</varname>, needs a dimension level to join table, <varname>string</varname>

Cause: One or more hierarchical relationship(s) in the table(s) could not be established.

Action: Consider adding a level in the dimension to provide the missing intra- table relationships.

QSM-01035: a row level security policy exists on this table

Cause: Any row level security policy that may exist on a base-table prevents exact text match query rewrite.

Action: None

QSM-01036: unmatched column, <varname>string</varname>, present in query after view merging

Cause: Clearing the columns after view merging failed due to some reasons - bug??

Action: None

QSM-01037: Query Rewrite failed to allocate the necessary query join graph

Cause: Join graph allocation and initialization failed, possibly due to one or more undetermined operand(s) in the query expression.

Action: None

QSM-01038: logical operator(s) could not be processed

Cause: One or more logical operator(s) in the query predicates could not be processed, possibly due to invalid operator(s).

Action: None

QSM-01039: selection present on right hand side of an outer join

Cause: Query cannot be rewritten if any predicate contains a selection on the right hand side of an outer join.

Action: None

QSM-01040: match between the materialized view (<varname>string</varname>) and query join graphs failed

Cause: Query rewrite will not take place if the joins in the query and the materialized view do not have any match.

Action: None

QSM-01041: materialized view, <varname>string</varname>, does not match with a measure in the query

Cause: If a measure (such as SUM, AVERAGE) in the query cannot be matched or computed from the materialized view, it will not be used for rewrite.

Action: None

QSM-01042: anchor and matching join arc check failed for <varname>string</varname>

Cause: If there is a lossy join in the materialized view that doesn't exist in the query, query rewrite will not take place.

Action: None

QSM-01043: join back attempted on a table to the RHS of a semi or anti join for <varname>string</varname>

Cause: Query Rewrite will not occur if a join back is required to a table that appears to the right hand side of a semi or anti-join.

Action: None

QSM-01044: join back attempted on a view for <varname>string</varname>

Cause: Query Rewrite will not occur if a join back to a table is required to find any missing columns.

Action: None

QSM-01046: complex join back on correlated columns not allowed (<varname>string</varname>)

Cause: Query Rewrite will not occur if a join back is required on a column that is referenced by a sub-query.

Action: None

QSM-01047: complex join back on non-MAV rewrite not allowed (<varname>string</varname>)

Cause: Query Rewrite can occur by means of a complex join back only during a MAV rewrite.

Action: None

QSM-01048: join back level(s) not present (<varname>string</varname>)

Cause: Query Rewrite requires joining back to a level of a dimension to find a missing information.

Action: Consider creating a dimension.

QSM-01049: semi-join check failed for materialized view, <varname>string</varname>

Cause: If there is a semi join in the query, then Query Rewrite will create (select distinct <varname>pk-list</varname>, <varname>ref-col</varname> from mv) where <varname>pk-list</varname> is the list of rowids/pk of all mv tables that don't correspond to a right side of a semi-join and <varname>ref-col</varname> are their columns. Query Rewrite will not occur if a join from the materialized view cannot match the semi-join from the query.

Action: None

QSM-01050: roll-up check failed for materialized view, <varname>string</varname>

Cause: A column in the query cannot be computed from the materialized view.

Action: Consider creating a dimension to supply the missing information

QSM-01051: no support for rollup when a window function is present on the column

Cause: No query rewrite if a window function is present on a column that requires a roll-up to compute a measure.

Action: None

QSM-01052: referential integrity constraint on table, <varname>string</varname>, not VALID in ENFORCED integrity mode

Cause: A join present in the materialized view requires validated primary/foreign key constraints in ENFORCED query rewrite integrity mode.

Action: Validate the constraint or change the integrity mode with ALTER SESSION SET QUERY_REWRITE_INTEGRITY = STALE_TOLERATED command.

QSM-01053: NORELY referential integrity constraint on table, <varname>string</varname>, in TRUSTED/STALE TOLERATED integrity mode

Cause: A join present in the materialized view requires RELY mode to be set on the primary/foreign key constraints.

Action: Set the RELY mode with ALTER TABLE <varname>table</varname> MODIFY CONSTRAINT <varname>constraint</varname> RELY command. Alternatively validate the constraint with ALTER TABLE <varname>table</varname> VALIDATE CONSTRAINT <varname>constraint</varname>.

QSM-01054: no join match between query and summary, <varname>string</varname>

Cause: There are no common joins between the query and the the materialized view

Action: None

QSM-01055: Query Rewrite failed to allocate the necessary materialized view join graph

Cause: Join graph allocation and initialization failed, possibly due to one or more undetermined operand(s).

Action: None

QSM-01056: no query rewrite for this DDL expression

Cause: Some SELECT statements which are part of a DDL expression may be eligible for rewrite. These include CREATE AS SELECT and CREATE OUTLINE statements. The given query expression is a DDL expression, which doesn't fall in this category.

Action: None

QSM-01057: no query rewrite for this DML expression

Cause: Current DML is being done using an updatable view, so it is not eligible for rewrite.

Action: None

QSM-01058: MV, <varname>string</varname>, does not have column, <varname>string</varname>, for a joinback

Cause: A GROUP BY column in the query is not present in the GROUP BY clause of the materialized view. This usually requires a join back to a third table.

Action: None

QSM-01059: HAVING clause in the query block is malformed

Cause: An illegal HAVING clause has been specified in the query.

Action: Correct the query syntax and run the query again.

QSM-01060: illegal subquery in the HAVING clause

Cause: When a HAVING clause has a subquery, then any references to the tables in the outer query should only reference the tables in the GROUP BY clause.

Action: Correct error in the syntax and rerun the query.

QSM-01061: illegal query expression

Cause: An illegal query was specified. Specifically one of the following criteria was not satisfied: (a) All (non-constant, non-aggregate) SELECT expressions in the query should be made up of group expressions. (b) All column references in the HAVING clause should come from the GROUP BY expressions. (c) If there is an ORDER BY clause, then all column references should come from the GROUP BY or SELECT clause, depending on whether the query selects DISTINCT.

Action: Correct error in the syntax and rerun the query.

QSM-01062: query has one or more manual partition(s)

Cause: Query rewrite is not possible if query has any manual partitions.

Action: None

QSM-01063: query has a dictionary table or view

Cause: Query rewrite is not allowed if query references any dictionary tables/views.

Action: None

QSM-01064: query has a fixed table or view

Cause: Query rewrite is not allowed if query references any fixed tables/views

Action: None

QSM-01065: materialized view, <varname>string</varname>, cannot compute measure, <varname>string</varname>, in the query

Cause: If the materialized view cannot compute a measure in the query using the measures in its definition, then query rewrite will not occur.

Action: None

QSM-01066: materialized view, <varname>string</varname>, does not have the column, <varname>string</varname>, from query

Cause: Query rewrite will not occur, if the materialized view cannot provide all the columns that the query has

Action: None

QSM-01067: materialized view, <varname>string</varname>, cannot support the query measure, <varname>string</varname>

Cause: An attempt was made to push a grouping function through an expression specified in the query to transform a measure. Query rewrite will not occur if this measure transformation failed.

Action: None

QSM-01068: no dimensions present

Cause: An attempt was made to load a dimension from the dataware house, but there were no dimensions present.

Action: None

QSM-01069: summary join graph for, <varname>string</varname>, does not have table, <varname>string</varname>

Cause: An attempt to locate an object that is part of a join failed.

Action: None

QSM-01070: equivalence class manager was not found

Cause: An equivalence class manager is required to compute the transitive closure for the columns in an equivalence class.

Action: None

QSM-01071: query rewrite not possible because a join in materialized view % with table % has eliminated some rows found in query

Cause: All lossy joins in the materialized view must be present in the query for query rewrite to occur.

Action: None

QSM-01072: materialized view, <varname>string</varname>, and query have different joins between tables, <varname>string</varname>

Cause: Anchors, if any, in the MV and query match. But the joins between these anchors in the MV and query are different.

Action: None

QSM-01073: query rewrite not possible because materialized view, <varname>string</varname>, has a join not found in query

Cause: Query rewrite may not be possible if the materialized view has some joins that query does not have

Action: None

QSM-01074: query rewrite not possible because materialized view, <varname>string</varname>, and query have different number of joins between tables, <varname>string</varname>

Cause: Query rewrite may not be possible if the query has some joins that the materialized view does not have between the same pair of tables.

Action: n/a

QSM-01075: materialized view, <varname>string</varname>, does not support aggregate function, <varname>string</varname>

Cause: The specified aggregate function is not found in the materialized view.

Action: None

QSM-01076: no materialized join view was found

Cause: To support an MJV rewrite, we require a materialized join view.

Action: None

QSM-01077: materialized view, <varname>string</varname>, is grouping at a higher level than query

Cause: If a query column, which is not present in the materialized view, can be obtained by a rollup within the materialized view, then it should group at a higher level than the materialized view.

Action: None

QSM-01078: materialized view, <varname>string</varname>, is marked invalid

Cause: The materialized view's kglobsta field has KGLSINV bit set.

Action: none ??

QSM-01079: DML operation occurred on a table referenced by MV, <varname>string</varname>

Cause: If any dependent tables of a materialized view undergoes a DML operation, query rewrite may be restricted depending on the query rewrite integrity mode for the session. In this situation, query rewrite will take place only if the rewrite integrity mode is STALE_TOLERATED.

Action: Consider refreshing the materialized view changing the rewrite integrity mode to STALE_TOLERATED.

QSM-01080: invalid dimension, <varname>string</varname>

Cause: This dimension table has authorization or compilation problems.

Action: None

QSM-01081: no primary key or row id found for table, <varname>string</varname>, in MV, <varname>string</varname>

Cause: In order to obtain a missing column, the materialized view needs to join back to the above table. But it lacks the primary key or rowid for the table.

Action: None

QSM-01082: Joining materialized view, <varname>string</varname>, with table, <varname>string</varname>, not possible

Cause: A column in the query is not found in the summary. To obtain the column, a join back of materialized view to the table by means of either the primary key, foreign key or rowid of the table is required. The specified materialized view does not have the primary key, foreign key or rowid of the table to perform the join operation.

Action: Consider building a dimension-table to provide the missing information.

QSM-01083: query text not available - possible inline view

Cause: During the query rewrite transformation, original query was possibly transformed into an inline view.

Action: None

QSM-01084: materialized view <varname>string</varname> has an anchor table <varname>string</varname> not found in query

Cause: A table in a materialized view is an anchor, (a) if it is not joined to any other table or (b) joined to other tables but each of its joins is either lossy or lossless with the above table being child-side table. If an anchor which is present in the materialized view is not found in the query, then query rewrite will not take place.

Action: None

QSM-01085: materialized view, <varname>string</varname>, has a lossy join between tables, <varname>string</varname>

Cause: There are no primary key, foreign key constraints between these tables. But query rewrite is still possible if the lossy join between the above tables also appear in the query

Action: None

QSM-01086: dimension(s) not present or not used in ENFORCED integrity mode

Cause: Query rewrite does not use dimensions in ENFORCED query rewrite integrity mode. If a suitable dimension is present, consider changing the current integrity mode to either TRUSTED or STALE_ TOLERATED by using ALTER SESSION SET QUERY_REWRITE_INTEGRITY = command.

Action: None

QSM-01087: query grouping on a column that cannot be derived from materialized view, <varname>string</varname>

Cause: Query is grouping on undetermined columns.

Action: None

QSM-01089: an inline view in the query does not have a materialized view

Cause: General query rewrite is not possible if an inline view in the query does not have a matching materialized view in the meta data.

Action: None

QSM-01090: no query rewrite after view merging

Cause: Internal session parameter `_QUERY_REWRITE_1` is set to FALSE

Action: Change session parameter with ALTER SESSION command.

QSM-01091: cost based optimizer found query rewrite is more expensive

Cause: When cost based optimizer is ON, cost of the rewritten cursor is compared to the cursor generated without query rewrite, and the cheaper one is chosen for execution.

Action: None

QSM-01092: mjb tries to rewrite a semi-join and primary key or rowid missing

Cause: Materialized join view tries to rewrite a semi-join (IN sub-query) and the primary keys or rowids of left tables of semi-joins are missing from MJV.

Action: None

QSM-01093: anti-join marker not found in materialized join view

Cause: Materialized join view has outer join while the query inner join. For rewrite to succeed MV must have an anti-join marker like the rowid or primary key of the right tables of outer join

Action: None

QSM-01094: outer-join filter not found in materialized join view

Cause: Materialized join view has outer join while the query inner join. For rewrite to succeed MV must have an anti-join marker like the rowid or primary key of the right tables of outer join

Action: None

QSM-01095: no suitable grouping_id found in MV with grouping sets

Cause: If materialized aggregate view contains grouping sets, then it also must contain the `grouping_id()` function. This function must contain all columns in the MV GROUP BY.

Action: None

QSM-01096: Materialized view with grouping sets contains duplicates

Cause: Materialized view with grouping sets contains duplicates and no rewrite is supported for it. For example, GROUP BY GROUPING SET ((a), (a)) is not supported for rewrite.

Action: None

QSM-01097: Materialized view with grouping sets has too long key

Cause: Materialized view with grouping sets has more than 64 different keys in its GROUP BY. No rewrite is supported then.

Action: None

QSM-01098: mv <varname>string</varname> clause more restrictive than query <varname>string</varname> clause

Cause: The materialized view contains a selection condition in the WHERE or HAVING clause that is more restrictive than the corresponding selection condition in the request query.

Action: Change the selection criteria in the request query to be at least as restrictive as the selection criteria in the materialized view, or drop and recreate the materialized view using less restrictive selection criteria.

QSM-01099: non-tolerated reference to stale portion of mv for table <varname>string</varname>

Cause: The materialized view is partially stale. It is stale with respect to one or more partitions in one or more of its detail tables. The request query references one or more such detail partitions.

Action: (1) Change the selection criteria of the request to restrict the query to only the fresh portion of the materialized view, or (2) ALTER {SYSTEM|SESSION} QUERY_REWRITE_INTEGRITY = STALE_TOLERATED or (3) refresh the materialized view.

QSM-01100: containment check failed for mv, <varname>string</varname>

Cause: The materialized view contains a selection condition in the WHERE or HAVING clause that is more restrictive than the corresponding selection condition in the request query.

Action: Change the selection criteria in the request query to be at least as restrictive as the selection criteria in the materialized view, or drop and recreate the materialized view using less restrictive selection criteria.

QSM-01101: rollup(s) took place on mv, <varname>string</varname>

Cause: If query's GROUP BY has one of the higher levels of columns found in the materialized view, then the lower level columns in the materialized view will be rolled up to compute the desired results.

Action: None

QSM-01102: materialized view, <varname>string</varname>, requires join back to table, <varname>string</varname>, on column, <varname>string</varname>

Cause: A column in the query does not appear in the materialized view. Query rewrite will try to obtain this column from the base table, by doing a join back to that column with the MV.

Action: None

QSM-01103: there is a remote table, <varname>string</varname>, referenced in the query

Cause: Query rewrite does not support query with remote tables.

Action: None

QSM-01104: query is using flashback

Cause: Query rewrite does not support flashback.

Action: None

QSM-01105: no primary key or row id in MV, <varname>string</varname>, is found for table, <varname>string</varname>

Cause: In order to obtain a missing column, the materialized view needs to join back to the above table. But it lacks the primary key or rowid for the table.

Action: None

QSM-01106: materialized view, <varname>string</varname>, is stale with respect to some partition(s) in the base table(s)

Cause: Query is requesting some data from the MV that are stale with respect to some partitions in the base tables due to some updates.

Action: refresh the stale partitions and rerun the query

QSM-01107: Partition Containment Tracking (PCT) rewrite is not allowed

Cause: Query rewrite is disabled for PCT through a session parameter

Action: None

QSM-01108: maximum number of disjuncts exceeded in the query <varname>string</varname>

Cause: Query rewrite engine cannot process the query if the number of disjuncts (OR's) in the WHERE clause exceeds the maximum allowed number. The number of disjuncts in the query and the maximum allowed disjuncts are given at the end of the message in the form of (no of disjuncts in query, maximum disjuncts allowed).

Action: None

QSM-01109: while rewriting with MV, <varname>string</varname>, table, <varname>string</varname>, migrated to query delta

Cause: There was an unmatched join on the MV, so a table involved in the join was pushed to the query delta to see if the query can be rewritten

Action: None

QSM-01110: query rewrite not possible with materialized view <varname>string</varname> because it contains a join between tables (<varname>string</varname>) that is not present in the query and that potentially eliminates rows needed by the query

Cause: All lossy joins in the materialized view must be present in the query for query rewrite to occur.

Action: None

QSM-01111: no partition key or partition marker found in MV, <varname>string</varname>

Cause: In order to do query rewrite with fresh partitions of an MV, the MV should have a partition key or partition marker.

Action: None

QSM-01112: WHERE clause of mv, <varname>string</varname>, is more restrictive than query

Cause: The materialized view contains a selection condition in the WHERE clause that is more restrictive than the corresponding selection condition in the request query.

Action: Change the selection criteria in the request query to be at least as restrictive as the selection criteria in the materialized view, or drop and recreate the materialized view using less restrictive selection criteria.

QSM-01113: HAVING clause of mv, <varname>string</varname>, is more restrictive than query

Cause: The materialized view contains a selection condition in the HAVING clause that is more restrictive than the corresponding selection condition in the request query.

Action: Change the selection criteria in the request query to be at least as restrictive as the selection criteria in the materialized view, or drop and recreate the materialized view using less restrictive selection criteria.

QSM-01115: rollup took place on a column with a window function

Cause: There was a rollup to aggregate the data on a column with a window function.

Action: None

QSM-01116: window function computability checks failed

Cause: The window function in the query could not be computed from the materialized view.

Action: None

QSM-01120: recursive rewrite not allowed here

Cause: This query was possibly rewritten with an equivalence which doesn't allow further rewrites.

Action: None

QSM-01121: materialized view, <varname>string</varname>, is TRUSTED in ENFORCED integrity mode

Cause: A stale materialized view created with USING TRUSTED CONSTRAINTS clause cannot be used when the query rewrite integrity mode is set ENFORCED.

Action: Alter materialized view such that it has the ENFORCED CONSTRAINTS
ALTER MATERIALIZED VIEW <varname>mv</varname> REFRESH USING
ENFORCED CONSTRAINTS

QSM-01123: self-join algorithm could not resolve multiple instances

Cause: The generalized self-join algorithm could not resolve the multiple instances, likely due to mismatch in joins or measures

Action: Consider using aliases in the query to match with the aliases in the materialized view

QSM-01124: set operator materialized view, <varname>string</varname>, doesn't have a marker column

Cause: The specified set operator materialized view does not have a marker column.

Action: Add a marker column to the specified materialized view.

QSM-01125: a more optimal set operator materialized view than <varname>string</varname> was used to rewrite

Cause: Query Rewrite always chooses the most optimal set operator materialized view based on parameters, such as cardinality of the set operator materialized view,

number of branches that the set operator materialized view can rewrite etc. The set operator materialized view specified was found to be less optimal.

Action: To force using a set operator materialized view, consider using a rewrite hint.

QSM-01126: query rewritten with set operator materialized view, <varname>string</varname>

Cause: The specified set operator materialized view was used to rewrite the given query.

Action: None

QSM-01127: query rewritten with materialized view(s), <varname>string</varname>

Cause: The query was successfully rewritten with multiple MVs

Action: None

QSM-01128: Multi MV rewrite is disabled

Cause: When multimv query rewrite is disabled, no multimv query rewrite will take place.

Action: Enable multimv query rewrite with ALTER SESSION SET
"_MULTIMV_QUERY_REWRITE_ENABLED" = true .

QSM-01129: query has NO_MULTIMV_REWRITE hint

Cause: When the query has this hint no multimv rewrite will be tried for this query

Action: Remove hint from query

QSM-01130: Multi MV rewrite not allowed if at least one query block has no MVs

Cause: When only multimv query rewrite is enabled, every query block should have at least one MV in it's from clause

Action: Disable only multimv query rewrite with ALTER SESSION SET
"_ONLY_MULTIMV_QUERY_REWRITE_ENABLED" = false .

QSM-01131: query has ONLY_MULTIMV_REWRITE hint

Cause: When the query has this hint no multimv rewrite will be done if the query has a query block with no MVs in the from clause

Action: Remove hint from query

QSM-01132: query has a named array type column

Cause: When the query has a column of named array type, query rewrite cannot be done

Action: None

QSM-01133: query has an ADT column

Cause: When the query has a column of ADT type, query rewrite cannot be done

Action: None

QSM-01134: query has a hidden or nested table column

Cause: When the query has a hidden or nested table column, query rewrite cannot be done

Action: None

QSM-01135: query has an LOB column

Cause: When the query has a column stored in LOB, query rewrite cannot be done

Action: None

QSM-01136: query has a nested table column

Cause: When the query has a nested table column, query rewrite cannot be done

Action: None

QSM-01137: dimension level, <varname>string</varname>, marked as SKIP WHEN NULL

Cause: Join back is not possible on a level marked as SKIP WHEN NULL in a dimension

Action: None

QSM-01138: Query rewrite is not allowed.

Cause: Query rewrite was not allowed during materialized view validation.

Action: None

QSM-01139: query rewrite with stale materialized view, <varname>string</varname>, requires join back

Cause: Query rewrite was not allowed with a stale materialized view if join back to a base table is required.

Action: None

QSM-01150: query did not rewrite

Cause: See the other messages from explain_rewrite() for explanation"

Action: None

QSM-01168: query rewrite not possible when Fine Grain Auditing is present on a base table

Cause: Query rewrite could not take place because Fine Grain Auditing (FGA) was present on a base table in the query

Action: None

QSM-01169: query rewrite not possible for a CREATE or ALTER VIEW statement

Cause: Query rewrite could not take place because the incoming query was either a CREATE or ALTER VIEW statement

Action: None

QSM-01170: no matching objects found between query and materialized view <varname>string</varname>

Cause: Matching objects were not found between the query and the materialized view. Materialized view may contain only editioning views.

Action: None

QSM-01202: query rewrite not possible when OPTIMIZER_MODE is set to rule based

Cause: Query rewrite did not occur because the OPTIMIZER_MODE was set to RULE.

Action: Change the optimizer mode using the OPTIMIZER_MODE parameter.

QSM-01203: query rewrite not possible on DDL queries

Cause: If query contains any data definition operations, no query rewrite will take place.

Action: None

QSM-01204: query rewrite not possible before view merging

Cause: Internal session parameter _QUERY_REWRITE_2 is set to FALSE

Action: Change session parameter with ALTER SESSION command.

QSM-01205: query rewrite not possible when query has slave SQL

Cause: Current process is a kxfx slave

Action: None

QSM-01207: query rewrite not possible when query has a NOREWRITE hint

Cause: When query contains a NOREWRITE hint, no query rewrite will take place for that query block.

Action: Remove the NOREWRITE hint from the query

QSM-01208: query rewrite not possible for update queries

Cause: If a query or part of it has any DML update operations, no query rewrite will take place.

Action: None

QSM-01209: query rewritten with materialized view, <varname>string</varname>, using text match algorithm

Cause: The query was rewritten using a materialized view, because query text matched the definition of the materialized view

Action: None

QSM-01210: query rewrite not possible because no common table(s) found between materialized view <varname>string</varname> and query

Cause: If the materialized view does not reference the base tables found in the query, it cannot be used for rewrite

Action: None

QSM-01211: query rewrite not possible when stored outline does not have a rewrite hint

Cause: When using a stored outline, a rewrite hint is required for query rewrite

Action: None

QSM-01212: query rewrite not possible when SAMPLE clause is present in FROM

Cause: If a query contains a SAMPLE clause, query rewrite will not take place

Action: None

QSM-01213: query rewrite not possible when nested aggregates or CONNECT BY clause or START WITH clause or recursive WITH clause is present

Cause: If the query contains nested aggregates, CONNECT BY clause, or START WITH clause, or recursive with clause, query rewrite will not take place

Action: None

QSM-01214: query rewrite not possible if OR is the top level operator in query WHERE clause

Cause: If the top-level operator in the WHERE clause is an OR and there is more than one table in the FROM list, then query rewrite will not take place.

Action: None

QSM-01215: query rewrite not possible when query GROUP BY clause has non-columns

Cause: No query rewrite, if there is no valid column in the GROUP BY clause.

Action: None

QSM-01218: query rewrite is likely more expensive due to a single table match between materialized view and query

Cause: Materialized join view is more expensive for rewrite than using the base table

Action: None

QSM-01219: no suitable materialized view found to rewrite this query

Cause: There doesn't exist any materialized view in the database that can be used to rewrite this query.

Action: Consider creating a new materialized view.

QSM-01220: materialized view, <varname>string</varname>, is disabled, stale or unusable

Cause: Materialized view is probably disabled or stale.

Action: Consider enabling the materialized view for rewrite or refreshing it.

QSM-01222: materialized view <varname>string</varname> is less optimal than <varname>string</varname>

Cause: Query Rewrite always chooses the most optimal materialized view based on certain parameters, such as cardinality of the materialized view, number of joins etc. The materialized view specified was found to be less optimal.

Action: To force using a materialized view, consider using a rewrite hint.

QSM-01241: query measure cannot be derived from the materialized view <varname>string</varname>

Cause: If a measure (such as SUM, AVERAGE) in the query cannot be matched or computed from the materialized view, it will not be used for rewrite.

Action: None

QSM-01244: join back could not be done on a view for <varname>string</varname>

Cause: Query Rewrite will not occur if a join back to a table is required to find any missing columns.

Action: None

QSM-01246: join back on correlated columns not allowed (<varname>string</varname>)

Cause: Query Rewrite will not occur if a join back is required on a column that is referenced by a sub-query.

Action: None

QSM-01247: join back cannot be done on a materialized view that does not have an aggregate (<varname>string</varname>)

Cause: Query Rewrite can occur by means of a complex join back only during a MAV rewrite.

Action: None

QSM-01248: materialized view does not have the join back level(s) (<varname>string</varname>)

Cause: Query Rewrite requires joining back to level of a dimension to find missing information.

Action: Consider creating a dimension.

QSM-01251: query rewrite cannot perform rollup due to the presence of a window function

Cause: No query rewrite if a window function is present on a column that requires a roll-up to compute a measure.

Action: None

QSM-01256: query rewrite not possible for this DDL statement

Cause: Some SELECT statements which are part of a DDL expression may be eligible for rewrite. These include CREATE AS SELECT and CREATE OUTLINE statements. The given query expression is a DDL expression, which doesn't fall in this category.

Action: None

QSM-01257: query rewrite not possible for this DML statement

Cause: Current DML is being done using an updatable view, so it is not eligible for rewrite.

Action: None

QSM-01263: query rewrite not possible when query references a dictionary table or view

Cause: Query rewrite is not allowed if query references any dictionary tables/views.

Action: None

QSM-01271: query rewrite not possible because a join in materialized view <varname>string</varname> with table <varname>string</varname> has eliminated some rows found in query

Cause: A join from the materialized view to any table that eliminates some rows should be present in the query. Otherwise query rewrite will not occur.

Action: None

QSM-01273: query rewrite not possible because materialized view <varname>string</varname> has a join not found in query

Cause: Query rewrite may not be possible if the materialized view has some joins that query does not have

Action: None

QSM-01274: query rewrite not possible because materialized view <varname>string</varname> and query have different number of joins between tables <varname>string</varname>

Cause: Query rewrite may not be possible if the query has some joins that the materialized view does not have between the same pair of tables.

Action: n/a

QSM-01279: query rewrite not possible because DML operation occurred on a table referenced by materialized view <varname>string</varname>

Cause: If any dependent tables of a materialized view undergoes a DML operation, query rewrite may be restricted depending on the query rewrite integrity mode for the session. In this situation, query rewrite will take place only if the rewrite integrity mode is STALE_TOLERATED.

Action: Consider refreshing the materialized view changing the rewrite integrity mode to STALE_TOLERATED.

QSM-01281: query rewrite not possible because either a primary key or a row id is required to join table <varname>string</varname> with MV <varname>string</varname>

Cause: In order to obtain a missing column, the materialized view needs to join back to the above table. But it lacks the primary key or rowid for the table.

Action: None

QSM-01284: materialized view <varname>string</varname> has an anchor table <varname>string</varname> not found in query

Cause: A table in a materialized view is an anchor, (a) if it is not joined to any other table or (b) joined to other tables but each of its joins is not guaranteed to provide all the rows or joined with the above table being child-side table. If an anchor which is present in the materialized view is not found in the query, then query rewrite will not take place.

Action: None

QSM-01293: anti-join marker not found in materialized view with joins

Cause: Materialized view has outer join while the query has inner join. For rewrite to succeed MV must have an anti-join marker like the rowid or primary key of the right tables of outer join

Action: None

QSM-01295: no suitable grouping_id found in materialized view with grouping sets

Cause: If materialized view contains grouping sets, then it also must contain the grouping_id() function. This function must contain all columns in the MV GROUP BY.

Action: None

QSM-01296: query rewrite not possible because materialized view contains duplicate grouping sets

Cause: Materialized view with grouping sets contains duplicates and no rewrite is supported for it. For example, GROUP BY GROUPING SET ((a), (a)) is not supported for rewrite.

Action: None

QSM-01297: query rewrite not possible because materialized view with grouping sets has more than 176 different keys

Cause: Materialized view with grouping sets has more than 176 different keys in its GROUP BY. No rewrite is supported then.

Action: None

QSM-01298: materialized view <varname>string</varname> clause more restrictive than query <varname>string</varname> clause

Cause: The materialized view contains a selection condition in the WHERE or HAVING clause that is more restrictive than the corresponding selection condition in the request query.

Action: Change the selection criteria in the request query to be at least as restrictive as the selection criteria in the materialized view, or drop and recreate the materialized view using less restrictive selection criteria.

QSM-01299: query rewrite not possible because materialized view <varname>string</varname> is partially stale

Cause: The materialized view is partially stale. It is stale with respect to one or more partitions in one or more of its detail tables. The request query references one or more such detail partitions.

Action: (1) Change the selection criteria of the request to restrict the query to only the fresh portion of the materialized view, or (2) ALTER {SYSTEM|SESSION} QUERY_REWRITE_INTEGRITY = STALE_TOLERATED or (3) refresh the materialized view.

QSM-01303: query rewrite not possible because query references a remote table <varname>string</varname>

Cause: Query rewrite does not support query with remote tables.

Action: None

QSM-01304: query rewrite not possible because query is using flashback

Cause: Query rewrite does not support flashback.

Action: None

QSM-01307: Partition Containment Tracking (PCT) rewrite is not allowed

Cause: Query rewrite is disabled for PCT through a session parameter

Action: None

**QSM-01308: number of 'OR's in query exceeded the maximum value
<varname>string</varname>**

Cause: Query rewrite engine cannot process the query if the number of disjuncts (OR's) in the WHERE clause exceeds the maximum allowed number. The number of disjuncts in the query and the maximum allowed disjuncts are given at the end of the message in the form of (no of disjuncts in query, maximum disjuncts allowed).

Action: None

**QSM-01316: window function could not be computed from materialized view
<varname>string</varname>**

Cause: The window function in the query could not be computed from the materialized view.

Action: None

**QSM-01321: query rewrite not possible because materialized view
<varname>string</varname> has TRUSTED constraints in ENFORCED integrity
mode**

Cause: A stale materialized view created with USING TRUSTED CONSTRAINTS clause cannot be used when the query rewrite integrity mode is set ENFORCED.

Action: Alter materialized view such that it has the ENFORCED CONSTRAINTS
ALTER MATERIALIZED VIEW <varname>mv</varname> REFRESH USING
ENFORCED CONSTRAINTS

**QSM-01332: query rewrite not possible because query has a named array type
column**

Cause: When the query has a column of named array type, query rewrite cannot be done

Action: None

QSM-01333: query rewrite not possible because query has an ADT column

Cause: When the query has a column of ADT type, query rewrite cannot be done

Action: None

**QSM-01334: query rewrite not possible because query has a hidden or nested
table column**

Cause: When the query has a hidden or nested table column, query rewrite cannot be done

Action: None

QSM-01335: query rewrite not possible because query has an LOB column

Cause: When the query has a column stored in LOB, query rewrite cannot be done

Action: None

**QSM-01336: the materialized view you specified (<varname>string</varname>)
was not used to rewrite the query**

Cause: A materialized view specified by the user in the input was not used to rewrite the query, either because query rewrite failed or another more optimal materialized view was used to rewrite.

Action: None

QSM-01339: rewrite not supported on inline view aggregate

Cause: Query has an inline view with an aggregate. Such inline views cannot be matched to any inline views in materialized views.

Action: None

QSM-01340: no inline view match found between query and materialized view(s)

Cause: Query's inline view does not have a match with any inline views in the materialized view

Action: None

QSM-01341: joins between materialized view <varname>string</varname> and query inline views are different

Cause: There is a mismatch between the joins in the query and materialized view inline views

Action: None

QSM-01342: query rewrite not possible because query has full outer join

Cause: When query block has a table involved in full outer join, query rewrite cannot be done

Action: None

QSM-01343: general inline view rewrite not possible on remote objects

Cause: The general inline view rewrite could not take place because the query had remote objects

Action: None

QSM-01344: general inline view rewrite not possible on this WHERE clause construct

Cause: The general inline view rewrite was not supported with this WHERE clause construct

Action: None

QSM-01345: general inline view rewrite not possible when inline view has subquery

Cause: The general inline view rewrite could not take place because there were subqueries

Action: None

QSM-01346: general inline view rewrite not possible with nested inline views

Cause: General inline view rewrite cannot take place with nested inline views

Action: None

QSM-01347: a query inline view could not be matched with any materialized view inline view

Cause: No materialized view inline views were found to match with a query inline view

Action: None

QSM-01348: an invalid predicate was found in an inline view

Cause: An inline view in the query contained an invalid WHERE clause predicate

Action: None

QSM-01349: general inline view cannot be supported on this inline view

Cause: Certain inline views are unsupported in general inline view rewrite

Action: None

QSM-01350: query rewrite cannot support this inline view

Cause: Certain inline views are unsupported in general inline view rewrite

Action: None

QSM-01351: query inline view has no matching objects with any materialized view inline views

Cause: There were no matching objects between the query inline view and materialized view inline views

Action: None

QSM-01352: SELECT lists of the query and materialized view inline views do not match

Cause: Query inline view's and materialized view inline view's SELECT list items did not match.

Action: None

QSM-01353: no query rewrite on remote objects unless integrity mode is set to stale_tolerated

Cause: Query rewrite's integrity mode should be set to stale_tolerated for query rewrite to occur on queries with remote objects

Action: Set the session parameter, QUERY_REWRITE_INTEGRITY to stale_tolerated

QSM-01354: query rewrite is disabled for remote objects

Cause: Query rewrite was disabled internally for queries referencing remote objects.

Action: None

QSM-01355: multi-mv rewrite not possible in the presence of remote objects

Cause: Multi-MV rewrite not possible for queries referencing remote objects.

Action: None

QSM-01356: query rewrite against cube-organized materialized views not possible when OLAP option is off

Cause: Query rewrite against cube-organized materialized views was not possible because the OLAP option was off.

Action: None

QSM-01509: equivalence, <varname>string</varname>, matched query text

Cause: The query was rewritten using an equivalence, because query text matched the source statement for this equivalence.

Action: None

QSM-01522: a more optimal equivalence than <varname>string</varname> was used to rewrite

Cause: Query Rewrite always chooses the most optimal equivalence based on certain parameters, such as cardinality of the equivalence, number of joins etc. The equivalence view specified was found to be less optimal.

Action: None

QSM-01526: query rewrite is disabled for equivalence, <varname>string</varname>

Cause: Query rewrite could not use this equivalence, because this equivalence was created as disabled.

Action: Enable this equivalence using alter_rewrite_equivalence procedure from package, dbms_advanced_rewrite.

QSM-01533: query rewritten with equivalence, <varname>string</varname>

Cause: The specified equivalence was used to rewrite the given query.

Action: None

QSM-01565: equivalence, <varname>string</varname>, cannot compute measure, <varname>string</varname>, in the query

Cause: If a measure in the query cannot be computed using the measures in the equivalence, then query rewrite will not occur.

Action: None

QSM-01567: equivalence, <varname>string</varname>, cannot support the query measure, <varname>string</varname>

Cause: An attempt was made to push a grouping function through an expression specified in the query to transform a measure. Query rewrite will not occur if this measure transformation failed.

Action: None

QSM-01572: equivalence, <varname>string</varname>, and query have different joins between tables, <varname>string</varname>

Cause: Anchors, if any, in the equivalence and query match. But the joins between these anchors in the equivalence and query are different.

Action: None

QSM-01582: Joining equivalence, <varname>string</varname>, with table, <varname>string</varname>, not possible

Cause: A column in the query is not found in the equivalence. To obtain the column, a join back of equivalence to the table by means of either the primary key, foreign key or rowid of the table is required. But join backs are not allowed for equivalence rewrite

Action: None

QSM-01584: equivalence, <varname>string</varname>, has anchor, <varname>string</varname>, not found in query

Cause: If an anchor which is present in the equivalence is not found in the query, then query rewrite will not take place.

Action: None

QSM-01601: rollup(s) took place on equivalence, <varname>string</varname>

Cause: If query's GROUP BY has one of the higher levels of columns found in the equivalence, then the lower level columns in the equivalence will be rolled up to compute the desired results.

Action: None

QSM-01602: equivalence, <varname>string</varname>, requires join back to table, <varname>string</varname>, on column, <varname>string</varname>

Cause: A column in the query does not appear in the equivalence. Query rewrite will try to obtain this column from the base table, by doing a join back to that column with a materialized view. But join backs are not allowed for equivalence rewrite as the required constraints are not guaranteed to be found on the tables in the destination statement of the equivalence.

Action: None

QSM-01610: a lossy join in equivalence, <varname>string</varname>, between tables, <varname>string</varname>, not found in query

Cause: All lossy joins in the equivalence must be present in the query for query rewrite to occur.

Action: None

QSM-01617: equivalence definition is disabled

Cause: There is an equivalence definition that could have been probably used by query rewrite to rewrite the query. But this equivalence is disabled.

Action: None

QSM-01618: equivalence, <varname>string</varname>, is enabled for text match rewrite only

Cause: This equivalence was created for text match rewrite only

Action: None

QSM-01619: equivalence cannot be used in ENFORCED integrity mode

Cause: An equivalence cannot be used for query rewrite when the query rewrite integrity mode is set to ENFORCED.

Action: None

QSM-01621: join backs to base tables not allowed with an equivalence

Cause: Query rewrite needs to do a join back to a base table column to answer this query. But join back is not allowed for an equivalence rewrite

Action: None

QSM-01709: query rewritten with equivalence, <varname>string</varname>, using text match algorithm

Cause: The query was rewritten using an equivalence because query text matched the definition of the equivalence

Action: None

QSM-01784: equivalence <varname>string</varname> has an anchor table <varname>string</varname> not found in query

Cause: A table in an equivalence is an anchor, if (a) it is not joined to any other table or (b) it is joined to other tables but each of its joins is not guaranteed to provide all the rows or joined with the above table being child-side table. If an anchor which is present in the equivalence is not found in the query, then query rewrite will not take place.

Action: None

QSM-01837: recursive query rewrite on equivalence, <varname>string</varname>, not permitted

Cause: The source and destination statements of this equivalence MV are possibly identical. A recursive rewrite on this equivalence can lead to an infinite loop and thus not permitted.

Action: None

QSM-01838: semijoin transformation not supported on equivalence

Cause: There was a semijoin transformation attempted on an equivalence rewrite. Currently this is not allowed

Action: None

QSM-02001: clustered mv container table

Cause: The capability in question is not supported on a materialized view that has a clustered container table.

Action: Recreate the materialized view using a conventional container table.

QSM-02002: DISTINCT aggregate measure in SELECT list

Cause: The capability in question is not supported when the materialized view uses the DISTINCT qualifier on an aggregate function.

Action: Remove the DISTINCT qualifier.

QSM-02003: aggregate function nested within an expression

Cause: The capability in question is not supported when the materialized view contains an aggregate function invocation nested within an outer expression.

Action: Re-phrase the expression such that the aggregate function invocation is not nested.

QSM-02004: grouping column omitted from SELECT list

Cause: The capability in question is not supported when the materialized view contains a column or expression in the GROUP BY clause that is not also present in the list of output select expressions.

Action: Include all GROUP BY expressions in the output select list.

QSM-02005: named view in FROM list

Cause: The capability in question is not supported when a named view appears in the FROM list.

Action: Remove the named view from the FROM list.

QSM-02006: subquery in FROM list

Cause: The capability in question is not supported when a subquery appears in the FROM list.

Action: Remove the subquery from the FROM list.

QSM-02007: multiple instances of the same table or view

Cause: The capability in question is not supported when the same table or view occurs more than once in the FROM list.

Action: Re-phrase the query to avoid multiple instances of the same table. For instance,

QSM-02008: non-join filter condition in WHERE or HAVING clause

Cause: The capability in question is not supported when the materialized view has a selection condition (an expression not representing a join) in the WHERE or HAVING clauses.

Action: Remove the selection filter expression.

QSM-02009: non-inner join

Cause: The capability in question is only supported with inner joins.

Action: Re-phrase the query using an inner join. Remove any outer joins.

QSM-02010: join predicate with operator other than equals (=)

Cause: The capability in question is not supported when the materialized view uses a relationship operator other than equals ("=") in a join in the WHERE clause. This is known as a non-equijoin.

Action: Re-phrase the query to avoid the non-equijoin.

QSM-02011: a HAVING clause is present

Cause: The capability in question is not supported when the materialized view uses a HAVING clause.

Action: Remove the HAVING clause.

QSM-02012: a CONNECT BY clause is present

Cause: The capability in question is not supported when the materialized view uses a CONNECT BY clause.

Action: Re-phrase the query to avoid use of the CONNECT BY clause.

QSM-02013: SELECT list includes a RAW data type expression

Cause: The capability in question is not supported when the materialized view uses RAW data type in an expression.

Action: Remove the reference to the RAW expression.

QSM-02014: GROUP BY expression other than a column

Cause: The capability in question is not supported when the materialized view uses an expression other than a simple column reference in the GROUP BY clause.

Action: Re-phrase the query to use only simple column expressions in the GROUP BY clause.

QSM-02015: Index Organized Table (IOT) present in FROM list

Cause: The capability in question is not supported when the materialized view references an Index Organized Table in the FROM list.

Action: Remove the reference to the Index Organized Table.

QSM-02016: clustered table in FROM list

Cause: The capability in question is not supported when the materialized view references a clustered table in the FROM list.

Action: Remove the reference to the clustered table in the FROM list.

QSM-02017: subquery present in the HAVING clause

Cause: The capability in question is not supported when the materialized view uses a subquery in the HAVING clause.

Action: Re-phrase the query to avoid the subquery in the HAVING clause.

QSM-02018: subquery present in the WHERE clause

Cause: The capability in question is not supported when the materialized view uses a subquery in the WHERE clause.

Action: Re-phrase the query to avoid the subquery in the WHERE clause.

QSM-02019: mv references another mv in FROM clause

Cause: The capability in question is not supported when the materialized view is nested (i.e., when it references another materialized view in its FROM list).

Action: Re-phrase the query to avoid reference to the other materialized view.

QSM-02020: container column not in SELECT list with NOT NULL constraint

Cause: The capability in question is not supported when the materialized view's container table has a column that does not correspond to an output expression in the select list, and that column has a NOT NULL constraint. This situation can result in problems during refresh since any new rows inserted into the materialized view will set that column to NULL.

Action: Disable or remove the NOT NULL constraint.

QSM-02021: set operator encountered in mv

Cause: The capability in question is not supported when the materialized view uses set operators such as UNION, UNION ALL, MINUS, etc.

Action: Re-phrase the query to avoid the use of set operators.

QSM-02022: aggregate selections

Cause: The capability in question is not supported when the materialized view uses an aggregate expression in the HAVING clause.

Action: Re-phrase the query to avoid the use of an aggregate in the HAVING clause.

QSM-02023: nested cursor

Cause: The capability in question is not supported when the materialized view uses a nested cursor expression.

Action: Re-phrase the query to avoid use of a nested cursor expression.

QSM-02024: no GROUP BY clause

Cause: The capability in question is not supported when the materialized view does not use a GROUP BY clause.

Action: Re-phrase the query to use a GROUP BY clause.

QSM-02025: no aggregate functions

Cause: The capability in question is not supported when the materialized view uses no aggregate functions.

Action: Re-phrase the query to use aggregate functions.

QSM-02026: non-AND conjunction in WHERE clause

Cause: The capability in question is not supported when the materialized view uses a conjunction other than AND (such as OR) in the WHERE clause.

Action: Re-phrase the query to avoid use of the non-AND conjunction.

QSM-02027: group by ROLLUP

Cause: The capability in question is not supported when the materialized view uses the ROLLUP operator in the GROUP BY clause.

Action: Re-phrase the query to avoid use of the ROLLUP operator.

QSM-02028: group by CUBE

Cause: The capability in question is not supported when the materialized view uses the CUBE operator in the GROUP BY clause.

Action: Re-phrase the query to avoid use of the CUBE operator.

QSM-02029: PL/SQL function invocation

Cause: The capability in question is not supported when the materialized view invokes a PL/SQL function.

Action: Re-phrase the query to avoid use of PL/SQL functions.

QSM-02030: reduced precision specified for prebuilt mv

Cause: The capability in question is not supported when the materialized view is created with the WITH REDUCED PRECISION clause.

Action: DROP the materialized view and re-create it without using the WITH REDUCED PRECISION clause.

QSM-02031: materialized view cannot support any type of query rewrite

Cause: The materialized view cannot be used with query rewrite.

Action: Examine the other messages and documentation to determine the cause of the problem.

QSM-02032: no joins are present in the WHERE clause

Cause: The capability in question is not supported when the materialized view includes no join conditions in the WHERE clause.

Action: Re-phrase the query to include a join.

QSM-02033: no filter conditions are present in the WHERE clause

Cause: The capability in question is not supported when the materialized view includes no filter selection conditions in the WHERE clause.

Action: Add a filter condition.

QSM-02034: no joins are present in the HAVING clause

Cause: The capability in question is not supported when the materialized view includes no joins in the HAVING clause.

Action: Re-phrase the query to include a join.

QSM-02035: no filter conditions are present in the HAVING clause

Cause: The capability in question is not supported when the materialized view includes no filter condition in the HAVING clause.

Action: Re-phrase the query to include a join.

QSM-02036: in-list present in mv

Cause: The capability in question is not supported when the materialized view uses an IN list.

Action: Re-phrase the query to avoid the use of IN lists.

QSM-02037: cannot evaluate constant expression at compile time

Cause: The capability in question is not supported when the materialized view uses a compile-time non-constant expression in a filter condition in the WHERE or HAVING clauses. For example, WHERE X=1 uses a compile-time constant expression in a filter condition. WHERE X=MY_PLSQL_FUNCTION() uses a compile-time non-constant expression in a filter condition.

Action: Re-phrase the query to avoid the use of a compile-time non-constant expressions in filter conditions.

QSM-02038: Partition Change Tracking (PCT) is enabled

Cause: The Partition Change Tracking (PCT) capability is supported for this materialized view.

Action: No action is needed.

QSM-02039: top level mv query uses grouping sets

Cause: The capability in question is not supported when the materialized view use grouping sets.

Action: Re-phrase the query to avoid use of grouping sets.

QSM-02040: top level query contains GSets and the key is too long for rewrite

Cause: The capability in question is not supported when the materialized view uses a grouping set with too many keys.

Action: Reduce the number of grouping set keys.

QSM-02041: nested aggregate function

Cause: The capability in question is not supported when the materialized view nests an aggregate function invocation as an argument to another aggregate function.

Action: Re-phrase the query to avoid the nested aggregate function invocation.

QSM-02042: view or subquery in from list

Cause: The capability in question is not supported when the materialized view references a view or subquery in the FROM list.

Action: Re-phrase the query to avoid the use of views or subqueries in the FROM list.

QSM-02044: ORDER BY clause in mv

Cause: The capability in question is not supported when the materialized view includes an ORDER BY clause.

Action: Remove the ORDER BY clause.

QSM-02045: START WITH clause in mv

Cause: The capability in question is not supported when the materialized view includes a START WITH clause.

Action: Re-phrase the query to avoid the use of the START WITH clause.

QSM-02047: window function in mv

Cause: The capability in question is not supported when the materialized view uses a window function.

Action: Re-phrase the query to avoid the use of window functions.

QSM-02048: outer join in mv

Cause: The capability in question is not supported when the materialized view uses an outer join.

Action: Re-phrase the query to avoid the use of outer joins.

QSM-02049: subquery using the ANY clause in mv

Cause: The capability in question is not supported when the materialized view uses the ANY clause with a subquery.

Action: Re-phrase the query to avoid the use of the ANY clause.

QSM-02050: subquery using the ALL clause in mv

Cause: The capability in question is not supported when the materialized view uses the ALL clause with a subquery.

Action: Re-phrase the query to avoid the use of the ALL clause.

QSM-02051: subquery using the NOT EXISTS clause in mv

Cause: The capability in question is not supported when the materialized view uses the NOT EXISTS with a subquery.

Action: Re-phrase the query to avoid the use of the NOT EXISTS clause.

QSM-02052: subquery using a select list in mv

Cause: The capability in question is not supported when the materialized view uses a select list.

Action: Re-phrase the query to avoid the use of a select list.

QSM-02053: collection subquery in mv

Cause: The capability in question is not supported when the materialized view uses a collection subquery.

Action: Re-phrase the query to avoid the use of collection subqueries.

QSM-02054: DISTINCT clause in select list in mv

Cause: The capability in question is not supported when the materialized view uses the DISTINCT clause in the select list.

Action: Re-phrase the query to avoid the use of the DISTINCT clause.

QSM-02055: mv references a packed object table or view

Cause: The capability in question is not supported when the materialized view references a packed object table or view.

Action: Re-phrase the query to avoid the use of the packed object tables or views.

QSM-02056: correlated variable and outer join in mv

Cause: The capability in question is not supported when the materialized view uses a correlated variable and an outer join.

Action: Re-phrase the query to avoid the use of the correlated variables or outer joins.

QSM-02057: ROWNUM referenced in mv

Cause: The capability in question is not supported when the materialized view references the ROWNUM function.

Action: Re-phrase the query to avoid the use of the ROWNUM function.

QSM-02058: set operator in mv and compatibility mode is less than 9.0

Cause: The capability in question is not supported when the materialized view uses a set operator and the compatibility mode is less than 9.0.

Action: Re-phrase the query to avoid the use of set operators or set the compatibility mode to 9.0 or greater.

QSM-02059: join may produce duplicate rows in mv

Cause: The capability in question is not supported when the materialized view contains a join condition that can result in duplicate rows in the materialized view.

Action: Re-phrase the query to avoid the occurrence of duplicate rows in the materialized view.

QSM-02061: one or more joins present in mv

Cause: The capability in question is not supported when the materialized view contains joins.

Action: Re-phrase the query to avoid the use of the joins.

QSM-02062: GROUP BY clause in mv

Cause: The capability in question is not supported when the materialized view uses the GROUP BY clause.

Action: Re-phrase the query to avoid the use of the GROUP BY clause.

QSM-02063: aggregate function in mv

Cause: The capability in question is not supported when the materialized view uses an aggregate function.

Action: Re-phrase the query to avoid the use of the aggregate functions.

QSM-02064: subquery in mv

Cause: The capability in question is not supported when the materialized view uses a subquery.

Action: Re-phrase the query to avoid the use of the subqueries.

QSM-02066: Oracle error: see RELATED_NUM and RELATED_TEXT for details

Cause: The capability in question is not supported because an attempt to create the materialized view would result in an error.

Action: Examine the associated Oracle error code in the RELATED_NUM column and the Oracle error text in the RELATED_TEXT column and address the problem.

QSM-02067: no partition key or PMARKER or join dependent expression in select list

Cause: The capability in question is not supported when the materialized view unless the select list (and group by list if a GROUP BY clause is present) includes the partition key or PMARKER function reference to the table in question or an expression join dependent on the partitioning column of the table in question.

Action: Add the partition key or a PMARKER function reference or a join dependent expression to the select list (and the GROUP BY clause, if present).

QSM-02068: relation is not a partitioned table

Cause: The capability in question is not supported when the relation in question is not a partitioned table.

Action: Change the query to reference a partitioned table.

QSM-02069: PCT not supported with multi-column partition key

Cause: The capability in question is not supported when the table in is partitioned on a multi-column key.

Action: Re-phrase the query to reference a table partitioned on a single column key.

QSM-02070: PCT not supported with this type of partitioning

Cause: The capability in question is not supported when the table in question uses certain types of partitioning.

Action: Re-phrase the query to reference a table that is uses a type of partitioning that is supported for this capability.

QSM-02071: internal error: undefined PCT failure code

Cause: An internal Oracle error has occurred.

Action: Report the problem through your normal support channels.

QSM-02072: requirements not satisfied for fast refresh of nested mv

Cause: The capability in question is not supported because one or more of the requirements for this capability have not been satisfied.

Action: Examine the relevant nested materialized view documentation in the Warehouse Guide and address the problem.

QSM-02073: non-primary key RepAPI mv is not fast refreshable

Cause: Fast refresh is supported for RepAPI materialized views only if it is also a primary key materialized view.

Action: Re-design the materialized view to be a primary key materialized view.

QSM-02074: materialized view over Heterogeneous Services link

Cause: The capability in question is not supported when the materialized view uses a heterogeneous link.

Action: Re-design the materialized view to avoid the use of the heterogeneous links.

QSM-02075: materialized view on synonym

Cause: The capability in question is not supported when the materialized view references a synonym, if the compatible parameter is earlier than 10.2.0.

Action: Re-phrase the query to avoid the use of the synonyms.

QSM-02076: sequence number in the mv log is newer than last refresh

Cause: The timestamp of the sequence number in the mv log was after the last refresh time.

Action: A complete refresh is required before the next fast refresh.

QSM-02077: mv log is newer than last full refresh

Cause: The capability in question is not supported when the relevant materialized view log was created after the creation or most recent complete refresh of the materialized view.

Action: Perform a complete refresh of the materialized view.

QSM-02078: mv log must have new values

Cause: The capability in question is not supported when the relevant materialized view log omits new values.

Action: Re-create the materialized view log using the NEW VALUES clause.

QSM-02079: mv log must have ROWID

Cause: The capability in question is not supported when the relevant materialized view log omits ROWIDs.

Action: Re-create the materialized view log using the ROWID clause.

QSM-02080: mv log must have primary key

Cause: The capability in question is not supported when the relevant materialized view log omits primary keys.

Action: Re-create the materialized view log using the PRIMARY KEY clause.

QSM-02081: mv log does not have all necessary columns

Cause: The capability in question is not supported when the relevant materialized view log omits columns referenced in the select list of the materialized view.

Action: Re-create the materialized view log and include all columns referenced in the select list.

QSM-02082: problem with mv log

Cause: The capability in question is not supported because of a problem the materialized view log in question.

Action: Examine the relevant materialized view log and fast refresh documentation in the Warehouse Guide and address the problem.

QSM-02083: mv references PL/SQL function that maintains state

Cause: The capability in question is not supported when the materialized view references a PL/SQL function that maintains state and which may not return the same value every time it is invoked against the same set of rows.

Action: Re-phrase the query to avoid such a PL/SQL function. Or modify the PL/SQL function to avoid state maintenance and change its declaration accordingly.

QSM-02084: DISTINCT clause on a duplicate sensitive aggregate function

Cause: The capability in question is not supported when the materialized view uses the DISTINCT clause in this context.

Action: Re-phrase the query to avoid the use of the DISTINCT clause.

QSM-02086: mv uses the MIN or MAX aggregate functions

Cause: The capability in question is not supported when the materialized view uses the MIN or MAX function.

Action: Re-phrase the query to avoid the use of the MIN or MAX functions.

QSM-02088: mv omits at least one grouping key from the select list

Cause: The capability in question is not supported when the materialized view omits any grouping expressions from the select list.

Action: Include all GROUP BY expressions in the select list.

QSM-02090: SELECT includes an expression that is not just a column

Cause: The capability in question is not supported when the materialized view uses an expression in the select list that is not a simple column reference.

Action: Re-phrase the query to avoid the use of the expressions that are not simple column references.

QSM-02091: mv references a non-repeatable or session-sensitive expression

Cause: The capability in question is not supported when the materialized view uses an expression that may not return the same value each time it is invoked against the same set of rows or that may return different values depending on session parameters.

Action: Re-phrase the query to avoid the use of such expressions.

QSM-02092: mv references a sequence number

Cause: The capability in question is not supported when the materialized view references a sequence number.

Action: Re-phrase the query to avoid the reference to sequence numbers.

QSM-02093: mv uses an object REF clause

Cause: The capability in question is not supported when the materialized view uses an object REF clause.

Action: Re-phrase the query to avoid the use of an object REF clause.

QSM-02096: mv references a named view

Cause: The capability in question is not supported when the materialized view references a view.

Action: Re-phrase the query to avoid references to views.

QSM-02099: mv references a remote table or view in the FROM list

Cause: The capability in question is not supported when the materialized view references a remote table or view in the FROM list.

Action: Re-phrase the query to avoid references to remote tables or views.

QSM-02101: mv references a synonym in the FROM list

Cause: The capability in question is not supported when the materialized view references a synonym in the FROM list.

Action: Re-phrase the query to avoid the reference to the synonym.

QSM-02102: mv FROM list references an object in the SYS schema

Cause: The capability in question is not supported when the materialized view references an object in the SYS schema.

Action: Re-phrase the query to avoid the reference to the SYS schema.

QSM-02104: aggregate function in a filter condition in the HAVING clause

Cause: The capability in question is not supported when the materialized view references an aggregate function in a filter condition in the HAVING clause.

Action: Re-phrase the query to avoid the use of aggregates in filter conditions in the HAVING clause.

QSM-02106: mv uses a filter condition in the WHERE or HAVING clause

Cause: The capability in question is not supported when the materialized view includes a filter condition in the WHERE or HAVING clause.

Action: Re-phrase the query to avoid the use of filter conditions in the WHERE or HAVING clauses.

QSM-02112: top level query has LEFT OUTER, RIGHT OUTER or FULL OUTER join

Cause: The capability in question is not supported when the materialized view uses these types of joins.

Action: Re-phrase the query to avoid the use of these types of joins.

QSM-02113: expression in select list references multiple tables or views

Cause: The capability in question is not supported when the materialized view includes an expression in the select list that references multiple tables or views.

Action: Re-phrase the query to avoid the use of the such expressions.

QSM-02114: no GROUP BY clause, no aggregates and not >= 9.0 compatibility

Cause: The capability in question is not supported when the materialized view has no GROUP BY clause, no aggregates and compatibility mode is less than 9.0.

Action: Re-phrase the query to avoid the include a GROUP BY clause or an aggregate function. Or set compatibility mode to 9.0 or greater.

QSM-02115: mv references a remote object and is refreshed ON COMMIT

Cause: The capability in question is not supported when the materialized view references a remote object and is refreshed ON COMMIT.

Action: Re-phrase the query to avoid the reference to the remote object or alter the materialized view to be refreshed ON DEMAND.

QSM-02116: multiple master sites

Cause: The capability in question is not supported when the materialized view references multiple remote objects that reside at different remote instances.

Action: Re-phrase the query to avoid the use of multiple master sites.

QSM-02117: missing GROUPING_ID or GROUPING functions on GROUP BY column(s)

Cause: The capability in question is not supported when the materialized view uses grouping sets but omits the relevant GROUPING_ID or GROUPING functions.

Action: Re-phrase the query to include the relevant GROUPING_ID or GROUPING functions.

QSM-02118: duplicate grouping sets

Cause: The capability in question is not supported when the materialized view redundantly references grouping sets.

Action: Re-phrase the query to avoid the use of the redundant grouping sets.

QSM-02119: internal error while analyzing required supporting aggregates

Cause: An internal Oracle error has occurred.

Action: Report the problem through your normal support channels.

QSM-02120: compatibility mode must be 9.0 or higher

Cause: The capability in question is not supported when the compatibility mode is less than 9.0.

Action: Set the compatibility mode to 9.0 or higher.

QSM-02121: set operator in a context not supported for fast refresh

Cause: The capability in question is not supported when the materialized view uses a set operator in this context.

Action: Re-phrase the query to avoid the use of the set operator.

QSM-02122: compatibility mode must be 8.1 or higher

Cause: The capability in question is not supported when the compatibility mode is less than 8.1.

Action: Set the compatibility mode to 8.1 or higher.

QSM-02123: subquery and UNION mv's must be primary key mv's

Cause: The capability in question is not supported when the materialized view is not a primary key materialized view and uses subqueries or the union operator in this context.

Action: Re-create the materialized view as a primary key materialized view.

QSM-02124: object type in WHERE clause

Cause: The capability in question is not supported when the materialized view references an object type in the WHERE clause.

Action: Re-phrase the query to avoid the reference to the object type.

QSM-02125: subquery join conditions don't meet requirements for capability

Cause: The capability in question is not supported when the materialized view uses a subquery in a join in this way.

Action: Examine the relevant replication documentation concerning subquery materialized views and address the problem.

QSM-02126: no rowid at master site

Cause: The capability in question is not supported when the materialized view references a remote site that does not support rowids.

Action: Re-phrase the query to avoid the reference to the remote site.

QSM-02127: not supported for this type mv by Oracle version at master site

Cause: The capability in question is not supported when the materialized view uses certain constructs and references an older version, remote Oracle instance.

Action: Re-phrase the query to avoid the use of the construct or upgrade the remote Oracle instance.

QSM-02128: does not meet the requirements of a primary key mv

Cause: The capability in question is not supported when the materialized view fails to meet the requirements of a primary key materialized view.

Action: Examine the relevant primary key materialized view replication documentation and address the problem.

QSM-02129: join or filter condition(s) are complex

Cause: The capability in question is not supported when the materialized view uses a complex join or filter condition.

Action: Re-phrase the query to simplify the join or filter condition.

QSM-02130: expression not supported for fast refresh

Cause: The capability in question is not supported when the materialized view references certain, complex expressions.

Action: Re-phrase the query to simplify the expression.

QSM-02131: agg(expr) requires corresponding SUM(expr) function

Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of the SUM function on the same argument.

Action: Add the SUM function to the select list.

QSM-02132: agg(expr) requires corresponding COUNT(expr) function

Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of the COUNT function on the same argument.

Action: Add the COUNT function to the select list.

QSM-02133: agg(expr) requires corresponding MIN(expr) function

Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of the MIN function on the same argument.

Action: Add the MIN function to the select list.

QSM-02134: agg(expr) requires corresponding MAX(expr) function

Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of the MAX function on the same argument.

Action: Add the MAX function to the select list.

QSM-02135: agg(expr) requires corresponding AVG(expr) function

Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of the AVG function on the same argument.

Action: Add the AVG function to the select list.

QSM-02136: agg(expr) requires corresponding VARIANCE(expr) function

Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of the VARIANCE function on the same argument.

Action: Add the VARIANCE function to the select list.

QSM-02137: agg(expr) requires corresponding STDDEV(expr) function

Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of the STDDEV function on the same argument.

Action: Add the STDDEV function to the select list.

QSM-02138: agg(expr) requires corresponding agg(expr*expr) function

Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of that same aggregate function on the square of the same argument.

Action: Add an invocation of the same aggregate function on the square of the same argument (that is, the argument multiplied by itself).

QSM-02139: agg(expr) requires corresponding agg(expr+expr) function

Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of that same aggregate function on the same argument added to the same argument.

Action: Add the indicated aggregate function to the select list.

QSM-02140: agg(expr) requires corresponding SUM(expr*expr) function

Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of the SUM function on the square of the same argument (the argument multiplied by itself).

Action: Add the SUM function on the square of the argument.

QSM-02141: the reason why the capability is disabled has escaped analysis

Cause: The EXPLAIN_MV analysis engine has failed to capture the reason why the given capability is not possible.

Action: Report the problem through your normal problem reporting channels.

QSM-02142: COUNT(*) is not present in the select list

Cause: The materialized view query omits COUNT(*) from the select list.

Action: Add COUNT(*) to the select list.

QSM-02143: SUM(expr) without COUNT(expr)

Cause: SUM(expr) occurs in the select list without a corresponding COUNT(expr).

Action: Add COUNT(expr) to the select list.

QSM-02144: aggregate functions are present without a GROUP BY clause

Cause: One or more aggregate functions are present in the select list but a GROUP BY clause is not used.

Action: Add a GROUP BY clause.

QSM-02145: GROUP BY clause is present but no aggregate functions are used

Cause: A GROUP BY clause is used but no aggregate functions are present in the select list.

Action: Add an aggregate function to the select list.

QSM-02146: see the reason why REFRESH_FAST_AFTER_INSERT is disabled

Cause: REFRESH_FAST_AFTER_ONETAB_DML is disabled for the same reason that REFRESH_FAST_AFTER_INSERT is disabled.

Action: Correct the problem with REFRESH_FAST_AFTER_INSERT.

QSM-02147: default date format is sensitive to session settings

Cause: You have specified a date conversion operation using either the default format or an incomplete format. The default date format or an incomplete format is sensitive to session settings, and therefore may not be reproducible across different environments.

Action: Specify a complete date format string.

QSM-02148: many to many subquery joins require 9.0 compatibility or higher

Cause: You have specified a many to many join in your materialized view while running in less than 9.0 compatibility mode.

Action: Set your compatibility mode to 9.0 or higher or restructure the materialized view query.

QSM-02149: ON COMMIT with this MV requires 9.0 compatibility or higher

Cause: You have specified a materialized view that uses some combination of the following: joins aggregation filter conditions in the WHERE clause a remote relation in the FROM list a SUM(x) function without a corresponding COUNT(x) function an omitted COUNT(*) aggregate function a MIN() or MAX() aggregate function in combination with the REFRESH ON COMMIT option while running in less than 9.0 compatibility mode.

Action: Set your compatibility mode to 9.0 or higher or restructure the materialized view query.

QSM-02150: select lists must be identical across the UNION operator

Cause: You have specified a materialized view using the UNION operator and the respective queries on each side of the UNION operator do not have the same select list. The RELATED_NAME column shows the alias of the first different select list item. The RELATED_NUM column shows the offset from the SELECT keyword to the start of this select list item.

Action: Restructure the materialized view query such that the respective sides of the UNION operator have identical select lists.

QSM-02151: subquery or named view in FROM list and < 9.0 compatibility

Cause: You have specified a materialized view that references a subquery or named view in its top level FROM list while running in less than 9.0 compatibility mode.

Action: Set compatibility mode to 9.0 or higher or restructure the materialized view query.

QSM-02152: subquery or named view in FROM list even after view merging

Cause: You have specified a materialized view that references a subquery or named view in its top level FROM list that could not be merged during the view merging process.

Action: Restructure the materialized view query.

QSM-02153: inline view or subquery in FROM list not supported for this type MV

Cause: You have specified a materialized view that references an inline view or a subquery. The indicated capability is not supported for this type of materialized view.

Action: Restructure the materialized view query.

QSM-02154: MV is not fast refreshable even with view merging

Cause: You have a materialized view with view in the FROM clause, however it does not meet the criteria for fast refresh after view merging.

Action: Restructure the materialized view query to remove the offending view or the complex construct in the view.

QSM-02161: see the reason why REFRESH_FAST_AFTER_ONETAB_DML is disabled

Cause: REFRESH_FAST_AFTER_ANY_DML is disabled for the same reason that REFRESH_FAST_AFTER_ONETAB_DML is disabled.

Action: Correct the problem with REFRESH_FAST_AFTER_ONETAB_DML.

QSM-02162: the detail table does not have a materialized view log

Cause: The fast refresh cannot be performed because the master table does not contain a materialized view log.

Action: Use the CREATE MATERIALIZED VIEW LOG command to create a materialized view log on the master table.

QSM-02163: cannot use object id columns from materialized view log

Cause: The materialized view log either does not have object id columns logged, or the timestamp associated with the object id columns is more recent than the last refresh time.

Action: A complete refresh is required before the next fast refresh. Add object id columns to the materialized view log, if required.

QSM-02169: the materialized view contains partition extended table name

Cause: Fast refresh of materialized aggregate views and/or materialized join views are not supported if they were defined using partition extended table names.

Action: Create the fast refreshable materialized view without using partition extended table names or create the materialized view as a complete refresh materialized view.

QSM-02170: tables must be identical across the UNION operator

Cause: You have specified a materialized view using the UNION operator and the tables on each side of the UNION operator do not match. Fast refresh is not supported in this context.

Action: Restructure the materialized view query such that the respective sides of the UNION operator have the same table.

QSM-02171: the materialized view has a join operation in the outer UNION block

Cause: Fast refresh is not supported if a materialized view having the UNION operator contains a join operation.

Action: Rewrite the materialized view query without the join.

QSM-02173: the unique constraints does not exist on the join columns of the inner table

Cause: If there are outer joins, unique constraints must exist on the join columns of the inner table. Otherwise, the materialized view can not be fast refreshable.

Action: n/a

QSM-02174: the materialized view does not have a UNION ALL marker column

Cause: For a materialized view with UNION ALL to be fast refreshable, it must have a UNION ALL marker column. This is a constant column, at the same ordinal position in each query block and must have distinct values in each query block.

Action: Add a UNION ALL marker column to each query block in the UNION ALL query defining the materialized view.

QSM-02175: some query block in UNION ALL MV is not fast refreshable

Cause: For a materialized view with UNION ALL to be fast refreshable, each query block must conform to a fast refreshable materialized join view or materialized aggregate view.

Action: Check each query block in the UNION ALL to ensure it is either a materialized view with joins or aggregates.

QSM-02176: MV with UNION ALL in a view is too complex

Cause: If a materialized view has a view whose definition involves a UNION ALL query, then the materialized view's defining query cannot have any clauses other than SELECT or FROM. Other clauses such as WHERE, HAVING, CONNECT BY, or GROUP BY are not allowed. Further more, the FROM clause should have only one item.

Action: Remove any clauses besides SELECT and FROM from the materialized view's defining query.

QSM-02177: MV with UNION ALL in a view must match the view's SELECT list

Cause: If a materialized view has a view whose definition involves a UNION ALL query, then the materialized view's select list must match the underlying view's select list exactly. It must not have any expressions and must not have add/drop/reorder columns from the underlying view.

Action: Use select * when defining a materialized view with a UNION ALL in a view.

QSM-02178: MV has a view with UNION ALL that is not fast refreshable

Cause: The materialized view has a view whose definition involves a UNION ALL query that does not satisfy the requirements for fast refresh.

Action: Check that the defining query of the view being referenced in the materialized view satisfies conditions for fast refresh of a UNION ALL materialized view.

QSM-02179: MV with UNION ALL requires compatibility >= 9.2

Cause: The setting of the COMPATIBLE initialization parameter is less than 9.2.0.

Action: Set COMPATIBLE to 9.2.0 or higher.

QSM-02180: no primary key constraint in the master table

Cause: The explain_mview assumes that the materialized view is going to be created as the Primary Key materialized view. A Primary Key materialized view can not be created if the base table does not have a primary key constraint.

Action: Add a primary key constraint to the base table, or create the materialized view as Rowid MV by specifying the WITH ROWID option. If the materialized view is a Rowid MV, then it should be able to do complete refresh and even fast refresh, given that the materialized view log on the master table has a rowid.

QSM-02181: a SPREADSHEET clause is present

Cause: The capability in question is not supported when the materialized view uses a SPREADSHEET clause.

Action: Remove the SPREADSHEET clause.

QSM-02182: PCT is enabled through a join dependency

Cause: The capability in question is not supported when the materialized view does not contain some expression join dependent on the partitioning key of relation in question in the select list. For definition of join dependency, please look at Oracle documentation.

Action: Change the query to contain the partitioning key

QSM-02183: Expression to enable PCT not in PARTITION BY of analytic function or SPREADSHEET

Cause: The capability in question is not supported when the expression is not in the PARTITION BY clause

Action: Change the query so that the expression is in the PARTITION BY

QSM-02184: Expression to enable PCT cannot be rolled up

Cause: The capability in question is not supported when the expression is rolled up

Action: Change the query so that the expression is not rolled up

QSM-02185: no partition key or PMARKER in select list

Cause: The capability in question is not supported when the materialized view unless the select list (and group by list if a GROUP BY clause is present) includes either the partition key of or a PMARKER function reference to the table in question.

Action: Add the partition key or a PMARKER function reference to the select list (and the GROUP BY clause, if present).

QSM-02186: PARTITIONED OUTER JOIN is present

Cause: The capability in question is not supported when the materialized view has PARTITIONED OUTER JOIN.

Action: Remove PARTITIONED OUTER JOIN.

QSM-02187: materialized view on external table

Cause: The capability in question is not supported when the materialized view references an external table.

Action: Re-phrase the query to avoid the use of the external tables.

QSM-02188: named view in FROM list not supported for this type MV

Cause: You have specified a materialized view that references a named view. The indicated capability is not supported for this type of materialized view.

Action: Restructure the materialized view query.

QSM-02189: materialized view definition changes

Cause: The definition of the materialized view has changed. Usually redefining the synonym or table in the definition can cause this. The materialized view can not be fast refreshed.

Action: Complete refresh or recreate the materialized view.

QSM-02190: SQL PIVOT or UNPIVOT is present

Cause: The capability in question is not supported when the materialized view has sql PIVOT or UNPIVOT operation.

Action: Remove sql PIVOT or UNPIVOT.

QSM-02191: types of MV logs are not compatible

Cause: The capability in question is not supported when the materialized view is defined on detail tables which do not have a compatible type of materialized view logs, either all timestamp based or commit SCN based.

Action: Complete refresh or recreate materialized view logs.

QSM-02192: commit SCN based MV log is not in consistent state

Cause: The capability in question is not supported when the relevant materialized view log is not in consistent state due to the failure when populating the mapping table of SYS.SNAP_XCMT\$.

Action: Perform a complete refresh of the materialized view.

QSM-02193: unsupported MV on commit SCN based MV logs

Cause: The capability in question is not supported when the relevant materialized view is not supported to be defined on detail tables which have commit SCN based MV logs.

Action: None

QSM-02194: CASE expressions present in materialized view

Cause: The capability in question is not supported when the materialized view contain CASE expressions.

Action: Re-phrase the query to avoid the use of CASE expressions.

QSM-02195: PCT FAST REFRESH is not possible if query contains a named view

Cause: The capability in question was not supported because the materialized view query contained a named view.

Action: Rephrase the query to avoid the use of named views.

QSM-02196: PCT FAST REFRESH is not possible if query contains an inline view

Cause: The capability in question was not supported because the materialized view query contained an inline view.

Action: Rephrase the query to avoid the use of an inline view.

QSM-02197: PCT FAST REFRESH is not possible if query contains a remote table

Cause: The capability in question was not supported because the materialized view query contained a remote table.

Action: Rephrase the query to avoid the use of a remote table.

QSM-02198: PCT FAST REFRESH is not possible if HAVING clause includes a subquery

Cause: The capability in question was not supported because the materialized view query HAVING clause included a subquery.

Action: Rephrase the query to avoid the use of a subquery in the HAVING clause.

QSM-02199: PCT FAST REFRESH is not possible if WHERE clause includes a subquery

Cause: The capability in question was not supported because the materialized view query WHERE clause included a subquery.

Action: Rephrase the query to avoid the use of a subquery in the WHERE clause.

QSM-02200: PCT FAST REFRESH is not possible if query contains LEFT OUTER, RIGHT OUTER or FULL OUTER JOIN

Cause: The capability in question was not supported because the materialized view query contained LEFT OUTER, RIGHT OUTER or FULL OUTER JOIN.

Action: Rephrase the query to avoid the use of LEFT OUTER, RIGHT OUTER or FULL OUTER JOIN.

QSM-02201: PCT FAST REFRESH is not possible if there is a self join or self cartesian product in query

Cause: The capability in question was not supported because the materialized view query contained self join or self cartesian product in the query.

Action: Rephrase the query to avoid the use of self joins or self cartesian product in the query.

QSM-02202: PCT FAST REFRESH is not possible if query has ORDER BY clause

Cause: The capability in question was not supported because the materialized view query contained an ORDER BY clause.

Action: Rephrase the query to avoid the use of the ORDER BY clause.

QSM-02203: PCT FAST REFRESH is not possible if query has set operand query blocks

Cause: The capability in question was not supported because the materialized view query contained set operand query blocks.

Action: Rephrase the query to avoid the use of set operand query blocks.

QSM-02204: PCT FAST REFRESH is not possible if query has an inner query

Cause: The capability in question was not supported because the materialized view query contained an inner query.

Action: Rephrase the query to avoid the use of the inner query.

QSM-02205: PCT FAST REFRESH is not possible if there is a subquery inside select-list

Cause: The capability in question was not supported because the materialized view query contained a subquery inside a select-list.

Action: Rephrase the query to avoid the use of a subquery inside a select-list.

QSM-02206: PCT FAST REFRESH is not possible because this query join may produce extra duplicate rows

Cause: The capability in question was not supported because the materialized view contained a join condition that can result in duplicate rows in the materialized view.

Action: Rephrase the query to avoid the occurrence of duplicate rows in the materialized view.

QSM-02207: PCT FAST REFRESH is not possible for complex queries

Cause: The capability in question was not supported because the materialized view query was too complex.

Action: No action is necessary.

QSM-02208: subquery using the NOT IN clause in materialized view

Cause: The capability in question was not supported when the materialized view uses NOT IN with a subquery.

Action: Rephrase the query to avoid the use of the NOT IN clause.

QSM-02209: a MATCH_RECOGNIZE clause is present

Cause: The capability in question was not supported when the materialized view used a MATCH_RECOGNIZE clause.

Action: Remove the MATCH_RECOGNIZE clause.

QSM-03112: Invalid CREATE MATERIALIZED VIEW statement

ln<varname>string</varname>

Cause: The CREATE MATERIALIZED VIEW statement that was passed into the procedure was not a valid one.

Action: Check the reason(s) following the error or the statement and retry the operation.

QSM-03113: Cannot tune the MATERIALIZED VIEW statement

ln<varname>string</varname>

Cause: The MATERIALIZED VIEW statement could not be tuned.

Action: Check the reason(s) following the error or the statement and retry the operation.

QSM-03114: Cannot tune FOR UPDATE materialized view

Cause: The materialized view was created with the FOR UPDATE option.

Action: Rephrase the statement to avoid the use of the FOR UPDATE option.

QSM-03115: Cannot tune materialized view ON PREBUILT table

Cause: The materialized view was created on a prebuilt table.

Action: Rephrase the statement to avoid the use of the ON PREBUILT option.

QSM-03116: The materialized view is already optimal and cannot be tuned any further

Cause: The materialized view has the capabilities that are specified in the statement.

Action: None

QSM-03117: Cannot tune the materialized view to be fast refreshable

Cause: The materialized view could not be tuned or decomposed to be fast refreshable.

Action: Run the dbms_mview.explain_mview to find out the reason.

QSM-03118: Cannot tune the materialized view for general rewrite

Cause: The materialized view could not be tuned for supporting general rewrite.

Action: Run the `dbms_mview.explain_mview` to find out the reason.

QSM-03119: The WHERE/HAVING clause is too complex for general query rewrite

Cause: The WHERE/HAVING was too complex for general rewrite.

Action: Try to simplify the WHERE/HAVING clause in the materialized view defining query.

QSM-03120: Cannot create materialized view log on encrypted columns

Cause: There were encrypted columns in materialized view defining query.

Action: Try to remove the encrypted columns in the materialized view defining query.

QSM-03201: The table <varname>string</varname>.<varname>string</varname> is classified as a fact table.

Cause: This table has met the criteria of a fact table for the purposes of synchronous refresh.

Action: None. This is an informational message.

QSM-03202: The table <varname>string</varname>.<varname>string</varname> is classified as a dimension table.

Cause: This table has met the criteria of a dimension table for the purposes of synchronous refresh.

Action: None. This is an informational message.

QSM-03203: The table <varname>string</varname>.<varname>string</varname> is classified as neither a fact nor a dimension table.

Cause: This table has not met the necessary criteria of a fact table or a dimension table for the purposes of synchronous refresh. Synchronous refresh requires that the defining query of a materialized view conform to either the star or snowflake schema. A table can be either a fact or dimension table.

Action: Check the joins of the query to ensure they conform to the requirements.

QSM-03204: The materialized view passes the join graph eligibility check for synchronous refresh.

Cause: The defining query of the materialized view (MV) conformed to the star or snowflake schema and, therefore, was eligible for synchronous refresh.

Action: None. This is an informational message.

QSM-03205: The materialized view fails the join graph eligibility check for synchronous refresh.

Cause: The defining query of the materialized view (MV) did not conform to the star or snowflake schema and, therefore, was not eligible for synchronous refresh.

Action: Check the joins of the query to ensure they conform to the requirements.

QSM-03206: The fact table is partitioned by <varname>string</varname> and its partition key is <varname>string</varname>.

Cause: The fact table had the indicated partitioning method and key.

Action: None. This is an informational message.

QSM-03207: The materialized view is partitioned by <varname>string</varname> and its partition key is <varname>string</varname>.

Cause: The materialized view (MV) had the indicated partitioning method and key.

Action: None. This is an informational message.

QSM-03208: The partition key of the fact table functionally determines the partition key of the materialized view.

Cause: The analysis by synchronous refresh indicated that the partition key of the fact table functionally determined the partition key of the materialized view (MV), which is a requirement for synchronous refresh eligibility.

Action: None. This is an informational message.

QSM-03209: The materialized view passes the partition key dependency eligibility check for synchronous refresh.

Cause: The analysis by synchronous refresh indicated that the materialized view (MV) passed the partition key dependency eligibility check.

Action: None. This is an informational message.

QSM-03210: The materialized view does not pass the partition key functional dependency check and is not eligible for synchronous refresh.

Cause: The analysis by synchronous refresh indicated that the materialized view (MV) did not pass the partition key dependency eligibility check.

Action: Check the partition keys of both the fact table and materialized view and check the joins of the materialized view to ensure the functional dependency check passes.

QSM-03211: The partition key of the MV can be rolled up from the partition key of the fact table by a join between the fact table and the dimension table <varname>string</varname>.

Cause: The analysis by synchronous refresh indicated there was a rollup relationship between the partition keys of the fact table and the materialized view (MV).

Action: None. This is an informational message.

QSM-03212: The partition key of the MV corresponds to <varname>string</varname> column of the fact table and not to the partition key of the fact table.

Cause: The analysis by synchronous refresh indicated that the the partition key of the materialized view (MV) was related to a column of the fact table and not to the partition key of the fact table.

Action: Check the partition keys of both the fact table and materialized view and and check the joins of the materialized view to ensure the functional dependency check passes.

QSM-03213: The partition key of the MV corresponds to the partition key of the fact table.

Cause: The analysis by synchronous refresh indicated that the partition key of the materialized view (MV) is the same as the partition key of the fact table.

Action: None. This is an informational message.

QSM-03214: The partition key of the MV is derived from table <varname>string</varname> whereas the partition key of the fact table is related by a join to dimension table <varname>string</varname>.

Cause: The analysis by synchronous refresh indicated that the partition key of the materialized view (MV) was related to a column of a dimension table that was not the dimension table to which the partition key of the fact table was joined.

Action: Check the partition keys of both the fact table and materialized view and check the joins of the materialized view to ensure the functional dependency check passes.

QSM-03215: The partition key of the MV is not a column related to the partition key of the fact table.

Cause: The analysis by synchronous refresh indicated that the partition key of the materialized view (MV) was not a column related to the partition key of the fact table.

Action: Check the partition keys of both the fact table and materialized view and check the joins of the materialized view to ensure the functional dependency check passes.

QSM-03216: The partition key of the MV is related to the partition key of the fact table by a join between the fact table and the dimension table <varname>string</varname>.

Cause: The analysis by synchronous refresh indicated that the partition key of the materialized view (MV) was related to the partition key of the fact table by a join.

Action: None. This is an informational message.

QSM-03217: The table <varname>string</varname>.<varname>string</varname> is classified as both a fact and a dimension table.

Cause: This table has met the necessary criteria of both a fact table and a dimension table for the purposes of synchronous refresh. Synchronous refresh requires that the defining query of a materialized view conform to either the star or snowflake schema. A table can be either a fact or dimension table.

Action: Check the joins of the query to ensure they conform to the requirements.

QSM-03218: More than one table is classified as a fact table.

Cause: More than one of the base tables of the materialized view was classified as a fact table for the purposes of synchronous refresh, which requires exactly one fact table. Synchronous refresh requires that the defining query of a materialized view conform to either the star or snowflake schema. A table can be either a fact or dimension table. However, only one (and exactly one) can be fact table and the rest must be dimension tables.

Action: Check the joins of the query to ensure they conform to the requirements.

QSM-03219: The materialized view is not partitioned and therefore is not eligible for synchronous refresh.

Cause: The materialized view was not partitioned and therefore was not eligible for synchronous refresh.

Action: Partition the materialized view so that it is eligible for synchronous refresh.

QSM-03220: The partition key of the MV belongs to a table other than the fact table.

Cause: The analysis by synchronous refresh indicated that the partition key of the materialized view (MV) was related to a table other than the fact table.

Action: Check the partition keys of both the fact table and materialized view and the check the joins of the materialized view to ensure the functional dependency check passes.

QSM-03221: The partition key of the fact table does not appear in the joins of the MV.

Cause: The analysis by synchronous refresh indicated that the partition key of the fact table did not appear in the joins of the materialized view (MV).

Action: Check the partition keys of both the fact table and materialized view and the joins.

QSM-03222: The partition key of the fact table could not be related to the partition key of the MV.

Cause: The analysis by synchronous refresh indicated that the partition key of the fact table cannot be related to the partition key of the materialized view (MV).

Action: Check the partition keys of both the fact table and materialized view and the joins.

QSM-03223: The partition method used in the table or MV is not supported by MV synchronous refresh.

Cause: An attempt was made to do synchronous refresh on a table or materialized view (MV) that used an unsupported partition method.

Action: Check the partition method used in the table or MV definition to make sure it is either range, range-range, range-list, or range-hash partition.

QSM-03224: rows being deleted or updated not in the base table

Cause: The staging log rows to be updated or deleted were not in the base table.

Action: Change the staging log key in the staging log table.

QSM-03225: rows being inserted in the base table

Cause: The staging log rows to be inserted were in the base table.

Action: Change the staging log key in the staging log table.

QSM-03226: Rows being updated had exactly the same old and new values on all columns.

Cause: The staging log rows to be updated had exactly the same old and new values on all columns.

Action: Change some of the column values of the rows being updated or delete the problematic rows from the staging log.

QSM-03227: The USING TRUSTED CONSTRAINTS clause is not specified in the materialized view definition.

Cause: The USING TRUSTED CONSTRAINTS clause was not specified in the materialized view (MV) definition. Therefore, the MV was not eligible for synchronous refresh.

Action: Alter the materialized view to use trusted constraints.

QSM-03228: The refresh option specified in the materialized view definition is not supported.

Cause: The refresh option specified in the materialized view (MV) definition was not supported for synchronous refresh. The only refresh option supported for synchronous refresh is REFRESH FORCE.

Action: Alter the materialized view refresh option to REFRESH FORCE.

QSM-03229: The ON COMMIT refresh option is not supported.

Cause: The ON COMMIT refresh option specified in the materialized view definition was not supported for synchronous refresh. The only refresh option supported for synchronous refresh is ON DEMAND.

Action: Alter the materialized view refresh option to ON DEMAND.

QSM-03230: The materialized view is in an invalid state or not fresh.

Cause: The materialized view was in an invalid state or not fresh. Synchronous refresh requires the materialized view (MV) to be in a valid and fresh state when it is registered or prepared.

Action: Recompile the MV and refresh it to ensure it is valid and fresh.

QSM-03231: ROWID is not allowed in the materialized view registered for synchronous refresh.

Cause: ROWID was used in the defining query of the materialized view.

Action: Remove the ROWID column from the defining query of the materialized view.

QSM-03232: RAW data type is not allowed in the materialized view registered for synchronous refresh.

Cause: RAW data type was used in the defining query of the materialized view.

Action: Remove the RAW data type column from the defining query of the materialized view.

QSM-03233: MIN or MAX is not allowed in the materialized view registered for synchronous refresh.

Cause: MIN or MAX was used in the defining query of the materialized view.

Action: Remove the MIN or MAX expression from the defining query of the materialized view.

QSM-03234: Set operator is not allowed in the materialized view registered for synchronous refresh.

Cause: The set operator was used in the defining query of the materialized view.

Action: Remove the set operator from the defining query of the materialized view.

QSM-03235: OUTER JOIN is not allowed in the materialized view registered for synchronous refresh.

Cause: OUTER JOIN was used in the defining query of the materialized view.

Action: Remove OUTER JOIN from the defining query of the materialized view.

QSM-03236: Subquery is not allowed in the materialized view registered for synchronous refresh.

Cause: A subquery was used in the defining query of the materialized view.

Action: Remove the subquery from the defining query of the materialized view.

QSM-03237: Trigger is not allowed in the base table <varname>string</varname>.<varname>string</varname> for synchronous refresh.

Cause: A trigger was used in the base table for synchronous refresh.

Action: Remove the trigger from the base table.

QSM-03238: The materialized view was not defined on the base table <varname>string</varname>.<varname>string</varname> for synchronous refresh.

Cause: There was no materialized view defined on the base table.

Action: Change the base table name.

QSM-03239: Group by CUBE, ROLLUP, or grouping-sets was not allowed in the materialized view registered for synchronous refresh.

Cause: A group by CUBE, ROLLUP, or grouping-sets was used in the defining query of the materialized view.

Action: Remove the group by CUBE, ROLLUP, or grouping-sets from the defining query of the materialized view.

QSM-03240: The object <varname>string</varname>.<varname>string</varname> used in a materialized view definition was not a table.

Cause: An object was used in the defining query of the materialized view, which was not a table type.

Action: Remove the object from the defining query of the materialized view.

QSM-03241: Currently there is no active operation on the specified synchronous refresh group.

Cause: Either EXECUTE_REFRESH or ABORT_REFRESH returned an error because there was no active operation on the specified synchronous refresh group.

Action: Check the catalog views to determine the status of the synchronous refresh group.

QSM-03242: The synchronous refresh group is in an invalid state for the requested operation.

Cause: Either PREPARE_REFRESH or EXECUTE_REFRESH returned an error because the specified operation was not valid for the specified synchronous refresh group.

Action: Check the catalog views to determine the status of the synchronous refresh group. Refer to the synchronous refresh documentation to find out which refresh operations are valid in the various possible states of the group.

QSM-03243: The synchronous refresh group cannot resume execution.

Cause: EXECUTE_REFRESH returned an error because all possible refresh subgroups had been processed and had a status of either COMPLETE or ABORT.

Action: Check the catalog views to determine the status of the synchronous refresh group and its objects. Refer to the synchronous refresh documentation to find out which refresh operations are valid in the various possible states of the group.

QSM-03244: The partition operations registered on table <varname>string</varname>.<varname>string</varname> are not valid.

Cause: Either an illegal partition operation was specified in the register partition operation or the partition name was incorrectly specified.

Action: Check that the partition_name belongs to a valid partition and that only one operation is registered for a partition.

QSM-03245: The partition operations registered on partition <varname>string</varname> of table <varname>string</varname>.<varname>string</varname> conflict with the data supplied in the staging logs.

Cause: The staging log contained changes to rows in the partition that were being registered. These changes occur due to changes specified in the staging log of the fact table or because of updates to dimension tables.

Action: Resolve these conflicts by either unregistering the partition or deleting the rows from the named partition in the staging log of the fact table. If the conflicts are due to dimension updates, provide all changes to the fact table in the staging log rather than attempting to register the partition operations directly.

QSM-03246: The owner of outside partition <varname>string</varname> is <varname>string</varname> whereas it should be <varname>string</varname>.

Cause: When registering the outside table, the user supplied the incorrect owner for the outside table.

Action: Unregister the outside table and register it with the correct owner, which should be the same as the owner of the base table.

QSM-03247: The staging log on table <varname>string</varname>.<varname>string</varname> has not been prepared.

Cause: PREPARE_REFRESH failed because the staging log for the specified table was not prepared with PREPARE_STAGING_LOG. All staging logs of tables of the group must be prepared before running PREPARE_REFRESH.

Action: Run PREPARE_STAGING_LOG on the specified table. Check that all other tables in the group have been prepared.

QSM-03248: The materialized view <varname>string</varname>.<varname>string</varname> is already registered.

Cause: The specified materialized view (MV) has already been registered. A MV can be registered only once.

Action: No action is necessary if the MV is in a valid state. If the MV is in an invalid state, unregister the MV and re-register it with REGISTER_MVIEWS.

QSM-03249: The table <varname>string</varname>.<varname>string</varname> does not have a staging log.

Cause: REGISTER_MVIEWS failed because the staging log for the specified table belonging to the materialized view (MV) being registered did not exist. All tables on a MV are required to have staging logs created on them for the MV to be registered for synchronous refresh.

Action: Create the staging log with the CREATE MATERIALIZED VIEW LOG statement with the FOR SYNCHRONOUS REFRESH clause. If the table already has an ordinary MV log, use the ALTER MATERIALIZED VIEW LOG instead.

QSM-03250: The fact table <varname>string</varname>.<varname>string</varname> is not referenced by any MV in the group and the changes to dimension tables contain deletes or updates.

Cause: PREPARE_REFRESH found that there was no materialized view (MV) registered for synchronous refresh that contained the specified fact table as one of its base tables and the changes to the dimension tables contained updates or deletes. This error will not occur if the changes to the dimension tables contain only inserts.

Action: There are many ways to handle this situation. Refer to the documentation for details. One way is to unregister all MV's, drop staging logs on the tables or alter them to ordinary logs and apply the changes to the tables. Then the MV's can be refreshed using conventional methods instead of synchronous refresh. If desired, the staging logs on the tables can be re-created and the MV's can be registered for synchronous refresh. Another way is to register a MV which references the specified fact table for synchronous refresh. If no such MV exists, the user can first create one before registering it.

QSM-03251: The fact table <varname>string</varname>.<varname>string</varname> is not referenced by any MV in the group and its staging log is not empty.

Cause: PREPARE_REFRESH found that there is no materialized view (MV) registered for synchronous refresh that contained the specified fact table as one of its base tables and the staging log for that table specified changes to it.

PREPARE_REFRESH supports fact tables without MV's defined on them if they meet two conditions: a) the staging log for the fact table is empty; b) the staging logs for the dimension tables in the group do not specify deletes or updates.

Action: There are many ways to handle this situation. Refer to the documentation for details. Briefly, the two main ways are: 1. Register a MV which references the fact table for synchronous refresh. If no such MV exists, you can create one. 2. Unregister all the MVs in the group; drop staging log on the table or alter it to an ordinary MV log. Re-register the MVs which have been unregistered.

QSM-03252: The synchronous refresh group of table <varname>string</varname>.<varname>string</varname> is locked by another operation.

Cause: Either REGISTER_PARTITION_OPERATION or UNREGISTER_PARTITION_OPERATION detected that the synchronous refresh group to which the table belonged had been locked by another synchronous refresh operation.

Action: Wait for the other operation to complete before attempting this operation again.

QSM-03253: The synchronous refresh group of table <varname>string</varname>.<varname>string</varname> has been unlocked by another operation.

Cause: Either REGISTER_PARTITION_OPERATION or UNREGISTER_PARTITION_OPERATION detected that the synchronous refresh group to which the table belonged had been unlocked by another synchronous refresh operation. This is an internal error.

Action: Contact Oracle Support Services for assistance.

QSM-03254: The lock operation on synchronous refresh group <varname>string</varname> failed unexpectedly.

Cause: The lock operation on the specified synchronous refresh group failed unexpectedly. This is an internal error.

Action: Contact Oracle Support Services for assistance.

QSM-03255: The unlock operation on synchronous refresh group <varname>string</varname> failed unexpectedly.

Cause: The unlock operation on the specified synchronous refresh group failed unexpectedly. This is an internal error.

Action: Contact Oracle Support Services for assistance.

QSM-03256: The synchronous refresh group <varname>string</varname> is locked by another operation.

Cause: Either REGISTER_MVIEWS or PREPARE_REFRESH detected that the synchronous refresh group to be processed by the requested operation had been locked by another synchronous refresh operation.

Action: Wait for the other operation to complete before attempting this operation again.

QSM-03257: The synchronous refresh group <varname>string</varname> has been unlocked by another operation.

Cause: Either EXECUTE_REFRESH or ABORT_REFRESH detected that the synchronous refresh group to be processed by the requested operation had been unlocked by another synchronous refresh operation. This is an unexpected condition and may indicate an internal error.

Action: Contact Oracle Support Services for assistance.

QSM-03258: The value supplied for the parameter <varname>string</varname> is too long.

Cause: The value supplied for the specified parameter exceeded the maximum length allowed for that parameter.

Action: Supply a valid value for the specified parameter.

QSM-03259: The value supplied for the parameter <varname>string</varname> is malformed.

Cause: The value supplied for the specified parameter was invalid.

Action: Supply a valid value for the specified parameter.

QSM-03260: The materialized views being registered are not defined on tables.

Cause: The materialized views being registered were not defined on tables, but were defined on top of other types of objects such as views or materialized views. Synchronous refresh works only with materialized views defined on tables.

Action: Do not register such materialized views for synchronous refresh.

QSM-03261: The partition operation name <varname>string</varname> is not valid.

Cause: Either REGISTER_PARTITION_OPERATION or UNREGISTER_PARTITION_OPERATION detected that the partition operation name did not belong to the DROP, EXCHANGE or TRUNCATE value.

Action: Check the parameter partition operation carefully, and change it to DROP, EXCHANGE or TRUNCATE.

QSM-03262: The object `<varname>string</varname>.<varname>string</varname>` is not registered for Synchronous Refresh.

Cause: REGISTER_PARTITION_OPERATION or UNREGISTER_PARTITION_OPERATION detected that either: - This object was not registered for synchronous refresh. - The synchronous refresh group was not in the current run. - The object was not a table type.

Action: Make sure this object is registered for synchronous refresh, the synchronous refresh group is in the current run, and the object is a table type.

QSM-03263: There is already a partition operation registered on `<varname>string</varname>.<varname>string</varname>` partition `<varname>string</varname>`.

Cause: REGISTER_PARTITION_OPERATION detected that there was already a partition maintenance operation (for example, DROP, EXCHANGE or TRUNCATE) registered on the specified partition of the base table.

Action: Use the UNREGISTER_PARTITION_OPERATION to unregister this partition first, and then run REGISTER_PARTITION_OPERATION.

QSM-03264: There is no partition named `<varname>string</varname>` in base table `<varname>string</varname>.<varname>string</varname>`.

Cause: REGISTER_PARTITION_OPERATION detected that there was no partition with the specified name in the base table.

Action: Check the parameter PARTITION_NAME, and make sure it is a valid partition in the base table.

QSM-03265: The outside table `<varname>string</varname>.<varname>string</varname>` does not exist.

Cause: REGISTER_PARTITION_OPERATION detected that the outside table schema or table name did not exist or was not valid.

Action: Check the parameters OUTSIDE_PARTN_TABLE_SCHEMA or OUTSIDE_PARTN_TABLE_NAME, and make sure the outside table exists.

QSM-03266: Tablespace of base table `<varname>string</varname>` does not match the tablespace of outside partition table `<varname>string</varname>`.

Cause: REGISTER_PARTITION_OPERATION detected that the tablespace of the base table for any partition or subpartition did not match the tablespace of the outside partition table.

Action: Alter the tablespace of outside partition table to match the tablespace of the base table, or check if the outside partition table is eligible for REGISTER_PARTITION_OPERATION or not.

QSM-03267: The outside partition table `<varname>string</varname>` contains at least one record that is not within the partition range of the base table `<varname>string</varname>`.

Cause: REGISTER_PARTITION_OPERATION detected that the outside partition table contained at least one record that was not within the partition range of the base table.

Action: Check the records to see if the outside partition table is eligible for the REGISTER_PARTITION_OPERATION.

QSM-03268: Synchronous refresh can only support top partition by RANGE.

Cause: REGISTER_PARTITION_OPERATION detected the base table was not partitioned by RANGE on top.

Action: The base table is not eligible for REGISTER_PARTITION_OPERATION.

QSM-03269: The number of partitions of the base table <varname>string</varname> and the outside table <varname>string</varname> do not match.

Cause: The base table was composite-partitioned. The partition number of the outside partition did not match the number of subpartitions inside the specified partition of the base table.

Action: Check the partitions to see if the outside partition table is eligible for the REGISTER_PARTITION_OPERATION.

QSM-03270: There is no partition operation registered on <varname>string</varname>.<varname>string</varname> partition <varname>string</varname>.

Cause: UNREGISTER_PARTITION_OPERATION detected that there was no partition maintenance operation (for example, DROP, EXCHANGE and TRUNCATE) registered on the specified partition of the base table.

Action: Use the REGISTER_PARTITION_OPERATION to register this partition first, and then run UNREGISTER_PARTITION_OPERATION.

QSM-03271: The partition name of outside partition table <varname>string</varname> does not match the subpartition name of base table <varname>string</varname>.

Cause: REGISTER_PARTITION_OPERATION detected that the partition name of the outside partition table did not match the subpartition name of base table.

Action: Alter the partition name of outside partition table to match the partition name of the base table, or check if the outside partition table is eligible for REGISTER_PARTITION_OPERATION or not.

QSM-03272: There are no changes loaded for any tables in this group.

Cause: There were no changes recorded for any tables in this group. The changes to a table can be provided in its staging log or by specifying partition change operations with REGISTER_PARTITION_OPERATION.

Action: Provide the appropriate changes to the tables in the group.

QSM-03276: The specified schema <varname>string</varname> of the staging log is different from the owning schema <varname>string</varname> of the base table.

Cause: The user-specified schema of the staging log was different from the owning schema of the base table. They must be in the same schema if the schema of the staging log is specified.

Action: Specify the owning schema of the base table as the schema of the staging log or do not specify the schema for the staging log.

QSM-03277: An internal error related to tracing messages to SYNCREF_MESG has occurred.

Cause: This is an internal error as noted in the message.

Action: Contact Oracle Support Services for assistance.

QSM-03278: The table SYNCREF_MESG is not present in the SYS schema.

Cause: This is an internal error related to tracing messages to the table SYNCREF_MESG. It occurs if the event 31904 is set to level 4 or 8 but the message table SYNCREF_MESG is not created in the SYS schema. Oracle does not support levels 4 and 8 in event 31904.

Action: Execute the command again after unsetting levels 4 and 8 in event 31904.

QSM-03280: One or more materialized views failed to refresh successfully.

Cause: The base tables in the group refreshed successfully but one or more materialized views in the group did not. The status of the group for synchronous refresh operation was set to PARTIAL in this case.

Action: To find the materialized views which failed, query the USER_SR_OBJ_STATUS catalog view. Take one of the following courses of action: * Issue the EXECUTE_REFRESH command again to retry refreshing the views. In this case EXECUTE_REFRESH will internally use the PCT refresh mode to refresh the materialized views. * Issue the ABORT_REFRESH command to abort the refresh of all objects in the group, including the base tables, and restore them to the original state.

QSM-03281: The specified GROUP_ID is not valid.

Cause: The GROUP_ID specified as input to the refresh operation was not valid and does not identify a valid synchronous refresh group.

Action: Provide the correct GROUP_ID. Use the DBMS_SYNC_REFRESH.GET_GROUP_ID to get the correct GROUP_ID.

QSM-03282: A materialized view is registered on a table related to <varname>string</varname>. <varname>string</varname>.

Cause: The staging log creation on the specified table failed because a table related to it by referential-integrity constraint has a materialized view which was registered for synchronous refresh with the REGISTER_MVIEWS command. Oracle requires that you first register the tables before registering any materialized view defined on them.

Action: Unregister the materialized views defined on the related tables with the UNREGISTER_MVIEWS command. Then, register the tables with synchronous refresh by creating staging logs on them. Finally, register any materialized views you wish to register for synchronous refresh with REGISTER_MVIEWS.

QSM-03283: The materialized view <varname>string</varname>. <varname>string</varname> has not been registered.

Cause: The specified materialized view was not registered for synchronous refresh.

Action: Register the materialized view with DBMS_SYNC_REFRESH.REGISTER_MVIEWS. Use the USER_SR_OBJ catalog view to verify the materialized view has been registered.

QSM-03284: There is no foreign key constraint defined on <varname>string</varname> referencing <varname>string</varname>. <varname>string</varname>.

Cause: The table of REGISTER_PARTITION_OPERATION did not define a foreign key constraint on its referred base table.

Action: Define a foreign key constraint on its referred base table and retry the operation.

QSM-03285: There is no primary key constraint defined on <varname>string</varname>.<varname>string</varname>.

Cause: The table of REGISTER_PARTITION_OPERATION did not define a primary key constraint on it.

Action: Define a primary key constraint on the table and retry the operation.

QSM-03286: Complex materialized view was not allowed for synchronous refresh.

Cause: There was a complex materialized view in the synchronous refresh group.

Action: Remove the complex materialized view in the synchronous refresh group.

QSM-03287: synchronous refresh internal error: [<varname>string</varname>]

Cause: This was an internal error in synchronous refresh.

Action: Contact Oracle Support Services with the complete message.

RDE-00000 to RDE-08001

RDE-00000: no error

Cause: Operation was successful.

Action: No action needed.

RDE-00001: unspecified error

Cause: An unknown error occurred. This is an internal error.

Action: Contact Oracle Support Services and provide details about how and when the error occurred.

RDE-00002: provider busy

Cause: The provider is processing a request.

Action: This is not an error.

RDE-00003: no value found for service tag <varname>string</varname>.

Cause: A value was not found for the given service tag.

Action: This is normally not an error.

RDE-00004: operation timeout

Cause: A FIND or REGISTER operation timed out.

Action: For a FIND operation, this is only an error if the find was expected to successfully locate a service.

RDE-00005: invalid universe: "<varname>string</varname>"

Cause: An unknown universe was specified for the address.

Action: Specify a valid universe.

RDE-00006: invalid protocol: "<varname>string</varname>"

Cause: An invalid protocol was specified in an address.

Action: Specify a valid protocol.

RDE-00009: data too large for buffer. Buffer length: <varname>number</varname>. Required: <varname>number</varname>.ln

Cause: This error is internal and normally is not seen by users.

Action: Contact Oracle Support Services.

RDE-00010: not found

Cause: A value was not found in a list.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-00011: invalid type: <varname>number</varname>

Cause: The type given for a piece of data was invalid.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-00012: no list name specified.

Cause: A name was not given for a list.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-00013: name busy.

Cause: This is an internal error.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-00014: operation was interrupted.

Cause: An operation was interrupted.

Action: None. This normally is not an error.

RDE-00015: load of provider library failed.

Cause: The load of a library which implements the interface for a provider failed.

Action: Enable tracing to determine the exact error that occurred.

RDE-00016: no provider libraries found.

Cause: It was not possible to locate any provider libraries.

Action: Make sure that the provider libraries have been installed.

RDE-00017: provider error.

Cause: A provider generated an error.

Action: If errors follow, examine them to determine the exact error. Otherwise, enable tracing to determine the exact error.

RDE-00018: regular expression compilation failed. Pattern "<varname>string</varname>" Error: <varname>number</varname>.\n

Cause: The creation of a pattern for use in a comparison failed.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-00019: pattern match failed. String: "<varname>string</varname>" Pattern: "<varname>string</varname>" Error: <varname>number</varname>.\n

Cause: A comparison against a regular expression failed.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-00020: no host name or IP address

Cause: An address must contain either the name of the server or its IP address.

Action: Specify a host name or an IP address in the address.

RDE-00021: no providers found for universe "<varname>string</varname>".

Cause: A provider was not found for the specified universe.

Action: Either specify a different universe or obtain a provider library for that universe. Examine the errors that follow (if any) for more information.

RDE-00022: property not found.

Cause: A provider property was not found.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-00023: provider not found. Universe "<varname>string</varname>".

Cause: A provider was not found for the specified universe.

Action: Either specify a different universe or obtain a provider library for that universe.

RDE-00024: address invalid

Cause: The address is not in the correct format.

Action: Specify an address in the correct format. The syntax is described in rd.h.

RDE-00025: service type not specified.

Cause: The service type is not specified in the address.

Action: Specify an address with the service type.

RDE-00026: expected delimiter not found. Expected: "<varname>string</varname>" Found: "<varname>string</varname>"

Cause: The delimiter expected in the address was not found.

Action: Correct the address so that the delimiter is present.

RDE-00027: port number not found.

Cause: When a colon (":") follows the host name, it must be followed by a port number.

Action: Specify a port number.

RDE-00028: initialization failed.

Cause: Initialization of RD failed.

Action: Examine the errors that follow this one to determine the problem that is causing the error.

RDE-00029: no server found.

Cause: No server for the specified provider could be found to perform the desired operation.

Action: Start a server for the desired provider or use a different provider.

RDE-00030: memory allocation failure.

Cause: An operation failed because it was not possible to allocate enough process memory.

Action: If memory is low on the system, terminate other processes, or threads, or both, and try the operation again. Otherwise, this is an internal error and Oracle Support Services should be contacted.

RDE-00031: invalid domain: <varname>number</varname>.

Cause: The application specified an invalid number for the domain.

Action: Specify a correct domain. See rd.h for the allowed values.

RDE-00032: length of service type "<varname>string</varname>" (<varname>number</varname>) is greater than the maximum allowed: <varname>number</varname>

Cause: The user specified a service type which is longer than that permitted by the provider.

Action: Use a shorter service type.

RDE-00033: no universe specified.

Cause: The user did not specify a universe in the address.

Action: Specify a universe.

RDE-00034: address not registered: "<varname>string</varname>"

Cause: The application attempted to use an address which does not exist.

Action: Specify a registered address.

RDE-00037: invalid service instance tag: <varname>number</varname>

Cause: The value for a service instance tag was incorrect.

Action: Specify a valid tag. They are listed in rd.h.

RDE-00038: invalid protocol type: "<varname>string</varname>" Valid protocols: <varname>string</varname>

Cause: The user specified a protocol which is not supported by the provider.

Action: Specify a valid protocol. The protocol must be at least one character which is not a period (".").

RDE-00039: invalid host name: "<varname>string</varname>"

Cause: The name of the host specified was not in the correct format.

Action: Use the correct host name format. The host name must be one of the following: 1. The name of the machine; 2. A valid IPv4 address (N.N.N.N); 3. A valid IPv6 address (N[:N]*).

RDE-00040: invalid search domain: "<varname>string</varname>"

Cause: The name of the domain searched by the service was not in the correct format.

Action: Use the correct domain name format. A domain is a series of one or more alphanumeric characters.

RDE-00041: no protocol or domain specified.

Cause: The service name was followed by a period separator, but no protocol or domain was found after it.

Action: Specify a valid protocol, or domain, or both.

RDE-00042: invalid port number: "<varname>string</varname>"

Cause: The port specified in the service address was not valid. A port number may only be a positive decimal number.

Action: Specify a valid port number.

RDE-00043: no search domain specified.

Cause: No search domain followed the period separator.

Action: Specify a valid search domain.

RDE-00044: no protocol specified.

Cause: No protocol was specified for the service.

Action: Specify a valid protocol.

RDE-00045: port number required to register with a generic address.

Cause: Because of the requirements of some providers, the port number must be specified when registering using a generic address.

Action: Specify a port number.

RDE-00046: invalid attribute

Cause: An attribute was specified using an incorrect format.

Action: An attribute should be specified using the following format: "name=value[, name1=value1 ...]"

RDE-00047: no name specified for attribute.

Cause: A value was given for an attribute but no name was specified.

Action: Specify a name for the attribute.

RDE-00048: no attribute specified.

Cause: An attribute was not found in the address where it was expected.

Action: Specify a valid attribute. An attribute is composed of a name followed by an equals sign ("=") and then by an optional value. The name and value may both contain spaces.

RDE-00049: expected separator not found. Expected: "<varname>string</varname>" Found: "<varname>string</varname>"

Cause: The separator expected to be present between the mandatory and optional sections of the address was not found.

Action: Specify the separator.

RDE-00050: provider initialization for universe "<varname>string</varname>" failed.

Cause: The operation failed because providers could not be initialized for the specified universe.

Action: The message(s) that follow describe the errors encountered by the providers.

RDE-00051: provider "<varname>string</varname>" error.

Cause: The specified provider failed to perform an operation.

Action: The message(s) that follow describe the errors encountered by the provider.

RDE-00052: invalid numeric value specified: "<varname>string</varname>"

Cause: The value specified as a number was not valid.

Action: Specify a valid number.

RDE-00053: invalid or null service instance.

Cause: The service instance used for an operation is either invalid or null.

Action: Specify a valid service instance.

RDE-00054: invalid operation: <varname>number</varname>.ln

Cause: The operation specified was not valid.

Action: Specify a valid operation.

RDE-00055: no providers available.

Cause: No providers were available for an operation. This may be caused by the failure of a process or service needed by the provider (e.g. the mDNS service).

Action: Examine the trace and log files for details. Ensure that the process or service required by the process is running.

RDE-00056: registration of service instance "<varname>string</varname>" failed.

Cause: The registration of the specified service instance failed.

Action: Examine the errors that follow for more information about the error.

RDE-00057: unregistration of service instance "<varname>string</varname>" failed.

Cause: The deletion of the registration of the specified service instance failed.

Action: Examine the errors that follow for more information about the error.

RDE-00058: confirmation of service instance "<varname>string</varname>" failed.

Cause: The confirmation of the specified service instance failed.

Action: Examine the errors that follow for more information about the error.

RDE-00059: location of service types "<varname>string</varname>" failed.

Cause: It was not possible to retrieve types of services supported by Resource Discovery.

Action: Examine the errors that follow for more information about the error.

RDE-00060: service instance "<varname>string</varname>" was not found.

Cause: The location of the specified service.

Action: Examine the errors that follow for more information about the error.

RDE-00061: retrieval of details about service instance "<varname>string</varname>" failed.

Cause: It was not possible to get details about the specified service instance.

Action: Examine the errors that follow for more information about the error.

RDE-00062: termination failed.

Cause: The call to terminate the use of Resource Discovery failed.

Action: Examine the errors that follow for more information about the error.

RDE-00063: operation failed.

Cause: A FIND or REGISTER operation failed.

Action: Examine the errors that follow for more information about the error.

RDE-00064: retrieval of a provider for universe "<varname>string</varname>" failed.

Cause: It was not possible to retrieve a provider descriptor for the specified universe.

Action: Examine the errors that follow for more information about the error.

RDE-00065: creation of service instance failed.

Cause: An error occurred while trying to assemble a service instance using components.

Action: Examine the errors that follow for more information about the error.

RDE-00066: parsing of service instance "<varname>string</varname>" failed.

Cause: An error occurred while trying to parse the specified address.

Action: Examine the errors that follow for more information about the error.

RDE-00067: location of domain failed.

Cause: An error occurred while trying to locate domains of the specified type.

Action: Examine the errors that follow for more information about the error.

RDE-00068: length of universe component "<varname>string</varname>" (<varname>number</varname>) is longer than the maximum: <varname>number</varname>.

Cause: The string specified for the universe-specific portion of the service instance is longer than the maximum allowed by the provider.

Action: Specify a universe component which is shorter than the maximum. If this error occurs when no universe-specific portion was specified, the provider may have used the service type for the universe-specific component. In that case, make sure that the length of the service type does not exceed the maximum.

RDE-00069: property "<varname>string</varname>" is read-only.

Cause: An error occurred while trying to set a property value. Property had read-only access and could not be altered.

Action: Specify a property name with read/write access.

RDE-01999: internal error

Cause: RD failed due to some unforeseen reason.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-02000: invalid service type: "<varname>string</varname>"

Cause: The user specified a service type which does not conform to the standard specified by RFC's 1034 and RFC 1123. The service type must be one or more characters and must start and end with a letter or digit. The interior characters may be letters, digits, or hyphens.

Action: Specify a service type which conforms to the RFC.

RDE-02001: failed to connect to the mDNS responder.

Cause: The provider was unable to make a connection with the multicast / Domain Name Server (mDNS) responder.

Action: Check to ensure that the responder is running. If it is, this is an internal error and Oracle Support Services should be contacted.

RDE-04000: client waiting

Cause: The client uses this error to signal to the server that it is waiting for query results.

Action: This error is used for signaling between the client and the DNS server. It should not be visible to the user. If it occurs, contact Oracle Support Services

RDE-04001: no error

Cause: Operation was successful.

Action: No action needed.

RDE-04002: unknown error has occurred

Cause: An unknown error has occurred.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04003: no such name

Cause: A record could not be found with the given name.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04004: memory allocation failed

Cause: An operation failed because it was not possible to allocate enough process memory.

Action: If memory is low on the system, terminate other processes, or threads, or both, and try the operation again. Otherwise, this is an internal error and Oracle Support Services should be contacted.

RDE-04005: invalid parameter

Cause: A record contained an illegal or nonexisting value.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04006: invalid reference

Cause: An unknown DNS record was found.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04007: invalid state

Cause: This is an internal error.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04008: invalid flags

Cause: This is an internal error.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04009: unsupported operation

Cause: The provider interface attempted to perform an operation which is not supported by the provider.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04010: not initialized

Cause: This is an internal error.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04011: no cache allocated

Cause: A Domain Name Server (DNS) query failed because no cache was allocated.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04012: service already registered

Cause: The user attempted to register a service that was already registered.

Action: A service should only be registered once.

RDE-04013: service name conflict

Cause: The user attempted to register a service whose name already exists.

Action: A service should only be registered once.

RDE-04014: invalid record entry

Cause: The provider interface attempted to perform an operation whose record contained invalid or nonexistent data.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04015: client software incompatible with server

Cause: The version of the client software used by the provider interface is not compatible with the version of the server software.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04016: invalid interface

Cause: The provider interface attempted to use an unknown interface.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04017: cache size must be increased

Cause: The size of the cache maintained by the provider interface was insufficient and should be increased.

Action: This error is used as a status indicator. It should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04018: configuration changed

Cause: The server configuration changed during an operation.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04019: client should free resources

Cause: This error is used as an internal status indicator and should not be visible outside of the provider.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06000: no more data

Cause: This error is used internally to signal that there is no more data to be passed by the SLP provider.

Action: This error is normal - no action is required.

RDE-06001: no error

Cause: Operation was successful.

Action: This error is normal - no action is required.

RDE-06002: language not supported

Cause: No service could be found that supports the language required.

Action: A service will have to be added or modified which supports the requested language.

RDE-06003: parse error

Cause: The SLP message rejected by a remote SLP agent.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06004: invalid registration

Cause: The SLP provider attempted to register a URL which is malformed.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06005: scope not supported

Cause: This is an internal error.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06006: authenticator not provided

Cause: The SLP provider failed to authenticate itself.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06007: authentication failed

Cause: The SLP provider failed to authenticate itself.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06008: invalid update

Cause: An update for a nonexistent registration was issued, or the update includes a service type or scope different than that in the initial registration.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06009: refresh rejected

Cause: Attempts were made to refresh a registration more frequently than the minimum refresh interval.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06010: feature unimplemented

Cause: An unimplemented feature was used.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06011: buffer overflow

Cause: An outgoing request overflowed the maximum network MTU size.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06012: network timed out

Cause: An reply to an SLP request did not arrive in the configured timeout interval.

Action: Check the network connection and retry the request.

RDE-06013: network initialization failure

Cause: The network failed to initialize properly.

Action: Check the network connection and retry the request.

RDE-06014: memory allocation failed

Cause: The SLP provider was unable to allocate enough process memory.

Action: If memory is low on the system, terminate other processes, or threads, or both, and try the operation again. Otherwise, this is an internal error and Oracle Support Services should be contacted.

RDE-06015: invalid parameter

Cause: The provider attempted to pass an invalid parameter.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06016: network error

Cause: The network failed to initialize properly.

Action: Check the network connection and retry the request.

RDE-06017: internal system error

Cause: The SLP subsystem failed for unknown reasons.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06018: handle in use

Cause: The SLP provider attempted to recursively use a handle.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06019: generic error

Cause: The provider failed for unknown reasons.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06020: unicast query must be sent.

Cause: The provider must send a unicast query.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-08000: invalid service type: "<varname>string</varname>".

Cause: This is an internal error.

Action: Contact Oracle Support Services.

RDE-08001: failed to connect to the GNS server.

Cause: A connection with the Grid Naming Service (GNS) server failed.

Action: Check to ensure that the Oracle Grid Naming Service Daemon (GNSD) resource is online. If it is, this is an internal error and Oracle Support Services should be contacted.

RDJ-00001 to RDJ-00136

RDJ-00001: OK ADDRESS

Cause: The operation succeeded.

Action: No further action is necessary.

RDJ-00002: invalid operation:

Cause: The operation specified was incorrect.

Action: Specify a valid operation.

RDJ-00003: Error parsing "<varname>string</varname>"\n<varname>string</varname>

Cause: An error occurred parsing an address.

Action: Correct the address using the other information in the error.

RDJ-00004: invalid trace level

Cause: The trace level specified was incorrect.

Action: Specify a valid trace level.

RDJ-00005: Operation: <varname>string</varname> failed. Error: <varname>string</varname>

Cause: An RD operation failed with the specified error.

Action: Re-try the operation with tracing enabled to determine what happened.

RDJ-00006: invalid port number: <varname>number</varname>

Cause: The port number specified for a service is invalid.

Action: Specify a port number that is greater than zero.

RDJ-00008: invalid number specified:

Cause: The number specified contained non-numeric characters.

Action: Specify a number with only numeric characters.

RDJ-00009: invalid address format:

Cause: The format specified for an address was incorrect.

Action: Specify a valid format.

RDJ-00011: results processor may not be null

Cause: A null object was specified for the class that is to process the results of an operation.

Action: Specify a non-null object.

RDJ-00012: invalid instance uniqueness

Cause: The uniqueness value specified for an instance was not valid.

Action: Specify a valid uniqueness value.

RDJ-00013: Invalid service instance attribute

Cause: An attribute specified for a service instance was not valid.

Action: Specify an attribute in the correct format.

RDJ-00015: Invalid service instance tag: "<varname>string</varname>".**Available tags:**

Cause: The tag value specified for a service instance was incorrect.

Action: Specify a valid tag value.

RDJ-00017: invalid domain type: "<varname>string</varname>". Available domain types:

Cause: The type specified for a domain was not valid.

Action: Specify a valid domain type.

RDJ-00048: Unknown command: "<varname>string</varname>"

Cause: An invalid command was specified.

Action: Specify a valid command.

RDJ-00049: Unknown option: "<varname>string</varname>"

Cause: An invalid option was specified.

Action: Specify a valid option.

RDJ-00052: invalid flag value:

Cause: The value specified for a flag was not valid.

Action: Specify a valid flag value.

RDJ-00053: deletion of trace output file failed:

Cause: The tool attempted to remove a trace file so that it could create a new one. However, the attempt failed.

Action: Examine the accompanying exception for details about what happened.

RDJ-00054: deletion of error log file failed:

Cause: The tool attempted to remove an error log so that it could create a new one. However, the attempt failed.

Action: Examine the accompanying exception for details about what happened.

RDJ-00055: trace file already exists:

Cause: The trace file specified already exists.

Action: Remove the file or specify a file which does not exist.

RDJ-00056: error log already exists:

Cause: The error log specified already exists.

Action: Remove the file or specify a file which does not exist.

RDJ-00057: trace file is a directory:

Cause: The trace file specified is actually a directory.

Action: Specify a file name.

RDJ-00058: error log is a directory:

Cause: The error log specified is actually a directory.

Action: Specify a file name.

RDJ-00059: The trace file "<varname>string</varname>" cannot be created

Cause: The tool failed to create the trace file.

Action: Examine the accompanying exception for details about the error.

**RDJ-00060: The error log "<varname>string</varname>" cannot be created.
Check permissions on the parent directory:**

Cause: The tool failed to create the error log.

Action: Examine the accompanying exception for details about the error.

RDJ-00061: The file stream cannot be created:

Cause: The tool failed to create the Java stream for a file.

Action: Examine the accompanying exception for details about the error.

RDJ-00062: The print stream cannot be created:

Cause: An error occurred when the tool tried to create a Java print stream for a file.

Action: Examine the accompanying exception for details about the error.

RDJ-00063: invalid time-to-live:

Cause: A non-numeric value was specified for the time to live.

Action: Specify a numeric value.

RDJ-00065: Option type must be greater than zero:

Cause: The type specified for an option was less than or equal to zero.

Action: Specify a type which is greater than zero.

RDJ-00134: unknown type:

Cause: The type specified is invalid.

Action: Specify a known type.

RDJ-00135: invalid stream type:

Cause: The stream type specified is invalid.

Action: Specify a known type.

RDJ-00136: invalid argument count:

Cause: The number of arguments specified is invalid.

Action: Specify a valid number of arguments.

RMAN-00201 to RMAN-20514

RMAN-00201: Do you really want to execute the above repair (enter YES or NO)?

Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00202: Do you want to open the database (enter YES or NO)?

Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00203: Do you want to open resetlogs the database (enter YES or NO)?

Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00204: Do you really want to delete the above objects (enter YES or NO)?

Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00205: Do you really want to drop all backups and the database (enter YES or NO)?

Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00206: Do you really want to drop the database (enter YES or NO)?

Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00207: Do you really want to unregister the database (enter YES or NO)?

Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00208: Want to unregister the database with target db_unique_name (enter YES or NO)?

Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00209: Do you really want to change the above failures (enter YES or NO)?

Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00210: Do you really want to catalog the above files (enter YES or NO)?

Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00211: Error occurred getting response - assuming NO response

Cause: An error occurred reading user response.

Action: No action is required, this is an informational message only.

RMAN-00212: "<varname>string</varname>" is an invalid response - please re-enter.

Cause: An incorrect response was entered.

Action: Enter a correct response.

RMAN-00550: parser package failed to load

Cause: lpmloadpkg() return an error indication.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-00551: initialization of parser package failed

Cause: The parser package initialization routine returned an error.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-00552: syntax error in command line arguments

Cause: The arguments supplied to RMAN could not be parsed, or no arguments were supplied at all.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-00553: internal recovery manager package failed to load

Cause: lpmloadpkg() return an error indication.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-00554: initialization of internal recovery manager package failed

Cause: The internal package initialization routine returned an error.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-00555: target database connect string must be specified

Cause: The TARGET parameter was not specified.

Action: Supply the necessary parameter.

RMAN-00556: could not open CMDFILE "<varname>string</varname>"

Cause: An error occurred when trying to open the file.

Action: Check that the file name was specified correctly and that the file exists and that the user running RMAN has read permission for the file.

RMAN-00557: could not open MSGLOG "<varname>string</varname>"

Cause: An error occurred when trying to open the file.

Action: Check that the file name was specified correctly and that the file exists and that the user running RMAN has write permission for the file.

RMAN-00558: error encountered while parsing input commands

Cause: The parser detected a syntax error.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-00562: username too long

Cause: The specified user name exceeds the maximum allowable username length.

Action: Correct the username.

RMAN-00563: password too long

Cause: The specified password exceeds the maximum allowable password length.

Action: Correct the password.

RMAN-00564: host data too long

Cause: The SQL*NET host connect string exceeds the maximum allowable length.

Action: Correct the host string.

RMAN-00565: unable to read input file

Cause: An error occurred while trying to read from STDIN or from the CMDFILE.

Action: Ensure that the cmdfile is readable. The cmdfile must be a text file with 1 line per record.

RMAN-00566: could not open TRACE "<varname>string</varname>"

Cause: An error occurred when trying to open the file.

Action: Check that the file name was specified correctly and that the user running RMAN has write permission for the file.

RMAN-00567: Recovery Manager could not print some error messages\n

Cause: An error occurred while trying to print the error message stack.

Action: If the associated error message indicates a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-00568: user interrupt received

Cause: The user typed ^C or ATTN.

Action: No action is required.

**RMAN-00569: ===== ERROR MESSAGE STACK FOLLOWS
=====**

Cause: This message precedes an error message stack.

Action: The errors are printed in last-in first-out order. To interpret them correctly, read from the bottom to the top.

RMAN-00570: **end-of-file**

Cause: The end of an inline cmdfile was reached. This is just an informational message.

Action: No action is required.

RMAN-00571:

=====

Cause: Displayed to highlight the error message stack.

Action: The errors are printed in last-in first-out order. To interpret them correctly, read from the bottom to the top.

RMAN-00572: waiting for DBMS_PIPE input

Cause: This message is used only when the PIPE option was specified.

Action: enqueue some RMAN input into the pipe

RMAN-00573: DBMS_PIPE.NEXT_ITEM_TIME returned unknown type code: <varname>number</varname>

Cause: This is an internal error.

Action: contact Oracle Support Services.

RMAN-00574: rman aborting due to errors reading/writing DBMS_PIPE

Cause: RMAN was run with input/output being sent to DBMS_PIPE. An error was encountered while reading from or writing to the pipe. This error should be preceded by information describing the error.

Action: RMAN terminates. Refer to the cause/action for the preceding errors.

RMAN-00575: timeout while trying to write to DBMS_PIPE

Cause: RMAN was running in DBMS_PIPE mode. A timeout occurred while calling DBMS_PIPE.SEND_MESSAGE. This occurs when the pipe is full and no process has dequeued any of the messages. This is usually caused by death of the process that was talking to rman.

Action: RMAN will abort.

RMAN-00576: PIPE cannot be used with CMDFILE

Cause: The PIPE and CMDFILE options cannot be used together. When using the PIPE option, RMAN must obtain its input from the input pipe.

Action: Remove either the PIPE or CMDFILE option.

RMAN-00577: PIPE requires that TARGET be specified on the command line

Cause: The PIPE option obtains its input from, and writes its output to, an Oracle database pipe in the target database. Therefore, the target database connection must be specified on the command line, so that RMAN can connect to the target database to receive its input from the pipe.

Action: Specify the TARGET option on the RMAN command line.

RMAN-00578: pipe <varname>string</varname> is not private and owned by SYS

Cause: The pipe that RMAN needs to use for its input or output is either a public pipe or a private pipe that is not owned by SYS. This is a potential security problem,

because it allows a non-SYS user to issue commands to RMAN or to retrieve the RMAN output.

Action: If you are attempting to put data on the RMAN input pipe prior to starting RMAN, so RMAN will process the data on the pipe as soon as it starts, you must be connected as SYS and you must first use the DBMS_PIPE.CREATE_PIPE function to explicitly create the pipe as a private pipe.

RMAN-00579: SCRIPT cannot be used with CMDFILE

Cause: The SCRIPT and CMDFILE options cannot be used together. When using the SCRIPT option, RMAN executes only the specified script.

Action: Remove either the SCRIPT or CMDFILE option.

RMAN-00600: internal error, arguments [<varname>string</varname>] [<varname>string</varname>] [<varname>string</varname>] [<varname>string</varname>]

Cause: An internal error in recovery manager occurred.

Action: Contact Oracle Support Services.

RMAN-00601: fatal error in recovery manager

Cause: A fatal error has occurred.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-00700: SCRIPT requires that TARGET be specified on the command line

Cause: A SCRIPT option was included on the RMAN command line without a specified TARGET database.

Action: Specify the TARGET option on the RMAN command line.

RMAN-00701: SCRIPT requires that CATALOG be specified on the command line

Cause: A SCRIPT option was included on the RMAN command line without a specified CATALOG recovery catalog.

Action: Specify the CATALOG option on the RMAN command line.

RMAN-00702: The command has no syntax errors

Cause: This is an informational message only.

Action: No action is required.

RMAN-00703: The cmdfile has no syntax errors

Cause: This is an informational message only.

Action: No action is required.

RMAN-01006: error signaled during parse

Cause: An error was signaled during parsing.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-01007: at line <varname>number</varname> column <varname>number</varname> file: <varname>string</varname>

Cause: This is an informational message indicating the line and column where a syntax error was detected.

Action: No action is required.

RMAN-01008: the bad identifier was: <varname>string</varname>

Cause: This is an informational message indicating the identifier token that caused a syntax error.

Action: No action is required.

RMAN-01009: syntax error: found "<varname>string</varname>": expecting one of: "<varname>string</varname>"

Cause: A syntax error was signaled during parsing.

Action: Correct the input.

RMAN-02000: wrong message file version (msg <varname>number</varname> not found)

Cause: The rmanxx.msb file is not the correct version.

Action: Check that the installation was done correctly. The RMAN binary (executable, load module, whatever it is called on your O/S) and the rmanxx.msb file must be from the same version, release, and patch level.

RMAN-02001: unrecognized punctuation symbol "<varname>string</varname>"

Cause: An illegal punctuation character was encountered.

Action: Remove the illegal character.

RMAN-02002: unexpected end of input file reached

Cause: This is probably caused by failure to supply the closing quote for a quoted string.

Action: Correct the input.

RMAN-02003: unrecognized character: <varname>string</varname>

Cause: An input character that is neither an alpha, digit, or punctuation was encountered.

Action: Remove the character.

RMAN-02004: quoted string too big

Cause: A quoted string longer than 2000 bytes was encountered.

Action: This may be caused by a missing close quote. If so, add the missing quote, otherwise shorten the string.

RMAN-02005: token too big

Cause: A token longer than 1000 bytes was encountered

Action: Tokens must be separated by whitespace or punctuation. Either add the missing whitespace or punctuation, or shorten the token.

RMAN-02006: script line too long

Cause: a line longer than 500 bytes was encountered

Action: break the line up into shorter lines

RMAN-02007: Integer value overflow

Cause: Parser failed to convert input string to integer

Action: Acceptable values for integer are from 0 to 2147483648. Retry command using valid integer value.

RMAN-02008: no value exists for variable "<varname>string</varname>"

Cause: The RMAN variable specified was either undefined or null

Action: Verify that a proper value has been given to that variable.

RMAN-02009: unexpected end of command file reached

Cause: This is probably caused by failure to supply the closing brace for a stored script in a command file.

Action: Correct the input.

RMAN-03000: recovery manager compiler component initialization failed

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-03001: recovery manager command sequencer component initialization failed

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-03002: failure of <varname>string</varname> command at <varname>string</varname>

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-03003: command not implemented yet: <varname>string</varname>

Cause: The command is not implemented in the current release.

Action: Avoid using the command.

RMAN-03004: fatal error during execution of command

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-03008: error while performing automatic resync of recovery catalog

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-03009: failure of <varname>string</varname> command on <varname>string</varname> channel at <varname>string</varname>

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-03010: fatal error during library cache pre-loading

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-03011: Recovery Manager<varname>string</varname>

Cause: This is the RMAN banner

Action: No action is required.

RMAN-03012: fatal error during compilation of command

Cause: A fatal error occurred during compilation of a command.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-03013: Copyright (c) 1995, 2003, Oracle Corporation. All rights reserved.

Cause: This is the copyright banner

Action: No action is required.

RMAN-03014: implicit resync of recovery catalog failed

Cause: This message is accompanied by other errors explaining the cause of the failure.

Action: No action is required.

RMAN-03015: error occurred in stored script <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-03017: recursion detected in stored script <varname>string</varname>

Cause: A stored script is calling itself or another script which calls itself.

Action: Remove the recursion.

RMAN-03018: asynchronous RPCs are working correctly

Cause: This is an informational message only.

Action: No action is required.

RMAN-03019: asynchronous RPCs are NOT working

Cause: The RPCTEST command has determined that RPCs are not executing asynchronously. Instead, they are blocking. This is caused by using a SQL*NET driver that does not support non-blocking UPI.

Action: Try using a different SQL*NET driver.

RMAN-03020: asynchronous RPC test will take 1 minute

Cause: This is an informational message only.

Action: No action is required.

RMAN-03023: executing command: <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-03028: fatal error code for command <varname>string</varname> : <varname>number</varname>

Cause: Informational message. This precedes error 3012.

Action: No action is required.

RMAN-03029: echo set on

Cause: a SET ECHO ON command was issued

Action: No action is required.

RMAN-03030: echo set off

Cause: a SET ECHO OFF command was issued

Action: No action is required.

RMAN-03031: this option of set command needs to be used inside a run block

Cause: The option used with the SET command is not valid outside a run block.

Action: Change the SET command or place it inside a run block.

RMAN-03032: this option of set command needs to be used outside of a run block

Cause: The option used with the SET command is not valid inside of a run block.

Action: Change the SET command or place it outside a run block.

RMAN-03033: current log archived

Cause: "ALTER SYSTEM ARCHIVE LOG CURRENT" command completed successfully.

Action: None, this is an informational message.

RMAN-03034: LEVEL <varname>number</varname> is invalid. LEVEL must be between <varname>string</varname> and <varname>string</varname>

Cause: An invalid DEBUG LEVEL was used.

Action: Change the DEBUG LEVEL argument.

RMAN-03035: Debugging turned off

Cause: a DEBUG OFF command was issued

Action: No action is required.

RMAN-03036: Debugging set to level=<varname>number</varname>[<varname>string</varname>], types=<varname>string</varname>
Cause: a DEBUG command was issued

Action: No action is required.

RMAN-03037: Spooling started in log file: <varname>string</varname>
Cause: a SPOOL LOG TO ... command was issued

Action: No action is required.

RMAN-03038: Spooling started in trace file: <varname>string</varname>
Cause: a SPOOL TRACE TO ... command was issued

Action: No action is required.

RMAN-03039: Spooling for log turned off
Cause: a SPOOL LOG OFF command was issued

Action: No action is required.

RMAN-03040: Spooling for trace turned off
Cause: a SPOOL TRACE TO ... command was issued

Action: No action is required.

RMAN-03042: error while analyzing automatic repair options
Cause: This message is accompanied by other errors explaining the cause of the failure.

Action: No action is required.

RMAN-03090: Starting <varname>string</varname> at <varname>string</varname>
Cause: This is an informational message only.

Action: No action is required.

RMAN-03091: Finished <varname>string</varname> at <varname>string</varname>
Cause: This is an informational message only.

Action: No action is required.

RMAN-03098: <varname>string</varname>RMAN-<varname>number</varname>: <varname>string</varname><varname>string</varname>
Cause: This is the message prefix with a possible indentation.

Action: No action is required.

RMAN-03099: job cancelled at user request
Cause: The user interrupted the current job.

Action: None

**RMAN-03999: Oracle error occurred while while converting a date: ORA-
<varname>number</varname>: <varname>string</varname>**
Cause: Internal error converting a date.

Action: Contact Oracle Support Services.

RMAN-04000: memory allocation failure

Cause: A memory allocation request could not be satisfied.

Action: Increase the amount of memory available to RMAN.

RMAN-04001: heap initialization failure

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

**RMAN-04002: OCIPI failed, ORA-
<varname>string</varname>**

Cause: OCI process level initialization failed.

Action: This error should not normally occur.

RMAN-04003: OCIINIT failed

Cause: The call to OCIEvnlinit failed.

Action: This error should not normally happen. Contact Oracle Customer Support.

**RMAN-04004: error from recovery catalog database: <varname>string</
varname>**

Cause: Oracle error signaled by catalog database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-04005: error from target database: \n<varname>string</varname>

Cause: Oracle error signaled by target database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-04006: error from auxiliary database: <varname>string</varname>

Cause: Oracle error signaled by auxiliary database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

**RMAN-04007: WARNING from recovery catalog database: <varname>string</
varname>**

Cause: Non fatal Oracle error signaled by catalog database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-04008: WARNING from target database: \n<varname>string</varname>

Cause: Non fatal Oracle error signaled by target database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-04009: WARNING from auxiliary database: <varname>string</varname>

Cause: Non fatal Oracle error signaled by auxiliary database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-04010: target database Password:

Cause: No password was provided for the target database.

Action: Provide target database password.

RMAN-04011: recovery catalog database Password:

Cause: No password was provided for the recovery catalog database.

Action: Provide recovery catalog database password.

RMAN-04012: auxiliary database Password:

Cause: No password was provided for the auxiliary database.

Action: Provide auxiliary database password.

RMAN-04013: must connect before startup

Cause: A STARTUP command was attempted before connecting to the database.

Action: Connect to database before attempting STARTUP command.

RMAN-04014: startup failed: <varname>string</varname>

Cause: The database failed to startup.

Action: The cause of the failure is included in the error message. Correct the cause of the failure and retry the startup command.

RMAN-04015: error setting target database character set to <varname>string</varname>

Cause: An error was received while setting the session character set in the target database.

Action: This error should not normally happen. Contact Oracle Customer Support.

RMAN-04016: could not get OCI error handle

Cause: An error was received while initializing the OCI layer.

Action: This error should not normally happen. Contact Oracle Customer Support.

RMAN-04017: startup error description: <varname>string</varname>

Cause: This is an additional informational message that indicates the cause of failure.

Action: See accompanying error messages indicating the cause of failure. No action is required.

RMAN-04020: target database name "<varname>string</varname>" does not match channel's name: "<varname>string</varname>"

Cause: The CONNECT clause in the ALLOCATE command has resulted in a connection to a database which is not the same as the one used to connect to the target database.

Action: Verify that the CONNECT string connects to the same database as the one specified in the TARGET connection for the CONNECT command.

RMAN-04021: target database DBID <varname>string</varname> does not match channel's DBID <varname>string</varname>

Cause: The CONNECT clause in the ALLOCATE command has resulted in a connection to a database which is not the same as the one used to connect to the target database.

Action: Verify that the CONNECT string connects to the same database as the one specified in the TARGET connection for the CONNECT command.

RMAN-04022: target database mount id <varname>string</varname> does not match channel's mount id <varname>string</varname>

Cause: The CONNECT clause in the ALLOCATE command has resulted in a connection to a database which is not the same as the one used to connect to the target database.

Action: Verify that the CONNECT string connects to the same database as the one specified in the TARGET connection for the CONNECT command.

RMAN-04024: starting Oracle instance without parameter file for retrieval of spfile

Cause: The instance could not be started because no default parameter file (either PFILE or SPFILE) could be found. The instance will be started in restricted mode with default parameters.

Action: None - this is an informational message.

RMAN-04025: unable to generate a temporary file

Cause: Creation of a temporary file failed. It could be that the system does not have enough resources (disk space, memory or similar).

Action: Verify and free some system resources memory and try again.

RMAN-04026: unable to open a temporary file: "<varname>string</varname>"

Cause: Opening of a temporary file failed. It could be that the system does not have enough resources (disk space, memory or similar).

Action: Verify and free some system resources memory and try again.

RMAN-04027: unable to write to a temporary file: "<varname>string</varname>"

Cause: Writing to a temporary file failed. It could be that the system does not have enough resources (disk space, memory or similar).

Action: Verify and free some system resources memory and try again.

**RMAN-04031: \ninitialization parameters used for automatic instance:
\n<varname>string</varname>\n**

Cause: This is an informational message only.

Action: No action is required.

RMAN-04032: using contents of file <varname>string</varname>

Cause: The specified file was included as part of the auxiliary database parameter file. This is an informational message.

Action: No action is required.

RMAN-04033: cannot open auxiliary parameter file <varname>string</varname>

Cause: An auxiliary parameter file was specified with SET AUXILIARY INSTANCE PARAMETER FILE command but the specified file cannot be found.

Action: Set the parameter file to an existent file or retry the command without setting AUXILIARY INSTANCE PARAMETER FILE.

RMAN-04034: source recovery catalog database Password:

Cause: A password was not provided for the source recovery catalog database.

Action: Provide source recovery catalog database password.

RMAN-04035: error from source recovery catalog database: <varname>string</varname>

Cause: Oracle error signaled by source recovery catalog database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-04036: WARNING from source recovery catalog database: <varname>string</varname>

Cause: Nonfatal Oracle error signaled by source recovery catalog database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-04037: Connection should be as SYSDBA or as SYSBACKUP

Cause: An unsupported mode was specified on a target or clone connection.

Action: Specify a valid mode and retry the connection.

RMAN-04038: Connection should not specify a mode

Cause: A connection specified a mode when no mode is supported for this kind of connection

Action: Remove the mode specification and retry the connection.

RMAN-05000: CONFIGURE AUXNAME required for datafile <varname>string</varname>

Cause: Either: -) The control file mounted by the auxiliary database does not have an entry for this datafile, therefore file name conversion is not possible. -) A COPY DATAFILE TO AUXNAME command was issued, but no auxname was set for this datafile.

Action: Use the CONFIGURE AUXNAME command to specify a file name that the auxiliary database can use as a restore destination.

RMAN-05001: auxiliary file name <varname>string</varname> conflicts with a file used by the target database

Cause: RMAN is attempting to use the specified file name as a restore destination in the auxiliary database, but this name is already in use by the target database.

Action: Use the CONFIGURE AUXNAME command to specify a name for the data file that does not conflict with a file name in use by the target db.

RMAN-05002: aborting Tablespace Point-in-Time Recovery

Cause: Previously encountered error(s) were issued which require corrective action.

Action: Resolve the error conditions, and then re-issue the RECOVER command.

RMAN-05003: Tablespace Point-in-Time Recovery is not allowed for tablespace <varname>string</varname>

Cause: The SYSTEM, SYSUAX or a tablespace containing rollback segments is not allowed in Tablespace Point-in-Time Recovery.

Action: Remove the indicated tablespace from the recovery set and retry the operation.

RMAN-05004: target database log mode is NOARCHIVELOG

Cause: An attempt was made to apply Tablespace Point-in-Time Recovery or Pluggable Database Point-in-Time Recovery to a database that is in NOARCHIVELOG mode.

Action: If all required archived log files are available for Tablespace Point-in-Time Recovery or Pluggable Database Point-in-Time Recovery, alter the target database log mode to ARCHIVELOG and retry the operation. Otherwise, Tablespace Point-in-Time Recovery and Pluggable Database Point-in-Time Recovery cannot be applied to this database.

RMAN-05005: Tablespace Point-in-Time Recovery is not allowed for re-created tablespace <varname>string</varname>

Cause: The requested tablespace has been re-created and is not allowed in Point-in-Time Recovery.

Action: Remove the indicated tablespace from the recovery set and retry the operation.

RMAN-05006: cannot recover clone standby single tablespaces

Cause: Standby recover can only be performed for the whole database.

Action: Change the tablespace list to a database specification.

RMAN-05007: no channel allocated

Cause: A command was entered that requires a channel, and no channel is allocated.

Action: Use ALLOCATE CHANNEL before using the command

RMAN-05008: SKIP clause not valid for normal recovery

Cause: The SKIP clause was specified for non-Tablespace or Table Point-in-Time Recovery.

Action: Remove the UNDO TABLESPACE clause.

RMAN-05009: Block Media Recovery requires Enterprise Edition

Cause: The RECOVER...BLOCK command was specified.

Action: Remove the RECOVER...BLOCK command.

RMAN-05010: target database must be opened in READ WRITE mode for Tablespace Point-in-Time Recovery

Cause: The target database was not opened in read/write mode.

Action: Open the database in read/write mode.

RMAN-05011: auxiliary instance must be in NOMOUNT state for Tablespace Point-in-Time Recovery

Cause: The Auxiliary instance was not in NOMOUNT state.

Action: Open the auxiliary instance in NOMOUNT state.

RMAN-05013: auxiliary control file name <varname>string</varname> conflicts with a file used by the target database

Cause: RMAN is attempting to use the specified control file name for Tablespace Point-in-Time Recovery as a restore destination in the auxiliary database, but this name is already in use by the target database.

Action: Set control_files parameter in the auxiliary instance to a name that does not conflict with a file name in use by the target database.

RMAN-05014: Tablespaces with undo segments were not found in recovery catalog

Cause: The recovery catalog did not have information about tablespaces with undo segments.

Action: Manually specify the tablespaces with undo segments in the optional UNDO tablespaces clause of the RECOVER command.

RMAN-05015: WARNING: not enough information in recovery catalog for specified Point-in-Time recovery

Cause: The recovery catalog did not have information about the tablespaces with undo segments at the specified Point-in-Time. This happened because the current recovery catalog was not in use at the specified Point-in-Time. A list of tablespaces with undo segments was supplied.

Action: RMAN assumes that the current set of tablespaces with undo segments is the same set that was in use at the specified Point-in-Time. If the set of tablespaces with undo segments changes, the recovery fails. If recovery fails, use the optional UNDO TABLESPACE clause of the RECOVER command to specify the correct set of tablespaces.

RMAN-05016: failover to previous backup

Cause: This is an informational message to indicate the RMAN could not successfully restore the files using the specified backups. An attempt was made to restore the datafile/archived logs/ control file/SPFILE using a previous existing backup.

Action: See accompanying additional error messages indicating the cause of the failover.

RMAN-05017: no copy of datafile <varname>number</varname> found to recover

Cause: A RECOVER COPY command was not able to proceed because no copy of indicated file was found to recover. Possible causes include the following: 1. no copy of indicated file exists on disk that satisfy the criteria specified in the user's recover operands. 2. copy of indicated datafile exists on disk but no incremental backup was found to apply to the datafile copy.

Action: One of the following: 1. Use or correct TAG specification to recover a different datafile copy. 2. Use BACKUP FOR RECOVER OF COPY command to create necessary incremental backup or copy.

RMAN-05018: some datafile copies cannot be recovered, aborting the RECOVER command

Cause: This error message can follow one or more RMAN-5017 or RMAN-5019 error messages.

Action: See RMAN-5017 or RMAN-5019 error messages documentation for more information.

RMAN-05019: WARNING: no channel of required type allocated to recover copy of datafile <varname>number</varname>

Cause: A RECOVER COPY command could not proceed because incremental backup sets exist on a device type that has not been allocated.

Action: Use the LIST command to determine which device type is needed, then allocate a channel of that type.

RMAN-05020: cannot specify AUXILIARY DESTINATION option for normal recovery

Cause: The AUXILIARY DESTINATION option was specified for a normal recovery. It is only allowed for Tablespace or Table Point-in-Time Recovery.

Action: Remove the AUXILIARY DESTINATION option and rerun the RECOVER command.

RMAN-05021: this configuration cannot be changed for a BACKUP or STANDBY control file

Cause: The user attempted to modify the configuration which cannot be changed for a BACKUP or STANDBY control file while the mounted control file was either BACKUP or STANDBY. The following configurations can be changed only when connected to primary database instance that has CURRENT/CREATED control file type mounted: CONFIGURE RETENTION POLICY CONFIGURE EXCLUDE CONFIGURE ENCRYPTION CONFIGURE DB_UNIQUE_NAME

Action: Connect to primary database instance and execute the command.

RMAN-05022: TRANSPORT TABLESPACE may not be used with user-managed auxiliary instance

Cause: A user-managed auxiliary instance was specified.

Action: Retry the operation with an RMAN-managed auxiliary instance.

RMAN-05023: TABLESPACE DESTINATION required

Cause: A required TABLESPACE DESTINATION was not specified.

Action: Specify a TABLESPACE DESTINATION and retry the operation.

RMAN-05024: \nList of tablespaces presumed to have UNDO segments

Cause: Accompanying message to 5015.

Action: See action of message 5015.

RMAN-05025: Tablespace <varname>string</varname>

Cause: Accompanying message to 5015.

Action: See action of message 5015.

RMAN-05026: WARNING: presuming following set of tablespaces applies to specified Point-in-Time

Cause: RMAN assumes that the current set of tablespaces with undo segments is the same set that was in use at the specified Point-in-Time. If the set of tablespaces with undo segments changes, the recovery fails. If recovery fails, use the optional UNDO TABLESPACE clause of the RECOVER command to specify the correct set of tablespaces.

Action: RMAN assumes that the current set of tablespaces with undo segments is the same set that was in use at the specified Point-in-Time. If the set of tablespaces with undo segments changes, the recovery fails. If recovery fails, use the optional UNDO TABLESPACE clause of the RECOVER command to specify the correct set of tablespaces.

RMAN-05027: InList of tablespaces expected to have UNDO segments

Cause: Accompanying message to 5026.

Action: See action of message 5026.

RMAN-05028: Tablespace <varname>string</varname>

Cause: Accompanying message to 5026.

Action: See action of message 5026.

RMAN-05029: UNDO TABLESPACE clause not valid for normal recovery

Cause: The UNDO TABLESPACE clause was specified for non-Tablespace or Table Point-in-Time Recovery.

Action: Remove the UNDO TABLESPACE clause.

RMAN-05030: CLONE clause only valid for normal recovery

Cause: The CLONE clause was specified for a Tablespace or Logical Point-in-Time Recovery.

Action: Remove the CLONE clause.

RMAN-05031: DATAPUMP DESTINATION clause is only valid for Table Point-in-Time Recovery

Cause: The DATAPUMP DESTINATION clause was specified for a non-Table Point-in-Time Recovery.

Action: Remove the DATAPUMP DESTINATION clause.

RMAN-05032: datafile <varname>string</varname> will be created automatically during restore operation

Cause: The specified datafile did not have an available backup.

Action: None. This is an informational message displayed for VALIDATE or PREVIEW option of the RESTORE command.

RMAN-05033: Media recovery start SCN is <varname>string</varname>

Cause: The above system change number (SCN) would be starting media recovery SCN, if the specified files are restored.

Action: None. This is an informational message displayed for PREVIEW option of the RESTORE command.

RMAN-05034: Recovery must be done beyond SCN <varname>string</varname> to clear datafile fuzziness

Cause: The above system change number (SCN) identifies the minimum SCN beyond which the media recovery must be performed on the specific datafile to clear the media recovery fuzziness for all datafile.

Action: None. This is an informational message displayed for PREVIEW option of the RESTORE command.

RMAN-05035: archived logs generated after SCN <varname>string</varname> not found in repository

Cause: The recovery catalog or target database control file did not have a record of archived logs containing the redo generated after the specified system change number (SCN).

Action: None. To avoid this message, perform a log switch if the database is in open mode.

RMAN-05036: FOR DB_UNIQUE_NAME option cannot be used for this configuration

Cause: An attempt was made to set the configuration which cannot be used with FOR DB_UNIQUE_NAME option.

Action: Remove FOR DB_UNIQUE_NAME option and execute the command.

RMAN-05037: FOR DB_UNIQUE_NAME option cannot be used in nocatalog mode

Cause: An attempt was made to set the remote configuration in nocatalog mode.

Action: Connect to recovery catalog and execute the command.

RMAN-05038: unable to determine UNTIL SCN for TRANSPORT

Cause: No archived logs were found in the control file.

Action: Add UNTIL clause to TRANSPORT command and retry.

RMAN-05039: One or more auxiliary set of datafiles could not be removed

Cause: There was an error while performing Tablespace or Table Point-in-Time Recovery. Some of the restored datafiles had Oracle Managed Files (OMF) names and were not deleted.

Action: Manually remove the auxiliary set of datafiles that were not deleted.

RMAN-05040: \n\nList of tablespaces that have been dropped from the target database:

Cause: One or more tablespaces in the recovery set were not found in the control file of the target database.

Action: None. Informational message.

RMAN-05041: Error during export of metadata

Cause: Export of metadata received an error from Data Pump.

Action: This message is accompanied by other error message(s) indicating the cause of the error.

RMAN-05042: Error during import of metadata

Cause: Import of metadata received an error from Data Pump.

Action: This message is accompanied by other error message(s) indicating the cause of the error.

RMAN-05043: Tablespace <varname>string</varname>

Cause: Accompanying message to 5040.

Action: See Action of message 5040.

RMAN-05044: \nPerforming export of metadata...

Cause: This is an informational message only.

Action: No action is required.

RMAN-05045: \nPerforming import of metadata...

Cause: This is an informational message only.

Action: No action is required.

RMAN-05046: Export completed\n

Cause: This is an informational message only.

Action: No action is required.

RMAN-05047: Import completed\n

Cause: This is an informational message only.

Action: No action is required.

RMAN-05048: specified file name <varname>string</varname> conflicts with a file used by the target database

Cause: The specified file name was already in use by another datafile in the database.

Action: Use SET NEWNAME command to specify a different name for the datafile that does not conflict with a file name in use by the target database.

RMAN-05050: flashing back control file to SCN <varname>string</varname>

Cause: RESTORE command was issued with a SET UNTIL clause and Flashback Database enabled. The control file was flashed back to the SET UNTIL time.

Action: This is an informational message only.

RMAN-05051: analyzing automatic repair options; this may take some time

Cause: This is an informational message only.

Action: No action is required.

RMAN-05052: Repair <varname>string</varname> is not compatible with this version of RMAN.

Cause: The specified repair was not compatible with this version of Recovery Manager (RMAN).

Action: Use a newer version of the RMAN executable.

RMAN-05053: AUXILIARY DESTINATION is only valid when using a RMAN-managed auxiliary instance

Cause: AUXILIARY DESTINATION clause was specified while using an user-managed auxiliary instance.

Action: Do not specify AUXILIARY DESTINATION clause and retry the operation or use a RMAN-managed auxiliary instance.

RMAN-05054: recover block operand <varname>string</varname> cannot be used to recover datafile

Cause: The specified operand could not be used with RECOVER datafile command.

Action: Delete the invalid operand and retry the command.

RMAN-05055: recover datafile operand <varname>string</varname> cannot be used to recover block

Cause: The specified operand could not be used with RECOVER block command.

Action: Delete the invalid operand and retry the command.

RMAN-05056: Table <varname>string</varname>.<varname>string</varname> belongs to SYS

Cause: A SYS table was specified to be recovered.

Action: Remove SYS table, SYS objects cannot be recovered.

RMAN-05057: Table <varname>string</varname>.<varname>string</varname> not found

Cause: The specified table was not found in the dictionary at the specified point-in-time.

Action: Verify the name of the schema and table, or change the point-in-time and retry the command.

RMAN-05058: Cannot determine tablespace for table <varname>string</varname>.<varname>string</varname>

Cause: The specified table was not found in the data pump views at the specified point-in-time.

Action: Verify the name of the schema and table, or change the point-in-time and retry the command.

RMAN-05059: Table <varname>string</varname>.<varname>string</varname> resides in tablespace <varname>string</varname>

Cause: The tablespace that contained the specified table did not allow Tablespace Point-in-Time Recovery.

Action: Remove the offending table before attempting the operation again.

RMAN-05060: block specifier must be specified to recover block

Cause: Block Specifier was not specified in the command.

Action: Specify block specifier and resubmit the command.

RMAN-05061: analyzing automatic repair options complete

Cause: This is an informational message only.

Action: No action is required.

RMAN-05062: image copy needs no roll forward

Cause: The image copy that would be rolled forward by the RECOVER COPY command is already more recent than the specified UNTIL time or system change number (SCN).

Action: Usually this is the result of a recent OPEN RESETLOGS operation, and no action is needed, because the daily backup strategy will start rolling this copy forward after it becomes old enough to be eligible for rolling forward. To force the copy to be rolled forward, specify a more recent UNTIL time or system change number (SCN).

RMAN-05063: Cannot recover specified tables

Cause: Previously encountered errors required corrective action.

Action: Resolve the error conditions and reissue the Table Point-in-Time Recovery command.

RMAN-05064: REMAP TABLE clause is only valid for Table Point-in-Time Recovery

Cause: The REMAP TABLE clause was specified for a non-Table Point-in-Time Recovery.

Action: Remove the REMAP TABLE clause.

RMAN-05065: REMAP TABLESPACE clause is only valid for Table Point-in-Time Recovery

Cause: The REMAP TABLESPACE clause was specified for a non-Table Point-in-Time Recovery.

Action: Remove the REMAP TABLESPACE clause.

RMAN-05066: NOTABLEIMPORT clause is only valid for Table Point-in-Time Recovery

Cause: The NOTABLEIMPORT clause was specified for a non-Table Point-in-Time Recovery.

Action: Remove the NOTABLEIMPORT clause.

RMAN-05067: Table <varname>string</varname> already specified

Cause: The specified table was already specified to be recovered.

Action: Remove the duplicated table and retry the command.

RMAN-05069: New table name <varname>string</varname> for user <varname>string</varname> was already specified for other table

Cause: The same table name for the same user has already been specified for a different table.

Action: Remove or change the duplicated table name and retry the command.

RMAN-05070: Running TRANSPORT_SET_CHECK on recovery set tablespaces

Cause: This is an informational message only.

Action: No action is required.

RMAN-05071: TRANSPORT_SET_CHECK completed successfully

Cause: This is an informational message only.

Action: No action is required.

RMAN-05072: TRANSPORT_SET_CHECK failed

Cause: SYS.TS_PITR_CHECK was not empty for recovery set tablespaces.

Action: Fix dependencies before attempting TSPITR again.

RMAN-05073: Tablespace <varname>string</varname> creation SCN <varname>string</varname> is ahead of point-in-time SCN <varname>string</varname>

Cause: The tablespace was found in the control file but the creation system change number (SCN) of the datafile(s) is after the specified point-in-time. This can happen if a previous tablespace point-in-time recovery was performed, for the tablespace.

Action: If a previous TSPITR has been performed drop the tablespace and retry the command. Otherwise, verify the name of the tablespace and/or the point-in-time and resubmit the command.

RMAN-05074: Tablespace <varname>string</varname> does not exist at specified point-in-time SCN <varname>string</varname>

Cause: The tablespace was found in the control file but the creation system change number (SCN) of the datafile(s) is after the specified point-in-time.

Action: Verify the name of the tablespace and/or the point-in-time and resubmit the command.

RMAN-05075: Remapped object <varname>string</varname> is not being recovered

Cause: The specified remapped object was not recovered.

Action: Add remapped object to object list or remove this remap specification.

RMAN-05076: Remapped tablespace <varname>string</varname> is not being recovered

Cause: The specified tablespace was not recovered. None of the objects being recovered belong to the specified tablespace.

Action: Revise the object list or remove the remapped tablespace specification.

RMAN-05077: New tablespace <varname>string</varname> does not exist in target database

Cause: The new tablespace in the REMAP TABLESPACE clause could not be found in the target database.

Action: Revise the object list or remove remapped tablespace specification.

RMAN-05078: Table Point-in-Time Recovery requires an UNTIL clause

Cause: Table Point-in-Time Recovery was specified without a point-in-time specification.

Action: Add a point-in-time specification and retry the command.

RMAN-05079: Table <varname>string</varname> already remapped

Cause: The same table appeared in another remap specification.

Action: Remove the duplicated remapped table and retry the command.

RMAN-05080: Not performing table import after point-in-time recovery

Cause: As requested, Data Pump Import was not performed after the point-in-time recovery was performed.

Action: Manually perform the Data Pump Import of the recovered tables into the target database.

RMAN-05081: Cannot use REMAP clauses if NOTABLEIMPORT clause is used

Cause: The NOTABLEIMPORT clause was specified together with either the REMAP TABLE or REMAP TABLESPACE clause. These clauses are used during importing of the tables and, therefore, are invalid.

Action: Remove the REMAP clauses or remove the NOTABLEIMPORT clause and retry the command.

RMAN-05082: Tablespace <varname>string</varname> already remapped

Cause: The same tablespace appeared in another remap specification.

Action: Remove the duplicated remapped tablespace and retry the command.

RMAN-05083: Partition <varname>string</varname>.<varname>string</varname>.<varname>string</varname> not found

Cause: The specified partition was not found in the dictionary at the specified point-in-time.

Action: Verify the name of the schema, table and partition, or change the point-in-time and retry the command.

RMAN-05084: \nPerforming export of tables...

Cause: This is an informational message only.

Action: No action is required.

RMAN-05085: \nPerforming import of tables...

Cause: This is an informational message only.

Action: No action is required.

RMAN-05086: DUMP FILE clause is only valid for Table Point-in-Time Recovery

Cause: The DUMP FILE clause was specified for a non-Table Point-in-Time Recovery.

Action: Remove the DUMP FILE clause.

RMAN-05087: \nPerforming export of metadata for specified tablespaces...

Cause: This is an informational message only.

Action: No action is required.

RMAN-05088: DB_CREATE_FILE_DEST is not set

Cause: TO NEW was specified for a RESTORE BACKUPPIECE command but DB_FILE_CREATE_DEST was not set for the target database.

Action: Specify DB_FILE_CREATE_DEST for the target database or specify FORMAT and retry the command.

RMAN-05089: Cannot specify <varname>string</varname> clause with cross-platform restore

Cause: The specified option was used for a cross-platform datafile restore.

Action: Remove the option and resubmit the command.

RMAN-05090: FROM PLATFORM clause can only be used with cross-platform datafile restore

Cause: FROM PLATFORM clause was specified for a noncross-platform datafile restore.

Action: Remove the clause and resubmit the command.

RMAN-05091: UNTIL cannot be used with cross-platform datafile restore

Cause: An UNTIL command was in effect or an UNTIL clause was specified for a cross-platform datafile restore.

Action: Remove the UNTIL clause or command and resubmit the command.

RMAN-05092: Option <varname>string</varname> cannot be used when restoring whole database with cross-platform datafile restore

Cause: The specified option was specified for whole database cross-platform datafile restore.

Action: Remove the option and resubmit the command.

RMAN-05093: Restore cannot be mixed with cross-platform datafile restore

Cause: A restore specification was found when a cross-platform data file specification was expected.

Action: Use only one kind of restore specification in a single restore command.

RMAN-05094: Cross-platform whole database restore requires that the database is not mounted

Cause: FOREIGN DATABASE specification was found but the database was not in the correct state.

Action: Make sure that the database is not mounted when performing whole database cross-platform restore.

RMAN-05095: Data Pump import requires the database to be open read/write

Cause: During a cross-platform tablespace restore, DUMP FILE was specified without NOIMPORT and database was not open in read/write mode.

Action: Remove DUMP FILE specification or add NOIMPORT to it or, alternatively, open the database in read/write mode before retrying the command.

RMAN-05096: FROM SERVICE option is not supported for archived logs

Cause: The FROM SERVICE option was supplied but does not apply to restoring archived logs.

Action: Remove the FROM SERVICE operand and reenter the command.

RMAN-05097: could not validate file header for datafile <varname>string</varname> from service <varname>string</varname>

Cause: The specified datafile could not be accessed from the indicated service.

Action: Ensure that the datafile exists on the service and has same creation SCN as that of target database file. If the error can be corrected, do so and retry the operation.

RMAN-05099: not connected to target database with a password

Cause: A command that restores SPFILE to the target instance from a service name was requested. Such a command requires a password to be present in the connect string used to connect to the target instance.

Action: Exit RMAN session and then connect to target database using command line or CONNECT TARGET command with a password.

RMAN-05100: not connected to auxiliary database with a password

Cause: A command that restores SPFILE to the auxiliary instance from a service name was requested. Such a command requires a password to be present in the connect string used to connect to the auxiliary instance.

Action: Exit RMAN session and then connect to auxiliary instance using command line or CONNECT AUXILIARY command with a password.

RMAN-05101: Point-in-Time Recovery without CATALOG and TARGET not open requires that UNDO TABLESPACE is specified

Cause: A Point-in-Time Recovery was attempted when target database was not open without connection to a recovery catalog. It is necessary that the list of tablespaces with undo segments is provided with the UNDO TABLESPACE clause.

Action: Retry the command specifying the list of tablespaces with undo segments using the UNDO TABLESPACE clause.

RMAN-05102: auxiliary instance must be in the NOMOUNT state for Pluggable Database Point-in-Time Recovery

Cause: The Auxiliary instance was not in the NOMOUNT state.

Action: Put the auxiliary instance into the NOMOUNT state.

RMAN-05103: aborting Pluggable Database Point-in-Time Recovery

Cause: Previously encountered error(s) were issued which require corrective action.

Action: Resolve the error conditions and then re-issue the RECOVER command.

RMAN-05104: Specifying more than one Pluggable Databases is not supported

Cause: The command was attempted on more than one Pluggable Databases. This is not supported.

Action: Separate the task into multiple RMAN commands so that each command operates on one Pluggable Database.

RMAN-05105: Specifying <varname>string</varname> database is not supported.

Cause: This operation was not supported for the Pluggable Database that was specified in the command.

Action: None. This is an informational message only.

RMAN-05106: datafile <varname>string</varname> conflicts with file used by database <varname>string</varname>

Cause: RMAN attempted to use the specified datafile number as a restore destination, but this datafile number was already in use by the specified database.

Action: Resolve the conflict and retry the command.

RMAN-05107: AUXILIARY DESTINATION option is not specified

Cause: The AUXILIARY DESTINATION option was not specified for Pluggable Database Point-in-Time Recovery or Flashback Pluggable Database. This is a mandatory option for these commands unless Fast Recovery Area is used.

Action: Specify the AUXILIARY DESTINATION option and retry the command.

RMAN-05108: Command is not supported for pluggable database

Cause: Pluggable database specified for this command. This is not supported.

Action: None - informational message only

RMAN-05109: UNTIL SCN (<varname>string</varname>) is orphan incarnation of Pluggable Database <varname>string</varname>

Cause: Specified UNTIL CHANGE was an orphan incarnation of the Pluggable Database.

Action: Check the UNTIL CHANGE or UNTIL RESTORE POINT. If the database needs to be restored to an orphan incarnation, use the RESET PLUGGABLE DATABASE command.

RMAN-05110: Pluggable Database <varname>string</varname> must be closed.

Cause: Pluggable Database Point-in-Time Recovery or Flashback Pluggable Database was attempted while the Pluggable Database was open.

Action: Close the Pluggable Database and Retry the Command.

RMAN-05111: Pluggable Database Point-in-Time Recovery is not supported for standby

Cause: Pluggable Database Point-in-Time Recovery was attempted on standby. This is not supported.

Action: None - informational message only.

RMAN-05112: table "<varname>string</varname>". "<varname>string</varname>" already exists

Cause: The specified table was present in the dictionary in the target database.

Action: Verify the name of the schema and table, or change the table name using the REMAP option and retry the command.

RMAN-05113: import completed with errors; Oracle Data Pump dump file <varname>string</varname> is retained

Cause: Import completed with errors.

Action: See Data Pump Import output for details of the problem.

RMAN-05114: datafile <varname>string</varname> name <varname>string</varname> is already used by datafile <varname>string</varname>

Cause: RMAN attempted to use the specified data file name as a restore destination for the indicated data file, but this data file name was already in use by the specified database. This can happen during pluggable database point-in-time recovery to recover a dropped tablespace whose data file name was already in use by a pluggable database.

Action: Add a SET NEWNAME command prior to the RESTORE or RECOVER command to specify the restore destination for this file.

RMAN-05115: Cross-platform INSTANT RESTORE is not supported.

Cause: An instant restore was specified using a data file copy from a different platform.

Action: Specify a different data file copy that is formatted for the same platform where the restore is taking place.

RMAN-05116: feature was not enabled: <varname>string</varname>

Cause: The specified feature is not enabled.

Action: Do not attempt to use this feature.

RMAN-05117: archive logs missing from SCN <varname>string</varname> to SCN <varname>string</varname>

Cause: Archive logs were missing for the SCN range.

Action: Backup the missing archive logs for a successful recovery.

RMAN-05118: recovery will be done up to SCN <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-05119: recovery can not be done to a consistent state.

Cause: No archive logs or backups were found.

Action: Backup archive logs for a successful recovery.

RMAN-05120: failed to open the wallet for restore

Cause: An error occurred while opening the wallet with the specified password.

Action: Ensure that the wallet is configured properly and a correct password is specified.

RMAN-05121: decryption password set for <varname>string</varname> database

Cause: This is an informational message only.

Action: No action is required.

RMAN-05500: the auxiliary database must be not mounted when issuing a DUPLICATE command

Cause: A DUPLICATE command was issued, but the auxiliary database is mounted.

Action: Dismount the auxiliary database.

RMAN-05501: aborting duplication of target database

Cause: Previously encountered errors require corrective action.

Action: Resolve the error conditions, and reissue the DUPLICATE command.

RMAN-05502: the target database must be mounted when issuing a DUPLICATE command

Cause: A DUPLICATE command was issued, but the target database control file is not mounted.

Action: Mount the target database control file by issuing ALTER DATABASE MOUNT via Enterprise Manager or Server Manager.

RMAN-05503: at least one auxiliary channel must be allocated to execute this command

Cause: No auxiliary channels were allocated.

Action: Allocate an auxiliary channel.

RMAN-05504: at least two redo log files or groups must be specified for this command

Cause: Only one redo log file or group was specified

Action: Specify at least one more redo log file or group

RMAN-05505: auxiliary file name conversion of '<varname>string</varname>' exceeds maximum length of <varname>string</varname>

Cause: When the given file name is converted to the name used for the auxiliary database, the converted name is larger than the maximum allowed file name.

Action: Change initialization parameter DB_FILE_NAME_CONVERT to convert to a valid file name.

RMAN-05506: error during recursive execution

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-05507: standby control file checkpoint (<varname>string</varname>) is more recent than duplication point-in-time (<varname>string</varname>)

Cause: A DUPLICATE FOR STANDBY command was issued, but the checkpoint of the control file is more recent than the last archived log or the specified point-in-time.

Action: If an explicit point-in-time was specified, change it to be at least the control file checkpoint; otherwise archive (and backup/copy) the current log.

RMAN-05510: Duplicate finished

Cause: This is an informational message only.

Action: No action is required.

RMAN-05511: Datafile <varname>string</varname> skipped by request

Cause: This is an informational message only.

Action: No action is required.

RMAN-05512: Tablespace <varname>string</varname> cannot be skipped from duplication

Cause: The SYSTEM and SYSAUX tablespaces were not included in the DUPLICATE DATABASE. They must be present.

Action: Remove the SYSTEM and/or SYSAUX tablespace from the SKIP list and retry the operation.

RMAN-05513: cannot duplicate, control file is not current or standby

Cause: Target database did not have a current or standby control file. DUPLICATE requires the target database to have a current or standby control file.

Action: Open database to make control file current or connect to a different database before retrying the command.

RMAN-05514: Tablespace <varname>string</varname> has undo information, cannot skip

Cause: All tablespaces that have undo information must be included in the duplication.

Action: Remove the specified tablespace from the SKIP list and retry the operation.

RMAN-05515: Duplicate for standby does not allow the use of SET UNTIL

Cause: A SET UNTIL clause was specified for the command.

Action: Remove the SET UNTIL clause and try again.

RMAN-05516: duplicate operand specified: <varname>string</varname>

Cause: The specified operand appears more than once in the same DUPLICATE option list

Action: Delete the duplicated operand.

RMAN-05517: tempfile <varname>string</varname> conflicts with file used by target database

Cause: RMAN attempted to use the specified tempfile as a restore destination in the auxiliary database, but this name was already in use by the target database.

Action: Use the SET NEWNAME FOR TEMPFILE command to specify a name for the indicated tempfile, making sure that the new name does not conflict with a file name in use by target database. Alternatively, use DB_FILE_NAME_CONVERT and retry the command.

RMAN-05518: Automatically adding tablespace <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-05519: WARNING: tablespace <varname>string</varname> is always included when duplicating

Cause: The SYSTEM and SYSAUX tablespaces were included in the DUPLICATE TABLESPACE command. They were automatically included by the command and did not need to be explicitly named.

Action: To avoid this warning,, remove the SYSTEM and/or SYSAUX tablespace from the tablespaces list and retry the operation.

RMAN-05520: database name mismatch, auxiliary instance has <varname>string</varname>, command specified <varname>string</varname>

Cause: The database name specified in the initialization parameter was not the same as the database name provided in the DUPLICATE command.

Action: Correct the database name in the command or adjust the database name of the auxiliary instance.

RMAN-05521: DUPLICATE without CATALOG and TARGET not open requires that UNDO TABLESPACE is specified

Cause: A DUPLICATE was attempted when target database was not open without connection to a recovery catalog. It is necessary that the list of tablespaces with undo segments is provided with the UNDO TABLESPACE clause.

Action: Retry the command specifying the list of tablespaces with undo segments using the UNDO TABLESPACE clause.

RMAN-05522: Skipping tablespace <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-05523: Tablespace <varname>string</varname> is read only and SKIP READONLY was specified

Cause: Conflicting parameters were provided.

Action: Remove SKIP READONLY or remove read-only tablespace from list of tablespaces to duplicate.

RMAN-05524: Tablespace <varname>string</varname> is offline

Cause: It was not possible to duplicate offline tablespaces.

Action: Remove offline tablespace from list or online tablespace to duplicate it.

RMAN-05525: SKIP TABLESPACE cannot be used when using DUPLICATE TABLESPACE

Cause: A SKIP TABLESPACE clause was specified for the command.

Action: Remove the SKIP TABLESPACE clause and try again.

RMAN-05526: datafile <varname>number</varname> not processed because file is OFFLINE IMMEDIATE

Cause: A DUPLICATE command omitted processing the indicated datafile because it is offline immediate. The tablespace to which this datafile belongs will also not be included. See message 5528.

Action: None, informational message only.

RMAN-05527: Tablespace <varname>string</varname> has one or more OFFLINE IMMEDIATE datafiles

Cause: It was not possible to duplicate a tablespace who had offline immediate tablespaces.

Action: Remove offending tablespace from list or recover datafile which are offline immediate in the tablespace before attempting the command again.

RMAN-05528: datafile <varname>number</varname> not processed because file belongs to tablespace with one or more offline immediate datafile (<varname>string</varname>)

Cause: A DUPLICATE command omitted processing the indicated datafile because it is part of a tablespace that has offline immediate datafile. See message 5526.

Action: No action is required. This is an informational message only.

RMAN-05529: WARNING: DB_FILE_NAME_CONVERT resulted in invalid ASM names; names changed to disk group only.

Cause: It was not possible to convert ASM Oracle Managed Files names using DB_FILE_NAME_CONVERT parameter. RMAN changed these invalid names to the converted disk group name instead.

Action: No action is required. This is an informational message only. If the automatic change is incorrect, use one of the following options instead of using DB_FILE_NAME_CONVERT for ASM Oracle Managed Files: 1) use RMAN command SET NEWNAME for each Oracle Managed File. 2) set DB_CREATE_FILE_DEST initialization parameter in auxiliary instance and not specify DB_FILE_NAME_CONVERT.

RMAN-05530: an UNTIL TIME or SCN cannot be specified with FROM ACTIVE DATABASE

Cause: A DUPLICATE with FROM ACTIVE DATABASE was specified along with either a SET UNTIL statment or UNTIL clause on the command. This is not supported. A DUPLICATE FROM ACTIVE DATABASE always creates a copy as of the current time.

Action: Check the statement and remove the use of UNTIL.

RMAN-05531: a mounted database cannot be duplicated while datafiles are fuzzy

Cause: A DUPLICATE with FROM ACTIVE DATABASE command was specified while the database was mounted or open read-only. Unless the database is open read/write, the datafiles cannot be fuzzy.

Action: Open the database read/write, then shutdown cleanly before mounting.

RMAN-05532: PASSWORD FILE specified without FROM ACTIVE DATABASE

Cause: The PASSWORD FILE clause of the DUPLICATE command was specified but the FROM ACTIVE DATABASE clause was not. A password file can only be duplicated if the FROM ACTIVE DATABASE clause has been used.

Action: Remove the PASSWORD FILE clause from the command, or perform an online duplicate of the database by specifying the FROM ACTIVE DATABASE clause.

RMAN-05533: <varname>string</varname> is not supported on <varname>string</varname> database

Cause: The specified command is not supported on this type of database. The type of database can be STANDBY, CLONE, or RAC.

Action: Do not use the specified command against this database.

RMAN-05534: WARNING: LOG_FILE_NAME_CONVERT resulted in invalid ASM names; names changed to disk group only.

Cause: It was not possible to convert ASM Oracle Managed Files names using LOG_FILE_NAME_CONVERT parameter. RMAN changed these invalid names to the converted disk group name instead.

Action: If the automatic change is incorrect, use one of the following options instead of using LOG_FILE_NAME_CONVERT for ASM Oracle Managed Files: 1) Use the LOGFILE clause for online log files. 2) After DUPLICATE completes, create standby log files using the SQL ALTER DATABASE ADD STANDBY LOGFILE command.

RMAN-05535: WARNING: All redo log files were not defined properly.

Cause: It was not possible to define all the redo log files. This can occur when LOG_FILE_NAME_CONVERT initialization parameter is defined but fails to match all the names or causes names to be created that are not in valid directories.

Action: Query the V\$LOGFILE view to see what redo log files are defined after DUPLICATE has completed. Use the ALTER DATABASE RENAME FILE SQL command to correctly name the existing redo log files.

RMAN-05536: auxiliary logfile name <varname>string</varname> conflicts with a file used by the target database

Cause: RMAN attempted to use the specified logfile name as a standby redo log file in the auxiliary database, but this name was already in use by the target database.

Action: Use or alter LOG_FILE_NAME_CONVERT so that unique logfile names can be generated. Or wait for the command to complete and create standby logfiles using the SQL ALTER DATABASE ADD STANDBY LOGFILE command.

RMAN-05537: DUPLICATE without TARGET connection when auxiliary instance is started with spfile cannot use SPFILE clause

Cause: A DUPLICATE was attempted when the auxiliary database was started with a server parameter file and the SPFILE sub-clause was specified. RMAN cannot restore the server parameter file if the auxiliary database is already started with a server parameter file.

Action: Start the auxiliary database with a client parameter file or do not specify SPFILE sub-clause and retry.

RMAN-05538: WARNING: implicitly using DB_FILE_NAME_CONVERT

Cause: The duplicated SPFILE had DB_FILE_NAME_CONVERT set and it has been used to produce datafile names for the new database.

Action: No action is required. This is an informational message only. If this behavior was not intended, then do not duplicate the server parameter file, or explicitly set DB_FILE_NAME_CONVERT in the DUPLICATE command and retry the operation.

RMAN-05539: DUPLICATE TARGET DATABASE cannot be used without connecting to the TARGET

Cause: A DUPLICATE TARGET DATABASE was attempted and no connection to the TARGET database was established.

Action: Connect to TARGET or use DATABASE <db_name> clause.

RMAN-05540: no archived logs found in repository for database <varname>string</varname>

Cause: Recovery catalog did not have archived log records for the specified database. If database is running in NOARCHIVELOG mode, then specify NOREDO.

Action: Specify NOREDO for NOARCHIVELOG databases. Cannot duplicate an ARCHIVELOG database unless the recovery catalog or target database control file has archived redo log information about it.

RMAN-05541: no archived logs found in target database

Cause: Target database was running in archived log mode, but control file did not have any archived log records.

Action: Archive current log before retrying command.

RMAN-05542: Only UNTIL TIME can be used with DUPLICATE without TARGET and CATALOG connections

Cause: A DUPLICATE without TARGET and CATALOG connections was attempted specifying an UNTIL clause that was not TIME based.

Action: Retry the command with an UNTIL TIME clause or without an UNTIL clause.

RMAN-05543: DUPLICATE without TARGET connection requires that DATABASE is specified

Cause: A DUPLICATE without TARGET connection was attempted without specifying the database to duplicate.

Action: Retry the command specifying the DATABASE to duplicate.

RMAN-05544: Cannot specify ACTIVE DATABASE when not connected to target database

Cause: DUPLICATE from ACTIVE DATABASE required a connection to the target database.

Action: Connect to target database or remove from ACTIVE DATABASE and retry the command.

RMAN-05545: WARNING: Until SCN <varname>string</varname> is ahead of SCN of last full resync of recovery catalog: <varname>string</varname>

Cause: The specified point-in-time for duplication without a target connection was ahead of the last time that the datafile information was resynced to the recovery catalog. Information about offline and read-only datafiles might be incorrect.

Action: If duplication fails due to incorrectly identified offline and/or read-only datafiles, specify a point-in-time before the last resync of the recovery catalog and retry the command. Or perform full resync of the target database and retry the command.

RMAN-05546: DUPLICATE without TARGET and CATALOG connections requires that BACKUP LOCATION is specified

Cause: A DUPLICATE without TARGET and CATALOG connections was attempted without specifying BACKUP LOCATION.

Action: Retry the command specifying a BACKUP LOCATION.

RMAN-05547: Checking that duplicated tablespaces are self-contained

Cause: This is an informational message only.

Action: No action is required.

RMAN-05548: The set of duplicated tablespaces is not self-contained

Cause: A DUPLICATE TABLESPACE has specified a set of tablespaces that cannot function independently.

Action: Retry the command without incomplete tablespaces or add other tablespaces to make the set self-contained.

RMAN-05549: The following SYS objects were found in skipped tablespaces

Cause: This is an informational message only.

Action: No action required.

RMAN-05550: TARGET database not open, cannot verify that set of tablespaces being duplicated does not have SYS objects

Cause: This is an informational message only.

Action: No action is required.

RMAN-05551: Not connected to TARGET, cannot verify that set of tablespaces being duplicated does not have SYS objects

Cause: This is an informational message only.

Action: No action is required.

RMAN-05552: Object <varname>string</varname> on tablespace <varname>string</varname>

Cause: A SYS object was found in one of the skipped tablespaces.

Action: Remove object if possible or include tablespace in duplicated tablespaces.

RMAN-05553: SYS objects in skipped tablespaces prevent duplication

Cause: Objects owned by SYS were found in the tablespaces that would not be duplicated.

Action: If using SKIP TABLESPACE, do not skip tablespaces that contain SYS objects. If using DUPLICATE TABLESPACE, make sure to specify all tablespaces containing SYS objects.

RMAN-05554: cannot specify INCARNATION when duplicating without TARGET and CATALOG connections

Cause: A DUPLICATE without TARGET and CATALOG connections was attempted when INCARNATION was also specified.

Action: Retry the command without specifying INCARNATION.

RMAN-05555: Not connected to TARGET or TARGET not open, cannot verify that subset of tablespaces is self-contained

Cause: This is an informational message only.

Action: No action is required.

RMAN-05556: not all datafiles have backups that can be recovered to SCN <varname>string</varname>

Cause: One or more datafiles being duplicated could not be restored as no available backups were found.

Action: Change the system change number (SCN) or make backups available for the specified datafiles and retry the command.

RMAN-05557: Target instance not started with server parameter file

Cause: SPFILE clause was used but target instance was not started with a server parameter file.

Action: Do not specify SPFILE clause, or restart target instance with server parameter file.

RMAN-05558: Must specify DB_UNIQUE_NAME with FOR STANDBY clause

Cause: A DUPLICATE FOR STANDBY ... SPFILE command was issued but DB_UNIQUE_NAME was not provided for the standby database.

Action: Specify a DB_UNIQUE_NAME in the SPFILE clause for the standby database.

RMAN-05559: error converting parameter <varname>string</varname>, string larger than <varname>number</varname>

Cause: While attempting to apply a PARAMETER_VALUE_CONVERT to the specified parameter value, the resulting string exceeded the maximum length for a value.

Action: Change the PARAMETER_VALUE_CONVERT so that, when converting the parameter, the maximum length is not reached.

RMAN-05560: Using previous duplicated file <varname>string</varname> for datafile <varname>number</varname> with checkpoint SCN of <varname>string</varname>

Cause: A datafile copy from a previous duplicate attempt matching the duplicate name requested was found for the specified datafile and will be used instead of restoring the datafile from a backup.

Action: No action needed unless this behavior is not desired. In that case, either use a different name for the datafile or use NORESUME to avoid using previous datafile copies for all the datafiles.

RMAN-05561: CATALOG did not return information about tablespaces with undo segments

Cause: A DUPLICATE with no target connection was attempted, but the recovery catalog did not have information about the tablespaces with undo segments at the specified point in time. It is necessary that the list of tablespaces with undo segments is provided with the UNDO TABLESPACE clause.

Action: Retry the command specifying the list of tablespaces with undo segments using the UNDO TABLESPACE clause.

RMAN-05562: SPFILE backup not found for database <varname>string</varname> with DBID <varname>number</varname> created before <varname>string</varname> in <varname>string</varname>

Cause: RMAN could not locate a backup of the SPFILE in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05563: SPFILE backup not found for database with DBID <varname>number</varname> created before <varname>string</varname> in <varname>string</varname>

Cause: RMAN could not locate a backup of the SPFILE in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05564: SPFILE backup not found for database <varname>string</varname> created before <varname>string</varname> in <varname>string</varname>

Cause: RMAN could not locate a backup of the SPFILE in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05565: SPFILE backup created before <varname>string</varname> not found in <varname>string</varname>

Cause: RMAN could not locate a backup of the SPFILE in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05566: SPFILE backup not found for database <varname>string</varname> with DBID <varname>number</varname> in <varname>string</varname>

Cause: RMAN could not locate a backup of the SPFILE in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05567: SPFILE backup not found for database with DBID <varname>number</varname> in <varname>string</varname>

Cause: RMAN could not locate a backup of the SPFILE in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05568: SPFILE backup not found for database <varname>string</varname> in <varname>string</varname>

Cause: RMAN could not locate a backup of the SPFILE in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05569: SPFILE backup not found in <varname>string</varname>

Cause: RMAN could not locate a backup of the SPFILE in the specified location.

Action: Provide a different location and retry the command.

RMAN-05570: Duplicate for standby does not allow the use of LOGFILE

Cause: A LOGFILE clause was specified for the command.

Action: Remove the LOGFILE clause and try again.

RMAN-05571: DORECOVER specified for non standby duplication

Cause: A DORECOVER clause was specified and the duplicate did not specify FOR STANDBY.

Action: Remove the DORECOVER clause or add FOR STANDBY and try again.

RMAN-05572: Controlfile backup not found for database <varname>string</varname> with DBID <varname>number</varname> created before <varname>string</varname> in <varname>string</varname>

Cause: RMAN could not locate a backup of the control file in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05573: CONTROLFILE backup not found for database with DBID <varname>number</varname> created before <varname>string</varname> in <varname>string</varname>

Cause: RMAN could not locate a backup of the control file in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05574: CONTROLFILE backup not found for database <varname>string</varname> created before <varname>string</varname> in <varname>string</varname>

Cause: RMAN could not locate a backup of the control file in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05575: CONTROLFILE backup created before <varname>string</varname> not found in <varname>string</varname>

Cause: RMAN could not locate a backup of the control file in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05576: CONTROLFILE backup not found for database <varname>string</varname> with DBID <varname>number</varname> in <varname>string</varname>

Cause: RMAN could not locate a backup of the control file in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05577: CONTROLFILE backup not found for database with DBID <varname>number</varname> in <varname>string</varname>

Cause: RMAN could not locate a backup of the control file in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05578: CONTROLFILE backup not found for database <varname>string</varname> in <varname>string</varname>

Cause: RMAN could not locate a backup of the control file in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05579: CONTROLFILE backup not found in <varname>string</varname>

Cause: RMAN could not locate a backup of the control file in the specified location.

Action: Provide a different location and retry the command.

RMAN-05580: Duplicate for standby does not allow the use of SKIP READONLY

Cause: A SKIP READONLY clause was specified for the command.

Action: Remove the SKIP READONLY clause and try again.

RMAN-05581: Duplicate for standby does not allow the use of SKIP TABLESPACE

Cause: A SKIP TABLESPACE clause was specified for the command.

Action: Remove the SKIP TABLESPACE clause and try again.

RMAN-05582: Duplicate for standby does not allow the use of OPEN RESTRICTED

Cause: An OPEN RESTRICTED clause was specified for the command.

Action: Remove the OPEN RESTRICTED clause and try again.

RMAN-05583: Duplicate for standby does not allow the use of TABLESPACE

Cause: A TABLESPACE clause was specified for the command.

Action: Remove the TABLESPACE clause and try again.

RMAN-05584: Duplicate for standby does not allow the use of NOREDO

Cause: A NOREDO clause was specified for the command.

Action: Remove the NOREDO clause and try again.

RMAN-05585: Duplicate for standby does not allow the use of UNDO TABLESPACE

Cause: A UNDO TABLESPACE clause was specified for the command.

Action: Remove the UNDO TABLESPACE clause and try again.

RMAN-05586: The following materialized objects were found in skipped tablespaces

Cause: This is an informational message only.

Action: No action required.

RMAN-05587: Materialized table <varname>string</varname> on tablespace <varname>string</varname>

Cause: A materialized table was found in one of the skipped tablespaces.

Action: Remove object if possible or include tablespace in duplicated tablespaces.

RMAN-05588: Materialized index <varname>string</varname> on tablespace <varname>string</varname>

Cause: A materialized index was found in one of the skipped tablespaces.

Action: Remove object if possible or include tablespace in duplicated tablespaces.

RMAN-05589: Materialized objects in skipped tablespaces prevent duplication

Cause: Materialized objects found in the tablespaces that would not be duplicated.

Action: If using SKIP TABLESPACE, do not skip tablespaces that contain materialized objects. If using DUPLICATE TABLESPACE, make sure to specify all tablespaces containing SYS objects.

RMAN-05590: Reenabling controlfile options for auxiliary database

Cause: This is an informational message only.

Action: No action is required.

RMAN-05591: Ignoring error, reattempt command after duplicate finishes

Cause: A sql error was received during the execution of command.

Action: Check the accompanying errors.

RMAN-05592: Dropping offline and skipped tablespaces

Cause: This is an informational message only.

Action: No action is required.

RMAN-05593: Could not drop tablespace <varname>string</varname> due to constraints, will reattempt removal after other tablespaces are removed

Cause: This is an informational message only.

Action: No action is required.

RMAN-05594: Could not drop tablespace <varname>string</varname> due to constraints

Cause: The tablespace failed to be dropped several times, no more attempts will be made.

Action: Drop the tablespace manually after duplicate finishes.

RMAN-05595: Leaving database unopened, as requested

Cause: User requested that the new database was not open.

Action: After the database is opened with resetlogs you might want to: - Catalog datafile copies of read-only datafiles - Switch read-only datafiles to the cataloged datafile copies - Online read-only tablespaces - Drop skipped tablespaces - Enable supplemental logging - Enable force logging - Enable change tracking

RMAN-05596: Error while removing created server parameter file

Cause: Server parameter file was not deleted. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors. Remove file manually.

RMAN-05597: Database started with server parameter file and PFILE clause used in command

Cause: A PFILE clause was specified for duplicate command, but database was started with a server parameter file causing a conflict.

Action: Remove PFILE clause from command or restart database without using a server parameter file.

RMAN-05598: SPFILE and PFILE clause specified in command

Cause: SPFILE and PFILE clauses were specified for duplicate command causing a conflict.

Action: Remove either one of the clauses and retry the command.

RMAN-05599: PASSWORD clause is not needed when duplicating for standby database from active database

Cause: PASSWORD clause was specified when creating a standby database from active database. This is not needed, it is automatic.

Action: No action is required. This is an informational message only.

RMAN-05600: Cannot specify UNTIL clause when duplicating from active database

Cause: An UNTIL clause in the command or with a SET UNTIL was in effect for an active database duplication.

Action: Remove UNTIL clause and reattempt duplication.

RMAN-05601: Failed to restore original settings to server parameter file

Cause: An error was received while duplicating the database after the server parameter file was modified by RMAN. An attempt was made to restore original settings to the server parameter file, but the original error was such that it was not possible to restore the settings.

Action: Before reattempting database duplication, the server parameter file needs to be fixed manually with the original values.

RMAN-05602: restarting auxiliary database without server parameter file

Cause: This is an informational message only.

Action: No action is required.

RMAN-05603: not connected to target database with a net service name

Cause: A command that restores files to the auxiliary instance from the target instance was requested. Such a command requires that a net service name be present in the connect string used to connect to the target instance.

Action: Exit RMAN session and then connect to target database using command line or CONNECT TARGET command with a net service name in the connect string. That service name must be valid on the auxiliary instance.

RMAN-05604: Cannot specify SECTION SIZE together with USING COPY

Cause: A SECTION SIZE clause was specified for the command. This option is valid only when USING BACKUPSET or USING COMPRESSED BACKUPSET option is specified.

Action: Remove the SECTION SIZE clause or specify USING BACKUPSET option and try again.

RMAN-05605: Cannot specify USING option when not using ACTIVE DATABASE option

Cause: A USING clause was specified for the command. This option is valid only when ACTIVE DATABASE option is specified.

Action: Remove USING option or specify ACTIVE DATABASE option and try again.

RMAN-05606: Cannot specify SECTION SIZE when not using ACTIVE DATABASE option

Cause: A SECTION SIZE clause was specified for the command. This option is valid only when ACTIVE DATABASE option is used.

Action: Remove SECTION SIZE option or specify ACTIVE DATABASE option and try again.

RMAN-05607: Cannot remove created server parameter file

Cause: Duplicate created a server parameter file that could not be removed because no client parameter file was provided for the command.

Action: Remove manually the created server parameter file.

RMAN-05608: Tablespace <varname>string</varname> cannot be dropped due to partitioned table

Cause: A partitioned table was contained in the tablespaces that were not included in the new database, however the tablespaces cannot be dropped until the table is dropped.

Action: Manually drop the partitioned table and then the tablespaces.

RMAN-05609: Must specify a username for target connection when using active duplicate

Cause: An active duplication was attempted but no username was provided in the connection to the target database.

Action: Specify a username when connecting to the target and retry the operation.

RMAN-05610: Must specify a username for auxiliary connection when using active duplicate

Cause: An active duplication was attempted but no username was provided in the connection to the auxiliary database.

Action: Specify a username when connecting to the auxiliary and retry the operation.

RMAN-05611: Usernames for target and auxiliary connections must be the same when using active duplicate

Cause: An active duplication was attempted but the usernames provided in the connection to the target and auxiliary database are not the same.

Action: Specify the same username when connecting to the target and the auxiliary database and retry the operation.

RMAN-05612: Must specify a password for target connection when using active duplicate

Cause: An active duplication was attempted but no password was provided in the connection to the target database.

Action: Specify a password when connecting to the target and retry the operation.

RMAN-05613: Must specify a password for auxiliary connection when using active duplicate

Cause: An active duplication was attempted but no password was provided in the connection to the auxiliary database.

Action: Specify a password when connecting to the auxiliary and retry the operation.

RMAN-05614: Passwords for target and auxiliary connections must be the same when using active duplicate

Cause: An active duplication was attempted but the passwords provided in the connection to the target and auxiliary database are not the same.

Action: Specify the same password when connecting to the target and the auxiliary database and retry the operation.

RMAN-05615: SKIP and DUPLICATE PLUGGABLE DATABASE cannot be used together

Cause: SKIP PLUGGABLE DATABASE and DUPLICATE PLUGGABLE DATABASE were both specified in the same command. These options are incompatible and cannot be used together.

Action: Remove one of the incompatible options and retry the command.

RMAN-05616: pluggable database <varname>string</varname> cannot be skipped from duplication

Cause: The CDB\$ROOT and PDB\$SEED databases were not included in the DUPLICATE DATABASE. They must be present.

Action: Remove the CDB\$ROOT and PDB\$SEED database from the SKIP list and retry the operation.

RMAN-05617: duplicate operand DUPLICATE TABLESPACE <varname>string</varname> and PLUGGABLE DATABASE <varname>string</varname>

Cause: The specified operand refers to same PLUGGABLE DATABASE in the DUPLICATE option list.

Action: Delete the duplicate operand and retry the command.

RMAN-05618: duplicate operand SKIP TABLESPACE <varname>string</varname> and PLUGGABLE DATABASE <varname>string</varname>

Cause: The specified operand refers to same PLUGGABLE DATABASE in the DUPLICATE option list.

Action: Delete the duplicate operand and retry the command.

RMAN-05619: SKIP PLUGGABLE DATABASE cannot be used with DUPLICATE TABLESPACE

Cause: A SKIP PLUGGABLE DATABASE clause was specified for the command.

Action: Remove the SKIP PLUGGABLE DATABASE clause and try again.

RMAN-05620: Skipping pluggable database <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-05621: password file location could not be found for the target database

Cause: The password file location did not exist for the target database instance.

Action: Set the password file location for the target database instance.

RMAN-05622: password file location could not be found for the auxiliary database

Cause: The password file location did not exist for the auxiliary database instance.

Action: Set the password file location for the auxiliary database instance.

RMAN-06000: could not open recovery manager library file: <varname>string</varname>

Cause: The "recover.bsq" file could not be opened.

Action: Check that the file was installed correctly and that the user running RMAN has authority to read the file.

RMAN-06001: error parsing job step library

Cause: A syntax error was encountered while parsing "recover.bsq".

Action: Ensure that the correct version of the file is installed and that it has not been modified in any way.

RMAN-06002: command not allowed when not connected to a recovery catalog

Cause: A command that is allowed only when a recovery catalog connect string was supplied was attempted.

Action: Avoid using the command, or restart RMAN and supply a recovery catalog connect string via the CATALOG parameter.

RMAN-06003: ORACLE error from target database: \n<varname>string</varname>

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-06004: ORACLE error from recovery catalog database: <varname>string</varname>

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-06005: connected to target database: <varname>string</varname> (DBID=<varname>string</varname>)

Cause: This is an informational message only.

Action: No action is required.

RMAN-06006: connected to target database: <varname>string</varname> (not mounted)

Cause: This is an informational message only.

Action: No action is required.

RMAN-06007: target database not mounted and db_name not set in init.ora

Cause: The target database has not mounted the control file, and its "init.ora" file does not specify the DB_NAME parameter.

Action: MOUNT the target database, or add the DB_NAME parameter to its "init.ora" and restart the instance.

RMAN-06008: connected to recovery catalog database

Cause: This is an informational message only.

Action: No action is required.

RMAN-06009: using target database control file instead of recovery catalog

Cause: This is an informational message only.

Action: No action is required.

RMAN-06010: error while looking up datafile: <varname>string</varname>

Cause: An error occurred while looking up the specified datafile in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure. Ensure that the file name is entered correctly. If the datafile was added recently, then a RESYNC CATALOG must be done to update the recovery catalog.

RMAN-06011: invalid level specified: <varname>number</varname>

Cause: An invalid incremental backup level was specified.

Action: Incremental backup level must be between 0 and 4.

RMAN-06012: channel: <varname>string</varname> not allocated

Cause: A RELEASE command was found for a channel identifier that was not yet allocated.

Action: Correct the channel identifier, or add an ALLOCATE CHANNEL command.

RMAN-06013: duplicate channel identifier found: <varname>string</varname>

Cause: A channel identifier was reused without first releasing the channel.

Action: Add a RELEASE CHANNEL command.

RMAN-06014: command not implemented yet: <varname>string</varname>

Cause: Not all commands are implemented for the beta release.

Action: Avoid using the command.

RMAN-06015: error while looking up datafile copy name: <varname>string</varname>

Cause: An error occurred while looking up the specified datafile copy name in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure. Ensure that the file name is entered correctly. If the datafile copy was created when the recovery catalog was not available, then a RESYNC CATALOG must be done to update the recovery catalog.

RMAN-06016: duplicate backup operand specified: <varname>string</varname>

Cause: The specified operand appears more than once in the same backup specifier or backup command.

Action: Delete the duplicated operand.

RMAN-06017: initialization of parser failed

Cause: The parser package initialization routine returned an error.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-06018: duplicate operand specified in backup specification: <varname>string</varname>

Cause: A backup specification operand appears more than once in a backup specification.

Action: Delete the duplicate operand.

RMAN-06019: could not translate tablespace name "<varname>string</varname>"

Cause: An error occurred while looking up the specified tablespace name in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure. Ensure that the tablespace is entered correctly. If the tablespace was added recently, then a RESYNC CATALOG must be done to update the recovery catalog.

RMAN-06020: connected to auxiliary database (not started)

Cause: This is an informational message only.

Action: No action is required.

RMAN-06021: FROM DATAFILECOPY/BACKUPSET may not be specified with archived logs

Cause: The FROM DATAFILECOPY/BACKUPSET option applies only to datafile and control file restores.

Action: Use this option only for datafile and control file restores.

RMAN-06022: invalid level specified for image copy: <varname>number</varname>

Cause: An invalid incremental backup level was specified for an image copy.

Action: Incremental backup level must be 0 for image copies.

RMAN-06023: no backup or copy of datafile <varname>number</varname> found to restore

Cause: A datafile, tablespace, or database restore could not proceed because no backup or copy of the indicated file was found. It may be the case that a backup or copy of this file exists but does not satisfy the criteria specified in the user's restore operands.

Action: None - this is an informational message. See message 6026 for further details.

RMAN-06024: no backup or copy of the control file found to restore

Cause: A control file restore could not proceed because no backup or copy of the control file was found. It may be the case that a backup or copy of this file exists but does not satisfy the criteria specified in the user's restore operands.

Action: None - this is an informational message. See message 6026 for further details.

RMAN-06025: no backup of archived log for thread <varname>number</varname> with sequence <varname>number</varname> and starting SCN of <varname>string</varname> found to restore

Cause: An archived log restore could not proceed because no backup of the indicated archived log was found. It may be the case that a backup of this file exists but does not satisfy the criteria specified in the user's restore operands.

Action: None - this is an informational message. See message 6026 for further details.

RMAN-06026: some targets not found - aborting restore

Cause: Some of the files specified for restore could not be found. Message 6023, 6024, or 6025 is also issued to indicate which files could not be found. Some common reasons why a file can not be restored are that there is no backup or copy of the file that is known to recovery manager, or there are no backups or copies that fall within the criteria specified on the RESTORE command, or some datafile copies have been made but not cataloged.

Action: The Recovery Manager LIST command can be used to display the backups and copies that Recovery Manager knows about. Select the files to be restored from that list.

RMAN-06027: no archived logs found that match specification

Cause: An archived log record specifier did not match any archived logs in the recovery catalog or target database control file.

Action: Resubmit the command with a different archived log record specifier. The Recovery Manager (RMAN) LIST command can be used to display all archived logs that RMAN knows about.

RMAN-06028: duplicate operand specified in restore specification: <varname>string</varname>

Cause: The CHANNEL, TAG, FROM, PARMS, VALIDATE, DEVICE TYPE, CHECK READONLY or DB_UNIQUE_NAME option was specified more than once in the restore command or in one of the restore specifications.

Action: Correct and resubmit the command.

RMAN-06029: the control file may be included only in a datafile backup set

Cause: The "include current/standby control file" option was specified for an archived log backup set.

Action: Use this option only for datafile backup sets.

RMAN-06030: the DELETE [ALL] INPUT option may not be used with a datafile backup set

Cause: The DELETE [ALL] INPUT option was specified for a backup that contains the current control file or datafile.

Action: Remove the option and resubmit the command.

RMAN-06031: could not translate database keyword

Cause: An error was received when calling DBMS_RCVMAN

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-06032: at least 1 channel of TYPE DISK must be allocated to execute a COPY command

Cause: No channel of TYPE DISK was allocated.

Action: Allocate a channel of TYPE DISK and re-issue the command.

RMAN-06033: channel <varname>string</varname> not allocated

Cause: An rman command requests a specific channel, but the requested channel has not been allocated.

Action: ALLOCATE the channel, or correct the channel identifier.

RMAN-06034: at least 1 channel must be allocated to execute this command

Cause: No channels were allocated.

Action: ALLOCATE a channel.

RMAN-06035: wrong version of recover.bsq, expecting <varname>string</varname>, found <varname>string</varname>

Cause: The "recover.bsq" file is incompatible with the RMAN executable.

Action: Install the correct version of recover.bsq.

RMAN-06036: datafile <varname>number</varname> is already restored to file <varname>string</varname>

Cause: A SET NEWNAME command was issued to restore a datafile to a location other than the original datafile, and Recovery Manager determined that the best candidate for restoring the file is the datafile copy with the same name, therefore the file is already restored and no action need be taken.

Action: None - this is an informational message.

RMAN-06038: recovery catalog package detected an error

Cause: A call to DBMS_RCVMAN returned an error.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-06039: SET NEWNAME command has not been issued for datafile <varname>string</varname>

Cause: A SWITCH command was specified for a datafile, but no destination was specified and no SET NEWNAME command has been previously issued for that file. An explicit file to switch to must be specified if no SET NEWNAME command has been issued.

Action: Correct and resubmit the SWITCH command.

RMAN-06040: control file is already restored to file <varname>string</varname>

Cause: The best candidate control file for restoration is the one that is named in the RESTORE CONTROLFILE command, hence no action need be taken.

Action: None - this is an informational message.

RMAN-06041: cannot switch file <varname>number</varname> to copy of file <varname>number</varname>

Cause: An attempt was made to switch a datafile to a copy of a different datafile.

Action: Correct and resubmit the SWITCH command.

RMAN-06042: PLUS ARCHIVELOG option is not supported with non-datafile backups

Cause: The PLUS ARCHIVELOG option was supplied but does not apply to this type of backup.

Action: Remove the PLUS ARCHIVELOG operand and reenter the command.

RMAN-06043: TAG option not supported for archived log copies

Cause: The tag option was supplied but does not apply to this type of copy.

Action: Remove the TAG operand and reenter the command

RMAN-06045: LEVEL option not supported for archived log or current/standby control file copies

Cause: The LEVEL option was supplied but does not apply to this type of copy.

Action: Remove the LEVEL operand and reenter the command.

RMAN-06046: archived log name: <varname>string</varname>

Cause: An error occurred while translating an archived log name to its recovery catalog RECID/time stamp. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-06047: duplicate datafile <varname>number</varname> specified for restoration from copy

Cause: The indicated datafile was specified more than once in the same restore command.

Action: Correct and resubmit the RESTORE command.

RMAN-06048: duplicate control file specified for restoration from copy

Cause: The control file was specified more than once in the same RESTORE command.

Action: Correct and resubmit the RESTORE command.

RMAN-06049: CHECK LOGICAL option not supported for archived log or current/standby control file copies

Cause: The check logical option was supplied but does not apply to this type of copy.

Action: Remove the CHECK LOGICAL operand and reenter the command

RMAN-06050: archived log for thread <varname>number</varname> with sequence <varname>number</varname> is already on disk as file <varname>string</varname>

Cause: An archived log which was requested to be restored (either explicitly or via a range specification) does not need to be restored because it already exists on disk.

Action: None - this is an informational message

RMAN-06051: DELETE INPUT option not implemented yet

Cause: This option was specified in a backup specification.

Action: Remove the DELETE INPUT option.

RMAN-06052: no parent backup or copy of datafile <varname>number</varname> found

Cause: An incremental backup at level 1 or higher could not find any parent backup or copy of the indicated datafile. A level 0 backup of the datafile will be taken automatically.

Action: This is an informational message only.

RMAN-06053: unable to perform media recovery because of missing log

Cause: This message is accompanied with another message identifying the missing log. The log would be needed to perform the media recovery, but the log is not on disk and no backup set containing the log is available.

Action: Determine if a backup set containing the log can be made available. If so, then use the CHANGE command to make the backup set available and retry the command. If not, then a point-in-time recovery up to the missing log is the only alternative.

RMAN-06054: media recovery requesting unknown archived log for thread <varname>string</varname> with sequence <varname>string</varname> and starting SCN of <varname>string</varname>

Cause: Media recovery is requesting a log whose existence is not recorded in the recovery catalog or target database control file.

Action: If a copy of the log is available, then add it to the recovery catalog and/or control file via a CATALOG command and then retry the RECOVER command. If not, then a point-in-time recovery up to the missing log is the only alternative and database can be opened using ALTER DATABASE OPEN RESETLOGS command.

RMAN-06055: could not find archived log with sequence <varname>string</varname> for thread <varname>string</varname>

Cause: A log which was on disk at the start of media recovery or which should have been restored from a backup set could not be found.

Action: Check the Recovery Manager message log to see if the log was restored by a previous job step. If so, then check the V\$ARCHIVED_LOG view to see if the log is

listed in the control file. If so, then validate that the log exists on disk and is readable. If the log was not restored, or was restored but no record of the log exists in V\$ARCHIVED_LOG, then contact Oracle Support Services.

RMAN-06056: could not access datafile <varname>number</varname>

Cause: A backup or copy could not proceed because the datafile header could not be read or the header was not valid.

Action: Make the datafile accessible or skip it.

RMAN-06057: a standby control file cannot be included along with a current control file

Cause: "current control file" was specified along with "standby control file".

Action: Remove "current control file" or "standby control file" from backup specification.

RMAN-06058: a current control file cannot be included along with a standby control file

Cause: "standby control file" was specified along with "current control file".

Action: Remove "standby control file" or "current control file" from backup specification.

RMAN-06059: expected archived log not found, loss of archived log compromises recoverability

Cause: The archived log was not found. The recovery catalog or target database control file thinks it does exist. If the archived log has in fact been lost and there is no backup, then the database is no longer recoverable across the point-in-time covered by the archived log. This may occur because the archived log was removed by an outside utility without updating the recovery catalog or target database control file.

Action: If the archived log has been removed with an outside utility and the archived log has already been backed up, then you can synchronize the recovery catalog or target database control file by running CROSSCHECK ARCHIVELOG ALL. If the archived log has not been previously backed up, then you should take a full backup of the database and archived logs to preserve recoverability. Previous backups are not fully recoverable.

RMAN-06060: WARNING: skipping datafile compromises tablespace <varname>string</varname> recoverability

Cause: SKIP INACCESSIBLE or SKIP OFFLINE option resulted in skipping datafile during BACKUP. If the datafile has in fact been lost and there is no backup, then the tablespace is no longer recoverable without ALL archived logs since datafile creation. This may occur because the datafile was deleted by an outside utility or the datafile is made OFFLINE [DROP].

Action: If there is no backup of skipped datafile and the tablespace has to be recoverable without ALL archived logs since datafile creation, then you should make these datafile available for backup.

RMAN-06061: WARNING: skipping archived log compromises recoverability

Cause: SKIP INACCESSIBLE option resulted in skipping archived logs during BACKUP. If the archived log has in fact been lost and there is no backup, then the database is no longer recoverable across the point-in-time covered by the archived

log. This may occur because archived log was removed by an outside utility without updating the recovery catalog or target database control file.

Action: If the archived log has been removed with an outside utility and the archived log has already been backed up, then you can synchronize the recovery catalog or target database control file by running `CROSSCHECK ARCHIVELOG ALL`. If the archived log has not been previously backed up, then you should take a full backup of the database and archived logs to preserve recoverability. Previous backups are not fully recoverable.

RMAN-06062: can not backup SPFILE because the instance was not started with SPFILE

Cause: A backup command requested a backup of the SPFILE, but no SPFILE was used to startup the instance.

Action: Create an SPFILE and re-start the instance using the SPFILE or modify the command.

RMAN-06063: DBID is not found in the recovery catalog

Cause: DBID is not found in the recovery catalog.

Action: Verify that the DBID is correct and restart the command.

RMAN-06064: creating datafile file number=<varname>string</varname> name=<varname>string</varname>

Cause: `RESTORE/RECOVER` command was issued and there were no backup available for the datafile.

Action: This is an informational message only.

RMAN-06065: The operand [<varname>string</varname>] conflicts with another specified operand.

Cause: An attempt was made to use two (or more) conflicting operands within the same statement.

Action: Remove one or both of the conflicting operands.

RMAN-06066: the target database must be mounted when issuing a RECOVER command

Cause: A `RECOVER` command was issued, but the target database control file is not mounted.

Action: Mount the target database control file by issuing `ALTER DATABASE MOUNT` via Enterprise Manager or Server Manager.

RMAN-06067: RECOVER DATABASE required with a backup or created control file

Cause: The control file has been restored from a backup or was created via `ALTER DATABASE CREATE CONTROLFILE`.

Action: Use the `RECOVER DATABASE` command to perform the recovery.

RMAN-06068: recovery aborted because of missing datafiles

Cause: This error should be accompanied by one or more instances of message `ORA-06094`.

Action: Refer to message `ORA-06094`.

RMAN-06069: the file name for datafile <varname>string</varname> is missing in the control file

Cause: Media recovery of a backup control file added this datafile to the control file, but it does not set the file name because that is unsafe.

Action: If the datafile is on disk, then issue ALTER DATABASE RENAME to correct the control file. Otherwise, RESTORE the datafile, and then use SWITCH to make it known to the control file. If the tablespace containing this datafile will be dropped, then reissue the RECOVER command with a SKIP clause to skip recovery of this tablespace.

RMAN-06070: DBWR could not identify datafile <varname>string</varname>

Cause: DBWR could not find the specified datafile.

Action: Ensure that the datafile exists and is accessible.

RMAN-06071: could not open datafile <varname>string</varname>

Cause: An error was encountered when trying to open the specified datafile.

Action: Ensure that the datafile exists and is accessible.

RMAN-06073: file header is corrupt for datafile <varname>string</varname>

Cause: ORACLE detected a corruption in the file header. A media failure has probably occurred.

Action: RESTORE the datafile to a new location, then do a SWITCH, and then retry the RECOVER command.

RMAN-06074: file <varname>string</varname> is not an ORACLE datafile

Cause: The file header indicates that this file is not a datafile. The file may have been overlaid or corrupted.

Action: RESTORE the datafile to a new location, then do a SWITCH, and then retry the RECOVER command.

RMAN-06075: datafile <varname>string</varname> does not belong to this database

Cause: The file header indicates that this file belongs to some other ORACLE database.

Action: RESTORE the datafile to a new location, then do a SWITCH, and then retry the RECOVER command.

RMAN-06076: datafile <varname>string</varname> contains wrong datafile

Cause: The datafile header indicates the file contains a different datafile number.

Action: RESTORE the datafile, and then retry the RECOVER command.

RMAN-06077: datafile <varname>string</varname> is a different version than contained in the control file

Cause: The control file entry for this datafile specifies a different version of this datafile. Different versions of a datafile can exist when a tablespace is dropped, and a new tablespace is created which reuses the same datafile numbers.

Action: If the datafile is correct, then fix the control file by using the SWITCH command. Otherwise, RESTORE the correct version of this datafile and retry the RECOVER command.

RMAN-06078: the control file is older than datafile <varname>string</varname>

Cause: The control file appears to be older than the specified datafile, but it is not marked as a backup control file. This indicates that the control file has been replaced with an older version. This error does not occur when a backup control file which was created via Recovery Manager or the ALTER DATABASE BACKUP CONTROLFILE command is restored because such control files are marked as backups.

Action: RESTORE a control file and perform RECOVER DATABASE.

RMAN-06079: database must be mounted to perform recovery

Cause: A RECOVER command was issued, but the target database is not mounted.

Action: Issue ALTER DATABASE MOUNT.

RMAN-06080: SWITCH required for datafile <varname>string</varname>

Cause: The control file record for this datafile is for an older incarnation of the datafile. A SWITCH command must be issued to update the control file before doing RECOVER.

Action: Issue SWITCH command then retry RECOVER.

RMAN-06081: error reading datafile header for datafile <varname>string</varname>, code <varname>string</varname>

Cause: X\$KCVFH returned the specified code in the HXERR column when it was queried for the specified datafile.

Action: Ensure the datafile exists and is readable. Using a newer release of Recovery Manager may return a more meaningful error message. If you have no newer version of Recovery Manager, contact Oracle Support Services.

RMAN-06082: datafile copy tag <varname>string</varname> is ambiguous

Cause: The specified tag refers to multiple datafile copies belonging to different datafiles.

Action: Specify the datafile copy by file name rather than by tag.

RMAN-06083: error when loading stored script <varname>string</varname>

Cause: The recovery catalog database returned an error. This error explains the cause of the problem.

Action: Correct the problem and retry.

RMAN-06084: the target database may not be mounted when issuing REPLICATE

Cause: A REPLICATE command was issued, but the target database is already mounted.

Action: dismount the target database control file by issuing ALTER DATABASE CLOSE and ALTER DATABASE DISMOUNT via Enterprise Manager or Server Manager.

**RMAN-06085: must use SET NEWNAME command to restore datafile
<varname>string</varname>**

Cause: A RESTORE command for the specified datafile could not find a destination name for the specified datafile.

Action: Add a SET NEWNAME command prior to the RESTORE command to specify the restore destination for this file.

RMAN-06086: offline files may only be skipped in a datafile backup set

Cause: The SKIP OFFLINE option was specified for an archived log backup set.

Action: Use this option only for datafile backup sets.

RMAN-06087: read-only files may only be skipped in a datafile backup set

Cause: The SKIP READONLY option was specified for an archived log backup set.

Action: Use this option only for datafile backup sets.

RMAN-06088: datafile copy <varname>string</varname> not found or out of sync with catalog

Cause: The indicated file is not found, or is found but is not the same file that the recovery catalog thinks it is. It is likely that some operation outside of Recovery Manager has altered the file, or that Recovery Manager has not resynced with the target database.

Action: Re-catalog the file and retry the operation.

RMAN-06089: archived log <varname>string</varname> not found or out of sync with catalog

Cause: The indicated file is not found, or is found but is not the same file that the recovery catalog thinks it is. It is likely that some operation outside of Recovery Manager has altered the file, or that Recovery Manager has not resynced with the target database.

Action: Re-catalog the file and retry the operation.

RMAN-06090: error while looking up control file copy: <varname>string</varname>

Cause: An error occurred while looking up the specified control file copy in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure. Ensure that the file name is entered correctly. If the control file copy was created when the recovery catalog was not available, then a RESYNC CATALOG must be done to update the recovery catalog.

RMAN-06091: no channel allocated for maintenance (of an appropriate type)

Cause: A command was entered that requires a maintenance channel, and no maintenance channel is allocated, or none of the appropriate type.

Action: Use ALLOCATE CHANNEL FOR MAINTENANCE before deleting backup pieces, or using the CROSSCHECK or DELETE EXPIRED commands. Proxy copies require a non-DISK channel.

RMAN-06092: error while looking up backup piece

Cause: An error occurred while looking up the specified backup piece in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure. Ensure that the name or key is entered correctly. If the backup piece was created when the recovery catalog was not available, then a RESYNC CATALOG must be done to update the recovery catalog.

**RMAN-06093: recovery catalog contains obsolete version of datafile
<varname>string</varname>**

Cause: The specified datafile number was dropped and then reused. The control file mounted by the target database contains the newer version of the datafile, but the recovery catalog contains information about only the older version.

Action: Issue a RESYNC command to update the recovery catalog, then reissue the failing command. If the error persists, contact Oracle Support Services.

RMAN-06094: datafile <varname>string</varname> must be restored

Cause: A RECOVER command was issued, and the recovery catalog indicates the specified datafile should be part of the recovery, but this datafile is not listed in the control file, and cannot be found on disk.

Action: Issue a RESTORE command for this datafile, using the same UNTIL clause specified to the RECOVER command (if any), then reissue the RECOVER.

**RMAN-06095: a backup control file must be restored to recover datafile
<varname>string</varname>**

Cause: The control file currently mounted by the target database contains a newer incarnation of the datafile than the recovery catalog indicates is appropriate for the Point-in-Time being recovered to.

Action: Restore the control file, using the same UNTIL clause specified on the failing RECOVER command, then reissue the command. If no control file can be restored, then you should issue a CREATE CONTROLFILE command.

RMAN-06096: SWITCH required for newname of datafile <varname>string</varname> to take effect

Cause: A SET NEWNAME was issued for this datafile, but no SWITCH command was issued before the RECOVER command.

Action: Issue a SWITCH command to make the newname take effect before doing RECOVER.

RMAN-06098: the target database must be mounted when issuing a BACKUP command

Cause: A BACKUP command was issued, but the target database control file is not mounted.

Action: Mount the target database control file by issuing ALTER DATABASE MOUNT via Enterprise Manager or Server Manager.

**RMAN-06099: error occurred in source file: <varname>string</varname>, line:
<varname>number</varname>**

Cause: See accompanying error.

Action: See accompanying error.

**RMAN-06100: no channel to restore a backup or copy of datafile
<varname>number</varname>**

Cause: A datafile, tablespace, or database restore could not proceed because the backup of the indicated file exists on a device type that was not allocated for restore.

Action: None - this is an informational message. See message 6026 for further details.

RMAN-06101: no channel to restore a backup or copy of the control file

Cause: A control file restore could not proceed because the backup of the indicated file exists on a device type that was not allocated for restore.

Action: None - this is an informational message. See message 6026 for further details.

**RMAN-06102: no channel to restore a backup or copy of archived log for thread
<varname>number</varname> with sequence <varname>number</varname>
and starting SCN of <varname>string</varname>**

Cause: An archived log restore could not proceed because the backup of the indicated file exists on a device type that was not allocated for restore.

Action: None - this is an informational message. See message 6026 for further details.

**RMAN-06103: duplicate qualifier found in REPORT command:
<varname>string</varname>**

Cause: The indicated qualifier appears more than once in a REPORT qualifier list.

Action: delete the duplicate qualifier

**RMAN-06105: duplicate qualifier found in LIST command: <varname>string</
varname>**

Cause: The indicated qualifier appears more than once in a LIST qualifier list.

Action: delete the duplicate qualifier

RMAN-06106: this command requires that target database be mounted

Cause: A command was issued that requires the target database to be mounted, but the target database is not mounted.

Action: Mount the target database control file by issuing ALTER DATABASE MOUNT via Enterprise Manager or Server Manager.

**RMAN-06107: WARNING: control file is not current for REPORT NEED BACKUP
DAYS**

Cause: The REPORT NEED BACKUP DAYS command may report some files as requiring backups when they really do not, because the most current online status of the file is not known unless a current control file is mounted.

Action: No action is required, however, a current control file should be mounted, if possible, to get the most accurate REPORT output.

RMAN-06108: changed datafile copy unavailable

Cause: This is an informational message only.

Action: No action is required.

RMAN-06109: changed archived log unavailable

Cause: This is an informational message only.

Action: No action is required.

RMAN-06110: changed control file copy unavailable

Cause: This is an informational message only.

Action: No action is required.

RMAN-06111: changed backup piece unavailable

Cause: This is an informational message only.

Action: No action is required.

RMAN-06112: changed datafile copy available

Cause: This is an informational message only.

Action: No action is required.

RMAN-06113: changed archived log available

Cause: This is an informational message only.

Action: No action is required.

RMAN-06114: changed control file copy available

Cause: This is an informational message only.

Action: No action is required.

RMAN-06115: changed backup piece available

Cause: This is an informational message only.

Action: No action is required.

RMAN-06116: cannot crosscheck unavailable object

Cause: An attempt was made to crosscheck an object which is unavailable.

Action: Make object available and try again or don't crosscheck object.

RMAN-06117: cannot do DELETE EXPIRED on an object which is not expired

Cause: An attempt was made to DELETE EXPIRED an object which is not expired.

Action: Remove EXPIRED keyword, crosscheck object, or don't delete object.

RMAN-06118: a backup control file older than SCN <varname>string</varname> must be used for this recovery

Cause: An attempt was made to recover the database, but some files had no backup, and were not present in the control file at the beginning of the restore. This happens when the control file used during the recovery is a backup control file taken before the creation of some of the files that had no backup. In this situation, the control file that is used must be taken before the creation of all files that have no backup. This will enable RMAN to automatically re-create all of the files that had no backup.

Action: Restore a control file that was backed up before the specified system change number (SCN). The following RMAN commands can be used to do this: SET UNTIL

SCN <varname>x</varname>; (where <varname>x</varname> is the SCN displayed in the message) RESTORE CONTROLFILE;

RMAN-06119: uncataloged datafile copy

Cause: This is an informational message only.

Action: No action is required.

RMAN-06120: uncataloged archived log

Cause: This is an informational message only.

Action: No action is required.

RMAN-06121: uncataloged control file copy

Cause: This is an informational message only.

Action: No action is required.

RMAN-06122: CHANGE .. UNCATALOG not supported for BACKUPSET

Cause: The CHANGE BACKUPSET .. UNCATALOG command was entered. The UNCATALOG operation is not supported with backup set.

Action: Use CHANGE BACKUPSET .. DELETE instead.

RMAN-06123: operation not supported without the recovery catalog or mounted control file

Cause: A command was used which requires a connection to a recovery catalog database or the target database to be mounted. The command cannot be used when no backup repository is available.

Action: If a recovery catalog database is available, then connect to the recovery catalog and retry the command, otherwise enter a different command.

RMAN-06124: error while looking up datafile copy key: <varname>number</varname>

Cause: An error occurred while looking up the specified datafile copy key in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure.

RMAN-06125: error while looking up archived log key: <varname>number</varname>

Cause: An error occurred while looking up the specified archived log key in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure.

RMAN-06126: skipping offline file <varname>string</varname>

Cause: The indicated file will not be included in the backup set because it is offline and the SKIP OFFLINE option was specified.

Action: No action is required.

RMAN-06127: skipping read-only file <varname>string</varname>

Cause: The indicated file could not be included in the backup set because it was read-only and the SKIP READONLY option was specified.

Action: No action is required.

RMAN-06128: skipping inaccessible file <varname>string</varname>

Cause: The indicated file will not be included in the backup set because it could not be read, and the SKIP INACCESSIBLE option was specified.

Action: No action is required.

RMAN-06129: invalid reserved channel ID: <varname>string</varname>

Cause: The specified channel id is invalid. DELETE and DEFAULT are reserved channel names and may not be specified by users.

Action: Specify a different channel ID.

RMAN-06131: SKIP OFFLINE and SKIP READONLY are only allowed with current control file

Cause: The target database control file was not current. The SKIP OFFLINE and SKIP READONLY options are only permitted when the target database control file is current. When the target control file is not current, it is not possible to obtain a datafile's offline or read-only status.

Action: Remove the SKIP option or mount a current control file on the target database.

RMAN-06132: cannot backup datafile <varname>string</varname> because it is not in the control file

Cause: A backup command was issued that includes the specified datafile, but the datafile is not listed in the control file. The control file is not current (it is a backup or a created control file).

Action: Recover the control file to make it current, then retry the backup command.

RMAN-06133: recovery catalog may have obsolete data for datafile <varname>string</varname>

Cause: A RESTORE UNTIL was issued, and the recovery catalog choose an older incarnation of the datafile than is listed in the control file.

Action: If the recovery catalog has correct data for the datafile, then restore a backup control file using the same UNTIL clause, then retry the datafile restore. Otherwise, restore a backup of the incarnation of the datafile listed in the control file.

RMAN-06134: host command complete

Cause: An operating system command has completed.

Action: None - this is an informational message.

RMAN-06135: error executing host command: <varname>string</varname>

Cause: A host command returned a non-zero return code.

Action: Correct the offending command.

RMAN-06136: ORACLE error from auxiliary database: <varname>string</varname>

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-06137: must have recovery catalog for REPORT SCHEMA AT TIME

Cause: A 'REPORT SCHEMA at_clause' command was issued, but there is no recovery catalog database.

Action: If you are not using a recovery catalog, then you may only issue the 'REPORT SCHEMA' command with no at_clause.

RMAN-06138: control file not mounted - must specify AT clause with REPORT command

Cause: A 'REPORT SCHEMA' with no at_clause was issued, and there is no recovery catalog, and there is also no control file mounted at the target database, so there is no place to get the information about the current list of files comprising the database.

Action: Use a recovery catalog or mount a control file at the target database.

RMAN-06139: WARNING: control file is not current for REPORT SCHEMA

Cause: A 'REPORT SCHEMA' with no at_clause was issued, and there is no recovery catalog, and the control file mounted by the target instance is not current, so the information about the current list of datafiles may not be current.

Action: Use a recovery catalog or mount a current control file.

RMAN-06140: cannot specify TAG option with LIST INCARNATION

Cause: The TAG option was specified with LIST INCARNATION. This is not permitted because there is no TAG associated with a database incarnation.

Action: Remove the TAG option and re-run the LIST command.

RMAN-06141: cannot specify ARCHIVELOG LIKE option with RESTORE

Cause: The ARCHIVELOG LIKE option was specified with RESTORE. This is not permitted because recovery catalog contains only those records that are not deleted from disk.

Action: Remove the ARCHIVELOG LIKE option and re-run the command.

RMAN-06142: DEVICE TYPE cannot be specified with this command

Cause: The DEVICE TYPE option was specified with a command that does not support it.

Action: Remove the DEVICE TYPE option and re-run the command.

RMAN-06143: LIKE may only be specified with COPY

Cause: The LIKE option was specified with a RMAN command. This is not permitted because only copies of datafiles, control files or archived logs have file names that may be tested with a LIKE operand.

Action: Remove the LIKE option and re-run the RMAN command.

RMAN-06144: FROM or UNTIL may not be specified with LIST INCARNATION

Cause: The FROM or UNTIL option was specified with LIST INCARNATION. This is not permitted because there is no time associated with a database incarnation.

Action: Remove the FROM or UNTIL option and re-run the LIST command.

RMAN-06145: control file is not current - obsolete file list may be incomplete

Cause: A CHANGE or REPORT command needs to compute the list of backups that are redundant and may be deleted. If the mounted control file is not current, it may not be possible to determine if a satisfactory backup exists for files which have been offline since the last OPEN RESETLOGS.

Action: No action need be taken - this is an informational message only. To ensure a complete report of obsolete backups, mount a current control file.

RMAN-06146: changes found for file <varname>number</varname> beyond offline SCN

Cause: A CHANGE or REPORT command needs to compute the list of backups that are redundant and may be deleted. A backup was found for a file which is shown as offline in the target database control file, but the backup contains changes beyond the system change number(SCN) when the file went offline. This is most likely because the target database control file is not really current, but is a restored copy of an older control file.

Action: Mount a current control file or a backup control file.

RMAN-06147: no obsolete backups found

Cause: A CHANGE or REPORT command could find no files that meet the specified criteria for obsolescence.

Action: None - this is an informational message.

RMAN-06148: redundancy count must be greater than zero

Cause: The REDUNDANCY operand specified for a CHANGE or REPORT OBSOLETE command was zero.

Action: Specify a REDUNDANCY operand of 1 or greater.

RMAN-06149: cannot BACKUP DATABASE in NOARCHIVELOG mode

Cause: A BACKUP DATABASE command was issued, but the target database was in NOARCHIVELOG mode and was open in READ/WRITE mode.

Action: Mount the target database control file by issuing ALTER DATABASE ARCHIVELOG using the Enterprise Manager or Server Manager.

RMAN-06150: auxiliary name for datafile <varname>number</varname> set to: <varname>string</varname>

Cause: This message is issued in response to a CONFIGURE AUXNAME command.

Action: None - this is an informational message.

RMAN-06151: datafile <varname>string</varname> creation SCN <varname>string</varname>

Cause: This is an informational message. It should be accompanied by other messages.

Action: None

RMAN-06153: validation failed for datafile copy

Cause: The CHANGE DATAFILECOPY VALIDATE command discovered that the datafile copy could not be found or no longer contains the same data, so its record was deleted from the recovery catalog or target database control file.

Action: None - this is an informational message.

RMAN-06154: validation succeeded for datafile copy

Cause: The CHANGE DATAFILECOPY VALIDATE command discovered that the datafile copy still matches its data in the recovery catalog or target database control file.

Action: None - this is an informational message.

RMAN-06155: validation failed for control file copy

Cause: The CHANGE CONTROLFILECOPY VALIDATE command discovered that the control file copy could not be found or no longer contains the same data, so its record was deleted from the recovery catalog or target database control file.

Action: None - this is an informational message.

RMAN-06156: validation succeeded for control file copy

Cause: The CHANGE CONTROLFILECOPY VALIDATE command discovered that the control file copy still matches its data in the recovery catalog or target database control file.

Action: None - this is an informational message.

RMAN-06157: validation failed for archived log

Cause: The CROSSCHECK ARCHIVELOG command determined that the archived log could not be found or no longer contained the same data, so its record was marked expired.

Action: None - this is an informational message.

RMAN-06158: validation succeeded for archived log

Cause: The CROSSCHECK ARCHIVELOG command or VALIDATE HEADER option determined that the archived log still matches its data.

Action: None - this is an informational message.

RMAN-06159: error while looking up backup set

Cause: An error occurred while looking up the specified backup set in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure. Ensure that the key is entered correctly. If the backup set was created when the recovery catalog was not available, then a RESYNC CATALOG must be done to update the recovery catalog.

RMAN-06160: no backup pieces found for backup set key: <varname>number</varname>

Cause: No backup pieces for the requested backup set were found in the recovery catalog, or the target database control file.

Action: Specify an existing backup set.

RMAN-06161: error when inspecting auxiliary file name: <varname>string</varname>

Cause: This error is accompanied by other errors explaining the cause.

Action: Correct the auxiliary file name if it is wrong via the CONFIGURE AUXNAME command.

RMAN-06162: sql statement: <varname>string</varname>

Cause: This is the sql statement about to be executed for a SQL command.

Action: None, informational message only.

RMAN-06163: some datafiles cannot be recovered, aborting the RECOVER command

Cause: This message should be followed by one or more 6162 or 6164 messages.

Action: Check the accompanying errors.

RMAN-06164: WARNING: no channel of required type allocated to recover datafile <varname>number</varname>

Cause: A RECOVER command could not proceed because incremental backup sets or archived log backup sets exist on a device type that has not been allocated.

Action: Use the LIST command to determine which device type is needed, then allocate a channel of that type.

RMAN-06165: datafile <varname>string</varname> is too old to recover, restore a more recent copy

Cause: The archived logs and/or incremental backup sets required to recover the datafile do not exist, but a more recent backup of the datafile exists which can be recovered.

Action: Issue a RESTORE for the datafile, then reissue the RECOVER command.

RMAN-06166: datafile <varname>string</varname> cannot be recovered

Cause: Incremental backups or archived redo logs needed to recover the datafile cannot be found, and no recoverable full backup or datafile copy exists.

Action: Use the LIST command to see if there is a backup set or datafile copy that can be made AVAILABLE. If not, then the datafile is unrecoverable. If a full or datafile copy exists, then a Point-in-Time Recovery may be possible.

RMAN-06167: already connected

Cause: a CONNECT command was issued, but RMAN is already connected to the specified database.

Action: RMAN has no DISCONNECT command, so to connect to a different instance, exit RMAN and start it again.

RMAN-06168: no backup pieces with this tag found: <varname>string</varname>

Cause: A tag was used to specify a list of backup pieces, but no backup pieces with this tag could be found.

Action: Make sure the tag is specified correctly.

RMAN-06169: could not read file header for datafile <varname>string</varname> error reason <varname>string</varname>

Cause: The specified datafile could not be accessed. The reason codes are: 1 - file name is MISSINGxx in the control file 2 - file is offline 3 - file is not verified 4 - DBWR could not find the file 5 - unable to open file 6 - I/O error during read 7 - file header is

corrupt 8 - file is not a datafile 9 - file does not belong to this database 10 - file number is incorrect 12 - wrong file version 15 - control file is not current

Action: If the error can be corrected, do so and retry the operation. The SKIP option can be used to ignore this error during a backup.

**RMAN-06170: no control file copy found with offline range RECID
<varname>string</varname> STAMP <varname>string</varname> datafile
<varname>string</varname>**

Cause: This offline range is needed for recovering the specified data file, but the offline range record has aged out of the current control file and no control file copy with the record could be accessed. At least 1 control file copy containing the offline range was found in the recovery catalog and was in AVAILABLE status.

Action: Query the RC_CONTROLFILE_COPY view for the names of all control file copies, then issue a CHANGE CONTROLFILECOPY ... VALIDATE; command for them. Then reissue the RECOVER command.

RMAN-06171: not connected to target database

Cause: A command was issued but no connection to the target database has been established.

Action: Issue a CONNECT TARGET command to connect to the target database.

RMAN-06172: no AUTOBACKUP found or specified handle is not a valid copy or piece

Cause: A restore could not proceed because no AUTOBACKUP was found or specified handle is not a valid copy or backup piece. In case of restore from AUTOBACKUP, it may be the case that a backup exists, but it does not satisfy the criteria specified in the user's restore operands. In case of restore from handle, it may be the handle is not a backup piece or control file copy. It may be that it does not exist.

Action: Modify AUTOBACKUP search criteria or verify the handle.

**RMAN-06173: SET NEWNAME command has not been issued for datafile
<varname>string</varname> when restore auxiliary**

Cause: Auxiliary type was specified for the control file, but no SET NEWNAME command has been previously issued for a datafile.

Action: Issue SET NEWNAME command for every datafile in the recovery set.

RMAN-06174: not connected to auxiliary database

Cause: An auxiliary command was issued but no connection to a auxiliary database has been established.

Action: Issue a CONNECT AUXILIARY command to connect to the auxiliary database.

RMAN-06175: deleted script: <varname>string</varname>

Cause: A DELETE SCRIPT command was executed.

Action: None, informational message only.

RMAN-06176: no recovery required; all files are read-only or offline

Cause: An attempt was made to recover files that were offline or read-only. A RECOVER DATABASE command does not need to recover any files because all of

the files to be recovered are offline or read-only. This can only occur when the SKIP clause includes the SYSTEM tablespace.

Action: None. This is an informational message only.

RMAN-06177: restore not done; all files read only, offline, or already restored

Cause: A RESTORE command does not need to restore any files, because all of the files to be restored are offline, read-only, or are already restored to their correct destinations.

Action: None, informational message only

RMAN-06178: datafile <varname>number</varname> not processed because file is offline

Cause: A RESTORE DATABASE or RECOVER DATABASE command omitted processing the indicated datafile because it is offline clean at the desired point-in-time.

Action: None, informational message only

RMAN-06179: datafile <varname>number</varname> not processed because file is read-only

Cause: A RESTORE DATABASE or RECOVER DATABASE command omitted processing the indicated datafile because it is part of a read-only tablespace at the desired point-in-time.

Action: None, informational message only

RMAN-06180: incremental backups require Enterprise Edition

Cause: A BACKUP command with INCREMENTAL LEVEL > 0 was specified.

Action: Use FULL, or INCREMENTAL LEVEL 0.

RMAN-06181: multiple channels require Enterprise Edition

Cause: Attempt to allocate more than 1 channel in a job.

Action: Remove all except one ALLOCATE CHANNEL command.

RMAN-06182: archived log <varname>string</varname> of thread <varname>string</varname> with sequence <varname>string</varname> larger than MAXSETSIZE

Cause: A BACKUP ARCHIVELOG command specified the MAXSETSIZE operand too low. The specified archived log is larger than MAXSETSIZE will allow.

Action: Increase MAXSETSIZE limit.

RMAN-06183: datafile or datafile copy <varname>string</varname> (file number <varname>string</varname>) larger than MAXSETSIZE

Cause: A BACKUP DATAFILE(copy) command specified the MAXSETSIZE operand too low. The specified datafile is larger than MAXSETSIZE will allow.

Action: Increase MAXSETSIZE limit.

RMAN-06184: duplicate object in backup specifier: <varname>string</varname> <varname>string</varname>

Cause: A backup command specifies the same datafile or copy of a data file multiple times.

Action: Eliminate the duplicates.

RMAN-06185: Recovery Manager incompatible with <varname>string</varname> database: RMAN <varname>number</varname>.<varname>number</varname>.<varname>number</varname> to <varname>number</varname>.<varname>number</varname>.<varname>number</varname> required

Cause: This version of recovery manager was incompatible with the indicated database or the DBMS_BACKUP_RESTORE package installed in the indicated database.

Action: If the database has been upgraded from an earlier version, ensure that the catxxx.sql script has been run successfully. Re-install dbmsbkrs.sql and prvtbkrs.plb if necessary. Otherwise, use a version of RMAN within the range specified in the error message.

RMAN-06186: PL/SQL package <varname>string</varname>.<varname>string</varname> version <varname>string</varname> in <varname>string</varname> database is too old

Cause: The specified PL/SQL package is a version that is too old to work with this version of the Recovery Manager (RMAN).

Action: If the database indicated is CATALOG, then you can use the UPGRADE CATALOG command to upgrade the recovery catalog to the most current version. If the database is TARGET or AUXILIARY, then you must either upgrade the specified database or use an older version of RMAN.

RMAN-06187: control file copy <varname>string</varname> not found or out of sync with catalog

Cause: The indicated file is not found, or is found but is not the same file that the recovery catalog thinks it is. It is likely that some operation outside of Recovery Manager has altered the file, or that Recovery Manager has not resynced with the target database.

Action: Re-catalog the file and retry the operation.

RMAN-06188: cannot use command when connected to a mounted target database

Cause: An attempt was made to issue a command that can be used only when there is no connection to the target database or when the target database is not mounted.

Action: Dismount the database or restart RMAN and use the command before connecting to the target database.

RMAN-06189: current DBID <varname>number</varname> does not match target mounted database (<varname>number</varname>)

Cause: SET DBID was used to set a DBID that does not match the DBID of the database to which RMAN is connected.

Action: If the current operation is a restore to copy the database, do not mount the database. Otherwise, avoid using the SET DBID command, or restart RMAN.

RMAN-06190: PL/SQL package <varname>string</varname>.<varname>string</varname> version <varname>string</varname> in <varname>string</varname> database is not current

Cause: RMAN detected an old version of the specified package. RMAN will execute in backwards-compatible mode.

Action: No action is required, but certain features and bug-fixes may not be available when RMAN runs in backwards-compatible mode. If the database is CATALOG, then you can use the UPGRADE CATALOG command to upgrade the recovery catalog to the most current version. If the database is TARGET or AUXILIARY, then you must either upgrade the specified database or use an older version of RMAN. The files that must be run to upgrade the target or auxiliary database are dbmsrman.sql and prvtman.plb.

RMAN-06191: PL/SQL package <varname>string</varname>.<varname>string</varname> version <varname>string</varname> in <varname>string</varname> database is too new

Cause: RMAN detected an incompatible version of the specified package.

Action: Use a newer version of recovery manager. Message 6439 indicates the minimum required version of recovery manager.

RMAN-06192: maximum value for MAXPIECESIZE or MAXSETSIZE must be between 1 KB and 2048 GB

Cause: Input size for MAXPIECESIZE or MAXSETSIZE was out of range.

Action: Specify a valid size and retry the command.

RMAN-06193: connected to target database (not started)

Cause: This is an informational message only.

Action: The database must be started before any other RMAN commands are issued.

RMAN-06194: target database instance not started

Cause: A command was issued that requires the target database instance be started.

Action: Issue a STARTUP command to start the instance.

RMAN-06195: auxiliary database not started

Cause: A command was issued that requires the auxiliary database instance be started.

Action: Issue a STARTUP AUXILIARY command.

RMAN-06196: Oracle instance started

Cause: A STARTUP command completed successfully.

Action: None, this is an informational message.

RMAN-06197: Total System Global Area <varname>string</varname> bytes

Cause: This is an informational message only.

Action: No action is required.

RMAN-06198: <varname>string</varname> <varname>string</varname> bytes

Cause: This is an informational message only.

Action: No action is required.

RMAN-06199: database mounted

Cause: This is an informational message only.

Action: No action is required.

RMAN-06200: Changed <varname>string</varname> objects to AVAILABLE status

Cause: This is an informational message only.

Action: No action is required.

RMAN-06201: Deleted <varname>string</varname> objects

Cause: This is an informational message only.

Action: No action is required.

RMAN-06202: Deleted <varname>string</varname> EXPIRED objects

Cause: This is an informational message only.

Action: No action is required.

RMAN-06203: Changed KEEP options for <varname>string</varname> objects

Cause: This is an informational message only.

Action: No action is required.

RMAN-06204: Changed <varname>string</varname> objects to UNAVAILABLE status

Cause: This is an informational message only.

Action: No action is required.

RMAN-06205: Uncataloged <varname>string</varname> objects

Cause: This is an informational message only.

Action: No action is required.

RMAN-06206: Crosschecked <varname>string</varname> objects

Cause: This is an informational message only.

Action: No action is required.

RMAN-06207: WARNING: <varname>string</varname> objects could not be deleted for <varname>string</varname> channel(s) due

Cause: This is an informational message only.

Action: No action is required.

RMAN-06208: to mismatched status. Use CROSSCHECK command to fix status

Cause: This is an informational message only.

Action: No action is required.

RMAN-06209: List of failed objects

Cause: This is an informational message only.

Action: No action is required.

RMAN-06210: List of Mismatched objects

Cause: This is an informational message only.

Action: No action is required.

RMAN-06211: =====

Cause: This is an informational message only.

Action: No action is required.

RMAN-06212: Object Type Filename/Handle

Cause: This is an informational message only.

Action: No action is required.

RMAN-06213: -----

Cause: This is an informational message only.

Action: No action is required.

RMAN-06214: <varname>string</varname> <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-06215: List of objects that must perform same operation at other database

Cause: This is an informational message only.

Action: The specified list of objects were not accessible at connected target database. Re-run the CROSSCHECK command after connecting to database that has DB_UNIQUE_NAME displayed in output for the specified object.

RMAN-06216: WARNING: db_unique_name mismatch - <varname>string</varname> objects could not be updated

Cause: This is an informational message only.

Action: Run CROSSCHECK command after connecting to a primary or physical standby database that can access the specified objects.

RMAN-06217: not connected to auxiliary database with a net service name

Cause: A command that moves files from the target instance to the auxiliary instance was requested. Such a command requires a net service name be present in the connect string used to connect to the auxiliary instance.

Action: Issue a CONNECT AUXILIARY command and include a net service name in the connect string. That service name must be valid on the target instance.

RMAN-06218: List of objects requiring same operation on database with db_unique_name <varname>string</varname>

Cause: This is an informational message only.

Action: The specified list of objects were not accessible by the target database. Re-run the same command after connecting to database that has DB_UNIQUE_NAME displayed in output for the specified object.

RMAN-06219: List of objects not associated with all known db_unique_names

Cause: This is an informational message only.

Action: The specified list of objects were not accessible by the target database. Re-run the same command after connecting to primary database or physical standby database that can access the specified objects.

RMAN-06220: \nCreating automatic instance, with SID='<varname>string</varname>'

Cause: No connection to the auxiliary instance was provided, but the command requires an auxiliary instance.

Action: No action is required unless you want to create a permanent database, in which case you should stop the command and re-run it, providing an auxiliary instance connection.

RMAN-06221: \nRemoving automatic instance

Cause: RMAN is removing the automatic auxiliary instance that was created for this command.

Action: No action is required.

RMAN-06223: starting up automatic instance <varname>string</varname>\n

Cause: This is an informational message only.

Action: No action is required.

RMAN-06224: Automatic instance created

Cause: This is an informational message only.

Action: No action is required.

RMAN-06225: shutting down automatic instance <varname>string</varname>\n

Cause: This is an informational message only.

Action: No action is required.

RMAN-06226: Automatic instance removed

Cause: This is an informational message only.

Action: No action is required.

RMAN-06230: List of Stored Scripts in Recovery Catalog

Cause: This message is issued in response to a LIST SCRIPT NAMES command. The following fields are shown for each script that is stored in the recovery catalog: Header indicating to what database the script belongs. Script Name: name of the script. Description: comment associated with this script.

Action: No action is required.

RMAN-06238: List of Databases

Cause: This message is issued in response to a LIST DB_UNIQUE_NAME command. The following fields are shown for each database that is known to the recovery catalog: DB Key: This is the unique key which identifies this database in the recovery catalog. DB Name: The name of the database. DB ID: The database ID. This is a number which remains the same for the life of the database, even if the database name is changed. DB_UNIQUE_NAME: db_unique_name value for the database.

Action: No action is required.

RMAN-06246: List of Database Incarnations

Cause: This message is issued in response to a LIST INCARNATION OF DATABASE command. The following fields are shown for each database that is registered with the

recovery catalog. DB Key: This is the unique key which identifies this database in the recovery catalog. Inc Key: This is the unique key which identifies this incarnation of the database in the recovery catalog. DB Name: The name of the database. DB ID: The database ID. This is a number which remains the same for the life of the database, even if the database name is changed. Status: 'YES' if this is the current incarnation of this database, otherwise 'NO'. Reset SCN: system change number (SCN) of the most recent RESETLOGS operation. Reset Time: Time of the most recent RESETLOGS operation.

Action: No action is required.

RMAN-06250: Report of files that need backup due to unrecoverable operations

Cause: An unlogged change (such as 'create table unrecoverable') has been made to this file, and the most recent backup of the file does not contain those changes.

Action: Take a backup of this file. If this file is lost before a backup is taken, then the unlogged modifications will be lost. The message indicates whether a full backup is required or whether an incremental backup will suffice.

**RMAN-06263: <varname>string</varname> <varname>string</varname>
<varname>string</varname>**

Cause: This message is issued in response to the REPORT NEED BACKUP INCREMENTAL command, for those files which would use more than the specified number of incrementals during recovery.

Action: To reduce the number of incremental backups which would be used during recovery of this datafile, take a new full backup of this file now.

**RMAN-06270: Report of files whose recovery needs more than
<varname>number</varname> days of archived logs**

Cause: This message is issued in response to the REPORT NEED BACKUP DAYS command for those files which need more than the specified number of days' archived logs for recovery.

Action: To reduce the number of log files needed for recovery of this datafile, take a new full or incremental backup now.

**RMAN-06274: Report of files that must be backed up to satisfy
<varname>number</varname> days recovery window**

Cause: This message is issued in response to the REPORT NEED RECOVERY WINDOW OF n DAYS command for those files that must be backed up to satisfy specified retention policy.

Action: To satisfy specified recovery window for this datafile, take a new full or incremental backup now.

RMAN-06275: invalid number of days specified for report : <varname>string</varname> days

Cause: This message is issued in response to the REPORT NEED RECOVERY WINDOW OF n DAYS or REPORT NEED BACKUP DAYS n command when an invalid number of days was specified in input command.

Action: The number of days specified in REPORT command must be greater than zero.

RMAN-06280: Report of obsolete backups and copies

Cause: This message is issued in response to the REPORT OBSOLETE command. Each of the files listed is obsolete because it is more redundant than the level of redundancy specified in the REPORT command.

Action: Depending on your needs, you might need to take new backups.

RMAN-06290: Report of database schema for database with db_unique_name <varname>string</varname>

Cause: This message is issued in response to the REPORT SCHEMA command. The report shows the physical schema of the database at the indicated time. The following fields are shown for each datafile and tempfile: File: The file number. Size(MB): The size of the file in mega bytes. Tablespace: The name of the tablespace which contains this file. RB segs: YES if this file is part of a tablespace containing rollback segments, otherwise NO. Datafile/Tempfile Name: The file name. Maxsize(MB): Maximum file size to which file can be extended

Action: No action is required.

RMAN-06300: Report of files with less than <varname>number</varname> redundant backups

Cause: This message is issued when the REPORT NEED BACKUP REDUNDANCY command is used for those files which have less than the specified number of backups which can be used for recovery.

Action: Take another backup of the datafiles listed.

RMAN-06306: =====

Cause: This message is issued in response to a LIST BACKUP DATABASE/ TABLESPACE/DATAFILE command when some backups were taken with the PROXY option. If a recovery catalog is in use, then the information comes from the recovery catalog, otherwise it comes from the target database control file. The following fields are shown for each proxy datafile backup. Key: This is the unique key which identifies this proxy backup in the recovery catalog. This value can be used in a CHANGE command to change its status. If the target database control file is being used as the recovery catalog, then this field uniquely identifies this copy in the control file. File: The file number that this file was copied from. Status: This is the status of the file. Possible values are: A - Available U - Unavailable D - Deleted X - Expired Status 'U' will not be used if the target database control file is being used as the recovery catalog. Completion time: This is the date and time when the backup was created. This column will be printed in the default Oracle date format, unless overridden with a NLS_DATE_FORMAT environment variable. Ckp SCN: This is the checkpoint system change number (SCN) of the backup. The file contains all changes made at or before this SCN. Ckp time: This is the time that the file was last checkpointed. Handle: This is the media manager handle of the proxy backup.

Action: No action is required.

RMAN-06378: List of Backup Sets

Cause: This message is issued in response to a LIST BACKUP command.

Action: No action is required.

RMAN-06400: database opened

Cause: This is an informational message only.

Action: No action is required.

RMAN-06401: database is already started

Cause: A STARTUP command without the FORCE option was issued, but the target database is already started.

Action: Use the FORCE option if you want to restart the database.

RMAN-06402: Oracle instance shut down

Cause: This is an informational message only.

Action: No action is required.

RMAN-06403: could not obtain a fully authorized session

Cause: The most likely cause of this error is that one of the databases to which RMAN had previously connected is not started or has been shutdown. Other error messages should identify exactly which database is the problem.

Action: Startup the database causing the problem.

RMAN-06404: database dismounted

Cause: This is an informational message only.

Action: No action is required.

RMAN-06405: database closed

Cause: This is an informational message only.

Action: No action is required.

RMAN-06406: deleted archived log

Cause: This is an informational message only.

Action: No action is required.

RMAN-06407: auxiliary instance file <varname>string</varname> deleted

Cause: This is an informational message only.

Action: No action is required.

RMAN-06408: recovery catalog upgraded to version <varname>string</varname>

Cause: This is an informational message issued by the UPGRADE CATALOG command. It indicates the version of the recovery catalog schema to which the recovery catalog was just upgraded. Note that this version number may not reflect the version number of your rman executable or target database, because the recovery catalog schema is not changed with each Oracle release.

Action: No action is required.

RMAN-06409: LIKE clause in LIST BACKUP OF ARCHIVELOG is not supported

Cause: LIST BACKUP OF ARCHIVELOG LIKE was used, which is not supported.

Action: Remove LIKE clause from command.

RMAN-06410: cannot use command when channels are allocated

Cause: An attempt was made to issue a command that can be used only when there are no allocated channels.

Action: Do not use the command, or de-allocate channels and use the command when no channels are allocated.

RMAN-06411: backup copies setting out of range (1-4): <varname>number</varname>

Cause: An attempt was made to set backup copies to an invalid value.

Action: Use a value in the specified range.

RMAN-06412: no proxy copy channel found

Cause: A proxy copy was started, but no allocated channel supports proxy copy. This could be because the media management software used by the target database does not support proxy copy, or because all of the allocated channels are of type DISK, which never support proxy copy.

Action: If this is a backup, then either allocate a non-disk channel, or do not use the PROXY option. If this is a restore, then a channel of the same type which created the proxy backup was allocated, but now does not support proxy copy. If proxy copy is no longer supported by the media management software at the target database, the CROSSCHECK or CHANGE commands should be used so that those backups will not be considered for further restores.

RMAN-06413: channel <varname>string</varname> does not support proxy copy

Cause: The channel which was specified for this backup or restore does not support proxy copy. This could be because the media management software used by the target database does not support proxy copy, or because the channel is of type DISK, which never supports proxy copy.

Action: If this is a backup, then either allocate a non-disk channel, or do not use the PROXY option. If this is a restore, then a channel of the same type which created the proxy backup was allocated, but now does not support proxy copy. If proxy copy is no longer supported by the media management software at the target database, the CROSSCHECK command should be used so that those backups will not be considered for further restores.

RMAN-06414: target database COMPATIBLE option does not support proxy copy

Cause: PROXY was specified, and the target database uses a media manager that supports proxy copy, but the COMPATIBLE initialization parameter of the target database must be 8.1.0 or greater to create proxy backups. If the database is downgraded to the earlier release that is specified in the COMPATIBLE parameter, then it will no longer be able to restore proxy backups.

Action: Either take a non-proxy backup or change the target database COMPATIBLE parameter.

RMAN-06415: file <varname>string</varname> cannot be proxy backed up

Cause: The PROXY option was specified, but the media management software used by the target database cannot back up the specified file using proxy copy. If PROXY ONLY was specified, then the backup is terminated. If PROXY was specified, then this file will be placed into a non-proxy backup set.

Action: Remove the ONLY option to place the files into a regular backup set, or contact the media management vendor if you believe that the media management software should support proxy copy of this file.

RMAN-06416: PROXY ONLY was specified and some files could not be proxy copied

Cause: PROXY ONLY was specified, and some of the files to be backed up could not be backed up by the media management software used by the target database. Message 6415 is issued for each file that cannot be proxy copied.

Action: Remove the ONLY option to place the files into a regular backup set, or contact the media management vendor if you believe that the media management software should support proxy copy of these files.

RMAN-06417: command not allowed when connected to a virtual private catalog

Cause: The command that was entered cannot be used while connected to a virtual private catalog.

Action: Connect to the base catalog and re-execute the command.

RMAN-06418: proxy incremental backups with level > 0 not supported

Cause: PROXY was specified for a non-level-zero incremental backup. Proxy backups may only be full or level 0 backups.

Action: Remove one of the conflicting options.

RMAN-06419: file <varname>string</varname> cannot be proxy restored from handle <varname>string</varname>

Cause: The media management software used by the target database indicated that it cannot restore the specified file from the specified backup handle.

Action: Consult the media management software documentation to find out why this restriction exists or contact the media management vendor.

RMAN-06420: some files could not be proxy restored - aborting restore

Cause: Some of the files to be restored could not be restored by the media management software used by the target database. Message 6419 is issued for each file that cannot be restored.

Action: Contact the media management vendor if you believe that the media management software should support proxy copy of these files. The CROSSCHECK or CHANGE commands can be used to remove these proxy copies from the catalog to prevent the RESTORE command from trying to restore from them.

RMAN-06421: sent command to channel: <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-06422: no channels found for SEND command

Cause: No channels with the specified names or device types were found. If no channel qualifiers were specified, then no channels were allocated.

Action: Specify a different channel type or allocate a channel of the desired type.

RMAN-06423: requested limit of <varname>number</varname> exceeds vendor limit of <varname>number</varname>

Cause: A command was used to set the backup piece size limit, but the media management software used by the target database cannot create backup pieces that large.

Action: Specify a smaller backup piece limit.

RMAN-06424: error while looking up proxy copy

Cause: An error occurred while looking up the specified proxy copy in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure. Ensure that the name or key is entered correctly. If the proxy copy was created when the recovery catalog was not available, then a RESYNC CATALOG must be done to update the recovery catalog.

RMAN-06425: <varname>datafile pathname not available</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-06426: RECOVERY_CATALOG_OWNER role must be granted to user <varname>string</varname>

Cause: The CREATE CATALOG or UPGRADE CATALOG command was used, but the USERID that was supplied in the CATALOG connect string does not have the RECOVERY_CATALOG_OWNER role granted as a DEFAULT role.

Action: Grant the RECOVERY_CATALOG_OWNER role to the recovery catalog owner.

RMAN-06427: recovery catalog already exists

Cause: The CREATE CATALOG command cannot be used when the recovery catalog already exists.

Action: Use the UPGRADE CATALOG command to upgrade your recovery catalog to the most current release without losing any existing backup data. Use the DROP CATALOG command to remove an existing recovery catalog.

RMAN-06428: recovery catalog is not installed

Cause: A recovery catalog database connection has been made, but the recovery catalog tables and views have not been installed.

Action: If you mis-typed the recovery catalog owner USERID, then correct the USERID and reconnect to the recovery catalog. If this is the first time that you have signed on to Recovery Manager with this recovery catalog owner USERID, then use the CREATE CATALOG command to create the recovery catalog schema. Alternatively, exit RMAN and connect without specifying a recovery catalog connection.

RMAN-06429: <varname>string</varname> database is not compatible with this version of RMAN

Cause: The indicated database is not compatible with this version of the Recovery Manager (RMAN). Other messages have also been issued which detail the cause of the error.

Action: See the other messages. If the database is CATALOG, then you may be able to use the CREATE CATALOG or UPGRADE CATALOG commands to correct the problem. If the database is TARGET or AUXILIARY, then you must either upgrade the target database or use a newer version of the RMAN executable.

RMAN-06430: recovery catalog USERID cannot be SYS

Cause: A recovery catalog connection was made to USERID SYS. The recovery catalog must be created in a USERID other than SYS.

Action: Specify a different USERID in the CATALOG connect string.

RMAN-06431: recovery catalog created

Cause: This is an informational message issued by the CREATE CATALOG command.

Action: No action is required.

RMAN-06432: recovery catalog dropped

Cause: This is an informational message issued by the DROP CATALOG command.

Action: No action is required.

RMAN-06433: error installing recovery catalog

Cause: An error was received from the recovery catalog database while it was being installed. Another error message shows the error message from the server.

Action: The most common reasons for failure to install the recovery catalog are: - Lack of space in the recovery catalog database: allocate more space, use the DROP CATALOG command to remove any partially installed recovery catalog, and retry the command. - Object already exists: This is caused by a partial recovery catalog installation. Use the DROP CATALOG command to remove the partially installed recovery catalog and retry the command.

RMAN-06434: some errors occurred while removing recovery catalog

Cause: Some errors were received from the recovery catalog database while removing the recovery catalog.

Action: Correct the error(s) and retry the command. Note that Recovery Manager intercepts and ignores common errors, such as 'object not found', which can happen while removing a partially installed recovery catalog. Only serious errors will be displayed while removing the recovery catalog.

RMAN-06435: recovery catalog owner is <varname>string</varname>

Cause: This is an informational message issued by the UPGRADE CATALOG and DROP CATALOG commands.

Action: No action is required.

RMAN-06437: cannot drop catalog - catalog is newer than this RMAN

Cause: The DROP CATALOG command was entered, but the recovery catalog was created by a newer version of the Recovery Manager (RMAN). This version of RMAN may not be able to drop the entire recovery catalog.

Action: Use the version of RMAN which most recently created or upgraded the recovery catalog.

RMAN-06438: error executing package DBMS_RCVMAN in <varname>string</varname> database

Cause: Recovery Manager requires the DBMS_RCVMAN package in the SYS schema of the indicated database. Normally this package is installed during database creation. To re-create the package, run the files dbmsrman.sql and prvtrmns.plb.

Action: re-create the DBMS_RCVMAN package in the SYS schema.

RMAN-06439: RMAN must be upgraded to version <varname>string</varname> to work with this package

Cause: This message indicates the minimum version of recovery manager required to use the package which was specified in message 6191.

Action: A newer version of RMAN must be used with this package.

RMAN-06440: virtual catalog dropped

Cause: This is an informational message issued by the DROP CATALOG command, when connected to a virtual private catalog. Note that dropping a virtual private catalog does not delete any data, because the catalog data is owned by the base catalog.

Action: No action is required.

RMAN-06441: cannot upgrade catalog - catalog is already newer than this RMAN

Cause: The recovery catalog is already at a version level that is greater than this version of the Recovery Manager. The UPGRADE CATALOG command is not needed.

Action: Either upgrade to a more recent Recovery Manager, or continue to use the current version. Message 6191 will be issued if the recovery catalog is too new to work with this version of Recovery Manager.

RMAN-06443: error upgrading recovery catalog

Cause: An error was received from the recovery catalog database while upgrading the recovery catalog.

Action: Correct the error and retry the command. Note that the Recovery Manager intercepts and ignores common errors, such as 'column already exists,' which can happen if the recovery catalog has already been partially upgraded. Only serious errors will be displayed while upgrading the recovery catalog.

RMAN-06444: error creating <varname>string</varname>

Cause: During the CREATE CATALOG or UPGRADE CATALOG command, the indicated object could not be created due to errors.

Action: Make sure that the RECOVER.BSQ file has not been modified or damaged, and then if this error persists, contact Oracle support. If the error refers to one of the RMAN PL/SQL packages, connect to the recovery catalog owner and query the USER_ERRORS view to find out the details of the compilation errors.

RMAN-06445: cannot connect to recovery catalog after NOCATALOG has been used

Cause: The CONNECT CATALOG command was used after the user had already specified the NOCATALOG option.

Action: Re-start rman if you wish to use a recovery catalog.

RMAN-06446: changed proxy copy unavailable

Cause: This is an informational message only.

Action: No action is required.

RMAN-06447: changed proxy copy available

Cause: This is an informational message only.

Action: No action is required.

RMAN-06448: uncataloged proxy copy

Cause: This is an informational message only.

Action: No action is required.

RMAN-06449: deleted proxy copy

Cause: This is an informational message only.

Action: No action is required.

RMAN-06450: crosschecked proxy copy: found to be '<varname>string</varname>'

Cause: This is an informational message only.

Action: No action is required.

**RMAN-06451: proxy copy handle=<varname>string</varname>
RECID=<varname>string</varname> STAMP=<varname>string</varname>**

Cause: This is an informational message only.

Action: No action is required.

**RMAN-06452: <varname>string</varname> package upgraded to version
<varname>string</varname>**

Cause: This is an informational message issued by the UPGRADE CATALOG command. It indicates the version to which the indicated package was just upgraded. Note that this version number may not reflect the version number of your rman executable or target database, because the recovery catalog packages are not changed with each Oracle release.

Action: No action is required.

RMAN-06453: RECOVERABLE may only be used with datafile objects

Cause: An attempt was made to use LIST ... RECOVERABLE .. with OF CONTROLFILE or OF ARCHIVELOG.

Action: Remove the RECOVERABLE keyword and try again.

RMAN-06454: duplexed backups require Enterprise Edition

Cause: The SET COPIES or CONFIGURE BACKUP COPIES command was used to create more than one copy of each backup piece, but Enterprise Edition is not installed.

Action: Do not attempt to create more than one copy of each backup piece.

RMAN-06455: Tablespace Point-in-Time Recovery requires Enterprise Edition

Cause: Tablespace Point-in-Time Recovery was attempted, but Enterprise Edition is not installed.

Action: Do not attempt Tablespace Point-in-Time Recovery.

RMAN-06456: command is obsolete

Cause: This is an informational message only.

Action: No action is required.

RMAN-06457: UNTIL SCN (<varname>string</varname>) is ahead of last SCN in archived logs (<varname>string</varname>)

Cause: UNTIL SCN cannot be more than the last system change number (SCN) of the last archived log

Action: Check the UNTIL SCN.

RMAN-06458: AS COPY option cannot be used with RECOVERY FILES, RECOVERY AREA or DB_RECOVERY_FILE_DEST

Cause: The RECOVERY FILES, RECOVERY AREA or DB_RECOVERY_FILE_DEST was specified with AS COPY.

Action: Remove the AS COPY option and resubmit the command.

RMAN-06459: BACKUP <VALIDATE|DURATION> is not supported with PROXY

Cause: BACKUP <VALIDATE|DURATION> and PROXY were specified in the same backup command.

Action: Remove the incompatible option.

RMAN-06460: control file copy <varname>string</varname> cannot be backed up by proxy.

Cause: The PROXY option was specified, but proxy copy of control file is not supported. This file will be placed into a non-proxy backup set.

Action: No action required, this is an informational message.

RMAN-06461: current control file cannot be backed up by proxy.

Cause: The PROXY option was specified, but proxy copy of control file is not supported. This file will be placed into a non-proxy backup set.

Action: No action required, this is an informational message.

RMAN-06462: no backup sets found on device DISK that match specification

Cause: A backup set record specifier did not match an backup set on device DISK in the recovery catalog.

Action: Resubmit the command with a different backup set record specifier. The Recovery Manager (RMAN) LIST command can be used to display all backup sets that RMAN knows about.

RMAN-06463: Backup set key <varname>string</varname> cannot be backed up by proxy.

Cause: The PROXY option was specified, but proxy copy of backup set is not supported. This file will be placed into a non-proxy backup set.

Action: No action required, this is an informational message.

RMAN-06464: BACKUP BACKUPSET is not supported with VALIDATE option

Cause: BACKUP BACKUPSET and VALIDATE were specified in the same backup command.

Action: To validate a backup set, use the VALIDATE BACKUPSET or RESTORE VALIDATE command.

RMAN-06465: configuration not implemented: <varname>string</varname>

Cause: The configuration is not implemented in the current release.

Action: Avoid using the command.

RMAN-06466: error parsing configuration string (<varname>string</varname>)

Cause: Unsupported configuration string is stored in recovery catalog or target database control file.

Action: Check compatibility matrix rman executable and target database and recover catalog. Use DBMS_BACKUP_RESTORE.DELETECONFIG to remove problematic configuration.

RMAN-06467: could not translate DBA: <varname>number</varname>

Cause: An error was received when calling DBMS_RCVMAN

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-06468: Invalid Data Block Address: <varname>number</varname>

Cause: The DBA specified doesn't belong to the mentioned tablespace

Action: Check the DBA

RMAN-06469: could not translate corruption list

Cause: An error was received when calling DBMS_RCVMAN

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-06470: DEVICE TYPE is supported only when automatic channels are used

Cause: The DEVICE TYPE option was specified with a BACKUP, RESTORE, RECOVER, DUPLICATE, CHANGE, VALIDATE, CROSSCHECK, or DELETE EXPIRED command. This option is allowed only when automatically allocated channels are used.

Action: Remove the DEVICE TYPE option and re-run the command. Or Remove all ALLOCATE commands and re-run the script so that channels are automatically allocated.

RMAN-06471: no configuration found to allocate channels for <varname>string</varname>

Cause: Device type configuration was not found in recovery catalog

Action: Setup device type configuration using configure command for required device type

RMAN-06472: channel id <varname>string</varname> is automatically allocated

Cause: Channel id was used on ALLOCATE/RELEASE command.

Action: Use other channel id that does not belong to reserved channel id's name space

RMAN-06473: SET DATABASE can only be used in case of DUPLICATE without TARGET connection

Cause: A SET DATABASE command was specified when connected to target database or not connected to an auxiliary instance.

Action: Specify the command only when not connected to a target database and when connected to an auxiliary instance in preparation to DUPLICATE without TARGET connection.

RMAN-06474: maintenance channels are not allocated

Cause: RELEASE CHANNEL was used without allocating any maintenance channels.

Action: Allocate maintenance channel before executing this command.

RMAN-06475: parallelism setting out of range (1-254): <varname>number</varname>

Cause: Parallelism for the device type in CONFIGURE PARALLELISM command is out of range

Action: Enter value of parallelism that are within the allowed range.

RMAN-06476: channel number out of range (1-254): <varname>number</varname>

Cause: Channel number entered in CONFIGURE CHANNEL command is out of range.

Action: Enter channel number within allowed range and retry the command. for this device and retry the command

RMAN-06477: configuration value length exceeds 1024

Cause: CONFIGURE CHANNEL command entered has configuration value greater than 1024 bytes.

Action: Reduce the length of CONFIGURE CHANNEL command options

RMAN-06478: WARNING: datafile copy '<varname>string</varname>' cannot be found on disk

Cause: The CHANGE DATAFILECOPY AVAILABLE command was used, but the datafile copy cannot be found on disk.

Action: If the storage containing the datafile copy has been removed from the host, restore it and retry the command. If the datafile copy is permanently gone, then issue the CHANGE DATAFILECOPY DELETE command for this datafile.

RMAN-06479: WARNING: control file copy '<varname>string</varname>' cannot be found on disk

Cause: The CHANGE CONTROLFILECOPY AVAILABLE command was used, but the control file copy cannot be found on disk.

Action: If the storage containing the control file copy has been removed from the host, restore it and retry the command. If the control file copy is permanently gone, then issue the CHANGE CONTROLFILECOPY DELETE command for this control file.

RMAN-06480: WARNING: archived log '<varname>string</varname>' cannot be found on disk

Cause: The CHANGE ARCHIVELOG AVAILABLE command was used, but the archived log cannot be found on disk.

Action: If the storage containing the archived log has been removed from the host, restore it and retry the command. If the archived log is permanently gone, then issue the CHANGE ARCHIVELOG DELETE command for this archived log.

RMAN-06481: WARNING: backup piece '<varname>string</varname>' cannot be found on the storage medium

Cause: The CHANGE BACKUPPIECE AVAILABLE command was used, but the backup piece cannot be found on the storage medium.

Action: If the storage containing the backup piece has been removed from the host, restore it and retry the command. If the backup piece is permanently gone, then issue the CHANGE BACKUPPIECE DELETE command for this backup piece.

RMAN-06482: WARNING: proxy copy '<varname>string</varname>' cannot be found on the storage medium

Cause: The CHANGE PROXY AVAILABLE command was used, but the proxy copy cannot be found on disk.

Action: If the storage containing the proxy copy has been removed from the host, restore it and retry the command. If the proxy copy is permanently gone, then issue the CHANGE PROXY DELETE command for this proxy copy.

RMAN-06483: changed datafile copy expired

Cause: This is an informational message only.

Action: No action is required.

RMAN-06484: changed control file copy expired

Cause: This is an informational message only.

Action: No action is required.

RMAN-06485: changed archived log expired

Cause: This is an informational message only.

Action: No action is required.

RMAN-06486: changed backup piece expired

Cause: This is an informational message only.

Action: No action is required.

RMAN-06487: changed proxy copy expired

Cause: This is an informational message only.

Action: No action is required.

RMAN-06488: restore from AUTOBACKUP does not allow any other modifiers

Cause: A control file or SPFILE restore from AUTOBACKUP was attempted and other restore options were used.

Action: Do not specify any other options for the control file AUTOBACKUP restore.

RMAN-06489: no configuration found to allocate clone channel <varname>number</varname> for device type <varname>string</varname>

Cause: Target channel configuration could not be used for clone channel as it contains CONNECT option.

Action: Setup clone channel configuration using CONFIGURE CLONE command for required number and type of channels.

RMAN-06490: WARNING: limit of AUTOBACKUPS for the day has been reached

Cause: No more control file AUTOBACKUPS are possible in this day.

Action: This is a warning message, no action is required.

RMAN-06491: control file AUTOBACKUP format "<varname>string</varname>" contains more than one "<varname>string</varname>" format specifier

Cause: A CONTROLFILE AUTOBACKUP FORMAT cannot have more than one reserved format specifier.

Action: Specify only one reserved format specifier or use an alternative format.

RMAN-06492: control file AUTOBACKUP format "<varname>string</varname>" must specify a "<varname>string</varname>" format specifier

Cause: A reserved format specifier was not specified for the CONTROLFILE AUTOBACKUP FORMAT

Action: Add a specifier to the CONTROLFILE AUTOBACKUP FORMAT

RMAN-06493: only UNTIL TIME clause is allowed when performing a restore from AUTOBACKUP, found: <varname>string</varname>

Cause: For restoring a control file AUTOBACKUP only SET UNTIL TIME can be used. It is not possible to translate the others to a precise day.

Action: Specify SET UNTIL TIME to indicate the day to start the restore of a control file AUTOBACKUP.

RMAN-06494: <varname>string</varname> = <varname>string</varname> is out of range (<varname>string</varname>-<varname>string</varname>)

Cause: The specified parameter for restoring a control file AUTOBACKUP is out of the valid range.

Action: Change the parameter value to a valid number or do not specify it.

RMAN-06495: must explicitly specify DBID with SET DBID command

Cause: Restore of a control file AUTOBACKUP or ADVISE FAILURE was attempted when the database is not mounted.

Action: Specify the DBID of the database using SET DBID or mount the database.

RMAN-06496: must use the TO clause when the database is mounted or open

Cause: A control file restore was attempted when the database is mounted or open and no alternate destination was specified.

Action: Specify an alternate destination with the TO clause or dismount the database.

RMAN-06497: WARNING: control file is not current, control file AUTOBACKUP skipped

Cause: Control file AUTOBACKUP is not possible without a current control file.

Action: This is a warning message, no action is required.

RMAN-06498: skipping datafile <varname>string</varname>; already backed up <varname>string</varname> time(s)

Cause: The indicated datafile will not be included in the backup set. It is already backed up on the device requested and file is offline/read-only datafile. Use the FORCE option to override backup optimization.

Action: No action is required.

RMAN-06499: skipping archived log of thread <varname>string</varname> with sequence <varname>string</varname>; already backed up

Cause: The indicated log file will not be included in the backup set because it is already backed up on the device requested. Use FORCE option to override backup optimization.

Action: No action is required.

RMAN-06500: skipping backup set key <varname>string</varname>; already backed up <varname>string</varname> time(s)

Cause: The indicated backup set will not be copied because it is already backed up on the device requested. Use FORCE option to override backup optimization.

Action: No action is required.

RMAN-06501: skipping datafile <varname>string</varname>; already backed up on <varname>string</varname>

Cause: The indicated datafile will not be included in the backup set. It is already been backed up once, or before the since time specified.

Action: No action is required.

RMAN-06502: skipping archived logs of thread <varname>string</varname> from sequence <varname>string</varname> to <varname>string</varname>; already backed up

Cause: Some archived logs were not be backed up because they were already backed up on the device requested.

Action: No action is required. You can use the FORCE option to override backup optimization and force these files to be backed up.

RMAN-06503: skipping backup set key <varname>string</varname>; already backed up on <varname>string</varname>

Cause: The indicated backup set will not be backed up. It has already been backed up on the device once, or before the since time specified.

Action: No action is required.

RMAN-06504: PROXY option with multiple backup copies is not supported

Cause: Multiple backup copies and PROXY option were specified in BACKUP command.

Action: Resolve the conflict.

RMAN-06505: specified DATABASE: <varname>string</varname> does not match previous DATABASE: <varname>string</varname>

Cause: SET DBID was used to set a DBID that translated into a database name that does not match newly specified database name or a previous SET DATABASE set a different database name.

Action: Verify that the correct DBID was specified or avoid using the SET DATABASE command.

RMAN-06506: the MAXSETSIZE option cannot be used with a backup backup set

Cause: The MAXSETSIZE option was specified for a backup backup set command.

Action: Remove the option and resubmit the command.

RMAN-06507: trying alternate file for archived log of thread <varname>number</varname> with sequence <varname>number</varname>

Cause: This is an informational message, appearing when an archived log was found out of sync with catalog database.

Action: No action is required.

RMAN-06508: MAXSETSIZE <varname>string</varname> KBYTES should be greater than block size <varname>string</varname> bytes

Cause: MAXSETSIZE configured or specified in backup command should be greater than database block size.

Action: Specify a larger MAXSETSIZE limit.

RMAN-06509: only SPFILE or control file can be restored from AUTOBACKUP

Cause: A datafile or archived log restore from AUTOBACKUP was attempted.

Action: Do not specify DATAFILE or ARCHIVELOG for restore from AUTOBACKUP.

RMAN-06510: RMAN retention policy is set to recovery window of <varname>number</varname> days

Cause: This is an informational message only.

Action: No action is required.

RMAN-06511: RMAN retention policy is set to redundancy <varname>number</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-06512: copy will be obsolete on date <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-06513: copy will never be obsolete

Cause: This is an informational message only.

Action: No action is required.

RMAN-06514: archived logs required to recover from this copy will not be kept

Cause: This is an informational message only.

Action: No action is required.

RMAN-06515: archived logs required to recover from this copy will expire when this copy expires

Cause: This is an informational message only.

Action: No action is required.

RMAN-06516: time specified in KEEP UNTIL clause must be after today

Cause: KEEP UNTIL support only a future time.

Action: Correct the time and retry the command.

RMAN-06517: KEEP option is not supported for archived log backups

Cause: The KEEP option is not supported for archived logs.

Action: Either remove KEEP option and retry the command or don't specify archived logs for this backup.

RMAN-06518: backup will be obsolete on date <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-06519: backup will never be obsolete

Cause: This is an informational message only.

Action: No action is required.

RMAN-06520: archived logs will not be kept or backed up

Cause: This is an informational message only.

Action: No action is required.

RMAN-06521: archived logs required to recover from this backup will expire when this backup expires

Cause: This is an informational message only.

Action: No action is required.

RMAN-06522: KEEP FOREVER option is not supported without the recovery catalog

Cause: The KEEP FOREVER option was used, but it requires a connection to a recovery catalog database. The KEEP FOREVER option cannot be used when the backup repository is the target database control file. This is because information about this backup cannot be permanently stored. (If information is stored just in the control file it will be aged out depending on CONTROL_FILE_RECORD_KEEP_TIME initialization parameter.)

Action: If a recovery catalog database is available, then connect to the recovery catalog and retry the command, otherwise use a different KEEP option. 6523, 1, "unused"

RMAN-06524: RMAN retention policy will be applied to the command

Cause: This is an informational message only.

Action: No action is required.

RMAN-06525: RMAN retention policy is set to none

Cause: Command DELETE OBSOLETE and REPORT OBSOLETE requires that either: * RMAN retention policy is not NONE or, * RMAN retention policy is specified with REPORT/DELETE command.

Action: Either configure RMAN retention policy with CONFIGURE command or specify it at the end of DELETE/REPORT command.

RMAN-06526: KEEP option cannot be used with incremental backup

Cause: The KEEP option was specified for a incremental backup.

Action: Remove the option and resubmit the command.

RMAN-06527: KEEP option is not supported for backup of backup sets

Cause: The KEEP option is not supported for backup of backup sets.

Action: Either remove KEEP option and retry the command or don't specify backup sets for this backup.

RMAN-06528: CHANGE ... KEEP not supported for BACKUPPIECE

Cause: The CHANGE BACKUPPIECE ... KEEP command was entered. KEEP attributes cannot be specified for backup pieces.

Action: Use CHANGE BACKUPSET ... KEEP instead.

RMAN-06529: CHANGE ... KEEP not supported for ARCHIVELOG

Cause: The CHANGE ARCHIVELOG ... KEEP command was entered. KEEP attributes cannot be specified for archived logs.

Action: Use CHANGE BACKUPSET ... KEEP instead.

RMAN-06530: CHANGE ... KEEP LOGS not supported for backup set which contains archived logs

Cause: The CHANGE BACKUPSET ... KEEP command was entered, but the BACKUPSET contains archived logs. Backup sets with archived logs cannot have KEEP attributes.

Action: Do not specify backup set with archived logs for the CHANGE BACKUPSET ... KEEP command.

RMAN-06531: CHANGE ... KEEP not supported for incremental BACKUPSET

Cause: The CHANGE BACKUPSET ... KEEP command was entered, but the BACKUPSET is an incremental backup set. Incremental backup sets cannot have KEEP attributes.

Action: Do not specify a backup set with archived logs for the CHANGE BACKUPSET ... KEEP command.

RMAN-06532: redundancy count must be greater than zero

Cause: The REDUNDANCY operand specified for the retention policy was zero.

Action: Specify a REDUNDANCY operand of 1 or greater.

RMAN-06533: KEEP ... NOLOGS option cannot be used when datafiles are fuzzy

Cause: The KEEP ... NOLOGS option was specified for a backup or copy of files in a fuzzy state. This kind of backup requires archived logs for recovery, so archived logs must be kept.

Action: Remove the KEEP ... NOLOGS option or make sure the files are not in a fuzzy state and resubmit the command.

RMAN-06534: archived logs required to recover from this backup will be backed up

Cause: This is an informational message only. An archive log backup will be created and kept so the specified backup can be recovered to a consistent state.

Action: No action is required.

RMAN-06535: LIST COPY OF SPFILE is not supported

Cause: LIST COPY OF SPFILE was used, which is not supported because SPFILE cannot have a copy.

Action: Remove SPFILE from the command.

RMAN-06536: BACKED UP ... TIMES option is supported only for archived logs

Cause: The BACKUP UP ... TIMES option was used as a qualifier. This option is supported only for archived logs.

Action: Remove the option and resubmit the command.

RMAN-06537: CHANGE ... KEEP not supported for BACKUP

Cause: The CHANGE BACKUP... KEEP command was entered. KEEP attributes cannot be specified for copies and backup pieces in a single command.

Action: Use CHANGE BACKUPSET ... KEEP instead.

RMAN-06538: The expected DB_UNIQUE_NAME is <varname>string</varname>, but found <varname>string</varname>

Cause: This is an informational message.

Action: Check other error messages associated with this message.

RMAN-06540: Tablespace <varname>string</varname> will be excluded from future whole database backups

Cause: This is an informational message only.

Action: No action is required.

RMAN-06541: Tablespace <varname>string</varname> will be included in future whole database backups

Cause: This is an informational message only.

Action: No action is required.

RMAN-06542: file <varname>string</varname> is excluded from whole database backup

Cause: The indicated file will not be included in the backup set because its tablespace is configured as excluded from backup.

Action: No action is required.

RMAN-06543: duplicate or conflicting LIST options: <varname>string</varname> and <varname>string</varname>

Cause: The indicated options conflict with each other or appear more than once in a LIST command.

Action: remove the duplicate/conflicting option from the command.

RMAN-06547: SYSTEM tablespace cannot be excluded from whole database backup

Cause: The SYSTEM tablespace must be included in whole database backup.

Action: Remove the SYSTEM tablespace from the CONFIGURE ... EXCLUDE and retry the operation.

RMAN-06548: connected to auxiliary database: <varname>string</varname> (DBID=<varname>string</varname>)

Cause: This is an informational message only.

Action: No action is required.

RMAN-06549: connected to auxiliary database: <varname>string</varname> (not mounted)

Cause: This is an informational message only.

Action: No action is required.

RMAN-06550: clone database not mounted and db_name not set in init.ora

Cause: The clone database "init.ora" file does not specify the DB_NAME parameter.

Action: Add the DB_NAME parameter to the clone database "init.ora" and restart the instance.

RMAN-06551: error while looking up datafile copy for file number: <varname>string</varname>

Cause: An error occurred while looking up the specified datafile copy in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure. If the datafile copy was created during a RESTORE with a new name, ensure that the RESTORE completed successfully.

RMAN-06552: newname for datafile <varname>number</varname> was set to NEW, but file was not restored

Cause: A SWITCH command was specified for a datafile, but the newname was set to NEW and the file was not restored. If newname is set to NEW, the file must be restored before issuing a SWITCH command.

Action: Correct and resubmit the SWITCH command.

RMAN-06553: DB_CREATE_FILE_DEST must be set for SET NEWNAME ... TO NEW

Cause: The SET NEWNAME ... TO NEW option was specified but the OMF destination init parameter DB_CREATE_FILE_DEST is not set.

Action: Supply a full name to the SET NEWNAME command or set DB_CREATE_FILE_DEST at the target database.

RMAN-06554: WARNING: file <varname>string</varname> is in backup mode

Cause: A file which is being backed up or copied is in backup mode. RMAN will back up the file anyway, but files do not need to be put into backup mode before backing them up with RMAN.

Action: Use the ALTER TABLESPACE ... END BACKUP statement, at the target database server, to take the files out of backup mode.

RMAN-06555: datafile <varname>string</varname> must be restored from backup created before <varname>string</varname>

Cause: An incomplete recovery session was started, but the file is newer than the UNTIL TIME clause.

Action: Check the UNTIL TIME clause or restore the file from a sufficient old backup.

RMAN-06556: datafile <varname>string</varname> must be restored from backup older than SCN <varname>string</varname>

Cause: An incomplete recovery session was started, but the file is newer than the UNTIL clause.

Action: Check the UNTIL clause or restore the file from a sufficient old backup.

RMAN-06557: unable to restore archived log of thread <varname>number</varname> with sequence <varname>number</varname>

Cause: Restore of the specified archived log failed because the size of the archived log is larger than available disk space.

Action: One of the following: 1) Increase the MAXSIZE parameter and retry the command. 2) Free up disk space in the recovery area.

RMAN-06558: archived log size of <varname>number</varname> kb is bigger than available space of <varname>number</varname> kb

Cause: This message should be followed by one or more 6557 messages.

Action: Check the accompanying errors.

RMAN-06559: MAXSIZE must be larger than 1 kb

Cause: The MAXSIZE parameter is out of range.

Action: Specify a valid size and retry the command.

RMAN-06560: WARNING: backup set with key <varname>number</varname> will be read <varname>number</varname> times

Cause: This message should be followed by one or more 6562 messages.

Action: Check the accompanying messages.

RMAN-06561: available space must be larger than <varname>number</varname> kb

Cause: The recovery failed because it requires more disk space. One of the following could have caused this error: 1) The MAXSIZE option is used but is not large enough to restore files. 2) Files should be restored to recovery area, but available disk space is not large enough to restore files.

Action: One of the following: 1) Increase the MAXSIZE parameter and retry the command. 2) Free up disk space in the recovery area.

RMAN-06562: available space of <varname>number</varname> kb needed to avoid reading the backup set multiple times

Cause: A backup set is read more than once. Multiple reads of a backup set can slow restore performance. One of the following could have caused this: 1) The MAXSIZE option is used but is not large enough to restore files. 2) Files should be restored to a recovery area, but the available disk space is not large enough to restore files.

Action: One of the following: 1) Increase the MAXSIZE parameter and retry the command. 2) Free up disk space in the recovery area.

RMAN-06563: control file or SPFILE must be restored using FROM AUTOBACKUP

Cause: RESTORE CONTROLFILE or RESTORE SPFILE was specified without the FROM AUTOBACKUP option when RMAN is not connected to the recovery catalog.

Action: If the recovery catalog is available, connect to the recovery catalog and retry the restore. If the recovery catalog is not available, following is the procedure to restore control file or SPFILE: 1. Specify the DBID of the database with the SET DBID command. 2. If the AUTOBACKUP was created with non-default AUTOBACKUP format, then specify the AUTOBACKUP format using the SET CONTROLFILE AUTOBACKUP FORMAT command. 3. If the backup was created with SBT device, then allocate an SBT channel using the ALLOCATE CHANNEL command. 4. Restore control file or SPFILE by starting the RESTORE ... FROM AUTOBACKUP command.

RMAN-06564: must use the TO clause when the instance is started with SPFILE

Cause: A restore of the SPFILE from AUTOBACKUP was attempted when the instance is started with SPFILE and no alternate destination was specified.

Action: Specify an alternate destination with the TO clause.

RMAN-06565: WARNING: <varname>string</varname>: sqlcode <varname>number</varname> was caught, automatic retry #<varname>number</varname>

Cause: The RMAN client caught a transient error and will automatically retry several times.

Action: No action required, this is an informational message.

RMAN-06566: target database incarnation not found in control file

Cause: RESETLOGS CHANGE# and/or time of the target database doesn't match any database incarnation in the control file.

Action: One of the following actions can be taken to resolve this error 1) Restore the control file from the incarnation. 2) To populate the new incarnation, inspect or restore an archived log/datafile/datafile copy/backup set from the target incarnation

RMAN-06567: connected to auxiliary database: <varname>string</varname> (DBID=<varname>string</varname>, not open)

Cause: This is an informational message only.

Action: No action is required.

RMAN-06568: connected to target database: <varname>string</varname> (DBID=<varname>string</varname>, not open)

Cause: This is an informational message only.

Action: No action is required.

RMAN-06569: DATABASE: <varname>string</varname> does not match previous DATABASE: <varname>string</varname>

Cause: SET DBID or SET DATABASE was used to specify the target database name which does not match specified database name in DUPLICATE command.

Action: Verify that the correct DBID or the correct DATABASE was specified or avoid specifying DATABASE in DUPLICATE command.

RMAN-06570: datafile <varname>number</varname> switched to datafile copy "<varname>string</varname>"

Cause: This message was issued in response to a SWITCH command.

Action: No action is required, this is an informational message.

RMAN-06571: datafile <varname>number</varname> does not have recoverable copy

Cause: The SWITCH command with the option TO COPY was specified but the datafile has no valid copy to switch to.

Action: Verify whether the datafile has a valid datafile copy.

RMAN-06572: database is open and datafile <varname>number</varname> is not offline

Cause: The SWITCH command with the option TO COPY was specified, but datafile is not offline and database is open.

Action: Either make sure the datafile is offline or the database must be mounted but not opened.

RMAN-06573: specified DBID: <varname>string</varname> does not match previous DBID: <varname>string</varname>

Cause: The DBID in the DUPLICATE command did not match the previously specified DBID in the SET DBID command.

Action: Verify that the correct DBID was specified or avoid using DBID in the DUPLICATE command.

RMAN-06575: platform id <varname>number</varname> found in datafile <varname>string</varname> header is not a valid platform id

Cause: The platform id found in the datafile header was not recognized.

Action: Verify that this is a valid datafile.

RMAN-06576: platform '<varname>string</varname>' (<varname>number</varname>) found in header of datafile <varname>string</varname> does not match specified platform name '<varname>string</varname>' (<varname>number</varname>)

Cause: The platform specified in the command did not match the platform found in the datafile header.

Action: Specify the correct platform name and retry the command.

RMAN-06577: FROM TAG option may only be used with datafile copies

Cause: The FROM TAG option was specified for datafiles.

Action: Remove the option and resubmit the command.

RMAN-06578: INCREMENTAL LEVEL > 0 must be specified with FOR RECOVER OF

Cause: The FOR RECOVER OF option was specified without specifying INCREMENTAL LEVEL > 0.

Action: Specify INCREMENTAL LEVEL > 0 and resubmit the command.

RMAN-06580: the <varname>string</varname> option cannot be used with AS COPY

Cause: The specified option was specified for a backup as copy command.

Action: Remove the option and resubmit the command.

RMAN-06581: option <varname>string</varname> not supported

Cause: This option was specified and it is not supported.

Action: Remove the specified option.

RMAN-06582: AS COPY option cannot be used when backing up backup sets

Cause: The backup set was specified with AS COPY.

Action: Remove the AS COPY option or remove the backup sets.

RMAN-06583: at least 1 channel of TYPE DISK must be allocated to use AS COPY option

Cause: No channel of TYPE DISK was allocated.

Action: Allocate a channel of TYPE DISK and re-issue the command or remove AS COPY.

RMAN-06584: WARNING: AS BACKUPSET option added due to allocation of multiple channel types

Cause: DISK and non DISK channels were allocated for a backup command. Configuration indicates to produce image copies to DISK, however due to the mixed channel types BACKUPSETS will be created on DISK.

Action: Do not allocate non DISK channels to produce image copies to DISK or allocate only non DISK channels to produce BACKUPSETS only.

RMAN-06585: no copy of datafile <varname>number</varname> found

Cause: An available datafile copy for the specified datafile could not be found.

Action: make sure that all specified datafiles have a copy available.

RMAN-06586: no copy of datafile <varname>number</varname> with tag <varname>string</varname> found

Cause: An available datafile copy for the specified datafile could not be found.

Action: make sure that all specified datafiles have a copy available.

RMAN-06587: one or more datafile copies were not found

Cause: This error message was accompanied by an additional error message or messages indicating the cause of the error.

Action: Follow the recommended actions of the additional error message or messages.

RMAN-06588: number of patterns (<varname>number</varname>) to DB_FILE_NAME_CONVERT should be even

Cause: An uneven number of patterns was specified.

Action: Specify one more or one less pattern.

RMAN-06589: cannot specify DB_FILE_NAME_CONVERT option without AS COPY

Cause: The DB_FILE_NAME_CONVERT option was specified without AS COPY. This is not permitted for backup set backups where multiple files are combined into a set.

Action: Remove the DB_FILE_NAME_CONVERT option and re-run the BACKUP command.

RMAN-06590: Tablespace <varname>string</varname> cannot be converted

Cause: The system tablespaces could not be transported to other platforms.

Action: Remove the specified tablespace from the CONVERT command and retry the operation.

RMAN-06591: ALLOW INCONSISTENT can only be used with cross-platform backup

Cause: ALLOW INCONSISTENT was specified in a non cross-platform backup command.

Action: Remove ALLOW INCONSISTENT or add a cross-platform backup modifier.

RMAN-06593: platform name '<varname>string</varname>' specified in FROM PLATFORM is not valid

Cause: The platform name was not recognized.

Action: Specify a valid platform name.

RMAN-06594: platform name '<varname>string</varname>' specified in TO PLATFORM is not valid

Cause: The platform name was not recognized.

Action: Specify a valid platform name.

RMAN-06595: platform name '<varname>string</varname>' does not match database platform name '<varname>string</varname>'

Cause: The platform name specified did not match the name of the database performing the conversion.

Action: Specify the correct platform name.

RMAN-06596: <varname>string</varname> requires target database compatibility <varname>string</varname>, currently set to <varname>string</varname>

Cause: A command or option was used that requires a higher database compatibility than is currently set at the target database.

Action: Raise the compatibility of the database before attempting the command again.

RMAN-06597: conversion between platforms '<varname>string</varname>' and '<varname>string</varname>' is not implemented

Cause: Conversion of Oracle datafiles between the specified platforms was not supported.

Action: Do not do the conversion.

RMAN-06599: Tablespace <varname>string</varname> is not read-only

Cause: A conversion was attempted on a tablespace which is not read-only.

Action: Change the tablespace to read-only and retry the operation.

RMAN-06600: old RMAN configuration parameters:

Cause: This message is issued in response to a CONFIGURE command.

Action: No action is required, this is an informational message only.

RMAN-06601: new RMAN configuration parameters:

Cause: This message is issued in response to a CONFIGURE command.

Action: No action is required, this is an informational message only.

RMAN-06602: TO DESTINATION option can be used only for disk device

Cause: The TO DESTINATION option was specified for non-disk device.

Action: Remove the TO DESTINATION option and resubmit the command.

RMAN-06603: TO DESTINATION option must be specified with RECOVERY AREA, RECOVERY FILES or DB_RECOVERY_FILE_DEST on disk device

Cause: RECOVERY FILES, RECOVERY AREA or DB_RECOVERY_FILE_DEST option was specified in BACKUP command on disk device without specifying TO DESTINATION option.

Action: Specify TO DESTINATION option and retry the command.

RMAN-06604: new RMAN configuration parameters are successfully stored

Cause: This message is issued in response to a CONFIGURE command.

Action: No action is required, this is an informational message only.

RMAN-06605: old RMAN configuration parameters are successfully deleted

Cause: This message is issued in response to a CONFIGURE command.

Action: No action is required, this is an informational message only.

RMAN-06606: RMAN configuration parameters are successfully reset to default value

Cause: This message is issued in response to a CONFIGURE command.

Action: No action is required, this is an informational message only.

RMAN-06607: RMAN configuration parameters for database with db_unique_name <varname>string</varname> are:

Cause: This message is issued in response to a SHOW command.

Action: No action is required, this is an informational message only.

RMAN-06608: RMAN configuration has no stored or default parameters

Cause: This message is issued in response to a SHOW command.

Action: No action is required, this is an informational message only.

RMAN-06609: AS COPY can be configured only for disk device

Cause: The AS COPY option was specified for non-disk device.

Action: Remove the AS COPY option and resubmit the command.

RMAN-06610: For record type <varname>string</varname> RECIDS from <varname>number</varname> to <varname>number</varname> are re-used before resync

Cause: This messages is issued when the control file records were re-used before resyncing to catalog database.

Action: Increase control_file_keep_record_time setting or issue BACKUP command that it will generate fewer control file records, e.g., backup few tablespaces instead of the complete database in one BACKUP command.

RMAN-06611: Following RMAN configuration applied before deleting logs:

Cause: This message is issued in response to a DELETE command.

Action: No action is required, this is an informational message only.

RMAN-06612: Incompatible options were specified for archivelog deletion policy

Cause: Incompabitle options were specified on CONFIGURE ARCHIVELOG DELETION POLICY command.

Action: Remove incompabitle options and retry the command. BACKED UP option can be used individually or combined with SHIPPED or APPLIED option. Following are invalid combination of options: a) TO NONE cannot be used with other options b) SHIPPED ON STANDBY and SHIPPED ON ALL STANDBY cannot be used together. c) APPLIED ON STANDBY and APPLIED ON ALL STANDBY cannot be used together. d) SHIPPED and APPLIED cannot be used together.

RMAN-06613: Connect identifier for DB_UNIQUE_NAME <varname>string</varname> not configured

Cause: The connect identifier for the specified DB_UNIQUE_NAME initialization parameter was not configured.

Action: Do one of the following: - If the DB_UNIQUE_NAME belongs to a connected target database, then define the DB_UNIQUE_NAME parameter in LOG_ARCHIVE_DEST_n at the remote database from where the resynchronization is performed. Otherwise, define DB_UNIQUE_NAME parameter in LOG_ARCHIVE_DEST_n at the target database. Or, - Configure the appropriate connect identifier using the CONFIGURE DB_UNIQUE_NAME RMAN command and rerun the command.

RMAN-06614: DB_UNIQUE_NAME string is too long

Cause: The DB_UNIQUE_NAME initialization parameter string was too long.

Action: Configure the appropriate DB_UNIQUE_NAME initialization parameter string and re-run the command.

RMAN-06615: resyncing from database with DB_UNIQUE_NAME <varname>string</varname>

Cause: Resync was performed remotely for the specified DB_UNIQUE_NAME initialization parameter without connecting to it as target database. This type of remote resync has limitations. For example, RMAN output cannot be resynced. Please refer to RMAN documentation for a complete set of limitations.

Action: This is an informational message.

RMAN-06616: RMAN output not resynced for database with DB_UNIQUE_NAME <varname>string</varname>

Cause: V\$RMAN_OUTPUT contents were not resynced when the RESYNC CATALOG FROM DB_UNIQUE_NAME command was executed."

Action: This is an informational message.

RMAN-06617: UNTIL TIME (<varname>string</varname>) is ahead of last NEXT TIME in archived logs (<varname>string</varname>)

Cause: UNTIL TIME was more than the last NEXT TIME of the last archived log.

Action: Check the UNTIL SCN.

RMAN-06618: RMAN client and database release mismatch; indicated database release is <varname>number</varname>.<varname>number</varname>.<varname>number</varname>.<varname>number</varname>.<varname>number</varname>.

Cause: This release of RMAN was incompatible with either the indicated database or the DBMS_BACKUP_RESTORE package installed in the indicated database.

Action: If the database has been upgraded from an earlier release, ensure that the catuxxx.sql script has been run successfully. Reinstall dbmsbkrs.sql and prvtbkrs.plb if necessary. Otherwise, make sure that the RMAN client release is the same as the target database release.

RMAN-06619: recovery catalog schema release <varname>string</varname> is newer than RMAN release

Cause: The RMAN client release did not match the catalog schema release number for the database.

Action: This is an informational message. No action is required.

RMAN-06700: error parsing text script in file <varname>string</varname>

Cause: Incorrect syntax or invalid commands were found.

Action: Fix text script and retry the command.

RMAN-06701: could not construct path for file: "<varname>string</varname>"

Cause: An error was encountered when trying to construct the full pathname for the specified file.

Action: Ensure that the path is correct.

RMAN-06702: could not initialize for input file: "<varname>string</varname>"

Cause: An error was encountered when trying to initialize the specified file for input.

Action: Ensure that the file exists.

RMAN-06703: could not open file: "<varname>string</varname>" (reason=<varname>string</varname>)

Cause: An error was encountered when trying to open the specified file.

Action: Ensure that the file has correct permissions.

RMAN-06705: text script line is too long (>1024)

Cause: A text script contained a line longer than the permitted maximum length.

Action: Split the line in smaller lines and retry the operation.

RMAN-06706: could not close file: "<varname>string</varname>" (reason=<varname>string</varname>)

Cause: An error was encountered when trying to close the specified file.

Action: Ensure that the file has correct permissions and still exists.

RMAN-06707: could not initialize for output file: "<varname>string</varname>"

Cause: An error was encountered when trying to initialize the specified file for output.

Action: Ensure that the file exists.

RMAN-06708: short write while writing file "<varname>string</varname>". Wrote <varname>string</varname> bytes instead of <varname>string</varname> bytes

Cause: An attempt was made to write to a file system that was full.

Action: Ensure that the file system has room for the file. Check system logs.

RMAN-06709: \n No scripts in recovery catalog

Cause: An attempt was made to list the scripts in the catalog, but no scripts could be found in the specified recovery catalog.

Action: No action required, this is an informational message only.

RMAN-06710: script <varname>string</varname> not found in catalog

Cause: An attempt was made to call a script that could not be found in the target database or as a global script in the specified catalog.

Action: Verify the script name and retry the command.

RMAN-06711: global scripts require a TARGET connection

Cause: Connection to a TARGET database was not specified.

Action: Provide a TARGET connection and retry the command.

RMAN-06716: skipping datafile <varname>number</varname>; already restored to file <varname>string</varname>

Cause: Recovery Manager determined that this file is already restored. Use FORCE option to override this optimization.

Action: No action required, this is an informational message only.

RMAN-06717: Could not delete auxiliary instance file <varname>string</varname>

Cause: Auxiliary instance file was not deleted. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-06724: backup not done; all files already backed up

Cause: A BACKUP command does not need to backup any files, because all of the files to backup are already backed up.

Action: No action required, this is an informational message only.

RMAN-06725: database not open: sort area size too small

Cause: sort area size too small to execute RMAN commands.

Action: open the database or increase sort_area_size.

RMAN-06726: could not locate archived log <varname>string</varname>

Cause: The specified archived log could not be found on any allocated channel.

Action: Allocate additional channels on other nodes of the cluster or, if the archived logs has been deleted, use the CROSSCHECK ARCHIVELOG command to correct the recovery catalog or target database control file entries.

RMAN-06727: could not locate datafile copy <varname>string</varname>

Cause: The specified datafile copy could not be found on any allocated channel.

Action: Allocate additional channels on other nodes of the cluster or if the datafile copy has been deleted, use the CROSSCHECK DATAFILECOPY command to correct the recovery catalog or target database control file entries.

RMAN-06728: could not locate control file copy <varname>string</varname>

Cause: The specified control file copy could not be found on any allocated channel.

Action: Allocate additional channels on other nodes of the cluster or if the control file copy has been deleted, use the CROSSCHECK CONTROLFILECOPY command to correct the recovery catalog or target database control file entries.

RMAN-06729: no backup of the SPFILE found to restore

Cause: A SPFILE restore could not proceed because no backup of the SPFILE was found. It may be the case that a backup of this file exists but does not satisfy the criteria specified in the user's restore operands.

Action: Modify options for the SPFILE restore.

RMAN-06730: no channel to restore a backup of the SPFILE

Cause: A SPFILE restore could not proceed because the backup on a device type that was not allocated for restore.

Action: No action required, this is an informational message only. See message 6026 for further details.

RMAN-06731: command <varname>string</varname>:<varname>string</varname>%% complete, time left <varname>number</varname>:<varname>number</varname>:<varname>number</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-06732: database dropped

Cause: This is an informational message only.

Action: No action is required.

RMAN-06733: database unregistered from the recovery catalog

Cause: This is an informational message only.

Action: No action is required.

RMAN-06737: database name "<varname>string</varname>" does not match target database name "<varname>string</varname>"

Cause: The UNREGISTER DATABASE command was used with a database name that does not match the name of the database to which RMAN is connected.

Action: Specify the correct database name or avoid specifying the database name when connected to the target database.

RMAN-06738: database name "<varname>string</varname>" is not unique in the recovery catalog

Cause: The UNREGISTER DATABASE command was used with a database name that is ambiguous.

Action: Use the SET DBID command to specify the database id and resolve the ambiguity.

RMAN-06739: database "<varname>string</varname>" is not found in the recovery catalog

Cause: The UNREGISTER DATABASE command was used with a database name that was not found in the recovery catalog.

Action: Make sure the database name specified in the DROP DATABASE command syntax is correct.

RMAN-06740: database name is not specified

Cause: The command failed because of the following:

- o RMAN is not connected to the target database
- o The database name is not specified in the command
- o DBID is not set with the SET DBID command

Action: Any one of the following actions will fix the problem:

- o Connect to the target database
- o Specify database name
- o Set DBID with SET DBID command

RMAN-06741: database name is "<varname>string</varname>" and DBID is <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-06742: platform name '<varname>string</varname>' longer than <varname>number</varname> characters

Cause: The specified platform name exceeded the maximum allowed platform name.

Action: Correct the platform name.

RMAN-06743: specification does not match any backup set in the repository

Cause: The specified backup sets were not found in the recovery catalog or target database control file.

Action: Verify backup set existence and retry the command.

RMAN-06744: specification does not match any datafile copy in the repository

Cause: The specified datafile copies were not found in the recovery catalog or target database control file.

Action: Verify datafile copy existence and retry the command.

RMAN-06745: skipping datafile copy <varname>string</varname>; already backed up <varname>string</varname> time(s)

Cause: The indicated datafile copy was not included in the backup set because it was already backed up on the device requested.

Action: Use FORCE option to override backup optimization.

RMAN-06746: backup cancelled because there are no files to backup

Cause: There were no files or all files were skipped for this backup set, therefore no backup set was created.

Action: This message is informational only.

RMAN-06747: at least 1 channel of tertiary storage must be allocated to execute this command

Cause: The executed command requires a SBT channel, but no channels of type SBT were configured or allocated.

Action: ALLOCATE or CONFIGURE a SBT channel.

RMAN-06748: more than one channel types were allocated

Cause: RECOVERY FILES, RECOVERY AREA or DB_RECOVERY_FILE_DEST option was specified in BACKUP command, but more than one channel types was used and no DEVICE TYPE or CHANNEL option was specified.

Action: Specify CHANNEL or DEVICE TYPE option and retry the command.

RMAN-06749: restore point <varname>string</varname> does not exist.

Cause: The specified restore point does not exist in v\$restore_point table of the target database.

Action: Check the name of restore point and retry the command.

RMAN-06750: SPFILE cannot be backed up by proxy.

Cause: The PROXY option was specified, but proxy copy of SPFILE is not supported. This file will be placed into a non-proxy backup set.

Action: No action required, this is an informational message only.

RMAN-06751: ASM file <varname>string</varname> cannot be proxy backed up.

Cause: The PROXY option was specified, but proxy copy of ASM file is not supported. This file will be placed into a non-proxy backup set.

Action: No action required, this is an informational message only.

RMAN-06752: error while looking up tempfile: <varname>string</varname>

Cause: An error occurred while looking up the specified tempfile in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure; see those error messages for further information. One possible problem is that the tempfile name was not entered correctly.

RMAN-06753: tempfile not found in the repository

Cause: The specified tempfile is not found in the control file or recovery catalog.

Action: Make sure that the tempfile name is correct and retry

RMAN-06754: INCREMENTAL FROM SCN option is not supported with [<varname>string</varname>]

Cause: The INCREMENTAL FROM SCN option was supplied but does not apply to this type of backup.

Action: Remove the INCREMENTAL FROM SCN operand and reenter the command.

RMAN-06755: WARNING: datafile <varname>string</varname>: incremental-start SCN is too recent; using checkpoint SCN <varname>string</varname> instead

Cause: The incremental-start system change number (SCN) which was specified when starting an incremental datafile backup is greater than the datafile checkpoint SCN, which could cause some blocks to be missed.

Action: Specify a smaller incremental-start system change number (SCN).

RMAN-06756: cannot flashback database to non-guaranteed restore point <varname>string</varname> when flashback is off

Cause: The indicated restore point was not guaranteed and flashback was disabled. When flashback is disabled, Oracle can flashback only to guaranteed restore point.

Action: Specify a guaranteed restore point or turn on flashback and retry the command. the command.

RMAN-06757: DB_UNIQUE_NAME "<varname>string</varname>" does not match target database ("<varname>string</varname>")

Cause: The value specified in the FOR DB_UNIQUE_NAME option did not match the DB_UNIQUE_NAME parameter setting of the target database.

Action: Use the RMAN STARTUP command, with no parameter file option, to start the target database without a parameter file, then run the RESTORE SPFILE command again.

RMAN-06758: DB_UNIQUE_NAME is not unique in the recovery catalog

Cause: RMAN could not identify which SPFILE to restore for this target database, because the recovery catalog contained two or more different instances of this database, each with different DB_UNIQUE_NAME values.

Action: Use the FOR DB_UNIQUE_NAME option to specify the name of the instance whose parameter file you want to restore.

RMAN-06759: skipping datafile copies that are already backed up

Cause: Some datafile copies were not be backed up because they were already backed up on the device requested.

Action: No action is required. You can use the FORCE option to override backup optimization and force these files to be backed up.

RMAN-06760: skipping archived logs that are already backed up

Cause: Some archived logs were not be backed up because they were already backed up on the device requested.

Action: No action is required. You can use the FORCE option to override backup optimization and force these files to be backed up.

RMAN-06761: skipping backup sets that are already backed up

Cause: Some backup sets were not be backed up because they were already backed up on the device requested.

Action: No action is required. You can use the FORCE option to override backup optimization and force these files to be backed up.

RMAN-06762: ignoring encryption for proxy or image copies

Cause: This information message is displayed when the RMAN client is generating proxy or image copies and encryption was enabled for the input files.

Action: This is an informational message only.

RMAN-06763: specified encryption algorithm not supported

Cause: An encryption algorithm not supported by the database is specified during backup.

Action: Refer to contents of v\$rman_encryption_algorithms view for the list of supported encryption algorithm. Specify a valid encryption algorithm and retry the command.

RMAN-06764: <varname>string</varname>

Cause: An error occurred when processing user request.

Action: n/a

RMAN-06765: Tablespace <varname>string</varname> will be encrypted in future backup sets

Cause: This is an informational message only.

Action: No action is required.

RMAN-06766: Tablespace <varname>string</varname> will not be encrypted in future backup sets

Cause: This is an informational message only.

Action: No action is required.

RMAN-06767: Tablespace <varname>string</varname> will default to database encryption configuration

Cause: This is an informational message only.

Action: No action is required.

RMAN-06768: duplicate or conflicting options are specified: <varname>string</varname> and <varname>string</varname>

Cause: An error occurred when processing the command because user specified two duplicate options or the two options are not allowed to be used together.

Action: Remove one of the above options and retry the command.

RMAN-06769: length of password must be greater than zero

Cause: Zero length password was specified for encrypted backups.

Action: Retry the command using a password with non-zero length.

RMAN-06771: cannot do IMPORT CATALOG after NOCATALOG has been used

Cause: The IMPORT CATALOG command was used after the NOCATALOG option was already specified.

Action: Restart RMAN and connect to recovery catalog if you wish to IMPORT CATALOG.

RMAN-06772: cannot do IMPORT CATALOG before connecting to recovery catalog

Cause: The IMPORT CATALOG command was used before connecting to the recovery catalog.

Action: Connect to recovery catalog using CONNECT CATALOG command if you wish to IMPORT CATALOG.

RMAN-06773: connected to source recovery catalog database

Cause: This is an informational message only.

Action: No action is required.

RMAN-06774: must specify a TNS service name for source recovery catalog database

Cause: The connect string does not contain TNS service name. IMPORT CATALOG without TNS service name is not supported.

Action: Specify a service name and resubmit the command.

RMAN-06775: not connected to source recovery catalog database

Cause: IMPORT CATALOG command was issued but no connection to the source recovery catalog database has been established.

Action: Resubmit IMPORT CATALOG command with correct connect string.

RMAN-06776: source recovery catalog database not started

Cause: IMPORT CATALOG command was issued which requires the source recovery catalog to be open.

Action: Open the source recovery catalog database and re-submit the command.

RMAN-06777: ORACLE error from source recovery catalog database: <varname>string</varname>

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-06778: WARNING: <varname>string</varname>: sqlcode <varname>number</varname> was caught, automatic retry #<varname>string</varname>

Cause: The RMAN client caught a transient error during temporary resource allocate for IMPORT CATALOG command and will automatically retry several times.

Action: No action required, this is an informational message.

RMAN-06779: import validation complete

Cause: This is an informational message only.

Action: No action required.

RMAN-06780: database unregistered from the source recovery catalog

Cause: This is an informational message only.

Action: No action is required.

RMAN-06781: <varname>string</varname> package version <varname>string</varname> in source database is not of version <varname>string</varname>

Cause: The catalog schema version of the source recovery catalog is not the same as the target recovery catalog. The two catalog

Action: UPGRADE source recovery catalog schema and recovery catalog schema to same version and retry the command.

RMAN-06782: Datafile headers of locally managed datafiles need to be updated.

Cause: This is an informational message only.

Action: No action is required.

RMAN-06783: Update of datafile headers of locally managed datafiles finished.

Cause: This is an informational message only.

Action: No action is required.

RMAN-06784: One or more datafile headers of locally managed datafiles were not updated.

Cause: Errors prevented the update of one or more datafile headers.

Action: See trace file for details of the problem.

RMAN-06785: This operation might take some time.

Cause: This is an informational message only.

Action: No action is required.

RMAN-06786: could not read file header for datafile <varname>string</varname> to do FLASHBACK.

Cause: The indicated datafile header could not be read to do FLASHBACK DATABASE.

Action: If the database must be taken back in time then a restore and incomplete recovery must be performed.

RMAN-06787: WARNING: TAG <varname>string</varname> option is ignored; backups will be tagged with <varname>string</varname>

Cause: WITH TAG option and TAG option were used together. When WITH TAG option is used, all the backups created by the command will have tag specified with WITH TAG option.

Action: The TAG option can be removed to not display the message.

RMAN-06791: changed the DB_UNIQUE_NAME value from <varname>string</varname> to <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-06792: database db_unique_name is "<varname>string</varname>", db_name is "<varname>string</varname>" and DBID is <varname>string</varname>

Cause: UNREGISTER DB_UNIQUE_NAME or CHANGE DB_UNIQUE_NAME command was executed, hence RMAN displayed the database information for which DB_UNIQUE_NAME the metadata will be removed/renamed in the recovery catalog.

Action: No action required, this is an informational message only.

RMAN-06793: database with db_unique_name <varname>string</varname> unregistered from the recovery catalog

Cause: UNREGISTER DB_UNIQUE_NAME command was executed.

Action: No action required, this is an informational message only.

RMAN-06795: Flashback database logging is not on.

Cause: A FLASHBACK DATABASE command was tried but flashback database logging has not been enabled.

Action: Flashback database logging must be enabled via the ALTER DATABASE FLASHBACK ON command before a FLASHBACK DATABASE command can be tried. If the database must be taken back in time then a restore and incomplete recovery must be performed.

RMAN-06796: Not enough flashback database log data to do FLASHBACK.

Cause: There was not enough flashback database log data to do the FLASHBACK DATABASE.

Action: If the database must be taken back in time then a restore and incomplete recovery must be performed.

RMAN-06797: Grant succeeded.

Cause: This is an informational message issued in response to a GRANT command.

Action: No action required.

RMAN-06798: Revoke succeeded.

Cause: This is an informational message issued in response to a REVOKE command.

Action: No action required.

RMAN-06799: found eligible base catalog owned by <varname>string</varname>

Cause: When creating a virtual private catalog, an 11g base catalog was found, owned by the specified user, and the currently connected catalog user has been granted privileges on this catalog, and can therefore create a virtual private catalog using this base catalog. This is an informational message issued in response to a CREATE VIRTUAL CATALOG command.

Action: No action required.

RMAN-06800: found ineligible base catalog owned by <varname>string</varname>

Cause: When creating a virtual private catalog, an 11g base catalog was found, owned by the specified user, and the currently connected catalog user has not been granted any privileges on this catalog. This is an informational message issued in response to a CREATE VIRTUAL CATALOG command.

Action: No action required.

RMAN-06801: no base catalog found

Cause: When trying to create a virtual catalog, either no base catalog was found, or this user has no privilege to create a virtual catalog against any existing base catalog.

Action: Establish the correct privileges and re-create the virtual catalog.

RMAN-06802: too many eligible base catalogs found

Cause: When trying to create a virtual catalog, more than one base catalog was found that is eligible to be the base catalog for this virtual catalog.

Action: Revoke privileges so that the current catalog user has privileges on only one base catalog, then re-issue the CREATE VIRTUAL CATALOG command.

RMAN-06803: created virtual catalog against base catalog owned by <varname>string</varname>

Cause: A virtual private catalog was created, where the base catalog data is owned by the specified user. This is an informational message issued in response to a CREATE VIRTUAL CATALOG command.

Action: No action required.

RMAN-06804: Enter value for <varname>string</varname>:

Cause: This is a user prompt.

Action: Enter a substitution value to proceed.

RMAN-06805: SET NEWNAME command has not been issued for tempfile <varname>string</varname>

Cause: A SWITCH command was specified for a tempfile, but no destination was specified and no SET NEWNAME command has been previously issued for that file. An explicit file to switch to must be specified if no SET NEWNAME command has been issued.

Action: Correct and resubmit the SWITCH command.

RMAN-06806: compression algorithm '<varname>string</varname>' of release <varname>string</varname> not found

Cause: An unsupported compression algorithm was specified for the backup.

Action: Query the V\$RMAN_COMPRESSION_ALGORITHM view for the list of supported compression algorithms. Specify a valid compression algorithm and retry the command.

RMAN-06807: compression algorithm '<varname>string</varname>' of release <varname>string</varname> cannot be used because database compatibility is less than <varname>string</varname>

Cause: The compression algorithm is not supported because the current compatibility level of the database is too low.

Action: Query the V\$RMAN_COMPRESSION_ALGORITHM view for the list of supported compression algorithms. Specify a valid compression algorithm and retry the command.

RMAN-06808: SECTION SIZE cannot be used when piece limit is in effect

Cause: The SECTION SIZE backup option was used together with the MAXPIECESIZE channel limit. These options are mutually exclusive, because they are independent methods of creating multiple backup pieces with one backup command.

Action: Use one option or the other, but not both.

RMAN-06809: compression algorithm '<varname>string</varname>' of release <varname>string</varname> requires advanced compression option

Cause: The compression algorithm was not supported because it requires advanced compression option to be enabled.

Action: Enable advanced compression option by setting advanced_compression_option_usable=true or specify a different compression algorithm.

RMAN-06810: specification does not match any datafile copy in the repository

Cause: No datafile copies were found that match specification in the recovery catalog or target database control file.

Action: Check the specifier.

RMAN-06811: specification does not match any control file copy in the repository

Cause: No control file copies were found that match specification in the recovery catalog or target database control file.

Action: Check the specifier.

RMAN-06812: specification does not match any backup in the repository

Cause: No backups were found that match specification in the recovery catalog or target database control file.

Action: Check the specifier.

RMAN-06813: could not translate pluggable database <varname>string</varname>

Cause: An error occurred while looking up the specified pluggable database in the repository.

Action: Ensure that the database name is entered correctly and retry the command.

RMAN-06814: cannot connect to pluggable database <varname>string</varname>

Cause: An error was received when connecting to database because the database is a pluggable database.

Action: Connect to the root database and retry the command.

RMAN-06815: cannot change the container in RMAN session.

Cause: An attempt was made by to change the container using the ALTER SESSION SET CONTAINER statement.

Action: This operation is not allowed in RMAN session.

RMAN-06817: Pluggable Database <varname>string</varname> cannot be backed up in NOARCHIVELOG mode.

Cause: Backing up the Pluggable Database when database was in NOARCHIVELOG mode is not allowed.

Action: Pluggable Database backups are not allowed when the database is in NOARCHIVELOG mode. Close the container database and backup the complete database using the BACKUP DATABASE command.

RMAN-06818: WARNING: last archived log from primary database not received at standby database

Cause: An archived log was switched at the primary database during backup at the standby database and this log was not shipped to the standby database. The backup created at the standby database will need more logs to recover.

Action: Check whether the standby database is configured correctly to receive logs from the primary database.

RMAN-06819: current log archived at primary database

Cause: The ALTER SYSTEM ARCHIVE LOG CURRENT command completed successfully at the primary database because the connected target instance was a physical standby database. The switched archived logs were included in the backup so that the backed up files could be recovered to a consistent point-in-time.

Action: None. This is an informational message.

RMAN-06820: WARNING: failed to archive current log at primary database

Cause: An attempt to switch the archived log at the primary database failed.

Action: Resolve the error messages associated with this message to avoid the warning.

RMAN-06821: backup is not consistent because the last archived log was not received at the standby

Cause: As part of the KEEP backup operation, the archived log at the primary database was switched but was not shipped to the standby database.

Action: Check whether the standby database is configured correctly to receive logs from the primary database.

RMAN-06822: backup not consistent because switching of archived log failed at the primary

Cause: As part of the KEEP backup operation, the attempt to switch the archived log at the primary database failed.

Action: Resolve the error messages associated with this message to avoid the warning.

RMAN-06896: cannot resolve circular path of synonym <varname>string</varname>

Cause: Synonym forms a circular reference that causes an infinite loop.

Action: Drop self-referential synonyms.

RMAN-06897: procedure, function, package, sequence, or type is not supported here

Cause: RMAN does not support DESCRIBE for procedures, functions, packages, sequences, or types.

Action: Use DESCRIBE for tables or views only.

RMAN-06898: recovery catalog is partially upgraded to <varname>string</varname>

Cause: The recovery catalog database was not completely upgraded to the specified version. Either there were some errors during execution of UPGRADE CATALOG or UPGRADE CATALOG was cancelled before completion.

Action: Execute UPGRADE CATALOG again.

RMAN-06899: updating recovery catalog with new database incarnation

Cause: The target database has a new incarnation that has not already been seen by the recovery catalog. This usually happens because a Point-in-Time Recovery was done. RMAN has made the necessary updates to the recovery catalog.

Action: This is an informational message only.

RMAN-06900: WARNING: unable to generate V\$RMAN_STATUS or V\$RMAN_OUTPUT row

Cause: The routine createRmanStatusRow() or createRmanOutputRow() could add new row into V\$RMAN_STATUS or V\$RMAN_OUTPUT.

Action: Check the associated error messages. If the associated error message indicates a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-06901: WARNING: disabling update of the V\$RMAN_STATUS and V\$RMAN_OUTPUT rows

Cause: Informational message only.

Action: No action required.

RMAN-06902: AS COMPRESSED BACKUPSET option cannot be used when backing up backup sets

Cause: The backup set was specified with AS COMPRESSED BACKUPSET.

Action: Remove the AS COMPRESSED BACKUPSET option.

RMAN-06903: backup of datafile <varname>string</varname> was cancelled

Cause: This is an informational message displayed when PARTIAL option of DURATION option was specified on the BACKUP command and backup could not be completed within the given duration time.

Action: Run the BACKUP command to backup cancelled files, or let the next backup window backup the cancelled files. It should be noted that the files that were skipped in the current job will be given preference to other files for next the BACKUP command with DURATION option.

RMAN-06904: backup of archived log for thread <varname>number</varname> with sequence <varname>number</varname> and starting SCN of <varname>string</varname> was cancelled

Cause: This is an informational message displayed when PARTIAL option of DURATION option was specified on the BACKUP command and backup could not be completed within the given duration time.

Action: Run BACKUP command to backup cancelled files, or let the next backup window backup the cancelled files. It should be noted that the files that were skipped in the current job will be given preference to other files for next the BACKUP command with DURATION option.

RMAN-06905: backup of backup set key <varname>number</varname> was cancelled

Cause: This is an informational message displayed when PARTIAL option of DURATION option was specified on the BACKUP command and backup could not be completed within the given duration time.

Action: Run BACKUP command to backup cancelled files, or let the next backup window backup the cancelled files. It should be noted that the files that were skipped in the current job will be given preference to other files for next the BACKUP command with DURATION option.

RMAN-06906: backup of control file was cancelled

Cause: This is an informational message displayed when PARTIAL option of DURATION option was specified on the BACKUP command and backup could not be completed within the given duration time.

Action: Run BACKUP command to backup cancelled files, or let the next backup window backup the cancelled files. It should be noted that the files that were skipped in the current job will be given preference to other files for next the BACKUP command with DURATION option.

RMAN-06907: MINIMIZE LOAD option not allowed for the specified input files

Cause: This option was specified in a backup command specification for BACKUP BACKUPSET or BACKUP CURRENT CONTROLFILE command.

Action: Remove the MINIMIZE LOAD option and retry the command.

RMAN-06908: WARNING: operation will not run in parallel on the allocated channels

Cause: RMAN allocated more than one channel for a job, but the job will not run in parallel on these channels because parallelism require Enterprise Edition.

Action: None

RMAN-06909: WARNING: parallelism require Enterprise Edition

Cause: RMAN allocated more than one channel for a job, but the job will not run in parallel on these channels because parallelism require Enterprise Edition.

Action: None

RMAN-06910: can not invoke parallel recovery for test recovery

Cause: Recover database was called with TEST and PARALLEL option

Action: Call recover database with either just the TEST or PARALLEL option

RMAN-06911: only one PARALLEL or NOPARALLEL clause may be specified

Cause: Recover database was called with PARALLEL and NOPARALLEL option

Action: Call recover database with either just the PARALLEL or NOPARALLEL option.

RMAN-06912: backup of spfile was cancelled

Cause: This is an informational message displayed when PARTIAL option of DURATION option was specified on the BACKUP command and backup could not be completed within the given duration time.

Action: Run BACKUP command to backup cancelled files, or let the next backup window backup the cancelled files. It should be noted that the files that were skipped in the current job will be given preference to other files for next the BACKUP command with DURATION option.

RMAN-06913: validate cancelled because there are no files to validate

Cause: All files for this validate command were skipped, therefore no files to validate.

Action: This message is informational only.

RMAN-06914: BLOCK <varname>string</varname> must be greater or equal to BLOCK <varname>string</varname>

Cause: The value of TO block number was less than the value of from block number.

Action: Increase the value of TO BLOCK past the value of from BLOCK and retry the command.

RMAN-06915: restore point <varname>string</varname> already exists

Cause: The specified restore point already exists on this database.

Action: Use LIST RESTORE POINT to see existing names and retry the command with a unique restore point name.

RMAN-06916: RECOVER DATABASE required for SNAPSHOT TIME recovery

Cause: RECOVER DATABASE must be used for SNAPSHOT TIME recovery.

Action: Use the RECOVER DATABASE command to perform the recovery.

RMAN-06917: skipping backup sets; RECOVERY FILES, RECOVERY AREA or DB_RECOVERY_FILE_DEST option cannot validate backup set

Cause: The RECOVERY FILES, RECOVERY AREA or DB_RECOVERY_FILE_DEST was specified in VALIDATE command to validate backup set. This is not supported.

Action: To validate a backup set, use the VALIDATE BACKUPSET or RESTORE VALIDATE command.

RMAN-06918: WARNING: allocated SBT channel to the Backup Appliance in NOCATALOG mode

Cause: The Backup Appliance might have run out of resources because congestion control could not be enabled in NOCATALOG mode.

Action: Use CATALOG mode to connect RMAN to a Backup Appliance instance.

RMAN-06919: command not allowed when the Backup Appliance is running

Cause: The command specified could not be used when the Backup Appliance was running.

Action: Shut down the Backup Appliance and retry the command.

RMAN-06920: database <varname>string</varname> is not open read-only

Cause: CONVERT DATABASE attempted on a database that was not open read-only.

Action: Open the database in read-only mode and retry the operation.

RMAN-06921: Convert database check failed

Cause: This database could not be transported because DBMS_TDB.CHECK_DB returned FALSE.

Action: None

RMAN-06922: External table <varname>string</varname>.<varname>string</varname> found in the database

Cause: An external table was found in the database.

Action: Redefine the table in the transported database.

RMAN-06923: Directory <varname>string</varname>.<varname>string</varname> found in the database

Cause: A directory object was found in the database.

Action: Redefine the directory in the transported database.

RMAN-06924: BFILE <varname>string</varname>.<varname>string</varname> found in the database

Cause: A BFILE was found in the database.

Action: Redefine the BFILE in the transported database.

RMAN-06925: BFILES are used in the system, please redefine them in the transported database

Cause: BFILES may or may not exist in the database. Automatically performed BFILE check failed because database was open read-only and could not allocate temporary space. This does not affect CONVERT DATABASE operation.

Action: Use DBMS_TDB.CHECK_EXTERNAL to perform BFILE check when the database is open in read/write mode.

RMAN-06926: User <varname>string</varname> with <varname>string</varname> privilege found in password file

Cause: Password file was used.

Action: Re-create the password file on the target platform using ORAPWD for the transported database.

RMAN-06927: Cannot specify NEW DATABASE clause more than once

Cause: NEW DATABASE clause specified more than once

Action: Remove redundant NEW DATABASE clause and retry the operation.

RMAN-06928: Cannot specify ON TARGET PLATFORM clause more than once

Cause: ON TARGET PLATFORM clause specified more than once

Action: Remove redundant ON TARGET PLATFORM clause and retry the operation.

RMAN-06929: Cannot specify TRANSPORT SCRIPT clause more than once

Cause: TRANSPORT SCRIPT clause specified more than once

Action: Remove redundant ON TARGET PLATFORM clause and retry the operation.

RMAN-06930: Cannot specify SKIP clause more than once

Cause: SKIP clause specified more than once

Action: Remove redundant SKIP clause and retry the operation.

RMAN-06931: Cannot specify FROM PLATFORM clause

Cause: CONVERT DATABASE command cannot use FROM PLATFORM clause.

Action: Change FROM PLATFORM clause and retry.

RMAN-06932: Database name '<varname>string</varname>' longer than <varname>number</varname>

Cause: The specified database name exceeded the maximum allowable database name length.

Action: Correct the database name.

RMAN-06933: Transport script name too long

Cause: The specified transport script name exceeded the maximum allowable script name length.

Action: Correct the script name.

RMAN-06934: Format string too long

Cause: The specified format string exceeded the maximum allowable format string length.

Action: Correct the format string.

RMAN-06935: Convert script name too long

Cause: The specified convert script name exceeded the maximum allowable script name length.

Action: Correct the script name.

RMAN-06936: at least 1 channel of TYPE DISK must be allocated to use CONVERT

Cause: A channel of TYPE DISK was not allocated.

Action: Allocate a channel of TYPE DISK and reissue the command.

RMAN-06937: invalid format specifier '<varname>string</varname>'

Cause: An invalid format specifier was found in an RMAN command.

Action: Correct the format specifier and retry the command.

RMAN-06941: Database must be closed and mounted EXCLUSIVE and RESTRICTED.

Cause: DROP DATABASE was attempted while the database was open or not mounted EXCLUSIVE and RESTRICTED.

Action: Change the database state to mounted EXCLUSIVE and RESTRICTED.

RMAN-06942: OPTION <varname>number</varname> is invalid; OPTION must be between <varname>string</varname> and <varname>string</varname>

Cause: An invalid OPTION was used.

Action: Change the OPTION argument.

RMAN-06943: no automatic repair OPTION <varname>number</varname> was listed in ADVISE FAILURE

Cause: The OPTION specified was not one of the automatic repair options listed by ADVISE FAILURE or there were no options listed by the ADVISE FAILURE command.

Action: Change the OPTION argument or resubmit ADVISE FAILURE with a different set of failures.

RMAN-06944: contents of repair script:

Cause: This is an informational message only.

Action: No action is required.

RMAN-06945: no repair script present for REPAIRID <varname>string</varname>

Cause: REPAIRID option specified in the command was invalid or the repair script had been purged from Automated Diagnostic Repository.

Action: Retry REPAIR FAILURE command with a different OPTION number.

RMAN-06946: executing repair script

Cause: This is an informational message only.

Action: No action is required.

RMAN-06947: searching flashback logs for block images until SCN <varname>string</varname>

Cause: Starting the flashback log search for RECOVER...BLOCK command. The log is searched until the indicated system change number (SCN).

Action: None. This is an informational message displayed for RECOVER...BLOCK command.

RMAN-06948: searching flashback logs for block images

Cause: Starting the flashback log search for RECOVER...BLOCK command. The log is searched until the end of the log.

Action: None. This is an informational message displayed for RECOVER...BLOCK command.

RMAN-06949: finished flashback log search, restored <varname>string</varname> blocks

Cause: Flashback log search finished for RECOVER...BLOCK command.

Action: None. This is an informational message displayed for RECOVER...BLOCK command.

RMAN-06950: invalid validate option specified: <varname>string</varname>

Cause: The specified object was invalid with VALIDATE command.

Action: Delete the invalid operand.

RMAN-06951: repair failure complete

Cause: This is an informational message only.

Action: No action is required.

RMAN-06952: database needs to be restarted

Cause: The target database control file was missing.

Action: Restart the instance and repair the database.

RMAN-06953: no automatic repairs were listed by ADVISE FAILURE

Cause: There were no automatic repairs listed by the ADVISE FAILURE command.

Action: Choose a different failure, submit ADVISE FAILURE command, and then submit REPAIR FAILURE command.

RMAN-06954: REPAIR command must be preceded by ADVISE command in same session

Cause: The ADVISE command was not issued in the same session as the REPAIR command.

Action: Submit ADVISE command and then submit the REPAIR command in same session.

RMAN-06955: Network copies are only supported for nonsection image copies.

Cause: An attempt was made to specify BACKUP AUXILIARY FORMAT without specifying the AS COPY clause. A network copy is only supported with an image copy without sections.

Action: Seek an alternate method of copying the desired files.

RMAN-06956: create datafile failed; retry after removing <varname>string</varname> from OS

Cause: An attempt was made to re-create a database file. This attempt failed.

Action: If the indicated file already exists, remove the file from operating system and retry the RMAN command.

RMAN-06957: finished standby search, restored <varname>string</varname> blocks

Cause: Standby search finished for RECOVER...BLOCK command.

Action: None. This is an informational message displayed for RECOVER...BLOCK command.

RMAN-06958: Executing: <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-06959: WARNING: repair completed but could not verify that failures were fixed by it

Cause: RMAN repair command successfully completed but could not check if the failures were fixed.

Action: Use LIST FAILURE command to verify repair results.

RMAN-06960: EXPDP> <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-06961: IMPDP> <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-06962: Error received during export of metadata

Cause: Data Pump could not perform export of tablespace metadata.

Action: See accompanying datapump messages indicating the cause of the error.

RMAN-06963: Error received during import of metadata

Cause: Data Pump could not perform import of tablespace metadata.

Action: See accompanying datapump messages indicating the cause of the error.

RMAN-06964: option <varname>string</varname> cannot be used with <varname>string</varname>

Cause: Incompatible options were specified that caused the command to fail.

Action: Remove one of the options from the command and retry.

RMAN-06965: Datapump job has stopped

Cause: A Data Pump error has caused the job to stop.

Action: See accompanying datapump messages or look for a Data Pump trace file for the cause of the error.

RMAN-06966: Invalid release number <varname>string</varname>

Cause: An incorrectly formatted release number was specified.

Action: Specify a valid release number in n.n.n.n.n format.

RMAN-06967: finished primary search, recovered <varname>string</varname> blocks

Cause: Primary Database search finished for RECOVER...BLOCK command.

Action: None. This is an informational message displayed for RECOVER...BLOCK command.

RMAN-06968: duplicate DUMP FILE specification

Cause: DUMP FILE specification already encountered for this command.

Action: Remove duplicate DUMP FILE specification and retry the command.

RMAN-06969: duplicate DATAPUMP specification

Cause: DATAPUMP specification already encountered for this command.

Action: Remove duplicate DATAPUMP specification and retry the command.

RMAN-06970: NEWNAME '<varname>string</varname>' for database must include %<varname>number</varname> or %%U format

Cause: The newname in SET NEWNAME FOR DATABASE did not include a format specifier to produce different newnames for the datafiles.

Action: Include %f or %U in the newname or use SET NEWNAME FOR DATABASE TO NEW to ensure datafiles get different datafile names.

RMAN-06971: NEWNAME '<varname>string</varname>' for tablespace must include %<varname>number</varname> or %%U format

Cause: The newname in SET NEWNAME FOR TABLESPACE did not include a format specifier to produce different newnames for the datafiles.

Action: Include %f or %U in the newname or use SET NEWNAME FOR TABLESPACE ... TO NEW to ensure datafiles get different datafile names.

RMAN-06980: The following errors need to be fixed before performing this command

Cause: The tablespaces failed validation by DBMS_TTS.TRANSPORT_SET_CHECK.

Action: Fix accompanying violations before attempting the command again.

RMAN-06981: Violation: <varname>string</varname>

Cause: This message was issued to show a violation obtained from the DBMS_TTS.TRANSPORT_SET_CHECK.

Action: Fix violation before attempting the command again.

RMAN-06982: SQL command with length of <varname>string</varname> exceeds maximum length of <varname>string</varname>

Cause: The SQL command issued exceeded the maximum allowed length.

Action: Retry the command removing unnecessary spaces or use a shorter command.

RMAN-06983: unsupported data type <varname>string</varname> in column <varname>string</varname> for select

Cause: The select list included an unsupported data type. Not all SQL data types are supported by RMAN. Only simple data types are supported.

Action: Remove the column from select list or use a conversion function to change it to a simple data type.

RMAN-06985: \n<varname>string</varname> rows selected

Cause: This is an informational message only.

Action: No action is required.

RMAN-06986: Statement processed

Cause: This is an informational message only.

Action: No action is required.

RMAN-06987: NUMWIDTH option <varname>string</varname> out of range (<varname>number</varname> through <varname>number</varname>)

Cause: Value for NUMWIDTH option was out of the specified range.

Action: Check the limits of the option and enter a value that is within the range.

RMAN-06988: Only SELECT statements are supported for CATALOG modifier

Cause: SQL CATALOG was specified for a non-SELECT statement.

Action: Do not specify CATALOG or change the statement to be a SELECT statement.

RMAN-06989: \nno rows selected

Cause: This is an informational message only.

Action: No action is required.

RMAN-06990: Error in select list

Cause: The specified select list could not be processed.

Action: See accompanying errors for corrective action.

RMAN-06991: Name Null? Type

Cause: This is an informational message only.

Action: No action is required.

RMAN-06992: -----

Cause: This is an informational message only.

Action: No action is required.

RMAN-06993: LONG option <varname>string</varname> out of range (<varname>number</varname> through <varname>number</varname>)

Cause: Value for LONG option was out of the specified range.

Action: Check the limits of the option and enter a value that is within the range.

RMAN-07000: List of SPFILE Backups

Cause: This message is issued in response to a LIST BACKUP OF SPFILE command.

Action: No action is required.

RMAN-07025: <varname>string</varname> is not supported for foreign archived log

Cause: The specified option was not supported for foreign archived log.

Action: Do not use the specified command for foreign archived log.

RMAN-07200: no failures found that match specification

Cause: A failure specifier did not match any failures in the Automated Diagnostic Repository.

Action: Resubmit the command with a different failure specifier. You can use the LIST FAILURE ALL command in Recovery Manager to display all failures known to RMAN.

RMAN-07207: changed <varname>string</varname> failures to HIGH priority

Cause: This is an informational message only.

Action: No action is required.

RMAN-07208: changed <varname>string</varname> failures to LOW priority

Cause: This is an informational message only.

Action: No action is required.

RMAN-07209: closed <varname>string</varname> failures

Cause: This is an informational message only.

Action: No action is required.

RMAN-07210: new failures after most recent LIST FAILURE command

Cause: New failures were found since last LIST FAILURE command in this RMAN session.

Action: No action is required. This is an informational message only.

RMAN-07211: failure option not specified

Cause: ALL, CRITICAL, HIGH, LOW, or list of failure numbers was not specified.

Action: Specify a failure option and resubmit the command.

RMAN-07212: skipping failure <varname>string</varname> because it was CLOSED

Cause: The specified failure has been already closed, so ADVISE FAILURE or CHANGE FAILURE cannot be executed on this failure.

Action: This is an informational message only. No action is required.

RMAN-07213: Mandatory Manual Actions

Cause: This is an informational message only.

Action: No action is required.

RMAN-07215: Automated Repair Options

Cause: This is an informational message only.

Action: No action is required.

RMAN-07220: no manual actions available

Cause: This is an informational message only.

Action: No action is required.

RMAN-07222: =====

Cause: This is an informational message only.

Action: No action is required.

RMAN-07251: Repair script: <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-07252: =====

Cause: This is an informational message only.

Action: No action is required.

RMAN-07253: =====

Cause: This is an informational message only.

Action: No action is required.

RMAN-07255: priority change for failure <varname>string</varname> failed

Cause: An attempt was made to change the priority of a child failure.

Action: Specify the parent failure ID to change the child failure.

RMAN-07256: cannot change priority of child failure

Cause: An attempt was made to change the priority of child failure.

Action: This message should be followed by one or more 7255 messages.

RMAN-07259: <varname>string</varname> critical failures exist; cannot exclude from ADVISE FAILURE

Cause: ADVISE FAILURE was executed for HIGH or LOW priority failures when CRITICAL failures existed.

Action: Execute ADVISE FAILURE with the CRITICAL or ALL options.

RMAN-07262: no automatic repair options available

Cause: This is an informational message only.

Action: No action is required.

RMAN-07263: Database Role: <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-07500: searching for all files that match the pattern <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-07501: searching for all files in the recovery area

Cause: This is an informational message only.

Action: No action is required.

RMAN-07502: List of Files Unknown to the Database

Cause: This message is issued in response to a CATALOG command.

Action: No action is required.

RMAN-07505: no files found to be unknown to the database

Cause: This is an informational message displayed by the CATALOG command. The command either found no files, or all files that matched the specified search pattern were already present in the target database control file.

Action: No action is required.

RMAN-07507: cataloging files...

Cause: This is an informational message only.

Action: No action is required.

RMAN-07508: cataloging done

Cause: This is an informational message only.

Action: No action is required.

RMAN-07509: List of Cataloged Files

Cause: This message is issued in response to a CATALOG command.

Action: No action is required.

RMAN-07513: List of Files Which Were Not Cataloged

Cause: This message is issued in response to a CATALOG command.

Action: No action is required.

RMAN-07514: =====

Cause: This is an informational message only.

Action: No action is required.

RMAN-07515: File Name: <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-07516: Reason: Error reading

Cause: This is an informational message only.

Action: No action is required.

RMAN-07517: Reason: The file header is corrupted

Cause: Either the file is not an Oracle file or the file header is corrupted.

Action: Delete the file using OS utility.

**RMAN-07518: Reason: Foreign database file DBID: <varname>string</varname>
Database Name: <varname>string</varname>**

Cause: This is an informational message only.

Action: No action is required.

RMAN-07519: Reason: Error while cataloging. See alert.log.

Cause: This is an informational message only.

Action: No action is required.

RMAN-07520: Reason: Data pump dump file

Cause: This is an informational message only.

Action: No action is required.

**RMAN-07521: cannot create recovery catalog in database version
<varname>string</varname>; version <varname>string</varname> required**

Cause: An attempt was made to use a version of the recovery catalog schema that was incompatible with the version of the database.

Action: Upgrade the catalog database to at least the required version or install the catalog schema in a different database which is of at least the required version.

**RMAN-07522: CREATE TYPE privilege must be granted to user
<varname>string</varname>**

Cause: The CREATE CATALOG or UPGRADE CATALOG command was used, but the USERID that was supplied in the CATALOG connect string does not have the CREATE TYPE privilege granted.

Action: Grant CREATE TYPE privilege to the recovery catalog owner.

RMAN-07523: List of files in Recovery Area not managed by the database

Cause: This message was issued in response to a CATALOG RECOVERY AREA command.

Action: No action is required.

RMAN-07524:

=====

Cause: This is an informational message only.

Action: No action is required.

RMAN-07525: Reason: File is not a supported file type in Recovery Area

Cause: This message should be accompanied by other message(s) indicating the name of file that was not supported in recovery area. Any file other than current control file, online log, archived log, RMAN backups and flashback log is not supported in recovery area. This is an informational message only.

Action: No action is required.

RMAN-07526: Reason: File is not an Oracle Managed File

Cause: This message should be accompanied by other message(s) indicating the name of file that was not a oracle managed file. This is an informational message only.

Action: No action is required.

RMAN-07527: Reason: File was not created using DB_RECOVERY_FILE_DEST initialization parameter

Cause: This message should be accompanied by other message(s) indicating the name of file that was not created using DB_RECOVERY_FILE_DEST initialization parameter. One of the following scenarios caused this error: 1) This is an archived log file and was created when the LOG_ARCHIVE_DEST_n initialization parameter was set explicitly to recovery area location. For example, LOG_ARCHIVE_DEST_1='location=+FRA' where '+FRA' was also your DB_RECOVERY_FILE_DEST value. 2) This is an RMAN backup file and was created in a recovery area using the FORMAT option of the BACKUP command. 3) This is an online log file or current control file and was created prior to setting the recovery area. 4) This file fits none of the above scenarios and is not supported by the recovery area.

Action: All of following actions will resolve future occurrences of this error: 1) To create archived logs in recovery area, set the LOG_ARCHIVE_DEST_n initialization parameter to 'location=USE_DB_RECOVERY_FILE_DEST'. Do not explicitly set the LOG_ARCHIVE_DEST_n initialization parameter to a recovery area location. 2) To create RMAN backups in recovery area, do not use the FORMAT option of the BACKUP command. All of following actions will resolve current problem: 1) If this is an archived log file or an RMAN backup file, use the CATALOG command to re-catalog the files. 2) If this is an online log file or a current control file to be managed by the recovery area, re-create the file using the DB_RECOVERY_FILE_DEST initialization parameter.

RMAN-07528: number of files not managed by recovery area is <varname>string</varname>, totaling <varname>string</varname>

Cause: This message should be accompanied by other message(s) indicating the list of files. Either the files listed are not known to the database or not managed by recovery area. The number and size of the files are shown. This is an informational message only.

Action: No action is required.

RMAN-07529: Reason: catalog is not supported for this file type

Cause: The CATALOG command encountered one or more files of types that cannot be cataloged. These file types include online redo logs, flashback logs, block change tracking files, and data pump files. This message will be accompanied by other messages indicating the names of the file's that could not be cataloged.

Action: No action is required.

RMAN-07530: Reason: This file type is not requested for cataloging

Cause: This is an informational message only.

Action: No action is required.

RMAN-07531: skipping datafile <varname>number</varname>; already restored to SCN <varname>string</varname>

Cause: Recovery Manager determined that this file was already restored to the specified SCN.

Action: No action required, this is an informational message only.

RMAN-07532: skipping datafilecopy <varname>string</varname>; already recovered to SCN <varname>string</varname>

Cause: Recovery Manager determined that this datafile copy was already recovered to the specified SCN.

Action: No action required, this is an informational message only.

RMAN-07535: waiting for ASM instance to release file state object

Cause: This is an informational message only.

Action: No action is required.

RMAN-07536: command not allowed when connected to a Pluggable Database

Cause: A command was attempted that can only be performed in the root container.

Action: Connect to the root container and retry the command.

RMAN-07537: command only allowed in a container database

Cause: A command was attempted that is only allowed in a CDB.

Action: Connect to a CDB and retry the command.

RMAN-07538: Pluggable Database qualifier not allowed when connected to a Pluggable Database

Cause: A command was attempted with Pluggable Database name qualifier. This is not allowed when connected to a Pluggable Database.

Action: Connect to the root container or remove the Pluggable Database qualifier and retry the command.

RMAN-07539: insufficient privileges to create or upgrade the catalog schema

Cause: The user specified in the connect string of the CREATE CATALOG or UPGRADE CATALOG command did not have the privileges required to create or upgrade the catalog schema.

Action: Execute '?/rdbms/admin/dbmsrmansys.sql' after connecting to a catalog database as SYS to grant the required privileges to run RMAN CREATE or UPGRADE command.

RMAN-07540: Cleanup is required for the VPC user schema

Cause: The VPC user specified in the connect string does have extra privileges granted.

Action: Execute '?/rdbms/admin/dbmsrmanvpc.sql' after connecting to a catalog database as SYS to cleanup VPC users schemas.

RMAN-07541: checkpoint of the control file is more recent than the last archived log

Cause: The checkpoint system change number (SCN) of the control file in the backup was higher than the SCN of the most recent archived log. THE RMAN DUPLICATE command will use the checkpoint SCN of the most recent backup control file as the UNTIL SCN value during restore and recovery.

Action: This is an informational message only.

RMAN-07999: Backup Appliance catalog must be upgraded using Backup Appliance RMAN

Cause: Backup Appliance catalog could not be upgraded using this RMAN executable.

Action: Use RMAN executable from Backup Appliance shiphome and upgrade the recovery catalog schema.

RMAN-08000: channel <varname>string</varname>: copied datafile <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08001: restore not complete

Cause: All of the backup pieces have been successfully applied, but DBMS_BACKUP_RESTORE package indicates that the restore conversation is not complete. This usually means that the backup set contained corrupt data.

Action: Restore the files from a different backup set, if possible. The Recovery Manager CHANGE BACKUPPIECE UNAVAILABLE can be used to prevent Recovery Manager from attempting to restore from the corrupt backup piece(s).

RMAN-08002: starting full resync of recovery catalog

Cause: This is an informational message only.

Action: No action is required.

RMAN-08003: channel <varname>string</varname>: reading from backup piece <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08004: full resync complete

Cause: This is an informational message only.

Action: No action is required.

RMAN-08005: new incarnation of database registered in recovery catalog

Cause: This is an informational message only.

Action: No action is required.

RMAN-08006: database registered in recovery catalog

Cause: This is an informational message only.

Action: No action is required.

RMAN-08007: channel <varname>string</varname>: copied datafile copy of datafile <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08008: channel <varname>string</varname>: starting full datafile backup set

Cause: This is an informational message only.

Action: No action is required.

RMAN-08009: channel <varname>string</varname>: starting archived log backup set

Cause: This is an informational message only.

Action: No action is required.

RMAN-08010: channel <varname>string</varname>: specifying datafile(s) in backup set

Cause: This is an informational message only.

Action: No action is required.

RMAN-08011: including current control file in backup set

Cause: This is an informational message only.

Action: No action is required.

RMAN-08012: including control file copy in backup set

Cause: This is an informational message only.

Action: No action is required.

**RMAN-08013: channel <varname>string</varname>: backup piece
<varname>string</varname>**

Cause: This is an informational message only.

Action: No action is required.

**RMAN-08014: channel <varname>string</varname>: specifying archived log(s)
in backup set**

Cause: This is an informational message only.

Action: No action is required.

RMAN-08015: datafile <varname>string</varname> switched to datafile copy

Cause: This is an informational message only.

Action: No action is required.

**RMAN-08016: channel <varname>string</varname>: starting datafile backup set
restore**

Cause: This is an informational message only.

Action: No action is required.

**RMAN-08017: channel <varname>string</varname>: starting archived log
restore to default destination**

Cause: This is an informational message only.

Action: No action is required.

**RMAN-08018: channel <varname>string</varname>: starting archived log
restore to user-specified destination**

Cause: This is an informational message only.

Action: No action is required.

**RMAN-08019: channel <varname>string</varname>: restoring datafile
<varname>string</varname>**

Cause: This is an informational message only.

Action: No action is required.

RMAN-08020: including standby control file in backup set

Cause: This is an informational message only.

Action: No action is required.

RMAN-08021: channel <varname>string</varname>: restoring control file

Cause: This is an informational message only.

Action: No action is required.

RMAN-08022: channel <varname>string</varname>: restoring archived log

Cause: This is an informational message only.

Action: No action is required.

**RMAN-08023: channel <varname>string</varname>: restored backup piece
<varname>string</varname>**

Cause: This is an informational message only.

Action: No action is required.

RMAN-08025: channel <varname>string</varname>: copied control file copy

Cause: This is an informational message only.

Action: No action is required.

RMAN-08026: channel <varname>string</varname>: copied archived log

Cause: This is an informational message only.

Action: No action is required.

RMAN-08027: channel <varname>string</varname>: copied current control file

Cause: This is an informational message only.

Action: No action is required.

**RMAN-08028: channel <varname>string</varname>: copy current control file
failed**

Cause: This is an informational message only.

Action: No action is required.

**RMAN-08029: snapshot control file name set to default value:
<varname>string</varname>**

Cause: This is an informational message only.

Action: No action is required.

RMAN-08030: allocated channel: <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08031: released channel: <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

**RMAN-08032: channel <varname>string</varname>: RECID <varname>string</
varname> STAMP <varname>string</varname> does not match recovery
catalog**

Cause: The record that identifies the source file for a copy or backup database does not contain the same data as is stored in the recovery catalog.

Action: Perform a full resync and retry the operation. If the problem persists, then contact Oracle.

RMAN-08033: channel <varname>string</varname>: including datafile copy of datafile <varname>string</varname> in backup set

Cause: This is an informational message only.

Action: No action is required.

RMAN-08034: full resync skipped, target database not mounted

Cause: This is an informational message only.

Action: No action is required.

RMAN-08035: partial resync skipped, target database not mounted

Cause: This is an informational message only.

Action: No action is required.

RMAN-08036: channel <varname>string</varname>: could not create control file record for <varname>string</varname> <varname>string</varname>

Cause: The record identifying the named file was no longer present in the target database control file, and repeated attempts to inspect the file were unsuccessful in creating the record. This could be because the circular-reuse section of the control file which holds information about the specified type of file is too small and there is other database activity which is causing the record to be overwritten before it can be used.

Action: Try increasing either the size of the control file circular-reuse section for this file type (datafile copy or archived log, as indicated in the error message, or the CONTROL_FILE_RECORD_KEEP_TIME initialization parameter. If neither of those remedies works then contact Oracle.

RMAN-08037: channel <varname>string</varname>: unexpected validation return code <varname>string</varname>

Cause: This is an internal error that should never be issued.

Action: Contact Oracle Support.

RMAN-08038: channel <varname>string</varname>: starting piece <varname>string</varname> at <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08039: channel <varname>string</varname>: starting incremental datafile backup set restore

Cause: This is an informational message only.

Action: No action is required.

RMAN-08040: full resync skipped, control file is not current or backup

Cause: This is an informational message only.

Action: No action is required.

RMAN-08041: partial resync skipped, control file is not current or backup

Cause: This is an informational message only.

Action: No action is required.

RMAN-08042: channel <varname>string</varname>: copied standby control file

Cause: This is an informational message only.

Action: No action is required.

RMAN-08043: channel <varname>string</varname>: copy standby control file failed

Cause: This is an informational message only.

Action: No action is required.

RMAN-08044: channel <varname>string</varname>: finished piece <varname>string</varname> at <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08045: channel <varname>string</varname>: finished piece <varname>string</varname> at <varname>string</varname> with <varname>string</varname> copies

Cause: This is an informational message only.

Action: No action is required.

RMAN-08046: channel <varname>string</varname>: starting compressed full datafile backup set

Cause: This is an informational message only.

Action: No action is required.

RMAN-08047: channel <varname>string</varname>: starting compressed incremental level <varname>string</varname> datafile backup set

Cause: This is an informational message only.

Action: No action is required.

RMAN-08048: channel <varname>string</varname>: starting incremental level <varname>string</varname> datafile backup set

Cause: This is an informational message only.

Action: No action is required.

RMAN-08049: channel <varname>string</varname>: starting compressed archived log backup set

Cause: This is an informational message only.

Action: No action is required.

RMAN-08050: cataloged datafile copy

Cause: This is an informational message only.

Action: No action is required.

RMAN-08051: cataloged archived log

Cause: This is an informational message only.

Action: No action is required.

RMAN-08052: cataloged control file copy

Cause: This is an informational message only.

Action: No action is required.

RMAN-08053: channel <varname>string</varname>: finished piece <varname>string</varname> at <varname>string</varname> with <varname>string</varname> copies and tag <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08054: starting media recovery

Cause: This is an informational message only.

Action: No action is required.

RMAN-08056: skipping datafile <varname>string</varname> because it has not changed

Cause: The specified datafile has not had its checkpoint advanced since the previous backup, therefore it does not need a new incremental backup.

Action: This is an informational message only.

RMAN-08057: channel <varname>string</varname>: backup cancelled because all files were skipped

Cause: All datafiles for this backup were skipped, therefore no backup is created.

Action: This is an informational message only.

RMAN-08058: replicating control file

Cause: This is an informational message only.

Action: No action is required.

RMAN-08059: media recovery failed

Cause: This is an informational message only.

Action: No action is required.

RMAN-08060: unable to find archived log

Cause: This is an informational message only.

Action: No action is required.

RMAN-08061: WARNING: change failure ID <varname>string</varname> failed due to error ORA-<varname>string</varname>

Cause: CHANGE FAILURE for the indicated failure ID encountered an error.

Action: See the indicated ORA error message for the cause of the error.

RMAN-08062: WARNING: cannot change priority of a critical failure <varname>string</varname>

Cause: An attempt was made to change priority of a failure with CRITICAL priority.

Action: No action is required.

RMAN-08063: Recovery catalog is down or not connected to catalog, trying to reconnect.

Cause: This is an informational message only.

Action: No action is required.

RMAN-08064: Reconnection with the recovery catalog is successful.

Cause: This is an informational message only.

Action: No action is required.

RMAN-08065: WARNING: Reconnection with the recovery catalog failed, switching to nocatalog mode.

Cause: RMAN failed to reconnect to the recovery catalog and switched to nocatalog mode.

Action: No action is required.

RMAN-08066: database reset to incarnation <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08070: deleted datafile copy

Cause: This is an informational message only.

Action: No action is required.

RMAN-08071: channel <varname>string</varname>: deleting archived log(s)

Cause: This is an informational message only.

Action: No action is required.

RMAN-08072: deleted control file copy

Cause: This is an informational message only.

Action: No action is required.

RMAN-08073: deleted backup piece

Cause: This is an informational message only.

Action: No action is required.

RMAN-08074: crosschecked backup piece: found to be '<varname>string</varname>'

Cause: This is an informational message only.

Action: No action is required.

RMAN-08085: created script <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08086: replaced script <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08087: channel <varname>string</varname>: started backup set validation

Cause: This is an informational message only.

Action: No action is required.

RMAN-08088: applied offline range to datafile <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

Cause: This is an informational message only.

Action: No action is required.

RMAN-08094: channel <varname>string</varname>: specifying datafile(s) for proxy restore

Cause: This is an informational message only.

Action: No action is required.

RMAN-08096: channel <varname>string</varname>: starting validation of datafile backup set

Cause: This is an informational message only.

Action: No action is required.

RMAN-08097: channel <varname>string</varname>: starting validation of archived log backup set

Cause: This is an informational message only.

Action: No action is required.

RMAN-08099: specifying standby control file for proxy backup

Cause: This is an informational message only.

Action: No action is required.

RMAN-08100: channel <varname>string</varname>: starting proxy validation

Cause: This is an informational message only.

Action: No action is required.

RMAN-08101: channel <varname>string</varname>: proxy validation complete

Cause: This is an informational message only.

Action: No action is required.

**RMAN-08102: channel <varname>string</varname>: located backup piece:
<varname>string</varname>**

Cause: This is an informational message only.

Action: No action is required.

**RMAN-08103: channel <varname>string</varname>: could not locate backup
piece: <varname>string</varname>**

Cause: This is an informational message only.

Action: No action is required.

**RMAN-08104: channel <varname>string</varname>: input backup set:
count=<varname>string</varname>, stamp=<varname>string</varname>,
piece=<varname>string</varname>**

Cause: This is an informational message only.

Action: No action is required.

**RMAN-08105: channel <varname>string</varname>: backup cancelled because
no pieces were found**

Cause: All backup sets specified has no pieces. Therefore, no backup set is created.

Action: This is an informational message only.

RMAN-08106: channel <varname>string</varname>: restoring block(s)

Cause: This is an informational message only.

Action: No action is required.

**RMAN-08107: skipping inaccessible backup set count=<varname>string</
varname> STAMP=<varname>string</varname>**

Cause: The indicated backup set will not be backed up because one or more pieces of the backup set could not be read, and the SKIP INACCESSIBLE option was specified.

Action: No action is required.

**RMAN-08108: channel <varname>string</varname>: specifying block(s) to
restore from backup set**

Cause: This is an informational message only.

Action: No action is required.

RMAN-08109: channel <varname>string</varname>: restored block(s) from backup piece <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08110: failover to next copy of backup piece

Cause: This is an informational message only.

Action: No action is required.

RMAN-08111: some blocks not recovered: See trace file for details

Cause: Some blocks not recovered due to errors.

Action: See trace file for details of the problem.

RMAN-08112: archived log failover was done on <varname>string</varname>, check alert log for more info

Cause: This is an informational message to indicate the server found a corrupted block in an archived log and had to switch to another copy of the same archived log in an alternate archived log destination to get corresponding un-corrupted block.

Action: If backup is done with delete input option, nothing needs to be done. Otherwise delete the archived log that has corrupted block(s) as recovery on applying this log would fail. Alert log contains name of the log that has corrupted block(s).

RMAN-08113: including current SPFILE in backup set

Cause: This is an informational message only.

Action: No action is required.

RMAN-08114: channel <varname>string</varname>: restoring SPFILE to PFILE

Cause: This is an informational message only.

Action: No action is required.

RMAN-08115: channel <varname>string</varname>: restoring SPFILE

Cause: This is an informational message only.

Action: No action is required.

RMAN-08116: output file name is original SPFILE location

Cause: This is an informational message only.

Action: No action is required.

RMAN-08117: channel <varname>string</varname>: the AUTOBACKUP does not contain an SPFILE

Cause: The requested AUTOBACKUP does not contain a SPFILE. This is because the instance was not started with a SPFILE when the AUTOBACKUP was created.

Action: No action is required. RMAN will try three older AUTOBACKUPS before signaling ORA-19687.

RMAN-08118: WARNING: could not delete the following archived redo log

Cause: The routine deleteArchivedLog() could not delete an archived redo log on the target instance.

Action: Check the accompanying file specification and the associated error messages. The file specification indicates what archived redo log on the target instance RMAN was trying to delete and the error messages indicate why RMAN was unable to delete it. Resolve the problem by first confirming that the archived redo log in question has been backed up, do the deletion manually, and then do a crosscheck so that RMAN is aware of the deletion.

RMAN-08119: skipping backup piece handle <varname>string</varname>; already exists

Cause: A BACKUP command does not need to backup control file AUTOBACKUP pieces, because they already exists.

Action: This is an informational message, no action is required.

RMAN-08120: WARNING: archived log not deleted, not yet applied by standby

Cause: This is an informational message to alert the user that an archived log that should have been deleted was not as it has not been applied to the standby database. The next message identifies the archived log

Action: Archivelog can be deleted after it has been applied to standby database.

RMAN-08121: keep attributes for the backup are deleted

Cause: This is an informational message only.

Action: No action is required.

RMAN-08122: keep attributes for the backup are changed

Cause: This is an informational message only.

Action: No action is required.

RMAN-08123: keep attributes for the datafile/control file copy are deleted

Cause: This is an informational message only.

Action: No action is required.

RMAN-08124: keep attributes for the datafile/control file copy are changed

Cause: This is an informational message only.

Action: No action is required.

RMAN-08125: keep attributes for the proxy copy are deleted

Cause: This is an informational message only.

Action: No action is required.

RMAN-08126: keep attributes for the proxy copy are changed

Cause: This is an informational message only.

Action: No action is required.

RMAN-08127: cataloged backup piece

Cause: This is an informational message only.

Action: No action is required.

RMAN-08128: uncataloged backup piece

Cause: This is an informational message only.

Action: No action is required.

**RMAN-08129: failover to piece handle=<varname>string</varname>
tag=<varname>string</varname>**

Cause: This is an informational message to indicate the server found a corrupted block in a piece and had to switch to another copy of piece to get corresponding un-corrupted block.

Action: See alert log for information on corruption block(s) and the name of the piece that has the corrupted block(s).

RMAN-08130: failover to copy on device type <varname>string</varname>

Cause: This is an informational message to indicate the RMAN could not successfully restore the database using the specified backups. An attempt was made to restore the datafiles/archived logs/ control file/SPFILE using the same backup set on a different device type.

Action: See accompanying additional error messages indicating the cause of the failover.

RMAN-08131: channel <varname>string</varname>: specifying datafile copies to recover

Cause: This is an informational message only.

Action: No action is required.

RMAN-08132: WARNING: cannot update recovery area reclaimable file list

Cause: This error should be accompanied by other errors giving the cause of failure to update reclaimable file list.

Action: Check the accompanying error.

RMAN-08133: channel <varname>string</varname>: the AUTOBACKUP does not contain a standby control file.

Cause: The requested AUTOBACKUP did not contain a standby control file.

Action: No action is required, RMAN will try three older AUTOBACKUPS before signaling ORA-19687.

RMAN-08135: some corrupt blocks found during conversion of file <varname>string</varname>

Cause: While converting the specified file from one platform to another, some corrupt blocks were discovered in the specified file. Details about the corruption have been written to a server trace file.

Action: If these corrupt blocks are unexpected, you may be able to use Block Media Recovery at the source database to fix the problem, then re-convert the files.

RMAN-08136: channel <varname>string</varname>: deleting incremental backup(s)

Cause: This is an informational message only.

Action: No Action Required.

RMAN-08137: WARNING: archived log not deleted, needed for standby or upstream capture process

Cause: An archived log that should have been deleted was not as it was required by upstream capture process or Data Guard. The next message identifies the archived log.

Action: This is an informational message. The archived log can be deleted after it is no longer needed. See the documentation for Data Guard to alter the set of active Data Guard destinations. See the documentation for Streams to alter the set of active streams.

RMAN-08138: WARNING: archived log not deleted - must create more backups

Cause: An archived log that should have been deleted was not as it did not meet the user specified archive log deletion policy of number of backups required before deleting the logs.

Action: This is an informational message. The archived log can be deleted after more backups are created to satisfy archivelog deletion policy.

RMAN-08139: WARNING: archived redo log not deleted, needed for guaranteed restore point

Cause: An archived log that should have been deleted was not because it is required for guaranteed restore point.

Action: This is an informational message. The archived redo log can be deleted after backups are created or after deleting the guaranteed restore point that requires the log.

RMAN-08140: channel <varname>string</varname>: starting validation of datafile

Cause: This is an informational message only.

Action: No action is required.

RMAN-08141: channel <varname>string</varname>: specifying datafile(s) for validation

Cause: This is an informational message only.

Action: No action is required.

RMAN-08142: including standby control file for validation

Cause: This is an informational message only.

Action: No action is required.

RMAN-08143: including current control file for validation

Cause: This is an informational message only.

Action: No action is required.

RMAN-08144: channel <varname>string</varname>: validation complete, elapsed time: <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08145: channel <varname>string</varname>: starting validation of archived log

Cause: This is an informational message only.

Action: No action is required.

RMAN-08146: channel <varname>string</varname>: specifying archived log(s) for validation

Cause: This is an informational message only.

Action: No action is required.

RMAN-08150: created global script <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08151: replaced global script <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08152: global script <varname>string</varname> written to file <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08153: deleted global script: <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08154: deleted script: <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08155: printing stored global script: <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08156: printing stored script: <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08157: script <varname>string</varname> written to file <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08158: executing script: <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08159: executing global script: <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08160: script commands will be loaded from file <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08161: contents of Memory Script:

Cause: This is an informational message only.

Action: No action is required.

RMAN-08162: executing Memory Script

Cause: This is an informational message only.

Action: No action is required.

RMAN-08163: validation succeeded for backup piece

Cause: The VALIDATE HEADER option determined that the backup piece still matches its data.

Action: None - this is an informational message.

RMAN-08164: validation succeeded for proxy copy

Cause: The VALIDATE HEADER option determined that the proxy copy still matches its data.

Action: None - this is an informational message.

RMAN-08165: could not locate proxy copy <varname>string</varname>

Cause: The specified proxy copy could not be found on proxy channel.

Action: If the proxy copy has been deleted, use the CROSSCHECK BACKUP command to correct the recovery catalog or target database control file entries.

RMAN-08166: validation succeeded for datafile copy and control file copy

Cause: The VALIDATE HEADER option discovered that the datafile copy and control file copy still matches its data in the recovery catalog or target database control file.

Action: None - this is an informational message.

RMAN-08167: WARNING: <varname>string</varname> encountered a piece that was in use

Cause: The backup piece is currently in use by another BACKUP, RESTORE or DELETE operation.

Action: Use LIST to determine if backup has been deleted. If not deleted, then check if any process is hung while accessing the piece and terminate them before retrying DELETE. If using SBT device, then check Media Manager as well. Alternatively, consider the command DELETE FORCE.

RMAN-08168: channel <varname>string</varname>: using compressed network backup set from service <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08169: channel <varname>string</varname>: using network backup set from service <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08180: channel <varname>string</varname>: restore complete, elapsed time: <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08181: media recovery complete, elapsed time: <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

Cause: This is an informational message only.

Action: No action is required.

RMAN-08183: channel <varname>string</varname>: block restore complete, elapsed time: <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08184: added tempfile <varname>string</varname> to tablespace <varname>string</varname> in control file

Cause: This is an informational message only.

Action: No action is required.

RMAN-08185: renamed tempfile <varname>string</varname> to <varname>string</varname> in control file

Cause: This is an informational message only.

Action: No action is required.

RMAN-08186: tempfile <varname>string</varname> size altered in control file

Cause: One of tempfile size attributes AUTOEXTEND, MAXSIZE, NEXTSIZE was altered. This is an informational message only.

Action: No action is required.

RMAN-08187: WARNING: media recovery until SCN <varname>string</varname> complete

Cause: Media recovery was completed until the indicated system change number (SCN) because the database was in NOARCHIVELOG mode.

Action: This is an informational message only. No action is required.

RMAN-08190: validate found one or more corrupt blocks

Cause: Backup validate found that one or more blocks were corrupt in the specified datafiles. This message should be followed by 8191 message.

Action: Repair them at your earliest convenience.

RMAN-08191: See trace file <varname>string</varname> for details

Cause: This is an informational message only.

Action: No action is required.

RMAN-08300: Run SQL script <varname>string</varname> on the target platform to create database

Cause: This is an informational message only.

Action: No action is required.

RMAN-08301: Edit init.ora file <varname>string</varname>. This PFILE will be used to create the database on the target platform

Cause: This is an informational message only.

Action: No action is required.

RMAN-08302: Run RMAN script <varname>string</varname> on target platform to convert datafiles

Cause: This is an informational message only.

Action: No action is required.

RMAN-08303: To recompile all PL/SQL modules, run utlirp.sql and utlrp.sql on the target platform

Cause: This is an informational message only.

Action: Transport script invokes utlirp.sql and utlrp.sql.

RMAN-08304: To change the internal database identifier, use DBNEWID Utility

Cause: This is an informational message only.

Action: Transport script does not invoke DBNEWID Utility automatically.

RMAN-08305: channel <varname>string</varname>: starting to check datafiles

Cause: This is an informational message only.

Action: No action is required.

RMAN-08306: channel <varname>string</varname>: datafile checking complete, elapsed time: <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08400: Running TRANSPORT_SET_CHECK on specified tablespaces

Cause: This is an informational message only.

Action: No action is required.

RMAN-08401: Cannot specify AS COPY when producing a cross-platform backup

Cause: Cross-platform backup modifier was specified and the type of backup is not a BACKUPSET.

Action: Use CONVERT command instead or specify AS BACKUPSET.

RMAN-08402: Cannot include controlfile in a cross-platform backup

Cause: Cross-platform backup modifier was specified and controlfile backup was also requested.

Action: Do not include controlfile in cross-platform backup or remove cross-platform backup modifiers.

RMAN-08403: Cannot include SPFILE in a cross-platform backup

Cause: Cross-platform backup modifier was specified and SPFILE backup was also requested.

Action: Do not include SPFILE in cross-platform backup or remove cross-platform backup modifiers.

RMAN-08404: Cannot backup a BACKUPSET in a cross-platform backup

Cause: Cross-platform backup modifier was specified and BACKUPSET clause was also requested.

Action: Do not include BACKUPSET clause in cross-platform backup or remove cross-platform backup modifiers.

RMAN-08405: Cannot backup datafile copies in a cross-platform backup

Cause: Cross-platform backup modifier was specified and datafile copies were also requested.

Action: Do not include datafile copies in cross-platform backup or remove cross-platform backup modifiers.

RMAN-08406: Cannot include archived logs in a cross-platform backup

Cause: Cross-platform backup modifier was specified and ARCHIVELOG clause was also requested.

Action: Do not include ARCHIVELOG clause in cross-platform backup or remove cross-platform backup modifiers.

RMAN-08407: Cannot translate DATAPUMP DESTINATION <varname>string</varname> (reason: <varname>string</varname>)

Cause: The specified DATAPUMP DESTINATION was invalid.

Action: Retry the command with a valid DATAPUMP DESTINATION

RMAN-08408: Cannot specify <varname>string</varname> clause when producing cross-platform backups

Cause: A clause that cannot be used with cross-platform backup was specified.

Action: Do not include the specified clause or remove cross-platform backup modifiers.

RMAN-08409: FROM PLATFORM only allowed with BACKUPPIECE clause

Cause: A BACKUP FROM PLATFORM command was specified with backup objects other than BACKUPPIECE.

Action: Remove FROM PLATFORM or specify BACKUPPIECE clause.

RMAN-08410: Cross-platform backups require the database to be open in read/write mode

Cause: Cross-platform backup modifier was specified, but the database was not open in read/write mode.

Action: Open the database in read/write mode or remove cross-platform backup modifiers.

RMAN-08411: DATAPUMP can only be used with cross-platform backup

Cause: DATAPUMP was specified but TO PLATFORM or FOR TRANSPORT clauses were not used.

Action: Do not specify DATAPUMP clause or specify either TO PLATFORM or FOR TRANSPORT.

RMAN-08412: DATAPUMP cannot be used with whole database cross-platform backup

Cause: DATAPUMP was specified together with whole database cross-platform backup.

Action: Do not specify DATAPUMP clause for a whole database cross- platform backup or specify only tablespaces.

RMAN-08413: Cross-platform backup of backup pieces requires FORMAT clause

Cause: A BACKUP BACKUPPIECE command was specified without FORMAT clause.

Action: Add a FORMAT clause to command and retry.

RMAN-08416: ALLOW INCONSISTENT allowed only for datafile backup

Cause: ALLOW INCONSISTENT was specified for a BACKUP BACKUPPIECE command.

Action: Do not specify ALLOW INCONSISTENT clause for BACKUP BACKUPPIECE command.

RMAN-08417: standby database must be open to do KEEP backups

Cause: KEEP backup was attempted on a standby database that was not open.

Action: Open the standby database in READ ONLY or READ ONLY WITH APPLY mode and retry the command.

RMAN-08418: KEEP backups are allowed only with current or standby control file

Cause: KEEP backup was attempted on a control file that was not current or standby.

Action: Convert the control file to current or standby and retry the command.

RMAN-08419: KEEP backups cannot find archivelog to make the backup consistent

Cause: Archived logs could not be found to make keep the backup consistent.

Action: Check if the database is opened and if archive logs can be created and retry the command.

Cause: This is an informational message only.

Action: No action is required.

RMAN-08602: channel <varname>string</varname>: no AUTOBACKUPS found in ASM disk group <varname>string</varname>

Cause: The specified ASM area does not have desired AUTOBACKUP.

Action: Check the option UNTIL TIME in case an existing AUTOBACKUP does satisfy the criteria specified in the restore command. Otherwise, verify the values used for the format of the CONFIGURE CONTROLFILE AUTOBACKUP FORMAT command and DB_UNIQUE_NAME to verify whether the ASM area location is set correctly. Note that the DB_UNIQUE_NAME can be specified as option to the restore command.

RMAN-08603: skipping <varname>string</varname>; file in use by another process

Cause: The indicated file was not included in the backup because it is part of another restore or delete operation.

Action: No action is required. Wait for the other operation to complete, then retry.

RMAN-08604: skipping <varname>string</varname>; file deleted from recovery area to reclaim disk space

Cause: The indicated file was not included in the backup because it was deleted from the recovery area to reclaim disk space for other operations.

Action: No action is required.

RMAN-08605: channel <varname>string</varname>: SID=<varname>string</varname> instance=<varname>string</varname> device type=<varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-08606: WARNING: The change tracking file is invalid.

Cause: Backup found changed blocks that were not marked in the change tracking file. See alert log for more information.

Action: Do not use any of the incremental backups taken since the last full backup.

RMAN-08607: List of remote backup files

Cause: RESTORE command detected that one or more remote backup files were required to perform restore operation.

Action: Recall the media from remote site that contains the specified backup files before actual restore operation. The message should be accompanied with the list of remote backup files.

RMAN-08608: Initiated recall for the following list of remote backup files

Cause: This is an informational message displayed when the specified RECALL option of the RESTORE command detected that one or more remote backup files were required to perform the restore operation. The message indicated that RMAN had initiated the request on SBT channel to recall the remote backup files.

Action: No action required.

RMAN-08609: channel <varname>string</varname>: starting incremental datafile backup set

Cause: This is an informational message only.

Action: No action is required.

RMAN-08610: channel <varname>string</varname>: restoring datafile <varname>string</varname> to <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

Cause: This is an informational message only.

Action: No action is required.

RMAN-08612: channel <varname>string</varname>: failover to duplicate backup on device <varname>string</varname>

Cause: This is an informational message to indicate the RMAN could not successfully restore the files using the specified backups. An attempt was made to restore the datafiles/archived logs/ control file/SPFILE using a previous existing backup.

Action: See accompanying additional error messages indicating the cause of the failover.

RMAN-08613: channel <varname>string</varname>: failover to piece handle=<varname>string</varname> tag=<varname>string</varname>

Cause: This is an informational message to indicate the server found a corrupted block in a backup piece and had to switch to another copy of the piece to get the same block.

Action: See alert log for information on corruption block(s) and the name of the backup piece that has the corrupted block(s).

RMAN-08614: channel <varname>string</varname>: errors found reading piece handle=<varname>string</varname>

Cause: This is an informational message to indicate the server found a corrupted block in a backup piece. Accompanying error will describe the action taken.

Action: See alert log for more information.

RMAN-08615: channel <varname>string</varname>

Cause: This is an informational message to indicate the server could not perform the restore due to the included errors. A least recent backup set will be used to perform the restore.

Action: See alert log for information on corruption block(s) and the name of the backup piece that has the corrupted block(s).

RMAN-08616: validating blocks <varname>string</varname> through <varname>string</varname>

Cause: This is an informational message only

Action: No action is required.

RMAN-08617: validation failed for foreign archived log

Cause: The CROSSCHECK FOREIGN ARCHIVELOG command determined that the foreign archived log could not be found or no longer contained the same data, so its record was marked expired.

Action: None - this is an informational message.

RMAN-08618: validation succeeded for foreign archived log

Cause: The CROSSCHECK FOREIGN ARCHIVELOG command determined that the foreign archived log still matches its data.

Action: None - this is an informational message.

**RMAN-08619: foreign archived log file name=<varname>string</varname>

datafilecopy <varname>string</varname>**

Cause: This is an informational message only.

Action: No action is required.

RMAN-08629: waiting for resources on the Backup Appliance for <varname>string</varname> channels

Cause: The number of channels required to complete this operation was not available. Channels will be allocated when they become available.

Action: No action is required. This is an informational message only.

RMAN-08630: allocating the required resources on the Backup Appliance

Cause: The required resources were allocated on a Backup Appliance.

Action: No action is required. This is an informational message only.

RMAN-10000: error parsing target database connect string "<varname>string</varname>"

Cause: An invalid target connect string was supplied.

Action: Specify a valid connect string and re-run the job.

RMAN-10001: error parsing recovery catalog connect string "<varname>string</varname>"

Cause: An invalid recovery catalog connect string was supplied.

Action: Specify a valid connect string and re-run the job.

RMAN-10002: ORACLE error: <varname>string</varname>

Cause: The specified Oracle error was received. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-10003: unable to connect to target database

Cause: Recovery manager was unable to connect to the target database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Ensure that that the target database is started, and that the connect string is valid.

RMAN-10004: unable to connect to recovery catalog

Cause: Recovery manager was unable to connect to the recovery catalog

Action: Ensure that that the recovery catalog is started, and that the connect string is valid. This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-10005: error opening cursor

Cause: An error was received while trying to open a cursor. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: If the associated Oracle error message indicates a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10006: error running SQL statement: <varname>string</varname>

Cause: An error message was received while running the SQL statement shown.

Action: If the associated Oracle error message indicates a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10007: error closing cursor

Cause: An error was received while trying to close a cursor. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: If the associated Oracle error message indicates a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10008: could not create channel context

Cause: An error was received while trying create a channel context. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: If the associated Oracle error message indicates a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10009: error logging off of Oracle

Cause: An error was received while disconnecting from Oracle. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: This is an informational message only.

RMAN-10010: error while checking for RPC completion

Cause: Recovery Manager's channel context had an error while checking to see if a remote procedure call had completed. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: If other error messages indicate a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10011: synchronization error while polling for rpc <varname>number</varname>, action=<varname>string</varname>

Cause: Recovery Manager could not synchronize properly with a remote procedure call.

Action: This is an internal error that should not be issued. Contact Oracle Support.

RMAN-10012: KGU error: <varname>string</varname>

Cause: An error occurred while initializing the KGU subsystem

Action: This is an internal error that should not be issued. Contact Oracle Support.

RMAN-10013: error initializing PL/SQL

Cause: An error occurred while initializing the PL/SQL subsystem.

Action: This is an internal error that should not be issued. Contact Oracle Support.

RMAN-10014: PL/SQL error <varname>number</varname> on line <varname>number</varname> column <varname>number</varname>: <varname>string</varname>

Cause: PL/SQL error

Action: The text of this message will be issued by the PL/SQL subsystem. See the PL/SQL error message manual.

RMAN-10015: error compiling PL/SQL program

Cause: An error occurred while compiling a PL/SQL program.

Action: This is an internal error that should not be issued. Contact Oracle Support.

RMAN-10018: error cleaning up channel context

Cause: An error was received during inter-step cleanup of a channel context.

Action: This is an internal error that should not be issued. Contact Oracle Support.

RMAN-10020: error initializing Recovery Manager execution layer

Cause: An error was received while initializing the Recovery Manager execution layer in preparation for running a job. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: If other error messages indicate a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10022: error in system-dependent sleep routine

Cause: An error was received while waiting for a remote RPC to complete. The error occurred in the system-dependent sleep routine.

Action: This is an internal error that should not be issued. Contact Oracle Support.

RMAN-10023: RPC attempted to unrecognized package

Cause: The Recovery Manager internal RPC router received a package name that it could not understand.

Action: This is an internal error that should not be issued. Contact Oracle Support.

RMAN-10024: error setting up for rpc polling

Cause: The Recovery Manager could not create the RPC polling context which is required to test for RPC completion. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: If other error messages indicate a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10025: connection is already registered for events

Cause: The Recovery Manager could not enable the target database connection to test for RPC completion.

Action: This is an internal error that should not be issued. Contact Oracle Support.

RMAN-10026: network error <varname>number</varname>-<varname>number</varname> occurred registering connection

Cause: An network error occurred while attempting to register the target database connection to test for RPC completion.

Action: This is an internal error that should not be issued. The message numbers are issued by the Sql*Net layer. Contact Oracle Support.

RMAN-10027: could not locate network layer context

Cause: Recovery Manager could not locate a necessary context area while attempting to register the target database connection to test for RPC completion.

Action: This is an internal error that should not be issued. Contact Oracle Support.

RMAN-10028: network error <varname>number</varname>-<varname>number</varname> occurred during remote RPC

Cause: An network error occurred while waiting for a remote RPC to complete.

Action: This is an internal error that should not be issued. The message numbers are issued by the Sql*Net layer. Contact Oracle Support.

RMAN-10029: unexpected return code <varname>number</varname> from PL/SQL execution

Cause: PL/SQL returned an unexpected return code while executing one channel program.

Action: This is an internal error that should not be issued. Contact Oracle Support.

RMAN-10030: RPC call appears to have failed to start on channel <varname>string</varname>

Cause: An RPC to a target database instance was issued, but was not observed to start within 5 timeouts.

Action: This error is probably accompanied by other error messages giving the precise cause of the failure.

RMAN-10031: RPC Error: ORA-<varname>number</varname> occurred during call to <varname>string</varname>.<varname>string</varname>

Cause: An RPC to the target database or recovery catalog database encountered an error.

Action: This error is accompanied with the error message from the server where the error occurred.

RMAN-10032: unhandled exception during execution of job step <varname>number</varname>: \n<varname>string</varname>

Cause: An unhandled PL/SQL exception occurred during a job step.

Action: This error is accompanied by the error messages describing the exception.

RMAN-10033: error during compilation of job step <varname>number</varname>: <varname>string</varname>

Cause: PL/SQL detected a problem during the compilation of a job step

Action: This error message is accompanied by the error messages describing

RMAN-10034: unhandled exception during execution of job step <varname>number</varname>, error unknown

Cause: PL/SQL detected an unhandled exception during execution of a job step, but no further information available

Action: n/a

RMAN-10035: exception raised in RPC: \n<varname>string</varname>

Cause: A call to a remote package resulted in an exception.

Action: The exception should indicate what went wrong.

RMAN-10036: RPC call OK on channel <varname>string</varname>

Cause: This is just an informational message. It should be preceded by message 10030.

Action: No action is required.

RMAN-10037: RPC anomaly detected on channel <varname>string</varname>, UPINBLT=<varname>number</varname>

Cause: This is an debugging message and can be ignored.

Action: No action is required.

RMAN-10038: database session for channel <varname>string</varname> terminated unexpectedly

Cause: The database connection for the specified channel no longer exists. Either the session was terminated by some external means or the channel terminated because of an internal error.

Action: Check for an oracle trace file for detailed information on why the session terminated.

RMAN-10039: error encountered while polling for RPC completion on channel <varname>string</varname>

Cause: This error should be accompanied by other errors giving the cause of the polling error.

Action: Check the accompanying errors.

RMAN-10040: asynchronous support not detected, RMAN will run synchronously

Cause: The database connection does not support asynchronous operation, so RMAN will not multi-task work among multiple channels. Multiple channels can still be allocated, but they will not run work concurrently.

Action: Use a connection type that supports asynchronous operations.

RMAN-10041: Could not re-create polling channel context following failure.

Cause: The RPC polling context, which is required to test for RPC completion, failed and Recovery Manager could not re-create this channel. This message should be accompanied by other error messages indicating the cause of the error.

Action: If other error messages indicate a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-11000: message number <varname>number</varname> not found in recovery manager message file

Cause: Recovery manager message file is out of date.

Action: Make sure that the recovery manager error message file is current and installed in the correct location.

RMAN-11001: Oracle Error: \n<varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-11002: could not open a cursor to the target database

Cause: This is an informational message only.

Action: No action is required.

RMAN-11003: failure during parse/execution of SQL statement: <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-11004: format requires %<varname>character</varname> when duplexing

Cause: SET_DUPLEX=ON was specified, but %c was not part of the format.

Action: Include %c in format, or use %U.

RMAN-11005: conflicting media information for piece "<varname>string</varname>"

Cause: While restoring the specified backup piece, RMAN received conflicting information about the physical location of the piece from the Media Management software. This can cause poor restore performance.

Action: If RMAN does not parallelize the restore from all of the available channels, then you should contact the Media Management vendor.

RMAN-11006: WARNING: test recovery results: ln<varname>string</varname>

Cause: User called recover database with the test option

Action: None required

RMAN-11007: new media label is "<varname>string</varname>" for piece "<varname>string</varname>"

Cause: This is an informational message indicating that the backup piece was moved from one media to another by media management software.

Action: No action is required.

RMAN-12000: execution layer initialization failed

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-12001: could not open channel <varname>string</varname>

Cause: An ALLOCATE CHANNEL command could not be processed.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-12005: error during channel cleanup

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-12007: cannot allocate more than <varname>number</varname> channels

Cause: The maximum number of RMAN channels has been exceeded. Note that one channel is reserved for RMAN.

Action: Allocate fewer channels. Contact Oracle if you have a need for more channels in a single job.

RMAN-12008: could not locate backup piece <varname>string</varname>

Cause: There was at least 1 backup set that could not be accessed by any of the allocated channels.

Action: Allocate additional channels on other nodes of the cluster

RMAN-12009: command aborted because some backup pieces could not be located

Cause: Same as 7008.

Action: Refer to 7008.

RMAN-12010: automatic channel allocation initialization failed

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-12011: multiple records for default device type found in repository

Cause: Configuration for default device type was not consistent.

Action: Re-run CONFIGURE DEFAULT DEVICE TYPE command to set device type.

RMAN-12012: multiple records for <varname>string</varname> parallelism found in repository

Cause: Configuration for device parallelism was not consistent.

Action: Re-run CONFIGURE PARALLELISM command for device to set parallelism.

RMAN-12013: multiple records for <varname>string</varname> channel <varname>number</varname> found in repository

Cause: Configuration for the channel was not consistent.

Action: Re-run CONFIGURE CHANNEL command to configure this channel.

RMAN-12014: multiple records for default channel configuration for <varname>string</varname> found in repository

Cause: Configuration for the channel was not consistent.

Action: Re-run CONFIGURE CHANNEL command to configure the channel.

RMAN-12015: configuration for <varname>string</varname> channel <varname>number</varname> is ignored

Cause: This is an informational message only. Parallelism for the device is less than associated channel number.

Action: To use this configuration increase parallelism for this device. To clear this configuration use CONFIGURE CHANNEL... CLEAR command.

RMAN-12016: using channel <varname>string</varname>

Cause: This is an informational message only.

Action: No action is required.

RMAN-12017: could not locate pieces of backup set key <varname>string</varname>

Cause: Copies of the specified backup set key could not be accessed on any of the allocated channels.

Action: Allocate additional channels on other nodes of the cluster or, if the backup pieces has been deleted, use the CROSSCHECK BACKUP command to correct the recovery catalog or target database control file entries.

RMAN-12018: channel <varname>string</varname> disabled, job failed on it will be run on another channel

Cause: This is an informational message displayed whenever a retryable error occurs for the job and there are channels available to run this step.

Action: No action is required.

RMAN-12019: continuing other job steps, job failed will not be re-run

Cause: This is an informational message displayed whenever there is a non-retryable error occurred for the job.

Action: No action is required.

RMAN-12020: error on step filtered for normal output \n<varname>string</varname>

Cause: This message is added when stacking errors for failed jobs after channel failover was performed. It will be filtered from normal output.

Action: No action is required.

RMAN-20000: abnormal termination of job step

Cause: A job step encountered an error and could not recover. This error should be followed by other errors indicating the cause of the problem.

Action: Check the accompanying error.

RMAN-20001: target database not found in recovery catalog

Cause: target database is not found in the recovery catalog

Action: make sure that the target database is registered in the recovery recovery catalog

RMAN-20002: target database already registered in recovery catalog

Cause: target database is already registered in the recovery catalog

Action: if the target database is really registered, there is no need to register it again. Note that the recovery catalog enforces that all databases have a unique DBID. If the new database was created by copying files from an existing database, it will have the same DBID as the original database and cannot be registered in the same recovery catalog.

RMAN-20003: target database incarnation not found in recovery catalog

Cause: RESETLOGS CHANGE# and/or time of the target database doesn't match any database incarnation in the recovery catalog.

Action: if target database was opened with RESETLOGS option then use 'reset database' to register the new incarnation.

RMAN-20004: target database name does not match name in recovery catalog

Cause: name of the target database doesn't match the one stored in the recovery catalog

Action: This is an internal error.

RMAN-20005: target database name is ambiguous

Cause: two or more databases in the recovery catalog match this name

Action: n/a

RMAN-20006: target database name is missing

Cause: target database instance is not started or db_name initialization parameter is not set

Action: startup the instance and make sure that db_name parameter is set

RMAN-20009: database incarnation already registered

Cause: this incarnation is already registered in the recovery catalog

Action: No action is required.

RMAN-20010: database incarnation not found

Cause: database incarnation does not match any database incarnation in the recovery catalog

Action: specify a valid database incarnation key

RMAN-20011: target database incarnation is not current in recovery catalog

Cause: the database incarnation that matches the RESETLOGS CHANGE# and time of the mounted target database control file is not the current incarnation of the database

Action: If 'reset database to incarnation <varname>key</varname>' was used to make an old incarnation current then restore the target database from a backup that matches the incarnation and mount it. You will need to do 'STARTUP NOMOUNT' before you can restore the control file using RMAN. Otherwise use 'reset database to incarnation <varname>key</varname>' make the intended incarnation current in the recovery catalog.

RMAN-20012: not authorized to register new database

Cause: You attempted to register a new database with this recovery catalog, but you are using a virtual private catalog, and you have not been granted permission by the catalog administrator to register this database with this recovery catalog

Action: Ask the catalog administrator to grant permission for you to register this database.

RMAN-20013: error upgrading virtual private catalog

Cause: An error occurred while automatically upgrading a virtual private catalog.

Action: Ensure that the virtual private catalog userid has all of the required privileges, such as being granted the RECOVERY_CATALOG_OWNER role.

RMAN-20014: virtual private catalog owner must be granted RECOVERY_CATALOG_OWNER role

Cause: An attempt was made to establish a virtual private RMAN catalog in a schema that is not granted the RECOVERY_CATALOG_OWNER role.

Action: Grant RECOVERY_CATALOG_OWNER to the virtual private catalog owner.

RMAN-20015: not authorized to share this catalog

Cause: You attempted to share a recovery catalog but were not authorized to do this by the catalog administrator.

Action: Ask the catalog administrator to grant permission for you to share this catalog.

RMAN-20016: virtual private catalog user cannot modify global scripts

Cause: A virtual private catalog user attempted to create, delete, or modify a global script. Virtual private catalog users cannot modify global scripts.

Action: Connect to the catalog owner userid and retry the global script operation.

RMAN-20017: illegal script update operation

Cause: An illegal script operation was performed.

Action: None

RMAN-20018: database not found in recovery catalog

Cause: An attempt was made to grant or revoke catalog access to a database whose name was not registered in the recovery catalog.

Action: Correct the database name and re-issue the GRANT or REVOKE command. If this is an attempt to grant or revoke access to a database that is not yet registered, then re-issue the command using the database ID of the desired database.

RMAN-20019: database name not unique in recovery catalog

Cause: An attempt was made to grant or revoke catalog access to a database whose name is not unique in the recovery catalog.

Action: Re-issue the command specifying the database ID of the desired database.

RMAN-20022: user not found

Cause: An attempt was made to grant a privilege to a user that does not exist.

Action: Reissue the command specifying a user that exists.

RMAN-20029: cannot make a snapshot control file

Cause: another operation that needs the snapshot control file is in progress

Action: try again later if necessary

RMAN-20030: resync in progress

Cause: this procedure cannot be called while a resync is in progress

Action: This is an internal error.

RMAN-20031: resync not started

Cause: this procedure can only be called in a resync

Action: This is an internal error.

RMAN-20032: checkpoint CHANGE# too low

Cause: the checkpoint change# is less than the one of the previous resync or the checkpoint change# is null

Action: make sure that the right control file is used

RMAN-20033: control file SEQUENCE# too low

Cause: the control file sequence is less than the one of the previous resync

Action: make sure that the right control file is used

RMAN-20034: resync not needed

Cause: the control file has not changed since the previous resync

Action: nothing since the recovery catalog is in sync

RMAN-20038: must specify FORMAT for CONVERT command

Cause: No FORMAT was specified when using CONVERT command.

Action: Resubmit the command using FORMAT clause.

RMAN-20039: format requires <varname>character</varname> when duplexing

Cause: SET_DUPLEX=ON was specified, but %c was not part of the format.

Action: Include %c in format, or use %U.

RMAN-20045: must specify FORMAT for BACKUP INCREMENTAL FROM SCN command

Cause: No FORMAT was specified when using BACKUP INCREMENTAL FROM SCN command.

Action: Resubmit the command using FORMAT clause.

RMAN-20079: full resync from primary database is not done

Cause: Resync from standby detected that a full resync from primary database is required. One of the following events on primary database may have caused this error: 1) one or more tablespaces or datafiles were added 2) one or more tablespaces or datafiles were dropped 3) one or more datafiles status changed

Action: Perform full resync after connecting to primary database.

RMAN-20081: change stamp for the record

Cause: A record with same recid and stamp is already known to catalog.

Action: None. This error is automatically handled by RMAN client by changing the stamp in control file during resync.

RMAN-20108: control file for remote database cannot be updated

Cause: RESYNC CATALOG FROM DB_UNIQUE_NAME command was attempted, but the control file at the database with DB_UNIQUE_NAME needs to be resynced directly instead of through the current target.

Action: Directly connect as target to the remote database with the specified DB_UNIQUE_NAME and resync.

RMAN-20109: remote database has different database ID

Cause: Command RESYNC CATALOG FROM DB_UNIQUE_NAME was executed and the database ID of the remote database was different than the connected target database.

Action: The remote database should have the same database ID as the database connected as the target database. Fix the connect identifier for the remote database and retry the command.

RMAN-20140: database not yet registered in the Backup Appliance

Cause: The database was not registered in the Backup Appliance.

Action: Add a database to the Backup Appliance schema by making a call to ADD_DB call.

RMAN-20141: target database ID mismatch with registered database in the Backup Appliance

Cause: The database with the same DB_UNIQUE_NAME was already registered in a Backup Appliance, but the database ID was different than the target database.

Action: Connect to the proper target database, or change the DB_UNIQUE_NAME and register it again in the Backup Appliance.

RMAN-20142: version stamp of backup XML set is different

Cause: A new backup XML set was generated at the Backup Appliance since the last read of watermarks.

Action: Retry the reconcile operation.

RMAN-20143: no records found to resync for incarnation view

Cause: The reconcile code at the Backup Appliance expected incarnation records, but they were not sent by the recovery catalog.

Action: This is an internal error.

RMAN-20144: no records found to resync for tablespace view

Cause: The reconcile code at the Backup Appliance expected tablespace records, but they were not sent by the recovery catalog.

Action: This is an internal error.

RMAN-20145: no records found to resync for data file view

Cause: The reconcile code at the Backup Appliance expected datafile records, but they were not sent by the recovery catalog.

Action: This is an internal error.

RMAN-20146: no records found to resync for thread view

Cause: The reconcile code at the Backup Appliance expected thread records, but they were not sent by the recovery catalog.

Action: This is an internal error.

RMAN-20147: no records found to resync for online redo log view

Cause: The reconcile code at the Backup Appliance expected online redo log records, but they were not sent by the recovery catalog.

Action: This is an internal error.

RMAN-20148: no records found to resync for offline range view

Cause: The reconcile code at the Backup Appliance expected offline range records, but they were not sent by the recovery catalog.

Action: This is an internal error.

RMAN-20149: required records are purged from the backup XML set at the Backup Appliance

Cause: The recovery catalog was not reconciled from the Backup Appliance recently, and records from backup XML set were purged at the Backup Appliance.

Action: A new backup XML set must be created at the Backup Appliance.

RMAN-20150: no records found to resync for Pluggable Database view

Cause: The reconcile code at the Backup Appliance expected Pluggable Database records, but they were not sent by the recovery catalog.

Action: This is an internal error.

RMAN-20151: no records found to resync for Pluggable Database incarnation view

Cause: The reconcile code at the Backup Appliance expected Pluggable Database incarnation records, but they were not sent by the recovery catalog.

Action: This is an internal error.

RMAN-20201: datafile not found in the recovery catalog

Cause: The specified datafile is not found in the recovery catalog

Action: make sure that the datafile name is correct and that the recovery catalog is up-to-date

RMAN-20202: Tablespace not found in the recovery catalog

Cause: the specified tablespace is not found in the recovery catalog

Action: make sure that the tablespace name is correct and that the recovery catalog is up-to-date

RMAN-20203: translation in progress

Cause: this procedure can not be called when name translation is in progress

Action: This is an internal error.

RMAN-20204: translation not started

Cause: GETDATAFILE procedure was called before TRANSLATETABLESPACE

Action: This is an internal error.

RMAN-20205: incomplete UNTIL clause

Cause: The sequence# was NULL

Action: This is an internal error.

RMAN-20206: log sequence not found in the repository

Cause: The specified log sequence does not exist in log history of the current database incarnation

Action: check the thread# and sequence#

RMAN-20207: UNTIL TIME or RECOVERY WINDOW is before RESETLOGS time

Cause: UNTIL TIME and RECOVERY WINDOW cannot be less than the database creation time or RESETLOGS time.

Action: Check the UNTIL TIME or RECOVERY WINDOW. If the database needs to be restored to an old incarnation, use the RESET DATABASE TO INCARNATION command.

RMAN-20208: UNTIL CHANGE is before RESETLOGS change

Cause: UNTIL CHANGE cannot be less than the database RESETLOGS change.

Action: Check the UNTIL CHANGE. If the database needs to be restored to an old incarnation, use the RESET DATABASE TO INCARNATION command.

RMAN-20209: duplicate datafile name

Cause: Two datafiles have the same name

Action: This is an internal error.

RMAN-20211: FROM TIME is before RESETLOGS time

Cause: FROM TIME cannot be less than the database creation time or RESETLOGS time.

Action: Check the FROM TIME. If the database needs to be restored to an old incarnation, use the RESET DATABASE TO INCARNATION command.

RMAN-20212: UNTIL CHANGE is an orphan incarnation

Cause: Specified UNTIL CHANGE was an orphan incarnation.

Action: Check the UNTIL CHANGE or UNTIL RESTORE POINT. If the database needs to be restored or flashed back to an orphan incarnation, use the RESET DATABASE TO INCARNATION command.

RMAN-20213: UNTIL TIME could not be translated to a valid SCN

Cause: Specified UNTIL TIME could not be translated to a valid SCN.

Action: Use a more recent UNTIL TIME.

RMAN-20215: backup set not found

Cause: The specified backup set key was not found in the recovery catalog or target database control file.

Action: Specify a different backup set key.

RMAN-20217: datafile not part of the database

Cause: the datafile does not exist or did not exist at until time/scn

Action: check the datafile name or number. This is an internal error. for restore database or tablespace.

RMAN-20218: datafile not found in repository

Cause: This is an internal error.

Action: Contact Oracle Support Services.

RMAN-20220: control file copy not found in the repository

Cause: The specified control file was not in the recovery catalog or target database control file or it was marked deleted.

Action: check the file name

RMAN-20221: ambiguous control file copy name

Cause: more than one control file copy in the recovery catalog match the specified name.

Action: n/a

RMAN-20222: datafile name not found in recovery catalog or is ambiguous

Cause: The specified datafile name is not the name of a datafile that is currently part of the target database, or an UNTIL clause has been specified and the file name was for a different datafile at the time specified by the UNTIL clause than it is now.

Action: Use a datafile number to specify the datafile you want to RESTORE or RECOVER.

RMAN-20223: DB_UNIQUE_NAME mismatch in snapshot control file

Cause: The DB_UNIQUE_NAME value in the snapshot control file was incorrect. This error can occur in Oracle RAC when the snapshot control file location is not shared across nodes and virtual IPs are setup in the remote database from where resynchronization is done using RESYNC CATALOG FROM DB_UNIQUE_NAME command.

Action: To avoid this error, one of the following actions can be taken: 1) Share the control file snapshot location. The snapshot location can be displayed by executing SHOW SNAPSHOT CONTROLFILE NAME at the RMAN prompt. 2) Do not use Virtual IPs in the service name used to define the connect identifiers. The connect identifiers can be displayed using SHOW DB_UNIQUE_NAME command at the RMAN prompt.

RMAN-20230: datafile copy not found in the repository

Cause: The specified datafile was not in the recovery catalog or target database control file or it was marked deleted.

Action: check the datafile copy name or key

RMAN-20231: ambiguous datafile copy name

Cause: more than one control file copy in the recovery catalog match the specified name.

Action: use the datafile copy key to uniquely specify the datafile copy

RMAN-20240: archived log not found in the repository

Cause: The specified archived log was not found in the recovery catalog or target database control file or it was marked deleted.

Action: check the archived log name or key

RMAN-20241: ambiguous archived log name

Cause: more than one archived log in the recovery catalog match the specified name

Action: use the archived log key to uniquely specify the archived log

RMAN-20242: specification does not match any archived log in the repository

Cause: No archived logs found that match specification in the recovery catalog or target database control file.

Action: check the archived log specifier

RMAN-20243: database db_unique_name is not known to the recovery catalog

Cause: the user specified DB_UNIQUE_NAME not known to the recovery catalog.

Action: change the database DB_UNIQUE_NAME to a known database value. To display list of known db_unique_names execute LIST DB_UNIQUE_NAME OF DATABASE

RMAN-20244: can not change currently connected database db_unique_name

Cause: the user specified currently connected DB_UNIQUE_NAME value to unregister.

Action: use the DB_UNIQUE_NAME other than connected target database's DB_UNIQUE_NAME value.

RMAN-20245: can not specify db_unique_name option in nocatalog mode

Cause: the user specified DB_UNIQUE_NAME in nocatalog mode.

Action: remove the DB_UNIQUE_NAME option from the command.

RMAN-20246: new db_unique_name is already known to the recovery catalog

Cause: the user specified known DB_UNIQUE_NAME value when renaming a DB_UNIQUE_NAME in the recovery catalog.

Action: change the database DB_UNIQUE_NAME to an known DB_UNIQUE_NAME value; or unregister the new DB_UNIQUE_NAME before renaming an old DB_UNIQUE_NAME value for a database. To display the list of all DB_UNIQUE_NAME for the databases LIST DB_UNIQUE_NAME OF DATABASE command can be executed.

RMAN-20247: specification does not match any foreign archived log in the repository

Cause: No foreign archived logs found that match specification in the recovery catalog or target database control file.

Action: check the foreign archived log specifier

RMAN-20250: offline range not found in the repository

Cause: The specified offline was not found in the recovery catalog or target database control file.

Action: check that recovery catalog is current

RMAN-20260: backup piece not found in the repository

Cause: The specified backup piece was not in the recovery catalog or target database control file or it was marked deleted.

Action: check the backup piece handle or key

RMAN-20261: ambiguous backup piece handle

Cause: more than one backup piece in the recovery catalog match the specified handle

Action: use the backup piece key to uniquely specify the backup piece

RMAN-20272: no parent backup found for the incremental backup

Cause: no available backup or copy that could be used as the parent of the incremental backup was found in the recovery catalog.

Action: take a level 0 backup or copy of the datafile first

RMAN-20280: too many device types

Cause: more than 8 device types were allocated

Action: make sure that the job allocates at most 8 different device types

RMAN-20298: DBMS_RCVCAT package not compatible with the recovery catalog

Cause: The version of the recovery catalog tables does not work with this version of the DBMS_RCVCAT package.

Action: Check that the recovery catalog packages and schema are installed correctly. The UPGRADE CATALOG command can be used to upgrade the recovery catalog tables and packages to the most current version.

RMAN-20299: DBMS_RCVMAN package not compatible with the recovery catalog

Cause: The version of the recovery catalog tables does not work with this version of the DBMS_RCVMAN package.

Action: Check that the recovery catalog packages and schema are installed correctly. The UPGRADE CATALOG command can be used to upgrade the recovery catalog tables and packages to the most current version.

RMAN-20310: proxy copy not found in the repository

Cause: The specified proxy copy was not in the recovery catalog or target database control file or it was marked deleted.

Action: check the proxy copy handle or key

RMAN-20311: ambiguous proxy copy handle

Cause: more than one proxy copy in the recovery catalog matches the specified handle

Action: use the proxy copy key to uniquely specify the proxy copy

RMAN-20401: script already exists

Cause: a CREATE SCRIPT was issued, but a script with the specified name already exists.

Action: use a different name or use REPLACE SCRIPT.

RMAN-20501: redo logs from parent database incarnation cannot be applied

Cause: A RESTORE or RECOVER of a datafile was requested, but recovery of the datafile would require applying redo logs that were generated before the most recent OPEN RESETLOGS.

Action: If a full backup or datafile copy from the current database incarnation exists, ensure that it is marked AVAILABLE, and that a channel of the correct device type is allocated. It may also be necessary to remove the FROM BACKUPSET or FROM DATAFILECOPY or FROM TAG operands if these have been specified.

RMAN-20502: DELETE EXPIRED cannot delete objects that exist - run CROSSCHECK

Cause: A DELETE EXPIRED command was run, but the object was actually found to exist. This means the recovery catalog or target database control file is out of sync with reality.

Action: Run CROSSCHECK.

RMAN-20503: DELETE cannot delete expired objects - run CROSSCHECK or DELETE EXPIRED

Cause: A DELETE command was run without EXPIRED option, but the object doesn't exist. This means the recovery catalog or target database control file is out of sync with reality.

Action: Run CROSSCHECK.

RMAN-20504: corruption list not found in recovery catalog

Cause: corruption list is empty

Action: make sure that one or more blocks are marked corrupted in v\$copy_corruption and v\$backup_corruption and recovery catalog is up-to-date.

RMAN-20505: create datafile during recovery

Cause: applying of archived log caused a create datafile redo-entry to terminate recovery.

Action: none. This message is never displayed. RMAN automatically detects this case and creates the datafile.

RMAN-20506: no backup of archived log found

Cause: during the recover process, no backup was found from which the archived logs could be restored.

Action: this message should be followed by a list of missing archived logs. Please make the necessary archived log backups available and try again.

RMAN-20507: some targets are remote - aborting restore

Cause: during the restore process, one or more backup files were unavailable locally for the restore operation.

Action: This message should be accompanied with the list of remote backup files. Recall these backups from remote location and retry the RESTORE command.

RMAN-20508: temporary resource already in use

Cause: Temporary resource that was allocated for IMPORT CATALOG command was already in use.

Action: Retry IMPORT CATALOG command.

RMAN-20509: temporary resource not found

Cause: Temporary resource that was allocated for IMPORT CATALOG command was not found.

Action: Retry IMPORT CATALOG command.

RMAN-20510: database not found in source recovery catalog database

Cause: Database that was specified in IMPORT CATALOG command was not found in the source recovery catalog database.

Action: Make sure that the database is registered in the source recovery catalog database.

RMAN-20511: database name is ambiguous in source recovery catalog database

Cause: Two or more databases in the source recovery catalog database match this name.

Action: Use DBID option in IMPORT CATALOG command to specify the source database.

RMAN-20512: source database already registered in recovery catalog

Cause: Source database was already registered in the recovery catalog.

Action: If the source database is really registered, there is no need to register it again. Note that the recovery catalog enforces that all databases have a unique DBID. If the new database was created by copying files from an existing database, it will have the same DBID as the original database and cannot be registered in the same recovery catalog.

RMAN-20513: UNTIL TIME or SCN is before Pluggable Database CREATION SCN

Cause: The UNTIL TIME or SCN specified was less than the Pluggable Database CREATION SCN. UNTIL TIME or SCN cannot be less than the Pluggable Database CREATION SCN.

Action: Check the UNTIL TIME or SCN and retry the command.

RMAN-20514: feature requires Oracle Backup Appliance recovery catalog

Cause: The specified command required the Oracle Backup Appliance recovery catalog.

Action: Connect to the Oracle Backup Appliance recovery catalog and retry the command.

SCLC-01000 to SCLC-01037

SCLC-01000: Failed to retrieve address of {0}, {1}

Cause: Failed to retrieve current address of the resource.

Action: Make sure that resource is running and that user has read permission on resource profile and try again.

SCLC-01003: Failed to retrieve tier names registered with {0}, {1}

Cause: Failed to retrieve tier names.

Action: Make sure that resource is running and try again.

SCLC-01004: Failed to retrieve members of tier {0} registered with {1}, {2}

Cause: Failed to retrieve tier members.

Action: Make sure that resource is running and try again.

SCLC-01005: Failed to get member tiers, {0}

Cause: Failed to get member tiers.

Action: Make sure that tier specific representatives are running and try again.

SCLC-01006: Failed to get cluster tier instance, {0}

Cause: Failed to get cluster tier instance.

Action: Make sure that cluster tier is configured and try again.

SCLC-01007: Failed to get discovery information for tier {0}, {1}

Cause: Failed to get tier discovery information

Action: Retry after resolving cause stated in message

SCLC-01008: Failed to get filters at location {0} for tier {1}

Cause: Failed to get filters registered at the given location of the tier.

Action: Retry after resolving cause stated in message

SCLC-01009: Failed to set filters {0} at location {1} of the tier {2}, {3}

Cause: Failed to set filters at the given location of the tier.

Action: Retry after resolving cause stated in message

SCLC-01010: Failed to create Discovery Server, {0}

Cause: Failed to initialize Discovery Server

Action: Retry after resolving cause stated in message.

SCLC-01011: Failed to get Discovery Server reference, {0}

Cause: Failed to get Discovery Server reference

Action: Discovery server is not configured properly, contact Oracle support.

SCLC-01013: Failed to get Super Cluster Representative reference, {0}

Cause: Failed to get Super Cluster Representative reference

Action: Super Cluster Representative is not running, start it and retry.

SCLC-01014: Address {0} is not a multicast address

Cause: Given IP Address is not a multicast address and therefore cannot be used for multicast discovery.

Action: Supply a multicast IP address and try again.

SCLC-01015: Failed to retrieve configured multicast address for tier {0}

Cause: Failed to retrieve multicast address.

Action: Retry after resolving cause stated in message

SCLC-01016: Failed to retrieve discovery method for tier {0}

Cause: Failed to retrieve discovery method for the given tier.

Action: Retry after resolving cause stated in message

SCLC-01017: Multicast discovery method is not configured for tier {0}, {1}

Cause: Multicast discovery method is not configured.

Action: This operation is applicable only for Multicast discovery method. Try it after configuring multicast discovery method for this tier.

SCLC-01018: Discovery Server discovery method is not configured for tier {0}, {1}

Cause: Discovery Server discovery method is not configured.

Action: This operation is applicable only for Discovery Server discovery method.

SCLC-01019: Failed to retrieve member list for tier {0}, {1}

Cause: Failed to current retrieve member list for the tier.

Action: Retry after resolving cause stated in message

SCLC-01021: Failed to retrieve name of tier {0}

Cause: Failed to retrieve name of the tier.

Action: Retry after resolving cause stated in message.

SCLC-01022: Failed to update name of the tier {0}, {1}

Cause: Failed to update name of the tier.

Action: Retry after resolving cause stated in message.

SCLC-01025: Failed to retrieve count of representatives for tier {0}

Cause: Failed to retrieve number of representatives configured for the given tier.

Action: Retry after resolving cause stated in message.

SCLC-01026: Failed to update count of representatives for tier {0}, {1}

Cause: Failed to update number of representatives for the given tier.

Action: Retry after resolving cause stated in message.

SCLC-01027: Failed to start {0}, {1}

Cause: Failed to start given server.

Action: Retry after resolving cause stated in message.

SCLC-01028: Failed to stop {0}, {1}

Cause: Failed to stop given server.

Action: Retry after resolving cause stated in message.

SCLC-01029: Failed to check status of {0}, {1}

Cause: Failed to check status of given server.

Action: Retry after resolving cause stated in message.

SCLC-01030: {0} server is not running

Cause: Server is not running.

Action: Retry after starting the server.

SCLC-01031: Illegal argument : {0}

Cause: Given argument is illegal.

Action: See command usage.

SCLC-01032: Usage: {0} {1} {2}

Cause: Prints given action script usage.

Action: None

SCLC-01033: Failed to create super cluster client for tier {0}, {1}

Cause: Failed to create super cluster client for tier.

Action: Retry after resolving cause stated in message.

SCLC-01034: No argument was supplied to {0}

Cause: The tool was invoked without any arguments, see its usage.

Action: Invoke the tool with arguments as documented in its usage.

SCLC-01035: Failed to configure logger for {0}

Cause: An error was encountered while configuring logger for given program. The message is followed by an exception message that contains more information. Most likely source of error is lack of privileges to create/update files in <crs_home>/log/<varname>hostname</varname>/srvm directory.

Action: Fix the error reported in the exception message by granting privileges to the current user to create/update files in <crs_home>/log/<varname>hostname</varname>/srvm directory.

SCLC-01036: Failed to start the status listener for the EONS server {0}, {1}

Cause: The specified EONS server failed to either obtain an available port or create the status listener thread.

Action: Check if there are available ports on this system.

SCLC-01037: Failed to create the port file for the EONS server {0} on node {1}

Cause: An error occurred while creating a file in the <crs_home>/eons/init directory.

Action: Ensure that file system permissions are correct and that disk space is available.

SCLS-01000 to SCLS-01005

SCLS-01000: Failed to create super cluster representative server for tier {0}, {1}

Cause: Failed to create super cluster representative server for the given tier.

Action: Retry after resolving cause stated in message.

SCLS-01001: Failed to get ONS runtime of {0}

Cause: Failed to get ONS runtime of the given server.

Action: Retry after resolving cause stated in message.

SCLS-01002: Failed to get current member list of tier {0}

Cause: Failed to get current member list of the given tier.

Action: Retry after resolving cause stated in message.

SCLS-01003: eONS runtime was not running for tier {0}

Cause: eONS runtime was stopped abnormally.

Action: In cluster environment, try `srvctl stop nodeapps -n <varname>node</varname>` and `srvctl start nodeapps -n <varname>node</varname>`. In Oracle Restart environment, try `srvctl stop eons` and `srvctl start eons`.

SCLS-01004: Failed to set listening port to {0} for {1}

Cause: Failed to update listening port of the eONS runtime for this tier.

Action: Make sure that user has permission to update resource attribute. In cluster environment make sure that the clusterware stack is up.

SCLS-01005: Invalid listening port {0} specified for eONS

Cause: The specified eONS listening port number is invalid.

Action: Valid port numbers on Unix are from 1025 to 65535. Provide a valid port number for eONS to listen on.

SQL-01075 to SQL-02159

SQL-01075: you are currently logged on

Cause: There is already a connection on this host.

Action: Do not attempt the second connection.

SQL-02100: Out of memory (i.e., could not allocate)

Cause: SQLLIB was unable to allocate enough memory to execute the program.

Action: Allocate more memory to the user session, then rerun the program. If the error persists, call customer support for assistance.

SQL-02101: Inconsistent cursor cache. Unit cursor/global cursor mismatch

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02102: Inconsistent cursor cache. No global cursor entry.

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02103: Inconsistent cursor cache. Out of range cursor cache reference

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02104: Inconsistent host cache. No cursor cache available

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02105: Inconsistent cursor cache. Global cursor not found

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02106: Inconsistent cursor cache. Invalid Oracle cursor number

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02107: Program too old for runtime library; please re-compile it

Cause: The program was precompiled by an older version of the Oracle Precompilers, which is incompatible with this release of SQLLIB.

Action: Precompile the program with a newer version of the Oracle Precompilers.

SQL-02108: Invalid descriptor passed to run-time library

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02109: Inconsistent host cache. Host reference is out of range

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02110: Inconsistent host cache. Invalid host cache entry type

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02111: Heap consistency error

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02112: SELECT..INTO returns too many rows

Cause: A SELECT...INTO statement returned more rows than can be stored in the host variable provided.

Action: There are 3 possible solutions: 1. Use the precompiler option `select_error=no`. 2. Declare a host variable with a larger array dimension. 3. Declare a cursor or cursor variable for the select statement.

SQL-02113: Unable to open message file

Cause: SQLLIB was unable to find or open the sqllib message file `sql*.msb`

Action: Check that the file exists in the `mesg` directory and that it is readable

SQL-02114: Invalid SQL Cursor usage: trying to CLOSE a CLOSED cursor

Cause: An attempt was made to CLOSE a cursor that was already CLOSED with `MODE={ANSI|ANSI14}`. A CLOSED cursor can be re-CLOSEd only when `MODE={ORACLE|ANSI13}`.

Action: When `MODE={ANSI|ANSI14}`, verify that a cursor is not already CLOSED before trying to CLOSE it. Specify `MODE={ORACLE|ANSI13}` if a CLOSED cursor is to be re-CLOSEd.

SQL-02115: Code interpretation problem -- check COMMON_NAME usage

Cause: With PRO*FORTRAN, this error occurs if the precompiler option `COMMON_NAME` is specified incorrectly. With other Oracle Precompilers, this error occurs when the precompiler cannot generate a section of code.

Action: With Pro*FORTRAN, when using COMMON_NAME to precompile two or more source modules, make sure to specify a different common name for each module. With other Oracle Precompilers, if the error persists, call customer support for assistance.

SQL-02116: FATAL ERROR: Reentrant code generator gave invalid context

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02117: Invalid SQL Cursor usage: trying to OPEN an OPENed cursor

Cause: An attempt was made to OPEN a cursor that was already OPENed with MODE={ANSI|ANSI14|ANSI13}. An open cursor can be re-OPENed only when MODE=ORACLE.

Action: When MODE={ANSI|ANSI14|ANSI13}, verify that a cursor is not already OPENed before trying to OPEN it. Specify MODE=ORACLE if an OPENed cursor is to be re-OPENed.

SQL-02118: Invalid row for a WHERE CURRENT OF operation

Cause: An attempt was made to reference a nonexistent row using the CURRENT OF clause in an UPDATE or DELETE statement. This happens when no FETCH has been executed or when FETCH returns a "no data found" error that the program fails to trap.

Action: Check that the last cursor operation succeeded and that the current row of the cursor is valid. The outcome of a cursor operation can be checked in two ways: implicit checking with the WHENEVER statement or explicit checking of SQLCODE in the SQLCA.

SQL-02119: Invalid HSTDEF argument

Cause: A non-null ptr was given for a hstdef as the second argument to a call to sqlrcn when the first argument was also used. Either the first or the second argument to SQLRCN must be null.

Action: Pass a null pointer in either the first or second argument to SQLRCN. *Note: This error *msg* is never actually used. The error *number* is used, given as the return value of sqlrcn if this error occurs.

SQL-02120: First and second arguments to SQLRCN both null

Cause: Both the first and second arguments to sqlrcn were null. An HSTDEF must be passed into SQLRCN in either the form of an OCI lda (first argument) or as an HSTDEF pointer itself (second argument).

Action: Pass in either an OCI LDA or an HSTDEF, but not both. *Note: This error *msg* is never actually used. The error *number* is used, given as the return value of sqlrcn if this error occurs.

SQL-02121: Invalid host name

Cause: The host name passed into a SQLFCN call was not used in a previous call to SQLRCN.

Action: Use the same identifier used in the corresponding SQLRCN call. *Note: This error *msg* is never actually used. The error *number* is used, given as the return value of sqlfcn if this error occurs.

SQL-02122: Invalid OPEN or PREPARE for this database connection

Cause: An attempt was made to execute an OPEN or a PREPARE statement using a cursor that is currently open for another database connection and, therefore, cannot be used for this connection.

Action: Close the cursor to make it available for this connection or use a different cursor for this connection.

SQL-02123: Context referenced in EXEC TOOLS GET CONTEXT statement not found

Cause: The context name given in the EXEC TOOLS GET CONTEXT statement was never stored with an EXEC TOOLS SET CONTEXT statement.

Action: Use the EXEC TOOLS SET CONTEXT statement to save any contexts to be retrieved later.

SQL-02124: NULL value returned by EXEC TOOLS statement

Cause: A NULL value was returned by EXEC TOOLS for a host variable that lacks an indicator variable. This error is returned only when MODE=ANSI. When MODE=ORACLE, although the value of the host variable is indeterminate, no error is generated.

Action: Associate an indicator variable with each host variable to which nulls might be returned.

SQL-02125: Connect error, can't get error text

Cause: No connection (not even to the default host) was available, so SQLLIB could not get the message text for the Oracle error that occurred. However, SQLLIB returns the Oracle error number, which can be used to look up the message.

Action: Look up the appropriate message in the Oracle7 Server Messages manual, and follow the Cause and Action information provided.

SQL-02126: Count of array elements cannot be negative (i.e. < 0)

Cause: The precompiler found a negative number of array elements in the the N or F element of the SQLDA (SQL Descriptor Area, which is used with dynamic SQL Method 4). Before executing the DESCRIBE statement, N must be set to the dimension of the descriptor arrays. After executing the DESCRIBE statement, N must be reset to the actual number of variables DESCRIBEd, which is stored in the F variable.

Action: Check that the N or F variables are set to non-negative values.

SQL-02127: Precompiler/SQLLIB version mismatch

Cause: The program was linked to an older version of SQLLIB, which is incompatible with this release of the Oracle Precompilers.

Action: Relink the program with a newer version of SQLLIB

SQL-02128: Sessions still exist, not logged off

Cause: A host was not removed ("logged off") from SQLLIB because XA still has sessions associated with that host.

Action: Before calling SQLXDH to drop a host, XA must either drop all sessions for that host or set the "doit_anyway" flag. *Note: This error *msg* is never actually used.

The error *number* is used, given as a possible return value to the sqllib xa function sqlxdh.

SQL-02129: Fetched number of bytes is odd.

Cause: The program tried to FETCH an invalid column value into a multi-byte NLS host variable. Specifically, the column did not contain valid double-byte data.

Action: Make sure the column contains only double-byte data. To verify this, use SQL*Plus or Server Manager.

SQL-02130: EXEC TOOLS interface is not available.

Cause: An attempt was made to link with a version of an Oracle tool that does not support the EXEC TOOLS interface. EXEC TOOLS interface.

Action: Either upgrade the Oracle tool, or use the EXEC IAF interface.

SQL-02131: Runtime context in use

Cause: Your application attempted to execute a SQL statement using a runtime context that is already in use.

Action: Rewrite the application to either wait for one thread to complete before executing another SQL statement with the same runtime context, or to allocate and use a separate runtime context for each thread.

SQL-02132: Unable to allocate runtime context sdfla asdjklfajs jfja ajsdf

Cause: An attempt to allocate a runtime context failed.

Action: This error typically occurs when the process memory is low. Allocate more memory and run the application again.

SQL-02133: Unable to initialize process for use with threads

Cause: This is an internal error.

Action: Call customer support.

SQL-02134: Invalid runtime context

Cause: The runtime context associated with this statement has not been properly allocated.

Action: Rewrite the application to execute the EXEC SQL CONTEXT ALLOCATE statement before executing any SQL statements.

SQL-02135: Unable to initialize date format using supplied mask

Cause: The runtime library was unable to issue a set date format statement with the date format mask supplied.

Action: Check the validity of the date format and correct if necessary. Check the ORA error number for further information.

SQL-02136: Invalid NCHAR character set id

Cause: An attempt was made to bind or define an NCHAR host variable, and the NLS_NCHAR variable was not set correctly.

Action: Set the NLS_NCHAR environment variable to a valid fixed width character set id and run the application again.

SQL-02137: Multi-threaded agent with no RETURNING clause present

Cause: The EXEC SQL REGISTER CONNECT statement does not contain a RETURNING clause and the agent is running in threaded mode.

Action: Re-code the statement to use a RETURNING clause that references a declared sql_context host variable.

SQL-02138: No external procedure context exists

Cause: The external procedure context passed in the EXEC SQL REGISTER CONNECT statement is not valid.

Action: Ensure that you have done the following: 1. Created the PL/SQL procedure/function with a CONTEXT parameter. 2. Included OCIExtProcContext in the formal parameter list of the external procedure 3. Correctly passed the OCIExtProcContext to the EXEC SQL REGISTER CONNECT statement.

SQL-02139: Unable to get the OCI handles

Cause: The call to OCIExtProcGetEnv failed.

Action: Ensure that the OCIExtProcContext that the external procedure has been created with a CONTEXT parameter and that this context is correctly referenced in the EXEC SQL REGISTER CONNECT statement.

SQL-02140: An unnamed connection already exists

Cause: An attempt to register an external procedure context was made when an unnamed connection already exists for the runtime context.

Action: Do not attempt to establish any connections with the EXEC SQL CONNECT statement from external procedures.

SQL-02141: Collection descriptor has not been allocated

Cause: An unallocated collection descriptor was referenced in a COLLECTION SET or COLLECTION GET statement.

Action: Allocate the collection descriptor with the EXEC SQL ALLOCATE statement. e.g. EXEC SQL ALLOCATE :coldesc_p;

SQL-02142: Collection is NULL

Cause: The collection referenced in an EXEC SQL COLLECTION statement is null.

Action: Check the status of the associated indicator variable prior to executing an EXEC SQL COLLECTION statement.

SQL-02143: Target object has not been properly allocated

Cause: An attempt was made to retrieve elements from a collection into an unallocated object pointer.

Action: Allocate the object pointer with the EXEC SQL ALLOCATE statement.

SQL-02144: Invalid ANSI dynamic usage

Cause: An ANSI allocate, deallocate, get or set descriptor statement was encountered when dynamic option was not set.

Action: Precompile your source with option dynamic=ansi.

SQL-02145: Invalid dynamic descriptor

Cause: An attempt to access an unallocated or invalid descriptor was encountered.

Action: For ANSI descriptors, check that descriptor name is valid and descriptor has been allocated and not previously deallocated. Or if using Oracle descriptors (sqllda) with mode=ansi also use dynamic=oracle.

SQL-02146: Attempt to allocate an existing descriptor

Cause: An attempt allocated a descriptor which has previously been allocated was encountered.

Action: Use and unique descriptor name or deallocate the descriptor before attempting to reallocate it.

SQL-02147: ANSI Dynamic occurrence value out of range

Cause: The value clause in a dynamic GET or SET statement is less than one or greater than MAX given for descriptor allocation.

Action: Supply a number for the VALUE clause between 1 and the MAX occurrences supplied when the descriptor was allocated.

SQL-02148: ANSI Dynamic count value out of range

Cause: The count in a dynamic GET or SET statement is less than one or greater than MAX given for descriptor allocation.

Action: Supply a number for the COUNT clause between 1 and the MAX occurrences supplied when the descriptor was allocated.

SQL-02149: ANSI Dynamic insufficient item descriptor areas

Cause: The SQL statement being described contains more output items (or columns) than were allocated in the descriptor.

Action: Increase the MAX number of occurrences when allocating the descriptor.

SQL-02150: Encountered zero length in ANSI dynamic SET statement

Cause: An invalid length of zero was encountered in an ANSI dynamic statement.

Action: Set the length to a non-zero value

SQL-02151: Invalid host variable for exact numeric SET statement item

Cause: An host variable with an invalid type or length was used to get or set an exact numeric item in an ANSI dynamic statement.

Action: Make sure your host variable is and int or short for C or for COBOL, S9(4) or S9(9) binary/comp/display sign leading separate.

SQL-02152: Invalid numeric variable for use in an array GET/SET statement

Cause: An host variable with type other than int or short for C or S9(4) or S9(9) binary or comp was used for an exact numeric with and array size > 1.

Action: Use only int or short for C or S9(4) or S(9) binary or comp for COBOL when supplying an exact numeric in conjunction with the for clause to indicate arrays. Specifically, display sign leading separate is not allowed in this context.

SQL-02153: Invalid character variable for use in a GET/SET statement

Cause: An host variable with type other than character, string or varchar was found as an item name (other than DATA item) in an ANSI Dynamic GET or SET descriptor statement.

Action: Host variable types for character items (other than the DATA item) in ANSI dynamic GET or SET descriptor statements must not be of type LONG or LONG VARCHAR. Redeclare the variable to be character, string or varchar type

SQL-02154: Invalid or unset data type for host variable in ANSI Dynamic

Cause: An ANSI Dynamic SET statement with item name DATA was encountered with out a valid TYPE having been previously set and option mode=ansi was used

Action: With mode=ansi, you must set the TYPE before setting the DATA. Issue a SET statement with correct item TYPE or, for output issue a DESCRIBE to set the item type. Or use mode=oracle which allows the type to default to the type of the bind/define host variable

SQL-02155: Date Time Interval only valid with Dynamic=ANSI

Cause: An attempt to access the datetime interval code or precision was encountered when type_code option not set to ANSI

Action: Use precompiler option type_code=ansi to access the date time interval code or date time interval precision

SQL-02156: Invalid type for Indicator or Returned Length

Cause: A host variable associated with the item Indicator or Returned Length must be of type short or s9(4) comp. If value semantics and scalar they may also be gotten into display sign leading separate host variables

Action: Use signed short for indicator, ref indicator and returned length, ref returned length host variables in C. For COBOL use s9(4) comp. for GETs only with non-arrays and you may use display sign leading separate host variables

SQL-02157: Source or destination lob is invalid

Cause: One of the lobs used in the lob append call is invalid or possibly null.

Action: Make sure the lobs used in the append call are non-null.

SQL-02158: Unable to establish savepoint

Cause: An internal error occurred while establishing an internal savepoint.

Action: Check trace files for errors and rerun your application.

SQL-02159: exceeded the maximum allowed number of descriptors

Cause: The application exceeded the maximum number of descriptors.

Action: Close the unused descriptors in the application.

TNS-00000 to TNS-12699

TNS-00000: Not An Error

Cause: Everything is working as it should.

Action: Don't worry: Be happy.

TNS-00001: INTCTL: error while getting command line from the terminal

Cause: Improper standard input connection from the terminal.

Action: Normally not visible to the user. Start the INTCTL program again. If error persists, contact Oracle Customer Support.

TNS-00002: INTCTL: error while starting the Interchange

Cause: The Interchange could not be started.

Action: Check the Interchange configuration files (INTCHG.ORA, TNSNET.ORA and TNSNAV.ORA) for errors and confirm that no other programs are using the ADDRESS(es) specified. If error continues, turn on tracing in the Interchange components and examine the trace files to determine the cause of the problem. Be sure to turn tracing off when the problem has been rectified.

TNS-00003: INTCTL: error while sending request to the Interchange

Cause: Improper command sent to the Interchange or the Interchange is not responding. Not normally visible to the user.

Action: Verify that the command sent to the Interchange is valid. Also check that the Interchange is running by using the INTCTL STATUS command. If necessary, start the Interchange using the INTCTL START command.

TNS-00004: INTCTL: error while starting the Navigator

Cause: The Navigator could not be started.

Action: Check to make sure that executables for the Navigator (navgatr) are present in the ORACLE executable directory on your platform. Check the configuration files TNSNET.ORA and TNSNAV.ORA for errors. If error continues, turn on tracing in the Interchange components and examine the trace files to determine the cause of the problem. Be sure to turn tracing off when the problem has been rectified.

TNS-00005: INTCTL: error while sending request to the Navigator

Cause: The Navigator is not responding. Either the Navigator is not running or another process is responding.

Action: Check that the Navigator is running by using the STATUS command of the Interchange Control Utility. Verify that the correct addresses are listed in the TNSNAMES.ORA, TNSNET.ORA, and TNSNAV.ORA configuration files.

TNS-00006: INTCTL: HOST variable is not defined

Cause: The HOST variable was not set.

Action: Set the variable HOST properly and restart the INTCTL program.

TNS-00007: INTCTL: unknown host

Cause: The pointer HOST is set to an unknown hostname.

Action: Set the pointer HOST properly and restart INTCTL program.

TNS-00008: INTCTL: could not contact destination Navigator

Cause: Connection could not be properly established to a Navigator. This may be because the Navigator specified is not running or the Navigator addresses are incorrect.

Action: Check that the Navigator is running by using the STATUS command of the Interchange Control Utility; if necessary, start the Navigator using the START command of the Interchange Control Utility. If it is running and the error persists, contact Oracle Customer Support.

TNS-00009: INTCTL: could not contact destination Connection Manager

Cause: Connection could not be properly established to a Connection Manager. This may be because the Connection Manager (Interchange) specified is not running or the Connection Manager addresses are incorrect.

Action: Make sure the Connection Manager is running by using the STATUS command of the Interchange Control Utility; if necessary, start the Connection Manager using the START command of the Interchange Control Utility. If it is running and the error persists, contact Oracle Customer Support.

TNS-00010: Error while flushing NS context

Cause: Internal NS error; connection may be lost.

Action: Make sure the connection is properly established. If the error persists, then contact Oracle Customer Support.

TNS-00011: INTCTL: error while starting the Connection Manager

Cause: The Connection Manager could not be started.

Action: Assure that the executable can be found in the standard Oracle executable area. Check the configuration file INTCHG.ORA for errors and confirm that no other process is using the ADDRESS(es) for this Connection Manager as specified in TNSNET.ORA. Tracing can also be turned on in the Connection Manager and detailed information about the reason for the error determined. Consult the MultiProtocol Interchange Administrator's Guide and Chapter 2 of this manual for how to turn on tracing.

TNS-00012: INTCTL: error while processing Connection Manager request

Cause: An improper command was sent to the Connection Manager or it is not responding. Not normally visible to the user.

Action: Verify that the correct addresses are listed in the TNSNAMES.ORA, TNSNET.ORA, and TNSNAV.ORA configuration files. Also check that the Connection Manager is running by using the STATUS command of the Interchange Control Utility. If the error persists, contact Oracle Customer Support.

TNS-00013: INTCTL: error while performing NS disconnect command

Cause: Internal NS error. Error in closing down connections.

Action: Make sure the networking protocol being used is properly installed on the machine. If the error persists contact Oracle Customer Support.

TNS-00014: INTCTL: error while opening terminal input channel

Cause: Could not open standard terminal input. Internal error.

Action: Normally not visible to the user. Restart the INTCTL program. If error persists, contact Oracle Customer Support.

TNS-00015: INTCTL: error while closing terminal input channel

Cause: Could not close terminal input channel. Internal error.

Action: Normally not visible to the user. Restart the INTCTL program. If error persists, contact Oracle Customer Support.

TNS-00016: INTCTL: error while performing NS send command

Cause: Internal NS error. Connection may be lost.

Action: If the error persists contact Oracle Customer Support.

TNS-00017: INTCTL: error while performing NS receive command

Cause: Internal NS error. Connection may be lost.

Action: If the error persists contact Oracle Customer Support.

TNS-00018: INTCTL: TNS_ADMIN not defined

Cause: The TNS_ADMIN pointer is improperly set.

Action: No action necessary; TNS_ADMIN need only be set if you want to use a different network environment.

TNS-00019: INTCTL: error initializing the national language interface

Cause: The message file could not be found.

Action: Make sure that the ORACLE environment is set and that the message file is in the correct place.

TNS-00020: INTCTL: missing NAVIGATOR_DATA in TNSNAV.ORA

Cause: TNSNAV.ORA does not contain the NAVIGATOR_DATA component.

Action: Define the ADDRESS(es) for the Navigator, then restart the INTCTL program.

TNS-00021: INTCTL: missing INTERCHANGE_DATA in INTCHG.ORA

Cause: INTCHG.ORA does not contain an INTERCHANGE_DATA component.

Action: Define the correct data for the Connection Manager, then restart the INTCTL program.

TNS-00022: INTCTL: missing CMANAGER_NAME in INTCHG.ORA

Cause: INTCHG.ORA does not contain a CMANAGER_NAME component.

Action: Define the correct name for the CMANAGER_NAME, then restart the INTCTL program.

TNS-00023: INTCTL: missing ADDRESS(es) in config files

Cause: Configuration files do not contain an ADDRESS/ADDRESS_LIST component.

Action: Define the Connection Manager ADDRESS(es) in the TNSNET.ORA file and check the Navigator ADDRESS(es) in the TNSNAV.ORA file, then restart the INTCTL program.

TNS-00024: INTCTL: Unable to contact Navigator to obtain Connection Manager address

Cause: The Navigator is not running.

Action: Verify that the Navigator is running by doing a status request on the Navigator (use the Interchange Control Utility command STATUS). If necessary, start the Navigator using the Interchange Control Utility. Verify that the network is properly configured; if the error persists, contact Worldwide Customer Support.

TNS-00025: INTCTL: The ORACLE environment is not set up correctly

Cause: The ORACLE environment is incorrectly set up.

Action: Refer to the Oracle operating system specific documentation for your platform for information on how the ORACLE environment should be set. Correct it and rerun INTCTL. Make sure the ORACLE environment includes the correct directories.

TNS-00026: INTCTL: TNS_ADMIN directory set, and is being used

Cause: The TNS_ADMIN environment variable is set properly. INTCTL will use the TNS_ADMIN directory. This is only an informative message. If you do not want it to be used, and want the default directory to be used instead, then unset TNS_ADMIN and reexecute.

Action: None

TNS-00027: INTCTL: Could not resolve Navigator's name/address

Cause: The Navigator's name to address definition is missing.

Action: Check TNSNAMES.ORA file and make sure to include a definition for the name specified.

TNS-00028: INTCTL: Could not resolve Connection Manager's name/address

Cause: The Connection Manager's name does not have a definition that the Navigator knows about, nor is the name/address available in the TNSNAMES.ORA file. The name may also be incorrect in the INTCHG.ORA file.

Action: Verify that the Connection Manager's name is in the TNSNET.ORA file read by the Navigator or in the TNSNAMES.ORA file. Be sure that INTCHG.ORA is correct.

TNS-00031: INTCTL: internal NT error

Cause: Problem interfacing to the protocol adapters installed.

Action: Normally not visible to the user. Try starting INTCTL again. If the error persists, check the product installation. If it is correct, contact Oracle Customer Support.

TNS-00032: INTCTL: internal NS error

Cause: Problem interfacing with TNS.

Action: Normally not visible to the user. Try starting INTCTL again. If the error persists, check the product installation. If it is correct, contact Oracle Customer Support.

TNS-00033: INTCTL: internal NL error

Cause: Problem with internal TNS module NL.

Action: Normally not visible to the user. Try starting INTCTL again. If the error persists, check the product installation. If it is correct, contact Oracle Customer Support.

TNS-00034: INTCTL: internal NR error

Cause: Problem with internal Interchange routines.

Action: Normally not visible to the user. Try starting INTCTL again. If the error persists, check the product installation. If it is correct, contact Oracle Customer Support.

TNS-00035: INTCTL: error while constructing full file name

Cause: Problem while constructing the full path for a file name because the path name to the file or the environment variables are incorrect. Files looked up include TNSNAMES.ORA, TNSNAV.ORA, INTCHG.ORA and the error files for the Navigator and Connection Manager.

Action: Check that all environment variables are defined correctly and that all configuration files exist in their correct places.

TNS-00036: INTCTL: error reading from Navigator or Connection Manager error files

Cause: Problem while reading from Navigator or Connection Manager error files generated by the Navigator or Connection Manager when they fail to start.

Action: Check that a standard Network Error directory exists and that all privileges on the directory are appropriate.

TNS-00037: INTCTL: error opening Navigator or Connection Manager error files

Cause: Failed to open Navigator or Connection Manager error files when they have failed to start.

Action: Check that a Network Error directory exists and that all privileges on the directory are appropriate.

TNS-00038: INTCTL: Poorly formed address or command string

Cause: An unacceptable string was encountered while attempting to send a message to either the Navigator or Connection Manager. The addresses provided for either the Navigator or Connection Manager may be incorrectly constructed.

Action: Check all address strings in configuration files (TNSNAMES.ORA, TNSNAV.ORA or TNSNET.ORA) and assure that they are properly formed. Regenerate the files, if possible. If all is correct, please contact Worldwide Customer Support.

TNS-00039: INTCTL: error while spawning a process

Cause: An error was encountered while spawning a process due to an internal operating system dependent problem. Machine resources may be limited.

Action: Retry command. Check permissions on Interchange executables and the current setting of the search path. If necessary, terminate other applications to free up machine resources. If the error persists, contact Oracle Customer Support.

TNS-00040: INTCTL: failed to initialize trace context- Continuing anyway

Cause: Problem while opening specified trace file because of errors in INTCHG.ORA or because the user has incorrect privileges, or the file does not exist.

Action: Check the privileges on the configuration files and ensure that all of them exist in their proper locations.

TNS-00041: INTCTL: Navigator already running. Start operation cancelled

Cause: There is a Navigator already running and listening on the same addresses.

Action: None; the Navigator is already running.

TNS-00042: INTCTL: CMANAGER already running. Start operation cancelled

Cause: There is a Connection Manager already running and listening on the same addresses.

Action: None; the Connection Manager is already running.

TNS-00043: The CMANAGER has active connections, do you still want to stop it (y/n)?

Cause: The CMANAGER that is being stopped has active connections going through. This is the confirmation message.

Action: Respond by pressing y or n. Answering y will cause the active database connection to be dropped; this is not generally recommended.

TNS-00044: INTCTL: You must have an INTCHG.ORA file to contact the Connection Manager

Cause: There was an attempt to contact a default Connection Manager (Interchange) where there was no INTCHG.ORA present in the correct directory.

Action: Create an INTCHG.ORA file. Make sure it is placed in the correct directory and includes the correct name for the Connection Manager you wish to contact.

TNS-00045: INTCTL: Could not contact the Navigator on address

Cause: There was an attempt to contact a Navigator on a specific address which is not responding.

Action: Check the TNSNAV.ORA file for that address. Or check that the Navigator is actually listening on that address.

TNS-00046: INTCTL: Could not contact the CMANAGER on address

Cause: There was an attempt to contact a CMANAGER on a specific address which is not responding.

Action: Verify that the TNSNET.ORA file contains that address. Also check that the CMANAGER is actually listening on that address by using the INTCTL STATUS command. If necessary, start the Connection Manager using the INTCTL START command.

TNS-00060: INTCTL: Bad command: only the STATUS command can be used on remote Interchanges

Cause: The user entered a command that does not exist, or the user tried to make a request other than STATUS to a remote Interchange.

Action: Check the MultiProtocol Interchange Administrator's Guide for a list of INTCTL commands or type HELP for a list of valid commands.

TNS-00061: INTCTL: Bad command or syntax error: You must specify a trace level

Cause: The user did not specify a trace level.

Action: Specify a trace level and retry command.

TNS-00062: INTCTL: Bad command or syntax error: For help type help/h/?

Cause: The user entered an invalid command.

Action: Check the MultiProtocol Interchange Administrator's Guide or type HELP for a list of valid commands.

TNS-00063: INTCTL: Failed to allocate memory for buffers

Cause: INTCTL was unable to allocate memory for internal buffers.

Action: Check the amount of available memory on your machine to ensure that there is enough memory to run this executable. If necessary, free up memory by running fewer programs, then try again.

TNS-00064: INTCTL: Failed to find CMANAGER_NAME in INTCHG.ORA

Cause: INTCTL was unable to find the CMANAGER_NAME parameter in INTCHG.ORA.

Action: Check that the INTCHG.ORA file is properly constructed.

TNS-00065: INTCTL: Command cannot be executed remotely

Cause: A command other than status and version has been attempted remotely.

Action: If you desire execute any command other than status and version, you must run intctl on the interchange machine.

**TNS-00070: INTCTL usage: [intctl] <varname>command</varname>
<process_name> [argument]\n**

Cause: Help message displayed by INTCTL.

Action: None

TNS-00071: where <varname>command</varname> is one of following: \n

Cause: Help message displayed by INTCTL.

Action: None

TNS-00072: * start - start up process_name\n

Cause: Help message displayed by INTCTL.

Action: None

TNS-00073: * stop/abort - stop the process_name\n

Cause: Help message displayed by INTCTL.

Action: None

TNS-00074: * status - get statistics from the process_name\n

Cause: Help message displayed by INTCTL.

Action: None

TNS-00075: NOTE: the user may get the status info of a remoteln

Cause: Help message displayed by INTCTL.

Action: None

TNS-00076: component by specifying the component name inln

Cause: Help message displayed by INTCTL.

Action: None

TNS-00077: the argument fieldln

Cause: Help message displayed by INTCTL.

Action: None

TNS-00078: * log_on - ask process_name to turn logging onln

Cause: Help message displayed by INTCTL.

Action: None

TNS-00079: * log_off - ask process_name to turn logging offln

Cause: Help message displayed by INTCTL.

Action: None

TNS-00080: * force_log - ask process_name to dump its stateln

Cause: Help message displayed by INTCTL.

Action: None

TNS-00081: * trace_on - ask process name to turn tracing onln

Cause: Help message displayed by INTCTL.

Action: None

TNS-00082: NOTE: the user MUST specify a trace levelln

Cause: Help message displayed by INTCTL.

Action: None

TNS-00083: (USER or ADMIN) in the argument fieldln

Cause: Help message displayed by INTCTL.

Action: None

TNS-00084: * trace_off - ask process name to turn tracing offln

Cause: Help message displayed by INTCTL.

Action: None

TNS-00085: * reread - ask the process name to reread parameter filesln

Cause: Help message displayed by INTCTL.

Action: None

TNS-00086: * reload - ask the Navigator to reload TNSNET.ORA\n

Cause: Help message displayed by INTCTL.

Action: None

TNS-00087: * version - ask the process name to display its version number\n

Cause: Help message displayed by INTCTL.

Action: None

TNS-00088: * exit - quit the Interchange controller\n\n

Cause: Help message displayed by INTCTL.

Action: None

TNS-00089: process_name is one of Interchange, CMANAGER, or Navigator\n

Cause: Help message displayed by INTCTL.

Action: None

TNS-00090: * Interchange - will ask the Interchange\n

Cause: Help message displayed by INTCTL.

Action: None

TNS-00091: * Navigator (or navgatr) - will ask the Navigator only\n

Cause: Help message displayed by INTCTL.

Action: None

TNS-00092: * CMANAGER (or intlsnr) - will ask the Cmanager only\n\n

Cause: Help message displayed by INTCTL.

Action: None

TNS-00093: argument is only supplied to either status or trace_on\n

Cause: Help message displayed by INTCTL.

Action: None

TNS-00094: * to status - argument is considered the remote process_name\n

Cause: Help message displayed by INTCTL.

Action: None

TNS-00095: * to trace_on - argument is considered the trace level\n\n

Cause: Help message displayed by INTCTL.

Action: None

TNS-00100: Unable to allocate memory

Cause: Out of memory on the machine.

Action: Add more memory or run fewer processes.

TNS-00101: File operation error

Cause: Error in accessing reading or writing a particular file.

Action: Check existence of or operating system access to the log and trace file locations.

TNS-00102: Keyword-Value binding operation error

Cause: Not normally visible to the user. May indicate a shortage of memory.

Action: If error persists contact Oracle Customer Support.

TNS-00103: Parameter file load error

Cause: Parameter file process failed.

Action: Check to make sure that all parameter files necessary for the Interchange are present (TNSNAV.ORA, TNSNET.ORA and INTCHG.ORA). If these files are present and properly configured, turn on tracing and repeat the operation. Turn off tracing when the trace is complete. Look in the trace file for errors in the parameter loading process. If error persists contact Oracle Customer Support.

TNS-00104: Data stream open/access error

Cause: Unable to open or access data stream for either log or trace files for the Interchange.

Action: Check read/write permissions on Oracle files and directories.

TNS-00105: Could not initialize tracing

Cause: The INTCHG.ORA file is improperly configured. Verify the trace parameters specified.

Action: If error persists contact Oracle Customer Support.

TNS-00106: Failed to open log file

Cause: Unable to access or obtain write permission to create log file.

Action: Check existence of or access to log file directory.

TNS-00107: Unable to initialize TNS global data

Cause: Not normally visible to the user.

Action: If error persists contact Oracle Customer Support.

TNS-00108: TNS_ADMIN not defined

Cause: TNS_ADMIN pointer is not set.

Action: Set the TNS_ADMIN pointer before running application

TNS-00109: Message could not be printed; not enough memory

Cause: Printing of message failed due to lack of memory. Not normally visible to user.

Action: Increase the resources on your machine. If error persists contact Oracle Customer Support.

TNS-00110: Could not initialize network from file TNSNET.ORA

Cause: Poorly formed network information in network file.

Action: Fix network configuration data to assure that at least one Interchange is defined in TNSNET.ORA.

TNS-00111: Failed to get configuration data from file

Cause: Poorly formed configuration information in network files TNSNET.ORA or TNSNAV.ORA.

Action: Check TNSNET.ORA and TNSNAV.ORA and confirm that they are correct.

TNS-00112: Failed to find configuration file name

Cause: Name specified for configuration file was incorrect.

Action: Check for presence of the configuration file.

TNS-00113: Failed to open error log file

Cause: Could not open log file during startup of Navigator or Connection Manager due to read or write permission problems or non-existent error directory.

Action: Create the standard error directory or assure that if one is present the Interchange executables can write to it.

TNS-00114: Internal error- Allocation of addresses not performed

Cause: Internal error. Should not normally occur.

Action: Contact Oracle Customer Support.

TNS-00115: Could not allocate pump global buffers

Cause: Not enough memory to allocate pump buffers.

Action: Decrease the number of PUMP_BUFFERS in INTCHG.ORA.

TNS-00116: Pump failed during initial bequeath

Cause: Error in assigning connection to a new pump. This error may be caused by insufficient machine resources.

Action: Attempt the connection again. The pump should recover from such a failure. If machine resources appear to be the problem, add more resources // or shut down some active applications. If problem persists, contact Oracle Customer Support.

TNS-00117: Internal error- No data passed through pump

Cause: Internal error. Data expected has not arrived yet.

Action: If error persists, contact Oracle Customer Support.

TNS-00119: Missing PUMP_CONNECTIONS in INTCHG.ORA

Cause: No PUMP_CONNECTIONS parameter specified in INTCHG.ORA.

Action: Add PUMP_CONNECTIONS parameter to INTCHG.ORA.

TNS-00120: Missing PUMPS in INTCHG.ORA

Cause: No PUMPS parameter specified.

Action: Add an appropriate number of PUMPS to INTCHG.ORA.

TNS-00121: Missing CMANAGER_NAME in INTCHG.ORA

Cause: No CMANAGER_NAME parameter specified.

Action: Define the CMANAGER_NAME parameter in INTCHG.ORA; it must match the CMANAGER_NAME parameter used in TNSNET.ORA for that Interchange.

TNS-00122: Missing ADDRESS(es) in TNSNET.ORA file

Cause: No ADDRESS or ADDRESS_LIST parameter specified in TNSNET.ORA.

Action: Define a valid set of ADDRESSES for the Connection Manager in the TNSNET.ORA file.

TNS-00123: Unable to perform a listen on configured ADDRESS(es)

Cause: Another process is already listening on this address or the ADDRESS is incorrectly defined.

Action: Check the ADDRESS(es) defined in TNSNET.ORA (for the Connection Manager) for errors. Verify that another program is not using them.

TNS-00124: Internal error - Unable to create empty address

Cause: - Internal error. Should not normally occur.

Action: If problem persists contact Oracle Customer Support.

TNS-00125: Failed to get number of Interchanges in TNSNET.ORA

Cause: Error in the TNSNET.ORA file.

Action: Check the contents of TNSNET.ORA and eliminate errors. Regenerate the configuration files.

TNS-00126: Missing Connection Manager name and address in TNSNET.ORA

Cause: The Interchange name specified in INTCHG.ORA is not defined in the TNSNET.ORA file.

Action: Define one Connection Manager name and set of addresses for each Interchange in the network. Regenerate the configuration files.

TNS-00127: Missing Connection Manager name in TNSNET.ORA

Cause: One or more Connection Manager names are missing.

Action: Ensure that each Connection Manager name is defined in TNSNET.ORA. Regenerate TNSNET.ORA.

TNS-00128: Missing COMMUNITY in TNSNET.ORA

Cause: One or more ADDRESSES does not have a COMMUNITY assigned.

Action: Ensure that all addresses have a COMMUNITY defined in TNSNET.ORA.

TNS-00129: Internal error - Failed to create new community

Cause: Internal Error. Should not normally occur. There may be a resource limitation problem on the machine.

Action: Stop and restart Interchange. If possible, make more memory available on the machine. If problem persists, contact Oracle Customer Support.

TNS-00130: Failed to create Interchange's internal address

Cause: There is an error in one of the addresses listed in TNSNET.ORA.

Action: Check the file for errors in defining Interchanges.

TNS-00131: Missing COMMUNITY in COMMUNITY_COST_LIST in TNSNET.ORA

Cause: A COMMUNITY keyword-value pair is missing within the COMMUNITY_COST_LIST in TNSNET.ORA.

Action: Define the communities with a COMMUNITY name and associated COST in COMMUNITY_COST_LIST.

TNS-00132: COST value must be an integer greater than 0

Cause: A community has been defined in TNSNET.ORA with a COST of 0.

Action: Assign an alternate value that is greater than 0.

TNS-00133: Missing LOCAL_COMMUNITIES field in TNSNAV.ORA

Cause: Improperly configured TNSNAV.ORA file.

Action: Define the LOCAL_COMMUNITIES fields correctly in TNSNAV.ORA.

TNS-00134: Missing COMMUNITY component in addresses for the Navigator in TNSNAV.ORA

Cause: The addresses specified for the Navigator have no COMMUNITY name.

Action: Ensure that all addresses in the NAVIGATOR_ADDRESSES field have a COMMUNITY entry in the TNSNAV.ORA file.

TNS-00135: Missing TNS error message file

Cause: No error message file present.

Action: Ensure that the ORACLE environment is correctly set for your platform and that there is a message directory that contains the correct error message file.

TNS-00136: Did not register product/facility for TNS error message

Cause: Error message file error.

Action: Ensure that the ORACLE environment is correctly set for your platform and that there is a message directory that contains the correct error message file.

TNS-00137: Failed to get TNS error message file entry

Cause: No TNS error message file present.

Action: Ensure that the ORACLE environment is correctly set for your platform and that there is a message directory that contains the correct error message file.

TNS-00138: Failed to find ORACLE executable directory

Cause: The ORACLE environment is not correctly set.

Action: Ensure that the ORACLE environment is correctly set and the error messages file is in the correct place.

TNS-00139: Internal - Data passed from the Interchange listener is poorly formed

Cause: Internal error in Interchange.

Action: Check that you are using compatible components of the Interchange product, using the INTCTL VERSION command. If problem persists call Oracle Customer Support.

TNS-00140: Interchange specified was not found in network tables

Cause: Could not find the Interchange specified in a control request.

Action: Check that the Interchange specified is indeed in TNSNET.ORA.

TNS-00141: Failed to get file stream information

Cause: Error in the file stream package.

Action: None

TNS-00142: Community mismatch in TNSNAV.ORA

Cause: The communities in the LOCAL_COMMUNITIES entry in TNSNAV.ORA do not correspond with all the communities in the NAVIGATOR_ADDRESSES entry.

Action: Assure that all communities in the NAVIGATOR_ADDRESSES correspond to those in the LOCAL_COMMUNITIES component.

TNS-00143: Illegal PREFERRED_CMANGERS entry in TNSNAV.ORA

Cause: PREFERRED_CMANGERS entry in the TNSNAV.ORA used by the Connection Manager. There should only be a PREFERRED_NAVIGATORS entry in the TNSNAV.ORA on an Interchange.

Action: Remove the PREFERRED_CMANGERS entry from TNSNAV.ORA and assure that either no PREFERRED_NAVIGATORS entry is present or that it is correct.

TNS-00144: PUMP_CONNECTIONS value in INTCHG.ORA is too large.

Cause: The number of PUMP_CONNECTIONS specified in INTCHG.ORA is too large to be supported on this platform.

Action: Consult the Oracle operating system specific manual for the maximum value for the number of PUMP_CONNECTIONS.

TNS-00145: PUMPS value in INTCHG.ORA is too large.

Cause: The number of PUMPS specified in INTCHG.ORA is too large to be supported on this platform.

Action: Consult the Oracle operating system specific manual for the maximum value for the number of PUMPS.

TNS-00146: Internal-- Retry data request withing pump.

Cause: The data space provided in order to receive data from the pump is to small.

Action: Operation must be retried with a larger buffer.

TNS-00147: Failed to start a pre-spawned pump.

Cause: The Connection Manager was unable to start a pump during startup.

Action: Check all configuration parameters and assure that they are correct. Turn on tracing to determine the area that the failure occurred in.

TNS-00200: Unable to do nsanswer on context\nresult=<varname>string</varname>\n

Cause: Requester of service may have aborted or options negotiation failed.

Action: Try making the connection again. If the problem persists call Oracle Customer Support.

TNS-00201: Unable to read answer connection data :<varname>string</varname>:\n

Cause: Improperly formed connect data sent to the Interchange listener.

Action: If problem persists, check the application using the Interchange (it may be closing down or crashing). Call Oracle Customer Support if the problem cannot be located.

TNS-00202: Failure in redirecting call : \nOriginal to <varname>string</varname>\n\t Redirect to <varname>string</varname>\n

Cause: Internal - error could not redirect call to a pump or other Interchange listener. The cause may be insufficient network or machine resources.

Action: Add resources or close some running applications in order to free up resources. If error persists, call Oracle Customer Support.

TNS-00203: Unable to start tracing in intlsnr\n

Cause: Failure in setting up tracing for Interchange listener.

Action: Check file permissions in Network trace directory also check to make sure that if trace file names and directories are specified in INTCHG.ORA, they are correct.

TNS-00204: Started tracing in intlsnr\n

Cause: Internal message- Successfully started tracing information.

Action: None

TNS-00205: Turning off tracing in intlsnr\n

Cause: Internal message - Turned off tracing in the Interchange listener.

Action: None

TNS-00206: \n\nStatus Information for Interchange <varname>string</varname>:\n

Cause: Message sent back by Interchange as header for status request.

Action: None

TNS-00207: \tUptime : <varname>number</varname> days <varname>number</varname> hr. <varname>number</varname> min. <varname>number</varname> sec\n

Cause: Part of status request.

Action: None

TNS-00208: \tLogging : <varname>string</varname>\n

Cause: Part of status request.

Action: None

TNS-00209: \tTracing : <varname>string</varname>\n

Cause: Part of status request Interchange.

Action: None

TNS-00210: \tTotal Pumps Available : <varname>number</varname>\n

Cause: Part of status request for Connection Manager.

Action: None

TNS-00211: \tTotal Active Pumps : <varname>number</varname>\n

Cause: Part of status request for Connection Manager.

Action: None

TNS-00212: \tTotal Pumps Started : <varname>number</varname>\n

Cause: Part of status request for Connection Manager.

Action: None

TNS-00213: \tAvailable Connections : <varname>number</varname>\n

Cause: Part of status request for Connection Manager.

Action: None

TNS-00214: \tTotal Connections in Use : <varname>number</varname>\n

Cause: Part of status request for Connection Manager.

Action: None

TNS-00215: \tTotal Successful Connections : <varname>number</varname>\n

Cause: Part of status request for Connection Manager.

Action: None

TNS-00216: \tTotal Failed Connections : <varname>number</varname>\n

Cause: Part of status request for Connection Manager.

Action: None

TNS-00217: \tTotal Bytes of Data : <varname>number</varname>\n

Cause: Part of status request for Connection Manager.

Action: None

TNS-00218: \tCurrent Bytes/Sec. : <varname>number</varname>\n

Cause: Part of status request for Connection Manager.

Action: None

TNS-00219: \tPump Strategy : <varname>string</varname>\n

Cause: Part of status request.

Action: None

TNS-00220: \tPump Breakdown\n\t-----\n

Cause: Part of status request.

Action: None

TNS-00221: \tPump Connections Total Data Bytes/Second\n

Cause: Part of status request.

Action: None

TNS-00222: \t-----\n

Cause: Part of status request.

Action: None

TNS-00223: \t<varname>number</varname><varname>number</varname><varname>number</varname><varname>number</varname><varname>number</varname>\n

Cause: Part of status request.

Action: None

TNS-00224: No more connections available\n

Cause: More connections were made to the Interchange than are configured in INTCHG.ORA.

Action: Wait until the Interchange is not as busy or change the number of connections allowed in INTCHG.ORA and restart the Interchange.

TNS-00225: Unable to bequeath connection to pump\n

Cause: Unable to start a pump because either the executable cannot be found or too many processes are currently running on a particular machine.

Action: Reduce the number of processes on the machine or increase the resources on the machine.

TNS-00226: Unable to contact pump <varname>number</varname> to send broadcast message <varname>string</varname>\n

Cause: Could not call a particular pump.

Action: None, but if the problem persists call Oracle Customer Support.

TNS-00227: Unable to contact pump; Connection Manager declared pump dead\n

Cause: A pump became an orphaned process. A protocol adapter is not working properly or machine network resources are being over used.

Action: This error is not immediately fatal; the orphaned pump may continue to function. Restart the Interchange when convenient. If the problem persists, call Oracle Customer Support.

TNS-00228: Failure in finding pump data\n

Cause: Internal problem with data passed back from pump.

Action: None

TNS-00229: Error in call: unable to deliver message\n:<varname>string</varname>:\n<varname>string</varname>\n<varname>string</varname>\n<varname>string</varname>\n

Cause: Destination for call is unavailable.

Action: None

TNS-00230: Cannot start new pump process:\n<varname>string</varname>\n<varname>string</varname>\nProtocol Adapter errors:<varname>number</varname>

Cause: Unable to create a new process; possibly there are too many processes on the machine.

Action: Free machine resources by exiting other applications on the Interchange machine. If the problem continues you may need more memory on the machine. If you believe there are sufficient resources on the machine but the problem persists, contact Oracle Customer Support.

TNS-00231: Pump is alive\n

Cause: Pump log message sent to Interchange listener.

Action: None

TNS-00232: Unable to setup connection\n

Cause: Error log message sent from pump to indicate failure in initiating connection because of errors in the call string: network problem or resource limitations.

Action: None

TNS-00233: Interchange failed to make contact with destination with errors:\n<varname>string</varname>\n<varname>string</varname>\n<varname>string</varname>\n

Cause: Pump call to destination failed.

Action: Check destination.

TNS-00234: Connect data for failed call:\nCALL DATA =\n<varname>string</varname>\nRECEIVE DATA = :<varname>string</varname>:\n

Cause: Connect data supplied for error 00233.

Action: None

TNS-00235: Aborting connection:\nProtocol Adapter errors:\n<varname>string</varname>;<varname>number</varname>,<varname>number</varname>\n<varname>string</varname>;<varname>number</varname>,<varname>number</varname>\n

Cause: Pump aborting connection because connection has been up too long, or some other network error on the connection.

Action: None

TNS-00236: Failed to initialize tracing\n

Cause: Pump failed to initialize tracing.

Action: Check that INTCHG.ORA is properly configured.

TNS-00237: Failed to refuse connection\n

Cause: Connection may have aborted before error took place in Pump.

Action: None

TNS-00238: Pump <varname>number</varname> @: <varname>string</varname>:

Cause: Prepend message to all pump log messages.

Action: None

TNS-00239: Connection Manager has been stopped

Cause: Message sent back to control program from Interchange.

Action: None

TNS-00240: Connection Manager: Logging is now ON

Cause: Message sent back to control program from Interchange.

Action: None

TNS-00241: Connection Manager: Logging is now OFF

Cause: Message sent back to control program from Interchange.

Action: None

TNS-00242: Connection Manager: Tracing is now ON

Cause: Message sent back to control program from Interchange.

Action: None

TNS-00243: Connection Manager: Tracing is now OFF

Cause: Message sent back to control program from Interchange.

Action: None

TNS-00244: Connection Manager: Request Failed

Cause: Message sent back to control program from Interchange.

Action: None

TNS-00245: Connection Manager: Failed to open log file

Cause: Message sent back to control program from Interchange.

Action: None

TNS-00246: Connection Manager: Failed to start tracing

Cause: Message sent back to control program from Interchange.

Action: None

TNS-00247: Unable to allocate memory for configuration data from TNSNET.ORA file

Cause: Navigator failed to allocate enough memory for TNSNET.ORA configuration file.

Action: Increase machine resources available for running the Interchange or remove some other running applications from the machine.

TNS-00248: Unable to get information from file :<varname>string</varname>: InExiting with NR error:<varname>number</varname>\n

Cause: TNSNAV.ORA poorly configured or addresses provided are already being used by another application.

Action: Check the syntax of the TNSNAV.ORA file; if necessary, assign new addresses.

**TNS-00249: Unable to read network configuration data from file
<varname>string</varname>\n with error:\n <varname>string</varname>\n**
Cause: Network configuration file TNSNET.ORA is missing or poorly configured.

Action: Check to make sure that TNSNET.ORA is properly configured.

TNS-00250: Navigator has been started\n
Cause: Message to log file on Navigator startup.

Action: None

TNS-00251: Failure in nstest: \n
Cause: NS test operation failed due to internal error.

Action: If the problem persists there may be a network problem or resource limitations on the machine. If these do not seem to be causing the problem, call Oracle Customer Support.

TNS-00252: Unable to handle route request:\n<varname>string</varname>\n
Cause: Command requested did not exist.

Action: None

**TNS-00253: Error in reading network configuration data from file
<varname>string</varname>\n with error\n<varname>string</varname>\n**
Cause: TNSNET.ORA is poorly configured or nonexistent.

Action: Check to make sure that TNSNET.ORA is properly configured.

TNS-00254: Navigator has been stopped\n
Cause: Message sent to Interchange control program by Navigator confirming it has been stopped.

Action: None

TNS-00255: Closing down log, stopping Navigator\n
Cause: Log message when Navigator is stopped.

Action: None

TNS-00256: Status of Navigator:\n
Cause: Navigator status message component

Action: None

TNS-00257: \tNumber of Successful Requests : <varname>number</varname>\n
Cause: Navigator status message component

Action: None

TNS-00258: \tNumber of Failed Requests : <varname>number</varname>\n
Cause: Navigator status message component

Action: None

TNS-00259: \tDisabled Interchange list:\n\t\n
Cause: Navigator status message component

Action: None

TNS-00260: \t-----\n

Cause: Navigator status message component

Action: None

TNS-00261: \tInterchange Name Community Link Down Time Remaining (secs)
\n

Cause: Navigator status message component

Action: None

TNS-00262: <varname>string</varname><varname>string</
varname><varname>number</varname>\n

Cause: Navigator status message component

Action: None

TNS-00263: Navigator: Request Failed

Cause: Response from Navigator when a particular request failed.

Action: None

TNS-00264: Navigator: Failed to reload configuration data

Cause: Message sent to the Interchange control program when reload of network configuration failed. TNSNET.ORA Poorly configured or missing.

Action: None

TNS-00265: Navigator: Reloaded network configuration data

Cause: Message sent to Interchange control program when reload of network is successful.

Action: None

TNS-00266: Navigator: Unknown Request

Cause: Request was made to Navigator that it knows nothing about.

Action: None

TNS-00267: Navigator: Internal Error

Cause: Generated when a request was made to the Navigator it knows nothing about.

Action: None

TNS-00268: ON

Cause: On component of message.

Action: None

TNS-00269: OFF

Cause: Off component of message.

Action: None

TNS-00270: <varname>string</varname>: Terminal Error\n<varname>string</varname>\n

Cause: Message put out in error file of executable when it fails to start.

Action: None

TNS-00271: Connection Manager

Cause: Name of the Connection Manager.

Action: None

TNS-00272: Navigator

Cause: Name for the Navigator.

Action: None

TNS-00273: Navigator: Logging is now ON

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00274: Navigator: Logging is now OFF

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00275: Navigator: Tracing is now ON

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00276: Navigator: Tracing is now OFF

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00277: Navigator: Request Failed

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00278: Navigator: Failed to Open Log file

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00279: Navigator: Failed to Start Tracing

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00280: \tMax Avg Bytes/Sec : <varname>number</varname>\n

Cause: Part of status request for Connection Manager.

Action: None

TNS-00281: Connection Manager: Forced Log output

Cause: Message sent back to control program from Connection Manager.

Action: None

TNS-00282: Connection Manager: Failed to force log, logging is off

Cause: Message sent back to control program from Connection Manager.

Action: None

TNS-00283: Listening on the following TNS addresses:

Cause: Message sent back to control program from Connection Manager.

Action: None

TNS-00284: Max Avg Bytes/Sec : <varname>number</varname>

Cause: Part of status request for Connection Manager.

Action: None

TNS-00285: Avg Connect Time (secs) : <varname>number</varname>

Cause: Part of status request for Connection Manager.

Action: None

TNS-00286: Max Connect Time (secs) : <varname>number</varname>

Cause: Part of status request for Connection Manager.

Action: None

TNS-00287: Min Connect Time (secs) : <varname>number</varname>

Cause: Part of status request for Connection Manager.

Action: None

TNS-00288: Navigator: Failed to Disable Interchange

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00289: Navigator: Disabled Interchange

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00290: Navigator: Failed to Enable Interchange

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00291: Navigator: Enabled Interchange

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00292: Log File Name : <varname>string</varname>

Cause: Message sent back to control program showing log file name

Action: None

TNS-00293: \tTrace File Name :\n\t\t<varname>string</varname>\n

Cause: Message sent back to control program showing trace file name

Action: None

TNS-00294: Connection Manager: Security is enabled, you cannot STOP the Interchange\n

Cause: Message sent back to control program indicating that the connection manager is secure.

Action: None

TNS-00295: Navigator: Security is enabled, you cannot STOP the Navigator\n

Cause: Message sent back to control program indicating that the Navigator is secure.

Action: None

TNS-00296: \tStoppable : <varname>string</varname>\n

Cause: Message sent back to control program indicating whether program can be stopped.

Action: None

TNS-00297: \tLogging Level : <varname>string</varname>\n

Cause: Message sent back to control program indicating whether program can be stopped.

Action: None

TNS-00298: Request to Navigator:\n<varname>string</varname>\n

Cause: Log entry for request to Navigator.

Action: None

TNS-00299: Response from Navigator:\n<varname>string</varname>\n

Cause: Log entry for request to Navigator.

Action: None

TNS-00300: *Disabling Interchange : <varname>string</varname>\n**

Cause: Log entry for disabling a particular Interchange.

Action: None

TNS-00301: *Enabling Interchange : <varname>string</varname>\n**

Cause: Log entry for disabling a particular Interchange.

Action: None

TNS-00302: Connection Manager: Unknown Request

Cause: Request sent by Interchange control program is unknown.

Action: None

TNS-00303: Connection Manager: Reread parameter data

Cause: Request sent by control manager to control programming indicating that parameter data was read.

Action: None

TNS-00304: Status Information for Connection Manager:\n

Cause: Message sent back by Interchange as header for status request.

Action: None

TNS-00305: The Navigator encountered an invalid/unknown trace level\n

Cause: Message sent back by the Navigator indicating an invalid trace level.

Action: Reattempt the request with a correct trace level.

TNS-00306: Connection Manager encountered an invalid/unknown trace level\n

Cause: Message sent back by the Connection Manager indicating an invalid trace level.

Action: Reattempt the request with a correct trace level.

TNS-00307: Navigator: Reread parameter data

Cause: Request sent by the Navigator to control program indicating that parameter data was read.

Action: None

TNS-00308: Navigator: Failed to open log while rereading parameter data

Cause: Request sent by the Navigator to control program indicating that it could not reopen log file after rereading parameter data.

Action: None

TNS-00309: Connection Manager: Failed to open log while re-reading parameter data

Cause: Request sent by the Connection Manager to control program indicating that it could not reopen log file after rereading parameter data.

Action: None

TNS-00310: Navigator: Failed to start tracing after rereading parameter data

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00311: Connection Manager: Failed to start tracing after rereading parameter data

Cause: Message sent back to control program from Connection Manager.

Action: None

TNS-00312: Connection Manager: Failed to get version information

Cause: Message sent back to control program from Connection Manager.

Action: None

TNS-00313: Navigator: Failed to get version information

Cause: Message sent back to control program from Connection Manager.

Action: None

TNS-00314: Protocol Adapter Errors: <varname>number</varname>,<varname>number</varname>\n

Cause: Protocol Adapter errors which go with message 233

Action: None

TNS-00315: Failed to allocate larger connect data area for getting pump data: <varname>number</varname>\n

Cause: Could not allocate a large enough area to get pump statistics; continue without them.

Action: None

TNS-00316: Ran out of data buffers in the pump\n

Cause: The Interchange is resource limited by having too few data buffers in the pump.

Action: If the problem persists (that is, there are a lot of log messages), increase the number of pump buffers by increasing the value of the parameter PUMP_BUFFERS in INTCHG.ORA. Then shutdown and restart the Interchange to make the changes take effect.

TNS-00317: Failed to contact Connection Manager

Cause: Connection Manager is not running.

Action: Start the Connection Manager and retry

TNS-00501: Cannot allocate memory

Cause: Sufficient memory could not be allocated to perform the desired activity.

Action: Either free some resource for TNS or add more memory to the machine. For further details, turn on tracing and reexecute the operation.

TNS-00502: Invalid argument

Cause: An internal function received an invalid parameter.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00503: Illegal ADDRESS parameters

Cause: An illegal set of protocol adapter parameters was specified.

Action: Check the parameters within the ADDRESS section of the TNSNAMES.ORA file. It may be helpful to turn on tracing and look at the addresses specified in the trace file, checking for spelling or other errors. Be sure to turn tracing off when the trace is complete.

TNS-00504: Operation not supported

Cause: An internal function received a request to perform an operation that is not supported (on this machine).

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00505: Operation timed out

Cause: The requested operation could not be completed within the timeout period.

Action: For further details, turn on tracing and reexecute the operation.

TNS-00506: Operation would block

Cause: An internal operation did not commence because to do so would block the current process and the user has requested that operations be non-blocking.

Action: None needed; this is an information message.

TNS-00507: Connection closed

Cause: Normal "end of file" condition has been reached; partner has disconnected.

Action: None needed; this is an information message.

TNS-00508: No such protocol adapter

Cause: The protocol adapter requested for this connection does not exist.

Action: Install the protocol adapter or use one that is available. Be sure that the correct protocols are listed in the configuration files.

TNS-00509: Buffer overflow

Cause: Too much data for buffer.

Action: Reexecute with larger receive buffer or smaller send buffer.

TNS-00510: Internal limit restriction exceeded

Cause: Too many files or sockets open simultaneously (or some other resource has been depleted).

Action: For further details, trace the operation for protocol details.

TNS-00511: No listener

Cause: The connect request could not be completed because no application is listening on the address specified, or the application is unable to service the connect request in a sufficiently timely manner.

Action: Ensure that the supplied destination address matches one of the addresses used by the listener - compare the TNSNAMES.ORA entry with appropriate LISTENER.ORA file (or TNSNAV.ORA if the connection is to go by way of an Interchange. Start the listener on the remote machine.

TNS-00512: Address already in use

Cause: Specified listener address is already being used.

Action: Start your listener with an unused address.

TNS-00513: Destination host unreachable

Cause: Contact cannot be made with remote party.

Action: Make sure the network driver is functioning and the network is up.

TNS-00514: Contexts have different wait/test functions

Cause: Two protocol adapters have conflicting wait/test functions.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00515: Connect failed because target host or object does not exist

Cause: The address specified is not valid, or the program being connected to does not exist.

Action: Ensure the ADDRESS parameters have been entered correctly; the most likely incorrect parameter is the node name. Ensure that the executable for the server exists (perhaps "oracle" is missing.)

TNS-00516: Permission denied

Cause: User has insufficient privileges to perform the requested operation.

Action: Acquire necessary privileges and try again.

TNS-00517: Lost contact

Cause: Partner has unexpectedly gone away.

Action: Investigate partner application for abnormal termination.

TNS-00518: Incomplete read or write

Cause: A data send or receive failed.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00519: Operating system resource quota exceeded

Cause: The current user has exceeded the allotted resource assigned in the operating system.

Action: Acquire more operating system resource, or perform a different function.

TNS-00520: Syntax error

Cause: The supplied connect descriptor contains illegal syntax.

Action: Check the syntax of the connect descriptor for correct syntax.

TNS-00521: Missing keyword

Cause: The supplied connect descriptor is missing one or more TNS keywords.

Action: Check the syntax, and ensure all required keywords are present.

TNS-00522: Operation was interrupted

Cause: An internal operation was interrupted and could not complete.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00523: Previous operation was busy

Cause: Operation tried could not be successfully completed because the requested resource was busy.

Action: Attempt the operation again. If error persists, contact Oracle Customer Support.

TNS-00524: Current operation is still in progress

Cause: Internal operation is still in progress but will complete.

Action: None; wait for operation to complete.

TNS-00525: Insufficient privilege for operation

Cause: Operating system failed to complete operation because user lacked sufficient privileges.

Action: Check your platform-specific privileges.

TNS-00526: No caller (false async event)

Cause: Internal error.

Action: For further details, turn on tracing and reexecute the operation.

TNS-00527: Protocol Adapter not loadable

Cause: On some platforms (for example OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter is missing or one of its supporting libraries is missing, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that could not be loaded.

TNS-00528: Protocol Adapter not loaded

Cause: On some platforms (for example OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter has not been loaded, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that has not been loaded.

TNS-00530: Protocol adapter error

Cause: A generic protocol adapter error occurred.

Action: For further details, turn on tracing and reexecute the operation.

TNS-00532: No previous async operation to wait on

Cause: Internal protocol adapter error.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00533: Connection dissolved or not yet made

Cause: Internal protocol adapter error.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00534: Failed to grant connection ownership to child

Cause: Internal protocol adapter error.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00535: Failed to send or receive disconnect message

Cause: Internal protocol adapter error.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00536: Connection entered inappropriate state

Cause: Internal protocol adapter error.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00537: Index into protocol adapter table is out of legal range

Cause: Internal protocol adapter error.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00539: Network or Protocol services are down

Cause: The Network services on or from your node are not running or have stopped running.

Action: Restart your network or protocol services on this platform. If error persists, contact Oracle Customer Support.

TNS-00540: SSL protocol adapter failure

Cause: The SSL protocol adapter encountered an error.

Action: In most cases, this error should only be pair with a more meaningful ORA-error.

TNS-00541: underlying transport does not exist.

Cause: The SSL protocol adapter was unable to locate an adapter for the protocol that it is going to use as the data transport.

Action: In most cases, the underlying transport is TCP. Make sure that the Oracle Net TCP/IP adapter was installed.

TNS-00542: SSL Handshake failed

Cause: The SSL protocol adapter was unable to connect to another process.

Action: This error can be caused by a variety of problems including the termination of the peer process. Enable Oracle Net tracing and attempt the connection again. The trace file should give some clues as to what the exact problem is.

TNS-00543: internal error

Cause: The SSL protocol adapter encountered an unexpected error.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00544: unsupported operation

Cause: The SSL adapter could not perform a given command.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00545: parameter retrieval failure

Cause: The SSL protocol adapter was not able to retrieve a configuration parameter for some reason.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00546: control failure

Cause: The SSL protocol adapter was unable to perform a command.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00547: user information retrieval failed

Cause: The SSL protocol adapter was unable to retrieve information about the remote user.

Action: Examine the first error in the error stack. It should describe the error in more detail.

TNS-00548: value specified for client authentication parameter is not boolean

Cause: The value specified for the parameter that specifies that SSL client authentication is to be used was not boolean.

Action: Specify a correct value for the parameter.

TNS-00549: value specified for the SSL version is not valid

Cause: The value specified for the SSL version is not valid.

Action: Specify a valid value for the SSL version.

TNS-00550: disconnection error

Cause: The SSL protocol adapter encountered an error when the underlying transport disconnected.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00551: underlying transport connection failed

Cause: The underlying transport adapter used by the SSL adapter failed to connect.

Action: Enable Oracle Net tracing and try the connection again. If the connection fails, examine the trace file to determine the cause.

TNS-00552: no valid cipher suites were specified

Cause: SSL cipher specs were specified, but none were valid.

Action: Specify correct cipher suites.

TNS-00553: read failed

Cause: The SSL adapter failed to read data from its connection.

Action: Examine the contents of sqlnet.log for more information. Enable Oracle Net tracing and try the connection again. If the connection fails, examine the trace file to determine the cause.

TNS-00554: write failed

Cause: The SSL adapter failed to send data over its connection.

Action: Examine the contents of sqlnet.log for more information. Enable Oracle Net tracing and try the connection again. If the connection fails, examine the trace file to determine the cause.

TNS-00555: no directory specified for wallet resource locator

Cause: It was specified that a file was to be used from which to retrieve a wallet, but no directory was specified for the wallet.

Action: Specify the directory where the wallet is located.

TNS-00556: no method specified for wallet retrieval

Cause: A wallet resource locator was specified, but no method was given for the retrieval of the wallet.

Action: Specify the method by which the method is to be retrieved.

TNS-00557: unsupported wallet retrieval method

Cause: The method specified for wallet retrieval is not supported. Currently, only files are supported for wallet retrieval.

Action: Specify "FILE" as the wallet retrieval method.

TNS-00558: Entrust login failed

Cause: Entrust failed to authenticate the username, password, and/or profile name that was presented.

Action: Specify correct values for the username, password or profile name. If no data was prompted for, contact Oracle support.

TNS-00559: load of Entrust certificate failed

Cause: An error occurred while attempting to validate the provided Entrust certificate.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00560: extraction of name from Entrust certificate failed

Cause: An error occurred while attempting to extract a name from an Entrust certificate.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00580: Read failed due to closed or invalid transport connection

Cause: Read attempt was made on a transport connection which was previously terminated or is somehow deemed to be invalid.

Action: Indicates a substantial transport level failure. Check the O/S configuration for the particular transport or contact the transport provider. For further details, turn on tracing and reexecute the operation.

TNS-00581: Send failed due to timeout

Cause: The send operation did not complete within the allowed time interval.

Action: Error is informational. Note, repeated receipt of this error could indicate an attempted Denial-Of-Service attack. Also, if the receipt of this error interferes w/ a customer's normal operations, the customer may wish to lengthen the timeout.

TNS-00582: Receive failed due to timeout

Cause: The receive operation did not complete within the allowed time interval.

Action: Error is informational. Note, repeated receipt of this error could indicate an attempted Denial-Of-Service attack. Also, if the receipt of this error interferes w/ a customer's normal operations, the customer may wish to lengthen the timeout.

TNS-00583: Valid node checking: unable to parse configuration parameters

Cause: Valid node checking was unable to parse the configuration due to syntactical errors.

Action: Ensure that the configuration syntax matches the Oracle reference manual documented syntax. For further details, turn on tracing and reexecute the operation.

TNS-00584: Valid node checking configuration error

Cause: Valid node checking specific Oracle Net configuration is invalid.

Action: Ensure the hosts specified in the "invited_nodes" and "excluded_nodes" are valid. For further details, turn on tracing and reexecute the operation.

TNS-01000: spawn [<listener_name>] <spawn_alias> [<(ARGUMENTS='arg0, arg1,...')>]\n

Cause: Control program usage message.

Action: None

TNS-01001: start [<listener_name>] : start listener\n

Cause: Control program usage message.

Action: None

TNS-01002: stop [<listener_name>] : stop listener\n

Cause: Control program usage message.

Action: None

TNS-01003: status [<listener_name>] : get the status of listener\n

Cause: Control program usage message.

Action: None

TNS-01004: reload [<listener_name>] : reload the parameter files and SIDs\n

Cause: Control program usage message.

<varname>number</varname>**

Cause: Listener logging message.

Action: None

TNS-01100: TNS returned error <varname>number</varname> when attempting to start the listener

Cause: The bequeath (BEQ) mechanism that LSNRCTL uses to start the listener failed.

Action: If NS error code 12538 is also returned then the BEQ driver is not installed; call Oracle Worldwide Support as the BEQ driver should always be installed. If this is not the problem then the error is probably caused by the fact that the TNSLSNR executable cannot be found in the place expected in your platform's ORACLE environment. Verify that the full pathname of the TNSLSNR executable as displayed by LSNRCTL is correct.

TNS-01101: Could not find listener name or service name <varname>string</varname>

Cause: The listener name or service name could not be resolved by name-lookup.

Action: Verify that the listener name or service name specified to LSNRCTL has the correct name and address defined in LISTENER.ORA or in TNSNAMES.ORA.

TNS-01102: TNS application contacted was not the listener

Cause: Another TNS application such as the Interchange was listening at the address contacted. There may be another TNS application listening at the address contacted and the data returned is not in the appropriate format.

Action: Verify that the listener name or service name specified to LSNRCTL has the correct name and address defined in LISTENER.ORA or in TNSNAMES.ORA.

TNS-01103: Protocol specific component of the address is incorrectly specified

Cause: The ADDRESS used to contact the listener is not correctly specified. This error occurs because the address fails to specify the destination of the listener. The address is well formed (for example, there are no missing parentheses) but it is missing a protocol specific component. For example, this is the error returned when the HOST component is missing from a TCP/IP address string.

Action: Edit the ADDRESS in LISTENER.ORA to include the required protocol-specific keywords. For more information about the keywords required by different protocol adapters, see the Oracle operating system specific documentation for your platform.

TNS-01106: Listener using listener name <varname>string</varname> has already been started

Cause: Another listener is already listening on one of the ADDRESSes specified.

Action: Shutdown the previous listener specified by the listener name before starting this one.

TNS-01107: A valid trace level was not specified

Cause: Failed to specify a valid trace level for the LSNRCTL trace command.

Action: Specify one of OFF, USER, ADMIN, or SUPPORT. Type "LSNRCTL help trace" for more information or consult Chapter 2 of this manual for an introduction to the concepts of tracing.

TNS-01108: Listener password prompt failed

Cause: Password not entered via tty

Action: Enter the listener password on a tty device

TNS-01109: Listener password encryption failed

Cause: Possibly garbled password entered

Action: Re-enter the listener password, using valid ASCII characters. If problem persists, contact Oracle Customer Support.

TNS-01110: Mismatch - password unchanged

Cause: New password and reentered new password are different"

Action: Re-enter the listener password, make sure that New password and reentered new password are the same

TNS-01111: Log status can either be ON or OFF

Cause: Failed to specify a log status value for the LSNRCTL log_status command.

Action: Specify one of ON or OFF. Type "LSNRCTL help set log_status" for more information or consult Chapter 2 of this manual for an introduction to the concepts of logging.

TNS-01112: Plug and play can either be ON or OFF

Cause: Failed to specify a valid value for the LSNRCTL use_plugandplay command.

Action: Specify one of ON or OFF. Type "LSNRCTL help set use_plugandplay" for more information.

TNS-01113: save_config_on_stop can either be ON or OFF

Cause: Failed to specify a valid value for the LSNRCTL save_config_on_stop command.

Action: Specify one of ON or OFF. Type "LSNRCTL help set save_config_on_stop" for more information.

TNS-01114: LSNRCTL could not perform local OS authentication with the listener

Cause: LSNRCTL failed to obtain system resources (heap memory, or shared memory) needed to perform local OS authentication with the listener.

Action: Make sure that system resources like shared memory and heap memory are available for LSNRCTL tool to execute properly.

TNS-01115: OS error <varname>string</varname> creating shared memory segment of <varname>string</varname> bytes with key <varname>string</varname>

Cause: The shared memory segment could not be created as requested. For example, a segment with the provided key may already exist, or the size may be outside of system allowed range.

Action: Use the error code to determine the exact cause of the problem. In certain cases the problem may be resolved by adjusting the system-imposed limits such as the maximum number of allowed shared memory segments, or their maximum and minimum sizes. In other cases, resources need to be freed up first for the operation to succeed.

TNS-01116: Listener alias name given as connect identifier is too long

Cause: The listener alias name you were attempting to resolve was too long.

Action: The maximum length of a listener alias name is 255 bytes; this limit has been exceeded. Use a smaller listener alias name.

TNS-01117: Invalid argument was specified for stop command

Cause: Failed to specify a valid argument for the LSNRCTL stop command.

Action: Make sure a valid argument is specified with stop command.

TNS-01150: The address of the specified listener name is incorrect

Cause: The address on which the listener attempted to listen contains a syntax error.

Action: For the listener name or service name specified to LSNRCTL, check that the address or connect descriptor is well-formed. You can find the listener name in LISTENER.ORA, or you can access the listener through the service name is TNSNAMES.ORA.

TNS-01151: Missing listener name, <varname>string</varname>, in LISTENER.ORA

Cause: The listener could not find the listener name specified.

Action: Make sure valid addresses on which to listen are specified for the listener name in LISTENER.ORA.

TNS-01152: All addresses specified for the listener name, <varname>string</varname>, failed

Cause: The listener failed to listen on any of the specified addresses.

Action: Make sure that another application is not listening on the addresses specified or check that the appropriate protocol adapters are installed. Turn on tracing and execute again for more information.

TNS-01153: Failed to process string: <varname>string</varname>

Cause: The string specified is not well-formed.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-01154: SID detected in old format that is no longer supported

Cause: One of the SIDs was specified in an obsolete format.

Action: Check LISTENER.ORA for a line of the form: <varname>sid</varname> = (SID=(ORACLE_HOME=<oracle_home>)) OR <varname>sid</varname> = (SID_DESC=(ORACLE_HOME=<oracle_home>)) The above format is no longer supported and SID_LIST_<listener_name> format described in the Oracle9i Net Services Reference Guide should be used. For example, SID_LIST_LISTENER = (SID_LIST=(SID_DESC=(SID_NAME=<varname>sid</varname>) (ORACLE_HOME=<oracle_home>)))

TNS-01155: Incorrectly specified SID_LIST_<varname>string</varname> parameter in LISTENER.ORA

Cause: SID_LIST_<listener_name> in LISTENER.ORA has an error in it.

Action: Be sure this parameter is specified as described in the Oracle9i Net Services Reference Guide. For example, SID_LIST_LISTENER = (SID_LIST=(SID_DESC=(SID_NAME=<varname>sid</varname>) (ORACLE_HOME=<oracle_home>)))

TNS-01156: Missing or inappropriate PROTOCOL, TIMEOUT or POOL_SIZE parameter from PRESPAWN_DESC

Cause: PRESPAWN_DESC in each SID_DESC does not have required fields.

Action: Be sure the parameters required for PRESPAWN_DESC are specified in each SID_DESC. For example, SID_LIST_LISTENER = (SID_LIST=(SID_DESC=(SID_NAME=<varname>sid</varname>) (PRESPAWN_MAX=5)(ORACLE_HOME=<oracle_home>) (PRESPAWN_DESC=(PROTOCOL=tcp)(POOL_SIZE=10)(TIMEOUT=30)))) Add or correct these parameters in the LISTENER.ORA file

TNS-01157: Can only listen on <varname>number</varname> addresses - ignoring <varname>string</varname>

Cause: Too many addresses were given to listen on.

Action: Reduce the number of addresses to listen on and use another listener to listen on the remaining addresses.

TNS-01158: Internal connection limit reached, preventing dispatcher from connecting

Cause: The internal Oracle Net connection list is full. Too many dispatchers are connected to the listener; therefore, no more dispatchers are allowed to connect.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-01159: Internal connection limit has been reached; listener has shut down

Cause: The internal Oracle Net connection list is full. The listener is configured to use too many Oracle Net connections.

Action: Reduce the number of listen addresses or services connected to the listener. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-01160: Trace level was not specified

Cause: Failed to specify a trace level for the trace command.

Action: Specify one of OFF, USER, ADMIN, or SUPPORT. Users should not see this error if LSNRCTL is being used.

TNS-01161: Spawn alias <varname>string</varname> was not found. Check listener parameter file

Cause: The alias specified to spawn a program was not found in LISTENER.ORA.

Action: This is not seen in normal use of Oracle Net.

TNS-01162: Syntax error in the address resolved from the spawn alias: <varname>string</varname>

Cause: The alias specified to spawn a program was not a valid NVstring.

Action: This is not seen in normal use of Oracle Net.

TNS-01163: Failed to spawn process: <varname>string</varname>

Cause: The process failed to start correctly.

Action: This is not seen in normal use of Oracle Net.

TNS-01164: No spawn alias sent to listener

Cause: The spawn command was issued without an alias.

Action: This is not seen in normal use of Oracle Net.

TNS-01165: Spawn alias has no program name set in it

Cause: The spawn alias in LISTENER.ORA is incorrectly specified.

Action: This is not seen in normal use of Oracle Net.

TNS-01167: The command <varname>string</varname> is not supported by the listener contacted

Cause: The listener does not recognize the command.

Action: This is caused when a newer version of LSNRCTL contacts an old listener. Upgrade listener if executing this command is important.

TNS-01168: Cannot allocate memory

Cause: Sufficient memory could not be allocated to perform the desired activity.

Action: Either free some resource for TNS, or add more memory to the machine. For further details, turn on tracing and reexecute the operation.

TNS-01169: The listener has not recognized the password

Cause: The listener has the password security mechanism enabled and requires the correct password to execute any command other than VERSION. The user attempted to issue one of the privileged administrative commands, but could not be successfully authenticated with the password provided.

Action: If an authorized user is attempting the command, then use the SET PASSWORD command at the LSNRCTL prompt with the listener password. If you do not know the password, then you are trying to execute an inappropriate command.

TNS-01170: Event detection broke for address: <varname>string</varname>

Cause: The event detection mechanism for the address specified returned an error.

Action: Future attempts to detect events on this address will fail. The listener will deallocate the listen address and connections will no longer be accepted for this address. This error is not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-01171: Event detection broke for dispatcher: <varname>string</varname>

Cause: The event detection mechanism for the dispatcher specified returned an error.

Action: Future attempts to detect events on this dispatcher will fail. The listener will deallocate the dispatcher and connections will no longer be redirected to this dispatcher. This error is not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-01172: Listener has shut down since all listen addresses have been deallocated

Cause: The event detection mechanism broke and caused all listen addresses to be removed.

Action: Error 1170 has occurred and caused all the listen addresses to be deallocated. Since all the listen addresses have been removed, no more connections can be established to this listener so it shuts itself down. This error is not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-01173: Missing or inappropriate PRESPAWN_MAX parameter from SID_DESC

Cause: PRESPAWN_MAX in each SID_DESC does not have required fields.

Action: Be sure the parameters required for PRESPAWN_DESC are specified in each SID_DESC. For example, SID_LIST_LISTENER =
(SID_LIST=(SID_DESC=(SID_NAME=<varname>sid</varname>)
(PRESPAWN_MAX=15)(ORACLE_HOME=<oracle_home>)
(PRESPAWN_DESC=(PROTOCOL=tcp)(POOL_SIZE=10)(TIMEOUT=30)))) Add or correct these parameters in the LISTENER.ORA file

TNS-01174: The sum of the POOL_SIZES from each PRESPAWN_DESC is greater than the PRESPAWN_MAX

Cause: The minimum value for PRESPAWN_MAX should be the sum of the POOL_SIZES.

Action: Be sure the parameters required for PRESPAWN_DESC are specified in each SID_DESC. For example, SID_LIST_LISTENER =
(SID_LIST=(SID_DESC=(SID_NAME=<varname>sid</varname>)
(PRESPAWN_MAX=15)(ORACLE_HOME=<oracle_home>)
(PRESPAWN_DESC=(PROTOCOL=tcp)(POOL_SIZE=10)(TIMEOUT=30))
(PRESPAWN_DESC=(PROTOCOL=ipc)(POOL_SIZE=5)(TIMEOUT=15)))) Add or correct these parameters in the LISTENER.ORA file

TNS-01175: Password unchanged

Cause: Unable to set the new password

Action: Be sure to see that the new password has legal ASCII characters. Try to set the password again.

TNS-01176: Error in loading the new parameter value

Cause: Illegal values given for the parameters

Action: Make sure that the parameter values are valid refer to the manual for the legal values for parameters

TNS-01177: Log Status is OFF. Log file/directory unchanged

Cause: Log status needs to be set ON for changing the log file

Action: use command set log_status ON to set the log status of the listener ON.

TNS-01178: Trace Level is 0. Trace file/directory unchanged

Cause: Trace Level needs to be set for changing the trace file/directory

Action: use command set trc_level ON to set the trace level

TNS-01179: Listener cannot load instance class "<varname>string</varname>"

Cause: Instance tried to register as a class unknown to listener.

Action: check LISTENER.ORA and/or instance configuration, and reference platform documentation to find the instance classes available for the listener on this platform.

TNS-01180: Missing listener object <varname>string</varname> in Directory Server

Cause: The listener could not find the listener object specified.

Action: Make sure the listener object is present in the Directory Server.

TNS-01181: Internal registration connection limit reached

Cause: The number of registration connections has reached the maximum. No more registrations are allowed until some of the existing registration connections are completed.

Action: Disconnect existing registration connections if they are no longer needed.

TNS-01182: Listener rejected registration of service "<varname>string</varname>"

Cause: Received registration information could not be processed because it was invalid, or an internal error occurred.

Action: Not normally visible to the user. For further details, turn on tracing and restart the instance. If error persists, contact Oracle Customer Support.

TNS-01183: Listener rejected registration or update of instance "<varname>string</varname>"

Cause: Received registration or update information could not be processed because it was invalid, or an internal error occurred.

Action: Not normally visible to the user. For further details, turn on tracing and restart the instance. If error persists, contact Oracle Customer Support.

TNS-01184: Listener rejected registration or update of service handler "<varname>string</varname>"

Cause: Received registration or update information could not be processed because it was invalid, or an internal error occurred.

Action: Not normally visible to the user. For further details, turn on tracing and restart the instance. If error persists, contact Oracle Customer Support.

TNS-01185: Registration attempted from a remote node

Cause: It was determined that the registering instance is not located on the same node as the listener. It is required that the instance be colocated with the listener for this type of service registration.

Action: Check the configuration of the registering instance. Ensure that `local_listener` parameter specifies only local listeners. Use `remote_listener` parameter to specify remote listeners.

TNS-01186: Client connection was dropped based on a filtering rule

Cause: Listener was configured with a filtering rule which explicitly specified that the client connection should be terminated without returning an error to the client.

Action: Modify the filtering rules if the client should be allowed access to the requested service.

TNS-01187: No proxy service handler available

Cause: One of the following conditions has occurred: - the proxy service was not registered - the proxy service was registered, but was blocking new connections - all of the registered proxy service handlers were blocking new connections

Action: If the proxy service is not registered it may need to be restarted. If the proxy service handlers are busy and not accepting new connections more of them may need to be started to handle the load.

TNS-01188: Listener cannot operate with incompatible transport protocols

Cause: Listener was configured with multiple listening addresses with different and incompatible transport protocols. Listener cannot operate efficiently in such configuration.

Action: Modify the existing listener configuration by removing the listening address that caused the error. Configure a separate listener to listen on this address.

TNS-01189: The listener could not authenticate the user

Cause: The user attempted to issue a privileged administrative command, but could not be successfully authenticated by the listener using the local OS authentication mechanism. This may occur due to one of the following reasons: 1. The user is running a version of LSNRCTL that is lower than the version of the listener. 2. The user is attempting to administer the listener from a remote node. 3. The listener could not obtain the system resources needed to perform the authentication. 4. The local network connection between the listener and LSNRCTL was terminated unexpectedly during authentication message exchange, such as if LSNRCTL program was suddenly aborted. 5. The communication between the listener and LSNRCTL is being intercepted by a malicious user. 6. The software that the user is running is not following the authentication protocol, indicating a malicious user.

Action: Make sure that administrative commands are issued using the LSNRCTL tool that is of a version equal or greater than the version of the listener, and that the tool and the listener are running on the same node. You can issue the `VERSION` command to find out the version of the listener. If a malicious user is suspected, use the information provided in the listener log file to determine the source and nature of

the requests. Enable listener tracing for more information. If the error persists, contact Oracle Support Services.

TNS-01190: The user is not authorized to execute the requested listener command

Cause: Most of the listener administrative commands are only intended to be issued by privileged users, for example DBAs or system administrators. If the listener password is not set, then the listener only accepts administrative requests from LSNRCTL running with the same OS credentials, or running as a local administrator (also referred to as super user).

Action: If an authorized user is attempting the command, then make sure that LSNRCTL is executed with the same OS user credentials as the running listener, or as a local administrator.

TNS-01191: Failed to initialize the local OS authentication subsystem

Cause: Initialization of the security subsystem failed during listener startup or reload. The listener could not obtain system resources (memory, or file descriptors) needed for local OS authentication security mechanism.

Action: Make sure that system resources like shared memory and heap memory are available for listener to execute properly. For further details, turn on tracing and execute the operation again. If the error persists, contact Oracle Support Services.

TNS-01192: Missing SID_LIST_ value left of equation for SID description in LISTENER.ORA

Cause: SID description in LISTENER.ORA had an error in it.

Action: Make sure the lines of code in LISTENER.ORA containing SID_DESC or SID begin with SID_LIST_ <listener_name> on the left side of the equation. For example, SID_LIST_LISTENER=(SID_LIST=(SID_DESC=(SID_NAME=<varname>sid</varname>))(ORACLE_HOME=<oracle_home>)))

TNS-01193: Listener cannot operate with specified secure transport

Cause: Listener was configured with transport protocols which are either invalid or none of the secure transport protocols are present in listening addresses.

Action: Modify the existing listener configuration by specifying a valid transport protocol in secure transport list.

TNS-01194: The listener command did not arrive in a secure transport

Cause: Most of the listener administrative commands are only intended to be issued in a secure transport, which are configured in secure_control_ parameter. If the parameter is set, then the listener accepts administrative requests only on those secure transports.

Action: Make sure the command is issued using a transport specified in secure transport list.

TNS-01196: Unable to initialize GSM IPC channel

Cause: IPC API returned an error

Action: Not normally visible to the user. For further details, turn on tracing and restart the instance. If error persists, contact Oracle Support Services.

TNS-01197: Listener failed to create the end point

Cause: Internal error. Unable to get subnet mask for the ip address.

Action: OS failure. Turn on tracing for further details

TNS-01198: Listener failed to initialize valid node list

Cause: VNCR options are not properly initialized in listener.ora or OS API failed.

Action: Check VNCR options i.e. `valid_node_checking_for_registration`, `registration_invited_nodes`, `registration_excluded_nodes` in listener.ora For further details, turn on tracing.

TNS-01199: Warning! Different databases have registered the same service

Cause: Different databases have registered the same service.

Action: In a multitenant container database (CDB) setup, this error indicates the usage of identical Oracle Net service name by multiple CDBs. The default Oracle Net service name for a pluggable database (PDB) in a CDB is derived from PDB name, so ensure that multiple CDBs registering with the same listener are not using identical PDB names. However, this error can be safely ignored if the usage of identical Oracle Net service name across multiple databases is intentional.

TNS-01200: The listener must be suid root

Cause: The ownership privileges of the TNSLSNR executable are incorrect.

Action: Contact your DBA or system administrator to change the ownership of the file to be suid root and restart the listener. This action is necessary because the user that started the process should claim ownership.

TNS-01201: Listener cannot find executable <varname>string</varname> for SID <varname>string</varname>

Cause: The executable for the Oracle dedicated server process cannot be found.

Action: Check the appropriate SID_DESC in LISTENER.ORA to make sure that the ORACLE_HOME component is pointing to a valid location. If this component is not set, then check the value of the ORACLE_HOME environment variable.

TNS-01202: Missing the dba group (<varname>string</varname>) specified by DBA_GROUP in SID_DESC

Cause: The dba group specified is missing from /ETC/GROUP.

Action: Check the DBA_GROUP parameter in the SID_DESC in LISTENER.ORA and verify it has a valid entry in /ETC/GROUP.

TNS-01203: Missing the account (<varname>string</varname>) specified by DEFAULT_USER_ACCOUNT in SID_DESC

Cause: The unprivileged OS account is missing from /etc/passwd.

Action: Check the DEFAULT_USER_ACCOUNT parameter in the SID_DESC in LISTENER.ORA and verify it has a valid entry in /etc/passwd. This is the account that the Oracle shadow process will be started with if the the connecting client has database privileges or does not exist on this machine.

TNS-01204: Unprivileged account (<varname>string</varname>) is in dba group (<varname>string</varname>)

Cause: The unprivileged account has DBA privileges. The unprivileged account specified by DEFAULT_USER_ACCOUNT in the SID_DESC in LISTENER.ORA is a

member of the dba group specified by DBA_GROUP in SID_DESC. The unprivileged account cannot belong to the dba group because this would be a security violation with OPS\$ logins.

Action: Remove the unprivileged account from the dba group.

TNS-01250: Failed to get ADR Path for trace/alert directory

Cause: The diagnosability API to get the service path returned an error

Action: None

TNS-01251: Cannot set trace/log directory under ADR

Cause: ADR trace and log directories cannot be set by the user.

Action: None

TNS-01300: \nERROR at <varname>string</varname>\n

Cause: Listener logging message.

Action: None

TNS-02020: set displaymode RAW | COMPAT | NORMAL | VERBOSE: output mode for lsnrctl display\n

Cause: Control program usage message.

Action: None

TNS-02021: DIRECT_HANDOFF can be either ON or OFF.\n

Cause: Invalid value for the LSNRCTL direct_handoff parameter.

Action: Specify one of ON or OFF.

TNS-02022: show rules: Show rules that are currently in effect\n

Cause: Control program usage message.

Action: None

TNS-02401: gdbname <varname>string</varname> too long, allowed <varname>number</varname> characters

Cause: gdbname or domain name too long.

Action: Check the gdbname parameter in listener.ora, shorten it.

TNS-02402: Bad CLBGNAMEs parameter in tnsnames.ora

Cause: CLBGNAMEs parameter in tnsnames.ora is bad.

Action: Check the CLBGNAMEs parameter format and correct it. Make sure that the tnsnames.ora file is there.

TNS-02403: Bad alias <varname>string</varname> or alias not present in tnsnames.ora

Cause: An alias was expected in tnsnames.ora but was not found or was not correctly formed.

Action: Check the tnsnames.ora for the alias and make sure it is correctly formed.

TNS-02404: Service <varname>string</varname> contains no local handlers

Cause: The listener found no suitable handler to redirect to.

Action: Make sure that there is at least one handler for this node.

TNS-02405: GMS call failed, check GMS logs.

Cause: A GMS call made by the listener failed.

Action: Check if the GMS is up and running. See GMS-client trace files for more information.

TNS-02501: Authentication: no more roles

Cause: When a process attempted to retrieve a role from the authentication service, no more were available.

Action: None. This error is used internally and occurs in the normal course of events.

TNS-02502: Authentication: unable to find initialization function

Cause: The native authentication service was unable to call the initialization function for the specified service because it does not exist.

Action: If this service adaptor came directly from Oracle, contact Oracle Customer Support, as this error should never happen. Otherwise, add an initialization function for the service being used.

TNS-02503: Parameter retrieval failed

Cause: The native service layer was unable to retrieve a parameter from a configuration file.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02504: Parameter count retrieval failed

Cause: The native service layer was unable to determine the number of arguments given for a configuration parameter.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02505: Authentication: null context pointer provided

Cause: The function `nau_ini()` was passed a null pointer as the pointer to the context that it is supposed to use.

Action: Call `nau_ini()` with a pointer to a context structure.

TNS-02506: Authentication: no type string

Cause: An authentication context structure does not contain a string that describes the authentication service being used.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02507: Encryption: algorithm not installed

Cause: After picking an algorithm, the server was unable to find an index for it in its table of algorithms. This should be impossible because the algorithm was chosen (indirectly) from that list.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-02508: Encryption: server negotiation response in error

Cause: The server's response in negotiation was in error.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-02509: Authentication: invalid process state

Cause: The state in which a process is running does not correspond to any of the values which are valid.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02510: Invalid numeric data type

Cause: The type of a piece of numeric data that was received does not correspond to one of the valid values.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02511: Invalid data type

Cause: The type of a piece of data that was received or to be transmitted did not correspond to any of the correct values.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02512: Invalid status received

Cause: A process received a value as a status flag which was unknown.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02513: Requested data type does not match retrieved type

Cause: A service requested data whose type does not match that of the segment which was sent from the other process.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02514: Invalid packet received

Cause: A process received a data packet which was not meant for the native services layer.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02515: Encryption/crypto-checksumming: unknown control type

Cause: An encryption or crypto-checksumming algorithm "control" function was called, but did not recognize the "type" argument it was given.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-02516: No data available

Cause: A native service attempted to retrieve data but no data was available to be received.

Action: The error is not normally visible as it usually is only used to signal the end of a data stream. If the error becomes visible, enable tracing to reproduce the problem and contact Oracle Customer Support.

TNS-02517: key smaller than requested size

Cause: The key returned by negotiation was smaller than the size requested by some service (either encryption or crypto-checksumming).

Action: The error is not normally visible. If the error persists, enable tracing to reproduce the problem and contact Oracle Customer Support.

TNS-02518: key negotiation error

Cause: An error occurred while the two sides of the connection were negotiating an encryption or crypto-checksumming key.

Action: The error is not normally visible. If the error persists, enable tracing to reproduce the problem and contact Oracle Customer Support.

TNS-02519: no appropriate key-negotiation parameters

Cause: No appropriate key-negotiation parameters are available for the key size requested either by encryption or by crypto-checksumming.

Action: The error is not normally visible. Enable tracing to reproduce the problem and contact Oracle Customer Support.

TNS-02520: encryption/crypto-checksumming: no Diffie-Hellman seed

Cause: The "sqlnet.crypto_seed" parameter is missing from the SQLNET.ORA parameters file.

Action: Add this line to SQLNET.ORA: sqlnet.crypto_seed = "randomly-chosen text"

TNS-02521: encryption/crypto-checksumming: Diffie-Hellman seed too small

Cause: The "sqlnet.crypto_seed" parameter in the SQLNET.ORA parameter file for Oracle Net is too small.

Action: Add more randomly-chosen text to it.

TNS-02524: Authentication: privilege check failed

Cause: An error occurred when the authentication service attempted to verify that a user had a specific database privilege.

Action: This error should not happen normally. Enable tracing and attempt to repeat the error. Contact Customer Support.

TNS-02525: encryption/crypto-checksumming: self test failed

Cause: The encryption/crypto-checksumming service detected an error while running tests on the active encryption or checksumming algorithm.

Action: Contact Customer Support.

TNS-02526: server proxy type does not match client type

Cause: The authentication type selected by the server does not match that picked by the client.

Action: Contact Oracle Customer Support

TNS-03501: OK

Cause: The operation succeeded.

Action: No action necessary.

TNS-03502: Insufficient arguments. Usage: tns ping <varname>address</varname> [<varname>count</varname>]

Cause: Some required command-line arguments are missing.

Action: Re-enter the command using the correct arguments.

TNS-03503: Could not initialize NL

Cause: The network library could not be initialized.

Action: This is an internal error which should not normally be visible. Ensure that memory is available to run the application and that there are no other operating system problems, and then attempt the command again.

TNS-03504: Service name too long

Cause: The service name you are attempting to ping is too long.

Action: Re-enter the command using the correct service name.

TNS-03505: Failed to resolve name

Cause: The service name you provided could not be found in TNSNAMES.ORA, an Oracle Names server, or a native naming service.

Action: Verify that you entered the service name correctly. You may need to ensure that the name was entered correctly into the network configuration.

TNS-03506: Failed to create address binding

Cause: The TNSPING utility found the requested address or service name, but received an internal error when trying to use it.

Action: This is an internal error which should not normally be visible. Ensure that memory is available to run the application and that there are no other operating system problems, and then attempt the command again.

TNS-03507: Failure looking for ADDRESS keyword

Cause: The TNS address did not contain an ADDRESS keyword.

Action: If you entered the TNS address on the command line, be sure that the syntax is correct. If you entered a service name on the command line, the address contains the wrong information. You should verify that the information was entered correctly.

TNS-03508: Failed to create address string

Cause: The TNSPING utility received an internal error when generating an address.

Action: This is an internal error which should not normally be visible. Ensure that memory is available to run the application and that there are no other operating system problems, and then attempt the command again.

TNS-03509: OK (<varname>number</varname> msec)

Cause: The operation succeeded, in this amount of time.

Action: No action necessary.

TNS-03510: Failed due to I/O error

Cause: An I/O operation failed, perhaps due to a resource failure or premature window termination.

Action: This is an internal error which should not normally be visible. Do not close the TNSPING window before all I/O operations have completed.

TNS-03511: Used parameter files:\n<varname>string</varname>\n

Cause: Prints out the path of the parameter files(sqlnet.ora,tnsnames.ora) used in the process of resolving the NAME.

Action: None

TNS-03512: Used <varname>string</varname> adapter to resolve the alias\n

Cause: Prints out the name of the adapter which resolved the TNS alias.

Action: None

TNS-03513: Attempting to contact <varname>string</varname>\n

Cause: Attempting to contact a given TNS address.

Action: None

TNS-03601: Failed in route information collection

Cause: The route could either not connect, or encountered an unsupported version of Oracle Net.

Action: Check if Oracle Net along all nodes is version 2.3 or greater.

TNS-03602: Insufficient arguments. Usage: trcroute <varname>address</varname>

Cause: Some required command-line arguments are missing.

Action: Re-enter the command using the correct arguments.

TNS-03603: Encountered a node with a version earlier than SQL*Net 2.3

Cause: Versions of SQL*Net before 2.3 do not support trcroute.

Action: Find the node that isn't responding to trcroute.

TNS-04001: <varname>string</varname>

Cause: CMCTL general message.

Action: None

TNS-04002: The command completed successfully.

Cause: Not applicable.

Action: None

TNS-04003: Syntax Error.

Cause: The command issued has a wrong syntax.

Action: Check for the command issue syntax, and correct the problem.

TNS-04004: Unable to encrypt the supplied password.

Cause: The password that was supplied to the ADMINISTER command could not be encrypted.

Action: Change the password to something acceptable. See Oracle Net Services documentation for valid password values.

TNS-04005: Unable to resolve address for <varname>string</varname>.

Cause: The alias name supplied with the ADMINISTER command could not be resolved to an Oracle Connection Manager address.

Action: Check if your an entry for the alias is present in either CMAN.ORA file or in TNSNAMES.ORA file.

TNS-04006: Invalid password

Cause: The password given with the ADMINISTER command could not be verified by the Oracle Connection Manager instance.

Action: Retry with the correct password.

TNS-04007: Internal error <varname>number</varname>.

Cause: Not normally visible to the user.

Action: If error persists, contact Oracle Support Services.

TNS-04008: <varname>string</varname> | <varname>string</varname>

Cause: String parameter value.

Action: None

TNS-04009: <varname>string</varname> | <varname>number</varname>

Cause: Integer parameter value.

Action: None

TNS-04010: Command cannot be issued before the ADMINISTER command.

Cause: A command was issued before administering the Oracle Connection Manager instance.

Action: Enter the ADMINISTER command before retrying this command.

TNS-04011: Oracle Connection Manager instance not yet started.

Cause: A command was issued when Oracle Connection Manager was not yet started or already shutdown.

Action: Start Oracle Connection Manager.

TNS-04012: Unable to start Oracle Connection Manager instance.

Cause: CMCTL was unable to start the Oracle Connection Manager instance. Some of the possible reasons include: cmadmin not present in ORACLE_HOME/bin, Invalid

parameter in configuration repository, wrong parameter values, or log directory not present.

Action: 1. Check whether log directory is present, and is writable. Log directory can be found at ORACLE_HOME/network/log, or as specified by the LOG_DIRECTORY parameter in CMAN.ORA. 2. Turn on logging or tracing to get more information about this error. 3. Correct any parameter errors (or mismatched paranthesis), and retry starting Oracle Connection Manager. 4. If the problem persists, contact Oracle Support Services.

TNS-04013: CMCTL timed out waiting for Oracle Connection Manager to start

Cause: Oracle Connection Manager internal registrations have not been completed.

Action: Turn on logging or tracing to get more information about this error. If the problem persists, contact Oracle Support Services.

TNS-04014: Current instance <varname>string</varname> is already started

Cause: An ADMINISTER command was issued to administer an Oracle Connection Manager instance that is already started.

Action: None

TNS-04015: Current instance <varname>string</varname> is not yet started

Cause: An ADMINISTER command was issued to an instance that has not yet been started.

Action: None

TNS-04016: Connecting to <varname>string</varname>

Cause: CMCTL is connecting to the the specified Oracle Connection Manager address.

Action: None

TNS-04017: Please wait. Shutdown in progress.

Cause: A command which cannot be used while Oracle Connection Manager is shutting down was issued.

Action: Wait for some time before retrying the command.

TNS-04018: Instance already started

Cause: The STARTUP command was issued to an instance which was already started.

Action: None

TNS-04019: Starting Oracle Connection Manager instance <varname>string</varname>. Please wait...

Cause: The STARTUP command was issued for an Oracle Connection Manager instance. CMCTL is waiting for the instance to start.

Action: None

TNS-04020: CMCTL Version: <varname>number</varname>.<varname>number</varname>.<varname>number</varname>.<varname>number</varname>.<varname>number</varname>.<varname>number</varname>.

Cause: None.

Action: None

TNS-04021: The SET command is unsuccessful for parameter <varname>string</varname>.

Cause: The value set for the parameter was out of range.

Action: See Oracle Net Services documentation for value ranges for the parameters.

TNS-04022: <varname>string</varname> parameter <varname>string</varname> set to <varname>string</varname>.

Cause: Parameter value was successfully set.

Action: None

TNS-04023: Command failed.

Cause: The command issued failed to complete successfully.

Action: Retry command. If problem persists, contact Oracle Support Services.

TNS-04037: Connections refer to <varname>string</varname>.

Cause: The ADMINISTER command resolved to the address in the specified message string.

Action: None

TNS-04044: Specified gateways do not exist.

Cause: One or more specified gateway IDs do not exist.

Action: Specify correct gateway IDs.

TNS-04045: Invalid specification of time

Cause: The time specified with the GT (greater than) option was invalid.

Action: Check Oracle Net Services documentation for valid time specification.

TNS-04046: Invalid specification for source

Cause: The source specified with the FROM option was invalid.

Action: Check Oracle Net Services documentation for valid source specification.

TNS-04047: Invalid specification for destination

Cause: The destination specified with the TO option was invalid.

Action: Check Oracle Net Services documentation for valid destination specification.

TNS-04048: Specified service does not exist.

Cause: The service specified with the FOR option did not exist.

Action: None

TNS-04049: Specified connections do not exist

Cause: One or more connection IDs do not exist.

Action: None

TNS-04050: Invalid specification for gateway ID.

Cause: The gateway ID specified is invalid.

Action: Check Oracle Net Services documentation for a valid gateway ID specification.

TNS-04063: Remote administration disabled in the Oracle Connection Manager instance.

Cause: CMCTL attempted to connect to a remote Oracle Connection Manager instance in which remote administration was disabled.

Action: Set parameter remote_admin=on in the remote instance before starting it.

TNS-04064: The number of CMCTL sessions exceeds MAX_CMCTL_SESSIONS.

Cause: The Oracle Connection Manager instance already has MAX_CMCTL_SESSIONS number of CMCTLs connected to it.

Action: Use an already connected CMCTL, or, use a higher value for the parameter MAX_CMCTL_SESSIONS in the CMAN.ORA file.

TNS-04065: The number of remote CMCTL sessions exceeds (MAX_CMCTL_SESSIONS-1)

Cause: The Oracle Connection Manager instance already has (MAX_CMCTL_SESSIONS-1) number of remote CMCTL sessions connected to it.

Action: Use an already connected CMCTL, or, use a higher value for the parameter MAX_CMCTL_SESSIONS in the CMAN.ORA file.

TNS-04066: The following log events can be enabled or disabled:

Cause: None

Action: None

TNS-04067: Number of connections: <varname>number</varname>.

Cause: Either no information qualifier (COUNT/DETAIL) was present in SHOW CONNECTIONS command, or, COUNT was used as the information qualifier.

Action: None

TNS-04068: Cannot start an Oracle Connection Manager instance remotely.

Cause: CMCTL was used to start Oracle Connection Manager instance in a remote host.

Action: Use a local CMCTL to start the Oracle Connection Manager.

TNS-04069: Sleeping for <varname>number</varname> seconds...

Cause: CMCTL is idle for specified seconds. This feature is only provided for testing purposes.

Action: None

TNS-04070: Cannot administer a remote Oracle Connection Manager instance which is not yet started.

Cause: An attempt was made to administer a remote Oracle Connection Manager instance which is not yet started.

Action: Use a local CMCTL session to start the Oracle Connection Manager instance before trying to administer it remotely.

TNS-04071: Connections closed successfully. Number closed: <varname>number</varname>.

Cause: The specified connections were closed successfully.

Action: None

TNS-04072: Unable to suspend atleast one of the gateways.

Cause: CMCTL was unable to suspend one or more gateways. Possible reason could be suspending a gateway that was already suspended or suspending a gateway that was not present.

Action: Turn on tracing and logging, retry operation. Information in the log files would help.

TNS-04073: Passwords do not match.

Cause: The new password and its confirmation do not match

Action: Use SET PASSWORD again.

TNS-04074: Invalid value for the parameter <varname>string</varname>.

Cause: The parameter value set using the SET command is invalid.

Action: See Oracle Net Services documentation for the valid values of the parameter.

TNS-04075: Cannot use ADMINISTER directly from the command line.

Cause: ADMINISTER can only be issued from the CMCTL> prompt.

Action: Use the -c option with any command instead of ADMINISTER.

TNS-04076: Invalid specification for state.

Cause: The state specified with "in" option is invalid.

Action: Check Oracle Net Services documentation for valid state specification.

TNS-04077: WARNING: No password set for the Oracle Connection Manager instance.

Cause: A connection to the Oracle Connection Manager instance was made with no password from the user.

Action: Ignore the warning if the Oracle Connection Manager is secure enough. Otherwise, use SET PASSWORD command to set a new password for the instance.

TNS-04078: Unable to resume atleast one of the gateways.

Cause: CMCTL was unable to resume one or more gateways. Possible reason could be resuming a gateway that was ready for connections, or resuming a gateway that was not present.

Action: Turn on tracing and logging, retry operation. Information in the log files would help.

TNS-04079: Cannot administer Oracle Connection Manager with no CMAN.ORA, and port = <varname>number</varname>.

Cause: CMAN.ORA is not present or address not configured in CMAN.ORA, and the net service name in the TNSNAMES.ORA contains a nondefault Oracle Connection Manager port.

Action: Either change the TNSNAMES.ORA entry to use the default port, or configure the CMAN.ORA file with the Oracle Connection Manager's address.

TNS-04080: Failed to reload

Cause: Oracle Connection Manager failed to reload the new configuration due to errors in the configuration file.

Action: Set log_level to support and retry operation. Error encountered will be logged in the log file of CMADMIN.

TNS-04081: Event groups:

Cause: None

Action: None

TNS-04082: <varname>string</varname> event <varname>string</varname> set to <varname>string</varname>.

Cause: Event value was successfully set.

Action: None

TNS-04083: Failed to save password

Cause: Oracle Connection Manager failed to save the password in the configuration file.

Action: Check for the permissions on the configuration file. The file should have WRITE permissions.

TNS-04084: WARNING: Non-reloadable parameters have retained their values.

Cause: Values of non-reloadable parameters were changed, or, one or more non-reloadable parameters having non-default values were added to the parameter file.

Action: See Oracle Net Services documentation for a list of non-reloadable parameters.

TNS-04085: Password not changed since last save.

Cause: Password has not been changed since it was last saved.

Action: None

TNS-04086: Invalid value for the event <varname>string</varname>.

Cause: The event value set using the SET EVENT command is invalid.

Action: See Oracle Net Services documentation for the valid values of the event.

TNS-04087: Unable to shutdown atleast one of the gateways.

Cause: CMCTL was unable to shutdown one or more gateways. Possible reason could be shutting down a gateway that was not present.

Action: Turn on tracing and logging, retry operation. Information in the log files would help.

TNS-04088: Unable to close atleast one of the connections.

Cause: CMCTL was unable to close one or more connections. Possible reason could be closing a connection that was not present.

Action: Turn on tracing and logging, retry operation. Information in the log files would help.

TNS-04089: Alias name too long.

Cause: User entered an alias name that exceeded 64 characters.

Action: Retry with a shorter alias name. Alias names have to be less than 65 characters.

TNS-04140: Migration completed successfully.

Cause: CMMIGR has successfully completed the migration of the old CMAN.ORA file to the new format.

Action: None

TNS-04141: Unable to find CMAN.ORA file.

Cause: CMMIGR was not able to find CMAN.ORA file.

Action: Check whether CMAN.ORA file is present in \$TNS_NAME/admin, or in \$ORACLE_HOME/network/admin, or in the path specified in the command line.

TNS-04142: CMAN.ORA file has an invalid format.

Cause: CMMIGR was unable to recognize the format of CMAN.ORA file.

Action: Check for the syntax errors in CMAN.ORA file, and correct them.

TNS-04143: Unable to write the new CMAN.ORA file.

Cause: CMMIGR was unable to create the new CMAN.ORA file due to insufficient permissions.

Action: Set WRITE permissions to the directory in which CMAN.ORA file is to be written.

TNS-04144: Nothing to migrate

Cause: CMMIGR did not find anything in the old CMAN.ORA file that has an equivalent in the new format.

Action: None

TNS-04201: Trace Assistant Usage ERROR: Missing File name\n

Cause: Trace file name argument is missing

Action: Put the trace file name as the last command line argument for for this tool.

TNS-04202: Trace Assistant Usage ERROR: Not enough arguments \n

Cause: The <varname>file name</varname> and/or the <varname>options</varname> arguments are missing

Action: Put the right number of command line arguments.

TNS-04203: Trace Assistant Usage ERROR: Invalid options \n

Cause: The options provided are not valid

Action: Check the valid options for this tool.

TNS-04204: Trace Assistant Internal ERROR: Couldn't Open trace file\n

Cause: The trace file name given doesn't exist or it is not accessible for this user.

Action: Check the spelling, and permissions of the trace file.

TNS-04205: Trace Assistant Internal ERROR: Memory

Cause: Possible memory problem

Action: Verify the amount of available memory on the system.

TNS-04206: Trace Assistant Internal ERROR: Packet Type

Cause: The packet type read by trcAsst is not valid.

Action: Verify that your trace file is not corrupted. If trace file looks OK, with not strange characters in it, contact World Wide Support and provide trace file to them.

TNS-04207: Trace Assistant Internal ERROR: Packet Length

Cause: The packet being decode is corrupted.

Action: Verify that your trace file is not corrupted. If trace file looks OK, with not strange characters in it, contact World Wide Support and provide trace file to them.

TNS-04208: Trace Assistant Internal ERROR: Fatal

Cause: Fatal internal error

Action: Contact World Wide Support.

**TNS-04209: Trace Assistant Internal ERROR: Type Error **

Cause: Internal type error,

Action: Contact World Wide Support.

TNS-04210: Trace Assistant Internal ERROR: End of File

Cause: Reaching End of File to soon. Not able to decode trace file. Your trace file appears to be truncated.

Action: Generate another trace file. This trace file can not be decoded.

TNS-04211: Trace Assistant Internal ERROR: CORE

Cause: Internal System Error

Action: Contact World Wide Support.

**TNS-04212: Trace Assistant Internal ERROR: NACOM Type Error **

Cause: Not able to decode Network Authentication information

Action: Contact World Wide Support.

TNS-04231: Trace Assistant WARNING: Assuming Oracle trace format

Cause: This trace file may not be a Network trace file. The default format (Oracle Trace) will be assumed.

Action: None

**TNS-04232: Trace Assistant WARNING: Not retrieving all rows **

Cause: Trace Assitante won't retrieve all the rows data.

Action: None

TNS-04233: Trace Assistant WARNING: Going beyond Packet length

Cause: Trying to read beyond packet length. The trace file may be corrupted

Action: None

TNS-04234: Trace Assistant WARNING: won't decode TTC

Cause: Trace assistant does not have enough information to decode TTC data. This maybe an old trace file or from a platform that trace assistant does not understand.

Action: None

TNS-04235: Trace Assistant WARNING: Unknown TTC protocol

Cause: Trace Assistant has reached a point in which the TTC protocol can not be understood.

Action: None

TNS-12150: TNS:unable to send data

Cause: Unable to send data. Connection probably disconnected.

Action: Reestablish connection. If the error is persistent, turn on tracing and reexecute the operation.

TNS-12151: TNS:received bad packet type from network layer

Cause: Internal error.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12152: TNS:unable to send break message

Cause: Unable to send break message. Connection probably disconnected.

Action: Reestablish connection. If the error is persistent, turn on tracing and reexecute the operation.

TNS-12153: TNS:not connected

Cause: Not currently connected to a remote host.

Action: Reestablish connection.

TNS-12154: TNS:could not resolve the connect identifier specified

Cause: A connection to a database or other service was requested using a connect identifier, and the connect identifier specified could not be resolved into a connect descriptor using one of the naming methods configured. For example, if the type of connect identifier used was a net service name then the net service name could not be found in a naming method repository, or the repository could not be located or reached.

Action: - If you are using local naming (TNSNAMES.ORA file): - Make sure that "TNSNAMES" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA) - Verify that a TNSNAMES.ORA file exists and is in the proper directory and is accessible. - Check that the net service name used as the connect identifier exists in the TNSNAMES.ORA file. - Make sure there are no syntax errors anywhere in the TNSNAMES.ORA file. Look for unmatched parentheses or stray characters. Errors in a TNSNAMES.ORA file may make it unusable. - If you are using directory naming: - Verify that "LDAP" is listed as one of

the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Verify that the LDAP directory server is up and that it is accessible. - Verify that the net service name or database name used as the connect identifier is configured in the directory. - Verify that the default context being used is correct by specifying a fully qualified net service name or a full LDAP DN as the connect identifier - If you are using easy connect naming: - Verify that "EZCONNECT" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Make sure the host, port and service name specified are correct. - Try enclosing the connect identifier in quote marks. See the Oracle Net Services Administrators Guide or the Oracle operating system specific guide for more information on naming.

TNS-12155: TNS:received bad datatype in NSWMARKER packet

Cause: Internal error during break handling.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12156: TNS:tried to reset line from incorrect state

Cause: Internal error during break handling.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12157: TNS:internal network communication error

Cause: Internal error during network communication.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12158: TNS:could not initialize parameter subsystem

Cause: Unable to locate parameter file.

Action: Verify that a valid parameter file exists, and is readable.

TNS-12159: TNS:trace file not writeable

Cause: The trace file to be generated is not writeable by this user.

Action: If the user does not have write permissions in the directory to which the trace file will be written, contact an administrator to get the proper permissions or set the TRACE_DIRECTORY_CLIENT parameter in the net profile (SQLNET.ORA file) to a directory the user can write to.

TNS-12160: TNS:internal error: Bad error number

Cause: Corrupt error reporting subsystem.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12161: TNS:internal error: partial data received

Cause: The connection may be terminated.

Action: Reconnect and try again. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12162: TNS:net service name is incorrectly specified

Cause: The connect descriptor corresponding to the net service name in TNSNAMES.ORA or in the directory server (Oracle Internet Directory) is incorrectly specified.

Action: If using local naming make sure there are no syntax errors in the corresponding connect descriptor in the TNSNAMES.ORA file. If using directory naming check the information provided through the administration used for directory naming.

TNS-12163: TNS:connect descriptor is too long

Cause: The connect descriptor corresponding to the net service name specified as the connect identifier is too long. The maximum length for a connect descriptor is 512 bytes and this limit has been exceeded.

Action: Check the net service name's connect descriptor in the local naming file (TNSNAMES.ORA) or in the directory server (Oracle Internet Directory). Use a smaller connect descriptor. If this is not possible, contact Worldwide Customer Support.

TNS-12164: TNS:Sqlnet.fdf file not present

Cause: The sqlnet.fdf file doesn't exist in \$ORACLE_HOME/network/admin.

Action: The sqlnet.fdf file is required for Oracle Tracing to occur. Either install the sqlnet.fdf file in \$ORACLE_HOME/network/admin or turn off tracing in your ORA file.

TNS-12165: TNS:Trying to write trace file into swap space.

Cause: Oracle Trace doesn't allow writing trace information into your swap space.

Action: Oracle Trace cannot write trace information into swap space so either disable tracing or redirect trace files to be written to another area of your disk.

TNS-12166: TNS:Client can not connect to HO agent.

Cause: NVstring contained DESCRIPTION/HO.

Action: Call HO agent from integrating server.

TNS-12168: TNS:Unable to contact LDAP Directory Server

Cause: Cannot contact LDAP directory server to get Oracle Net configuration.

Action: Verify that the directory server is up and accessible from the network. Verify that directory access configuration is correct. For more information see the Oracle Internet Directory Administrators Guide or the Oracle Net Administrators Guide.

TNS-12169: TNS:Net service name given as connect identifier is too long

Cause: The net service name you are attempting to resolve is too long.

Action: The maximum length of a net service name is 255 bytes; this limit has been exceeded. Use a smaller net service name. If this is not possible, contact Worldwide Customer Support.

TNS-12170: TNS:Connect timeout occurred

Cause: The server shut down because connection establishment or communication with a client failed to complete within the allotted time interval. This may be a result of network or system delays; or this may indicate that a malicious client is trying to cause a Denial of Service attack on the server.

Action: If the error occurred because of a slow network or system, reconfigure one or all of the parameters SQLNET.INBOUND_CONNECT_TIMEOUT, SQLNET.SEND_TIMEOUT, SQLNET.RECV_TIMEOUT in sqlnet.ora to larger values. If a malicious client is suspected, use the address in sqlnet.log to identify the source and restrict access. Note that logged addresses may not be reliable as they can be forged (e.g. in TCP/IP).

TNS-12171: TNS:could not resolve connect identifier: <varname>string</varname>

Cause: A connection to a database or other service was requested using a connect identifier, and the connect identifier specified could not be resolved into a connect descriptor using one of the naming methods configured. For example, if the type of connect identifier used was a net service name then the net service name could not be found in a naming method repository, or the repository could not be located or reached.

Action: - If you are using local naming (TNSNAMES.ORA file): - Make sure that "TNSNAMES" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA) - Verify that a TNSNAMES.ORA file exists and is in the proper directory and is accessible. - Check that the net service name used as the connect identifier exists in the TNSNAMES.ORA file. - Make sure there are no syntax errors anywhere in the TNSNAMES.ORA file. Look for unmatched parentheses or stray characters. Errors in a TNSNAMES.ORA file may make it unusable. - If you are using directory naming: - Verify that "LDAP" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Verify that the LDAP directory server is up and that it is accessible. - Verify that the net service name or database name used as the connect identifier is configured in the directory. - Verify that the default context being used is correct by specifying a fully qualified net service name or a full LDAP DN as the connect identifier - If you are using easy connect naming: - Verify that "EZCONNECT" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Make sure the host, port and service name specified are correct. - Try enclosing the connect identifier in quote marks. See the Oracle Net Services Administrators Guide or the Oracle operating system specific guide for more information on naming.

TNS-12196: TNS:received an error from TNS

Cause: The navigation layer received an error from TNS.

Action: See the error log file for the specific TNS error.

TNS-12197: TNS:keyword-value resolution error

Cause: The navigation layer received an error while trying to look up a value for a keyword.

Action: Check the syntax of the connect descriptor.

TNS-12198: TNS:could not find path to destination

Cause: Could not navigate a path through Interchanges to the destination. This error occurs if an invalid community is in the address string, or the address includes a protocol that is not available or the TNSNAV.ORA file does not have a correct CMANAGER address specified or the Interchange is down.

Action: Assure that Interchanges necessary to get to the desired destination are up and have available capacity for an additional connection. Also check that the correct community and protocol have been specified in the CMANAGER address used.

TNS-12200: TNS:could not allocate memory

Cause: Out of memory on machine.

Action: Reconfigure machine to have more storage or run fewer applications while the Interchange is running.

TNS-12201: TNS:encountered too small a connection buffer

Cause: TNS connection buffer supplied by the application was too small to retrieve the data sent back.

Action: Supply a larger connection buffer. If problem persists, call Worldwide Customer Support.

TNS-12202: TNS:internal navigation error

Cause: Internal navigation error.

Action: Not normally visible to the user. For further details contact Worldwide Customer Support.

TNS-12203: TNS:unable to connect to destination

Cause: Invalid address specified or destination is not listening. This error can also occur because of underlying network or network transport problems.

Action: Verify that the net service name you entered was correct. Verify that the ADDRESS portion of the connect descriptor which corresponds to the net service name is correct. Ensure that the destination process (for example the listener) is running at the remote node.

TNS-12204: TNS:received data refused from an application

Cause: The application using Connection Manager refused the connection at the listener.

Action: Make sure that the application listener at the destination is functioning correctly. If it is and the problem persists, contact Worldwide Customer Support.

TNS-12205: TNS:could not get failed addresses

Cause: Internal navigation error.

Action: Not normally visible to the user. For further details contact Worldwide Customer Support.

TNS-12206: TNS:received a TNS error during navigation

Cause: Internal navigation error because of an unexpected TNS error.

Action: Look at the log file to find the TNS error. If necessary, turn on tracing and repeat the operation.

TNS-12207: TNS:unable to perform navigation

Cause: Improperly configured navigation file TNSNAV.ORA.

Action: Check the syntax of the TNSNAV.ORA file on the application's machine, and verify that it lists the correct communities.

TNS-12208: TNS:could not find the TNSNAV.ORA file

Cause: Either the ORACLE environment is not set up correctly, or the TNSNAV.ORA file is not present.

Action: Ensure that the ORACLE environment is set up appropriately on your platform and that a TNSNAV.ORA file is present.

TNS-12209: TNS:encountered uninitialized global

Cause: Application calling navigation routine has not properly configured the global variables. There are no TNSNAV.ORA files available, or they are defective.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12210: TNS:error in finding Navigator data

Cause: Application calling navigation routine has not properly configured the TNSNAV.ORA file.

Action: Check the syntax of the TNSNAV.ORA file.

TNS-12211: TNS:needs PREFERRED_CMANGERS entry in TNSNAV.ORA

Cause: TNSNAV.ORA does not have a PREFERRED_CMANGERS defined.

Action: Add a PREFERRED_CMANGERS entry to the TNSNAV.ORA file.

TNS-12212: TNS:incomplete PREFERRED_CMANGERS binding in TNSNAV.ORA

Cause: The PREFERRED_CMANGERS binding in the client's TNSNAV.ORA file does not have a CMANGER_NAME specified.

Action: Define the CMANGER_NAME as part of the PREFERRED_CMANGERS binding. Use of the Oracle Network Manager should eliminate this error.

TNS-12213: TNS:incomplete PREFERRED_CMANGERS binding in TNSNAV.ORA

Cause: The PREFERRED_CMANGERS binding in the client's TNSNAV.ORA file does not have an ADDRESS specified.

Action: Define the ADDRESS as part of the PREFERRED_CMANGERS binding.

TNS-12214: TNS:missing local communities entry in TNSNAV.ORA

Cause: There is no LOCAL_COMMUNITIES entry in TNSNAV.ORA.

Action: Define the LOCAL_COMMUNITIES for this node in the TNSNAV.ORA file.

TNS-12215: TNS:poorly formed PREFERRED_NAVIGATORS Addresses in TNSNAV.ORA

Cause: Address binding for PREFERRED_NAVIGATORS entry is improperly entered. entry.

Action: Check your PREFERRED_NAVIGATORS entry and fix it in TNSNAV.ORA

TNS-12216: TNS:poorly formed PREFERRED_CMANGERS addresses in TNSNAV.ORA

Cause: Address binding for the PREFERRED_CMANGERS entry in the client's TNSNAV.ORA file is improperly entered.

Action: Define the ADDRESS as part of the PREFERRED_CMANGERS binding.

TNS-12217: TNS:could not contact PREFERRED_CMANGERS in TNSNAV.ORA

Cause: There is a syntax error in the PREFERRED_CMANGERS entry, or addresses specified are wrong, or the intended Connection Managers are unavailable.

Action: Check the PREFERRED_CMANGERS entries in the client's TNSNAV.ORA file and correct them or talk with your network administrator to determine if the specified Connection Managers are available. Verify that the Interchanges are active by using the INTCTL STATUS command.

TNS-12218: TNS:unacceptable network configuration data

Cause: Poorly formed network configuration data. For example, a PREFERRED_CMANGERS entry may have an incorrect CMANGER_NAME in the client's TNSNAV.ORA file. Or an Interchange downtime parameter (TIMEOUT_INTERVAL) on the Navigator may be set to zero in INTCHG.ORA.

Action: Check the entries in TNSNAV.ORA and the Interchange configuration files and correct them. If necessary, talk with your network administrator to determine if the specified Interchanges (Connection Managers) are available and properly configured. Use the Oracle Network Manager to generate the configuration files if necessary.

TNS-12219: TNS:missing community name from address in ADDRESS_LIST

Cause: This error occurs when an ADDRESS_LIST has some ADDRESSES in it that have no COMMUNITY component and others that do have a COMMUNITY component.

Action: Check that in the connect descriptors you are using either all the ADDRESSES have a COMMUNITY component or all do not.

TNS-12221: TNS:illegal ADDRESS parameters

Cause: An illegal set of protocol adapter parameters was specified. In some cases, this error is returned when a connection cannot be made to the protocol transport.

Action: Verify that the destination can be reached using the specified protocol. Check the parameters within the ADDRESS section of TNSNAMES.ORA or in the directory. Legal ADDRESS parameter formats may be found in the Oracle operating system specific documentation or the Oracle Net Administrator's Guide. Protocols that resolve names at the transport layer are vulnerable to this error if not properly configured or names are misspelled.

TNS-12222: TNS:no support is available for the protocol indicated

Cause: The protocol requested in the ADDRESS portion of the connect descriptor identified through the net service name is not available. If the supplied ADDRESS is typographically correct then support for that protocol is not installed.

Action: Install support for the protocol or correct typographical error, as appropriate.
Note: if the supplied address was derived from resolving the net service name, check the address in the appropriate file (TNSNAMES.ORA, LISTENER.ORA) or in the directory server.

TNS-12223: TNS:internal limit restriction exceeded

Cause: Too many TNS connections open simultaneously.

Action: Wait for connections to close and re-try.

TNS-12224: TNS:no listener

Cause: The connection request could not be completed because the listener is not running.

Action: Ensure that the supplied destination address matches one of the addresses used by the listener - compare the TNSNAMES.ORA entry with the appropriate LISTENER.ORA file (or TNSNAV.ORA if the connection is to go by way of an Interchange). Start the listener on the remote machine.

TNS-12225: TNS:destination host unreachable

Cause: Contact can not be made with remote party.

Action: Make sure the network driver is functioning and the network is up.

TNS-12226: TNS:operating system resource quota exceeded

Cause: The current user has exceeded the allotted resource assigned in the operating system.

Action: Acquire more operating system resource, or perform a different function.

TNS-12227: TNS:syntax error

Cause: The supplied connect descriptor contains illegal syntax.

Action: Check the syntax of the connect descriptor in TNSNAMES.ORA.

TNS-12228: TNS:protocol adapter not loadable

Cause: On some platforms (such as Windows) protocol support is loaded at run-time. If the shared library (or DLL) for the protocol adapter is missing or one of its supporting libraries is missing then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will include the name of the shared library (or DLL) that could not be loaded.

TNS-12229: TNS:Interchange has no more free connections

Cause: One or more Interchanges along the path to the destination desired has no more free connections available to be used for this call.

Action: Try again later when the Interchanges are less busy, or contact your network administrator to have him determine which interchange it is, and increase the number of connections available on that interchange.

TNS-12230: TNS:Severe Network error occurred in making this connection

Cause: This error is reported by an interchange which fails to make contact with the destination due to a physical network error while calling a destination.

Action: Try again later when the network service may have been fixed or report the problem to your Network Administrator so that he may fix the problem.

TNS-12231: TNS:No connection possible to destination

Cause: This error is reported by an interchange which fails to find a possible connection along the path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

TNS-12232: TNS:No path available to destination

Cause: This error is reported by an interchange which fails to find a possible path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

TNS-12233: TNS:Failure to accept a connection

Cause: This error is reported by an interchange which fails to accept a connection due to a redirect failure.

Action: Report the problem to your Network Administrator so that he may isolate the interchange problem.

TNS-12234: TNS:Redirect to destination

Cause: This error is reported by an interchange which determines that this interchange is not the right gateway and needs to redirect the connection to another gateway along the path to the destination.

Action: None

TNS-12235: TNS:Failure to redirect to destination

Cause: This error is reported by an interchange which fails to redirect a connection to another interchange along the path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

TNS-12236: TNS:protocol support not loaded

Cause: On some platforms (such as Windows) protocol support is loaded at run-time. If the shared library (or DLL) for the protocol adapter has not been loaded, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that has not been loaded.

TNS-12500: TNS:listener failed to start a dedicated server process

Cause: The process of starting up a dedicated server process failed. The executable could not be found or the environment may be set up incorrectly.

Action: Turn on tracing at the ADMIN level and reexecute the operation. Verify that the ORACLE Server executable is present and has execute permissions enabled. Ensure that the ORACLE environment is specified correctly in LISTENER.ORA. The Oracle Protocol Adapter that is being called may not be installed on the local hard drive. Please check that the correct Protocol Adapter are successfully linked. If error persists, contact Oracle Customer Support.

TNS-12502: TNS:listener received no CONNECT_DATA from client

Cause: No CONNECT_DATA was passed to the listener.

Action: Check that the service name resolved from TNSNAMES.ORA has the CONNECT_DATA component of the connect descriptor.

TNS-12503: TNS:listener received an invalid REGION from client

Cause: Invalid REGION was passed to the listener.

Action: Check the REGION name specified in the CONNECT_DATA component of the connect descriptor.

TNS-12504: TNS:listener was not given the SERVICE_NAME in CONNECT_DATA

Cause: The listener was not configured with a default service and SERVICE_NAME was missing from the CONNECT_DATA received by the listener.

Action: Possible solutions are: - Configure DEFAULT_SERVICE parameter in LISTENER.ORA with a valid service name. Reload the listener parameter file using reload [<listener_name>]. This should be done by the LISTENER administrator. - If using a service name, Check that the connect descriptor corresponding to the service name in TNSNAMES.ORA has a SERVICE_NAME or SID component in the CONNECT_DATA.

TNS-12505: TNS:listener does not currently know of SID given in connect descriptor

Cause: The listener received a request to establish a connection to a database or other service. The connect descriptor received by the listener specified a SID for an instance (usually a database instance) that either has not yet dynamically registered with the listener or has not been statically configured for the listener. This may be a temporary condition such as after the listener has started, but before the database instance has registered with the listener.

Action: - Wait a moment and try to connect a second time. - Check which instances are currently known by the listener by executing: lsnrctl services <varname>listener name</varname> - Check that the SID parameter in the connect descriptor specifies an instance known by the listener. - Check for an event in the listener.log file.

TNS-12508: TNS:listener could not resolve the COMMAND given

Cause: The COMMAND given to listener is not supported.

Action: This is not seen in normal use of Oracle Net.

TNS-12509: TNS:listener failed to redirect client to service handler

Cause: The dispatcher terminated unexpectedly

Action: Attempt to connect again and if the same error occurs, contact the DBA to check the state of the dispatchers for this SID. If the problem persists, turn on tracing in the listener to determine the TNS error caused by the redirect.

TNS-12510: TNS:database temporarily lacks resources to handle the request

Cause: The dispatchers appear to be busy handling other requests.

Action: Attempt the connection again. If error persists, ask the DBA to increase the number of dispatchers and/or dispatchers' limit on number of connections/sessions that they can accept.

TNS-12511: TNS:service handler found but it is not accepting connections

Cause: The dispatchers notified the listener that they temporarily do not accept new connections.

Action: Attempt the connection again. If error persists, contact the DBA to check the state of the dispatchers and/or ask him to increase the number of dispatchers.

TNS-12513: TNS:service handler found but it has registered for a different protocol

Cause: The dispatchers registered for this service are connected to the listener by way of a different network protocol than that of the client.

Action: Contact the DBA to register a dispatcher on your protocol.

TNS-12514: TNS:listener does not currently know of service requested in connect descriptor

Cause: The listener received a request to establish a connection to a database or other service. The connect descriptor received by the listener specified a service name for a service (usually a database service) that either has not yet dynamically registered with the listener or has not been statically configured for the listener. This may be a temporary condition such as after the listener has started, but before the database instance has registered with the listener.

Action: - Wait a moment and try to connect a second time. - Check which services are currently known by the listener by executing: `lsnrctl services <varname>listener name</varname>` - Check that the `SERVICE_NAME` parameter in the connect descriptor of the net service name used specifies a service known by the listener. - If an easy connect naming connect identifier was used, check that the service name specified is a service known by the listener. - Check for an event in the listener.log file.

TNS-12515: TNS:listener could not find a handler for this presentation

Cause: None of the listener's known service handlers are registered as supporting the presentation protocol required by the connecting client.

Action: Check that the destination service is configured to accept the presentation protocol.

TNS-12516: TNS:listener could not find available handler with matching protocol stack

Cause: None of the known and available service handlers for the given `SERVICE_NAME` support the client's protocol stack: transport, session, and presentation protocols.

Action: Check to make sure that the service handlers (e.g. dispatchers) for the given `SERVICE_NAME` are registered with the listener, are accepting connections, and that they are properly configured to support the desired protocols.

TNS-12518: TNS:listener could not hand off client connection

Cause: The process of handing off a client connection to another process failed.

Action: Turn on listener tracing and re-execute the operation. Verify that the listener and database instance are properly configured for direct handoff. If problem persists, call Oracle Support.

TNS-12519: TNS:no appropriate service handler found

Cause: The listener could not find any available service handlers that are appropriate for the client connection.

Action: Run "`lsnrctl services`" to ensure that the instance(s) have registered with the listener, and are accepting connections.

TNS-12520: TNS:listener could not find available handler for requested type of server

Cause: None of the known and available service handlers for requested type of server (dedicated or shared) are appropriate for the client connection.

Action: Run "lsnrctl services" to ensure that the instance(s) have registered with the listener and that the appropriate handlers are accepting connections.

TNS-12521: TNS:listener does not currently know of instance requested in connect descriptor

Cause: The listener received a request to establish a connection to a database or other service. The connect descriptor received by the listener specified in addition to the service name an instance name for an instance (usually a database instance) that either has not yet dynamically registered with the listener or has not been statically configured for the listener. This may be a temporary condition such as after the listener has started, but before the database instance has registered with the listener.

Action: - Wait a moment and try to connect a second time. - Check which instances are currently known by the listener by executing: lsnrctl services <varname>listener name</varname> - Check that the INSTANCE_NAME parameter in the connect descriptor specifies an instance name known by the listener. - Check for an event in the listener.log file.

TNS-12522: TNS:listener could not find available instance with given INSTANCE_ROLE

Cause: There are not any available and appropriate database instances registered with the listener, that are part of the service identified by SERVICE_NAME given in the connect descriptor and that have the specified INSTANCE_ROLE (and INSTANCE_NAME, if specified).

Action: Check to make sure that the INSTANCE_ROLE specified is correct. Run "lsnrctl services" to ensure that the instance(s) have registered with the listener and that they are ready to accept connections.

TNS-12523: TNS:listener could not find instance appropriate for the client connection

Cause: The listener could not find any available (database) instances, that are appropriate for the client connection.

Action: Run "lsnrctl services" to ensure that the instance(s) are registered with the listener, and have status READY.

TNS-12524: TNS:listener could not resolve HANDLER_NAME given in connect descriptor

Cause: The HANDLER_NAME in the CONNECT_DATA was not found in the listener's tables for the specified SERVICE_NAME and INSTANCE_NAME.

Action: Check to make sure that the HANDLER_NAME specified is correct.

TNS-12525: TNS:listener has not received client's request in time allowed

Cause: The listener disconnected the client because the client failed to provide the necessary connect information within the allowed time interval. This may be a result of network or system delays; or this may indicate that a malicious client is trying to cause a Denial of Service attack on the listener.

Action: If the error occurred because of a slow network or system, reconfigure INBOUND_CONNECT_TIMEOUT to a larger value. If a malicious client is suspected, use the address in listener.log to identify the source and restrict access. Turn on tracing for more information.

TNS-12526: TNS:listener: all appropriate instances are in restricted mode

Cause: Database instances supporting the service requested by the client were in restricted mode. The Listener does not allow connections to instances in restricted mode. This condition may be temporary, such as during periods when database administration is performed.

Action: Attempt the connection again. If error persists, then contact the database administrator to change the mode of the instance, if appropriate.

TNS-12527: TNS:listener: all instances are in restricted mode or blocking new connections

Cause: All appropriate database instances supporting the service requested by the client reported that they either were in restricted mode or were blocking the new connections. The Listener does not allow connections to such instances. This condition may be temporary, such as at instance startup.

Action: Attempt the connection again. If error persists, then contact the database administrator to check the status of the instances.

TNS-12528: TNS:listener: all appropriate instances are blocking new connections

Cause: All instances supporting the service requested by the client reported that they were blocking the new connections. This condition may be temporary, such as at instance startup.

Action: Attempt the connection again. If error persists, then contact the administrator to check the status of the instances.

TNS-12529: TNS:connect request rejected based on current filtering rules

Cause: Connection Manager and its listener were configured with filtering rules specifying that the connect request be rejected.

Action: If this connect request should be allowed, then contact the administrator to modify the filtering rules.

TNS-12531: TNS:cannot allocate memory

Cause: Sufficient memory could not be allocated to perform the desired activity.

Action: Either free some resource for TNS, or add more memory to the machine. For further details, turn on tracing and reexecute the operation.

TNS-12532: TNS:invalid argument

Cause: An internal function received an invalid parameter.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12533: TNS:illegal ADDRESS parameters

Cause: An illegal set of protocol adapter parameters was specified. In some cases, this error is returned when a connection cannot be made to the protocol transport.

Action: Verify that the destination can be reached using the specified protocol. Check the parameters within the ADDRESS section of TNSNAMES.ORA. Legal ADDRESS parameter formats may be found in the Oracle operating system specific documentation for your platform. Protocols that resolve names at the transport layer (such as DECnet object names) are vulnerable to this error if not properly configured or names are misspelled.

TNS-12534: TNS:operation not supported

Cause: An internal function received a request to perform an operation that is not supported (on this machine).

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12535: TNS:operation timed out

Cause: The requested operation could not be completed within the time out period.

Action: Look at the documentation on the secondary errors for possible remedy. See SQLNET.LOG to find secondary error if not provided explicitly. Turn on tracing to gather more information.

TNS-12536: TNS:operation would block

Cause: An internal operation did not commence because to do so would block the current process and the user has requested that operations be non-blocking.

Action: None needed; this is an information message.

TNS-12537: TNS:connection closed

Cause: "End of file" condition has been reached; partner has disconnected.

Action: None needed; this is an information message.

TNS-12538: TNS:no such protocol adapter

Cause: The protocol adapter requested (by way of the "(PROTOCOL=..)" keyword-value pair in a TNS address) is unknown. If the supplied address is typographically correct then the protocol adapter is not installed.

Action: Install the protocol adapter or correct typographical error, as appropriate.
Note: if the supplied address was derived from resolving the service name, check the address in the appropriate file (TNSNAMES.ORA, LISTENER.ORA or SQLNET.ORA).

TNS-12539: TNS:buffer over- or under-flow

Cause: Buffer too small for incoming data or too large for outgoing data.

Action: This restriction (which is associated with CONNECT DATA) is not normally visible to the user. For further details, turn on tracing and reexecute the operation; contact Oracle Customer Support.

TNS-12540: TNS:internal limit restriction exceeded

Cause: Too many TNS connections open simultaneously.

Action: Wait for connections to close and re-try.

TNS-12541: TNS:no listener

Cause: The connection request could not be completed because the listener is not running.

Action: Ensure that the supplied destination address matches one of the addresses used by the listener - compare the TNSNAMES.ORA entry with the appropriate LISTENER.ORA file (or TNSNAV.ORA if the connection is to go by way of an Interchange). Start the listener on the remote machine.

TNS-12542: TNS:address already in use

Cause: Specified listener address is already being used.

Action: Start your listener with a unique address.

TNS-12543: TNS:destination host unreachable

Cause: Contact can not be made with remote party.

Action: Make sure the network driver is functioning and the network is up.

TNS-12544: TNS:contexts have different wait/test functions

Cause: Two protocol adapters have conflicting wait/test functions.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12545: Connect failed because target host or object does not exist

Cause: The address specified is not valid, or the program being connected to does not exist.

Action: Ensure the ADDRESS parameters have been entered correctly; the most likely incorrect parameter is the node name. Ensure that the executable for the server exists (perhaps "oracle" is missing.) If the protocol is TCP/IP, edit the TNSNAMES.ORA file to change the host name to a numeric IP address and try again.

TNS-12546: TNS:permission denied

Cause: User has insufficient privileges to perform the requested operation.

Action: Acquire necessary privileges and try again.

TNS-12547: TNS:lost contact

Cause: Partner has unexpectedly gone away, usually during process startup.

Action: Investigate partner application for abnormal termination. On an Interchange, this can happen if the machine is overloaded.

TNS-12548: TNS:incomplete read or write

Cause: A data send or receive failed.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12549: TNS:operating system resource quota exceeded

Cause: The current user has exceeded the allotted resource assigned in the operating system.

Action: Acquire more operating system resource, or perform a different function.

TNS-12550: TNS:syntax error

Cause: The supplied connect descriptor contains illegal syntax.

Action: Check the syntax of the connect descriptor in TNSNAMES.ORA.

TNS-12551: TNS:missing keyword

Cause: The supplied connect descriptor is missing one or more TNS keywords.

Action: Check the syntax, and ensure all required keywords are present.

TNS-12552: TNS:operation was interrupted

Cause: An internal operation was interrupted and could not complete.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12554: TNS:current operation is still in progress

Cause: An internal operation is still in progress.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12555: TNS:permission denied

Cause: User has insufficient privileges to perform the requested operation.

Action: Acquire necessary privileges and try again.

TNS-12556: TNS:no caller

Cause: TNS detected an incoming connect request but there was no caller.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12557: TNS:protocol adapter not loadable

Cause: On some platforms (such as OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter is missing or one of its supporting libraries is missing then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will include the name of the shared library (or DLL) that could not be loaded.

TNS-12558: TNS:protocol adapter not loaded

Cause: On some platforms (such as OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter has not been loaded, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that has not been loaded.

TNS-12560: TNS:protocol adapter error

Cause: A generic protocol adapter error occurred.

Action: Check addresses used for proper protocol specification. Before reporting this error, look at the error stack and check for lower level transport errors. For further details, turn on tracing and reexecute the operation. Turn off tracing when the operation is complete.

TNS-12561: TNS:unknown error

Cause: A generic protocol error occurred.

Action: For further details, turn on tracing and reexecute the operation.

TNS-12562: TNS:bad global handle

Cause: Internal error - bad 'gbh' argument passed to TNS from caller. System may have been linked with old libraries.

Action: Not normally visible to the user, contact Oracle Customer Support.

TNS-12564: TNS:connection refused

Cause: The connect request was denied by the remote user (or TNS software).

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation.

TNS-12566: TNS:protocol error

Cause: An unexpected TNS protocol error has occurred.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12569: TNS:packet checksum failure

Cause: The data received is not the same as the data sent.

Action: Attempt the transaction again. If the error is persistent, turn on tracing and reexecute the operation.

TNS-12570: TNS:packet reader failure

Cause: An error occurred during a data receive.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12571: TNS:packet writer failure

Cause: An error occurred during a data send.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12574: TNS:redirection denied

Cause: The connect request failed because it would have required redirection and the caller has requested no redirections.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12575: TNS:dhctx busy

Cause: The handoff over a dhctx failed as dhctx was already busy with an ongoing handoff.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12576: TNS:handoff not supported for this session

Cause: Handoff of a established session was attempted which either had tcps as its transport or NA options were enabled for this session.

Action: Check the transport setting as well as NA options. If error persists, contact Oracle Customer Support.

TNS-12578: TNS:wallet open failed

Cause: An error was encountered while trying to open the specified wallet.

Action: For further details, turn on tracing and re-execute the operation.

TNS-12582: TNS:invalid operation

Cause: An internal function received an invalid request.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12583: TNS:no reader

Cause: A send operation has been requested but partner has already disconnected.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12585: TNS:data truncation

Cause: A receive operation has completed with insufficient data to satisfy the user's request.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12589: TNS:connection not bequeathable

Cause: An attempt to hand-off a connection from one process to another has failed because the protocol provider does not support it.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12590: TNS:no I/O buffer

Cause: An attempt to perform an I/O operation failed because no buffer was available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12591: TNS:event signal failure

Cause: The TNS software is unable to signal an event occurrence.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12592: TNS:bad packet

Cause: An ill-formed packet has been detected by the TNS software.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12593: TNS:no registered connection

Cause: An attempt to solicit network event activity has failed because no connections are registered for event notification.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12595: TNS:no confirmation

Cause: TNS is unable to get requested confirmation acknowledgment from remote partner.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12596: TNS:internal inconsistency

Cause: TNS has detected an internal inconsistency.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12597: TNS:connect descriptor already in use

Cause: Internal error - illegal use of connect descriptor.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12598: TNS:banner registration failed

Cause: The registration of a product banner with the Oracle server failed.

Action: This is an error which is not normally visible externally. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

TNS-12599: TNS:cryptographic checksum mismatch

Cause: The data received is not the same as the data sent.

Action: Attempt the transaction again. If error persists, check (and correct) the integrity of your physical connection.

TNS-12600: TNS: string open failed

Cause: The creation of a string in ORACLE NLS format failed.

Action: This is an internal error, enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

TNS-12601: TNS:information flags check failed

Cause: The TNS information flags set by the process prior to connection negotiation were not present after the negotiation was finished.

Action: This is an internal error. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

TNS-12602: TNS: Connection Pooling limit reached

Cause: The operation failed because maximum active current connections has been reached. It may not be a real error when the Connection Pooling feature is enabled. It is possible that the application later reissues the operation and successfully grabs the connection pool slot and proceeds.

Action: This is an internal error. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

TNS-12606: TNS: Application timeout occurred

Cause: A network session did not reach an application-defined stage within the allowed time interval.

Action: This is an error which does not normally appear at the high level. The action to take is application specific, and is detailed in the higher level error description.

TNS-12607: TNS: Connect timeout occurred

Cause: A network session did not reach a predefined connect stage within the allowed time interval.

Action: This is an error which does not normally appear at the high level. The action to take is application specific, and is detailed in the higher level error description.

TNS-12608: TNS: Send timeout occurred

Cause: The send or write operation did not complete within the allowed time interval.

Action: Check if the peer host is available. Increase the send timeout value if necessary.

TNS-12609: TNS: Receive timeout occurred

Cause: The receive or read operation did not complete within the allowed time interval.

Action: Check if the peer host is available. Increase the receive timeout value if necessary.

TNS-12611: TNS:operation is not portable

Cause: Attempted operation is not portable.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12612: TNS:connection is busy

Cause: Attempted operation failed because it conflicts with an ongoing action or status of the connection.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12615: TNS:preempt error

Cause: A request to service an event failed because no event notification has yet been posted.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12616: TNS:no event signals

Cause: The operation failed because the type of data specified is unknown.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12618: TNS:versions are incompatible

Cause: The two machines are running incompatible versions of TNS.

Action: Check the version numbers, and upgrade the machine with the smaller one.

TNS-12619: TNS:unable to grant requested service

Cause: The connect request failed because requested service could not be provided by the local TNS software.

Action: If appropriate, reexecute with reduced service requirements.

TNS-12620: TNS:requested characteristic not available

Cause: The connect request failed because a requested transport characteristic could not be supported by the remote TNS software.

Action: If appropriate, reexecute with reduced requirements.

TNS-12622: TNS:event notifications are not homogeneous

Cause: An attempt to register a connection for event notification failed because the event notification type conflicts with existing registrations.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12623: TNS:operation is illegal in this state

Cause: Connection is half-duplex and a full-duplex operation was attempted.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12624: TNS:connection is already registered

Cause: An attempt to register a connection for event notification failed because the connection is already registered.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12625: TNS:missing argument

Cause: An operation failed because an argument was missing"

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12626: TNS:bad event type

Cause: An attempt to register a connection for event notification failed because the event type is unknown.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12628: TNS:no event callbacks

Cause: An attempt to register a connection for event notification failed because asynchronous callbacks are not available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12629: TNS:no event test

Cause: An attempt to register a connection for event notification failed because the ability to test for events is not available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12630: Native service operation not supported

Cause: An operation requested by a user is not supported by the native services component.

Action: This may be an internal error if the operation should have been supported.

TNS-12631: Username retrieval failed

Cause: The authentication service failed to retrieve the name of a user.

Action: Enable tracing to determine which routine is failing.

TNS-12632: Role fetch failed

Cause: The authentication service failed to retrieve one of the user's roles.

Action: Enable tracing to determine which routine is failing.

TNS-12633: No shared authentication services

Cause: The list of authentication services specified by the user does not match those supported by the process.

Action: Either specify another list or relink the executable with the desired services.

TNS-12634: Memory allocation failed

Cause: Process was unable to allocate memory.

Action: Terminate other processes in order to reclaim needed memory.

TNS-12635: No authentication adapters available

Cause: The executable was not linked with any authentication service adapters but the sqlnet.ora parameter that determines whether or not authentication is required was set to true.

Action: Either disable the parameter or relink the executable with service adapters.

TNS-12636: Packet send failed

Cause: A process was unable to send a packet to another process. Possible causes are: 1. The other process was terminated. 2. The machine on which the other process is running went down. 3. Some other communications error occurred.

Action: If the cause is not obvious, contact Oracle Customer Support.

TNS-12637: Packet receive failed

Cause: A process was unable to receive a packet from another process. Possible causes are: 1. The other process was terminated. 2. The machine on which the other process is running went down. 3. Some other communications error occurred.

Action: If the cause is not obvious, contact Oracle Customer Support.

TNS-12638: Credential retrieval failed

Cause: The authentication service failed to retrieve the credentials of a user.

Action: Enable tracing to determine the exact error.

TNS-12639: Authentication service negotiation failed

Cause: No match was found between the types of authentication services that the client supports and those that the server is using.

Action: Possible solutions: 1. Change the entry in sqlnet.ora that determines which services are to be used. 2. Relink the client with at least one of the authentication service adapters that the server supports. 3. Relink the server with at least one of the authentication service adapters that the client supports. 4. Disable authentication on both the client and server.

TNS-12640: Authentication adapter initialization failed

Cause: The function specified in the authentication table entry for the service failed.

Action: Enable tracing to determine the exact error.

TNS-12641: Authentication service failed to initialize

Cause: The authentication service failed during initialization.

Action: Enable tracing to determine the exact error.

TNS-12642: No session key

Cause: A process has no session key associated with it because the authentication service being used does not use one.

Action: If a session key is required, use another authentication service.

TNS-12643: Client received internal error from server

Cause: The client process received an error from the server that indicated that an internal Oracle Net native services error had occurred.

Action: Enable tracing on both processes and attempt to recreate the problem. If successful in recreating the problem, contact Oracle Customer Support.

TNS-12645: Parameter does not exist.

Cause: A sqlnet.ora parameter from which a value was needed does not exist.

Action: Set the parameter in the parameter file.

TNS-12646: Invalid value specified for boolean parameter

Cause: The value specified for a parameter was set to a value other than true/false or on/off.

Action: Correct the value of the parameter.

TNS-12647: Authentication required

Cause: The parameter that controls whether authentication is required was set to true, but the executable does not have an authentication service linked in.

Action: Either re-link the executable with an authentication service adapter or disable the parameter.

TNS-12648: Encryption or data integrity algorithm list empty

Cause: A list-of-algorithms parameter was empty, e.g. "()".

Action: Change the list to contain the name of at least one installed algorithm, or remove the list entirely if every installed algorithm is acceptable.

TNS-12649: Unknown encryption or data integrity algorithm

Cause: A list-of-algorithms parameter included an algorithm name that was not recognized.

Action: Either remove that algorithm name, correct it if it was misspelled, or install the driver for the missing algorithm.

TNS-12650: No common encryption or data integrity algorithm

Cause: The client and server have no algorithm in common for either encryption or data integrity or both.

Action: Choose sets of algorithms that overlap. In other words, add one of the client's algorithm choices to the server's list or vice versa.

TNS-12651: Encryption or data integrity algorithm unacceptable

Cause: The algorithm the server chose to use for encryption or data integrity was not one of the choices acceptable to the client. This is either the result of an internal error, of a network data transmission error, or of deliberate tampering with the transmitted data.

Action: For further details, turn on tracing, re-execute the operation, and contact Oracle Customer Support.

TNS-12652: String truncated

Cause: Not enough memory was allocated for a string so it had to be truncated

Action: If it is OK that the string is truncated, then it is not an error. Otherwise, call the routine that reported the error again with a larger string buffer.

TNS-12653: Authentication control function failed

Cause: The control function utilized by the authentication service driver failed.

Action: Enable tracing to determine the exact error.

TNS-12654: Authentication conversion failed

Cause: The authentication service was unable to convert the credentials of a user from the format specific to the format into the ORACLE format.

Action: Enable tracing to determine the exact error.

TNS-12655: Password check failed

Cause: The authentication service being used was unable to verify the provided password.

Action: Enable tracing to determine the exact error.

TNS-12656: Cryptographic checksum mismatch

Cause: The cryptographic checksum received with a packet of incoming data didn't match the checksum computed by the receiving end. This indicates that the packet was tampered with or otherwise corrupted in transit.

Action: Look for sources of data corruption, perhaps including deliberate tampering.

TNS-12657: No algorithms installed

Cause: The near side of the connection required the use of a service (either encryption or checksumming) when no algorithms for that service were installed.

Action: Remove the "ON" requirement for that service.

TNS-12658: ANO service required but TNS version is incompatible

Cause: A client process that is running an earlier version of TNS attempted to connect but the connection failed because the server process required that an ANO service (authentication, encryption, etc.) be used.

Action: Relink the calling executable and retry the connection or eliminate the requirement that the service be used on the server side.

TNS-12659: Error received from other process

Cause: An error was received by one or more services from the process on the other side of the connection.

Action: Enable tracing to determine the exact error(s). The error(s) is (are) not returned directly because an error generated by a server may not make sense on the client side and vice-versa.

TNS-12660: Encryption or crypto-checksumming parameters incompatible

Cause: One side of the connection specified "REQUIRED" for encryption or crypto-checksumming, while the other side specified "REJECTED".

Action: Change the "REQUIRED" side to "REQUESTED" if the you want encryption or crypto-checksumming to be optional, or change the "REJECTED" side to "ACCEPTED" if you do not want the service to be optional.

TNS-12661: Protocol authentication to be used

Cause: The authentication service has determined that the Oracle Net transport protocol in use is to be utilized to authenticate a user's identity.

Action: This error is used solely to communicate information between the authentication service and the Oracle Net session layer and should not normally be visible. If the error is seen, contact Oracle Worldwide Support.

TNS-12662: proxy ticket retrieval failed

Cause: The authentication adapter used by Oracle Net failed to retrieve the credentials needed to authenticate a database link.

Action: Enable tracing to determine the exact error.

TNS-12663: Services required by client not available on the server

Cause: Service(s) that was (were) required by the client process were not available on the server process.

Action: Configure the server with the services required by the client (best solution) or delete the requirement from the configuration file of the client (least secure).

TNS-12664: Services required by server not available on the client

Cause: Service(s) that was (were) required by the server process were not available on the client process.

Action: Configure the client with the services required by the server (best solution) or delete the requirement from the configuration file of the server (least secure).

TNS-12665: NLS string open failed

Cause: A native service was unable to make a string available for use by the National Language Support component.

Action: Make sure the National Language Support component has been properly. If it has, enable tracing and report the problem to Customer Support.

TNS-12666: Dedicated server: outbound transport protocol different from inbound

Cause: The protocol specified for an externally-identified outbound connection from a dedicated server (database link) was not the same as that used for the inbound connection. It is not possible for Oracle Net to authenticate a proxy connection that uses a protocol that is different from that which was used for the connection to the dedicated server.

Action: Specify the same protocol in the Oracle Net connect descriptor for the outbound connection as that used for the inbound connection.

TNS-12667: Shared server: outbound transport protocol different from inbound

Cause: The protocol specified for an externally-identified outbound connection from a shared server (database link) was not the same as that used for the inbound connection. It is not possible for Oracle Net to authenticate a proxy connection that uses a protocol that is different from that which was used for the connection to the shared server.

Action: Specify the same protocol in the Oracle Net connect descriptor for the outbound connection as that used for the inbound connection

TNS-12668: Dedicated server: outbound protocol does not support proxies

Cause: The protocol specified to perform an externally-identified proxy connection (database link) from a dedicated server does not support proxy connections.

Action: Specify a protocol in the Oracle Net connect descriptor used for the connection that does support externally-authenticated proxy connections. NOTE: Because of a limitation in Oracle Net, the protocol used for the proxy connection must be the same as that used for the connection from the client to the server.

TNS-12669: Shared server: outbound protocol does not support proxies

Cause: The protocol specified to perform an externally-identified proxy connection (database link) from a shared server does not support proxy connections.

Action: Specify a protocol in the Oracle Net connect descriptor used for the connection that does support externally-authenticated proxy connections. NOTE: Because of a limitation in Oracle Net, the protocol used for the proxy connection must be the same as that used for the connection from the client to the server.

TNS-12670: Incorrect role password

Cause: A password supplied for a role could not be validated by the authentication service.

Action: Supply the correct password.

TNS-12671: Shared server: adapter failed to save context

Cause: The adapter for the authentication service failed when it tried to save the data needed for proxy connections (database links) through the shared server.

Action: Enable tracing to determine the exact error. Contact Oracle Customer Support if the reason is not obvious.

TNS-12672: Database logon failure

Cause: The authentication service adapter in use encountered an error it attempted to validate the logon attempt of a user.

Action: Enable tracing to determine the exact error encountered by the adapter.

TNS-12673: Dedicated server: context not saved

Cause: A connection was marked as being a proxy connection (database link) from a dedicated server but no inbound context was present.

Action: This error should not normally be visible to the user. Contact Oracle Customer Support.

TNS-12674: Shared server: proxy context not saved

Cause: A connection was marked as being a proxy connection (database link) from a shared server but no inbound context was present.

Action: This error should not normally be visible to the user. Contact Oracle Customer Support.

TNS-12675: External user name not available yet

Cause: The authentication service in use was not able to return the external name of a user of the ORACLE server because it is not available to the service yet.

Action: This is just an informational message and should not normally be visible to the user. If the error does appear, contact Oracle Customer Support.

TNS-12676: Server received internal error from client

Cause: The server process received an error from the client which indicated that an internal Oracle Net native services error had occurred.

Action: Enable tracing on both processes and attempt to recreate the problem. If the problem recurs, contact Oracle Customer Support.

TNS-12677: Authentication service not supported by database link

Cause: The authentication service used by the proxy process (database link) was unable to find the adapter being used by the client in its list of authentication mechanisms.

Action: Specify an authentication adapter that is shared by the client and the server being used for the database link.

TNS-12678: Authentication disabled but required

Cause: The configuration parameters that control whether authentication is disabled or required were both set to TRUE.

Action: Set one or both of the parameters to FALSE.

TNS-12679: Native services disabled by other process but required

Cause: The remote process has disabled native services but the local process requires them.

Action: Enable native services on the remote process or disable them locally.

TNS-12680: Native services disabled but required

Cause: The process has disabled native services but at least one service is required.

Action: Enable native services or change the configuration file so that none of the available services are required.

TNS-12681: Login failed: the SecurID card does not have a pincode yet

Cause: The SecurID card that is used to logon to Oracle, does not have a pincode assigned to it.

Action: Use one of the programs supplied by Security Dynamics to assign a pincode to the card.

TNS-12682: Login failed: the SecurID card is in next PRN mode

Cause: The SecurID card and the SecurID server are out of sync and the server requires the next cardcode to resynchronize the card.

Action: Use one of the programs supplied by Security Dynamics to resynchronize the SecurID card.

TNS-12683: encryption/crypto-checksumming: no Diffie-Hellman seed

Cause: The "sqlnet.crypto_seed" parameter is missing from the SQLNET.ORA parameters file.

Action: Add this line to SQLNET.ORA: sqlnet.crypto_seed = "randomly-chosen text"

TNS-12684: encryption/crypto-checksumming: Diffie-Hellman seed too small

Cause: The "sqlnet.crypto_seed" parameter in the SQLNET.ORA parameter file is too small.

Action: Add more randomly-chosen text to it, perhaps using Network Manager.

TNS-12685: Native service required remotely but disabled locally

Cause: A native service is required by the remote process but native services have been disabled locally.

Action: Enable native services locally or change the configuration parameters on the remote host so that no native services are required.

TNS-12686: Invalid command specified for a service

Cause: An operation which does not exist was specified for a native service.

Action: This is a programming error and should not normally be visible to the user. If the error does appear, contact Oracle Customer Support.

TNS-12687: Credentials expired.

Cause: The credentials that are used to authenticate the user for the requested connection have expired.

Action: Renew your credentials. Refer to the documentation specific for your Network Authentication Adapter on how to do this.

TNS-12688: Login failed: the SecurID server rejected the new pincode

Cause: There are a number of reasons why the SecurID server would refuse a pincode: - The user might not have permission to make up his own pincode. - The pincode was either too short or too long. Valid pincodes consist of minimal four, but no more than eight characters. - The pincode contains any non alphanumeric characters.

Action: Reexecute the operation and make sure to use a pincode that satisfies the above requirements. If the problem persists, turn on tracing at the Oracle Server side of the connection and examine the trace file for the exact error.

TNS-12689: Server Authentication required, but not supported

Cause: Server Authentication is required for this connection, but not supported by both sides of the connection.

Action: Make sure both sides of the connection have the correct version of Advanced Networking Option, and that the Authentication Adapter supports Server Authentication.

TNS-12690: Server Authentication failed, login cancelled

Cause: Server Authentication is required, but the server's credentials were found invalid by the client.

Action: Make sure that the server has a valid set of credentials. Refer to your authentication adapter specific documentation on how to do this.

TNS-12696: Double Encryption Turned On, login disallowed

Cause: The user is using a Secure Protocol Adapter that has Encryption turned ON as well as ANO Encryption.

Action: Turn OFF either ANO Encryption or the Protocol Adapter Encryption if possible. Refer to the Administrator's Guide on how to do this.

TNS-12699: Native service internal error

Cause: An internal error occurred in the native services component.

Action: Enable tracing to determine the exact error. Contact Oracle Customer Support.

UDE-00001 to UDE-00054

UDE-00001: user requested cancel of current operation

Cause: User has requested a cancellation of current job.

Action: No action is needed.

UDE-00002: invalid username or password

Cause: An invalid username or password was specified.

Action: Retry with a valid username and password.

UDE-00003: all allowable logon attempts failed

Cause: Attempts were repeatedly made to log on with an invalid username or password.

Action: Shut down the utility, then restart and retry with a valid username and password.

UDE-00004: operation generated ORACLE error <varname>number</varname>

Cause: The operation unexpectedly produced the specified error. Refer to the description of that error for more information.

Action: Refer to the description of the reported error for possible actions.

UDE-00005: unexpected End-Of-File encountered while reading input

Cause: Encountered an End-Of-File while reading the user input.

Action: If input to export is being redirected, check the file for errors.

UDE-00006: failed to allocate memory of size <varname>number</varname>

Cause: Unable to allocate the necessary memory.

Action: Record the messages that follow and report this to Oracle Customer Support as an Export internal bug.

UDE-00007: attempt to free unallocated memory

Cause: An attempt was made to free memory that was not allocated.

Action: Contact Oracle Worldwide Support

UDE-00010: multiple job modes requested, <varname>string</varname> and <varname>string</varname>.

Cause: Multiple job modes were specified.

Action: Specify only one valid mode, then retry.

UDE-00011: parameter <varname>string</varname> is incompatible with parameter <varname>string</varname>

Cause: An invalid combination of parameters was specified.

Action: Refer to documentation for the set of valid modes, then retry.

UDE-00012: table mode exports only allow objects from one schema

Cause: Multiple schemas were selected for export.

Action: Retry export specifying only one schema.

UDE-00013: internal expdp error.

Cause: Fatal internal Data Pump client error.

Action: Contact Oracle Customer Support

UDE-00014: invalid value for parameter, '<varname>string</varname>'.

Cause: Could not parse the specified parameter or parameter value.

Action: Refer to documentation for valid parameter values.

UDE-00015: invalid context or job state for parameter, '<varname>string</varname>'.

Cause: Invalid job state or context for specified parameter.

Action: Refer to documentation for correct parameter usage.

UDE-00016: '<varname>string</varname>' parameter requires a value.

Cause: Parameter was specified without a value.

Action: Refer to documentation for correct parameter usage.

UDE-00017: Data Pump job is already executing.

Cause: Incorrect Data Pump job state for requested operation.

Action: Refer to documentation for correct usage.

**UDE-00018: Data Pump client is incompatible with database version
<varname>string</varname>**

Cause: The Export utility is at a higher version than the database version and is thereby incompatible.

Action: Use the same version of Export utility as the database.

UDE-00019: '<varname>string</varname>' parameter list is too long.

Cause: Requested parameter list exceeds 4000 character maximum.

Action: Reduce the specified number of parameter values and rerun.

UDE-00020: Data Pump client is incompatible with Data Pump API.

Cause: The Export utility is at a higher version than the Data Pump server and is thereby incompatible.

Action: Use the same version of Export utility as the server.

UDE-00050: Unable to setup parameter processing.

Cause: An unexpected error occurred during parameter manager initialization.

Action: Record the messages that follow and report this to Oracle Customer Support as an Export internal bug.

UDE-00051: unable to set NLS_NUMERIC_CHARACTERS to required defaults.

Cause: Export was unable to set NLS_NUMERIC_CHARACTERS to '.,'

Action: Record the accompanying messages and report this as an Export internal error to Oracle customer support.

UDE-00052: incorrect Data Pump client for operation: <varname>string</varname>

Cause: Export client attempted to attach to import job.

Action: Use appropriate client when attaching to an existing job

UDE-00053: unrecognized client command '<varname>string</varname>'

Cause: Invalid interactive client command.

Action: Refer to documentation for valid client commands.

UDE-00054: Deprecated Legacy Mode parameter '<varname>string</varname>' specified at or on: <varname>string</varname>

Cause: The Legacy Mode parameter specified has no corresponding Data Pump mapping.

Action: Review the location referred to in the error message (either 'Command Line', 'Parameter File', or 'Environment Variable') and remove the parameter.

UDI-00001 to UDI-00054

UDI-00001: user requested cancel of current operation\n

Cause: User has requested a cancellation of current job.

Action: No action is needed.

UDI-00002: invalid username or password

Cause: An invalid username or password was specified.

Action: Retry with a valid username and password.

UDI-00003: all allowable logon attempts failed

Cause: Attempts were repeatedly made to log on with an invalid username or password.

Action: Shut down the utility, then restart and retry with a valid username and password.

UDI-00004: operation generated ORACLE error <varname>number</varname>

Cause: The operation unexpectedly produced the specified error. Refer to the description of that error for more information.

Action: Refer to the description of the reported error for possible actions.

UDI-00005: unexpected End-Of-File encountered while reading input.\n

Cause: Encountered an End-Of-File while reading the user input.

Action: If input to import is being redirected, check the file for errors.

UDI-00006: failed to allocate memory of size <varname>number</varname>

Cause: Unable to allocate the necessary memory.

Action: Record the messages that follow and report this to Oracle Customer Support as an Import internal bug.

UDI-00007: attempt to free unallocated memory

Cause: An attempt was made to free memory that was not allocated.

Action: Contact Oracle Customer Support

UDI-00010: multiple job modes requested, <varname>string</varname> and <varname>string</varname>.

Cause: Invalid job mode was specified.

Action: Specify only one valid mode, then retry.

UDI-00011: parameter <varname>string</varname> is incompatible with parameter <varname>string</varname>

Cause: An invalid combination of parameters was specified.

Action: Refer to documentation for the set of valid modes, then retry.

UDI-00012: table mode imports only allow objects from one schema

Cause: Multiple schemas were selected for import.

Action: Retry import specifying only one schema.

UDI-00013: internal impdp error.

Cause: Fatal internal Data Pump client error.

Action: Contact Oracle Customer Support.

UDI-00014: invalid value for parameter, '<varname>string</varname>'

Cause: Could not parse the specified parameter or parameter value.

Action: Refer to documentation for valid parameter values.

UDI-00015: invalid context or job state for parameter, '<varname>string</varname>'.

Cause: Invalid job state or context for specified parameter.

Action: Refer to documentation for correct parameter usage.

UDI-00016: '<varname>string</varname>' parameter requires a value.

Cause: Parameter was specified without a value.

Action: Refer to documentation for correct parameter usage.

UDI-00017: Data Pump job is already executing.

Cause: Incorrect Data Pump job state for requested operation.

Action: Refer to documentation for correct usage.

**UDI-00018: Data Pump client is incompatible with database version
<varname>string</varname>**

Cause: The Import utility is at a higher version than the database version and is thereby incompatible.

Action: Use the same version of Import utility as the database.

UDI-00019: '<varname>string</varname>' parameter list is too long.

Cause: Requested parameter list exceeds 4000 character maximum.

Action: Reduce the specified number of parameter values and rerun.

UDI-00020: Data Pump client is incompatible with Data Pump API.

Cause: The Export utility is at a higher version than the Data Pump server and is thereby incompatible.

Action: Use the same version of Export utility as the server.

UDI-00050: unable to setup parameter processing.

Cause: An unexpected error occurred during parameter manager initialization.

Action: Record the messages that follow and report this to Oracle Customer Support as an Import internal bug.

UDI-00051: unable to set NLS_NUMERIC_CHARACTERS to required defaults.

Cause: Import was unable to set NLS_NUMERIC_CHARACTERS to '.,'

Action: Record the accompanying messages and report this as an Import internal error to Oracle Customer Support.

UDI-00052: incorrect Data Pump client for operation: <varname>string</varname>

Cause: Import client attempted to attach to export job.

Action: Use appropriate client when attaching to an existing job

UDI-00053: unrecognized client command '<varname>string</varname>'

Cause: Invalid interactive client command.

Action: Refer to documentation for valid client commands.

UDI-00054: Deprecated Legacy Mode parameter '<varname>string</varname>' specified at or on: <varname>string</varname>

Cause: The Legacy Mode parameter specified has no corresponding Data Pump mapping.

Action: Review the location referred to in the error message (either 'Command Line', 'Parameter File', or 'Environment Variable') and remove the parameter.

SQL*Loader-00100 to SQL*Loader-03120

SQL*Loader-00100: Syntax error on command-line

Cause: Possible causes for this error include: placing a positional argument after keyword arguments, misspelling a keyword, not balancing parentheses or quotes, or leaving space between the operator, '=', and an argument.

Action: Check the command syntax and the spelling, then retry.

SQL*Loader-00101: Invalid argument for username/password

Cause: The username/password argument specified on the command line was not recognized. Another argument (not identified by a keyword) could be in the position where username/password is expected.

Action: Check the format of the username/password argument, which is the first argument on the command line, if arguments are given without keywords.

SQL*Loader-00102: Invalid control file name on command line

Cause: The control file name specified on the command line was not recognized. It could be misspelled, or another argument (not identified by a keyword) could be in its place. One possible cause is the existence of a space between username and password. See error 101, above. Another is that the specified file name caused an overflow of the output buffer.

Action: Check the spelling and position of the arguments on the command line.

SQL*Loader-00103: Invalid log file name on command line

Cause: The log file name specified on the command line was not recognized. It could be misspelled, or another argument (not identified by a keyword) could be in its place. Another possible cause is that the specified file name caused an overflow of the output buffer.

Action: Check the spelling and position of the arguments on the command line.

SQL*Loader-00104: Invalid bad file name on command line

Cause: The bad file name specified on the command line was not recognized. It could be misspelled, or another argument (not identified by a keyword) could be in its place. Another possible cause is that the specified file name caused an overflow of the output buffer.

Action: Correct it.

SQL*Loader-00105: Invalid data file name on command line

Cause: The datafile name specified on the command line was not recognized. It could be misspelled, or another argument (not identified by a keyword) could be in its place. Another possible cause is that the specified file name caused an overflow of the output buffer.

Action: Check the spelling and position of the arguments on the command line.

SQL*Loader-00106: Invalid discard file name on command line

Cause: The discard file name specified on the command line was not recognized. It could be misspelled, or another argument (not identified by a keyword) could be in its place. Another possible cause is that the specified file name caused an overflow of the output buffer.

Action: Check the spelling and position of the arguments on the command line.

SQL*Loader-00107: Invalid maximum number of discards

Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00108: Invalid number of logical records to load

Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00109: Invalid number of logical records to skip

Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00110: Invalid maximum number of errors

Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00111: Invalid number of rows for bind array or data saves

Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00112: Invalid maximum bind array size

Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00113: Invalid silent mode option

Cause: The only valid options for the SILENT command-line argument are ALL, ERROR, FEEDBACK, or HEADER. The argument could be misspelled, or another argument (not identified by a keyword) could be in its place.

Action: Check the command line and retry.

SQL*Loader-00114: Error in OPTIONS statement

Cause: Command line options specified in the SQL*Loader control file with the OPTIONS clause were found to be incorrect.

Action: Check the format of the OPTIONS clause in the SQL*Loader control file.

SQL*Loader-00115: Invalid direct path option\n

Cause: The only valid options for the DIRECT command-line argument are TRUE or FALSE. The argument could be misspelled, or another argument (not identified by a keyword) could be in its place.

Action: Check the command line and retry.

SQL*Loader-00116: Error prompting for password\n

Cause: An internal error has occurred.

Action: Contact customer support.

SQL*Loader-00118: Invalid parallel load option\n

Cause: The command-line argument used for the parallel load is incorrect.

Action: Use only TRUE or FALSE as the value for the parallel load option.

SQL*Loader-00119: Invalid parallel file (data file) name on command line\n

Cause: The command-line argument for the parallel file was entered incorrectly. One possible cause is that the specified file name caused an overflow of the output buffer.

Action: Check the command line argument and retry the operation.

SQL*Loader-00120: Invalid _synchro option string\n

Cause: The command-line argument _synchro is incorrect.

Action: Use only one of the allowed modes: see ulminv[].

SQL*Loader-00121: Invalid skip_unusable_indexes option\n

Cause: The command line argument for skip_unusable_indexes is incorrect.

Action: Use only TRUE or FALSE as the value for the skip_unusable_indexes option.

SQL*Loader-00122: Invalid skip_index_maintenance option\n

Cause: The command line argument for skip_index_maintenance is incorrect.

Action: Use only true or false as the value for the skip_index_maintenance option.
(Note: only on direct loads!)

SQL*Loader-00123: specified value for bindsize(<varname>number</varname>) less than readsize(<varname>number</varname>)\n

Cause: The command line argument specified for bindsize was less than the value of readsize.

Action: No action is required. SQL*Loader automatically adjusts the value of bindsize to equal the value of readsize.

SQL*Loader-00124: specified value for readsize(<varname>number</varname>) less than bindsize(<varname>number</varname>)\n

Cause: The command line argument specified for readsize was less than the value of bindsize.

Action: No action is required. SQL*Loader automatically adjusts the value of readsize to equal the value of bindsize.

SQL*Loader-00125: specified value for readsize(<varname>number</varname>) less than max_record_size(<varname>number</varname>)\n

Cause: The command line argument specified for readsize was less than the value of max_record_size.

Action: No action is required. SQL*Loader automatically adjusts the value of readsize to equal the value of max_record_size.

SQL*Loader-00126: Invalid read sizeln

Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00127: Invalid maximum record sizeln

Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00128: unable to begin a session\n

Cause: An error occurred when attempting to start a session on the database.

Action: See the message that follows this message for information on the cause of the error.

SQL*Loader-00129: Invalid number of rows for direct path column array\n

Cause: The argument's value is inappropriate

Action: Check the command line and retry.

SQL*Loader-00130: Invalid direct path stream sizeln

Cause: The argument's value is inappropriate

Action: Check the command line and retry.

SQL*Loader-00131: Invalid multithreading option\n

Cause: The only valid options for the MULTITHREADING command-line argument are TRUE or FALSE. The argument could be misspelled, or another argument (not identified by a keyword) could be in its place.

Action: Check the command line and retry.

SQL*Loader-00132: invalid argument for external table option\n

Cause: The command line argument specified for external_tables was not TRUE or FALSE

Action: Check the command line and retry.

SQL*Loader-00133: Can't specify both direct path and external tables\n

Cause: Both options for direct path and external tables were indicated. Only one of these can be applied at a time.

Action: Change at least one of the parameters to enable only one.

SQL*Loader-00134: invalid option specified for EXTERNAL_TABLE parameter\n

Cause: An invalid value was specified for the EXTERNAL_TABLE parameter.

Action: Specify one of the following values. NOT_USED disables use of external tables. GENERATE_ONLY generates the SQL statements that will use external tables to load the data. EXECUTE both generates the SQL statements and then executes them.

SQL*Loader-00135: Invalid argument for RESUMABLE

Cause: The command line argument specified for RESUMABLE was not TRUE or FALSE.

Action: Check the command line and retry.

SQL*Loader-00136: Invalid argument for RESUMABLE_NAME

Cause: The command line argument specified for RESUMABLE_NAME was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00137: Invalid value for RESUMABLE_TIMEOUT

Cause: The command line argument specified for RESUMABLE_TIMEOUT was not a valid positive integer.

Action: Check the command line and retry.

SQL*Loader-00138: Invalid value for DATE_CACHE

Cause: The command line argument specified for DATE_CACHE was not a valid positive integer.

Action: Check the command line and retry.

SQL*Loader-00144: Conflicting load methods: <varname>string</varname>/<varname>string</varname> specified

Cause: External table mode and direct path mode were both specified.

Action: Specify only one load method.

SQL*Loader-00145: Invalid value for NO_INDEX_ERRORS

Cause: The command line argument specified was not a valid boolean.

Action: Check the command line and retry.

SQL*Loader-00146: Invalid value for PARTITION_MEMORY

Cause: The command line argument specified was not -1, 0, or positive.

Action: Check the command line and retry.

SQL*Loader-00147: Warning: The NO_INDEX_ERRORS parameter is ignored for direct path parallel loads

Cause: The NO_INDEX_ERRORS parameter was specified for a parallel load.

Action: Do not use the NO_INDEX_ERRORS parameter for parallel loads.

SQL*Loader-00148: Invalid value for the TABLE parameter

Cause: The command line argument specified for the TABLE parameter was not a valid string. It is also possible that the schema name or the table name overflowed the output buffer which allows for the maximum identifier size in the database character set.

Action: Check the command line and retry.

**SQL*Loader-00149: Control file cannot be specified with the TABLE parameter.
ln**

Cause: A control file was specified along with the TABLE parameter.

Action: Check the command line and retry. If you are doing an express mode load, omit the control file. If you are not doing an express mode load, omit the TABLE parameter.

**SQL*Loader-00174: conflicting values for PARALLEL and DEGREE_OF_PARALLELISM parameters
ln**

Cause: Conflicting values were specified for the parallel setting. This could be caused by: 1) having PARALLEL=TRUE and DEGREE_OF_PARALLELISM=NONE(or 1) 2) PARALLEL=FALSE and DEGREE_OF_PARALLELISM being set to a value other than NONE or 1.

Action: Verify the values for PARALLEL and DEGREE_OF_PARALLELISM.

**SQL*Loader-00175: invalid number of Direct NFS (dNFS) read buffers
ln**

Cause: The argument's value was inappropriate.

Action: Check the command line and retry.

**SQL*Loader-00176: Invalid value for the DATE_FORMAT parameter.
ln**

Cause: The command line argument specified for the DATE_FORMAT parameter was not a valid string.

Action: Check the command line and retry.

**SQL*Loader-00177: The DATE_FORMAT parameter can only be specified with the TABLE parameter.
ln**

Cause: A control file was specified along with the DATE_FORMAT parameter.

Action: Check the command line and retry. If you are doing an express mode load, omit the control file. If you are not doing an express mode load, omit the DATE_FORMAT parameter.

**SQL*Loader-00178: Invalid value for the TERMINATED_BY parameter.
ln**

Cause: The command line argument specified for the TERMINATED_BY parameter was not a valid string.

Action: Check the command line and retry.

**SQL*Loader-00179: Invalid hexadecimal value for the TERMINATED_BY parameter.
ln**

Cause: The command line argument specified for the TERMINATED_BY parameter was not a valid hexadecimal string.

Action: Check the command line and retry.

**SQL*Loader-00180: Invalid hexadecimal value for the table-level NULLIF parameter.
ln**

Cause: The command line argument specified for the table-level NULLIF parameter was not a valid hexadecimal string.

Action: Check the command line and retry.

SQL*Loader-00181: The TERMINATED_BY parameter cannot be specified without the TABLE parameter.\n

Cause: The TERMINATED_BY parameter was specified without the TABLE parameter.

Action: Check the command line and retry. If you are doing an express mode load, include the TABLE parameter and omit the control file. If you are not doing an express mode load, omit the TERMINATED_BY parameter.

SQL*Loader-00182: Invalid value for the ENCLOSED_BY parameter.\n

Cause: The command line argument specified for the ENCLOSED_BY parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00183: invalid hexadecimal value for the ENCLOSED_BY parameter: <varname>string</varname>\n

Cause: The command line argument specified for the ENCLOSED_BY parameter was not a valid hexadecimal string.

Action: Check the command line and retry.

SQL*Loader-00184: The ENCLOSED_BY parameter cannot be specified with the OPTIONALLY_ENCLOSED_BY parameter.\n

Cause: Both the ENCLOSED_BY parameter and the OPTIONALLY_ENCLOSED_BY parameter were specified.

Action: Check the command line and retry. Specify only the ENCLOSED_BY parameter or the OPTIONALLY_ENCLOSED_BY parameter.

SQL*Loader-00185: The ENCLOSED_BY parameter cannot be specified without the TABLE parameter.\n

Cause: The ENCLOSED_BY parameter was specified without the TABLE parameter.

Action: Check the command line and retry. If you are doing an express mode load, include the TABLE parameter and omit the control file. If you are not doing an express mode load, omit the ENCLOSED_BY parameter.

SQL*Loader-00186: Invalid value for the OPTIONALLY_ENCLOSED_BY parameter.\n

Cause: The command line argument specified for the OPTIONALLY_ENCLOSED_BY parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00187: invalid hexadecimal value for the OPTIONALLY_ENCLOSED_BY parameter: <varname>string</varname>\n

Cause: The command line argument specified for the OPTIONALLY_ENCLOSED_BY parameter was not a valid hexadecimal string.

Action: Check the command line and retry.

SQL*Loader-00188: The OPTIONALLY_ENCLOSED_BY parameter cannot be specified with the ENCLOSED_BY parameter.\n

Cause: Both the OPTIONALLY_ENCLOSED_BY parameter and the ENCLOSED_BY parameter were specified.

Action: Check the command line and retry. Specify only the `OPTIONALLY_ENCLOSED_BY` parameter or the `ENCLOSED_BY` parameter.

SQL*Loader-00189: The `OPTIONALLY_ENCLOSED_BY` parameter cannot be specified without the `TABLE` parameter.

Cause: The `OPTIONALLY_ENCLOSED_BY` parameter was specified without the `TABLE` parameter.

Action: Check the command line and retry. If you are doing an express mode load, include the `TABLE` parameter and omit the control file. If you are not doing an express mode load, omit the `OPTIONALLY_ENCLOSED_BY` parameter.

SQL*Loader-00190: Invalid value for the `CHARACTERSET` parameter.

Cause: The command line argument specified for the `CHARACTERSET` parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00191: The `CHARACTERSET` parameter can only be specified with the `TABLE` parameter.

Cause: A control file was specified along with the `CHARACTERSET` parameter.

Action: Check the command line and retry. If you are doing an express mode load, omit the control file. If you are not doing an express mode load, omit the `CHARACTERSET` parameter.

SQL*Loader-00192: The `CHARACTERSET` parameter cannot be specified without the `TABLE` parameter.

Cause: The `CHARACTERSET` parameter was specified without the `TABLE` parameter.

Action: Check the command line and retry. If you are doing an express mode load, include the `TABLE` parameter and omit the control file. If you are not doing an express mode load, omit the `CHARACTERSET` parameter.

SQL*Loader-00193: Invalid value for the `DEGREE_OF_PARALLELISM` parameter.

Cause: The command line argument specified for the `DEGREE_OF_PARALLELISM` parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00194: Option `<varname>string</varname>` specified and ignored for `<varname>string</varname>` path load.

Cause: An option was specified that is not supported for conventional path or direct path.

Action: Do not specify the unsupported option or do not use conventional path or direct path load.

SQL*Loader-00195: Invalid value for the `TRIM` parameter.

Cause: The command line argument specified for the `TRIM` parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00196: Invalid value for the CSV parameter.\n

Cause: The command line argument specified for the CSV parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00197: Invalid value for the TIMESTAMP_FORMAT parameter.\n

Cause: The command line argument specified for the TIMESTAMP_FORMAT parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00198: The TIMESTAMP_FORMAT parameter can only be specified with the TABLE parameter.\n

Cause: A control file was specified along with the TIMESTAMP_FORMAT parameter.

Action: Check the command line and retry. If you are doing an express mode load, omit the control file. If you are not doing an express mode load, omit the TIMESTAMP_FORMAT parameter.

SQL*Loader-00199: Invalid value for the NULLIF parameter.\n

Cause: The command line argument specified for the NULLIF parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00200: FORMAT clause should not be present - flat data files only\n

Cause: SQL/DS FORMAT clause is not supported.

Action: Remove the FORMAT command from the SQL*Loader control file or

SQL*Loader-00201: There is an invalid value for the CSV clause.\n

Cause: The control file clause specified for CSV was neither CSV WITH EMBEDDED or CSV WITHOUT EMBEDDED.

Action: Check the control file CSV clause syntax and retry.

SQL*Loader-00202: shift-based character sets not supported with CSV format files with embedded record terminators\n

Cause: A CSV format file with embedded record terminators was specified with a shift-based character set.

Action: Either use a nonshift-based character set or do not use CSV format files with embedded record terminators.

SQL*Loader-00203: The NULLIF parameter can only be specified with the TABLE parameter.\n

Cause: A control file was specified along with the NULLIF parameter.

Action: Check the command line and retry. If you are doing an express mode load, omit the control file. If you are not doing an express mode load, omit the NULLIF parameter.

SQL*Loader-00204: Invalid value for the FIELD_NAMES parameter.\n

Cause: The command line argument specified for the FIELD_NAMES parameter was not a valid string. You must specify FIRST, FIRST_IGNORE, ALL, ALL_IGNORE, or NONE.

Action: Check the command line and retry.

SQL*Loader-00205: The FIELD_NAMES parameter can only be specified with the TABLE parameter.\n

Cause: A control file was specified along with the FIELD_NAMES parameter.

Action: Check the command line and retry. If you are doing an express mode load, omit the control file. If you are not doing an express mode load, omit the FIELD_NAMES parameter.

SQL*Loader-00206: Empty field name for field <varname>number</varname> in the FIELD NAMES record in data file\n

Cause: A field name in the FIELD NAMES record was empty.

Action: Specify a valid field name and retry the operation.

SQL*Loader-00207: Missing one or more field names in the FIELD NAMES record in the data file. Found <varname>number</varname> fields, there should be <varname>number</varname> fields.\n

Cause: One or more field names was not listed in the FIELD NAMES record. However, it was listed in the access parameter list for the external table.

Action: Include all field names in the data file and retry the operation.

SQL*Loader-00208: Error on the FIELD NAMES record for table <varname>string</varname>, field <varname>string</varname><varname><varname>string</varname> was not found in the control file.\n

Cause: The listed field was not found in the control file field list. The next error message lists the name of the data file where the error was found.

Action: Check the listed field and fix it. Then retry the operation.

SQL*Loader-00209: error processing the FIELD NAMES record in data file <varname>string</varname>.\n

Cause: An error occurred while processing the FIELD NAMES record for the data file.

Action: See messages that precede this one for more details. Fix the error and retry the operation.

SQL*Loader-00210: first data file is empty, cannot process the FIELD NAMES record\n

Cause: The data file listed in the next message was empty. Therefore, the FIELD NAMES FIRST FILE directive could not be processed.

Action: Check the listed data file and fix it. Then retry the operation.

SQL*Loader-00211: Field name <varname>string</varname><varname>string</varname><varname>string</varname> in the FIELD NAMES record in the data file is too long.\n

Cause: The field name exceeded the maximum of 30 characters.

Action: Specify at most 30 characters.

SQL*Loader-00212: The field level ENCLOSED BY clause is not allowed with the CSV WITH EMBEDDED clause.\n

Cause: A field level ENCLOSED BY clause was specified with the CSV WITH EMBEDDED clause. All fields must use the same ENCLOSED BY or OPTIONALLY ENCLOSED BY clause for CSV files with embedded record terminators.

Action: Either remove the field level ENCLOSED BY clause, or, if the data file does not contain embedded record terminators, change CSV WITH EMBEDDED to CSV WITHOUT EMBEDDED.

SQL*Loader-00213: Invalid value for the table parameter\n

Cause: The table name specified on the command line was not recognized. It could be misspelled, or another argument (not identified by a keyword) could be in its place. The schema name or the table name may have been too long for a valid database identifier in the database character set.

Action: Check the spelling and position of the arguments on the command line.

SQL*Loader-00214: Invalid value for the table name in the INTO TABLE clause\n

Cause: The table name specified in the INTO TABLE clause was not recognized. The schema name or the table name may have been too long for a valid database identifier in the database character set.

Action: Check the name and try again with a valid table name.

SQL*Loader-00215: Invalid data file name in INFILE statement\n

Cause: The datafile name specified in INFILE statement was not recognized. It could be misspelled, or the length may exceed the maximum file specification allowed on the platform.

Action: Check the spelling and length of the data file specification.

SQL*Loader-00216: Invalid bad file name in BADFILE statement\n

Cause: The bad file name specified in the BADFILE statement was not recognized. It could be misspelled, or the length may exceed the maximum file specification allowed on the platform.

Action: Check the spelling and length of the bad file specification.

SQL*Loader-00217: Invalid discard file name in DISCARDFILE statement\n

Cause: The discard file name specified in the DISCARDFILE statement was not recognized. It could be misspelled, or the length may exceed the maximum file specification allowed on the platform.

Action: Check the spelling and length of the discard file specification.

SQL*Loader-00218: Specified command-line parameter <varname>string</varname> ignored since not an express mode load.\n

Cause: A command-line parameter was specified that is supported only for express mode and not for loads which use a control file.

Action: Omit the option which is not supported if the option is not needed or use the control file syntax for the option. For example, use the CSV WITH EMBEDDED or CSV WITHOUT EMBEDDED control file syntax.

SQL*Loader-00248: multiple <varname>string</varname> format masks specified at table level for table <varname>string</varname>\n

Cause: Multiple format masks were specified for the listed datetime data type at the table level for the listed table.

Action: Remove one of the mask specifications and try the operation again.

SQL*Loader-00249: Unexpected error occurred while processing datetime format mask (<varname>string</varname>).\n

Cause: An unexpected error occurred while processing the datetime format mask.

Action: Check the mask and try the operation again with a correct mask. If the problem still occurs, contact Oracle Support Services.

SQL*Loader-00250: Work data sets are not used by SQL*Loader\n

Cause: The SQL*Loader control file contains a WRKDDN statement. SQL*Loader ignores this clause.

Action: No action required. This is an informational message.

SQL*Loader-00251: Sort devices are not used by SQL*Loader\n

Cause: The SQL*Loader control file contains a SORTDEVT statement. SQL*Loader ignores this clause.

Action: No action required. This is an informational message.

SQL*Loader-00252: Sort data sets are not used by SQL*Loader\n

Cause: The SQL*Loader control file contains a SORTNUM statement. SQL*Loader ignores this clause.

Action: No action required. This is an informational message.

SQL*Loader-00253: DB2 partition number has no significance -- ignored\n

Cause: The SQL*Loader control file contains a PART statement. SQL*Loader ignores this clause.

Action: No action required. This is an informational message.

SQL*Loader-00254: Cannot have DISCARDFILE specs here when multiple data files\n

Cause: The SQL*Loader control file contained multiple INFILE statements and a DISCARDFILE statement was found below the RESUME clause.

Action: Move the DISCARDFILE statement above the RESUME clause, so it is adjacent to one of the INFILE statements.

SQL*Loader-00255: Log file for error recovery not used by SQL*Loader\n

Cause: The SQL*Loader control file contains a LOG statement. SQL*Loader ignores this clause.

Action: No action required. This is an informational message.

SQL*Loader-00256: SORTED INDEXES option allowed only for direct path\n

Cause: The SQL*Loader control file contains a SORTED INDEXES statement, but it was not used in a direct path load.

Action: Specify a direct path load with DIRECT=TRUE on the command line, remove the statement from the SQL*Loader control file, or

SQL*Loader-00257: TERMINATED BY EOF option not valid with ENCLOSED BY option

Cause: A field description in the SQL*Loader control file contains both the TERMINATED BY EOF and the ENCLOSED BY options. These options are mutually exclusive.

Action: Remove either or both of the clauses.

SQL*Loader-00258: Maximum number of SORTED INDEXES (<varname>number</varname>) exceeded on table <varname>string</varname>

Cause: There are too many indexes in the SORTED INDEX clause. The message displays the maximum number that are permitted.

Action: Reduce the number of indexes specified in the SORTED INDEX clause or use the conventional path load instead of the direct path load.

SQL*Loader-00259: Could not escalate DDL share lock to exclusive on table <varname>string</varname>

Cause: This error occurs when another user has a parse lock on the table, for example, when another user is doing a select on the table. The parse lock should clear momentarily.

Action: Give the parse lock a chance to clear and then retry or else use the conventional path load.

SQL*Loader-00260: TERMINATED BY EOF option available only with LOBFILE option

Cause: The TERMINATED BY EOF option can be used only when describing data to be loaded from a LOBFILE. It cannot be specified at the table level and it cannot be for data in "regular" data files.

Action: Verify that you have specified the correct option for TERMINATED BY and verify that the TERMINATED BY option is specified for the correct fields.

SQL*Loader-00261: illegal use of TERMINATED BY for RAW field

Cause: The TERMINATED BY option cannot be used for loading data of type RAW from the data file. The only exception is when loading RAW data from LOBFILES. In that case, you may specify the TERMINATED BY EOF option.

Action: Remove the TERMINATED BY option from the RAW field in the SQL*Loader control file.

SQL*Loader-00262: PIECED keyword (on column <varname>string</varname>) allowed only when path is direct

Cause: The PIECED keyword cannot be used in a conventional path load.

Action: Remove the PIECED keyword or use the direct path load.

SQL*Loader-00263: PIECED column <varname>string</varname> must be last specified column in table <varname>string</varname>

Cause: A column that is not the last column was specified as PIECED.

Action: Remove the PIECED keyword or place the column last.

SQL*Loader-00264: File mode token <varname>string</varname> parsed but ignored\n

Cause: An obsolete file mode token was used in the SQL*Loader control file. As of Release 1.1 of SQL*Loader, the file-processing options string is used to control file processing, rather than keywords like STREAM, RECORD, FIXED, and VARIABLE.

Action: No action required. This message is informational. Removing the obsolete keywords will eliminate the message without changing the way in which the datafile is processed.

SQL*Loader-00265: Unable to get default character set name.\n

Cause: SQL*Loader was unable to locate the default character set name for the environment.

Action: Supply a character set name with the CHARACTERSET keyword.

SQL*Loader-00266: Unable to locate character set handle for <varname>string</varname>.\n

Cause: SQL*Loader could not find the character set handle for the named character set.

Action: Correct the character set name.

SQL*Loader-00267: Control file must be first data file.\n

Cause: The SQL*Loader control file is specified as containing data using the INFILE "*" clause, but other datafiles were named first.

Action: Move the INFILE "*" clause so that it is the first datafile declared in the SQL*Loader control file.

SQL*Loader-00268: UNRECOVERABLE keyword may be used only in direct path.\n

Cause: The UNRECOVERABLE keyword can only be specified in the direct path load.

Action: Use the direct path load or remove the keyword. (Conventional path loads are always recoverable).

SQL*Loader-00269: Null string not allowed as clause comparison text.\n

Cause: A clause is being compared to a null string.

Action: Modify the clause to compare to at least one character.

SQL*Loader-00270: TERMINATED BY EOF valid only for CHAR or RAW datatypes\n

Cause: A field description in the SQL*Loader control file used the TERMINATED BY EOF option when the field was not a RAW or CHAR datatype.

Action: Modify the SQL*Loader control file to either remove the TERMINATED BY EOF clause or change the datatype for the field to be CHAR or RAW.

SQL*Loader-00271: Not a Parallel load. Table level OPTIONS statement ignored.\n

Cause: A table-level OPTIONS statement was specified for a non-parallel load.

Action: Remove the OPTIONS statement from the SQL*Loader control file.

SQL*Loader-00272: Table level OPTIONS statement ignored.\n

Cause: In the parallel load option, the file specified on the command line overrides the file specified in the SQL*Loader control file.

Action: Remove the OPTIONS statement from the SQL*Loader control file.

SQL*Loader-00273: READBUFFERS may be used only in direct path.\n

Cause: The READBUFFERS specification was not entered as part of a direct path.

Action: Use the direct path or remove the READBUFFERS specification from the SQL*Loader control file.

SQL*Loader-00274: At least 2 read buffers have to be specified.\n

Cause: Fewer than 2 read buffers have been specified.

Action: Specify at least 2 read buffers in the READBUFFERS statement, in the SQL*Loader control file.

SQL*Loader-00275: Data is in control file but "INFILE *" has not been specified.\n\n

Cause: The INFILE specification was not entered in the SQL*Loader control file.

Action: If data in the SQL*Loader control file is to be read, specify INFILE * in the SQL*Loader control file.

SQL*Loader-00276: Local storage option overrides global storage.\n

Cause: A storage clause has been specified in the table level options statement and also in the global options statement.

Action: This is only a warning message. Table level options take precedence over global options. Drop the table level options statement if this is not the intent.

SQL*Loader-00277: Local file specification overrides global file specification.\n

Cause: A filename has been specified in the table level options statement and also in the global options statement.

Action: This is only a warning message. Table level options take precedence over global options. Drop the table level options statement if this is not the intent.

SQL*Loader-00278: Incorrect file specification for parallel load.\n

Cause: The filename used to perform the parallel load was entered incorrectly.

Action: Correct the filename and re-invoke parallel loader.

SQL*Loader-00279: Only APPEND mode allowed when parallel load specified.\n

Cause: INSERT, REPLACE, or TRUNCATE mode was used in a parallel load specification.

Action: Change the SQL*Loader control file to use the APPEND keyword and re-invoke the parallel loader.

SQL*Loader-00280: table <varname>string</varname> is a temporary table\n

Cause: The sqlldr utility does not load temporary tables. Note that if sqlldr did allow loading of temporary tables, the data would disappear after the load completed.

Action: Load the data into a non-temporary table.

SQL*Loader-00281: Warning: ROWS parameter ignored in parallel mode.\n

Cause: Specifying save points using the ROWS parameter is not supported for parallel loads.

Action: Remove the ROWS parameter from the command-line arguments or specify a non-parallel direct load to have save points performed.

SQL*Loader-00282: Unable to locate character set handle for character set ID (<varname>number</varname>).\n

Cause: SQL*Loader could not find the character set handle for the given character set ID.

Action: The character set ID was obtained from the database server, the SQL*Loader client does not have knowledge of the given character set ID. Possible mis-match of NLS data on the client and server side.

SQL*Loader-00283: file processing string "<varname>string</varname>" ignored for INFILE *\n

Cause: The SQL*Loader control file specified INFILE * for a load data file along with an optional file processing string. This message is a warning that the file processing string will be ignored since SQLLDR will expect the data to have the same record format as the SQL*Loader control file.

Action: If the data in the SQL*Loader control file is in the same format as the rest of the SQL*Loader control file, then you don't need to do anything. Removing the file processing string will get rid of this error message. If the data in the SQL*Loader control file has a different record format, then you need to copy the data into a separate file and use that file's name in the INFILE clause.

SQL*Loader-00284: Warning: Input data file <varname>string</varname> specified multiple times.\n

Cause: The same input datafile is loaded multiple times. This can occur if the INFILE keyword is placed out of order in the load syntax statement, which causes the filename of the first datafile loaded to default to the name of the control file with an extension or file type of DAT.

Action: Check that INFILE keyword is not placed after one of these - BADFILE/BADDN/DISCARDFILE/DISCARDDN/DISCARDS.

SQL*Loader-00285: <varname>string</varname> may be used only in conventional path.\n

Cause: HIDDEN can only be specified in the conventional path load.

Action: Use the conventional path load.

SQL*Loader-00286: ROWS parameter is not supported when loading an IOT.\n

Cause: Specifying save points using the ROWS parameter is not supported when loading an IOT.

Action: Remove the ROWS parameter from the command-line arguments.

SQL*Loader-00287: No control file name specified.\n

Cause: No control file name was provided at the control prompt.

Action: Provide the name of a valid control file at the prompt or on the command line.

SQL*Loader-00288: Delimiters may not be specified for collections stored in SDF.\n

Cause: A TERMINATED BY or ENCLOSED BY clause was found along with an SDF (secondary data files) clause for a nested table or varray field.

Action: The TERMINATED BY or ENCLOSED BY clauses may be specified only if the nested table or VARRAY data is stored in the record in the main data file. If you are loading nested table or VARRAY data from a secondary data file, then you must use COUNT to indicate the number of elements in the secondary data file that are stored in the file.

SQL*Loader-00289: SQL string for column <varname>string</varname> occludes SQL string for column <varname>string</varname>.\n

Cause: A SQL string has been associated with both a column object and one of its attributes in the control file. Because the SQL string of the column object will replace the entire column object in the VALUE clause of the INSERT statement, the SQL string of the attribute is ignored. This could cause unexpected or incorrect values to be loaded.

Action: Correct the control file so that only the column object or its attribute has a SQL string, but not both.

SQL*Loader-00290: PIECED keyword (on column <varname>string</varname>) allowed only for lob or long columns\n

Cause: The PIECED keyword cannot be used for non lob or long columns.

Action: Remove the PIECED keyword or use lob or long column type.

SQL*Loader-00291: Invalid bind variable <varname>string</varname> in SQL string for column <varname>string</varname>.\n

Cause: A bind variable may not refer to a filler field or to a non-existent field. Also, when running in direct-path mode, a bind variable may not refer to field that represents a LOB stored in a secondary file or a collection.

Action: Remove the offending bind variable from the SQL string.

SQL*Loader-00292: ROWS parameter ignored when an XML, LOB or VARRAY column is loaded\n

Cause: Command-line arguments contained a ROWS parameter. Specifying save points using the ROWS parameter is not supported when any table being loaded contains a LOB or a column stored as a LOB. XML and VARRAY columns may be stored as a LOB.

Action: Remove the ROWS parameter from the command-line arguments.

SQL*Loader-00293: Missing XMLTYPE directive in control file for table <varname>string</varname>\n

Cause: A table of sys.xmltype must specify the XMLTYPE directive.

Action: Add XMLTYPE directive to control file.

SQL*Loader-00294: invalid name % specified in TREAT AS clause\n

Cause: The type name specified in a TREAT AS clause is invalid. It might contain characters that are not valid in the client character set or a quoted string might not be terminated or the name might be too long to contain a valid schema name and type name.

Action: Verify that the type name has valid characters and is not too long. Also, ensure that all quoted strings are terminated.

SQL*Loader-00295: Warning: Table <varname>string</varname>, Column <varname>string</varname> - Quoting rule of object attribute bind variables has changed.\n\n

Cause: The quoting rule of bind variables consisting of full object attribute names changed. The old quoting rule is incorrect because it can lead to ambiguous column references. For backward compatibility, current load will continue unless ambiguous column references are detected.

Action: This is only a warning message. Because the quoting rule of object attribute bind variables has changed, it is recommended that the control file be replaced with the new rule. With the new rule, a full object attribute bind variable name is not enclosed in its entirety in double quotes. Instead, each attribute name in the bind variable should be independently quoted as needed. Note that each attribute name is actually an identifier on its own and thus should follow the quoting rules for an identifier. For example, bind variable ':A.B.C' here consists of 3 attribute names (or identifiers): 'A', 'B', and 'C'.

SQL*Loader-00296: Bind variable <varname>string</varname> for column <varname>string</varname> is ambiguous.\n

Cause: A bind variable can only refer to one column in the control file. Current load could not continue due to ambiguous column references.

Action: Fix the bind variable. If this bind variable consists of quotes, check that the quotes are used correctly. For example, the old quoting rule of bind variables consisting of full object attribute names was incorrect because it can lead to ambiguous column references. Let's say we have an expression "LTRIM(:'A.B.C')". Using the old quoting rule, this bind variable can refer to object attribute columns "'A'. 'B'. 'C'", "'A.B'. 'C'", and "'A'. 'B.C'". To avoid this confusion, use the new quoting rule for object attribute bind variables, which is to quote each attribute name independently as needed. In the preceding example, if the intended object attribute column is 'A.B.C', then the expression rewritten as "LTRIM(:A.B.C)" or "LTRIM(:'A'. 'B'. 'C') will not lead to ambiguities.

SQL*Loader-00297: Invalid syntax or bind variable in SQL string for column <varname>string</varname>.\n

Cause: See following error message for more information. A SQL string cannot have quoted strings improperly terminated. A bind variable in a SQL string cannot have a length of 0, cannot exceed maximum length of 30 characters, and cannot be missing a double quote.

Action: Fix the SQL string. See following error for more information.

SQL*Loader-00298: Filler field name is too long\n

Cause: The specified filler field name exceeded the maximum of 30 characters.

Action: Specify at most 30 characters.

SQL*Loader-00299: Virtual column <varname>string</varname> in table <varname>string</varname>.<varname>string</varname> cannot be loaded.\n

Cause: Virtual columns were specified in the control file.

Action: Virtual columns cannot be specified in the control file. Remove the virtual column from the SQL*Loader control file.

SQL*Loader-00300: error while attempting to enable tracing\n

Cause: An error occurred while executing an ALTER SESSION statement to enable tracing. This message will be followed by the error returned from ALTER SESSION.

Action: No action required.

SQL*Loader-00301: string for TERMINATED BY or ENCLOSED BY clause is longer than <varname>number</varname> bytes\n

Cause: The size of a string literal is longer than the maximum number of bytes allowed for an ENCLOSED BY or TERMINATED BY string. This error can also occur if the string needs to be converted to the character set of the data file and the resulting string is too long.

Action: Use shorter strings for the TERMINATED BY and ENCLOSED BY clauses.

SQL*Loader-00303: Non-hex character encountered where hex char expected\n

Cause: A non-hex character was found in a hexadecimal string.

Action: Change it to the intended hexadecimal character.

SQL*Loader-00304: Illegal combination of non-alphanumeric characters\n

Cause: The SQL*Loader control file contains a combination of non-alphanumeric characters that SQL*Loader does not recognize. For example, the combination != is recognized as "not equal", but the combination =! is not valid.

Action: Remove the unrecognized characters from the control file.

SQL*Loader-00305: More than one end of file character encountered\n

Cause: The file contains multiple end-of-file marks.

Action: Remove the excess end-of-file characters.

SQL*Loader-00306: Token longer than max allowable length of <varname>number</varname> chars\n

Cause: The SQL*Loader control file contains a single word or combination of characters (a token) that is longer than the maximum permissible value. The maximum possible value is shown. This error could result from missing spaces, so that multiple tokens are joined.

Action: Check that the proper SQL*Loader control file is being executed Separate tokens, if joined, or shorten the token.

SQL*Loader-00307: Warning: conflicting lengths <varname>number</varname> and <varname>number</varname> specified for column <varname>string</varname> table <varname>string</varname>\n

Cause: The SQL*Loader control file specifies two different lengths for the named column. There are three ways to specify the length of a field: --with the POSITION keyword: POSITION(1:3) -- with the length specifier: CHAR(6) -- with the implied length of a datatype; for example, INTEGER -- A conflict could occur between any two of these specifications (or among all three, but only two are shown). A common cause of this error is the specification of some numeric datatype, such as INTEGER, when the numeric external form is intended (INTEGER EXTERNAL). The external form consists of character data, so it is considerably longer than the numeric form, which consists of binary data.

Action: No action is necessarily required, because SQL*Loader uses only one of the lengths. Check the log file under the heading "Len" in the table-description section to see which length was used. Adjusting the SQL*Loader control file to produce uniform length specifications will remove the warning.

SQL*Loader-00308: <varname>string</varname> SQL string of column <varname>string</varname> must be in double quotes.\n

Cause: A SQL string was found that was not quoted or in single quotes.

Action: Use double quotes for the SQL string, rather than single quotes.

SQL*Loader-00309: No SQL string allowed as part of <varname>string</varname> field specification\n

Cause: Particular field types do not allow SQL strings as part of their field specification (e.g. field corresponding to a LOB column). This was violated and needs to be corrected.

Action: Remove the SQL string from the particular field specification.

SQL*Loader-00310: Interval partition values of table <varname>string</varname> must be in double quotes.\n

Cause: A string specified for interval partitioning was found that was not quoted or in single quotes.

Action: Use double quotes for the interval partitioning values string, rather than single quotes.

SQL*Loader-00350: Syntax error at line <varname>number</varname>.\n

Cause: num identifies the line in the SQL*Loader control file at which the error occurred. This message is followed by another of the form -- Expecting str1, found str2 where str1 is a description of what SQL*Loader expected in the SQL*Loader control file, and str2 is what was found. Then SQL*Loader displays the offending line from the SQL*Loader control file, indicating the location of the error in the line by a carat (^) or an asterisk (*). An example follows: -- SQL*Loader-350: Syntax error at line 28 -- Expecting column name, found keyword CHAR -- col3 ENCLOSED BY '"', CHAR ENCLOSED '"',

Action: Compare the DDL syntax against the syntax diagrams in Oracle7 Server Utilities and make any necessary corrections.

SQL*Loader-00401: End field position <varname>number</varname> must be greater than or equal to start <varname>number</varname>\n

Cause: The named field contains a (start:end) clause in which end is less than start.

Action: Modify the clause so that end is greater than or equal to start.

SQL*Loader-00402: Unable to determine length of column <varname>string</varname> from specification\n

Cause: The specified datatype does not have an implied length (for example, a numeric external or RAW datatype), it is not specified with delimiters, no length was specified, and a length cannot be determined from a POSITION clause.

Action: If a POSITION clause is specified, adding an end location to it produces a length specification. This clause then has the form POSITION(start:end) A length can also specified after the datatype, as in INTEGER EXTERNAL (6) Finally, the field

could be specified with delimiters, or the datatype changed to one that has an implied length.

SQL*Loader-00403: Referenced column <varname>string</varname> not present in table <varname>string</varname>.\n

Cause: The named column is not present in the given table.

Action: Correct the column name or table name.

SQL*Loader-00404: Column <varname>string</varname> present more than once in <varname>string</varname>'s INTO TABLE block.\n

Cause: The named column is specified more than once in a single INTO TABLE statement.

Action: Remove the extraneous column specification.

SQL*Loader-00405: Need termination delim with optional enclosure delim: column <varname>string</varname> table <varname>string</varname>\n

Cause: The named column was specified with an optional enclosure delimiter, but no termination delimiter. Enclosure delimiters can only be optional when termination delimiters are present.

Action: Specify a termination delimiter or make the enclosure delimiters non-optional.

SQL*Loader-00406: If data is all generated, number to load cannot be ALL\n

Cause: When only generated data is loaded, a number to load must be given so SQL*Loader knows when to stop.

Action: Specify a number to load.

SQL*Loader-00407: If data is all generated, number to skip is meaningless\n

Cause: When all data is generated, no file is read, and there are no records to skip.

Action: Remove the number to skip.

SQL*Loader-00408: Physical record stack overflow\n

Cause: An internal error has occurred.

Action: Contact customer support.

SQL*Loader-00409: Number to skip must be table-level, not load-level on continued loads\n

Cause: The SKIP parameter was specified on the command line or in the OPTIONS statement, but the load was specified as continued with CONTINUE_LOAD. When a multiple-table direct load is interrupted, it is possible that a different number of records were loaded into each table. As a result, the number of records to skip must be specified for each table when continuing the load. In this case, the load is specified as continued with the CONTINUE_LOAD statement, and the number of records to skip is given in each INTO TABLE statement. See also messages 410 and 411 for more information.

Action: Check the log file to determine the appropriate number of records to skip for each table and specify this number in the INTO TABLE statement for each table in a continued load or with the command-line SKIP parameter in a standard load.

SQL*Loader-00410: Number to skip must be load-level, not table-level

Cause: A SKIP clause was found in the INTO TABLE statement of a standard (non-continued) load. In a standard load, specified with LOAD DATA, it is not possible to skip a different number of records for each table. The number of records to skip must be specified for the entire load by using the SKIP parameter on the command line or in the OPTIONS clause. If table-level skip is required, because a different number of records were loaded into each table (only possible for a multiple-table direct load), then specify a continued load with the CONTINUE_LOAD statement. See also messages 409 and 411 for more information.

Action: If the load was not a multiple-table, direct path load, then move the SKIP clause from the INTO TABLE statements to the command line or to the OPTIONS clause. Otherwise, specify the load as continued with CONTINUE_LOAD.

SQL*Loader-00411: Only a direct path load may be continued

Cause: The load is specified with CONTINUE_LOAD, but DIRECT=FALSE. CONTINUE_LOAD is only possible for a direct path load and is only necessary for a multiple-table, direct path load when a different number of records have been loaded into each table. See also messages 409 and 410 for more information.

Action: If CONTINUE_LOAD is necessary, specify a direct load and put the number of records to skip in each INTO TABLE statement. Otherwise, use the command line or OPTIONS clause to specify the number of records to skip and use LOAD DATA instead of CONTINUE_LOAD.

SQL*Loader-00412: More columns specified for table <varname>string</varname> than the maximum (<varname>number</varname>)

Cause: More columns were specified for the table than the maximum number allowed by the database.

Action: Remove the extraneous columns.

SQL*Loader-00413: NULLIF or DEFAULTIF clause specified for filler field <varname>string</varname> in table <varname>string</varname>.

Cause: A NULLIF or DEFAULTIF clause was specified in the SQL*Loader control file for the named filler field. These options cannot be specified for filler fields.

Action: Remove the NULLIF or DEFAULTIF clause from the field definition.

SQL*Loader-00414: no columns to load for table <varname>string</varname>

Cause: There were no fields in the data file to be loaded for the table. Probably all fields were identified as FILLER fields.

Action: Verify that the FILLER attribute was set correctly for the fields.

SQL*Loader-00415: column <varname>string</varname> in table <varname>string</varname> cannot use and be the object of an SDF or LOBFILE

Cause: The named column is identified as the target of a secondary data file (SDF) or LOBFILE clause. However, the column also gets its value from an SDF or LOBFILE. If a field name is named in an SDF or LOBFILE clause, then that field cannot have an SDF or LOBFILE clause.

Action: Verify that the SDF and LOBFILE clauses in the SQL*Loader control file name the correct fields. Also verify that the SDF and LOBFILE clauses are specified for the correct field.

SQL*Loader-00416: SDF clause for field <varname>string</varname> in table <varname>string</varname> references a non existent field.\n

Cause: The secondary data file clause for the field identified another field that doesn't exist in the table definition for the SQL*Loader control file.

Action: Verify the definition of the secondary data file to make sure it identifies the intended field.

SQL*Loader-00417: SQL string (on column <varname>string</varname>) not allowed in direct path.\n

Cause: Because the direct path bypasses SQL processing, the SQL string cannot be used.

Action: Remove the SQL string or use the conventional path.

SQL*Loader-00418: Bad datafile datatype for column <varname>string</varname>\n

Cause: The datatype in the data file specified for the column cannot be used to load the column. This message is often displayed for columns that need to be loaded with special features. For example, BFILE columns can only be loaded via the BFILE directive in the control file; same goes for REF fields. in the SQL*Loader control file. Similarly, REF columns can only be loaded with the REF datatype in the SQL*Loader control file.

Action: Determine the datatype of the column in the database check the documentation for the correct mechanisms to use to load columns of that type.

SQL*Loader-00419: input datatype for column <varname>string</varname> is not supported when loading varrays\n

Cause: The datatype in the SQL*Loader control file for the column is cannot be used to load data in a varray.

Action: Use a different datatype.

SQL*Loader-00420: unsupported datatype conversion requested for column <varname>string</varname> in table <varname>string</varname>\n

Cause: The column needs to have its data converted to another datatype before loading the data. The required conversion cannot be done by sqlldr.

Action: Verify that the correct datatype was specified for the column.

SQL*Loader-00421: error converting data\n

Cause: This message can be displayed as one of the reasons for rejecting a row. The sqlldr utility was attempting to convert data for the column from its datatype in the data file to the datatype for the column in the database. This message should be followed with another message describing the conversion error.

Action: Correct the data in the data file so that it can be converted.

SQL*Loader-00422: constant element count of <varname>number</varname> for column <varname>string</varname> is greater than maximum, <varname>number</varname>\n

Cause: The number of elements specified for a varray column in a table is greater than the maximum number of elements allowed for the type of the varray column.

Action: Increase the number of elements allowed for the type or remove unwanted elements from the data file.

SQL*Loader-00423: element count is greater than maximum allowed for the column

Cause: When building a varray from the data file, SQL*Loader encountered more varray elements than are allowed for the column.

Action: The previous error messages contain the name of the column and the row number containing the bad data.

SQL*Loader-00424: table <varname>string</varname> makes illegal reference to collection field <varname>string</varname>

Cause: A WHEN, OID or SID clause for the table refers to a field declared inside of a collection.

Action: Move the data containing the value for a SID or OID clause outside of the collection definition.

SQL*Loader-00425: column <varname>string</varname> makes illegal reference to collection field <varname>string</varname>

Cause: A clause, such as NULLIF or BFILE clause, for the column refers to a field declared inside of a collection.

Action: Move the data containing the value for a SID or OID clause outside of the collection definition.

SQL*Loader-00426: count of elements in VARRAY <varname>string</varname> comes after the data for the varray

Cause: The COUNT clause for a VARRAY field indicates that the count of elements in the varray is stored in another data field. However, that data field comes after the varray data in the data file. Since finding the count field would require SQL*Loader to know the number of elements in the VARRAY first, SQL*Loader requires that the count field come before the VARRAY data.

Action: Move the count field to be before the collection data in the data file.

SQL*Loader-00427: a field condition references a non-scalar field or a LOB field <varname>string</varname>

Cause: The field condition is referencing a field which is either a nested table, varray, column object, LOB or BFILE field. These fields with these types cannot be referenced by other field.

Action: Correct the NULLIF, DEFAULTIF, or WHEN clauses to reference only non-LOB scalar data fields.

SQL*Loader-00428: count for field <varname>string</varname> not stored in character or integer field

Cause: The count clause for a field references another field, but the referenced field is not a character or integer datatype.

Action: Modify the count field so that it reference a data field that has the count in an integer or character format.

SQL*Loader-00429: insufficient number of elements found for varray

Cause: The COUNT directive was specified for a varray, but the number of elements found is less than the number specified by the COUNT directive.

Action: Correct the data so that the count and the number of elements agree.

SQL*Loader-00430: NULL nested table element is not allowed\n

Cause: A row in a nested table was set to NULL. Nested tables cannot contain NULL fields.

Action: Correct the data so that there are no NULL rows in the nested table.

SQL*Loader-00431: illegal NULLIF or DEFAULTIF clause specified for nested table column <varname>string</varname>\n

Cause: Rows in a nested table cannot be set to NULL. SQLLDR displays this error when a NULLIF clause was specified for the element that defines the row that make up a nested table. SQLLDR also displays this error if a DEFAULTIF clause is specified for an element that is a named type, since SQLLDR will set a named type to NULL if the DEFAULTIF evaluates to TRUE.

Action: n/a

SQL*Loader-00432: converted data too large\n

Cause: This message is preceded by a message identifying a row and column. It is displayed when there is insufficient room to convert the data from the datatype in the input file to the datatype for the column in the database.

Action: Modify the data so that it fits in the database field.

SQL*Loader-00433: no attributes found for column object <varname>string</varname> in table <varname>string</varname>\n

Cause: No attributes are to be loaded for a column object named in the control file. This can happen if all fields in the definition for the column object in the control are designated as FILLER fields.

Action: Either specify attributes to load for the column object or remove the column object from the control file.

SQL*Loader-00434: Can not load LOB/XML in a nested table along with the parent table.\n

Cause: Loading LOBs and XML data within a nested table at the same time as the parent table is not supported.

Action: Load the nested table with the LOB or XML column separately from the parent table.

SQL*Loader-00435: invalid constant value <varname>string</varname> for nested table column <varname>string</varname>\n

Cause: A constant value was specified for the SETID of a nested table column. An error occurred while translating the character constant into a SETID.

Action: Make sure the constant string contains valid hexadecimal characters and that there are 32 hexadecimal characters.

SQL*Loader-00436: error converting GUID\n

Cause: The value of the field named in the message is used to populate the column named in the message. Because column is a Set ID or an Object ID, the field needs to be converted. This message indicates that there was a conversion error. If the field is a character field, then the conversion error could be caused by too many or too few hexadecimal characters. Also, one or more of the characters in the field might not be a valid hexadecimal character. If the field contains RAW data, then either too many or too few bytes were specified for the field.

Action: Fix the data and reload the row.

**SQL*Loader-00437: enabled constraint not allowed on LOB column
<varname>string</varname>\n**

Cause: An enabled constraint was present on a LOB column.

Action: Disable the constraint and try again.

SQL*Loader-00440: Invalid table specified as scope of a REF\n

Cause: As part of the REF directive one specifies the table name or another fields name which contains the table name of the table which the REF references.

Action: Make sure that the right referenced table name is specified.

SQL*Loader-00456: end of collection found after <varname>number</varname> elements when looking for <varname>number</varname> elements\n

Cause: A count value was specified for a varray or nested table column and the number of rows found is less than the number of rows specified

Action: Verify that the count field has the correct value and that there is no missing data for the collection.

SQL*Loader-00457: Comparison text of CONTINUEIF LAST must have length 1 not <varname>number</varname>\n

Cause: The comparison text is too long. It can only be one character.

Action: Reduce the comparison text to one character.

SQL*Loader-00458: Comparison text ('<varname>string</varname>') of CONTINUEIF LAST must be non-whitespace\n

Cause: The comparison text is a whitespace character (blank or tab).

Action: Change the comparison text to a non-whitespace character.

SQL*Loader-00459: error fetching numeric value for sequence on column (<varname>string</varname>)\n

Cause: An attempt was made to retrieve a non-numeric value for a sequenced column.

Action: Verify that the data for the sequenced column is numeric. Then retry the operation.

SQL*Loader-00460: Column (<varname>string</varname>), form of use (<varname>number</varname>) does not match char set id of (<varname>number</varname>)\n

Cause: The given column with the given form of use does not have the same character set ID as a previous column with the same form of use.

Action: This should not happen. Contact ORACLE support and supply the following information: DDL for the table being loaded, and the SQL*Loader control file. ADDED in 8.1

SQL*Loader-00461: direct path loading of datatype for column <varname>string</varname> not supported\n

Cause: The datatype for the specified column is one that cannot be loaded with direct path.

Action: If the datatype is supported with conventional path, load the table using conventional path.

SQL*Loader-00462: error inserting LOB into column <varname>string</varname>, row <varname>number</varname>, table <varname>string</varname>\n

Cause: An error occurred while attempting to write a lob into a row.

Action: See accompanying messages describing why the LOB could not be loaded, what actions sqlldr took (if any), and where the errors may be in order to reload.

SQL*Loader-00463: secondary data file for LOB is <varname>string</varname>\n

Cause: The secondary data file that was in use for populating the LOB when an error occurred.

Action: n/a

SQL*Loader-00464: file offset for beginning of lob is <varname>string</varname>\n

Cause: The offset into the secondary data file that contains the start of the LOB that was being written when an error occurred.

Action: n/a

SQL*Loader-00465: <varname>string</varname> directive expects <varname>number</varname> arguments, <varname>number</varname> found.\n

Cause: You specified a directive such as COUNT() or BFILE() in the SQL*Loader control file. This directive specifies a fixed number of arguments, but the SQL*Loader control file contains a different number of arguments.

Action: Correct the SQL*Loader control file so that the directive contains the correct number of arguments.

SQL*Loader-00466: Column <varname>string</varname> does not exist in table <varname>string</varname>.\n

Cause: The SQL*Loader control file specified a table column that does not exist.

Action: n/a

SQL*Loader-00467: attribute <varname>string</varname> does not exist in type <varname>string</varname> for table <varname>string</varname>.\n

Cause: The SQL*Loader control file specified an attribute that does not exist for the specified type. The table that contains the type is also identified in the error message.

Action: Verify that the correct table in the correct schema is named in the SQL*Loader control file. Also verify that the column name is spelled correctly.

SQL*Loader-00468: OID directive expects 1 argument, <varname>number</varname> found.\n

Cause: More than one argument was specified for an OID clause.

Action: Specify the name of the field containing the value to use for the OID. If the OID for the table is user-defined, then do not use the OID clause in the control file.

SQL*Loader-00469: SID directive expects 1 argument, <varname>number</varname> found.\n

Cause: More than one argument was specified for a SID clause.

Action: Only specify the name of the field containing the value to use for the SID in the SID clause.

SQL*Loader-00470: table <varname>string</varname> does not have system generated OID\n

Cause: You specified an OID clause for a table but the table is either not an object table or the table is an object table but the OIDs for the rows are not system generated.

Action: Verify that the you are loading the correct table. If you are, then you must not specify the OID clause for this table. You should use the OID clause only when the table is an object table, has system generated OIDs and when you want to specify OIDs to be assigned to each row of the table.

SQL*Loader-00471: OID or SID clause has an argument that is CONSTANT\n

Cause: You specified a CONSTANT as an argument in an OID clause for an object table or in the SID clause for a nested table column. Since these columns must have unique values, SQL Loader does not allow the a constant to be specified for their values.

Action: Store the OID for each row in a filler field and specify the name of the filler field as an argument.

SQL*Loader-00472: collections can contain only one non FILLER field specification\n

Cause: More than one non filler field specification is found in a collection field's member field list.

Action: See correct syntax in the Utilities Manual. If indeed there is more than one attribute that makes up the particular collection, then it must be a collection of a object type which needs to be specified using the COLUMN OBJECT field specification syntax.

SQL*Loader-00473: nesting of collections is not allowed.\n

Cause: Nesting of one collection type field description within another is not allowed.

Action: Verify that collection nesting is attempted in the SQL*Loader control file. Correct the mistake.

SQL*Loader-00474: no value set for dynamic file for column <varname>string</varname> in table <varname>string</varname> row <varname>number</varname>\n

Cause: The data for the named column is in a dynamic LOBFILE or secondary data file. This message is returned when the field containing the name of the file with the data for this field has not been set or is NULL. This could be because the record in the data file does not match the format described by the SQL*Loader control file.

Action: Correct any errors in the data file or the SQL*Loader control file.

SQL*Loader-00475: field for dynamic file name is <varname>string</varname> in table <varname>string</varname>\n

Cause: This message is always displayed after message 474.

Action: n/a

SQL*Loader-00476: count of elements for collection is not set or null, 0 will be used

Cause: This message is displayed following a message that identifies the column and row that contained the problem. The message indicates that the collection field named in the previous message has the count of elements in the collection stored in another field. This message is displayed if the field containing the count does not have a value or is set to NULL. When this happens, SQL*Loader uses 0 as the number of elements.

Action: If 0 is not the count of elements for the collection, correct the data in the data file.

SQL*Loader-00477: REF directive for field <varname>string</varname> requires at least two arguments

Cause: The SQL Loader control file contains a REF directive for the field, but only one argument was supplied for the directive. The REF directive always requires at least two arguments.

Action: Supply the missing argument to the REF directive. Remember that you must always supply a table name to the REF directive even if the REF is scoped.

SQL*Loader-00478: unable to continue due to missing filename for LOBFILE or SDF

Cause: The name for a LOBFILE or secondary data file is either missing or NULL for the current row. SQL*Loader is unable to continue loading since it can't determine how to get the LOB for the next row.

Action: Correct the data file so that there are valid values for all fields containing the names of LOBFILES and secondary data files.

SQL*Loader-00479: REF directive for column <varname>string</varname> expects <varname>number</varname> arguments; found <varname>number</varname>.

Cause: The number of arguments in the REF directive for the column is incorrect.

Action: Specify the correct number of arguments for REF. Remember that the REF directive always requires a table name. Also, primary key REFs require one argument for each field in the primary key.

SQL*Loader-00480: EXPRESSION may not be used with elements of a collection.

Cause: The EXPRESSION keyword is followed by a required SQL string expression and is used to load a column with the result of the SQL string expression instead of with a value from the input data file. However, this capability is not allowed with elements of a collection.

Action: Remove the EXPRESSION keyword and associated SQL string from the collection element in the control file.

SQL*Loader-00481: HIDDEN may not be used with non-scalar fields.

Cause: The HIDDEN keyword is only allowed for scalar fields.

Action: Remove the HIDDEN keyword from the non-scalar field in the control file.

SQL*Loader-00486: sql-strings may not be specified for collection field <varname>string</varname>\n

Cause: A sql-string was specified as part of the description of the field that is inside a nested table or varray. Sql-strings cannot be used to load a field in a varray or nested tables.

Action: Remove the sql-string from the field description. Modify the data file so that it contains the values to be loaded into the column in the collection.

SQL*Loader-00487: COUNT clause required for collection <varname>string</varname>\n

Cause: A VARRAY or NESTED TABLE was defined in the SQL Loader control file and all of the fields in the VARRAY or NESTED TABLE are generated by SQL Loader and do not come from a data file. SQL Loader requires a COUNT clause be specified so that it knows how many elements to add to the VARRAY or NESTED TABLE for each row.

Action: Add a COUNT clause to the VARRAY or NESTED TABLE definition.

SQL*Loader-00488: <varname>string</varname> not a named collection type for filler field <varname>string</varname>\n

Cause: The FILLER option was specified for a VARRAY or NESTED TABLE field in the SQL Loader control file. However, the type name specified for the field is not the name of a VARRAY or NESTED TABLE type.

Action: Verify that the correct type name was specified. If the type is defined in a different schema, also verify that the correct schema name is specified.

SQL*Loader-00489: cannot insert NULL object into object table <varname>string</varname>, row <varname>number</varname> \n

Cause: There was no data specified in the control file, a lob file, or a secondary data file for this object column.

Action: Place valid data for this column in the appropriate file prior to invoking SQL*Loader to load data into this table.

SQL*Loader-00490: absolute position is not allowed for inline collections\n

Cause: The absolute position specification was used for inline collections. Specifying the absolute position for inline collections is not supported.

Action: Use relative positioning for inline collections.

SQL*Loader-00500: Unable to open file (<varname>string</varname>)\n

Cause: SQL*Loader could not open the named file.

Action: Check the operating system messages below this one in the log file.

SQL*Loader-00501: Unable to read file (<varname>string</varname>)\n

Cause: SQL*Loader could not read the named file.

Action: Check the operating system messages following this message in the log file.

SQL*Loader-00502: unable to open data file '<varname>string</varname>' for field <varname>string</varname> table <varname>string</varname>\n

Cause: An attempt to open a LOBFILE or secondary data file failed.

Action: Check the operating system messages following this message for information on why the open failed. Verify that the correct name is specified for the LOBFILE or secondary data file.

SQL*Loader-00503: Error appending extension to file (<varname>string</varname>)\n

Cause: SQL*Loader could not append the default extension to create the filename. The given name could be too long or contain illegal characters.

Action: Check the specified filename.

SQL*Loader-00504: Error skipping records in file (<varname>string</varname>)\n

Cause: SQL*Loader could not open the file or could not read from it.

Action: Check that the file is where it is expected and that read access has been granted.

SQL*Loader-00505: error reading LOBFILE\n

Cause: An attempt to read a secondary data file failed.

Action: Check the operating system message that follows this message for more information.

**SQL*Loader-00506: formatting error reading SDF or LOBFILE
<varname>string</varname> for column <varname>string</varname> in table
<varname>string</varname>\n**

Cause: The the record format of the named LOBFILE or SDF file is incorrect.

Action: Fix the record formatting problems in the file.

**SQL*Loader-00507: unexpected EOF reading SDF or LOBFILE
<varname>string</varname> for column <varname>string</varname> in table
<varname>string</varname>\n**

Cause: The end of file was reached for a secondary data file or LOBFILE before the data for the current row was found.

Action: If the file is a LOBFILE, verify the correct datatype was specified for the field. If the file is a secondary data file, make sure the record format is specified correctly in the SQL*Loader control file.

SQL*Loader-00508: record forming error in data file <varname>string</varname>\n

Cause: The data found in the data file does not correspond to the record format in the SQL*Loader control file.

Action: Verify that all records in the data file match the format as described in the SQL*Loader control file.

SQL*Loader-00509: System error: <varname>string</varname>\n

Cause: A platform-specific error was returned during an operation. This message is used to display the text of the error.

Action: n/a

SQL*Loader-00510: Physical record in data file (<varname>string</varname>) is longer than the maximum(<varname>number</varname>)\n

Cause: The datafile has a physical record that is too long.

Action: Use CONCATENATE or CONTINUEIF. Break up the physical records.

SQL*Loader-00511: Unable to initialize read functions\n

Cause: SQL*Loader could not initialize the read functions.

Action: Check the errors below this message in the log file for more information.

SQL*Loader-00512: Unable to free read buffer\n

Cause: An internal error has occurred.

Action: Contact customer support.

SQL*Loader-00513: Unable to close file (<varname>string</varname>)\n

Cause: SQL*Loader could not close the named file.

Action: Check the errors below this message in the log file for more information.

SQL*Loader-00514: Error getting elapsed time\n

Cause: SQL*Loader could not get the elapsed time from the system.

Action: No action required.

SQL*Loader-00515: Error getting CPU time\n

Cause: SQL*Loader could not get the CPU time from the system.

Action: No action required.

SQL*Loader-00516: Control file (<varname>string</varname>) has no contents\n

Cause: The named file was found to be empty.

Action: Check that the intended file was referenced and that it is not empty.

SQL*Loader-00517: Error decomposing file name (<varname>string</varname>)\n

Cause: SQL*Loader could not break down the filename into its component parts.

Action: Check the filename for illegal characters.

SQL*Loader-00518: Error reassembling file name (<varname>string</varname>)\n

Cause: SQL*Loader could not put the filename back together again from its components.

Action: Check the filename for illegal characters.

SQL*Loader-00520: Ifimknam failed for file (<varname>string</varname>)\n

Cause: LFI failed to make a name object for the file.

Action: Contact Oracle Worldwide Support.

SQL*Loader-00521: Ifilini failed for file (<varname>string</varname>)\n

Cause: LFI failed to create or initialize a file object for the file.

Action: Contact Oracle Worldwide Support.

SQL*Loader-00522: lfiopen failed for file (<varname>string</varname>)\n

Cause: LFI failed to open the file.

Action: Check for any possible operating system errors and/or potential memory problems.

SQL*Loader-00523: error <varname>number</varname> writing to file (<varname>string</varname>)\n

Cause: Could not write to specified file.

Action: Check the following: the file actually resides in the specified location you have write privileges on the file you have sufficient disk space you have not exceeded your disk quota If all of these conditions are satisfied, then retry the operation.

SQL*Loader-00524: partial record found at end of datafile (<varname>string</varname>)\n

Cause: An incomplete record was found at the end of the indicated datafile.

Action: Make sure the last record in the datafile is complete and has the correct terminating character(s). Also, if fixed-length records are in use, verify that no record exceeds the platform-specific length for a single record.

SQL*Loader-00525: OCI return status: success\n

Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00526: OCI return status: success with info\n

Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00527: OCI return status: no data\n

Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00528: OCI return status: error\n

Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00529: OCI return status: invalid handle\n

Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00530: OCI return status: need data\n

Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00531: OCI return status: still executing\n

Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00532: OCI return status: continue\n

Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00533: OCI return status: unknown, value is <varname>number</varname>\n

Cause: An unknown status was returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00534: Warning: no files found for INFILE wildcard specification (<varname>string</varname>).\n

Cause: SQL*Loader could not find a file which matched the INFILE wildcard specification.

Action: Check to make sure that the files exist in order for them to be loaded.

SQL*Loader-00535: Warning: no files found for INFILE subdirectory search specification (<varname>string</varname>).\n

Cause: SQL*Loader could not find a file which matched the INFILE subdirectory search specification.

Action: Check to make sure that the files exist in order for them to be loaded.

SQL*Loader-00536: No files found for any data parameter specification or INFILE specification.\n

Cause: SQL*Loader could not find a file which matched any of the data parameter specifications or INFILE specifications.

Action: Check to make sure that the files exist in order for them to be loaded.

SQL*Loader-00537: Warning: no files found for data parameter wildcard specification (<varname>string</varname>).\n

Cause: SQL*Loader could not find a file which matched the data parameter wildcard specification.

Action: Check to make sure that the files exist in order for them to be loaded.

SQL*Loader-00538: Warning: no files found for data parameter subdirectory search specification (<varname>string</varname>).\n

Cause: SQL*Loader could not find a file which matched the data parameter subdirectory search specification.

Action: Check to make sure that the files exist in order for them to be loaded.

SQL*Loader-00539: No files found for any data parameter specification in express mode.\n

Cause: SQL*Loader could not find a file which matched any of the data parameter specifications. Since there is no control file for express mode, there are no INFILE specifications.

Action: Check to make sure that the files exist in order for them to be loaded.

SQL*Loader-00551: internal error: error initializing slfn

Cause: An internal error occurred while trying to initialize the file I/O component.

Action: Call customer support.

SQL*Loader-00552: insufficient privilege to open file\n

Cause: SQL*Loader does not have the privileges required to open the file.

Action: Verify that the correct file was specified and that the file has the appropriate permissions.

SQL*Loader-00553: file not found\n

Cause: The specified file cannot be found.

Action: verify that the correct name exists and whether the file is in the intended location.

SQL*Loader-00554: error opening file\n

Cause: An error occurred while trying to open the file. No further information is available.

Action: Verify that the file is accessible.

SQL*Loader-00555: unrecognized processing option\n

Cause: The processing option specified for the file cannot be processed.

Action: Verify that the processing options specified for the file contain legal syntax for the platform where SQL*Loader is running.

SQL*Loader-00556: unable to allocate read buffer\n

Cause: Attempt to allocate the read buffer failed.

Action: If possible, try specifying a smaller size for the read buffer.

SQL*Loader-00557: unable to allocate memory\n

Cause: An attempt to allocate some memory to track I/O for the file failed.

Action: Contact customer support.

SQL*Loader-00558: attempt to use SKIP parameter with linked-in loader\n

Cause: SKIP parameter was specified with a linked-in file processor.

Action: Do not use the SKIP parameter in this case.

SQL*Loader-00559: error closing file\n

Cause: An error occurred while closing the file.

Action: Contact customer support.

SQL*Loader-00560: error reading file\n

Cause: An error occurred while reading the file.

Action: Make sure the file is still accessible.

SQL*Loader-00561: end of file\n

Cause: End of file reached.

Action: n/a

SQL*Loader-00562: record too big\n

Cause: A record in the file is larger than the read buffer.

Action: Verify that the file is not corrupt. If not, try specifying a larger size for the read buffer.

SQL*Loader-00563: bad length for VAR record\n

Cause: The length portion of a VAR record contains non-numeric data.

Action: Fix the data in the file.

SQL*Loader-00564: illegal hexadecimal literal specified for record delimiter\n

Cause: A hexadecimal literal that contains the record delimiter for the file does not contain a valid hexadecimal string.

Action: Verify that the correct hexadecimal value was specified in the processing options for the file.

SQL*Loader-00565: unexpected error during skip\n

Cause: an unexpected error occurred while attempting to skip records.

Action: This message should be followed by another message giving more specific information about the error

SQL*Loader-00566: partial record found at end of datafile\n

Cause: An incomplete record was found at the end of file.

Action: Make sure the last record in the datafile is complete and has the correct terminating character(s).

SQL*Loader-00567: unable to derive file name\n

Cause: An error occurred while attempting to build a name for a data file, bad file, discard file or log file.

Action: Instead of relying on SQL Loader to build these file names, try specifying full file specifications for these files in the control file or on the SQL Loader command line.

SQL*Loader-00568: error writing to file\n

Cause: Unexpected error occurred while writing to a file. This message is followed by another message with more information about the error.

Action: n/a

**SQL*Loader-00569: READSIZE parameter exceeds maximum value
<varname>string</varname> for platform\n**

Cause: The value specified for the READSIZE parameter on the SQL Loader command line was larger than the maximum size allowed on the platform executing the SQL Loader command

Action: Decrease the size of the READSIZE parameter to be less than the maximum size allowed on the platform.

SQL*Loader-00570: Warning: single bad file specification with multiple data files using <varname>string</varname> file may get overwritten.\n

Cause: The value specified for the BADFILE parameter contained something other than a directory specification (for example, it contained a file name). The INFILE specification had wildcards or the data command line parameter specification contained a comma-separated list or wildcards and the result was more than one data file. In that case, the BADFILE specification or the BAD command line parameter value should be a directory specification only and should not contain a file name.

Action: No action is needed. This is a warning. However, for a parallel load with external tables or express mode, the file may get overwritten or may get corrupted due to contention on the file by multiple parallel query slaves. Try the operation again with a directory only or omit the parameter and use the default bad file name.

SQL*Loader-00571: Warning: single discard file specification with multiple data files, using <varname>string</varname>, but file may get overwritten.\n

Cause: The value specified for the DISCARDFILE parameter contained something other than a directory specification (for example, it contained a file name). The INFILE specification had wildcards or the data command line parameter specification contained a comma-separated list or wildcards and the result was more than one data file. In that case, the DISCARDFILE specification or the DISCARD command line parameter value should be a directory specification only and should not contain a file name.

Action: No action is needed. This is a warning. However, for a parallel load with external tables or express mode, the file may get overwritten or may get corrupted due to contention on the file by multiple parallel query slaves. Try the operation again with a directory only or omit the parameter and use the default discard file name.

SQL*Loader-00572: Warning: cannot add "_\%p" to <varname>string</varname> for file <varname>string</varname>. Using file name as is.\n

Cause: SQL*Loader could not add "_\%p" to the file name. The name specified or the derived name may be too long.

Action: No action is needed. This is a warning. However, for a parallel load with external tables or express mode, the file may be overwritten or may get corrupted due to contention on the file by multiple parallel query slaves. Try the operation again with a shorter file name.

SQL*Loader-00573: Error opening the directory (<varname>string</varname>), failed with return code [<varname>number</varname>].\n

Cause: An error occurred while trying to open the directory (see accompanying error code).

Action: Verify that the directory is accessible.

SQL*Loader-00574: \nCheck the log file:\n <varname>string</varname>\nfor more information about the load.\n

Cause: Informational only.

Action: No action is needed.

SQL*Loader-00575: \nCheck the log files:\n <varname>string</varname>\n<varname>string</varname>\nfor more information about the load.\n

Cause: Informational only.

Action: No action is needed.

SQL*Loader-00576: Error getting count of entries for directory (<varname>string</varname>), failed with return code [<varname>number</varname>].\n

Cause: An error occurred while trying to get the count of directory entries (see accompanying error code).

Action: Verify that the directory is accessible.

SQL*Loader-00577: Error reading the directory (<varname>string</varname>), failed with return code [<varname>number</varname>].\n

Cause: An error occurred while trying to read the directory (see accompanying error code).

Action: Verify that the directory is accessible.

SQL*Loader-00578: Error finishing wild card search in directory (<varname>string</varname>), failed with return code [<varname>number</varname>].\n

Cause: An error occurred while trying to finish a search for files in a directory that match a wild card specification (see accompanying error code).

Action: This is an informational message. No action is needed.

SQL*Loader-00579: switching to direct path for the load\n

Cause: SQL*Loader could not use the external tables load method for the express mode load. Therefore SQL*Loader tried to use direct path for the load instead of external tables. See any previous messages for more information.

Action: No action is needed. This is an informational message.

SQL*Loader-00582: Warning: cannot remove "_\%p" from <varname>string</varname> for file <varname>string</varname>. Using file name as is.\n

Cause: SQL*Loader could not remove "_\%p" from the file name.

Action: No action is needed. This is a warning. The file name was used as is.

SQL*Loader-00583: ignoring trim setting with <varname>string</varname>, using value of LDRTRIM\n

Cause: SQL*Loader was doing a direct path or conventional path load. SQL*Loader only supports LDRTRIM for direct path and conventional path. Therefore, LDRTRIM trimming was used for the load. You can get the equivalent of NOTRIM trimming if you use a control file and use the PRESERVE BLANKS clause.

Action: No action is needed. This is an informational message.

SQL*Loader-00584: ignoring DEGREE_OF_PARALLELISM setting with <varname>string</varname>, using value of NONE\n

Cause: DEGREE_OF_PARALLELISM was not supported by SQL*Loader for direct path and conventional path loads. Therefore, the DEGREE_OF_PARALLELISM setting was ignored for the load and treated as a value of NONE.

Action: No action is needed. This is an informational message.

SQL*Loader-00585: defaulting DEGREE_OF_PARALLELISM to NONE since load=<varname>number</varname> was specified\n

Cause: DEGREE_OF_PARALLELISM was defaulted to NONE by SQL*Loader because load=n was specified. This assures consistency in the records which get loaded with load=n.

Action: No action is needed. This is an informational message.

SQL*Loader-00600: Bind size of <varname>number</varname> bytes increased to <varname>number</varname> bytes to hold 1 row.\n

Cause: The space needed to contain a single row is longer than the specified bind size. The value used for the bind size will be increased to handle the larger size

Action: No action is required. This message will go away if the new value in the error message is specified for the bind size.

SQL*Loader-00601: For INSERT option, table must be empty. Error on table <varname>string</varname>\n

Cause: A non-empty table is being loaded with the INSERT option.

Action: Use the REPLACE keyword to empty the old table and store the new data in its place. Use the APPEND keyword to leave the table's contents intact and add the new data to it.

SQL*Loader-00602: Maximum converted length <varname>number</varname> of column <varname>string</varname> is too big for bind array\n

Cause: The named column cannot undergo the specified character set conversion and still be placed in a contiguous piece of memory on the system.

Action: Specify a shorter data column or eliminate the conversion.

SQL*Loader-00603: Maximum length <varname>number</varname> of column <varname>string</varname> is too big for bind array\n

Cause: The named column cannot be put in a contiguous piece of memory on the system.

Action: Specify a shorter data column.

SQL*Loader-00604: Error occurred on an attempt to commit\n

Cause: An error occurred while trying to commit changes to the database.

Action: Look at the message listed below this one in the log file for more information.

SQL*Loader-00605: Non-data dependent ORACLE error occurred -- load discontinued.\n\n

Cause: An error occurred that is independent of the data. For example, an out-of-space condition. Because all further rows will be rejected, the load is discontinued. (If the error were data dependent, then other rows might succeed.)

Action: See the errors below this one in the log file for more information.

SQL*Loader-00606: Object <varname>string</varname> in INTO TABLE clause is not a local table\n

Cause: The synonym specified in the INTO TABLE clause in the SQL*Loader control file specifies a remote object via a database link. Only a synonym for an existing local table can be specified in the INTO TABLE clause.

Action: Ensure that a local table name or a synonym for a local table is fully specified in the INTO TABLE clause. The table must already exist.

SQL*Loader-00607: partition not empty for INSERT option; table <varname>string</varname>, partition <varname>string</varname>\n

Cause: An attempt was made to use the INSERT option on a non-empty partition.

Action: Empty the partition, or use the REPLACE or TRUNCATE option.

SQL*Loader-00608: subpartition not empty for INSERT option; table <varname>string</varname>, subpartition <varname>string</varname>\n

Cause: An attempt was made to use the INSERT option on a non-empty subpartition.

Action: Empty the subpartition, or use the REPLACE or TRUNCATE option.

SQL*Loader-00609: value used for ROWS parameter changed from <varname>number</varname> to <varname>number</varname>\n

Cause: SQL Loader adjusted the value it was using for the ROWS parameter to the new value reported. This is an informational message and not an error. SQL Loader will adjust the value of the ROWS parameter if the amount of memory specified by BINDSIZE is not large enough to hold data for the number of rows specified. SQL Loader will also change the value of the ROWS parameter for conventional path loads if the value is larger than 65534. Conventional path load can load at most 65534 rows at a time.

Action: If the limit of 65534 rows for conventional path load is not being reached, then try increasing the value of BINDSIZE.

SQL*Loader-00610: cannot load system partitioned table <varname>string</varname>; partition name(s) required\n

Cause: An attempt was made to load a system partitioned table with no partitioning clause specified in the SQL*Loader control file.

Action: Specify the partition name(s) in the SQL*Loader control file.

SQL*Loader-00620: Initial enclosure character not found\n

Cause: A mandatory initial enclosure delimiter was not present. Either it is missing on the current field or the previous field is missing an identical closing delimiter.

Action: Supply the missing delimiters.

SQL*Loader-00621: Field in data file exceeds maximum length\n

Cause: A field exceeded its maximum allowable length. The maximum length is either the length specified in the SQL*Loader control file, or, for delimitable fields without a length specified, the default maximum length (255 bytes).

Action: Check for missing delimiters and/or shorten the field.

SQL*Loader-00622: Column not found before end of logical record (use TRAILING NULLCOLS)\n

Cause: The logical record ended before all specified fields were found.

Action: If the missing fields should be loaded as null, use the TRAILING NULLCOLS clause. Otherwise, correct the data.

SQL*Loader-00623: second enclosure string not present\n

Cause: The logical end of record or the end of a LOBFILE was reached before a second enclosure delimiter was found.

Action: Correct the data file to include the missing delimiter.

SQL*Loader-00624: no terminator found after TERMINATED and ENCLOSED field\n

Cause: No termination delimiter was found after the enclosed field ended.

Action: Supply the missing termination delimiter.

SQL*Loader-00625: Multibyte character error in control file.\n

Cause: Incomplete multi-byte character strings were found in the SQL*Loader control file.

Action: Edit the SQL*Loader control file to check that all multi-byte character data is valid.

SQL*Loader-00626: Character set conversion buffer overflow.\n

Cause: A conversion from the datafile character set to the client character set required more space than that allocated for the conversion buffer. The size of the conversion buffer is limited by the maximum size of a varchar2 column.

Action: The input record is rejected. The data will not fit into the column.

SQL*Loader-00627: Character set conversion graph not available.\n

Cause: A conversion from the datafile character set to the client character failed due to the conversion graph not being available.

Action: Contact Oracle support. Check NLSRTL installation.

SQL*Loader-00628: Character set conversion error.\n

Cause: A character set conversion error occurred.

Action: Contact Oracle support. Check NLSRTL installation. Provide a reproduceable test case.

SQL*Loader-00640: Variable length field was truncated.\n

Cause: The end of the logical record was encountered before the end of a variable length field. The length of each variable-length field is embedded in the field, so SQL*Loader knows that more data should have been present.

Action: Check the data for inadvertent truncation and verify the SQL*Loader control file specifications against the log file; the field may be starting in the wrong place.

SQL*Loader-00641: Invalid packed decimal nibble.\n

Cause: Each byte in a packed decimal field contains two 4-bit nibbles. Each nibble must have a valid value.

Action: Check the SQL*Loader control file's specifications against the log file to ensure that the field location was specified correctly. Check the contents of the field.

SQL*Loader-00642: Relative start position > absolute field end position.\n

Cause: A field specified as POSITION(*+n:y) had its relative start occur after the absolute position y.

Action: Check that a delimiter is not missing and that the values of n and y are correct.

SQL*Loader-00643: error executing INSERT statement for table <varname>string</varname>\n

Cause: A fatal error occurred while attempting to insert data into the table.

Action: Refer to the messages that follow for more information. If you specified SQL strings for any of your columns, verify that strings are correct. Specifically, check for balanced parenthesis and correct use of quotation marks. Another format error

SQL*Loader-00644: end of logical record found when reading length of varying length field\n

Cause: While attempting to read the length portion of a varying length field, then end of the logical record was reached.

Action: Verify that the SQL*Loader control file describes the data correctly and that the data in the data file matches the description in the SQL*Loader control file

SQL*Loader-00645: error converting character length field to a number\n

Cause: An error occurred while attempting to convert the characters containing the count portion of a VARCHARC or VARRAWC field.

Action: Verify that the count portion for the column has the correct value.

SQL*Loader-00646: lob set to EMPTY in column <varname>string</varname>, row <varname>number</varname>, table <varname>string</varname>\n

Cause: Encountered errors (e.g. parsing errors in LOBFILE) while loading LOBs. The row will remain in the table and its LOB column will be initialized to empty. Loading of other records will continue.

Action: Correct the data file (see accompanying messages) and reload.

SQL*Loader-00647: Integer to number conversion error\n

Cause: An error occurred while attempting to convert an integer to an Oracle number format.

Action: Verify that the integer field in the data file is a valid integer. If the INTEGER(N) syntax was used, then verify that the length specified is valid.

SQL*Loader-00649: Quoted string missing closing quote\n

Cause: A quoted string in the control file is missing a closing quote.

Action: Insert the closing quote as appropriate.

SQL*Loader-00650: incomplete lob data written for column <varname>string</varname>, row <varname>number</varname>, table <varname>string</varname>\n

Cause: Encountered errors (e.g. parsing errors in LOBFILE) while loading LOBs using direct path. The row will remain in the table and its LOB column may not be complete. Loading of other records will continue.

Action: Correct the data file (see accompanying messages) and reload.

SQL*Loader-00651: error skipping lob for column <varname>string</varname>, row <varname>number</varname>, table <varname>string</varname>\n

Cause: Encountered errors (e.g. parsing errors in LOBFILE) while skipping LOBs.

Action: Correct the data file (see accompanying messages) and reload.

SQL*Loader-00652: Invalid zoned decimal byte.\n

Cause: Each byte of a zoned decimal field must have a valid value based on the character set encoding used. ASCII-based zoned decimals must follow the formats specified in the VAX Architecture Reference Manual. EBCDIC-based zoned decimals must follow the formats specified in the ESA/390 Principles of Operations, version 8.1.

Action: Check the SQL*Loader control file's specifications against the log file to ensure that the field location was specified correctly. Check the contents of the field.

SQL*Loader-00653: XML data set to NULL in column <varname>string</varname>, row <varname>number</varname>, table <varname>string</varname>\n

Cause: Encountered errors (e.g. parsing errors in LOBFILE) while loading LOBs into an XML column. The row will remain in the table and its XML column will be initialized to null. Loading of other records will continue.

Action: Correct the data file (see accompanying messages) and reload.

SQL*Loader-00654: Variable length field exceeds maximum length.\n

Cause: A variable length field (with a leading length subfield) exceeded its maximum allowable length. The maximum length is either the length specified in the SQL*Loader control file, or, the default if not specified (4kb).

Action: Shorten the field and its length.

SQL*Loader-00655: cannot load object-relational XML attribute using direct path\n

Cause: The table being loaded contains a column object which contains an XML attribute with a storage type of object-relational. This type of attribute cannot be loaded with direct path.

Action: Perform the load with conventional path mode.

SQL*Loader-00656: position specification for column <varname>string</varname> is not allowed in external table loads\n

Cause: Use of a position specification was present in an external table load.

Action: Either remove the position specification, change the position specification to a field name reference, use direct path, or use conventional path.

SQL*Loader-00657: table <varname>string</varname> loaded using <varname>number</varname> passes, partition memory limit was <varname>number</varname>kb\n

Cause: Due to memory use, multiple passes were used to load some partitions.

Action: To decrease the number of passes, consider increasing the partition memory limit using the PARTITION_MEMORY command line option, or by increasing PGA_AGGREGATE_TARGET. Note that increasing the limit too much can cause the load to run out of memory.

SQL*Loader-00700: Out of memory while performing essential allocations [<varname>number</varname>]\n

Cause: SQL*Loader could not allocate the memory it needs.

Action: Check the operating system and process memory. Increase memory available to SQL*Loader, if possible. If using direct path, try lowering the columnarrayrows option (see log file for current default value).

SQL*Loader-00702: Internal error - <varname>string</varname>\n

Cause: An internal error has occurred.

Action: Make a note of the message and contact customer support.

SQL*Loader-00703: Internal error: argument <varname>number</varname>\n

Cause: An internal error has occurred.

Action: Make a note of the message and the number, then contact customer support.

**SQL*Loader-00704: Internal error: <varname>string</varname>
[<varname>number</varname>]\n**

Cause: An internal error has occurred.

Action: Make a note of the message and the number, then contact customer support.

SQL*Loader-00705: Internal error\n

Cause: An internal error has occurred.

Action: Contact customer support.

SQL*Loader-00706: Bad argument to ulerr [<varname>number</varname>].\n

Cause: An internal error has occurred.

Action: Contact customer support.

SQL*Loader-00708: Internal error: unknown status <varname>number</varname> returned from slf layer\n

Cause: An unknown status was returned by a call to the slf layer.

Action: Contact customer support.

SQL*Loader-00709: Internal error calling SLTS layer: <varname>string</varname> failed\n

Cause: A nonsuccess status was returned by a call to the SLTS layer.

Action: Contact customer support.

SQL*Loader-00710: Internal error: direct path stream buffer not loaded\n

Cause: A direct path stream buffer was built but not loaded.

Action: Contact customer support.

SQL*Loader-00711: Internal error: bad address for little endian UTF16 conversion\n

Cause: Address for little endian UTF16 data not in a valid buffer.

Action: Contact customer support.

SQL*Loader-00712: Internal error: bad address for big endian UTF16 conversion\n

Cause: Address for big endian UTF16 data not in a valid buffer.

Action: Contact customer support.

SQL*Loader-00713: Internal error calling SLTS layer: <varname>string</varname> failed with return code [<varname>number</varname>].\n

Cause: A nonsuccess status was returned by a call to the SLTS layer.

Action: Contact customer support.

SQL*Loader-00800: <varname>string</varname> specified and ignored\n

Cause: An option was specified that is not supported by External Table load.

Action: Do not specify the unsupported option or do not use External Table load.

SQL*Loader-00801: all INTO TABLE clauses must have the same options (<varname>string</varname>)\n

Cause: At least two INTO TABLE clauses have different options set.

Action: Set the options to be the same or do the loads separately.

SQL*Loader-00802: numeric EXTERNAL with DEFAULTIF clause not supported by External Table\n

Cause: A numeric EXTERNAL type was specified with a DEFAULTIF clause which is not supported by external table load.

Action: Remove the clause if possible or do not use external table load.

SQL*Loader-00803: Field type <varname>string</varname> not supported by External Table\n

Cause: The specified field type is not supported by external table.

Action: Remove the specified field type or do not use external table load.

SQL*Loader-00804: SEQUENCES with intervals are not supported by External Table Load.\n

Cause: A sequence with an interval was specified which is not supported by external table load.

Action: Remove the interval from the sequence, or remove the sequence itself, or do not use external table load.

SQL*Loader-00805: Option <varname>string</varname> not supported by <varname>string</varname>\n

Cause: The specified option is not supported by external table or express mode load.

Action: Remove the specified option or do not use external table load or express mode load.

SQL*Loader-00806: unknown record format specified for data file\n

Cause: The osd string containing file processing options in the control file specified an unknown file processing option.

Action: Verify the correct options are specified for the platform being used.

SQL*Loader-00807: error loading table\n

Cause: An INSERT statement used to load a table from an external table or a temporary internal table failed. The statement that failed is shown immediately preceding this message.

Action: See subsequent messages for more information about the error.

SQL*Loader-00808: error creating sequence: <varname>string</varname>\n

Cause: An attempt to create a sequence needed for the load failed.

Action: See messages that follow this one for information about the failure.

SQL*Loader-00809: error dropping sequence: <varname>string</varname>\n

Cause: A sequence needed to be dropped either because SQL Loader found a sequence with the same name it is trying to create or because SQL Loader is cleaning up from sequences it created at the beginning of the load.

Action: See messages that follow this one for information about why the attempt to drop the sequence failed.

SQL*Loader-00810: error creating external table: <varname>string</varname>\n

Cause: An attempt to create the external table failed for the load.

Action: See messages that follow for more information about the failure.

SQL*Loader-00811: error dropping external table: <varname>string</varname>\n

Cause: An error occurred when trying to drop an external table. Note that the table may have been left from a previous load.

Action: n/a

SQL*Loader-00812: error creating internal table: <varname>string</varname>\n

Cause: An error was encountered trying to create a temporary internal table. The internal table is used only when loading multiple tables from the same data file. The internal table is loaded once and the target tables are loaded from the internal table.

Action: n/a

SQL*Loader-00813: error dropping internal table: <varname>string</varname>\n

Cause: An error was encountered trying to drop a temporary internal table. The internal table is used only when loading multiple tables from the same data file. The internal table is loaded once and the target tables are loaded from the internal table. The internal table may have been left from a previous build.

Action: n/a

SQL*Loader-00816: error creating temporary directory object <varname>string</varname> for file <varname>string</varname>\n

Cause: No existing directory object was found in the database for the directory containing the file. Since all files loaded by external tables must be in a directory named by a directory object, SQL Loader tried to create a directory object for the file.

Action: See error messages that follow this message for more information.

SQL*Loader-00817: error dropping directory object <varname>string</varname>\n

Cause: SQL Loader created a directory object as part of an external table load. An attempt to cleanup the directory object failed.

Action: See messages following this one for more information about the error.

SQL*Loader-00820: cannot create WHERE clause with POSITION syntax for table <varname>string</varname>\n

Cause: The EXTERNAL_TABLE parameter was specified for a multi-table load, and a WHEN clause for one of the tables contained a reference to a range of bytes in the record using POSITION syntax. SQL*Loader uses the WHEN clause from the control file to generate the WHERE clause in the INSERT statement. If the WHERE clause contains a reference to a range of bytes in the table, then a valid WHERE clause cannot be generated. Note that SQL*Loader will proceed as if GENERATE_ONLY was specified for the EXTERNAL_TABLE parameter.

Action: Modify the control file to only use field name references in the WHEN clause. Note that this may require creating a filler field. Another alternative is to create one control file for each table to be loaded and load the tables separately. In that case, SQL*Loader can use the access parameter list LOAD WHEN syntax to specify the range of bytes using POSITION syntax for a single table.

SQL*Loader-00821: switching to GENERATE_ONLY\n

Cause: SQL Loader is not able to execute the SQL statements it generated for loading the data using external tables. See previous messages for more information.

Action: n/a

SQL*Loader-00822: operation not supported on external organized table\n

Cause: User attempted an operation on an external table which is not supported.

Action: Don't do that!

SQL*Loader-00823: TREAT AS clause for object tables not supported for external tables\n

Cause: A TREAT AS clause was specified in the INTO TABLE clause for an object table in the SQL*Loader control file and the EXTERNAL_TABLES command line parameter was set to either EXECUTE or GENERATE_ONLY. External tables can be used to load the data, but SQL*Loader does not generate the correct SQL statements to do this.

Action: Use SQL*Loader direct path or SQL*Loader conventional path to load the table.

SQL*Loader-00824: column type <varname>string</varname> not supported by <varname>string</varname>\n

Cause: The column type was not supported by external table or express mode using the external table load method.

Action: Do not use external table or express mode using the external table load method. Try the load using conventional path or direct path as the load method.

SQL*Loader-00901: Error logging on to ORACLE:\n

Cause: An attempt was made to log on to Oracle in direct path load mode.

Action: Ensure that the instance is up and running. Check the Oracle messages below this one in the log file for more information.

SQL*Loader-00902: Error opening cursor: [<varname>number</varname>] \n

Cause: An internal error has occurred.

Action: Check the Oracle messages below this one in the log file and contact customer support.

SQL*Loader-00903: Database must be at least version <varname>number</varname>.<varname>number</varname>.<varname>number</varname>.<varname>number</varname> for direct path

Cause: The direct path load mode is being used with an incompatible database.

Action: Upgrade the database to the specified version or else use the conventional path load.

SQL*Loader-00904: You cannot used the direct path when linked with v5 of the database

Cause: The direct path mode is being used after SQL*Loader has been linked with a Version 5 database.

Action: Use the conventional path.

SQL*Loader-00905: Error parsing SQL statement for upi: [<varname>number</varname>] in

Cause: Header message.

Action: Check the message below this one in the log file for more information.

SQL*Loader-00906: Error executing SQL statement for upi: [<varname>number</varname>] in

Cause: An internal error has occurred.

Action: Check the message below this one in the log file for more information.

SQL*Loader-00909: Loader views must be loaded (as SYS) for direct path to be used

Cause: Database views required for the direct path mode are not present.

Action: The Oracle7 Server Administrator's Guide details how to run the required scripts as user SYS for loading the required views.

SQL*Loader-00910: Error binding input variables for upi: [<varname>number</varname>] in

Cause: Header message.

Action: Check the message below this one in the log file for more information.

SQL*Loader-00911: Error defining output variable(s) for upi: [<varname>number</varname>] in

Cause: Header message.

Action: Check the message below this one in the log file for more information.

SQL*Loader-00913: Error fetching results of select statement (upi): [<varname>number</varname>] in

Cause: Header message.

Action: Check the message below this one in the log file for more information.

SQL*Loader-00914: Error locking table <varname>string</varname> in exclusive mode.\n

Cause: The direct path mode could not lock the named table.

Action: Check the message below this one in the log file for more information. Check that the necessary privileges have been granted.

SQL*Loader-00915: Error closing cursor: [<varname>number</varname>] \n

Cause: Header message.

Action: CCheck the message below this one in the log file for more information.

SQL*Loader-00916: Error checking path homogeneity\n

Cause: To do a direct path load when the front end and back end of the database are on separate hardware systems, the systems must be identical, using the same machine, operating system, and character set. This error occurs when SQL*Loader detects a difference between the systems that will prevent a direct load from operating properly.

Action: Use a conventional path load for this configuration.

SQL*Loader-00918: The catalog must be loaded (as SYS) for SQL*Loader to be used\n

Cause: The catalog is not loaded.

Action: Logon as user SYS and load the Oracle7 catalog and the views in the script ULVIEW.SQL.

SQL*Loader-00919: Error during upi fetch: [<varname>number</varname>] \n

Cause: An internal error has occurred.

Action: Check the message below this one in the log file for more information.

SQL*Loader-00925: Error while <varname>string</varname>\n

Cause: An internal error has occurred.

Action: Check the message below this one in the log file for more information. The table or column referenced may not be accessible.

SQL*Loader-00926: OCI error while <varname>string</varname> for table <varname>string</varname>\n

Cause: An OCI error has occurred.

Action: Check the message below this one in the log file for more information. The table or column referenced may not be accessible.

SQL*Loader-00929: Error parsing insert statement for table <varname>string</varname>.\n

Cause: The table's insert statement caused a parse error.

Action: Check all SQL strings that were used.

SQL*Loader-00930: Error parsing insert statement for table <varname>string</varname> column <varname>string</varname>.\n

Cause: The named column's INSERT statement caused a parse error.

Action: Check the message below this one in the log file for more information. Check the SQL string used for this column.

SQL*Loader-00931: OCI error while binding variable for column <varname>string</varname> in table <varname>string</varname>\n

Cause: An OCI error has occurred.

Action: Check the errors below it for more information. The SQL string for this column may be in error.

SQL*Loader-00932: Could not truncate table <varname>string</varname>.\n

Cause: Truncation of the table was attempted and failed.

Action: Check the following errors for more information. Truncation due to referential constraints should not occur.

SQL*Loader-00933: Specified file <varname>string</varname> not part of database\n

Cause: The specified filename to load the table is not a database file.

Action: Specify a valid datafile.

SQL*Loader-00934: Incorrect data file <varname>string</varname> specified for table <varname>string</varname>\n

Cause: A datafile name was given to load the table that is not a part of the tablespace in which the table resides.

Action: Specify a valid datafile.

SQL*Loader-00935: Error verifying required option for parallel load.\n

Cause: An error was encountered because a required option was not found or was invalid.

Action: Correct the problem as described in the accompanying Oracle message.

SQL*Loader-00937: parallel load requested and <varname>string</varname> has enabled triggers or constraints\n

Cause: A request was made for a parallel direct load, but the object to be loaded has an enabled constraint (check, referential) and/or enabled triggers.

Action: Disable the offending enabled constraints and/or triggers and retry the parallel direct load.

SQL*Loader-00938: partition load requested and <varname>string</varname> has enabled triggers or constraints\n

Cause: A request was made for a direct load of a single partition, but the object to be loaded has an enabled constraint (check, referential) and/or enabled triggers.

Action: Disable the offending enabled constraints and/or triggers and retry the parallel direct load.

SQL*Loader-00939: OCI error while <varname>string</varname> for table <varname>string</varname> partition <varname>string</varname>\n

Cause: Header message.

Action: Check the following errors for more information. The table or partition referenced may not be accessible.

SQL*Loader-00940: UPI error while setting NCHAR bind attributes for column <varname>string</varname> table <varname>string</varname>\n

Cause: An error occurred while setting the charsetform attribute of an NCHAR column.

Action: This is an internal error. Report to ORACLE support.

SQL*Loader-00941: Error during describe of table <varname>string</varname>\n

Cause: Error while executing a describe of a select list on the given table. Check the error immediately preceding this error.

Action: n/a

SQL*Loader-00942: partition <varname>string</varname> not part of table <varname>string</varname>\n

Cause: the specified partition is not part of the specified table

Action: n/a

SQL*Loader-00943: incorrect datafile <varname>string</varname> specified for table <varname>string</varname> partition <varname>string</varname>\n

Cause: The specified datafile is not in the tablespace of the specified partition. Due to use of FILE= keyword on a partitioned table. When loading all partitions of a partitioned table, the partitions must be in the same tablespace. When loading a single partition, the tablespace of the partition being loaded must be the same as the tablespace in which the specified datafile file resides.

Action: n/a

SQL*Loader-00944: error preparing insert statement for table <varname>string</varname>.\n

Cause: A call to OCISmtPrepare for the table's insert statement returned an error.

Action: Refer to the message that follows for information about the error returned by OCISmtPrepare. Make sure the syntax is correct for all SQL strings specified in the SQL*Loader control file.

SQL*Loader-00945: record size <varname>number</varname> too large for direct path\n

Cause: The maximum size of records in the data file is larger than the maximum size supported by direct path, which is 65535

Action: Load the data file using conventional path.

SQL*Loader-00946: OCI error while <varname>string</varname> for table <varname>string</varname> subpartition <varname>string</varname>\n

Cause: Header message.

Action: Check the following errors for more information. The table or subpartition referenced may not be accessible.

SQL*Loader-00947: subpartition load requested and <varname>string</varname> has enabled triggers or constraints\n

Cause: A request was made for a direct load of a single subpartition, but the object to be loaded has an enabled constraint (check, referential) and/or enabled triggers.

Action: Disable the offending enabled constraints and/or triggers and retry the parallel direct load.

SQL*Loader-00948: subpartition <varname>string</varname> not part of table <varname>string</varname>\n

Cause: the specified subpartition is not part of the specified table

Action: n/a

SQL*Loader-00949: incorrect datafile <varname>string</varname> specified for table <varname>string</varname> subpartition <varname>string</varname>\n

Cause: The specified datafile is not in the tablespace of the specified subpartition. Due to use of FILE= keyword on a subpartitioned table. When loading all subpartitions of a subpartitioned table, the subpartitions must be in the same tablespace. When loading a single subpartition, the tablespace of the subpartition being loaded must be the same as the tablespace in which the specified datafile file resides.

Action: n/a

SQL*Loader-00950: Error shipping data structures across 2-task\n

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00951: Error calling once/load initialization\n

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00952: Error calling once/data file initialization\n

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00953: Error shipping read buffer across 2-task\n

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00954: Error shipping index to read buffer across 2-task\n

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00955: Error calling col array build, block formatter\n

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00956: Error calling once/data file finishing\n

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00957: Error shipping text string across 2-task\n

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00958: Error popping data relocation address stack\n

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00959: Error shipping buffer across 2-task\n

Cause: Header message.

Action: Check the error(s) below it for more information.

**SQL*Loader-00961: Error calling once/load finishing for table
<varname>string</varname>\n**

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00962: Error setting user-side Ctrl-C handler\n

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00963: Error clearing user-side Ctrl-C handler\n

Cause: Header message.

Action: Check the error(s) below it for more information.

**SQL*Loader-00965: Error <varname>number</varname> disabling constraint
<varname>string</varname> on table <varname>string</varname>**

Cause: Header message.

Action: Check the error(s) below it for more information.

**SQL*Loader-00966: Error <varname>number</varname> disabling all triggers
on table <varname>string</varname>**

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00969: Error performing file name translation on kernel side\n

Cause: File specified for parallel load is probably not a valid database file.

Action: Specify a valid database file.

**SQL*Loader-00970: enabled constraint on an XML column not allowed in direct
path\n**

Cause: An enabled check constraint existed on an XML column.

Action: Disable the check constraint before attempting to load the table data using the direct path mode, or leave the constraint enabled but use the conventional path mode instead.

**SQL*Loader-00971: parallel load option not allowed when loading lob columns
\n**

Cause: An attempt was made to load lob columns using parallel=true. This error will also be issued when loading columns stored as lobes (such as varrays and xml types)

Action: Do not use the parallel option when loading lob columns.

SQL*Loader-00972: Warning: ROWS parameter ignored when NO_INDEX_ERRORS is used.\n

Cause: Specifying save points using the ROWS parameter was not supported with NO_INDEX_ERRORS=TRUE.

Action: Remove the ROWS parameter from the command-line arguments or do not specify NO_INDEX_ERRORS=TRUE.

SQL*Loader-00973: Warning: ROWS parameter ignored when PARTITION_MEMORY is used.\n

Cause: Specifying save points using the ROWS parameter was not supported with PARTITION_MEMORY=n.

Action: Remove the ROWS parameter from the command-line arguments or do not specify PARTITION_MEMORY=n.

SQL*Loader-00974: database is not available for update\n

Cause: The database was not opened for read/write access. SQL*Loader requires that the database be opened for read/write access.

Action: Verify that the database is opened for read/write access. Then retry the operation.

SQL*Loader-02026: the load was aborted because SQL Loader cannot continue.\n

Cause: The load cannot continue. See the error message before this * message for the cause of the error.

Action: See the action for the error message that precedes this one.

SQL*Loader-02050: Multibyte character error.\n

Cause: Text specified by POSITION or terminated by newlines is invalid.

Action: Edit the SQL*Loader control file or the data file to fix alignment of column.

SQL*Loader-02300: For CSV format files, all fields must be delimited fields. Field <varname>string</varname> is not delimited.\n

Cause: CSV format files did not have delimited fields. CSV format files must have all delimited fields so that SQL*Loader can process the fields.

Action: Make all of the fields delimited or remove the CSV specification and retry.

SQL*Loader-02301: For FIELD NAMES, all fields must be delimited fields. Field <varname>string</varname> is not delimited.\n

Cause: Data files with a FIELD NAMES record did not have delimited fields. Data files with a FIELD NAMES record must have all delimited fields so that SQL*Loader can process the field names.

Action: Make all of the fields delimited and retry.

SQL*Loader-02302: Data in the control file not supported with CSV format files.\n

Cause: CSV format file was specified with INFILE * indicating that there was data in the control file.

Action: Move the data to a separate data file and retry.

SQL*Loader-03120: Resumable parameters ignored -- current session not resumable

Cause: Current session is not resumable.

Action: Must specify RESUMABLE=TRUE to enable resumable session in order for the RESUMABLE_NAME and RESUMABLE_TIMEOUT parameters to take effect.

VID-00611 to VID-00721

VID-00611: unable to access the BLOB for reading

Cause: The BLOB could not be opened for reading.

Action: Contact Oracle Support Services.

VID-00612: unable to open export destination file

Cause: The file could not be created or opened.

Action: Check that the file does not refer to an existing directory. Check that the file is not locked by another application.

VID-00613: export destination access denied

Cause: Permission to write to destination file was denied.

Action: Refer to the Oracle Multimedia documentation for information on granting privileges for the export() method.

VID-00614: I/O error during export

Cause: The export operation failed because of an I/O error.

Action: Check OS logs and contact Oracle Support Services.

VID-00702: unable to initialize video processing environment

Cause: The initialization of the video processing procedure failed.

Action: See the database administrator to make sure that enough memory has been allocated to JServer. If JServer does have enough memory, contact Oracle Support Services.

VID-00703: unable to read video data

Cause: An error occurred while accessing the video source.

Action: Make sure the video source is valid. For external sources, make sure all access privileges are granted.

VID-00704: invalid input format or corrupted input data

Cause: The video data in the source was not in the format specified by the format field of the video object. In some unusual cases, the video data is actually corrupted.

Action: Provide a correct value in the format field. If the correct value is unknown, put NULL in the format field to invoke the DEFAULT format plug-in.

VID-00705: unsupported input format

Cause: The file format of the video data was not supported. This error can only occur in the DEFAULT format plug-in package.

Action: Refer to the Oracle Multimedia documentation for supported formats.

VID-00706: unsupported or corrupted input format

Cause: The video data was either corrupted or the file format was not supported.

Action: Refer to the Oracle Multimedia documentation for supported formats. If the video data is not corrupted and is in a supported file format, contact Oracle Support Services.

VID-00707: unable to read empty video data

Cause: There is no data in the video object.

Action: Refer to the Oracle Multimedia documentation for information on how to populate the video object with video data.

VID-00713: internal error while parsing video data

Cause: An internal error occurred during parsing.

Action: Contact Oracle Support Services.

VID-00714: internal error

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

VID-00721: unable to find format plug-in package

ORDPLUGINS.ORDX_<varname>string</varname>_VIDEO

Cause: Custom video plug-in for user-specified format was not found.

Action: Ensure correct video format is specified or proper custom video plug-in package is installed.

WLMD-02005 to WLMD-02019

WLMD-02005: Classifier {0} for PC {1} is too long.

Cause: The classifier for the specified performance class (PC) was too long.

Action: Shorten the classifier in the policy set.

WLMD-02006: Total classifier length for PC {0} is too large.

Cause: In aggregate the classifiers for this performance class (PC) were too long.

Action: Remove or shorten classifiers in the policy set.

WLMD-02011: The DBWLM application for the system {0} cannot be undeployed because it is still enabled.

Cause: The DBWLM application was undeployed when it was enabled.

Action: Disable the DBWLM application and then undeploy it.

WLMD-02014: Oracle Clusterware infrastructure has reported a failure.

Cause: There was a problem in the Oracle Clusterware.

Action: Check the exception and, if needed the Oracle Clusterware logs, and correct the issue reported there. Then enable Quality of Service Management (QoS) and retry this operation.

WLMD-02015: QoS configuration key {0} could not be retrieved.

Cause: The key did not exist in the Quality of Service Management (QoS) persistent storage.

Action: Contact Oracle Support Services for assistance.

WLMD-02017: Could not retrieve credential information for database {0}.

Cause: An attempt to open the database wallet and read the credential information failed.

Action: Re-enable the database for Quality of Service Management (QoS) from the associated Enterprise Manager console for that database.

WLMD-02018: The task {0} has failed to terminate.

Cause: This is an internal error.

Action: Please provide logs to Oracle Support Services. Quality of Service Management (QoS) restarted automatically.

WLMD-02019: Cluster {0} state change detected. The action requested may no longer be appropriate or possible.

Cause: There was a change to the Oracle Clusterware state since the action was recommended.

Action: Consider implementing actions from the current recommendation.

WLMF-03002 to WLMF-03025

WLMF-03002: The Quality of Service Management (QoS) user {0} is not authorized to perform this operation {1}.

Cause: The Quality of Service Management (QoS) user did not have the permission to perform this operation.

Action: Check the JAVA security policy setup and grant the Quality of Service Management (QoS) user the appropriate security permission if it should have this permission. Otherwise, this is the expected behavior.

WLMF-03003: The Quality of Service Management (QoS) service user does not have permissions to get the JAVA security Subject associated with the current access control context {0}.

Cause: The Quality of Service Management (QoS) service user did not have the permission to get the JAVA security Subject object within the current access control context.

Action: Check the security policy setup and grant this user the permission if it should have this permission.

WLMF-03004: Version check failed or not performed. Operation could not be performed.

Cause: The operation to exchange the supported version numbers between the server and the client had not been called or had failed.

Action: This is an internal error. Contact Oracle Support Services for assistance.

WLMF-03005: Application .ear file is corrupt.

Cause: Quality of Service Management (QoS) .ear file was corrupt.

Action: Contact Oracle Support Services for assistance.

WLMF-03006: Unsupported version. The client supports versions {0} to {1}.

Cause: Version numbers supported in the client were not supported by this Quality of Service Management (QoS) service.

Action: Contact Oracle Support Services for assistance.

WLMF-03007: Required policy set does not exist.

Cause: There was no policy set in persistent storage.

Action: Create a new policy set.

WLMF-03008: Invalid argument. Argument {0} was provided with value {1}.

Cause: The specified value of the argument was invalid.

Action: Please contact Oracle Support Services.

WLMF-03009: The policy set is corrupt.

Cause: The Quality of Service Management (QoS) policy set retrieved from persistent storage was corrupt.

Action: Create a new policy set and enable Quality of Service Management (QoS).

WLMF-03010: There is no policy set in QoS persistent storage.

Cause: The policy set was not found in Quality of Service Management (QoS) persistent storage.

Action: Create a new policy set and enable Quality of Service Management (QoS).

WLMF-03011: QoS is not enabled.

Cause: Quality of Service Management (QoS) was not enabled for this operation.

Action: Enable Quality of Service Management (QoS) and retry the operation.

WLMF-03012: The component {0} tried to transition from state {1} to {2}, but the current state is {3}. This is illegal.

Cause: This is an internal error.

Action: Contact Oracle Support Services with trace information. Quality of Service Management (QoS) will restart automatically.

WLMF-03013: QoS implement action ID {0} has expired.

Cause: The Quality of Service Management (QoS) implement action ID has expired.

Action: Implement a current recommendation.

WLMF-03014: The What If Analysis could not be performed.

Cause: Quality of Service Management (QoS) is unable to perform the What If Analysis because its timestamp is invalid or expired.

Action: Perform another What If Analysis.

WLMF-03015: The action {0} is in progress and it will complete at {1}. The current time is {2}.

Cause: Unable to execute the action because a previous action has not completed.

Action: Wait until the current action is completed.

WLMF-03016: Internal error encountered.

Cause: This is an internal error.

Action: Contact Oracle Support Services with Quality of Service Management (QoS) log information. Clusterware has restarted Quality of Service Management (QoS) automatically.

WLMF-03017: The operating system has reported a failure.

Cause: There was a problem in the operating system.

Action: Check the exception and the accompanying error messages for details , and correct the issue. Then enable Quality of Service Management (QoS).

WLMF-03018: QoS service is not in the expected state.

Cause: Quality of Service Management (QoS) was not in the correct state to perform the requested operation.

Action: Retry the operation shortly.

WLMF-03019: Required library could not be loaded.

Cause: A library which Quality of Service Management (QoS) depends upon could not be loaded.

Action: Contact Oracle Support Services.

WLMF-03020: Requested action was not implemented.

Cause: Quality of Service Management (QoS) detects a change in system state that invalidates the performance projections.

Action: Implement a current recommendation

WLMF-03021: Persistent key {0} had invalid value.

Cause: The service found a corrupt key value.

Action: Contact Oracle Support Services.

WLMF-03022: Policy set or policy corruption.

Cause: The service has detected a corruption in the policy set or policy keys.

Action: Push a new policy set and re-enable the service.

WLMF-03023: Persistent storage not found.

Cause: The persistent storage could not be found.

Action: Contact Oracle Support Services.

WLMF-03024: Only the LOCAL parameter value is supported to enable DBWLM

Cause: The GLOBAL parameter value was set to enable DBWLM.

Action: Contact Oracle Support Services.

WLMF-03025: Invalid argument. Argument {0} was provided with value {1} and it must be less than argument {2} with value {3}.

Cause: The specified value of the argument was invalid.

Action: Contact Oracle Support Services.

WLMV-08000 to WLMV-08000

WLMV-08000: WLMV-8000: QoS schema of type <{0}> encountered errors.

Cause: The Quality of Service Management (QoS) schema validation encountered errors.

Action: Contact Oracle Support Services.

XOQ-00101 to XOQ-02560

XOQ-00101: unknown error

Cause: An unexpected internal error occurred.

Action: Report this error to Oracle Support Services.

XOQ-00102: system failure

Cause: An unexpected internal error occurred.

Action: Report this error to Oracle Support Services.

XOQ-00103: An OLAP API method failed.

Cause: An unexpected internal error occurred.

Action: Report this error to Oracle Support Services.

XOQ-00104: not implemented

Cause: An OLAP API query was issued that requires an unimplemented feature.

Action: Check the classes and methods in the OLAP API Java documentation for alternative ways to construct the query.

XOQ-00105: unknown error

Cause: An unexpected internal error occurred.

Action: Report this error to Oracle Support Services.

XOQ-00106: SQL query failed: "(<varname>string</varname>)"

Cause: A SQL query generated by the OLAP component failed to execute.

Action: Examine the error message to determine the possible cause of failure, or contact Oracle Support Services.

XOQ-00107: current operation cancelled

Cause: An Oracle operation was interrupted by CTRL+C or another cancelling operation.

Action: Continue with the next operation.

XOQ-00201: error opening connection

Cause: An error occurred while initializing the connection for the OLAP API.

Action: Ensure that Oracle Database is properly installed with the OLAP option. If the problem persists, then contact Oracle Support Services.

XOQ-00203: error retrieving connection information for the server

Cause: An error occurred while retrieving the connection parameter information.

Action: Ensure that Oracle Database is properly installed with the OLAP option. If the problem persists, then contact Oracle Support Services.

XOQ-00204: error initializing second DataProvider on a JDBC connection

Cause: The Java client tried to open multiple DataProviders over one JDBC connection.

Action: Close the first DataProvider before initializing the second DataProvider.

XOQ-00223: error executing an OLAP DML command

Cause: A syntactic or referential error in the command string prevented execution of an OLAP DML command.

Action: Correct the syntax of the OLAP DML command.

XOQ-00225: error closing the connection

Cause: An error occurred while closing the connection for the OLAP API.

Action: Report this error to Oracle Support Services.

XOQ-00229: cannot retrieve information for the connection

Cause: An error occurred while preparing OLAP API connection information.

Action: Report this error to Oracle Support Services.

XOQ-00232: error sharing the session

Cause: An unexpected error occurred.

Action: Report this error to Oracle Support Services.

XOQ-00233: error obtaining the system

Cause: An unexpected error occurred.

Action: Report this error to Oracle Support Services.

XOQ-00234: error obtaining the module version

Cause: An unexpected error occurred.

Action: Report this error to Oracle Support Services.

XOQ-00251: Default database is not set.

Cause: An unexpected error occurred.

Action: Report this error to Oracle Support Services.

XOQ-00286: error creating a definition manager

Cause: An error occurred while preparing an OLAP API query for use.

Action: Examine the ErrorStack for more detail about the reason for the failure.

XOQ-00287: error adding analytic workspace "<varname>string</varname>" to branch

Cause: An unexpected error occurred while adding an analytic workspace to a branch.

Action: Report this error to Oracle Support Services.

XOQ-00288: unable to commit transaction

Cause: An error occurred while trying to commit changes to a cube or dimension.

Action: Examine the error stack for more detail about the reason for the failure.

XOQ-00289: error executing DDL "(<varname>string</varname>)" for metadata object "(<varname>string</varname>)"

Cause: An error occurred while executing the DDL.

Action: Check the metadata object and examine the error stack for the reason for the failure.

XOQ-00400: failed to map CWM object "(<varname>string</varname>)" to XML or IDL

Cause: An error occurred while preparing a metadata object to return to the client.

Action: Check the metadata object for unusual characteristics, such as extremely long text attributes, unusual characters in text attributes,

XOQ-00401: a <varname>string</varname> could not be created with the name "<varname>string</varname>", because that name is already used by an existing <varname>string</varname>.

Cause: An error occurred while trying to create a metadata object with the name of an existing object.

Action: Rename one of the objects so that its ID is unique.

XOQ-00500: no metadata provider "(<varname>string</varname>)" available

Cause: A MetadataProvider could not be found for the specified type of metadata.

Action: Ensure that your code requests metadata type CWM.

XOQ-00501: table "(<varname>string</varname>)" and/or column "(<varname>string</varname>)" not found

Cause: A metadata object was mapped to a table or column that does not exist.

Action: Run PL/SQL procedure

CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any reported problems with the metadata object.

XOQ-00502: cannot create more than one CursorManager for a source

Cause: An attempt was made to create a second CursorManager for a source in a transaction.

Action: Use only one CursorManager or upgrade to newer OLAP API jar files.

XOQ-00503: cannot create server cursor

Cause: An error occurred while executing the SQL for an OLAP API query.

Action: Examine the ErrorStack for details about the failure.

XOQ-00504: cannot execute the query

Cause: An error occurred while executing the SQL for an OLAP API query.

Action: Examine the ErrorStack for details about the failure.

XOQ-00505: The number of cursor inputs (<varname>string</varname>) does not match the number of bind sources (<varname>string</varname>).

Cause: The bind source specified in the cursor manager did not have matching cursor input.

Action: Specify a cursor input for each bind source.

XOQ-00506: cannot parse XML string from the client

Cause: An error occurred while parsing query or metadata definitions sent by the client.

Action: Examine the error output for details about the failure.

XOQ-00507: source definition not found with ID "<varname>string</varname>"

Cause: The query referred to a source definition that did not exist.

Action: Examine the error output for details about the failure.

XOQ-00508: metadata object not found with ID "<varname>string</varname>"

Cause: The query referred to a metadata object that did not exist.

Action: Correct the query so it refers to existing metadata objects.

XOQ-00509: Invalid value string "<varname>string</varname>" is used for a value of dimension "<varname>string</varname>"

Cause: The query contained an incorrectly formatted value string. The accepted formats are "HIERARCHY::LEVEL::VALUE" in hierarchy-qualified value mode, or "[Dimension].[Hierarchy].[Level].[Value]" in ODBO compatibility mode.

Action: Correct the value string used in the query, or select values using the localValue attribute. For example,
 dimensionSource.select(dimension.getLocalValueAttribute().getSource().eq("value"));

XOQ-00510: NULL key found in hierarchy

Cause: The hierarchy was not identified as a skip-level hierarchy, although it contained NULL values.

Action: Correct the metadata for the hierarchy to mark it as a skip-level hierarchy.

XOQ-00511: Query will result in a Cartesian product.

Cause: An incorrect join condition was used in the query.

Action: Examine the mappings for the metadata objects and correct the query.

XOQ-00600: internal error code, arguments: [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>]

Cause: A process encountered an exceptional condition. This is the generic internal error number for Oracle program exceptions.

Action: Report as a bug. The first argument is the internal error number.

XOQ-00603: Fatal error occurred: unwise to proceed.

Cause: An Oracle session was in an unrecoverable state.

Action: Log in to Oracle again so a new session is created automatically. Examine the session trace file for more information.

XOQ-00699: internal error, arguments: [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>], [<varname>string</varname>]

**[<varname>string</varname>], [<varname>string</varname>],
[<varname>string</varname>]**

Cause: An internal inconsistency was detected that did not end the process.

Action: Report a bug and include the internal error, which is the first argument in the error message.

XOQ-00700: error compiling OLAP DML command

Cause: A syntactic or referential error in the OLAP DML command caused a compilation error.

Action: Correct the syntax of the OLAP DML command. The error stack may provide more detail about the error. Before trying again, enable the OLAP DML BADLINE option to get more detailed messages.

XOQ-00701: error compiling OLAP DML expression

Cause: A syntactic or referential error in the OLAP DML expression caused a compilation error.

Action: Correct the syntax of the OLAP DML expression. The error stack may provide more detail about the error. Before trying again, enable the OLAP DML BADLINE option to get more detailed messages.

XOQ-00702: no OLAP DML code to compile

Cause: SPLExecutor::executeCommand was called with an empty command string.

Action: Ensure that an OLAP DML command is passed to SPLExecutor::executeCommand.

XOQ-00703: error executing OLAP DML command "(<varname>string</varname>)"

Cause: A syntactic or referential error in the command string prevented the execution of an OLAP DML command.

Action: Examine the error stack for more detail about the error. Correct the OLAP DML command and try again.

XOQ-00704: error evaluating OLAP DML expression

Cause: A syntactic or referential error in the expression string prevented the evaluation of an OLAP DML expression.

Action: Examine the error stack for more detail about the error. Correct the OLAP DML expression and try again.

XOQ-00705: no OLAP DML expression to evaluate

Cause: An SPLExecutor::evaluateExpression method was called with an empty expression string.

Action: Ensure that an OLAP DML command is passed to the SPLExecutor::evaluateExpression method.

**XOQ-00850: cannot create fundamental snapshot: definition id
"(<varname>string</varname>)" not recognized**

Cause: A cursor could not be created because the source referred to an unrecognized metadata object.

Action: If the source uses an MdmDimension or MdmMeasure that is created with an MdmCustomObjectFactory, then ensure that the Mtm definition is complete and refers only to existing objects.

XOQ-00851: cannot create Mdm property: definition id "<varname>string</varname>" not recognized

Cause: A cursor was not created because the source referred to an unrecognized metadata object.

Action: If the source uses an MdmDimension or MdmMeasure that is created with an MdmCustomObjectFactory, then ensure that the Mtm definition is complete and refers only to existing objects.

XOQ-01000: A portion of the query results in an empty selection and a 0-extent cursor.

Cause: The selection for one or more dimensions of a source yielded no members, so no data was retrieved for the source.

Action: Check the dimension selections to ensure that all references to hierarchies, levels, and members are correct. Evaluate each dimension query separately to identify the faulty one.

XOQ-01100: Query is not supported by the current generator.

Cause: The source involved a construct that was syntactically correct but is not currently supported.

Action: Check the source for unsupported constructs. For example, some releases require that a measure source be joined to sources for hierarchies and not to sources for dimensions.

XOQ-01150: unknown problem with OLAP Catalog

Cause: An error occurred while reading the OLAP Catalog.

Action: Run PL/SQL procedure
CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation
OLAP API. Correct any problems.

XOQ-01151: OCI error:\n<varname>string</varname>

Cause: An exception was raised by Oracle Call Interface.

Action: Correct the problems identified in the error message.

XOQ-01200: metadata problem for MdmAttribute "<varname>string</varname>"

Cause: Metadata for the MdmAttribute was incomplete or inconsistent. Possible causes are: 1) The MdmAttribute did not have an associated MtmAttributeMap. 2) The MtmAttributeMap existed, but there was no mapped expression for a requested MtmDimensionMap.

Action: If the MdmAttribute is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MdmAttribute is read from the OLAP Catalog, then run PL/SQL procedure
CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation
OLAP API. Correct any problems.

XOQ-01201: metadata problem for MdmMeasure "<varname>string</varname>"

Cause: Metadata for the MdmMeasure was incomplete or inconsistent. Possible causes are: 1) The MdmMeasure did not have an associated MtmMeasureMap. 2) The MtmMeasureMap existed, but there was no mapped expression for a requested MtmBaseCube. 3) The MtmMeasureMap existed, but had no associated MtmCube.

Action: If the MdmMeasure is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MdmMeasure is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01202: metadata problem for MdmLevel "<varname>string</varname>"

Cause: Metadata for the MdmLevel was incomplete or inconsistent. The MdmLevel did not have an associated MtmLevelMap.

Action: If the MdmLevel is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MdmLevel is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01203: metadata problem for MdmHierarchy "<varname>string</varname>"

Cause: Metadata for the MdmHierarchy was incomplete or inconsistent. The MdmHierarchy did not have an associated MtmHierarchyMap.

Action: If the MdmHierarchy is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MdmHierarchy is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01204: metadata problem for MdmListDimension "<varname>string</varname>"

Cause: Metadata for the MdmListDimension was incomplete or inconsistent.

Action: If the MdmListDimension is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MdmListDimension was read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01205: metadata problem for MdmPrimaryDimension "<varname>string</varname>"

Cause: Metadata for the MdmPrimaryDimension was incomplete or inconsistent. The MdmPrimaryDimension (also known as MdmUnionHierarchy) did not have an associated MtmPrimaryDimensionMap.

Action: If the MdmPrimaryDimension is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MdmPrimaryDimension is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01206: metadata problem for cube "<varname>string</varname>"

Cause: Metadata for the cube was incomplete or inconsistent. This happened for one of the following reasons: 1) No MtmBaseCube was associated with a requested hierarchy combination. 2) One of the MtmMeasureMaps associated with an MtmCube was NULL. 3) Something was wrong with an MtmCubeDimensionality associated with an MtmBaseCube.

Action: If the hierarchy combination, measure map, or cube is created or modified using the OLAP Metadata API, then ensure that the objects are created and mapped correctly. If the attribute hierarchy combination, measure map, or cube is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01207: metadata problem for hierarchy combination "<varname>string</varname>"

Cause: Metadata for the hierarchy combination was incomplete or inconsistent.

Action: If the hierarchy combination is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the hierarchy combination is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01208: metadata problem for MtmBaseCube "<varname>string</varname>"

Cause: Metadata for the MtmBaseCube was incomplete or inconsistent. An MtmBaseCube had no associated MtmTabularSource.

Action: If the MtmBaseCube is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MtmBaseCube is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01209: metadata problem for attributes on dimension "<varname>string</varname>"

Cause: Metadata for the attributes on the dimension was incomplete or inconsistent.

Action: If the attributes or dimension is created or modified using the OLAP Metadata, then ensure that the objects are created and mapped correctly. If the attributes or dimension are read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01210: metadata problem for table map for list dimension "<varname>string</varname>"

Cause: Metadata for the table map for the list dimension was incomplete or inconsistent.

Action: If the table map or dimension is created or modified using the OLAP Metadata API, then ensure that the objects are created and mapped correctly. If the table map or dimension is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01211: metadata problem for MdmValueHierarchy "<varname>string</varname>"

Cause: Metadata for the MdmValueHierarchy was incomplete or inconsistent. Possible causes are: 1) The MtmValueLevelHierarchyMap for the MdmValueHierarchy did not have an associated MtmSolvedLevelHierarchyMap. 2) The MtmValueLevelHierarchyMap for the MdmValueHierarchy was invalid.

Action: If the MdmValueHierarchy or MtmValueLevelHierarchyMap is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MdmValueHierarchy or MtmValueLevelHierarchyMap is read from the OLAP Catalog, run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01212: aggregation metadata problem for cube "<varname>string</varname>"

Cause: Aggregation metadata for the cube was incomplete or inconsistent.

Action: If the cube is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the cube is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01213: metadata problem for MdmLevelHierarchy "<varname>string</varname>"

Cause: Metadata for the table mapping for the MdmLevelHierarchy was incomplete or inconsistent. The MtmLevelHierarchyMap for the MdmLevelHierarchy had no associated MtmTabularSource.

Action: If the MdmLevelHierarchy is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MdmLevelHierarchy is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01214: metadata problem with dimension order specification for "<varname>string</varname>"

Cause: Metadata for the custom sort column was incomplete or inconsistent. An MtmDimensionOrderSpecification had no associated OrderByExpression.

Action: If the MtmDimensionOrderSpecification is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MtmDimensionOrderSpecification is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01215: metadata problem with mapped RDBMS column "<varname>string</varname>"

Cause: Metadata for the mapped RDBMS column was incomplete or inconsistent. There was a problem identifying the RDBMS table that owns the associated RDBMS column.

Action: If the RDBMS column is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the RDBMS column is read from the OLAP Catalog, then run PL/SQL procedure

CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01216: metadata problem with mapping for snowflake hierarchy "<varname>string</varname>"

Cause: Mapping metadata for the snowflake hierarchy was incomplete or inconsistent. There was a problem identifying a mapping for the associated snowflake hierarchy.

Action: If the hierarchy is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the hierarchy is read from the OLAP Catalog, run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01217: metadata problem with mapping for hierarchy "<varname>string</varname>"

Cause: Mapping metadata for the hierarchy was incomplete or inconsistent. A mapping for the associated hierarchy could not be identified. The problem may be the way the dimension was mapped in one of the cubes and may be in the GID column.

Action: If the hierarchy is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the hierarchy is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01218: metadata problem with mapping for hierarchy "<varname>string</varname>"

Cause: Mapping metadata for the hierarchy was incomplete or inconsistent. A mapping for the associated hierarchy could not be identified, possibly because of the way the dimension was mapped in one of the cubes.

Action: If the hierarchy is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the hierarchy is read from the OLAP Catalog, run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01219: metadata problem with mapping for hierarchy "<varname>string</varname>"

Cause: Mapping metadata for the hierarchy was incomplete or inconsistent. The ET column for the associated hierarchy could not be identified.

Action: If the hierarchy is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the hierarchy is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01300: invalid dimension member value "<varname>string</varname>"

Cause: An invalid dimension value was specified as part of an MdmCustomMember.

Action: Check the values passed to the MdmCustomMembers. All dimension members must be in unique value form. The problem could be in the memberValue, the parentValue, an attributeExpression, or the measureExpression.

XOQ-01301: invalid measure expression in MdmCustomMember "<varname>string</varname>"

Cause: A measure expression in an MdmCustomMember was invalid.

Action: Ensure that the measure expression in each MdmCustomMember is valid. Ensure that any square brackets are balanced.

XOQ-01302: query not supported in local value mode

Cause: Some feature of the query required unique value mode to be enabled.

Action: Either enable unique value mode, or rewrite the query to remove any features that depend on unique value mode. MdmCustomMembers require unique value mode.

XOQ-01303: incorrect cube dimensionality

Cause: The metadata that defines the dimensionality of a cube was incorrect.

Action: Check the metadata for the dimensionality of the cubes being queried. Ensure that the number of join columns on the fact table matches the number of join columns on the dimension table.

XOQ-01304: Custom members feature is not supported.

Cause: The query included custom members that could not be processed.

Action: Check if any solved cubes are in GROUPING SET or ROLLUP form in the query. Rewrite them in ET form.

XOQ-01305: invalid model assignment

Cause: The definition of a model assignment was invalid.

Action: Ensure that all assignments are defined so the assigned source does not have a qualified source as an input. The assignment may have been created explicitly, or it may have been created implicitly from a custom member definition.

XOQ-01306: cannot generate cursor manager for MdmValueHierarchy

Cause: A cursor manager could not be created on a query containing an MdmValueHierarchy, because the hierarchy had no LevelExpressions and was not compiled in an analytic workspace.

Action: Either add LevelExpressions to the SolvedValueHierarchyMap of the MdmValueHierarchy, or create a AWPrimaryDimensionOrganization on the hierarchy's MdmPrimaryDimension. Build the dimension using a COMPILE command.

XOQ-01307: Cannot generate MdmCubeMap "<varname>string</varname>" on MdmCube "<varname>string</varname>". The MdmCubeMap contains no MdmCubeDimensionalityMap for dimension "<varname>string</varname>".

Cause: The MdmCubeMap was missing an MdmCubeDimensionalityMap for the specified dimension.

Action: Ensure that the MdmCubeMap has an MdmCubeDimensionalityMap for each dimension of the MdmCube.

XOQ-01308: Primary dimension "<varname>string</varname>" on cube "<varname>string</varname>" has multiple dimension levels but no hierarchy.

Cause: A PrimaryDimension had more than one DimensionLevel, but no hierarchies and no MemberListMap.

Action: Add a Hierarchy or MemberListMap to the PrimaryDimension.

XOQ-01400: invalid metadata objects

Cause: One or more Mdm or Mtm metadata objects was invalid. A list of the invalid objects follows this error.

Action: Examine the list of invalid metadata objects and correct the errors reported for each object. For objects created or modified using the OLAP Metadata API, make the necessary changes on the client. For objects created from the OLAP Catalog, either modify the metadata tables or modify the Mdm and Mtm objects using the OLAP Metadata API.

XOQ-01401: validation error

Cause: An error occurred while validating an Mdm or Mtm metadata object, but the cause of the error could not be determined.

Action: Check the metadata object and its dependencies for inconsistencies.

XOQ-01411: attribute mapping not defined for hierarchy "<varname>string</varname>")"

Cause: An MtmAttributeMap had no mapping for a requested MtmDimensionMap, and it had no default value.

Action: Use the OLAP Metadata API to create an expression that provides the attribute value for the required MtmDimensionMap. Add it to the MtmAttributeMap as a mapping for the given MtmDimensionMap. If the attribute is read from the OLAP Catalog, then correct the attribute mapping in the OLAP Catalog tables.

XOQ-01421: A hierarchy must contain at least one level.

Cause: An MdmHierarchy was defined without any levels.

Action: Add a level to the requested MdmHierarchy using the OLAP Metadata API. If the hierarchy is read from the OLAP Catalog, then add a level to the hierarchy in the catalog table, or remove the hierarchy from the table if it is no longer relevant.

XOQ-01422: Hierarchy does not match hierarchy map: hierarchy map does not contain level map for "<varname>string</varname>")"

Cause: The levels contained in an MdmHierarchy were inconsistent with the level maps contained in the corresponding MtmHierarchyMap.

Action: Use the OLAP Metadata API to correct the hierarchy or hierarchy map so they are consistent.

XOQ-01423: Hierarchy does not match hierarchy map: hierarchy does not contain level "<varname>string</varname>")"

Cause: The levels contained in an MdmHierarchy are inconsistent with the level maps contained in the corresponding MtmHierarchyMap.

Action: Use the OLAP Metadata API to correct the hierarchy or hierarchy map so they are consistent.

XOQ-01424: Hierarchy must be declared skip-level, because it contains level expressions that can be null.

Cause: One of the MtmLevelMaps of an MdmHierarchy was defined by a level expression that can be null. Hierarchies containing levels with nullable expressions must be declared skip-level.

Action: Either set the MtmHierarchyMap to be skip-level using the OLAP Metadata API, or declare the expression for the MtmLevelMap as not nullable.

XOQ-01431: Primary dimension must have at least one hierarchy.

Cause: An MdmPrimaryDimension was defined without any hierarchies.

Action: Add a hierarchy to the requested MdmPrimaryDimension using the OLAP Metadata API. If the primary dimension is read from the OLAP Catalog, then add a hierarchy to the primary dimension in the catalog table, or remove the primary dimension from the table if it is no longer relevant.

XOQ-01432: Primary dimension and union hierarchy map are inconsistent: union hierarchy map does not contain hierarchy map for "(<varname>string</varname>)".

Cause: The hierarchies contained in an MdmPrimaryDimension were inconsistent with the hierarchy maps contained in the corresponding MtmPrimaryDimensionMap.

Action: Use the OLAP Metadata API to correct the MdmPrimaryDimension or MtmPrimaryDimensionMap so they are consistent.

XOQ-01433: Primary dimension and union hierarchy map are inconsistent: primary dimension does not contain hierarchy "(<varname>string</varname>)".

Cause: The hierarchies contained in an MdmPrimaryDimension were inconsistent with the hierarchy maps contained in the corresponding MtmPrimaryDimensionMap.

Action: Use the OLAP Metadata API to correct the MdmPrimaryDimension or MtmPrimaryDimensionMap so they are consistent.

XOQ-01434: Time dimension must have EndDate and TimeSpan attributes.

Cause: A time dimension did not have an EndDate or a TimeSpan attribute.

Action: Create an EndDate and a TimeSpan attribute using the OLAP Metadata API, and add them to the time dimension using the appropriate functions. If the time dimension already has an EndDate and a TimeSpan attribute, then ensure that they have been added to the time dimension. If the time dimension is read from the OLAP Catalog, then define the EndDate and TimeSpan attributes in the catalog.

XOQ-01441: Measure does not contain cube dimension "(<varname>string</varname>)".

Cause: An MdmMeasure and its associated MtmPartitionedCube contained different sets of dimensions.

Action: Use the OLAP Metadata API to correct the MdmMeasure or the MtmPartitionedCube so they are consistent. If the measure and cube are read from the OLAP Catalog, then ensure that the dimensions are consistent in the catalog.

XOQ-01442: Measure contains dimension "(<varname>string</varname>)", which does not exist on the cube.

Cause: An MdmMeasure and its associated MtmPartitionedCube contained different sets of dimensions.

Action: Use the OLAP Metadata API to correct the MdmMeasure or the MtmPartitionedCube so they are consistent. If the measure and cube are read from the OLAP Catalog, then ensure that the dimensions are consistent in the catalog.

XOQ-01443: Measure contains dimension "<varname>string</varname>", which is not a primary dimension.

Cause: An MdmMeasure referred to dimensions that were not primary dimensions.

Action: Use the OLAP Metadata API to change the MdmMeasure to refer to primary dimensions. If the measure is read from the OLAP Catalog, then change the catalog so the MdmMeasure refers only to primary dimensions.

XOQ-01444: Cube is not partitioned.

Cause: An MtmMeasureMap referred to an MtmBaseCube instead of an MtmPartitionedCube.

Action: Use the OLAP Metadata API to change the MtmMeasureMap to refer to an MtmPartitionedCube. If the measure is read from the OLAP Catalog, then change the catalog so the MtmMeasureMap refers to the MtmPartitionedCube.

XOQ-01445: Measure is not a member of its partitioned cube.

Cause: An MtmMeasureMap referred to an MtmPartitionedCube as its owner, but the MtmPartitionedCube does not include the MtmMeasureMap among its measures.

Action: Use the OLAP Metadata API to add the MtmMeasureMap as a member to its MtmPartitionedCube. If the measure is read from the OLAP Catalog, then correct the catalog so the MtmPartitionedCube refers to the MtmMeasureMap.

XOQ-01446: Measure has no mapping for cube "<varname>string</varname>".

Cause: An MtmMeasureMap contained no mapped expressions for the requested MtmBaseCube, and it did not have a default mapped expression.

Action: Use the OLAP Metadata API to create an expression that provides the measure value for the required MtmBaseCube. Add the expression to the MtmMeasureMap as a mapping for the given MtmBaseCube. If the measure is read from the OLAP Catalog, then correct the measure mapping in the OLAP Catalog tables.

XOQ-01461: Partitioned cube has no base cube for hierarchy combination "<varname>string</varname>".

Cause: A partitioned cube had no base cube for the requested hierarchy combination.

Action: Use the OLAP Metadata API to create a base cube for the required hierarchy combination. If the cube is read from the OLAP Catalog, then add a base cube to the partitioned cube in the OLAP Catalog tables.

XOQ-01462: Partitioned cube does not contain measure "<varname>string</varname>".

Cause: A partitioned cube and one of its base cubes referred to different sets of measure maps.

Action: Use the OLAP Metadata API to add or remove measure maps as necessary to make the partitioned cube consistent with all of its base cubes. If the cube is read from the OLAP Catalog, then correct the cube in the OLAP Catalog tables.

XOQ-01463: Base cube does not contain measure "<varname>string</varname>".

Cause: A partitioned cube and one of its base cubes referred to different sets of measure maps.

Action: Use the OLAP Metadata API to add or remove measure maps as necessary to make the partitioned cube consistent with all of its base cubes. If the cube is read from the OLAP Catalog, then correct the base cube in the OLAP Catalog tables.

XOQ-01464: Partitioned cube does not contain dimension "`(<varname>string</varname>)`".

Cause: A partitioned cube and one of its base cubes referred to different sets of dimension maps.

Action: Use the OLAP Metadata API to add or remove dimension maps as necessary to make the partitioned cube consistent with all of its base cubes. If the cube is read from the OLAP Catalog, then correct its dimensions in the OLAP Catalog tables.

XOQ-01465: Base cube does not contain dimension "`(<varname>string</varname>)`".

Cause: A partitioned cube and one of its base cubes referred to different sets of dimension maps.

Action: Use the OLAP Metadata API to add or remove dimension maps as necessary to make the partitioned cube consistent with all of its base cubes. If the cube is read from the OLAP Catalog, then correct its dimensions in the OLAP Catalog tables.

XOQ-01466: Base cube does not contain dimension for dimensionality "`(<varname>string</varname>)`".

Cause: A base cube's dimensionalities contained a set of dimension maps that was inconsistent with the base cube's set of dimension maps.

Action: Use the OLAP Metadata API to add or remove dimension maps or dimensionalities as necessary to make the sets of dimension maps consistent. If the cube is read from the OLAP Catalog, then correct its dimensionalities in the OLAP Catalog tables.

XOQ-01467: Base cube does not contain dimensionality for dimension "`(<varname>string</varname>)`".

Cause: A base cube's dimensionalities contained a set of dimension maps that was inconsistent with the base cube's set of dimension maps.

Action: Use the OLAP Metadata API to add or remove dimension maps or dimensionalities as necessary to make the sets of dimension maps consistent. If the cube is read from the OLAP Catalog, then correct its dimensionalities in the OLAP Catalog tables.

XOQ-01468: Base cube solved status does not match dimensionality "`(<varname>string</varname>)`" solved status.

Cause: A base cube was solved, but one of its dimensionalities was unsolved, or the reverse.

Action: Use the OLAP Metadata API to correct the inconsistency. If the cube is read from the OLAP Catalog, then correct its dimensionalities in the OLAP Catalog tables.

XOQ-01481: Dimension "`(<varname>string</varname>)`" appears in multiple aggregation steps.

Cause: Every dimension in the cube must appear in one and only one aggregation step.

Action: Use the OLAP Metadata API to remove the extraneous aggregation steps from the cube. If the cube is read from the OLAP Catalog, then correct its aggregation specification in the OLAP Catalog tables.

XOQ-01482: no aggregation step found for dimension "<varname>string</varname>")"

Cause: A dimension did not have an aggregation step. Every dimension in the cube must appear in one and only one aggregation step.

Action: Use the OLAP Metadata API to add an appropriate aggregation step to the cube. If the cube is read from the OLAP Catalog, then correct its aggregation specification in the OLAP Catalog tables.

XOQ-01483: Invalid aggregation step for dimension "<varname>string</varname>)": Dimension is not part of the cube.

Cause: An aggregation step referred to a dimension that was not a dimension of the cube.

Action: Use the OLAP Metadata API to remove the extraneous aggregation steps from the cube. If the cube is read from the OLAP Catalog, then correct its aggregation specification in the OLAP Catalog tables.

XOQ-01484: Cannot modify "<varname>string</varname>" while in a branch in a way that invalidates its materialized view.

Cause: A change was attempted in a branch to an object that had an associated materialized view. The change would invalidate that materialized view.

Action: Disable the materialized view on the object before creating the branch.

XOQ-01485: Cannot modify "<varname>string</varname>" in the branch, because its analytic workspace is not in the branch.

Cause: A modification was attempted on an object whose analytic workspace had not been added to the branch.

Action: Add the associated analytic workspace to the branch.

XOQ-01486: Consistent solve has two aggregation steps over dimension "<varname>string</varname>".

Cause: A consistent solve had more than one aggregation steps over the dimension.

Action: Modify the consistent solve to remove or replace one of the aggregation steps.

XOQ-01487: Consistent solve has two precompute models over dimension "<varname>string</varname>".

Cause: A consistent solve had more than one precompute model over the dimension.

Action: Modify the consistent solve to remove or replace one of the precompute models.

XOQ-01488: Consistent solve has two dynamic models over dimension "<varname>string</varname>".

Cause: A consistent solve had more than one dynamic model over the dimension.

Action: Modify the consistent solve to remove or replace one of the dynamic models.

XOQ-01489: Consistent solve has a model "<varname>string</varname>" with invalid explicit dimension "<varname>string</varname>".

Cause: An explicit dimension of a model in a consistent solve was not a dimension of the cube and measure.

Action: Modify the consistent solve to remove or replace this model.

XOQ-01490: Consistent solve has a model "<varname>string</varname>" with invalid base dimension "<varname>string</varname>".

Cause: The base dimension of a model in a consistent solve was not a dimension of the cube and measure.

Action: Modify the consistent solve to remove or replace this model.

XOQ-01491: Consistent solve has an invalid aggregation step over dimension "<varname>string</varname>".

Cause: The aggregation step for a consistent solve was not over a dimension of the cube and measure.

Action: Modify the consistent solve to remove or replace this aggregation step.

XOQ-01492: invalid order of steps for consistent solve

Cause: A consistent solve did not list precompute models first, then aggregation steps, and dynamic models last.

Action: Reorder the steps in the consistent solve or remove some of the steps.

XOQ-01493: Invalid specification for dimension "<varname>string</varname>" in precompute condition for cube "<varname>string</varname>"

Cause: The precompute condition contained an invalid specification. When a precompute percent is also specified, the precompute condition can specify only that the last dimensions in the cube's consistent solve specification are not precomputed.

Action: Remove the cube's precompute condition or precompute percent, or rewrite the cube's precompute condition so that it specifies only NONE for dimensions at the end of the cube's consistent solve specification.

XOQ-01494: invalid target dimension or attribute "<varname>string</varname>"

Cause: The attribute and its target dimension or attribute were in different analytic workspaces.

Action: Remove the attribute's target, or specify a target dimension or attribute that is in the same analytic workspace.

XOQ-01495: cannot specify both a target attribute "<varname>string</varname>" and a target dimension "<varname>string</varname>"

Cause: The attribute has both a target dimension and a target attribute.

Action: Remove either the attribute's target dimension or its target attribute.

XOQ-01496: loaded data incompatible with data type "<varname>string</varname>"

Cause: A data type change could not be made because data loaded for the object could not be represented by the data type.

Action: Clear the data prior to making the data type change.

XOQ-01497: Data type "<varname>string</varname>" is not allowed for an indexed attribute.

Cause: An invalid data type was specified for an indexed attribute.

Action: Either change the data type or set CreateIndex to False, set PopulateLineage to False, remove any target attributes or target dimensions from the attribute, and remove the attribute from the list of UniqueKeyAttributes in all dimension levels.

XOQ-01498: Calculation model "<varname>string</varname>" specifies invalid explicit dimension "<varname>string</varname>".

Cause: A dimension calculation model specified the owning dimension as an explicit dimension.

Action: Remove the owning dimension from the calculation model's explicit dimensions.

XOQ-01499: Measure folder "<varname>string</varname>" cannot appear twice in a sequence of nested folders.

Cause: A measure folder was nested under itself as a subfolder.

Action: Remove the nested subfolder.

XOQ-01502: Consistent solve cannot vary the aggregation method of dimension "<varname>string</varname>" during aggregation.

Cause: The OVER clause specified the same dimension as either the AGGREGATE USING DIMENSION clause or the dimension of the attribute in the AGGREGATE USING ATTRIBUTE clause.

Action: Specify different dimensions in the OVER clause and the DIMENSION clause or ensure that the dimension in the OVER clause is not the dimension of the attribute in the ATTRIBUTE clause.

XOQ-01503: Consistent solve cannot vary the aggregation method because "<varname>string</varname>" is not a dimension or dimension attribute of the cube.

Cause: An attempt was made to vary aggregation methods by a dimension or attribute of a dimension not in the cube.

Action: Specify the aggregation methods by measure, dimension or indexed attribute of a dimension that is used in the cube.

XOQ-01504: The hierarchy level "<varname>string</varname>" is mapped to a constant but the level is not the top of the hierarchy.

Cause: A lower hierarchy level was mapped to a constant.

Action: Remap all lower levels to variable expressions.

XOQ-01600: XOQ-01600: OLAP DML error while executing DML "<varname>string</varname>"\n<varname>string</varname>

Cause: An OLAP DML expression in an analytic workspace failed.

Action: This is an unexpected error. Examine the rest of the error stack for more details.

XOQ-01601: error while loading data for <varname>string</varname> "<varname>string</varname>" into the analytic workspace

Cause: An error occurred while executing a generated SQL statement and loading the result into the analytic workspace. The error could be caused by bad SQL or bad data.

Action: Examine the rest of the error stack for more details. If build logging is enabled, the SQL will be displayed in the OUTPUT column of the cube build log.

XOQ-01700: Cube "<varname>string</varname>" is not part of an analytic workspace.

Cause: The cube was not built because it was not deployed in an analytic workspace.

Action: Remove the cube from the list of objects in the build process, or deploy the cube in an analytic workspace.

XOQ-01701: Dimension "<varname>string</varname>" is not part of an analytic workspace.

Cause: The dimension was not built because it is not deployed in an analytic workspace.

Action: Remove the dimension from the list of objects in the build process, or deploy the dimension in an analytic workspace.

XOQ-01702: Objects from multiple analytic workspaces cannot be built in a single process.

Cause: A single build process contained objects from more than one analytic workspace.

Action: Change the build process to include objects in only a single analytic workspace.

XOQ-01703: error during parse of build process script: "<varname>string</varname>", "<varname>string</varname>"

Cause: The current build process failed because of an error in the build script.

Action: Correct the error in the script.

XOQ-01704: unknown model "<varname>string</varname>"

Cause: The current build process failed because the model in the build script does not exist.

Action: Change the build script to refer to an actual model.

XOQ-01705: CLEAR command cannot run on a dimension.

Cause: A CLEAR command is in a build specification for a dimension.

Action: Remove the CLEAR command.

XOQ-01706: An unexpected condition occurred during the build: "<varname>string</varname>"

Cause: An internal error occurred during the build.

Action: Report this error to Oracle Support Services.

XOQ-01707: Oracle job "<varname>string</varname>" failed while executing slave build "<varname>string</varname>" with error "<varname>string</varname>"

Cause: A build job spawned by the current process failed.

Action: Examine the trace file for the slave build to determine the cause of the failure.

XOQ-01708: SOLVE command cannot run on a dimension.

Cause: A SOLVE command was in a build specification for a dimension.

Action: Remove the SOLVE command.

XOQ-01709: <varname>string</varname> command cannot run on a cube.

Cause: An invalid build command was in a build specification for a cube.

Action: Remove the invalid build command.

XOQ-01710: unknown build item "<varname>string</varname>"

Cause: A build item was not a cube or a dimension.

Action: Check the list of build items to ensure that they are all valid.

XOQ-01711: Aggregation path for hierarchies on dimension "<varname>string</varname>" is inconsistent.

Cause: The definition of parents was ambiguous among hierarchies, or a loop was defined within a hierarchy.

Action: Fix the mappings or delete the hierarchies.

XOQ-01712: "<varname>string</varname>" failed validation as a level hierarchy.

Cause: A member of the hierarchy had one of these problems: 1) The member's level was not part of the hierarchy. 2) The member's parent was at the same or a lower level of the hierarchy.

Action: Redefine the hierarchy as a value hierarchy or fix the level mappings.

XOQ-01713: "<varname>string</varname>" failed validation as a non-skip-level hierarchy.

Cause: A member of the hierarchy had one of these problems: 1) The member had no parent but was not in the top level of the hierarchy. 2) The member's parent was two or more levels above in the hierarchy.

Action: Mark the hierarchy as a skip-level hierarchy or fix the level mappings.

XOQ-01714: "<varname>string</varname>" failed validation as a non-ragged hierarchy.

Cause: A member of the hierarchy had no children but was not in the lowest level of the hierarchy.

Action: Mark the hierarchy as a ragged hierarchy or fix the level mappings.

XOQ-01715: Hierarchy "<varname>string</varname>" has no members for some levels.

Cause: No members existed for some levels defining this hierarchy.

Action: Fix the mappings or the hierarchy definition.

XOQ-01716: Definition of a hierarchy "<varname>string</varname>" does not allow raggedness.

Cause: Leaf members of a hierarchy were on different levels.

Action: Fix the mappings or the hierarchy definition.

XOQ-01717: illegal parent for calculated member "<varname>string</varname>"

Cause: The parent for this member was not a member of a dimension or hierarchy.

Action: Fix the calculated member parent data.

XOQ-01718: A calculated member "<varname>string</varname>" and its parent have inconsistent level definitions.

Cause: Levels of a calculated member and its parent are inconsistent with the current hierarchy.

Action: Fix level data for a calculated member or its parent.

XOQ-01719: incorrect level for a calculated member "<varname>string</varname>"

Cause: The level of a calculated member was invalid, or it was not in this hierarchy level.

Action: Fix the level data for the calculated member.

XOQ-01720: Calculated members in hierarchy "%(1)" cannot be organized.

Cause: A loop existed among calculated members.

Action: Fix the parent data for calculated members to remove the loop.

XOQ-01721: ValueHierarchy "<varname>string</varname>" does not have unique keys.

Cause: AddUniqueKeyPrefix was set to True on an AWPPrimaryDimensionOrganization, and a load was attempted on a ValueHierarchy.

Action: Do one of the following: 1) Perform the load on DimensionLevels. 2) If the keys are in fact unique, then set AddUniqueKeyPrefix on the AWPPrimaryDimensionOrganization to False.

XOQ-01722: Cube "<varname>string</varname>" mapping to "<varname>string</varname>" is invalid. Cubes must map to DimensionLevels for PrimaryDimensions whose keys are not unique.

Cause: AddUniqueKeyPrefix was set to True on an AWPPrimaryDimensionOrganization, and a cube was not mapped to a DimensionLevel.

Action: Either map the cube to a DimensionLevel or, if the keys are in fact unique, set AddUniqueKeyPrefix on the AWPPrimaryDimensionOrganization to False.

XOQ-01723: CLEAR AGGREGATES command cannot run within a FOR...BUILD group.

Cause: A CLEAR AGGREGATES command was found within a FOR...BUILD group as part of a build.

Action: Change the command to CLEAR VALUES or remove it from the FOR...BUILD group.

XOQ-01724: invalid USING clause

Cause: An invalid USING clause was specified on a cube or cube dimension with an associated materialized view.

Action: Specify a valid USING clause or omit the USING clause.

XOQ-01725: unknown named build specification "<varname>string</varname>"

Cause: A USING clause specified an unknown named build specification."

Action: Ensure that the name in the USING clause is correct.

XOQ-01726: The partition dimension "<varname>string</varname>" in cube "<varname>string</varname>" is missing an ET view.

Cause: The partition dimension was missing an embedded totals view. This may have been caused by using EIF import to create the analytic workspace."

Action: Ensure that the partition dimension has an ET view.

XOQ-01727: Specified refresh method "<varname>string</varname>" is invalid.

Cause: An invalid refresh method was specified for a build.

Action: Specify a valid refresh method.

XOQ-01728: Atomic refresh is not supported.

Cause: Multiple objects were specified in the build script, or the add_dimensions flag was set to true. Atomic refresh is not supported for builds involving two or more cube materialized views.

Action: Specify the atomic parameter as false, or build the objects individually.

XOQ-01729: Explicit SCN build is not allowed.

Cause: A build involving cube materialized views specified AS OF SCN for a build.

Action: Remove explicit SCN from the build script.

XOQ-01730: Refresh method "<varname>string</varname>" requires a suitable materialized view.

Cause: The cube was not associated with a FAST or REWRITE materialized view, as required by the specified refresh method.

Action: Change the refresh method or the type of materialized view associated with the cube.

XOQ-01731: Atomic build is not supported in a branch.

Cause: An atomic build was requested while there was an active branch in the session.

Action: Either run the build without the atomic setting or close the branch.

XOQ-01732: Object "<varname>string</varname>" cannot build in a branch because it has a materialized view.

Cause: A build was attempted in a branch on an object that has an associated materialized view.

Action: Turn off the materialized view on the object before creation of a branch.

XOQ-01733: Invalid cube map "<varname>string</varname>" is specified in a LOAD command.

Cause: A FROM clause was specified in a LOAD command that does not correspond to any cube map in the build cube.

Action: Remove the FROM clause or specify a valid cube map.

XOQ-01734: Time dimension "<varname>string</varname>" is specified in a COMPILE command, but attribute "<varname>string</varname>" on level "<varname>string</varname>" has no mapping.

Cause: One of the following attributes was specified but not mapped: END_DATE, START_DATE, or TIMESPAN.

Action: Define a mapping for the unmapped attribute.

XOQ-01735: Cube cannot be refreshed because dimension "<varname>string</varname>" is stale.

Cause: An attempt was made to refresh a cube with a materialized view when one of the cube's dimensions has a stale materialized view.

Action: Refresh the dimension's materialized view before refreshing the cube.

XOQ-01736: Cube "<varname>string</varname>" cannot be aggregated because it is compressed.

Cause: An attempt was made to run a nonconsistent solve aggregation on a compressed cube. This is not supported.

Action: Redefine the cube to be noncompressed or do not attempt to run the aggregation.

XOQ-01737: FAST_SOLVE cannot be used to build cube "<varname>string</varname>". Build must use COMPLETE.

Cause: An attempt was made to use FAST_SOLVE build on a cube that must use a COMPLETE build (for example, an initial build).

Action: Use a FORCE or a COMPLETE build on the cube.

XOQ-01738: Level of dimension member "<varname>string</varname>" cannot change from "<varname>string</varname>" to "<varname>string</varname>" within a single load.

Cause: A dimension member was mapped to more than one level.

Action: Change the mapping so each dimension member is mapped to only one level.

XOQ-01739: Unknown or invalid measure "<varname>string</varname>" is specified in an assignment.

Cause: The target of an assignment was specified as a measure that was not part of the cube being built.

Action: Specify a valid measure of the cube as the assignment target.

XOQ-01740: Unknown or invalid dimension "<varname>string</varname>" is specified in an assignment.

Cause: The target of an assignment was qualified by a dimension that was not part of the cube or attribute being built.

Action: Specify a valid dimension of the cube or attribute.

XOQ-01741: unsupported assignment qualification for dimension "<varname>string</varname>"

Cause: The target of an assignment was qualified by something other than a literal text value.

Action: Specify a literal text value for the qualified dimension member.

XOQ-01742: NO COMMIT option cannot be specified on build "<varname>string</varname>"

Cause: The NO COMMIT option was specified on a build that includes cubes backed by materialized views or that has non zero parallelism.

Action: Do not specify the NO COMMIT option for this build.

XOQ-01743: Cannot apply automatic order because circular dependency exists between build objects "<varname>string</varname>" and "<varname>string</varname>"

Cause: The build objects contained two or more metadata objects that depend on each other.

Action: Either do not specify automatic order, or remove one of the properties that cause the circular dependency.

XOQ-01744: The LOAD PRUNE command cannot be used with cube "<varname>string</varname>"

Cause: A build specification contained a LOAD PRUNE command for a cube that did not support the PRUNE option. To be compatible with the LOAD PRUNE command, a cube must have exactly one CubeMap; the CubeMap must contain a CubeDimensionalityMap for the partition dimension; the CubeDimensionalityMap for the partition dimension must specify a MappedDimension; and the MappedDimension object must contain a DimensionMap.

Action: Remove the PRUNE option from the LOAD command.

XOQ-01745: Unknown or invalid hierarchy "<varname>string</varname>" is specified in a maintain dimension command.

Cause: The hierarchy specified in a maintain dimension command was not part of the dimension being built.

Action: Specify a valid hierarchy of the dimension in the maintain dimension command.

XOQ-01746: Unknown or invalid level "<varname>string</varname>" is specified in a maintain dimension command.

Cause: The level specified in a maintain dimension command was not part of the dimension being built.

Action: Specify a valid level of the dimension in the maintain dimension command.

XOQ-01747: Dimension member "<varname>string</varname>" is not a valid member of dimension "<varname>string</varname>"

Cause: The member specified in the maintain dimension command was not a valid member of the dimension.

Action: Specify a valid member in the maintain dimension command.

XOQ-01748: Dimension member "<varname>string</varname>" is already a member of dimension "<varname>string</varname>".

Cause: The member specified in the dimension insert command was already a member of the dimension.

Action: Change the dimension insert command to a dimension merge command.

XOQ-01749: Dimension member "<varname>string</varname>" is not a member of dimension "<varname>string</varname>".

Cause: The member specified in the dimension update or dimension delete command was not a member of the dimension.

Action: Specify an existing member of the dimension in the dimension update or dimension delete command.

XOQ-01750: Dimension member "<varname>string</varname>" is already a member of hierarchy "<varname>string</varname>".

Cause: The member specified in the dimension insert command was already a member of the hierarchy.

Action: Change the dimension insert command to a dimension merge command.

XOQ-01751: Dimension member "<varname>string</varname>" is not a member of hierarchy "<varname>string</varname>".

Cause: The member specified in the dimension update or dimension delete command was not a member of the hierarchy.

Action: Specify an existing member of the hierarchy in the dimension update or dimension delete command.

XOQ-01752: Member "<varname>string</varname>" appears both in level "<varname>string</varname>" and in level "<varname>string</varname>" of dimension "<varname>string</varname>".

Cause: A modification to a dimension member was attempted that would cause the member to belong to two different levels.

Action: Change the maintain dimension command to modify the level of all hierarchies to which the dimension member belongs.

XOQ-01753: Unknown or invalid attribute "<varname>string</varname>" is specified in an assignment.

Cause: The target of an assignment was specified as an attribute that was not part of the dimension being built.

Action: Specify a valid attribute of the dimension as the assignment target.

XOQ-01754: SOLVE command cannot run on a subset of cube measures when sparse type is COMPRESSED and measure storage is INDEPENDENT.

Cause: The build specification contains a partial list of cube measures with COMPRESSED cube sparsity and INDEPENDENT measure storage.

Action: Correct the build specification in one of these ways: Remove the SOLVE command, list all measures of the cube, or build the entire cube.

XOQ-01755: Dimension member "<varname>string</varname>" requires a prefix to be created in dimension "<varname>string</varname>".

Cause: The AddUniqueKeyPrefix option was turned on, but the member name did not have a valid prefix.

Action: Turn off AddUniqueKeyPrefix or specify the member name with a valid prefix: the level name if the member is added to a level, or an underscore if it is not.

XOQ-01756: Member "<varname>string</varname>" appears inconsistently in level "<varname>string</varname>" across hierarchies of dimension "<varname>string</varname>".

Cause: A modification to a dimension member was attempted that would cause the member to belong to multiple hierarchies at different levels.

Action: Change the maintain dimension command to modify the level of all hierarchies to which the dimension member belongs.

XOQ-01757: Dimension "<varname>string</varname>" does not belong to build cube "<varname>string</varname>".

Cause: The specified dimension in the build script did not belong to the build cube.

Action: Specify dimensions that belong to the build cube.

XOQ-01758: Measure "<varname>string</varname>" does not belong to build cube "<varname>string</varname>".

Cause: The specified measure in the build script did not belong to the build cube.

Action: Specify measures that belong to the build cube.

XOQ-01799: unspecified error

Cause: A mismatch existed between the C++ and the OLAP DML versions of the code.

Action: Verify the installation of the product.

XOQ-01800: ALTER privilege is required on object "<varname>string</varname>" in schema "<varname>string</varname>".

Cause: An attempt was made to modify a metadata object without having the ALTER privilege on that object.

Action: Request the ALTER privilege on the object from the DBA.

XOQ-01801: CREATE privilege is required for object "<varname>string</varname>" in schema "<varname>string</varname>".

Cause: An attempt was made to create a new metadata object without the necessary privileges.

Action: Request the CREATE ANY privilege to create the object in any schema or the CREATE privilege to create it only in your own schema.

XOQ-01802: DROP privilege is required for object "<varname>string</varname>" in schema "<varname>string</varname>".

Cause: An attempt was made to delete a metadata object without the DROP privilege on that object.

Action: Request the DROP privilege on the object from the DBA.

XOQ-01803: SELECT privilege is required for object "<varname>string</varname>" in schema "<varname>string</varname>".

Cause: An attempt was made to read a metadata object without the SELECT privilege on that object.

Action: Request the SELECT privilege on the object from the DBA.

XOQ-01900: The dimension level has invalid or no unique key attributes.

Cause: The dimension level had an associated materialized view, but it had no unique key attributes.

Action: Create at least one unique key attribute.

XOQ-01901: No measures or dimensionalities are in the cube.

Cause: Measures and dimensionalities were not added to the cube.

Action: Add at least one measure or dimensionality to the cube.

XOQ-01902: No analytic workspace is specified in the analytic workspace primary dimension organization.

Cause: An analytic workspace was not added to the analytic workspace primary dimension organization.

Action: Add an analytic workspace to the analytic workspace primary dimension organization.

XOQ-01903: The unique key attribute has no corresponding base attribute.

Cause: A dimension level whose primary dimension had an associated materialized view contained a unique key attribute that did not have an associated base attribute.

Action: Create a base attribute that corresponds to the unique key attribute.

XOQ-01904: The dimension level has no base attributes.

Cause: A dimension level whose primary dimension had an associated materialized view did not have base attributes.

Action: Create base attributes that correspond to the unique key attributes of the dimension level.

XOQ-01905: GenerateRefreshMV is not specified in AWCubeOrganization.

Cause: The AWCubeOrganization was not marked for a refresh materialized view, but it was marked for rewrite materialized view.

Action: Set GenerateRefreshMV on the AWCubeOrganization if it has been marked for GenerateRewriteMV.

XOQ-01906: The analytic workspace referenced by the AWCubeOrganization does not match that of analytic workspace primary dimension organization "<varname>string</varname>".

Cause: The analytic workspace referred to by the AWCubeOrganization did not match that of its corresponding analytic workspace primary dimension organization.

Action: Set the analytic workspace of the AWCubeOrganization to match that of its corresponding analytic workspace primary dimension organization.

XOQ-01907: The AWCubeOrganization is marked for GenerateRefreshMV, but analytic workspace primary dimension organization "<varname>string</varname>" is not.

Cause: The AWCubeOrganization was marked for GenerateRefreshMV.

Action: If the AWCubeOrganization is marked for GenerateRefreshMV, then mark the analytic workspace primary dimension organization also.

XOQ-01908: The cube has no dimensionalities.

Cause: The AWCubeOrganization was marked for GenerateRefreshMV, but there were no dimensionalities.

Action: Add dimensionalities to the cube and mark the analytic workspace primary dimension organization for GenerateRefreshMV.

XOQ-01909: The hierarchy level has an invalid or no associated dimension level.

Cause: Either a dimension level was not created on the primary dimension, or the primary dimension on the dimension level was not the same as the primary dimension on the hierarchy.

Action: Assure that the hierarchy level is associated with exactly one dimension level in the same primary dimension.

XOQ-01910: The level hierarchy has no hierarchy levels.

Cause: Hierarchy levels were not created on the level hierarchy.

Action: Create at least one level for the hierarchy.

XOQ-01911: The specified default hierarchy does not exist.

Cause: A default hierarchy was specified, but it was not created.

Action: Create a hierarchy on the primary dimension, then set it as the default hierarchy.

XOQ-01912: The cube has no organization.

Cause: Neither an AWCubeOrganization nor a ROLAP cube organization existed on the cube.

Action: Create either an AWCubeOrganization or ROLAP cube organization on the cube.

XOQ-01913: The base measure has an invalid or no data type specified.

Cause: A SQL data type on the base measure was either not specified or invalid.

Action: Create a valid SQL data type on the base measure.

XOQ-01914: The primary dimension has no organization.

Cause: Neither an analytic workspace primary dimension organization nor a ROLAP primary dimension organization existed on the primary dimension.

Action: Create either an analytic workspace primary dimension organization or ROLAP primary dimension organization on the primary dimension.

XOQ-01915: The hierarchy level has no hierarchy level map.

Cause: A hierarchy level map did not exist on the hierarchy level.

Action: Create a hierarchy level map for the hierarchy levels of dimensions with associated materialized views.

XOQ-01916: The AWCubeOrganization has no analytic workspace.

Cause: An analytic workspace was not specified for the AWCubeOrganization.

Action: Create an analytic workspace for AWCubeOrganization in which the cube will be deployed.

XOQ-01917: The base attribute has an invalid or no data type specified.

Cause: A SQL data type on the base attribute was either not specified or invalid.

Action: Create a valid SQL data type on the base attribute.

XOQ-01918: The sparse type must be COMPRESSED when the AWCubeOrganization is marked for GenerateRefreshMV.

Cause: When the AWCubeOrganization was marked for GenerateRefreshMV, the sparse type was not COMPRESSED.

Action: Set the sparse type to COMPRESSED on the AWCubeOrganization.

XOQ-01919: The sparse dimensions of the AWCubeOrganization must contain all dimensions or none.

Cause: The sparse dimensions did not contain either all dimensions or none, although the AWCubeOrganization was marked for GenerateRefreshMV.

Action: Set sparse dimensions on the AWCubeOrganization to include all the dimensions or none.

XOQ-01920: Sparse dimensions of the AWCubeOrganization must be specified with a subset of the cube dimensionalities.

Cause: The sparse dimensions did not specify a subset of the cube dimensionalities, although the AWCubeOrganization was not marked for GenerateRefreshMV.

Action: Set sparse dimensions on the AWCubeOrganization to include a subset of the cube dimensionalities.

XOQ-01921: The dimensionality does not reference a primary dimension.

Cause: A primary dimension was not specified on the dimensionality.

Action: Set the primary dimension on the dimensionality.

XOQ-01922: The dimension referenced in dimensionality "<varname>string</varname>" is specified more than once in this cube.

Cause: Duplicate dimensions were specified in the dimensionality of the cube.

Action: Remove duplicate dimensionality specifications.

XOQ-01923: Assignment "<varname>string</varname>" has no member expression and does not correspond to a custom member.

Cause: An expression or a custom member was missing in the assignment.

Action: Specify an expression for the assignment, or check that its name corresponds to a known custom member.

XOQ-01924: Custom member "<varname>string</varname>" has no member expression.

Cause: An expression was missing in the custom member.

Action: Specify an expression for the custom member.

XOQ-01925: PrecomputePercent cannot be used with this cube.

Cause: PrecomputePercent can be used only with a compressed cube.

Action: Remove the PrecomputePercent property from this cube.

XOQ-01926: PrecomputePercentTop cannot be used with this cube.

Cause: PrecomputePercentTop can be used only with a compressed partitioned cube.

Action: Remove the PrecomputePercentTop property from this cube.

XOQ-01927: invalid PrecomputePercent value

Cause: PrecomputePercent value was not in the valid range. A PrecomputePercent value must be between 0 and 100, and if the cube has a secondary partition level then the PrecomputePercent value cannot be 0.

Action: Change the PrecomputePercent value.

XOQ-01928: invalid PrecomputePercentTop value

Cause: PrecomputePercentTop value was not in the valid range between 0 and 100.

Action: Change the PrecomputePercentTop value.

XOQ-01929: incompatible values for PrecomputePercent and PrecomputePercentTop

Cause: A PrecomputePercentTop value can be greater than 0 only when the PrecomputePercent value is greater than 0.

Action: Change the PrecomputePercent value or the PrecomputePercentTop value.

XOQ-01930: The cube dimensionality map has no mapped dimension.

Cause: A mapped dimension was not specified for the cube dimensionality map.

Action: Specify a mapped dimension on the cube dimensionality map. The mapped dimension must be the dimension or hierarchy level that corresponds to the mapped data.

XOQ-01931: MeasureStorage is incompatible with MVOption.

Cause: MeasureStorage was defined as SHARED.

Action: Specify MeasureStorage as INDEPENDENT.

XOQ-01932: NullStorage is incompatible with MVOption.

Cause: NullStorage was defined as GENERIC.

Action: Specify NullStorage as MV_READY.

XOQ-01933: invalid list of sparse dimensions

Cause: List of sparse dimensions was not contiguous among all cube dimensions.

Action: Change the order of the cube dimensions.

XOQ-01934: Sparse dimensions are not last.

Cause: Sparse dimensions were not last in the list cube dimensions, as required for compressed cubes.

Action: Change the order of the cube dimensions.

XOQ-01935: invalid definition of SPARSE_GLOBAL cube

Cause: SPARSE_GLOBAL cube must have at least two dimensions, at least one sparse dimension, and partitions.

Action: Change the definition of the cube.

XOQ-01936: invalid partition dimension for SPARSE_GLOBAL cube

Cause: SPARSE_GLOBAL cube cannot have a sparse partition dimension.

Action: Change the definition of the cube.

XOQ-01937: incompatible HierarchyConsistencyRule and MVOption

Cause: HierarchyConsistencyRule must be set to STAR_CONSISTENT for this MVOption.

Action: Change the HierarchyConsistencyRule.

XOQ-01938: PrecomputeCondition cannot be used with this cube.

Cause: PrecomputeCondition was used with a compressed cube, but it requires an uncompressed cube.

Action: Remove PrecomputeCondition property from this cube.

XOQ-01939: MappedDimension "<varname>string</varname>" specified for a CubeDimensionalityMap is not mapped.

Cause: The MappedDimension property of a CubeDimensionalityMap pointed to a dimension that was not mapped.

Action: Change the MappedDimension property to reference a dimension that is mapped, or add a map to the current MappedDimension. For example, if MappedDimension points to a DimensionLevel, then the DimensionLevel must contain a MemberListMap.

XOQ-01940: BaseAttribute "<varname>string</varname>" is specified on a DimensionLevel as both a UniqueKeyAttribute and a VisibleAttribute.

Cause: A BaseAttribute on a DimensionLevel can be specified as either a UniqueKeyAttribute or a VisibleAttribute, but not both.

Action: Remove either the Visible or the UniqueKey setting for the attribute.

XOQ-01941: The HierarchyLevelMap for HierarchyLevel "<varname>string</varname>" must contain a KeyExpression and a Query.

Cause: HierarchyLevelMap missing a KeyExpression, Query, or both.

Action: Specify a KeyExpression and Query for the HierarchyLevelMap.

XOQ-01942: A BaseAttribute cannot be removed while it is a UniqueKeyAttribute on DimensionLevel "<varname>string</varname>"

Cause: The BaseAttribute is a UniqueKeyAttribute of a DimensionLevel.

Action: Remove the attribute as a UniqueKeyAttribute.

XOQ-01943: An AttributeMap refers to a nonexistent attribute.

Cause: An AttributeMap referred to a nonexistent attribute.

Action: Ensure all AttributeMaps point to an existing attribute.

XOQ-01944: BaseAttribute "<varname>string</varname>" already exists on this dimension object.

Cause: A BaseAttribute was added to a dimension object more than once.

Action: Do not add the same BaseAttribute to a dimension object.

XOQ-01945: The cube dimensionality map has no join condition.

Cause: A join condition was not specified for the CubeDimensionalityMap.

Action: Specify a join condition on the cube dimensionality map.

XOQ-01946: BaseAttribute "<varname>string</varname>" is mapped by more than one attribute map.

Cause: A BaseAttribute was mapped more than once.

Action: Do not map the same BaseAttribute more than once.

XOQ-01947: Measure "<varname>string</varname>" is mapped by more than one MeasureMap.

Cause: A measure was mapped more than once.

Action: Do not map the same measure more than once.

XOQ-01948: CubeDimensionality "<varname>string</varname>" is mapped by more than one CubeDimensionalityMap.

Cause: A cube dimensionality was mapped more than once.

Action: Do not map the same cube dimensionality more than once.

XOQ-01949: The AWCubeOrganization for cube "<varname>string</varname>" is marked as DENSE but contains SPARSE dimensions.

Cause: The AWCubeOrganization was marked as DENSE but contained SPARSE dimensions.

Action: Either mark the cube as SPARSE, or remove the SPARSE dimensions.

XOQ-01950: The AWCubeOrganization for cube "<varname>string</varname>" contains multiple BuildSpecifications with the same name.

Cause: The AWCubeOrganization contains multiple BuildSpecifications with the same name.

Action: Ensure all BuildSpecifications on an AWCubeOrganization are named uniquely.

XOQ-01951: A time dimension requires at least two of the following attributes: END_DATE, START_DATE and TIMESPAN.

Cause: A time dimension was created without the required attributes.

Action: Add the required attributes and mark them as the appropriate type.

XOQ-01952: The CubeMap for cube "<varname>string</varname>" must contain either a query or a From clause.

Cause: The CubeMap did not have a query or From clause.

Action: Specify a query or From clause for the CubeMap.

XOQ-01953: cannot commit changes to CWM or AWMXML metadata

Cause: The transaction contained changes to metadata objects stored in CWM or AWMXML format.

Action: Use the DBMS_CUBE.UPGRADE function to upgrade the metadata objects to a format that supports changes.

XOQ-01954: Object cannot be renamed to "<varname>string</varname>" because that name is already being used by an existing object.

Cause: The transaction attempted to change an object name to a name that was already taken.

Action: Change the object name to a different name and commit the transaction again.

XOQ-01955: Cannot rename object to "<varname>string</varname>" because that name is invalid.

Cause: The transaction attempted to change an object name to a name that was either too long or contained invalid characters.

Action: Change the object name to a different name, and commit the transaction again.

XOQ-01956: The object cannot be renamed.

Cause: The transaction attempted to change the name of a database object such as a table or a column. This object cannot be renamed through the OLAP API client. It must be renamed with a DDL statement such as RENAME or ALTER TABLE.

Action: Restore the object name to its previous value or rollback the transaction containing the rename. Then use an appropriate DDL statement to rename the object.

XOQ-01957: A cube cannot have both rewrite materialized views and either a ragged or a skip-level hierarchy. The hierarchy is "<varname>string</varname>".

Cause: The cube had rewrite materialized views and either a ragged or a skip-level hierarchy.

Action: Either mark the cube to exclude rewrite materialized views, or adjust the hierarchy so it is neither ragged nor skip-level.

XOQ-01958: The derived measure has an invalid data type or no data type.

Cause: Either a valid SQL data type was not specified on the derived measure, or the data type could not be derived from the expression.

Action: Create a valid SQL data type on the derived measure.

XOQ-01959: The derived measure has a missing or invalid expression.

Cause: An expression on the derived measure was either not specified or invalid.

Action: Create a valid expression on the derived measure.

XOQ-01960: Circular dependency exists between <varname>string</varname> "<varname>string</varname>" and <varname>string</varname> "<varname>string</varname>".

Cause: The OLAP API transaction contained two or more metadata objects that depend on each other.

Action: Remove either one or both of the properties that cause the circular dependency.

XOQ-01961: Object <varname>string</varname> "<varname>string</varname>" cannot be dropped while it is still a dependency of <varname>string</varname> "<varname>string</varname>".

Cause: An attempt was made to drop a metadata object that was referenced by another metadata object.

Action: Remove the reference to the metadata object being dropped.

XOQ-01962: Object "<varname>string</varname>" has an invalid name.

Cause: An attempt was made to create an object with a name that was too long or contained invalid characters.

Action: Use a valid name and commit the transaction again.

XOQ-01963: MappedDimension "<varname>string</varname>" does not match CubeDimensionality "<varname>string</varname>" specified for a CubeDimensionalityMap.

Cause: The MappedDimension property of a CubeDimensionalityMap did not point to a dimension or subdimension that had the same dimensionality as the CubeDimensionalityMap.

Action: Change the MappedDimension property to reference a dimension with the same dimensionality as the CubeDimensionalityMap.

XOQ-01964: Cannot drop MappedDimension "<varname>string</varname>" of the CubeDimensionalityMap.

Cause: An attempt was made to drop a dimension that is a MappedDimension of a CubeDimensionalityMap.

Action: Remove the reference to the dimension being dropped from the CubeDimensionalityMap.

XOQ-01965: Missing Cube Dimensionality Map for Cube Dimensionality "<varname>string</varname>".

Cause: A CubeDimensionalityMap was not found for a CubeDimensionality.

Action: Add a CubeDimensionalityMap for the CubeDimensionality.

XOQ-01966: Cannot drop PartitionLevel "<varname>string</varname>" of AWCubeOrganization.

Cause: An attempt was made to drop a dimension that is a PartitionLevel of an AWCubeOrganization Map.

Action: Remove the reference to the dimension being dropped from the AWCubeOrganization.

XOQ-01967: Attribute "<varname>string</varname>" is invalid.

Cause: An attempt was made to commit a dimension with an invalid attribute.

Action: Correct the attribute or delete it from the dimension.

XOQ-01968: UniqueKey attribute "<varname>string</varname>" has an invalid multilingual flag set.

Cause: The attribute had the multilingual flag set. An attribute cannot have this flag set and be a unique key.

Action: Remove this flag on the attribute or do not make the attribute a unique key.

XOQ-01969: Attribute cannot be both multilingual and indexed.

Cause: An indexed attribute had the multilingual flag set.

Action: Unset the createIndex flag on the analytic workspace attribute organization or unset the populate lineage flag on the attribute.

XOQ-01970: Attribute "<varname>string</varname>" has no attribute map.

Cause: The attribute had no corresponding attribute map on the hierarchy level.

Action: Create an attribute map on the attribute.

XOQ-01971: A dependency cannot be added on the organizationalSchema to the cube because measure "<varname>string</varname>" is invalid.

Cause: An attempt was made to commit an organizationalSchema that contained an invalid measure.

Action: Correct the measure.

XOQ-01972: A dependency cannot be added on the organizationalSchema to the cube because the cube has been deleted.

Cause: An attempt was made to commit an organizationalSchema that contained a deleted cube.

Action: Remove the cube reference from the organizationalSchema.

XOQ-01973: UniqueKey attribute "<varname>string</varname>" on the dimension level is invalid.

Cause: The uniqueKey attribute was invalid.

Action: Correct the uniqueKey attribute or delete it from the dimension level.

XOQ-01974: Attribute map "<varname>string</varname>" is invalid.

Cause: An attribute on the attribute map was invalid.

Action: Correct the attribute or delete it from the dimension.

XOQ-01975: The DimensionMap for Dimension "<varname>string</varname>" must contain either a query or a From clause

Cause: The DimensionMap did not have a query or From clause.

Action: Specify a query or From clause for the DimensionMap.

XOQ-01976: No key expression is defined on this dimension map owned by "<varname>string</varname>"

Cause: A key expression was not defined on the dimension map.

Action: Define a key expression on the dimension map.

XOQ-01977: Measure "<varname>string</varname>" does not exist in cube "<varname>string</varname>".

Cause: The measure associated with the measure map did not exist in the cube.

Action: Correct the measure map or add the measure to the cube.

XOQ-01978: The number of dimensionalities on cube "<varname>string</varname>" does not match the number of cube dimensionality maps on the cube map.

Cause: The number of cube dimensionalities did not equal the number of cube dimensionality maps on the cube map.

Action: Correct the cube dimensionality mappings.

XOQ-01979: Measure map "<varname>string</varname>" refers to an invalid measure, "<varname>string</varname>".

Cause: The measure was invalid.

Action: Correct the measure or delete it from the cube.

XOQ-01980: Dimension "<varname>string</varname>" is created before the attribute cube GID relation is added.

Cause: The dimension was created before the attribute cube GID relation was added.

Action: Add the attribute cube GID relation.

XOQ-01981: A generic metadata validation error has occurred.

Cause: An attempt was made to commit with invalid metadata.

Action: Correct the metadata.

XOQ-01982: A generic metadata validation error occurred against "<varname>string</varname>".

Cause: An attempt was made to commit with invalid metadata.

Action: Correct the metadata.

XOQ-01983: The dimension "<varname>string</varname>" is referenced more than once in the precompute list of the AWCubeOrganization.

Cause: Duplicate dimensions were specified in the precompute list of the AWCubeOrganization.

Action: Remove duplicate dimensions from the precompute list.

XOQ-01984: The dimension "<varname>string</varname>" referenced in the precompute list of the AWCubeOrganization is not part of cube "<varname>string</varname>".

Cause: A dimension specified in the precompute list of the AWCubeOrganization is not part of the cube.

Action: Remove the dimension from the precompute list.

XOQ-01985: The ET attribute prefix of "<varname>string</varname>" specified for dimension "<varname>string</varname>" of cube "<varname>string</varname>" is invalid.

Cause: The ET attribute prefix was invalid. The ET attribute prefix: 1) Must be fewer than six characters 2) Cannot be a substring of any MdmDimensionality or MdmMeasure column names.

Action: Correct the ET attribute prefix, or omit the prefix to use the default value.

XOQ-01986: The LevelHierarchy "<varname>string</varname>" contains more than one HierarchyLevel for DimensionLevel "<varname>string</varname>".

Cause: If HierarchyConsistencyRule is CONSISTENT or STAR_CONSISTENT, then a DimensionLevel within a LevelHierarchy can have only one HierarchyLevel.

Action: Correct the HierarchyLevels in the LevelHierarchy.

XOQ-01987: A subset of the following HierarchyLevels is ordered inconsistently in PrimaryDimension "<varname>string</varname>": "<varname>string</varname>"

Cause: If HierarchyConsistencyRule is CONSISTENT or STAR_CONSISTENT, then HierarchyLevels cannot form loops between LevelHierarchies.

Action: Eliminate the loop.

XOQ-01988: name conflict between <varname>string</varname> "<varname>string</varname>" and <varname>string</varname> "<varname>string</varname>"

Cause: Two metadata objects with the same parent had the same name. This duplication was allowed in Oracle Database 10 Release 2 (10.2) and earlier, but it is not valid for metadata objects in Oracle Database 11 Release 1 (11.1) and later.

Action: Run DBMS_CUBE.INITIALIZE_CUBE_UPGRADE which will populate a table (default name CUBE_UPGRADE_INFO) with new names to resolve the conflicts.

XOQ-01989: Level "<varname>string</varname>" is not uniquely mapped.

Cause: More than one level was mapped to the same expression. If a dimension has materialized views, it cannot have more than one level mapped to the same expression.

Action: Uniquely map all levels or create the dimension without materialized views.

XOQ-01990: Cube "<varname>string</varname>" cannot override the aggregation maps for this measure.

Cause: The consistent solve specification was invalid on the measure.

Action: Modify the cube so it is uncompressed with independent measure storage.

XOQ-01991: The data type of this measure in cube "<varname>string</varname>" or its mapped expression is incompatible with materialized views.

Cause: The data type of a numeric measure in a cube with a materialized view had restricted scale or precision.

Action: Change the data type to NUMBER without any qualifications.

XOQ-01992: The OLAP DML data type cube storage qualifications "<varname>string</varname>" in cube "<varname>string</varname>" are incompatible with materialized views.

Cause: The cube storage data type of the AWCubeOrganization with a materialized view had restricted scale or precision.

Action: Remove precision and scale restrictions on the NUMBER data type from the cube storage.

XOQ-01993: The data type of base attribute "<varname>string</varname>" or its mapped expression is incompatible with materialized views.

Cause: The data type of the attribute or its mapped expression is not supported by materialized views.

Action: Change the data type of the attribute or its mapped expression.

XOQ-01994: Primary dimension "<varname>string</varname>" and the cube have incompatible organizations.

Cause: The organizations of the primary dimension and of the cube were incompatible. If a cube has an AWCubeOrganization, then all of its primary dimensions must have analytic workspace primary dimension organizations.

Action: Create an analytic workspace primary dimension organization on the primary dimension.

XOQ-01995: Object "<varname>string</varname>" does not exist.

Cause: A cube or dimension was defined in terms of an object that does not exist.

Action: Create the missing object or redefine the cube or dimension.

XOQ-01996: The object cannot be renamed.

Cause: An attempt was made to rename an object without the necessary permissions to alter all of the dependent objects.

Action: Do not attempt to rename the object.

XOQ-01997: A partition level of the cube is invalid.

Cause: The hierarchy level specified as a partition level of the cube was invalid.

Action: Remove the partition level from the cube or specify a valid hierarchy level.

XOQ-01998: cannot partition a cube by two different dimensions: "<varname>string</varname>" and "<varname>string</varname>"

Cause: The cube was defined with partitioning by levels from different dimensions.

Action: Ensure that all partition levels for the cube belong to the same dimension.

XOQ-01999: More than one ORDER BY element is specified in the CUSTOMORDER clause.

Cause: The CUSTOMORDER contained more than one ORDER BY element.

Action: Specify only one ORDER BY element in the CUSTOMORDER clause.

XOQ-02000: PrimaryDimension "<varname>string</varname>" is not a valid TimeDimension for the time series expression.

Cause: PrimaryDimension was not a TimeDimension.

Action: Specify a TimeDimension for the time series expression.

XOQ-02001: table "<varname>string</varname>" not found

Cause: A table used to map a cube or dimension does not exist. It may have been deleted after the original mapping.

Action: Create the table or remap to a different table.

XOQ-02002: Table "<varname>string</varname>" does not contain column "<varname>string</varname>".

Cause: A column used to map a cube or dimension does not exist. It may have been deleted after the original mapping.

Action: Create the column or remap to a different column.

XOQ-02003: Expression "<varname>string</varname>" is only valid within a model.

Cause: The expression can only be specified as the right hand side of a model assignment.

Action: Redefine the expression to remove all model-specific features.

XOQ-02004: object <varname>string</varname> "<varname>string</varname>" not found

Cause: The referenced object may have been deleted.

Action: Specify an existing object.

XOQ-02005: The <varname>string</varname> "<varname>string</varname>" referenced from object "<varname>string</varname>" is not found.

Cause: The referenced object was not found. It may have been deleted.

Action: Specify an existing object.

XOQ-02006: invalid reference to table "<varname>string</varname>" in mapping "<varname>string</varname>"

Cause: An expression in a mapping object referred to a table that is not part of the mapping query.

Action: Make sure that all expressions in the mapping object refer only to columns from the mapping query.

XOQ-02007: cannot parse OLAP syntax string

Cause: The OLAP syntax string was invalid and could not be parsed.

Action: Replace the syntax with a valid syntax string.

XOQ-02008: cannot parse OLAP syntax string "<varname>string</varname>": <varname>string</varname>

Cause: The OLAP syntax string was invalid and could not be parsed.

Action: Replace the syntax with a valid syntax string.

XOQ-02009: Function "<varname>string</varname>" is not supported by the analytic workspace.

Cause: A function was specified that is not supported by the OLAP DML language.

Action: Remove the unsupported function from the expression.

XOQ-02010: Data type "<varname>string</varname>" is not supported by the analytic workspace.

Cause: A data type was specified that is not supported by the OLAP DML language.

Action: Use a supported data type.

XOQ-02011: invalid column expression "<varname>string</varname>"

Cause: The OLAP DML expression was invalid in this context.

Action: Replace the expression with a valid syntax string.

XOQ-02012: missing expression in object "<varname>string</varname>"

Cause: A mapping object did not contain all the expressions needed to perform the requested action.

Action: Add the necessary expressions to the mapping object.

XOQ-02013: Missing query and From clause in object "<varname>string</varname>"

Cause: A mapping object contained neither a query nor a From clause.

Action: Add the necessary query or From clause to the mapping object.

XOQ-02014: missing condition in object "<varname>string</varname>"

Cause: A mapping object did not contain all the conditions that were needed to perform the requested action.

Action: Add the necessary conditions to the mapping object.

XOQ-02015: Dimension or hierarchy has too many Grouping ID columns.

Cause: The number of Grouping ID columns exceeded the maximum allowed columns. Possible causes are: 1) Attribute spreading was enabled for some attributes in the dimension. 2) There were too many levels defined for the dimension or hierarchy.

Action: Do one of the following: 1) Disable attribute spreading for some or all of the attributes. 2) Eliminate some attributes. 3) Eliminate some levels.

XOQ-02100: cannot parse server XML string

Cause: An internal error occurred while parsing query or metadata definitions.

Action: Examine the error output for more detail about the reason for the failure.

XOQ-02101: Invalid object type is used for object reference with id "<varname>string</varname>"

Cause: An object of the wrong type was specified as an object reference in the XML document.

Action: Correct the XML document to reference an object of the correct type.

XOQ-02102: cannot find object "<varname>string</varname>"

Cause: An object that does not exist was referenced in the XML document.

Action: Create the referenced object or correct the XML document to reference an existing object.

XOQ-02103: invalid XML attribute "<varname>string</varname>" with value "<varname>string</varname>" for element "<varname>string</varname>" and object "<varname>string</varname>"

Cause: An XML attribute in the XML document was invalid.

Action: Correct the invalid attribute in the XML document.

XOQ-02104: invalid XML element "<varname>string</varname>"

Cause: An XML element in the XML document was invalid.

Action: Correct the invalid element in the XML document.

XOQ-02105: invalid XML element "<varname>string</varname>" for object "<varname>string</varname>"

Cause: An XML element in the XML document was invalid.

Action: Correct the invalid element in the XML document.

XOQ-02106: invalid property "<varname>string</varname>" with value "<varname>string</varname>" for object "<varname>string</varname>" in XML document

Cause: The XML document did not specify the object property correctly.

Action: Correct the invalid property in the XML document.

XOQ-02107: invalid property "<varname>string</varname>" with key::value "<varname>string</varname>" for object "<varname>string</varname>" in XML document

Cause: The XML document did not specify the object property correctly.

Action: Correct the invalid property in the XML document.

XOQ-02108: invalid XML document: <varname>string</varname> at line <varname>string</varname>

Cause: An internal error occurred while parsing the XML document.

Action: Examine the error output for more detail about the reason for the failure.

XOQ-02110: a <varname>string</varname> with ID "<varname>string</varname>" cannot be created because another object with that ID already exists.

Cause: An attempt was made through the XML to create an object with an ID that was already used on an existing object.

Action: Rename the new object or delete the existing one.

XOQ-02111: Object type "<varname>string</varname>" is invalid for export.

Cause: An attempt was made to export an object of an inappropriate type. Only objects of type analytic workspace, database schema, cube, cube dimension, measure folder, and cube build process are allowed for export.

Action: If the object is a subobject of a cube or cube dimension, then call the export procedure passing the cube or cube dimension as an argument instead of the object itself.

XOQ-02112: invalid XML attribute "<varname>string</varname>" with value "<varname>string</varname>" for element "<varname>string</varname>"

Cause: An XML attribute in the XML document was invalid.

Action: Correct the invalid attribute in the XML document.

XOQ-02113: Unable to parse XML because the compatibility setting is below the minimum setting of 11.0.0.0.0.

Cause: The compatibility setting was below the minimum for parsing XML.

Action: Set the compatibility to 11.0.0.0.0 or higher.

XOQ-02114: Unable to write XML because the compatibility setting is below the minimum setting of 11.0.0.0.0.

Cause: The compatibility setting was below the minimum for writing XML.

Action: Set the compatibility to 11.0.0.0.0 or higher.

XOQ-02115: Metadata object type "<varname>string</varname>" cannot be renamed on import.

Cause: The object type in the rename table was not a leaf object type, or the leaf object type could not be renamed.

Action: Enter a valid object type in the rename table.

XOQ-02116: Metadata object id "<varname>string</varname>" is not valid.

Cause: The object id in the rename table was null or contained invalid characters.

Action: Enter a valid object id in the rename table.

XOQ-02117: The new name "<varname>string</varname>" for object "<varname>string</varname>" is not valid.

Cause: The new name in the rename table was either null or empty.

Action: Enter a valid new name in the rename table.

XOQ-02118: Two new names for object "<varname>string</varname>" with type "<varname>string</varname>" are in the rename table.

Cause: The rename table contained two different new names for the same object.

Action: Remove one of the rows from the rename table.

XOQ-02200: cannot upgrade object "<varname>string</varname>"

Cause: The object could not be upgraded.

Action: Apply the modifications suggested by the other error messages that typically accompany this one. Then attempt the upgrade again. If you cannot correct the error, try exporting the XML definition for the object using DBMS_CUBE.EXPORT_XML, and reimporting the object into a different schema.

XOQ-02201: object "<varname>string</varname>" not found

Cause: The upgrade command referred to an object that did not exist.

Action: Correct the object identifier and try again.

XOQ-02202: Object "<varname>string</varname>" cannot be upgraded because its name is the same as an existing object.

Cause: The upgrade failed because the object name was the same as the name of an existing object. In earlier versions of Oracle Database, a cube, dimension, or measure folder could have the same name as a database table. In Oracle Database 11g and later, cubes, dimensions, measure folders, and RDBMS tables must all have different names.

Action: Change the object name and try the upgrade again.

XOQ-02203: Analytic workspace "<varname>string</varname>" cannot be upgraded because it contains customization "<varname>string</varname>".

Cause: The upgrade failed because the analytic workspace contained a customization. Customizations are not supported in releases after Oracle Database 10g.

Action: Remove the customization and attempt the upgrade again. To remove all customizations, call the upgrade procedure with the DeleteCustomizations option set to YES.

XOQ-02204: Cannot upgrade object "<varname>string</varname>": only analytic workspaces and database schemas are valid arguments to the UPGRADE command.

Cause: The identified argument of the UPGRADE command was an object that was neither type oracle.olapi.metadata.mdm.MdmDatabaseSchema nor type oracle.olapi.metadata.deployment.AW.

Action: If the object is in an analytic workspace or a database schema, call the UPGRADE command and use the analytic workspace or the database schema as an argument instead of the object.

XOQ-02205: Cannot upgrade analytic workspace "<varname>string</varname>": the analytic workspace version is too old.

Cause: An attempt was made to upgrade an analytic workspace that was formatted for Oracle Database 10.1.0.2 or earlier. Only analytic workspaces from Oracle Database 10.1.0.3 and later can be upgraded using DBMS_CUBE.UPGRADE.

Action: Upgrade the analytic workspace to release 10.1.0.3 or later using methods described in the OLAP documentation for Oracle 10.1.0.3. Then use DBMS_CUBE.UPGRADE to upgrade the analytic workspace to Release 11g.

XOQ-02206: Cannot upgrade object "<varname>string</varname>": the metadata is already using the current version.

Cause: An attempt was made to upgrade an analytic workspace that is already formatted correctly for the current version.

Action: Do not use the DBMS_CUBE.UPGRADE facility for this analytic workspace.

XOQ-02207: cannot process mapping "<varname>string</varname>": <varname>string</varname>

Cause: An object stored in an Oracle Database 10g analytic workspace contained an invalid mapping.

Action: Replace the mapping with a valid one. If the problem persists, set the IgnoreMappingErrors option to YES in the UPGRADE or COMMIT options.

XOQ-02208: Object contains multiple mappings.

Cause: A dimension or measure stored in an Oracle OLAP 10g analytic workspace contained multiple mappings. This is not supported in releases after Oracle Database 10g.

Action: Modify the object to use only one mapping. If the problem persists, set the IgnoreMappingErrors option to YES in the UPGRADE or COMMIT options.

XOQ-02209: cannot process aggregation "<varname>string</varname>": <varname>string</varname>

Cause: An object stored in an Oracle Database 10g analytic workspace contained an invalid aggregation.

Action: Replace the aggregation with a valid one. If the problem persists, set the IgnoreMappingErrors option to YES in the UPGRADE or COMMIT options.

XOQ-02210: Legacy metadata contains invalid mappings.

Cause: An object stored in an Oracle Database 10g analytic workspace contained mappings that could not be converted to post-10g format.

Action: Examine the list of invalid mappings and correct the errors reported for each object using Analytic Workspace Manager in 10g compatibility mode. If the problem persists, set the IgnoreMappingErrors option to YES in the UPGRADE or COMMIT options.

XOQ-02211: The MdmPrimaryDimension cannot be upgraded because a compile step failed with this message: "<varname>string</varname>".

Cause: A dimension could not be compiled.

Action: Correct the compilation errors in the analytic workspace. If the problem persists, set the IgnoreCompileErrors option to YES in the UPGRADE options. This allows other objects in the analytic workspace to be upgraded. Then fix and recompile the problem dimension so you can use it.

XOQ-02212: The expression for this MdmMeasure cannot be read. Analytic workspace "<varname>string</varname>" was not attached when the connection was opened.

Cause: The Oracle Database 10g analytic workspace contained a derived measure. Derived measures can only be upgraded if the analytic workspace is attached before the first call to DataProvider.createSession or DataProvider.initialize.

Action: Attach the analytic workspace before calling DataProvider.createSession or DataProvider.initialize. Alternatively, set the IgnoreMappingErrors option to YES in the UPGRADE or COMMIT options to suppress this error message. The derived measure will become an MdmBaseMeasure after the upgrade.

XOQ-02213: cannot read legacy metadata

Cause: The database contained metadata stored in an Oracle Database 10g analytic workspace or in CWM format. The metadata could not be converted to post-10g format because of problems in the stored metadata.

Action: Examine the list of errors and make corrections to the metadata using Analytic Workspace Manager in 10g compatibility mode. If the problem persists and is preventing you from accessing 11g metadata, set the MetadataReaderMode option to 11_ONLY in the connection properties.

XOQ-02214: error reading legacy metadata object: <varname>string</varname>

Cause: One of the metadata objects, which was stored in either an Oracle Database 10g analytic workspace or CWM format, could not be converted to post-10g format.

Action: Make corrections to the metadata using Analytic Workspace Manager in 10g compatibility mode. If the problem persists and is preventing you from accessing post-10g metadata, set the MetadataReaderMode option to 11_ONLY in the connection properties.

XOQ-02300: Build completed with warnings.

Cause: The build completed successfully, but some of the data may be incorrect due to inconsistencies in the metadata or input data.

Action: If cube build logging is enabled, examine the OUTPUT column of the cube build log for more details.

XOQ-02400: An invalid cube dimension name was specified in a call to function DBMS_CUBE.GET_BREAKOUT_DIMENSIONS.

Cause: The cube dimension name was invalid.

Action: Specify a valid cube dimension name.

XOQ-02401: An invalid cube name was specified in the drillThrough operation.

Cause: The cube name was invalid.

Action: Specify a valid cube name.

XOQ-02402: Cube "<varname>string</varname>" is not dimensioned by "<varname>string</varname>".

Cause: The specified dimension was not a dimension of the cube.

Action: Specify a valid dimension of the cube.

XOQ-02403: QDR "<varname>string</varname>" is invalid.

Cause: The specified qualified data reference was invalid.

Action: Specify a valid qualified data reference.

XOQ-02404: The cube specified in QDR "<varname>string</varname>" is invalid.

Cause: The cube specified in the qualified data reference was invalid.

Action: Specify a valid cube in the qualified data reference.

XOQ-02405: The measure specified in QDR "<varname>string</varname>" is invalid.

Cause: The measure specified in the qualified data reference was invalid.

Action: Specify a valid stored measure in the qualified data reference. A calculated measure or an expression is not allowed.

XOQ-02406: Dimension "<varname>string</varname>" on cube "<varname>string</varname>" is not referenced in the QDR qualifier.

Cause: The specified dimensions referenced in the qualified data reference did not include all the dimensions on the cube.

Action: Specify valid dimensions in the qualified data reference.

XOQ-02407: The expression "<varname>string</varname>" for cube dimension "<varname>string</varname>" in the QDR is not supported.

Cause: A dimension specified in the qualified data reference is currently not supported.

Action: Specify a valid expression value for the cube dimension in the qualified data reference.

XOQ-02408: Cube "<varname>string</varname>" is not dimensioned by QDR qualifier "<varname>string</varname>".

Cause: The dimension specified in the qualified data reference was not a dimension of the cube.

Action: Specify a valid dimension of the cube in the qualified data reference.

XOQ-02409: Invalid ET column "<varname>string</varname>" specified in a call to function DBMS_CUBE.DRILL_THROUGH.

Cause: An invalid embedded-total column was specified for drill through.

Action: Specify a valid embedded-total column for drill through.

XOQ-02410: ET column "<varname>string</varname>" does not correspond to a valid metadata object.

Cause: An invalid embedded-total column was specified for drill through.

Action: Specify a valid embedded-total column for drill through.

XOQ-02411: Invalid mapped object "<varname>string</varname>" in drill through

Cause: An invalid mapped object was encountered when processing the ET columns during drill through.

Action: Specify a valid mapping for the metadata object.

XOQ-02412: Invalid member "<varname>string</varname>" in cube dimension "<varname>string</varname>" in the drill-through QDR

Cause: An invalid member value was specified in the qualified data reference for a cube dimension.

Action: Specify a valid member value in the qualified data reference for the cube dimension.

XOQ-02413: Drill through is not allowed on cube "<varname>string</varname>".

Cause: An invalid cube was specified in a call to function DBMS_CUBE.DRILL_THROUGH.

Action: Specify a valid cube to perform drill through.

XOQ-02414: Cube dimension "<varname>string</varname>" was specified more than once in QDR "<varname>string</varname>".

Cause: A duplicate dimension was specified in the qualified data reference.

Action: Specify a cube dimension for every dimensionality in the qualified data reference.

XOQ-02415: Specified dimension member not found in a valid hierarchy of cube dimension "<varname>string</varname>".

Cause: The dimension member is not part of any valid hierarchy.

Action: Ensure that the dimension member is included in a valid hierarchy.

XOQ-02416: More than one Hierarchy ET view on cube dimension "<varname>string</varname>" was specified for drill through.

Cause: More than one Hierarchy ET view on the same dimension was specified for drill through.

Action: Ensure that only one Hierarchy ET view per dimension is referenced in drill through.

XOQ-02500: Derived attribute "<varname>string</varname>" is not a DIM_KEY.

Cause: The derived attribute specified in the CUSTOMORDER clause was not the DIM_KEY. A derived attribute in a CUSTOMORDER clause can only be the DIM_KEY.

Action: Specify the DIM_KEY or use a base attribute in the CUSTOMORDER clause.

XOQ-02501: Attribute "<varname>string</varname>" is not part of the primary dimension.

Cause: The attribute specified in the CUSTOMORDER clause was not part of the primary dimension. An attribute in the CUSTOMORDER clause must be part of the primary dimension.

Action: Specify an attribute of the CUSTOMORDER clause that is part of the primary dimension.

XOQ-02502: Attribute "<varname>string</varname>" is not a visible attribute of the hierarchy.

Cause: The attribute specified in the CUSTOMORDER clause was not a visible attribute of the hierarchy. An attribute in the CUSTOMORDER clause of a hierarchy must be a visible attribute of the hierarchy.

Action: Specify a visible attribute in the CUSTOMORDER clause of the hierarchy.

XOQ-02503: No attribute is specified for the CUSTOMORDER clause.

Cause: The object specified in the CUSTOMORDER clause was not an attribute. Only an attribute can be specified in the CUSTOMORDER clause.

Action: Specify an attribute in the CUSTOMORDER clause.

XOQ-02504: The object contains multiple descriptions of type "<varname>string</varname>" for the language "<varname>string</varname>".

Cause: An object contained multiple descriptions for the same type on the same language.

Action: Ensure there is only one description on an object for each type for each language.

XOQ-02505: The CubeMap for cube "<varname>string</varname>" contains both a query and a From clause.

Cause: The CubeMap had a query and a From clause.

Action: Specify either a query or a From clause for the CubeMap but not both.

XOQ-02506: The DimensionMap for dimension "<varname>string</varname>" contains both a query and a From clause.

Cause: The DimensionMap had a query and a From clause.

Action: Specify either a query or From clause for the DimensionMap but not both.

XOQ-02507: The DimensionMap for dimension "<varname>string</varname>" contains a From clause with duplicate queries.

Cause: The DimensionMap had a From clause with duplicate queries.

Action: Remove the duplicate queries in the From clause for the DimensionMap.

XOQ-02508: The CubeMap for cube "<varname>string</varname>" contains a From clause with duplicate queries.

Cause: The CubeMap had a From clause with duplicate queries.

Action: Remove the duplicate queries in the From clause for the CubeMap.

XOQ-02509: Analytic workspace "<varname>string</varname>" has an invalid name.

Cause: An attempt was made to create an analytic workspace with an invalid name. Analytic workspace names cannot contain lower-case letters.

Action: Change the analytic workspace name to a valid name, and commit the transaction.

XOQ-02510: The SolvedMap for Object "<varname>string</varname>" contains a From Clause with multiple queries

Cause: The SolvedMap had a From Clause with multiple queries.

Action: Remove multiple queries in the From Clause for the SolvedMap.

XOQ-02511: The cube storage DATE data type is incompatible with materialized views.

Cause: The AWCubeOrganization had a cube storage data type of DATE, which was incompatible with materialized views.

Action: Either change the cube storage data type to DATETIME or create the cube without materialized views.

XOQ-02512: <varname>string</varname>InXOQ-02512: OLAP DML error while compiling formula for measure "<varname>string</varname>"

Cause: The measure expression in the derived measure could not be compiled.

Action: Redefine the measure expression for the derived measure.

XOQ-02513: A rewrite materialize view cannot be created for cube "<varname>string</varname>" because the aggregation from the consistent solve specification is incompatible.

Cause: The consistent solve specification specified an aggregation that was not uniform over all dimensions and hierarchies or was not one of the supported aggregation operators.

Action: Change the aggregation on the consistent solve specification to be uniform and one of the supported aggregation types.

XOQ-02514: The attribute "<varname>string</varname>" is mapped to different expressions on the two HierarchyLevels "<varname>string</varname>" and "<varname>string</varname>"

Cause: An attribute was mapped to different expressions on two different HierarchyLevels that have the same DimensionLevel.

Action: Change the attribute mappings so that the target expression is the same on all HierarchyLevels having the same DimensionLevel.

XOQ-02515: The MVCreationOptions of REFRESH ON COMMIT, REFRESH START WITH, and REFRESH NEXT are not supported.

Cause: The MVCreationOptions of either an AWPPrimaryDimensionOrganization or an AWCubeOrganization contained unsupported settings.

Action: Ensure that the MVCreationOptions of AWPPrimaryDimensionOrganizations and AWCubeOrganizations do not set REFRESH ON COMMIT and do not specify REFRESH START WITH or REFRESH NEXT.

XOQ-02516: The MdmValueHierarchy has no value hierarchy map.

Cause: The MdmValueHierarchy did not contain a value hierarchy map.

Action: Add a SolvedValueHierarchyMap to all value hierarchies contained in dimensions with associated materialized views.

XOQ-02517: The data type "<varname>string</varname>" of the base attribute or base measure is different from the mapped expression "<varname>string</varname>"

Cause: Either the base attribute or base measure with the mapped expression was set to an inconsistent data type, or it was mapped to an expression of a different data type from its fixed data type.

Action: When changing a mapped expression for a base attribute or base measure, ensure that the expression has the same data type; otherwise, set the data type of the base attribute or base measure to NULL first. When a base attribute or a base measure has an existing mapped expression, do not set it to a different data type.

XOQ-02518: Object cannot be renamed to "<varname>string</varname>" because that name is already being used by an existing object.

Cause: A row in the CUBE_UPGRADE_INFO table had a value in the NEW_NAME column that was not unique.

Action: Fix the CUBE_UPGRADE_INFO table by using an UPDATE command or running DBMS_CUBE.INITIALIZE_CUBE_UPGRADE.

XOQ-02519: The mapped dimension in the cube dimensionality map of a cube materialized view must be either a dimension level or a hierarchy level.

Cause: "The mapped dimension in the cube dimensionality map of a cube materialized view was a primary dimension."

Action: "Change the mapped dimension in the cube dimensionality map of a cube materialized view to a dimension level or a hierarchy level."

XOQ-02520: The mapped dimension in the cube dimensionality map of a query-rewrite-enabled cube materialized view must be the lowest hierarchy level on all hierarchies in the dimension.

Cause: "The mapped dimension in the cube dimensionality map of a query-rewrite-enabled cube materialized view was not the lowest hierarchy level on a hierarchy in the dimension."

Action: "Change the mapped dimension in the cube dimensionality map of a query-rewrite-enabled cube materialized view to a hierarchy level or a dimension level that is the lowest hierarchy level on all hierarchies in the dimension."

XOQ-02521: The object description of type "<varname>string</varname>" for language "<varname>string</varname>" was truncated to the maximum number of characters (<varname>string</varname>).

Cause: An object had a description that was too long. The description was shortened automatically.

Action: No action is necessary. Consider rephrasing the description to make it fit within the maximum length.

XOQ-02522: The values for attribute "<varname>string</varname>" in level "<varname>string</varname>" must be unique.

Cause: The IsLevelUnique flag was set to true for the attribute, but the attribute values in the given level were not unique.

Action: Either set the IsLevelUnique flag to false, or load unique values into the attribute.

XOQ-02523: unsupported data type "<varname>string</varname>"

Cause: The data type specified for cube storage was invalid or not supported.

Action: Specify a supported SQL data type.

XOQ-02524: A SQL data type and an OLAP DML data type have both been specified and/or modified for cube storage. The OLAP DML cube storage data type specification will be ignored

Cause: The data type for cube storage was specified in both SQL and in OLAP DML resulting in the use of the SQL data type.

Action: Specify a supported data type in either SQL or OLAP DML format.

XOQ-02525: A mismatch exists between the measure data type "<varname>string</varname>" and cube storage data type "<varname>string</varname>"

Cause: Measure storage was defined as SHARED and the data type for the measure was not an exact match to that of the cube storage type. This may result in data inconsistencies.

Action: Specify an exact match between the measure data type and the cube storage data type when measure storage is SHARED. Either set the IsLevelUnique flag to false, or load unique values into the attribute.

XOQ-02526: UniqueKey attribute "<varname>string</varname>" has an invalid populate lineage flag set.

Cause: The attribute had the populate lineage flag set. This flag does not need to be set on a unique key attribute.

Action: Optionally remove this flag on the attribute or do not make the attribute a unique key.

XOQ-02527: Hierarchy levels "<varname>string</varname>" and "<varname>string</varname>" contain different unique key attributes that are mapped to the same expression.

Cause: Two different unique key attributes on different levels of a primary dimension were mapped to the same expression. Such mappings are not allowed if the dimension is part of a query-rewrite-enabled cube.

Action: Uniquely map the unique key attributes or create the cube without a REWRITE materialized view.

XOQ-02528: The derived measure "<varname>string</varname>" cannot be designated as the default measure for the cube.

Cause: A derived measure was designated as the default measure on a cube that has materialized views.

Action: To designate a default measure for the cube, choose a measure that is not derived, or remove the materialized views from the cube.

XOQ-02529: The base attribute "<varname>string</varname>" of dimension "<varname>string</varname>" cannot be given an NVL expression because it is indexed.

Cause: An NVL expression was specified for a base attribute that is indexed. An attribute is indexed if it is explicitly marked as indexed by the user, or if it is a unique key attribute, or if the populate lineage flag is set.

Action: Remove the NVL expression or change the attribute so that it is not indexed, is not a unique key, and does not have the populate lineage flag set.

XOQ-02530: A maintain dimension command cannot be specified as part of a default build specification or named build specification.

Cause: Either a named build specification or the default build specification for a cube or dimension specified a maintain dimension command.

Action: Remove the maintain dimension command from the default build specification or named build specification.

XOQ-02531: The sparse type must be COMPRESSED or SPARSE when a secondary partition level is specified.

Cause: A secondary partition level was specified for the AWCubeOrganization when its sparse type was not COMPRESSED or SPARSE.

Action: Set the sparse type to COMPRESSED or SPARSE on the AWCubeOrganization, or remove all secondary partition levels.

XOQ-02532: cannot specify a secondary partition level without also specifying a (primary) partition level.

Cause: A secondary partition level was specified for an AWCubeOrganization that had no (primary) partition level.

Action: Specify a (primary) partition level before specifying additional secondary partition levels.

XOQ-02533: The cube dimensionality map has neither a join condition nor an expression.

Cause: Neither a join condition nor an expression were specified for the CubeDimensionalityMap.

Action: Specify either a join condition, an expression, or both on the cube dimensionality map.

XOQ-02534: The data type "<varname>string</varname>" of the base attribute or base measure "<varname>string</varname>" is different from the mapped expression "<varname>string</varname>".

Cause: Either the base attribute or base measure with the mapped expression was set to an inconsistent data type, or it was mapped to an expression of a different data type from its fixed data type.

Action: When changing a mapped expression for a base attribute or base measure, ensure that the expression has the same data type; otherwise, set the data type of the base attribute or base measure to NULL first. When a base attribute or a base measure has an existing mapped expression, do not set it to a different data type.

XOQ-02535: The view name "<varname>string</varname>" defined on the object "<varname>string</varname>" is not unique.

Cause: The user-defined view name was already in use.

Action: Ensure that all user-defined view names are unique.

XOQ-02537: The procedure is not supported for the version of the analytic workspace of the cube or dimension.

Cause: The version of the analytic workspace of the cube or dimension was earlier than 12c.

Action: Do not use the procedure for the objects in the current analytic workspace.

XOQ-02538: Materialized views cannot be created for the cube dimension because it has no level hierarchies.

Cause: The cube dimension had no level hierarchies.

Action: Do not create a materialized view for the cube dimension.

XOQ-02539: Specified rewrite type is invalid.

Cause: An invalid rewrite type was specified for creating a materialized view.

Action: Specify a valid rewrite type.

XOQ-02540: Specified refresh type is invalid.

Cause: An invalid refresh type was specified for creating a materialized view.

Action: Specify a valid refresh type.

XOQ-02541: Specified USING constraints clause is invalid.

Cause: An invalid USING constraints clause was specified for creating a materialized view.

Action: Specify a valid USING constraints clause.

XOQ-02542: mismatch between MVOption and RefreshType

Cause: MVOption was set to COMPLETE_REFRESH, but RefreshType was set to FAST.

Action: Either set MVOption to FAST_REFRESH or REWRITE, or set RefreshType to COMPLETE or FORCE.

XOQ-02543: Specified version for the analytic workspace "<varname>string</varname>" is invalid.

Cause: An invalid version was specified for creating an analytic workspace.

Action: Specify a valid version.

XOQ-02544: The cube or dimension "<varname>string</varname>" has no analytic workspace organization.

Cause: No analytic workspace organization was specified for the cube or dimension.

Action: Specify an analytic workspace organization for the cube or dimension.

XOQ-02545: Invalid SQLMap in the cube or dimension.

Cause: The SQLMap feature is not supported.

Action: Use supported mappings for the cube or dimension.

XOQ-02546: A dimensionality cannot be specified on a measure.

Cause: A dimensionality was specified on a measure.

Action: Specify the dimensionality on a cube.

XOQ-02547: Object "<varname>string</varname>" cannot be mapped to ET view <varname>string</varname> because this transaction is also modifying the ET view.

Cause: An object being modified was mapped to an ET (Embedded Totals) view that required an update because of changes to its owning object.

Action: If the object is mapped to the ET view of another object, then split the updates into multiple transactions. If the object is mapped to its own ET view, then either specify a unique ET view name or ensure that the mapped source name already exists and allow Oracle OLAP to create a new default name.

XOQ-02548: The derived measure expression references invalid object "<varname>string</varname>".

Cause: The derived measure expression referenced an invalid object.

Action: Ensure the objects referenced in the derived measure expression are valid.

XOQ-02549: The cube name or cube dimension name is missing.

Cause: No cube name or cube dimension name was specified for creating a materialized view.

Action: Specify a cube name or cube dimension name.

XOQ-02550: Cannot create "<varname>string</varname>" while in a branch.

Cause: The creation of a top level object within a schema was attempted in a branch.

Action: Create the top level object outside of the branch.

XOQ-02551: Invalid loop type specified for the derived measure.

Cause: The loop type specified for the derived measure was invalid.

Action: Specify either INNER, OUTER, or DENSE for the loop type of the derived measure.

XOQ-02552: Invalid metadata property value "<varname>string</varname>" specified.

Cause: The metadata property contained both a single value and a list value.

Action: Specify either a single value or a list value for the metadata property.

XOQ-02553: cannot rename "<varname>string</varname>" while in a branch

Cause: The renaming of an object was attempted in a branch.

Action: Rename the object outside of the branch or, if the object is a custom member, you may drop it and re-create it with the new name within the branch.

XOQ-02554: Dimensions "<varname>string</varname>" and "<varname>string</varname>" cannot be mapped on the leaf level to the same dimension source table "<varname>string</varname>" when materialized views are enabled on the cube.

Cause: Materialized views were enabled when an attempt was made to map two dimensions to the same source table. This is not allowed unless the source table is a fact table.

Action: Specify a different mapping for one of the dimensions.

XOQ-02555: The join condition on CubeDimensionalityMap "<varname>string</varname>" is invalid.

Cause: The join condition did not refer to the fact table and the relevant dimension table.

Action: Specify a join condition that refers to the fact table and the relevant dimension table.

XOQ-02556: The named build process does not contain a build specification.

Cause: An attempt was made to create a named build process without providing a build specification.

Action: Provide build items for the named build process.

XOQ-02557: Object cannot be dropped while it is still a dependency of another object.

Cause: An attempt was made to drop a metadata object that was referenced by another object.

Action: Remove the reference to the metadata object being dropped.

XOQ-02558: The base attribute "<varname>string</varname>" of dimension "<varname>string</varname>" cannot be given an NVL expression because it is multilingual.

Cause: An NVL expression was specified for a base attribute that is multilingual.

Action: Remove the NVL expression or change the attribute so that it is not multilingual.

XOQ-02559: Cannot create or rename the object "<varname>string</varname>" because the object name conflicts with a reserved keyword.

Cause: An attempt was made to use a reserved name for an object.

Action: Rename the object.

XOQ-02560: Analytic workspace "<varname>string</varname>" referenced in "<varname>string</varname>" does not exist.

Cause: An attempt was made to modify an object that referenced a non-existent analytic workspace.

Action: Create the analytic workspace before referencing it.
