PRGO-01573: failed to retrieve information from source home "{0}"

Cause: An attempt to query source home information failed.

Action: Examine the accompanying error messages for more information, address reported issues, and retry.

PRGO-01576: Specified operation is not supported on this entity in version {0} of Rapid Home Provisioning Clients.

Cause: The requested operation was rejected because it was not supported on clients of the indicated version.

Action: Retry the command from a cluster of higher version.

PRGO-01577: Destination working copy "{0}" already exists.

Cause: An attempt to move to an Oracle home based on an Oracle Layered File System failed because the specified destination working copy already existed.

Action: Reissue the 'move gihome' command specifying a destination working copy that does not exist.

PRGO-01578: failed to move the Oracle Grid Infrastructure home because the software-only destination working copy has more nodes than the source working copy

Cause: An attempt to move the Oracle Grid Infrastructure home was rejected because the specified destination working copy has more nodes than the source working copy.

Action: Specify a software-only destination working copy that is on the same set of nodes as the source working copy and retry the operation.

PRGO-01579: failed to upgrade the Oracle Grid Infrastructure home because the software-only destination working copy has more nodes than the source working copy

Cause: An attempt to upgrade the Oracle Grid Infrastructure home was rejected because the specified destination working copy has more nodes than the source working copy.

Action: Specify a software-only destination working copy that is on the same set of nodes as the source working copy and retry the operation.

PRGO-01580: failed to move the Oracle Grid Infrastructure home because the software-only destination working copy did not have nodes {0} from the source working copy

Cause: An attempt to move the Oracle Grid Infrastructure home was rejected because the specified source and destination working copies have different sets of nodes.

Action: Specify a software-only destination working copy that is on the same set of nodes as the source working copy and retry the operation.

PRGO-01581: failed to upgrade the Oracle Grid Infrastructure home because the software-only destination working copy did not have nodes {0} from the source working copy

Cause: An attempt to upgrade the Oracle Grid Infrastructure home was rejected because the specified source and destination working copies have different set of nodes.

Action: Specify a software-only destination working copy that is on the same set of nodes as the source working copy and retry the operation.

PRGO-01582: illegal specification of disk group "{0}" for provisioning single instance database on a non-cluster node

Cause: An attempt to provision a database using the indicated disk group was rejected because a disk group cannot be used for provisioning a single instance database on a non-clustered node.

Action: Reissue the command, either specifying a path for the '-datafileDestination' option or omitting it altogether.

PRGO-01583: missing '-targetnode' option for deleting Oracle RAC home on a cluster that has no RHP client

Cause: An attempt to delete an Oracle RAC database home on a cluster that had no Rapid Home Provisioning (RHP) client was rejected because the '-targetnode' option was not specified.

Action: Reissue the command specifying the '-targetnode' option.

PRGO-01584: missing '-targetnode' option for deleting Oracle RAC database on a cluster that has no RHP client

Cause: An attempt to delete an Oracle RAC database home on a cluster that had no Rapid Home Provisioning (RHP) client was rejected because the '-targetnode' option was not specified.

Action: Reissue the command specifying the '-targetnode' option.

PRGO-01585: spurious '-node' option for delete

Cause: The '-node' option was specified on an operation that does not need it.

Action: Reissue the command without the '-node' option.

PRGO-01586: invalid cluster name "{0}"

Cause: An attempt to validate the specified cluster name failed as the cluster name supplied was illegal. The supplied cluster name must be at most 15 characters long and can be any combination of lower and uppercase alphanumeric characters, and hyphen.

Action: Specify a valid cluster name and retry the operation.

PRGO-01587: illegal '-agpath' option provided where source working copy is based on an Oracle Layered File system

Cause: An attempt to move to an Oracle home based on an Oracle Layered File System failed because the '-agpath' option was provided when source working copy was already based on an Oracle Layered File System.

Action: Reissue the 'rhpctl move gihome' command without specifying the '-agpath' option.

PRGO-01588: illegal '-path' option provided where source working copy is based on an Oracle Layered File system

Cause: An attempt to move to an Oracle home based on an Oracle Layered File System failed because the '-path' option was provided when source working copy was already based on an Oracle Layered File System.

Action: Reissue the 'rhpctl move gihome' command without specifying the '-path' option.

PRGO-01589: illegal '-aupath' and '-agpath' option for image version earlier than 12.2

Cause: An attempt to provision an Oracle home based on an Oracle Layered File System failed because the version of the specified image was earlier than 12.2.

Action: Reissue the 'add workingcopy' command specifying neither the '-agpath' nor the '-aupath' option or specify an image with version 12.2 or later.

PRGO-01590: No target node specified.

Cause: An attempt to delete nodes from a working copy was rejected because the working copy was provisioned with no Rapid Home Provisioning (RHP) client and no target node was provided. A target node must be specified when deleting nodes from a working copy provisioned with no RHP client.

Action: Retry the 'rhpctl deletenode gihome' command specifying the target node.

PRGO-01591: Delete node with '-targetnode' option rejected.

Cause: An attempt to delete nodes from a working copy was rejected because the target node was provided for a working copy whose release was Oracle Database 12c Release 2 (12.2) or later. The target node must not be specified while deleting nodes from a working copy whose release is Oracle Database 12c Release 2 (12.2) or later.

Action: Retry the 'rhpctl deletenode gihome' command without specifying the '-targetnode' option.

PRGO-01592: Nodes "{0}" are not part of working copy "{1}".

Cause: An attempt to delete nodes from a working copy was rejected because the specified nodes were not part of the working copy.

Action: Retry the 'rhpctl deletenode gihome' command specifying nodes that are part of the working copy.

PRGO-01593: illegal attempt to delete all Hub nodes "{0}"

Cause: An attempt to delete nodes from a working copy was rejected because all the Hub nodes were present in the specified node list. At least one Hub node should not be specified for deletion while deleting nodes from a working copy.

Action: If appropriate, retry the 'rhpctl deletenode gihome' command with fewer nodes.

PRGO-01594: illegal attempt to delete all nodes "{0}"

Cause: An attempt to delete nodes from a working copy was rejected because all of the nodes were present in the specified node list. At least one node should not be specified for deletion while deleting nodes from a working copy.

Action: Retry the 'rhpctl deletenode gihome' command specifying a node list that does not contain all of the nodes in the working copy, or use the 'rhpctl delete workingcopy' command to remove the working copy.

PRGO-01595: missing mandatory option '{0}' for a 'move database' or 'upgrade database' operation on a cluster whose version is older than 12.2

Cause: An attempt was made to move or upgrade a database without specifying the indicated option.

Action: Specify the indicated option and retry the command.

PRGO-01596: unexpected option '-targetnode' specified for moving a database from working copy "{0}" which is a single instance Oracle home

Cause: An attempt to move a database was rejected because the '-targetnode' option was not needed.

Action: Retry the operation without specifying the '-targetnode' option.

PRGO-01597: illegal '-force' option provided

Cause: An attempt to delete the specified working copy with the image type ORACLEGISOFTWARE was rejected because the '-force' option was not valid for the working copy with the image type ORACLEGISOFTWARE.

Action: Reissue the 'rhpctl delete workingcopy' command without specifying the '-force' option.

PRGO-01598: Patched working copy "{0}" is not a single-instance Oracle home.

Cause: An attempt to move or upgrade a database failed because the source working copy was a single-instance Oracle home, but the indicated patched working copy was not.

Action: Retry the command specifying a single-instance Oracle home for the patched working copy.

PRGO-01599: Oracle Grid Infrastructure home upgrade failed with destination working copy version "{0}" earlier than or equal to the source working copy version "{1}"

Cause: An attempt to upgrade the Oracle Grid Infrastructure home failed because the destination working copy version (shown in the message) was not later than the indicated version for the source working copy.

Action: Ensure that the destination working copy version is later than the source working copy version.

PRGO-01600: missing mandatory option '-aupath' where the source working copy is based on an Oracle Layered File System

Cause: An attempt to move to an Oracle home based on an Oracle Layered File System failed because the '-aupath' option was not provided when the source working copy was based on an Oracle Layered File System.

Action: Reissue the 'rhpctl move gihome' command specifying the '-aupath' option.

PRGO-01601: missing mandatory option '-agpath'

Cause: An attempt to move to an Oracle home based on an Oracle Layered File System failed because the '-agpath' option was not provided.

Action: Reissue the 'rhpctl move gihome' command specifying the '-agpath' option.

PRGO-01602: missing mandatory option '-path'

Cause: An attempt to move to an Oracle home based on an Oracle Layered File System failed because the '-path' option was not provided.

Action: Reissue the 'rhpctl move gihome' command specifying the '-path' option.

PRGO-01603: unexpected option '-softwareonly' specified when adding working copy "{0}" from an image of base type other than ORACLELEGISoftware

Cause: An attempt to add the indicated working copy was rejected because the '-softwareonly' option was supplied and this option is permitted only when adding a working copy from an image of base type ORACLELEGISoftware.

Action: Retry the operation without specifying the '-softwareonly' option.

PRGO-01608: Cluster {0} is already being moved from working copy {1} to working copy {2}.

Cause: An attempt to move the indicated cluster was rejected because the indicated cluster was not completely moved between the indicated working copies.

Action: Retry after completing or reverting the ongoing move operation.

PRGO-01609: Cluster {0} is already being moved from Oracle home at {1} to working copy {2}.

Cause: An attempt to move the indicated cluster was rejected because the indicated cluster was not completely moved from the indicated Oracle home to the indicated working copy.

Action: Retry after completing or reverting the ongoing move operation.

PRGO-01610: No cluster is being moved to working copy {0}.

Cause: An attempt to resume or abort moving a cluster to the specified working copy was rejected because a move operation had not been initiated for the specified working copy.

Action: None

PRGO-01612: Unexpected option '{0}' specified for 'move' operation on a cluster of version {1}.

Cause: The attempted 'move' operation was rejected because the specified option was not supported for the indicated cluster version.

Action: Retry the command without the specified option.

PRGO-01613: illegal attempt to provision a working copy with a policy-managed database on storage managed by RHP for a cluster with Leaf Nodes

Cause: An attempt to provision a working copy with a policy-managed database was rejected because the client cluster contained Leaf Nodes which cannot access ACFS storage managed by Rapid Home Provisioning (RHP).

Action: Specify LOCAL or NFS for the '-storagetype' option for the provisioning of Oracle database home on all nodes of the cluster.

PRGO-01614: missing '-path' option for creating destination working copy

Cause: An attempt to move or upgrade Oracle Grid Infrastructure was rejected because the '-path' option was not specified. The '-path' option is required for creating the destination working copy as part of an 'rhpctl move gihome' or 'rhpctl upgrade gihome' command operation.

Action: Retry the command specifying the '-path' option.

PRGO-01615: missing '-responsefile' option for creating Oracle Grid Infrastructure working copy that is not software-only

Cause: An attempt to add Oracle Grid Infrastructure working copy was rejected because the '-responsefile' option is required for creating Oracle Grid Infrastructure working copy unless it is software-only provisioning.

Action: Retry the command specifying the '-responsefile' option or specifying '-softwareonly' option for software-only provisioning.

PRGO-01618: The groups "{0}" of the source home do not match the groups "{1}" of the patched working copy.

Cause: An attempt to move or upgrade the database failed because the source groups and patched working copy groups were different.

Action: Create or specify a patched working copy with the same groups as the source home and retry the move or upgrade database operation.

PRGO-01619: The groups "{0}" of the source home are not configured in the patched working copy.

Cause: An attempt to move or upgrade the database failed because some of the source groups were not configured in the patched working copy.

Action: Create or specify a patched working copy which contains the missing groups and retry the move or upgrade database operation.

PRGO-01620: The groups "{0}" of the patched working copy are not configured in the source home.

Cause: An attempt to move the database failed because some of the patched working copy groups were not configured in the source home.

Action: Create or specify a patched working copy which does not contain the additional groups and retry the move database operation.

PRGO-01623: A previously failed 'addnode' operation with nodelist "{0}" exists. Use '-force' option to override.

Cause: An attempt to add nodes to a working copy was rejected because a previously failed 'addnode' operation with the indicated node list was detected, and the specified node list was not a proper subset of the indicated node list, or the '-force' option was not provided.

Action: Reissue the command 'rhpctl addnode gihome' either specifying a node list that is a proper subset of the indicated node list of the failed 'addnode' operation or specifying the '-force' option to clear the previously failed 'addnode' operation.

PRGO-01624: A complete working copy was not found on the specified client {0}.

Cause: An attempt to add nodes to a cluster was rejected because a complete working copy was not found on the specified client.

Action: Reissue the command 'rhpctl addnode gihome' either after performing a 'move gihome' operation on the specified client, or specifying a client with a complete working copy.

PRGO-01627: The groups "{0}" of the Oracle Grid Infrastructure home do not match the groups "{1}" of the patched working copy.

Cause: An attempt to move or upgrade the Oracle Grid Infrastructure home was rejected because the source groups and patched working copy groups were different.

Action: Create or specify a patched working copy with the same groups as the source home and retry the command.

PRGO-01628: The groups "{0}" of the Oracle Grid Infrastructure home are not configured in the patched working copy.

Cause: An attempt to move or upgrade the Oracle Grid Infrastructure home was rejected because some of the source groups were not configured in the patched working copy.

Action: Create or specify a patched working copy which contains the missing groups and retry the command.

PRGO-01629: The groups "{0}" of the patched working copy are not configured in the Oracle Grid Infrastructure home.

Cause: An attempt to move the Oracle Grid Infrastructure home was rejected because some of the patched working copy groups were not configured in the Oracle Grid Infrastructure home.

Action: Create or specify a patched working copy which does not contain the additional groups and retry the command.

PRGO-01630: Disk group "{0}" already exists on the target system.

Cause: The attempted 'verify client' operation failed because the disk group name provided in the response file already existed on the target system.

Action: Specify a different disk group name in the response file.

PRGO-01632: Improper '-dbversion' option specified with image type with base type ORACLEGISOFTWARE.

Cause: An attempt to query images was rejected because the '-dbversion' option was specified together with an image type with base type ORACLEGISOFTWARE. The obsolete '-dbversion' option is applicable only with image types with base type ORACLEDBSOFTWARE.

Action: Either specify the version with '-version' option or specify an image type with base type ORACLEDBSOFTWARE and retry the command.

PRGO-01633: unexpected option '-responsefile' specified when adding working copy "{0}" from an image of base type other than ORACLEGISoftware

Cause: An attempt to add the indicated working copy was rejected because the '-responsefile' option was supplied and this option is permitted only when adding a working copy from an image of base type ORACLEGISoftware.

Action: Retry the operation without specifying the '-responsefile' option.

PRGO-01634: Invalid '-sourcehome' option specified for 'move gihome' operation.

Cause: The '-sourcehome' option value specified is not a valid absolute path for the source home.

Action: Supply a valid source home path and retry.

PRGO-01635: unable to retrieve group information for user "{0}"

Cause: An attempt to retrieve the indicated user's group information using the 'id' command failed.

Action: Examine the accompanying error messages, address the described issues, and retry.

PRGO-01636: Oracle Inventory already exists on nodes "{0}".

Cause: An attempt to add a working copy was rejected as Oracle Inventory exists on the indicated nodes.

Action: Reissue the 'add working copy' command after cleaning up the Oracle Inventory on the indicated nodes. Refer to the Oracle documentation for details.

PRGO-01637: The '-asmclientdata' option required for creating a working copy on an application cluster is not specified.

Cause: An attempt to create a working copy on an application cluster was rejected because the '-asmclientdata' option was not specified.

Action: Retry the 'rhpctl add workingcopy' command specifying the '-asmclientdata' option.

PRGO-01638: The GI home of cluster {0} is not an RHP working copy.

Cause: An attempt to delete nodes from the specified cluster was rejected because the Grid Infrastructure home of that cluster was not deployed by Rapid Home Provisioning (RHP).

Action: Execute the 'rhpctl move gihome' operation for the specified cluster and retry the 'rhpctl deletenode gihome' operation, or retry the 'rhpctl deletenode gihome' operation specifying a client with a complete working copy.

PRGO-01640: failed to validate that Oracle home "{0}" on node {1} is of platform {2}

Cause: An attempt to import the specified Oracle home as an image failed because it could not be validated that the specified Oracle home on the specified node was of the indicated platform.

Action: Examine the accompanying error messages for more information, address the reported issues, and retry.

PRGO-01641: The specified user "{0}" is not registered with an email address to receive email notifications.

Cause: An attempt to subscribe to a series failed because the specified user did not have a registered email address.

Action: Execute the command with a user having a registered email address.

PRGO-01642: destination working copy "{0}" is not based on Oracle Layered File System

Cause: An attempt to move to the specified working copy failed as the specified working copy was not based on an Oracle Layered File System.

Action: Reissue the 'move gihome' command specifying a destination working copy that is based on an Oracle Layered File System.

PRGO-01646: Working copy "{0}" is not provisioned on this RHP Client.

Cause: An attempt to add or delete a database instance was rejected because the specified working copy was not provisioned on this Rapid Home Provisioning (RHP) Client.

Action: Either 1) Retry the command on the RHP Client where the specified working copy is provisioned, or 2) Retry the command from the RHP Server.

PRGO-01647: Database "{0}" is a single-instance database.

Cause: An attempt to add or delete an instance of the indicated database was rejected because single-instance databases do not support these operations.

Action: None

PRGO-01648: Working copy '{0}' is an Oracle single-instance database home.

Cause: An attempt to add or delete a database instance was rejected because single-instance databases do not support these operations.

Action: None

PRGO-01649: The base image type "{0}" of working copy "{1}" is incompatible with 'addnode database' and 'deletenode database'.

Cause: An attempt to add or delete a database instance was rejected because the base image type of the specified working copy was not ORACLEDBSOFTWARE.

Action: Specify a working copy with base image type ORACLEDBSOFTWARE and retry the command.

PRGO-01650: Database "{0}" is not running.

Cause: An attempt to add or delete an instance of the specified database was rejected because the database was not running.

Action: Start the specified database and retry the command.

PRGO-01651: Database "{0}" is not an administrator-managed database.

Cause: An attempt to add or delete an instance of the specified database was rejected because these operations are only required for administrator-managed databases.

Action: Refer to the product documentation for details on how to add or delete instances of a policy-managed database.

PRGO-01653: An invalid value "{0}" for the cluster type parameter was specified in the response file

Cause: An attempt to validate the response file or provision

Action: Refer to the product documentation for valid cluster type values.

PRGO-01654: 'addnode' and 'deletenode' for an Oracle Grid Infrastructure home is not supported by the Rapid Home Provisioning Client.

Cause: The attempted 'addnode' or 'deletenode' operation for an Oracle Grid Infrastructure home was rejected because it is not supported by the Rapid Home Provisioning Client.

Action: Retry the command from the Rapid Home Provisioning Server.

PRGO-01655: Rolling patch is not possible because there is only one active Hub Node. Specify the '-nonrolling' option to perform non-rolling patch.

Cause: An attempt to perform a rolling patch was rejected because there was only one active Hub Node on the client cluster.

Action: Reissue the command 'move gihome' providing the '-nonrolling' option to perform non-rolling patch.

PRGO-01656: specified destination working copy has different Oracle base "{0}" from source working copy "{1}"

Cause: An attempt to move to the specified working copy failed because it had a different Oracle base from the indicated source working copy.

Action: Reissue the command 'move gihome' specifying a destination working copy that has the same Oracle base as the source working copy.

PRGO-01657: The -targetnode and either the -root or -sudouser option must be specified.

Cause: An attempt to add a working copy was rejected because the working copy version was less than 12.2 and either the -targetnode was not specified, or the targetnode was specified without the -root or -sudouser option.

Action: Retry the operation specifying the -targetnode and either the -root or the -sudouser option.

PRGO-01660: unsupported option '-local' specified when adding working copy "{0}" from an image of base type other than ORACLEGISOFTWARE

Cause: An attempt to add the indicated working copy was rejected because the '-local' option was supplied and this option is permitted only when adding a working copy from an image of base type ORACLEGISOFTWARE.

Action: Retry the operation without specifying the '-local' option.

PRGO-01661: The specified command is not supported on version "{0}".

Cause: The attempted operation was rejected because it was not supported for the indicated version.

Action: Refer to the product documentation for the supported version and retry.

PRGO-01662: The specified command is not supported.

Cause: The attempted operation was rejected because it was not supported.

Action: Refer to the product documentation.

PRGO-01664: The specified source working copy "{0}" is a software-only working copy.

Cause: An attempt to move or upgrade an Oracle Grid Infrastructure working copy was rejected because the indicated working copy was a software-only working copy.

Action: Retry the operation specifying an active, configured Oracle Grid Infrastructure home as the source.

PRGO-01666: deleting the last instance of database "{0}" is not permitted

Cause: An attempt to delete instances of the specified database was rejected because 'rhpctl deletenode database' may not be used to delete the last instance of a database.

Action: Retry the operation specifying a subset of instances.

PRGO-01667: The database "{0}" does not belong to working copy "{1}".

Cause: An attempt to operate on the specified database was rejected because the specified database does not belong to the specified working copy.

Action: Retry the operation specifying a database with its associated working copy.

PRGO-01668: The value supplied "{0}" for cluster node is more or less than the required information.

Cause: The command was rejected because the indicated value supplied as a node specification was either more or less than the required information.

Action: Retry the command providing a node specification in the form "<node_name>" for an Application cluster, in the form "<node_name>:<node_vip>[:<node_role>]" for a Flex cluster, and in the form "<node_name>:<node_vip>" for a non-Flex cluster.

PRGO-01669: Invalid credentials option specified for target node {0} belonging to cluster {1}, which is of version 12.2 or higher, and which has RHPC enabled.

Cause: An attempt to import an image was rejected because either -sudouser or -root was specified with -targetnode for a node belonging to a cluster of version 12.2 or higher where the Rapid Home Provisioning Client (RHPC) was enabled.

Action: Retry the operation using the -client option instead of the -sudouser or -root options.

PRGO-01670: Invalid credentials option was specified for target node {0} belonging to cluster {1}, which is of version 12.2 or higher, and which has the RHPC disabled.

Cause: An attempt to import an image was rejected because either -sudouser or -root was specified with -targetnode for a node belonging to a cluster of version 12.2 or higher where the Rapid Home Provisioning Client (RHPC) was disabled.

Action: Enable the RHPC on the indicated cluster, then retry the operation using the -client option instead of the -sudouser or -root options.

PRGO-01671: Invalid credentials option specified for target node {0} belonging to cluster {1}, which is of version 12.2 or higher, and where RHPC is not configured.

Cause: An attempt to import an image was rejected because either -sudouser or -root was specified with -targetnode for a node belonging to a cluster of version 12.2 or higher, where the Rapid Home Provisioning Client (RHPC) was not configured.

Action: Configure and start an RHPC on the indicated cluster, then retry the operation using the -client option instead of the -sudouser or -root options.

PRGO-01672: First node "{0}" is not a Hub Node.

Cause: An attempt to patch Oracle Clusterware was rejected because the indicated node, specified as the first node, was not a Hub Node.

Action: Reissue the command specifying a Hub Node as the first node.

PRGO-01673: An invalid value "{0}" for the cluster configuration parameter was specified in the response file

Cause: An attempt to validate the response file or provision

Action: Refer to the product documentation for valid

PRGO-01674: error while importing the client cluster certificate

Cause: An error occurred while importing the client cluster certificate.

Action: Examine the accompanying errors for more information, address issues and retry.

PRGO-01675: failed to delete working copy\n{0}

Cause: An attempt to delete working copy failed during the cleanup of the Oracle Grid Infrastructure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the described issues, and retry.

PRGO-01676: Re-execution of 'add workingcopy' rejected because the file '{0}' specified by response file parameter '{1}' differs from the one originally specified.

Cause: Re-execution of the 'add workingcopy' command failed because the file contents did not match the one used for the original execution.

Action: Retry the command with the same file contents used for the first execution of the command.

PRGO-01677: The specified target node "{0}" option is invalid for the cluster of version "{1}".

Cause: An attempt to add nodes to a cluster failed because the cluster was of a version prior to 12.2, and the target node specified was not one of the existing cluster nodes.

Action: Reissue the command after revising the target node option.

PRGO-01678: Option '-continue' is supported only for batch and smart move operations.

Cause: An attempt to move the Oracle Grid Infrastructure home was rejected because the '-continue' option was specified, but the move operation requested was not a batch move or a smart move operation.

Action: Resume the move operation by reissuing the command with the options that were originally specified.

PRGO-01679: The specified node "{0}" is not a part of the specified cluster "{1}".

Cause: The command was rejected because the indicated node was not a member of the indicated cluster.

Action: Reissue the command with a valid pair of cluster and node name.

PRGO-01684: Option -client is invalid when executing from an RHPC cluster.

Cause: An attempt to add a working copy was rejected because the command was executed specifying the -client option, which was not allowed on a Rapid Home Provisioning Client (RHPC) cluster.

Action: Reissue the command without specifying the -client option.

PRGO-01685: Oracle home "{0}" does not exist on nodes "{1}".

Cause: An attempt to delete a working copy with base image type ORACLEDBSOFTWARE failed because the indicated path did not exist on the indicated nodes.

Action: If the indicated home is an Oracle RAC home, specify a node using -targetnode on which the home does exist, or specify -force to remove the working copy metadata.

PRGO-01686: Move of gihome is not allowed from Rapid Home Provisioning Client where both the source and the destination working copies are based on the Oracle Layered File System.

Cause: An attempt to move to the specified working copy on the Rapid Home Provisioning Client was rejected because both the source and the destination working copies are based on the Oracle Layered File System.

Action: Reissue the 'move gihome' command from the Rapid Home Provisioning Server.

PRGO-01687: failure to add node "{0}" because the GNS is not configured

Cause: The Oracle Grid Infrastructure did not allow a Leaf Node to be added as part of this Oracle Cluster configuration because the Grid Naming Service (GNS) was not configured.

Action: Specify a Hub Node or configure the GNS using the command 'srvctl add gns' and retry the operation.

PRGO-01688: The '-clustermanifest' option required for creating a working copy on an application cluster is not specified.

Cause: An attempt to create a working copy on an application cluster was rejected because the '-clustermanifest' option was not specified.

Action: Retry the 'rhpctl add workingcopy' command specifying the '-clustermanifest' option.

PRGO-01689: The target node option is specified for the cluster of version "{0}".

Cause: An attempt to add nodes to a cluster failed because the cluster was version 12.2 or later, and the target node option was specified but should not have been.

Action: Reissue the command without specifying the target node option.

PRGO-01690: The -targetnode and either the -root or -sudouser option must be specified.

Cause: An attempt to move a Grid Infrastructure home in a nonrolling manner was rejected because the -targetnode was not specified or the targetnode was specified without the -root or -sudouser option.

Action: Retry the operation specifying the -targetnode and either the -root or the -sudouser option.

PRGO-01691: The move operation was rejected because the patched working copy "{0}" is missing the patches for bug numbers "{1}" which are present in the source Oracle home "{2}".

Cause: Some patches were present in the source Oracle home that were missing in the patched working copy.

Action: Rerun the move command with the '-ignorewcpatches' option or specify a patched working copy with at least the same patches applied as the source Oracle home.

PRGO-01693: The database patching cannot be completed in a rolling manner because the target patched home at "{0}" contains non-rolling bug fixes "{1}" compared to the source home at "{2}".

Cause: The bug numbers listed are marked as non-rolling in the metadata, and therefore cannot be applied in a rolling manner.

Action: Reissue the command specifying the '-nonrolling' option to complete the database patching in a non-rolling manner or remove the listed patches from the target patched home and continue to patch in a rolling manner.

PRGO-01694: The 'setupSSH' option is not supported for images whose version is earlier than 12.2.

Cause: An attempt to set up passwordless SSH user equivalence was rejected because the image was of a version earlier than 12.2.

Action: None

PRGO-01695: The credentials required for passwordless SSH user equivalence set up are missing.

Cause: An attempt to set up passwordless SSH user equivalence using the '-setupSSH' option of rhpctl was rejected because the required credentials were missing.

Action: Provide the credentials needed for passwordless SSH user equivalence set up and retry the operation.

PRGO-01696: Rapid Home Provisioning pre-check failed.

Cause: Rapid Home Provisioning pre-check failed on the cluster to be provisioned. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry.

PRGO-01697: Rapid Home Provisioning pre-check failed because SSH user equivalence was not set up on the remote nodes.

Cause: Rapid Home Provisioning pre-check failed on the cluster to be provisioned because the nodes did not have passwordless SSH user equivalence for the provisioning user.

Action: Run the 'rhpctl verify client' command with the '-fixup' and '-setupSSH' options to set up passwordless SSH user equivalence and retry the provisioning operation.

PRGO-01698: File "{0}" already exists.

Cause: An attempt to export the Rapid Home Provisioning (RHP) schema to the specified file failed because the file already existed.

Action: Remove or rename the existing file or specify a file that does not exist and retry the command.

PRGO-01699: More than one node is specified for provisioning a single instance database home.

Cause: The number of nodes specified for a single instance database home provisioning was greater than one.

Action: Specify only one node for the -node option.

PRGO-01700: Failure occurred while adding user "{0}" to authorize operations on the Oracle ACFS file system using volume device "{1}".

Cause: An attempt to add the specified user to authorize operations on the Oracle ACFS file system using the indicated volume device encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGO-01701: failure to copy Oracle home "{0}" to node "{1}"

Cause: An attempt to copy the specified Oracle home to the given node encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGO-01702: Failure occurred while provisioning an Oracle home.

Cause: An attempt to provision an Oracle home encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGO-01703: Failure occurred while provisioning an Oracle Grid Infrastructure working copy "{0}".

Cause: An attempt to provision an Oracle Grid Infrastructure working copy encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGO-01704: Failure occurred while deconfiguring an Oracle Grid Infrastructure cluster.

Cause: An attempt to deconfigure an Oracle Grid Infrastructure cluster encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGO-01705: Failure occurred while adding client "{0}".

Cause: An attempt to add a client encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGO-01706: Failure occurred while adding nodes "{0}" to an Oracle Grid Infrastructure cluster.

Cause: An attempt to add the specified nodes to an Oracle Grid Infrastructure cluster encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGO-01707: Failure occurred while executing Cluster Verification Utility.

Cause: An attempt to execute a command using the Cluster Verification Utility encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGO-01708: Failure occurred while executing discover client operation.

Cause: An attempt to execute a discover client operation encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGO-01709: Failure occurred while upgrading an Oracle Grid Infrastructure cluster.

Cause: An attempt to upgrade an Oracle Grid Infrastructure cluster encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGO-01710: Failure occurred while moving Oracle Grid Infrastructure home "{0}" to "{1}".

Cause: An attempt to move Oracle Grid Infrastructure home from the specified source to the specified destination encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGO-01711: Failure occurred during export of credentials for client "{0}".

Cause: An attempt to export the credentials for the specified client encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGO-01712: failure to retrieve the Rapid Home Provisioning Server user

Cause: An attempt to retrieve the Rapid Home Provisioning server user encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGO-01713: failure to retrieve working copy "{0}" information

Cause: An attempt to retrieve the specified working copy information encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGO-01714: Failure occurred during deletion of database "{0}" at Oracle home location "{1}".

Cause: An attempt to delete the specified database at the indicated Oracle home location encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGO-01716: The site version {0} is lower than the destination working copy version {1}.

Cause: An attempt to upgrade an Oracle RAC database failed because the site version was lower than the destination working copy version.

Action: Ensure that the destination working copy version is equal to or lower than the site version.

PRGO-01717: Databases "{0}" are currently being moved from working copy {1} to working copy {2}.

Cause: An attempt to move databases was rejected because the indicated databases were not completely moved between the indicated working copies.

Action: Retry after completing or reverting the ongoing move operation.

PRGO-01718: Databases "{0}" are currently being moved from Oracle home at {1} to working copy {2}.

Cause: An attempt to move databases was rejected because the indicated databases were not completely moved from the indicated Oracle home to the indicated working copy.

Action: Retry after completing or reverting the ongoing move operation.

PRGO-01719: Option '-continue' is supported only for batch and smart move operations.

Cause: An attempt to move databases was rejected because the '-continue' option was specified, but the move operation requested was not a batch move or a smart move operation.

Action: Resume the move operation by reissuing the command with the options that were originally specified. Revert the move operation by swapping the values for options '-sourcewc' and '-destwc' in the original command. Do not specify the '-continue' option.

PRGO-01720: Rapid Home Provisioning pre-check fails with warning messages.

Cause: The Rapid Home Provisioning pre-check failed with warning messages on the cluster to be provisioned. The accompanying messages provide detailed information.

Action: Examine the accompanying warning messages, address the described issues, and retry, or ignore the warnings.

PRGO-01721: invalid '-oraclebase' option provided for provisioning a software-only GI working copy where '-local' was not specified and the local node is not a member of the RHPS cluster

Cause: An attempt to provision a software-only Oracle Grid Infrastructure working copy with the 'rhpctl add workingcopy' command was rejected because the '-oraclebase' option was supplied incorrectly. The '-oraclebase' option can be supplied only in conjunction with the '-local' option to create a local working copy only when the local node is a member of the Rapid Home Provisioning Server (RHPS) cluster.

Action: When provisioning a software-only Oracle Grid Infrastructure working copy for the local node in RHPS cluster, specify the '-oraclebase' option and the '-local' option. The '-local' option is not supported for nodes in client clusters.

PRGO-01722: unable to delete working copy {0} because the home path is different across nodes "{1}"

Cause: An attempt to delete the indicated working copy was rejected because the home path was different across nodes.

Action: Perform the necessary steps to complete any earlier patching or upgrade operation and ensure that the home path is same on all nodes before attempting to delete the working copy.

PRGO-01723: The specified target node "{0}" is a part of the RHPS cluster.

Cause: An attempt to add a client on the target node was rejected because this node was already registered with the Rapid Home Provisioning Server (RHPS) cluster.

Action: Reissue the command with a target node outside of the RHPS cluster.

PRGO-01724: missing '-path' option when '-local' option was not specified

Cause: An attempt to provision a software-only Oracle Grid Infrastructure working copy with the 'rhctl add workingcopy' command was rejected because the '-path' option was missing. The '-path' option is mandatory when the '-local' option is not supplied.

Action: Retry the command specifying the '-path' option.

PRGO-01725: Removing node {0} as a candidate server for Oracle RAC One Node database {1} is not permitted.

Cause: An attempt to remove the specified node as a candidate server for the specified Oracle RAC One Node database was rejected because the specified database was running on the node.

Action: Retry the operation specifying a different node or reissue the same command after relocating the specified database.

PRGO-01726: Option -{0} is invalid when executing from an RHPC cluster.

Cause: An attempt to execute an operation was rejected because the specified option was not allowed on a Rapid Home Provisioning Client (RHPC) cluster.

Action: Reissue the command specifying a valid option.

PRGO-01728: failed to parse the date "{0}"

Cause: An attempt to execute an operation was rejected because the indicated date specification did not conform with the format "yyyy-MM-dd".

Action: Retry the operation specifying a valid date.

PRGO-01729: Database "{0}" has no instances configured on nodes: "{1}".

Cause: An attempt to delete instances of the indicated database on the indicated nodes failed because that database had no instances configured on those nodes.

Action: None

PRGO-01730: User "{0}" lacks the authority to perform the 'enable osconfig' operation.

Cause: An attempt to run the command 'rhctl enable osconfig' was rejected because the user did not have root or Administrator privileges.

Action: Retry the command from a user ID that has root or Administrator privileges.

PRGO-01731: User "{0}" lacks the authority to perform the 'disable osconfig' operation.

Cause: An attempt to run the command 'rhpctl disable osconfig' was rejected because the user did not have root or Administrator privileges.

Action: Retry the command from a user ID that has root or Administrator privileges.

PRGO-01732: No working copy is configured on cluster "{0}".

Cause: An attempt to patch Oracle databases in the indicated cluster using the '-auto' option failed because the cluster had no working copy created from an image of type ORACLEDBSOFTWARE.

Action: Retry the operation after provisioning working copies from images of type ORACLEDBSOFTWARE on the indicated cluster.

PRGO-01733: No database in cluster "{0}" is being moved.

Cause: An attempt to patch Oracle databases in the indicated cluster using the '-auto' option failed because the specified user input resulted in none of the databases in the cluster being identified as databases which needed to be patched.

Action: Retry the operation after ensuring that the inputs for options: '-dbhomes', '-only', and '-except' are not excluding all databases in the indicated cluster from being patched.

PRGO-01734: No database exists in cluster "{0}".

Cause: An attempt to patch Oracle databases in the specified cluster using the '-auto' option failed because no database existed in the cluster.

Action: Reissue the command without specifying the '-auto' option.

PRGO-01735: Working copy "{0}" is not a valid patched working copy for source working copy "{1}".

Cause: An attempt to patch Oracle databases using the '-auto' option failed because the pairing of the specified source working copy to the specified patched working copy using the '-dbhomes' option was invalid. The accompanying messages provide more details.

Action: Examine the accompanying messages and resolve any issues identified there. Reissue command specifying a valid pairing of source working copy to the patched working copy using the '-dbhomes' option.

PRGO-01740: Working copy "{0}" is not a valid patched working copy for source Oracle home "{1}".

Cause: An attempt to patch Oracle databases using the '-auto' option failed because the pairing of the specified source Oracle home to the specified patched working copy using the '-dbhomes' option was invalid. The accompanying messages provide more details.

Action: Examine the accompanying messages and resolve any issues identified there. Reissue the command specifying a valid pairing of source Oracle home to patched working copy using the '-dbhomes' option.

PRGO-01750: One or more of the specified batches contain multiple nodes.

Cause: An attempt to perform a patching operation in batch mode on a cluster whose version was earlier than 12.2.0.1 was rejected because one or more of the specified

batches contained multiple nodes. Batches containing more than one node was not supported for Grid Infrastructure versions prior to 12.2.0.1.

Action: Retry the operation ensuring that every batch contains only one node.

PRGO-01754: Batches "{0}" have already been completed.

Cause: An attempt to perform a patching operation in batch mode was rejected because the patching operation had already been completed on the specified batches.

Action: Retry the operation specifying nodes that have not been patched.

PRGO-01755: The option '-targetnode' is invalid when adding a working copy for an image of type '{0}'.

Cause: An attempt to add a working copy for the indicated image type was rejected because an invalid option ('-targetnode') was specified.

Action: Rerun the command 'add workingcopy' specifying the '-node' option instead of the '-targetnode' option.

PRGO-01756: The patched working copy "{0}" is missing the mandatory patches for bug numbers "{1}".

Cause: An attempt to move or upgrade a database to the indicated patched working copy was rejected because it did not include the mandatory patches for the indicated bugs.

Action: Apply the mandatory patches in the patched working copy or specify an image with the mandatory patches to create the patched working copy, and then retry the command.

PRGO-01757: The groups "{0}" specified in the '-groups' option in the command 'add workingcopy' is missing one or more groups for this image type and version.

Cause: All the required groups were not specified in the '-groups' option in the command 'add workingcopy', given the type and version of the image.

Action: Reissue the command with all valid groups for this image type and version. Valid group keywords for Grid Infrastructure Provisioning: Versions 11.2,12.1,12.2: OSDBA,OSOPER,OSASM Valid group keywords for Database Provisioning: Version 11.2: OSDBA,OSOPER Version 12.1: OSDBA,OSOPER,OSBACKUP,OSDG,OSKM Version 12.2: OSDBA,OSOPER,OSBACKUP,OSDG,OSKM,OSRAC

PRGO-01758: invalid configuration details for the Grid Infrastructure Management Repository disk group were specified in the response file

Cause: An attempt to validate the response file or provision an Oracle Domain Services Cluster failed because invalid configuration details for the Grid Infrastructure Management Repository disk group were specified in the response file.

Action: Refer to the product documentation for valid Grid Infrastructure Management Repository disk group settings for configuring Oracle Domain Services Cluster. Specify the required details to create a new disk group in the response file and retry the command.

PRGO-01759: invalid configuration details specified for configuring Grid Naming Service in the response file

Cause: An attempt to validate the response file or provision an Oracle Domain Services Cluster failed because invalid configuration details for the Grid Naming Service were specified in the response file.

Action: Refer to the product documentation for valid Grid Naming Service settings for configuring Oracle Domain Services Cluster. Specify the required details to create Grid Naming Service in the response file and retry the command.

PRGO-01760: storage type other than LOCAL specified for provisioning an Oracle home based on an Oracle Layered File System

Cause: An attempt to provision an Oracle home based on an Oracle Layered File System failed because the storage type specified was not LOCAL.

Action: Retry the command specifying the storage type as LOCAL or by leaving it unspecified and accepting the default.

PRGO-01761: Rapid Home Provisioning precheck failed because of invalid value or values in the response file "{0}"

Cause: Rapid Home Provisioning precheck failed on the cluster that was to be provisioned. The accompanying messages provide detailed failure information.

Action: Modify the response file to address the issues described by the accompanying messages, and retry the operation.

PRGO-01762: cannot complete the delete-database operation because there was no instance of database "{0}" running on any node

Cause: An attempt to delete the indicated database using the '-targetnode' option was rejected because there was no instance of that database running on any node.

Action: Start an instance of the database, if necessary, by first adding the working copy for the indicated database on at least one node.

PRGO-01763: unable to delete working copy "{0}" because the remote cluster has other active Oracle homes in the inventory

Cause: An attempt to delete the indicated working copy was rejected because other active Oracle homes were found in the inventory on the remote cluster.

Action: Perform the necessary steps to remove other active Oracle homes on the remote cluster before attempting to delete the specified working copy.

PRGO-01766: The specified target node "{0}" is one of the new nodes to be added to the cluster.

Cause: An attempt to add nodes to a cluster failed because the target node specified was one of the new nodes to be added.

Action: Reissue the command, specifying one of the existing nodes as the target node.

PRGO-01767: The nodes "{0}" to be added already exist in the cluster.

Cause: An attempt to add nodes to a cluster was rejected because the indicated nodes were already part of cluster.

Action: Reissue the command, excluding nodes that are already part of the cluster.

PRGO-01768: Failed to delete image series "{0}" because there are users subscribed to it.

Cause: An attempt to delete an image series failed because there were users subscribed to it.

Action: Unsubscribe all users from the series and reissue the command.

PRGO-01769: Cluster nodes string "{0}" has roles specified which are not valid unless provisioning an Oracle Flex Cluster.

Cause: An attempt to add a working copy was rejected because node roles were specified when provisioning a non-flex Cluster.

Action: Specify the value for the cluster nodes in the form "<node_name>:<node_vip>" or specify the cluster type as FLEX.

PRGO-01770: illegal combination of options '-node' and '-targetnode'

Cause: An attempt to provision a single instance Oracle home on a standalone non-cluster node was rejected because both '-targetnode' and '-node' were specified.

Action: Reissue the command specifying either '-targetnode' or '-node', but not both.

PRGO-01771: The site version {0} was lower than the image version {1}.

Cause: An attempt to provision an Oracle RAC database failed because the site version was lower than the image version.

Action: Retry the command, specifying an image whose version is less than or equal to the version of this site.

PRGO-01772: invalid storage type 'NFS' specified for pre-12.2 cluster

Cause: An attempt to provision a working copy on NFS storage was rejected because the target cluster version was not 12.2 or later.

Action: Reissue the command specifying a non-NFS storage type.

PRGO-01773: The compressed file {0} is not valid for import.

Cause: An attempt to import an image from the specified home failed. The indicated file was either non-existent or was corrupted.

Action: Retry the operation specifying a valid compressed file.

PRGO-01774: The evaluation revealed potential failure for command "{0}".

Cause: The preexecution evaluation check for the indicated command showed that some prerequisites of the command were not met. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the issues, and then retry the operation.

PRGO-01775: "{0}" operation on the client side is skipped for the cluster "{1}" of version "{2}".

Cause: This operation was not supported on the client site of the indicated version.

Action: Not an error.

PRGO-01776: Only one server pool should be provided when adding a single instance database.

Cause: An attempt to add a single instance database was rejected because more than one server pool was specified.

Action: Retry the operation specifying only one server pool.

PRGO-01777: The cluster manifest file "{0}" is invalid for cluster "{1}"

Cause: An attempt to add a working copy was rejected because the supplied cluster manifest file was either invalid or was not for the indicated remote cluster.

Action: Retry the command supplying a valid cluster manifest file.

PRGO-01778: failed to validate the cluster manifest file "{0}" for cluster "{1}"

Cause: An attempt to add a working copy was rejected because the supplied cluster manifest file could not be validated. The accompanying messages provide detailed failure information.

Action: Modify the cluster manifest file to address the issues described by the accompanying messages, and retry the operation.

PRGO-01779: The specified local path "{0}" is invalid.

Cause: 1) The path was on Oracle Automatic Storage Management Cluster File System (Oracle ACFS) but the storage type was LOCAL. Or 2) The path was not writable on all of the nodes. Or 3) The path had insufficient free space.

Action: Ensure that the specified path directory or its parent directory is writable and has sufficient free space.

PRGO-01780: Series "{0}" has no images.

Cause: An attempt to add a working copy was rejected because the indicated series had no images.

Action: Add at least one image to the specified series, and then retry the operation.

PRGO-01781: User "{0}" lacks the authority to perform the 'add workingcopy' operation on all of the images in the image series "{1}".

Cause: The user running the 'rhctl add workingcopy' command with the '-series' option did not have the required authorization for all of the images in the specified image series.

Action: Request authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01782: The image "{0}" in state "{1}" was skipped from the image series "{2}" as the user "{3}" lacks the authority to perform the 'add workingcopy' operation on it.

Cause: The user running the 'rhctl add workingcopy' command with the '-series' option did not have the required authorization for the image specified.

Action: Request authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01800: error encountered during update Oracle Database Appliance client operation

Cause: An attempt to update an Oracle Database Appliance client encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGO-01801: unpacked Oracle Database Appliance patch bundle version "{0}" does not match the image version "{1}"

Cause: An attempt to update an Oracle Database Appliance client failed because the unpacked patch bundle version was different from the image version.

Action: Retry the command specifying the deployed image or execute the command 'rhctl deploy image' to deploy the specified image.

PRGO-01802: unpacked Oracle Database Appliance patch bundle version "{0}" on node "{1}" does not match the patch bundle version "{2}" on node "{3}"

Cause: An attempt to update an Oracle Database Appliance (ODA) client failed because the unpacked patch bundle version was different on the two nodes.

Action: Retry the command after executing the command 'rhpctl deploy image' to deploy the specified image on both nodes.

PRGO-01803: Oracle Database Appliance cluster has "{0}" nodes

Cause: An attempt to update an Oracle Database Appliance (ODA) client failed because the ODA cluster did not have two nodes.

Action: Reissue the command specifying the correct target node.

PRGO-01807: components not updated: on node '{0}' {1} and on node '{2}' {3}

Cause: An attempt to update an Oracle Database Appliance (ODA) client failed because the required components were not updated. The accompanying oakcli update command output provides detailed failure information.

Action: Examine the oakcli update command output, resolve the problems identified there, and then retry the operation.

PRGO-01809: User interrupt caught. Commands already running on remote node will continue to execute.

Cause: An attempt to update an Oracle Database Appliance client failed because the user interrupted the command.

Action: Reissue the command.

PRGO-01810: node '{0}' down for more than {1} minutes

Cause: An attempt to update an Oracle Database Appliance client failed. The node was down for an unexpected amount of time.

Action: Reissue the command after the node is up again.

PRGO-01811: error while executing the oakcli command '{0}'

Cause: An attempt to update an Oracle Database Appliance client failed. There was an error while executing the oakcli update command.

Action: Examine the oakcli update command output, resolve the problems identified there, and then retry the operation.

PRGO-01812: The ODA patch version "{0}" is not recognized.

Cause: An attempt to update an Oracle Database Appliance (ODA) client was rejected because the indicated ODA patch version was not recognized by Rapid Home Provisioning (RHP).

Action: Ensure that the specified image is of the correct version and patching for that version is supported through RHP, and then retry the operation.

PRGO-01813: error encountered during deploy image operation

Cause: An attempt to deploy an Oracle Database Appliance image encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the described issues, and retry the operation.

PRGO-01814: The image path specified contains invalid files "{0}"

Cause: An attempt to deploy an Oracle Database Appliance (ODA) image failed because the image path contained files which were not ODA patch zip files.

Action: Reissue the command specifying the correct path.

PRGO-01815: The image version "{0}" specified is invalid.

Cause: An attempt to deploy an Oracle Database Appliance (ODA) image was rejected because an invalid image version was specified.

Action: Reissue the command specifying a valid ODA patch version.

PRGO-01816: The '-version' option required for importing an image of type ODAPATCHSOFTWARE is not specified.

Cause: An attempt to import the image was rejected because

Action: Retry the command specifying the '-version' option.

PRGO-01817: invalid option '-version' specified

Cause: An attempt to import an image was rejected because the '-version' option was specified, but is only allowed for images of type ODAPATCHSOFTWARE.

Action: Retry the command without the '-version' option.

PRGO-01818: The '-batch' option is not allowed for this patch since the storage components {0} must be updated.

Cause: An attempt to update an Oracle Database Appliance client with the '-batch' option was rejected because the storage components were required to be updated.

Action: Retry the command without the '-batch' option.

PRGO-01820: components not updated: on node '{0}' {1}

Cause: An attempt to update Oracle Database Appliance client failed because the required components were not updated. The accompanying messages provide detailed failure information.

Action: Examine the oakcli update command output, resolve the problems identified there, and then retry the operation.

PRGO-01824: More than one node was specified for the '-batch' option.

Cause: An attempt to update an Oracle Database Appliance client was rejected because more than one node was specified for the '-batch' option.

Action: Retry the command specifying only one node for the '-batch' option.

PRGO-01825: Node '{0}' was not patched successfully. Node '{1}' can be patched only after successfully patching node '{0}'

Cause: An attempt to run the update Oracle Database Appliance client command for the indicated node failed because another node was not patched successfully.

Action: Complete patching of the other node and then retry the command.

PRGO-01826: Node '{0}' already patched successfully to version '{1}'

Cause: An attempt to run the update Oracle Database Appliance client command for this node was rejected because the node had already been patched successfully.

Action: No action.

PRGO-01827: The '-batch' option is not valid since an instance of the command without the '-batch' option was already issued for this Oracle database Appliance system and image

Cause: An attempt to run the update Oracle Database Appliance client command for this node was rejected because an instance of the command without the '-batch' option was already issued for this Oracle database Appliance system and image.

Action: Execute the command without the '-batch' option.

PRGO-01828: The '-batch' option is mandatory since an instance of the command with the '-batch' option was already issued for this Oracle database Appliance system and image

Cause: An attempt to run the update Oracle Database Appliance client command for this node was rejected because an instance of the command with the '-batch' option was already issued for this Oracle database Appliance system and image.

Action: Execute the command with the '-batch' option.

PRGO-01831: Could not find any job with job ID {0}.

Cause: An attempt to fetch the job details failed because the specified job ID did not exist in the repository.

Action: Retry the operation with a job ID that exists in the repository.

PRGO-01832: osconfig already enabled

Cause: The operation was rejected because osconfig was already enabled.

Action: Retry the operation specifying the '-force' flag.

PRGO-01833: User "{0}" lacks the authority to perform the 'osconfig' operation.

Cause: An osconfig operation was rejected because the user did not have the necessary privileges. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01843: The specified osconfig "{0}" does not exist.

Cause: An attempt to operate on an osconfig collection was rejected because the specified osconfig was not found.

Action: Retry the operation specifying an osconfig collection that exists.

PRGO-01844: The specified osconfig "{0}" does not include node "{1}".

Cause: An attempt to compare osconfig was rejected because the specified osconfig did not include the specified node.

Action: Retry the operation specifying a valid node name or an osconfig collection that includes the specified node.

PRGO-01846: failed to compare the osconfig collections

Cause: An attempt to compare the specified osconfig collection failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01849: failed to restore the osconfig collection {0} for node {1}

Cause: An attempt to restore the osconfig collection failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01850: failed to determine the available osconfig collections for site {0}

Cause: An attempt to query the osconfig collection failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01851: backup osconfig operation scheduled at {0} for site {1} failed

Cause: An attempt to backup an osconfig collection failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01853: osconfig not yet enabled for site {0}

Cause: The operation was rejected because osconfig was not enabled for the indicated site.

Action: Enable osconfig and reissue the command.

PRGO-01854: failed to archive osconfig for node {0}

Cause: An attempt to backup an osconfig collection failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01855: failure to create directory "{0}"

Cause: An attempt to create the specified directory failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01856: failure to read or write to the file "{0}"

Cause: An attempt to read or write to the specified file failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGO-01859: The operation is not supported on version "{0}".

Cause: The attempted operation was rejected because it was not supported by the indicated version.

Action: Refer to the product documentation for the supported versions and retry the operation.

PRGO-01860: osconfig was already disabled

Cause: An attempt to disable osconfig was rejected because osconfig was already disabled.

Action: Retry the operation specifying the '-force' flag.

PRGO-01862: failed to collect osconfig for client "{0}"

Cause: An attempt to backup an osconfig collection failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01863: The name "{0}" was specified as the name of a peer server, but it is the name of a Rapid Home Provisioning Client (RHPC).

Cause: An attempt to query the peer server was rejected because the indicated name was the name of a Rapid Home Provisioning Client (RHPC), where the name of a peer Rapid Home Provisioning Server (RHPS) was expected.

Action: Retry the command providing the name of an RHP server.

PRGO-01864: The name "{0}" was specified as the name of a client, but it is the name of a peer Rapid Home Provisioning Server (RHPS).

Cause: An attempt to query the client was rejected because the indicated name was the name of a peer Rapid Home Provisioning Server (RHPS), where the name of a Rapid Home Provisioning Client (RHPC) was expected.

Action: Retry the command providing the name of an RHP Client.

PRGO-01865: User "{0}" does not have permission to perform the 'query peerserver' operation.

Cause: An attempt to execute the command 'rhpctl query peerserver' was rejected because the indicated user did not have permission.

Action: Request authorization from an administrator and retry the command or perform the operation from a user ID that has the required authorization.

PRGO-01866: User "{0}" does not have permission to perform the 'register server' operation.

Cause: An attempt to execute the command 'rhpctl register server' was rejected because the indicated user did not have permission.

Action: Request authorization from an administrator and retry the command or perform the operation from a user ID that has the required authorization.

PRGO-01869: Failed to create a single instance database on the Leaf Node "{0}".

Cause: An attempt to create a single instance database was rejected because the indicated node was a Leaf Node.

Action: Retry the operation, specifying a single Hub Node using the '-node' option.

PRGO-01870: The unzipped directory {0} is not a proper Oracle home.

Cause: An attempt to import an image from the indicated path failed. The indicated extracted directory was not a proper Oracle home.

Action: Retry the import operation supplying a compressed file containing a valid Oracle home as the top directory in the archive.

PRGO-01871: The specified nodes "{0}" do not belong to cluster "{1}".

Cause: An attempt to provision a standalone working copy was rejected because either some of the specified nodes were not configured with Oracle Grid Infrastructure (GI), or they belonged to different clusters.

Action: Retry the command ensuring that either none of the nodes specified by '-node' are configured with GI or all of them are configured with the same client cluster.

PRGO-01872: The database "{0}" does not belong to Oracle home "{1}".

Cause: An attempt to operate on the specified database was rejected because the specified database did not belong to the specified Oracle home.

Action: Retry the operation specifying a database with its associated Oracle home.

PRGO-01873: The GoldenGate working copy "{0}" is not complete.

Cause: An attempt to upgrade a database with zero downtime was rejected because the specified GoldenGate working copy was incomplete.

Action: Retry after completely provisioning the specified GoldenGate working copy or specify a different working copy.

PRGO-01874: The GoldenGate working copy "{0}" of base image type "{1}" is not valid for Oracle home version "{2}".

Cause: An attempt to upgrade a database with zero downtime was rejected because the version of the specified GoldenGate working copy was not suitable for the indicated Oracle home version.

Action: Retry the operation specifying a GoldenGate working copy of the appropriate base image type.

PRGO-01875: The GoldenGate working copy "{0}" is not owned by user "{1}".

Cause: An attempt to upgrade a database with zero downtime was rejected because the specified GoldenGate working copy was not owned by the indicated user.

Action: Retry the operation specifying a GoldenGate working copy owned by the indicated user.

PRGO-01876: The GoldenGate working copy "{0}" is not on an ASM Cluster File System (ACFS).

Cause: An attempt to upgrade a database with zero downtime was rejected because the specified GoldenGate working copy was not on an ACFS file system.

Action: Retry the operation specifying a GoldenGate working copy on an ACFS file system.

PRGO-01877: The source Oracle home is missing mandatory patches.

Cause: An attempt to upgrade a database with zero downtime was rejected because the database belonged to an Oracle home which was missing mandatory patches.

Oracle home version|Minimum patches required
 -----|----- 11.2.0.4 |11.2.0.4.160419 PSU
 and patch 24342770 -----|-----

Action: Move the database to an Oracle home with the required patches and retry.

PRGO-01878: failed to upgrade database "{0}" with zero downtime

Cause: An attempt to upgrade the specified database with zero downtime failed. The accompanying messages provide more details.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01887: The database "{0}" does not have services.

Cause: An attempt to upgrade the indicated database with zero downtime was rejected because it does not have services.

Action: Add services to the database and retry.

PRGO-01892: The destination working copy is missing mandatory patches.

Cause: An attempt to upgrade a database with zero downtime was rejected because the destination working copy was missing mandatory patches. Oracle home version|Min. GI

```
version |Minimum patches required -----|-----|-----
12.1.0.2 |12.1.0.2 |12.1.0.2.160419 PSU -----|-----|-----
12.1.0.2 |12.2.0.1 |12.1.0.2.160419 PSU and | |bugs 21626377,21780146
-----|-----|-----
```

Action: Retry the operation specifying a destination working copy containing the required patches.

PRGO-01893: The snapshot database "{0}" is not running.

Cause: An attempt to upgrade a database with zero downtime failed because the snapshot database was not started. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01895: The database "{0}" is not the primary database.

Cause: An attempt to upgrade the specified database with zero downtime was rejected because it was not the primary database.

Action: Retry the operation specifying the primary database.

PRGO-01896: unable to connect to database "{0}" with the SYSDBA system privilege

Cause: An attempt to upgrade the indicated database with zero downtime was rejected because Rapid Home Provisioning (RHP) could not connect to the database with the SYSDBA system privilege.

Action: Retry the operation after ensuring that the database is online.

PRGO-01897: The database "{0}" is not in OPEN mode.

Cause: An attempt to upgrade the indicated database with zero downtime was rejected because the database was not open.

Action: Retry the operation after ensuring that the database is open.

PRGO-01898: The database "{0}" is in backup mode.

Cause: An attempt to upgrade the indicated database with zero downtime was rejected because the database was in backup mode.

Action: Retry the operation after the database backup has completed.

PRGO-01899: The data files of database "{0}" exist on an ASM disk group.

Cause: An attempt to upgrade the specified database with zero downtime was rejected because its data files were on an ASM disk group.

Action: None

PRGO-01900: The database "{0}" is not in ARCHIVELOG mode.

Cause: An attempt to upgrade the specified database with zero downtime was rejected because it was not in ARCHIVELOG mode.

Action: Retry the operation after configuring the database in ARCHIVELOG mode.

PRGO-01901: The data files of database "{0}" do not exist on ASM Cluster File System (ACFS) snapshots.

Cause: An attempt to upgrade the specified database with zero downtime was rejected because its data files do not exist on ACFS snapshots.

Action: None

PRGO-01902: The data files "{0}" of database "{1}" are missing.

Cause: An attempt to upgrade the indicated database with zero downtime was rejected because the indicated data files were missing.

Action: Restore the missing data files from a backup, and then retry the operation.

PRGO-01903: The database "{0}" does not have all its data files on ASM Cluster File System (ACFS) snapshots.

Cause: An attempt to upgrade the indicated database with zero downtime was rejected because one or more its data files were not on ACFS snapshots.

Action: Upgrade the indicated database in a non-rolling fashion.

PRGO-01904: The data files "{0}" of database "{1}" are not online.

Cause: An attempt to upgrade the indicated database with zero downtime was rejected because the indicated data files were not online.

Action: Ensure that the indicated data files are all online, and then retry the operation.

PRGO-01905: invalid Oracle database home "{0}"

Cause: An attempt to upgrade a database with zero downtime was rejected because the indicated Oracle home was not a database home.

Action: Retry the operation specifying an Oracle database home.

PRGO-01906: Oracle database home "{0}" does not exist

Cause: An attempt to upgrade a database to the specified Oracle home with zero downtime was rejected because the home did not exist.

Action: Retry the operation specifying an Oracle home that does exist.

PRGO-01907: could not retrieve the version of Oracle database home "{0}"

Cause: An attempt to upgrade a database to the indicated Oracle home with zero downtime was rejected because the version of the home could not be retrieved. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01908: The version of Oracle database home "{0}" is the same as the source database.

Cause: An attempt to upgrade a database with zero downtime was rejected because the specified destination Oracle home and the source database were of the same version.

Action: Retry the operation specifying a destination Oracle home of a higher version.

PRGO-01909: The version of Oracle database home "{0}" is lower than the source database.

Cause: An attempt to upgrade a database with zero downtime was rejected because the specified destination Oracle home was of a lower version than the source database.

Action: Retry the operation specifying a destination home of a higher version.

PRGO-01910: invalid number of job_queue_processes for database "{0}"

Cause: An attempt to upgrade the indicated database with zero downtime was rejected because the current value of the job_queue_processes parameter was less than 4, which was the minimum.

Action: Retry the operation after setting the job_queue_processes parameter equal to or greater than 4.

PRGO-01911: failed to set up Oracle GoldenGate requirements for database "{0}"

Cause: An attempt to upgrade the indicated database with zero downtime failed because an error occurred while setting up Oracle GoldenGate requirements for the database. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01912: failed to add sequence support to database "{0}"

Cause: An attempt to upgrade the indicated database with zero downtime failed because an error occurred while adding sequence support to the database. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01913: The required size of REDO space is {0}G but only {1}G is available.

Cause: An attempt to upgrade a database with zero downtime failed because an ASM Cluster File System (ACFS) snapshot could not be created for the temporary database due to insufficient REDO space.

Action: Retry the operation after increasing the REDO space.

PRGO-01914: failed to create an ASM Cluster File System (ACFS) snapshot

Cause: An attempt to upgrade a database with zero downtime failed because an ACFS snapshot could not be created for the temporary database. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01915: failed to alter the backup mode for database "{0}"

Cause: An attempt to upgrade the indicated database with zero downtime failed because an error occurred while altering the backup mode for the database. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01916: failed to retrieve the archive finish time for database "{0}"

Cause: An attempt to upgrade a database with zero downtime failed because an error occurred while retrieving the archive finish time for the specified database. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01917: failed to retrieve the archive destination ID for database "{0}"

Cause: An attempt to upgrade a database with zero downtime failed because an error occurred while retrieving the archive destination ID for the specified database. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01918: failed to create the control file for the temporary database

Cause: An attempt to upgrade a database with zero downtime failed because an error occurred while creating the control file for the temporary database. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01919: failed to recover the temporary database

Cause: An attempt to upgrade a database with zero downtime failed because an error occurred while performing recovery for the temporary database. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01920: failed to open the temporary database with the RESETLOGS option

Cause: An attempt to upgrade a database with zero downtime failed because an error occurred while opening the temporary database with the RESETLOGS option. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01921: failed to set temporary table spaces for the temporary database

Cause: An attempt to upgrade a database with zero downtime failed because an error occurred while setting temporary table spaces for the temporary database.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01922: failed to set read-only table spaces for the temporary database

Cause: An attempt to upgrade a database with zero downtime failed because an error occurred while setting read-only table spaces for the temporary database. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01923: failed to change the database ID for the temporary database

Cause: An attempt to upgrade a database with zero downtime failed because an error occurred while changing the database ID for the temporary database. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01924: failed to create the SPFILE for the temporary database

Cause: An attempt to upgrade a database with zero downtime failed because an error occurred while creating the SPFILE for the temporary database. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01925: failed to add the temporary database as a Clusterware resource

Cause: An attempt to upgrade a database with zero downtime failed because the temporary database could not be added as a Clusterware resource. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01926: The temporary database does not exist.

Cause: An attempt to upgrade a database with zero downtime failed because the temporary database was missing. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01927: The temporary database is not running.

Cause: An attempt to upgrade a database with zero downtime failed because the temporary database was not started. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01928: failed to check the status of Oracle GoldenGate

Cause: An attempt to upgrade a database with zero downtime failed because an error occurred while checking the status of Oracle GoldenGate. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01929: The status of Oracle GoldenGate is unhealthy.

Cause: An attempt to upgrade a database with zero downtime failed because the status of Oracle GoldenGate was abnormal. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01930: Internal error [# {0} #].

Cause: An attempt to upgrade a database with zero downtime failed because of an internal error.

Action: Contact Oracle Support Services.

PRGO-01931: failed to create services for the temporary database

Cause: An attempt to upgrade a database with zero downtime failed because an error occurred while creating services for the temporary database. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01932: Oracle GoldenGate synchronization did not complete.

Cause: An attempt to upgrade a database with zero downtime failed because an error occurred while synchronizing the source and temporary databases using Oracle GoldenGate. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01933: failed to disable the database service "{0}"

Cause: An attempt to upgrade a database with zero downtime failed because an error occurred while disabling the indicated database service. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01934: failed to enable the database service "{0}"

Cause: An attempt to upgrade a database with zero downtime failed because an error occurred while enabling the indicated database service. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-01937: User "{0}" lacks the authority to perform the 'recover node' operation.

Cause: An attempt to run the command 'rhpctl recover node' was rejected because the user did not have root or Administrator privileges.

Action: Retry the command from a user ID that has root or Administrator privileges.

PRGO-01938: User "{0}" lacks the authority to perform the 'deploy image' operation.

Cause: An attempt to run the command 'rhpctl deploy image' was rejected because the user did not have root or Administrator privileges.

Action: Retry the command from a user ID that has root or Administrator privileges.

PRGO-01939: User "{0}" lacks the authority to perform the 'collect osconfig' operation.

Cause: An attempt to run the command 'rhpctl collect osconfig' was rejected because the user did not have root or sudo privileges.

Action: Retry the command specifying the user ID that has root or sudo privileges.

PRGO-01940: Path {0} does not designate an Oracle Golden Gate Home.

Cause: An attempt to import the software image was rejected because the directory designated by the indicated path did not contain the 'ggcmd' binary and so could not be an Oracle Golden Gate home.

Action: Retry ensuring that the supplied path is an Oracle Golden Gate home path.

PRGO-01941: Path {0} does not designate an Oracle Golden Gate Home because the inventory file was not found.

Cause: An attempt to import an Oracle Golden Gate Home software image was rejected because the directory designated by the indicated path did not contain the Oracle Universal Installer (OUI) inventory file and so could not be an Oracle Golden Gate home.

Action: Retry ensuring that the supplied path is an Oracle Golden Gate home path.

PRGO-01942: The working copy "{0}" is an Oracle single-instance database home on a non-cluster node.

Cause: An attempt to upgrade a database to the indicated Oracle home with zero downtime was rejected because the database was not configured in an Oracle Grid Infrastructure environment.

Action: None

PRGO-01943: ASM is not running on cluster "{0}".

Cause: An attempt to upgrade a database with zero downtime on the indicated cluster was rejected because ASM was not running on the cluster.

Action: Retry after starting ASM on the indicated cluster.

PRGO-01945: The database "{0}" is not running.

Cause: An attempt to upgrade the indicated database with zero downtime was rejected because the database was not running.

Action: Retry after starting the indicated database.

PRGO-01946: The database "{0}" does not have its data files on an ASM Cluster File System (ACFS) or an ASM diskgroup.

Cause: An attempt to upgrade the indicated database with zero downtime was rejected because its data files were neither on an ACFS file system nor on an ASM diskgroup.

Action: None

PRGO-01947: The database "{0}" does not have its REDO logs on an ASM Cluster File System (ACFS).

Cause: An attempt to upgrade the indicated database with zero downtime was rejected because its REDO logs were not on an ACFS file system.

Action: None

PRGO-01948: The database "{0}" does not have its fast recovery area on an ASM Cluster File System (ACFS).

Cause: An attempt to upgrade the indicated database with zero downtime was rejected because its fast recovery area was not on an ACFS file system.

Action: None

PRGO-01949: Version '{0}' is not a valid Oracle database release.

Cause: An attempt to schedule a gold image creation job on the Gold Image As Service (GIAAS) server failed because the supplied Oracle database version identifier was not valid.

Action: Reissue the command specifying a valid Oracle database release version identifier for the -release option.

PRGO-01950: The PSU string '{0}' is not a valid Oracle database PSU version.

Cause: An attempt to schedule a gold image creation job on the Gold Image As Service (GIAAS) server failed because the supplied patch set updates (PSU) version was not a valid Oracle database version.

Action: Reissue the command specifying the correct Oracle database PSU for the -psu option.

PRGO-01951: The patches string '{0}' does not contain valid Oracle Database patch numbers.

Cause: An attempt to schedule a gold image creation job on the Gold Image As Service (GIAAS) server failed because the supplied patches string was not a list of valid bug numbers.

Action: Reissue the command specifying the correct Oracle database patch version for the -patches option. The specified patches string could be a list of comma-separated valid bug numbers.

PRGO-01952: Directory '{0}' does not have sufficient space to store archive file.

Cause: An attempt to download the gold image from the Gold Image As Service (GIAAS) server failed because the specified directory did not have sufficient storage space.

Action: Free up space in the specified directory and reissue the command.

PRGO-01953: failure to write file: '{0}' in directory: '{1}'

Cause: An attempt to write the gold image archive file failed because the current user did not have write permission for the indicated directory.

Action: Retry the command ensuring that the specified directory has the requisite permissions.

PRGO-01954: While scheduling job, GIAAS server returned error message: '{0}'.

Cause: An attempt to schedule a Gold Image As Service (GIAAS) job failed because the GIAAS server returned the indicated error.

Action: Check the GIAAS logs for the specified error message from the GIAAS server, address the issue, and reissue the command.

PRGO-01955: The derived image type '{0}' is not supported for scheduling GIAAS job.

Cause: An attempt to schedule a Gold Image As Service (GIAAS) job on the GIAAS server failed because the base image type of the specified image name was not of the type ORACLEGISOFTWARE or ORACLEDBSOFTWARE.

Action: Retry the command ensuring that the base image type of the derived image is either ORACLEGISOFTWARE or ORACLEDBSOFTWARE.

PRGO-01956: HTTP Post request to URL '{0}' failed with HTTP status code '{1}'.

Cause: An attempt to post to the indicated URL failed because of the HTTP error denoted by the indicated status code.

Action: Ensure that the specified URL is correct and that the HTTP server is running using the 'ping' command. Otherwise, contact Oracle Support Services.

PRGO-01957: HTTP Get request to URL '{0}' failed with error message: '{1}'.

Cause: An attempt to access the indicated URL failed because the HTTP server returned the specified HTTP status code.

Action: Retry the command ensuring that the specified URL is correct and that the HTTP server is running using the 'ping' command.

PRGO-01958: HTTP Post request to URL '{0}' failed with error message: '{1}'.

Cause: An attempt to post to the indicated URL failed because the HTTP server returned the indicated error.

Action: Examine the specified error message from the HTTP server for more information, address the reported issues, and retry.

PRGO-01959: No email address configured for user '{0}'.

Cause: An attempt to schedule a Gold Image As Service (GIAAS) job on the GIAAS server failed because there was no email address configured for the indicated user.

Action: Use the 'rhpctl register user' command to specify the email address for the specified user and retry.

PRGO-01960: failed to modify the RHP user of user "{0}" because it is not a REST user

Cause: An attempt to modify the Rapid Home Provisioning (RHP) user failed because the user was not a REST user.

Action: Provide a REST user or create a new REST user using the command "rhpctl register user".

PRGO-01961: failed to set the RHP user "{0}" because it is a REST user

Cause: An attempt to set the Rapid Home Provisioning (RHP) user failed because the user should not be a REST user.

Action: Retry the operation, specifying an RHP user.

PRGO-01962: Invalid REST user "{0}" supplied for granting or revoking a role.

Cause: An attempt to grant or revoke a role for the indicated user failed because the user was a REST user.

Action: Retry the command, specifying a non-REST user.

PRGO-01966: failed to modify the REST user "{0}" because its roles are not a subset of "{1}" roles

Cause: An attempt to modify the indicated REST user was rejected because that user had more privileges than the indicated Rapid Home Provisioning (RHP) user.

Action: Grant the correct roles to the RHP user and try again.

PRGO-01974: cannot upgrade an Oracle Grid Infrastructure home in a Rapid Home Provisioning Server (RHPS) cluster

Cause: An attempt to upgrade Oracle Grid Infrastructure home failed because the target node was configured with RHPS. RHPS self-upgrade is not supported.

Action: Manually upgrade the home without using the Rapid Home Provisioning commands.

PRGO-01975: unexpected option '-oraclebase' specified when adding working copy "{0}" from an image of Golden Gate base type

Cause: An attempt to add the indicated working copy was rejected because the '-oraclebase' option was supplied and this option was not permitted when adding a working copy from an image of base type ORACLEGGSOFTWARE.

Action: Retry the operation without specifying the '-oraclebase' option.

PRGO-02040: Adding a working copy failed. The specified software home is for the "{0}" operating system, and the cluster operating system is "{1}".

Cause: An attempt to provision a working copy was rejected because the platform of the software home specified was different from that of the cluster, and the platform-specific files for the target platform were not found in the rhpboot directory.

Action: Import an Oracle Grid Infrastructure image of the current version and target platform, and then reissue the command.

PRGO-02041: Databases "{0}" have not been completely reverted.

Cause: An attempt to continue database patching was rejected because a request was previously made to revert the indicated databases, but the revert operation was not completed on all the required nodes.

Action: Complete reverting the indicated databases and then continue patching the remaining databases.

PRGO-02042: Databases "{0}" are not being moved.

Cause: An attempt to continue or revert patching for the indicated databases was rejected because the databases were not involved in a move operation.

Action: Do not specify the indicated databases to continue or revert patching.

PRGO-02048: Oracle GoldenGate does not provide full capture process support for one or more tables in database "{0}".

Cause: An attempt to upgrade the indicated database with zero downtime was rejected because GoldenGate did not fully support the capture process for one or more tables owned by non-Oracle maintained users.

Action: Query the DBA_GOLDENGATE_SUPPORT_MODE view in the indicated database to get additional information about the level of Oracle GoldenGate capture process support for the tables in the database. To ignore this warning and retry the operation, specify the '-ignoreprereq' option.

PRGO-02049: Failed to query view DBA_GOLDENGATE_SUPPORT_MODE. Query output:\n{0}

Cause: An attempt to upgrade database with zero downtime failed because a query of view DBA_GOLDENGATE_SUPPORT_MODE failed.

Action: Review the accompanying output for details and retry after resolving the error.

PRGO-02050: failed to create obey file

Cause: An attempt to upgrade the indicated database with zero downtime was rejected because the GoldenGate obey file could not be created. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-02051: Failed to set GoldenGate requirements for database "{0}".

Cause: An attempt to upgrade the indicated database with zero downtime was rejected because the GoldenGate requirements could not be set for the database. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-02065: Cannot create a snapshot of an existing snapshot of an ASM Cluster File System (ACFS) on ASM disk group "{0}".

Cause: An attempt to upgrade a database with zero downtime was rejected because the database had data files on an ACFS snapshot, but the ASM Dynamic Volume Manager (ADVM) compatibility attribute for the disk group containing the ACFS was less than 12.1, which meant that a snapshot of the data files could not be created.

Action: None. Creation of a snapshot from an existing ACFS snapshot cannot be performed. Even if the ADVM compatibility attribute for the indicated disk group is updated to 12.1, creation of a snapshot from an existing snapshot is not possible due to the presence of a snapshot that was created with the ADVM compatibility set to less than 12.1.

PRGO-02066: Cannot create a read-write snapshot of an ASM Cluster File System (ACFS) on ASM disk group "{0}".

Cause: An attempt to upgrade a database with zero downtime was rejected because the database had data files on an ACFS, but the ASM Dynamic Volume Manager (ADVM) compatibility attribute for the disk group containing the ACFS was less than 11.2.0.3.0, which meant that a snapshot of the data files could not be created.

Action: Set the ADVM compatibility attribute for the indicated disk group to 11.2.0.3.0 or higher, and then retry the operation.

PRGO-02067: Database "{0}" is not owned by "{1}".

Cause: An attempt to retrieve information about the indicated database was rejected because it was not owned by the indicated user.

Action: Specify a working copy owned by the correct user, and then retry the operation.

PRGO-02069: failed to apply osconfig retention plan for client "{0}"

Cause: An attempt to perform osconfig retention failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-02081: cannot add working copy from image "{0}" because creation of this image was stored on external file system

Cause: An attempt to add a working copy from an image was rejected because

Action: Specify a non-external image from which to add the working copy.

PRGO-02083: Image "{0}" is already replicated to client "{1}".

Cause: An attempt to replicate the indicated image to the specified client was rejected, because the image was already replicated to the client.

Action: None

PRGO-02084: Image "{0}" cannot be replicated to client "{1}" because the image is incomplete.

Cause: An attempt to replicate the indicated image to the indicated client was rejected, because the image was incomplete.

Action: Retry the 'replicate image' command, specifying a complete image.

PRGO-02085: failed to start database service "{0}"

Cause: An error occurred while attempting to start the indicated service. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02086: failed to stop database service "{0}"

Cause: An error occurred while attempting to stop the indicated service. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02087: The server data file provided is for cluster {0}, not for the specified cluster {1}.

Cause: An attempt to register a peer server was rejected because the specified server data file was for a different cluster.

Action: Retry the operation, ensuring that the name of the RHP Server cluster specified using the '-server' option is the name of the cluster where the command 'rhpctl export server' was run to generate the server data file.

PRGO-02108: No job ID specified in the command arguments.

Cause: An attempt to delete a scheduled job was rejected because there was no job ID was found in the command arguments.

Action: Retry the 'delete job' command specifying a valid job id or comma separated list of job ids.

PRGO-02115: The move operation was rejected because the patched working copy "{0}" has the same patches which are present in the source working copy "{1}".

Cause: An attempt to move to an Oracle home based on an Oracle Layered File System was rejected because the destination workingcopy had the same patches as the source workingcopy, which was also based on an Oracle Layered File System.

Action: Rerun the 'rhpctl move gihome' command specifying a patched working copy with more patches applied as the source working copy.

PRGO-02121: could not find any matching jobs

Cause: An attempt to find jobs based on the specified conditional arguments failed because no matching jobs were found. This was probably due to invalid conditional arguments.

Action: Retry the operation, specifying valid conditional arguments.

PRGO-02122: Rapid Home Provisioning (RHP) client is running on node "{0}", preventing a recover node operation.

Cause: An attempt to perform a recover node operation was rejected because the Rapid Home Provisioning (RHP) client was running on the indicated node.

Action: Start the RHP client on a different node, and then retry the operation.

PRGO-02128: Failed to create the pluggable database "{0}" because the specified working copy creation was incomplete.

Cause: An attempt to add a pluggable database was rejected because the specified working copy creation was incomplete.

Action: Run the command 'rhpctl add workingcopy' to re-create the working copy, and then retry the operation.

PRGO-02129: missing required option '-targetnode' for performing "{0}" operation on a cluster whose version is older than 12.2

Cause: An attempt to perform the indicated operation failed because the '-targetnode' option was not specified.

Action: Retry specifying the '-targetnode' option.

PRGO-02130: Image "{0}" does not exist in the specified mapping file "{1}".

Cause: An attempt to download the indicated image failed because the image details for that image were not found in the indicated mapping file.

Action: Retry the command specifying the correct image and mapping file after adding the image to the mapping file if both indicated values are correct.

PRGO-02131: JSON parsing failed for mapping file "{0}".

Cause: An attempt to download an image failed because the indicated mapping file could not be parsed because it was not in valid JSON format.

Action: Retry the operation after correcting the indicated file or specifying the correct mapping file.

PRGO-02132: file "{0}" not found at path: "{1}"

Cause: An attempt to download the indicated file failed because the indicated path was not valid.

Action: Ensure that the specified file exists and retry.

PRGO-02135: The directory '{0}' does not have sufficient space to store archive file.

Cause: An attempt to download an archive failed because the indicated directory did not have sufficient storage space.

Action: Free up space in the specified directory and reissue the command.

PRGO-02136: Oracle Grid Infrastructure software-only home "{0}" does not exist on nodes "{1}".

Cause: An attempt to move or upgrade Oracle Grid Infrastructure was rejected because the specified destination Oracle Grid Infrastructure home did not exist on the indicated cluster nodes.

Action: Retry the operation, specifying an Oracle Grid Infrastructure software-only working copy that exists on all nodes in the cluster being patched.

PRGO-02137: missing mandatory option '-agpath', '-path', or both

Cause: An attempt to move to an Oracle home based on an Oracle Layered File System failed because the '-agpath', '-path' option, or both options were not provided.

Action: Reissue the 'rhpctl move gihome' command specifying both the '-agpath' and '-path' options.

PRGO-02140: failed to delete the RHP user "{0}" because the REST user "{1}" is linked with this user

Cause: An attempt to delete the indicated Rapid Home Provisioning (RHP) user was rejected because it was associated the indicated REST user.

Action: Remove the indicated REST user, or change the RHP user associated with the REST user, and then retry the operation.

PRGO-02141: The specified string "{0}" is not the name of an RHP client.

Cause: An attempt to execute a command for the specified client failed because the name specified did not correspond to a Rapid Home Provisioning (RHP) client.

Action: Retry the operation, specifying a valid client name.

PRGO-02142: The specified string "{0}" is not the name of a peer RHP server.

Cause: An attempt to execute a command for the specified server failed because the name specified did not correspond to a peer Rapid Home Provisioning (RHP) server.

Action: Retry the operation, specifying a valid server name.

PRGO-02143: failed to move Oracle Grid Infrastructure home to destination working copy "{0}" with storage type RHP_MANAGED

Cause: An attempt to move an Oracle Grid Infrastructure home failed because the storage type of the destination working copy was RHP_MANAGED,

Action: Retry the move operation specifying a working copy that does not have the storage type RHP_MANAGED.

PRGO-02144: The image zip file {0} contains invalid files "{1}"

Cause: An attempt to deploy an Oracle Database Appliance (ODA) image was rejected because the indicated image zip file contained files which were not ODA patch zip files.

Action: Retry the operation, ensuring that the specified zip file does not contain indicated invalid files.

PRGO-02145: The zip file {0} is not an Oracle Database Home

Cause: An attempt to deploy an Oracle Database home image was rejected because the indicated zip file did not contain the Oracle Database binary.

Action: Retry the operation, ensuring that the zip file specified is an Oracle Database home image.

PRGO-02146: Zip file {0} does not contain an Oracle Golden Gate home.

Cause: An attempt to import a Golden Gate home software image was rejected because the indicated zip file did not contain the 'ggcmd' binary.

Action: Retry the operation, ensuring that the specified zip file contains an Oracle Golden Gate home.

PRGO-02147: Zip file {0} does not contain an Oracle Golden Gate home because the inventory file was not found.

Cause: An attempt to import an Oracle Golden Gate home software image was rejected because the indicated zip file did not contain the Oracle Universal Installer (OUI) inventory file.

Action: Retry the operation, ensuring that the specified zip file contains an Oracle Golden Gate home.

PRGO-02148: The zip file {0} does not contain an Oracle Grid Infrastructure home

Cause: An attempt to import an Oracle Grid Infrastructure home software image was rejected because the indicated zip file did not contain the 'crsd' binary.

Action: Retry the operation, ensuring that the specified zip file contains an Oracle Grid Infrastructure home.

PRGO-02149: User "{0}" lacks the authority to schedule the operation.

Cause: An attempt to schedule an rhpctl command was rejected because the indicated user did not have the required authorization.

Action: Retry the operation after requesting the authorization from the administrator or retry the operation from a user ID that has the required authorization.

PRGO-02150: User "{0}" lacks the authority to delete the scheduled job {1}.

Cause: An attempt to delete a scheduled job was rejected because the indicated user did not have the required authorization.

Action: Retry the operation after requesting the authorization from the administrator or retry the operation from a user ID that has the required authorization.

PRGO-02151: cannot replicate image "{0}" stored on an external file system

Cause: An attempt to replicate the indicated image was rejected because it

Action: None

PRGO-02152: The move operation was rejected because the patched working copy home path is the same as the source home path "{0}".

Cause: An attempt to move a database was rejected because the destination working copy home path was the same as the indicated source home path.

Action: Rerun the 'rhpctl move database' command specifying a patched working copy with a different Oracle home path.

PRGO-02153: Image "{0}" is not replicated to client "{1}".

Cause: An attempt to fetch the indicated image from the indicated client failed, because the image was not replicated to the client.

Action: Retry the operation, specifying an image that already exists on the indicated client. Alternatively, store the indicated image into the repository, and then retry the operation.

PRGO-02154: User "{0}" does not have permission to perform the 'unregister server' operation.

Cause: An attempt to execute the command 'rhpctl unregister server' was rejected because the indicated user did not have permission.

Action: Request authorization from an administrator and retry the command or perform the operation from a user ID that has the required authorization.

PRGO-02155: The name "{0}" was specified as the name of a client, but it is the name of a peer Rapid Home Provisioning Server (RHPS).

Cause: An attempt to delete a client was rejected because the indicated name was the name of a peer Rapid Home Provisioning Server (RHPS), where the name of a Rapid Home Provisioning Client (RHPC) was expected.

Action: Retry the command providing the name of an RHP Client.

PRGO-02156: The name "{0}" was specified as the name of a peer server, but it is the name of a Rapid Home Provisioning Client (RHPC).

Cause: An attempt to unregister a peer server was rejected because the indicated name was the name of a Rapid Home Provisioning Client (RHPC) where the name of a Rapid Home Provisioning Server (RHPS) was expected.

Action: Retry the command providing the name of an RHP Server.

PRGO-02157: Cannot delete the job "{0}" because it has child jobs associated with it. To forcibly delete a parent job, specify -force option.

Cause: An attempt to delete a scheduled job was rejected because the indicated job was a parent job and had one or more child jobs.

Action: Retry the operation, specifying -force option if the job needs to be deleted forcibly.

PRGO-02158: The value {0} of JSON element {2} has an invalid format for an instance of type {1}.

Cause: A Rapid Home Provisioning REST request was rejected because the indicated JSON element was not in the expected format.

Action: Retry the operation, ensuring that the indicated JSON element is formatted correctly for the indicated type.

PRGO-02159: An unexpected character (" {0}" (code "{1}")) was found at position "{2}" in the JSON message body of this request.

Cause: A Rapid Home Provisioning REST request was rejected because the body of the request did not conform to the JSON syntax specification.

Action: Retry the operation, ensuring that the request body is syntactically valid JSON. The client should not retry the request without modifying the request body.

PRGO-02160: An unrecognized field name "{0}" was found in the JSON message body of this request. The valid field names for the operation are : {1}.

Cause: A Rapid Home Provisioning REST request was rejected because the request body contained a field name that was not recognized.

Action: Retry the operation, ensuring that the request body contains only the indicated, valid field names. The client should not retry the request without modifying the request body.

PRGO-02161: Warning: The option '-image' has been deprecated. Use separate invocations of rhpctl to provision a working copy, and then to perform the required operations on the working copy.

Cause: Warning message.

Action: Not an error.

PRGO-02162: invalid configuration details specified for configuring the Grid Naming Service in the response file

Cause: An attempt to validate the response file or provision an Oracle Cluster failed because invalid configuration details for the Grid Naming Service were specified in the response file.

Action: Refer to the product documentation for valid Grid Naming Service settings for configuring an Oracle Cluster. Specify the required details to create the Grid Naming Service in the response file and retry the command.

PRGO-02163: No databases are being moved from working copy "{0}".

Cause: An attempt to patch Oracle databases using the '-auto' option was rejected because the specified user input resulted in no database being identified as a database which needed to be moved from the indicated working copy.

Action: Retry the operation, ensuring that the inputs for options '-dbhomes', '-only', and '-except' are not excluding all databases in the indicated working copy from being patched.

PRGO-02164: No databases are being moved from Oracle home "{0}".

Cause: An attempt to patch Oracle databases using the '-auto' option was rejected because the specified user input resulted in no database being identified as a database which needed to be moved from the indicated Oracle home.

Action: Retry the operation, ensuring that the inputs for options '-dbhomes', '-only', and '-except' are not excluding all databases in the indicated Oracle home from being patched.

PRGO-02165: The image path specified contains invalid files "{0}"

Cause: An attempt to deploy an Exadata image failed because the image path contained files which were not Exadata patch zip files.

Action: Reissue the command specifying the correct path.

PRGO-02166: The '-version' option required for importing an image of type EXAPATCHSOFTWARE is not specified.

Cause: An attempt to import an image was rejected because

Action: Retry the command specifying the '-version' option.

PRGO-02167: error encountered during update Exadata operation

Cause: An attempt to update an Exadata system encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and then retry the operation.

PRGO-02168: Image type of the image "{0}" is not EXAPATCHSOFTWARE.

Cause: An incorrect image type was specified for Exadata patching.

Action: Specify an image with image type EXAPATCHSOFTWARE.

PRGO-02169: The '-fromnode' option required for patching the specified Exadata nodes is not specified.

Cause: An attempt to update Exadata nodes was rejected because

Action: Retry the command specifying the '-fromnode' option.

PRGO-02170: error while executing the patchmgr command '{0}' on node '{1}'

Cause: An attempt to update Exadata nodes failed. There was an error while executing the patchmgr command.

Action: Examine the patchmgr command output, resolve the problems identified there, and then retry the operation.

PRGO-02172: The root user credentials required for Exadata nodes are missing.

Cause: The requested Exadata patching operation was rejected because root user credentials were required, but were not provided.

Action: Retry the operation, providing credentials using the '-root' option.

PRGO-02173: The list of database servers, storage servers or ibswitches to be patched is missing.

Cause: The requested Exadata patching operation was rejected because neither dbnodes, nor cells, nor ibswitches were specified.

Action: Retry the operation, specifying either the 'dbnodes', 'cells' or 'ibswitches' option.

PRGO-02174: The image version "{0}" specified is invalid.

Cause: An attempt to deploy an Exadata image was rejected because an invalid image version was specified.

Action: Reissue the command specifying a valid Exadata patch version.

PRGO-02175: The image zip file {0} contains invalid files "{1}".

Cause: An attempt to deploy an Exadata image was rejected because the indicated image zip file contained files which were not Exadata patch zip files.

Action: Retry the operation, ensuring that the specified zip file does not contain the indicated invalid files.

PRGO-02176: The working copy specified "{0}" does not exist.

Cause: The requested Exadata patching operation was rejected because the working copy specified did not exist.

Action: Retry the operation, specifying a valid working copy name. When patching an Exadata system for the first time using Rapid Home Provisioning (RHP), a new working copy can be created using the command 'add workingcopy'.

PRGO-02187: User "{0}" is not a valid RHP user.

Cause: An attempt to modify a Rapid Home Provisioning (RHP) user failed because the indicated RHP user was not valid.

Action: Provide a different RHP user or create a new RHP user using the command "rhpctl register user".

PRGO-02188: User "{0}" already exists.

Cause: An attempt to add the indicated name as a Rapid Home Provisioning (RHP) user failed because there was already an existing user with that name.

Action: Retry specifying a different user name.

PRGO-02189: REST user "{0}" is already associated with the RHP user "{1}".

Cause: An attempt to link the indicated REST user to a Rapid Home Provisioning (RHP) user was rejected because the indicated RHP user was already linked to a different REST user.

Action: Retry specifying a different RHP user.

PRGO-02190: The admin-managed database "{0}" is not supported on leaf nodes "{1}".

Cause: An attempt to add or delete an instance of the indicated database on a leaf node was rejected because the database was administrator managed, and running an admin-managed database on a leaf node was not supported.

Action: Retry the operation, specifying a hub node.

PRGO-02191: invalid '-path' option provided for provisioning a software-only GI home on an Oracle Layered File System

Cause: An attempt to provision a software-only GI home based on an Oracle Layered File System was rejected because the '-path' option was supplied erroneously. The '-path' option can be supplied only in conjunction with the '-agpath' option.

Action: Reissue the 'add workingcopy' command without the '-path' option or specifying the -path option in conjunction with '-agpath' option.

PRGO-02193: An invalid value "{0}" for the storage option parameter STORAGE_OPTION was specified in the response file.

Cause: An attempt to validate the response file or provision an Oracle cluster failed because an invalid value for the storage option parameter was specified in the response file.

Action: Refer to the product documentation for valid storage options. Retry the operation, specifying a valid value for the storage option parameter in the response file.

PRGO-02194: Cross-platform import image is not supported because the image version {0} being imported is older than version {1}.

Cause: An attempt to import a cross-platform image was rejected because the indicated image version was older than the indicated version. Such an import would create binary file incompatibilities and missing binaries under the directory that stores platform-specific files used during provisioning operations.

Action: Retry the operation, specifying a path to an image which is not older than the indicated version.

PRGO-02195: Importing an image of type {0} before importing an Oracle Grid Infrastructure image of version {1} is not allowed for cross-platform imports.

Cause: An attempt to import an image of the indicated type was rejected to prevent incompatible and missing binaries under the directory that stores platform-specific files used during provisioning operations.

Action: Import an Oracle Grid Infrastructure software image of the indicated version and then retry the operation.

PRGO-02196: missing '-path' option for 'add workingcopy'

Cause: An attempt to provision an Oracle Grid Infrastructure working copy of version 12.2.0.2 or later was rejected because the mandatory '-path' option was missing.

Action: Retry the 'add workingcopy' command, specifying the '-path' option.

PRGO-02201: error while executing the command '{0}' on node '{1}'

Cause: An attempt to update Exadata nodes failed. The command output provides detailed failure information.

Action: Examine the command output, resolve the problems identified, and then retry the operation.

PRGO-02204: The {0} patch files are missing in the image "{1}".

Cause: An attempt to update Exadata nodes failed because the image specified did not contain the necessary patch files.

Action: Retry the operation specifying an image containing the necessary patch files.

PRGO-02205: The format of the node list file "{0}" is invalid.

Cause: An attempt to update Exadata nodes failed because the format of the specified node list file was invalid.

Action: Retry the operation specifying a valid node list file.

PRGO-02206: The node list file "{0}" is empty.

Cause: An attempt to update Exadata nodes failed because the specified node list file was empty.

Action: Retry the operation specifying a valid node list file.

PRGO-02213: The database server specified using the '-fromnode' option is the same as the node to be patched.

Cause: An attempt to update Exadata nodes was rejected because the node specified using the '-fromnode' option was the same as the node to be patched.

Action: Retry the command specifying a different node for the '-fromnode' option.

PRGO-02214: The specified string "{0}" is not the name of an RHP client.

Cause: An attempt to replicate the image for the indicated client failed because the specified name did not correspond to a Rapid Home Provisioning (RHP) client.

Action: Retry the operation, specifying a valid client name.

PRGO-02215: The specified string "{0}" is not the name of a peer RHP server.

Cause: An attempt to replicate the image for the indicated server failed because the specified name did not correspond to a peer Rapid Home Provisioning (RHP) server.

Action: Retry the operation, specifying a valid server name.

PRGO-02216: option '-tgip' specified when the patched working copy "{0}" has the same patches that are present in the source working copy "{1}"

Cause: An attempt to move an Oracle home was rejected because the '-tgip' option was specified when the destination working copy had the same patches as the source working copy.

Action: Rerun the 'rhpctl move gihome' command specifying a patched working copy with more patches applied than the source working copy, or remove the '-tgip' option.

PRGO-02232: unable to convert JSON file "{0}" to Java object

Cause: An attempt to convert a JSON file to a Java object failed. The accompanying messages provide detailed failure information.

Action: Contact Oracle Support Services.

PRGO-02233: unable to convert data to JSON format

Cause: An attempt to convert data to JSON format failed. The accompanying messages provide detailed failure information.

Action: Contact Oracle Support Services.

PRGO-02240: configuration data not found for cluster {0}

Cause: An attempt to retrieve configuration information failed. The accompanying messages provide detailed failure information.

Action: Run the command 'rhpctl collect osconfig' to re-create the cluster configuration data, and then retry the operation.

PRGO-02241: configuration data not found for node {0}

Cause: An attempt to retrieve configuration information failed. The accompanying messages provide detailed failure information.

Action: Ensure that the specified node is up and run the command 'rhpctl collect osconfig' to re-create the cluster configuration data, and then retry the operation.

PRGO-02242: failed to process configuration data for site {0}

Cause: An attempt to process the osconfig collection failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-02251: GoldenGate replication lag did not stabilize for database "{0}".

Cause: An attempt to upgrade a database with zero downtime failed because the GoldenGate replication lag did not stabilize for the indicated database.

Action: Check the status of the GoldenGate replication process. Retry the operation after the lag has stabilized.

PRGO-02253: operation succeeded with warnings\n{0}

Cause: The intended operation completed with warning messages. The accompanying messages provide detailed information.

Action: Examine the accompanying warning messages, address the described issues, and retry, or ignore the warnings.

PRGO-02254: The database "{0}" does not have its REDO logs on an ASM diskgroup.

Cause: An attempt to upgrade the indicated database with zero downtime was rejected because its REDO logs were not on an ASM diskgroup.

Action: None

PRGO-02255: The database "{0}" does not have its fast recovery area on an ASM diskgroup.

Cause: An attempt to upgrade the indicated database with zero downtime was rejected because its fast recovery area was not on an ASM diskgroup.

Action: None

PRGO-02256: Backup location "{0}" does not exist.

Cause: An attempt to upgrade a database with zero downtime was rejected because the specified backup location does not exist.

Action: Retry the operation, specifying a valid backup location.

PRGO-02257: ASM diskgroup "{0}" does not exist.

Cause: An attempt to upgrade a database with zero downtime was rejected because the indicated diskgroup does not exist.

Action: Ensure that the database is configured properly and then retry the operation.

PRGO-02258: failed to create client data file "{0}"

Cause: An attempt to create the indicated client data file for setting up a Rapid Home Provisioning Client (RHPC) in a remote cluster failed. The accompanying messages provide detailed failure information.

Action: Ensure that the indicated file does not exist. Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02259: The '-clonedatadg' option required for creating a clone of database "{0}" is missing.

Cause: An attempt to upgrade the indicated database with zero downtime was rejected because the '-clonedatadg' option was not specified.

Action: Retry the operation, specifying the '-clonedatadg' option with a valid diskgroup name.

PRGO-02260: Database "{0}" could not be started.

Cause: An attempt to upgrade a database with zero downtime failed because the indicated database from which it was cloned could not be converted to a RAC database.

Action: Examine the accompanying warning messages, address the described issues, and retry.

PRGO-02261: Failed to set cluster database thread parameter for database "{0}".

Cause: An attempt to upgrade a database with zero downtime failed because the indicated database from which it was cloned could not be converted to a RAC database.

Action: Examine the accompanying warning messages, address the described issues, and retry.

PRGO-02262: failed to retrieve the maximum redo log thread number for database "{0}"

Cause: An attempt to upgrade the indicated database with zero downtime failed because the maximum redo log thread number could not be determined.

Action: Examine the accompanying warning messages, address the described issues, and retry.

PRGO-02263: Query of DBA_TABLESPACES failed. Query output:\n{0}

Cause: An attempt to upgrade a database with zero downtime failed because a query of DBA_TABLESPACES failed.

Action: Review the accompanying output for details and retry after resolving the error.

PRGO-02264: Truststore file "{0}" does not exist.

Cause: An attempt to connect to a URL using an HTTPS connection failed because the indicated truststore file did not exist.

Action: Ensure that the indicated truststore file exists or execute the command 'crskeytoolctl -copycacerts -storepass *password*' to create a cacerts file.

PRGO-02265: failed to duplicate the password file of database instance "{0}"

Cause: An attempt to upgrade, with zero downtime, the database with the indicated instance failed because the database could not be cloned because the password file of the instance could not be duplicated. This is most likely due to incorrect permissions for the file or its parent directory.

Action: Verify the permissions of the password file and its parent directory. Ensure that the password file of the indicated database instance can be duplicated and retry.

PRGO-02268: Missing Oracle base to register working copies for image "{0}" of image type {1}.

Cause: An attempt to register working copies was rejected because the '-oraclebase' option was omitted for an image type that requires it.

Action: Retry the command supplying the '-oraclebase' option.

PRGO-02269: The '-oraclebase' option is not allowed when registering working copies for image "{0}" because the image type is {1}.

Cause: An attempt to register working copies was rejected because the '-oraclebase' option was specified for an image type that does not support it.

Action: Retry the command without the '-oraclebase' option.

PRGO-02270: Unexpected number of attributes specified for working copy "{0}".

Cause: An attempt to register the specified working copy was rejected because an incorrect number of attributes was supplied for it in the attribute file.

Action: Ensure that the attribute file provides all and only the required attributes on each line and then retry the operation.

PRGO-02271: Cannot upgrade single-instance database "{0}" with zero downtime.

Cause: An attempt to upgrade the indicated database with zero downtime was rejected because that operation was not supported for single-instance databases.

Action: Upgrade the indicated database using "rhpctl upgrade database".

PRGO-02272: The replication policy for the specified image "{0}" and site "{1}" already exists.

Cause: An attempt to set the image policy for the indicated image was rejected because the indicated image name was already associated with a replication policy for the indicated site.

Action: Run "rhpctl unstantiate image" for the indicated image and site and then retry the operation.

PRGO-02273: The replication policy for the specified image series "{0}" and site "{1}" already exists.

Cause: An attempt to set the image policy for the indicated image series was rejected because the indicated image series name was already associated with a replication policy for the indicated site.

Action: Run "rhpctl unstantiate image" for the indicated imageseries and site and then retry the operation.

PRGO-02274: The replication policy for the specified image type "{0}" and site "{1}" already exists.

Cause: An attempt to set the image policy for the indicated image type was rejected because the indicated image type name was already associated with a replication policy for the indicated site.

Action: Run "rhpctl unstantiate image" for the indicated imagetype and site and then retry the operation.

PRGO-02275: The replication policy for the specified image "{0}" and site "{1}" does not exist.

Cause: An attempt to unset the image policy for the indicated image was rejected because the indicated image name was not associated with a replication policy for the indicated site.

Action: Run "rhpctl instantiate image" for the indicated image and site and then retry the operation.

PRGO-02276: The replication policy for the specified image series "{0}" and site "{1}" does not exist.

Cause: An attempt to unset the image policy for the indicated image series was rejected because the indicated image series name was not associated with a replication policy for the indicated site.

Action: Run "rhpctl instantiate image" for the indicated imageseries and site and then retry the operation.

PRGO-02277: The replication policy for the specified image type "{0}" and site "{1}" does not exist.

Cause: An attempt to unset the image policy for the indicated image type was rejected because the indicated image type name was not associated with a replication policy for the indicated site.

Action: Run "rhpctl instantiate image" for the indicated imagetype and site and then retry the operation.

PRGO-02278: Failed to delete the job "{0}": "{1}".

Cause: An attempt to delete the indicated job failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, resolve the indicated problems and then retry the operation.

PRGO-02280: Invalid job IDs provided: "{0}".

Cause: An attempt to delete the indicated jobs failed because the job IDs provided were invalid.

Action: Retry the operation, specifying valid job IDs.

PRGO-02281: Failed to delete the jobs: "{0}":\nFailure details:\n{1}

Cause: An attempt to delete the indicated jobs failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, resolve the indicated problems and then retry the operation.

PRGO-02282: Could not find the following jobs: "{0}".

Cause: An attempt to delete the indicated jobs failed because the indicated jobs were not found.

Action: Retry the operation, specifying valid job IDs.

PRGO-02283: Failed to modify schedule time for the job "{0}" as the job status currently is: "{1}".

Cause: An attempt to modify the indicated job failed because the indicated job was not in the TIMER_RUNNING state.

Action: Retry the operation, specifying a job in the TIMER_RUNNING state.

PRGO-02284: ASM disk group "{0}" does not exist on cluster "{1}".

Cause: An attempt to upgrade a database with zero downtime was rejected because the indicated disk group was invalid.

Action: Retry the operation, specifying a valid disk group.

PRGO-02350: Password file "{0}" does not exist.

Cause: An attempt to upgrade a database with zero downtime was rejected because the indicated password file required for cloning the database was not found.

Action: Create the indicated password file, and then retry the operation.

PRGO-02351: The source Oracle home is missing mandatory fixes for bugs "{0}".

Cause: An attempt to upgrade a database with zero downtime was rejected because the database belonged to an Oracle home which was missing mandatory fixes for the indicated bugs.

Action: Move the database to an Oracle home with the required patches, and then retry the operation.

PRGO-02352: The destination Oracle home is missing mandatory fixes for bugs "{0}".

Cause: An attempt to upgrade a database with zero downtime was rejected because the destination Oracle home was missing mandatory fixes for the indicated bugs.

Action: Specify a destination Oracle home with the required patches, and then retry the operation.

PRGO-02353: failed to start database "{0}" using the MOUNT option

Cause: An attempt to upgrade a database with zero downtime failed because the indicated clone database could not be started using the MOUNT option.

Action: Examine the accompanying warning messages, resolve the described issues, and then retry the operation.

PRGO-02354: failed to start redo apply

Cause: An attempt to upgrade a database with zero downtime failed because the redo apply could not be started.

Action: Examine the accompanying warning messages, resolve the described issues, and then retry the operation.

PRGO-02355: Path "{0}" is not a valid ACFS file system.

Cause: An attempt to upgrade a database with zero downtime was rejected because the indicated path was not a valid ACFS file system.

Action: Retry the operation, specifying a valid ACFS file system path.

PRGO-02356: failed to start database "{0}"

Cause: An attempt to upgrade a database with zero downtime failed because the indicated database could not be started.

Action: Examine the accompanying warning messages, resolve the described issues, and then retry the operation.

PRGO-02357: failed to switch the role of database "{0}" from "{1}" to "{2}"

Cause: An attempt to upgrade a database with zero downtime failed because the role of the indicated database could not be modified.

Action: Examine the accompanying warning messages, resolve the described issues, and then retry the operation.

PRGO-02358: Service "{0}" for database "{1}" does not exist.

Cause: An attempt to upgrade a database with zero downtime failed because the indicated database service did not exist.

Action: Examine the accompanying messages, resolve the described issues, and then retry the operation.

PRGO-02359: Query of FLASH_RECOVERY_AREA_USAGE for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query of FLASH_RECOVERY_AREA_USAGE failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02360: Flashback Database is not enabled for database "{0}".

Cause: An attempt to upgrade the indicated database with zero downtime was rejected because Flashback Database was not enabled for the database.

Action: Enable Flashback Database for the database, and then retry the operation.

PRGO-02361: RHP client "{0}" of version 12.2 is missing mandatory fixes for bugs "{1}".

Cause: An attempt to upgrade a database with zero downtime using the indicated version 12.2 RHP client was rejected because the RHP client's Grid Infrastructure was missing fixes for the indicated bugs.

Action: Patch the RHP client's Grid Infrastructure using 'rhpctl move gihome', and then retry the operation.

PRGO-02362: DBUA execution failed for database "{0}"\n{1}

Cause: An attempt to upgrade the indicated database failed because Database Upgrade Assistant (DBUA) execution failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, resolve the indicated problems, and then retry the operation.

PRGO-02363: Query to verify whether Flashback Database is enabled for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query of FLASHBACK_ON in V\$DATABASE failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02364: SQL query to retrieve Data Guard Broker status for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query to retrieve Data Guard Broker status failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02365: SQL query to retrieve job_queue_processes parameter of database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query to retrieve the job_queue_processes parameter failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02366: Query of V\$RESTORE_POINT for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query of V\$RESTORE_POINT failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02367: SQL statement to drop a restore point failed.\n{0}

Cause: An attempt to upgrade a database with zero downtime failed because a SQL statement to drop a restore point failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02368: SQL statement to create a restore point failed.\n{0}

Cause: An attempt to upgrade a database with zero downtime failed because a SQL statement to create a restore point failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02369: Query of GV\$INSTANCE for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query of GV\$INSTANCE failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02370: SQL statement to disable CLUSTER_DATABASE for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a SQL statement to disable CLUSTER_DATABASE failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02371: Query of DATABASE_ROLE in V\$DATABASE for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query of DATABASE_ROLE in V\$DATABASE failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02372: Query of CLUSTER_DATABASE in V\$SPPARAMETER for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query of CLUSTER_DATABASE in V\$SPPARAMETER failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02373: Query of PROTECTION_MODE in V\$DATABASE for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query of DATABASE_ROLE in V\$DATABASE failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02374: DBMS_STATS.SET_GLOBAL_PREFS procedure failed.\n{0}

Cause: An attempt to upgrade a database with zero downtime failed because the DBMS_STATS.SET_GLOBAL_PREFS procedure failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02375: Query of DBA_LOGSTDBY_UNSUPPORTED for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query to verify datatype support for the transient logical standby failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02376: SQL statement to start redo apply for standby database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because redo apply could not be started for the indicated standby database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02377: SQL statement to stop redo apply for standby database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because redo apply could not be stopped for the indicated standby database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02378: SQL statement to switch logs for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because the logs could not be switched for the indicated database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02379: Query of APPLIED_SCN in V\$LOGSTDBY_PROGRESS for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query of APPLIED_SCN in V\$LOGSTDBY_PROGRESS failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02380: Query of CURRENT_SCN in V\$DATABASE for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query of CURRENT_SCN in V\$DATABASE failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02381: Query of V\$RECOVERY_PROGRESS for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query of V\$RECOVERY_PROGRESS failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02382: Query of V\$LOGSTBY_STATE for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query of V\$LOGSTBY_STATE failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02383: SQL statement to convert physical standby database "{0}" to transient logical standby failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because the indicated physical standby database could not be converted to a transient logical standby. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02384: DBMS_LOGSTDBY.BUILD procedure to start logical standby instantiation failed.\n{0}

Cause: An attempt to upgrade a database with zero downtime failed because logical standby instantiation could not be started by the DBMS_LOGSTDBY.BUILD procedure. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02385: Query of OPEN_MODE in V\$DATABASE for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query of OPEN_MODE in V\$DATABASE failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02386: SQL statement to open database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because indicated database could not be opened. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02387: SQL statement to stop transient logical standby database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because the indicated transient logical standby database could not be stopped. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02388: DBMS_LOGSTDBY.APPLY_SET procedure to set rolling upgrade parameters for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because the DBMS_LOGSTDBY.APPLY_SET procedure could not set rolling upgrade parameters for the indicated database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02389: SQL statement to start transient logical standby database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because the indicated transient logical standby database could not be started. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02390: SQL query to check for completion of dictionary loading failed.\n{0}

Cause: An attempt to upgrade a database with zero downtime failed because a query to check for completion of dictionary loading failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02391: SQL statement to enable CLUSTER_DATABASE for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a SQL statement to enable CLUSTER_DATABASE failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02392: DBMS_STATS.GATHER_DICTIONARY_STATS procedure to gather statistics for dictionary schemas failed.\n{0}

Cause: An attempt to upgrade a database with zero downtime failed because the DBMS_STATS.GATHER_DICTIONARY_STATS procedure could not gather statistics for dictionary schemas. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02393: SQL statement to switch primary database "{0}" to transient logical standby failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because the indicated primary database could not be switched to the transient logical standby. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02394: Query of SWITCHOVER_STATUS in V\$DATABASE for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query of SWITCHOVER_STATUS in V\$DATABASE failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02395: SQL statement to start recovery for standby database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because recovery could not be started for the indicated standby database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02396: SQL statement to switch transient logical standby database "{0}" to primary failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because the indicated transient logical standby database could not be switched to primary. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02397: SQL statement to restore database "{0}" to restore point "{1}" failed.\n{2}

Cause: An attempt to upgrade a database with zero downtime failed because the indicated database could not be restored to the indicated restore point. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02398: SQL statement to switch database "{0}" to physical standby failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because the indicated database could not be switched to physical standby. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02399: Query of SCN in V\$RESTORE_POINT for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query of SCN in V\$RESTORE_POINT failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02400: SQL statement to set _transient_logical_clear_hold_mrp_bit parameter to true for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because the _transient_logical_clear_hold_mrp_bit parameter could not be set to true for the indicated database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02401: SQL statement to backup control files of database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because the control files of the indicated database could not be backed up. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02402: SQL statement to add standby redo log file group "{0}" to standby database "{1}" and assign it to thread "{2}" failed.\n{3}

Cause: An attempt to upgrade a database with zero downtime failed because the indicated standby redo log file group could not be added to the indicated standby database and assigned to the indicated thread. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02403: Query to retrieve THREAD# and BYTES from V\$LOG for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query to retrieve THREAD# and BYTES from V\$LOG failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02404: Query to retrieve the maximum redo log group identifier number from V\$LOGFILE for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query to retrieve the maximum GROUP# from V\$LOGFILE failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02405: Query to retrieve the maximum redo log group identifier number from V\$STANDBY_LOG for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query to retrieve the maximum GROUP# from V\$STANDBY_LOG failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02406: Query to retrieve the number of redo log members from V\$STANDBY_LOG for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query to retrieve the number of redo log members from V\$STANDBY_LOG failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02407: SQL statement to put database "{0}" into FORCE LOGGING mode failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because the indicated database could not be put into FORCE LOGGING mode. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02408: Query to verify whether media recovery is running for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query to verify whether media recovery was running for the indicated database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02409: SQL statement to stop media recovery for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because media recovery could not be stopped for the indicated database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02410: Query of V\$TEMPFILE to verify existence of a temp file for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query to the existence of a temp file for the indicated database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02411: SQL statement to enable supplemental logging for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because supplemental logging could not be enabled for the indicated database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02412: SQL statement to enable change tracking for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because change tracking could not be enabled for the indicated database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02413: SQL statement to enable Flashback Database for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because Flashback Database could not be enabled for the indicated database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02414: Query of DB_UNIQUE_NAME in V\$DATABASE for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query of DB_UNIQUE_NAME in V\$DATABASE failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02415: Query of V\$INSTANCE for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query of V\$INSTANCE failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02416: SQL statement to set DG_CONFIG value for LOG_ARCHIVE_CONFIG parameter for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because the LOG_ARCHIVE_CONFIG parameter could not be updated for the indicated database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02417: SQL statement to enable automatic standby file management for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because the STANDBY_FILE_MANAGEMENT parameter could not be updated for the indicated database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02418: Query to retrieve parameter LOG_ARCHIVE_DEST of database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query to retrieve parameter LOG_ARCHIVE_DEST of the indicated database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02419: Query to retrieve parameter FAL_SERVER of database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query to retrieve parameter FAL_SERVER of the indicated database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02420: Query to retrieve parameter LOG_ARCHIVE_CONFIG of database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query to retrieve parameter LOG_ARCHIVE_CONFIG of the indicated database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02421: SQL statement to set standby parameters for primary database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because standby parameters could not be set for the indicated primary database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02422: Service "{0}" of database "{1}" is not running.

Cause: An attempt to upgrade a database with zero downtime failed because the indicated database service was not running.

Action: Start the indicate database services, and then retry the operation.

PRGO-02423: failed to determine status of service "{0}" of database "{1}"\n{2}

Cause: An attempt to upgrade a database with zero downtime failed because the status of the indicated database service could not be determined. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02424: failed to update the startup mode of database "{0}" to OPEN\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because "srvctl update database" failed for indicated database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02425: failed to migrate the password file for database "{0}"\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because the migration of the password file for the indicated database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02426: failed to copy password file "{0}" to path "{1}"

Cause: An attempt to upgrade a database with zero downtime failed because the indicated password file could not be copied. This was most likely due to incorrect permissions for the file, its parent directory, or the target directory.

Action: Check the permissions of the password file and source and target parent directories. Verify that the indicated password file can be copied, and then retry the operation.

PRGO-02427: failed to change owner to "{0}" and group to "{1}" for password file "{2}"

Cause: An attempt to upgrade a database with zero downtime failed because because the ownership of the indicated password file could not be changed as indicated. This was most likely due to missing execute permission for the parent directory of the indicated file.

Action: Check that the directory of the indicated file has execute permission. Verify that the ownership of the password file can be modified as indicated, and then retry the operation.

PRGO-02428: failed to modify the password file of database "{0}"\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because "srvctl modify database" failed for the indicated database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02429: failed to create ACFS snapshot "{0}"\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because the indicated ASM Cluster File System (ACFS) snapshot could not be created. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-02430: failed to create directory "{0}"\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because the indicated directory could not be created. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-02431: failed to stop clone database "{0}"\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because the indicated clone database could not be stopped. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-02432: RMAN failed to start clone database "{0}"\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because RMAN could not start the indicated clone database. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-02433: RMAN failed to backup and restore the SPFILE for clone database "{0}"\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because RMAN could not backup and restore the SPFILE for the indicated clone database. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-02434: failed to register clone database "{0}"\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because the indicated clone database could not be registered using 'srvctl add database'. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-02435: failed to modify instance for clone database "{0}"\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because an instance could not be modified for the indicated clone database using 'srvctl modify database'. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-02436: failed to modify the resource dependencies of database "{0}"\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because "srvctl modify database" failed to modify the resource dependencies for the indicated database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02437: failed to start auxiliary listener "listener_clone".\n{0}

Cause: An attempt to upgrade a database with zero downtime failed because 'lsnrctl' could not start the indicated auxiliary listener. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-02438: failed to stop auxiliary listener "listener_clone".\n{0}

Cause: An attempt to upgrade a database with zero downtime failed because 'lsnrctl' could not stop the indicated auxiliary listener. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-02439: Source database "{0}" is using Flash Cache.

Cause: An attempt to upgrade the indicated database with zero downtime was rejected because the database was using Flash Cache, which prevented the creation of a clone database.

Action: Disable Flash Cache for the indicated database by setting the DB_FLASH_CACHE_SIZE parameter to 0, and then retry the operation.

PRGO-02440: failed to disable the database service "{0}"\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because an error occurred while disabling the indicated database service. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-02441: failed to enable the database service "{0}"\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because an error occurred while enabling the indicated database service. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-02442: failed to start database service "{0}"\n{1}

Cause: An error occurred while attempting to start the indicated service. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02443: failed to stop database service "{0}"\n{1}

Cause: An error occurred while attempting to stop the indicated service. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02444: MRP process is not running for database "{0}".

Cause: An attempt to upgrade a database with zero downtime failed because the Managed Recovery Process (MRP) was not running for the indicated database.

Action: Start MRP for the indicated database, and then retry the operation.

PRGO-02445: timed out after "{0}" minutes of inactivity

Cause: An attempt to upgrade a database with zero downtime failed because an operation timed out. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02446: Number of restore points for database "{0}" exceeds maximum of {1}.

Cause: An attempt to upgrade a database with zero downtime was rejected because the number of restore points for the indicated database exceeded the indicated maximum value.

Action: Retry the operation after freeing up restore points for the indicated database such that the total number of restore points is less than the indicated maximum.

PRGO-02447: Flash recovery area usage by database "{0}" exceeds {1} percent.

Cause: An attempt to upgrade a database with zero downtime was rejected because the flash recovery area usage by the indicated database exceeded the indicated percentage.

Action: Free up enough of the flash recovery area to reduce the area usage to less than the indicated percentage, and then retry the operation.

PRGO-02448: Data Guard Broker is active for database "{0}".

Cause: An attempt to upgrade a database with zero downtime was rejected because Data Guard Broker was active for the indicated database.

Action: Disable Data Guard Broker for the indicated database by setting the DG_BROKER_START parameter to false, and then retry the operation.

PRGO-02449: failed to stop instance "{0}" of database "{1}"\n{2}

Cause: An attempt to upgrade a database with zero downtime failed because the indicated instance of the indicated database could not be stopped using 'srvctl stop instance'. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-02450: failed to start instance "{0}" of database "{1}"\n{2}

Cause: An attempt to upgrade a database with zero downtime failed because the indicated instance of the indicated database could not be started using 'srvctl start instance'. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-02451: failed to stop database "{0}"\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because the indicated database could not be stopped using 'srvctl stop database'. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-02452: failed to start database "{0}"\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because the indicated database could not be started using 'srvctl start database'. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-02453: Database "{0}" is not a "{1}" database.

Cause: An attempt to upgrade a database with zero downtime failed because the indicated database was not in the indicated role.

Action: Switch the indicated database to the indicated role, and then retry the operation.

PRGO-02454: Database "{0}" is running in maximized protection mode.

Cause: An attempt to upgrade a database with zero downtime failed because the indicated database was running in maximized protection mode.

Action: Ensure that the indicated database is not running in maximized protection mode, and then retry the operation.

PRGO-02455: Database "{0}" is not mounted.

Cause: An attempt to upgrade a database with zero downtime failed because the indicated database was not mounted.

Action: Ensure that the indicated database is mounted, and then retry the operation.

PRGO-02456: Database "{0}" is not in read/write mode.

Cause: An attempt to upgrade a database with zero downtime failed because the indicated database was not in read/write mode.

Action: Ensure that the indicated database is in read/write mode, and then retry the operation.

PRGO-02457: Database "{0}" is in "OPEN MIGRATE" mode.

Cause: An attempt to upgrade a database with zero downtime failed because the indicated database was in the "OPEN MIGRATE" mode.

Action: Ensure that the indicated database is not in the "OPEN MIGRATE" mode, and then retry the operation.

PRGO-02458: Options required for creating a clone of database "{0}" are missing.

Cause: An attempt to upgrade the indicated database with zero downtime was rejected because neither the '-clonedatadg' option nor the '-clonedatafs' option was specified.

Action: Retry the operation, specifying either the '-clonedatadg' option or the '-clonedatafs' option and related options.

PRGO-02459: ACFS file system "{0}" does not exist on cluster "{1}".

Cause: An attempt to upgrade a database with zero downtime was rejected because the indicated ASM Cluster File System (ACFS) did not exist.

Action: Retry the operation, specifying a valid ACFS file system.

PRGO-02460: failed to open file "{0}"

Cause: An attempt to open the indicated file failed because the file did not exist or the permissions for the file were incorrect.

Action: Verify the existence and permissions of the file, and retry. If the problem persists, contact Oracle Support Services.

PRGO-02461: The preupgrd.sql script reported one or more errors for database "{0}". Log file "{1}" contains additional details.\n{2}

Cause: An attempt to upgrade the indicated database with zero downtime was rejected because the Pre-Upgrade Information Tool reported one or more errors.

Action: Review the indicated preupgrade.log file for details, and retry the operation after fixing the flagged issues.

PRGO-02462: The preupgrd.sql script reported one or more warnings for database "{0}". Log file "{1}" contains additional details.\n{2}

Cause: An attempt to upgrade the indicated database with zero downtime was rejected because the Pre-Upgrade Information Tool reported one or more warnings.

Action: Review the indicated log file for details. To ignore the warnings and retry the operation, specify the '-ignoreprereq' option.

PRGO-02463: SQL statement to run Pre-Upgrade information tool on the database "{0}" failed.\n{1}

Cause: An attempt to upgrade the indicated database with zero downtime failed because the SQL statement to run the Pre-Upgrade Information Tool failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-02464: Image "{0}" already exists on cluster "{1}".

Cause: An attempt to replicate the specified image was rejected because the indicated image already existed on the target.

Action: Specify a different image and retry the operation.

PRGO-02467: Working copy "{0}" already exists with the specified path "{1}".

Cause: An existing working copy was found with the same home path while adding a new working copy.

Action: Supply another home path or delete the working copy and retry.

PRGO-02468: cannot retrieve the full version of the image from image path "{0}" while registering or importing a new image on node {1}.

Cause: An attempt to retrieve the full version of the image from the indicated image path using ORAVERSION failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, resolve the described issues, and then retry the operation.

PRGO-02469: CVU checks for adding a node failed for the specified node list {0}.

Cause: One or more Cluster Verification Utility (CVU) checks for adding a node failed.

Action: Review the underlying error messages and take the appropriate action.

PRGO-02470: Working copy "{0}" is involved in an incomplete move or upgrade operation.

Cause: An attempt to delete the indicated working copy was rejected because it is involved in an ongoing move or upgrade operation.

Action: Retry deleting the indicated working copy after completing or aborting the ongoing move or upgrade operation.

PRGO-02471: Missing '-targetnode' option for Single-Instance High Availability Grid Infrastructure provisioning.

Cause: An attempt to provision Single-Instance High Availability Grid Infrastructure was rejected because the '-targetnode' option is required for provisioning Single-Instance High Availability Grid Infrastructure.

Action: Reissue the command specifying the '-targetnode' option.

PRGO-02473: invalid format "{0}" specified in preference file "{1}"

Cause: The format specified in the preference file was invalid.

Action: Specify preference in valid format and retry. Valid preference keywords for the database are DBUA_ARGS or DBUA_ARGS followed by an underscore and the database home release version like 12.1.0.2.

PRGO-02474: A direct upgrade of database from version {0} to version {1} is not supported.

Cause: An attempt to upgrade the database failed because the source working copy version was lower than the supported versions for upgrade.

Action: Refer to the product documentation for the supported versions for upgrade. Upgrade the database to one of the supported versions, and then upgrade to the destination working copy version.

PRGO-02475: Neither GNS server nor GNS client are configured on this RHP Server cluster.

Cause: An 'rhpctl upgrade gihome' command was rejected because neither the Grid Naming Service (GNS) server nor GNS client was configured on this Rapid Home Provisioning (RHP) Server cluster.

Action: Configure either the GNS server or GNS client using the command 'srvctl add gns' in this RHP Server cluster, and retry the command.

PRGO-02485: The derived image type '{0}' did not match the image type '{1}' from the user input.

Cause: An attempt to register or import an image was rejected because the image type derived from the file specified by '-getfromOSS' option was different from the image type specified by '-imagetype' option.

Action: Confirm the image type and retry the command with correct options.

PRGO-03002: missing '-rsp' option for migrating database to the cloud

Cause: An attempt to migrate database to the cloud was rejected because the '-rsp' option is required.

Action: Retry the command specifying the '-rsp' option.

PRGO-03003: Zero downtime migration (ZDM) response file {0} does not exist.

Cause: An attempt to locate the specified Zero downtime migration (ZDM) response file failed.

Action: Ensure that the path and name of the response file were entered correctly and that the file exists and is readable.

PRGO-03004: Zero downtime migration (ZDM) template file {0} is not a file.

Cause: The specified template file was a directory.

Action: Specify the absolute file path of the template file.

PRGO-03007: failed to migrate database "{0}" with zero downtime

Cause: An attempt to migrate the specified database with zero downtime failed. The accompanying messages provide more details.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-04001: SQL statement to start the REDO APPLY statement for standby database "{0}" failed \n{1}

Cause: An attempt to migrate a database with zero downtime failed because starting the REDO APPLY statement failed for the specified standby database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04002: SQL statement to add standby redo log file group "{0}" to standby database "{1}" and assign it to thread "{2}" failed.\n{3}

Cause: An attempt to migrate a database with zero downtime failed because the indicated standby redo log file group could not be added to the specified standby database and assigned to the indicated thread. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the specified problems, and then retry the operation.

PRGO-04003: Failed to authenticate object store credentials. Invalid username or password.

Cause: An attempt to authenticate input credentials failed.

Action: Verify the credentials and then retry the operation.

PRGO-04004: failed to retrieve Oracle object storage service container "{0}"\n{1}

Cause: An error occurred while trying to retrieve the specified Oracle object storage service container. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04005: The storage container "{0}" does not exist.

Cause: The specified storage container did not exist.

Action: Verify the storage container and then retry the operation.

PRGO-04007: OSS cloud backup module installation failed.\n{0}

Cause: An attempt to install the Oracle Storage Service (OSS) cloud backup module failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04008: ASM disk group "{0}" does not exist.

Cause: An attempt to migrate a database with zero downtime was rejected because the specified disk group did not exist.

Action: Ensure that the specified disk group exists and then retry the operation.

PRGO-04010: The database "{0}" is not in ARCHIVELOG mode.

Cause: An attempt to migrate the specified database was rejected because it was not in ARCHIVELOG mode.

Action: Retry the operation after configuring the database in ARCHIVELOG mode.

PRGO-04011: The path "{0}" is not a valid Oracle ACFS file system path.

Cause: An attempt to migrate a database with zero downtime was rejected because the specified path was not a valid Oracle Automatic Storage Management Cluster File System (Oracle ACFS) path.

Action: Retry the operation, specifying a valid Oracle ACFS file system path.

PRGO-04012: OSS cloud backup for database "{0}" failed.\n{1}

Cause: An attempt to create the Oracle Storage Service (OSS) cloud backup for the specified database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04027: SPFILE creation failed.\n{0}

Cause: An attempt to create the SPFILE failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04028: Database resource modification failed.\n{0}

Cause: An attempt to modify the database resource using 'srvctl modify database' failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04029: unable to move the password file "{0}"\n{1}

Cause: An attempt to move the database password file failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04033: failed to create initial parameter file "{0}"

Cause: An attempt to create the indicated database initialization parameter file failed.

Action: Verify that the parent directory exists with the permissions to write and then retry the operation.

PRGO-04036: SQL statement to switch logs for database "{0}" failed

Cause: An attempt to migrate a database with zero downtime failed because the logs could not be switched for the specified database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04037: query of the V\$RECOVERY_PROGRESS view for database "{0}" failed

Cause: An attempt to migrate a database with zero downtime failed because a query of the V\$RECOVERY_PROGRESS view failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04038: query of the V\$LOGSTBY_STATE view for database "{0}" failed

Cause: An attempt to migrate a database with zero downtime failed because a query of the V\$LOGSTBY_STATE view failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04039: SQL statement to switch primary database "{0}" to transient logical standby database failed

Cause: An attempt to migrate a database with zero downtime failed because the specified primary database could not be switched to the transient logical standby database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04040: SQL statement to start recovery for standby database "{0}" failed

Cause: An attempt to migrate a database with zero downtime failed because recovery could not be started for the specified standby database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04041: SQL statement to switch transient logical standby database "{0}" to primary database failed

Cause: An attempt to upgrade a database with zero downtime failed because the indicated migrate logical standby database could not be switched to the primary database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04042: query to verify whether media recovery is running for database "{0}" failed

Cause: An attempt to migrate a database with zero downtime failed because a query to verify whether media recovery was running for the standby database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04047: unable to create the password file "{0}"\n{1}

Cause: An attempt to create the database password file failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04048: failed to change owner to "{0}" for password file "{1}"

Cause: An attempt to migrate a database with zero downtime failed because the ownership of the password file could not be changed as specified. This was most likely due to missing execute permission for the parent directory of the indicated file.

Action: Check that the directory of the indicated file has execute permission. Ensure that the ownership of the password file can be modified, and then retry the operation.

PRGO-04049: failed to register clone database "{0}"\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the indicated clone database could not be registered. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-04052: Restoration of control file and database files failed.\n{0}

Cause: An attempt to migrate a database with zero downtime failed because restoration of the control files and database files failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-04053: query of DBA_TABLESPACES failed on database "{0}".

Cause: An attempt to migrate a database with zero downtime failed because a query of DBA_TABLESPACES failed.

Action: Examine the accompanying messages, resolve the indicated problems, and retry.

PRGO-04054: Oracle RAC option not enabled for database "{0}"

Cause: An attempt to migrate a database with zero downtime failed because Oracle Real Application Clusters (Oracle RAC) was not enabled for the specified database.

Action: Enable the Oracle RAC option, and then retry the operation.

PRGO-04055: SQL statement to stop the REDO APPLY statement for standby database "{0}" failed

Cause: An attempt to migrate a database with zero downtime failed because stopping the REDO APPLY statement failed for the specified database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04056: SQL statement to enable supplemental logging for standby database "{0}" failed

Cause: An attempt to migrate a database with zero downtime failed because a query to enable supplemental logging failed for the specified standby database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04058: failed to execute the statement to convert the database "{0}" to physical standby database

Cause: An attempt to migrate a database with zero downtime failed because the execution of the statement to convert the specified database as PHYSICAL STANDBY failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04059: failed to execute the statement to enable force logging for database "{0}"

Cause: An attempt to migrate a database with zero downtime failed because the execution of the statement to enable force logging for the specified database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04060: failed to add log file with thread number "{0}", group "{1}" and size "{2}" for database "{3}"

Cause: An attempt to migrate the specified database with zero downtime failed because the operation to add the indicated log file failed.

Action: Examine the accompanying messages, resolve the indicated problems, and retry.

PRGO-04061: failed to enable thread number "{0}" for database "{1}"

Cause: An attempt to migrate the specified database with zero downtime failed because the operation to enable the indicated thread number failed.

Action: Examine the accompanying messages, resolve the indicated problems, and retry.

PRGO-04062: failed to create undo tablespace "{0}" for database "{1}"

Cause: An attempt to migrate the specified database with zero downtime failed because the operation to create the indicated undo tablespace failed.

Action: Examine the accompanying messages, resolve the indicated problems, and retry.

PRGO-04063: query of the V\$BLOCK_CHANGE_TRACKING view for database "{0}" failed

Cause: An attempt to migrate a database with zero downtime failed because a query of \$BLOCK_CHANGE_TRACKING failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04064: SQL statement to enable block change tracking for database "{0}" failed

Cause: An attempt to migrate a database with zero downtime failed because the query to enable block change tracking failed for the specified database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04065: SQL statement to enable flashback mode for database "{0}" failed

Cause: An attempt to migrate a database with zero downtime failed because the query to enable flashback mode failed for the specified database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04066: failed to update the primary database "{0}" \n "{1}"

Cause: An attempt to migrate a database with zero downtime failed because the update of the primary database failed during the standby database registration. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04068: OSS cloud full backup for database "{0}" failed.\n{1}

Cause: An attempt to create the Oracle Storage Service (OSS) cloud backup for the specified database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04071: OSS cloud incremental backup for database "{0}" failed.\n{1}

Cause: An attempt to create the Oracle Storage Service (OSS) cloud backup for the specified database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04074: OSS cloud differential backup for database "{0}" failed.\n{1}

Cause: An attempt to create the Oracle Storage Service (OSS) cloud backup for the specified database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04077: OSS cloud cumulative backup for database "{0}" failed.\n{1}

Cause: An attempt to create the Oracle Storage Service (OSS) cloud backup for the specified database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04079: open with resetlogs failed for database "{0} ".\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the operation to open the specified database with resetlogs failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04080: failed to set "{1}" parameter to "{2}" for database "{0}"

Cause: An attempt to migrate a database with zero downtime failed because the operation to set the indicated parameter to the indicated value for the specified database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04081: failed to set the "{1}" parameter for database "{0}"

Cause: An attempt to migrate a database with zero downtime failed because the operation to set the indicated parameter for the specified database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04082: failed to reset the "{1}" parameter for database "{0}"

Cause: An attempt to migrate a database with zero downtime failed because the operation to reset the indicated parameter for the specified database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04083: failed to query the "{1}" parameter from the view "{2}" for database "{0}"

Cause: An attempt to migrate a database with zero downtime failed because the operation to query the indicated parameter from the indicated view for the specified database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04084: failed to create directory "{0}"\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the indicated directory could not be created. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-04085: failed to change owner to "{0}" and group to "{1}" for file "{2}"\n{3}

Cause: An attempt to migrate a database with zero downtime failed because the ownership of the specified file could not be changed as indicated. This was most likely due to missing execute permission for the parent directory of the indicated file.

Action: Check that the directory of the indicated file has execute permission. Ensure that the ownership of the password file can be modified, and then retry the operation.

PRGO-04086: failed to query the "{1}" details from the view "{2}" for database "{0}"

Cause: An attempt to migrate a database with zero downtime failed because the operation to query the indicated details from the indicated view for the specified database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04087: Zero impact patching cannot be performed during revert of Oracle Grid Infrastructure home.

Cause: An attempt to revert the Oracle Grid Infrastructure home was rejected because zero impact patching cannot be performed during the revert operation.

Action: Retry the revert operation without specifying the '-tgip' option.

PRGO-04091: failed to create PFILE "{0}" from the SPFILE for database "{1}"

Cause: An attempt to migrate the specified database with zero downtime failed because the operation to create the indicated PFILE from the SPFILE failed.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-04092: failed to copy file "{0}"\n{1}

Cause: An attempt to copy the indicated file failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-04093: failed to open directory "{0}"\n{1}

Cause: An attempt to open the specified directory failed.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGO-04095: failed to enable thread number "{0}" for database "{1}"

Cause: An attempt to upgrade a database with zero downtime failed because the operation to enable the specified thread number for specified database failed.

Action: Examine the accompanying messages, resolve the indicated problems, and retry the operation.

PRGO-04096: Query to retrieve the maximum redo log size for database "{0}" failed.

Cause: An attempt to upgrade a database with zero downtime failed because a query to retrieve BYTES from V\$LOG for the specified database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04097: Query to retrieve the maximum redo log group for database "{0}" failed.

Cause: An attempt to upgrade a database with zero downtime failed because a query to retrieve the maximum GROUP# from V\$LOG for specified database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04098: SQL statement to add redo log file group "{0}" to database "{1}" and assign it to thread "{2}" failed.

Cause: An attempt to upgrade a database with zero downtime failed because the indicated redo log file group could not be added to the specified database and assigned to the indicated thread. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04099: The standby database "{0}" does not exist.

Cause: An attempt to upgrade a database with zero downtime failed because the specified standby database was unexpectedly missing.

Action: Retry after aborting the ongoing upgrade operation.

PRGO-04100: The database "{0}" does not have enabled services.

Cause: An attempt to upgrade the specified database with zero downtime was rejected because it did not have enabled services.

Action: Enable at least one database service and retry.

PRGO-04101: RHP client is running on node "{0}", preventing "{1}" option.

Cause: An attempt to perform the operation the with indicated option was rejected because the Rapid Home Provisioning (RHP) client was running on the indicated node.

Action: Specify a valid option and retry the operation.

PRGO-04105: Parameter 'ORACLE_HOME' is missing or empty in the specified response file for 'add workingcopy'.

Cause: An attempt to provision an Oracle Grid Infrastructure working copy of version earlier than release 12.2.0.2 was rejected because the mandatory 'ORACLE_HOME' parameter was missing or empty in the specified response file.

Action: Retry the 'add workingcopy' command, specifying the 'ORACLE_HOME' parameter in the response file.

PRGO-04106: Query of the log_archive_dest parameter for database "{0}" failed.\n{1}
Cause: An attempt to upgrade a database with zero downtime failed because a query of the log_archive_dest parameter failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04107: The database "{0}" is missing required Oracle GoldenGate RDBMS patches.

Cause: An attempt to upgrade the specified database with zero downtime was rejected because the database does not have the required Oracle GoldenGate RDBMS patches.

Action: Refer to MOS note 1557031.1, and retry the operation after applying the relevant Oracle GoldenGate RDBMS patch.

PRGO-04108: The credentials required for remote node connection to the site "{0}" are missing.

Cause: The requested upgrade Oracle Grid Infrastructure operation was rejected because the specified site was not a Rapid Home Provisioning (RHP) client, and the credentials required for remote node connection were not provided.

Action: Retry the 'rhpctl upgrade gihome' command, providing the credentials.

PRGO-04109: failed to re-create client "{0}" because working copies have been configured for it.

Cause: An attempt to re-create a client was rejected because there were working copies configured for it.

Action: Use the 'rhpctl remove workingcopy' command to first remove the associated working copies and retry the command.

PRGO-04113: SQL query to retrieve PROCESSES parameter of database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query to retrieve the PROCESSES parameter failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGO-04115: The number of processes for database "{0}" is less than "{1}", which is the minimum required.

Cause: An attempt to upgrade the indicated database with zero downtime was rejected because the current value of the PROCESSES parameter was less than 500, which was the minimum.

Action: Retry the operation after setting the PROCESSES parameter equal to or greater than 500.

PRGO-04116: failed to resume the job "{0}" as the job status currently is: "{1}"

Cause: An attempt to resume the specified job was rejected because the specified job was not in the PAUSED state.

Action: Retry the operation, specifying a job in the PAUSED state.

PRGO-04119: pause phase {0} does not exist

Cause: An attempt to locate the specified pause phase failed.

Action: Ensure that the pause phase exists using -eval option to show valid phases.

PRGO-04125: DV_PATCH_ADMIN role cannot be granted to the SYS user for database with instance "{0}".

Cause: An attempt to perform database patching failed because the database with the indicated instance was Oracle Database Vault enabled, but the DV_PATCH_ADMIN role could not be granted to the SYS user.

Action: Ensure that it is possible to grant the DV_PATCH_ADMIN role to the SYS user and retry the command.

PRGO-10211: Invalid option specified when retrieving information for image series

Cause: An invalid combination of the '-series', '-image' and '-client' options was specified.

Action: Supply the correct combination of the '-series', '-image' and '-client' options when running 'rhpctl config series'. Only the following combinations are allowed: 1) no option 2) -client option only 3) -image option only 4) -series option only 5) -series and -client options only

PRGO-10321: User "{0}" lacks the authority to perform the 'config role' operation.

Cause: The user running the 'rhpctl config role' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-10391: User "{0}" lacks the authority to perform the 'config image' operation.

Cause: The user running the 'rhpctl config image' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-10461: User "{0}" lacks the authority to query series.

Cause: The user running the 'rhpctl query series' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-10481: User "{0}" lacks the authority to perform the 'config working copy' operation.

Cause: The user running the 'rhpctl config workingcopy' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-11371: User "{0}" lacks the authority to perform the 'query client' operation.

Cause: The user running the 'rhctl query client' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-12571: failed to register image "{0}"

Cause: An error occurred while attempting to register the indicated image.

Action: Examine the accompanying error messages for more information.

PRGO-13111: failed to get the directory size of path "{0}" during register image of "{1}"

Cause: An attempt to determine the directory size during register image failed because either the current user or the owner specified did not have read and execute permissions for the specified directory.

Action: Ensure that either the current user or the owner specified with '-pathowner' has read and execute permissions for the specified directory. Examine the accompanying error messages for more information.

PRGO-17731: The compressed file {0} is not valid for registering.

Cause: An attempt to register an image from the specified home failed. The indicated file was either non-existent or was corrupted.

Action: Retry the operation specifying a valid compressed file.

PRGP-01001 to PRGP-01142

PRGP-01001: There is no cluster being moved to destination path {0}.

Cause: An attempt to resume or abort moving a cluster to the specified destination path was rejected because a move operation had not been initiated for the specified destination path.

Action: None

PRGP-01002: There are no databases being moved to destination path {0}.

Cause: An attempt to resume or abort moving databases from the specified destination path was rejected because a move operation had not been specified for the indicated destination path.

Action: None

PRGP-01003: No databases are being moved from Oracle home "{0}".

Cause: An attempt to patch Oracle databases was rejected because the '-excludedblist' option resulted in no database being identified as a database that needed to be moved from the specified Oracle home.

Action: Retry the operation, ensuring that the input for option '-excludedblist' is not excluding all databases in the specified Oracle home from being patched.

PRGP-01004: missing information to move databases from or to Oracle home "{0}" on cluster "{1}"

Cause: An attempt to patch Oracle databases was rejected because the specified Oracle home is involved in parallel 'rhpctl move database' operations and the user did not specify sufficient information to uniquely identify a specific operation.

Action: Retry the operation, ensuring that the input for option '-dbname' or option '-excludedblist' uniquely identifies a specific operation.

PRGP-01005: cannot specify databases "{0}" along with databases "{1}"

Cause: An attempt to patch Oracle databases was rejected because the input for option '-dbname' was incorrect.

Action: Retry the operation, ensuring that the input for option '-dbname' does not include the offending values.

PRGP-01006: Value for option '-excludedblist' matched multiple 'rhpctl move database' operations in progress: "{0}"

Cause: An attempt to patch Oracle databases was rejected because the input for option '-excludedblist' was incorrect.

Action: Retry the operation, ensuring that the input for option '-excludedblist' identifies a specific 'rhpctl move database' operation among the indicated operations in progress.

PRGP-01013: The specified source home "{0}" is not an active Cluster Ready Services (CRS) home.

Cause: An attempt to move or upgrade Oracle Grid Infrastructure home was rejected because the specified source home was not an active Cluster Ready Services (CRS) home.

Action: Retry the operation specifying an active, configured Oracle Grid Infrastructure home as the source.

PRGP-01014: failed to move the Oracle Grid Infrastructure home because the source and the destination home cannot be the same

Cause: An attempt to move the Oracle Grid Infrastructure home was rejected because the specified source and destination homes were the same.

Action: Specify different source and destination homes and retry the operation.

PRGP-01015: Neither GNS server nor GNS client is configured on this RHP server cluster.

Cause: An 'rhpctl add workingcopy' command was rejected because neither the Grid Naming Service (GNS) server nor GNS client was configured on the Rapid Home Provisioning (RHP) server cluster.

Action: Configure either the GNS server or the GNS client using the command 'srvctl add gns' in the RHP server cluster, and retry the command.

PRGP-01016: Zero impact patching is supported only for STANDALONE cluster, whereas the detected cluster is {0}.

Cause: An attempt to revert or move the Oracle Grid Infrastructure home was rejected because zero impact patching is not supported for the specified cluster class.

Action: Retry the revert or move operation without specifying the '-tgip' option.

PRGP-01017: Specifying more than one node for zero impact patching is unsupported.

Cause: An attempt to revert or move the Oracle Grid Infrastructure home was rejected because zero impact patching is supported one node at a time and more than one node was specified for the '-batch' option.

Action: Retry the command specifying only one node for the '-batch' option or without specifying the '-tgip' option.

PRGP-01018: Zero impact patching is not supported on Oracle Restart.

Cause: An attempt to revert or move the Oracle Grid Infrastructure home was rejected because zero impact patching is not supported on Oracle Restart.

Action: Retry the revert or move operation without specifying the '-tgip' option.

PRGP-01019: Zero impact patching is supported only on Oracle Linux platform, whereas the detected platform is {0}.

Cause: An attempt to revert or move the Oracle Grid Infrastructure home was rejected because zero impact patching is not supported for the indicated platform.

Action: Retry the revert or move operation without specifying the '-tgip' option.

PRGP-01025: No clients were found in the wallet file.

Cause: An attempt to import client credentials from a wallet file was rejected because the wallet file did not have client credentials.

Action: Retry the import operation with a valid wallet file that contains client credentials.

PRGP-01026: The specified wallet file '{0}' does not exist.

Cause: An attempt to read from a wallet file failed because the wallet file did not exist.

Action: Retry the import operation with a valid wallet file that contains client credentials.

PRGP-01027: The specified wallet file '{0}' already exists.

Cause: An attempt to write a wallet file failed because the wallet file already exists.

Action: Retry the export operation with a different wallet file name.

PRGP-01028: An invalid client name '{0}' was found while reading the wallet file

Cause: An attempt to read clients from a wallet file failed because a client name was invalid.

Action: Retry the operation with a different wallet file.

PRGP-01029: Delete working copy partially failed.

Cause: An attempt to delete a working copy partially failed as there was a failure to connect to Rapid Home Provisioning Client (RHPC). Only the working copy metadata was deleted from Rapid Home Provisioning Server (RHPS).

Action: Manually remove the working copy storage data from the Rapid Home Provisioning Client (RHPC) with operating system commands.

PRGP-01031: Specified first batch '{0}' contains multiple nodes.

Cause: An attempt to perform a patching operation in batch mode was rejected because specified first batch contained multiple nodes.

Action: Retry the operation after ensuring that first batch contains only one node.

PRGP-01032: The specified destination home '{0}' is not a software only home.

Cause: An attempt to upgrade or move the Oracle Grid Infrastructure (GI) was rejected because the destination home was not a software only home.

Action: Retry the move or upgrade command specifying a different destination home that is software only.

PRGP-01033: Oracle RAC database provisioning in Standard Edition home is not supported.

Cause: The target home for the Oracle RAC database provisioning is installed as Standard Edition. This only applies to version 19c and later.

Action: Select a valid Enterprise Edition home for the provisioning of Oracle RAC database.

PRGP-01034: Cluster Ready Services (CRS) is not running on node "{0}" after patch manager execution.

Cause: Cluster Ready Services (CRS) was not running on the indicated node.

Action: Start the Cluster Ready Services (CRS) on the indicated node.

PRGP-01036: failed to execute patch manager on node '{0}'.

Cause: An attempt to execute patch manager on indicated node failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address issues described and retry.

PRGP-01037: failed to disable resource use on node '{0}'

Cause: An attempt to disable all CRSD resources failed on the specified node. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGP-01038: failed to enable resource use on node '{0}'

Cause: An attempt to enable all CRSD resources failed on the specified node. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGP-01043: cannot move the Oracle Grid Infrastructure home for incomplete exadata image "{0}"

Cause: An attempt to move the Oracle Grid Infrastructure for exadata image was rejected because creation of the specified exadata image was not complete.

Action: Specify a complete exadata image for move operation.

PRGP-01044: failure to move Oracle Grid Infrastructure home Option because exadata image "{0}" base image type is not EXAPATCHSOFTWARE

Cause: An attempt to move the Oracle Grid Infrastructure home was rejected because the specified exadata image base image type is not EXAPATCHSOFTWARE

Action: Specify a complete image of base image type EXAPATCHSOFTWARE.

PRGP-01047: failure to move Oracle Grid Infrastructure home.

Cause: An attempt to move the Oracle Grid Infrastructure home failed.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGP-01051: User '{0}' specified to be the owner of a GIMR working copy is not the Grid Infrastructure user '{1}'.

Cause: The user specified as the owner of a Grid Infrastructure Management Repository (GIMR) working copy was not the Grid Infrastructure user.

Action: Specify the Grid Infrastructure user as the owner of the working copy or submit the command without the flag indicating that the working copy is for a GIMR home.

PRGP-01052: Working copy '{0}' is not a GIMR working copy.

Cause: A Grid Infrastructure Management Repository (GIMR) only operation was attempted on a non-GIMR working copy.

Action: Specify a GIMR working copy and retry the command.

PRGP-01053: Gold image path '{0}' does not exist or is empty on node '{1}'.

Cause: The gold image path did not exist or was empty in at least one of the cluster nodes.

Action: Manually create the gold image path and unzip the contents of the gold image under it.

PRGP-01061: stop phase {0} does not exist

Cause: An attempt to locate the specified stop phase failed.

Action: Ensure that the stop phase exists in the workflow. Use -listphases option to list the phases involved.

PRGP-01064: the specified -pauseafter phase {0} is beyond -stopafter phase {1}

Cause: Pause phase can't be a phase after the last phase of the job.

Action: Ensure that the pause phase exists in the workflow. Use -listphases option to list the phases involved.

PRGP-01068: User "{0}" failed to add Grid Infrastructure Management Repository (GIMR) database to the working copy in the cluster "{1}".

Cause: The indicated user could not add Grid Infrastructure Management Repository (GIMR) database to the working copy because the working copy was not owned by the Grid Infrastructure user of the indicated cluster.

Action: Create the working copy so that it is owned by the Grid Infrastructure user of the indicated cluster.

PRGP-01070: failed to update exadata on the Rapid Home Provisioning client "{0}"

Cause: An attempt to update exadata on the node where Rapid Home Provisioning client was running failed because 'exadata update' actions either failed with an error or timed out.

Action: Examine the accompanying error messages and retry the command after addressing the cause for the error.

PRGP-01071: Option '-continue' is supported only for 'update exadata' batch operations.

Cause: An attempt to update exadata was rejected because the '-continue' option was specified, but the update exadata operation requested was not a batch operation.

Action: Resume the move operation by reissuing the command with the options that were originally specified.

PRGP-01073: Failed the patching operation for the Grid Infrastructure Management Repository.

Cause: The attempted patching operation for the Grid Infrastructure Management Repository failed.

Action: Examine the accompanying error messages and retry the operation after addressing the cause for the error.

PRGP-01075: Unexpected option '{0}' specified for moving the Grid Infrastructure Management Repository between Oracle homes.

Cause: The attempted 'move database' operation was rejected because the indicated option was not supported.

Action: Retry the command without the indicated option.

PRGP-01076: Option '{0}' not specified for moving the Grid Infrastructure Management Repository.

Cause: The attempted 'move database' operation was rejected because the indicated option was not specified.

Action: Specify the indicated option and retry the command.

PRGP-01077: Flash Recovery Area is not configured in the database.

Cause: AutoUpgrade relied on a Guarantee Restore Point (GRP) because the rollback strategy required the database to have the flash recovery area configured.

Action: Execute one of the following: - Manually configure flash recovery area in the database and enable the archive mode of the database and retry the command. - Add '-fra <db_recovery_file_dest>' option and retry the command to configure flash recovery area as part of operation. This restarts all of the database instances. - Add '-grp NO' option and retry the command to disable the AutoUpgrade rollback mechanism. If you select this option, then both database backup and database restoration must be performed manually by the DBA.

PRGP-01078: Oracle Home "{0}" is not a Standard Edition home.

Cause: The target home for the Oracle Standard Edition High Availability database provisioning is not installed as Standard Edition. This only applies to version 19.7 and later.

Action: Select a valid Standard Edition home for the provisioning of Oracle SEHA database.

PRGP-01079: Image version "{0}" is lower than 19.7.

Cause: The target Standard Edition image is on Database Release lower than 19.7. Standard Edition High Availability is only supported from Database Release 19.7 and later.

Action: Select a valid Standard Edition Database image for the provisioning of Oracle Standard Edition High Availability database.

PRGP-01081: Oracle Grid Infrastructure on node(s) "{0}" is not running from Oracle home "{1}"

Cause: Failed to force completion of 'move gihome' command as Oracle Grid Infrastructure was not running from specified Oracle home.

Action: Ensure that the Oracle Grid Infrastructure is running from the specified Oracle home on all nodes and resubmit the command.

PRGP-01083: failed to copy User action files\n{0}

Cause: The user action file copy operation failed either because the file system was full or the destination directory did not have write permissions for the specified user.

Action: Retry the command making sure that the file system is not full and the destination directory has requisite permissions.

PRGP-01084: failed to suspend the job "{0}" because it is not executing. Current job status is: "{1}"

Cause: An attempt to suspend the specified job was rejected because the specified job was not in the EXECUTING state.

Action: Retry the operation, specifying a job in the EXECUTING state.

PRGP-01085: suspend job operation allowed only for Zero Downtime Migration (ZDM) jobs

Cause: An attempt to suspend the specified job was rejected because suspend job operation is allowed only on Zero Downtime Migration (ZDM) jobs.

Action: Retry the operation on Zero Downtime Migration (ZDM) jobs.

PRGP-01086: User "{0}" lacks the authority to abort the scheduled job {1}.

Cause: An attempt to abort a scheduled job was rejected because the indicated user did not have the required authorization.

Action: Retry the operation after requesting the authorization from the administrator or retry the operation from a user ID that has the required authorization.

PRGP-01087: User "{0}" lacks the authority to suspend the job {1}.

Cause: An attempt to suspend a scheduled job was rejected because the indicated user did not have the required authorization.

Action: Retry the operation after requesting the authorization from the administrator or retry the operation from a user ID that has the required authorization.

PRGP-01088: User "{0}" lacks the authority to resume the job {1}.

Cause: An attempt to resume a job was rejected because the indicated user did not have the required authorization.

Action: Retry the operation after requesting the authorization from the administrator or retry the operation from a user ID that has the required authorization.

PRGP-01089: failed to abort the job "{0}" because it is not in abortable state. Current job status is: "{1}"

Cause: An attempt to abort the specified job was rejected because the specified job was not abortable..

Action: Retry the operation, specifying a job which is in abortable state.

PRGP-01091: failed to get the list of pluggable databases on node "{0}"

Cause: An attempt to retrieve the list of pluggable databases failed.

Action: Examine the accompanying error messages.

PRGP-01092: failed to find {0} available ports in the port range {1}-{2}

Cause: Failed to find the required number of available ports in the port range to copy remote files.

Action: Ensure that the indicated number of required ports are available in the indicated port range. Alternatively, change the port range using `srvctl modify rhpsrvr -port_range x-y`.

PRGP-01093: failed to downgrade Oracle Grid Infrastructure on node "{0}"

Cause: An attempt to downgrade Oracle Grid Infrastructure on the indicated nodes failed.

Action: Examine the accompanying error messages, resolve the issues and retry the command.

PRGP-01094: no Oracle Grid Infrastructure upgrade in progress to working copy "{0}"

Cause: An attempt to downgrade Oracle Grid Infrastructure on the indicated working copy failed.

Action: Ensure that the right working copy name is used to perform Oracle Grid Infrastructure downgrade.

PRGP-01095: Source working copy is not provisioned on the specified nodes "{0}" in the batches argument.

Cause: An attempt to perform a patching operation in batch mode was rejected because the specified node was not part of the nodes on which the source working copy was provisioned.

Action: Reissue the command with a node on which the source working copy was provisioned or specify a source working copy that exists on the specified node."

PRGP-01097: failed to update Exadata

Cause: An attempt to update Exadata failed.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGP-01098: The -iso_repo option value "{0}" is a file path.

Cause: The requested operation failed because the -iso_repo option value was a file path.

Action: Only specify the ISO image name and retry the command.

PRGP-01099: failed to patch the database node "{0}" where RHPS/RHPC container is running

Cause: An attempt to update Exadata nodes was rejected because the patch manager utility could not be launched from the indicated node which was listed in patch manager server list file.

Action: Retry the command specifying the '-batches' option with non-container node.

PRGP-01100: Site with cluster name "{0}" already exists for an another cluster.

Cause: An attempt to add a working copy was rejected because the site with the indicated cluster name already exists for an another cluster.

Action: Specify '-clusteralias *alias*' to add working copy.

PRGP-01101: failed to execute datapatch

Cause: An attempt to execute datapatch failed.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGP-01102: The Rapid Home Provisioning Server (RHPS) version {0} does not match with Rapid Home Provisioning Client (RHPC) version {1}.

Cause: An attempt to modify the RHPC failed because the RHPS and RHPC versions are different.

Action: Ensure that the RHPS and RHPC versions are the same for the modify client operation.

PRGP-01103: The Rapid Home Provisioning Client (RHPC) "{0}" has only one node

Cause: An attempt to modify the RHPC failed because the RHPC has only one node.

Action: Ensure that the RHPC contains minimum of two nodes for the modify client operation.

PRGP-01110: Image "{0}" is not deployed to the cluster "{1}".

Cause: An attempt to update the exadata was rejected because the specified exadata image was not deployed to the specified cluster.

Action: Retry the command after executing the command 'rhpctl deploy image' to deploy the specified image on the specified cluster.

PRGP-01111: cannot deploy image "{0}" because creation of this image was not complete

Cause: An attempt to deploy an image was rejected because creation of the specified image was not complete.

Action: Specify a complete image to deploy.

PRGP-01112: Image "{0}" is already deployed to the cluster "{1}" at location "{2}".

Cause: An attempt to deploy the Oracle Exadata image was rejected because the specified image was already deployed to the specified cluster.

Action: Retry the operation after ensuring that the Oracle Exadata image is not yet deployed or specify a different image to deploy.

PRGP-01113: failed to relocate one or more database services

Cause: An error occurred while attempting to relocate the services. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGP-01114: failed to stop one or more database services

Cause: An error occurred while attempting to stop the services. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGP-01115: failed to start one or more database services

Cause: An error occurred while attempting to start the services. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGP-01116: failed to stop one or more databases

Cause: An error occurred while attempting to stop the databases. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGP-01117: failed to start one or more databases

Cause: An error occurred while attempting to start the databases. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGP-01118: The specified patch manager location "{0}" does not contain 'patchmgr' executable on nodes "{1}".

Cause: An attempt to update the Exadata was rejected because 'patchmgr' executable did not exist in the specified patch manager location on the specified nodes.

Action: Specify the correct patch manager location, and then retry the operation.

PRGP-01119: The specified ISO file "{0}" does not exist on the deployed path "{1}" on nodes "{2}"

Cause: An attempt to update the Exadata was rejected because the specified 'iso_repo' file did not exist in the deployed path on specified nodes.

Action: Specify the correct iso repository, and then retry the operation.

PRGP-01120: The specified path "{0}" for importing Exadata image is empty

Cause: An attempt to import image failed because specified image path directory is empty.

Action: Retry the command ensuring that the specified directory contains Exadata software with ISO image.

PRGP-01124: An attempt to get the target cluster name failed

Cause: Remote execution of the command failed.

Action: Examine the accompanying error messages for details.

PRGP-01125: An attempt to fetch the remote source home info failed

Cause: Remote execution of the command failed.

Action: Examine the accompanying error messages for details.

PRGP-01126: relocate of database services failed

Cause: Remote execution of the command failed.

Action: Examine the accompanying error messages for details.

PRGP-01127: Stop of database services failed

Cause: Remote execution of the command failed.

Action: Examine the accompanying error messages for details.

PRGP-01128: An attempt to fetch the home information for home path "{0}" failed with the error ln"{1}"

Cause: Remote execution of the command failed.

Action: Examine the accompanying error messages for details.

PRGP-01129: retry attempts of command "{0}" failed even after retrying "{1}" times with error ln"{2}"

Cause: Remote execution of the command failed.

Action: Examine the accompanying error messages for details.

PRGP-01130: failure detected while unregistering peer server "{0}". Perform unregister on peer server as well to complete the cleanup.

Cause: An attempt to unregister peer server encountered a failure.

Action: Retry the command on peer RHPS to complete the cleanup.

PRGP-01131: checksum of the source zip file "{0}" and the target zip file "{1}" do not match

Cause: The zip file was corrupted while transferring from the source node to the target node

Action: Retry the command.

PRGP-01136: The database rollback cannot be completed in a rolling manner because the source home at "{0}" contains more restricted RAC rolling patches compared to the target home at "{1}".

Cause: The restricted RAC rolling patches enabled in the source home are more than in the target home and therefore cannot be rolled back in a rolling manner.

Action: Reissue the command specifying the '-nonrolling' option to complete the rollback in a non-rolling manner.

PRGP-01137: An error occurred when moving the database to Oracle home location "{1}".

Cause: An attempt to move the database to the new Oracle home failed.

Action: Examine the accompanying error messages.

PRGP-01138: Enabling restricted RAC rolling patches on database "{0}" failed.

Cause: Enabling restricted RAC rolling patches on specified database failed because the execution of the SQL statement 'ALTER SYSTEM ENABLE_ALL_PATCH' to enable restricted RAC rolling patches failed.

Action: Retry the SQL statement manually.

PRGP-01139: Warning: The maintenance database plan for one or more databases could not be updated, as per the following details:

Cause: An error occurred while attempting to update the maintenance database plan data. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages for details.

PRGP-01140: failed to relocate one or more database services

Cause: An error occurred while attempting to relocate the services. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages and resolve the indicated problems.

PRGP-01142: An error occurred when an attempt was made to fetch the site name for node "{0}".

Cause: An attempt to get the site name for the specified node failed.

Action: Examine the accompanying error messages. Address the reported issues and retry the operation.

PRGR-00100 to PRGR-00183

PRGR-00100: The specified state "{0}" is invalid.

Cause: An incorrect image state was specified.

Action: Specify one of TESTABLE, RESTRICTED, or PUBLISHED.

PRGR-00101: The specified privilege "{0}" is invalid.

Cause: An incorrect privilege name was specified.

Action: Specify one of READ, WRITE, or DELETE.

PRGR-00102: Failed to connect to repository database "{0}": {1}

Cause: An attempt to establish a database connection for the Grid Infrastructure Management Repository database failed.

Action: Address the accompanying error messages and retry the command.

PRGR-00103: The repository object already exists in the database : \n{0}

Cause: An attempt was made to store a repository object to the database when it was already present in it.

Action: Either delete the currently stored repository object, or avoid rewriting the same repository object into the database.

PRGR-00104: The database connection context is in incorrect state and therefore cannot be written to the database.

Cause: The connection to the database may have been closed.

Action: Ensure that the database and the listener are running and retry.

PRGR-00105: Illegal argument passed to the entity manager.

Cause: An illegal argument was passed to an entity manager operation.

Action: Internal error. Contact your Oracle representative.

PRGR-00106: Storing this repository object requires a transaction but no transaction exists.

Cause: Internal error.

Action: Please contact Oracle Support Services.

PRGR-00107: Failed to close database connection context.

Cause: An attempt to close database connection context for repository failed.

Action: The database may have gone offline. Restart the database.

PRGR-00108: Failed to get current OS user.

Cause: An attempt to get current OS user failed.

Action: Look at the accompanying message for more details.

PRGR-00109: Invalid repository object version "{0}".

Cause: The repository object had previously been stored with invalid version.

Action: Delete the repository object object from the database and store it with the correct version.

PRGR-00110: Repository object "{0}" of type "{1}" does not exist.

Cause: The specified repository object does not exist in the repository database.

Action: Specify the correct repository object name.

PRGR-00111: The site type specified "{0}" is invalid; allowed values are "{1}".

Cause: An invalid site type was specified.

Action: Specify the correct site type from the list of values indicated in the error message.

PRGR-00112: Failed to get current cluster name.

Cause: An attempt to get the current cluster name failed.

Action: Internal error. Contact Oracle Support Services.

PRGR-00113: Invalid access control entry type specified.

Cause: The access control entry type can only be USER or ROLE, but an invalid type was specified.

Action: Internal Error. Contact Oracle Support Services.

PRGR-00114: Image "{0}" does not exist.

Cause: An attempt to fetch the specified image from the repository failed because the object does not exist in the repository.

Action: Fetch an image that already exists, or store the specified image into the repository before attempting to fetch it.

PRGR-00115: Image series "{0}" does not exist.

Cause: An attempt to fetch the specified image series from the repository failed because the object does not exist in the repository.

Action: Fetch an image series that already exists, or store the specified image series into the repository before attempting to fetch it.

PRGR-00116: User "{0}" does not exist.

Cause: An attempt to fetch the specified user from the repository failed because the object does not exist in the repository.

Action: Fetch a user that already exists, or store the specified user into the repository before attempting to fetch it.

PRGR-00117: Role "{0}" does not exist.

Cause: An attempt to fetch the specified role from the repository failed because the object does not exist in the repository.

Action: Fetch a role that already exists, or store the specified role into the repository before attempting to fetch it.

PRGR-00118: Working copy "{0}" does not exist.

Cause: An attempt to fetch the specified working copy from the repository failed because the object does not exist in the repository.

Action: Fetch a working copy that already exists, or store the specified working copy into the repository before attempting to fetch it.

PRGR-00119: Site "{0}" does not exist.

Cause: An attempt to fetch the specified site data from the repository failed because the object does not exist in the repository.

Action: Fetch data for a site that already exists, or store the specified site data into the repository before attempting to fetch it.

PRGR-00120: Failed to get an image name.

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRGR-00121: Image {0} was not found in this series. Make sure the series and image names are correct.

Cause: The specified image name was not found in the image list of the series.

Action: Make sure the series and image names are correct.

PRGR-00122: The specified image type "{0}" has an invalid base type.

Cause: An incorrect image type was specified.

Action: Specify an image type with a base type of either ORACLEDBSOFTWARE, ORACLEGISoftware, or SOFTWARE.

PRGR-00123: Image "{0}" already exists.

Cause: An attempt to add the specified image to the repository failed because the object already exists in the repository.

Action: Add an image that does not exist, or delete the specified image from the repository before attempting to add it.

PRGR-00124: Image series "{0}" already exists.

Cause: An attempt to add the specified image series to the repository failed because the object already exists in the repository.

Action: Add an image series that does not exist, or delete the specified image series from the repository before attempting to add it.

PRGR-00125: User "{0}" already exists.

Cause: An attempt to add the specified user to the repository failed because the object already exists in the repository.

Action: Add a user that does not exist, or delete the specified user from the repository before attempting to add it.

PRGR-00126: Role "{0}" already exists.

Cause: An attempt to add the specified role to the repository failed because the object already exists in the repository.

Action: Add a role that does not exist, or delete the specified role from the repository before attempting to add it.

PRGR-00127: Working copy "{0}" already exists.

Cause: An attempt to add the specified working copy to the repository failed because the object already exists in the repository.

Action: Add a working copy that does not exist, or delete the specified workingcopy from the repository before attempting to add it.

PRGR-00128: Site "{0}" already exists.

Cause: An attempt to add the specified site to the repository failed because the object already exists in the repository.

Action: Add a site that does not exist, or delete the specified site from the repository before attempting to add it.

PRGR-00129: Invalid holder type "{0}" specified, allowed values are "{1}"

Cause: This is an Oracle internal error.

Action: Call Oracle Support Service.

PRGR-00130: Invalid ACE string: "{0}"

Cause: This is an internal error.

Action: Call Oracle Support Services.

PRGR-00131: Failed to access the database: {0}

Cause: An attempt to access the Grid Infrastructure Management Repository database failed.

Action: Address the accompanying error messages and retry the command. If the database was recently restarted, wait a minute before retrying the command.

PRGR-00132: Client cluster name {0} is the same as the Rapid Home Provisioning Server cluster name.

Cause: An attempt to add the specified client cluster to the repository failed because the client cluster name is the same as the Rapid Home Provisioning Server cluster name.

Action: Specify a different client cluster name.

PRGR-00133: failed to retrieve the platform information from the specified Oracle home path "{0}"

Cause: An error occurred while attempting to retrieve the platform information.

Action: Examine the accompanying errors for more information.

PRGR-00134: failed to execute the requested command to act on the Rapid Home Provisioning repository because the Rapid Home Provisioning Server is running

Cause: A request to act on the Rapid Home Provisioning repository was rejected because this requires the Rapid Home Provisioning Server to be stopped.

Action: Use the command 'srvctl stop rhpserver' or, if necessary, use the command 'srvctl stop rhpserver -force' to stop the Rapid Home Provisioning Server and then retry upgrading the Rapid Home Provisioning repository.

PRGR-00136: invalid version "{0}" specified

Cause: The version specified was an invalid version from which to upgrade.

Action: Specify from which version the upgrade is being done without periods and without a fifth number. For example, for version 12.1.0.2.0, specify 12102.

PRGR-00137: failed to upgrade objects of type {0} due to the following errors:\n{1}

Cause: An attempt to upgrade the objects of the mentioned type failed.

Action: Examine the accompanying errors for more information about the failure for each object.

PRGR-00138: failed to get a user name

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRGR-00139: User action "{0}" already exists.

Cause: An attempt to add the specified user action to the repository failed because an action with that name already exists.

Action: Specify a user action name that does not exist or, if appropriate, delete the existing user action before adding this one.

PRGR-00140: User action "{0}" does not exist.

Cause: An attempt to fetch the specified user action from the repository failed because the object did not exist in the repository.

Action: Specify a user action that already exists, or store the specified user action into the repository before attempting to fetch it.

PRGR-00141: Image type "{0}" already exists.

Cause: An attempt to add the specified image type to the repository failed because the image type already existed in the repository.

Action: Add an image type that does not exist, or delete the specified image type from the repository before attempting to add an image type with the same name.

PRGR-00142: Image type "{0}" does not exist.

Cause: An attempt to fetch the specified image type from the repository failed because the object did not exist in the repository.

Action: Fetch an image type that already exists, or store the specified user action into the repository before attempting to fetch it.

PRGR-00143: The specified operation type "{0}" is invalid.

Cause: The specified operation type was not supported by user actions in Rapid Home Provisioning.

Action: Specify either IMPORT_IMAGE, ADD_WORKINGCOPY, DELETE_WORKINGCOPY, ADD_DATABASE, DELETE_DATABASE, MOVE_DATABASE, MOVE_GIHOME, UPGRADE_DATABASE, UPGRADE_GIHOME, ADDNODE_GIHOME, DELETENODE_GIHOME, ADDNODE_DATABASE, DELETENODE_DATABASE, ADDNODE_WORKINGCOPY, ZDTUPGRADE_DATABASE, ZDTUPGRADE_DATABASE_SNAPDB, ZDTUPGRADE_DATABASE_DBUA, ZDTUPGRADE_DATABASE_SWITCHBACK, ZDM_DATABASE, ZDM_FULL_BACKUP,

ZDM_FULL_RESTORE, ZDM_INCREMENTAL_BACKUP,
ZDM_DIFFERENTIAL_BACKUP, ZDM_SETUP_STANDBY,
ZDM_SETUP_SERVICES or ZDM_SWITCHOVER.

PRGR-00144: failed to modify the audit record limit because the number of written records is higher than the limit provided

Cause: An attempt to modify the audit record limit failed.

Action: Delete audit records using the command 'rhpctl delete audit'.

PRGR-00145: The specified run scope "{0}" is invalid.

Cause: An invalid value was specified for the '-runscope' parameter.

Action: Specify ONENODE, ALLNODES or AUTO.

PRGR-00146: The value specified for 'onerror' "{0}" is invalid.

Cause: An invalid value was specified for the '-onerror' parameter.

Action: Specify ABORT or CONTINUE.

PRGR-00147: The starting date specified {0} for an audit query is later than the ending date specified {1}.

Cause: An audit query specified an invalid date range.

Action: Ensure that the ending date for the query is later than the starting date.

PRGR-00152: Client "{0}" already exists.

Cause: An attempt to add the indicated client failed because that client already existed.

Action: To add a new client, choose a name that does not exist, or to create the client data file, use the command 'rhpctl export client'.

PRGR-00153: The policy type "{0}" is invalid.

Cause: An attempt to create a policy was rejected because the specified policy type was invalid.

Action: Retry the operation, specifying a policy type between 0 and 15.

PRGR-00154: failed to export or import the RHP repository

Cause: An attempt to export or import the Rapid Home Provisioning (RHP) repository failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGR-00170: Client "{0}" does not exist.

Cause: An attempt to delete a client failed because the indicated client was not found in the repository.

Action: Retry ensuring that the intended client exists and is correctly specified.

PRGR-00171: failed to update working copy drift metadata in the repository for client "{0}"

Cause: An attempt to update the working copy drift metadata for the indicated client encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and then retry the operation.

PRGR-00172: failed to fetch working copy drift metadata for client "{0}"

Cause: An attempt to update the working copy drift metadata for the indicated client encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and then retry the operation.

PRGR-00173: Credential "{0}" does not exist.

Cause: An attempt to fetch the specified credential from the repository failed because the object did not exist in the repository.

Action: Fetch a credential that already exists, or store the specified credential into the repository before attempting to fetch it.

PRGR-00183: No working copy found for site "{0}" in path "{1}".

Cause: An attempt to fetch a working copy with the specified site and path from the repository failed because no such working copy existed.

Action: Verify the arguments specified and retry.

PRGS-00100 to PRGS-00123

PRGS-00100: Failed to create volume {0}

Cause: An attempt to create a volume device for the specified volume name failed.

Action: Review the accompanying error messages that provide the details of why the volume creation failed. Resolve the reported problem and retry.

PRGS-00101: Insufficient space in diskgroup {0}

Cause: Diskgroup does not have enough space for the specified operation.

Action: Add more disks to the diskgroup and re-try the operation.

PRGS-00102: Volume {0} already in use

Cause: The volume name specified was already being used by another volume device.

Action: Specify a different volume name and retry.

PRGS-00103: Disk group {0} does not exist

Cause: The specified disk group was either not created or was not accessible.

Action: Review the accompanying error messages that provide the details. Resolve the reported problem and retry.

PRGS-00104: volume {0} does not exist

Cause: The specified volume did not exist.

Action: Create the specified volume or specify a volume that exists and retry the operation.

PRGS-00105: Failed to get volume device for volume {0}

Cause: An attempt to get the volume device path for the specified volume failed.

Action: Review the accompanying error messages that provide the details. Resolve the reported problem and retry.

PRGS-00106: Failed to delete volume {0}

Cause: An attempt to delete the volume device for the specified volume name failed.

Action: Review the accompanying error messages that provide the details of why the volume creation failed. Resolve the reported problem and retry.

PRGS-00107: Failed to create ACFS on volume device {0}

Cause: The operation to create an Oracle ASM Cluster File System on the specified volume device failed.

Action: Review the accompanying error messages that provide the details of why the file system creation failed. Resolve the reported problem and retry.

PRGS-00108: Failed to delete ACFS on volume device {0}

Cause: The operation to delete an Oracle ASM Cluster File System on the specified volume device failed.

Action: Review the accompanying error messages that provide the details of why the file system creation failed. Resolve the reported problem and retry.

PRGS-00109: Failed to create snapshot {0}

Cause: An attempt to create a snapshot on the Oracle ASM Cluster File System failed.

Action: Review the accompanying error messages that provide the details of why the snapshot creation failed. Resolve the reported problem and retry.

PRGS-00110: Failed to delete snapshot {0}

Cause: An attempt to delete a snapshot on the Oracle ASM Cluster File System failed.

Action: Review the accompanying error messages that provide the details of why the snapshot deletion failed. Resolve the reported problem and retry.

PRGS-00111: Unable to create snapshot {0} as the limit is reached

Cause: The maximum number of snapshots is already reached on the specified ASM Cluster File System.

Action: Reduce the number of snapshots and retry.

PRGS-00112: snapshot {0} already exists

Cause: The specified snapshot name is being already used by another snapshot in the specified ASM Cluster File System.

Action: Specify a different snapshot name and retry.

PRGS-00113: snapshot {0} does not exist

Cause: Snapshot with the specified name did not exist.

Action: Create the snapshot or specify a snapshot that exists and retry the operation.

PRGS-00114: snapshot type {0} is not valid

Cause: An invalid snapshot type was passed for snapshot creation.

Action: Pass either read-only or read-write as snapshot type to create the snapshot.

PRGS-00115: mount type {0} is not valid

Cause: An invalid mount type was specified for mount operation.

Action: Internal error. Contact Oracle Support Services.

PRGS-00116: Failed to resize volume {0} for file system path {1}

Cause: An attempt to resize the volume for the specified file system path failed when creating a snapshot.

Action: Review the accompanying error messages that provide details of the failure. Resolve the reported problem and retry.

PRGS-00117: failed to configure Oracle Layered File System

Cause: An attempt to configure Oracle Layered File System failed because the new file system drivers could not be installed.

Action: Examine the accompanying error messages, address the issues described, and then retry.

PRGS-00118: failed to mount the gold image path '{0}' and read-write path '{1}' on the Oracle Grid Infrastructure home path '{2}'

Cause: An attempt to instantiate the home path failed because the 'mount' command completed with errors.

Action: Examine the accompanying error messages, address the issues described, and then retry.

PRGS-00119: failed to configure Oracle Layered File System on nodes {0}

Cause: An attempt to configure Oracle Layered File System failed because the new file system drivers could not be installed.

Action: Examine the accompanying error messages, address the issues described, and then retry.

PRGS-00120: failed to mount the gold image path '{0}' and read-write path '{1}' on the Oracle Grid Infrastructure home path '{2}' on nodes '{3}'

Cause: An attempt to instantiate the home path failed because the 'mount' command completed with errors.

Action: Examine the accompanying error messages, address issues described and retry.

PRGS-00121: Failed to start Oracle ACFS clone listener on '{0}'.

Cause: An attempt to start an Oracle ASM Cluster File System (ACFS) clone listener on the indicated host failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying error messages, resolve the problems reported, and then retry the operation.

PRGS-00122: Failed to replicate image home path '{0}' to destination Oracle ACFS mount path '{1}' on host '{2}'.

Cause: The operation failed to replicate the specified Oracle ASM Cluster File System (ACFS) image home path to the indicated ACFS mount path on the indicated host. The accompanying messages provide detailed failure information.

Action: Review the accompanying error messages, resolve the problems reported, and then retry the operation.

PRGS-00123: The specified databases "{0}" does not exist.

Cause: The specified databases does not exist.

Action: Ensure that the specified databases are present and then retry the operation.

PRGT-01000 to PRGT-01099

PRGT-01000: The remote authentication plug-in Java archive {0} was not found for option {1}.

Cause: An attempt to execute the 'zdmcli' command with the '-srcauth' archive (JAR) file was not found.

Action: Ensure that the indicated JAR file is present and retry the command.

PRGT-01007: invalid value "{0}" specified for -pauseafter option

Cause: Unsupported phase was specified for -pauseafter option.

Action: Ensure that a valid phase value is specified for -pauseafter option and retry the command. Use -eval option to list the supported phases to pause.

PRGT-01008: Oracle home location {0} does not contain program {1}

Cause: The current Oracle home directory did not contain the indicated utility.

Action: Provide the correct Oracle home directory.

PRGT-01009: Attempt to retrieve Oracle base home from Oracle home {0} failed. Detailed error: ln {1}

Cause: An attempt to execute the 'oraclebasehome' command failed. See the accompanying error message for further details.

Action: Verify that the 'bin' directory under the indicated Oracle home contains the 'oraclebasehome' binary, and verify execution of the command 'oraclebasehome' manually on that Oracle home.

PRGT-01012: invalid offset value "{0}" specified for -schedule option

Cause: Offset value specified was not in the expected format "+dd:mm:yy:hh:mm:ss"

Action: Ensure that a valid offset value is specified for -schedule option and retry the command. Example 1: +44:22:33 to specify offset value of 44 hours, 22 minutes and 33 seconds. Example 2: +11:02:02:44:22:33 to specify offset value of 11 days, 02 months, 02 years, 44 hours, 22 minutes and 33 seconds.

PRGT-01013: invalid offset value "{0}" specified for "{1}" field of -schedule option

Cause: The offset value did not contain a valid value for the indicated field of the offset value for the -schedule option.

Action: Ensure that a valid offset value is specified for each of the fields of the offset value for the -schedule option and retry the command. Maximum allowed values for "+dd:mm:yy:hh:mm:ss" is "+31:12:99:23:59:59"

PRGT-01015: The value specified for the '-raconetimeout' option is invalid.

Cause: An attempt to move a database was rejected because the integer specified for '-raconetimeout' was not a value between 1 and 720.

Action: Retry the operation specifying a valid value for option '-raconetimeout'.

PRGT-01016: Option "{0}" not allowed for specified operation type {1}.

Cause: An attempt to run an rhpctl command was rejected because the indicated option was not allowed.

Action: Retry the operation specifying valid options.

PRGT-01017: The target Oracle Database home "{0}" is missing the patches for bug numbers "{1}" which are present in the source Oracle Database home "{2}". The target database has a lower patch level compared to the source database patch level. Apply the indicated patches to the target database and retry the migration.

Cause: An attempt to migrate a database with zero downtime was rejected because the target Oracle Database home did not include the patches for the indicated bugs.

Action: Rerun the migrate command with the '-ignoremissingpatches <patch_name>[,<patch_name>...]' option to ignore specific patches or with the '-ignore ALL|PATCH_CHECK' option to ignore patch checking, or apply the indicated patches to the target database and retry the migration.

PRGT-01018: Specified client name "{0}" contains invalid characters or is too long.

Cause: An attempt to add client was rejected because the indicated client name was not valid. Client names must not contain the characters "\$@\">());*?" and must be no longer than 128 characters.

Action: Specify a valid client name.

PRGT-01019: Specified working copy path "{0}" contains invalid characters or is too long.

Cause: An attempt to create or patch a working copy was rejected because the indicated working copy path was not valid. Working copy path must not contain the characters "\$@\">());*?" and must be no longer than 128 characters.

Action: Specify a valid working copy path.

PRGT-01020: Specified working copy Oracle base path "{0}" contains invalid characters or is too long.

Cause: An attempt to create or patch a working copy was rejected because the indicated working copy Oracle base path was not valid. Working copy Oracle base path must not contain the characters "\$@\">());*?" and must be no longer than 128 characters.

Action: Specify a valid Oracle base path.

PRGT-01021: The file {0} required by option '-autoupg' was not found.

Cause: An attempt to upgrade a database failed using the option -autoupg because the indicated Java Archive (JAR) file was not found.

Action: Refer to MOS note 2485457.1, and retry the operation after installing the relevant Oracle AutoUpgrade software.

PRGT-01022: Invalid bug number list "{0}" was specified.

Cause: Bug numbers were specified in an incorrect format.

Action: Bug numbers should contain only comma separated numeric values. Please remove redundant commas and other illegal characters and retry the command.

PRGT-01023: The option value provided for "{0}" contains one or more of the following invalid characters "{1}".

Cause: An invalid value was provided for a given option.

Action: Provide a valid value that doesn't contain invalid characters.

PRGT-01024: invalid value "{0}" specified for incremental interval option

Cause: Unsupported value was specified for the incremental interval option.

Action: Ensure that a valid numeric value is specified for incremental interval option and retry the command.

PRGT-01025: GIMR upgrade failed while executing mgmtua.\n{0}

Cause: An attempt to execute the management database upgrade assistant (mgmtua) to upgrade the Grid Infrastructure Management Repository (GIMR) failed.

Action: Correct the problem indicated by the accompanying error messages and then retry.

PRGT-01026: password in the wallet {0} is missing

Cause: An attempt to read the password in the wallet file failed because the password was not found.

Action: Retry the operation, providing a wallet containing the password.

PRGT-01027: -jobtype option cannot be used with any other options except -jobid

Cause: The option jobtype was used with incompatible options.

Action: Retry the command specifying only jobtype and jobid options.

PRGT-01028: The command is submitted from the node '{0}' which is the same as the the nodes to be patched specified in the '-batches' option

Cause: An attempt to update Exadata nodes was rejected because the nodes specified for patching using the '-batches' option was the same as current node.

Action: Retry the command specifying a different node than current node for the '-batches' option.

PRGT-01029: failed to update exadata to cluster '{0}'

Cause: An attempt to update the exadata to the specified cluster failed. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages, address issues reported, and retry.

PRGT-01030: invalid value "{0}" specified for -stopafter option

Cause: Unsupported phase was specified for -stopafter option.

Action: Ensure that a valid phase value is specified for -stopafter option and retry the command.

PRGT-01031: failed to import an image from a remote zip file

Cause: An attempt to use the -zip option to import from a remote location using the -targetnode or -client option failed. The -zip option is supported only on the Rapid Home Provisioning (RHP) server cluster.

Action: Retry the command on RHP Server Cluster specifying the -zip option.

PRGT-01032: failed to open the wallet file "{0}"

Cause: An attempt to read the wallet file failed.

Action: Verify the file access permissions and provide a valid user for opening the wallet.

PRGT-01033: failed to deserialize JSON content in file "{0}"

Cause: An attempt to deserialize JavaScript Object Notation (JSON) content in the specified file failed.

Action: Ensure that the file exists, is readable, and contains correct JSON content.

PRGT-01038: ZDM service is not running.

Cause: ZDM service was not running.

Action: Review the accompanying error messages, and resolve the indicated problems, if any. Ensure the ZDM service is running using `zdmstatus` command and if required, start the service using `zdmstatus start` command and then retry the operation.

PRGT-01039: identity file "{0}" specified in param "{1}" not found on node "{2}"

Cause: The expected identity file not found in specified path

Action: Provide a valid identity file path

PRGT-01040: Invalid command specified: {0}

Cause: The command keyword specified on the command line was not recognized.

Action: Valid commands are `abort|add|audit|migrate|modify|query|resume`. Inline help for `zdmcli` is printed with this error. Check the `zdmcli` usage printed along with this error and specify a valid command.

PRGT-01041: Command "{0}" is not supported for object "{1}"

Cause: An unsupported command and object combination was specified.

Action: Use the command `'zdmcli -h'` to identify valid combinations and re-issue the command.

PRGT-01042: The '-datafileDestination' option was not specified.

Cause: An attempt to add a Standard Edition High Availability database was rejected because the data file destination was not specified.

Action: Reissue the command specifying the '-datafileDestination' option with ASM disk group or with ACFS.

PRGT-01043: An unrecognized property name "{0}" was found in the response file "{1}".

Cause: A request was rejected because the response file contained a property name that was not recognized.

Action: Retry the operation, ensuring that the response file contains only valid property names, refer to `zdm_logical_template.rsp` for the list of valid properties. The client should not retry the request without modifying the response file.

PRGT-01044: Invalid edition "{0}".

Cause: The edition type specified was not valid.

Action: Supply a valid edition type. Allowed values are: ENTERPRISE or STANDARD.

PRGT-01045: AutoUpgrade database checks have failed for database "{0}" from source home "{1}".

Cause: The preexecution evaluation check for the upgrade database command showed that some prerequisites were not met. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the issues, and then retry the operation.

PRGT-01046: The '-datafileDestination' location specified "{0}" was not ASM disk group name or ACFS file system when '-dbtype' was SINGLE (SEHA).

Cause: An attempt to add a Standard Edition High Availability database was rejected because the data file destination was not an Oracle Automatic Storage Management disk nor an ASM Cluster File System path.

Action: Reissue the command specifying the '-datafileDestination' option with ASM disk group or with ACFS.

PRGT-01047: Root user action requested for the operation "{0}" failed

Cause: An attempt to add a root user action to a Rapid Home Provisioning (RHP) operation was rejected because the root user action was not supported for the indicated RHP operation.

Action: Retry the operation specifying valid options.

PRGT-01048: Option "{0}" need to specify {ONENODE | ALLNODES | AUTO} supported runscope

Cause: An attempt to add a root user action to a Rapid Home Provisioning (RHP) operation was rejected because the root user action was not supported for the indicated RHP operation.

Action: Retry the operation specifying valid options.

PRGT-01049: failed to configure flash recovery area for database "{0}" on source home "{1}"

Cause: An attempt to configure the flash recovery area failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the issues, and then retry the operation.

PRGT-01050: The file specified for the '-actionscrip' option "{0}" is not supported.

Cause: An attempt to add a 'useraction' was rejected because the file specified for the '-actionscrip' option was not supported.

Action: Refer to the product documentation for the supported executable types and retry.

PRGT-01051: Identity file "{0}" specified in parameter "{1}" is not readable.

Cause: The specified identity file was not readable.

Action: Provide a valid identity file path and retry the operation.

PRGT-01052: Identity file "{0}" specified in parameter "{1}" is not a file.

Cause: The specified identity file was not a valid file.

Action: Provide a valid identity file path and retry the operation.

PRGT-01053: The '-gimrwc' option missing for self upgrade of Rapid Home Provisioning Server

Cause: An attempt to upgrade Rapid Home Provisioning Server was rejected as '-gimrwc' option was not specified.

Action: Reissue the command specifying the '-gimrwc' option.

PRGT-01055: failed to establish connection with specified bastion server {0}

Cause: An attempt to migrate a database with zero downtime failed to establish connection with the specified bastion server.

Action: Ensure specified bastion details are valid and retry the operation.

PRGT-01056: invalid value "{0}" specified for parameter {1}

Cause: An attempt to migrate the database was rejected because the indicated parameter value specified was not valid.

Action: Refer to the product documentation for allowed values and ensure a valid value is specified and then retry the operation.

PRGT-01058: Invalid list of nodes "{0}" specified for parameter {1}

Cause: The requested 'update exadata' operation was rejected because the indicated nodelist was not specified in the correct format.

Action: Retry the command specifying the list of nodes in the correct format.

PRGT-01060: Option "{0}" is not allowed.

Cause: An attempt to migrate a database with zero downtime was rejected because the specified option was not allowed.

Action: Retry the operation after removing specified option.

PRGT-01061: Database type {1} is not supported with environment {0}.

Cause: An attempt to migrate a database with zero downtime was rejected because the provided database type is not supported with the provided environment type.

Action: Provide supported environment name and database type combination in response file and then retry the operation.

PRGT-01063: missing Amazon S3 bucket details for selected data transfer medium AMAZONS3

Cause: An attempt to migrate a database with zero downtime was rejected because DUMPTRANSFERDETAILS_S3BUCKET parameters were missing for the selected data transfer medium AMAZONS3.

Action: Retry the operation, providing DUMPTRANSFERDETAILS_S3BUCKET details.

PRGT-01064: missing Amazon S3 bucket name for selected data transfer medium AMAZONS3

Cause: An attempt to migrate a database with zero downtime was rejected because DUMPTRANSFERDETAILS_S3BUCKET_NAME was missing for the selected data transfer medium AMAZONS3.

Action: Retry the operation, providing the DUMPTRANSFERDETAILS_S3BUCKET_NAME value.

PRGT-01065: missing Amazon S3 bucket region for selected data transfer medium AMAZONS3

Cause: An attempt to migrate a database with zero downtime was rejected because DUMPTRANSFERDETAILS_S3BUCKET_REGION was missing for the selected data transfer medium AMAZONS3.

Action: Retry the operation, providing the DUMPTRANSFERDETAILS_S3BUCKET_REGION value.

PRGT-01066: missing Amazon S3 bucket access key for selected data transfer medium AMAZONS3

Cause: An attempt to migrate a database with zero downtime was rejected because DUMPTRANSFERDETAILS_S3BUCKET_ACCESSKEY was missing for the selected data transfer medium AMAZONS3.

Action: Retry the operation, providing DUMPTRANSFERDETAILS_S3BUCKET_ACCESSKEY option.

PRGT-01067: missing SOURCEDATABASE_ENVIRONMENT parameters for selected data transfer medium AMAZONS3

Cause: An attempt to migrate a database with zero downtime was rejected because SOURCEDATABASE_ENVIRONMENT parameters were missing for the selected data transfer medium AMAZONS3.

Action: Retry the operation, after providing the SOURCEDATABASE_ENVIRONMENT parameters.

PRGT-01068: invalid data transfer medium {0} specified for environment {1}

Cause: An attempt to migrate a database with zero downtime was rejected because an invalid data transfer medium was specified for the selected environment.

Action: Retry the operation after providing the correct value for SOURCEDATABASE_ENVIRONMENT_NAME and DATA_TRANSFER_MEDIUM.

PRGT-01069: DATAPUMPSETTINGS_EXPORTDIRECTORYOBJECT_PATH is not supported with data transfer medium {0}.

Cause: An attempt to migrate a database with zero downtime was rejected because DATAPUMPSETTINGS_EXPORTDIRECTORYOBJECT_PATH was not supported with the selected data transfer medium.

Action: Remove DATAPUMPSETTINGS_EXPORTDIRECTORYOBJECT_PATH and then retry the operation.

PRGT-01070: invalid proxy details specified for parameters {0}

Cause: An attempt to migrate a database with zero downtime was rejected because the proxy details were invalid.

Action: Retry the operation, after providing the correct value for proxy host and port.

PRGT-01071: sourcenode argument is not supported for AMAZON environment

Cause: An attempt to migrate a database with zero downtime was rejected because the -sourcenode argument was not supported for the AMAZON environment.

Action: Retry the operation, after removing the -sourcenode argument.

PRGT-01072: object name "{0}" selection not allowed for object type {1}.

Cause: An attempt to migrate a database with zero downtime was rejected because the specified option was not allowed.

Action: Retry the operation after removing specified option

PRGT-01073: mutually exclusive INCLUDEOBJECT and EXCLUDEOBJECT parameters were both specified

Cause: An attempt to migrate a database with zero downtime was rejected because the mutually exclusive parameters INCLUDEOBJECT and EXCLUDEOBJECT were specified.

Action: Refer to the product documentation for the supported filter types and retry.

PRGT-01074: mutually exclusive object type TABLE INCLUDEOBJECT and EXCLUDEOBJECT parameters were both specified

Cause: An attempt to migrate a database with zero downtime was rejected because the mutually exclusive parameters INCLUDEOBJECT and EXCLUDEOBJECT were specified.

Action: Refer to the product documentation for the supported filter types and retry.

PRGT-01075: include owners "{0}" with wildcard specified for migration

Cause: An attempt to migrate a database with zero downtime was rejected because the specified option included unsupported wildcard characters.

Action: Retry the operation after correcting the specified option.

PRGT-01076: more than one object type included in addition to include of object type {0}

Cause: An attempt to migrate a database with zero downtime was rejected because the specified option includes entire schema and one or more object type in addition.

Action: Retry the operation after correcting the specified option.

PRGT-01077: include object type {0} specified for job mode FULL

Cause: An attempt to migrate a database with zero downtime was rejected because the specified option included indicated object type for job mode FULL.

Action: Retry the operation after correcting the specified option.

PRGT-01078: multiple owners {0} specified for migration

Cause: An attempt to migrate a database with zero downtime was rejected because the specified option was not valid as it included more than one owners for migration.

Action: Retry the operation after correcting the specified option.

PRGT-01079: duplicate include object type {0} specified

Cause: An attempt to migrate a database with zero downtime was rejected because the specified option was not valid as same object type was included more than once.

Action: Retry the operation after correcting the specified option.

PRGT-01080: all objects of type {0} excluded for owner {1}

Cause: An attempt to migrate a database with zero downtime was rejected because the specified exclude option omits all objects of specified type and is not supported.

Action: Retry the operation after correcting the specified option.

PRGT-01081: invalid value {0} specified for EXCLUDEOBJECTS or INCLUDEOBJECTS parameters

Cause: An attempt to migrate a database with zero downtime was rejected because the specified wildcard is not supported.

Action: Retry the operation after specifying a supported value.

PRGT-01083: Invalid option '-eval' specified with '-rollback' or '-backup'

Cause: An invalid combination of options was specified for the 'update exadata -dbnodes' command. The '-eval' option cannot be specified with '-rollback' or '-backup'.

Action: Retry the command, omitting the '-eval' option.

PRGT-01084: invalid value {0} specified for job tag parameter

Cause: Unsupported tag value was specified for -jobtag option.

Action: Ensure that a valid tag value is specified for -jobtag option and retry the command.

PRGT-01085: GoldenGate administrator user name for source database was not specified.

Cause: An attempt to migrate a database with zero downtime was rejected because parameter SOURCEDATABASE_GGADMINUSERNAME was not specified for the selected ONLINE_LOGICAL migration method.

Action: Retry the operation, specifying SOURCEDATABASE_GGADMINUSERNAME.

PRGT-01086: GoldenGate administrator user name for target database was not specified.

Cause: An attempt to migrate a database with zero downtime was rejected because parameter TARGETDATABASE_GGADMINUSERNAME was not specified for the selected ONLINE_LOGICAL migration method.

Action: Retry the operation, specifying TARGETDATABASE_GGADMINUSERNAME.

PRGT-01087: Path "{0}" does not exist.

Cause: An attempt to locate the specified path failed.

Action: Ensure that the specified path exists, and retry the operation.

PRGT-01088: Path "{0}" is not a directory.

Cause: The specified path was not a directory.

Action: Ensure that the specified path is a directory, and retry the operation.

PRGT-01089: Directory "{0}" is not empty.

Cause: The specified directory was not empty.

Action: Ensure that the specified directory is empty, and retry the operation.

PRGT-01090: Directory "{0}" is empty.

Cause: The specified directory was empty.

Action: Ensure that the specified directory contains the backup files of a Fleet Patching and Provisioning Server, and retry the operation.

PRGT-01091: schema batches selected for job mode {0}

Cause: An attempt to migrate a database with zero downtime was rejected because the specified option was not allowed.

Action: Retry the operation after removing the specified option.

PRGT-01092: mutually exclusive DATAPUMPSETTINGS_SCHEMABATCH and DATAPUMPSETTINGS_SCHEMABATCHCOUNT parameters were both specified

Cause: An attempt to migrate a database with zero downtime was rejected because the mutually exclusive parameters DATAPUMPSETTINGS_SCHEMABATCH and DATAPUMPSETTINGS_SCHEMABATCHCOUNT were specified.

Action: Refer to the product documentation for the supported filter types and retry.

PRGT-01093: invalid characters specified for schema names "{0}" for migration

Cause: An attempt to migrate a database with zero downtime was rejected because the specified option included invalid characters.

Action: Retry the operation after correcting the specified option.

PRGT-01094: mutually exclusive DATAPUMPSETTINGS_SCHEMABATCH, DATAPUMPSETTINGS_SCHEMABATCHCOUNT, and INCLUDEOBJECTS parameters were specified

Cause: An attempt to migrate a database with zero downtime was rejected because the mutually exclusive parameters INCLUDEOBJECTS, DATAPUMPSETTINGS_SCHEMABATCH and DATAPUMPSETTINGS_SCHEMABATCHCOUNT were specified.

Action: Refer to the product documentation for the supported parameters and retry.

PRGT-01095: File "{0}" does not exist.

Cause: An attempt to locate the specified file failed.

Action: Ensure that the specified file exists, and retry the operation.

PRGT-01096: Path "{0}" is not a file.

Cause: The specified path was not a file.

Action: Retry the operation, specifying the name of an existing file.

PRGT-01097: mutually exclusive DATAPUMPSETTINGS_SCHEMABATCH, DATAPUMPSETTINGS_SCHEMABATCHCOUNT, and DATAPUMPSETTINGS_METADATAFIRST parameters were specified

Cause: An attempt to migrate a database with zero downtime was rejected because the mutually exclusive parameters DATAPUMPSETTINGS_METADATAFIRST, DATAPUMPSETTINGS_SCHEMABATCH and DATAPUMPSETTINGS_SCHEMABATCHCOUNT were specified.

Action: Refer to the product documentation for the supported parameters and retry.

PRGT-01098: Invalid site type specified: {0}

Cause: The site type specified was not valid.

Action: Supply a valid site type. The allowed values are ORACLERESTART, REMOTENODE, and STANDALONE.

PRGT-01099: Command '{0}' timed out after {1} seconds.

Cause: The specified command timed out.

Action: Retry the operation.

PRGZ-01001 to PRGZ-03621

PRGZ-01001: Query of the V\$ARCHIVE_DEST_STATUS view for database "{0}" failed.\n{1}

Cause: An attempt to upgrade a database with zero downtime failed because a query of the V\$ARCHIVE_DEST_STATUS view failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01002: The '{0}' property has to be set if the '{1}' property is set in the response file {2} and vice versa.

Cause: Only one of the indicated parameters was set in the response file.

Action: Either set both the indicated parameters or unset both of them in the response file.

PRGZ-01004: The directory "{0}" does not exist.

Cause: An attempt to upgrade a database with zero downtime failed because the specified directory did not exist.

Action: Ensure that the specified directory exists and then retry the operation.

PRGZ-01008: failed to execute the statement to convert the database "{0}" to snapshot standby database

Cause: An attempt to migrate a database with zero downtime failed because the execution of the statement to convert the specified database as SNAPSHOT STANDBY failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01009: No Oracle home is found for Oracle SID {0} on node {1}.

Cause: The specified Oracle system identifier (SID) was not found in the oratab file on the specified node.

Action: Ensure that the Oracle SID exists and then retry the operation.

PRGZ-01012: mandatory parameters "{0}" not set

Cause: Either one or all of the indicated parameters was not set in the response file.

Action: Set all of the indicated parameters in the response file.

PRGZ-01013: The path "{0}" does not exist.

Cause: An attempt to migrate a database with zero downtime failed because the specified path did not exist.

Action: Ensure that the specified path exists and then retry the operation.

PRGZ-01015: The specified phase "{0}" does not exist.

Cause: The requested operation failed because the specified phase did not exist.

Action: Retry the operation specifying a valid phase.

PRGZ-01016: ZDLRA is not supported for given Oracle Cloud type "{0}".

Cause: The attempted operation was rejected because it was not supported for the indicated Oracle Cloud type.

Action: Refer to the product documentation for the supported case and retry.

PRGZ-01017: Failure occurred during the creation of Oracle wallets on node "{0}".

Cause: An attempt to upgrade a database with zero downtime failed because the creation of Oracle wallets on the indicated node failed.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01100: The path "{0}" does not exist.

Cause: An attempt to convert a nonmultitenant container database (CDB) to a pluggable database (PDB) was rejected because the specified path did not exist.

Action: Ensure that the specified path exists and then retry the operation.

PRGZ-01101: The source database "{0}" is a multitenant container database.

Cause: An attempt to convert a nonmultitenant container database (CDB) to a pluggable database (PDB) was rejected because the specified source database was a CDB.

Action: Ensure that the source database is not a CDB and then retry the operation.

PRGZ-01102: The target database "{0}" is not a multitenant container database.

Cause: An attempt to convert a nonmultitenant container database (CDB) to a pluggable database (PDB) was rejected because the specified target database was not a CDB that could have the converted PDB plugged in.

Action: Ensure that the specified target database is a CDB and then retry the operation.

PRGZ-01103: The source database "{0}" is a pluggable database existing in the multitenant container database "{1}".

Cause: An attempt to convert a nonmultitenant container database (CDB) to a pluggable database (PDB) was rejected because the specified source database was a PDB existing in the indicated CDB.

Action: Ensure that the specified source database is not a PDB in any CDB and then retry the operation.

PRGZ-01104: The database "{0}" does not exist.

Cause: An attempt to convert a nonmultitenant container database (CDB) to a pluggable database (PDB) was rejected because the specified source database was not present.

Action: Ensure that the specified source database is present and then retry the operation.

PRGZ-01105: The database "{0}" is not running.

Cause: An attempt to convert a nonmultitenant container database (CDB) to a pluggable database (PDB) was rejected because the specified source database was not running.

Action: Ensure that the specified source database is running and then retry the operation.

PRGZ-01106: Stored procedure to create the PDB description file for database "{0}" failed.\n{1}

Cause: An attempt to convert a nonmultitenant container database (CDB) to a pluggable database (PDB) failed because the stored procedure to create the PDB description file for the specified database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01107: Stored procedure to check the plug compatibility for database "{0}" failed.\n{1}

Cause: An attempt to convert a nonmultitenant container database (CDB) to a pluggable database (PDB) was rejected because the stored procedure to check the plug compatibility for the specified database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01108: The source database "{0}" is not compatible with the multitenant container database "{1}".

Cause: An attempt to convert a nonmultitenant container database (CDB) to a pluggable database (PDB) was rejected because the specified source database was not compatible with the indicated CDB as a PDB.

Action: Ensure the source database is fully compatible with the indicated CDB, and then retry the operation.

PRGZ-01109: The PDB description file for source database "{0}" is missing.

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRGZ-01110: SQL statement to show compatibility violations for source database "{0}" failed.\n{1}

Cause: An attempt to convert a nonmultitenant container database (CDB) to a pluggable database (PDB) failed because the statement to show compatibility violations for the specified source database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01111: SQL statement to create the pluggable database "{0}" failed.\n{1}

Cause: An attempt to convert a nonmultitenant container database (CDB) to a pluggable database (PDB) failed because the statement to create the specified PDB failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01112: SQL statement to open the pluggable database "{0}" failed.\n{1}

Cause: An attempt to convert a nonmultitenant container database (CDB) to a pluggable database (PDB) failed because the statement to open the specified PDB failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01113: SQL statements to convert database "{0}" to a PDB failed.\n{1}

Cause: An attempt to convert a nonmultitenant container database (CDB) to a pluggable database (PDB) failed because statements to convert the specified database to a PDB failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01114: unable to find a free port ranging from {0} to {1}

Cause: An attempt to upgrade a database with zero downtime failed because an attempt to find a free port within the indicated range failed.

Action: Ensure there is a free port within the indicated range and then retry the operation.

PRGZ-01115: parameter "{0}" not supported

Cause: Either one or all of the indicated parameters was set in the response file and not supported.

Action: Refer to the product documentation for the supported case and retry.

PRGZ-01116: The curl version from node {0} is not supported.

Cause: The current curl version of the specified node was not supported by zero downtime migration (ZDM).

Action: Ensure all nodes have a compatible version of curl installed.

PRGZ-01117: The curl package is not installed on node {0}.

Cause: The mentioned node did not have curl installed.

Action: Ensure that all nodes have a compatible version of curl installed.

PRGZ-01118: Database {0} is currently being migrated part of job {1}.

Cause: An attempt to start migrating specified database was rejected because of an ongoing migrate operation.

Action: Wait for specified job to complete or abort the ongoing migrate operation and retry.

PRGZ-01119: incorrect value specified for parameters "{0}"

Cause: The indicated parameters were set with incorrect value in the response file.

Action: Refer to the product documentation, correct the values and retry.

PRGZ-01125: No Oracle base is found for Oracle Home {0} on node {1}.

Cause: The specified Oracle home has no Oracle base associated.

Action: Ensure that the Oracle home has an Oracle base associated with it.

PRGZ-01126: missing the "{0}" option or the "{1}" option in the response file

Cause: The response file was missing one of the mandatory options.

Action: One of the indicated options must be specified in the response file.

PRGZ-01128: file "{0}" not found on host "{1}"

Cause: An attempt to access the specified file failed.

Action: Ensure that the specified file exists and retry.

PRGZ-01129: failed to locate Zero Downtime Migration property file "{0}"

Cause: An internal error occurred. The included value was an internal identifier.

Action: Contact Oracle Support Services.

PRGZ-01130: failed to locate Zero Downtime Migration property "{0}"

Cause: An internal error occurred. The included value was an internal identifier.

Action: Contact Oracle Support Services.

PRGZ-01131: The value "{1}" specified for parameter '{0}' is invalid.

Cause: An invalid value was specified for the specified parameter.

Action: Refer to the product documentation for the supported values and retry.

PRGZ-01132: -eval failed for the phase {0} with exception {1}.

Cause: An attempt to perform the -eval operation with zero downtime failed because the indicated phase evaluation failed with the indicated error message.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01133: failed to discover Oracle Database {0} in node {1}\n{2}

Cause: An attempt to migrate a database with zero downtime was rejected because the information about the specified Oracle Database could not be determined.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01134: payload is missing information about Oracle GoldenGate Microservices

Cause: An attempt to migrate a database with zero downtime was rejected because the user did not specify information about Oracle GoldenGate Microservices.

Action: Specify the required information and resubmit the job.

PRGZ-01135: password for user "{0}" was not specified

Cause: An attempt to migrate a database was rejected because the user did not specify the required password.

Action: Specify the required information and resubmit the job.

PRGZ-01136: failed to verify configuration and status of Oracle GoldenGate Microservices at URL "{0}"

Cause: An attempt to verify the configuration and status of Oracle GoldenGate Microservices at the specified URL failed.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01137: Oracle GoldenGate Service Manager at URL "{0}" is not healthy.

Cause: An attempt to migrate a database with zero downtime was rejected because the specified Oracle GoldenGate Microservices were not in a healthy state.

Action: Ensure that the specified Oracle GoldenGate Microservices are running in a healthy state, and retry the operation.

PRGZ-01138: Oracle GoldenGate Microservices deployment "{0}" at URL "{1}" is not running.

Cause: An attempt to migrate a database with zero downtime was rejected because the specified Oracle GoldenGate Microservices deployment was not running.

Action: Ensure that the specified Oracle GoldenGate Microservices deployment is running, and retry the operation.

PRGZ-01139: Oracle GoldenGate Microservice "{0}" in deployment "{1}" at URL "{2}" is not healthy.

Cause: An attempt to migrate a database with zero downtime was rejected because the specified Oracle GoldenGate Microservice in the specified deployment was not in a healthy state.

Action: Ensure that the specified Oracle GoldenGate Microservice in the specified deployment is running, and retry the operation.

PRGZ-01140: User data directory for Oracle GoldenGate Microservice deployment "{0}" is "{1}" whereas the user data directory for Oracle GoldenGate Microservice deployment "{2}" is "{3}".

Cause: An attempt to migrate a database with zero downtime was rejected because the specified Oracle GoldenGate Microservice deployments were not using the same user data directory.

Action: Ensure that the specified Oracle GoldenGate Microservice deployments use the same user data directory, and retry the operation.

PRGZ-01141: failed to verify configuration and status of Oracle database "{0}"

Cause: An attempt to verify the configuration and status of the specified Oracle database failed.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01142: parameter ENABLE_GOLDENGATE_REPLICATION is not set to 'true' for Oracle database "{0}"

Cause: An attempt to migrate a database with zero downtime using Oracle GoldenGate was rejected because database parameter

Action: Set database parameter ENABLE_GOLDENGATE_REPLICATION to 'true' for the specified database, and then retry the operation.

PRGZ-01143: database user "{0}" in Oracle database "{1}" is missing Oracle GoldenGate privileges

Cause: An attempt to migrate a database with zero downtime using Oracle GoldenGate was rejected because the specified database user

Action: Grant the required Oracle GoldenGate privileges, and then retry the operation.

PRGZ-01144: Database "{0}" is not in ARCHIVELOG mode.

Cause: An attempt to migrate a database with zero downtime was rejected because the specified database was not in ARCHIVELOG mode.

Action: Set the database in ARCHIVELOG mode, and then retry the operation.

PRGZ-01145: Minimal supplemental logging is not enabled for database "{0}".

Cause: An attempt to migrate a database with zero downtime was rejected because minimal supplemental logging was not enabled for the specified database.

Action: Enable minimal supplemental logging for the database, and then retry the operation.

PRGZ-01146: FORCE LOGGING is not enabled for database "{0}".

Cause: An attempt to migrate a database with zero downtime was rejected because FORCE LOGGING was not enabled for the specified database.

Action: Enable FORCE LOGGING mode for the database, and then retry the operation.

PRGZ-01147: Database "{0}" contains tables with Oracle GoldenGate capture process support level PLSQL or NONE: "{1}"

Cause: An attempt to migrate a database with zero downtime using Oracle GoldenGate was rejected because the specified database contained

Action: Exclude the indicated tables for online logical migration, and then retry the operation.

PRGZ-01148: Maximum of "{0}" Oracle GoldenGate Extract processes can be created for source database.

Cause: An attempt to migrate a database with zero downtime using more than the allowed number of Oracle GoldenGate Extract processes was rejected.

Action: Specify settings for the valid number of Oracle GoldenGate Extract processes, and then retry the operation.

PRGZ-01149: Maximum of "{0}" Oracle GoldenGate Replicat processes can be created for target database.

Cause: An attempt to migrate a database with zero downtime using more than the allowed number of Oracle GoldenGate Replicat processes was rejected.

Action: Specify settings for the valid number of Oracle GoldenGate Replicat processes, and then retry the operation.

PRGZ-01150: Oracle GoldenGate Parallel Replicat parameter APPLY_PARALLELISM cannot be used with parameters MIN_APPLY_PARALLELISM or MAX_APPLY_PARALLELISM.

Cause: An attempt to migrate a database using Oracle GoldenGate was rejected because an invalid combination of APPLY_PARALLELISM Replicat parameters was specified.

Action: Either specify parameter APPLY_PARALLELISM or define a range using parameters MIN_APPLY_PARALLELISM and MAX_APPLY_PARALLELISM, and then retry the operation.

PRGZ-01151: Oracle database parameter STREAMS_POOL_SIZE is currently set to "{0}" instead of the minimum expected value of "{1}" for source database "{2}".

Cause: An attempt to migrate a database with zero downtime using Oracle GoldenGate was rejected because the Oracle database parameter STREAMS_POOL_SIZE was not set to the desired value.

Action: Increase the value of Oracle database parameter STREAMS_POOL_SIZE, and then retry the operation.

PRGZ-01153: Oracle GoldenGate Microservice deployment "{0}" with software version "{1}" at URL "{2}" does not support database of version "{3}".

Cause: An attempt to migrate a database with zero downtime was rejected because the specified Oracle GoldenGate Microservice deployment does not support the database.

Action: Ensure that the specified Oracle GoldenGate Microservice deployment supports the database version, and retry the operation.

PRGZ-01154: Oracle database parameter "{0}" is not set to the same value across all instances of Oracle database "{1}".

Cause: An attempt to migrate the specified database with zero downtime was rejected because the specified database parameter did not have the same setting across all instances of the database.

Action: Ensure that the specified database parameter has the same setting across all instances of the database, and then retry the operation.

PRGZ-01155: Database "{0}" contains no tables which are owned by users who are not Oracle-maintained.

Cause: An attempt to migrate a database was rejected because the specified database contained no tables which are owned by users that are not Oracle-maintained.

Action: None

PRGZ-01156: No object in database "{0}" has been selected for migration.

Cause: An attempt to migrate a database was rejected because all objects in the specified database have been excluded.

Action: Verify the input, ensure that not all database objects have been excluded, and then retry the operation.

PRGZ-01157: OCID "{0}" represents neither an Autonomous Database nor a user-managed database.

Cause: An attempt to migrate a database was rejected because the specified Oracle Cloud identifier (OCID) was not a valid OCID for a database system on Oracle Cloud Infrastructure (OCI).

Action: Verify the input, and then retry the operation.

PRGZ-01158: Current lifecycle state of OCI database "{0}" is "{1}".

Cause: An attempt to migrate a database was rejected because the lifecycle state of the database on Oracle Cloud Infrastructure (OCI) with the specified Oracle Cloud identifier (OCID) was not 'Available'.

Action: Ensure that the lifecycle state of the specified database on OCI is 'Available', and then retry the operation.

PRGZ-01159: OCI REST API for database "{0}" failed.

Cause: An attempt to migrate a database was rejected because a REST API call for the database on Oracle Cloud Infrastructure (OCI) with the specified Oracle Cloud identifier (OCID) failed.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01160: failed to identify the infrastructure shape and workload type of OCI database "{0}"

Cause: An attempt to migrate a database was rejected because the infrastructure shape and workload type of the database on Oracle Cloud Infrastructure (OCI) with the specified Oracle Cloud identifier (OCID) could not be determined.

Action: Ensure that the GET request to OCI database service for the specified database returns a valid response, and then retry the operation.

PRGZ-01161: Predefined database service "{0}" does not exist for Autonomous Database "{1}".

Cause: An attempt to migrate a database was rejected because the Autonomous Database on Oracle Cloud Infrastructure (OCI) with the specified Oracle Cloud Identifier (OCID) was not configured with the indicated predefined database service.

Action: Verify the configuration of the specified Autonomous Database, and then retry the operation.

PRGZ-01162: payload is missing information about on-premise Oracle database

Cause: An attempt to migrate a database was rejected because information about the on-premise database was not specified.

Action: Specify the required information and resubmit the job.

PRGZ-01163: payload is missing information about on-premise Oracle multitenant database's CDB root

Cause: An attempt to migrate a database was rejected because information about the CDB root of the on-premise Oracle multitenant database was not specified.

Action: Specify the required information and resubmit the job.

PRGZ-01164: payload is missing information about database on Oracle Cloud Infrastructure

Cause: An attempt to migrate a database was rejected because information about the database on Oracle Cloud Infrastructure was not specified.

Action: Specify the required information and resubmit the job.

PRGZ-01165: payload is missing OCID of database on Oracle Cloud Infrastructure

Cause: An attempt to migrate a database was rejected because the Oracle Cloud identifier (OCID) of the database on Oracle Cloud Infrastructure was not specified.

Action: Specify the required information and resubmit the job.

PRGZ-01166: payload is missing information about OCI user who will call OCI REST APIs

Cause: An attempt to migrate a database was rejected because information about the Oracle Cloud Infrastructure (OCI) user who will call OCI REST APIs was not specified.

Action: Specify the required information and resubmit the job.

PRGZ-01167: payload is missing connection details for user-managed database system on Oracle Cloud Infrastructure

Cause: An attempt to migrate a database was rejected because information about the user-managed database system on Oracle Cloud Infrastructure was not specified.

Action: Specify the required information and resubmit the job.

PRGZ-01168: failed to create directory "{0}" to store client credentials for Autonomous Database "{1}"

Cause: An attempt to migrate a database was rejected because an attempt to create the indicated directory for the specified Autonomous Database failed.

Action: Verify file system permissions, and retry the operation.

PRGZ-01169: Client credentials downloaded for Autonomous Database "{0}" do not include tnsnames.ora file.

Cause: An attempt to migrate a database was rejected because the client credentials downloaded for the specified Autonomous Database did not include tnsnames.ora file.

Action: Ensure Oracle Cloud Infrastructure API GenerateAutonomousDatabaseWallet returns a valid response for the specified Autonomous Database, and then retry the operation.

PRGZ-01170: Parameter "{0}" is not valid for Oracle Data Pump operation type "{1}" with mode "{2}".

Cause: An attempt to migrate a database was rejected because the specified parameter did not apply to the specified Oracle Data Pump operation and mode.

Action: Do not specify the indicated parameter, and retry the operation.

PRGZ-01171: Oracle Data Pump parameter FLASHBACK_SCN or FLASHBACK_TIME is not required for online logical migration.

Cause: An attempt to migrate a database with zero downtime was rejected because Oracle Data Pump parameter FLASHBACK_SCN or FLASHBACK_TIME was specified. Schemas being migrated will be prepared for instantiation before Oracle GoldenGate Extract process is started, thereby ensuring that Oracle GoldenGate Replicat process does not apply duplicate data. Because of this, there is no need to use Oracle Data Pump parameter FLASHBACK_SCN or FLASHBACK_TIME.

Action: Do not specify Oracle Data Pump parameter FLASHBACK_SCN or FLASHBACK_TIME, and retry the operation.

PRGZ-01172: Directory object 'data_pump_dir' does not exist in Autonomous Database "{0}".

Cause: An attempt to migrate a database was rejected because the Autonomous Database on Oracle Cloud Infrastructure (OCI) with the specified Oracle Cloud identifier (OCID) did not contain directory object 'data_pump_dir'.

Action: Verify the configuration of the specified Autonomous Database, and then retry the operation.

PRGZ-01173: OCI Object Store bucket for storing the wallet containing certificates for on-premise database was not specified.

Cause: An attempt to create a database link from an Autonomous Database on Oracle Cloud Infrastructure (OCI) to an on-premise database was rejected because information was not specified about the OCI Object Store bucket which would be used to store the wallet containing certificates for the on-premise database.

Action: Specify information about the OCI Object Store bucket, and then retry the operation.

PRGZ-01174: OCI Object Store bucket for storing Oracle Data Pump dump files was not specified.

Cause: An attempt to migrate a database was rejected because information was not specified about the Oracle Cloud Infrastructure (OCI) Object Store bucket which would be used to store Oracle Data Pump dump files.

Action: Specify information about the OCI Object Store bucket, and then retry the operation.

PRGZ-01175: Information about transporting Oracle Data Pump dump files is missing.

Cause: An attempt to migrate a database was rejected because how to transfer Oracle Data Pump dump files from the on-premise database to a database on Oracle Cloud Infrastructure (OCI) was not specified.

Action: Specify the required information, and then resubmit the job. The following cases are supported: 1) Performing a remote network import using a newly created or an existing database link between database on OCI to on-premise database. 2) Uploading Oracle Data Pump dump files to an OCI Object Store bucket, if database on OCI is an Autonomous Database. 3) Transferring Oracle Data Pump dump files from on-premise database server to OCI database server using newly created or existing database directory objects, if database on OCI is a user-managed database system.

PRGZ-01176: Information about database directory object is missing for database "{0}".

Cause: An attempt to migrate a database was rejected because information about the directory object to be used for storing Oracle Data Pump dump files was not specified.

Action: Either specify information required to create a new directory object or specify an existing directory object, and then resubmit the job.

PRGZ-01177: Database link "{0}" is invalid and unusable.

Cause: An attempt to migrate a database was rejected because the specified database link was invalid and unusable.

Action: Drop the specified database link, and then resubmit the job. Oracle Zero Downtime Migration (ZDM) will automatically create a valid and usable database link.

PRGZ-01182: The parameter '{0}' modified during rerun.

Cause: The value of the indicated parameter was changed during rerun.

Action: Indicated parameter value can not be changed during rerun. Restore the original value and retry.

PRGZ-01184: Specified shard ID {0} does not match with current Zero Downtime Migration (ZDM) host {1}.

Cause: The shard ID specified in the response file did not match with the hostname of the current ZDM server.

Action: Verify that the current job is being executed in the correct host or that the information in the response file is correct.

PRGZ-01185: The source database version {0} and target database version {1} does not match.

Cause: An attempt to migrate the database failed because the source database and target database version did not match.

Action: Ensure that the source and target database major version are equal.

PRGZ-01186: SCAN listener details not found for database {0} on the target node {1}

Cause: An attempt to migrate a database was rejected because the specified database Single Client Access Name (SCAN) listener was either not configured or not enabled.

Action: Verify the configuration of the specified database, ensure the REMOTE_LISTENER parameter is set, and then retry the operation.

PRGZ-01187: identity file "{0}" specified in param "{1}" not found on node "{2}"

Cause: The expected identity file not found in specified path

Action: Provide a valid identity file path

PRGZ-01188: failed to resume job "{0}" because the specified '-pauseafter' phase "{1}" is already completed.

Cause: An attempt to resume the migrate database job was rejected because the specified '-pauseafter' phase already has the status completed.

Action: Specify a valid phase to '-pauseafter' and then retry the operation.

PRGZ-01189: Exporting Oracle Data Pump dump files to directory "{0}" on a file system which does not support O_DIRECT is not allowed.

Cause: An attempt to migrate a database using Oracle Data Pump was rejected because the specified directory cannot be used by a Data Pump Export job.

Action: Review MOS note 1330406.1. Either specify a directory on a file system which supports O_DIRECT, or alter the database filesystemio_option to 'none', and then retry the operation.

PRGZ-01190: OCI user "{0}" already has two OCI Auth Tokens.

Cause: An attempt to migrate a database using Oracle Data Pump was rejected because a new Auth Token cannot be created for the Oracle Cloud Infrastructure (OCI) user with the specified Oracle Cloud Identifier (OCID).

Action: Specify an existing Auth Token, or delete an unused Auth Token, or specify a different OCI user, and then retry the operation.

PRGZ-01191: Auth Token was not specified for OCI user "{0}".

Cause: An attempt to migrate a database using Oracle Data Pump was rejected because an Auth Token was not specified for the Oracle Cloud Infrastructure (OCI) user with the specified Oracle Cloud Identifier (OCID).

Action: Either specify an existing Auth Token, or specify that Oracle Zero Downtime Migration should create a new Auth Token, and then retry the operation.

PRGZ-01192: Tablespaces "{0}" do not exist in database "{1}".

Cause: An attempt to migrate a database using Oracle Data Pump was rejected because the indicated tablespaces do not exist in the specified database.

Action: Either remap tablespaces, or create the indicated tablespaces in the specified database, and then retry the operation.

PRGZ-01195: User action specified for phase {0} which does not support user actions.

Cause: The attempted operation was rejected because it was not supported for the indicated operation phase.

Action: Refer to the product documentation for the supported case and retry.

PRGZ-01196: node information not found to execute user action for phase "{0}"

Cause: The attempted operation was rejected because node information to execute the indicated operation phase was not found.

Action: Reissue the command with necessary node information to execute the user action.

PRGZ-01197: Source database version {0} is not supported for non container database to pluggable database conversion.

Cause: Pre 12c database conversion into pluggable database was not supported.

Action: Ensure that the source database version is 12c or above and reissue the migration command.

PRGZ-01199: Warning: ignoring custom action {0} execution failure...

Cause: The indicated custom action execution failed and the failure was ignored due to custom action property.

Action: Refer to product documentation if the custom action execution error should not be ignored.

PRGZ-01200: custom action {0} execution failed

Cause: An attempt to migrate a database failed because the specified custom action failed to execute. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01201: Oracle database parameter STREAMS_POOL_SIZE is currently not set for source database "{0}".

Cause: An attempt to migrate a database with zero downtime using Oracle Data Pump was rejected because the Oracle database parameter STREAMS_POOL_SIZE was not set.

Action: Ensure the value of Oracle database parameter STREAMS_POOL_SIZE is set and then retry the operation.

PRGZ-01202: missing source database SSL authentication details to set up database link

Cause: An attempt to migrate a database with zero downtime using Oracle Data Pump was rejected because the details to set up database link with Autonomous Database to source database using SSL (TCPS) authentication were not available

Action: Ensure the source database is configured to use TCP/IP with SSL (TCPS) authentication and secure connection details are provided in the response file and reattempt the operation.

PRGZ-01203: Oracle Data Pump METADATA_FILTER option {0} is not supported for job mode {1}

Cause: The attempted operation was rejected because the indicated METADATA_FILTER is not supported in Zero Downtime Migration for the given Oracle Data Pump job mode.

Action: Refer to the product documentation for the supported case and retry.

PRGZ-01204: sourcedb or sourcesid option is missing for running logical migration

Cause: An attempt to migrate a database was rejected because sourcedb or sourcesid option was not specified.

Action: Specify the required information and resubmit the job.

PRGZ-01210: failed to list Data Pump dump in the specified path "{0}"

Cause: An attempt to migrate a database was rejected because the specified directory path was either not readable or missing Oracle Data Pump dump files.

Action: Ensure that the Data Pump dump files exists and are readable in the indicated directory path for the Oracle Database user and then retry the operation.

PRGZ-01211: failed to validate specified database directory object path "{0}"

Cause: An attempt to migrate a database was rejected because the validation of specified directory object to be used for storing Oracle Data Pump dump files failed.

Action: Either specify a valid path required to create a new directory object or specify an existing directory object, and then resubmit the job.

PRGZ-01212: failed to operate in path "{0}" on node {1}

Cause: An attempt to migrate a database failed because the operation on specified directory path failed. The accompanying messages provided detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01219: failed to transfer dumps in node {0} path {1}

Cause: An attempt to migrate a database failed because the indicated Data Pump dump file could not be transferred. The accompanying messages provided detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01220: unsupported Data Pump transfer medium {0} specified for Oracle Cloud type "{1}"

Cause: The attempted operation was rejected because it was not supported for the indicated Oracle Cloud type.

Action: Refer to the product documentation for the supported case and retry.

PRGZ-01221: failed to copy Oracle Data Pump dump file {0}

Cause: An attempt to migrate a database failed because the indicated Data Pump dump file could not be copied. The accompanying messages provided detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01222: transfer of dump files from specified node {0} not supported

Cause: The attempted operation was rejected because the specified node was not the Oracle Zero Downtime Migration (ZDM) server.

Action: Refer to the product documentation for the supported case and retry.

PRGZ-01223: missing required option '-targetnode' for migrating database

Cause: An attempt to migrate a database with zero downtime was rejected because the user did not specify information required to access the target database server.

Action: Specify the required information and resubmit the job.

PRGZ-01224: Oracle Transparent Data Encryption (TDE) keystore password not specified for database "{0}" during non-CDB to PDB conversion.

Cause: An attempt to migrate a database with zero downtime was rejected because a password-based Oracle Transparent Data Encryption (TDE) keystore was detected but the keystore password was not specified.

Action: Specify the Oracle Transparent Data Encryption (TDE) keystore password, and then retry the operation.

PRGZ-01225: Source database for non-CDB to PDB conversion had version {0} of Oracle Application Express (APEX) installed and target database had no APEX installed.

Cause: An attempt to migrate a database with non-CDB to PDB conversion was rejected because the source database had APEX installed and the target database had no APEX installed.

Action: Ensure that either source database has no APEX installation or that target database has the same version of APEX installed and then retry the operation.

PRGZ-01226: failed to list trusted certificate entries in the client credentials wallet "{0}" for Autonomous Database "{1}".

Cause: An attempt to migrate a database was rejected because the indicated client credentials wallet file downloaded for the Autonomous Database on Oracle Cloud Infrastructure (OCI) with the specified Oracle Cloud Identifier (OCID) could not be processed.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01227: Client credentials wallet "{0}" for Autonomous Database "{1}" does not contain a trusted X.509 certificate with a valid X.500 principal.

Cause: An attempt to migrate a database was rejected because the indicated client credentials wallet file downloaded for the Autonomous Database on Oracle Cloud Infrastructure (OCI) with the specified Oracle Cloud Identifier (OCID) did not contain a trusted X.509 certificate with a valid X.500 principal.

Action: Contact Oracle Cloud Support to verify and fix the configuration of database services which provide secure TCP connections to the specified Autonomous Database using the TLS protocol.

PRGZ-01228: unsupported option Oracle Data Pump parallel specified for Oracle Database Standard Edition

Cause: The attempted operation was rejected because the specified Oracle Data Pump parallel option was not supported in Oracle Database Standard Edition.

Action: Ensure that the parallel option is not specified and then retry the operation.

PRGZ-01229: failed to remove Oracle Data Pump dump file {0}

Cause: An attempt to migrate a database failed because the indicated Data Pump dump file could not be removed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01234: incorrect option database directory object "{0}" specified for database link mode

Cause: An attempt to migrate a database was rejected because specifying directory object is not allowed for Database link mode.

Action: Resolve the indicated issue, and then retry the operation.

PRGZ-01235: Oracle GoldenGate process "{0}" did not start.

Cause: An attempt to migrate a database with zero downtime failed because the indicated Oracle GoldenGate process did not start.

Action: Review Oracle GoldenGate errors in ggserr.log file on the Oracle GoldenGate server, resolve the errors, and then retry the operation.

PRGZ-01237: failed to resume job "{0}" because the specified options "{1}" cannot be modified at this phase

Cause: An attempt to resume the migrate database job was rejected because the specified migration properties were already used in previous phases that are now completed.

Action: Use the same value as set either on previous 'migrate database' or 'resume job' operation for the indicated properties.

PRGZ-01238: The target keystore password is not needed when source keystore credentials are not provided.

Cause: Credentials for target keystore were provided for non-CDB to PDB migration but source keystore credentials were not provided.

Action: Reissue the command providing credentials for source database keystore, or without providing target keystore credentials.

PRGZ-01239: The target keystore password is not needed for migration without non-CDB to PDB conversion

Cause: The credentials for target keystore were provided for migration.

Action: Reissue the command either without the credentials for remote keystore, or enabling non-CDB to PDB conversion.

PRGZ-01240: Target keystore credentials were not provided for migration

Cause: The credentials for the target keystore were required to import source keys in non-CDB to PDB migration workflow when source keystore credentials were provided.

Action: Reissue the command including the -tgttdekeystorepwd or -tgttdewallet option.

PRGZ-01241: The version of Application Express (APEX) installed on source database {0} is different than the version installed on target database: {1}

Cause: An attempt to migrate a database with non-CDB to PDB conversion was rejected because the version of APEX installed on source database is different than the one installed on target database.

Action: Ensure that either source database has no APEX installation or that target database has the same version of APEX installed and then retry the operation.

PRGZ-01242: failed to create an useraction output due to "{0}"

Cause: An attempt to generate output file for the useraction failed.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01243: SQL file "{0}" execution was rejected as it has a cyclic dependency, which leads to unexpected behavior

Cause: An attempt to execute the SQL file was rejected.

Action: Make sure there is no cyclic dependency of SQL files and retry the operation.

PRGZ-01245: The database {0} version {1} is not supported.

Cause: An attempt to migrate the database was rejected because the database version is not supported.

Action: Ensure that the source and target database version are 11.2.0.4 or later.

PRGZ-01253: Target database time zone version {0} is lower than that of source version {1}

Cause: An attempt to migrate the database was rejected because the target database time zone version was lower than that of the source database time zone version.

Action: Ensure that the target database time zone version is equal to or higher than that of the source database and retry the operation.

PRGZ-01258: unable to delete the useraction "{0}" because useraction "{1}" execution depends on its output

Cause: An attempt to delete a useraction was rejected because the output from this useraction was being used by the indicated useraction.

Action: Ensure that the dependency is no longer required, remove the dependency, and reissue the command. Execute the 'modify useraction' command to remove the useraction dependency.

PRGZ-01259: Information about target node for transporting Oracle Data Pump dump files is missing.

Cause: An attempt to migrate a database was rejected because the target node for transfer of Oracle Data Pump dump files from the source database server was not specified.

Action: Specify the required information, and then resubmit the job.

PRGZ-01265: sourcenode option is missing for logical migration

Cause: An attempt to migrate a database was rejected because the '-sourcenode' option was not specified.

Action: Specify the required information and resubmit the job.

PRGZ-01266: mutually exclusive parameters INCLUDEOBJECT and EXCLUDEOBJECT are specified

Cause: An attempt to migrate a database with zero downtime was rejected because the mutually exclusive parameters INCLUDEOBJECT and EXCLUDEOBJECT were specified.

Action: Retry the operation specifying only one of the parameters.

PRGZ-01267: Schema {0} to be included does not exist.

Cause: An attempt to migrate a database with zero downtime failed because the specified schema to be included was not found.

Action: Retry the operation specifying a valid schema.

PRGZ-01268: unable to find schema to be excluded {0}

Cause: An attempt to migrate a database with zero downtime failed because the specified schema to be excluded was not found.

Action: Retry the operation specifying a valid schema.

PRGZ-01269: Database "{0}" does not contain any schemas that can be migrated.

Cause: An attempt to migrate a database was rejected because the specified database did not contain any schemas that were not Oracle maintained.

Action: None

PRGZ-01270: unsupported option create tablespace specified for Oracle Autonomous Serverless database {0}

Cause: The attempted operation was rejected because the specified database prohibits use of SQL command CREATE TABLESPACE.

Action: Refer to the Oracle documentation for the supported case and retry.

PRGZ-01274: failed to query the tablespace configuration for database "{0}"

Cause: An attempt to migrate a database with zero downtime failed because the operation to query the tablespace configuration for the specified database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01275: failed to create tablespaces for database "{0}"

Cause: An attempt to migrate a database with zero downtime failed because the operation to create tablespaces for the specified database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01278: invalid tablespace name specified for exclude {0}

Cause: An attempt to migrate a database with zero downtime rejected because the specified tablespaces name was invalid

Action: Specify a valid tablespace name for exclusion and then retry the operation.

PRGZ-01281: HTTP Connection error

Cause: An attempt to connect to the HTTP URL failed.

Action: Retry the operation with a valid HTTP URL.

PRGZ-01288: Oracle Data Pump file upload from Amazon RDS directory {0} to Amazon S3 bucket {1} failed with error {2}.

Cause: An attempt to migrate a database with zero downtime failed with the indicated error.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01290: Oracle Data Pump file upload from Amazon RDS directory {0} to Amazon S3 bucket {1} failed with error {2}.

Cause: An attempt to migrate a database with zero downtime failed because Oracle Data Pump dump files upload to Amazon S3 bucket failed.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01291: specified Amazon Relational Database Service instance directory {0} for Oracle Data Pump export does not exist

Cause: An attempt to migrate a database was rejected because the specified RDS directory for Oracle Data Pump export was invalid.

Action: Ensure that the specified RDS directory exists in the RDS instance, and then resubmit the job.

PRGZ-01292: Amazon S3 secret key was not specified for accesskey "{0}".

Cause: An attempt to migrate a database using Oracle Data Pump was rejected because an Amazon S3 secret key was not specified.

Action: Specify correct Amazon S3 secret key, and then retry the operation.

PRGZ-01295: unable to find tablespace {0} specified as automatic remap in target database {1}

Cause: An attempt to migrate a database with zero downtime was rejected because the specified tablespace name was not found in the specified target database.

Action: Specify a valid tablespace name as automatic remap target and then retry the operation.

PRGZ-01296: parameter BACKUP_PATH is not supported for migration method "{0}" and data transfer medium "{1}"

Cause: An attempt to migrate a database with zero downtime was rejected because the indicated parameter set in the response file is not supported for the specified migration method and data transfer medium.

Action: Refer to the product documentation for the supported parameters for each migration type and data transfer medium and retry.

PRGZ-01297: more than one database link "{0}" exists in target database {1}.

Cause: An attempt to migrate a database was rejected because more than one database link existed.

Action: Drop the additional database link. Oracle Zero Downtime Migration (ZDM) automatically creates a valid and usable database link if it does not exist.

PRGZ-01298: no valid authentication method found for transporting Oracle Data Pump dump files

Cause: An attempt to migrate a database was rejected because the target node for transfer of Oracle Data Pump dump files from the source database server was not found.

Action: Specify the required information, and then resubmit the job.

PRGZ-01299: failed to read OCI authorization details due to a JSON mapping error while getting secret for the autonomous database

Cause: An attempt to read authorization details failed due to a JSON mapping error.

Action: Ensure that the target authorization details are valid and then retry the operation.

PRGZ-01300: failed to read OCI authorization details due to a JSON mapping error while getting secret for the co-managed database

Cause: An attempt to read authorization details failed due to a JSON mapping error.

Action: Ensure that the source authorization details are valid and then retry the operation.

PRGZ-01301: failed to read OCI authorization details due to a JSON mapping error while getting secret for the Oracle GoldenGate

Cause: An attempt to read authorization details failed due to a JSON mapping error.

Action: Ensure that the golden gate authorization details are valid and then retry the operation.

PRGZ-01302: failed to retrieve the secret content due to a JSON mapping error for the autonomous database

Cause: An attempt to retrieve the specified content failed due to a JSON mapping error.

Action: Ensure that the administrator password details are correct and then retry the operation.

PRGZ-01303: failed to retrieve the secret content due to a JSON mapping error for the co-managed database

Cause: An attempt to retrieve the specified content failed due to a JSON mapping error.

Action: Ensure that the administrator password details are correct and then retry the operation.

PRGZ-01304: failed to retrieve the secret content due to a JSON mapping error for the Oracle GoldenGate

Cause: An attempt to retrieve the specified content failed due to a JSON mapping error.

Action: Ensure that the administrator password details are correct and then retry the operation.

PRGZ-01305: failed to update arguments for ZDM job due to a JSON mapping error

Cause: An attempt to update arguments for the zdm job due to a JSON mapping error.

Action: Ensure that the target authorization details are valid. and then retry the operation.

PRGZ-01306: -sourcedb or -sourcesid option missing for physical migration

Cause: An attempt to migrate a database was rejected because neither the -sourcedb nor -sourcesid option was specified.

Action: Specify the required information and resubmit the job.

PRGZ-01307: missing mandatory option -{0}

Cause: An option required by the specified command was missing.

Action: Issue 'zdmcli *command object* -help' to display option details for the command and ensure that all of the mandatory options are specified.

PRGZ-01308: more than one schema was specified for executing Data Pump in Table mode

Cause: An attempt to migrate a database with zero downtime was rejected because only a single schema can be specified when performing Data Pump in Table mode.

Action: Specify objects belonging to a single schema using the EXCLUDEOBJECTS or INCLUDEOBJECTS properties, and then retry the operation.

PRGZ-01320: failed to discover Oracle Database {0} objects

Cause: An attempt to migrate a database with zero downtime failed because the information about the specified Oracle Database could not be queried.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01321: object {0} of type {1} not found in schema {2} for inclusion

Cause: An attempt to migrate a database was rejected because the the specified Oracle Database schema had no object of specified type.

Action: Specify an object type that exists for inclusion and then resubmit the job.

PRGZ-01323: failed to verify Amazon RDS to Amazon S3 integration

Cause: An attempt to migrate a database with zero downtime was rejected because of a failure to verify Amazon RDS to Amazon S3 integration.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01326: failed to verify Amazon S3 to Oracle Autonomous Database integration

Cause: An attempt to migrate a database with zero downtime was rejected because of a failure to verify Amazon S3 to Oracle Autonomous Database integration.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01328: user schema {0} not found in target database {1} to migrate selected schema objects

Cause: An attempt to migrate a database was rejected because the the specified Oracle Database schema was not found in the specified database.

Action: Ensure the schema exists in the specified database and then resubmit the job.

PRGZ-01329: invalid Oracle maintained schema {0} in target database {1} chosen to migrate user objects

Cause: An attempt to migrate a database was rejected because the the specified Oracle Database schema was Oracle maintained.

Action: Ensure a valid user schema exists in the specified database and remap the source schema to identified user schema in target and then resubmit the job.

PRGZ-01333: host name was not specified

Cause: An attempt to migrate a database was rejected because the user did not specify the required host name.

Action: Specify the required information and resubmit the job.

PRGZ-01334: port for host "{0}" was not specified

Cause: An attempt to migrate a database was rejected because the user did not specify the required port number.

Action: Specify the required information and resubmit the job.

PRGZ-01335: database service name was not specified

Cause: An attempt to migrate a database was rejected because the user did not specify the required service name.

Action: Specify the required information and resubmit the job.

PRGZ-01339: Non-ignorable errors found in Oracle Data Pump job {0} log are\n{1}

Cause: The Oracle Data Pump operation completed successfully. The analysis of Data Pump log indicated errors. The accompanying messages provided detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01344: Oracle database parameter GLOBAL_NAMES is set to TRUE with data transfer medium 'DBLINK' for database "{0}".

Cause: An attempt to migrate a database with zero downtime using Oracle DataPump was rejected because the Oracle database parameter GLOBAL_NAMES was set to TRUE for data transfer medium DBLINK.

Action: Ensure the value of Oracle database parameter GLOBAL_NAMES is set to false for Data transfer medium DBLINK and then retry the operation.

PRGZ-01345: schema {0} was filtered and batch of schemas specified to be processed

Cause: An attempt to migrate a database was rejected because the schema was filtered and batch of schemas were specified for batch processing.

Action: Ensure that either the schema is filtered or a batch of schemas are specified, but not both. Resubmit the job.

PRGZ-01348: parallel export and import of schemas missing batch size

Cause: An attempt to migrate a database was rejected because the batch count was not specified.

Action: Resolve the indicated issue, and then retry the operation.

PRGZ-01349: parallel export and import of schemas not allowed

Cause: An attempt to migrate a database was rejected because the processing of schemas in parallel chosen for job mode other than SCHEMA.

Action: Resolve the indicated issue, and then retry the operation.

PRGZ-01352: query to retrieve the latest SCN for database "{0}" failed

Cause: An attempt to migrate a database with zero downtime failed because the query to retrieve the latest sequence change number (SCN) failed for the specified database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-01353: missing Oracle Data Pump dump transfer medium to migrate metadata first

Cause: The attempted operation was rejected because no valid data transfer medium was chosen to transfer Oracle Data Pump dump.

Action: Refer to the product documentation for the necessary parameters to migrate the metadata first and retry.

PRGZ-01357: Operation interrupted.

Cause: An attempt to migrate database failed because the operation was interrupted.

Action: Reissue the migrate database command.

PRGZ-01358: unsupported Data Pump job mode {0} specified for Oracle Cloud type "{1}"

Cause: The attempted operation was rejected because the specified job mode was not supported for the indicated Oracle Cloud type.

Action: Refer to the product documentation for the supported case and retry.

PRGZ-01359: Source PDB\$SEED is in restricted mode.

Cause: An attempt to migrate a database with zero downtime was rejected because the source database PDB\$SEED was in restricted mode.

Action: Ensure that the PDB\$SEED in the source database is not in restricted mode and retry the operation.

PRGZ-01360: Target PDB\$SEED is in restricted mode.

Cause: An attempt to migrate a database with zero downtime using a non-multitenant container database to pluggable database conversion was rejected because target database PDB\$SEED was in restricted mode.

Action: Ensure that the PDB\$SEED in the target database is not in restricted mode and retry the operation.

PRGZ-01361: Selected target for non-CDB to PDB conversion is not a container database.

Cause: An attempt to migrate a database with zero downtime using a non-multitenant container database (non-CDB) to pluggable database (PDB) conversion was rejected because the selected target is not a container database.

Action: Select a valid target database for the migration and retry the operation.

PRGZ-01362: Selected source for non-CDB to PDB conversion is a container database.

Cause: An attempt to migrate a database with zero downtime using a non-multitenant container database (non-CDB) to pluggable database (PDB) conversion was rejected because the selected source is a container database.

Action: Select a valid non-CDB database for the migration or ensure that non cdb to pdb conversion is disabled by setting the responsefile parameter NONCDBTOPDB_CONVERSION to FALSE and then retry the operation.

PRGZ-01363: the response file is missing both OCID and service name of the target database

Cause: An attempt to migrate a database was rejected because neither Oracle Cloud identifier (OCID) nor the service name of the target database was specified.

Action: Specify the required information and resubmit the job.

PRGZ-01365: missing OCI user details when DATAPUMPSETTINGS_CREATEAUTHTOKEN is set to false

Cause: An attempt to migrate a database with zero downtime was rejected because the user details for oci authentication was not specified, which is mandatory when DATAPUMPSETTINGS_CREATEAUTHTOKEN is set to false.

Action: Retry the operation, specifying the oci user details or remove the DATAPUMPSETTINGS_CREATEAUTHTOKEN property from the response file or set it to true.

PRGZ-01366: Job "{0}" is of type "{1}".

Cause: An attempt to modify the specified job was rejected because it was not a MIGRATE job.

Action: None

PRGZ-01367: Migration method of job "{0}" is "{1}".

Cause: An attempt to modify the specified job was rejected because the migration method was not ONLINE_LOGICAL.

Action: None

PRGZ-01369: failed to read file "{0}"

Cause: An attempt to migrate the specified database with zero downtime failed because the attempt to read the indicated file failed.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGZ-01370: Database "{0}" contains tables with Oracle GoldenGate capture process support level ID KEY: "{1}"

Cause: An attempt to migrate a database with zero downtime using Oracle GoldenGate was rejected because the specified database contained

Action: Set response file parameter GOLDENGATESETTINGS_USEFLASHBACKQUERY to TRUE or exclude the indicated tables, and then retry the operation.

PRGZ-01375: No pluggable database is configured for Oracle database "{0}"

Cause: An attempt to migrate the specified database with zero downtime was rejected because the specified database did not have a pluggable database configured.

Action: Ensure that the specified database has a pluggable database configured and retry the migration.

PRGZ-01376: Oracle Database Vault is enabled on source database and disabled on target database.

Cause: An attempt to migrate the specified database with zero downtime was rejected because Oracle Database Vault was enabled on the source database and disabled on the target database. For NONCDBTOPDB_CONVERSION enabled migration source and target Oracle Database Vault should be consistent.

Action: Ensure Oracle Database Vault status is consistent on the source and the target database and retry the operation.

PRGZ-03100: SQL statement to disable block change tracking for database "{0}" failed.

Cause: An attempt to migrate a database with zero downtime failed because the statement to disable block change tracking failed for the specified database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03102: keystore open failed for database "{0}"\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the operation to open the keystore failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03103: keystore close failed for database "{0}"\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the operation to close the keystore failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03104: failed to get Oracle base for home "{0}"

Cause: An attempt to migrate a database with zero downtime failed because the operation to retrieve the Oracle base for the specified home failed.

Action: Ensure that the specified home exists and is a valid Oracle home.

PRGZ-03105: restoration of data files failed\n{0}

Cause: An attempt to migrate a database with zero downtime failed because the database files could not be restored. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGZ-03106: database files recovery failed\n{0}

Cause: An attempt to migrate a database with zero downtime failed because the database files could not be recovered. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGZ-03107: restoration of database control files failed\n{0}

Cause: An attempt to migrate a database with zero downtime failed because the database control files could not be restored. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGZ-03108: Oracle Transparent Data Encryption (TDE) keystore is not set up for database "{0}".

Cause: An attempt to migrate a database with zero downtime was rejected because the Oracle Transparent Data Encryption (TDE) keystore was not set up for the specified database.

Action: Set up Oracle Transparent Data Encryption (TDE) keystore and then retry the operation. Refer to Oracle Database Advanced Security Guide for more details regarding keystore administration.

PRGZ-03110: failed to open Oracle Transparent Data Encryption (TDE) keystore directory location "{0}" for database "{1}"\n{2}

Cause: An attempt to migrate a database with zero downtime failed because the indicated Oracle Transparent Data Encryption (TDE) keystore directory could not be opened. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03111: Oracle Transparent Data Encryption (TDE) keystore password not specified for database "{0}".

Cause: An attempt to migrate a database with zero downtime failed because a password-based Oracle Transparent Data Encryption (TDE) keystore was detected but the keystore password was not specified.

Action: Specify the Oracle Transparent Data Encryption (TDE) keystore password, and then retry the operation.

PRGZ-03112: Oracle Transparent Data Encryption (TDE) keystore master key is not configured for database "{0}".

Cause: An attempt to migrate a database with zero downtime failed because the Oracle Transparent Data Encryption (TDE) keystore master key was not detected.

Action: Configure the Oracle Transparent Data Encryption (TDE) keystore master key, and then retry the operation. Refer to the Oracle documentation for more details regarding keystore administration.

PRGZ-03113: Oracle Transparent Data Encryption (TDE) keystore is of type LOCAL_AUTOLOGIN for database "{0}".

Cause: An attempt to migrate a database with zero downtime failed because Oracle Transparent Data Encryption (TDE) keystore of type LOCAL_AUTOLOGIN was detected.

Action: Refer to Oracle Database Advanced Security Guide for more details regarding keystore administration.

PRGZ-03114: failed to duplicate database "{0}" to physical standby database

Cause: An attempt to migrate a database with zero downtime failed because the execution of the statement to duplicate the database from backup as PHYSICAL STANDBY failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03115: failed to remove database "{0}"\n{1}

Cause: An attempt to remove the database that was already configured failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03116: failed to start instance for database "{0}"\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the execution of the statement to start database instance from SPFILE failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03117: failed to execute SQL statement.\n{0}

Cause: An attempt to migrate a database with zero downtime failed because the execution of the SQL statement failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03120: failed to clone target database '{0}' from ZDLRA '{1}'\n{2}

Cause: An attempt to migrate a database with zero downtime failed because the execution of Recovery Manager (RMAN) procedure to duplicate database from Zero Data Loss Recovery Appliance (ZDLRA) failed. Accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03122: failed to add instance for database "{0}"\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the execution of "srvctl add instance" failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03124: failed to add server pool for database "{0}"\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the execution of "srvctl add serverpool" as database owner failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03125: failed to obtain configuration of resource "{0}"\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the resource configuration could not be obtained. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03126: Target database unique name specified is identical to the source database unique name, and they must be different.

Cause: An attempt to migrate a database with zero downtime was rejected because the target database unique name was the same as the source database unique name, and the target must be given a different database unique name.

Action: Specify a different database unique name for the target, and then retry the operation.

PRGZ-03127: Target database unique name was not specified.

Cause: An attempt to migrate a database with zero downtime was rejected because the target database unique name was not specified.

Action: Retry the operation, specifying a target database unique name.

PRGZ-03128: failed to change owner to "{0}" for file "{1}"\n{2}

Cause: An attempt to migrate a database with zero downtime failed because the ownership of the indicated file could not be changed as indicated.

Action: Ensure that the directory of the indicated file has execute permission. Ensure that the ownership of the file can be modified, and then retry the operation.

PRGZ-03129: failed to copy file "{0}" to "{1}"\n{2}

Cause: An attempt to copy the indicated file to the indicated node failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGZ-03130: failed to establish connection to target listener from nodes {0}\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the source node couldn't reach the target node using 'tnsping'.

Action: Ensure that there is connectivity with the target node from the source node using 'tnsping' and then retry the operation.

PRGZ-03131: failed to establish connection to target listener from nodes {0} with the specified SSH tunnel port\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the source node couldn't reach the target node using 'tnsping' with the specified target SSH tunnel port.

Action: Ensure that either the provided target SSH tunnel port is correct or that the SSH tunnel was properly configured and then retry the operation.

PRGZ-03132: failed to start database "{0} ".\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the execution of the statement to start database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03133: failed to query the snapshot control file location for database "{0} ".\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the operation to query the indicated parameter from the indicated view for the specified database failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGZ-03134: failed to validate path "{0} ".\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the specified path is incorrect or lacks permission to write.

Action: Ensure that the specified path is valid and then retry the operation.

PRGZ-03135: SQL statement to save pdb state for database "{0} " failed\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the query to save pdb state failed for the specified database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03136: SQL statement to open pdb "{1} " with "{2} " mode for database "{0} " failed\n{3}

Cause: An attempt to migrate a database with zero downtime failed because the query to open indicated pluggable databases failed for the specified database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03137: RMAN crosscheck for database "{0} " failed\n{3}

Cause: An attempt to migrate a database with zero downtime failed because RMAN crosscheck failed for the specified database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03149: Query to retrieve the latest backup SCN for database "{0}" failed\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the query to retrieve the latest sequence change number (SCN) in the backup failed for the specified database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03151: restoration of database files failed\n{0}

Cause: An attempt to migrate a database with zero downtime failed because the database files could not be restored. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGZ-03155: Failed to create database initialization file {0}\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the indicated database initialization file could not be created. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGZ-03156: Failed to open database initialization file {0}\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the indicated database initialization file could not be opened. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGZ-03163: Restoration and encryption of data files failed\n{0}

Cause: An attempt to migrate a database with zero downtime failed because the database files could not be restored and encrypted. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGZ-03166: Renaming of TEMP files and online redo log files failed\n{0}

Cause: An attempt to migrate a database with zero downtime failed because the TEMP files and online redo log files could not be renamed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGZ-03169: Database open with RESETLOGS for database {0} failed\n{1}

Cause: An attempt to migrate a database with zero downtime failed because an error was encountered during opening of the database with RESETLOGS. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGZ-03175: failed to shut down database {0}\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the indicated database could not be shut down. The accompanying messages provide detailed failure information.

Action: Ensure that the database is able to be shut down and retry the operation.

PRGZ-03176: a database connection cannot be established from target node {0} to source node {1}

Cause: An attempt to migrate a database with zero downtime failed because the indicated target cannot establish a connection to the source node and response file parameter SKIP_FALLBACK was set to FALSE.

Action: Ensure that there is connectivity from the target node to the source node using 'tnsping' and then retry the operation.

PRGZ-03177: Warning: no connection from target node to database at source node, redo logs will not be shipped to database at source node

Cause: The SKIP_FALLBACK option in the response file was set to TRUE.

Action: If fallback is desired, ensure that there is connectivity from the target node to the source node using 'tnsping' and set the SKIP_FALLBACK option to FALSE in the response file and retry the operation.

PRGZ-03181: Internal error: {0}

Cause: An internal error occurred. The included value is an internal identifier.

Action: Contact Oracle Support Services.

PRGZ-03182: failed to query the RMAN configuration for database "{0}"\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the operation to query the RMAN configuration for the specified database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03183: failed to move the file "{0}"\n{1}

Cause: An attempt to move the specified file failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03184: failed to remove the file "{0}"\n{1}

Cause: An attempt to remove the specified file failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03185: Transparent Data Encryption (TDE) keystore found in status "{2}" for pluggable database "{1}" in database "{0}". Keystore is not open.

Cause: An attempt to migrate a database with zero downtime failed because the Transparent Data Encryption (TDE) keystore was not open in the indicated pluggable database.

Action: Ensure that the keystore wallet is configured and is open in the indicated pluggable database. Refer to the Oracle documentation for more details regarding keystore administration.

PRGZ-03186: Transparent Data Encryption (TDE) keystore master key is not configured for pluggable database "{1}" in database "{0}".

Cause: An attempt to migrate a database with zero downtime failed because the Transparent Data Encryption (TDE) keystore master key was not detected in the indicated pluggable database.

Action: Configure the Transparent Data Encryption (TDE) keystore master key, and then retry the operation. Refer to the Oracle documentation for more details regarding keystore administration.

PRGZ-03187: Transparent Data Encryption (TDE) keystore found in status "{1}" for database "{0}". Keystore is not open.

Cause: An attempt to migrate a database with zero downtime failed because the Transparent Data Encryption (TDE) keystore was not open.

Action: Ensure that the keystore wallet is open. Refer to the Oracle documentation for more details regarding keystore administration.

PRGZ-03189: failed to connect to database "{0}" as sys user with the specified password\n{1}

Cause: An attempt to migrate a database with zero downtime failed, because the connection to the database with the specified

Action: Verify the password specified and then retry the operation.

PRGZ-03200: The name of a multitenant container database (CDB) was not specified.

Cause: An attempt to migrate a database with zero downtime was rejected because the name of a multitenant container database (CDB) was not specified.

Action: Retry the operation, specifying a CDB name.

PRGZ-03201: The specified name "{0}" of a multitenant container database (CDB) is identical to the target database name.

Cause: An attempt to migrate a database with zero downtime was rejected because the indicated CDB name was the same as the target database name, and the CDB name must be given a different database name.

Action: Specify a different CDB name, and then retry the operation.

PRGZ-03202: failed to modify db_unique_name to "{0}"\n{1}

Cause: An attempt to modify the database that was already configured failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03203: failed to remove the standby parameters in primary "{0}"\n{1}

Cause: An attempt to modify the database standby parameters failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03206: failed to start services for database "{0}"\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the database services failed to start. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03212: failed to drop database {0}\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the database could not be dropped.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03213: failed to change mode to "{0}" for file "{1}"\n{2}

Cause: An attempt to migrate a database with zero downtime failed because the permissions of the indicated file could not be changed as indicated.

Action: Ensure that the directory of the indicated file has execute permission. Ensure that the ownership of the file can be modified, and then retry the operation.

PRGZ-03214: failed to restore the RMAN configuration for database "{0}"\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the operation to restore the RMAN configuration for the specified database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03215: failed to start database "{0}" instance on node "{1}"\n{2}

Cause: An attempt to migrate a database with zero downtime failed because the execution of the statement to start database instance on the indicated node failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03216: failed to stop database "{0}" instance on node "{1}"\n{2}

Cause: An attempt to migrate a database with zero downtime failed because the execution of the statement to stop database instance on the indicated node failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03217: Target database {0} conversion to cluster mode failed.

Cause: An attempt to migrate a database with zero downtime failed because the conversion of the indicated database to a cluster database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03219: failed to list the file "{0}"\n{1}

Cause: An attempt to list the specified file failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03220: failed to get the file "{0}"\n{1}

Cause: An attempt to get the specified file failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03221: failed to get list of Oracle Data Pump dump files for {0}

Cause: An attempt to get the specified file failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03222: failed to import the Oracle Data Pump dump files {0}\n{1}

Cause: An attempt to import the specified file failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03225: schema "{0}" not found in database {1}

Cause: An attempt to get the specified schema failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03226: failed to get schemas for database "{0}"

Cause: An attempt to get the schemas for the specified database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03227: failed to set up the credential wallet for database "{0}"\n{1}

Cause: An attempt to set up credential wallet for the specified database. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03230: failed to export the Oracle Data Pump dump files for schema {0}\n{1}

Cause: An attempt to export the indicated file failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03231: Oracle OCI CLI failed to execute\n{0}

Cause: failed to execute Oracle Cloud Infrastructure command line interface. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03232: Oracle OCI CLI failed to list\n{0}

Cause: Failed to execute Oracle Cloud Infrastructure command line interface to list object or bucket. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03233: Oracle OCI CLI failed to get object\n{0}

Cause: Failed to execute Oracle Cloud Infrastructure command line interface to download object. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03234: Oracle OCI CLI failed to put object\n{0}

Cause: Failed to execute Oracle Cloud Infrastructure command line interface to store object. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03237: failed to find the value for parameter "{0}"

Cause: An attempt to retrieve the specified parameter failed.

Action: If the reported parameter is a response file parameter, then specify a value as expected for the parameter and then retry the operation. If the reported parameter is not a response file parameter, then an internal error occurred, contact Oracle Support Services.

PRGZ-03241: failed to access Oracle Cloud Identity Information"{0}"\n{1}

Cause: An error occurred while trying to access the specified Oracle Cloud Identity Information. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03242: failed to retrieve Oracle Cloud Identity Information"{0}"\n{1}

Cause: An error occurred while trying to retrieve the specified Oracle Cloud Identity Information. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03244: Backup of archive logs for database "{0}" failed.\n{1}

Cause: An attempt to backup the archive logs for the specified database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03247: Media recovery SCN {0} does not include backup start SCN {1}.

Cause: An attempt to backup the specified database failed because the latest available media recovery did not include the indicated SCN recorded at the startup of the backup. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve any indicated problems, and then retry the backup operation.

PRGZ-03254: backup of data and control files for database "{0}" failed\n{1}

Cause: An attempt to backup the data files for the specified database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03258: found data files not recovered until the recovery SCN: {0}.

Cause: An attempt to migrate a database with zero downtime failed because the indicated data files were not recovered until the latest recovery SCN.

Action: The indicated data files either need to be recovered manually or dropped before continuing.

PRGZ-03259: error forcing a checkpoint for database {0}\n {1}

Cause: An attempt to migrate a database with zero downtime failed because the command to force explicit checkpoint failed.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03263: incremental restore of data files failed\n{0}

Cause: An attempt to migrate a database with zero downtime failed because the incremental restore of database failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGZ-03267: Backup of new data files added during backup for database "{0}" failed.\n{1}

Cause: An attempt to backup the new data files for the specified database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03269: cannot locate Oracle Transparent Data Encryption (TDE) keystore location {1} for database "{0}"

Cause: An attempt to migrate a database with zero downtime was rejected because the Oracle Transparent Data Encryption (TDE) keystore could not be located for the specified database.

Action: Set up Oracle Transparent Data Encryption (TDE) keystore and then retry the operation. Refer to Oracle Database Advanced Security Guide for more details regarding keystore administration.

PRGZ-03273: failed to create network link {0}

Cause: An attempt to migrate a database with zero downtime failed because the execution of the SQL statement to create network link failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03274: failed to move file {0} to Oracle Cloud secure storage

Cause: An attempt to migrate a database with zero downtime failed because the execution of the SQL statement move the Oracle Data pump logs from datapump directory to Oracle Cloud secure storage. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03275: failed to drop OSS access credential {0}

Cause: An attempt to migrate a database with zero downtime failed because the SQL statement to drop Oracle Cloud secure storage access failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03276: failed to create Oracle Cloud secure storage access credential {0}

Cause: An attempt to migrate a database with zero downtime failed because the SQL statement to setup Oracle Cloud secure storage access failed. The accompanying messages provided detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03277: failed to create a schema {0}

Cause: An attempt to migrate a database with zero downtime failed because the execution of the SQL statement to create schema failed. The accompanying messages provided detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03278: failed to create Oracle Data Pump Directory {0}

Cause: An attempt to migrate a database with zero downtime failed because the execution of the SQL statement failed. The accompanying messages provided detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03299: failed to grant DV_PATCH_ADMIN privilege to SYS in database {0}\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the execution of the SQL statement to grant DV_PATCH_ADMIN privileges failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03300: failed to revoke DV_PATCH_ADMIN privilege for SYS in database {0}\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the execution of the SQL statement to revoke DV_PATCH_ADMIN privileges failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03301: failed to check Oracle Database Vault for database {0}\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the execution of the SQL statement to check if Oracle Database Vault is configured failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03302: cannot locate Transparent Data Encryption (TDE) keystore location for database "{0}"

Cause: An attempt to migrate a database with zero downtime was rejected because the Transparent Data Encryption (TDE) keystore could not be located for the specified database.

Action: Ensure that Transparent Data Encryption (TDE) keystore is set up and retry the operation. Refer to Oracle Database Advanced Security Guide for more details regarding keystore administration.

PRGZ-03303: cannot locate Transparent Data Encryption (TDE) keystore location for database "{0}"

Cause: An attempt to migrate a database with zero downtime was rejected because the Transparent Data Encryption (TDE) keystore could not be located for the specified database.

Action: Ensure that Transparent Data Encryption (TDE) keystore is set up and retry the operation. Refer to Oracle Database Advanced Security Guide for more details regarding keystore administration.

PRGZ-03304: failed to access Oracle Cloud secure storage "{0}"\n{1}

Cause: An error occurred while trying to access the specified Oracle Cloud secure storage link. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03305: Oracle Cloud OSS pre-authenticated URL not defined

Cause: Oracle Cloud secure storage link was not defined.

Action: Review the Oracle documentation, specify the URL, and then retry the operation.

PRGZ-03311: Database "{0}" is not a multitenant container database.

Cause: An attempt to migrate a database with zero downtime was rejected because the specified database was not a multitenant container database.

Action: Ensure that the specified database is a multitenant container database.

PRGZ-03312: Pluggable database "{1}" not found in database "{0}".

Cause: An attempt to migrate a database with zero downtime was rejected because the indicated pluggable database was not found in the specified multitenant container database.

Action: Ensure that the indicated pluggable database is part of the specified multitenant container database, and then retry the operation.

PRGZ-03313: DBNEWID utility failed for database "{0}". \n{1}

Cause: An attempt to migrate a database with zero downtime was rejected because DBNEWID execution failed.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03325: error killing session for database {0}\n{1}

Cause: An attempt to migrate a database with zero downtime was rejected because session could not be aborted.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03327: Password file does not exist or is not accessible for user {0}, database {1}.

Cause: An attempt to migrate a database with zero downtime was rejected because the indicated database password file required for cloning the database password file was not configured for the indicated database or was not accessible.

Action: Review and ensure Oracle Database password file exists and is accessible and then retry the operation. Following are probable error conditions to be resolved: 1. Oracle Database password file is not configured 2. If password file exists in ASM and non sudo privileged user is supplied for source node access and source has role separation and database user is not allowed to copy password file out of ASM, then either: a. Specify a sudo privileged user for migration, or b. Copy wallet from ASM to database user accessible path and specify it in ZDM_SRC_DB_PASSWORDFILE_LOC parameter. 3. Sudo privileged user supplied, but ASMCMD failed to copy password file as grid user.

PRGZ-03362: Invalid ACFS Path: "{0}" path "{1}" provided in the response file contains invalid characters

Cause: Provided ACFS path contains invalid characters.

Action: Provide a valid ACFS path.

PRGZ-03363: Failed to query column {1} from the view {2} for data base "{0}".

Cause: An attempt to migrate a database with zero downtime failed because the operation to query the specified database details failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03364: failed to remove service "{0}"\n{1}

Cause: An attempt to remove the database service failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03365: Target database storage path "{0}" of size "{1}" is less than the size required to migrate source database of size "{2}"

Cause: The target storage path size was too small compared to data, redo and recovery size of the source database.

Action: Allocate the target storage path with a size equal to or greater than the size of the source database and retry the operation.

PRGZ-03366: Warning: Target database storage path "{0}" of size "{1}" is less than the size required to migrate source database of size "{2}"

Cause: The target storage path size was too small compared to data, redo and recovery size of the source database.

Action: Allocate the target storage path with a size equal to or greater than the size of the source database and retry the operation.

PRGZ-03369: Backup of archive logs and control files for database "{0}" failed.\n{1}

Cause: An attempt to backup the archive logs and control files for the specified database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03371: Backup of data files for database "{0}" failed\n{1}

Cause: An attempt to backup the data files for the specified database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03373: failed to remove directory "{0}"\n{1}

Cause: An attempt to remove the indicated directory failed.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03376: failed to switch data files to copy for database {0}\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the execution of the RMAN data file switch to copy failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03379: failed to run RMAN catalog for database {0}\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the execution of the RMAN catalog failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03383: failed to remove Data Guard configuration for database {1} from database {0}\n{2}

Cause: An attempt to migrate a database with zero downtime failed because the execution of the SQL statement to remove Data Guard configuration failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03384: failed to drop standby log file group from database {0}\n{1}

Cause: An attempt to migrate a database with zero downtime failed because the execution of the SQL statement to remove standby log file group failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03387: initialization parameter LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST is set

Cause: An attempt to migrate a database with zero downtime was rejected because the indicated database initialization parameter was found to be set.

Action: Reset and reconfigure the indicated parameter and then retry the operation.

PRGZ-03390: invalid Transparent Data Encryption (TDE) keystore password specified for database "{0}".

Cause: An attempt to migrate a database with zero downtime failed because a password-based Transparent Data Encryption (TDE) keystore was detected but the keystore password specified was invalid.

Action: Specify a valid Transparent Data Encryption (TDE) keystore password and then retry the operation.

PRGZ-03391: failed to access database {0} backup from ZDLRA '{1}'

Cause: An attempt to migrate a database with zero downtime failed because the execution of Oracle Recovery Manager (RMAN) procedure to access backup from Zero Data Loss Recovery Appliance (ZDLRA) failed. Accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03392: ZDLRA access user information not supplied

Cause: An attempt to migrate a database with zero downtime was rejected because Zero Data Loss Recovery Appliance (ZDLRA) user detail was not specified.

Action: Specify the required information and resubmit the job.

PRGZ-03393: ZDLRA access password not supplied

Cause: An attempt to migrate a database with zero downtime was rejected because Zero Data Loss Recovery Appliance (ZDLRA) user password detail was not specified.

Action: Specify the required information and resubmit the job.

PRGZ-03397: phase: {1} is invalid for the job: {0}

Cause: An attempt to fetch the phase details failed because the specified phase was not valid for the given job.

Action: Specify a valid phase as listed in query job command and retry the operation with a phase that exists for the given job.

PRGZ-03402: failed to authenticate object store credentials. Invalid username or password

Cause: An attempt to authenticate input credentials failed.

Action: Verify the credentials and then retry the operation.

PRGZ-03420: failed to modify keystore entry "{0}" in wallet "{1}."\n"{2}"

Cause: An attempt to migrate a database with zero downtime failed because indicated keystore entry could not be modified.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03421: failed to merge keystore "{0}" into "{1}" for database "{2}"

Cause: An attempt to migrate a database with zero downtime failed because the operation to merge the indicated keystores failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03422: failed to create keystore "{0}" for database "{1}"\n{2}

Cause: An attempt to migrate a database with zero downtime failed because the operation to create the indicated keystore failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03502: failed to create Self Sign On (cwallet.sso) certificate for keystore location {0}

Cause: An attempt to migrate a database with zero downtime failed because a Self Sign On (cwallet.sso) certificate for the Transparent Data Encryption (TDE) keystore could not be created.

Action: Verify the indicated keystore location and retry the operation.

PRGZ-03503: WARNING: concurrent backup of database {0} to DISK is in progress, completed {1}%

Cause: An attempt to migrate a database with zero downtime failed because the execution of Oracle Recovery Manager (RMAN) procedure to backup is delayed due to ongoing concurrent backup to DISK.

Action: Verify if the ongoing concurrent database backup operation is required.

PRGZ-03504: parameter "{0}" with value "{1}" cannot be combined with parameter "{2}" with value "{3}"

Cause: The indicated parameters set with incorrect value in the response file.

Action: Refer to the product documentation, correct the values and retry.

PRGZ-03508: WARNING: apply lag metrics not updated to standby {0}

Cause: An attempt to migrate a database with zero downtime failed because the execution of Oracle Managed Recovery Process metrics were not updated at the standby database.

Action: Ensure that the standby database is receiving data from the primary database as expected.

PRGZ-03510: Job ID {0} is not in ABORTED state.

Cause: Delete job operation failed for the specified job because it was not in the ABORTED state.

Action: Abort the job and retry the operation.

PRGZ-03511: Database "{0}" is not primary.

Cause: An attempt to migrate a database with zero downtime was rejected because the database role is not primary.

Action: Ensure database role is configured as primary and then retry the operation.

PRGZ-03515: Unsupported target platform detected

Cause: An attempt to migrate a database with zero downtime was rejected because the target platform was not a Oracle Cloud or Oracle Exadata system.

Action: Ensure that the Target platform is a supported platform and retry.

PRGZ-03525: rerun requested for a logical database migration

Cause: An attempt to resume a job was rejected because logical migration does not support phase rerun.

Action: Remove the phase rerun request from the 'resume job' command and retry.

PRGZ-03526: rerun requested for current phase {0} which cannot be rerun

Cause: An attempt to resume a job was rejected because the job in the indicated phase does not allow phase rerun.

Action: Either remove the phase rerun request from the 'resume job' command or abort the current job and submit a new job.

PRGZ-03536: tablespace encryption keys found missing from the Transparent Data Encryption (TDE) keystore

Cause: An attempt to migrate a database with zero downtime failed because the required encryption keys were not found in the Transparent Data Encryption (TDE) keystore.

Action: Ensure that the correct Transparent Data Encryption (TDE) keystore is available and accessible from all database instances and retry.

PRGZ-03539: ExaCS Database as a Service (DBaaS) wallet Transparent Data Encryption (TDE) keystore password did not match database TDE keystore password

Cause: An attempt to migrate a database with zero downtime failed because the Transparent Data Encryption (TDE) keystore password in ExaCS Database as a Service (DBaaS) wallet did not match the database TDE keystore password.

Action: Ensure that the correct Transparent Data Encryption (TDE) keystore password is available in the ExaCS Database as a Service (DBaaS) wallet and retry.

PRGZ-03540: failed to import encryption keys from {0} to target database{n{1}}

Cause: An attempt to import the encryption keys from source non container database to target container database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03541: failed to create PFILE "{0}" from memory for database "{1}"

Cause: An attempt to migrate the specified database with zero downtime failed because the operation to create the indicated PFILE from the memory failed.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGZ-03544: database {0} with version {1} does not support restore from service

Cause: An attempt to migrate the specified database with zero downtime was rejected because the indicated database version did not support restore from service.

Action: Either upgrade the database to 12.1 or higher or choose a different migration method, and then retry the operation.

**PRGZ-03546: failed to establish SQL*Net connection to "{0}" from node "{1}"
n{2}**

Cause: An attempt to migrate the specified database with zero downtime failed because the SQL*Net connectivity could not be confirmed

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGZ-03549: Source NLS character set {0} is different from target NLS character set {1}.

Cause: An attempt to migrate a database with zero downtime was rejected because source and target NLS character set were different.

Action: Ensure that source and target NLS character set are the same.

PRGZ-03550: Source NLS Nchar character set {0} is different from target NLS Nchar character set {1}.

Cause: An attempt to migrate a database with zero downtime was rejected because source and target NLS Nchar character set were different.

Action: Ensure that source and target NLS Nchar character set are the same.

PRGZ-03551: Source endian format {0} is different from target endian format {1}.

Cause: An attempt to migrate a database with zero downtime was rejected because source and target endian format were different.

Action: Ensure that source and target endian format are the same.

PRGZ-03555: backup is available but not a valid backup for database {0} with tag {1}.

Cause: An attempt to migrate a database with zero downtime was rejected because backup with provided existing tag is not valid for specified database.

Action: Ensure that source database backup with specified tag is valid.

PRGZ-03556: backup is not available for database {0} with tag {1}.

Cause: An attempt to migrate a database with zero downtime was rejected because backup with provided existing tag is not available for specified database.

Action: Ensure that source database backup with specified tag is available.

PRGZ-03557: An error occurred in fetching existing backup for database {0} of tag {1}.

Cause: An attempt to migrate a database with zero downtime failed because the operation to query the indicated field from view v\$BACKUP_FILES for the specified database failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03558: ZDM_BACKUP_TAG value is not specified for a migration using an existing backup.

Cause: An attempt to migrate a database with zero downtime was rejected because ZDM_BACKUP_TAG value was not specified in the response file. ZDM_BACKUP_TAG value is mandatory when ZDM_USE_EXISTING_BACKUP value is TRUE.

Action: Ensure that ZDM_BACKUP_TAG value is specified in the response file.

PRGZ-03560: failed to create SPFILE "{0}" from memory for database "{1}"\n{2}

Cause: An attempt to migrate the specified database with zero downtime failed because the operation to create the indicated SPFILE from the memory failed.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGZ-03561: failed to create PFILE "{0}" from the SPFILE "{1}" for database "{2}"\n{3}

Cause: An attempt to migrate the specified database with zero downtime failed because the operation to create the indicated PFILE from the indicated SPFILE failed.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGZ-03578: Database duplication failed. \n{0}

Cause: An attempt to migrate a database with zero downtime failed because the database duplication failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGZ-03580: Duplicate database operation cannot be resumed because database {0} is not mounted.

Cause: An attempt to migrate a database with zero downtime failed because the resume from a prior duplicate database invocation failed as the database was not in MOUNT mode.

Action: Examine the accompanying messages, delete partially restored control and data files either manually, or by resuming the job with '-rerun RESTORE'.

PRGZ-03584: failed to connect to Oracle Cloud object storage bucket {2} from node {1}\n{0}.

Cause: An attempt to migrate a database with zero downtime was rejected because backup restore setup validation failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03588: failed to lookup specified service name "{1}" in the database "{0}" root container

Cause: An attempt to migrate a database with zero downtime failed because the service name specified to be used for direct migration could not be verified. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03590: failed to clear log file group {1} from database {0}\n{2}

Cause: An attempt to migrate a database with zero downtime failed because the execution of the SQL statement to clear log file group failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGZ-03591: missing user information to access the backup medium

Cause: An attempt to migrate a database with zero downtime was rejected because the backup user was not specified, which was mandatory for physical migration and OSS or ZDLRA transfer medium.

Action: Retry the operation, specifying the backup user via the -backupuser option.

PRGZ-03592: Cloud Premigration Advisor Tool (CPAT) execution failed. \n{0}

Cause: An attempt to migrate a database with zero downtime failed because execution of CPAT failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the indicated issues and then retry the operation.

PRGZ-03593: Cloud Premigration Advisor Tool (CPAT) execution found blockers. \n{0}

Cause: An attempt to migrate a database with zero downtime failed because execution of CPAT found blockers. The accompanying messages provide detailed information.

Action: Review the accompanying messages, resolve the indicated blocker issues and then retry the operation.

PRGZ-03595: failed to fetch timezone version for database "{0}"

Cause: An attempt to fetch the timezone version of specified database failed.

Action: Ensure database is up and running.

PRGZ-03604: Oracle Data Guard Broker configuration on "{0}" failed. ln{1}

Cause: An attempt to migrate a database with zero downtime failed because Oracle Data Guard Broker configuration failed. The accompanying messages provide detailed information.

Action: Review the accompanying messages, resolve the indicated blocker issues and then retry the operation.

PRGZ-03605: Oracle Data Guard Broker switchover to database "{1}" on database "{0}" failed. ln{1}

Cause: An attempt to migrate a database with zero downtime failed because Oracle Data Guard Broker switchover failed. The accompanying messages provide detailed information.

Action: Review the accompanying messages, resolve the indicated blocker issues and then retry the operation.

PRGZ-03609: failed to establish SQL*Net connection to standby database "{0}" from node "{1}" ln{2}

Cause: An attempt to migrate the specified database with zero downtime failed because the SQL*Net connectivity could not be confirmed.

Action: Examine the accompanying messages, resolve the indicated issues, and then retry the operation.

PRGZ-03610: failed to determine standby database details for database "{0}"

Cause: An attempt to migrate the specified database with zero downtime failed because the SQL*Net connectivity details for standby database could not be determined.

Action: Ensure that the standby connection details are provided.

PRGZ-03612: DBID "{0}" of the standby database does not match DBID of the source database "{1}"

Cause: An attempt to migrate the specified database with zero downtime failed because the DBID of the standby database does not match DBID of the source database.

Action: Ensure that the standby connection details provided are for a valid standby database.

PRGZ-03613: standby database role "{0}" is not PHYSICAL_STANDBY

Cause: An attempt to migrate the specified database with zero downtime failed because the database role of the standby database is not physical standby.

Action: Review the accompanying messages, resolve the indicated blocker issues and then retry the operation.

PRGZ-03616: failed to configure connection with TLS settings to perform {0}

Cause: An attempt to configure Transport Layer Service (TLS) settings to perform the indicated action failed.

Action: Review the accompanying messages, resolve the indicated blocker issues and retry the operation.

PRGZ-03617: failed to read the wallet "{0}".

Cause: An attempt to read the wallet failed.

Action: Review that wallet exists and that it is valid, and then retry the operation.

PRGZ-03619: passwordless user equivalence for user {0} is not set up from node {1} to node {2}

Cause: An attempt to migrate the specified database with zero downtime failed because passwordless secure shell (SSH) connectivity between cluster nodes was not available.

Action: Set up passwordless SSH connectivity between target nodes and then retry the operation. Refer to Oracle Database documentation more details regarding passwordless SSH connectivity between nodes.

PRGZ-03620: failed to list Oracle ASM path "{0}" using ASMCMD as user {1}. Details below:\n***\n{2}\n*****\n**

Cause: An attempt to migrate a database failed because the specified Oracle Automatic Storage Management (Oracle ASM) path was either not readable or was not valid.

Action: Ensure that the Oracle ASM path exists and is readable for the indicated user and then retry the operation.

PRGZ-03621: parameter "{0}" is duplicated with different values in response file.\nFirst value={1}\nSecond value={2}

Cause: An attempt to migrate a database was rejected because the specified parameter set in the response file was duplicated with different values.

Action: Refer to Oracle product documentation for the supported parameters for each migration type and data transfer medium, rename or remove the wrong parameter, and retry.

PRIF-00001 to PRIF-00054

PRIF-00001: invalid format for network interface

Cause: An invalid network interface was given.

Action: Supply a network interface of the form <if_name>/subnet:<if_type>.

PRIF-00002: invalid network interface type

Cause: An invalid network interface type was given.

Action: Supply one of the valid interface types PUBLIC, CLUSTER_INTERCONNECT or ASM.

PRIF-00003: cannot find the input interface configured

Cause: An attempt was made to access an interface that is not already configured.

Action: Check if the input interface is configured through the "getif" command option.

PRIF-00004: OCR error while deleting the configuration for the given interface

Cause: OCR may have been configured incorrectly or an OCR API failed.

Action: Check if OCR is configured correctly by running ocrdump.

PRIF-00005: invalid syntax for the setif command option

Cause: An invalid syntax was specified for the oifcfg setif command option.

Action: Make sure the syntax for setif is "oifcfg setif {-node *nodename* | -global} {<if_name>/subnet:<if_type>}..."

PRIF-00006: invalid syntax for the getif command option

Cause: An invalid syntax was specified for the oifcfg getif command option.

Action: Make sure the syntax for getif is "oifcfg getif [-node *nodename* | -global] [-if <if_name>/subnet] [-type <if_type>]..."

PRIF-00007: invalid syntax for the delif command option

Cause: An invalid syntax was specified for the oifcfg delif command option.

Action: Make sure the syntax for delif is "oifcfg delif {{-node *nodename* | -global} [<if_name>/subnet]} [-force] | -force}..."

PRIF-00008: failed to initialize the prifcg context

Cause: There was a system error.

Action: Check the messages in the log file oifcfg.log.

PRIF-00009: incorrect usage

Cause: Invalid command line options specified for the oifcfg tool.

Action: Run "oifcfg -help" to check the usage for the oifcfg tool.

PRIF-00010: failed to initialize the cluster registry

Cause: The cluster registry was not configured correctly.

Action: Run "ocrdump" to see if the cluster registry was configured properly.

PRIF-00011: cluster registry error

Cause: There was an internal error while operating on the cluster registry.

Action: Check the messages in the log file oifcfg.log.

PRIF-00012: failed to initialize cluster support services

Cause: The cluster support services module was not configured correctly.

Action: Check the messages in the log file oifcfg.log.

PRIF-00013: cluster support services error

Cause: There was an internal error while accessing cluster support services.

Action: Check if Cluster Support Services is running properly.

PRIF-00014: invalid node name

Cause: The node name does not match any of the configured nodes.

Action: Ensure that the supplied node name is one of the node names returned by 'olsnodes'.

PRIF-00015: invalid subnet value specified

Cause: An oifcfg request was rejected because the subnet argument specified was not a valid IPv4 or IPv6 subnet number.

Action: Retry the command specifying a valid IPv4 or IPv6 subnet.

PRIF-00016: invalid syntax for the iflist command option

Cause: An invalid syntax was specified for the oifcfg iflist command option.

Action: Make sure the syntax for iflist is "oifcfg iflist [-p [-n]]."

PRIF-00017: Error in getting the host names in a cluster

Cause: There was an internal error while calling clsgpnp_crs_getcsshhosts.

Action: Check the underlying errors shown with this.

PRIF-00018: Error in deleting network information from GPnP profile

Cause: There was an internal error while calling clsgpnp_x_prfDelHostNetInfo.

Action: Check the underlying errors shown with this.

PRIF-00019: Error in getting the network attribute values from GPnP profile

Cause: There was an internal error while calling clsgpnp_x_prfGetNetAttrVal.

Action: Check the underlying errors shown with this.

PRIF-00020: Error in getting the lock for GPnP profile

Cause: There was an internal error while calling clsgpnp_crs_cssLockUpdates.

Action: Check the underlying errors shown with this.

PRIF-00021: Error in getting the GPnP profile

Cause: There was an internal error while calling `clsgpnp_getProfile`.

Action: Check the underlying errors shown with this.

PRIF-00022: Error in cloning the GPnP profile

Cause: There was an internal error while calling `clsgpnp_getProfile`.

Action: Check the underlying errors shown with this.

PRIF-00023: Error in getting network interface from GPnP profile

Cause: There was an internal error while calling `clsgpnp_x_prfGetHostNetInfo`.

Action: Check the underlying errors shown with this.

PRIF-00024: Error in retrieving the network interface from GPnP profile

Cause: Failed to retrieve the network interface information because of underlying errors.

Action: Check the underlying errors shown with this.

PRIF-00025: Error in setting network attribute value in GPnP profile

Cause: There was an internal error while calling `clsgpnp_x_prfSetNetAttrVal`.

Action: Check the underlying errors shown with this.

PRIF-00026: Error in update the profiles in the cluster

Cause: There was an internal error while calling `clsgpnp_crs_ensuredSignAndPush`.

Action: Check the underlying errors shown with this.

PRIF-00027: Error in releasing the in memory presentation of GPnP profile

Cause: There was an internal error while calling `clsgpnp_profileDestroy`.

Action: Check the underlying errors shown with this.

PRIF-00028: Error in unlock the GPnP profile

Cause: There was an internal error while calling `clsgpnp_crs_cssUnlockUpdates`.

Action: Check the underlying errors shown with this.

PRIF-00029: Warning: wildcard in network parameters can cause mismatch among GPnP profile, OCR, and system.

Cause: Wildcard syntax was detected in one or more network-related parameters. Although this is allowed, be aware that network particulars (such as interface names and subnets) must be identical on all nodes of the cluster. Using wildcard syntax in network parameters does not allow the network configuration to vary across nodes. This problem with wildcard syntax is limited to 10.2 and 11.1 databases.

Action: If wildcard causes the problem, provide interface name and subnet without wildcard for 10.2 and 11.1 databases.

PRIF-00030: Network information in OCR and GPnP profile differs

Cause: There was mismatched network information in OCR.

Action: Use `'oifcfg setif'` to synchronize the network information from GPnP profile to OCR.

PRIF-00031: Failed to delete the specified network interface because it is the last private interface

Cause: A request to delete the only private network interface was refused because force was not specified.

Action: Specify the '-force' option to delete the last private interface, but be aware this may render Oracle Clusterware inoperative.

PRIF-00032: Error in checking for profile availability for host *string* interface *string*

Cause: Failed to set or delete interface because the profile was not available on the specified node.

Action: Make sure that profile is available on all cluster nodes before setting interface or deleting the interface. Examine the accompanying error messages and respond accordingly.

PRIF-00033: Failed to set or delete interface because hosts could not be discovered interface *string*

Cause: An attempt to set or delete an interface failed because hosts could not be discovered or their GPNP profiles could not be accessed.

Action: Ensure that the Oracle GPNP and mDNS daemons are running on all cluster nodes and resolve any other issues reported in accompanying error messages.

PRIF-00034: IPv6 subnets are not supported for cluster interconnect or Oracle ASM network

Cause: An attempt was made to classify an IPv6 subnet as Oracle ASM network or cluster interconnect.

Action: Use an IPv4 subnet for Oracle ASM network and cluster interconnect.

PRIF-00035: Failed to retrieve the OCR registry key [*string*] for global interface [*string*]

Cause: An attempt to get the registry key for the specified global interface from OCR failed.

Action: Delete the interface with invalid key using 'oifcfg delif -global <if_name> [-force]'. Reset the interface using 'oifcfg setif -global <if_name>/subnet:<if_type>'.

PRIF-00036: Failed to retrieve the OCR registry key [*string*] for interface *string* on node *string*

Cause: An attempt to get the registry key for the specified interface from OCR failed.

Action: Delete the interface with invalid key using 'oifcfg delif -node *nodename* <if_name> [-force]'. Reset the interface using 'oifcfg setif -node *nodename* <if_name>/subnet:<if_type>'.

PRIF-00037: duplicate interface type [*string*] specified for interface [*string*]

Cause: An attempt to configure the network was rejected because the indicated interface type was specified more than once for the indicated interface.

Action: Supply a network interface of the form <if_name>/subnet:<if_type>. Make sure to provide a unique combination for <if_name>/subnet:<if_type>

PRIF-00038: Both IPv4 and IPv6 address types are not supported for cluster interconnect.

Cause: An attempt to classify a network as CLUSTER_INTERCONNECT failed because the specified address type did not match the remaining interconnects. All cluster interconnect networks must be of the same address type, either IPv4 or IPv6.

Action: Retry the operation specifying the same address type as the existing interconnects, or, to change the address type for the cluster interconnects delete all of the cluster interconnects and add them back with the same new address type, either IPv4 or IPv6.

PRIF-00039: Error: Oracle Restart installed, oifcfg command is not valid in this environment

Cause: An invalid command was run in an Oracle Restart environment.

Action: Do not use the oifcfg utility in the Oracle Restart environment.

PRIF-00040: failure to delete the specified network interface because it is the last ASM interface

Cause: A request to delete the only ASM network interface was refused because -force was not specified.

Action: Specify the -force option to delete the last ASM interface. However, be aware this may render Oracle Clusterware inoperative.

PRIF-00041: failure to modify the specified network interface because it is the last private interface

Cause: An attempt to modify the network interface type of the only private interface was refused because it may render Oracle Clusterware inoperative.

Action: Do not modify the interface type of the only private interface.

PRIF-00042: failure to modify the specified network interface because it is the last ASM interface

Cause: An attempt to modify the network interface type of the only Oracle ASM interface was refused because it may render Oracle Clusterware inoperative.

Action: Do not modify the interface type of the only Oracle ASM interface.

PRIF-00050: duplicate interface is given in the input

Cause: Duplicate interface is given in the input.

Action: Warning: Supply a network interface of the form <if_name>/subnet:<if_type>. Make sure to provide unique combination for <if_name>/subnet:<if_type> if multiple inputs are provided in the same command line or if the entry already exists.

PRIF-00051: Warning: interface [string] is set to both public and cluster_interconnect

Cause: The interface is set to both public and cluster_interconnect.

Action: Warning: Make sure that the interface is not set to both public and cluster_interconnect.

PRIF-00052: Could not get an immediate lock for GPnP profile. Wait to get the lock ...

Cause: The command was unable to take an exclusive CSS lock with the nowait option.

Action: Ctrl-C if wait for too long. Check the setup of clusterware.

PRIF-00053: Invalid type combination specified for interface [*string*]

Cause: A network interface specification included both 'public' and 'asm' types.

Action: Make sure that the interface is not set to both 'public' and 'asm'.

PRIF-00054: Specified interface [*string*] is not configured.

Cause: An attempt to delete interface configuration failed because the specified interface was not configured.

Action: Retry specifying a configured interface. Configured interfaces can be listed using 'oifcfg getif'.

PRKA-02001 to PRKA-02005

PRKA-02001: GSD already exists

Cause: An attempt was made to create the Global Services Daemon (GSD) application while there was a running GSD application.

Action: Stop and remove the GSD and create the GSD application again using 'srvctl add nodeapps'.

PRKA-02002: Listener already exists

Cause: An attempt was made to create a Listener application while there was a running Listener application.

Action: Stop and remove the running Listener and create the Listener application again using 'srvctl add nodeapps'.

PRKA-02003: EM Agent already exists

Cause: An attempt was made to create an Agent application while there was a running Agent application.

Action: Stop the running Agent and create the Agent application again using 'srvctl add nodeapps'.

PRKA-02005: Netmasks are different for starting and ending IP addresses

Cause: An invalid range of VIP addresses was specified for the cluster

Action: Check if the starting and ending addresses in the VIP range belong to the same netmask.

PRKC-01000 to PRKC-01225

PRKC-01000: No active nodes detected in the cluster

Cause: The active node list of the cluster could not be retrieved. This could occur if the operating system dependent clusterware was not functioning properly in one or more nodes in the cluster, or because there was no clusterware installed on the system.

Action: Check the state of the cluster by running 'lsnodes' binary from your ORACLE_HOME/bin and see if it prints the node list correctly.

PRKC-01001: Error submitting commands in the buffer

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRKC-01002: Not all the submitted commands completed successfully.

Cause: Some of the submitted commands failed to complete on the nodes specified either because the node in question failed or because communication between the nodes was disrupted.

Action: Check that all the specified nodes are up and running or check the details of the failures on the given nodes.

PRKC-01004: Problem in copying file to nodes

Cause: Attempted file copy operation(s) from the local node to one or more nodes in the cluster and one or multiple of those copy file operations failed. Possible causes: 1) One or more file copy operations to nodes in the cluster failed. 2) The destination directory did not have write permission for the user on one or more of the nodes .the source file did not exist. 3) The 'rcp' command to one or more nodes failed on UNIX platforms.

Action: 1) Check that the source file exists. 2) Check that all nodes in the cluster are up. 3) Check that destination directory has write permission for the user. 4) On UNIX based platforms check that user can do 'rcp' to all the nodes.

PRKC-01005: Problem in removing file from nodes

Cause: Attempted file remove operation(s) from the local node to one or more nodes in the cluster and one or multiple of those file remove operations failed. Possible causes: 1) One or more nodes failed during the operation. 2) The destination directory did not have write permission for the user on one or more of the nodes. 3) The source file did not exist. 4) The 'rcp' command to one or more nodes failed on UNIX platforms.

Action: Check the accompanying error messages for details.

PRKC-01006: Problem in moving file to nodes

Cause: Attempted file move operation(s) from the local node to one or more nodes in the cluster and one or multiple of those move file operations failed. Possible causes: 1) One or more nodes failed during the operation. 2) The destination directory did not have write permission for the user on one or more of the nodes. 3) The source file did not exist. 4) The 'rcp' command to one or more nodes failed on UNIX platforms.

Action: Check the accompanying error messages for details.

PRKC-01007: Problem in creating directories on the nodes

Cause: Attempted directory create operation(s) from the local node to one or more nodes in the cluster and one or multiple of those directory create operations failed. Possible causes: 1) One or more nodes failed during the operation. 2) The destination directory did not have write permission for the user on one or more of the nodes. 3) The 'rcp' command to one or more nodes failed on UNIX platforms.

Action: Check the accompanying error messages for details.

PRKC-01009: Failed to start the service on all nodes

Cause: The service failed to start on one or more nodes of the cluster.

Action: Check if all the nodes in cluster are up and look in the clusterware alert log.

PRKC-01010: Failed to stop the service on all nodes

Cause: The service failed to stop on one or more nodes of the cluster.

Action: Check if all the nodes in cluster are up and service is still up on failed nodes. Look in the clusterware alert log.

PRKC-01011: Failed to delete the service from all nodes

Cause: The service failed to be deleted on one or more nodes of the cluster.

Action: Check if all the nodes in cluster are up and service is still registered. Look in the clusterware alert log.

PRKC-01012: Failed to create the service on all nodes

Cause: The service failed to be created on one or more nodes of the cluster.

Action: Check if all the nodes in cluster are up. Look in the clusterware alert log.

PRKC-01016: Failed to retrieve value of the environment variable "{0}", {1}

Cause: A required environment variable was not defined.

Action: Define the environment variable.

PRKC-01017: Problem restarting GSD

Cause: GSD (Global Services Daemon) could not be started on the local node. This could occur if the operating system dependent clusterware was not functioning properly or there is already a running GSD.

Action: Check the state of your clusterware by running 'lsnodes' from ORACLE_HOME/bin. It should list the nodes in the cluster. Try 'gsdctl stop' and then 'gsdctl start' again.

PRKC-01018: Error getting coordinator node

Cause: This could occur if the operating system dependent clusterware was not functioning properly.

Action: Use 'gsdctl stop' on each node to stop the GSDs. Use 'gsdctl start' on each node in the cluster.

PRKC-01019: Error creating handle to GSD daemon on the node {0}

Cause: Global Services Daemon was not running on the node.

Action: Use 'gsdctl stat' to check the status of the daemon. Use 'gsdctl start' to start it.

PRKC-01020: Exception while executing the operation on the remote node {0}

Cause: Attempted to execute an operation on the remote node when the Global Services Daemon was not up on the remote node {0}.

Action: Start the Global Services Daemon on the remote node using 'gsdctl start'.

PRKC-01021: Problem in the clusterware

Cause: The operating system dependent clusterware could not be contacted. This could occur because the operating system dependent clusterware was not functioning properly.

Action: Check the state of the operating system dependent clusterware.

PRKC-01022: Could not get node name for node {0} in {1}

Cause: The operating system dependent clusterware could not be contacted. This could occur because the operating system dependent clusterware was not functioning properly.

Action: Check the state of the operating system dependent clusterware using 'lsnodes -n'.

PRKC-01023: Invalid IP address format: {0}

Cause: The provided IP address was neither an IPv4 nor an IPv6 valid address.

Action: Make sure that the IP address is a valid IPv4 or IPv6 address.

PRKC-01025: Failed to create a file under the filepath {0} because the filepath is not executable or writable

Cause: The directory of the specified filepath did not have execute or write permission. So the temporary file could not be created to test whether the filepath was shared among nodes.

Action: Make the directory of the specified filepath executable and writable.

PRKC-01042: The Remote Shell {0} requested by client is not secure and therefore is no longer supported.

Cause: An attempt to configure remote command execution to use the indicated shell was rejected because that shell is insecure and is no longer supported.

Action: Retry configuration of remote shell execution using SSH.

PRKC-01043: The Remote Copy command {0} requested by client is not secure and therefore is no longer supported.

Cause: An attempt to configure remote copy command execution to use the indicated command was rejected because that command is insecure and is no longer supported.

Action: Retry configuration of remote copy execution using SCP.

PRKC-01044: Remote command execution setup check for node {0} using shells {1} and {2} failed.

Cause: An attempt to verify the configuration for remote command execution to the indicated node failed because passwordless Secure Shell (SSH) and Remote Shell (RSH) was not set up properly.

Action: Ensure that SSH or RSH is configured properly and that it does not prompt for a password or a key, or print extra messages.

PRKC-01141: Oracle Restart is not supported in version {0}. It is supported from version {1} onwards

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRKC-01144: File "{0}" not found.

Cause: The file was not found in the file system.

Action: Make sure that the file exists in the file system.

PRKC-01148: Failed to get host name for the local computer

Cause: An error occurred while attempting to retrieve the TCP/IP host name

Action: Correct the problem indicated by the accompanying error messages.

PRKC-01149: Failed to get OCR locations

Cause: An error occurred while attempting to retrieve the OCR locations, possibly due to missing or incorrect OCR locations file, or incomplete OCR configuration, or due to missing or incorrect SRVM shared libraries.

Action: Verify that the Clusterware has been correctly installed and configured. Verify that the ocr.loc file is present and readable in the appropriate location for your platform.

PRKC-01150: Failed to get drive letters used on following nodes: "{0}"

Cause: An error occurred while attempting to retrieve used drive letters on one or more nodes.

Action: Look at the accompanying messages and fix the error(s). The messages typically relate to a node not being reachable, or the remote execution service not running on the node, or some permissions issue when attempting to use the remote execution service on the remote node.

PRKC-01151: The given path "{0}" does not exist

Cause: The specified path may not have been created or an incorrect path has been specified.

Action: Make sure that the given path exists by specifying a correct existing path.

PRKC-01152: The specified path "{0}" is not a directory

Cause: The specified path may be a file, not a directory, or an incorrect path may have been specified.

Action: Make sure to specify a path that is a valid directory path.

PRKC-01153: No directory is available on the remote node "{0}" to copy the binary RemoteExecService.exe

Cause: Either the path defined by value of registry key HKEY_LOCAL_MACHINE/System/CurrentControlSet/Services/OracleRemExecService is not available on the remote node, or the c:/temp/ directory is not available or not accessible on the specified remote node.

Action: Make sure that the required path is available on the remote node.

PRKC-01155: The node list provided had only one entry or had multiple entries that were duplicates of a single nodename entry

Cause: The list of nodes provided for the shared path check was either only one node, or the list included entries that were duplicates of the same single node.

Action: Please provide the correct nodelist for the cluster on which the check is being called, making sure that there are at least two distinct entries.

PRKC-01156: Failed to validate raw device "{0}" -- Details: {1}

Cause: The raw device was not an existing device that could be opened and recognized by the OS as a "raw/character" device type.

Action: Make sure the supplied value identifies a valid raw device that can be opened as a "raw/character" device type.

PRKC-01157: Failed to validate raw device "{0}"

Cause: The raw device was not an existing device that could be opened and recognized by the OS as a "raw/character" device type.

Action: Make sure the supplied value identifies a valid raw device that can be opened as a "raw/character" device type.

PRKC-01158: Failed to validate raw device "{0}" -- Details: {1}

Cause: The device was not an existing device that could be opened and recognized by the OS as either "raw/character" or a "block" device type.

Action: Make sure the supplied value identifies a valid device that can be opened as a "raw/character" or "block" device type.

PRKC-01159: Failed to validate device "{0}"

Cause: The device was not an existing device that could be opened and recognized by the OS as either "raw/character" or a "block" device type.

Action: Make sure the supplied value identifies a valid device that can be opened as a "raw/character" or "block" device type.

PRKC-01160: Failed to retrieve the value of environment variable "{0}" on following nodes: "{1}", [{2}]

Cause: An error occurred while attempting to retrieve value of environment variable on one or more nodes due to the node not being reachable, or the remote execution service not running on the node, or some permissions issue when attempting to use the remote execution service on the remote node.

Action: Look at the accompanying messages and respond accordingly.

PRKC-01161: Failed to retrieve the Windows domain on following nodes: "{0}"

Cause: An error occurred while attempting to retrieve the Windows domain on one or more nodes. The possible causes include: - A node is not reachable. - Remote execution service is not running on the node. - Permissions problems prevented use of remote execution service on a node.

Action: Look at the accompanying messages and respond accordingly.

PRKC-01162: "{0}" is not a file

Cause: The indicated object was expected to be a file, but it was not.

Action: Make sure that the indicated object is a file and not a directory.

PRKC-01163: {0} Exception occurred while determining validity of storage type.

Cause: An error occurred while getting storage type of the given path. Null arguments might have been passed.

Action: Make sure that the native api is passing non null arguments.

PRKC-01164: invalid command or arguments

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRKC-01165: Failed to set up Windows service OracleRemoteExecService on node '{0}'

Cause: An error occurred while setting up OracleRemoteExecService on the specified nodes."

Action: Look at the accompanying messages and respond accordingly.

PRKC-01166: Storage is partially shared. Details: {0}

Cause: A subset of the nodes provided shared the given filesystem path with the local node.

Action: Mount the NFS filesystem on the node(s) that do not share the filesystem path.

PRKC-01167: Failed to resolve the specified path "{0}" to its physical path on following nodes: "{1}", [{2}]

Cause: An error occurred while attempting to resolve the path on one or more nodes due to the node not being reachable, the remote execution service not running on the node, or some permissions issue when attempting to use the remote execution service on the remote node.

Action: Look at the accompanying messages and respond accordingly.

PRKC-01168: The supplied IP address "{0}" is invalid or specifies an unknown host name

Cause: The provided string had an invalid IP address format or could not be resolved to a known host name.

Action: Make sure that the IP address has a valid IPv4 or IPv6 address format or that it resolves to a known host name.

PRKC-01169: The supplied IPv6 address "{0}" is invalid

Cause: The provided string had not the correct IPv6 address format.

Action: Make sure that the IP address has a valid IPv6 address format.

PRKC-01170: The IPv6 prefix length "{0}" is out of the allowed range of 0 to 128

Cause: The specified IPv6 prefix length was out of the allowed range.

Action: Make sure that the IPv6 prefix length is an integer from 0 to 128.

PRKC-01171: Internal error: {0}

Cause: An internal error occurred. The included value is an internal identifier.

Action: Oracle internal error. Contact Oracle Support Services.

PRKC-01172: The supplied IPv6 prefix length "{0}" is not an integer

Cause: The provided string for the IPv6 prefix length was not an integer.

Action: Make sure that the IPv6 prefix length is an integer from 0 to 128.

PRKC-01173: VIP name "{0}" does not resolve to an {1} address matching the netmask or prefix length {2}

Cause: The VIP name did not resolve to the IP address type specified by the netmask or prefix lengths.

Action: Make sure that the VIP name resolves to the IP address type which is indirectly specified by the netmask or prefix length.

PRKC-01174: Failed to verify whether the following IP addresses are reachable or not: {0}

Cause: A network error occurred while attempting to reach the specified IP addresses.

Action: Use an Operating System command such as 'ping' or 'traceroute' to determine accessibility of the IP address.

PRKC-01175: Failed to copy directories "{0}" to one or more nodes

Cause: An attempt to copy file system directories from the local node to one or more nodes in the cluster failed. Possible causes: 1) One or more nodes failed during the copy operation. 2) The user does not have write permission for a given destination directory on one or more of the nodes. 3) The user does not have read access to files or directories being copied. 4) On UNIX or Linux platforms, the 'scp' command failed.

Action: Check the accompanying error messages for details.

PRKC-01176: Failed to list contents of directory "{0}" on nodes "{1}"

Cause: An attempt to list the contents of the indicated directory failed. Possible causes: - The specified directory does not exist. - One or more nodes failed during the operation.

Action: Check the accompanying error messages for details.

PRKC-01177: The format of the specified version "{0}" is invalid.

Cause: An attempt to compare the target version against the software version failed because the specified version was not valid.

Action: Specify a version number that is one to five sequences of decimal digits separated by periods.

PRKC-01178: failed to execute the command "{0}" due to the following error:\n{1}

Cause: An attempt to execute the command failed due to the indicated error.

Action: Examine the error text displayed in this message and act accordingly.

PRKC-01179: Parameter {0} value is not valid.

Cause: This is an internal error. The value for the specified parameter was invalid, null or an empty string.

Action: Contact Oracle Support Services.

PRKC-01180: unable to validate whether the path is shared on some nodes

Cause: An attempt to write or list the contents from the specified path failed because one or more nodes did not share the file system path. Possible causes are: - The specified directory did not exist. - The user does not have write permission for the given file system path on one or more nodes. - One or more nodes failed during the operation.

Action: Ensure that the file system is mounted on all nodes. Check the accompanying error messages for details and retry the operation.

PRKC-01181: User equivalence check failed on all nodes.

Cause: An attempt to connect to nodes in order to execute the shell command using RSH or SSH failed.

Action: Ensure the following: - That all nodes are reachable. - That SSH or RSH is configured properly on the target node. - That the SSH daemon on the target node is alive.

PRKC-01182: failed to verify whether the nodes are accessible on the network and running

Cause: A network error occurred while attempting to reach the nodes.

Action: Make sure that all nodes are running normally and reachable on the network.

PRKC-01183: Warning: failed to remove the per-node temporary file created under the shared path in some of the nodes

Cause: An attempt to delete the temporary file from the shared path failed.

Action: Check the accompanying error message for the affected nodes and remove the associated files as indicated.

PRKC-01184: File "{0}" is a non-readable file

Cause: The user did not have read permissions to open the file.

Action: Modify the file permissions so that the file becomes readable or execute the command from an operating system user ID with the required privileges.

PRKC-01185: failed to write to file "{0}"

Cause: An attempt to write to the given file failed.

Action: Modify the file permissions so that the file becomes writable or execute the command from an operating system user ID with the required privileges.

PRKC-01186: failed to transfer directory "{0}"

Cause: An error occurred while executing the transfer directory command.

Action: Check the accompanying error messages and proceed as indicated.

PRKC-01187: The regular expression "{0}" is not supported.

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKC-01188: Directory "{0}" is not an absolute path name.

Cause: The indicated directory could not be created because it was not an absolute path.

Action: Ensure that the directory specified is an absolute path. It should either be a Universal Naming Convention (UNC) path or begin with a drive letter specification.

PRKC-01189: Directory "{0}" already exists on node "{1}".

Cause: The indicated directory could not be created on the indicated node because it already existed.

Action: Make sure that the indicated directory path does not exist on the indicated node.

PRKC-01190: failed to change permissions of directories on the nodes: {0}

Cause: An attempt to change permissions of one or more directories on one or more remote cluster nodes did not complete correctly. Possible causes: 1) One or more nodes failed during the operation. 2) The 'chmod' command to one or more nodes failed.

Action: Examine the accompanying error message for details, resolve the issues raised and retry the command.

PRKC-01191: Remote command execution setup check for node {0} using shell {1} failed.

Cause: An attempt to verify the configuration for remote command execution to the indicated node failed because passwordless Secure Shell (SSH) was not set up properly.

Action: Ensure that SSH is configured properly and that it does not prompt for a password or a key, or print extra messages.

PRKC-01192: cannot find a local IP address on network {0}

Cause: An attempt to select an IP address failed because there were no locally configured IP addresses on the indicated network.

Action: Ensure the networks selected in the installation are correctly configured.

PRKC-01193: failure encountered while checking the configuration of the Oracle Restart on node "{0}"

Cause: An error occurred while retrieving the Oracle Restart configuration, possibly due to one of the following: - A missing or incorrect Oracle Local Registry configuration file. - An incomplete configuration. - Incorrectly installed Grid Infrastructure.

Action: Verify that Oracle Grid Infrastructure is correctly installed and configured. Verify that the olr.loc file is present and readable in the appropriate location for your platform.

PRKC-01194: illegal release update version comparison attempted: version {0} to version {1}

Cause: An attempt to compare the release update versions of the indicated composite versions was rejected because the major versions were different. This was an internal error.

Action: Contact Oracle Support Services.

PRKC-01195: illegal release update revision version comparison attempted: version {0} to version {1}

Cause: An attempt to compare the release update revision versions of the indicated composite versions was rejected because the major versions were different. This was an internal error.

Action: Contact Oracle Support Services.

PRKC-01196: illegal release update revision version comparison attempted: version {0} to version {1}

Cause: An attempt to compare the release update revision versions of the indicated composite versions was rejected because the release update versions were different. This was an internal error.

Action: Contact Oracle Support Services.

PRKC-01197: Failed to retrieve cluster nodes because user is missing read, write or execute permissions for the configured Oracle base directory.

Cause: An attempt to execute the 'olsnodes' binary failed because the user did not have read, write and execute permissions for the Oracle base directory.

Action: Set read, write and execute permissions for the user on the Oracle base directory, and then retry the operation.

PRKC-01198: Error checking whether path {0} is on ACFS on nodes {1}

Cause: An attempt to determine if the specified path is on ACFS failed. This can occur because: 1. The Clusterware stack is down on the specified nodes. 2. ASM is down 3. A diskgroup associated with the path is not online. 4. The path is not mounted.

Action: Perform checks corresponding to the above causes: 1. Ensure the Clusterware stack is running on the specified nodes. 2. Ensure that ASM is running. 3. Ensure that the diskgroup associated with the path is online. 4. Ensure that the file system is mounted on the nodes.

PRKC-01199: failed to check whether the file "{0}" exists on nodes "{1}"

Cause: An attempt to check whether the specified file existed failed. One or more nodes might have failed during the operation.

Action: Check the accompanying error messages for details, resolve the reported problems, and retry the operation. Ensure that the indicated file exists on the indicated nodes.

PRKC-01200: failed to check whether the directory "{0}" is empty on nodes "{1}"

Cause: An attempt to check whether the specified directory was empty failed. One or more nodes might have failed during the operation.

Action: Check the accompanying error messages for details, resolve the reported problems, and retry the operation. Ensure that the indicated directory is empty on the indicated nodes.

PRKC-01201: failed to check whether the directory "{0}" is writable on nodes "{1}"

Cause: An attempt to check whether the specified directory was writable failed. One or more nodes might have failed during the operation.

Action: Check the accompanying error messages for details, resolve the reported problems, and retry the operation. Ensure that the indicated directory is empty on the indicated nodes.

PRKC-01210: failed to retrieve the details for path "{0}" on node "{1}"

Cause: An attempt to retrieve the ownership and permissions for the indicated path failed on the indicated node.

Action: Check the accompanying error messages for details, resolve the reported problems, and retry the operation. Ensure that the indicated path exists on the indicated node.

PRKC-01211: failed to retrieve the details for user "{0}" on node "{1}"

Cause: An attempt to check whether the indicated user exists on the indicated node failed.

Action: Check the accompanying error messages for details, resolve the reported problems, and retry the operation.

PRKC-01212: failed to retrieve the details for user with UID "{0}" on node "{1}"

Cause: An attempt to check whether the indicated user ID exists on the indicated node failed.

Action: Check the accompanying error messages for details, resolve the reported problems, and retry the operation.

PRKC-01213: failed to retrieve the details for group "{0}" on node "{1}"

Cause: An attempt to check whether the indicated group exists on the indicated node failed.

Action: Check the accompanying error messages for details, resolve the reported problems, and retry the operation.

PRKC-01214: failed to retrieve the group name with GID "{0}" on node "{1}"

Cause: An attempt to check whether the indicated group ID exists on the indicated node failed.

Action: Check the accompanying error messages for details, resolve the reported problems, and retry the operation.

PRKC-01215: failed to retrieve the memory allocated because the local node is not a container

Cause: An attempt to retrieve the allocated memory for the local node failed because the operation is only supported on Linux Containers.

Action: Retry the operation in a Linux Container.

PRKC-01216: failed to retrieve the memory allocated for local Linux Container

Cause: An attempt to retrieve the allocated memory for the local node failed.

Action: Check the accompanying error messages for details, resolve the reported problems, and retry the operation.

PRKC-01217: failed to check whether local node is a Linux Container

Cause: An attempt to check whether the local node is a Linux Container failed.

Action: Check the accompanying error messages for details, resolve the reported problems, and retry the operation.

PRKC-01218: The version "{0}" is a potential future version because it is greater than the current version "{1}".

Cause: The requested operation failed because the indicated version was greater than the version supported by the current home.

Action: Run the operation from a home that supports the indicated version.

PRKC-01219: failed to retrieve the memory allocated for local Docker Container

Cause: An attempt to retrieve the allocated memory for the local node failed.

Action: Check the accompanying error messages for details, resolve the reported problems, and retry the operation.

PRKC-01220: failed to check whether local node is a Docker Container

Cause: An attempt to check whether the local node was a Docker Container failed.

Action: Check the accompanying error messages for details, resolve the reported problems, and retry the operation.

PRKC-01221: failed to retrieve cluster nodes for version {0}

Cause: An attempt to retrieve the cluster nodes was rejected because the version was earlier than 11.2.

Action: Issue the request when the CRS version is higher than 11.2.

PRKC-01222: failed to check whether local node is a Kubernetes container

Cause: An attempt to check whether the local node was a Kubernetes container failed.

Action: Check the accompanying error messages for details, resolve the reported problems, and retry the operation.

PRKC-01223: invalid directory path specified {0} to check if the directory path is present across cluster nodes {1}

Cause: An attempt to check whether the specified directory existed failed.

Action: Examine the accompanying error messages for details, resolve the reported problems, and retry the operation. Ensure that the directory is valid.

PRKC-01224: failed to copy directory {0} contents to node {1}

Cause: An attempt to check whether the specified directory is copied across cluster nodes failed.

Action: Check the accompanying error messages for details, resolve the reported problems, and retry the operation.

PRKC-01225: failed to check whether local node is a Podman container

Cause: An attempt to check whether the local node was a Podman container failed.

Action: Check the accompanying error messages for details, resolve the reported problems, and retry the operation.

PRKE-01008 to PRKE-01011

PRKE-01008: Failed to get list of active nodes from Clusterware

Cause: Possible causes: 1) Not operating in cluster mode. 2) Failed to load SRVM libraries. 3) Failed to initialize clusterware context.

Action: Check for the health of clusterware using "lsnodes" utility to get the list of active nodes in the cluster. Also, check for the presence of srvm libraries in the load library path. If these two checks get cleared, please contact Oracle Support Services.

PRKE-01009: Failed to start GSD on local node

Cause: GSD is already running on the local node, or GSD could not be started because of some other reason.

Action: Run "gsdctl stat" to check if a daemon is already running on the local node. If a daemon is not running on local node, please contact Oracle Support Services to check for the other reasons for failure.

PRKE-01010: Failed to stop GSD on local node

Cause: GSD is not running on the local node, or GSD could not shut down gracefully.

Action: Run "gsdctl stat" to check if a GSD is running on the local node. If a GSD is running, please contact Oracle Support Services to check for other reasons for failure.

PRKE-01011: Failed to get status of GSD on local node

Cause: Failure to get the list of active nodes from the cluster, or failure to query the list of live daemons from the clusterware.

Action: Run "lsnodes" to check the health of the clusterware. If the clusterware is working fine, check for the presence of SRVM libraries in the load library path. If the libraries are present, please contact Oracle Support Services for further assistance.

PRKF-01000 to PRKF-01519

PRKF-01000: Empty value for command line option {0} for command {1}

Cause: An empty value was specified for this command line option.

Action: Provide a value following the specific command line option.

PRKF-01001: Maximum character length ({0}) exceeded for command line option {1}

Cause: The user entered more characters than the maximum length for this command line option value.

Action: Provide a value with no more characters than the maximum limit.

PRKF-01002: Type: {0}

Cause: Mount options

Action: None

PRKF-01003: Mount options: {0}

Cause: Mount options

Action: None

PRKF-01004: Nodes: {0}

Cause: Node list

Action: None

PRKF-01005: Server pools: {0}

Cause: Serverpool list

Action: None

PRKF-01006: Application ID: {0}

Cause: Application ID

Action: None

PRKF-01011: Invalid file system type "{0}"

Cause: An invalid file system type was specified for the file system resource.

Action: The file system type must be either 'ACFS', 'NTFS', 'ZFS', 'JFS', 'EXT3' or 'EXT4'

PRKF-01012: Invalid 'autostart' option value "{0}"

Cause: An invalid value was specified for the command option 'autostart'.

Action: The 'autostart' option value must be either 'always', 'never' or 'restore'

PRKF-01013: Options "{0}" and "{1}" are in conflict

Cause: The specified options were set although mutually exclusive.

Action: Make sure that only one of the options is set.

PRKF-01014: An application ID is allowed only for node-local file systems. "{0}" is valid only if "{1}" or "{2}" is present.

Cause: An application ID was provided for a node-local file system.

Action: Make sure that use the application ID option only for non node-local file systems.

PRKF-01015: Either option "{0}" or "{1}" is required to be specified for file system "{2}"

Cause: For non-ACFS file systems, the user did not provide a nodelist or a server pool list.

Action: For non-ACFS file systems, make sure that either a nodelist or a server pool list is provided.

PRKF-01016: One or more nodes in the list of nodes ("'{0}'") is empty

Cause: A list of nodes included an empty node name.

Action: Make sure that no empty string is provided as part of the node list.

PRKF-01017: The file system found for volume device "{0}" is added for all nodes

Cause: The file system with the given volume device path was configured as a global file system.

Action: Either change the volume device path or do not use the '-nodes' and '-serverpools' options as part of the command 'srvctl modify filesystem'. To specify placement for an existing global file system, remove it and re-create it.

PRKF-01018: An attempt to modify the port of the Rapid Home Provisioning Server failed because the Rapid Home Provisioning Server is running. Use -force to force stop and restart of Rapid Home Provisioning Server.

Cause: A request to modify the port number of Rapid Home Provisioning Server was rejected because such modification requires Rapid Home Provisioning Server to be stopped and restarted.

Action: Use '-force' option to force restart of Rapid Home Provisioning Server.

PRKF-01019: An attempt to modify the Rapid Home Provisioning Client failed because the Rapid Home Provisioning Client is running.

Cause: A request to modify the Rapid Home Provisioning Client was rejected because such modification requires the Rapid Home Provisioning Client to be stopped and restarted.

Action: Stop the Rapid Home Provisioning Client with the 'srvctl stop rhpclient' command, reissue the 'srvctl modify rhpclient' and restart with the 'srvctl start rhpclient' command.

PRKF-01020: No other option is allowed when the '-clientdata' option is specified.

Cause: During the command 'srvctl add gns', '-clientdata' option was specified along with other options which are not allowed with '-clientdata'.

Action: Only specify the '-clientdata' option.

PRKF-01022: The "-{0}" option requires one of the options "-{1}", "-{2}", "-{3}" or "-{4}".

Cause: An option was specified that required one of the other possible options to be specified at the same time.

Action: Specify only one of the possible options.

PRKF-01023: Cannot specify both of the "-{0}" and "-{1}" options.

Cause: An invalid combination of options was specified.

Action: Specify only one of the indicated options.

PRKF-01024: The "-{0}" option is not allowed when the "-weight", "-priority", "-port" or "-instance" options are specified.

Cause: The '-createsrv' option was not specified with '-weight', '-priority', '-port' or '-instance' options.

Action: Only specify the '-createsrv', '-target' and '-protocol' options with the '-weight', '-priority', '-port' or '-instance' options.

PRKF-01025: Only "-createsrv" or "-deletesrv" options are allowed when the "-{0}" option is specified.

Cause: An option other than '-createsrv' or '-deletesrv' was specified.

Action: Only specify the '-createsrv' or '-deletesrv' options with the '-protocol' option.

PRKF-01026: The "-{0}" option cannot be specified with the "-timetolive" option.

Cause: An invalid combination of options were specified with the '-timetolive' option.

Action: Specify only valid combination of options with the '-timetolive' option.

PRKF-01027: Only "-createtxt" or "-createptr" command options are allowed when the "-namettl" option is specified.

Cause: A command option other than '-createtxt' or '-createptr' was specified with the '-namettl' option.

Action: Only specify the '-createtxt' or '-createptr' command options with the '-namettl' option.

PRKF-01028: This action is not permitted on the management database

Cause: An attempt to perform the requested action on the management database was rejected.

Action: Try the action on a non-management database or use the commands 'srvctl verb mgmtldb'.

PRKF-01033: Invalid command option {0} specified for Standard ASM

Cause: An option was specified that only can be used with Flex ASM, but Standard ASM is currently configured.

Action: Retry the command omitting the specified invalid option.

PRKF-01036: Option '-eval' cannot be used to evaluate modifications of a administrator-managed database without the '-srvpool' option

Cause: The command 'srvctl modify database -db <db_name> -eval' request was issued without the '-srvpool' option. The only '-eval' option modification that can be evaluated for an administrator-managed database is the conversion of that database to a policy-managed database, which is what is requested with the '-srvpool' option.

Action: To evaluate effects of modifications on administrator-managed database provide '-srvpool' option.

PRKF-01065: Option '-eval' cannot be used to evaluate relocation of a database without the '-node' option

Cause: The command 'srvctl relocate database -db <db_name> -eval' request was issued without the '-node' option.

Action: To evaluate effects of database relocation, specify the '-node' option.

PRKF-01066: Cannot export server data because GNS is not configured with a domain

Cause: An attempt to export server data failed because Grid Naming Service (GNS) was not configured with a domain.

Action: Add GNS using the command 'srvctl add gns -domain' and retry the command.

PRKF-01067: Option "-delete" can be specified only with a non-mandatory "-address" option

Cause: An invalid combination of options was specified with the '-delete' option.

Action: Specify only '-address' option with the '-delete' option and retry the command.

PRKF-01068: Command line options "{0}" and "{1}" cannot be used together

Cause: Conflicting options were specified on a srvctl command.

Action: Reissue the command with the correct options.

PRKF-01070: Modify client data operation is not allowed because GNS is configured

Cause: An attempt to modify client data failed because GNS was configured. Client data can only be modified on a GNS client cluster.

Action: Remove the GNS configuration and retry the command.

PRKF-01071: Unable to add Rapid Home Provisioning Server because the resource for disk group {0} could not be found. {1}

Cause: The resource for the specified disk group was not found. Either the disk group name was misspelled or the disk group has not been mounted.

Action: Correct the disk group spelling or use SQL*Plus or ASMCA to create the disk group.

PRKF-01072: The file "{0}" does not exist or cannot be read

Cause: The '-file' or '-importfile' option value specified a nonexistent or non-readable file name.

Action: Ensure that the '-file' or '-importfile' option value corresponds to an existing readable file name.

PRKF-01073: One or more server pool names in the list of server pools (" {0} ") is empty

Cause: While adding a filesystem, the specified list of server pools included an empty server pool name.

Action: Make sure that no empty string is provided as part of the server pool list.

PRKF-01074: Invalid command line options. "-subnet" option must be specified with either "-asmlistener" or "-leaflistener".

Cause: An invalid combination of options was specified.

Action: If issuing the command with the '-subnet' option, include either '-asmlistener' or '-leaflistener' option.

PRKF-01075: Missing required option '-available'

Cause: The '-toprefer' option was specified on the command 'srvctl modify service' request without required '-available' option.

Action: Make sure that the required option is provided.

PRKF-01076: Option '-eval' cannot be used to evaluate effects of addition of service {0} with an administrator-managed database {1}

Cause: The '-eval' option was specified on the command 'srvctl add service' request with an administrator-managed database.

Action: Specify a policy-managed database.

PRKF-01077: Server pool or node list cannot be modified because the file system for volume device {0} is a cluster-wide file system

Cause: An attempt to modify the server pool or node list attributes of a cluster file system was rejected because the filesystem resource was a local resource. Placement attributes like server pools or node names apply only to cluster resources.

Action: Do not specify node names and server pools, or remove the local resource and add a cluster resource using the command 'srvctl add filesystem {-serverpools <serverpool_list>|-nodes <node_list>}'

PRKF-01078: Option '-eval' cannot be used to evaluate effects of modification of service {0} with an administrator-managed database {1}

Cause: The '-eval' option was specified on the command 'srvctl modify service' request with an administrator-managed database.

Action: Specify a policy-managed database.

PRKF-01079: Option '-eval' cannot be used to evaluate effects of starting service {0} with an administrator-managed database {1}

Cause: The '-eval' option was specified on the command 'srvctl start service' request with an administrator-managed database.

Action: Specify a policy-managed database.

PRKF-01080: Option '-eval' cannot be used to evaluate effects of stopping service {0} with an administrator-managed database {1}.

Cause: The '-eval' option was specified on the command 'srvctl stop service' request with an administrator-managed database.

Action: Specify a policy-managed database.

PRKF-01083: Port "{0}" is already configured for use as a local, remote or Enterprise Manager by the ONS daemon

Cause: The specified port was already in use by an ONS daemon.

Action: Specify a port that is not already configured.

PRKF-01084: Port "{0}" is used in multiple ONS ports

Cause: The specified port was provided as two or more ONS ports.

Action: Ensure that the specified port is different from the local ONS, remote ONS and Enterprise Manager ports.

PRKF-01085: Command "{0}" is not supported for object "{1}"

Cause: An unsupported command and object combination was specified.

Action: Re-issue the command using one of the supported usages.

PRKF-01086: Command option {0} and {1} cannot be used together

Cause: Conflicting command line options were supplied.

Action: Check the command line options entered and make sure that all the required options in one set are specified.

PRKF-01087: Missing required option {0} when {1} was specified

Cause: The specified command option is missing.

Action: Use the command 'srvctl' with the '-help' option to display option details for the command and make sure that all the required options are specified.

PRKF-01088: Failed to add PQ service {0} using PQ server pool {1}. Administrator-managed database {2} does not support PQ services

Cause: An attempt to add a PQ service to the specified database was rejected because only policy-managed databases support PQ services.

Action: Do not add PQ services to administrator-managed databases.

PRKF-01089: Specified command option {0} can only be used in Flex Cluster

Cause: The cluster was configured as a regular cluster. The specified command option is only valid for Flex Cluster.

Action: Do not specify options that are only valid in Flex Cluster mode when the cluster is configured as a regular cluster.

PRKF-01090: Existing service {0} cannot be registered as the parallel query helper of the primary service {1}

Cause: An attempt to register a parallel query service specified a service that already exists.

Action: Use a different parallel query service name.

PRKF-01091: Failed to start service {0} of database {1} on server pool {2} that was not configured for service

Cause: The service was not configured to run on the specified serverpool.

Action: Start the services on already configured serverpool or modify the service to run on the specified serverpool.

PRKF-01092: The parallel query service name {0} was specified when the primary service name {1} is required

Cause: An attempt was made to operate on a database service via its parallel query helper service name rather than the primary service name.

Action: Specify the primary service name.

PRKF-01093: Failed to stop service {0} of database {1} on server pool {2} that was not configured for service

Cause: The service was not running on the specified serverpool.

Action: Stop the service on the serverpool on which it is running.

PRKF-01094: Failed to set the parallel query pool {0} because the parallel query helper service does not exist

Cause: An attempt was made to set a parallel query pool for the service that does not have a parallel query helper service configured or whose configured parallel query helper service would be removed by the '-pqservice' argument.

Action: Issue the command "srvctl modify service -db <database_name> -service <primary_service_name> -pqservice <pq_service_name> -ppool <pq_pool_name>" to configure parallel query service for the specified parallel query server pool.

PRKF-01097: Invalid command line option -{0} for "srvctl config gns" command on GNS client cluster

Cause: An invalid command line option was specified for 'srvctl config gns' command on Grid Naming Service (GNS) client cluster.

Action: Re-issue the command using one of the supported options.

PRKF-01098: Nothing to modify

Cause: No options were specified to modify.

Action: Specify at least one option with the modify command.

PRKF-01102: Cannot issue " srvctl {0} asm " in ASM Client Cluster

Cause: A srvctl command that operates on ASM was issued in an ASM Client Cluster.

Action: Issue the specified command in the cluster that ASM Client Cluster connects to.

PRKF-01103: Export of client data is not allowed on client cluster.

Cause: The command 'srvctl export gns' request was issued while the cluster was configured as Client.

Action: Rerun the command on the Grid Naming Service (GNS) Server Cluster.

PRKF-01104: Import file "{0}" does not exist

Cause: An attempt to import a GNS instance failed because the import file could not be found.

Action: Provide the name of an existing file to import.

PRKF-01105: Failed to add PQ service {0} because it has the same name as the core service {1}

Cause: An attempt to add PQ service was rejected because it has the same name as that of core service.

Action: Issue the command using a different PQ service name.

PRKF-01106: Invalid command line options. "-user" option cannot be specified with "-asmlistener" or "-leaflistener".

Cause: An invalid combination of options was specified.

Action: If issuing the command with the '-user' option, do not include '-asmlistener' or '-leaflistener' options.

PRKF-01107: GNS server already configured

Cause: An attempt to add a GNS server failed because a GNS server was already configured.

Action: Remove GNS server using the command 'srvctl remove gns' and retry the command.

PRKF-01108: Database {0} is an administrator-managed database, and therefore cannot accept only "-pqpool" option without "-serverpool" option for the conversion to a policy-managed database

Cause: An option was specified that only can be used on a policy-managed database. The '-pqpool' option alone is not sufficient to convert an administrator-managed database to a policy-managed database.

Action: Retry the command omitting the '-pqpool' option or convert the database to a policy-managed database by specifying one or more hub serverpools with the '-serverpool' option also in addition to the '-pqpool' option specified on the command line.

PRKF-01109: Missing -asm or -remove option to remove ASM listener

Cause: An invalid combination of options was specified. Either '-asm' or '-remove' option was missing.

Action: Issue the command with both '-asm' and '-remove' options.

PRKF-01110: Neither GNS server nor GNS client is configured on this cluster

Cause: The specified GNS command failed because neither GNS server nor GNS client was configured on this cluster.

Action: Configure either GNS server using the command 'srvctl add gns -vip {<vip_name> | ip} [-domain *domain*]' or GNS client using the command 'srvctl add gns -clientdata *filename*' in this cluster and retry the command.

PRKF-01111: GNS client already configured

Cause: An attempt to add a secondary Grid Naming Service (GNS) server cluster or GNS client cluster failed because a GNS client was already configured.

Action: Remove the GNS client using the command 'srvctl remove gns' and retry the command.

PRKF-01112: Option -pq conflicts with -instance for service {0} of database {1}

Cause: An attempt to start or stop a parallel query helper service was rejected because -pq cannot be specified with -instance.

Action: Issue the command without the -pq option or without the -instance option.

PRKF-01113: Server pool {0} is not valid for services {1} of the database {2}

Cause: An attempt to start or stop services on the server pool was rejected because the specified server pool was not one of the server pools of the specified services.

Action: Examine the server pools for the specified services using 'srvctl config service' and issue the command specifying a server pool of the service.

PRKF-01114: Unable to export client data: GNS is not running

Cause: An attempt was made to export GNS client data when Grid Naming Service (GNS) was not running.

Action: Start GNS with 'srvctl start gns' and reissue the request.

PRKF-01115: Import of instance is not allowed on client cluster.

Cause: The command 'srvctl import gns' request was issued while the cluster was configured as Client.

Action: Rerun the command on the Grid Naming Service (GNS) Server Cluster.

PRKF-01116: This command cannot be executed on a GNS client cluster.

Cause: An attempt to execute a command supported only on GNS server clusters failed because this cluster is configured as a GNS client.

Action: Execute this command on the GNS server cluster.

PRKF-01117: GNS server is not configured in this cluster.

Cause: A command that applies only to a GNS server cluster was rejected because this cluster has not been configured as a GNS server.

Action: If GNS server is to run in this cluster, use the 'srvctl add gns' command to configure it.

PRKF-01125: multiple values specified for the single value option "{0}":

Cause: Multiple values were specified for an option which accepts only a single value.

Action: Check the values printed following the message and reissue the command specifying a single value for the indicated option.

PRKF-01128: Environment variable {0} is not defined.

Cause: The command specified an environment variable which had no value defined.

Action: None

PRKF-01129: Specified option "{0}" is not supported on Windows

Cause: An option was provided which is not supported on Windows.

Action: Reissue the command after removing the indicated option.

PRKF-01137: Failed to retrieve the status for Oracle Cluster Health Analysis Service

Cause: An attempt to retrieve the status for Oracle Cluster Health Analysis Service failed.

Action: Examine the accompanying error messages for details.

PRKF-01142: The GNS subdomain {0} inside the instance file {1} does not match with configured GNS subdomain {2}.

Cause: An attempt to import a GNS instance file into a Grid Naming Service (GNS) instance failed because the subdomain of the destination instance did not match the subdomain in the file.

Action: Configure GNS with a subdomain name that matches the instance file subdomain and attempt the import again.

PRKF-01143: Command option {0} is not supported on an ASM client cluster.

Cause: The command option specified on the command line was not valid for an ASM client cluster.

Action: Command options for ASM Listener, ASM, DISKGROUP, VOLUME, and ACFS are not supported on an ASM client cluster. Remove the invalid option and retry the command.

PRKF-01150: InOracle Cluster Health Analysis Service got errors:\n{0}

Cause: An attempt to get the status of Oracle Cluster Health Analysis Service failed.

Action: Examine the accompanying error messages for details.

PRKF-01152: The specified option combination, -node with -model, is not permitted when server pools are configured.

Cause: An attempt to start monitoring the target was rejected since the specified option combination, -node with -model, is not permitted when server pools are configured.

Action: Check the specified option combination.

PRKF-01153: The specified option, -serverpool, is not permitted when server pools are not configured.

Cause: An attempt to start or stop monitoring the target was rejected since the specified option, -serverpool, is not permitted when server pools are not configured.

Action: Check the specified option.

PRKF-01215: Command option -{0} is not supported on GNS client cluster.

Cause: The command option specified on the command line was not valid for GNS client cluster.

Action: Remove the invalid option and retry the command.

PRKF-01216: Option '-node' cannot be used with option '-db' or '-serverpool'.

Cause: A 'srvctl config cha' command specified conflicting options.

Action: Reissue the command with the correct options.

PRKF-01217: Failed to retrieve Oracle Cluster Health Analysis Service configuration for the specified node {0}.

Cause: An attempt to retrieve Oracle Cluster Health Analysis Service configuration for the specified node failed.

Action: Examine the accompanying error messages for details.

PRKF-01218: Failed to retrieve server pool configuration for node {0}.

Cause: An attempt to retrieve server pool configuration from the Oracle Cluster Health Analysis Service for the given node failed.

Action: Examine the accompanying error messages for details.

PRKF-01219: Failed to retrieve server pool {0} configuration for the database {1}.

Cause: An attempt to retrieve Oracle Cluster Health Analysis Service configuration for the specified database on the server pool failed.

Action: Examine the accompanying error messages for details.

PRKF-01220: Failed to retrieve Oracle Cluster Health Analysis Service configuration for the specified database {0}.

Cause: An attempt to retrieve Oracle Cluster Health Analysis Service configuration for the specified database failed.

Action: Examine the accompanying error messages for details.

PRKF-01221: Failed to retrieve Oracle Cluster Health Analysis Service configuration for the specified server pool {0}.

Cause: An attempt to retrieve Oracle Cluster Health Analysis Service configuration details for the specified serverpool failed.

Action: Examine the accompanying error messages for details.

PRKF-01222: Failed to retrieve cluster configuration for Oracle Cluster Health Analysis Service.

Cause: An attempt to retrieve cluster configuration for Oracle Cluster Health Analysis Service failed.

Action: Examine the accompanying error messages for details.

PRKF-01223: An SQL error occurred while retrieving information from Grid Information Management Repository.

Cause: An SQL error occurred while connecting to or reading from Grid Information Management Repository.

Action: Examine the accompanying error messages for details.

PRKF-01224: failed to retrieve server pool status

Cause: An attempt to retrieve the status of server pools failed.

Action: Examine the accompanying error messages for details.

PRKF-01225: failed to retrieve the status of server pool {0}

Cause: An attempt to retrieve the status of the specified server pool failed.

Action: Examine the accompanying error messages for details.

PRKF-01231: Process cancelled by user.

Cause: A 'srvctl add service' request was interrupted before completion by Ctl-C or a similar mechanism. The operation has been cancelled.

Action: None

PRKF-01232: required '-address' option missing for static network type

Cause: An attempt to add a VIP resource for a static network type was rejected because no address was specified with the -address option.

Action: Retry the command with '-address' option.

PRKF-01233: Invalid option '-fixed' supplied while adding a non-single-instance database.

Cause: The '-fixed' option can be supplied only when adding a single-instance database.

Action: Reissue the command without the '-fixed' option.

PRKF-01235: Option '-node' is invalid for database {0} of type {1}

Cause: An attempt to modify the node of a non-single-instance database was rejected because '-node' can be specified only for a single-instance database.

Action: Reissue the command again without the '-node' option.

PRKF-01236: Options '-fixed' and '-serverpool' cannot be used together.

Cause: An attempt to create a policy-managed single-instance database with the '-fixed' option was rejected because '-fixed' can be specified only for a non-policy-managed single-instance database.

Action: Reissue the command again without the '-fixed' option.

PRKF-01237: Options '-serverpool' and '-node' are invalid for single-instance fixed database {0}

Cause: An attempt to modify the SERVER_POOLS or HOSTING_MEMBERS attributes of a fixed single-instance database was rejected because a fixed single-instance database is not hosted on a serverpool and the HOSTING_MEMBERS attributes cannot be modified.

Action: Reissue the command again without the '-serverpool' and '-node' options.

PRKF-01238: Option '-node' cannot be specified without '-startoption'.

Cause: An invalid combination of options was specified.

Action: Reissue the command again with the '-startoption' option.

PRKF-01239: One of the mandatory options {0} or {1} should be supplied.

Cause: An attempt to execute a 'srvctl' command failed because none of the mandatory options was specified.

Action: Reissue the command with the mandatory options.

PRKF-01240: Options {0} and {1} cannot be specified together.

Cause: An attempt to execute a 'srvctl' command failed because an invalid option combination was specified.

Action: Reissue the command with valid options.

PRKF-01241: invalid use of '-node' option on start of single-instance database {0}

Cause: The '-node' option was specified to start a single-instance database, but this option is only applicable to a RAC One Node database.

Action: Reissue the command without the '-node' option.

PRKF-01242: The command option '-auxvolumes' is not supported on this operating system.

Cause: The option '-auxvolumes' was specified for an unsupported operating system.

Action: Reissue the command without the '-auxvolumes' option.

PRKF-01245: OC4J HTTP port could not be modified

Cause: An error occurred while trying to modify the OC4J HTTP port.

Action: Examine the accompanying error messages for details.

PRKF-01246: Rapid Home Provisioning (RHP) server is running. Can't clean RHP repository.

Cause: A request to clean the RHP repository was rejected because the RHP server was running.

Action: Use the command 'srvctl stop rhpsrv' or, if necessary, use the command 'srvctl stop rhpsrv -force' to stop the Rapid Home Provisioning Server and then retry resetting the Rapid Home Provisioning repository.

PRKF-01247: An instance name was specified with multiple node names.

Cause: Option '-instance' cannot be used when multiple nodes are specified using the '-node' option.

Action: Specify either instance(s) or node(s).

PRKF-01248: Both '-instance' and '-node' options were specified with multiple values.

Cause: Options '-instance' and '-node' cannot be used together when multiple values are specified for each of them.

Action: Use either '-instance' or '-node'.

PRKF-01249: Option '-serverpool' cannot be specified without '-startoption'.

Cause: An invalid combination of options was specified.

Action: Reissue the command with the '-startoption' option.

PRKF-01250: option '-serverpool' specified for starting, stopping, or changing the start mode of database {0} which is neither Oracle RAC nor Oracle RAC One Node

Cause: An attempt to start, stop, or change the start mode on a server pool specified a database that is neither Oracle RAC nor Oracle RAC One Node.

Action: Reissue the command without the '-serverpool' option.

PRKF-01259: failed to read password from console

Cause: An error occurred during an attempt to read a password from the console or input device.

Action: Examine the accompanying error messages for details.

PRKF-01267: invalid import file "{0}"

Cause: An attempt to import a Grid Naming Service instance failed because the indicated file was not found, was of the wrong type or had zero length.

Action: Reissue the command specifying a valid import file.

PRKF-01268: Option {0} is not supported for the administrator-managed database {1}.

Cause: An attempt to start or stop the services of administrator-managed database was rejected because a server pool was specified and server pools are not compatible with administrator-managed databases.

Action: Consult the documentation and reissue the command with the correct options.

PRKF-01272: Option '-eval' was specified to evaluate the effects of service relocation of administrator-managed database {0}.

Cause: An attempt to evaluate the effect of service relocation for an administrator-managed database was rejected because the '-eval' option can only be used to evaluate the relocation of services for policy-managed databases.

Action: Retry the request specifying a service of a policy managed database.

PRKF-01273: Options '-oldinst' and '-newinst' were specified with the services of policy-managed database {0}.

Cause: An attempt to relocate a service of a policy-managed database was rejected because '-oldinst' and '-newinst' options were specified, which can only be used for administrator-managed databases.

Action: Use options '-currentnode' and '-targetnode' to relocate a service in a policy-managed database.

PRKF-01274: Options '-currentnode' and '-targetnode' cannot be used with the services of administrator-managed database {0}.

Cause: An attempt to relocate an administrator-managed database was rejected because '-currentnode' and '-targetnode' options were specified, which can only be used for policy-managed databases.

Action: Use options '-oldinst' and '-newinst' to relocate a service in an administrator-managed database.

PRKF-01279: Mail server login password is empty.

Cause: The command failed because the supplied password was empty.

Action: Specify a valid mail server login password.

PRKF-01280: Virtual machine list is incompletely specified.

Cause: The command failed because the virtual machine list was not specified or had missing values.

Action: Retry the command making sure that the virtual machine list is completely specified including all required values.

PRKF-01295: QoS Management Server already exists.

Cause: An attempt to create the QoS Management Server was rejected because it already exists.

Action: None

PRKF-01296: QoS Management Server creation failed.

Cause: QoS Management Server could not be added because of an exception.

Action: Resolve the exception and retry.

PRKF-01298: QoS Management Server is not configured.

Cause: An attempt to retrieve the configuration of the QoS Management Server failed because the QoS Management Server was not configured on the cluster.

Action: Check the exception printed with this message. If the QoS Management Server is not configured, then it can be created using the command 'srvctl add qosmsserver'. If there are other errors shown with this error, then check the cause and action messages of underlying exception.

PRKF-01300: QoS Management Server is still running. It must be stopped before removing.

Cause: A 'srvctl remove qosmsserver' command was issued while the QoS Management Server was running.

Action: Stop the QoS Management Server using the command 'srvctl stop qosmserver' and then try removing.

PRKF-01301: QoS Management Server could not be removed.

Cause: An attempt to remove the QoS Management Server failed. The accompanying error messages provide more details.

Action: Review the accompanying error messages and retry after resolving the underlying errors.

PRKF-01303: QoS Management Server RMI port could not be modified.

Cause: An error occurred while trying to modify the QoS Management Server Java Remote Method Invocation (RMI) port.

Action: Examine the accompanying error messages for details.

PRKF-01305: QoS Management Server could not be started.

Cause: An attempt to start the QoS Management Server failed. The accompanying error messages provide more details.

Action: Review the accompanying error messages and retry after resolving the underlying errors.

PRKF-01307: QoS Management Server failed to stop.

Cause: An attempt to stop the QoS Management Server failed. The accompanying error messages provide more details.

Action: Review the accompanying error messages and retry after resolving the underlying errors.

PRKF-01312: QoS Management Server could not be enabled.

Cause: An attempt to enable the QoS Management Server failed. The accompanying error messages provide more details.

Action: Review the accompanying error messages and retry after resolving the underlying errors.

PRKF-01315: QoS Management Server could not be disabled.

Cause: An attempt to disable the QoS Management Server has failed. The accompanying error messages provide more details.

Action: Review the accompanying error messages and retry after resolving the underlying errors.

PRKF-01318: QoS Management Server could not be relocated.

Cause: An attempt to relocate the QoS Management Server failed. The accompanying error messages provide more details.

Action: Review the accompanying error messages and retry after resolving the underlying errors.

PRKF-01320: QoS Management Server is already disabled.

Cause: QoS Management Server could not be disabled because it was already disabled.

Action: None required.

PRKF-01321: QoS Management Server is already enabled.

Cause: QoS Management Server could not be enabled because it was already enabled.

Action: None required.

PRKF-01327: An attempt to modify the port of the QoS Management Server failed because it is running. Use '-force' to force stop and restart the QoS Management Server.

Cause: A request to modify the port number of the QoS Management Server was rejected because such modification requires the QoS Management Server to be stopped and restarted.

Action: Use '-force' option to force restart of the QoS Management Server.

PRKF-01332: QoS Management Server HTTP port could not be modified.

Cause: An error occurred while trying to modify the QoS Management Server HTTP port.

Action: Examine the accompanying error messages for details.

PRKF-01333: unable to add a database resource with a disk group dependency on an ASM client cluster

Cause: An attempt to add a database was rejected because the -diskgroup option was specified on the command line on an ASM client cluster. The database to be added cannot have a dependency on the disk group because there is no disk group resource on an ASM client cluster.

Action: To add a database on a client cluster, reissue the command without the -diskgroup option.

PRKF-01334: failed to retrieve the ASM mode

Cause: Failed to retrieve the mode of ASM on this cluster when attempting to validate the '-diskgroup' option.

Action: Examine the accompanying error messages for details, resolve issues raised and retry the command.

PRKF-01335: Invalid command line options. Neither -addnode nor -deletenode can be specified with -node.

Cause: An attempt to modify the configuration of the specified Oracle home resource failed because an invalid combination of options was specified. Option '-node' was specified to replace the current node list configuration and '-addnode' or '-deletenode' options were specified to append or remove nodes from the current node configuration.

Action: Reissue the command without the '-node' option if either '-addnode' or '-deletenode' are specified.

PRKF-01336: invalid Grid Naming Service role "{0}"

Cause: An invalid value was specified for the Grid Naming Service (GNS) role.

Action: Reissue the command specifying a valid GNS role.

PRKF-01337: nothing to update

Cause: No options were specified to update.

Action: Specify at least one option with the 'srvctl update instance' command.

PRKF-01338: GNS cannot be removed because one or more leaf nodes are present.

Cause: Removing GNS failed because one or more leaf nodes were still running in the cluster.

Action: Delete the leaf nodes or change them to hub role, then retry the GNS remove operation.

PRKF-01339: cannot clean RHP repository when server has images registered

Cause: A request to clean the Rapid Home Provisioning (RHP) repository was rejected because the RHP server had one or more images registered.

Action: Use 'rhpctl reset server' to delete all images and then retry the command.

PRKF-01348: failure to set the ASM cardinality to a number {0} other than ALL with configured pre-12.1 databases {1}

Cause: An attempt to set the ASM cardinality to the specified number was rejected because the indicated databases were of versions older than 12.1. These databases required the ASM cardinality to be set to ALL.

Action: Keep the ASM cardinality set to ALL until all of the databases are upgraded to release 12.1 or later.

PRKF-01350: failure to add ASM I/O server on an unsupported operating system {0}

Cause: An attempt to add the ASM I/O server on the indicated operating system was rejected because it was not one of the supported platforms. The ASM I/O server is only supported on Linux and Solaris.

Action: Choose a server running one of the supported operating systems on which to run the ASM I/O server.

PRKF-01352: Missing option '-preferred' was required by supplying '-modifyconfig'.

Cause: An attempt to modify the resource configuration was rejected because the option '-modifyconfig' was specified without '-preferred'.

Action: Retry the command ensuring that the -preferred option is provided when the -modifyconfig option is specified.

PRKF-01353: invalid value specified while modifying QoS management server resource for '-secure' option

Cause: An attempt to modify a resource was rejected because an invalid value was specified for the '-secure' option.

Action: Retry the command operation, specifying either YES or NO for the '-secure' option.

PRKF-01354: Invalid 'cpucount' option value "{0}"

Cause: The specified value for 'cpucount' was not valid. A valid 'cpucount' is a nonnegative number.

Action: Retry the operation specifying a non-negative value for the 'cpucount' option.

PRKF-01355: nothing to modify

Cause: An attempt to modify the RHP progress listener was rejected because no options were specified to the modify command.

Action: Retry specifying at least one option with the modify command.

PRKF-01356: can't modify port of running RHP listener.

Cause: A request to modify the port number of the Rapid Home Provisioning progress listener was rejected because the RHP progress listener was already running, and the modification would require that it be stopped and restarted.

Action: To modify the RHP progress listener while it is running, specify the '-force' option to stop and restart the process.

PRKF-01360: invalid network server type "{0}"

Cause: An attempt to add or modify the dhcpproxy resource was rejected because the specified network server type was invalid.

Action: Reissue the command specifying a network server type of 'static' or 'dhcp'.

PRKF-01361: non-static network server type for MAC-to-IP address mapping

Cause: An attempt to add or modify the dhcpproxy resource was rejected because 'static' was not specified for the network server type.

Action: Reissue the command specifying a network server type of 'static'.

PRKF-01362: static network server type without MAC-to-IP address mapping

Cause: An attempt to add or modify the dhcpproxy resource was rejected because 'static' was specified for the network server type, but no MAC-to-IP address mapping was provided.

Action: Reissue the command specifying a MAC-to-IP address mapping.

PRKF-01363: invalid MAC-to-IP address mapping: "{0}"

Cause: An attempt to add or modify the dhcpproxy resource was rejected because the MAC-to-IP address mapping had invalid syntax, or the IP address format was invalid.

Action: Retry the operation ensuring that the MAC address is separated from the IP address and the IP address is in a valid format.

PRKF-01364: invalid root directory for the DNSMASQ TFTP service: "{0}"

Cause: An attempt to add or modify the TFTP resource was rejected because the format of the path for the root directory was invalid.

Action: Retry the operation specifying a valid root directory path.

PRKF-01365: Invalid TFTP server ip "{0}"

Cause: An attempt to add or modify the TFTP resource was rejected because the specified IP address for the TFTP server was invalid.

Action: Retry the operation specifying a valid TFTP server IP address.

PRKF-01378: The '-invitedsubnets' or '-invitednodes' options are not allowed when the '-scanclient' option is specified.

Cause: An attempt to set either invited subnets or invited nodes was rejected because this operation is not supported for a SCAN listener configured for a client cluster.

Action: Retry the operation, specifying only the '-scanclient' option.

PRKF-01379: invalid 'cdpnumber' option value "{0}"

Cause: An invalid value was specified for the command option 'cdpnumber'.

Action: Retry the operation, specifying a 'cdpnumber' option value that identifies a registered Cross-Domain Protocol (CDP) resource.

PRKF-01380: A 'srvctl add database' command specified the '-serverpool' option for an Oracle Restart fixed single-instance database

Cause: An attempt to add an Oracle Restart fixed single-instance database was rejected because the '-serverpool' option was specified.

Action: Retry the operation, without specifying the '-serverpool' option.

PRKF-01381: A 'srvctl add database' command specified the RAC database type for an Oracle Restart fixed single-instance database

Cause: An attempt to add an Oracle Restart fixed single-instance database was rejected because the option '-dbtype RAC' was specified.

Action: Retry the operation either without the '-dbtype' option, or specifying '-dbtype SINGLE'.

PRKF-01382: The value "{0}" is invalid for the enableTLS command line option.

Cause: An attempt to add or modify a Rapid Home Provisioning Server or Client was rejected because a value other than 'YES' or 'NO' was supplied for the enableTLS command line option.

Action: Retry the command specifying either YES or NO for the enableTLS option.

PRKF-01384: invalid wallet file {0}

Cause: An attempt to import a wallet failed because the format of the file was incorrect.

Action: Retry the command supplying a password protected or an autologin wallet.

PRKF-01385: invalid option value for 'client_type' "{0}" or 'client_name' "{1}"

Cause: A requested operation failed because an invalid value was specified as shown for either the client_type or client_name with the result that no matching Cross-Domain Protocol proxy was found.

Action: Retry the operation, specifying valid client_type and client_name values that identify a registered Cross-Domain Protocol (CDP) proxy resource.

PRKF-01387: invalid 'httpdnumber' option value "{0}"

Cause: An invalid value was specified for the command option 'httpdnumber'.

Action: Retry the operation, specifying an 'httpdnumber' option value that identifies a registered HyperText Transfer Protocol (HTTP) daemon resource.

PRKF-01393: Command line options '-vipless' and '-address' cannot be used together.

Cause: Conflicting options were specified on a 'srvctl add nodeapps' command.

Action: Reissue the command with the correct options.

PRKF-01394: CDP proxy resource was not found.

Cause: A requested Cross-Domain Protocol (CDP) operation failed because the CDP proxy did not match either the client_type or client_name, or the CDP proxy was not configured on the system.

Action: Retry the operation, specifying valid `client_type` and `client_name` values that identify a registered CDP proxy resource that is configured on the system.

PRKF-01395: The value "{0}" is invalid for the enableHTTPS command line option.

Cause: An attempt to add or modify a Rapid Home Provisioning Server or Client was rejected because a value other than 'YES' or 'NO' was supplied for the `enableHTTPS` command line option.

Action: Retry the command specifying either YES or NO for the `enableHTTPS` option.

PRKF-01398: invalid value specified while modifying QoS management server resource for '-enableHTTPS' option

Cause: An attempt to modify the QoS management server resource was rejected because an invalid value was specified for the '-enableHTTPS' option.

Action: Retry the operation, specifying either YES or NO for the '-enableHTTPS' option.

PRKF-01400: The DHCP proxy resource is not configured

Cause: The DHCP proxy resource was not configured on the cluster or an unexpected error occurred while querying Clusterware for the DHCP proxy resource. The accompanying messages provide detailed failure information.

Action: Ensure that the DHCP proxy resource is configured. The command `svctl add dhcpproxy` can be used to create a new DHCP proxy resource. Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRKF-01402: DHCP proxy is already disabled

Cause: An attempt to disable the DHCP proxy resource was rejected because the resource was already disabled.

Action: None required.

PRKF-01403: DHCP proxy is already enabled

Cause: An attempt to enable the DHCP proxy resource was rejected because the resource was already enabled.

Action: None required.

PRKF-01407: DHCP proxy resource must be stopped before removing

Cause: The command `svctl remove dhcpproxy` was rejected because the DHCP proxy instance was running.

Action: Stop the DHCP proxy resource using the command `svctl stop dhcpproxy`, and then retry the remove operation.

PRKF-01410: Invalid port range: {0}

Cause: A port range was provided for the data transfers which had an invalid format.

Action: Retry the operation, ensuring that the range contains both a lower value and an upper value, the values are both integers, and the lower value comes first.

PRKF-01412: cannot clean RHP repository stored in external database

Cause: A request to clean the Rapid Home Provisioning (RHP) repository was rejected because the repository was stored in an external database.

Action: Use 'srvctl remove rhpsrv -resource' to remove only the resource. To clear the repository, re-create the schema in the external database.

PRKF-01413: Specified option {0} is invalid.

Cause: An attempt to execute a 'srvctl' command was rejected because the indicated option was invalid.

Action: Reissue the command with valid options.

PRKF-01416: The ASM I/O server cardinality cannot be set to {0}, which is different from the cardinality of the ASM resource group.

Cause: An attempt to set the cardinality of the ASM I/O server to the indicated number was rejected because the ASM I/O server was a resource in the ASM resource group, which had a different cardinality.

Action: Issue the command 'srvctl modify asm -count *count*' to modify the ASM resource group cardinality and the cardinalities of the resources in the group.

PRKF-01418: commands on object '{0}' are only allowed to be executed from the active Grid Infrastructure home

Cause: The specified command was not executed from a Grid Infrastructure home.

Action: Reexecute the command from a valid Grid Infrastructure home.

PRKF-01419: Option {0} is no longer supported.

Cause: An attempt to execute a command using the specified option was rejected because the specified option was not supported.

Action: Use a valid option.

PRKF-01420: Service name {0} exceeds the maximum length of 64 characters.

Cause: An attempt to add a service was rejected because the service name was longer than the maximum length of 64 characters.

Action: Reissue the command with a service name less than 64 characters.

PRKF-01427: Command option -{0} for acfsapps is only supported on an ASM client cluster.

Cause: An attempt to execute an acfsapps command using the specified for an ASM client cluster.

Action: Reissue the command using one of the supported options.

PRKF-01445: cannot relocate database "{0}"; invalid database type

Cause: An attempt to relocate a database was rejected because the database was not an Oracle RAC One Node database or a single-instance database.

Action: Reissue the command with an Oracle RAC One Node database or a single-instance database.

PRKF-01447: Options '-serverpool' and '-node' are invalid for single-instance policy-managed database {0}

Cause: An attempt to modify the serverpool of a policy-managed single-instance database was rejected because the '-node' option was given.

Action: Reissue the command again without the '-node' option.

PRKF-01449: Cannot create or modify a service which will result in values '-failovertype' {0} and '-resetstate' {1} being defined for the service.

Cause: An attempt to execute a 'srvctl' command failed because an invalid option combination will result with the completed operation.

Action: Reissue the command which will result in valid options being defined for the service.

PRKF-01500: Kernel Virtual machine list is incompletely specified.

Cause: The command failed because the kernel virtual machine list was not specified or had missing values.

Action: Retry the command making sure that the kernel virtual machine list is completely specified including all required values.

PRKF-01501: failed to add KVM resource "{0}"

Cause: An attempt to add the KVM resource failed.

Action: Examine the accompanying error messages for details.

PRKF-01502: Adding a KVM resource failed because the virtual machine "{0}" specified is already configured in a different VM resource.

Cause: The KVM resource was not added because the kernel virtual machine name or ID specified was already registered in a different resource.

Action: Retry the 'add' command specifying kernel virtual machine names or IDs that are not already registered.

PRKF-01503: failed to query the status of KVM resource {0}: {1}

Cause: An attempt to query the status of the specified KVM resource failed.

Action: Examine the accompanying error messages for details.

PRKF-01504: failed to retrieve the configuration details for KVM resource

Cause: An attempt to retrieve the configuration of the KVM resource failed.

Action: Examine the accompanying error messages for details.

PRKF-01505: failed to modify the configuration of KVM resource "{0}"

Cause: An attempt to modify the configuration of the KVM resource failed.

Action: Examine the accompanying error messages for details.

PRKF-01506: kernel virtual machine "{0}" not found in KVM resource "{1}"

Cause: An attempt to retrieve the status of the specified kernel virtual machine failed because it was not found in the configuration of the KVM resource.

Action: Retry the command, making sure to specify a kernel virtual machine that is part of the KVM resource. The kernel virtual machines that are in the KVM resource can be listed using the 'srvctl config' command.

PRKF-01507: failed to modify the management policy of database {0} to RANK

Cause: An attempt to modify the management policy of the database resource to RANK was rejected because there were registered pluggable databases created without specifying -cardiality option.

Action: Modify the database to use a management policy that is not RANK. Alternatively, remove all pluggable databases created without specifying -cardiality option before modifying the management policy to RANK.

PRKF-01508: cluster name alias "{0}" is not valid.

Cause: The specified cluster name alias was not valid. A valid name consists of a maximum of 63 characters that can consist of letters, numbers and hyphen.

Action: Specify a valid cluster name alias.

PRKF-01509: failed to add the Proxy ADVN resource in EDV cluster

Cause: An attempt to add the Proxy ADVN resource was rejected because that resource is not supported while the cluster is running in EDV mode.

Action: Re-issue the command using one of the supported options.

PRKF-01510: specified option "{0}" is not supported on this operating system.

Cause: An option was provided which was not supported on this operating system.

Action: Reissue the command after removing the indicated option.

PRKF-01511: failed to add a file system of type "{0}"

Cause: An attempt to add a file system was rejected because the file system type was not supported on this operating system.

Action: Reissue the command specifying a supported file system type.

PRKF-01512: Object {0} is not supported on this operating system.

Cause: The object specified on the command line was not a valid object on this operating system.

Action: Use a valid object.

PRKF-01513: failed to add {0} as there is no json object for {0}.

Cause: The file did not contain a JSON object for specified type.

Action: Ensure that the file contains a valid JSON object.

PRKF-01514: The command for serverpool has been desupported.

Cause: The specified command was desupported and failed to execute any action because policy-managed database was desupported.

Action: Use the command 'srvctl -help' for online help or check the documentation for the commands supported by srvctl.

PRKF-01515: The service attribute value SESSION_STATE_CONSISTENCY=STATIC is deprecated in Oracle Database 21c.

Cause: SESSION_STATE_CONSISTENCY=STATIC option value was deprecated in release 21c.

Action: Use one of the following option combinations in the service configuration:
FAILOVER_TYPE=AUTO with SESSION_STATE_CONSISTENCY=AUTO or
FAILOVER_TYPE=TRANSACTION with
SESSION_STATE_CONSISTENCY=DYNAMIC

**PRKF-01516: The service attribute value
SESSION_STATE_CONSISTENCY=STATIC is no longer a supported service
attribute value.**

Cause: SESSION_STATE_CONSISTENCY=STATIC option value was no longer a supported service attribute value.

Action: Use one of the following option combinations in the service configuration:
FAILOVER_TYPE=AUTO with SESSION_STATE_CONSISTENCY=AUTO or
FAILOVER_TYPE=TRANSACTION with
SESSION_STATE_CONSISTENCY=DYNAMIC

PRKF-01518: failed to add Memory Guard resource "{0}"

Cause: An attempt to add the Memory Guard resource failed.

Action: Examine the accompanying error messages for details.

PRKF-01519: Memory Guard already exists.

Cause: An attempt to create the Memory Guard resource was rejected because it already exists.

Action: None

PRKH-01014 to PRKH-03451

PRKH-01014: Current user "{0}" is not the oracle owner user "{1}" of oracle home "{2}"

Cause: The command was run as a different user than the owner user of the oracle home path.

Action: Retry the command as the user who owns the specified oracle home.

PRKH-01016: Failed to get CSS mode

Cause: An error occurred on a Cluster Synchronization Services request. This message may be accompanied by others identifying the specific problem.

Action: Correct the problem indicated by the accompanying messages, if possible. Otherwise, contact Oracle Support Services.

PRKH-01050: Buffer is too small

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-01051: Cluster software (skgxn) error

Cause: An error occurred when Cluster Synchronization Services attempted to use non-Oracle vendor clusterware. This message may be accompanied by others identifying the specific problem.

Action: Correct the problem indicated by the accompanying messages, if possible. Otherwise, contact Oracle Support Services.

PRKH-01052: Invalid arguments

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-01053: Cluster synchronization services are not active

Cause: CSS daemon is not running or unable to authenticate with CSS daemon

Action: Use 'crsctl check css' to ensure that CSS daemon is running. If CSS daemon is not running, execute 'crsctl start crs' command.

PRKH-01054: Communications error

Cause: CSS daemon is not running on the local node or unable to authenticate with CSS daemon

Action: Use 'crsctl check css' to ensure that CSS daemon is running. If CSS daemon is not running, execute 'crsctl start crs' command.

PRKH-01055: Oracle Cluster Registry error

Cause: OCR returned an error while processing a CSS request

Action: Ensure that CRSD daemon is running e.g. with crsctl check clusterware

PRKH-01056: Unexpected CSS error

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-01057: Check for node with node number 0 failed.

Cause: CSS daemon is not running on local node or unable to authenticate with CSS daemon.

Action: Use 'crsctl check css' to ensure that CSS daemon is running. If CSS daemon is not running, execute 'crsctl start crs' command.

PRKH-01058: Node number specified for the node name lookup is beyond the allowed node number range

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-01059: Failed to get ASM mode

Cause: An error occurred on an Oracle Clusterware request. This message may be accompanied by others identifying the specific problem.

Action: Correct the problem indicated by the accompanying messages, if possible. Otherwise, contact Oracle Support Services.

PRKH-01060: An attempt to change the CLSCRS trace level failed because the context is not initialized.

Cause: An error occurred while trying to change the Cluster Ready Services trace level.

Action: Initialize the Cluster Ready Services context and retry the operation.

PRKH-03002: Vendor cluster software error occurred in Cluster Synchronization Services

Cause: An error occurred when Cluster Synchronization Services attempted to use non-Oracle vendor clusterware. This message may be accompanied by others identifying the specific problem.

Action: Correct the problem indicated by the accompanying messages, if possible. Otherwise, contact Oracle Support Services.

PRKH-03003: An attempt to communicate with the CSS daemon failed

Cause: CSS daemon is not running.

Action: Ensure that CSS daemon is running.

PRKH-03004: Failed due to insufficient memory for Cluster Synchronization Services

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03005: Entity {0} was not registered with CSS

Cause: The given entity (e.g. instance) was not registered with CSS.

Action: Start the entity before retrying the operation.

PRKH-03009: An attempt was made by Cluster Synchronization Services to release a lock that was not held

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03011: Cluster Synchronization Services was started but has not completed startup

Cause: An attempt to connect to CSS failed because initialization is still in progress.

Action: None

PRKH-03013: An improper buffer argument was supplied to Cluster Synchronization Services

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRKH-03016: Invalid arguments

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03050: Unexpected error ({0}) returned from Cluster Synchronization Services

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03101: GIPC Error returned from DHCP module

Cause: A communication error occurred on a DHCP operation. This message may be accompanied by others identifying the specific problem.

Action: Correct the problem indicated by the accompanying messages, if possible. Otherwise, contact Oracle Support Services.

PRKH-03150: Unexpected error ({0}) returned from DHCP module

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03202: An error occurred in Oracle Clusterware during an Operating System function call or request

Cause: An error occurred in Oracle Clusterware. This message may be accompanied by others identifying the specific problem.

Action: Correct the problem indicated by the accompanying messages, if possible. Otherwise, contact Oracle Support Services.

PRKH-03203: Required password not supplied

Cause: A requested operation requires a password but none was supplied. This message may be accompanied by others identifying the specific problem.

Action: Correct the problem indicated by the accompanying messages, if possible. Otherwise, contact Oracle Support Services.

PRKH-03204: An improper buffer argument was supplied to Oracle Clusterware

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03205: Internal error in Oracle Clusterware

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03250: Unexpected error ({0}) returned from Oracle Clusterware

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03301: Invalid arguments

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03302: Oracle Clusterware database support layer returned OCR error

Cause: This message may be accompanied by others identifying the specific problem.

Action: Correct the problem indicated by the accompanying messages, if possible.

Otherwise, contact Oracle Support Services.

PRKH-03303: Oracle Clusterware database support layer returned OSD error

Cause: This message may be accompanied by others identifying the specific problem.

Action: Correct the problem indicated by the accompanying messages, if possible.

Otherwise, contact Oracle Support Services.

PRKH-03304: Internal error returned from Oracle Clusterware database support layer

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03306: Internal error returned from Oracle Clusterware database support layer

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03307: Internal error returned from Oracle Clusterware database support layer

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03340: Following VIP error occurred from Oracle Clusterware database support layer

Cause: An error occurred while processing a VIP request. This message may be accompanied by others identifying the specific problem.

Action: Correct the problem indicated by the accompanying messages, if possible.

Otherwise, contact Oracle Support Services.

PRKH-03350: Unexpected error returned from Oracle Clusterware database support layer

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03401: An improper buffer argument was supplied to an internal interface

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03402: OCR error returned from an internal interface

Cause: An internal interface encountered an error in OCR processing. This message may be accompanied by others identifying the specific problem.

Action: Correct the problem indicated by the accompanying messages, if possible.

Otherwise, contact Oracle Support Services.

PRKH-03450: Unexpected error ({0}) returned from an internal interface

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRKH-03451: An attempt to change the CLSS trace level failed because the context is not initialized.

Cause: An error occurred while trying to change the Cluster Synchronization Services trace level.

Action: Initialize the Cluster Synchronization Services context and retry the operation.

PRKN-01031 to PRKN-01048

PRKN-01031: Failed to retrieve local host name

Cause: An attempt to retrieve the local host name using Java network functions failed.

Action: Ensure that the 'localhost' entry exists in the hosts configuration file.

PRKN-01032: error occurred while reading input from user's terminal session.

Cause: An attempt to read input from the standard input failed.

Action: Use an operating system command line to run the proper command.

PRKN-01033: The following nodes do not share the filesystem path "{0}" with node {1}: {2}

Cause: A subset of the nodes provided shared the given filesystem path with the local node.

Action: Mount the NFS filesystem on the node(s) that do not share the filesystem path.

PRKN-01034: Failed to retrieve IP address of host "{0}"

Cause: An attempt to retrieve IP address for the host specified failed.

Action: Run 'nslookup' on the host name and make sure the name is resolved or add the host name to OS hosts file.

PRKN-01035: Host "{0}" is unreachable

Cause: An attempt to reach the specified host via IP failed.

Action: Make sure that the host is up and there are no firewalls blocking connectivity between local node and remote host.

PRKN-01036: Windows registry key "{0}" not found on node "{1}"

Cause: Could not find the specified Windows registry key on the identified node.

Action: Contact Oracle Support Services.

PRKN-01037: Unexpected command output on node {0}: "{1}"

Cause: A remotely-executed command produced output when none was expected.

Action: Ensure that ssh or rsh is configured properly on the target node. If it is, contact Oracle Support Services for assistance.

PRKN-01038: The command "{0}" run on node "{1}" gave an unexpected output: "{2}"

Cause: A remote-shell command produced an output when none was expected.

Action: Ensure that ssh or rsh is configured properly on the specified nodes. If it is, contact Oracle Support Services for assistance.

PRKN-01039: Failed to create directory "{0}" on node "{1}"

Cause: The specified directory could not be created on the specified node.

Action: Ensure that the user is an administrator on the specified node, that the specified drive has default share configured on it, and that there is enough space in the specified location. Look at accompanying error messages and respond accordingly.

PRKN-01040: Failed to remove directory "{0}" on node "{1}"

Cause: The specified directory could not be removed on the specified node.

Action: Ensure that the user is an administrator on the specified node, that the specified drive has default share configured on it. Look at accompanying error messages and respond accordingly.

PRKN-01041: Failed to retrieve the current Windows user name: {0}

Cause: An attempt to retrieve the current Windows user name failed with the error cited in the message.

Action: Ensure that the Windows Domain Server is reachable; log in to the OS as a domain user.

PRKN-01042: Failed to execute sharedness check on remote nodes

Cause: An attempt to perform sharedness check on given path failed to execute on remote nodes.

Action: n/a

PRKN-01043: unknown host exception for host "{0}"

Cause: An invalid IP address or unresolvable host name was specified.

Action: If an IP address is specified, then ensure that it is of legal length and format, and retry the operation. If a host name is specified, then ensure that the host name resolves to an IP address, and retry the operation.

PRKN-01044: failed to unload DLL {0}\n{1}

Cause: An attempt to unload the indicated DLL failed. The accompanying error message describes the reason for the failure.

Action: Examine the accompanying error messages, correct issues raised and retry the operation.

PRKN-01045: failed to retrieve composite release version

Cause: An attempt to retrieve the composite release version failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the issues identified, and then retry the operation.

PRKN-01046: The specified path "{0}" is a file.

Cause: Failed to check whether a directory was writable because the specified directory name already existed as a file.

Action: Use a valid directory and retry the operation.

PRKN-01047: failed to retrieve windows low privileged user \n{0}

Cause: An attempt to retrieve the windows low privileged user failed. The accompanying error messages describe the reasons for the failure.

Action: Examine the accompanying error messages, correct the issues raised, and retry the operation.

PRKN-01048: failed to retrieve windows low privileged user for oracle home {0} \n{1}

Cause: An attempt to retrieve the windows low privileged user failed. The accompanying error messages describe the reasons for the failure.

Action: Examine the accompanying error messages, correct the issues raised, and retry the operation.

PRKO-00371 to PRKO-09088

PRKO-00371: No option specified for "modify gns"

Cause: No option was specified for the "modify gns" command.

Action: Specify at least one option.

PRKO-00372: The "-{0}" option requires the specification of the "-{1}" option.

Cause: An option was specified which requires that another option to be specified at the same time.

Action: Specify the required option.

PRKO-00373: Invalid host name or address: "{0}".

Cause: The host name or address specified for the address on which GNS is to listen was not valid.

Action: Specify a valid host name or IP address. If an IP address is used, it must be one of the following: 1. A valid IPv4 address (N.N.N.N); 2. A valid IPv6 address (N[:N]*).

PRKO-00374: The "-{0}" option may not be used with the "-{1}" option.

Cause: The two options may not be used together.

Action: Run `srvctl` with each option specified separately.

PRKO-00375: No option was specified for the GNS "modify" command.

Cause: An option was not specified for the modify command.

Action: Specify an option.

PRKO-00377: The "-{0}" option requires the specification of either the "-{1}" or the "-{2}" option.

Cause: An option was specified which requires that one of the other possible options to be specified at the same time.

Action: Specify the one of the other options.

PRKO-00378: Both "-{0}" and "-{1}" options may not be specified with the "-{2}" option.

Cause: An invalid combination of options was specified.

Action: Specify only one of the other possible options.

PRKO-00380: No other option is allowed when the '-loglevel' option is specified.

Cause: If the '-loglevel' option is specified, no other option may be given.

Action: Only specify the '-loglevel' option.

PRKO-00381: Both '-serverpool' and '-node' options are required to set server pool {0} for single instance database {1} on the cluster.

Cause: Option '-node' is not specified in 'srvctl modify database' command for a single instance database on the cluster.

Action: Specify both -serverpool and -node options in 'srvctl modify database' and retry.

PRKO-00382: The number of candidate servers {0} in server pool {1} should be one for single instance database {2}

Cause: The server pool specified in 'srvctl modify database' command for a single instance database contained more than 1 candidate servers.

Action: Either modify the given server pool via 'srvctl modify srvpool' command to have only one candidate server specified via -node argument or specify another server pool that contains only one candidate server specified via -node argument.

PRKO-00383: Invalid IP address for name "{0}": "{1}"

Cause: The address used for a name was not valid.

Action: Specify a valid IP address. It must be one of the following: 1. A valid IPv4 address (N.N.N.N); 2. A valid IPv6 address (N[:N]*).

PRKO-02000: Invalid command line syntax for a single instance database

Cause: user specified invalid command line syntax.

Action: Look at the usage provided for this command and specify all mandatory options.

PRKO-02001: Invalid command line syntax

Cause: The syntax of the command is incorrect.

Action: Look at the usage provided for this command and use the correct syntax.

PRKO-02002: Invalid command line option: {0}

Cause: Invalid command line option was specified.

Action: Check the value printed along with the exception and specify the correct value.

PRKO-02003: Invalid command line option value:

Cause: Invalid command line option was specified.

Action: Check the value printed along with the exception and specify the correct value.

PRKO-02004: Repetition of command line option: -{0}

Cause: The command line option printed along with the exception was repeated.

Action: Delete the repeated command line option and try the command again.

PRKO-02005: Failure in getting Cluster Database Configuration for:

Cause: The specified database does not exist.

Action: Check the specified database name and try again.

PRKO-02006: Invalid node name: {0}

Cause: Unable to get the hostname for the given node/machine name.

Action: Check the node name and try again.

PRKO-02007: Invalid instance name: {0}

Cause: Unable to obtain the node name on which the instance name specified was running.

Action: Check the instance name specified and try again.

PRKO-02008: Invalid connect string:

Cause: The connect string specified was not in the format username/password [as {SYSDBA|SYSOPER}]

Action: Check the connect string and try again.

PRKO-02009: Invalid name/value string: {0}

Cause: The name value string should be of the form name = value

Action: check the input name/value pair and try again.

PRKO-02010: Invalid command specified on command line: {0}

Cause: The *command* specified on the command line was not recognized.

Action: Valid commands are enable|disable|start|stop|relocate|status|add|remove|modify|getenv|setenv|unsetenv|config|monitor|unmonitor. Usage of *srvctl* is printed with this error. Check the usage and specify a valid command.

PRKO-02011: Invalid object specified on command line: {0}

Cause: The *object* specified on the command line was not recognized.

Action: Valid objects are database|instance|service|nodeapps|vip|network|asm|diskgroup|listener|scan|scan_listener|oc4j|qosmserver|home|filesystem|gns|cvu|havip|exportfs|volume|mgmtldb|mgmtlsnr|rhpserver|rhpclient|cha|host. Usage for the '*srvctl*' command is displayed with this exception. Check the usage printed with this error and use a valid object.

PRKO-02012: {0} object is not supported in Oracle Restart

Cause: The *object* specified on the command line was not a valid object for the Oracle Restart mode.

Action: Valid objects for Oracle Restart mode are database|service|asm|diskgroup|listener|home|ons. *SRVCTL* usage is printed along with this exception. Check the usage printed with this error and use a valid object.

PRKO-02013: {0} object is not supported in Oracle Clusterware

Cause: The *object* specified on the command line was not a valid object for the Oracle Clusterware mode.

Action: Valid objects for Oracle Clusterware are database|instance|service|nodeapps|vip|network|asm|diskgroup|listener|scan|scan_listener|oc4j|qosmserver|home|filesystem|gns|cvu|havip|exportfs|volume|mgmtldb|mgmtlsnr. *Srvctl* usage is printed along with this exception. Check the usage printed with this error and use a valid object.

PRKO-02014: The -all option must be specified with '-db <db_unique_name>' for 'srvctl config database' command

Cause: The '-all' option was specified without the required '-db' option specifying for which database to retrieve configuration.

Action: To retrieve the full configuration of the database, specify both '-db' and '-all' option with the command 'srvctl config database'.

PRKO-02016: Database {0} has no services configured

Cause: 'srvctl config database' request found no services configured for the database.

Action: Use the command 'srvctl add service' to configure services for the database and then retry.

PRKO-02017: Service {0} does not exist for database {1}.

Cause: The service being updated was not defined for the given database.

Action: Specify a service that is defined for the database, or create the service if appropriate.

PRKO-02018: No databases are configured

Cause: No databases were configured.

Action: Use the command 'srvctl add database' to configure databases.

PRKO-02049: Invalid name-value string: {0}

Cause: The name=value string specified is not in valid format.

Action: The format for the string should be name=value. Check input and correct the error.

PRKO-02050: Error in enabling ASM instance on node {0}. {1}

Cause: ASM could not be enabled.

Action: Make sure that the node name is correct and that ASM exists on the specified node and it is not already enabled on the node. The current state of the ASM can be found using the command 'srvctl status asm'. To check if ASM is configured or not, use the command 'srvctl config asm'.

PRKO-02053: Error in disabling ASM instance on node {0}. {1}

Cause: ASM could not be disabled.

Action: Make sure that the node name is correct and that ASM exists on the specified node and it is not already disabled on the node. The current state of the ASM can be found using the command 'srvctl status asm'. To check if ASM is configured or not, use the command 'srvctl config asm'.

PRKO-02054: Invalid command line syntax, mandatory options are either {0} or {1}, but not both.

Cause: The command requires exactly one set of mandatory command line options. But either some options in one set were missing or the options from both sets were specified.

Action: Check the command line options entered and make sure that all the mandatory options in one set are specified.

PRKO-02056: Error occurred while checking dependent resources on network {0}. Network was not removed.

Cause: An attempt to check if any resources are dependent on the given network failed.

Action: Make sure that the network is up. Make sure that the user has sufficient permission to remove network. If force flag was not specified in the remove command then specify force flag and try the command again.

PRKO-02058: Scan name {0} cannot be the same as a cluster node name: {1}

Cause: Scan name is same as a cluster node name.

Action: Choose a different scan name and issue the command.

PRKO-02065: Only one server pool should be provided for a single instance database on a cluster

Cause: An attempt to create a single instance database failed because more than one server pool was specified.

Action: Provide only one server pool while creating the single instance database.

PRKO-02067: The size of server pool should be one for single instance database

Cause: An attempt to create a single instance database failed because a server pool with more than one server was specified.

Action: Provide a server pool with only one server while creating a single instance database.

PRKO-02069: OC4J could not be created as it already exists

Cause: A new OC4J instance could not be created, as there is an existing instance of OC4J.

Action: Only one instance of OC4J can exist at any given time.

PRKO-02070: OC4J creation failed

Cause: A new OC4J instance could not be added because of OC4J exception.

Action: Resolve the OC4J exception and then try the OC4J addition again.

PRKO-02072: OC4J is not configured

Cause: OC4J is not configured on the cluster.

Action: Check the exception printed with this message. If OC4J is not configured then OC4J instance can be created using the command 'srvctl add oc4j'. If there are other errors shown with this error then check the cause/action messages of underlying exception.

PRKO-02074: OC4J is still running. It must be stopped before removing.

Cause: 'srvctl remove oc4j' command was issued while OC4J instance was running.

Action: Stop the oc4j instance using the command 'srvctl stop oc4j' and then try removing.

PRKO-02075: OC4J could not be removed

Cause: OC4J instance could not be removed because it does not exist.

Action: The current OC4J configuration can be checked using the command 'srvctl config oc4j'. Make sure that OC4J instance is running on that port. If there are other underlying messages printed then check the cause/action for the underlying errors shown with this.

PRKO-02077: OC4J RMI port could not be modified

Cause: An error occurred while trying to modify the OC4J Java Remote Method Invocation (RMI) port.

Action: Examine the accompanying error messages for details.

PRKO-02079: OC4J could not be started

Cause: The start of OC4J instance failed.

Action: Make sure that OC4J instance exists and is not already started.

PRKO-02081: OC4J failed to stop

Cause: The OC4J instance could not be stopped.

Action: Make sure that OC4J instance exists and are not already stopped.

PRKO-02082: Missing mandatory option {0}

Cause: The specified mandatory command option is missing.

Action: Use `srvctl` with the `-help` option to display option details for the command and make sure that all the mandatory options are specified.

PRKO-02087: OC4J could not be enabled

Cause: OC4J instance could not be enabled.

Action: Make sure that node name is correct and that OC4J instance exists and is not already enabled. The current state of the OC4J instance can be found using the command `'srvctl status oc4j'` command. To check if OC4J instance is configured or not use `'srvctl config oc4j'` command.

PRKO-02090: OC4J could not be disabled

Cause: OC4J instance could not be disabled.

Action: Make sure that Node name is correct and that OC4J instance exists and is not already disabled. The current state of the OC4J instance can be found using the command `'srvctl status oc4j'`. To check if OC4J instance is configured or not use the command `'srvctl config oc4j'`.

PRKO-02093: OC4J could not be relocated

Cause: OC4J instance could not be relocated to given node.

Action: If the node name was passed in the command line make sure that the node name is valid. Also make sure that OC4J instance exists on the cluster and is running.

PRKO-02100: Cannot update service {0} because database {1} is not administrator-managed

Cause: An attempt to update the service using `'-update'` option failed because this option can be used with administrator-managed databases only.

Action: Make sure that you provide correct options for the command `'srvctl add service'`.

PRKO-02102: Failed to create server pool {0}: {1}

Cause: An attempt to create the specified server pool failed because of the reason provided by the accompanying error.

Action: Examine the accompanying error messages for details.

PRKO-02103: The '-available' and '-preferred' options cannot both be supplied with '-update'

Cause: Command 'srvctl add service' with '-update' option failed because both options '-available' and '-preferred' were provided.

Action: Reissue the command with the correct options.

PRKO-02104: Option '-available' or '-preferred' must be supplied with '-update'

Cause: Command 'srvctl add service' with option '-update' failed because it requires option '-available' or '-preferred' to be provided.

Action: Reissue the command with the correct options.

PRKO-02105: Option '-serverpool' cannot be used with option '-preferred', '-available' or '-tafpolicy'

Cause: A 'srvctl add service' command specified conflicting options.

Action: Reissue the command with the correct options.

PRKO-02106: There is no server pool associated with database {0}

Cause: Command 'srvctl add service' failed because the given database doesn't have an associated server pool.

Action: Oracle internal error. Contact customer support.

PRKO-02108: Command line options '-instance' and '-node' cannot be used together

Cause: Conflicting options were specified on a 'srvctl add service' command.

Action: Reissue the command with the correct options.

PRKO-02109: Options '-server', '-instance', or '-timeout' can only be supplied with option '-dbtype'

Cause: Incorrect usage of '-server', '-instance' and '-timeout' options.

Action: Reissue the command with the correct options.

PRKO-02110: The '-cardinality' option is not supported on a 'add service' request for administrator-managed database {0}.

Cause: An attempt to add a service for the indicated database using the '-cardinality' option was rejected because that option was not supported for administrator-managed databases.

Action: Reissue the command using the '-preferred' and '-available' options to specify service placement.

PRKO-02111: Invalid number {0} for command line option {1}

Cause: Invalid value was specified for the command line option that requires a number in a certain range.

Action: Check the value printed and specify a number within the required range.

PRKO-02112: Options '-node' and '-policy' were specified to create RAC One Node database {0}

Cause: Incorrect usage of '-node' and '-policy' options.

Action: Remove '-node' and '-policy' options and issue command again.

PRKO-02115: OC4J is already disabled

Cause: OC4J instance could not be disabled because it is already disabled.

Action: None required.

PRKO-02116: OC4J is already enabled

Cause: OC4J instance could not be enabled because it is already enabled.

Action: None required.

PRKO-02117: Options '-serverpool' and '-server' cannot be used together

Cause: Options '-serverpool' and '-server' were used incorrectly.

Action: Correct options and issue command again.

PRKO-02118: Options '-serverpool' and '-instance' were specified together

Cause: Incorrect usage of '-serverpool' and '-instance' options.

Action: Correct options and issue command again.

PRKO-02120: Options '-node' and '-policy' cannot be used to modify RAC One Node database

Cause: Options '-node' and '-policy' were used incorrectly.

Action: Remove '-node' and '-policy' options and issue command again.

PRKO-02121: Options '-server' and '-timeout' cannot be used to modify a database that is not RAC One Node

Cause: Options '-server' and '-timeout' were used incorrectly.

Action: Remove '-server' and '-timeout' options and issue command again.

PRKO-02122: Database type can only be 'RAC' or 'RACONENODE'

Cause: Incorrect database type was specified for the command 'srvctl convert database'.

Action: Specify 'RAC' or 'RACONENODE' when running the command 'srvctl convert database'.

PRKO-02126: Options '-node', '-timeout' and '-stopoption' cannot be used with options '-abort' and '-revert'

Cause: Options '-node' or '-timeout' or '-stopoption' could not be used with '-abort' or '-revert'.

Action: Remove the options that are not required and issue the command again.

PRKO-02127: Either option '-server' or '-serverpool' must be supplied for adding RAC One Node database

Cause: Options '-server' and '-serverpool' were not specified when adding an Oracle RAC One Node database.

Action: Use the command 'srvctl add database' with either '-server' or '-serverpool' option.

PRKO-02128: Specified cardinality {0} is not valid for policy-managed RAC One Node service {1}

Cause: Given cardinality was not applicable to an Oracle RAC One Node service.

Action: Use the 'srvctl add service' without the '-cardinality' option or specify SINGLETON value for the '-cardinality' option.

PRKO-02129: Online relocation timeout value {0} is not within the range of {1} and {2}
Cause: Online relocation timeout value was not within the required range.

Action: Supply a value within the required range.

PRKO-02130: Supplied node {0} must be in the candidate list of the administrator-managed database {1}
Cause: The supplied node name was not in the candidate list of the administrator-managed database.

Action: Supply a node in the candidate list of the database and rerun the command 'srvctl start database'.

PRKO-02131: Supplied node {0} must be in the server pool of the policy-managed database {1}
Cause: The supplied node name was not in the server pool of the policy-managed database.

Action: Supply a node from the server pool of the database and rerun the command 'srvctl start database'.

PRKO-02132: Options '-serverpool', '-preferred' and '-available' cannot be used to add services for RAC One Node database {0}
Cause: Failed to add specified service because provided options cannot be used to add a service for an Oracle RAC One Node database.

Action: Use the command 'srvctl add service' without options '-serverpool', '-preferred' or '-available'.

PRKO-02133: Options '-serverpool', '-preferred' and '-available' cannot be used to modify services for RAC One Node database {0}
Cause: Failed to modify specified service because provided options cannot be used to modify a service for an Oracle RAC One Node database.

Action: Use the command 'srvctl modify service' without options '-serverpool', '-preferred' or '-available'.

PRKO-02134: 'srvctl add instance' command is not supported with RAC One Node databases
Cause: The specified database does not support 'srvctl add instance' command.

Action: Convert the Oracle RAC One Node database to an Oracle RAC database by using the command 'srvctl convert database' and then rerun using the command 'srvctl add instance'.

PRKO-02135: 'srvctl remove instance' command is not supported with RAC One Node databases
Cause: The one instance of the Oracle RAC One Node database cannot be removed by using the command 'srvctl remove instance'.

Action: Run the command 'srvctl remove database'.

PRKO-02136: 'srvctl start/stop/enable/disable/status/setenv/getenv/unsetenv instance' commands are not supported with Oracle RAC One Node databases

Cause: The supplied instance command is not supported with an Oracle RAC One Node database.

Action: For an Oracle RAC One Node database, perform srvctl operations using the 'database' noun instead of the 'instance' noun.

PRKO-02137: Option '-node' must not be supplied to convert policy-managed RAC One Node database to RAC database

Cause: Failed to convert database because provided option cannot be used to convert policy-managed Oracle RAC One Node database.

Action: Use the command 'srvctl convert database' without '-node' option.

PRKO-02138: Database {0} is not of RAC One Node database type

Cause: The supplied database was not an Oracle RAC One Node database.

Action: Run the command 'srvctl convert database' with database of type Oracle RAC One Node.

PRKO-02139: Supplied nodes {0} should contain node {1} where database {2} is already running on

Cause: Supplied nodes did not include the node that the database was running on.

Action: Make sure given nodes include the node that the database is running on.

PRKO-02140: Option '-node' must be supplied when adding single instance database

Cause: Option '-node' was not supplied when adding single instance database.

Action: Supply '-node' option and issue command again.

PRKO-02141: Option '-revert' requires option '-abort'

Cause: Command 'srvctl relocate database' with option '-revert' failed because it requires option '-abort' to be provided.

Action: Correct options and issue command again.

PRKO-02142: Cannot start RAC One Node database when an online relocation request for the database is already active

Cause: Unable to start the supplied Oracle RAC One Node database because it already has an active online relocation request.

Action: Specify another database to start.

PRKO-02143: Cannot stop RAC One Node database when an online relocation request for the database is already active

Cause: Unable to stop the supplied Oracle RAC One Node database because it already has an active online relocation request.

Action: Either wait for the online relocation request to complete or specify another database to stop.

PRKO-02144: Option '-server' cannot be used with RAC One Node policy-managed database {0}

Cause: The '-server' option was specified to modify the candidate server list for an Oracle RAC One Node policy-managed database.

Action: Either use the command 'srvctl modify srvpool' to modify the candidate server list or specify '-serverpool' option with the command 'srvctl modify database' to modify the server pool.

PRKO-02145: 'srvctl remove instance' command is not supported with single instance databases

Cause: The single instance database cannot be removed by the 'srvctl remove instance' command.

Action: Run the command 'srvctl remove database'.

PRKO-02147: A 'srvctl add database' command specified the '-server', '-instance' or '-timeout' option for a database that is not Oracle RAC One Node

Cause: A 'srvctl add database' command was issued that included either the '-server', '-instance', or '-timeout' option but did not include a '-dbtype' option specifying that the database being added was Oracle RAC One Node. These options are permitted only for Oracle RAC One Node databases.

Action: Either remove the '-server', '-instance' or '-timeout' option or specify the '-dbtype' option with type Oracle RAC One Node.

PRKO-02148: Option '-node' must be supplied when running 'srvctl relocate database' for administrator-managed RAC One Node or Standard Edition High Availability database

Cause: Option '-node' was not specified when executing relocate on administrator-managed Oracle RAC One Node or Standard Edition High Availability database.

Action: Use the command 'srvctl relocate database' with '-node' option.

PRKO-02149: A 'srvctl modify database' command specified the '-instance' option for a RAC database

Cause: Option '-instance' in "srvctl modify database" command can be used to modify the instance name of a single instance database or instance name prefix of a Oracle RAC One Node database.

Action: Try 'srvctl modify instance' command to modify the instance name of the Oracle RAC database.

PRKO-02156: Instance name {0} is not valid

Cause: The supplied instance name is not the correct format for Oracle RAC One Node database.

Action: Make sure that the instance name is of the format <instance_name_prefix>_1 or <instance_name_prefix>_2. Use the command 'crsctl modify resource' to correct the instance name.

PRKO-02157: Option '-instance' must not specified to convert policy-managed RAC database to RAC One Node database

Cause: Failed to convert database because the provided option can not be used to convert policy-managed Oracle RAC database to an Oracle RAC One Node database.

Action: Use the command 'srvctl convert database' without '-instance' option.

PRKO-02158: Option '-node' must not be specified to convert a RAC database to RAC One Node database

Cause: Failed to convert database because the provided option '-node' should not be supplied to convert an Oracle RAC database to an Oracle RAC One Node database.

Action: Use the command 'srvctl convert database' without '-node' option.

PRKO-02159: Option '-instance' must be specified to convert an administrator-managed RAC database to its equivalent RAC One Node database configuration

Cause: Failed to convert database because the option '-instance' was not specified to convert administrator-managed Oracle RAC database to its equivalent Oracle RAC One Node database configuration.

Action: Use the command 'srvctl convert database' with '-instance' option.

PRKO-02160: Option '-timeout' must not be specified to convert a RAC One Node database to its equivalent RAC database configuration

Cause: Failed to convert database because option '-timeout' was specified to convert an Oracle RAC One Node database to its equivalent Oracle RAC database configuration.

Action: Use the command 'srvctl convert database' without '-timeout' option.

PRKO-02165: VIP does not exist on node(s) : {0}

Cause: VIP was not configured on the nodes.

Action: Add VIP using the command 'srvctl add nodeapps' or 'srvctl add vip' and try this command again.

PRKO-02166: GSD does not exist on node(s): {0}

Cause: GSD was not configured on the nodes

Action: Add GSD using the command 'srvctl add nodeapps' and try this command again.

PRKO-02167: VIP {0} does not exist.

Cause: VIP with the specified name was not configured.

Action: Add VIP using the command 'srvctl add nodeapps' or 'srvctl add vip' and try this command again.

PRKO-02168: Node applications are still running on node:

Cause: Node applications are still running on node when a remove was attempted.

Action: Stop the node applications before removing them or use force flag when attempting removal.

PRKO-02172: Some or all node applications are not removed successfully on node:

Cause: Not all node applications were removed on the node.

Action: Make sure that all resources that depend on node applications are stopped before attempting to remove node applications. Also if force flag was not specified, reissue this command with the force flag specified.

PRKO-02173: Instance {0} is already a preferred instance for service {1}.

Cause: Given instance is already a preferred instance for the service.

Action: Specify an instance other than the preferred instances of this service.

PRKO-02174: Instance {0} is already an available instance for service {1}.

Cause: Given instance is already an available instance for the service.

Action: Specify an instance other than the available instances of this service.

PRKO-02175: Failed to remove service {0} because this is the last service of RAC One Node database {1}

Cause: An attempt was made to remove the last service of an Oracle RAC One Node

Action: Add another service, for example by using the command 'srvctl add service', before removing the given service. Otherwise, if you are trying to deconfigure database, then remove the database directly, for example by using the command 'srvctl remove database'.

PRKO-02176: ONS daemon does not exist on node(s): {0}

Cause: ONS was not configured on the nodes.

Action: Add ONS using the command 'srvctl add nodeapps' and try this command again.

PRKO-02182: eONS daemon does not exist on node(s): {0}

Cause: eONS was not configured on the nodes.

Action: Add eONS using the command 'srvctl add nodeapps' and try this command again.

PRKO-02183: Node applications run on default network only. The netmask given {0} doesn't match default networks netmask {1}

Cause: The netmask given in the modify command doesn't match with default network's netmask.

Action: Modify the default network first using the command 'srvctl modify nodeapps -subnet *options*' and then try modifying the VIP.

PRKO-02184: Node applications run on default network only. The interface given {0} doesn't match default networks interface {1}

Cause: The interface specified in the modify command doesn't match with default network's interface.

Action: Modify the default network's interface using the command 'srvctl modify nodeapps -subnet *options*' and then try modifying the VIP.

PRKO-02185: The new VIP address given is same as the current VIP address

Cause: The VIP address given for modification is same as the current VIP. So there is nothing to modify.

Action: Check the VIP address you want to modify and specify the correct value.

PRKO-02186: The command line parameter host port list should be in the form *host[:port][,host[:port]]...*

Cause: The command line parameter -remoteservers <host_port_list> was not in the format *host[:port][,host[:port]]...* with port being numeric.

Action: Check the input and correct any error and try the command again.

PRKO-02187: The network resource has been modified successfully. VIP and other resources that depend on it might not start up unless they are modified

Cause: When underlying network resource has been modified the VIP should be updated to the new network resource. This is not a error and is just a status message.

Action: Use the command 'srvctl modify nodeapps -address *options*' to update the VIP to the new network.

PRKO-02188: All the node applications already exist. They were not recreated.

Cause: The command 'srvctl add nodeapps' was attempted when all the node applications already existed.

Action: If you want to modify node applications you should use the command 'srvctl modify nodeapps'.

PRKO-02190: VIP exists for node {0}, VIP name {1}

Cause: The VIP being added already exists.

Action: Check the input and if VIP needs to be modified use 'srvctl modify VIP' command.

PRKO-02199: Invalid address string:

Cause: VIP address being passed on the command line is not a valid address string.

Action: Address string should be of the format `{name|ip}/netmask/[if1[[if2...]]]`. Check the usage and correct the address format.

PRKO-02200: Invalid interface specified on command line: {0}

Cause: VIP address specification '-address {name|ip}/netmask/[if1[[if2...]]]' or the network address specification '-subnet subnet/netmask/[if1[[if2...]]]' on the command line contained interfaces names, none of which exist on current node.

Action: Check the interfaces listed in the address string and make sure that they are enabled and are up. Use network interface names on the command line if there is more than one interfaces that connect to the same network.

PRKO-02207: Warning: -{0} option has been deprecated and will be ignored.

Cause: Deprecated option has been used in the command line. The option will be ignored.

Action: Check the documentation for the new syntax of the command.

PRKO-02208: {0} command has been deprecated and will be ignored.

Cause: The command being executed has been deprecated and will not do any action.

Action: Check the documentation for the commands supported by srvctl.

PRKO-02209: {0} command is not supported for configuration using server pool.

Cause: The given command failed because it isn't applicable to instances of policy managed-databases.

Action: Check the documentation on the commands that are applicable to policy-managed databases.

PRKO-02211: ASM listener was not found

Cause: ASM listener does not exist.

Action: Use the command 'srvctl modify asm -listener <lsnr_name>' to set the listener that ASM should register with.

PRKO-02214: Specified server pool {0} cannot be used to host single instance database {1}

Cause: An attempt to create a single instance database failed because the specified server pool had no configured candidate server.

Action: Use the command 'srvctl modify srvpool' with '-servers' option to configure a candidate server for the server pool. Make sure that the candidate server name specified with the '-servers' option matches that of the '-node' option in the command 'srvctl add database'.

PRKO-02215: Specified server pool {0} has more than one candidate server

Cause: An attempt to create a single instance database failed because a server pool with more than one candidate server was specified.

Action: Provide a server pool with only one candidate server when creating a single instance database.

PRKO-02310: VIP does not exist on node {0}.

Cause: VIP was not configured on that node on which modification was attempted.

Action: VIP must be added using the command 'srvctl add nodeapps', before it can be modified.

PRKO-02313: A VIP named {0} does not exist.

Cause: An attempt was made to operate on a VIP with the specified VIP name. No such VIP was configured on the cluster.

Action: Check the status of VIPs using the command 'srvctl status vip'. VIP must be added using the command 'srvctl add vip' before any operation on it.

PRKO-02318: Target instance {0} already supports service {1}.

Cause: Given database instance already provides the given service.

Action: Specify an instance that is not a preferred or available instance for this service.

PRKO-02331: ONS daemon does not exist.

Cause: ONS daemon was not configured on this cluster.

Action: ONS daemon can be configured using the 'srvctl add nodeapps' command.

PRKO-02339: eONS daemon does not exist.

Cause: eONS daemon was not configured on this cluster.

Action: eONS daemon can be configured using the command 'srvctl add nodeapps'.

PRKO-02377: eONS already uses {0} as listening port. Nothing to modify.

Cause: The listening port specified in this command is already in use by eONS.

Action: Check the input and if the listening port needs to be changed then specify a different port.

PRKO-02380: VIP {0} is still running on node: {1}

Cause: VIP to be removed is still running on a node.

Action: Stop the VIP before attempting to remove it or retry the command with force flag.

PRKO-02381: VIP {0} is not removed successfully:

Cause: VIP remove action failed because VIP was running and force flag was not specified or an exception occurred during the removal.

Action: Make sure that any applications, like for example listener, that depend on VIP are down. Try using -force option to remove the VIP. If you use force option to remove VIP then any application that depends on this VIP will stop working. Look at the help message for the accompanying exception.

PRKO-02383: Network {0} is not removed successfully:

Cause: Since there were no VIPs hosted on the network an attempt was made to remove the network and network removal failed.

Action: Make sure that all other applications that depend on default network are stopped. If force flag was not specified then specify force flag and try the command again.

PRKO-02385: The specified hostname or address {0} cannot be resolved.

Cause: An invalid IP address or irresolvable hostname was specified.

Action: If IP address is specified then make sure that it is of legal length. If a host name is specified then make sure that the host name resolves to an IP address.

PRKO-02386: Netmask is missing in address string:

Cause: NETMASK is missing in the VIP address that was passed in the command string.

Action: VIP address is of form <ip_or_name>/netmask[/interface1[[interface2...]]. Specify the netmask.

PRKO-02387: -node <node_name> option has been deprecated.

Cause: '-node <node_name>' option has been deprecated in this release.

Action: Remove the usage of '-node <node_name>' option in the command.

PRKO-02388: Command line option {0} should be followed by a value.

Cause: The value needs to be specified by the command line option.

Action: Look at the usage and of the command and specify an appropriate value.

PRKO-02389: Invalid command line options. Neither -address nor -node can be specified with -subnet.

Cause: Invalid combination of options specified for add/modify node application command. Option '-address' is node-specific and has to be used with '-node' option. '-subnet' option is a global option and it cannot be used with '-address' or '-node' option.

Action: Issue the command using either '-address' and '-node' options together or '-subnet' option without '-address' or '-node' option.

PRKO-02390: -node <node_name> option has been deprecated and is ignored.

Cause: '-node <node_name>' option has been deprecated and is ignored from this release. It has no effect on the command.

Action: Remove the usage of '-node <node_name>' from the command line.

PRKO-02391: Network resource {0},{1} already exists. Nothing to modify

Cause: The subnet specified is already the default subnet.

Action: Check the input and if the subnet needs to be modified then specify a different subnet.

PRKO-02392: eONS already uses {0} as Multicast address. Nothing to modify.

Cause: The Multicast address specified in this command is already in use by eONS.

Action: Check the input and if the Multicast address needs to be changed then specify a different address.

PRKO-02393: eONS already uses {0} as Multicast port. Nothing to modify.

Cause: The Multicast port specified in this command is already in use by eONS.

Action: Check the input and if the Multicast port needs to be changed then specify a different port.

PRKO-02394: ONS already uses {0} as port for local connections. Nothing to modify.

Cause: The modify node applications command failed because the ONS port for local connections is already used by ONS for local connections.

Action: Check the input and if the port used by ONS for local connections need to be modified specify a different address.

PRKO-02395: ONS already uses {0} as port for remote connections. Nothing to modify.

Cause: The modify node applications command failed because the ONS port for remote connections is already used by ONS for remote connections.

Action: Check the input and if the port used by ONS for remote connections need to be modified specify a different address.

PRKO-02396: The list of remote host/port ONS pairs matches the current list : {0}. Nothing to modify.

Cause: The modify node applications command failed because the remote host/port ONS pairs matches the current list.

Action: Check the input and if the remote host/port pairs need to be modified and specify a different host/port list.

PRKO-02405: Network resource does not exist on the cluster nodes.

Cause: Network resource does not exist on the cluster nodes.

Action: Node applications can be added by using the command 'srvctl add nodeapps'.

PRKO-02409: GSD is already disabled on node(s): {0}

Cause: The disable node applications command failed because GSD was already disabled.

Action: None required.

PRKO-02410: VIP is already disabled on node(s): {0}

Cause: The disable node applications command failed because VIP was already disabled.

Action: None required.

PRKO-02411: Network resource is already disabled.

Cause: The disable node applications command failed because Network resource was already disabled.

Action: None required.

PRKO-02412: ONS is already disabled on node(s): {0}

Cause: The disable node applications command failed because ONS was already disabled.

Action: None required.

PRKO-02413: eONS is already disabled on node(s): {0}

Cause: The disable node applications command failed because eONS was already disabled.

Action: None required.

PRKO-02414: GSD is already enabled on node(s): {0}

Cause: The enable node applications command failed because GSD is already enabled.

Action: None required.

PRKO-02415: VIP is already enabled on node(s): {0}

Cause: The enable node applications command failed because VIP is already enabled.

Action: None required.

PRKO-02416: Network resource is already enabled.

Cause: The enable node applications command failed because Network resource is already enabled.

Action: None required.

PRKO-02417: ONS is already enabled on node(s): {0}

Cause: The enable node applications command failed because ONS is already enabled.

Action: None required.

PRKO-02418: eONS is already enabled on node(s): {0}

Cause: The enable node applications command failed because eONS is already enabled.

Action: None required.

PRKO-02419: GSD is already started on node(s): {0}

Cause: The start node applications command failed because GSD is already started.

Action: None required.

PRKO-02420: VIP {0} is already started on nodes: {1}

Cause: The start node applications command failed because VIP was already started.

Action: None required.

PRKO-02421: Network resource is already started on node(s): {0}

Cause: The start node applications command failed because Network resource is already started.

Action: None required.

PRKO-02422: ONS is already started on node(s): {0}

Cause: The start node applications command failed because ONS is already started.

Action: None required.

PRKO-02423: eONS is already started on node(s): {0}

Cause: The start node applications command failed because eONS is already started.

Action: None required.

PRKO-02424: GSD is already stopped on node(s): {0}

Cause: The stop node applications command failed because GSD is already stopped.

Action: None required.

PRKO-02425: VIP is already stopped on node(s): {0}

Cause: The stop node applications command failed because VIP is already stopped.

Action: None required.

PRKO-02426: ONS is already stopped on node(s): {0}

Cause: The stop node applications command failed because ONS is already stopped.

Action: None required.

PRKO-02427: eONS is already stopped on node(s): {0}

Cause: The stop node applications command failed because eONS is already stopped.

Action: None required.

PRKO-02428: VIP is running on the node {0} and cannot be modified.

Cause: Modify nodeapps command failed because VIP being modified is running on a node.

Action: Stop the node application by issuing the command 'srvctl stop nodeapps' and retry the modify again.

PRKO-02429: -node <node_name> should be specified with -address {name|ip}/netmask[/if1[/if2]] for modifying VIP.

Cause: If '-node <node_name>' option is specified then '-address' option must also be specified for modifying VIP.

Action: If you want to modify the VIP then specify both the '-node' and '-address' options. Otherwise remove the '-node <node_name>' option.

PRKO-02430: Missing required '-node' option for 'srvctl modify nodeapps - address' VIP modification.

Cause: '-address *options*' was specified for the 'modify nodeapps' command without specifying which node VIP needs to be modified.

Action: Specify the node whose VIP needs to be modified by using '-node' option.

PRKO-02431: Warning: the -node option is obsolescent; 'srvctl remove vip' is preferred for removing per-node VIP resource

Cause: The command 'srvctl remove nodeapps' was issued with the '-node' option specifying one or more nodes. Support for this option will be removed in a future release, at which time you must use the preferred command 'srvctl remove vip -vip <vip_list>'.

Action: The command is processed normally and attempts to remove VIP resources for the specified node(s). This message is displayed only to alert you to a future change. Use the command 'srvctl remove nodeapps' to remove all node applications from the last node of the cluster.

PRKO-02438: Network resource does not exist.

Cause: Network resource to be started/stopped/modified/enabled/disabled does not exist.

Action: Network resource can be created using the command 'srvctl add nodeapps'.

PRKO-02439: VIP does not exist.

Cause: VIP to be started/stopped/modified/enabled/disabled does not exist.

Action: VIP can be created using the command 'srvctl add nodeapps'.

PRKO-02440: Network resource is already stopped.

Cause: The stop node applications command failed because network resource was already stopped.

Action: None required.

PRKO-02452: ONS already exists

Cause: A new instance of ONS daemon could not be created, as there is an existing instance of ONS.

Action: None required.

PRKO-02453: eONS already exists

Cause: A new instance of eONS daemon could not be created, as there is an existing instance of eONS.

Action: None required.

PRKO-02458: ONS does not exist

Cause: ONS daemon was not configured on this instance of Oracle Restart.

Action: Add ONS daemon using the command 'srvctl add ons' and try this command again.

PRKO-02463: eONS does not exist

Cause: eONS daemon was not configured on this instance of Oracle Restart.

Action: Add eONS daemon using the command 'srvctl add eons' and try this command again.

PRKO-02465: ONS does not exist.

Cause: ONS daemon was not configured on this instance of Oracle Restart.

Action: ONS daemon can be configured using the command 'srvctl add ons'.

PRKO-02466: Both '-address' and '-iptype' options cannot be specified when modifying VIP

Cause: Both '-address' and '-iptype' options were specified in the modify VIP command.

Action: Specify either '-address' or '-iptype' but not both in the modify VIP command.

PRKO-02467: adminhelper does not exist

Cause: adminhelper was not configured on this cluster.

Action: Configure the adminhelper with the 'srvctl add rhpservice' or 'srvctl add rhpcient' command.

PRKO-02468: adminhelper is already started on nodes: {0}

Cause: The adminhelper start command failed because adminhelper is already started.

Action: None required.

PRKO-02469: adminhelper is already stopped on nodes: {0}

Cause: The command to stop adminhelper failed because adminhelper is already stopped.

Action: None required.

PRKO-02470: adminhelper is already enabled on nodes: {0}

Cause: The adminhelper enable command failed because adminhelper is already enabled.

Action: None required.

PRKO-02471: adminhelper is already disabled on nodes: {0}

Cause: The adminhelper disable command failed because adminhelper is already enabled.

Action: None required.

PRKO-02567: eONS daemon does not exist.

Cause: eONS daemon was not configured on this instance of Oracle Restart.

Action: eONS daemon can be configured using the command 'srvctl add eons'.

PRKO-02569: ONS is already started.

Cause: The command 'srvctl start ons' failed because the ONS daemon was already started.

Action: None required.

PRKO-02571: eONS is already started.

Cause: The command 'srvctl start eons' failed because the eONS daemon was already started.

Action: None required.

PRKO-02573: ONS daemon is already stopped.

Cause: The command 'srvctl stop ons' failed because the ONS daemon was already stopped.

Action: None required.

PRKO-02575: eONS daemon is already stopped.

Cause: The command 'srvctl stop eons' failed because the eONS daemon was already stopped.

Action: None required.

PRKO-02576: ONS is already enabled.

Cause: The command 'srvctl enable ons' failed because the ONS was already enabled.

Action: None required.

PRKO-02579: eONS is already enabled.

Cause: The command 'srvctl enable eons' failed because the eONS was already enabled.

Action: None required.

PRKO-02581: ONS is already disabled.

Cause: The command 'srvctl disable ons' failed because the ONS was already disabled.

Action: None required.

PRKO-02583: eONS is already disabled.

Cause: The command 'srvctl disable eons' failed because the eONS was already disabled.

Action: None required.

PRKO-02588: ONS daemon could not be removed because it is still running.

Cause: The command 'srvctl remove ons' failed because ONS daemon was still running.

Action: Stop the ons daemon by using the command 'srvctl stop ons' and then attempt to remove it. You can also use the '-force' option to remove a running ons daemon.

PRKO-02589: eONS daemon could not be removed because it is still running.

Cause: The command 'srvctl remove eons' failed because eONS daemon was still running.

Action: Stop the ons daemon by using the command 'srvctl stop eons' and then attempt to remove it. You can also use the '-force' option to remove a running eons daemon.

PRKO-02590: None of the ONS daemon parameters were modified.

Cause: The configuration of the ONS daemon has remained the same after the 'srvctl modify ons' command.

Action: Make sure that at least one of the optional modification parameters was specified on the command line. The current values of parameters of the ONS daemon can be found by using 'srvctl config ons' command. Specify at least one value different then current value while issuing the 'srvctl modify ons' command.

PRKO-02591: None of the eONS daemon parameters were modified.

Cause: The configuration of the eONS daemon has remained the same after the 'srvctl modify eons' command.

Action: Make sure that at least one of the optional modification parameters was specified on the command line. The current values of parameters of the eONS daemon can be found by using the command 'srvctl config eons'. Specify at least one value different then current value while issuing the command 'srvctl modify eons'.

PRKO-02593: enable of GNS failed.

Cause: Enabling the GNS server failed.

Action: Examine the accompanying exception for details.

PRKO-02595: modify of GNS failed.

Cause: Modification the GNS server failed.

Action: Examine the accompanying exception for details.

PRKO-02597: disable of GNS failed.

Cause: Disabling the GNS server failed.

Action: Examine the accompanying exception for details.

PRKO-02599: relocation of GNS failed.

Cause: Relocation of the GNS server failed.

Action: Examine the accompanying exception for details.

PRKO-02601: removal of GNS failed.

Cause: Removal of the GNS server failed.

Action: Examine the accompanying exception for details.

PRKO-02603: addition of GNS failed.

Cause: The addition of the GNS server failed.

Action: Examine the accompanying exception for details.

PRKO-02604: Add client data operation is not allowed because GNS is configured

Cause: An attempt to add client data failed because the Grid Naming Service (GNS) was configured in this cluster. Client data can only be added on a GNS client cluster or a secondary GNS server cluster.

Action: Remove the GNS configuration and retry the command.

PRKO-02611: GNS VIP does not exist. Specify the {0} option to create one.

Cause: The attempt to add GNS failed because the VIP associated with it does not exist.

Action: Create the VIP.

PRKO-02621: The '-node *node*' option cannot be used to create RAC database {0}

Cause: The '-node' option was supplied to create a single-instance database, along with '-dbtype RAC' requesting a Oracle RAC database.

Action: Specify '-dbtype SINGLE' with '-node *node*' or omit '-node' option and reissue the command.'

PRKO-02700: The CVU resource is not configured

Cause: The CVU resource was not configured on the cluster or an unexpected error occurred while querying Clusterware for the CVU resource.

Action: If the CVU resource was not configured then a new resource can be created using the command 'srvctl add cvu'. If the resource was configured, look at any accompanying error messages.

PRKO-02702: CVU is already disabled

Cause: CVU resource could not be disabled because it is already disabled.

Action: None required.

PRKO-02703: CVU is already enabled

Cause: CVU resource could not be enabled because it is already enabled.

Action: None required.

PRKO-02707: CVU resource must be stopped before removing

Cause: The command 'srvctl remove cvu' was issued while CVU instance was running.

Action: Stop the CVU resource using the command 'srvctl stop cvu' and then try removing.

PRKO-02708: Unable to convert RAC One Node database because it has an active online relocation request

Cause: Failed to convert an Oracle RAC One Node database to an Oracle RAC database because there was an active online relocation request for the database.

Action: Wait for the online relocation request to complete and then run the command 'srvctl convert database'.

PRKO-02709: Unable to convert RAC One Node database because it has a failed online relocation request

Cause: An attempt to convert an Oracle RAC One Node database to an Oracle RAC database failed because there was a failed online relocation request for the database.

Action: Use the command 'srvctl status database' to show the target node of the failed online relocation request process. Run the command 'srvctl relocate database' with either the '-abort' option or with '-node' option with the correct target node. Then run the command 'srvctl convert database'.

PRKO-02710: Option '-node' cannot be used to start RAC database {0}

Cause: The '-node' option was specified to start an Oracle RAC database, but '-node' option is only applicable to an Oracle RAC One Node databases.

Action: Either use the command 'srvctl start instance' to start an Oracle RAC database instance on the given node or use the command 'srvctl start database' without '-node' option to start the Oracle RAC database.

PRKO-02712: Administrator-managed database {0} is not supported with -eval option

Cause: A request with the '-eval' option specified an administrator-managed database.

Action: Specify a policy-managed database when using the '-eval' option.

PRKO-02713: Oracle Restart database {0} is not supported with -eval option

Cause: A request with the '-eval' option specified an oracle restart database.

Action: Specify a policy-managed database when using the '-eval' option.

PRKO-03026: Only one instance can be listed in -instance <inst_name_list> when -node option is specified

Cause: More than one instance was specified for '-instance' option when both '-instance' and '-node' options were used.

Action: Supply one instance name for '-instance' option when using both '-instance' and '-node' option.

PRKO-03031: Server pool {0} already exists

Cause: The command 'srvctl add serverpool' failed because the given server pool already exists.

Action: Make sure that the name of server pool is correct and a server pool with the given name doesn't exist.

PRKO-03032: Invalid instance name(s): {0}

Cause: Some of the supplied instance names do not exist in the database configuration.

Action: Please supply valid instance names and retry.

PRKO-03077: Failed to remove database {0}:

Cause: Failed to remove the database.

Action: Examine the accompanying message(s) for details of the error, and respond accordingly.

PRKO-03081: No such environment variable setting: {0}

Cause: The environment variable(s) does not exist for the specified resource.

Action: Supply a valid environment variable.

PRKO-03085: Volume device: {0}

Cause: Volume device label

Action: None

PRKO-03086: Mountpoint path: {0}

Cause: Mountpoint path label

Action: None

PRKO-03087: User: {0}

Cause: User label

Action: None

PRKO-03113: Administrator-managed database {1} can not support policy-managed service {0}.

Cause: The specified database does not support policy-managed services.

Action: Provide a database which supports policy-managed services.

PRKO-03114: Policy-managed database {1} can not support administrator-managed service {0}.

Cause: The specified database does not support administrator-managed services.

Action: Provide a database which supports administrator-managed services.

PRKO-03115: -tafpolicy option cannot be used with policy-managed service {0}.

Cause: The '-tafpolicy' option was specified for a policy-managed service.

Action: Use the '-failovermethod' option to specify failover processing for a policy-managed service.

PRKO-03116: Either '-serverpool', '-preferred', or '-cardinality' option must be provided.

Cause: An add service command was issued without the '-serverpool', '-preferred', or '-cardinality' option.

Action: Reissue the command with either the '-serverpool', '-preferred', or '-cardinality' option.

PRKO-03117: Service {0} already exists in database {1}

Cause: The service being added already exists.

Action: If the service needs to be modified use the command 'srvctl modify service'.

PRKO-03118: Failed to check if service {0} exists: {1}

Cause: Failed to get the service data.

Action: Make sure that Oracle Clusterware is active.

PRKO-03119: Database {0} cannot be started since it has no configured instances.

Cause: The specified database is an administrator-managed database and it cannot be started because no instances were configured.

Action: Use the command 'srvctl add instance' to configure the instance and then retry.

PRKO-03120: Database {0} cannot be stopped since it has no configured instances.

Cause: The specified database is an administrator-managed database and it could not be stopped because no instances were configured.

Action: Use the command 'srvctl add instance' to configure the instance and then retry.

PRKO-03121: -instance option or -node option is required for starting an instance on the administrator-managed database {0}.

Cause: The specified database is an administrator-managed database and the `srvctl start instance` command requires the instance name or nodename to be specified.

Action: Use the command `srvctl start instance` with either the `-instance` or `-node` option to start the instance.

PRKO-03122: -instance option or -node option is required for stopping an instance of database {0}

Cause: Neither the instance name nor the nodename was provided during the command `srvctl stop instance` invocation.

Action: Use the command `srvctl stop instance` with either the `-instance` or `-node` option to specify which instance to stop.

PRKO-03125: Invalid value {0} for command line option {1}

Cause: Invalid value was specified for the command line option.

Action: Check the value printed and specify the correct value.

PRKO-03126: Invalid GNS logging level: "{0}"

Cause: The level of logging specified was not a positive integer.

Action: Specify a positive integer.

PRKO-03128: Unable to add database because the resource for diskgroup {0} could not be found. {1}

Cause: The resource for the specified disk group could not be found. Either the diskgroup name was misspelled or the diskgroup has not been mounted.

Action: Correct the diskgroup spelling or use `sqlplus` to create the diskgroup.

PRKO-03129: Unable to modify database because the resource for diskgroup {0} could not be found. {1}

Cause: The resource for the specified disk group could not be found. Either the diskgroup name was misspelled or the diskgroup has not been mounted.

Action: Correct the diskgroup spelling or use `sqlplus` to create the diskgroup.

PRKO-03130: Server pool {0} is internally managed as part of administrator-managed database configuration and therefore cannot be modified directly via srvpool object.

Cause: An attempt was made to alter configuration of an internally managed server pool that is hosting an administrator-managed configuration.

Action: Do not modify this server pool via `srvpool` object directly. Instead use the command `srvctl add/remove instance` or use the command `srvctl modify database/service` to alter this server pool's configuration.

PRKO-03132: -instance option or -node option is required for checking the status of an instance of database {0}

Cause: Neither the instance name nor the nodename was provided during `srvctl status instance` command invocation.

Action: Use the command `srvctl status instance` with either the `-instance` or `-node` option to check the status of the instance.

PRKO-03133: Database {0} has no instance on node {1}

Cause: The indicated database did not have an instance configured on the indicated node.

Action: Either the command 'srvctl add instance' or the command 'srvctl modify instance' can be used to change instance-node mapping in administrator-managed databases. For a policy-managed database, either use the command 'srvctl start instance' with the '-node' option to start the instance on the specified node or use the command 'srvctl modify instance' to configure an instance for that node.

PRKO-03134: -node option cannot be specified with -nonode option

Cause: '-node' and '-nonode' options were both provided during 'srvctl modify instance' command invocation.

Action: Use the command 'srvctl modify instance' with either the '-node' or '-nonode' option to modify the node instance mapping of the database instance.

PRKO-03135: -node option cannot be empty when used with administrator-managed database {0}

Cause: The '-node' option was specified as an empty string in an attempt to remove node to instance mapping of administrator-managed database.

Action: Use the command 'srvctl remove instance' to remove node instance mapping of an administrator-managed database.

PRKO-03136: Option '-cardinality' cannot be used with administrator-managed service {0}

Cause: The '-cardinality' option was specified for administrator-managed service.

Action: Reissue the command without the '-cardinality' option.

PRKO-03138: Node {0} does not belong to server pool {1} which defines nodes for service {2}

Cause: Node doesn't belong to the server pool which defines nodes which can be used to run the specified service.

Action: Supply a node which belongs to specified server pool.

PRKO-03139: Options '-oldinst' and '-newinst' cannot be used with policy-managed service {0}

Cause: The '-oldinst' and '-newinst' options were specified to relocate a policy-managed service.

Action: Use options '-currentnode' and '-targetnode' to relocate a policy-managed service.

PRKO-03140: Options '-currentnode' and '-targetnode' cannot be used with administrator-managed service {0}

Cause: The '-currentnode' and '-targetnode' options were specified to relocate an administrator-managed service.

Action: Use options '-oldinst' and '-newinst' to relocate a administrator-managed service.

PRKO-03141: Database {0} could not be removed because it was running

Cause: The command 'srvctl remove database' failed because the database was running.

Action: Stop the database by using the command 'srvctl stop database' and then attempt to remove it. You can also use the '-force' option to remove the running database.

PRKO-03142: Option '-instance' cannot be used to enable or disable services for policy-managed database {0}

Cause: An attempt to enable or disable a policy-managed database service specified the '-instance' option.

Action: Use the '-node *node*' option to specify nodes on which to enable or disable services for this policy-managed database.

PRKO-03143: Options '-preferred', '-toprefer', '-modifyconfig' and '-available' were specified to modify policy-managed service {0}

Cause: Options '-preferred', '-toprefer', '-modifyconfig' and '-available' can be used to modify administrator-managed service only.

Action: Make sure that the service you are going to modify is an administrator-managed service.

PRKO-03144: Missing option '-modifyconfig' or '-preferred' was required by supplying '-available'.

Cause: An attempt to modify a resource configuration was rejected because option '-available' was specified without options '-modifyconfig' or '-preferred'.

Action: Retry the command ensuring that the -modifyconfig or -preferred option is provided when the -available option is specified.

PRKO-03145: Option '-preferred' requires '-modifyconfig' option to be specified

Cause: Option '-preferred' was specified without required '-modifyconfig' option.

Action: Make sure that required option is provided according to the command 'srvctl modify service' syntax.

PRKO-03146: Missing required '-preferred' option

Cause: Options '-available' or '-modifyconfig' were specified without required option '-preferred'.

Action: Make sure that required option is provided according to command 'srvctl modify service' syntax.

PRKO-03147: Instance {0} cannot be removed because it is the only preferred instance for service(s) {1} for database {2}

Cause: An attempt was made to remove the instance which is the only preferred instance for specified services.

Action: Make sure that specified services have more than one preferred instance or modify services to not have the instance as a preferred instance.

PRKO-03148: Instance {0} does not support service {1}.

Cause: The given database instance is not defined as a preferred or available instance for the given service.

Action: Specify an instance that is defined as preferred or available instance for the given service.

PRKO-03149: The candidate server {0} of server pool {1} is different from the server {2} specified with the '-node' option

Cause: Specified server must be the candidate server of the specified server pool.

Action: Make sure that the server specified with '-node' option is the same as the candidate server of the given server pool.

PRKO-03150: The server pools {0} specified with the '-serverpool' cannot be used to add an administrator-managed database

Cause: A request to add an administrator-managed database specified the '-serverpool' option.

Action: Use the command 'srvctl add database' without the '-serverpool' option to add an administrator-managed database.

PRKO-03151: Option '-serverpool' cannot have more than one specified server pool when converting an administrator-managed database to a policy-managed database

Cause: An attempt was made to convert an administrator-managed database to a policy-managed database by specifying more than one server pool.

Action: Make sure to specify only one server pool with the '-serverpool' option when converting an administrator-managed database to a policy-managed database.

PRKO-03152: The server pools {0} specified with the '-serverpool' option are subpools of Generic and therefore cannot be used to modify the server pool value of a policy-managed database

Cause: The supplied server pools are meant for managing administrator-managed databases because they are subpools of Generic.

Action: Make sure that none of the supplied server pools are meant for managing administrator-managed database. Only supply server pools meant for managing policy-managed databases to the '-serverpool' option of the command 'srvctl modify database'. Use the command 'srvctl config srvpool' to list the qualified server pools meant for managing policy managed databases.

PRKO-03153: -instance option or -node option is required for starting an instance on the policy-managed database {0}.

Cause: The specified database is a policy-managed database and the command 'srvctl start instance' requires the instance name or nodename to be specified.

Action: Use the command 'srvctl start instance' with either the '-instance' or '-node' option or both '-instance' and '-node' options to start the instance.

PRKO-03154: Both -instance and -node options are specified for starting an instance on the administrator-managed database {0}.

Cause: The specified database is an administrator-managed database and the command 'srvctl start instance' requires either the instance name or nodename to be specified but not both.

Action: Use the command 'srvctl start instance' with either the '-instance' or '-node' option to start the instance.

PRKO-03155: Can not start the instance {0} on the specified node {1} because the node is assigned to another user configured instance {2}

Cause: The database specified on the command 'srvctl start instance' was policy managed and had another instance already configured on the node name specified with the '-node' option.

Action: Either reformulate the command 'srvctl start instance' so that there is no conflict with configured instances' nodes, or use the command 'srvctl modify instance' to change configured instances' nodes.

PRKO-03160: Server pool {0} is internally managed as part of administrator-managed database configuration and therefore cannot be queried directly via srvpool object.

Cause: An attempt was made to query configuration of an internally managed server pool that is hosting an administrator-managed configuration.

Action: Do not query this server pool via srvpool object directly. Instead use srvctl config/status database/service command to query servers that are part of this pool's configuration.

PRKO-03161: Server pool {0} is internally managed as part of administrator-managed database configuration and therefore cannot be removed directly via srvpool object.

Cause: An attempt was made to remove configuration of an internally managed server pool that is hosting an administrator-managed configuration.

Action: Do not remove this server pool via srvpool object directly. Instead use the command 'srvctl remove service/database' to remove this server pool and any service/database hosted by the server pool.

PRKO-03162: The actions setenv, getenv, and unsetenv are not supported for Single Client Access Name listener {0}

Cause: Failed to use the command 'srvctl setenv, getenv, and unsetenv listener' for specified Single Client Access Name Listener. The environment variables for Single Client Access Name Listener cannot be changed.

Action: Do not set, get, and unset environment variables for Single Client Access Name Listener.

PRKO-03163: Options '-update', '-preferred', '-available', '-serverpool' and '-cardinality' cannot be used to add service {0} for single instance database {1}

Cause: Failed to add specified service because provided options can not be used to add a service for single instance database.

Action: use the command 'srvctl add service' without options '-update', '-preferred', '-available', '-serverpool' or '-cardinality'.

PRKO-03164: Options '-toprefer', '-force', '-modifyconfig', '-instance', '-edition', '-available', '-cardinality' and '-dtp' cannot be used to modify service {0} for single instance database {1}

Cause: Failed to modify specified service because provided options can not be used to modify a service for single instance database.

Action: Use the command 'srvctl modify service' without options '-toprefer', '-force', '-modifyconfig', '-instance', '-edition', '-available', '-cardinality' or '-dtp'.

PRKO-03165: Service {0} is defined for single instance database {1} and therefore cannot be relocated

Cause: Failed to relocate specified service because provided options can not be used to relocate a service for single instance database.

Action: Make sure that you issue the command 'srvctl relocate service' for the service which is not defined for a single instance database.

PRKO-03166: Invalid GNS parameter: "{0}"

Cause: An invalid parameter value was specified.

Action: A parameter value must have the following format: *name:value*. The name may not contain a colon (":"). The value may not contain a comma (",").

PRKO-03167: EONS has been deprecated and ONS should be used to set and modify the local port for Enterprise Manager.

Cause: The command being executed has been deprecated and will not do any action.

Action: Use the command 'srvctl -help' for online help or check the documentation for the commands supported by srvctl.

PRKO-03174: 'srvctl relocate service' command is not supported on RAC One Node database service {0}

Cause: An attempt was made to relocate a Oracle RAC One Node database service using the command 'srvctl relocate service'.

Action: Use the command 'srvctl relocate database' to relocate the RAC One Node database and its services to the target server.

PRKO-03175: TAF policy 'PRECONNECT' cannot be used to add a service for single instance database {0}

Cause: Failed to add specified service because provided TAF specification can not be used with a single instance database.

Action: Use the command 'srvctl add service' without 'PRECONNECT' TAF policy.

PRKO-03176: Option '-serverpool' cannot be used with administrator-managed service {0}

Cause: An attempt to change the server pool of service was rejected because the '-serverpool' option cannot be used with administrator-managed service.

Action: Change the preferred and available instances of the service via the command 'srvctl modify service' to manage placement of administrator-managed service.

PRKO-03226: Upgrade from version {0} to version {1} using 'srvctl upgrade model' command of version {2} is not supported

Cause: The command 'srvctl upgrade model' was issued for a version change that is other than an increase in patch set level.

Action: Check that the versions provided are correct.

PRKO-03229: Option '-instance' cannot be used to enable or disable services {0} for single instance database {1}

Cause: Failed to enable/disable specified service because its database is a single instance database.

Action: Make sure that you issue the command 'srvctl enable/disable service' without option '-instance'.

PRKO-03241: The '-oraclehome <oracle_home>' option value "{0}" corresponds to a pathname that does not exist or is not a directory

Cause: The '-oraclehome <oracle_home>' option value did not resolve to an existing directory pathname.

Action: Ensure that the '-oraclehome <oracle_home>' option value corresponds to an existing directory pathname.

PRKO-03242: The '-statfile <state_file>' option value "{0}" is a directory

Cause: The '-statfile <state_file>' option value resolved to an existing directory pathname instead of a file pathname.

Action: Ensure that the '-statfile <state_file>' option value corresponds to file.

PRKO-03243: The '-statfile <state_file>' option value "{0}" is a file under a non-writable directory

Cause: The '-statfile <state_file>' option value resolved to a non-writable pathname.

Action: Ensure that the state file parent directory has write permissions.

PRKO-03244: The '-statfile <state_file>' option value "{0}" already exists

Cause: The '-statfile <state_file>' option value resolved to an existing file pathname.

Action: Ensure that the '-statfile <state_file>' option value corresponds to a non-existing file pathname.

PRKO-03245: Cannot determine the canonical path to the state file "{0}"

Cause: The '-statfile <state_file>' option value specified a pathname for which the canonical path cannot be retrieved.

Action: Provide the absolute pathname for '-statfile <state_file>' option value.

PRKO-03246: The '-statfile <state_file>' option value "{0}" does not exist or cannot be read

Cause: The '-statfile <state_file>' option value mapped to a non-existing or non-readable file pathname.

Action: Ensure that the '-statfile <state_file>' option value corresponds to an existing readable file pathname.

PRKO-03249: Failed to add service {0} with PRECONNECT TAF policy because PRECONNECT TAF policy requires at least one available instance

Cause: An attempt to add a service with the PRECONNECT TAF policy was rejected because an available instance was not specified.

Action: Specify at least one available instance with the '-available' option using the command 'srvctl add service' if the service TAF policy is to be PRECONNECT.

PRKO-03250: Failed to stop VIPs on node {0} because no VIP was running on the given node

Cause: An attempt to stop VIPs on a given node was rejected because VIP was not running on the given node.

Action: Check the status of VIPs running on the given node using the command 'srvctl status vip' and issue the command 'srvctl stop vip' only if there are VIPs running on the given node.

PRKO-03251: Failed to relocate as relocation is not supported in Oracle Restart mode

Cause: An attempt to relocate failed because relocation was not supported in Oracle Restart.

Action: Ensure you are in a cluster environment to relocate managed entities.

PRKO-03252: Failed to convert as convert action is not supported in Oracle Restart Mode

Cause: An attempt to convert failed because conversion is not supported in Oracle Restart.

Action: Ensure you are in a cluster environment to convert managed entities.

PRKO-03253: An attempt to modify the OC4J port failed because OC4J is running. Use -force to force stop/restart of OC4J.

Cause: A request to modify the port number of OC4J was rejected because such modification requires OC4J to be stopped and restarted.

Action: Use '-force' option to force restart of OC4J.

PRKO-03268: Unable to add ASM because the resource for diskgroup {0} could not be found. {1}

Cause: An attempt to add ASM has failed because the specified disk group could not be found. Either the diskgroup name was misspelled or the diskgroup has not been mounted.

Action: Correct the diskgroup spelling or use sqlplus to create the diskgroup.

PRKO-03269: Unable to modify ASM because the resource for diskgroup {0} could not be found. {1}

Cause: An attempt to add ASM has failed because the specified disk group could not be found. Either the diskgroup name was misspelled or the diskgroup has not been mounted.

Action: Correct the diskgroup spelling or use sqlplus to create the diskgroup.

PRKO-03270: The specified password file {0} does not conform to an ASM path syntax

Cause: When adding or modifying a database or an ASM, a password file that was not ASM syntax was supplied.

Action: Specify a password file in ASM syntax.

PRKO-03285: Leaf listener was not found

Cause: No leaf listener was found registered during the operation.

Action: Resolve the issue reported by the included error message and then retry the command. If the leaf listener does not exist, use 'srvctl add listener -leaflistener' to register it.

PRKO-03287: Cluster ASM listener was not found

Cause: Check the reported message, cluster ASM listener may not exist.

Action: Use the command 'srvctl add listener -asmlistener' to register the ASM listener.

PRKO-03303: Option '-eval' cannot be used to evaluate effects of modifications on administrator-managed service {0}

Cause: The '-eval' option can be used to evaluate modification on policy-managed service only.

Action: Make sure that the service you are going to evaluate modification is a policy-managed service.

PRKO-03304: Option '-eval' cannot be used to evaluate effects of relocation of administrator-managed service {0}

Cause: The '-eval' option can be used to evaluate relocation of policy-managed service only.

Action: Make sure that the service you are going to evaluate relocation is a policy-managed service.

PRKO-03305: Option '-eval' cannot be used without '-service' option

Cause: The '-eval' option can be used to evaluate only for one service.

Action: Supply a valid '-service' argument.

PRKO-03346: Unable to export instance: GNS is running

Cause: The command 'srvctl export gns' request was issued while Grid Naming Service (GNS) was running.

Action: Stop GNS by using the command 'srvctl stop gns' and reissue the request.

PRKO-03347: Unable to import instance: GNS is running

Cause: The command 'srvctl import gns' request was issued while Grid Naming Service (GNS) was running.

Action: Stop GNS by using the 'srvctl stop gns' and reissue the request.

PRKO-03350: '-node' option conflicts with multiple instance names {0} specified for '-instance <instance_list>'

Cause: Conflicting options were specified on a 'srvctl start service' or 'srvctl stop service' command. Can't start or stop multiple instances on one node.

Action: Reissue the command for one instance or without '-node' option.

PRKO-03351: Failed to add GNS with -client option because this cluster running as a GNS server

Cause: The command 'srvctl add gns -client *filename*' request was issued on the cluster where the GNS server is running.

Action: Remove GNS by using the command 'srvctl remove gns' and reissue the request.

PRKO-09059: Invalid command line options for listener. '-all' cannot be specified with '-listener'.

Cause: Invalid combination of options specified for listener command.

Action: Issue the command using either '-listener <listener_name>' or '-all' option.

PRKO-09063: Single Client Access Name must start with a letter unless it is an IP address

Cause: A SCAN was supplied which did not begin with a letter, however SCAN names must begin with a letter.

Action: Supply a SCAN name that begins with a letter.

PRKO-09066: Invalid upgrade phase "{0}" for upgrade model command

Cause: An invalid value was specified for upgrade phase.

Action: Upgrade phase must be either 'first' or 'last'.

PRKO-09067: Invalid network server type "{0}"

Cause: An invalid value was specified for network server type.

Action: Reissue the command specifying a network server type of 'static', 'mixed', 'dhcp', or 'autoconfig'.

PRKO-09068: Invalid port number {0}

Cause: A supplied port number was not in the valid, non-privileged range 1024-65535.

Action: Specify a port number that is bigger than 1023.

PRKO-09070: Invalid address type "{0}"

Cause: An invalid address type was specified for network or the VIP resource.

Action: The address type must be either 'IPv4' or 'IPv6'.

PRKO-09071: The specified network server type "{0}" is invalid for an "IPv4" network

Cause: An invalid value was specified for network server type.

Action: Network server type must be 'static' or 'dhcp' or 'mixed'.

PRKO-09072: The specified network server type "{0}" is invalid for an "IPv6" network

Cause: An invalid value was specified for network server type.

Action: Network server type must be 'static' or 'autoconfig' or 'mixed'.

PRKO-09082: Oracle Home is not set

Cause: Command failed to execute because Oracle Home was not set.

Action: Set the ORACLE_HOME environment variable to the Grid Infrastructure home directory path and retry.

PRKO-09083: Invalid content in file: {0}

Cause: An attempt to import a GNS instance failed because the supplied import file contains invalid content.

Action: Provide a correct import file as generated by using the command 'srvctl export gns'.

PRKO-09084: Invalid GNS version found in import file: {0}

Cause: An attempt to import a GNS instance failed because an invalid GNS version was found in import file.

Action: GNS import is supported on 12.1.0.0.0 or later.

PRKO-09085: Invalid key name in import file: {0}

Cause: An attempt to import a GNS instance failed because an OCR key other than GNS was found in the supplied import file.

Action: Provide a correct import file as generated by using the 'srvctl export gns'.

PRKO-09086: Failed to import GNS instance from file: {0}

Cause: An attempt to import a GNS instance failed due to an internal error.

Action: Contact Oracle Support Services.

PRKO-09087: Failed to export GNS instance to file: {0}.

Cause: An attempt to export a GNS instance was failed due to an internal error.

Action: Contact Oracle Support Services.

PRKO-09088: Invalid command options; either {0} must be supplied or both {1} and {2} must be supplied

Cause: Incomplete or conflicting command line options were supplied.

Action: Check the command line options entered and make sure that all the mandatory options in one set are specified.

PRKP-01000 to PRKP-01088

PRKP-01000: Cannot retrieve configuration for cluster database {0}

Cause: The cluster database configuration could not be retrieved from the repository. This could occur either because the database was never registered, or because the repository itself had not been created.

Action: Check if the database has been configured by printing a list of all cluster databases using 'srvctl config'. If the repository has not been created, use 'srvconfig -init' to create it.

PRKP-01001: Error starting database instance {0} on node {1}

Cause: The instance could not be started using the SQL*Plus startup command.

Action: Try starting the named instance manually using SQL*Plus to see why it failed and examine the database instance alert log.

PRKP-01002: Error stopping database instance {0} on node {1}

Cause: The SQL*Plus shutdown command returned an error while stopping the instance.

Action: Try stopping the named instance manually using SQL*Plus to see why it failed and examine the database instance alert log.

PRKP-01003: Startup operation partially failed

Cause: Some components of the cluster database could not be started.

Action: Check the accompanying error messages for details.

PRKP-01004: Shutdown operation partially failed

Cause: Some components of the cluster database reported errors while being stopped.

Action: Check the accompanying error messages for details.

PRKP-01005: Failed to start up cluster database {0}

Cause: The cluster database could not be started.

Action: Check the accompanying error messages for details.

PRKP-01006: Failed to shut down cluster database {0}

Cause: The cluster database reported errors while being shut down.

Action: Check the accompanying error messages for details.

PRKP-01007: Failed to start all the listeners associated with all the instances of cluster database {0}

Cause: Internal error.

Action: Contact your customer support representative.

PRKP-01008: Failed to start listeners associated with instance {0} on node {1}

Cause: Internal error.

Action: Contact your customer support representative.

PRKP-01009: Failed to stop all the listeners associated with all the instances of cluster database {0}

Cause: Either the listener name associated with an instance could not be determined, or 'lsnrctl stop' failed for a listener.

Action: Verify that listener.ora contains a SID_LIST entry for each instance of the named database, and that the 'lsnrctl stop' command succeeds for those listeners.

PRKP-01010: Failed to stop all the listeners associated with instance {0} on node {1}

Cause: Either the listener name associated with an instance could not be determined, or 'lsnrctl stop' failed for a listener.

Action: Verify that listener.ora contains a SID_LIST entry for each instance of the named database, and that the 'lsnrctl stop' command succeeds for those listeners.

PRKP-01011: Failed to get all the listeners associated with instance {0} on node {1}

Cause: The listener name associated with an instance could not be determined.

Action: Ensure that listener.ora contains a SID_LIST entry for the named instance.

PRKP-01012: Invalid environment variable {0} setting for cluster database {1}

Cause: The argument to the -t option was not of the form *name=value* or it contained special characters.

Action: Ensure that the -t option has an argument of the form *name=value*. Enclose the argument to the -t flag in quotes.

PRKP-01013: {0}: undefined environment variable for cluster database {1}

Cause: The named environment variable is not defined for the named cluster database

Action: Set a value for the variable with 'srvctl setenv'.

PRKP-01014: {0}: undefined environment variable for instance {1} of cluster database {2}

Cause: The named environment variable is not defined for the given instance

Action: Set a value for the variable with 'srvctl setenv'.

PRKP-01015: {0}: undefined environment variable

Cause: The named environment variable is not defined

Action: Set a value for the named environment variable with 'srvctl setenv'.

PRKP-01084: Database "{0}" cannot have more than "{1}" services

Cause: Attempt to add a new service to database was rejected because database has already reached the maximum services limit.

Action: Retry after removing a service of this database via 'srvctl remove service' command, or contact Oracle Support Services.

PRKP-01088: Failed to retrieve configuration of cluster database {0}

Cause: Attempt to retrieve configuration of cluster database failed. This failure is most likely due to user incorrectly using a tool, such as SRVCTL, that is of different version than that of database's configuration.

Action: If error is due to user using SRVCTL that is of different version than than of the database's, then run SRVCTL tool from the ORACLE_HOME reported in the error message. Otherwise, contact Oracle support services.

PRKR-01001 to PRKR-01083

PRKR-01001: cluster database {0} does not exist

Cause: The cluster database was never registered in the repository.

Action: Check if the database has been configured by printing a list of all cluster databases using 'srvctl config'.

PRKR-01002: cluster database {0} already exists

Cause: An attempt was made to register a cluster database which already existed in the repository.

Action: Check if the database has already been configured by printing a list of all cluster databases using 'srvctl config'.

PRKR-01003: instance {0} does not exist

Cause: The named instance was never registered in the repository.

Action: Use 'srvctl config instance' to check if the instance is registered in the repository.

PRKR-01005: adding of cluster database {0} configuration failed, {1}

Cause: Internal error.

Action: Contact your customer support representative.

PRKR-01006: deleting of cluster database {0} configuration failed, {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01007: getting of cluster database {0} configuration failed, {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01008: adding of instance {0} on node {1} to cluster database {2} failed.

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01009: deleting of instance {0} from cluster database {1} failed, {2}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01010: moving of instance {0} to node {1} of cluster database {2} failed.

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01011: renaming of instance {0} to instance {1} of cluster database {2} failed, {3}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01012: error {0} while serializing configuration of cluster database {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01013: error {0} while deserializing configuration of cluster database {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01014: error {0} while serializing directory

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01015: error {0} while deserializing directory

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01016: reading of cluster database {0} configuration failed, {1}, {2}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01017: writing of cluster database {0} configuration failed, {1}, {2}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01018: reading of directory failed, {0}, {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01019: writing of directory failed, {0}, {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01020: reading of version information failed, {0}, {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01021: writing of version information failed, {0}, {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01022: Cluster registry {0} contains incompatible version, {1} != {2}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01023: file {0} does not exist

Cause: The named file did not exist.

Action: Specify a file that exists.

PRKR-01024: file {0} does not have {1} permissions

Cause: The named file did not have the specified permission.

Action: Try changing the permission on the file to the specified permission.

PRKR-01025: file {0} does not contain property {1}

Cause: The file did not contain the specified property.

Action: Contact Oracle Support Services.

PRKR-01026: property {0} not set in file {1}

Cause: The file did not contain the specified property.

Action: Contact Oracle Support Services.

PRKR-01027: failed to retrieve list of cluster databases

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01028: Cluster registry {0} is invalid\n[HINT: initialize cluster registry by using "srvconfig" tool]

Cause: The management repository was never initialized.

Action: Use 'srvconfig -init' to initialize the repository.

PRKR-01039: invalid option {0} specified

Cause: The specified option was invalid.

Action: Check the command documentation or the inline help display for usage details.

PRKR-01040: missing *file* argument for {0} option

Cause: The specified option was invalid for srvconfig.

Action: Check the command documentation or the inline help display for usage details.

PRKR-01050: file {0} creation in {1} directory failed

Cause: Either the directory did not exist or it did not have the required permissions.

Action: Create the directory if it did not exist or change the permission of the directory.

PRKR-01051: file {0} does not contain an entry for dbname {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01052: file name {0} is not of *cluster database name.conf* form

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01053: invalid range {0} specified in node_list = {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01054: invalid parameter {0} specified in inst_oracle_sid = {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01055: invalid extra arguments {0} specified to {1} option

Cause: Provided invalid arguments to srvconfig.

Action: Check the command documentation or the inline help display for usage details.

PRKR-01056: invalid registry entry {0} found; should be of form {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRKR-01057: environment variable does not exist

Cause: Attempted to retrieve non existing environment variable.

Action: Set the environment variable.

PRKR-01078: Database {0} of version {1} cannot be administered using current version of srvctl. Instead run srvctl from {2}

Cause: An attempt was made to access configuration of database using srvctl that was of different version than that of the database.

Action: Perform the operation using srvctl from the ORACLE_HOME mentioned in the error message.

PRKR-01082: Failed to get OCR locations

Cause: An error occurred while attempting to retrieve the OCR locations, possibly due to missing or incorrect OCR locations file, or incomplete OCR configuration, or due to missing or incorrect SRVM shared libraries.

Action: Verify that the Clusterware has been correctly installed and configured. Verify that the ocr.loc file is present and readable in the appropriate location for your platform.

PRKR-01083: failed to get OCR backup location \n{0}

Cause: An error occurred while attempting to retrieve the OCR backup location, possibly because of a missing or incorrect OCR backup location file, incomplete OCR configuration, or missing or incorrect SRVM shared libraries.

Action: Verify that the Clusterware has been correctly installed and configured. Verify that the ocr.loc file is present and readable in the appropriate location for the current platform.

PRKU-01001 to PRKU-01070

PRKU-01001: Unexpected argument {0}.

Cause: The command line argument reported in above error message is not expected the by tool

Action: Refer to the tool's inline help display or to the product documentation of the command line tool for valid options and arguments, and then rerun the tool.

PRKU-01002: The option {0} is required.

Cause: The command line option reported by the above error message is a mandatory option required by the tool

Action: Review the tool's inline help display or to the product documentation of the command line tool for type of value required for this option. And then rerun the command specifying the above option in command line options.

PRKU-01003: The parameter {0} requires an argument.

Cause: The command line parameter reported in error message needs a value.

Action: Review the tool's inline help display or to the product documentation of the command line tool for type of value required for this option. And then rerun the command specifying the above option in command line options.

PRKU-01015: Oracle Clusterware is not properly stopped and de-configured on node "{0}". The files "{1}" exist as configured.

Cause: The files `init.ohasd`, or `ocr.loc` and/or directory `scls_scr` still exists on this node which makes the tool believe that the clusterware stack is not shutdown properly

Action: Run the Oracle clusterware deconfiguration utility to completely cleanup the configuration. The Clusterware deconfiguration tool is available in Oracle clusterware home and also on Oracle OTN (Technology Network) page.

PRKU-01016: Failed to stop Oracle Clusterware on nodes "{0}". Run the command "{1}" after fixing the problem.

Cause: The clusterware deconfiguration tool has failed to stop Oracle clusterware stack. The reason for failure can be found browsing through clusterware alert logs found in `log/hostname/alerthostname.log` directory under Oracle clusterware.

Action: You should browse through daemon logs in `log/hostname` under Oracle clusterware home and manually correct the problem to stop clusterware stack. And then rerun the command specified in above error message.

PRKU-01018: Run the following command as the root user on node "{0}".

Cause: The clusterware deconfiguration that is run as non-root user cannot automatically run the command specified in above message.

Action: You should login to another session as a privileged user and run the command specified in above message

PRKU-01019: Run the following command as administrator.

Cause: The clusterware deconfiguration which is run as non-root user cannot automatically run the command specified in above message.

Action: You should login to another session as a privileged user and run the command specified in above message

PRKU-01021: As the privileged user, Execute "{0}" on every node in this cluster except for this node, and then execute "{1}" on this node to remove the configuration of the Oracle Clusterware and to completely remove the Oracle software

Cause: This is the message reported by Oracle clusterware deconfiguration tool when it is run in non-interactive (or silent) mode.

Action: Execute the identified scripts as described. Deconfiguring Oracle Clusterware in silent mode requires one set of operations on all nodes but the last followed by a special set of operations on the last node.

PRKU-01023: Oracle Clusterware is not stopped and de-configured on node "{0}" due to error "{1}"

Cause: The tool failed to deconfigure Oracle clusterware stack on the node because of errors reported in the above message

Action: You should review the error messages reported in above message to perform corrective actions and then rerun the tool

PRKU-01024: The stopping and de-configuring of Oracle Clusterware failed on some nodes. Fix the problem and rerun this tool to completely remove the Oracle Clusterware configuration and the software

Cause: This is a message reported by the tool to inform you that the Oracle clusterware deconfiguration did not happen on some of the nodes in the cluster.

Action: You should review the error messages reported by the tool for failing to deconfigure clusterware stack on each node, perform corrective actions after reviewing the error messages, and rerun the tool to completely deconfigure Oracle clusterware stack

PRKU-01025: You must delete or downgrade Clusterware-managed Oracle databases and de-install Clusterware-managed Oracle homes before attempting to remove the Oracle Clusterware home.

Cause: An attempt was made to deconfigure the Oracle Clusterware when one or more Clusterware-managed Oracle databases still exist.

Action: Run the Oracle Clusterware deconfiguration tool from Clusterware-managed Oracle homes to delete, deconfigure or downgrade Oracle database and then run the same tool from Oracle Clusterware home to deconfigure Clusterware.

PRKU-01029: The node "{0}" is currently not responding.

Cause: The host reported in the above message may have rebooted or hung

Action: Login to the host if possible and review system logs, correct the problem

PRKU-01035: The stopping and de-configuring of Oracle Restart failed. Fix the problem and rerun this tool to completely remove the Oracle Restart configuration and the software

Cause: The Oracle Restart stack couldn't be stopped cleanly before de-configuring.

Action: Review the error messages reported by the tool for failing to deconfigure Oracle Restart stack, perform corrective actions after reviewing the error messages, and rerun the tool to completely deconfigure Oracle Restart stack.

PRKU-01036: The deinstall tool failed to create the script file "{0}" that needs to be run in silent mode due to error "{1}"

Cause: The tool failed to create silent mode script file because of errors reported in the above message.

Action: You should review the error messages reported in above message to perform corrective actions and then rerun the tool.

PRKU-01037: As the privileged user, execute "{0}" on this node to remove the configuration of the Oracle Restart and to completely remove the Oracle software

Cause: This is the message reported by Oracle Restart deconfiguration tool when it is run in non-interactive (or silent) mode.

Action: Execute the identified scripts as described.

PRKU-01039: Can't deconfigure Oracle Restart before removing or downgrading managed Oracle databases.

Cause: A request to deconfigure Oracle Restart found one or more managed Oracle database homes, so the request was rejected.

Action: Run the Oracle deconfiguration tool from Oracle database homes to delete, deconfigure or downgrade Oracle database and then run the same tool from Oracle Restart home to deconfigure the Oracle Restart stack.

PRKU-01057: The home being deconfigured is NOT a configured Grid Infrastructure home ({0})

Cause: The home that was deconfigured has a different path from the configured Infrastructure home.

Action: If it is required to deconfigure the active CRS home, specify the configured CRS home in the deinstall command argument, or run deinstall from the configured CRS home.

PRKU-01059: Root script execution failed on nodes {0}

Cause: Root script execution failed on one or more nodes.

Action: Examine the accompanying output messages from the root script and correct the issue reported, if possible. Otherwise, contact Oracle Support Services.

PRKU-01060: Deleting the last node of a cluster using 'deinstall -local' is not allowed. Rerun deinstall without the '-local' flag.

Cause: The '-local' flag was specified with the 'deinstall' command on the last node.

Action: Rerun deinstall without the '-local' flag.

PRKU-01062: The checkpoint file "{0}" does not exist.

Cause: The checkpoint file to be worked on did not exist.

Action: This is an internal error. Contact Oracle Support Services.

PRKU-01064: Host names "{0}" are invalid.

Cause: The requested operation could not be completed because the indicated host names could not be resolved or contained an underscore.

Action: Retry, specifying valid host names.

PRKU-01067: The GIMR still exists while deinstalling the Oracle Grid Infrastructure home.

Cause: An attempt to deconfigure the Oracle Grid Infrastructure was rejected because the Grid Infrastructure Management Repository (GIMR) still exists.

Action: Deinstall the GIMR, and then retry the operation.

PRKU-01068: Failed to connect to GIMR in a remote cluster while deinstalling the Oracle Grid Infrastructure home.

Cause: An attempt to deconfigure the Oracle Grid Infrastructure was rejected because the connection to the Grid Infrastructure Management Repository (GIMR) failed.

Action: Ensure that the server GIMR is accessible and retry the operation.

PRKU-01069: Failed to mark remote GIMR as deconfigured while deinstalling the Oracle Grid Infrastructure home.

Cause: An attempt to deconfigure the Oracle Grid Infrastructure was rejected because the mgmtca command to deconfigure the current Grid Infrastructure Management Repository (GIMR) failed.

Action: Ensure that the pluggable database for the current cluster is open in the server cluster where GIMR is installed and retry the operation.

PRKU-01070: invalid subnet mask string: "{0}"

Cause: The specified subnet mask string was not a valid IPv4 subnet mask in dotted-decimal format or IPv6 prefix length.

Action: Ensure that the subnet mask string is a valid IPv4 subnet mask in dotted-decimal format or IPv6 prefix length.

PRKZ-01029 to PRKZ-05094

PRKZ-01029: HAVIP {0} is already disabled

Cause: The 'disable havip' command failed because HAVIP was already disabled.

Action: If this is the expected state then this is not an error. If it is not then HAVIP can be enabled by 'srvctl enable havip' command.

PRKZ-01030: export file system {0} is already disabled

Cause: The 'disable exportfs' command failed because it was already disabled.

Action: If this is the expected state then this is not an error. If it is not then it can be enabled by 'srvctl enable exportfs' command.

PRKZ-01031: HAVIP {0} is already enabled

Cause: The 'enable havip' failed because HAVIP was already enabled.

Action: If this is the expected state then this is not an error. If it is not then HAVIP can be disabled by 'srvctl disable havip' command.

PRKZ-01032: export file system {0} is already enabled

Cause: The 'enable exportfs' command failed because it was already enabled.

Action: If this is the expected state then this is not an error. If it is not then it can be disabled by 'srvctl disable exportfs' command.

PRKZ-01058: HAVIP exists for address {0}

Cause: An attempt to add a HAVIP found that it already exists

Action: Check the input and if HAVIP needs to be modified use the command 'srvctl modify havip'.

PRKZ-01059: HAVIP with ID {0} does not exist

Cause: The 'add exportfs' failed because the HAVIP with the specified ID does not exist.

Action: Specify the ID of an HAVIP that exists, or create the HAVIP for the specified ID using the command 'srvctl add havip -id *id* -address *vip*'.

PRKZ-01060: Export file system {0} does not exist

Cause: The export file system resource with the specified name does not exist.

Action: Check the name and retry with the export file system name that is already configured.

PRKZ-01062: Cannot determine which subnet to modify to network type "{0}". The network resource has two subnets configured with network type "{1}".

Cause: The command 'srvctl modify network -nettype' failed because the network had both IPv4 and IPv6 subnets, thus the subnet to modify could not be determined.

Action: Specify the '-subnet' option with the command 'srvctl modify network -nettype' to indicate whether to change type for IPv4 or IPv6 subnet.

PRKZ-01065: Invalid combination of options specified

Cause: The '-name' and '-id' options cannot be combined together.

Action: Issue the command with either '-name' or '-id' option.

PRKZ-01066: Invalid subnet string: "{0}"

Cause: The given subnet string was not a valid IPv4 or IPv6 subnet number in dotted-decimal format.

Action: Make sure that the subnet string is a valid IPv4 or IPv6 subnet number in dotted-decimal format.

PRKZ-01067: Invalid subnet mask string: "{0}"

Cause: The given subnet mask string was not a valid IPv4 subnet mask in dotted-decimal format or IPv6 prefix length.

Action: Make sure that the subnet mask string is a valid IPv4 subnet mask in dotted-decimal format or IPv6 prefix length.

PRKZ-01068: {0} object is not supported on Windows Operating System

Cause: The *object* specified on the command line was not a valid object on Windows Operating System.

Action: Objects rhpserver|rhpcclient|havip|exportfs are not valid on Windows Operating System. Use a valid object.

PRKZ-01069: "srvctl modify network -iptype both" cannot include the {0} option

Cause: The command 'srvctl modify network -iptype both' request included conflicting options.

Action: Issue the command 'srvctl modify network -iptype both' separate from other network changes.

PRKZ-01070: Changing network type from {0} to {1} requires new VIP addresses

Cause: The command 'srvctl modify nodeapps -nettype mixed' was issued without specifying the VIP address when the IPv4 or IPv6 network type was dynamic.

Action: Issue the command 'srvctl modify nodeapps -nettype mixed -address' to specify the new VIP address.

PRKZ-01071: '-netnum' option cannot be supplied without '-address' option

Cause: The command 'srvctl modify havip -netnum' was issued without specifying a VIP address that matches the new network Subnet.

Action: Retry the command 'srvctl modify havip' using '-address' option along with '-netnum' option to specify a new address for the HAVIP resource.

PRKZ-01072: SCAN name "{0}" is already registered on network {1}

Cause: The command 'srvctl add scan -scanname' was issued for a Single Client Access Name (SCAN) name that was already registered on the specified network.

Action: Use a distinct SCAN name.

PRKZ-01073: Cannot modify network type to 'mixed' because GNS is not configured.

Cause: An attempt to modify the network type to 'mixed' failed because Grid Naming Service (GNS) was not configured.

Action: Configure Grid Naming Service (GNS) and retry 'srvctl modify network' command.

PRKZ-01074: Failed to modify network type because the specified subnet "{0}" does not match any configured subnet.

Cause: The specified subnet did not match any configured subnet in the network resource.

Action: Specify a configured subnet to modify its network type.

PRKZ-01075: '-iptype' option cannot be given along with '-subnet'

Cause: A command attempted to modify both the network IP type and its subnet.

Action: Use 'srvctl modify network' with '-subnet' or '-iptype', not both.

PRKZ-01076: Cannot modify network with network type 'mixed'

Cause: An attempt to modify the subnet or IP type of a network resource with network type 'mixed' was issued.

Action: Use 'srvctl modify network -nettype' to modify the network type to STATIC, DHCP or AUTOCONFIG, before making any other change.

PRKZ-01078: Object {0} is not supported on an ASM client cluster.

Cause: The *object* specified on the command line was not a valid object for an ASM client cluster.

Action: Objects ASM, DISKGROUP, and VOLUME are not supported on an ASM client cluster. Use a valid object.

PRKZ-01079: Invalid subnet value {0} for '-invitedsubnets' option

Cause: The command was rejected because the invited subnets value was specified using incorrect syntax.

Action: Reissue the command specifying the invited subnets using either Classless Inter-Domain Routing (CIDR) syntax (e.g. 192.196.16.0/24) or wild cards.

PRKZ-01080: '-netnum' and '-vip' options conflict.

Cause: The 'srvctl start|stop vip' command was rejected because the '-netnum' option was specified along with the '-vip' option.

Action: Use the command 'srvctl start|stop vip' with either '-netnum' or '-vip', not both.

PRKZ-01082: The VIP name "{0}" cannot be resolved.

Cause: An unresolvable VIP name was specified.

Action: Make sure that the VIP name resolves to an IP address.

PRKZ-01083: The VIP name "{0}" resolves to "{1}" which cannot be found in any VIP.

Cause: An attempt to find a VIP with one of the specified addresses to which the VIP name resolved failed."

Action: Specify a VIP name that resolves to an address that is found in a VIP resource.

PRKZ-01084: The network type for the specified subnet ({0}) that is added cannot be set to 'mixed'.

Cause: An attempt was made to add an IPv4 or IPv6 subnet and set its network type directly to 'mixed'.

Action: Reissue the command and use a different value than 'mixed' for the -nettype option.

PRKZ-01085: Internal error: {0}

Cause: An internal error occurred. The included value is an internal identifier.

Action: Oracle internal error. Contact Oracle Support.

PRKZ-01119: nothing to modify

Cause: No options were specified to modify.

Action: Specify at least one option with the 'modify' command.

PRKZ-01125: Oracle Grid Infrastructure Management Repository (GIMR) client is not configured.

Cause: An attempt to retrieve GIMR client information failed because GIMR client did not exist.

Action: Add the GIMR client and try again.

PRKZ-01126: The network storage service is already disabled.

Cause: The network storage server resource could not be disabled because it was already disabled.

Action: None

PRKZ-01127: The network storage service is already enabled.

Cause: The network storage server resource could not be enabled because it was already enabled.

Action: None

PRKZ-01128: Host {0} is not reachable.

Cause: The command 'srvctl modify nodeapps -remoteservers *hostname*' specified a hostname that was not reachable.

Action: Ensure the host is up and reachable on the network and reissue the command.

PRKZ-01129: Host {0} is unknown.

Cause: The command 'srvctl modify nodeapps -remoteservers *hostname*' specified the indicated hostname, but that host was unknown.

Action: Reissue the command with a host name that is known to be correct.

PRKZ-01130: Port {0} is invalid.

Cause: The command 'srvctl modify nodeapps -remoteservers *hostname:port*' specified the indicated port, which was not a valid port .

Action: Reissue the command with a port that is known to be correct.

PRKZ-01131: {0} is only supported on an ASM client cluster.

Cause: An attempt to execute a command using the specified object was rejected because the specified object was not supported for a ASM client cluster.

Action: Use valid objects ASM, disk group or volume.

PRKZ-01133: invalid query of management repository status on member cluster

Cause: A request to query the management database from a member cluster was rejected because the management database status can only be queried on the domain services cluster.

Action: Check the documentation on commands related to the management database and execute commands from the appropriate cluster.

PRKZ-01143: cannot decommission database {0} because it is enabled

Cause: An attempt to mark the indicated database as 'Decommissioned' was rejected because the database was currently enabled.

Action: Disable the database using the command 'srvctl disable database' and retry the command.

PRKZ-01144: Database {0} has no pluggable databases configured

Cause: The 'srvctl config database' request found no pluggable databases configured for the database.

Action: Use the command 'srvctl add pdb' to configure pluggable databases for

PRKZ-01205: removing the GNS VIP resource with the force option results in the GNS VIP address {0} continuing to be reachable on node {1}

Cause: Status message

Action: Not an error

PRKZ-01214: Service cannot be enabled while patching is in progress because the service {0} has been identified as a Java service.

Cause: An attempt to enable a Java-based service was rejected because patching of the Oracle Java Virtual Machine (OJVM) was in progress, and Java services must remain disabled during OJVM patching.

Action: Complete the patching process on all database instances.

PRKZ-01217: ASM network resource does not exist.

Cause: The ASM network resource to be operated on did not exist.

Action: The ASM network resource can be created using the command 'srvctl add asmnetwork'.

PRKZ-01218: The ASM network resource is already started on nodes: {0}

Cause: The start asmnetwork command failed because ASM network resource is already started.

Action: None

PRKZ-01219: ASM network resource is already stopped on nodes: {0}

Cause: The stop asmnetwork command failed because ASM network resource is already stopped.

Action: None

PRKZ-01233: Database {0} is not administrator-managed and does not support the failback option.

Cause: An attempt to add or modify a service using '-failback' option was rejected because this option can be used with administrator-managed databases only.

Action: Reissue the command without the '-failback' option.

PRKZ-01400: The CVU administrative helper resource is not configured.

Cause: The Configuration Verification Utility (CVU) administrative helper resource was not configured on the cluster or an unexpected error occurred while querying Clusterware for the CVU administrative helper resource.

Action: If the CVU administrative resource was not configured, then a new resource can be created using the command 'srvctl add cvuadmin'. If the resource was configured, then examine the accompanying error messages, resolve the indicated issues, and retry the operation.

PRKZ-01401: CVU administrative helper resource is running.

Cause: The command 'srvctl remove cvuadmin' was issued while Cluster Verification Utility (CVU) administrative helper resource was running.

Action: Stop the CVU administrative helper resource using the command 'srvctl stop cvuadmin' and then retry the operation.

PRKZ-05007: Pluggable database {0} could not be removed because it was running.

Cause: The command 'srvctl remove pdb' failed because the database was running.

Action: Stop the database by using the command 'srvctl stop pdb' and then try to remove it. You can also use the '-force' option to remove the running database.

PRKZ-05032: A cardinality that was not SINGLETON nor UNIFORM was specified for policy-managed database {0}.

Cause: An attempt to add a service to the specified database was rejected because invalid cardinality was specified.

Action: Please retry with SINGLETON or UNIFORM value for -cardinality option .

PRKZ-05033: Either option '-service' or '-pdb' must be supplied for removing a service

Cause: Options '-service' and '-pdb' were not specified when removing a service.

Action: Use the command 'srvctl remove service' with either '-service' or '-pdb' option.

PRKZ-05035: Minimum {0} CPUs exceeds the maximum of {1} CPU

Cause: An attempt to add or modify a PDB was rejected because the minimum CPU usage specified exceeded the maximum CPU usage.

Action: Retry the command, specifying a valid minimum CPU usage.

PRKZ-05037: node {0} does not belong to server pool {1} which defines nodes for pluggable database {2}

Cause: This node did not belong to the server pool that defined the nodes that could be used to run the specified service.

Action: Supply a node that belongs to specified server pool.

PRKZ-05038: Pluggable database {0} is defined for single instance database {1} and therefore cannot be relocated.

Cause: An attempt to relocate the specified pluggable database (PDB) was rejected because the provided options could not be used to relocate a PDB for a single instance database.

Action: Issue the command 'srvctl relocate pdb' for the PDB that is not defined for a single instance database.

PRKZ-05039: Pluggable database {0} is defined for Oracle RAC One Node database {1} and therefore cannot be relocated

Cause: An attempt to relocate a Oracle RAC One Node pluggable database using the command 'srvctl relocate pdb' was rejected.

Action: Use the command 'srvctl relocate database' to relocate the Oracle RAC One Node database and its pluggable databases to the target server.

PRKZ-05040: failed to find an instance {1} for database {0}

Cause: An attempt to relocate the specified pluggable database (PDB) failed because the instance name specified was not valid.

Action: Issue the command 'srvctl relocate pdb' with a valid instance name for the -oldinst option.

PRKZ-05041: Add pluggable database (PDB) failed for a policy managed database {0}

Cause: An attempt to add PDB was rejected because pluggable database resource creation is not supported for policy managed database.

Action: Retry the command for a admin managed database.

PRKZ-05042: failed to create service {0} for database {1} without '-pdb' option

Cause: An attempt to create the specified service failed because the '-pdb' option was not specified along with the '-cardinality' option.

Action: Retry the operation specifying the '-pdb' option.

PRKZ-05043: GIMR status cannot be queried because the cluster uses remote GIMR services

Cause: A request to query the Grid Infrastructure Management Repository (GIMR) was rejected because the operation is not supported on a cluster using remote GIMR services.

Action: Use the command 'srvctl config mgmtadb' to obtain more details and then execute the command from the appropriate cluster.

PRKZ-05045: Add pluggable database (PDB) failed for database {0} with '-aproot' option.

Cause: An attempt to add a PDB was rejected because the pluggable database name specified with the '-aproot' option already has an application root PDB.

Action: Retry the command with a different application root PDB.

PRKZ-05046: Pluggable database {0} could not be removed because it was running.

Cause: The command 'srvctl remove pdb' failed because the database was running.

Action: Stop the database by using the command 'srvctl stop pdb' and then attempt to remove it. You can also use the '-force' option to remove the running database.

PRKZ-05050: Pluggable database {0} of database {1} could not be found.

Cause: The pluggable database (PDB) specified did not exist.

Action: Ensure that the PDB name is valid.

PRKZ-05051: relocate pluggable database (PDB) failed for policy-managed database {0}

Cause: An attempt to relocate a PDB was rejected because pluggable database resource relocation was not supported for policy-managed database.

Action: Retry the command for a administrator-managed database.

PRKZ-05060: failed to modify service {0} because pluggable database {1} of database {2} was not registered

Cause: The pluggable database (PDB) specified did not exist in Cluster Ready Services (CRS).

Action: Ensure that the PDB name is valid. Use the command 'srvctl config pdb' to check whether the PDB is registered with Cluster Ready Service (CRS) and use the command 'srvctl add pdb' to register it.

PRKZ-05061: more than 5 listeners specified for ASM

Cause: An attempt to add or modify the ASM resource because the number of the specified listeners was greater than 5 failed.

Action: Reissue the command with no more than 5 listeners.

PRKZ-05062: file system is already enabled on nodes: {0}

Cause: The 'enable filesystem' command failed because it was already enabled.

Action: None required.

PRKZ-05063: file system is already disabled on node(s): {0}

Cause: The 'disable filesystem' command failed because it was already disabled.

Action: None required.

PRKZ-05064: -cardinality specified for a PDB of single instance database {0}

Cause: An attempt to configure a pluggable database (PDB) was rejected because cardinality was an invalid option for a single instance database.

Action: Issue the command for the PDB omitting the -cardinality option.

PRKZ-05090: list of node names was specified without -pdb option

Cause: The command was rejected because -node option was specified with a list of node names when -pdb option was not specified.

Action: Retry the command with a single node name or specify the -pdb option.

PRKZ-05091: failed to modify the ASM network configuration with the specified IPV6 subnet {0}

Cause: An attempt to modify the subnet was rejected because the network type of the specified subnet did not match the existing IPV4 network.

Action: Use the command 'srvctl add asmnetwork' to add a new IPV6 ASM network resource.

PRKZ-05092: failed to modify the ASM network configuration with the specified IPV4 subnet {0}

Cause: An attempt to modify the subnet was rejected because the network type of the specified subnet did not match the existing IPV6 network.

Action: Use the command 'srvctl add asmnetwork' to add a new IPV4 ASM network resource.

PRKZ-05093: -policy option value AUTOMATIC was specified with -global option

Cause: An attempt to add a service using the -policy option was rejected because the AUTOMATIC management policy is not supported for global services.

Action: Reissue the command without the -global option or with the MANUAL management policy.

PRKZ-05094: mismatching number of services specified in {0} and {1}

Cause: An attempt to add a service was rejected because there was a mismatched number of services in the -service and -adc_service options.

Action: Ensure that the number of services and Active Data Cache (ADC) services are the same and reissue the command.

PROCL-00001 to PROCL-00110

PROCL-00001: Oracle Local Registry cannot be initialized.

Cause: An invalid init level was passed to initialize Oracle Local Registry.

Action: Initialize Oracle Local Registry with a valid init level.

PROCL-00002: Cannot perform local registry operation at the current init level.

Cause: Program tried a local registry operation which is not permitted at the init level.

Action: Initialize Oracle Local Registry with an appropriate init level.

PROCL-00003: Cannot perform local registry operation because context is invalid.

Cause: The Oracle Local Registry context passed was invalid.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00004: The local registry key to be operated on does not exist.

Cause: Program tried a local registry operation on a key which does not exist.

Action: Check to see if the key exists and try the operation again.

PROCL-00005: User does not have permission to perform a local registry operation on this key.

Cause: Program tried an operation on a local registry key for which it does not have permission.

Action: Check to see if program is run as the correct user.

PROCL-00006: User does not have permission to perform a local registry operation on this key.

Cause: Program tried a local registry operation on a key for which it does not have permission.

Action: Check to see if program is run as the correct user.

PROCL-00007: Cannot perform local registry operation because the key or batch handle is invalid.

Cause: The local registry key or batch handle passed was invalid.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00008: Cannot perform local registry operation because one of the parameters is invalid.

Cause: Program tried a local registry operation using an invalid parameter.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00009: Cannot perform local registry operation because the buffer passed is too small.

Cause: The amount of memory allocated for the buffer was insufficient.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00010: Cannot delete the local registry key as subkeys exist.

Cause: The program tried to delete a key for which subkeys exist.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00011: Cannot perform local registry operation because key is NULL.

Cause: The local registry key passed was NULL.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00012: Out of heap memory.

Cause: The program ran out of heap memory.

Action: Contact Oracle Support Services.

PROCL-00013: Cannot perform local registry operation because one of the parameters is NULL.

Cause: Program tried a local registry operation using an NULL parameter.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00014: Unknown error occurred

Cause: This is generic internal error for Oracle Local Registry.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00015: Failed to initialize the local registry

Cause: The Oracle Local Registry could not be accessed. The possible causes are: 1. The local registry has not been formatted. 2. The local registry file is not accessible. 3. The local registry file has incorrect permissions. 4. Oracle Clusterware is not running.

Action: 1. Run the 'ocrcheck -local' command to confirm that the OLR is formatted and usable. 2. Run 'ocrcheck -local -config' command to retrieve the configured file, and verify that the file is accessible and has the correct permissions via native platform or OS methods 3. Run 'crsctl check crs' command to verify that Oracle Clusterware is running.

PROCL-00016: Cannot retrieve any more subkeys for the given keyhandle

Cause: The key has no more subkeys to enumerate.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00017: Unimplemented feature

Cause: Requested feature has not been implemented in the current release.

Action: Try the feature again in the upcoming Oracle release.

PROCL-00018: The value size passed is too large

Cause: Cannot set a value of the given size.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00019: Cannot create more subkeys for the key

Cause: An attempt was made to create more subkeys under a key that is not permitted by the local registry.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00020: ORACLE_HOME environment not set

Cause: ORACLE_HOME environment not set.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported.

PROCL-00021: Maximum permitted depth of the OLR tree is reached

Cause: An attempt was made to create subkeys under a key which is already at depth PROC_MAX_KEY_DEPTH

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00022: The OLR backend has an invalid format

Cause: An attempt was made to use OLR before initializing it.

Action: Use the root.sh script. The 'ocrconfig -local -upgrade' command will initialize OLR.

PROCL-00023: Error in retrieving hostname

Cause: An error occurred while retrieving hostname.

Action: Contact Oracle Support Services.

PROCL-00024: Error in the messaging layer

Cause: An error occurred in the messaging layer while performing a local registry operation.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00025: Error in the NLS services

Cause: An error occurred in the NLS services while performing a local registry operation.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00026: Error while accessing the physical storage

Cause: The Oracle Local Registry could not be accessed. The possible causes are: 1. The local registry has not been formatted. 2. The local registry file is not accessible. 3. The local registry file has incorrect permissions.

Action: 1. Run the 'ocrcheck -local' command to confirm that the OLR is formatted and usable. 2. Run 'ocrcheck -local -config' command to retrieve the configured file, and verify that the file is accessible and has the correct permissions via native platform or OS methods

PROCL-00027: Error in authentication layer

Cause: An error occurred in the authentication layer while performing a local registry operation.

Action: Contact Oracle Support Services.

PROCL-00028: Oracle Local Registry already in current version

Cause: An attempt to upgrade the local registry which has already been upgraded.

Action: No action required.

PROCL-00029: Error in logging layer

Cause: An error occurred in the logging layer while performing a local registry operation.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00031: Storage device for the local registry is too small

Cause: The configured storage device for local registry was too small.

Action: Refer to the documentation and configure a storage device that is large enough for use by local registry.

PROCL-00032: Oracle High Availability Services on the local node is not running

Cause: Oracle High Availability Services on the local node was not running

Action: Run 'crsctl start crs' command to start the Oracle High Availability Services on the local node.

PROCL-00033: Oracle Local Registry is not configured

Cause: Oracle Local Registry configuration was not present on the node.

Action: Install and configure Oracle Clusterware.

PROCL-00035: Cannot perform local registry operation due to invalid version

Cause: The operation cannot be performed for this local active version

Action: Complete the upgrade before retrying the operation

PROCL-00036: No free space to perform this operation

Cause: There is no free space left to perform the requested operation

Action: Free up space and retry the operation

PROCL-00037: Oracle Local Registry does not support the storage type configured

Cause: The configured storage type for local registry is not supported

Action: Change the configuration of the local registry to a supported storage type. Refer to Oracle documentation for an exhaustive list for each platform.

PROCL-00038: Requested block number is not allocated from Oracle Local Registry

Cause: The requested block number is not allocated from Oracle Local Registry

Action: Retry the operation with another block number

PROCL-00039: Requested block has an invalid header

Cause: The requested block has an invalid header

Action: Retry the operation with another block number

PROCL-00040: Cannot add more operations to the batch

Cause: An attempt was made to add an operation to a batch that already has the maximum allowed operations.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00041: Oracle Local Registry is incorrectly configured

Cause: The local registry is incorrectly configured.

Action: Correct the local registry configuration.

PROCL-00042: User cannot access Oracle Local Registry configuration

Cause: Program encountered an error accessing the local registry configuration.

Action: Check to see if program is run as the correct user. Check that the local registry configuration has the correct permissions.

PROCL-00044: Error in network address and interface operations

Cause: An error occurred in the network address and interface operations layer while performing a local registry operation.

Action: Contact Oracle Support Services.

PROCL-00046: Cannot perform local registry operation because the batch is empty.

Cause: An attempt was made to execute the batch without any operations in it.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00048: Cannot perform the Oracle Local Registry operation due to a transient error.

Cause: A transient error occurred while performing the requested Oracle Local Registry operation. The operation was aborted without retrying, as requested by the client.

Action: Retry the operation.

PROCL-00049: The specified Oracle Local Registry backup location is inaccessible on the local node.

Cause: The backup location did not exist or the required permissions were not granted.

Action: Ensure that the location exists and the required file creation permissions are granted.

PROCL-00051: Error in patch management layer

Cause: An error occurred in the patch management layer while performing a local registry operation.

Action: Contact Oracle Support Services.

PROCL-00053: The configured patch level does not match the release patch level

Cause: The possible causes are: 1. Oracle Clusterware was started before the patch application had completed. 2. Oracle Clusterware was started from a location other than the Grid Infrastructure home that was most recently patched.

Action: Check the Oracle High Availability Service (OHASD) log file for details. 1. Complete applying the patch on this node. 2. Ensure the Oracle Clusterware is started from the Grid Infrastructure home that was most recently patched. Verify the patch level matches using the 'crsctl query crs releasepatch' and the 'crsctl query crs softwarepatch' commands. If the problem persists, contact Oracle Support Services.

PROCL-00054: The requested OLR operation is not supported.

Cause: An attempt was made to use an operation that is not supported.

Action: Verify the operation is valid before resubmitting it.

PROCL-00055: cannot create and set the local registry key because the key already exists

Cause: The program tried to create and set the local registry key when the key already exists.

Action: This is an internal error. Contact Oracle Support Services.

PROCL-00056: user does not have privilege to access the Oracle Local Registry

Cause: An operation that accesses the Oracle Local Registry was requested by a user with insufficient privileges.

Action: Run the command as root or administrator user.

PROCL-00057: Oracle Local Registry contains inconsistent data.

Cause: Inconsistent data was detected in the Oracle Local Registry.

Action: Check the availability of Oracle Local Registry backups using the 'ocrconfig - local -showbackup' command and restore a compatible backup. If you are not able to resolve the problem, contact Oracle Support Services.

PROCL-00058: The file specified for backing up the Oracle Local Registry already exists.

Cause: An operation to back up the Oracle Local Registry was requested with an incorrect file name.

Action: Run the command with a different file name provided as the argument.

PROCL-00059: The specified Oracle Local Registry export/import file location is not accessible.

Cause: The specified Oracle Local Registry export/import file location did not exist, did not have the required permissions, or did not have sufficient disk space.

Action: Ensure that the export/import file location exists, that its permissions are correct, and that it has sufficient disk space.

PROCL-00060: The Oracle Local Registry backup file '*string*' is corrupt.

Cause: The Oracle Local Registry backup file failed the post-backup corruption check. Either the Oracle Local Registry was corrupt or the backup introduced an error.

Action: Attempt the Oracle Local Registry backup again by executing an 'ocrconfig - local -manualbackup' command. If the problem persists, contact Oracle Support Services.

PROCL-00101: Operating System error [*string*]

Cause: An error occurred in the operating system layer while performing a local registry operation

Action: Contact Oracle Support Services.

PROCL-00102: Cluster services error [*string*]

Cause: An error occurred in the cluster services layer while performing a local registry operation.

Action: Contact Oracle Support Services.

PROCL-00103: Messaging error [string]

Cause: An error occurred in the messaging layer while performing a local registry operation.

Action: Contact Oracle Support Services.

PROCL-00104: Authentication error [string]

Cause: An error occurred in the authentication layer while performing a local registry operation.

Action: Contact Oracle Support Services.

PROCL-00105: Logging error

Cause: An error occurred in the logging layer while while performing a local registry operation.

Action: Contact Oracle Support Services.

PROCL-00106: Unidentified component error

Cause: An error occurred in an unidentified layer while performing a local registry operation.

Action: Contact Oracle Support Services.

PROCL-00107: Storage layer error [string]

Cause: An error occurred in the storage layer while performing a local registry operation.

Action: Contact Oracle Support Services.

PROCL-00109: Network address and interface operations error

Cause: An error occurred in the network address and interface operations layer while performing a local registry operation.

Action: Contact Oracle Support Services.

PROCL-00110: Patch and upgrade error [string]

Cause: An error occurred in the patch and upgrade management layer while performing a local registry operation.

Action: Contact Oracle Support Services.

PROC-00001 to PROC-00112

PROC-00001: Oracle Cluster Registry cannot be initialized.

Cause: An invalid init level was passed to initialize Oracle Cluster Registry.

Action: Initialize Oracle Cluster Registry with a valid init level.

PROC-00002: Cannot perform cluster registry operation at the current init level.

Cause: Program tried a cluster registry operation which is not permitted at the init level.

Action: Initialize Oracle Cluster Registry with an appropriate init level.

PROC-00003: Cannot perform cluster registry operation because context is invalid.

Cause: The Oracle Cluster Registry context passed was invalid.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00004: The cluster registry key to be operated on does not exist.

Cause: Program tried a cluster registry operation on a key which does not exist.

Action: Check to see if the key exists and try the operation again.

PROC-00005: User does not have permission to perform a cluster registry operation on this key.

Cause: Program tried an operation on a cluster registry key for which it does not have permission.

Action: Check to see if program is run as the correct user.

PROC-00006: User does not have permission to perform a cluster registry operation on this key.

Cause: Program tried a cluster registry operation on a key for which it does not have permission.

Action: Check to see if program is run as the correct user.

PROC-00007: Cannot perform cluster registry operation because key or batch handle is invalid.

Cause: The cluster registry key or batch handle passed was invalid.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00008: Cannot perform cluster registry operation because one of the parameters is invalid.

Cause: Program tried a cluster registry operation using an invalid parameter.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00009: Cannot perform cluster registry operation because the buffer passed is too small.

Cause: The amount of memory allocated for the buffer was insufficient.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00010: Cannot delete the cluster registry key as subkeys exist.

Cause: The program tried to delete a key for which subkeys exist.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00011: Cannot perform cluster registry operation because key is NULL.

Cause: The cluster registry key passed was NULL.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00012: Out of heap memory.

Cause: The program ran out of heap memory.

Action: Contact Oracle Support Services.

PROC-00013: Cannot perform cluster registry operation because one of the parameters is NULL.

Cause: Program tried a cluster registry operation using an NULL parameter.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00014: Unknown error occurred

Cause: This is generic internal error for Oracle Cluster Registry.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00015: failed to initialize the cluster registry

Cause: The Oracle Cluster Registry (OCR) could not be accessed. The possible causes are: 1. The cluster registry has not been formatted. 2. The cluster registry location is not accessible. 3. The cluster registry location has incorrect permissions. 4. Oracle Clusterware is not running.

Action: 1. Run the 'ocrcheck' command to confirm that the OCR is formatted and usable. 2. Run 'ocrcheck -config' command to retrieve the configured locations, and verify that each location is accessible and has the correct permissions via native platform or operating system methods. If a location is an ASM disk group, verify that the disk group exists and is mounted. 3. Run 'crsctl check crs' command to verify that Oracle Clusterware is running.

PROC-00016: Cannot retrieve any more subkeys for the given keyhandle

Cause: The key has no more subkeys to enumerate.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00017: Unimplemented feature

Cause: Requested feature has not been implemented in the current release.

Action: Try the feature again in the upcoming Oracle release.

PROC-00018: The value size passed is too large

Cause: Cannot set a value of the given size.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00019: Cannot create more subkeys for the key

Cause: An attempt was made to create more subkeys under a key that is not permitted by the cluster registry.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00020: ORACLE_HOME environment not set

Cause: ORACLE_HOME environment not set.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported.

PROC-00021: Maximum permitted depth of the OCR tree is reached

Cause: An attempt was made to create subkeys under a key which is already at depth PROC_MAX_KEY_DEPTH

Action: This is an internal error. Contact Oracle Support Services.

PROC-00022: The OCR backend has an invalid format

Cause: An attempt was made to use OCR before initializing it.

Action: Use the root.sh script. The 'ocrconfig -upgrade' command will initialize OCR.

PROC-00023: Error in cluster services layer

Cause: An error occurred in the cluster services layer while performing a cluster registry operation.

Action: Contact Oracle Support Services.

PROC-00024: Error in the messaging layer

Cause: An error occurred in the messaging layer while performing a cluster registry operation.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00025: Error in the NLS services

Cause: An error occurred in the NLS services while performing a cluster registry operation.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00026: Error while accessing the physical storage

Cause: The Oracle Cluster Registry could not be accessed. The possible causes are: 1. The cluster registry has not been formatted. 2. The cluster registry location is not accessible. 3. The cluster registry location has incorrect permissions. 4. Oracle Clusterware is not running.

Action: 1. Run the 'ocrcheck' command to confirm that the OCR is formatted and usable. 2. Run 'ocrcheck -config' command to retrieve the configured locations, and verify that each location is accessible and has the correct permissions via native platform or OS methods. If a location is an ASM disk group, verify that the disk group exists and is mounted. 3. Run 'crsctl check crs' command to verify that Oracle Clusterware is running.

PROC-00027: Error in authentication layer

Cause: An error occurred in the authentication layer while performing a cluster registry operation.

Action: Contact Oracle Support Services.

PROC-00028: Oracle Cluster Registry already in current version

Cause: An attempt to upgrade the cluster registry which has already been upgraded.

Action: No action required.

PROC-00029: Error in logging layer

Cause: An error occurred in the logging layer while performing a cluster registry operation.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00030: Oracle Cluster Registry IDs do not match

Cause: The cluster registry storage seen by the client was not the same as the one seen by the server. This may be caused by a misconfiguration.

Action: Contact Oracle Support Services.

PROC-00031: Storage device for the cluster registry is too small

Cause: The configured storage device or the storage device to be newly added to the cluster registry was too small.

Action: Refer to the documentation and configure a storage device that is large enough for use by cluster registry. In case the cluster registry is already configured, execute the 'ocrcheck' command to retrieve the total size, and ensure that the size of the device to be added is large enough for use by cluster registry.

PROC-00032: Cluster Ready Services on the local node is not running

Cause: The Cluster Ready Services on the local node was not running.

Action: Use the 'crsctl start crs' command to start the Cluster Ready Services on the local node.

PROC-00033: Oracle Cluster Registry is not configured

Cause: Oracle Cluster Registry configuration was not present on the node.

Action: Install and configure Oracle Clusterware.

PROC-00034: Oracle Cluster Registry configurations are not compatible

Cause: Cluster registry configuration on this node did not match with another node in the cluster.

Action: Retrieve the cluster registry configuration using 'ocrcheck -config' command on all nodes in the cluster. Fix the configuration on this node and make it consistent using 'ocrconfig -repair' command.

PROC-00035: Cannot perform cluster registry operation due to invalid version

Cause: The operation cannot be performed for this cluster active version

Action: Complete the upgrade before retrying the operation

PROC-00036: No free space to perform this operation

Cause: There is no free space left to perform the requested operation.

Action: Free up space and retry the operation.

PROC-00037: Oracle Cluster Registry does not support the storage type configured

Cause: The configured storage type for cluster registry is not supported

Action: Change the configuration of the cluster registry to a supported storage type. Refer to Oracle documentation for an exhaustive list for each platform.

PROC-00038: Requested block number is not allocated from Oracle Cluster Registry

Cause: The requested block number is not allocated from Oracle Cluster Registry.

Action: Retry the operation with another block number.

PROC-00039: Requested block has an invalid header

Cause: The requested block has an invalid header.

Action: Retry the operation with another block number.

PROC-00040: Cannot add more operations to the batch

Cause: An attempt was made to add an operation to a batch that already has the maximum allowed operations.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00041: Oracle Cluster Registry is incorrectly configured

Cause: The cluster registry is incorrectly configured.

Action: Correct the cluster registry configuration.

PROC-00042: User cannot access Oracle Cluster Registry configuration

Cause: Program encountered an error accessing the cluster registry configuration.

Action: Check to see if program is run as the correct user. Check that the cluster registry configuration has the correct permissions.

PROC-00043: Error in the ASM access layer

Cause: An error occurred in the layer used to access OCR when configured on ASM managed storage.

Action: Contact Oracle Support Services.

PROC-00044: Error in network address and interface operations

Cause: An error occurred in the network address and interface operations layer while performing a cluster registry operation.

Action: Contact Oracle Support Services.

PROC-00045: Error in the Oracle Clusterware API layer

Cause: An error occurred in the Oracle Clusterware API layer.

Action: Contact Oracle Support Services.

PROC-00046: Cannot perform cluster registry operation because the batch is empty.

Cause: An attempt was made to execute the batch without any operations in it.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00047: Cannot proceed while the Oracle Cluster Registry format upgrade is in progress.

Cause: An Oracle Cluster Registry operation was requested, but found that an Oracle Cluster Registry format upgrade was in progress.

Action: Retry the operation after the format upgrade completes.

PROC-00048: Cannot perform the Oracle Cluster Registry operation due to a transient error.

Cause: A transient error occurred while performing the requested Oracle Cluster Registry operation. The operation was aborted without retrying, as requested by the client.

Action: Retry the operation.

PROC-00049: The specified Oracle Cluster Registry backup location is inaccessible on nodes *string*.

Cause: The Oracle Cluster Registry backup location did not exist, was not mounted correctly, or did not have the required permissions on the indicated nodes.

Action: Ensure that the backup location exists with appropriate permissions on the indicated nodes. If the backup location is an ASM disk group, the disk group must be mounted correctly; also check the entries in the ASM alert log file for more details.

PROC-00050: The Oracle Cluster Registry location to be added is inaccessible on nodes *string*.

Cause: The Oracle Cluster Registry location to be added did not exist, was not mounted correctly, or did not have the required permissions on the indicated nodes.

Action: Ensure that the location exists with appropriate permissions on the indicated nodes. If the location is an ASM disk group, the disk group must be mounted correctly; also check the entries in the ASM alert log file for more details.

PROC-00051: Error in patch management layer

Cause: An error occurred in the patch management layer while performing a cluster registry operation.

Action: Contact Oracle Support Services.

PROC-00052: Failed to update the Oracle High Availability Service (OHASD) resource dependencies on nodes *string*.

Cause: An error occurred while updating the OHASD resource dependencies on the above listed nodes.

Action: Contact Oracle Support Services.

PROC-00053: The configured patch level, release patch level and the patch level on the other active cluster nodes are not all the same.

Cause: An attempted Oracle Clusterware stack start operation failed because of mismatched patch levels. This situation occurred because of one of the following: - Oracle Clusterware was started before the patch application had completed. - Oracle Clusterware was started from a location other than the Grid Infrastructure home that was most recently patched.

Action: Check the Cluster Ready Services (CRS) daemon log file for details. 1. Complete applying the patch on this node. 2. Ensure the Oracle Clusterware is started from the Grid Infrastructure home that was most recently patched. Verify the patch

level matches using the 'crsctl query crs releasepatch' and the 'crsctl query crs softwarepatch' commands. If the problem persists, contact Oracle Support Services.

PROC-00054: The requested OCR operation is not supported.

Cause: An attempt was made to use an operation that is not supported.

Action: Verify the operation is valid before resubmitting it.

PROC-00055: cannot create and set the cluster registry key because the key already exists

Cause: The program tried to create and set the cluster registry key when the key already exists.

Action: This is an internal error. Contact Oracle Support Services.

PROC-00056: user does not have privilege to access the Oracle Cluster Registry

Cause: An operation that accesses the Oracle Cluster Registry was requested by a user with insufficient privileges.

Action: Run the command as root or administrator user.

PROC-00057: Oracle Cluster Registry contains inconsistent data.

Cause: Inconsistent data was detected in the Oracle Cluster Registry.

Action: Check the availability of Oracle Cluster Registry backups using the 'ocrconfig - showbackup' command and restore a compatible backup. If you are not able to resolve the problem, contact Oracle Support Services.

PROC-00058: The file specified for backing up the Oracle Cluster Registry already exists.

Cause: An operation to back up the Oracle Cluster Registry was requested with an incorrect file name.

Action: Run the command with a different file name provided as the argument.

PROC-00059: The specified Oracle Cluster Registry export or import file location is not accessible.

Cause: The specified Oracle Cluster Registry export or import file location did not exist, was not mounted correctly, did not have the required permissions, or did not have sufficient disk space.

Action: Ensure that the export or import file location exists, that it is mounted correctly, that its permissions are correct, and that it has sufficient disk space. If the file location is an ASM disk group, check for related entries in the ASM alert log file for more details.

PROC-00060: The Oracle Cluster Registry backup file '*string*' is corrupt.

Cause: The Oracle Cluster Registry backup file failed the post-backup corruption check. Either the Oracle Cluster Registry was corrupt or the backup introduced an error.

Action: Attempt the Oracle Cluster Registry backup again by executing an 'ocrconfig - manualbackup' command. If the problem persists, contact Oracle Support Services.

PROC-00101: Operating System error [*string*]

Cause: An error occurred in the operating system layer while performing a cluster registry operation

Action: Contact Oracle Support Services.

PROC-00102: Cluster services error [string]

Cause: An error occurred in the cluster services layer while performing a cluster registry operation.

Action: Contact Oracle Support Services.

PROC-00103: Messaging error [string]

Cause: An error occurred in the messaging layer while performing a cluster registry operation.

Action: Contact Oracle Support Services.

PROC-00104: Authentication error [string]

Cause: An error occurred in the authentication layer while performing a cluster registry operation.

Action: Contact Oracle Support Services.

PROC-00105: Logging error

Cause: An error occurred in the logging layer while performing a cluster registry operation.

Action: Contact Oracle Support Services.

PROC-00106: Unidentified component error

Cause: An error occurred in an unidentified layer while performing a cluster registry operation.

Action: Contact Oracle Support Services.

PROC-00107: Storage layer error [string]

Cause: An error occurred in the storage layer while performing a cluster registry operation.

Action: Contact Oracle Support Services.

PROC-00108: ASM error [string]

Cause: An error occurred in the asm layer while performing a cluster registry operation.

Action: Contact Oracle Support Services.

PROC-00109: Network address and interface operations error

Cause: An error occurred in the network address and interface operations layer while performing a cluster registry operation.

Action: Contact Oracle Support Services.

PROC-00110: Patch and upgrade error [string]

Cause: An error occurred in the patch and upgrade management layer while performing a cluster registry operation.

Action: Contact Oracle Support Services.

PROC-00111: Cluster registry server error. Server error stack -\nstring\n- end of server error stack

Cause: An attempt to perform a cluster registry operation failed with errors reported by the server. The original request specified the -errorDetails option, thus the error stack from the server follows the message.

Action: Details of the error are specified in the displayed error stack. Correct the errors and retry the operation.

PROC-00112: Exadata File System (EDS) error [string]

Cause: An error occurred in the EDS layer while performing a cluster registry operation.

Action: Contact Oracle Support Services.

PROTL-00001 to PROTL-00604

PROTL-00001: Failed to initialize ocrconfig

Cause: Unable to initialize and start ocrconfig.

Action: Check log file for details about the failure.

PROTL-00002: Export file '*string*' already exists

Cause: Requested export file exists in the given path.

Action: Change the location for export file or remove the old export file.

PROTL-00003: Failed to create export file '*string*'

Cause: Unable to create or open file for exporting local registry data.

Action: Check access privilege or disk space of the requested path.

PROTL-00004: Failed to retrieve data from the local registry

Cause: Unable to retrieve necessary information from the local registry.

Action: Check the availability of the local registry and the details of the failure from the log file.

PROTL-00006: The specified Oracle Local Registry import file '*string*' is not accessible.

Cause: An attempt to import Oracle Local Registry contents from the indicated import file failed because the import file did not exist or user did not have permission to open the import file.

Action: Ensure that the import file exists and its permissions are correct and retry the import command.

PROTL-00007: Failed to open the specified import file '*string*'

Cause: Unable to access the specified import file.

Action: Check access privilege of the import file.

PROTL-00008: Failed to import data from specified file to the local registry

Cause: Unable to read data from the import file and import to the local registry.

Action: Check availability of the local registry and the details of the failure from the log file.

PROTL-00010: Failed to open the specified source local registry

Cause: Unable to access the specified source local registry.

Action: Check access privilege and location of the source local registry, and the log file for more detail.

PROTL-00011: Failed to open the specified destination local registry

Cause: Unable to access the specified destination local registry.

Action: Check access privilege and location of the destination local registry. Also check the log file for more details.

PROTL-00012: Oracle Local Registry to be upgraded has an unsupported version

Cause: Oracle Local Registry to be upgraded had an unsupported version.

Action: Upgrade Oracle Local Registry to a version supported.

PROTL-00013: Oracle Local Registry is in current version

Cause: Oracle Local Registry was in current version.

Action: No action required.

PROTL-00015: Unimplemented feature

Cause: Requested feature has not been implemented in current release.

Action: Try the feature again in the next release.

PROTL-00016: Internal Error

Cause: This is a generic internal error for ocrconfig.

Action: Contact Oracle Support Services.

PROTL-00017: Fatal Error

Cause: This is a generic fatal error for ocrconfig.

Action: Contact Oracle Support Services.

PROTL-00018: Failed to open the specified backup file '*string*'

Cause: File did not exist or user did not have permission to open the file.

Action: Ensure that the file exists and its permissions are correct. Also check the log file for more details.

PROTL-00019: Cannot proceed while the Oracle High Availability Service is running

Cause: The Oracle High Availability Service was running.

Action: Use the 'crsctl stop crs' command to shutdown the Oracle High Availability Service on the local node.

PROTL-00020: Insufficient permission to proceed. Require privileged user

Cause: User was not a privileged user.

Action: Run the command again using a privileged user.

PROTL-00021: Invalid parameter

Cause: Input parameter was not valid.

Action: Check log file for more information.

PROTL-00023: failed to back up Oracle Local Registry

Cause: An attempt to back up the Oracle Local Registry failed.

Action: Confirm that the registry exists ('ocrcheck -local') and that the clusterware stack is running ('crsctl check crs'). Ensure that there is sufficient free space at the

backup location for the OLR size reported by ocrcheck. If necessary, use 'ocrconfig -local -backuploc' to specify a different location.

PROTL-00024: No auto backups of the OLR are available at this time.

Cause: The command 'ocrconfig -local -showbackup' determined that no auto backups of the Oracle Local Registry (OLR) were available at that time.

Action: Auto backups of the OLR are created once every day. Wait 24 hours, and then retry the 'showbackup' operation. Alternatively, use 'ocrconfig -local -manualbackup' command to take a manual backup.

PROTL-00025: Manual backups for the Oracle Local Registry are not available

Cause: Manual backups for the Oracle Local Registry were not yet created.

Action: Manual backups can be created using 'ocrconfig -local -manualbackup' command.

PROTL-00035: The configured OLR location is not accessible

Cause: The configured Oracle local Registry (OLR) location did not exist, did not have the required permissions, or did not have sufficient disk space..

Action: Ensure that the location exists, that its permissions are correct, and that it has sufficient disk space. Also check the Clusterware alert log file for more details.

PROTL-00039: The specified file '*string*' has an invalid format

Cause: The specified file was not a valid Oracle Local Registry export/import file.

Action: Specify a valid Oracle Local Registry file which was created using the 'ocrconfig -local -export' command.

PROTL-00040: The specified file '*string*' has an invalid format

Cause: The specified file was not a valid Oracle Local Registry backup file.

Action: Use the 'ocrconfig -local -showbackup' command to list all available backups. Specify a valid Oracle Local Registry backup file listed by the above command.

PROTL-00041: The specified backup location '*string*' is not accessible

Cause: The backup location did not exist or the required permissions were not granted.

Action: Ensure that the location exists and the required file creation permissions are granted.

PROTL-00042: The specified backup location '*string*' is not a directory

Cause: The specified backup location was not a directory.

Action: Specify a directory.

PROTL-00049: The Oracle Local Registry (OLR) integrity check failed.

Cause: The integrity check failed for the configured Oracle Local Registry location.

Action: Check availability of backups using 'ocrconfig -local -showbackup' command and restore a compatible backup. If you are not able to resolve the problem, contact Oracle Support Services.

PROTL-00052: failed to retrieve backup location of Oracle Local Registry

Cause: An attempt to display the backup location for the Oracle Local Registry failed because the Oracle Local Registry was not accessible.

Action: Check the accessibility of Oracle Local Registry.

PROTL-00054: failed to copy the Oracle Local Registry backup file to the specified destination '*string*'

Cause: An attempt to copy the Oracle Local Registry backup file to the specified location failed because it was not writable by the user or did not have sufficient space.

Action: Ensure that the destination is writable by the user and that there is sufficient free space for the file.

PROTL-00056: The file name [*string*] specified for the 'ocrconfig -local -copy' command is invalid.

Cause: An attempt to copy an Oracle Local Registry file failed because the specified destination file name argument did not specify a complete path name.

Action: Reissue the command specifying a complete path name for the destination file.

PROTL-00057: The back up file specified in the 'ocrconfig -local -manualbackup -filename' command already exists [*string*].

Cause: The requested back up file already existed in the given path.

Action: Change the back up file location for the 'ocrconfig -local -manualbackup -filename' command or remove the old back up file.

PROTL-00058: successfully exported the Oracle Local Registry contents to file '*string*'

Cause: The Oracle Local Registry contents were successfully exported to the specified file as requested by the user.

Action: None

PROTL-00059: Manual backups for the Oracle Local Registry cannot be displayed.

Cause: An attempt to display OLR Manual backup locations failed because a manual backup was in progress.

Action: Retry the operation to display the manual backup locations using 'ocrconfig -local -showbackup manual' command after the in-progress backup completes.

PROTL-00061: The Oracle Local Registry backup file created is '*string*'.

Cause: None, this is an informational message.

Action: None

PROTL-00062: The Oracle Local Registry backup file '*string*' could not be deleted.

Cause: The Oracle Local Registry backup might not be accessible from the node on which the command was originated, or the user might not have appropriate permissions to delete the backup file.

Action: Check the accompanying errors and act accordingly.

PROTL-00302: Failed to initialize ocrdump

Cause: Unable to initialize and start ocrdump .

Action: Check log file for details about the failure.

PROTL-00303: Dump file already exists [*string*]

Cause: Requested dump file exists in the given path.

Action: Change the location for the dump file or remove the old dump file.

PROTL-00304: Failed to create dump file [*string*]

Cause: Unable to create or open file for dumping local registry data.

Action: Check access privilege or disk space of the requested path.

PROTL-00305: Failed to write to dump file [*string*]

Cause: Unable to write to dump file while dumping local registry data.

Action: Check access privilege or disk space of the requested path.

PROTL-00306: Failed to retrieve local registry data

Cause: Unable to read local registry data.

Action: Check log file for details about the failure.

PROTL-00307: The specified key does not exist in local registry

Cause: Unable to retrieve the specified key from local registry.

Action: Check log file for the key name.

PROTL-00309: Failed to access the Oracle Local Registry backup file.

Cause: The Oracle Local Registry backup file either did not exist or the user did not have the permission to open the file.

Action: Ensure that the file exists and its permissions are correct.

PROTL-00310: Not all keys were dumped due to permissions.

Cause: An attempt was made to dump one or more Oracle Local Registry keys for which the user does not have access permission.

Action: Log on as a different user and retry.

PROTL-00312: The specified file '*string*' has an invalid format.

Cause: The file argument to the ocrdump command specified a file that was not a valid Oracle Local Registry backup file.

Action: Use the 'ocrconfig -local -showbackup' command to list all available backups. Reissue the ocrdump command specifying a valid Oracle Local Registry backup file as listed by the ocrconfig command.

PROTL-00601: Failed to initialize ocrcheck

Cause: Unable to initialize and start ocrcheck.

Action: Check log file for details about the failure.

PROTL-00602: Failed to retrieve data from the local registry

Cause: Unable to retrieve necessary information from the local registry.

Action: Check the availability of the local registry and the details of the failure from the log file.

PROTL-00603: Oracle Local Registry is logically corrupted

Cause: A logical corruption was detected in the Oracle Local Registry.

Action: Check the log file for more information.

PROTL-00604: Failed to retrieve the configured location of the local registry

Cause: Unable to retrieve the location of local registry.

Action: Check log file for details about the failure.

PROT-00001 to PROT-00607

PROT-00001: Failed to initialize ocrconfig

Cause: Unable to initialize and start ocrconfig.

Action: Check log file for details about the failure.

PROT-00002: Export file '*string*' already exists

Cause: Requested export file exists in the given path.

Action: Change the location for export file or remove the old export file.

PROT-00003: Failed to create export file '*string*'

Cause: Unable to create or open file for exporting cluster registry data.

Action: Check access privilege or disk space of the requested path.

PROT-00004: Failed to retrieve data from the cluster registry

Cause: Unable to retrieve necessary information from the cluster registry.

Action: Check the availability of the cluster registry and the details of the failure from the log file.

PROT-00005: Clusterware is not running properly

Cause: Unable to register with clusterware for access to the cluster registry.

Action: Check the status of clusterware running on the machine.

PROT-00006: The specified Oracle Cluster Registry import file '*string*' is not accessible.

Cause: An attempt to import Oracle Cluster Registry contents from the indicated import file failed because the import file did not exist, was not mounted correctly, or user did not have permission to open the import file.

Action: Ensure that the import file exists, that it is mounted correctly, and that its permissions are correct and retry the import command. If the file location is an ASM disk group, check for related entries in the ASM alert log file for more details.

PROT-00007: Failed to open the specified import file '*string*'

Cause: Unable to access the specified import file.

Action: Check access privilege of the import file.

PROT-00008: Failed to import data from specified file to the cluster registry

Cause: Unable to read data from the import file and import to the cluster registry.

Action: Check availability of the cluster registry and the details of the failure from the log file.

PROT-00010: Failed to open the specified source cluster registry

Cause: Unable to access the specified source cluster registry.

Action: Check access privilege and location of the source cluster registry, and the log file for more detail.

PROT-00011: Failed to open the specified destination cluster registry

Cause: Unable to access the specified destination cluster registry.

Action: Check access privilege and location of the destination cluster registry. Also check the log file for more details.

PROT-00012: Oracle Cluster Registry to be upgraded has an unsupported version

Cause: Oracle Cluster Registry to be upgraded had an unsupported version.

Action: Upgrade Oracle Cluster Registry to a version supported.

PROT-00013: Oracle Cluster Registry is in current version

Cause: Oracle Cluster Registry was in current version.

Action: No action required.

PROT-00014: Oracle Cluster Registry to be downgraded has an earlier version

Cause: Oracle Cluster Registry to be downgraded had an earlier version.

Action: No action required.

PROT-00015: Unimplemented feature

Cause: Requested feature has not been implemented in current release.

Action: Try the feature again in the next release.

PROT-00016: Internal Error

Cause: This is a generic internal error for ocrconfig.

Action: Contact Oracle Support Services.

PROT-00017: Fatal Error

Cause: This is a generic fatal error for ocrconfig.

Action: Contact Oracle Support Services.

PROT-00018: Failed to open the specified backup file '*string*'

Cause: File did not exist or user did not have permission to open the file.

Action: Ensure that the file exists and its permissions are correct. Also check the log file for more details.

PROT-00019: Cannot proceed while the Cluster Ready Service is running

Cause: The Cluster Ready Service was running.

Action: Use the 'crsctl stop crs' command to shutdown the Cluster Ready Service on the local node.

PROT-00020: Insufficient permission to proceed. Require privileged user

Cause: User was not a privileged user.

Action: Run the command again using a privileged user.

PROT-00021: Invalid parameter

Cause: Input parameter was not valid.

Action: Check log file for more information.

PROT-00022: Storage too small

Cause: Specified storage was too small to mirror OCR content.

Action: Execute the 'ocrcheck' command to retrieve the total size, and ensure that the size of the device to be added is large enough for use by cluster registry.

PROT-00023: failed to back up Oracle Cluster Registry

Cause: An attempt to make a backup copy of the Oracle Cluster Registry (OCR) failed. This error may be accompanied by other messages that identify the specific problem.

Action: Check availability of the Oracle Cluster Registry and the available free space on the disk group where the manual backup will be stored. Use 'ocrconfig -backuploc' to specify a new backup location, if necessary.

PROT-00024: Auto backups for the Oracle Cluster Registry are not available

Cause: Auto backups for the Oracle Cluster Registry were not yet created. They are created once every four hours.

Action: No action required.

PROT-00025: Manual backups for the Oracle Cluster Registry are not available

Cause: Manual backups for the Oracle Cluster Registry were not yet created.

Action: Manual backups can be created using 'ocrconfig -manualbackup' command.

PROT-00026: Oracle Cluster Registry backup locations were retrieved from a local copy

Cause: The Oracle Cluster Registry files were not accessible. Information about the cluster registry backups is also maintained in the Oracle Local Registry. The information displayed has been retrieved from the Oracle Local Registry. This information may be outdated.

Action: Run 'ocrconfig -showbackup' command from another node in the cluster. Compare the output of the 'ocrconfig -showbackup' on this node with output of the same command from other nodes in the cluster to determine the latest backup copy.

PROT-00027: Cannot configure another Oracle Cluster Registry location because the maximum number of Oracle Cluster Registry locations (5) have been configured

Cause: The maximum number of Oracle Cluster Registry locations (5) had been configured.

Action: (Optional) Verify the configuration using the 'ocrcheck -config' command. Delete an Oracle Cluster Registry device by executing 'ocrconfig -delete *existing location*' command, and retry the operation.

PROT-00028: Cannot delete or replace the only configured Oracle Cluster Registry location.

Cause: A delete or replace operation was performed when there was only 1 configured Oracle Cluster Registry location. The above listed operation can only be performed when there are at least 2 configured Oracle Cluster Registry locations.

Action: Execute 'ocrconfig -add *new location*' to add the new Oracle Cluster Registry location followed by 'ocrconfig -delete *existing location*' command.

PROT-00029: The Oracle Cluster Registry location is already configured

Cause: The location to be added was identical to a configured Oracle Cluster Registry location.

Action: Verify the configuration using the 'ocrcheck -config' command. Ensure that the location to be added is not already configured.

PROT-00030: The Oracle Cluster Registry location to be added is not usable.

Cause: The Oracle Cluster Registry location to be added did not exist, was not mounted correctly, did not have the required permissions, or did not have the sufficient disk space. This error may be accompanied by other messages that identify the specific problem.

Action: Ensure that the location exists, that it is mounted correctly and visible to all nodes in the cluster, that its permissions are correct, and that it has sufficient disk space. If trying to add an ASM Oracle Cluster Registry location, check for related entries in the ASM alert log file for more details.

PROT-00031: The Oracle Cluster Registry location to be added is an ASM disk

Cause: The Oracle Cluster Registry location to be added is already in use by ASM.

Action: Specify a Oracle Cluster Registry location that is not currently in use. Use the 'crsctl query css votedisk' command to get the list of voting files used by CSS. Use the 'asmcmd lsdisk --member' command to get the list of disks used by ASM. Specify a location that is not in either list.

PROT-00032: The Oracle Cluster Registry location to be added is a CSS voting file

Cause: The Oracle Cluster Registry location to be added is already configured as a CSS voting file.

Action: Specify a Oracle Cluster Registry location that is not currently in use. Use the 'crsctl query css votedisk' command to get the list of voting files used by CSS. Use the 'asmcmd lsdisk --member' command to get the list of disks used by ASM. Specify a location that is not in either list.

PROT-00033: Oracle High Availability Services on the local node is not running

Cause: Oracle High Availability Services on the local node was not running

Action: Run 'crsctl start crs' command to start the Oracle High Availability Services on the local node.

PROT-00034: The Oracle Cluster Registry location to be deleted is not configured.

Cause: The location to be deleted was not already configured as an Oracle Cluster Registry location.

Action: Run 'ocrcheck -config' command to get the list of configured Oracle Cluster Registry locations. Ensure that the location to be deleted is already configured.

PROT-00035: The configured OCR locations are not accessible.

Cause: The configured Oracle Cluster Registry (OCR) locations did not exist, were not mounted correctly, did not have the required permissions, or did not have sufficient disk space. This error may be accompanied by other messages that identify the specific problem.

Action: Ensure that the locations exist, that they are mounted correctly and visible to all nodes in the cluster, that their permissions are correct, and that they have sufficient disk space. If using an Oracle Automatic Storage Management (Oracle ASM) OCR location, check for entries in the Oracle ASM alert log file for more details.

PROT-00036: Duplicate or previously used Oracle Cluster Registry location *string* cannot be added

Cause: The Oracle Cluster Registry location to be added had the same contents as that of currently configured locations. This might be due to the location to be added was either duplicate of one of the currently configured locations with a different path or previously used.

Action: Make sure that the location to be added is not currently configured with a different path. If the location was previously configured as an Oracle Cluster Registry location, ensure that the contents are erased before adding it again.

PROT-00037: The Oracle Cluster Registry location *string* cannot be deleted because it is required for the OCR to be available

Cause: A delete operation was requested when there were minimum configured Oracle Cluster Registry locations available. The above listed operation can only be performed when a majority of configured Oracle Cluster Registry locations are accessible and online.

Action: Run 'ocrcheck' command to get the current status of the configured Oracle Cluster Registry locations. Execute 'ocrconfig -add *new location*' to add the new Oracle Cluster Registry location followed by 'ocrconfig -delete *existing location*' command.

PROT-00038: The Oracle Cluster Registry location cannot be added because another configured location is offline.

Cause: An add or replace operation was requested when there was at least one configured Oracle Cluster Registry location which was not accessible or online. The above listed operation can only be performed when the inaccessible Oracle Cluster Registry location has been deleted or replaced.

Action: Run 'ocrcheck' command to get the current status of the configured Oracle Cluster Registry locations. Execute 'ocrconfig -delete *offline location*' command to delete the inaccessible Oracle Cluster Registry location followed by 'ocrconfig -add *new location*' command.

PROT-00039: The specified file '*string*' has an invalid format

Cause: The specified file was not a valid Oracle Cluster Registry export/import file.

Action: Specify a valid Oracle Cluster Registry file which was created using the 'ocrconfig -export' command.

PROT-00040: The specified file '*string*' has an invalid format

Cause: The specified file was not a valid Oracle Cluster Registry backup file.

Action: Use the 'ocrconfig -showbackup' command to list all available backups. Specify a valid Oracle Cluster Registry backup file listed by the above command.

PROT-00041: The specified backup location '*string*' is not accessible

Cause: The backup location did not exist or the required permissions were not granted.

Action: Ensure that the location exists and the required file creation permissions are granted.

PROT-00042: The specified location '*string*' designates an invalid storage type for Oracle Cluster Registry backup files.

Cause: The command 'ocrconfig -backuploc' specified a backup location which designated an invalid storage type for Oracle Cluster Registry backup files.

Action: Check the storage type for the Oracle Cluster Registry backup location.

PROT-00043: Administering the Oracle Cluster Registry from a Leaf node is not supported.

Cause: An attempt was made to execute the 'ocrconfig' command with the specified option from a Leaf node, which is not supported.

Action: Execute the 'ocrconfig' command from a Hub node.

PROT-00044: Cannot change the Oracle Cluster Registry backup location to an ASM disk group.

Cause: An attempt was made to change the Oracle Cluster Registry backup location to an ASM disk group when the Oracle Cluster Registry was not configured on ASM.

Action: Migrate the Oracle Cluster Registry to ASM before changing the Oracle Cluster Registry backup location to an ASM disk group.

PROT-00045: The specified Oracle Cluster Registry backup location *string* is inaccessible.

Cause: Oracle Cluster Registry backup location did not exist, was not mounted correctly, or did not have the required permissions.

Action: Ensure that the backup location exists, that it is mounted correctly, and that its permissions are correct. Check the entries in the ASM alert log file for more details.

PROT-00046: failed to repair the Oracle Cluster Registry configuration while adding the location '*string*' on the local node

Cause: The Oracle Cluster Registry (OCR) location to be added did not exist, was not mounted correctly, did not have the required permissions, or the OCR file in the disk group did not exist. This error may be accompanied by other messages that identify the specific problem.

Action: Ensure that the location exists with appropriate permissions. If the location is an ASM disk group, then the OCR file in the disk group must already exist, the disk group must be mounted correctly; also check the entries in the ASM alert log file for more details.

PROT-00048: The Oracle Cluster Registry location *string* cannot be deleted because the OCR backup location is an ASM disk group.

Cause: An attempt was made to delete the only ASM Oracle Cluster Registry (OCR) location.

Action: Ensure that there is at least one ASM Oracle Cluster Registry location.

PROT-00049: The Oracle Cluster Registry (OCR) integrity check failed.

Cause: The integrity check failed for one or more of the configured Oracle Cluster Registry locations.

Action: Use 'ocrcheck' command to validate the block integrity of the configured Oracle Cluster Registry locations. Delete the corrupt locations using the command 'ocrconfig -delete *corrupt location*'. If all configured Oracle Cluster Registry locations are corrupted, check the availability of backups using the 'ocrconfig -showbackup'

command and restore a compatible backup. If you are not able to resolve the problem, contact Oracle Support Services.

PROT-00050: OCR is local-only. '-repair -add' and '-repair -delete' options are not supported for local-only OCR.

Cause: An attempt was made to use the '-repair -add' or '-repair -delete' options with a local-only Oracle Cluster Registry, which is not supported.

Action: None

PROT-00051: reserved file or device name specified for Oracle Cluster Registry location

Cause: One of the commands 'ocrconfig -add', 'ocrconfig -repair', or 'ocrconfig -replace' was issued specifying a reserved file or device name. The names week.ocr, day.ocr, backup00.ocr, backup01.ocr, and backup02.ocr are reserved for Oracle.

Action: Choose an OCR location that is not one of the reserved names.

PROT-00052: failed to retrieve backup location of Oracle Cluster Registry

Cause: An attempt to display the backup location for the Oracle Cluster Registry failed because the Oracle Cluster Registry was not accessible.

Action: Check the accessibility of Oracle Cluster Registry.

PROT-00053: The file name [*string*] specified for the 'ocrconfig -repair', 'ocrconfig -add' or 'ocrconfig -replace' command designates an invalid storage type for the Oracle Cluster Registry.

Cause: One of the commands 'ocrconfig -add', 'ocrconfig -repair' or 'ocrconfig -replace' was issued using a file name which designates an invalid storage type for Oracle Cluster Registry.

Action: Check the storage type of the device being added, repaired or replaced.

PROT-00054: failed to copy the Oracle Cluster Registry backup file to the specified destination '*string*'

Cause: An attempt to copy the Oracle Cluster Registry backup file to the specified destination failed because it was not writable by the user, or did not have sufficient space, or the destination was not a filename.

Action: Ensure that the destination is writable by the user, and that there is sufficient free space for the file, and that the destination is a filename.

PROT-00055: The file name [*string*] specified for the 'ocrconfig -manualbackup -filename' command is invalid.

Cause: An attempt to configure a manual backup file for Oracle Cluster Registry failed because the specified file name argument did not specify a complete path name.

Action: Reissue the command specifying a complete path name for the backup file.

PROT-00056: The file name [*string*] specified for the 'ocrconfig -copy' command is invalid.

Cause: An attempt to copy an Oracle Cluster Registry file failed because the specified destination file name argument did not specify a complete path name.

Action: Reissue the command specifying a complete path name for the destination file.

PROT-00057: The backup file specified in the 'ocrconfig -manualbackup -filename' command already exists [string].

Cause: The requested backup file already existed in the given path.

Action: Change the backup file location for the 'ocrconfig -manualbackup -filename' command or remove the old backup file.

PROT-00058: successfully exported the Oracle Cluster Registry contents to file 'string'

Cause: The Oracle Cluster Registry contents were successfully exported to the specified file as requested by the user.

Action: None

PROT-00059: Manual backups for the Oracle Cluster Registry cannot be displayed.

Cause: An attempt to display OCR manual backup locations failed because a manual backup was in progress.

Action: Retry the operation to display the manual backup locations using 'ocrconfig -showbackup manual' command after the in-progress backup completes.

PROT-00060: The Oracle Cluster Registry backup is copied to 'string'.

Cause: The Oracle Cluster Registry backup contents were successfully copied to the specified file.

Action: None

PROT-00061: The Oracle Cluster Registry backup file created is 'string'.

Cause: None, this is an informational message.

Action: None

PROT-00062: The Oracle Cluster Registry backup file 'string' could not be deleted.

Cause: The Oracle Cluster Registry backup might not be accessible from the node on which the command was originated, or the user might not have appropriate permissions to delete the backup file.

Action: Check the accompanying errors and act accordingly.

PROT-00301: Dump is not feasible when clusterware is running

Cause: Unable to dump cluster registry data when clusterware is running.

Action: Stop the clusterware before retrying ocrdump.

PROT-00302: Failed to initialize ocrdump

Cause: Unable to initialize and start ocrdump.

Action: Check log file for details about the failure.

PROT-00303: Dump file already exists [string]

Cause: Requested dump file exists in the given path.

Action: Change the location for the dump file or remove the old dump file.

PROT-00304: Failed to create dump file [*string*]

Cause: Unable to create or open file for dumping cluster registry data.

Action: Check access privilege or disk space of the requested path.

PROT-00305: Failed to write to dump file [*string*]

Cause: Unable to write to dump file while dumping cluster registry data.

Action: Check access privilege or disk space of the requested path.

PROT-00306: Failed to retrieve cluster registry data

Cause: Unable to read cluster registry data.

Action: Check log file for details about the failure.

PROT-00307: The specified key does not exist in cluster registry

Cause: Unable to retrieve the specified key from cluster registry.

Action: Check log file for the key name.

PROT-00309: Failed to access the Oracle Cluster Registry backup file.

Cause: The Oracle Cluster Registry backup file either did not exist or the user did not have the permission to open the file.

Action: Ensure that the file exists and its permissions are correct.

PROT-00310: Not all keys were dumped due to permissions.

Cause: An attempt was made to dump one or more Oracle Cluster Registry keys for which the user does not have access permission.

Action: Log on as a different user and retry.

PROT-00311: insufficient permission to proceed

Cause: The user was not a privileged user.

Action: Log on as root or administrator user and reissue the command.

PROT-00312: The specified file '*string*' has an invalid format.

Cause: The file argument to the ocrdump command specified a file that was not a valid Oracle Cluster Registry backup file.

Action: Use the 'ocrconfig -showbackup' command to list all available backups. Reissue the ocrdump command specifying a valid Oracle Cluster Registry backup file as listed by the ocrconfig command.

PROT-00313: Oracle High Availability Services is not running on the local node.

Cause: An attempt was made to execute the 'ocrdump' command when the Oracle High Availability Services was not running on the local node.

Action: Run 'crsctl start crs' command to start the Oracle High Availability Services on the local node and reissue the command.

PROT-00601: Failed to initialize ocrcheck

Cause: Unable to initialize and start ocrcheck.

Action: Check log file for details about the failure.

PROT-00602: Failed to retrieve data from the cluster registry

Cause: Unable to retrieve necessary information from the cluster registry.

Action: Check the availability of the cluster registry and the details of the failure from the log file.

PROT-00603: Oracle Cluster Registry is logically corrupted

Cause: A logical corruption was detected in the Oracle Cluster Registry.

Action: Check the log file for more information. Check availability of backups using 'ocrconfig -showbackup' command. Restore a compatible backup, and verify using ocrcheck.

PROT-00604: Failed to retrieve the configured location(s) of the cluster registry.

Cause: Unable to retrieve the configured location(s) of the cluster registry.

Action: Check log file for details about the failure.

PROT-00605: The 'ocrcheck' command is not supported from a Leaf node.

Cause: An attempt was made to execute the 'ocrcheck' command from a Leaf node, which is not supported.

Action: Execute the 'ocrcheck' command from a Hub node.

PROT-00606: insufficient permission to proceed

Cause: The user was not a privileged user.

Action: Log on as root or administrator user and reissue the command.

PROT-00607: More than one OCR storage type was detected.

Cause: More than one Oracle Cluster Registry (OCR) storage type was detected. Storing OCR on different storage types simultaneously is not supported.

Action: Configure OCR using the same storage type.

PRVE-00004 to PRVE-10378

PRVE-00004: The given operator is not supported.

Cause: This is an internal error.

Action: Please contact Oracle Support.

PRVE-00005: The string does not represent a numeric value.

Cause: This is an internal error.

Action: Please contact Oracle Support.

PRVE-00008: Could not find command name in description of executable

Cause: This is an internal error.

Action: Please contact Oracle Support.

PRVE-00009: Failed to resolve variable "{0}"

Cause: This is an internal error.

Action: Please contact Oracle Support.

PRVE-00010: Properly formatted RESULT tags are not found in the command output: "{0}".

Cause: This is an internal error.

Action: Please contact Oracle Support.

PRVE-00011: Properly formatted COLLECTED tags are not found in the command output.

Cause: This is an internal error.

Action: Please contact Oracle Support.

PRVE-00012: Execution of verification executable failed.

Cause: An error was encountered while executing verification executable.

Action: Look at the accompanying messages for details on the cause of failure.

PRVE-00013: Execution of analyzer failed.

Cause: An error was encountered while executing analyzer.

Action: Look at the accompanying messages for details on the cause of failure.

PRVE-00016: Unable to write data to file "{0}".

Cause: The path specified is not writeable.

Action: Ensure that write access exists for the specified path.

PRVE-00018: Encountered a NULL executable argument.

Cause: This is an internal error.

Action: Please contact Oracle Support.

PRVE-00021: HugePages feature is not enabled on nodes "{0}"

Cause: Available memory is greater than 4GB, but OS HugePages feature is not enabled.

Action: If available memory is greater than 4GB, Oracle recommends configuring HugePages. Refer to OS documentation to configure HugePages.

PRVE-00022: Could not get available memory on node "{0}"

Cause: An error occurred accessing /proc/meminfo to determine available system memory.

Action: Ensure that the OS /proc virtual file system is functioning correctly and that /proc/meminfo is accessible.

PRVE-00023: HugePages feature is not supported on node "{0}"

Cause: HugePages feature of Linux operating system was not found supported on the indicated node.

Action: Oracle recommends enabling the database automatic memory management feature on database instances that run on a Linux operating system that does not support HugePages.

PRVE-00024: Transparent HugePages feature is enabled on node "{0}"

Cause: Transparent HugePages feature was found always enabled on the indicated node.

Action: Oracle recommends disabling Transparent HugePages on all servers running Oracle databases. To disable the Transparent HugePages feature add "transparent_hugepage=never" to the kernel boot line in the "/etc/default/grub" file of the indicated node and reboot the node to make the changes effective. In case of a container node, the recommended action shall be performed on the container host.

PRVE-00027: Hardware clock synchronization could not be determined on node "{0}"

Cause: The hwclock command is used in the shutdown script, but it is not possible to establish that the --systohc option is enabled.

Action: Check the shutdown/halt script and verify manually whether this script executes the command 'hwclock --systohc'.

PRVE-00028: Hardware clock synchronization could not be established as halt script does not exist on node "{0}"

Cause: The shutdown or halt script /etc/rc.d/init.d/halt does not exist or is missing.

Action: Check for the existence of the shutdown or halt script and ensure this script executes the command 'hwclock --systohc'.

PRVE-00029: Hardware clock synchronization check could not run on node "{0}"

Cause: The shutdown or halt script may not be accessible or a command may have failed.

Action: Contact Oracle Support.

PRVE-00033: Core files are not enabled on node "{0}"

Cause: The core file setting currently prevents the creation of a core file for process aborts and exceptions.

Action: Oracle recommends enabling core file creation.

PRVE-00034: Error encountered while trying to obtain the core file setting on node "{0}"

Cause: An error occurred while attempting to determine the core file setting.

Action: Oracle recommends enabling core file creation.

PRVE-00038: The SSH LoginGraceTime setting on node "{0}" may result in users being disconnected before login is completed

Cause: The LoginGraceTime timeout value is too low which is causing users to be disconnected before their login completes.

Action: Oracle recommends setting the LoginGraceTime to a value of zero (unlimited), Restart the SSH daemon on the identified node to make the changes effective.

PRVE-00039: Error encountered while trying to obtain the LoginGraceTime setting on node "{0}"

Cause: An error occurred while attempting to obtain the LoginGraceTime setting.

Action: Oracle recommends setting the LoginGraceTime to a value of zero (unlimited).

PRVE-00042: Maximum locked memory "{0}" limit when automatic memory management is enabled is less than the recommended value in the file "{1}" [Expected = "{2}", Retrieved="{3}"] on node "{4}"

Cause: The value of maximum locked memory is less than the recommended value for automatic memory management.

Action: Increase the value of locked memory in the indicated file. Refer to your operating system documentation for details.

PRVE-00043: Error encountered when checking maximum locked memory limit on node "{0}"

Cause: An error was encountered when retrieving the value of maximum locked memory.

Action: Modify the value of max locked memory. Refer your operating system documentation for details.

PRVE-00044: No entry in configuration file when checking locked memory limit on node "{0}"

Cause: No entry for maximum locked memory limit was found in /etc/security/limits.conf.

Action: Specify or correct the value of locked memory by modifying /etc/security/limits.conf. Refer your operating system documentation for details.

PRVE-00047: Error when checking IP port availability

Cause: Command failed when checking port availability.

Action: Contact Oracle Support.

PRVE-00048: Check for IP port "{0}" availability failed

Cause: IP Port 8888 not available.

Action: Stop any applications listening on port 8888 as it is needed for oc4j.

PRVE-00052: The syslog.conf log file sync setting on node "{0}" may result in users being disconnected before logins are completed

Cause: Not all log file specifications in /etc/syslog.conf are prefixed by the '-' character which will cause log messages being written to disk before control is released. This may cause users to be disconnected before their login completes.

Action: Oracle recommends prefixing all log file specifications in /etc/syslog.conf with the '-' character which result in the log messages being written to system cache and flushed to disk later.

PRVE-00053: Error encountered while trying to obtain the syslog.conf log file sync settings on node "{0}"

Cause: An error occurred while attempting to read the log file sync settings specified in file: /etc/syslog.conf.

Action: Verify read access to file '/etc/syslog.conf'. Oracle recommends prefixing all log file specifications in /etc/syslog.conf with the '-' character which will result in the log messages being written to system cache and flushed to disk later.

PRVE-00054: File '/etc/syslog.conf' not found on node "{0}"

Cause: An error occurred while attempting to read the log file sync settings specified in file: '/etc/syslog.conf'. The file '/etc/syslog.conf' was not found on the system.

Action: Please verify that the file '/etc/syslog.conf' exists on the system.

PRVE-00055: Cannot read the file '/etc/syslog.conf' on node "{0}"

Cause: The user did not have permissions to read the '/etc/syslog.conf' file on the system.

Action: Please verify that the current user has read access to the file.

PRVE-00059: no default entry or entry specific to user "{0}" was found in the configuration file "{1}" when checking the maximum locked memory "{2}" limit on node "{3}"

Cause: There was no default or user-specific entry for maximum locked memory limit found in the indicated configuration file.

Action: Specify or correct the value of the maximum locked memory by modifying the indicated configuration file. Refer to your operating system documentation for details.

PRVE-00060: Cannot read the shutdown script file "{0}"

Cause: The current user did not have read access to the indicated file.

Action: Ensure that the current user has read access to the indicated file.

PRVE-00067: Maximum locked memory "{0}" limit setting is less than the recommended value in the file "{1}" [Expected = "{2}", Actual="{3}"] on node "{4}"

Cause: A check of maximum locked memory settings determined that the value of maximum locked memory was less than the recommended value of 3 GB in the indicated file for the current user.

Action: Oracle recommends that the maximum locked memory limit should be at least 3GB. Increase the value of maximum locked memory specified in the indicated file of

the identified node. Refer to the operating system documentation or issue the command 'man limits.conf' for details.

PRVE-00068: Maximum locked memory "{0}" limit setting is less than the recommended value in the file "{1}" [Expected = "{2}", Actual="{3}"] when huge pages are enabled on node "{4}".

Cause: A check of maximum locked memory settings determined that the value of maximum locked memory specified for the current user in the indicated file was less than the recommended value of maximum locked memory when huge pages are enabled on the indicated node.

Action: Oracle recommends that the maximum locked memory be at least 90 percent of the installed physical memory when huge pages are enabled. Increase the value of maximum locked memory specified in the indicated file of the identified node. Refer to the operating system documentation or issue the command 'man limits.conf' for details.

PRVE-00072: Kernel parameter "{0}" required for the NUMA nodes from which huge pages are allocated or freed by the NUMA memory policy does not have expected current value on node "{1}" [Expected = "{2}" ; Found = "{3}"].

Cause: The Configuration Verification Utility (CVU) determined that the indicated HugePages memory policy kernel parameter was not set to the expected current value on the indicated node.

Action: Ensure that the indicated HugePages memory policy kernel parameter is set to the expected current value on the indicated node. In case of the container node, ensure the setting on the container host.

PRVE-00075: The verification for device special file '/dev/ofsctl' failed, the file is not present on node "{0}".

Cause: The device special file '/dev/ofsctl' was expected to be present on the node indicated as the ACFS drivers are installed and the file was missing.

Action: Verify that the ACFS installation completed successfully and ensure that the device special file '/dev/ofsctl' is created.

PRVE-00079: The UDEV rule for "ofsctl" was not found in the rule file '55-usm.rules' on node "{0}".

Cause: The ACFS verification found that the UDEV rule specification 'KERNEL=="ofsctl"' was not found in the rule file '55-usm.rules'.

Action: Verify that the ACFS installation completed successfully and ensure that the UDEV rule is created in the '55-usm.rules' file.

PRVE-00080: failed to execute the command 'osdbagrp -a' successfully on node "{0}"

Cause: The ACFS verification encountered a problem in attempting to execute the command '\$CRS_HOME/bin/osdbagrp -a' to obtain the ASM admin group name.

Action: Verify that the image 'osdbagrp' is available in the 'CRS home' location and the command execution can be performed successfully.

PRVE-00082: The device special file attributes did not meet the expected requirements on node "{0}".\n[permissions: Expected="{1}"; Found="{2}"] [owner: Expected="{3}"; Found="{4}"] [group: Expected="{5}"; Found="{6}"]

Cause: The file attributes for the device special file '/dev/ofsctl' did not match the expected values.

Action: Verify that the ACFS installation completed successfully and check the file attributes defined for '/dev/ofsctl'.

PRVE-00083: The UDEV rule specified in the '55-usm.rules' file does not meet the expected requirements on node "{0}". [group: Expected="{1}"; Found="{2}"] [mode: Expected="{3}"; Found="{4}"]

Cause: The ACFS verification encountered the problem that the UDEV rule defined in the rule file for "ofsctl" did not match the expected values.

Action: Verify that the ACFS installation completed successfully and check the UDEV rule defined for "ofsctl".

PRVE-00084: Current '/dev/shm/' mount options do not contain one or more required options. [Found: "{0}"; Missing: "{1}"].

Cause: Required '/dev/shm/' mount options were missing.

Action: Ensure that current mount options on the node for '/dev/shm/' satisfy the requirements expressed in the error.

PRVE-00085: Configured '/dev/shm/' mount options do not contain one or more required options. [Found: "{0}"; Missing: "{1}"].

Cause: Required '/dev/shm/' mount options were missing.

Action: Ensure that configured mount options in fstab on the node for '/dev/shm/' satisfy the requirements expressed in the error.

PRVE-00086: Current '/dev/shm/' mount options include one or more invalid options. [Found: "{0}"; Invalid: "{1}"].

Cause: One or more invalid '/dev/shm/' mount options were found.

Action: Ensure that current mount options on the node for '/dev/shm/' satisfy the requirements expressed in the error.

PRVE-00087: Configured '/dev/shm/' mount options include one or more invalid options. [Found: "{0}"; Invalid: "{1}"].

Cause: One or more invalid '/dev/shm/' mount options were found.

Action: Ensure that configured mount options in fstab on the node for '/dev/shm/' satisfy the requirements expressed in the error.

PRVE-00088: '/dev/shm/' mount options did not satisfy the requirements on node "{0}".

Cause: '/dev/shm/' mount options mismatch found. The reasons for the mismatch could be the following: 1. One or more required mount options were missing in current and configured mount options 2. One or more invalid mount options were found in current and configured mount options

Action: Check the accompanying error messages for the expected mount options. Configure '/dev/shm/' mount options accordingly.

PRVE-00093: The 'DefaultTasksMax' parameter is set to an incorrect value in file '/etc/systemd/system.conf' on node "{0}". [Found: "{1}"; Expected: "{2}"].

Cause: The DefaultTasksMax parameter was set to an incorrect value in /etc/systemd/system.conf file on the specified node.

Action: Ensure that the DefaultTasksMax parameter is correctly set in file /etc/systemd/system.conf.

PRVE-00234: Error encountered while trying to obtain the hangcheck_timer setting on node "{0}"

Cause: An error occurred while attempting to determine the hangcheck_timer setting.

Action: n/a

PRVE-00243: CSS diagwait is not set to recommended value of 13 on node "{0}"

Cause: CSS diagwait does not meet the recommendation

Action: Set the diagwait to the recommended setting using the '\$CRS_HOME/bin/crsctl set css diagwait' command.

PRVE-00244: Error encountered while trying to obtain the CSS diagwait setting on node "{0}"

Cause: An error occurred while attempting to determine the CSS diagwait setting.

Action: n/a

PRVE-00253: CSS misscount is not set to recommended on node "{0}"

Cause: CSS misscount does not meet the requirement

Action: Set the misscount to the recommended setting using the '\$CRS_HOME/bin/crsctl set css misscount' command.

PRVE-00254: Error encountered while trying to obtain the CSS misscount setting on node "{0}"

Cause: An error occurred while attempting to determine the CSS misscount setting.

Action: n/a

PRVE-00263: CSS reboottime is not set to recommended value of 3 seconds on node "{0}"

Cause: CSS reboottime does not meet the requirement

Action: Set the reboottime to the recommended setting using the '\$CRS_HOME/bin/crsctl set css reboottime' command.

PRVE-00264: Error encountered while trying to obtain the CSS reboottime setting on node "{0}"

Cause: An error occurred while attempting to determine the CSS reboottime setting.

Action: n/a

PRVE-00273: The value of network parameter "{0}" for interface "{4}" is not configured to the expected value on node "{1}".[Expected="{2}"; Found="{3}"]

Cause: The indicated parameter of the indicated interface on the indicated node was not configured to the expected value.

Action: Correct the configuration of the indicated parameter to the indicated expected value.

PRVE-00274: Error encountered while trying to obtain the network parameter setting on node "{0}"

Cause: An error occurred while attempting to retrieve network parameter setting.

Action: n/a

PRVE-00284: Error encountered while trying to obtain the virtual memory parameter setting on node "{0}"

Cause: An error occurred while attempting to retrieve virtual memory parameter setting.

Action: n/a

PRVE-00294: Error trying to obtain the MTU setting on node "{0}"

Cause: An error occurred while attempting to retrieve MTU setting.

Action: n/a

PRVE-00296: Error retrieving cluster interfaces on node "{0}"

Cause: Cluster interfaces could not be retrieved on the specified node using 'oifcfg getif'.

Action: Ensure that the Oracle Clusterware is configured and that the Oracle Clusterware stack is running.

PRVE-00304: Error while checking flow control settings in the E1000 on node "{0}"

Cause: An error occurred while attempting to retrieve E1000 flow control settings.

Action: n/a

PRVE-00314: Error while checking default gateway subnet on node "{0}"

Cause: An error occurred while attempting to retrieve subnet of default gateway.

Action: n/a

PRVE-00315: Error while checking VIP subnet on node "{0}"

Cause: An error occurred while attempting to retrieve subnet of VIP.

Action: n/a

PRVE-00324: Error while checking VIP restart configuration on node "{0}"

Cause: An error occurred while attempting to retrieve VIP restart configuration.

Action: n/a

PRVE-00334: Error while checking TCP packet re-transmit rate on node "{0}"

Cause: An error occurred while attempting to retrieve TCP packet re-transmit rate.

Action: n/a

PRVE-00343: Network packet reassembly occurring on node "{1}".

Cause: A possible cause is the difference in the MTU size across network

Action: Ensure that the MTU size is same across network

PRVE-00344: Error while checking network packet reassembly on node "{0}"

Cause: An error occurred while attempting to check network packet reassembly.

Action: n/a

PRVE-00354: Error encountered while trying to obtain the CSS disktimeout setting

Cause: An error occurred while attempting to determine the CSS disktimeout setting.

Action: n/a

PRVE-00384: Error encountered while trying to obtain the hangcheck reboot setting on node "{0}"

Cause: An error occurred while attempting to determine the hangcheck reboot setting.

Action: n/a

PRVE-00394: Error encountered while trying to obtain the hangcheck tick setting on node "{0}"

Cause: An error occurred while attempting to determine the hangcheck tick setting.

Action: n/a

PRVE-00404: Error encountered while trying to obtain the hangcheck margin setting on node "{0}"

Cause: An error occurred while attempting to determine the hangcheck margin setting.

Action: n/a

PRVE-00414: Error encountered while trying to obtain the listener name on node "{0}"

Cause: An error occurred while attempting to determine the listener name.

Action: n/a

PRVE-00420: /dev/shm is not found mounted on node "{0}"

Cause: During database installation it is recommended to have /dev/shm mounted as a RAM file system.

Action: Mount /dev/shm as RAM file system with appropriate size.

PRVE-00421: No entry exists in /etc/fstab for mounting /dev/shm

Cause: The file /etc/fstab did not have an entry specifying /dev/shm and its size to be mounted.

Action: Modify /etc/fstab to mount /dev/shm with appropriate size.

PRVE-00422: The size of in-memory file system mounted at /dev/shm is "{0}" megabytes which does not match the size in /etc/fstab as "{1}" megabytes

Cause: The size of the mounted RAM file system did not equal the value configured for system startup.

Action: Modify /etc/fstab to mount /dev/shm with appropriate size.

PRVE-00423: The file /etc/fstab does not exist on node "{0}"

Cause: The file /etc/fstab should exist on the node.

Action: Recreate or retrieve the /etc/fstab file.

PRVE-00426: The size of in-memory file system mounted as /dev/shm is "{0}" megabytes which is less than the required size of "{1}" megabytes on node "{2}"

Cause: The in-memory file system was found mounted a smaller size than required size on the identified node.

Action: Ensure that /dev/shm is correctly mounted with greater than or equal to the required size.

PRVE-00427: Failed to retrieve the size of in-memory file system mounted as /dev/shm on node "{0}"

Cause: An attempt to retrieve the in-memory file system size failed on the identified node.

Action: Ensure that /dev/shm is correctly mounted and that the current user has the permissions required to access the /dev/shm mount information.

PRVE-00428: No entry exists in /proc/mounts for temporary file system /dev/shm.

Cause: A CVU pre-install check for Linux containers failed because it determined that the file /proc/mounts did not have an entry for the temporary file system /dev/shm.

Action: Ensure that /dev/shm is correctly mounted. Verify that rc.sysinit is correctly configured to mount /dev/shm.

PRVE-00438: Oracle Solaris Support Repository Updates version "{0}" is older than minimum supported version "{1}" on node "{2}".

Cause: A CVU pre-install check found that the indicated version of Oracle Solaris Support Repository Updates was older than the minimum supported version as indicated on the identified node.

Action: Ensure that the Oracle Solaris Support Repository Updates version on the identified node is updated to the minimum supported version as indicated.

PRVE-00439: Command "{0}" issued on node "{1}" to retrieve the operating system version failed with error "{2}".

Cause: A CVU check for minimum SRU version could not complete because an error occurred while attempting to determine the current operating system version on the indicated node using the indicated command.

Action: Examine the accompanying Operating System error message and respond accordingly.

PRVE-00453: Reverse path filter parameter "rp_filter" for private interconnect network interfaces "{0}" is not set to 0 or 2 on node "{1}".

Cause: Reverse path filter parameter 'rp_filter' was not set to 0 or 2 for identified private interconnect network interfaces on specified node.

Action: Ensure that the 'rp_filter' parameter is correctly set to the value of 0 or 2 for each of the interface used in the private interconnect classification, This will disable or relax the filtering and allow Oracle Clusterware to function correctly. Use 'sysctl' command to modify the value of this parameter.

PRVE-00454: Error encountered while trying to retrieve the value of "rp_filter" parameter of "{0}" network interfaces on node "{1}"

Cause: An error occurred while attempting to retrieve reverse path filter parameter 'rp_filter' value on specified node.

Action: n/a

PRVE-00456: Reverse path filter parameter "rp_filter" for private interconnect network interfaces "{0}" is not configured to the value of 0 or 2 in file /etc/sysctl.conf on node "{1}".

Cause: Reverse path filter parameter 'rp_filter' was not configured to the value 0 or 2 for identified private interconnect network interfaces on the specified node.

Action: Ensure that the 'rp_filter' parameter is correctly configured to the value of 0 or 2 inside the /etc/sysctl.conf file for all the interface used in the private interconnect classification. This will disable or relax the filtering and allow Oracle Clusterware to function correctly. Configuring this value correctly inside the /etc/sysctl.conf file ensures the persistent setting of this value on reboots.

PRVE-00463: Network bonding feature is enabled on node "{0}" with bonding mode "{1}" which is not a recommended value of 0 "balance-rr" or 1 "active-backup" for private interconnect network interfaces "{2}"

Cause: The bonding mode specified for the network interfaces used as private cluster interconnect was not a recommended value.

Action: Configure network bonding mode 0 or 1 on interfaces used for private cluster interconnect.

PRVE-00464: Network bonding feature is enabled on nodes "{0}" with a bonding mode discouraged for cluster private interconnect usage.

Cause: An incorrect bonding mode was used for the network bonds in which private interconnect network interfaces participate on the indicated nodes.

Action: Ensure that the network bonding mode is set to the recommended value of 0 or 1 for all the network bonds in which private interconnect network interfaces participate.

PRVE-00465: Network bonding mode used on interfaces classified for private cluster interconnect on nodes "{0}" is inconsistent.\nNetwork bonding details are as follows:\n{1}

Cause: An inconsistent network bonding mode was used for the network bonds in which cluster interconnect interfaces participate on the indicated nodes.

Action: Ensure that the network bonding mode used for all the network bonds in which cluster interconnect interfaces participate is consistent across all the nodes.

PRVE-00466: Private interconnect network interface list for current network configuration was not available

Cause: An attempt to retrieve cluster private network classifications failed.

Action: Ensure that the configuration of public and private network classifications was done correctly during the installation process. If Oracle Clusterware is already configured then issue 'oifcfg getif' command to list the current network configuration.

PRVE-00468: Different MTU values "{0}" configured for the network interfaces "{1}" participate in the network bonding with mode "{2}" on node "{3}".

Cause: The Configuration Verification Utility (CVU) determined that the indicated network interfaces were not configured with the same maximum transmission units (MTU) value on the indicated node.

Action: Ensure that all of the indicated network interfaces participate in the network bonding configured with the same MTU value on the indicated node.

PRVE-00473: Berkeley Packet Filter device "{0}" is created with major number "{1}" which is already in use by devices "{2}" on node "{3}".

Cause: The indicated Berkeley Packet Filter device was found to be using a major number which is also in use by the indicated devices

Action: Ensure that the major number of the indicated Berkeley Packet Filter device is not in use by any other device on the indicated node.

PRVE-00474: Berkeley Packet Filter devices do not exist under directory /dev on nodes "{0}".

Cause: Berkeley Packet Filter devices /dev/bpf* were not found under the /dev directory on the indicated nodes.

Action: Create the Berkeley Packet Filter devices using the 'mknod' command on the indicated nodes and ensure that the devices are created using unique major and minor numbers.

PRVE-00475: Berkeley Packet Filter devices "{0}" are using same major number "{1}" and minor number "{2}" on node "{3}"

Cause: The indicated devices were found using same major and minor number on the identified node.

Action: Ensure that the minor number of each Berkeley Packet Filter device is unique on the identified node.

PRVE-00476: Failed to list the devices under directory /dev on node "{0}"

Cause: An attempt to read the attributes of all the devices under /dev directory failed on the identified node.

Action: Ensure that the current user has permission to list and read the attributes of devices listed under directory /dev on the identified node.

PRVE-02503: FAST_START_MTTR_TARGET should be 0 when _FAST_START_INSTANCE_RECOVERY_TARGET > 0 on rac.

Cause: FAST_START_MTTR_TARGET > 0, when
_FAST_START_INSTANCE_RECOVERY_TARGET > 0

Action: set FAST_START_MTTR_TARGET to 0 when
_FAST_START_INSTANCE_RECOVERY_TARGET > 0

PRVE-02504: Error while checking FAST_START_MTTR_TARGET

Cause: An error occurred while attempting to retrieve FAST_START_MTTR_TARGET.

Action: n/a

**PRVE-02734: Error while checking
_FAST_START_INSTANCE_RECOVERY_TARGET**

Cause: An error occurred while attempting to retrieve
_FAST_START_INSTANCE_RECOVERY_TARGET.

Action: n/a

PRVE-02873: Core files older than "{2}" days found in the core files destination "{5}" on node "{0}". [Expected = "{4}" ; Found = "{3}"]

Cause: Too many old core files found in the database core files destination.

Action: Move the old core files out of the database core files destination.

PRVE-02874: An error occurred while checking core files destination on node "{0}".

Cause: The check to verify the existence of old core files failed.

Action: This is an internal error. Contact Oracle Support.

PRVE-02883: ORA-00600 errors found in the alert log in alert log destination "{4}" on node "{0}".

Cause: ORA-00600 errors were found in the alert log.

Action: See the alert log for more information. Contact Oracle Support if the errors persists.

PRVE-02884: An error occurred while checking for ORA-00600 errors in the alert log.

Cause: The check to verify the existence of ORA-00600 errors in the alert log failed.

Action: This is an internal error. Contact Oracle Support.

PRVE-02893: Alert log files greater than "{2}" found in the alert log destination "{5}" on node "{0}". [Expected = "{4}" ; Found = "{3}"]

Cause: Alert log files greater than the indicated size found in the alert log destination.

Action: Rollover alert log to a new file and backup the old file.

PRVE-02894: Error while checking the size of alert log file

Cause: The check to verify presence of large alert logs in the alert log destination failed.

Action: This is an internal error. Contact Oracle Support.

PRVE-02913: Trace files older than "{2}" days found in the background dump destination "{5}" on node "{0}". [Expected = "{4}" ; Found = "{3}"]

Cause: Too many old trace files found in the background dump destination.

Action: Move the old trace files out of the background dump destination.

PRVE-02914: Error while checking trace files in background dump destination

Cause: The check to verify the existence of old trace files failed.

Action: This is an internal error. Contact Oracle Support.

PRVE-02923: ORA-07445 errors found in the alert log in alert log destination "{4}" on node "{0}".

Cause: ORA-07445 errors were found in the alert log.

Action: See the alert log for more information. Contact Oracle Support if the errors persists.

PRVE-02924: An error occurred while checking for ORA-07445 errors in the alert log.

Cause: The check to verify the existence of ORA-07445 errors in the alert log failed.

Action: This is an internal error. Contact Oracle Support.

PRVE-03073: Disks "{1}" are not part of any disk group.

Cause: The indicated disks were found not to be part of any disk group.

Action: Create one or more disk groups from the indicated disks or add the indicated disks to any existing disk groups.

PRVE-03142: One or more ASM disk rebalance operations found in WAIT status

Cause: A query on V\$ASM_OPERATION showed one or more ASM disk rebalance operations in WAIT status.

Action: Identify the ASM rebalance operations in WAIT status by running the query "SELECT * FROM V\$ASM_OPERATION WHERE OPERATION LIKE 'REBAL' AND STATE LIKE 'WAIT'" and resume the operations by altering rebalance power to a non-zero value for the related ASM disk groups.

PRVE-03143: Error occurred while checking ASM disk rebalance operations in WAIT status

Cause: An ASM query to obtain details of the ASM disk rebalance operations failed. Accompanying error messages provide detailed failure information.

Action: Examine the accompanying error message for details, resolve problems identified and retry.

PRVE-03149: ASM disk group files "{2}" are incorrectly owned by users "{3}" respectively.

Cause: A query showed that the indicated ASM disk group files were not owned by the Grid user.

Action: Refer to MOS Note 1959446.1 to take corrective action.

PRVE-03150: error occurred while checking for the correctness of ASM disk group files ownership

Cause: An ASM query failed unexpectedly.

Action: Examine the accompanying error messages for details.

PRVE-03155: ASM discovery string is set to the value "{1}" that matches TTY devices.

Cause: The ASM discovery string parameter ASM_DISKSTRING was set to a value that matches TTY devices.

Action: Ensure that the parameter ASM_DISKSTRING is altered to a restrictive value that does not match TTY devices using the command 'asmcmd dsset --normal *discovery string*' in ASM 11.2 or later. If SPFILE is in use for 11.1 or earlier ASM, then use the command 'ALTER SYSTEM SET ASM_DISKSTRING=*discovery string* SCOPE=SPFILE;'. Otherwise, update the value of parameter ASM_DISKSTRING in the PFILE of each ASM instance.

PRVE-03156: error occurred while checking for the selectivity of ASM discovery string

Cause: An ASM query failed unexpectedly.

Action: Examine the accompanying error messages for details.

PRVE-03163: Exadata cell nodes "{2}" contain more than one ASM failure group.

Cause: A query showed that the indicated Exadata cell nodes contain more than one ASM failure group.

Action: It is advisable to have a single ASM failure group assigned to an Exadata cell node. Ensure that the indicated Exadata cell nodes contain only one ASM failure group.

PRVE-03164: error occurred while checking the Exadata cell nodes for multiple ASM failure groups

Cause: An ASM query failed unexpectedly.

Action: Examine the accompanying error messages for details.

PRVE-03170: ASM spare parameters "{2}" are set to values different from their default values.

Cause: A query showed that values of the indicated ASM spare parameters had been changed.

Action: Review and reset the values of the indicated ASM spare parameters before upgrade. If unable to resolve the issue, contact Oracle Support.

PRVE-03171: An error occurred while checking ASM spare parameters.

Cause: An ASM query to obtain details of the spare parameters before upgrade failed unexpectedly. Accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages for details, resolve problems identified and retry.

PRVE-03175: ASM compatibility for ASM disk group "{1}" is set to "{2}", which is less than the minimum supported value "{3}".

Cause: A query showed that the ASM disk group attribute "compatible.asm" for the indicated disk group was set to a value less than the minimum supported value.

Action: Ensure that the ASM compatibility of the indicated disk group is set to a value greater than or equal to the indicated minimum supported value by running the command 'asmcmd setattr -G *diskgroup* compatible.asm *value*'.

PRVE-03176: An error occurred while checking ASM disk group compatibility attribute.

Cause: An ASM query to obtain details of the ASM compatibility disk group attribute failed. Accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages for details, resolve problems identified and retry.

PRVE-03180: RDBMS compatibility for ASM disk group "{1}" is set to "{2}", which is less than the minimum supported value "{3}".

Cause: A query showed that the ASM disk group attribute "compatible.rdbms" for the indicated disk group was set to a value less than the minimum supported value.

Action: Ensure that the RDBMS compatibility of the indicated disk group is set to a value greater than or equal to the indicated minimum supported value by running the command 'asmcmd setattr -G *diskgroup* compatible.rdbms *value*'.

PRVE-03181: An error occurred while checking ASM disk group RDBMS compatibility attribute.

Cause: An ASM query to obtain details of the RDBMS compatibility disk group attribute failed. Accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages for details, resolve problems identified and retry.

PRVE-03185: One or more ASM disk rebalance operations found in WAIT status

Cause: A query on V\$ASM_OPERATION showed one or more ASM disk rebalance operations in WAIT status.

Action: Identify the ASM rebalance operations in WAIT status by running the query "SELECT * FROM V\$ASM_OPERATION WHERE PASS LIKE 'REBALANCE' AND STATE LIKE 'WAIT'" and resume the operations by altering rebalance power to a non-zero value for the related ASM disk groups.

PRVE-03186: Error occurred while checking ASM disk rebalance operations in WAIT status

Cause: An ASM query to obtain details of the ASM disk rebalance operations failed. Accompanying error messages provide detailed failure information.

Action: Examine the accompanying error message for details, resolve problems identified and retry.

PRVE-03191: Free space on one or more ASM diskgroups is below the recommended value of {3}.

Cause: A query on V\$ASM_DISKGROUP showed that free space on one or more ASM disk groups is below the indicated value.

Action: Refer to MOS Note 473271.1 to take corrective action

PRVE-03192: Error occurred while checking ASM disk group free space.

Cause: An ASM query to obtain details of the ASM disk group failed. Accompanying error messages provide detailed failure information.

Action: Examine the accompanying error message for details, resolve problems identified and retry.

PRVE-03202: User "{0}" does not have the operating system privilege "{1}" on node "{2}"

Cause: A Direct Access (DAX) device '/dev/dax' was mounted on the node indicated but the Oracle user does not have the required operating system privilege to access this device.

Action: Ensure that the Oracle user has the indicated privilege. The privilege to access DAX device can be granted by running the command 'usermod -S files -K defaultpriv+=basic,dax_access Oracle user' as root.

PRVE-03206: The disks in the ASM disk group "{1}" have different sizes.

Cause: The Configuration Verification Utility (CVU) found that disk size was not consistent across the disks in the indicated ASM disk group.

Action: Use the query "SELECT D.PATH,D.OS_MB,G.NAME FROM V\$ASM_DISK D, V\$ASM_DISKGROUP G WHERE G.GROUP_NUMBER=D.GROUP_NUMBER" to retrieve the details of ASM disk sizes in the indicated ASM disk group. Ensure that disk size is consistent across the indicated ASM disk group and retry the operation.

PRVE-03207: Error occurred while checking ASM disk size consistency.

Cause: An ASM query to obtain details of the ASM disk group failed. Accompanying error messages provide detailed failure information.

Action: Examine the accompanying error message for details, resolve problems identified and retry the operation.

PRVE-03211: Software version of ASM client "{1}" is "{2}", which is less than the minimum supported value "{3}".

Cause: A query showed that the software version of the indicated ASM client was less than the minimum supported value.

Action: Upgrade the client to the later release that is compatible with Oracle ASM and retry the operation.

PRVE-03212: An error occurred while checking compatibility of ASM client.

Cause: An ASM query to obtain details of the active ASM clients failed. Accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages for details, resolve problems identified and retry.

PRVE-10073: Required /boot data is not available on node "{0}"

Cause: The file '/boot/symvers-<kernel_release>.gz', required for proper driver installation, was not found on the indicated node.

Action: Ensure that /boot is mounted and /boot/symvers-<kernel_release>.gz is available on the node.

PRVE-10077: NOZEROCONF parameter was not specified or was not set to 'yes' in file "/etc/sysconfig/network" on node "{0}"

Cause: During NOZEROCONF check, it was determined that NOZEROCONF parameter was not specified or was not set to 'yes' in /etc/sysconfig/network file.

Action: Ensure NOZEROCONF is set to 'yes' in /etc/sysconfig/network to disable 169.254/16 being added to the routing table.

PRVE-10078: LINKLOCAL_INTERFACES network parameter was defined in the file "/etc/sysconfig/network/config" on node "{0}".

Cause: During LINKLOCAL_INTERFACES parameter check, it was determined that the LINKLOCAL_INTERFACES network parameter was defined in the /etc/sysconfig/network/config file.

Action: Ensure that the LINKLOCAL_INTERFACES network parameter is not defined in the /etc/sysconfig/network/config file to avoid having the link local addresses 169.254/16 added to the routing table.

PRVE-10079: Parameter "{0}" value in the file "{1}" cannot be verified on node "{2}".

Cause: An error occurred while verifying the indicated parameter value in the indicated file on the indicated node. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRVE-10083: Java Virtual Machine is not installed properly

Cause: There were not enough JAVA objects in DBA_OBJECTS table.

Action: Refer to MOS note 397770.1 to take corrective action

PRVE-10084: Error while checking JAVAVM installation in the database

Cause: An error occurred while performing the check.

Action: Look at the accompanying messages for details on the cause of failure.

PRVE-10094: Error while checking Time Zone file

Cause: An error occurred while performing the check.

Action: Look at the accompanying messages for details on the cause of failure.

PRVE-10104: Error while checking standby databases

Cause: An error occurred while checking standby databases.

Action: Look at the accompanying messages for details on the cause of failure.

PRVE-10113: "multi-user-server" service is "{0}" on node "{1}"

Cause: The 'svcs svc:/milestone/multi-user-server' command reported that the multi-user-server was not online on the specified node.

Action: Consult the OS documentation/System Administrator to bring up multi-user-server service.

PRVE-10114: "multi-user" service is "{0}" on node "{1}"

Cause: The 'svcs svc:/milestone/multi-user' command reported that the multi-user was not online on the specified node.

Action: Consult the OS documentation/System Administrator to bring up multi-user service.

PRVE-10115: Error while checking multiuser service

Cause: An error occurred while checking multiuser service

Action: Look at the accompanying messages for details on the cause of failure.

PRVE-10123: Selected "{0}" group "{1}" is not same as the currently configured group "{2}" for existing Oracle Clusterware home "{3}"

Cause: An attempt to upgrade the database was rejected because the selected group was not the group configured for the existing Oracle Clusterware installation.

Action: Select the same groups as the currently configured groups of the existing Oracle Clusterware installation.

PRVE-10124: Current selection of the "{0}" group could not be retrieved

Cause: The indicated group was not found selected or set to any valid operating system group name.

Action: Ensure that the indicated group is selected and set to some valid operating system group name.

PRVE-10125: Error while checking privileged groups consistency. \nError: {0}

Cause: An error occurred while checking privileged groups consistency.

Action: Look at the accompanying messages for details on the cause of failure.

PRVE-10126: Configured "{0}" group for Oracle Clusterware home "{1}" could not be retrieved

Cause: The indicated group could not be retrieved using the 'osdbagr' utility from the identified Oracle Clusterware home.

Action: Ensure that the indicated group is configured correctly and that the 'osdbagr' utility reports it correctly from the identified Oracle Clusterware home.

PRVE-10128: Selected "{0}" group "{1}" is not same as the currently configured group "{2}" for existing database home "{3}"

Cause: An attempt to upgrade the database was rejected because the selected group was not the group configured for the existing database installation.

Action: Select the same groups as the currently configured groups of the existing database installation.

PRVE-10129: Configured "{0}" group for database home "{1}" could not be retrieved

Cause: The indicated group could not be retrieved using the 'osdbagr' utility from the identified database home.

Action: Ensure that the indicated group is configured correctly and that the 'osdbagr' utility reports it correctly from the identified database home.

PRVE-10138: FILESYSTEMIO_OPTIONS is not set to the recommended value of setall

Cause: An attempt to match the value of parameter FILESYSTEMIO_OPTIONS with the recommended value failed.

Action: Set the FILESYSTEMIO_OPTIONS to the recommended value using SQL statement 'alter system set'.

PRVE-10139: Error while checking FILESYSTEMIO_OPTIONS

Cause: An attempt to check the value of the parameter FILESYSTEMIO_OPTIONS failed because the database was not configured correctly.

Action: Ensure that the database is configured correctly and retry the operation.

PRVE-10150: The current IP hostmodel configuration for both IPV4 and IPV6 protocols does not match the required configuration on node "{0}". [Expected = "{1}" ; Found = "{2}"]

Cause: The IP hostmodel configuration on the indicated node for the specified protocols was 'strong' and should have been 'weak'.

Action: Modify the IP hostmodel configuration to meet the required configuration. Use command 'ipadm set-prop -p hostmodel=weak [ipv4|ipv6]' to modify the IP hostmodel configuration.

PRVE-10151: The current IP hostmodel configuration for "{0}" protocol does not match the required configuration on node "{1}". [Expected = "{2}" ; Found = "{3}"]

Cause: The IP hostmodel configuration on the indicated node for the specified protocol was 'strong' and should have been 'weak'.

Action: Modify the IP hostmodel configuration to meet the required configuration. Use command 'ipadm set-prop -p hostmodel=weak [ipv4|ipv6]' to modify the IP hostmodel configuration.

PRVE-10155: GSD resource is running and enabled on node "{0}".

Cause: GSD was found to be running and enabled on the indicated node.

Action: Stop and disable GSD using the commands 'srvctl stop nodeapps -g' and 'srvctl disable nodeapps -g' respectively.

PRVE-10156: GSD resource is enabled on node "{0}".

Cause: GSD was found to be enabled on the indicated node.

Action: Disable GSD using the command 'srvctl disable nodeapps -g'.

PRVE-10167: I/O Completion Ports (IOCP) device status did not match the required value on node "{0}". [Expected = "Available"; Found = "{1}"]

Cause: IOCP device status was not 'Available' on the indicated node. The IOCP device status must be 'Available' in order to list the candidate disks when creating ASM disk group.

Action: Login as the root user and change the IOCP device status to 'Available' using the command `/bin/smitty iocp` and reboot the node for the changes to take effect.

PRVE-10168: Failed to obtain the I/O Completion Ports (IOCP) device status using command "{0}" on node "{1}"

Cause: An attempt to obtain the status of IOCP device failed on the indicated node.

Action: Ensure that the identified command exists and the current user has read/execute permissions for it.

PRVE-10169: North America region (nam) is not installed on node "{0}".

Cause: The command `localeadm -q nam` reported that the North America region (nam) was not installed on the specified node.

Action: North America region (nam) must be installed, in order to install it use `localeadm -a nam -d <packages_path>`, where `<packages_path>` is the full path to a directory where the Solaris packages are available like `/cdrom/cdrom0/s0/Solaris_10/Product` if using a Solaris Compact Disc.

PRVE-10170: an error occurred when trying to determine if North America region (nam) is installed on node "{0}".

Cause: An error occurred while executing the command `localeadm -q nam` and failed to determine whether North America region (nam) was installed on the specified node.

Action: North America region (nam) must be installed. Consult the OS documentation/System Administrator to diagnose and fix the issue with the command `localeadm -q nam` and install the region using the command `localeadm -a nam -d <packages_path>`, where `<packages_path>` is the full path to a directory where the Solaris packages are available like `/cdrom/cdrom0/s0/Solaris_10/Product` if using a Solaris Compact Disc.

PRVE-10171: English locale is not installed on node "{0}".

Cause: The command `pkg facet -H *locale.en*` reported that the English locale was not installed on the specified node.

Action: The English locale must be installed. Issue `pkg change-facet locale.en_US=true` to install it.

PRVE-10172: An error occurred when trying to determine if English locale is installed on node "{0}".

Cause: An error occurred while executing the command `pkg facet -H *locale.en*`. Installation of English locale on the node could not be verified.

Action: English locale must be installed. Consult the OS documentation or System Administrator to diagnose and fix the issue with the command `pkg facet -H *locale.en*` and install the locale using the command `pkg change-facet locale.en_US=true`.

PRVE-10183: File system path "{0}" is mounted with 'nosuid' option on node "{1}".

Cause: The identified file system path is mounted with the 'nosuid' option on the indicated node. This mount option creates permission problems in the cluster.

Action: Ensure that the identified file system path is not mounted with 'nosuid' option.

PRVE-10184: Could not find file system for the path "{0}" using command "{1}" on node "{2}"

Cause: An error occurred while determining the file system for the identified path on the indicated node.

Action: Make sure that the identified path is a valid absolute path on the indicated node.

PRVE-10210: error writing to the output file "{0}" for verification type "{1}": "{2}"

Cause: An error was encountered while writing the indicated output file.

Action: Correct the problem indicated in the accompanying messages, then reissue the original command.

PRVE-10211: An error occurred while writing the report.

Cause: An error was encountered while writing one or more output files.

Action: Correct the problem indicated in the accompanying messages, then reissue the original command.

PRVE-10232: Systemd login manager parameter 'RemoveIPC' is enabled in the configuration file "{0}" on node "{1}". [Expected="no"; Found="{2}"]

Cause: The 'RemoveIPC' systemd login manager parameter was found to be enabled on the indicated node. Enabling this parameter causes termination of Automatic Storage Management (ASM) instances when the last oracle/grid user session logs out.

Action: Set the 'RemoveIPC' systemd login manager parameter to 'no' in the identified configuration file on the indicated node.

PRVE-10233: Systemd login manager parameter 'RemoveIPC' entry does not exist or is commented out in the configuration file "{0}" on node "{1}". [Expected="no"]

Cause: The 'RemoveIPC' systemd login manager parameter entry was not found or was commented out in the identified configuration file on the indicated node. By default this parameter is enabled and it causes termination of Automatic Storage Management (ASM) instances when the last oracle/grid user session logs out.

Action: Add the entry 'RemoveIPC=no' to the identified configuration file on the indicated node.

PRVE-10237: Existence of files "{1}" is not expected on node "{0}" before Clusterware installation or upgrade.

Cause: The indicated files were found on the specified node.

Action: Remove the indicated files and retry.

PRVE-10238: Error occurred while running commands "{1}" on node "{0}" to check for ASM Filter Driver configuration

Cause: An attempt to check for ASM Filter Driver configuration by running the indicated commands failed.

Action: Ensure that the identified commands exist on the indicated node and that the current user has read/execute permissions and retry.

PRVE-10239: ASM Filter Driver "{1}" is not expected to be loaded on node "{0}" before Clusterware installation or upgrade.

Cause: An attempt to install or upgrade Clusterware on the indicated node was rejected because the indicated ASM Filter Driver was already loaded.

Action: Refer to OS documentation to remove the indicated driver and retry the operation.

PRVE-10243: Failed to mount "{0}" at location "{1}" with NFS mount options "{2}".

Cause: An attempt to mount the indicated file system at the indicated location with the indicated mount options failed because the 'insecure' NFS export option was not used. The 'insecure' option was required for Oracle Direct NFS to make connections using a non-privileged source port.

Action: Ensure that the indicated network file system is exported with the "insecure" option and retry the operation. If the retry fails, examine the accompanying error message, resolve the problems indicated there, and then retry the operation again.

PRVE-10248: The file "{0}" either does not exist or is not accessible on node "{1}".

Cause: A Configuration Verification Utility (CVU) operation could not complete, because the indicated file was not accessible on the node shown.

Action: Ensure that the indicated file exists and can be accessed on the indicated node.

PRVE-10253: The path "{0}" either does not exist or is not accessible on node "{1}".

Cause: The Configuration Verification Utility (CVU) determined that the indicated path was not accessible.

Action: Ensure that the indicated path exists and can be accessed by the current user on the indicated node.

PRVE-10254: The path "{0}" does not have read permission for the current user on node "{1}".

Cause: A check for access control attributes found that the indicated path did not have read permission for the current user on the indicated node.

Action: Ensure that the current user has read permission for the indicated path on the indicated node, and then retry the operation.

PRVE-10255: The path "{0}" does not have write permission for the current user on node "{1}".

Cause: A check for access control attributes found that the indicated path did not have write permission for the current user on the indicated node.

Action: Ensure that the current user has write permission for the indicated path on the indicated node, and then retry the operation.

PRVE-10256: The path "{0}" does not have execute permission for the current user on node "{1}".

Cause: A check for access control attributes found that the indicated path did not have execute permission for the current user on the indicated node.

Action: Ensure that the current user has execute permission for the indicated path on the indicated node, and then retry the operation.

PRVE-10257: The path "{0}" permissions did not match the expected octal value on node "{1}". [Expected = "{2}" ; Found = "{3}"]

Cause: A check for access control attributes found that the permissions of the indicated path on the indicated node were different from the required permissions.

Action: Change the permissions of the indicated path to match the required permissions.

PRVE-10258: The path "{0}" permissions for owner did not match the expected octal value on node "{1}". [Expected = "{2}" ; Found = "{3}"]

Cause: A check for access control attributes found that the owner permissions of the indicated path on the indicated node were different from the required permissions.

Action: Change the owner permissions of the indicated path to match the required permissions.

PRVE-10259: The path "{0}" permissions for group did not match the expected octal value on node "{1}". [Expected = "{2}" ; Found = "{3}"]

Cause: A check for access control attributes found that the group permissions of the indicated path on the indicated node were different from the required permissions.

Action: Change the group permissions of the indicated path to match the required permissions.

PRVE-10260: The path "{0}" permissions for others did not match the expected octal value on node "{1}". [Expected = "{2}" ; Found = "{3}"]

Cause: A check for access control attributes found that the others permissions of the indicated path on the indicated node were different from the required permissions.

Action: Change the others permissions of the indicated path to match the required permissions.

PRVE-10261: The path "{0}" owner did not match the expected value on node "{1}". [Expected = "{2}" ; Found = "{3}"]

Cause: A check for access control attributes found that the owner of the indicated path on the indicated node was different from the required owner.

Action: Change the owner of the indicated path to match the required owner.

PRVE-10262: The path "{0}" group did not match the expected value on node "{1}". [Expected = "{2}" ; Found = "{3}"]

Cause: A check for access control attributes found that the group of the indicated path on the indicated node was different from the required group.

Action: Change the group of the indicated path to match the required group.

PRVE-10266: Error occurred while running command "{1}" on node "{0}" to check for logical partition capacity entitlement.

Cause: An attempt to check for logical partition entitled capacity by running the indicated command failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the identified issues, and then retry the operation after ensuring that the identified command exists on the indicated node and that the current user has permission to execute the command.

PRVE-10269: Logical partition entitled processing capacity is configured with a value less than expected on node "{0}". [Expected = "{2}" ; Found = "{1}"]

Cause: A check for capacity entitlement on the indicated node found that the entitled processing capacity is less than the expected value.

Action: Refer to OS documentation to configure capacity entitlement of the logical partition to more than the indicated expected value, and then retry the operation.

PRVE-10303: No such entry as "{0}" exists in the configuration file "{1}" on node "{2}"

Cause: The indicated configuration file does not contain the indicated entry. This will result in the 'systemd-tmpfiles' service removing required communication socket files from the directory named in the indicated entry.

Action: Edit the indicated configuration file to create the indicated entry in it.

PRVE-10314: Kernel does not have retpoline enabled on node "{0}".

Cause: The Configuration Verification Utility (CVU) determined that the kernel did not have the Spectre V2 retpoline mitigation which impacted the performance of Oracle ACFS.

Action: Ensure that the kernel has retpoline mitigation enabled. Consult the operating system vendor documentation on Spectre V2 retpoline mitigation to ensure that retpoline capability is correctly enabled and installed.

PRVE-10318: rds_tcp module not loaded in the kernel on node "{0}"

Cause: The Configuration Verification Utility (CVU) determined that the rds_tcp module was not loaded in the kernel on the indicated node.

Action: Ensure that the rds_tcp module is loaded in the kernel on the indicated node by running the command '/usr/sbin/modprobe rds_tcp'.

PRVE-10323: Systemd is not in running state on node "{0}". [Found state = "{1}"]

Cause: The Configuration Verification Utility (CVU) determined that the systemd was not in running state on the indicated node.

Action: Ensure that the systemd is in running state and system is fully operational on the indicated node.

PRVE-10327: Operating system package "{0}" required for the kernel crash dumping mechanism was not installed on node "{1}". Command "{2}" returned "{3}"

Cause: The Configuration Verification Utility (CVU) determined that the indicated Operating System package required for the kernel crash dumping mechanism was not installed on the indicated node.

Action: Ensure that the indicated package is installed and that the kernel crash dumping mechanism is enabled and in active state on the indicated node.

PRVE-10328: Kernel crash dumping mechanism was not enabled on node "{0}". Command "{1}" returned "{2}"

Cause: The Configuration Verification Utility (CVU) determined that the kernel crash dumping mechanism was not enabled on the indicated node.

Action: Ensure that the kernel crash dumping mechanism is enabled and in active state on the indicated node. Operating system command 'systemctl enable

kdump.service' may be issued as root user to enable and 'systemctl start kdump.service' may be issued as root user to start the kernel crash dumping mechanism.

PRVE-10329: Kernel crash dumping mechanism was not active on node "{0}". Command "{1}" returned "{2}"

Cause: The Configuration Verification Utility (CVU) determined that the kernel crash dumping mechanism was not active on the indicated node.

Action: Ensure that the kernel crash dumping mechanism is in active state on the indicated node. Operating system command 'systemctl start kdump.service' may be issued as root user to activate the kernel crash dumping mechanism.

PRVE-10333: Oracle ACFS member count "{0}" is not equal to the node count "{1}" on the cluster

Cause: The Configuration Verification Utility (CVU) determined that the Oracle Automatic Storage Management Cluster File System (Oracle ACFS) member count was not equal to the node count.

Action: Execute the following steps: 1. Restart Cluster Ready Services (CRS) (or just the Oracle Automatic Storage Management (ASM) proxy) on each node, restarting the Oracle ACFS primary node last, as follows: Run 'acfsutil cluster info | grep -i master' to get the primary node. 2. Restart CRS (or just ASM proxy) on each non-primary node in any order. 3. Restart CRS (or just ASM proxy) on the Oracle ACFS primary node last. Alternatively, upgrade Oracle Grid Infrastructure to a release that contains the fix for 29391849 (18.8/19.5). Refer to 2584567.1 for additional details.

PRVE-10334: Local node "{0}" is not part of the Oracle ACFS cluster.

Cause: The Configuration Verification Utility (CVU) determined that the indicated node was not part of the Oracle Automatic Storage Management Cluster File System (Oracle ACFS) cluster.

Action: Contact Oracle Support.

PRVE-10335: Oracle ACFS proxy process is not running on node "{0}"

Cause: The Configuration Verification Utility (CVU) determined that the Oracle Automatic Storage Management Cluster File System (Oracle ACFS) proxy process was not running on the indicated node.

Action: Ensure that the Cluster Ready Services (CRS) stack is up on the indicated node and retry the verification.

PRVE-10336: Trace file for Oracle ACFS proxy process with PID "{0}" not found on node "{1}"

Cause: The Configuration Verification Utility (CVU) determined that the trace file for Oracle Automatic Storage Management Cluster File System (Oracle ACFS) proxy was not found on the indicated node.

Action: Contact Oracle Support.

PRVE-10337: failed to get the cluster information for current incarnation "{0}" in the trace file "{1}" on node "{2}"

Cause: The Configuration Verification Utility (CVU) determined that the cluster information for the current incarnation was not found in the indicated trace file on the indicated node.

Action: Contact Oracle Support.

PRVE-10345: Kernel parameter "{0}" for private interconnect network interfaces "{1}" does not have expected current value on node "{2}" [Expected = "{3}" ; Found = "{4}"].

Cause: The Configuration Verification Utility (CVU) determined that the indicated Address Resolution Protocol (ARP) kernel parameter was not set to the expected current value for the identified private interconnect interfaces on the indicated node.

Action: Ensure that the indicated ARP kernel parameter is set to the expected current value for all the identified private interconnect interfaces on the indicated node.

PRVE-10346: Kernel parameter "{0}" for private interconnect network interfaces "{1}" does not have expected configured value on node "{2}" [Expected = "{3}" ; Found = "{4}"].

Cause: The Configuration Verification Utility (CVU) determined that the indicated Address Resolution Protocol (ARP) kernel parameter was not set to the expected configured value for the identified private interconnect interfaces on the indicated node.

Action: Ensure that the indicated ARP kernel parameter is set to the expected configured value for all the identified private interconnect interfaces on the indicated node.

PRVE-10350: Current clock source is not set to the expected value on node "{0}" [Expected = "{1}" ; Found = "{2}"].

Cause: The Configuration Verification Utility (CVU) determined that the current clock source was not set to the expected value on the indicated node, which would impact the database performance.

Action: Ensure that the current clock source is set to the expected value on the indicated node.

PRVE-10354: Network parameter "{0}" is not set to 0 or 2 on node "{1}".

Cause: The Configuration Verification Utility (CVU) determined that the specified network parameter value was not set to either 0 or 2 on the indicated node.

Action: Ensure that the specified network parameter is set to either 0 or 2 on the indicated node by using command `/usr/bin/ndd -set /dev/ip ip_strong_es_model 0`. This setting allows Oracle Clusterware to function correctly. Update the specified network parameter value inside `/etc/rc.config.d/nddconf` file to retain this setting even after a reboot.

PRVE-10355: failed to retrieve the network parameter "{0}" value on node "{1}"

Cause: The specified network parameter value could not be retrieved using the `/usr/bin/ndd` command on the indicated node.

Action: Ensure that the user running the command has required privileges and retry the operation.

PRVE-10362: Process "{0}" is running with cgroup CPU parameter "{1}" configured with value "{2}" in "{3}" which is less than the recommended value of "{4}" for the real-time scheduling of this process on node "{5}".

Cause: The Configuration Verification Utility (CVU) determined that the identified real-time CPU scheduling parameter value was not set to the indicated required value inside the indicated cgroup configuration file on the indicated node.

Action: Ensure that the indicated real-time CPU scheduling parameter is correctly configured in the indicated cgroup configuration file on the identified node. Refer to MOS note 2718971.1 to take corrective action.

PRVE-10363: failed to check the real-time CPU priority of the processes which must run in real-time on node "{0}"

Cause: The real-time CPU priority configuration setting of the critical processes could not be retrieved from the cgroup on the indicated node.

Action: Refer to MOS note 2718971.1 to take corrective action.

PRVE-10372: Failed to check the status of "{0}" service on node "{1}". command "{2}" failed with error: "{3}"

Cause: The Configuration Verification Utility (CVU) failed to obtain the current status of the indicated service on the indicated node.

Action: Ensure that the indicated service is configured and running on the indicated node. Examine the accompanying error messages, resolve the problems indicated there, and then retry the operation.

PRVE-10373: failed to verify the service file "{0}" used by the "{1}" service on node "{2}"

Cause: The Configuration Verification Utility (CVU) failed to verify the contents of the indicated service file on the indicated node.

Action: Ensure that the indicated service file exists on the indicated node. Examine the accompanying error messages, resolve the problems indicated there, and then retry the operation.

PRVE-10374: The service file "{0}" loaded by the "{1}" service on node "{2}" does not have the real time mode set.

Cause: The Configuration Verification Utility (CVU) determined that the indicated service on the indicated node was running with the indicated service file with missing real time mode setting.

Action: Ensure that the indicated service is configured to run with a service file with '--cpu-rt-runtime=950000' as a value for ExecStart= under the [Service] section .

PRVE-10375: The "{0}" service on node "{1}" has not loaded the latest content of the service file "{2}" which has the real time mode set.

Cause: The Configuration Verification Utility (CVU) determined that the indicated service on the indicated node was running with the stale content of the indicated service file.

Action: Ensure that the indicated service is restarted to run with a service file with '--cpu-rt-runtime=950000' as a value for ExecStart= under the [Service] section .

PRVE-10376: real-time CPU scheduling parameter "{0}" is set to a value "{1}" on the container host "{2}" in file "{3}" which is less than the recommended value of "{4}"

Cause: The Configuration Verification Utility (CVU) determined that the identified real-time CPU scheduling parameter value was not set to the indicated required value inside the indicated cgroup configuration file on the indicated node.

Action: Ensure that the indicated real-time CPU scheduling parameter is correctly configured in the indicated cgroup configuration file on the identified node. Refer to MOS note 2718971.1 to take corrective action.

PRVE-10377: real-time CPU scheduling parameter "{0}" is not set to the recommended value "{1}" on the container host "{2}"

Cause: The Configuration Verification Utility (CVU) determined that the indicated real-time CPU scheduling parameter value was not set to the recommended value the indicated node.

Action: Ensure that the indicated real-time CPU scheduling parameter is set to the recommended value of -1 on the indicated node.

PRVE-10378: real-time CPU scheduling parameter "{0}" is set to "{1}" in file "{2}" which is not the recommended value "{3}" on the container host "{4}"

Cause: The Configuration Verification Utility (CVU) determined that the indicated real-time CPU scheduling parameter value was not set to the recommended value in the specified file on the indicated node.

Action: Ensure that the indicated real-time CPU scheduling parameter is set to the recommended value of -1 in the specified file on the indicated node.

PRVF-00001 to PRVF-10409

PRVF-00001: Could not retrieve static nodelist. Verification cannot proceed

Cause: Error running lsnodes/olsnodes.

Action: Ensure that the executable exists and that it is executable by your OS userid.

PRVF-00002: could not retrieve local node name

Cause: The local node name could not be determined because the Java networking support functions failed to return a value.

Action: Ensure that host name is defined correctly using the 'hostname' command. On Linux machines, examine the files '/etc/sysconfig/network' and '/etc/resolv.conf' and ensure that the command 'hostname -f' succeeds.

PRVF-00006: Unable to check the existence of Oracle Home "{0}"

Cause: Could not verify the existence of the Oracle Home specified.

Action: Ensure that the Oracle Home location exists and is writeable by your user ID.

PRVF-00020: "{0}" is not writeable

Cause: The path specified is not writeable.

Action: Ensure that write access exists for the specified path.

PRVF-00040: The Remote Shell "{0}" requested by the client does not exist

Cause: Could not locate remote shell requested by the user.

Action: Ensure that the remote shell exists on all the nodes participating in the operation.

PRVF-00041: The Remote shell "{0}" requested by the client is not an executable file

Cause: The remote shell requested by the user is not a file.

Action: Ensure that the remote shell exists on all the nodes participating in the operation and that it is a file with execute permissions.

PRVF-00042: The Remote Copy command "{0}" requested by the client does not exist

Cause: Cannot locate remote copy command requested by the user.

Action: Ensure that the remote copy command exists on all the nodes participating in the operation.

PRVF-00045: The Secure Shell "{0}" requested by the client does not exist

Cause: Could not locate the secure shell executable specified.

Action: Ensure that the executable file specified exists.

PRVF-00046: The Secure Copy command "{0}" requested by the client does not exist

Cause: Could not locate the secure copy executable specified.

Action: Ensure that the executable file specified exists.

PRVF-00047: Unable to execute the Secure Shell "{0}" requested by the client

Cause: Could not execute the secure shell specified.

Action: Ensure that the secure shell specified allows execute access for the current user ID.

PRVF-00048: Unable to execute the Secure Copy command "{0}" requested by the client

Cause: Could not execute the secure copy specified.

Action: Ensure that the secure copy specified allows execute access for the current user ID.

PRVF-00051: The Remote Copy command "{0}" requested by the client is not an executable file

Cause: The remote copy command requested by the user was not an executable file.

Action: Ensure that the remote copy command exists on all the nodes participating in the operation and that it is a file with execute permissions.

PRVF-00054: Unable to find oifcfg executable file in directory "{0}"

Cause: An attempt to locate oifcfg executable file in specified directory failed.

Action: This is an internal error. Contact Oracle Support.

PRVF-00055: User "{0}" does not have administrative privileges to run this command

Cause: An attempt to run the Configuration Verification Utility (CVU) command failed because the user did not have sufficient authority to run it.

Action: The commands can be run as root user (uid=0) or by using the command line option '-method' to specify one of the privilege delegation methods.

PRVF-00056: User "{0}" does not have sufficient authorization to run this command

Cause: An attempt to run the CVU command failed because the user does not have sufficient authority to run it.

Action: The command can be run only by the Oracle installation owner. Make sure that you run these commands as appropriate user.

PRVF-02409: The device file "{0}" does not exist on node "{1}"

Cause: The expected device file could not be found.

Action: To enable asynchronous input-output operations using the asynchronous device driver, create the device file.

PRVF-02410: The device file "{0}" does not exist on nodes:

Cause: The expected device file could not be found.

Action: To enable asynchronous input-output operations using the asynchronous device driver, create the device file.

PRVF-02411: The file "{0}" is not a device file on nodes:

Cause: The file was not a device file.

Action: Ensure that the correct path and filename specified for the device file.

PRVF-02412: The file "{0}" is not a device file on node "{1}"

Cause: The file was not a device file.

Action: Ensure that the correct path and filename are specified for the device file.

PRVF-02413: Failed to retrieve details of the device file "{0}" on nodes:

Cause: An attempt to retrieve the attributes of a device file failed.

Action: Ensure that the file exists on the system and user has correct permissions to retrieve the details of specified device file.

PRVF-02414: Failed to retrieve details of the device file "{0}" on node "{1}"

Cause: An attempt to retrieve the attributes of a device file failed.

Action: Ensure that the file exists on the system and user has correct permissions to retrieve the details of specified device file.

PRVF-02415: The minor number of device file "{0}" is incorrect on the nodes:

Cause: The minor number of a device file was found incorrect as per the requirement.

Action: The third least significant bit (the 0x4 bit hexadecimal) of the minor number must be set.

PRVF-02416: The minor number of device file "{0}" is incorrect on the node "{1}"

Cause: The minor number of a device file was found incorrect as per the requirement.

Action: The third least significant bit (the 0x4 bit hexadecimal) of the minor number must be set.

PRVF-02417: Failed to retrieve the ID for device file "{0}" on the node "{1}"

Cause: Device file ID could not be retrieved on the node.

Action: Ensure that the device file exists at the specified path and is set to correct device ID.

PRVF-02418: Failed to retrieve minor number value for the device file "{0}" on the node "{1}"

Cause: The device file ID does not contain the correct minor number.

Action: Ensure the value of the minor number of the device file is correct.

PRVF-03911: Length of value of environment variable "{0}" exceeds the maximum recommended length of "{1}" on the nodes:

Cause: Length of the value of environment variable exceeds the recommended length.

Action: Ensure that the value of the environment variable does not exceed the standard operating system specified limit.

PRVF-03912: Length of value of environment variable "{0}" exceeds the maximum recommended length of "{1}" on the node "{2}"

Cause: Length of the value of environment variable exceeds the recommended length.

Action: Ensure that the value of the environment variable does not exceed the standard operating system specified limit. Restart the installer after changing the setting for environment variable.

PRVF-03913: Environment variable name "{0}" is set on nodes:

Cause: The environment variable was set on the nodes indicated.

Action: Ensure that the environment variable is not set to any value.

PRVF-03914: Environment variable name "{0}" is set on node "{1}"

Cause: The environment variable was set on the node indicated.

Action: Ensure that the environment variable is not set to any value. Restart the installer after changing the setting for environment variable.

PRVF-03915: Environment variable name "{0}" is not set on nodes:

Cause: Environment variable value could not be determined.

Action: Ensure that the environment variable is set and access permissions for the Oracle user allow access to read the environment variables.

PRVF-03916: Environment variable name "{0}" is not set on node "{1}"

Cause: Environment variable value could not be determined.

Action: Ensure that the environment variable is set and access permissions for the Oracle user allow access to read the environment variables. Restart the installer after changing the setting for environment variable.

PRVF-03917: Environment variable check for variable "{0}" cannot be performed on nodes:

Cause: Environment Variable value could not be determined.

Action: Ensure that the environment variable is set in either system or user environment and access permissions for the Oracle user allow access to read the environment variables.

PRVF-03918: Can not read environment variable "{0}" from node "{1}"

Cause: Environment variable value could not be determined.

Action: Check user equivalence and whether the user has administrative privileges on the node.

PRVF-03919: Failed to retrieve value of environment variable "{0}"

Cause: Environment variable value could not be determined.

Action: Check user equivalence and whether the user has administrative privileges on the node.

PRVF-03920: Environment variable name "{0}" is invalid for this operating system.

Cause: Environment variable name does not meet operating system standards.

Action: Ensure that the environment variable name is as per the operating system standards. Restart the installer after changing the setting for environment variable.

PRVF-03921: Environment variable name not specified.

Cause: Environment variable name was not specified.

Action: Ensure that a valid environment variable name is specified.

PRVF-03928: Adding the Oracle binary location to the PATH environment variable will exceed the OS length limit of ["{0}"], The maximum allowed length for PATH environment variable is [{"1}"] on the nodes:

Cause: The environment variable PATH needs to be updated to include the value "%ORACLE_HOME%/bin;". However, doing so will cause PATH to exceed the maximum allowable length that this operating system allows.

Action: Ensure that the length of your current PATH environment variable is less than that of specified maximum allowed length, so that adding of "%ORACLE_HOME%/bin;" does not exceed the operating system's environment variable length limit.

PRVF-03929: Adding the Oracle binary location to the PATH environment variable will exceed the OS length limit of ["{0}"], The maximum allowed length for PATH environment variable is [{"1}"] on the node "{2}"

Cause: The installer needs to update the PATH environment variable to include the value "%ORACLE_HOME%/bin;". However, doing so will cause PATH to exceed the maximum allowable length that this operating system allows.

Action: Ensure that the length of your current PATH environment variable is less than that of specified maximum allowed length, so that adding of "%ORACLE_HOME%/bin;" does not exceed the system's environment variable length limit. Restart the installer after changing the setting for environment variable.

PRVF-04001: Check: Space available on "{0}"

Cause: Could not determine mount point for location specified.

Action: Ensure that the location specified is available.

PRVF-04007: User equivalence check failed for user "{0}"

Cause: User equivalence for the specified user did not exist among all the nodes participating in the operation.

Action: Verify user equivalence on all the nodes participating in the operation. See 'Enabling SSH User Equivalency on Cluster Member Nodes' in the product documentation for more details.

PRVF-04008: User equivalence unavailable on all the specified nodes

Cause: User equivalence did not exist between the local node and the remote nodes.

Action: Ensure that user equivalence exists on all the nodes specified. The command 'cluvfy comp admprv -o user_equiv' can be used with the '-fixup' option to set up user equivalence. A password is required.

PRVF-04009: User equivalence is not set for nodes:

Cause: An attempt to perform a verification operation failed because user equivalence was not set up for the user on the indicated nodes.

Action: Ensure that user equivalence is set up between the local node and the indicated nodes. On UNIX platforms, the command 'cluvfy comp admprv -o user_equiv' can be used with the '-fixup' option to set up user equivalence. A password is required.

PRVF-04020: Inconsistent group IDs found for group "{0}"

Cause: The group ID for the specified group is not the same across all the nodes.

Action: Make sure that the group has the same group ID across all the nodes.

PRVF-04025: Inventory configuration file "{0}" does not exist

Cause: Cannot locate the inventory configuration file specified.

Action: Ensure that the correct inventory location was supplied and that the inventory file is there.

PRVF-04037: CRS is not installed on any of the nodes

Cause: Could not identify a CRS installation on any node.

Action: Ensure that CRS is installed on all the nodes participating in the operation.

PRVF-04038: CRS is not installed on nodes:

Cause: An attempt to identify Oracle Clusterware installation failed on specified nodes.

Action: Ensure that Oracle Clusterware is installed on all the nodes participating in the operation.

PRVF-04041: CSS is probably working with a non-clustered, local-only configuration on all the nodes

Cause: Oracle CSS was found to be configured to run in a local-only (non-clustered) environment on all the nodes.

Action: Ensure that cluster setup is correct and reconfigure Cluster Synchronization Services (CSS) as necessary on the nodes that are supposed to be executing in a clustered environment. See Oracle Cluster Synchronization Services documentation for further information.

PRVF-04042: CSS is probably working with a non-clustered, local-only configuration on nodes:

Cause: Oracle CSS was found to be configured to run in a local-only (non-clustered) environment on the nodes specified.

Action: Ensure that cluster setup is correct and reconfigure CSS as necessary on the nodes that are supposed to be executing in a clustered environment, see documentation regarding usage of the 'localconfig' script.

PRVF-04043: Unable to obtain OCR integrity details from any of the nodes

Cause: OCR was not found to be in a healthy state on any of the nodes.

Action: Verify the state of OCR on each of the nodes using 'ocrcheck'.

PRVF-04044: Unable to obtain OCR integrity details from nodes:

Cause: OCR was not found to be in a healthy state on some of the nodes.

Action: Verify the state of OCR on each of the nodes identified using 'ocrcheck'.

PRVF-04046: OCR ID is inconsistent among the nodes

Cause: Multiple OCR ID's found across the cluster nodes specified.

Action: Verify Oracle Clusterware configuration and setup with 'ocrcheck' on each node specified. See 'ocrcheck' documentation for further information.

PRVF-04048: Version of OCR found "{0}", expected version of OCR for this release is "{1}"

Cause: An incorrect version of OCR was found running on all the nodes.

Action: Verify version of OCR running on all the nodes using 'ocrcheck'.

PRVF-04049: OCR version is inconsistent amongst the nodes

Cause: Found different version of OCR running on the cluster nodes.

Action: Ensure that the correct version of OCR is running on all the nodes using 'ocrcheck'.

PRVF-04052: Total space in OCR device is inconsistent amongst the nodes

Cause: Found possible different devices in use across the nodes.

Action: Verify that the same OCR devices are used across the cluster nodes using 'ocrcheck'.

PRVF-04055: OCR integrity is invalid

Cause: Cluster registry integrity check failed.

Action: Verify state of cluster registry using ocrcheck on the nodes participating in the verification operation.

PRVF-04056: OCR integrity results are inconsistent amongst the nodes

Cause: Cluster registry integrity check failed on some of the nodes.

Action: Verify state of cluster registry using ocrcheck on the nodes participating in the verification operation.

PRVF-04060: failed to retrieve storage information

Cause: An internal error occurred while trying to retrieve storage information.

Action: Contact Oracle Support.

PRVF-04079: The number of addresses does not match the number of node

Cause: Cannot determine IP address for every node.

Action: Verify each node in the cluster has a valid IP address.

PRVF-04080: Network interface information cannot be obtained from any of the node

Cause: Could not find any network interface on any node in the cluster.

Action: Verify network interface(s) operational status on the cluster nodes.

PRVF-04083: Node reachability check failed from node "{0}"

Cause: Network link to target node could not be verified using PING.

Action: Verify network link to target node using the PING utility.

PRVF-04084: Make sure IP address "{0}" is up and is a valid IP address on node "{1}"

Cause: The network interface, IP address and subnet identified as "*network interface : IP address [subnet]*" is not available or is not functioning correctly.

Action: Please verify that the network interface identified is functioning as intended.

PRVF-04087: Node connectivity check failed

Cause: Encountered errors attempting to verify node connectivity using the "OS ping" utility.

Action: Ensure that the IP addresses that failed can be reached using the OS ping utility and resolve any issues found with those IP addresses/interfaces.

PRVF-04090: Node connectivity failed for interface "{0}"

Cause: Unable to verify connectivity to the interface indicated using the "OS ping" utility.

Action: Verify that the interface indicated is available.

PRVF-04095: Unable to reach any of the nodes

Cause: Unable to reach any of the nodes using the OS ping command.

Action: Ensure that the nodes specified are accessible.

PRVF-04097: Node "{0}" is not reachable

Cause: Unable to reach the node specified using the OS ping command.

Action: Ensure that the node specified is accessible.

PRVF-04098: User equivalence not found for node "{0}"

Cause: Cannot access node specified using user equivalence.

Action: Ensure that user equivalence is setup between the local node and the node specified.

PRVF-04101: Could not find a suitable set of interfaces for VIPs

Cause: Could not find a set of network interface adapters suitable for Virtual IP communication in the cluster .

Action: Ensure that the network interface adapters are installed and configured correctly on each node in the cluster and that each interface can communicate with a network gateway.

PRVF-04102: Could not find a suitable set of interfaces for the private interconnect

Cause: Could not find a set of network interface adapters suitable for Private communication in the cluster.

Action: Ensure that the network interface adapters are installed and configured correctly on each node in the cluster according to RFC 1918, or that the interfaces are not accessible from the public network.

PRVF-04107: Source node "{0}" is not reachable from local node

Cause: Unable to reach the source node specified using the OS ping command.

Action: Ensure that the source node specified is accessible.

PRVF-04108: User equivalence not found for source node "{0}"

Cause: Cannot access source node specified using user equivalence.

Action: Ensure that user equivalence is setup between the local node and the source node specified.

PRVF-04112: Cannot identify Oracle Restart installation

Cause: Cannot determine location of Oracle Restart installation.

Action: Ensure that the Oracle Restart environment is setup correctly.

PRVF-04113: Unable to obtain OLR integrity details from the local node

Cause: Could not verify the state of OLR on the local node.

Action: Check the status of OLR on the local node using the command 'ocrcheck -local'.

PRVF-04118: Unable to obtain Oracle Restart integrity details from the local node

Cause: Encountered an error when trying to run 'crsctl check has', or OHASD was found to be offline.

Action: Check the status of Oracle Restart using the 'crsctl check has' command on the local node.

PRVF-04123: Inconsistent user IDs found for user "{0}"

Cause: The user ID for the specified user is not the same across all the nodes.

Action: Make sure that the user has the same user ID across all the nodes.

PRVF-04125: Failed to retrieve storage type for "{0}"

Cause: The storage location specified may be non-existent or invalid or the user running the check may not have permissions to access the specified storage.

Action: Specify a valid existing location, and ensure that the user running the check has valid read permissions to this location.

PRVF-04126: Global failure for all nodes during execution of space check command

Cause: CVU's attempt to execute the space check command on all nodes had a total failure.

Action: Make sure that the location specified is a valid location and available on all nodes.

PRVF-04127: Unable to obtain OLR location

Cause: Could not verify the state of OLR.

Action: Check the status of OLR using the command 'ocrcheck -config -local'.

PRVF-04132: Multiple users "{0}" with UID "{1}" exist on nodes "{2}"

Cause: More than one user was found to have the same user ID as indicated in the error message.

Action: Ensure that the indicated user ID is not shared among two or more users. If Network Information Service (NIS) or Lightweight Directory Access Protocol (LDAP) is used, then ensure that the user ID is not duplicated between users in NIS or LDAP and the local user database.

PRVF-04143: Media Sensing of TCP/IP is enabled on the nodes:

Cause: Media Sensing setting for TCP/IP is enabled.

Action: To disable Media Sensing for TCP/IP, add the REG_DWORD registry entry by name 'DisableDHCPMediaSense' and value 1 to the 'HKEY_LOCAL_MACHINE\System\CurrentControlSet\Services\Tcpip\Parameters' subkey. It is recommended to backup the Windows Registry before proceeding with any changes, Restart your system to make your changes effective after changing the registry.

PRVF-04144: Media Sensing status check for TCP/IP cannot be performed on nodes:

Cause: Media Sensing status could not be determined.

Action: Ensure that the access permissions for the Oracle user allow access to the Windows Registry and Registry has the REG_WORD entry named 'DisableDHCPMediaSense' with value 1 under 'HKEY_LOCAL_MACHINE\System\CurrentControlSet\Services\Tcpip\Parameters' sub key on the node. It is recommended to backup the Windows Registry

before proceeding with any changes, Restart your system to make your changes effective after changing the registry.

PRVF-04145: Error reading Registry sub key 'HKEY_LOCAL_MACHINE\System\CurrentControlSet\Services\Tcpip\Parameters' from Windows Registry

Cause: Windows Registry sub key 'HKEY_LOCAL_MACHINE\System\CurrentControlSet\Services\Tcpip\Parameters' could not be read.

Action: Ensure that the access permissions for the Oracle user allow access to the Windows Registry.

PRVF-04146: Error reading Registry sub key 'HKEY_LOCAL_MACHINE\Cluster\Parameters' from Windows Registry

Cause: Windows Registry sub key 'HKEY_LOCAL_MACHINE\Cluster\Parameters' could not be read.

Action: Ensure that the access permissions for the Oracle user allow access to the Windows Registry.

PRVF-04147: Error reading Registry value 'DisableDHCPMediaSense' for Windows Media Sensing

Cause: Could not read Windows Registry value 'DisableDHCPMediaSense' under 'HKEY_LOCAL_MACHINE\System\CurrentControlSet\Services\Tcpip\Parameters' sub key.

Action: Ensure that the access permissions for the Oracle user allow access to the Windows Registry and the Registry value 'DisableDHCPMediaSense' under 'HKEY_LOCAL_MACHINE\System\CurrentControlSet\Services\Tcpip\Parameters' sub key is present on the node.

PRVF-04148: Error reading Registry value 'DisableClusSvcMediaSense' for Windows Media Sensing

Cause: Could not read Windows Registry value 'DisableClusSvcMediaSense' under 'HKEY_LOCAL_MACHINE\Cluster\Parameters' sub key.

Action: Ensure that the access permissions for the Oracle user allow access to the Windows Registry and the Registry value 'DisableClusSvcMediaSense' under 'HKEY_LOCAL_MACHINE\Cluster\Parameters' sub key is present on the node.

PRVF-04151: Found different access permissions for the above storage location across the nodes specified

Cause: The access permissions for the path specified (i.e. read, write, execute) are different, or could not be determined, across the nodes specified.

Action: Ensure that the access permissions allow access for the Oracle user on all the nodes specified.

PRVF-04152: The access permissions for the above storage location do not allow the user access across the nodes specified

Cause: The access permissions for the path specified (i.e. read, write, execute) do not allow the user access.

Action: Ensure that the access permissions allow access for the Oracle user on all the nodes specified.

PRVF-04164: Size of the OCR location "{0}" does not meet the requirement. [Expected="{1}" ; Found="{2}"]

Cause: Size of the ocr device does not meet the requirement

Action: Increase the size of the ocr device

PRVF-04190: Verification of the hosts config file failed

Cause: The '/etc/hosts' file(s) contain incorrect, or incomplete, network host information.

Action: Review the contents of the node's '/etc/hosts' file and ensure that each entry contains a valid IP address and a canonical host name for the specified IP address.

PRVF-04192: unable to verify the contents of the '/etc/hosts' file.

Cause: An attempt to verify the contents of the '/etc/hosts' file failed.

Action: Review the node's '/etc/hosts' file and ensure that it exists, has the necessary permissions and each entry contains at least an IP address and a host name for the IP address specified.

PRVF-04211: The specified OCR location "{0}" is not a partition

Cause: The location specified should be a disk partition rather than the disk itself.

Action: Specify a disk partition as the OCR storage.

PRVF-04212: The specified Voting Disk location "{0}" is not a partition

Cause: The location specified should be a disk partition rather than the disk itself.

Action: Specify a disk partition as the Voting Disk storage.

PRVF-04213: Encountered issues with the following OCR Device/Files

Cause: 'ocrcheck' returned failure, or warning, messages with the Device(s)/File(s) listed.

Action: Run 'ocrcheck' and resolve issues reported.

PRVF-04253: CRS integrity check passed, but encountered some warnings

Cause: Some warnings were encountered while verifying CRS integrity.

Action: Review warnings and make modifications as necessary.

PRVF-04309: The effective group id "{0}" differs from the primary group id "{1}" of user "{2}"

Cause: The user is currently logged into a group that is not user's primary group.

Action: Invoke the application after logging in to the primary group (using command 'newgrp *primary group*').

PRVF-04314: There is no primary group on this Operating System

Cause: An attempt was made to check users primary group on an Operating System where there are no primary groups.

Action: This is an internal error; contact Oracle Support.

PRVF-04317: User "{0}" is part of group "{1}". Check failed

Cause: The user who was executing this check was found to be part of root group.

Action: Use the 'id' command to check if the user is part of root group. Remove the user from root group using the 'usermod' command and try again.

PRVF-04318: Checking that user "{0}" is not part of "{1}" group could not be performed on node "{2}"

Cause: A node specific error occurred while checking if user is not part of root group.

Action: Check that the node is accessible and user equivalence exists between the node on which command was executed and the node on which the check failed.

PRVF-04353: Proper soft limit for resource "{0}" not found on node "{1}" [Expected = "{2}" ; Found = "{3}"]

Cause: Soft limit for the resource does not meet the requirement on the specified node.

Action: Modify the resource limits to meet the requirement.

PRVF-04354: Proper hard limit for resource "{0}" not found on node "{1}" [Expected = "{2}" ; Found = "{3}"]

Cause: Hard limit for the resource does not meet the requirement on the specified node.

Action: Modify the resource limits to meet the requirement.

PRVF-04355: Resource soft limit check for "{0}" failed on node "{1}"

Cause: Soft limit of the resource could not be determined.

Action: Ensure that the resource limit configuration is accessible.

PRVF-04356: Resource hard limit check for "{0}" failed on node "{1}"

Cause: Hard limit of the resource could not be determined.

Action: Ensure that the resource limit configuration is accessible.

PRVF-04363: Persistent configuration check for cluster nodes failed

Cause: The nodes IP address configuration was not found to be persistent.

Action: Make the nodes IP address configuration persistent using the 'crsctl pin css' command, see Oracle documentation 'Pinning Cluster Nodes for Oracle Database Release' for further information."

PRVF-04528: Check for existence of config file "{0}" could not be performed on node "{1}".

Cause: Could not verify existence of configuration file specified.

Action: Verify access to node indicated and that the config file exists.

PRVF-04529: Host-guid of node "{0}" is not unique

Cause: The system guid value is not unique across all the cluster nodes.

Action: Ensure that the guid value is unique across all cluster nodes using 'ocrcheck'.

PRVF-04530: OCFS is not configured in runlevel 3,4 and 5 on the node

Cause: Runlevel was not configured with levels 3,4 and 5 all being on.

Action: Check OCFS configuration and ensure the run levels indicated are on.

PRVF-04554: Unable to retrieve {0} resource name from node {1}.

Cause: Could not identify node application resource name specified on the node specified.

Action: Ensure that the node application resource name specified is available for the node specified.

PRVF-04555: Node application "{0}" does not exist on node "{1}"

Cause: Could not identify resource specified on the node specified.

Action: Ensure that the resource specified is available for the node specified.

PRVF-04556: Failed to check existence of node application "{0}" on node "{1}"

Cause: Could not verify existence of the nodeapp identified on the node specified .

Action: Ensure that the resource specified is available on the node specified, see 'srvctl add nodeapps' for further information.

PRVF-04567: Failed to check existence of VIP node application on nodes "{0}"

Cause: An attempt to verify existence of the VIP on the nodes specified failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVF-04570: Failed to check existence of NETWORK node application on nodes "{0}"

Cause: An attempt to verify existence of the NETWORK node application on the nodes specified failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVF-04573: Failed to check existence of GSD node application on nodes "{0}"

Cause: An attempt to verify existence of the GSD node application on the nodes specified failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVF-04576: Failed to check existence of ONS node application on nodes "{0}"

Cause: An attempt to verify existence of the ONS node application on the nodes specified failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVF-04578: Failed to check existence of node applications on nodes "{0}"

Cause: An attempt to verify existence of node applications on the nodes specified failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVF-04579: An error occurred while parsing the output of the command "{0}" for node application resource "{1}". The output is: "{2}"

Cause: An error occurred while parsing output of the command listed for the resource listed.

Action: This is an internal error. Contact Oracle Support.

PRVF-04580: Node applications do not exist on any node of the cluster

Cause: Node applications were not configured on the cluster nodes.

Action: Node applications are created when root scripts are run. They can be also be created using the command 'srvctl add nodeapps'.

PRVF-04606: User equivalence not found for reference node "{0}"

Cause: Cannot access reference node using user equivalence.

Action: Ensure that user equivalence is configured between the local node and the node specified. See *Enabling SSH User Equivalency on Cluster Member Nodes* documentation for further information.

PRVF-04657: Name resolution setup check for "{0}" (IP address: {1}) failed

Cause: Inconsistent IP address definitions found for the SCAN name identified using DNS and configured name resolution mechanism(s).

Action: Look up the SCAN name with `nslookup`, and make sure the returned IP addresses are consistent with those defined in NIS and `/etc/hosts` as configured in `/etc/nsswitch.conf` by reconfiguring the latter. Check the Name Service Cache Daemon (`/usr/sbin/nscd`) by clearing its cache and restarting it.

PRVF-04661: found inconsistent 'hosts' entry in /etc/nsswitch.conf on node {0}

Cause: The 'hosts' specifications in the `/etc/nsswitch.conf` file is different the indicated node.

Action: Ensure that the 'hosts' entries define the same lookup order in the `/etc/nsswitch.conf` file across all cluster nodes.

PRVF-04663: found configuration issue with the 'hosts' entry in the /etc/nsswitch.conf file

Cause: The 'hosts' specifications in the `/etc/nsswitch.conf` file should specify 'dns' before 'nis' to ensure proper IP address to name mapping.

Action: Ensure that the 'hosts' entries across the cluster nodes define 'dns' lookup before 'nis' lookup.

PRVF-04664: Found inconsistent name resolution entries for SCAN name "{0}"

Cause: The `nslookup` utility and the configured name resolution mechanisms, as defined in `/etc/nsswitch.conf`, returned inconsistent IP address information for the SCAN name identified.

Action: Check the Name Service Cache Daemon (`/usr/sbin/nscd`), the Domain Name Server (`nslookup`) and the `/etc/hosts` file to make sure the IP address for the SCAN names is registered correctly. Clear the stale IP addresses from the name service cache using the command `'/usr/sbin/nscd -i hosts'`.

PRVF-04758: 'lsnodes' could not be executed on the node

Cause: Error running 'lsnodes'.

Action: Ensure that the executable exists and that it is executable by your OS userid.

PRVF-04759: 'lsnodes' execution failed on the node

Cause: Error running 'lsnodes'.

Action: Ensure that the executable `CRSHOME/bin/lsnodes` exists and that it is executable by your OS userid.

PRVF-04761: Multiple partitions found. Cluster is fragmented.

Cause: An attempt to verify that the list of nodes that constitute the cluster is same on all nodes failed because different lists of cluster nodes were obtained on different nodes.

Action: Make sure that all nodes specified in the command belong to the same cluster. Make sure that all nodes share the same voting disk.

PRVF-04859: Location "{0}" not accessible on nodes to be added.

Cause: Location does not exist, or cannot be created, on node(s) to be added.

Action: Ensure that the location either exists or can be created on the node(s) to be added.

PRVF-04864: Path "{0}" exists but the current user has no write access on the following nodes: "{1}"

Cause: During write access verification, the path (or its parent) could not be written by the current user.

Action: Verify writeable access, by the current user, to entire path specified on the nodes(s) listed.

PRVF-04866: Device location check failed for: "{0}"

Cause: Cannot verify location specified.

Action: Verify location specified is accessible across cluster node(s).

PRVF-04868: Virtual IP (VIP) "{0}" found for node "{1}"

Cause: The VIP node application identified was found on the node specified.

Action: Removed the specified VIP node application from the node specified.

PRVF-04869: Shared OCR location check failed

Cause: Problem reading inventory file for CRS home location.

Action: Verify inventory file integrity.

PRVF-04950: Error checking Operating System Version compatibility for Universal Storage Manager on node "{0}"

Cause: A remote operation to check Operating System version on the remote node failed.

Action: See the action for the additional error message displayed.

PRVF-04954: Version "{0}" is NOT supported for installing ACFS on node "{1}"

Cause: The version of operating system on the node is not compatible for installing ACFS.

Action: Check documentation for compatible version and install compatible version.

PRVF-05054: Verification of SCAN VIP and listener setup failed

Cause: Could not identify any SCAN, or SCAN listener, resources on the cluster.

Action: Verify SCAN configuration using 'srvctl config scan'.

PRVF-05056: SCAN listener "{0}" not running

Cause: The identified listener was not in the running state.

Action: Start the identified listener using 'srvctl start scan_listener'.

PRVF-05057: SCAN listener port for listener "{0}" does not match other ports

Cause: The port number used for the listener did not match those of all the instances of the listener that were started.

Action: Ensure that all the port numbers for the identified listener match. Check the documentation to get the details about the commands 'srvctl config scan' and 'srvctl modify scan' used for inspecting and modifying details of SCAN resource port numbers.

PRVF-05059: An error was encountered while verifying the SCAN configuration

Cause: An error was encountered while obtaining SCAN information.

Action: Review additional messages displayed for details of the error that was encountered.

PRVF-05060: SCAN listener processing error

Cause: An error was encountered while obtaining SCAN listener information.

Action: Review additional messages displayed for details of the error that was encountered.

PRVF-05061: SCAN VIP "{0}" not running

Cause: The SCAN VIP resources is not in the 'running' state.

Action: Start the SCAN VIP resource using using 'srvctl start scan -i num'.

PRVF-05062: SCAN VIP "{0}" and Scan listener "{1}" not running

Cause: The SCAN VIP and SCAN listener resources are not in the 'running' state.

Action: Start the SCAN VIP and SCAN listener resources using 'srvctl'.

PRVF-05064: SCAN and SCAN listener may not function correctly

Cause: Either the SCAN VIP or the SCAN listener was not running, or the port numbers used for the listeners did not match across the nodes.

Action: Either start the SCAN VIP or the SCAN listener, or ensure that the port numbers used for the SCAN listeners match across the nodes in the cluster.

PRVF-05065: Warning: all SCAN VIPs and SCAN listeners are running on node "{0}"

Cause: All the SCAN VIPs and SCAN listeners were found to be running on specified node.

Action: Relocate scan using 'srvctl relocate scan' command to different nodes of the cluster.

PRVF-05067: TCP connectivity check for SCAN listener "{0}" failed on node "{1}"

Cause: An attempt to connect to SCAN listener specified failed from the node specified.

Action: Examine the accompanying TNS error messages and respond accordingly.

PRVF-05109: ASM Running check failed. ASM is not running on all specified nodes

Cause: ASM was not running on all the specified nodes.

Action: Ensure that ASM is running on all the nodes specified, see 'srvctl start asm' for further information.

PRVF-05110: ASM is not running on nodes: "{0}"

Cause: ASM was not running on the cluster nodes specified.

Action: Ensure that ASM is running on all the cluster nodes.

PRVF-05114: Disk Group check failed. No Disk Groups configured

Cause: No ASM disk groups were found configured on the ASM instance.

Action: Ensure that the necessary disk groups are configured in ASM.

PRVF-05117: The owner of device "{0}" is different across cluster nodes.

Cause: The attempted task could not be completed because the owner for the identified device was not the same across all the nodes.

Action: Ensure that the device has the same owner across all the nodes.

PRVF-05121: Group of device "{0}" is different across cluster nodes.

Cause: The attempted task could not be completed because the group for the identified device was not the same across all the nodes.

Action: Ensure that the device has the same group across all the nodes.

PRVF-05125: The permissions for device "{0}" are different across cluster nodes.

Cause: The Configuration Verification Utility determined that the permissions for the indicated device were not the same across all the cluster nodes.

Action: Ensure that the indicated device has the same permissions across all the nodes and retry the operation.

PRVF-05137: Failure while checking ASM status on node "{0}"

Cause: Could not verify ASM running on node specified.

Action: Ensure that ASM is running on the node specified.

PRVF-05144: ASM Disk group "{0}" is unavailable on nodes "{1}"

Cause: Could not verify existence of ASM disk group specified on the nodes indicated.

Action: Verify existence of ASM group identified on the specified nodes, see 'asmcmd' for further information.

PRVF-05145: ASM Disk group "{0}" is unavailable on all nodes

Cause: Could not verify existence of ASM disk group specified on all the nodes.

Action: Verify existence of ASM group identified on the cluster nodes.

PRVF-05157: could not verify ASM disk group "{0}" for voting disk location "{1}" is available on node "{2}"

Cause: The ASM disk group specified was not running on the indicated node.

Action: Ensure that the ASM disk group is configured correctly and defined on the node indicated, and ensure that the voting disk locations are configured correctly.

PRVF-05174: ACFS Driver version is not compatible with Operating System version on node "{0}"

Cause: The version of ACFS driver is not compatible with the Operating system version on the node.

Action: Check documentation for compatible version and install compatible version.

PRVF-05175: Failed to retrieve ACFS driver version on node "{0}". Driver version compatibility check cannot be performed

Cause: The version of the ACFS driver could not be retrieved from specified nodes.

Action: Make sure that ACFS driver is installed on these nodes.

PRVF-05176: Failed to retrieve Operating System version on the local node. ACFS driver version compatibility check will not be performed

Cause: Operating system version on local node could not be determined.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-05177: Global failure when attempting to query ACFS driver state option "{0}" on all nodes

Cause: ACFS driver state could not be obtained on all the nodes.

Action: Make sure that user executing this check has execute permissions on the `usm_driver_state` command.

PRVF-05184: Check of following Udev attributes of "{0}" failed: {1} \nData used for above verification obtained from file: \n{2}\nRule used from above file: \n{3}

Cause: Found incorrect attributes for the specified device.

Action: Ensure that the device attributes are set correctly. See Configurable Dynamic Device Naming documentation (udev) for further information.

PRVF-05193: No devices found matching discovery string "{0}"

Cause: The specified device may not exist on the node being tested.

Action: Specify a correct discovery string that matches to existing devices on the node being tested.

PRVF-05195: No shared devices found

Cause: No shared storage was found based on the discovery string used in the verification.

Action: A message should have been displayed for each shared storage check failure. For each such message, perform the suggested action for that message.

PRVF-05196: Failed to retrieve OCR locations

Cause: An attempt to retrieve the OCR locations failed, possibly due to incorrect or incomplete Clusterware install, or due to incorrect configuration of the OCR, or due to invalid or incorrect OCR location file `ocr.loc`.

Action: Make sure that the Clusterware installation and Clusterware configuration has been correctly completed, and the `ocr.loc` file is present and accessible.

PRVF-05197: Failed to retrieve voting disk locations

Cause: An attempt to retrieve the voting disk locations failed, possibly due to incorrect or incomplete Clusterware install, or due to incorrect configuration of the Clusterware.

Action: Make sure that the Clusterware installation and Clusterware configuration has been correctly completed.

PRVF-05205: GNS VIP resource configuration check failed.

Cause: An error occurred while trying to obtain GNS VIP resource configuration information.

Action: Look at the accompanying messages for details on the cause of failure.

PRVF-05210: GNS resource is running on multiple nodes "{0}"

Cause: GNS resource should be running on only one node in the cluster at any given time. It was found to be running on multiple nodes at the same time.

Action: Stop the GNS resources running on various nodes using 'srvctl stop gns' command and leave it running on just one node of the cluster.

PRVF-05211: GNS resource is not running on any node of the cluster

Cause: GNS resource should be running on one node of the cluster. GNS resource wasn't running on any node.

Action: GNS can be configured using 'srvctl add gns' command. Use 'srvctl start gns' command to start GNS.

PRVF-05213: GNS resource configuration check failed

Cause: An error occurred while trying to obtain GNS resource configuration information.

Action: Look at the accompanying messages for details on the cause of failure.

PRVF-05216: The following GNS resolved IP addresses for "{0}" are not reachable: "{1}"

Cause: The listed IP addresses for the fully domain qualified name (FDQN) listed in the message and resolved by GNS were not reachable.

Action: Make sure that the configuration of GNS resource is proper using 'srvctl config gns' command. If GNS is configured correctly make sure that the network administrator has provided a set of IP addresses for the subdomain of the cluster and Domain Name Server (DNS) is forwarding requests for these to the GNS.

PRVF-05217: An error occurred while trying to look up IP address for "{0}"

Cause: An error occurred while trying to translate the fully domain qualified name (FDQN), listed in the message, to IP addresses.

Action: These IP address requests should have been forwarded to GNS by the Domain Name Server (DNS). Check the configuration of GNS resource using 'srvctl config gns' command. If GNS is configured correctly make sure that the network administrator has provided a set of IP addresses for the subdomain of the cluster and DNS is forwarding requests for these to the GNS.

PRVF-05218: Domain name "{0}" did not resolve to an IP address.

Cause: The fully qualified domain name (FQDN) listed in the message did not resolve to an IP address.

Action: Ensure that the configuration of GNS resource is correct using the 'srvctl config gns' command. If GNS is configured correctly, ensure that the network administrator has provided a set of IP addresses for the subdomain of the cluster and that the domain name server (DNS) is forwarding requests for these to the GNS.

PRVF-05219: GNS and GNS VIP resources are running on different nodes. GNS is running on nodes "{1}" while GNS VIP is running on "{0}".

Cause: The GNS and GNS VIP resources were running on different nodes.

Action: If GNS should be running on one node of the cluster at any given point of time. Make sure that GNS is not running on multiple nodes of the cluster using 'srvctl config gns' command. If GNS is running on multiple nodes then shut down all but one using 'srvctl stop gns' command.

PRVF-05220: GNS VIP resource was not running on any node of the cluster

Cause: The GNS VIP resource was not running on any nodes of the cluster.

Action: Make sure that the VIP name specified in 'srvctl add gns' command is an unused address belonging to one of the public networks of the cluster nodes.

PRVF-05223: The GNS subdomain name "{0}" is not a valid domain name

Cause: The GNS domain name specified was not a valid domain name.

Action: A valid domain name starts with an alphabet and contain characters [A-Z], [a-z], [0-9], '.', '-'. Refer to RFC-1035 for more information.

PRVF-05227: GNS VIP "{0}" does not resolve to a valid IP address

Cause: The specified GNS VIP does not resolve to an IP address.

Action: Make sure that the VIP name is spelled correctly. Make sure that the VIP name is registered with the DNS. Make sure that there are no firewalls between the cluster and the DNS server.

PRVF-05229: GNS VIP is active before Clusterware installation

Cause: GNS VIP was found to be active on the public network before Clusterware installation.

Action: If you are upgrading an older release of Clusterware this is not an error. In case of new installation GNS VIP will be brought up by GNS resource after Clusterware installation. Make sure that GNS VIP is configured to be an unused IP address.

PRVF-05230: GNS VIP is inactive after Clusterware installation

Cause: GNS VIP was not reachable after Clusterware installation.

Action: Bring the GNS resource online using 'srvctl start gns' command.

PRVF-05232: The GNS subdomain qualified host name "{0}" was resolved into an IP address

Cause: The specified GNS subdomain qualified host name was resolved into an IP address before Clusterware installation.

Action: Ensure that the DNS is configured to forward (rather than resolve) names in the GNS subdomain.

PRVF-05233: There are no public networks that match the GNS VIP "{0}"

Cause: GNS VIP subnet number did not match any of the public networks on the node.

Action: Specify an address that matches the public subnet number for GNS VIP.

PRVF-05253: Command "{0}" executed to retrieve GPNP resource status failed on all of the nodes

Cause: An attempt to execute the displayed command failed on all of the nodes.

Action: Make sure that the nodes of the cluster are accessible from the current node. Make sure that the user executing the check has permission to execute commands on nodes using 'ssh'.

PRVF-05254: Command "{0}" executed on node "{1}" produced no output

Cause: An attempt to run the command listed on the node listed produced no output.

Action: This is an internal error. Contact Oracle support services.

PRVF-05255: The GPNP resource is not in ONLINE status on the following nodes: {0}

Cause: The GPNP resource was found to be in OFFLINE or UNKNOWN state on the nodes listed.

Action: This is not an error if the GPNP resource was shutdown. If it is not the expected state then use the command 'crsctl start res ora.gpnpd -init' to start the GPNP resource.

PRVF-05256: Command "{0}" executed to retrieve the GPNP resource status failed on nodes: {1}

Cause: An attempt to run the command listed failed on the node listed.

Action: Make sure that the nodes listed are accessible from the current node. Make sure that the user executing the check has permission to executed commands on the node(s) listed using 'ssh'.

PRVF-05300: Failed to retrieve active version for CRS on this node

Cause: Could not identify location of CRS home.

Action: Ensure that correct installation of CRS exists.

PRVF-05301: Failed to locate CRS home

Cause: Could not locate the CRS home.

Action: Ensure that the install of CRS has completed successfully and the CRS home is setup correctly.

PRVF-05302: Failed to execute the exectask command on node "{0}"

Cause: Could not execute command specified on node listed.

Action: Verify command specified can be executed on node listed.

PRVF-05305: The Oracle Clusterware is not healthy on node "{0}"

Cause: An error was found with the Oracle Clusterware on the node specified.

Action: Review the error reported and resolve the issue specified.

PRVF-05307: Failed to retrieve Oracle Restart home

Cause: Could not identify location of Oracle Restart home.

Action: Ensure that Oracle Local Repository (OLR) was created correctly. See Oracle Local Repository documentation for further information.

PRVF-05308: ohasd is either not running or could not be contacted on node "{0}"

Cause: CRCTL did not report that OHAS was online.

Action: Review the error information displayed and verify the state of OHAS on the node identified.

PRVF-05310: Check for existence of file "{0}" could not be performed on node "{1}".

Cause: An attempt to verify the existence of the indicated file failed on the indicated node.

Action: Examine the accompanying error messages for details.

PRVF-05311: File "{0}" either does not exist or is not accessible on node "{1}".

Cause: Cannot access the file specified.

Action: Verify that the specified file exists and can be access on the node identified.

PRVF-05312: No ohasd entry was found in /etc/inittab file

Cause: Did not find 'respawn:/etc/init.d/init.ohasd' line in '/etc/inittab' file.

Action: Ensure that the OHASD environment has been setup correctly.

PRVF-05313: Failed to search for ohasd entry in /etc/inittab file on node "{0}"

Cause: An error was encountered trying to search for OHASD information in /etc/inittab.

Action: Ensure that the OHASD environment has been setup correctly and that /etc/inittab is accessible on the specified node.

PRVF-05314: Could not find CRS, or Oracle Restart, installed on the local node

Cause: Could not locate the CRS, or Oracle Restart, installation from the local node.

Action: Ensure that the install of CRS, or Oracle Restart, has completed successfully and the CRS, or Oracle Restart, home is setup correctly.

PRVF-05316: Failed to retrieve version of CRS installed on node "{0}"

Cause: Could not identify location of CRS home.

Action: Verify installation of CRS on the identified node.

PRVF-05317: The Clusterware is currently being upgraded to version: "{0}".\n The following nodes have not been upgraded and are\n running Clusterware version: "{1}".\n "{2}"

Cause: The CRS integrity may have discovered that your Oracle Clusterware stack is partially upgraded.

Action: Review warnings and make modifications as necessary. If the warning is due to partial upgrade of Oracle Clusterware stack then continue with upgrade and finish it.

PRVF-05318: No Oracle Restart is found configured on the local node

Cause: Could not locate the Oracle Restart configuration on the specified node.

Action: Ensure that the install of Oracle Restart has completed successfully and the Oracle Restart home is set up correctly.

PRVF-05319: Oracle Cluster Synchronization Services do not appear to be online.

Cause: An error was encountered when trying to verify the status of Oracle Cluster Synchronization Services.

Action: Verify the state of the Oracle Cluster Synchronization Services using 'crsctl check cluster'.

PRVF-05321: Failed to get the CRS or Oracle Restart home

Cause: Could not locate the CRS, or Oracle Restart, home.

Action: Ensure that the install of CRS, or Oracle Restart, has completed successfully and the CRS, or Oracle Restart, home is setup correctly.

PRVF-05322: Failed to get the CRS user name for CRS home "{0}"

Cause: An attempt to obtain the Clusterware owner information from CRS home failed.

Action: Ensure that the user executing the CVU check has read permission for CRS or Oracle Restart home.

PRVF-05323: Failed to get information for file "{0}"

Cause: An attempt to read information for a file failed.

Action: Make sure that the user executing the CVU check has read permission for the file and the file exists in the specified path.

PRVF-05324: Could not find CRS installed on the node "{0}"

Cause: Could not locate the CRS installation on the specified node.

Action: Ensure that the install of CRS has completed successfully and the CRS home is setup correctly.

PRVF-05325: Failed to retrieve release version for Oracle Restart

Cause: Could not get release version for Oracle Restart.

Action: Ensure that the install of Oracle Restart has completed successfully.

PRVF-05401: Clock synchronization check using Network Time Protocol(NTP) failed

Cause: One or more of the Clock Synchronization checks failed.

Action: Correlate with the other failure messages displayed and fix those failures.

PRVF-05402: Warning: Could not find NTP configuration file "{0}" on node "{1}"

Cause: NTP might not have been configured on the node, or NTP might have been configured with a configuration file different from the one indicated.

Action: Configure NTP on the node if not done so yet. Refer to your NTP vendor documentation for details.

PRVF-05403: Operation to check presence of NTP configuration file "{0}" failed on node "{1}"

Cause: The operation to check NTP configuration file failed on node indicated. The failure is due to a reason like incorrect permissions on the configuration file, communications error with the node, missing or inaccessible remote execution binary on the node, etc.

Action: Review the error messages that follow this message and fix the problem(s) indicated.

PRVF-05405: The NTP configuration file "{0}" does not exist on all nodes

Cause: The configuration file specified was not available or was inaccessible on the given nodes.

Action: If you want to use NTP for time synchronization, create this file and setup its configuration as described in your vendor's NTP document. If you plan to use CTSS for time synchronization then NTP configuration should be uninstalled on all nodes of the cluster. Refer to "Preparing Your Cluster" of "Oracle Database 2 Day + Real Application Clusters Guide".

PRVF-05406: NTP Configuration file Check failed

Cause: Attempt to check presence of configuration file failed on one or more nodes.

Action: Look at the related error messages and fix them.

PRVF-05408: NTP Time Server "{0}" is common only to the following nodes "{1}"

Cause: One or more nodes in the cluster do not synchronize with the NTP Time Server indicated.

Action: At least one common NTP Time Server is required for a successful Clock Synchronization check. If there are none, reconfigure all of the nodes in the cluster to synchronize with at least one common NTP Time Server.

PRVF-05410: Check of common NTP Time Server failed

Cause: The NTP query command showed there is no common time server among all of the nodes in the cluster.

Action: At least one common NTP Time Server is required for a successful Clock Synchronization check. Reconfigure all of the nodes in the cluster to synchronize with at least one common NTP Time Server. If you plan to use CTSS for time synchronization then NTP configuration should be uninstalled on all nodes of the cluster. Refer to "Preparing Your Cluster" of "Oracle Database 2 Day+ Real Application Clusters Guide".

PRVF-05411: Query of NTP daemon failed on all nodes on which NTP daemon is running

Cause: Attempt to query the NTP daemon failed on all of the nodes of the cluster because the 'ntpq' command could not be found.

Action: Make sure that the NTP query command 'ntpq' is available on all nodes and the user running the CVU check has execute privilege for it.

PRVF-05413: Node "{0}" has a time offset of {1} that is beyond permissible limit of {2} from NTP Time Server "{3}"

Cause: The time offset for the given node clock with the specified NTP Time Server is beyond permissible limits, possibly due to a clock drift, or due to an incorrectly functioning time server.

Action: Make sure that the Time Server is functioning properly, and if yes, adjust the system clock so that the offset is within limits.

PRVF-05414: Check of NTP Config file failed on all nodes. Cannot proceed further for the NTP tests

Cause: Attempt to check existence of config file failed on all nodes.

Action: Look at the individual error messages displayed for the respective nodes and the overall result message and take appropriate action.

PRVF-05415: Check to see if NTP daemon or service is running failed

Cause: Attempt to check if the NTP daemon was running failed on nodes of the cluster.

Action: Look at the accompanying error messages for the nodes on which the check failed and fix the problem. If you plan to use CTSS for time synchronization then NTP configuration should be uninstalled on all nodes of the cluster. Refer to "Preparing Your Cluster" of "Oracle Database 2 Day+ Real Application Clusters Guide".

PRVF-05416: Query of NTP daemon failed on all nodes

Cause: An attempt to query the NTP daemon using the 'ntpq' command failed on all nodes.

Action: Make sure that the NTP query command 'ntpq' is available on all nodes and make sure that user running the CVU check has permissions to execute it.

PRVF-05421: NTP configuration file check failed on the following nodes:

Cause: Check of existence of NTP configuration file failed on nodes listed because NTP was not configured on those nodes.

Action: If you plan to use NTP for time synchronization across nodes of the cluster then configure NTP on all of the nodes. If you plan to use CTSS for time synchronization then NTP configuration should be uninstalled on all nodes of the cluster. Refer to "Preparing Your Cluster" of "Oracle Database 2 Day+ Real Application Clusters Guide".

PRVF-05424: Clock time offset check failed

Cause: Offsets on all of the nodes in the cluster were not within limits for any Time Server.

Action: Look at the individual messages displayed and fix the problems indicated.

PRVF-05428: Network Time Protocol(NTP) configuration file not found on any of the nodes. Oracle Cluster Time Synchronization Service(CTSS) can be used instead of NTP for time synchronization on the cluster nodes

Cause: NTP is not configured on the cluster nodes.

Action: This is not an error if the system administrator intended to use Oracle Cluster Time Synchronization Service (CTSS) for clock synchronization on the cluster. If not then install NTP on all nodes of the cluster according to your NTP vendor documentation.

PRVF-05430: Voting disk configuration does not meet Oracle's recommendation of three voting disk locations

Cause: For high availability, Oracle recommends that you have a minimum of three voting disk locations.

Action: Add additional voting disk locations to meet the Oracle recommended amount of three voting disks.

PRVF-05431: Oracle Cluster Voting Disk configuration check failed

Cause: The Voting Disk configuration does not meet Oracle's recommendations.

Action: Review Clusterware and Voting Disk configuration.

PRVF-05433: The current voting disk state is at high risk

Cause: The current state of the voting disk locations is susceptible to the loss of one voting disk location resulting in failure of the cluster.

Action: Add additional voting disk locations, or bring existing locations online, to reduce the risk of losing one voting disk location.

PRVF-05434: Cannot identify the current CRS software version

Cause: Unable to obtain CRS version from CRSCTL.

Action: Ensure that CRSCTL is accessible on the nodes being verified.

PRVF-05435: Voting disk configuration does not meet Oracle's recommendation

Cause: For high availability, Oracle recommends that you have more than two voting disk locations.

Action: Add additional voting disk locations.

PRVF-05436: The NTP daemon running on one or more nodes lacks the slewing option "{0}"

Cause: NTP daemon on one or more nodes lacked slewing option.

Action: Shut down and restart the NTP daemon after setting the slewing option as follows: For Linux, edit `/etc/sysconfig/ntpd` and add `-x` to the command line option. For SUSE Linux, edit `/etc/sysconfig/ntp` and add `-x` to the `OPTIONS` variable. For AIX, edit `/etc/rc.tcpip` and add `-x` to the command line option. For HP-UX, edit `/etc/rc.config.d/netdaemons` and add `-x` to the command line option. For Solaris release 10 or earlier, edit `/etc/inet/ntp.conf` and add `'slewalways yes'` and `'disable pll'` to the file. For Solaris release 11 and higher, logon as root user and issue command: `/usr/sbin/svccfg -s svc:/network/ntp:default setprop config/slew_always = true` to change the setting, then refresh the service by issuing: `svcadm refresh svc:/network/ntp:default`

PRVF-05442: Could not obtain NTP daemon's command line on any node

Cause: An attempt to obtain the command line options for the NTP daemon's failed on all nodes.

Action: Make sure that the NTP daemon is running on all the nodes. Make sure that slewing option is set on all the nodes of the cluster.

PRVF-05447: Could not verify sharedness of Oracle Cluster Voting Disk configuration

Cause: Unable to obtain list of nodes with CRS installed.

Action: Ensure that Clusterware is up and running and verify Voting Disk configuration.

PRVF-05448: Voting Disk location "{0}" is not shared across cluster nodes

Cause: Voting Disk location specified is not shared across all cluster nodes.

Action: Verify Voting Disk configuration and ensure all Voting Disk locations are shared across all cluster nodes and are of the same storage type.

PRVF-05449: Check of Voting Disk location "{0}" failed on the following nodes:

Cause: Voting Disk location specified did not have owner, group or permissions set correctly on the nodes identified.

Action: Correct the owner, group or permissions settings on the location indicated as mentioned in one of the accompanying message.

PRVF-05450: Constraint type does not match

Cause: The specified constraint does not relate to space checks.

Action: Make sure that the space constraint data is well formed and consistent in the constraint xml.

PRVF-05451: Missing key data "{0}"

Cause: The data required for constraint check is missing.

Action: Verify that the space constraint data is correctly specified in the constraint xml.

PRVF-05452: Missing key reference data "{0}"

Cause: The reference data required for constraint check is missing.

Action: For a greater than/equal comparison, reference data is required. Verify that the space constraint check reference data is correctly specified in the constraint xml.

PRVF-05453: Invalid data set for "{0}", EXPECTED:"{1}", FOUND: "{2}"

Cause: The specified data is invalid for the space constraint check being performed.

Action: Make sure that correct data is specified, using the values indicated in the message.

PRVF-05454: Qualifier "{0}" is not supported for "{1}"

Cause: The indicated qualifier is not supported for the class indicated in the message.

Action: Make sure that the correct qualifier is specified.

PRVF-05455: Cannot apply invalid constraint

Cause: The specified constraint is invalid.

Action: Specify the correct constraint.

PRVF-05456: Invalid constraint. Compatibility check cannot proceed

Cause: The specified constraint is invalid.

Action: Specify the correct constraint for the compatibility check.

PRVF-05461: Encountered an invalid setting for internal variable "{0}"

Cause: This is an internal error.

Action: Please contact Oracle Support.

PRVF-05470: The NTP daemon's boot time configuration, in file "{0}", on one or more nodes lacks the slewing option "{1}"

Cause: NTP daemon boot time configuration on one or more nodes lacked slewing option.

Action: Make sure that the slewing option is specified in the file listed. For a list of nodes on which this check failed look at the accompanying error messages.

PRVF-05473: NTP daemon's boot time configuration check could not be performed on node "{0}"

Cause: An attempt to obtain the NTP daemon's boot time configuration file failed on the node specified.

Action: Make sure that the NTP daemon is configured on the node and will be started when the node boots up. Make sure that the user running this check has access to the configuration file specified. Also look at other messages accompanying this message.

PRVF-05475: Could not obtain NTP daemon's boot time configuration on any node

Cause: An attempt to obtain the command line options for the NTP daemon's failed on all nodes.

Action: Make sure that the NTP daemon is running on all the nodes. Make sure that slewing option is set on all the nodes of the cluster.

PRVF-05478: TZ value missing in configuration file "{0}" on node "{1}".

Cause: Time Zone value is missing in specified configuration file.

Action: Enter appropriate Time Zone value in the specified configuration file on the indicated node.

PRVF-05479: Time zone is not the same on all cluster nodes.

Cause: Nodes have different time zone settings.

Action: Ensure that time zone is same on all nodes.

PRVF-05486: The NTP daemon on the indicated nodes is not using UDP port 123

Cause: The port 123 for udp is not opened for the NTP daemon or service.

Action: For Unix, edit the /etc/services file appropriately.

PRVF-05492: Warning: Could not find NTP Daemon or Service running on node "{0}".

Cause: NTP Daemon may have aborted , shut down or may not have been installed.

Action: Restart NTP Daemon on the indicated node or install if necessary.

PRVF-05493: Operation to check presence of NTP Daemon or Service failed on node "{0}".

Cause: The operation to check NTP Daemon or service failed on node indicated. The failure is due to a reason like incorrect setup, communications error with the node, missing or inaccessible remote execution binary on the node, etc.

Action: Review the error messages that follow this message and fix the problem(s) indicated.

PRVF-05494: The NTP Daemon or Service was not alive on all nodes

Cause: The NTP Daemon was not alive on all the nodes.

Action: Examine the status of ntp on each of the nodes indicated after this message and restart the daemon or install the NTP software if necessary.

PRVF-05495: The Check for NTP Daemon or Service status failed on some nodes

Cause: The NTP Daemon was not accessible or there was some unknown failure in the check. The failure is due to a reason like incorrect setup, communications error with the node, missing or inaccessible remote execution binary on the node, etc.

Action: Review the error that follow this message and fix the problem(s) in the indicated nodes.

PRVF-05498: Timezone file "{0}" missing on node "{1}".

Cause: A check for the indicated timezone file did not find it on the node shown.

Action: Restore the file on the indicated node by reinstalling timezone patches for your operating system.

PRVF-05499: There are more than one NTP daemons or Services running on various nodes of the cluster

Cause: An attempt to check if NTP daemons or Service were running on nodes of the cluster found that more than one NTP daemons or Services were active.

Action: The accompanying messages will list the NTP daemon or service names along with the nodes on which they are running. Make sure that only one time synchronization service is active on all nodes of the cluster at any given time by shutting down others.

PRVF-05501: The user "{0}" is currently logged in to the group "{1}" which is not the primary group for the user

Cause: The user is currently logged into a group that is not user's primary group.

Action: Invoke the application after logging in to the primary group (using command `newgrp primary group`).

PRVF-05502: Current group ID check cannot be performed

Cause: Attempt to check if the current group ID matches with primary group ID failed.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-05505: The NTP daemon on node "{0}" is not using UDP port 123

Cause: The port 123 for UDP was not being used by the NTP daemon or service.

Action: For Unix, edit the `/etc/services` file appropriately.

PRVF-05506: Check for UDP port 123 being used by NTP daemon or service could not be performed on node "{0}"

Cause: Attempt to check for UDP port 123 being used by NTP daemon or service failed.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-05507: NTP daemon or service is not running on any node but NTP configuration file exists on the following nodes:

Cause: The configuration file was found on at least one node though no NTP daemon or service was running.

Action: If you plan to use CTSS for time synchronization then NTP configuration must be uninstalled on all nodes of the cluster.

PRVF-05555: Automount feature is disabled on nodes:

Cause: Automount feature for new volumes was found disabled.

Action: To enable Automount feature for new volumes, use `'mountvol /e'` or use the `'diskpart'` utility's `'automount enable'` command. Restart your system to make your changes effective after enabling the Automount feature.

PRVF-05556: Automount feature is disabled on the node "{0}"

Cause: Automount feature for new volumes was found disabled on specified node.

Action: To enable Automount feature for new volumes, use `'mountvol /e'` or use the `'diskpart'` utility's `'automount enable'` command. Restart your system to make your changes effective after enabling the Automount feature.

PRVF-05557: Error reading Registry subkey "{0}" from Windows Registry on node "{1}"

Cause: Windows Registry subkey `'HKEY_LOCAL_MACHINE\\System\\CurrentControlSet\\Services\\MountMgr'` could not be read on specified node.

Action: Ensure that the specified subkey exists in registry and access permissions for the Oracle user allow access to the Windows Registry. Restart your system to make your changes effective after changing the registry.

PRVF-05558: Check for status of Automount feature cannot be performed on nodes:

Cause: Windows Registry subkey `'HKEY_LOCAL_MACHINE\\System\\CurrentControlSet\\Services\\MountMgr'` could not be read.

Action: Ensure that the specified subkey exists in registry and the access permissions for the Oracle user allow access to the Windows Registry. Restart your system to make your changes effective after changing the registry.

PRVF-05559: Failed to perform the Automount status verification.

Cause: An error occurred while attempting to retrieve the information about Automount feature.

Action: Look at the accompanying messages and respond accordingly.

PRVF-05600: On node "{0}" The following lines in file "{1}" could not be parsed as they are not in proper format: {2}

Cause: Invalid lines were found in the file resolv.conf at the location and on the node indicated.

Action: Correct the errors indicated. On UNIX the general format of file resolv.conf is "*keyword* <value(s)>". For more details refer to resolv.conf man page.

PRVF-05603: 'domain' entry does not exist in file "{0}" on nodes: "{1}".

Cause: The 'domain' entry was not found in the resolv.conf file on the indicated nodes while it was present in others.

Action: Examine the indicated file on all nodes. Make sure that either 'domain' entry is defined on all nodes or is not defined on any nodes.

PRVF-05604: 'domain' entry in file "{0}" on node "{1}" is "{2}" which differs from reference node.

Cause: The 'domain' entry on the indicated node was not the same as the reference node 'domain' option specified above.

Action: Make sure that all nodes of the cluster have same 'domain' entry in the indicated file.

PRVF-05605: File "{0}" does not exist on following nodes: {1}

Cause: File specified did not exist on the nodes listed, but exists on other nodes.

Action: Make sure that the file is either present on all nodes or is not present on any node.

PRVF-05607: The file "{0}" on following nodes has more than "{1}" 'nameserver' entries: {2}.

Cause: The indicated file had more than the allowed number of 'nameserver' entries.

Action: Reduce the number of 'nameserver' entries on the indicated nodes to the allowed number.

PRVF-05608: The file "{0}" on the following nodes has more than one 'attempts' entry: {1}.

Cause: More than one 'option attempts:' entry was found on nodes specified.

Action: Make sure that there is only one 'option attempts:' entry in the indicated file.

PRVF-05609: The following nodes have multiple 'domain' entries defined in file "{0}": {1}.

Cause: The nodes specified had multiple 'domain' entry defined in the indicated file.

Action: Make sure that the indicated file has only one 'domain' entry.

PRVF-05610: The file "{0}" on the following nodes have more than one 'search' entry: {1}.

Cause: More than one 'search' entry was found on nodes specified, in the indicated file.

Action: Make sure that there is only one 'search' entry in the indicated file. Multiple domains can be listed in the same search entry.

PRVF-05613: 'nameserver' entry does not exist in file "{0}" on nodes: "{1}"

Cause: The 'nameserver' entry was not found on the indicated nodes, while it was present in others.

Action: Examine the indicated file on all nodes and ensure that either the 'nameserver' entry is defined on all nodes or is not defined any nodes.

PRVF-05614: The 'nameserver' entry in file "{0}" on node "{1}" is "{2}", which differs from reference node.

Cause: The 'nameserver' entry shown from the indicated file on the indicated node is not the same as the 'nameserver' option on the reference node.

Action: Ensure that all nodes of the cluster have same 'nameserver' entry in the indicated file.

PRVF-05622: The 'search' entry does not exist in file "{0}" on nodes: "{1}".

Cause: The 'search' entry was not found on the indicated nodes while it was present in others.

Action: Examine the indicated file on all nodes. Make sure that either 'search' entry is defined on all nodes or is not defined any nodes.

PRVF-05623: The 'search' entry in file "{0}" on node "{1}" is "{2}", which differs from reference node.

Cause: The 'search' entry on the indicated node was not the same as the reference node 'search' option specified above.

Action: Make sure that all nodes of the cluster have same 'search' entry in the indicated file.

PRVF-05629: Unable to read file "{0}" copied to local scratch area from node {1}

Cause: An error occurred while trying to read indicated file.

Action: Make sure that the CV_DESTLOC area was not being used by another process. Make sure that CV_DESTLOC has sufficient permissions. Also look for messages accompanying this message for details.

PRVF-05636: The DNS response time for an unreachable node exceeded "{0}" ms on following nodes: {1}

Cause: The DNS response time for an unreachable node exceeded the value specified on nodes specified.

Action: Make sure that 'options timeout', 'options attempts' and 'nameserver' entries in file resolv.conf are proper. On HP-UX these entries will be 'retrans', 'retry' and 'nameserver'. On Solaris these will be 'options retrans', 'options retry' and 'nameserver'. Make sure that the DNS server responds back to name lookup request within the specified time when looking up an unknown host name.

PRVF-05637: DNS response time could not be checked on following nodes: {0}

Cause: An attempt to check DNS response time for unreachable node failed on nodes specified.

Action: Make sure that 'nslookup' command exists on the nodes listed and the user executing the CVU check has execute privileges for it.

PRVF-05640: Both 'search' and 'domain' entries are present in file "{0}" on the following nodes: {1}.

Cause: Both 'search' and 'domain' entries were found in the 'resolv.conf' file on the indicated nodes.

Action: Make sure that only one of these entries exists in the 'resolv.conf' file. It is preferable to use entry 'search' in the 'resolv.conf' file.

PRVF-05642: Unable to create the directory "{0}"

Cause: An attempt to create the directory specified failed on local node.

Action: Make sure that the user running CVU has read and write permissions on directory specified or specify a different work area using the CV_DESTLOC property in the cv/admin/cvu_config file under the software home directory.

PRVF-05643: Unable to delete files from directory "{0}"

Cause: An attempt to remove files from the directory specified failed.

Action: Make sure that the user running CVU has read and write permissions on directory specified or specify a different work area using the CV_DESTLOC property in the cv/admin/cvu_config file under the software home directory.

PRVF-05704: No DHCP server were discovered on the public network listening on port {0}

Cause: No reply was received for the DHCP discover packets sent on the specified port.

Action: Contact the network administrator to make sure that DHCP servers exist on the network. If the DHCP servers are listening to a different port then specify it by using -port option.

PRVF-05707: DHCP server was not able to provide sufficient IP addresses (required "{1}" , provided "{0}")

Cause: DHCP server was unable to provide sufficient number of IP address.

Action: An IP is required for each node VIP. Three IP addresses are needed for SCAN VIP. One IP address is required for each application VIP specified. Make sure that the DHCP server listening on port specified in above messages has sufficient number of IP addresses to give out.

PRVF-05711: DHCP server response time could not be measured

Cause: An attempt to measure DHCP server response time using 'crsctl discover' command failed.

Action: Look at messages accompanying this message for more information.

PRVF-05712: Warning: The DHCP server response time of {0} seconds is greater than VIP resource's SCRIPT_TIMEOUT attribute of {1} seconds

Cause: An attempt to obtain a DHCP lease took more time than VIP resource's SCRIPT_TIMEOUT attribute.

Action: This check is network load sensitive and can yield different result at different times. Make sure that the DHCP server and the network is not overloaded. Also consider a higher SCRIPT_TIMEOUT value.

PRVF-05713: Command "{0}" executed on node "{1}" produced no output

Cause: An attempt to run the command listed on the node listed produced no output.

Action: This is an internal error. Contact Oracle Support.

PRVF-05714: An error occurred while parsing the output of the command "{0}". The output is: "{1}"

Cause: An attempt to parse output of the command listed failed.

Action: This is an internal error. Contact Oracle Support.

PRVF-05715: The number of IP addresses assigned to the network interface "{0}" exceeds recommended value (recommended {1}, actual {2})

Cause: Too many IP addresses were assigned to the specified interface.

Action: If there are IP addresses that are not needed stop them in the operating system specific way. If too many resources are running on this node then relocate them to other nodes of the cluster relocate using 'srvctl relocate' command.

PRVF-05716: Unable to obtain network interface details on local node

Cause: An attempt to obtain network interface details on local node failed.

Action: Make sure that the user executing CVU has sufficient permissions to query network interfaces on the node. Also look at accompanying messages and take action as per those messages.

PRVF-05718: Command "{0}" failed to execute on node "{1}". The output produced by the command is: "{2}"

Cause: An attempt to execute specified command on the node specified failed.

Action: Refer to the specified output and fix the error.

PRVF-05801: Failed to execute command "{0}" on all nodes

Cause: CVU's attempt to execute the specified command failed on all of the nodes.

Action: Examine the messages displayed for each node and take action as per those messages.

PRVF-05803: An error occurred while starting the IP address "{0}" on node "{1}"

Cause: An attempt to start the specified IP address on the node specified failed.

Action: Look at messages accompanying this message for more information.

PRVF-05805: Unable to start the test DNS server

Cause: An attempt to start the test DNS server failed with errors.

Action: Look at messages accompanying this message for more information.

PRVF-05809: Unable to start the test DNS server on address: "{0}", listening on port: {1}

Cause: An attempt to start the test DNS server failed with errors.

Action: Look at messages accompanying this message for more information.

PRVF-05810: Unable to stop the test DNS server on address: "{0}", listening on port: {1}

Cause: An attempt to stop the test DNS server failed with errors.

Action: Look at messages accompanying this message for more information.

PRVF-05811: Unable to stop the IP address "{0}" on node "{1}"

Cause: An attempt to stop the IP address specified on the node specified failed.

Action: Look at messages accompanying this message for more information.

PRVF-05813: Unable to reach the IP address "{0}" from local node

Cause: An attempt to reach the specified IP address from current node failed.

Action: Make sure that the specified IP address is a valid IP address. Check messages of the 'cluvfy comp dns -server' instance to make sure that there are no errors. If the address has been started then make sure that there are no firewalls between the local node and node on which this IP address has been started.

PRVF-05816: Unable to query the test DNS server started on address "{0}", listening on port {1}

Cause: An attempt to query the test DNS server, started on specified address and port, failed.

Action: Look at messages on the 'cluvfy comp dns -server' instance to make sure that the test DNS server was started. Also look at any messages accompanying this message.

PRVF-05819: Failed to verify DNS delegation of the GNS subdomain "{0}"

Cause: An attempt to perform name resolution for nodename.<gns_subdomain> failed as DNS did not forward requests to the test DNS server.

Action: Look at messages accompanying this message for more information. Also look at any messages from 'cluvfy comp dns -server' invocation for CVU.

PRVF-05821: Unable to reach the IP address "{0}" from local node

Cause: An attempt to reach the specified IP address failed.

Action: Make sure that the specified IP address is a valid IP address and is assigned to an interface on the node on which 'cluvfy comp dns -server' was run. Make sure that there are no firewalls between local node and node on which specified IP address is assigned.

PRVF-05822: Name lookup for FQDN "{0}" failed with test DNS server running at address "{1}" and listening on port {2}.

Cause: An attempt to query the indicated Fully Qualified Domain Name (FQDN) on the test domain name server (DNS) running on the indicated address and port failed.

Action: Ensure that the indicated address and the port are correct. Ensure that there are no firewalls between the node on which 'cluvfy comp dns -server' is run and the node on which this command is run. Also, examine any error messages on the node on which 'cluvfy comp dns -server' is run.

PRVF-05823: Name lookup for FQDN "{0}" failed.

Cause: An attempt to query a domain name server for the indicated Fully Qualified Domain Name (FQDN) failed.

Action: Ensure that there are no firewalls between the local node and DNS. Ensure that there are no firewalls between DNS and the node on which 'cluvfy comp dns -server' was run. Ensure that Grid Naming Service subdomain delegation is set up

correctly in DNS. Also, examine any error messages on the node on which 'clufvy comp dns -server' was run.

PRVF-05826: The domain name "{0}" is not valid

Cause: The DNS domain name specified did not conform to the industry standard.

Action: A valid domain name starts with an alphabetic character and consists only of characters [A-Z], [a-z], [0-9], '.', '-'. Refer to the RFC-1035 standard for more information.

PRVF-05827: The response time for name lookup for name "{1}" exceeded {0} seconds.

Cause: The DNS response time for the indicated name exceeded the indicated time limit.

Action: On Linux and AIX ensure that 'options timeout', 'options attempts' and 'nameserver' entries in file resolv.conf are proper. On HPUX these entries will be 'retrans', 'retry' and 'nameserver'. On Solaris these will be 'options retrans', 'options retry' and 'nameserver'. On windows examine registry key 'HKEY_LOCAL_MACHINE\System\CurrentControlSet\Services\VxD\MSTCP' for values 'BcastQueryTimeout' and 'MaxConnectRetries'.

PRVF-06001: Could not get required information about the interface "{0}"

Cause: Could not get interface information for the interface specified.

Action: Ensure that the interface is installed and online on the nodes in the cluster.

PRVF-06002: Unable to get information about interface "{0}" on the following nodes:

Cause: Could not get interface information for the interface specified on the nodes listed.

Action: Ensure that the interface is installed and online on the nodes specified.

PRVF-06003: Unable to get network information from node: {0}

Cause: Could not obtain any network interface information from the node specified.

Action: Verify state of network interface adapters on the specified node.

PRVF-06005: Could not find a fully connected subnet that covers all the nodes

Cause: Could not find a network interface adapter that exists in the same subnet on every node in the cluster .

Action: Ensure that the network interface adapters are installed and configured correctly on each node in the cluster.

PRVF-06006: unable to reach the IP addresses "{0}" from the local node

Cause: During a verification operation to check that the indicated IP addresses are reachable from the local node using the 'ping' command, the verification failed to reach any of the addresses specified. Either the addresses did not resolve correctly or the nodes were unreachable.

Action: Ensure that the indicated IP addresses are accessible with the 'ping' command. If the host names do not resolve correctly, ensure that the domain naming services cache has been purged using the command '/etc/rc.d/init.d/nscd restart' on Linux and UNIX machines and the command 'ipconfig /flushdns' on Windows operating system machines.

PRVF-06011: could not find any network interface on node "{0}"

Cause: Node connectivity checking determined that the indicated node did not have any network interface configured.

Action: Verify the operational status of the network interfaces on the indicated node, configure the network interfaces according to the documentation and retry the node connectivity check.

PRVF-06019: Interface subnet "{0}" does not have a gateway defined

Cause: Could not identify the gateway for the subnet identified.

Action: Define a gateway for the specified subnet.

PRVF-06020: Different MTU values used across network interfaces in subnet "{0}"

Cause: Different MTU values found for the network adapter used between cluster nodes across the specified subnet.

Action: Set the MTU value for that network adapter/subnet to be the same on each node in the cluster.

PRVF-06402: Core file name pattern is not same on all the nodes.

Cause: The core file name pattern is not same on all the nodes.

Action: Ensure that the mechanism for core file naming works consistently on all the nodes. Typically for Linux, the elements to look into are the contents of two files /proc/sys/kernel/core_pattern or /proc/sys/kernel/core_uses_pid. Refer OS vendor documentation for platforms AIX, HP-UX, and Solaris.

PRVF-06407: Core file name pattern can not be obtained from nodes "{0}".

Cause: Unable to execute commands on the nodes specified.

Action: Ensure the ability to communicate with, and execute commands on, nodes specified .

PRVF-07017: Package cvuqdisk not installed

Cause: The required cvuqdisk package to perform this operation was found missing.

Action: Ensure that the required version of cvuqdisk package is installed on all the nodes participating in the operation.

PRVF-07019: OCFS file system does not exist on location "{0}"

Cause: OCFS file system was not found on the specified location.

Action: Ensure that OCFS file system is correctly created on the specified location.

PRVF-07020: Cannot verify the shared state for device {0} due to Universally Unique Identifiers (UUIDs) not being found, or different values being found, for this device across nodes:

Cause: An attempt to retrieve devices' Universally Unique Identifier (UUID) failed, or UUID's do not match, on the nodes indicated.

Action: Ensure the devices' UUID can be obtained and that the UUID value matches across all the nodes indicated.

PRVF-07036: Mount options did not meet the requirements for this platform [Expected = "{0}" ; Found = "{1}"]

Cause: The mount options found did not match the minimum set of mount options that must be used while mounting NFS volumes.

Action: Ensure that all of the required mount options are specified.

PRVF-07037: Reserve_policy setting prevents sharing of {0} on nodes:

Cause: The reserve_policy setting for the device is preventing the device from being shared on the nodes indicated.

Action: Change the reserve_policy setting for the device. See the chdev command for further details.

PRVF-07038: Reserve_lock setting prevents sharing of {0} on nodes:

Cause: The reserve_lock setting for the device is preventing the device from being shared on the nodes indicated.

Action: Change the reserve_lock setting for the device. See the chdev command for further details.

PRVF-07039: File system exists on location "{0}"

Cause: Existing file system found on the specified location.

Action: Ensure that the specified location does not have an existing file system.

PRVF-07501: Sufficient space is not available at location "{0}" on node "{1}" [Required space = {2}; available space = {3}]

Cause: There was not enough free space at location specified.

Action: Free up additional space or select another location.

PRVF-07524: Kernel version is not consistent across all the nodes.

Cause: The operating system kernel versions do not match across cluster nodes.

Action: Update the kernel version where necessary to have all cluster nodes running the same kernel version.

PRVF-07530: Sufficient physical memory is not available on node "{0}" [Required physical memory = {1}]

Cause: Amount of physical memory (RAM) found does not meet minimum memory requirements.

Action: Add physical memory (RAM) to the node specified.

PRVF-07531: Physical memory check cannot be performed on node "{0}"

Cause: Could not perform check of physical memory on the node indicated.

Action: Ensure the ability to access the node specified and view memory information.

PRVF-07532: Package "{0}" is missing on node "{1}"

Cause: A required package is either not installed or, if the package is a kernel module, is not loaded on the specified node.

Action: Ensure that the required package is installed and available.

PRVF-07533: Proper version of package "{0}" is not found on node "{1}" [Required = "{2}" ; Found = "{3}"].

Cause: Package does not meet the requirement.

Action: Upgrade the package to meet the requirement.

PRVF-07534: Package check cannot be performed on node "{0}"

Cause: Package configuration could not be determined.

Action: Ensure that the package configuration is accessible.

PRVF-07535: Proper architecture is not found on node "{0}" [Expected = "{1}" ; Found = "{2}"]

Cause: System architecture does not meet the requirement.

Action: Ensure that the correct software bundle is being used.

PRVF-07536: Architecture check cannot be performed on node "{0}"

Cause: System architecture could not be determined.

Action: Ensure that the correct software bundle is being used.

PRVF-07537: User "{0}" does not exist on node "{1}"

Cause: The specified user does not exist on the specified node.

Action: Create the user on the specified node.

PRVF-07538: User existence check cannot be performed on node "{0}"

Cause: Attempt to check the existence of user on the specified node failed.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-07539: Group "{0}" does not exist on node "{1}"

Cause: The specified group does not exist on the specified node.

Action: Create the group on the specified node.

PRVF-07540: Group existence check cannot be performed on node "{0}"

Cause: Attempt to check the existence of group on the specified node failed.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-07542: Kernel version check cannot be performed on node "{0}"

Cause: Unable to execute commands on node specified.

Action: Ensure the ability to communicate with, and execute commands on, node specified .

PRVF-07543: OS Kernel parameter "{0}" does not have proper value on node "{1}" [Expected = "{2}" ; Found = "{3}"].

Cause: Kernel parameter value did not meet the requirement.

Action: Modify the kernel parameter value to meet the requirement and ensure that the corrected kernel parameter value takes effect before retrying this check.

PRVF-07544: Check cannot be performed for kernel parameter "{0}" on node "{1}"

Cause: Kernel parameter value could not be determined.

Action: Ensure that the correct software bundle is being used.

PRVF-07562: Sufficient available memory is not available on node "{0}" [Required available memory = {1}]

Cause: Amount of available memory (RAM) does not meet minimum memory requirements.

Action: Add physical memory (RAM) to the node specified, or free memory being used.

PRVF-07563: Available memory check cannot be performed on node "{0}"

Cause: Could not perform check of available memory on the node indicated.

Action: Ensure the ability to access the node specified and view memory information.

PRVF-07564: The runlevel found on node "{0}" did not match a supported runlevel. [Expected="{1}"; Found="{2}"]

Cause: The runlevel mode of operation for the computer operating system was found to be an unsupported runlevel on the node specified.

Action: Reboot the specified node with one of the correct runlevels indicated.

PRVF-07565: Could not perform the runlevel verification check on node "{0}"

Cause: Errors were encountered when trying to obtain the runlevel set on the system.

Action: Ensure that the command used to obtain the runlevel value 'who -r' can be run on the specified node and the file accessed by this command '/var/run/utmp' has read access for the current user.

PRVF-07566: User "{0}" does not belong to group "{1}" on node "{2}"

Cause: The specified user is not a member of the specified group on the specified node.

Action: Make the user a member of the group on the specified node.

PRVF-07567: Group "{0}" is not the primary group for user "{1}" on node "{2}"

Cause: The specified group is not the primary group for the specified user.

Action: Make the specified group as the primary group for the user.

PRVF-07568: Check cannot be performed for membership of user "{0}" with group "{1}" on node "{2}"

Cause: Attempt to check the group membership of the user on the specified node failed.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-07571: Process "{0}" not running on node "{1}"

Cause: Required process not running on the specified node.

Action: Ensure that the identified process can be started on the node .

PRVF-07572: Process running check cannot be performed on node "{0}"

Cause: Could not collect process information from the specified node.

Action: Ensure the access to node specified and ability to view process information.

PRVF-07573: Sufficient swap size is not available on node "{0}" [Required = {1} ; Found = {2}]

Cause: The swap size found does not meet the minimum requirement.

Action: Increase swap size to at least meet the minimum swap space requirement.

PRVF-07574: Swap size check cannot be performed on node "{0}"

Cause: Could not perform check of swap space on the node indicated.

Action: Ensure the ability to access the node specified and view swap space information.

PRVF-07575: Encountered an internal error. The range of reference data for verifying swap size has not been correctly defined

Cause: Swap size could not be determined based on the physical memory available.

Action: This is an internal error that should be reported to Oracle.

PRVF-07584: Multiple versions of package "{0}" found on node {1}: {2}

Cause: Multiple versions of the package were found when only one version was expected.

Action: Ensure that the specified package is installed correctly.

PRVF-07590: "{0}" is not running on node "{1}"

Cause: The process identified is not running on the specified node.

Action: Ensure that the identified process is started and running on the specified node. If it is one of the Clusterware daemons then you can use 'crsctl check' command to check status.

PRVF-07591: Daemon process check cannot be performed for process "{0}" on node "{1}"

Cause: An error was encountered while trying to determine if the identified process was running on the specified node.

Action: Ensure that the user has the ability to execute the command displayed.

PRVF-07592: Space availability check for location "{0}" cannot be performed on node "{1}"

Cause: Unable to determine amount of free space available for the specified location on the node identified.

Action: Ensure the ability to communicate with the specified node and the ability to access the location identified.

PRVF-07593: CRS is not found to be installed on node "{0}"

Cause: Could not identify CRS installation on the specified node.

Action: Ensure that CRS is installed on the specified node.

PRVF-07594: {0} is running but is not working effectively on node "{1}"

Cause: Could not communicate with the process specified on the node indicated.

Action: Verify state of CRS on the node indicated using the 'crsctl check' command.

PRVF-07595: CRS status check cannot be performed on node "{0}"

Cause: Could not verify the status of CRS on the node indicated using 'crsctl check'.

Action: Ensure the ability to communicate with the specified node. Make sure that Clusterware daemons are running using 'ps' command. Make sure that the Clusterware stack is up.

PRVF-07596: CSS is probably working with a non-clustered, local-only configuration on node "{0}"

Cause: Oracle CSS was found to be configured to run in a local-only (non-clustered) environment on the specified node.

Action: Ensure that cluster setup is correct and reconfigure Cluster Synchronization Services (CSS) as necessary on the nodes that are supposed to be executing in a clustered environment. See Oracle Cluster Synchronization Services documentation for further information.

PRVF-07597: Unable to obtain OCR integrity details from node "{0}"

Cause: OCR was not found to be in a healthy state on the node specified.

Action: Verify the state of OCR on the node specified using 'ocrcheck'.

PRVF-07610: Cannot verify user equivalence/reachability on existing cluster nodes

Cause: Attempts to verify user equivalence, or node reachability, failed for all the existing cluster nodes.

Action: Verify that all the cluster nodes have user equivalence and are reachable.

PRVF-07611: Proper user file creation mask (umask) for user "{0}" is not found on node "{1}" [Expected = "{2}" ; Found = "{3}"]

Cause: The user's OS file creation mask (umask) was not the required setting.

Action: Set appropriate user file creation mask. Modify the users .profile or .cshrc or .bashrc to include the required umask.

PRVF-07612: User file creation mask check cannot be performed for user "{0}" on node "{1}"

Cause: Attempt to check the file creation mask of user on the specified node failed.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-07615: Unable to obtain network interface list using the "{0}" tool from Oracle Clusterware home "{1}"

Cause: The Oracle Interface Configuration Tool (OIFCFG) executable did not return the network interface list.

Action: Ensure that the 'oifcfg getif' and 'oifcfg iflist' commands return the valid interface list.

PRVF-07617: Node connectivity between "{0}" and "{1}" failed

Cause: Node connectivity between the two interfaces identified (*node* : *IP addr*) could not be verified.

Action: Verify the interface configurations for the network interfaces identified on the nodes indicated using utilities like ipconfig or ping.

PRVF-07650: Remote execution files could not be copied to "{0}" on the following nodes:

Cause: An attempt to copy files to the directory specified failed.

Action: Make sure that the user running CVU has read and write permissions on directory specified or specify a different work area using the CV_DESTLOC property in the cv/admin/cvu_config file under the software home directory.

PRVF-07700: Path for fixup root directory is either null or is an empty string

Cause: Provided fixup root directory path is either null or an empty string.

Action: Provide appropriate and absolute path for fixup root directory.

PRVF-07701: Path "{0}" for fixup root directory is invalid. It must be specified as an absolute pathname

Cause: Fixup root directory was not specified as an absolute pathname.

Action: Specify fixup root directory as an absolute pathname.

PRVF-07702: The path "{0}" for fixup root directory is not a valid directory

Cause: Fixup root directory path was not a valid directory.

Action: Specify fixup root path as a valid directory where files can be created and executed from.

PRVF-07703: The fixup root directory "{0}" is not writeable

Cause: Directory identified is not writeable.

Action: Verify write access to directory specified.

PRVF-07704: The fixup root directory "{0}" cannot be created

Cause: Could not create fixup root directory specified.

Action: Ensure that write access exists for the path for the directory specified.

PRVF-07705: Directory "{0}" cannot be created

Cause: Could not create directory specified.

Action: Ensure that write access exists for the path for the directory specified.

PRVF-07706: File "{0}" cannot be created

Cause: Could not create file specified.

Action: Ensure that write access exists for file location.

PRVF-07709: File "{0}" cannot be copied to file "{1}" on node "{2}"

Cause: Could not copy the source file specified to the target file specified on the identified node.

Action: Ensure that the node identified and the target location for the file specified can be accessed.

PRVF-07710: Invalid path has been specified for fixup root directory

Cause: The path specified for the fixup root directory is not correct.

Action: Specify an absolute path for a directory that exists and is writeable by the user performing the verification.

PRVF-07720: Fixup cannot be generated for creating group "{0}" on node "{1}"

Cause: Attempt to generate fixup for group creation on the specified node failed.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-07721: Fixup cannot be generated for creating user "{0}" on node "{1}"

Cause: Attempt to generate fixup for user creation on the specified node failed.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-07722: Fixup cannot be generated for setting kernel param "{0}" on node "{1}"

Cause: Attempt to generate fixup for kernel param on the specified node failed.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-07723: Fixup cannot be generated for setting soft limit for resource "{0}" on node "{1}"

Cause: Attempt to generate fixup for resource soft limit on the specified node failed.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-07724: Fixup cannot be generated for setting hard limit for resource "{0}" on node "{1}"

Cause: Attempt to generate fixup for resource hard limit on the specified node failed.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-07725: Fixup cannot be generated for setting runlevel "{0}" on node "{1}"

Cause: Attempt to generate fixup for run level on the specified node failed.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-07726: Fixup cannot be generated for setting membership of user "{0}" with group "{1}" on node "{2}"

Cause: Attempt to generate fixup for group membership on the specified node failed.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVF-07728: Could not access or create trace file path "{0}". Trace information could not be collected

Cause: Trace file location could not be created, or is not writeable.

Action: Make sure user has write access to location specified, or specify a different location using the environmental variable CV_TRACELOC.

PRVF-07729: Fixup cannot be generated for user "{0}", group "{1}", on node "{2}" because the user is not defined locally on the node

Cause: Fixup for group membership could not be generated because user was not found to be locally defined on the specified node.

Action: The fixup will have to be done manually. The user could be a Network Information Service (NIS) or Lightweight Directory Access Protocol (LDAP) user. Based on where the user is defined use appropriate tools to modify the user account.

PRVF-07730: Fixup cannot be generated for user "{0}", group "{1}", on node "{2}" because the group is not defined locally on the node

Cause: Fixup for group membership could not be generated because the group was not found to be locally defined on the specified node.

Action: The fixup will have to be done manually. The group could be a Network Information Service (NIS) or Lightweight Directory Access Protocol (LDAP) user. Based on where the group is defined use appropriate tools to modify the user account.

PRVF-09041: String has bad format: "{0}"

Cause: A parsing exception has occurred, and the string displayed could not be parsed.

Action: This message should be part of one or more other messages. Please look at those messages and take appropriate action.

PRVF-09105: Linux RPM package version found to be lower than minimum required version of <"{0}"> on nodes:

Cause: Linux RPM package version found to be older than recommended version.

Action: Ensure that the Linux RPM package version installed on the system is version 4.4.2.3 or higher.

PRVF-09106: Linux RPM package version was lower than the expected value. [Expected = "{0}" ; Found = "{1}"] on node "{2}"

Cause: Linux RPM package version found to be older than recommended version.

Action: Ensure that the Linux RPM package version installed on the system is version 4.4.2.3 or higher.

PRVF-09107: Could not retrieve the version of Linux RPM package on node:

Cause: An error occurred while running rpm command on system to determine the current version of Linux RPM package.

Action: Ensure that the Linux RPM package is correctly installed and is accessible to current user.

PRVF-09108: Could not retrieve the version of Linux RPM package on node "{0}"

Cause: An error occurred while running rpm command on system to determine the current version of Linux RPM package.

Action: Ensure that the Linux RPM package is correctly installed and is accessible to current user.

PRVF-09306: OCFS2 is not configured in runlevel 3,4 and 5 on all the nodes

Cause: Runlevel was not configured with levels 3,4 and 5 all being on.

Action: Check OCFS2 configuration and ensure the run levels indicated are on.

PRVF-09555: Current installation user "{0}" is not the owner "{1}" of the existing CRS installation

Cause: The current user was not found to be an owner of an existing CRS installation.

Action: Ensure that the user upgrading the CRS installation is an owner of the already existing installation.

PRVF-09556: Failed to get the CRS user name for an existing CRS installation

Cause: An attempt to obtain the Clusterware owner information from an existing CRS installation failed.

Action: Ensure that the user executing the CVU check has read permission for CRS or Oracle Restart home.

PRVF-09653: Command "{0}" to check CTSS status failed on all of the nodes

Cause: CVU attempts to execute the displayed command failed on all of the nodes.

Action: Examine the messages displayed for each node and take action as per those messages.

PRVF-09654: CTSS status check command "{0}" executed successfully on node "{1}", but there was a failure in retrieving the output of this command

Cause: Reason for failure to retrieve output could be due to improper execution.

Action: Try the command manually on the node to verify proper execution, and fix any issues arising out of this.

PRVF-09655: Query of CTSS for time offset and reference produced invalid output on node "{0}" \nOutput: "{1}"

Cause: Failure to correctly parse output could be due to improper execution.

Action: Try the command manually on the node to verify proper execution, and fix any issues arising out of this.

PRVF-09656: The CTSS command to query time offset and reference failed on node "{0}" with error message "{1}"

Cause: Reason for failure to retrieve output could have been be due to improper execution.

Action: Try the command manually on the node to verify proper execution, and fix any issues arising out of this.

PRVF-09657: The CTSS command "{0}" failed to execute correctly or failed to produce valid output on all of the nodes

Cause: Reason for failure could be due to improper execution.

Action: Look at the individual messages for each node and take action as per those messages.

PRVF-09659: The time offset of "{1}" on node "{0}" against reference node "{3}" is NOT within specified limit of "{2}" milliseconds

Cause: One of the clocks, either on the current node, or on the reference node has drifted beyond limits.

Action: Monitor the offset over a longer duration and verify if the offset reduces over this period and falls within the threshold limits. Oracle Time Synchronization Service does periodic adjustments of the clock to attempt to bring it within threshold limits. If the threshold does not fall within limits over a period of time possibly due to a large deviation or drift, it is recommended that the Oracle processes on this node be shutdown, and the clock be adjusted on the problematic node suitably. It is NOT recommended to set a clock backwards.

PRVF-09661: Time offset is greater than acceptable limit on node "{0}" [actual = "{1}", acceptable = "{2}"]

Cause: System clock has drifted from the clock on the reference node for the specified set of nodes.

Action: Look at the individual messages for each node and take action as per those messages.

PRVF-09664: CTSS is in an inconsistent state with some nodes in Observer state and some nodes in Active state. All nodes must be either in Observer state or in Active state.\nNodes with CTSS in Active state:"{0}"\nNodes with CTSS in Observer state:\n"{1}"

Cause: Some nodes may have NTP configured and some other nodes may not have NTP configured, resulting in an inconsistent state of CTSS.

Action: Stop Oracle CTSS service on all nodes and restart. Ensure that NTP is either configured on all nodes or not configured on any node.

PRVF-09665: Check of Clusterware install failed on some nodes. Clock Synchronization check will proceed with remaining nodes

Cause: A valid CRSHome was not found on one or more nodes. The messages displayed prior to this message indicate the list of nodes where a valid Clusteerware install was not found.

Action: Specify the correct set of nodes that contain a valid Clusterware installation, or complete the Clusterware installation on those node(s) and repeat this CVU verification.

PRVF-09666: CTSS is in Observer state. Switching over to clock synchronization checks using NTP

Cause: All of the nodes queried for CTSS state indicate they are in Observer state. In the Observer state, CTSS is not performing active clock synchronization adjustments, but letting the underlying NTP handle this action.

Action: None. This is a normal state.

PRVF-09667: CTSS is in Observer state. Switching over to Windows-specific time synchronization checks

Cause: All of the nodes queried for CTSS state indicate they are in Observer state. In the Observer state, CTSS is not performing active clock synchronization adjustments, but letting the underlying Windows time synchronization mechanisms handle this action.

Action: Look at the results of the Windows time synchronization checks displayed following this message. If there are any errors reported, perform action suggested for those error messages.

PRVF-09668: Command "{0}" executed to retrieve CTSS resource status failed on all of the nodes

Cause: CVU attempts to execute the displayed command failed on all of the nodes.

Action: Examine the messages displayed for each node and take action as per those messages.

PRVF-09669: Failure to query CTSS resource on all nodes in the cluster

Cause: Attempt to query CTSS resource on all of the nodes in the cluster failed. Possibly because Clusterware may not be running on the nodes.

Action: Look at the specific error messages reported for each of the nodes and take action as per those messages.

PRVF-09670: Failure checking status of CTSS on node "{1}" using command "{0}"

Cause: CTSS may not OFFLINE, or may not be running, or the remote node may not be accessible.

Action: Try running in the indicated command directly on the specified node and ensure it is up and running, check that the remote node, and check user equivalence.

PRVF-09671: CTSS on node "{1}" is not in ONLINE state, when checked with command "{0}"

Cause: The CTSS daemon is not running on the node, it may have died or may have been stopped.

Action: Restart the CTSS daemon on the specified node.

PRVF-09672: All nodes for which CTSS state was checked failed the check: Nodes: "{0}"

Cause: CTSS is not in ONLINE state on any of nodes, possibly due to node accessibility, or being stopped.

Action: Look at the individual messages displayed for each node and perform the suggested action for those messages.

PRVF-09676: Clusterware is not installed on all nodes checked : "{0}"

Cause: A valid Clusterware installation was not found on these nodes.

Action: Make sure the correct nodes are being specified in this check, or make sure that Clusterware is fully installed on the nodes before running this check for those nodes.

PRVF-09691: Clock Synchronization check without Oracle Cluster Time Synchronization Service (CTSS) is not supported on this platform

Cause: The command line parameter, '-noctss', was specified on the command line which indicates that Clock Synchronization check should be performed without Oracle Cluster Time Synchronization Service (CTSS). This is not supported on this platform.

Action: Run the Clock Synchronization check without the '-noctss' flag.

PRVF-09692: CRS Active version is less than 11.2, performing NTP checks

Cause: CTSS is supported only from release 11.2 onwards. Therefore, the clocksync component check can only run NTP checks.

Action: None

PRVF-09695: Failed to determine operating system patch status on the node "{0}"

Cause: Operating system patch status could not be determined.

Action: Ensure that the operating system configuration is accessible.

PRVF-09800: An exception occurred while attempting to determine storage type for location "{0}"

Cause: The location indicated may not be available on the node, or may have insufficient permissions for access by the user running the CVU check.

Action: Make sure that the location is available on the node, and has the right permissions to allow the user running the CVU check to read its attributes.

PRVF-09801: The storage location "{0}" is not a device, and therefore invalid for running Udev permissions check

Cause: UDev permissions check are valid only for storage devices, and not valid for any kind of file system.

Action: Make sure that a valid storage device location is specified. If the location is derived from an ASM discovery string, make sure that the discovery string specified points to one or more storage devices, and not filesystems.

PRVF-09802: Attempt to get 'udev' information from node "{0}" failed

Cause: An attempt to read the 'udev' permission or rule file failed, or the permission or rule file did not contain any rules for the specified device or devices.

Action: Make sure that the 'udev' permission or rule directory is created, the 'udev' permission or rule file is available and accessible by the user running the check and that the permission or rule file contains the correct 'udev' rule for the device or devices being checked.

PRVF-09806: Failed to get storage attributes to compare udev attributes against, udev attributes check aborted

Cause: In order to compare Udev attributes for a given storage location, the expected storage attributes are required to compare against. There was a failure to get these attributes, possibly due to invalid or non-existing Clusterware installation.

Action: Make sure that a valid Clusterware install exists on the node.

PRVF-09807: Encountered an internal error. The range of reference data for verification of kernel param "{0}" has not been correctly defined for node "{1}"

Cause: No reference range defined to be used to calculate expected value.

Action: Define a reference range.

PRVF-09809: Proper OS Patch is not found on node "{0}" [Expected = "{1}"; Found = "{2}"]

Cause: Required OS Patch is not applied.

Action: Apply the required OS Patch.

PRVF-09810: No prereq file defined

Cause: Prereq file was not set.

Action: Set prereq file.

PRVF-09811: Reference data is not available for release "{0}" on the operating system distribution "{1}"

Cause: No reference data was found for this operating system distribution.

Action: Consult the installation guide for the Oracle product and platform (for example, the Oracle Grid Infrastructure Installation Guide for Linux) for a list of supported operating system distributions.

PRVF-09903: Check of Clusterware install failed on some nodes. Oracle patch check will proceed with remaining nodes

Cause: A valid CRS home was not found on one or more nodes. The messages displayed prior to this message indicate the list of nodes where a valid Clusterware install was not found.

Action: Specify the correct set of nodes that contain a valid Clusterware installation, or complete the Clusterware installation on those node(s) and repeat this CVU verification.

PRVF-09905: Clusterware is not installed on the following nodes : "{0}"

Cause: A valid Clusterware installation was not found on these nodes.

Action: Make sure the correct nodes are being specified, and that the Clusterware is fully installed on the nodes before running this check for those nodes.

PRVF-09907: Failed to query patch information from OPatch inventory

Cause: The execution of opatch lsinventory command failed.

Action: Make sure that the install inventory is readable by the user.

PRVF-09908: Failed to query patch information from Oracle executable

Cause: Oracle executable could not be queried for patch information.

Action: Make sure that Oracle executable is present and is readable by the user running CVU.

PRVF-09909: Patch information from OPatch did not match patch information from Oracle executable

Cause: Bug information from OPatch inventory does not match patch information recorded with Oracle executable.

Action: Make sure that all patches are applied correctly, refer to the OPatch user guide for information on patch application. Make sure that Oracle executable is relinked, refer to the Oracle Administrator Guide for information on relinking executables.

PRVF-09910: Patch information is not consistent across nodes

Cause: Bug information from OPatch do not match between the nodes.

Action: Make sure that all patches are applied correctly on all nodes, refer to the OPatch user guide for information on patch application.

PRVF-09913: Patch information from OPatch did not match patch information from Oracle executable on the following nodes:

Cause: Bug information from OPatch inventory does not match patch information recorded with Oracle executable.

Action: Make sure that all patches are applied correctly, refer to the OPatch user guide for information on patch application. Make sure that Oracle executable is relinked, refer to the Oracle Administrator Guide for information on relinking executables.

PRVF-09914: bug list did not match across nodes for the following nodes

Cause: Bug information from OPatch do not match between the nodes.

Action: Make sure that all patches are applied correctly on all nodes, refer to the OPatch user guide for information on patch application.

PRVF-09990: Antivirus software is running

Cause: Antivirus software was detected to be running.

Action: Oracle recommends that the Antivirus software be disabled. Antivirus may introduce delays in processing that interfere with time-sensitive cluster operations.

PRVF-09991: Owner of device "{0}" did not match the expected owner. [Expected = "{1}"; Found = "{2}"] on nodes: {3}

Cause: Owner of the device listed was different than required owner.

Action: Change the owner of the device listed or specify a different device.

PRVF-09992: Group of device "{0}" did not match the expected group. [Expected = "{1}"; Found = "{2}"] on nodes: {3}

Cause: Group of the device listed was different than required group.

Action: Change the group of the device listed or specify a different device.

PRVF-09993: Permissions of device "{0}" did not match the expected permissions. [Expected = "{1}"; Found = "{2}"] on nodes: {3}

Cause: Permissions of the device listed was different than the required permissions.

Action: Change the permissions on the device listed or specify a different device.

PRVF-09994: Owner, group, permission information could not be obtained for device(s) "{0}" on node "{1}"

Cause: Owner, group and permission information could not be obtained for devices listed on the nodes listed.

Action: "Ensure that the correct devices were specified and that they are created on the indicated node. Make sure that the path exists and is accessible by the user.

PRVF-09995: The information related to owner, group, and permissions could not be obtained for all devices on node "{0}".

Cause: The information related to owner, group, and permissions could not be obtained for all devices on the listed node.

Action: Ensure that the node is up and that the user equivalence exists on the listed node.

PRVF-09998: User "{0}" could not be verified as a domain user, domain "{1}" is either an invalid domain or can not be contacted

Cause: Current user could not be verified as domain user. The identified domain name was either an invalid domain name or the domain could not be contacted.

Action: Ensure that the Windows Domain Server is reachable; log in to the OS as a domain user.

PRVF-10002: Node "{0}" is not yet deleted from the Oracle inventory node list

Cause: The indicated node still exists in the list of nodes for the CRS home in the Oracle inventory.

Action: Use 'runInstaller -updateNodeList' to remove the indicated node from the CRS home node list.

PRVF-10014: Clusterware home "{0}" is located under Oracle base directory "{1}" on nodes "{2}"

Cause: Clusterware home directory was found to be located in a subdirectory of ORACLE_BASE.

Action: Choose a Clusterware home directory that is not a subdirectory of the ORACLE_BASE. After Clusterware installation the owner will be changed to root for all of the directories above Clusterware home.

PRVF-10015: Clusterware home "{0}" is located under Oracle base directory "{1}" on node "{2}"

Cause: Clusterware home directory was found to be located in a subdirectory of ORACLE_BASE.

Action: Choose a Clusterware home directory that is not a subdirectory of the ORACLE_BASE. After Clusterware installation the owner will be changed to root for all of the directories above Clusterware home.

PRVF-10016: Unable to check for the locations of Clusterware home and Oracle Base directory on nodes "{0}"

Cause: Clusterware home or Oracle Base is not accessible or do not exist.

Action: Ensure that Oracle Base and Clusterware home exist and are accessible.

PRVF-10017: Unable to check for the locations of Clusterware home and Oracle Base directory on node "{0}"

Cause: Clusterware home or Oracle Base is not accessible or do not exist.

Action: Ensure that Oracle Base and Clusterware home exist and are accessible.

PRVF-10018: Clusterware home "{0}" is located under Oracle base directory "{1}"

Cause: The Clusterware home directory was found to be a subdirectory of the Oracle base directory.

Action: Choose a Clusterware home directory that is not a subdirectory of the Oracle base directory. After Clusterware installation the owner will be changed to root for all of the directories above Clusterware home.

PRVF-10035: OCR location is not the same across the cluster nodes

Cause: More than one OCR location was found across the cluster nodes.

Action: Ensure that the OCR location is the same across the cluster nodes.

PRVF-10037: Failed to retrieve storage type for "{0}" on node "{1}"

Cause: The storage location specified may be non-existent or invalid or the user running the check may not have permissions to access the specified storage.

Action: Specify a valid existing location, and ensure that the user running the check has valid read permissions to this location.

PRVF-10038: Could not find any OCR Locations

Cause: OCR Locations were not passed to the check.

Action: Pass Oracle locations to the check.

PRVF-10105: ASMLib is not installed on the nodes:

Cause: The ASMLib installation file /etc/init.d/oracleasm was not found or could not be accessed on one or more nodes.

Action: Ensure that the ASMLib is correctly installed on all the nodes, or is not installed on any node.

PRVF-10106: ASMLib is not installed on the node "{0}"

Cause: The ASMLib installation file /etc/init.d/oracleasm was not found or could not be accessed on the indicated node.

Action: Ensure that the ASMLib is correctly installed on the specified node, or is not installed on any node.

PRVF-10107: Failed to retrieve ASMLib information on the nodes:

Cause: The check for ASMLib installation was unable to retrieve the required information on one or more nodes.

Action: Ensure that the ASMLib is correctly installed on all the nodes and that the user has the necessary access privileges.

PRVF-10108: Failed to retrieve ASMLib information on the node "{0}"

Cause: The check for ASMLib installation was unable to retrieve the required information on the indicated node.

Action: Ensure that the ASMLib is correctly installed on all the nodes and that the user has the necessary access privileges.

PRVF-10109: ASMLib is not configured correctly on the nodes:

Cause: ASMLib was found configured on some nodes, but not on the listed nodes.

Action: Ensure that the ASMLib is configured correctly and enabled on all the nodes, or is not configured on any node.

PRVF-10110: ASMLib is not configured correctly on the node "{0}"

Cause: ASMLib was found configured on some nodes, but not on the indicated node.

Action: Ensure that the ASMLib is configured correctly and enabled on all the nodes, or is not configured on any node.

PRVF-10111: ASMLib does not identify the disks "{0}" on the nodes:

Cause: ASMLib could not list all the disks on one or more nodes.

Action: Ensure that the ASMLib is configured correctly to list all the created disks, To refresh the list of disks execute `"/etc/init.d/oracleasm scandisks"`.

PRVF-10112: ASMLib does not identify the disks "{0}" on the node "{1}"

Cause: ASMLib could not list all the disks on the indicated node.

Action: Ensure that the ASMLib is configured correctly to list all the created disks, To refresh the list of disks execute `"/etc/init.d/oracleasm scandisks"`.

PRVF-10208: Following error occurred during the VIP subnet configuration check

Cause: An error occurred while performing the VIP subnet check.

Action: Look at the accompanying messages for details on the cause of failure.

PRVF-10209: VIPs "{0}" are active before Clusterware installation

Cause: Node VIPs were found to be active on the network before Clusterware installation.

Action: If you are upgrading an older release of Clusterware this is not an error. In case of new installation, make sure that the IP addresses to be configured as VIPs are currently unused.

PRVF-10210: VIPs "{0}" are not active after Clusterware installation

Cause: Node VIPs were found to be not active on the network after Clusterware installation.

Action: Please run the command `'srvctl start nodeapps'` to bring up VIPs

PRVF-10211: Failed lookup of IP address for host "{0}"

Cause: An error occurred while trying to get IP address of the node VIP name.

Action: Run `'nslookup'` on the name and make sure the name is resolved or add the node VIP name into OS hosts file.

PRVF-10304: IPMI device driver does not exist on nodes {0}

Cause: Open IPMI device driver is not installed on the nodes.

Action: Install Open IPMI device drivers.

PRVF-10306: Error occurred while retrieving IP address of IPMI device on nodes {0}

Cause: An internally-issued 'crsctl get css ipmiaddr' on the nodes failed.

Action: Configure IPMI device over LAN and run command 'crsctl set css ipmiaddr' command on the nodes to set the IP address.

PRVF-10307: IPMI IP address {0} on node {1} is not reachable

Cause: A timeout occurred while receiving IPMI ping response. Usually this results from having the wrong IP address.

Action: Run 'crsctl set css ipmiaddr' command to set the correct IP address.

PRVF-10308: Login to node {0} BMC device using stored credentials failed

Cause: An attempt to login to BMC on the node using username and password present in IPMI wallet failed.

Action: Run 'crsctl set css ipmiadmin' command to set correct credentials.

PRVF-10405: Path "{0}" is not suitable for usage as RAC database software for release "{1}"

Cause: The specified path is not found suitable for usage as RAC database software

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVF-10406: Path "{0}" is not suitable for usage as RAC database file for release "{1}"

Cause: The specified path is not found suitable for usage as RAC database file

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVF-10407: Path "{0}" is not suitable for usage as Oracle Clusterware storage for release "{1}"

Cause: The specified path is not found suitable for usage as Oracle Clusterware storage(OCR or Voting Disk).

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVF-10408: Path "{0}" is not suitable for usage as Single Instance database software for release "{1}"

Cause: The specified path is not found suitable for usage as Single Instance database software

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVF-10409: Path "{0}" is not suitable for usage as Single Instance database file for release "{1}"

Cause: The specified path is not found suitable for usage as Single Instance database file

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVG-00100 to PRVG-13712

PRVG-00100: Directory "{0}" does not exist or is not writable for the current user on node "{1}".

Cause: A requested operation could not complete because it required writing the indicated directory, which failed because either the directory path did not exist or was not writable by the current user.

Action: Ensure that the indicated directory location exists and is writable by the current user.

PRVG-00101: Directory "{0}" does not exist or is not readable by the current user on node "{1}".

Cause: A requested operation could not complete because it required reading the indicated directory, which failed because either the directory path did not exist or was not readable by the current user.

Action: Ensure that the indicated directory location exists and is readable by the current user.

PRVG-00102: failed to delete directory "{0}" on node "{1}"

Cause: A requested operation could not complete because it required deleting the indicated directory, which failed because the directory path did not have required permissions for the current user to delete it.

Action: Ensure that the indicated directory has required permissions for the current user to delete it.

PRVG-00103: failed to delete file "{0}" on node "{1}"

Cause: A requested operation could not complete because it required deleting the indicated file, which failed because the file path did not have required permissions for the current user to delete it.

Action: Ensure that the indicated file path has required permissions for the current user to delete it.

PRVG-00219: Authorization error establishing connection to database "{0}" using user "{1}". Verification will be skipped for this database.

Cause: Authorization error occurred while establishing connection to the database using the specified user. This may be because the user does not exist, password is wrong, or user account is locked.

Action: Make sure that the specified user exists in the database, account is unlocked and the supplied password is correct.

PRVG-00221: Cannot launch browser to display the report. Check if the DISPLAY variable is set.

Cause: DISPLAY environment variable is not set

Action: set DISPLAY

PRVG-00222: Error establishing connection to database "{0}" using user "{1}". Verification will be skipped for this database.

Cause: Error occurred while establishing connection with the database using the specified user.

Action: Examine the accompanying error message for details.

PRVG-00258: Baseline collection for database "{0}" failed.

Cause: An error occurred while collecting baseline for the database.

Action: Examine the accompanying messages for details on the cause of failure.

PRVG-00277: Specified ASM disk group name is null or an empty string

Cause: Internal error.

Action: Contact Oracle Support.

PRVG-00278: ASM disk group name cannot contain wildcards

Cause: Internal error.

Action: Contact Oracle Support.

PRVG-00279: Specified ASM disk group list is null or empty.

Cause: Internal error.

Action: Contact Oracle Support.

PRVG-00280: The group "{0}" is defined locally with group ID "{1}" on node "{2}" which differs from the group ID "{3}" defined on the NIS or LDAP database for the same group.

Cause: The indicated group was duplicated on the indicated node with a different group ID than the group ID available on the NIS or LDAP database.

Action: Ensure that the group definition in file /etc/group on the indicated node does not define the group with different group ID.

PRVG-00281: Failed to retrieve the current effective group.

Cause: An attempt to retrieve the current effective group failed.

Action: Examine the accompanying messages for details of the cause of the failure.

PRVG-00282: failed to retrieve the operating system distribution ID

Cause: An attempt to retrieve the operating system distribution ID on the indicated node failed. The accompanying messages provide further detail.

Action: Examine the accompanying error messages, resolve issues identified and retry.

PRVG-00286: Reference data is not available for release "{0}" on the current operating system distribution "{1}". Using earlier operating system distribution "{2}" reference data.

Cause: No reference data was found for the current operating system distribution.

Action: Consult the installation guide for the Oracle product and operating system (for example, the Oracle Grid Infrastructure Installation Guide for Linux) for a list of supported operating system distributions.

PRVG-00329: Failed to check "{0}" port availability for port number "{1}" on nodes "{2}"

Cause: An attempt to check port availability of an indicated port failed on the identified nodes.

Action: Ensure that the nodes are reachable and the user running this command has required privileges on the nodes identified.

PRVG-00330: "{0}" port number "{1}" required for component "{2}" is already in use on nodes "{3}"

Cause: Indicated IP port was found to be in use on the identified nodes.

Action: Stop any applications listening on the indicated port on the identified nodes.

PRVG-00337: Protocol "{0}" port numbers "{1}" to be used for multicast communication are already in use on one or more cluster nodes

Cause: The Configuration Verification Utility (CVU) determined that the indicated IP ports were already in use on one or more cluster nodes.

Action: Ensure that at least one of the indicated ports is not in use by stopping all applications listening on at least one of the ports on all the cluster nodes.

PRVG-00338: Protocol "{0}" port numbers "{1}" to be used for broadcast communication are already in use on one or more cluster nodes

Cause: The Configuration Verification Utility (CVU) determined that the indicated IP ports were already in use on one or more cluster nodes.

Action: Ensure that at least one of the indicated ports is not in use by stopping all applications listening on at least one of the ports on all the cluster nodes.

PRVG-00341: Failed to retrieve the current login shell from nodes "{0}"

Cause: An attempt to retrieve the current login shell from indicated nodes failed.

Action: Ensure that the required login shell settings for current user are correct on the indicated nodes.

PRVG-00360: Location "{0}" file system is not NFS

Cause: An existing file system other than NFS was found on the specified location.

Action: Ensure that the specified location has either an NFS file system or no file system.

PRVG-00361: Incorrect NFS mount options "{0}" used for "{1}":"{2}" mounted on: "{3}"

Cause: An incorrect NFS mount option was found being used for the intended use of the NFS file system mount.

Action: Ensure that the file system is mounted with the correct options, Refer the Grid Infrastructure Installation Guide for detailed information on NFS mount options requirement.

PRVG-00362: DNFS file system is not enabled on node "{0}".

Cause: The DNFS file system was not enabled on the indicated node.

Action: Ensure that the DNFS file system is enabled on the indicated node. The DNFS file system can be enabled by running the commands 'cd \$ORACLE_HOME/rdbms/lib' and 'make -f ins_rdbms.mk dnfs_on'.

PRVG-00363: DNFS file system is not supported for the Oracle database version "{0}".

Cause: The oracle database version was less than the supported version Oracle 11g.

Action: Ensure that the Oracle database installed is either Oracle 11g or later.

PRVG-00364: Failed to check whether DNFS file system is enabled on node "{0}".

Cause: An error occurred while checking whether DNFS file system is enabled on the indicated node.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-00365: Disk "{0}" is offline on nodes "{1}".

Cause: The check to ensure that the specified disk is shared across nodes failed because the indicated disk was offline.

Action: Ensure that the disk is online. Refer to <http://technet.microsoft.com/en-us/library/cc732026.aspx> for more information on how to bring the disks online.

PRVG-00439: Hard limit check for maximum open file descriptors failed on node "{0}".

Cause: The Configuration Verification Utility could not determine the hard limit for the maximum open file descriptors on the indicated node.

Action: Ensure that the resource limit configuration is accessible on all the nodes and retry the check.

PRVG-00440: Hard limit check for maximum user processes failed on node "{0}".

Cause: The Configuration Verification Utility could not determine the hard limit for the maximum user processes on the indicated node.

Action: Ensure that the resource limit configuration is accessible on all the nodes and retry the check.

PRVG-00441: Hard limit check for maximum stack size failed on node "{0}".

Cause: The Configuration Verification Utility could not determine the hard limit for the maximum stack size on the indicated node.

Action: Ensure that the resource limit configuration is accessible on all the nodes and retry the check.

PRVG-00442: Soft limit check for maximum open file descriptors failed on node "{0}".

Cause: The Configuration Verification Utility could not determine the soft limit for the maximum open file descriptors on the indicated node.

Action: Ensure that the resource limit configuration is accessible on all the nodes and retry the check.

PRVG-00443: Soft limit check for maximum user processes failed on node "{0}".

Cause: The Configuration Verification Utility could not determine the soft limit for the maximum user processes on the indicated node.

Action: Ensure that the resource limit configuration is accessible on all the nodes and retry the check.

PRVG-00444: Soft limit check for maximum stack size failed on node "{0}".

Cause: The Configuration Verification Utility could not determine the soft limit for the maximum stack size on the indicated node.

Action: Ensure that the resource limit configuration is accessible on all the nodes and retry the check.

PRVG-00445: Proper soft limit for maximum open file descriptors was not found on node "{0}" [Expected {1} ; Found = "{2}"].

Cause: The Configuration Verification Utility determined that the setting for the indicated soft limit did not meet Oracle's recommendations for proper operation on the indicated nodes.

Action: Modify the resource limits to meet the requirement and take operating system specific measures to ensure that the corrected value takes effect for the current user before retrying this check.

PRVG-00446: Proper hard limit for maximum open file descriptors was not found on node "{0}" [Expected {1} ; Found = "{2}"].

Cause: The Configuration Verification Utility determined that the setting for the indicated hard limit did not meet Oracle's recommendations for proper operation on the indicated nodes.

Action: Modify the resource limits to meet the requirement and take operating system specific measures to ensure that the corrected value takes effect for the current user before retrying this check.

PRVG-00447: Proper soft limit for maximum user processes was not found on node "{0}" [Expected {1} ; Found = "{2}"].

Cause: The Configuration Verification Utility determined that the setting for the indicated soft limit did not meet Oracle's recommendations for proper operation on the indicated nodes.

Action: Modify the resource limits to meet the requirement and take operating system specific measures to ensure that the corrected value takes effect for the current user before retrying this check.

PRVG-00448: Proper hard limit for maximum user processes was not found on node "{0}" [Expected {1} ; Found = "{2}"].

Cause: The Configuration Verification Utility determined that the setting for the indicated hard limit did not meet Oracle's recommendations for proper operation on the indicated nodes.

Action: Modify the resource limits to meet the requirement and take operating system specific measures to ensure that the corrected value takes effect for the current user before retrying this check.

PRVG-00449: Proper soft limit for maximum stack size was not found on node "{0}" [Expected {1} ; Found = "{2}"].

Cause: The Configuration Verification Utility determined that the setting for the indicated soft limit did not meet Oracle's recommendations for proper operation on the indicated nodes.

Action: Modify the resource limits to meet the requirement and take operating system specific measures to ensure that the corrected value takes effect for the current user before retrying this check.

PRVG-00450: Proper hard limit for maximum stack size was not found on node "{0}" [Expected {1} ; Found = "{2}"].

Cause: The Configuration Verification Utility determined that the setting for the indicated hard limit did not meet Oracle's recommendations for proper operation on the indicated nodes.

Action: Modify the resource limits to meet the requirement and take operating system specific measures to ensure that the corrected value takes effect for the current user before retrying this check.

PRVG-00540: An incorrect value was specified for "{0}"

Cause: Incorrect value was specified for the identified command line option.

Action: Ensure that the correct value is specified for the identified command line option.

PRVG-00550: Failed to retrieve the value of an OCR key "{0}"

Cause: An attempt to read the specified OCR key from the local node failed.

Action: Ensure that current user has required privileges to access 'ocrdump'.

PRVG-00551: The OCR key "{0}" was not found in OCR

Cause: Could not find the specified OCR key in OCR.

Action: Ensure that current user has required privileges to access 'ocrdump'.

PRVG-00601: The current source software is already version "{0}"

Cause: Verification of pre-upgrade conditions determined that the software is already at the specified upgrade version.

Action: Ensure that the correct '-dest_version' was specified.

PRVG-00602: Failed to retrieve database version of database home "{0}"

Cause: An error occurred while retrieving database version of the database home.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-00700: Invalid target hub size

Cause: An invalid target hub size was specified

Action: Specify a valid target hub size

PRVG-00710: CRS stack must be running on the local node for performing rolling upgrade.

Cause: CRS stack is not running on the local node.

Action: Start the stack on the local node.

PRVG-00712: Cannot upgrade: Oracle Clusterware stack not running on this node.

Cause: An upgrade was requested on a node where the CRS stack was not running.

Action: Start the stack on the local node using the command 'crsctl start crs'.

PRVG-00713: Cannot upgrade: Oracle Clusterware stack not running on the local node, but the Oracle Clusterware stack was found running on nodes "{0}".

Cause: An upgrade was requested with Oracle Clusterware stack not running on the local node but one or more remote node had the stack up.

Action: Start the stack on the local node using the command 'crsctl start crs'.

PRVG-00714: Oracle Clusterware stack is not running on the local node. It is recommended that the upgrade be performed with the Oracle Clusterware stack running.

Cause: An upgrade was requested on a node with Oracle Clusterware stack not running.

Action: Start the stack on the local node using the command 'crsctl start crs'.

PRVG-00740: Failed to compress the content of directory "{0}" to "{1}" file using zip tool "{2}". Errors is "{3}"

Cause: An attempt to compress the content of the indicated directory into the indicated file failed using the indicated zip tool.

Action: Resolve the issues described in any accompanying messages and retry.

PRVG-00801: invalid internal command tags

Cause: An attempt to parse an internal command results failed because either incorrect tags were present in the output or expected tags were missing in the output. This is an internal error.

Action: Contact Oracle Support.

PRVG-00802: Storage type for path "{0}" could not be determined on node "{1}".

Cause: An error occurred while attempting to determine the storage type of the indicated path. Accompanying messages provide further details.

Action: Resolve the issues described in any accompanying messages and retry.

PRVG-00803: Storage type for path "{0}" is inconsistent across the nodes.

Cause: The sharability check for the storage at the indicated path failed because the associated storage type was not consistent across all cluster nodes. The varying storage types were as indicated following the message.

Action: Make sure that all nodes of the cluster have same storage type for the specified path.

PRVG-00805: Signature for storage path "{0}" could not be determined on node "{1}".

Cause: An error occurred while attempting to determine the storage signature of the indicated path. Accompanying messages provide further details.

Action: Resolve the issues described in any accompanying messages and retry.

PRVG-00806: Signature for storage path "{0}" is inconsistent across the nodes.

Cause: The sharability check for the storage at the indicated path failed because the associated storage signature was not consistent across all cluster nodes. The varying signatures were as indicated following the message.

Action: Make sure that all nodes of the cluster have same storage signature for the specified path.

PRVG-00808: Incorrect NFS mount options "{0}" are used for file system "{1}" mount on path "{2}" at node "{3}".

Cause: The file system was found mounted with one or more mount options which were not appropriate for the intended use of the NFS file system mount.

Action: Ensure that the file system is mounted with the correct options, Refer the Grid Infrastructure Installation Guide for detailed information on NFS mount options requirement.

PRVG-00809: Mount options for file system "{0}" mounted on path "{1}" at node "{2}" did not meet the requirements for this platform [Expected = "{3}"; Found = "{4}"]

Cause: The mount options found for the indicated file system as displayed in the message did not match the minimum set of mount options (shown in message) that must be used while mounting NFS volumes.

Action: Ensure that all of the required mount options are specified.

PRVG-00810: File system details for storage path "{0}" could not be determined on node "{1}"

Cause: There was an error in determining details of file system at the indicated path.

Action: Resolve the issues described in any accompanying messages and retry.

PRVG-00811: Discovery for storage of type "{0}" could not be performed on node "{1}".

Cause: An error occurred while attempting to discover the storage of the indicated type. Accompanying messages provide further details.

Action: Resolve the issues described in any accompanying messages and retry.

PRVG-00812: failed to get the list of vendor cluster nodes

Cause: An error occurred while attempting to get the list of nodes of vendor cluster. Accompanying messages provide further details.

Action: Resolve the issues described in any accompanying messages and retry.

PRVG-00813: Node "{0}" is not recognized by the vendor clusterware.

Cause: The indicated node was not recognized by the vendor clusterware.

Action: Ensure that the indicated node is recognized by the vendor clusterware.

PRVG-00814: failed to get the volume groups on node "{0}"

Cause: An error occurred while attempting to get the volume groups on the indicated node. Accompanying messages provide further details.

Action: Resolve the issues described in any accompanying messages and retry.

PRVG-00815: failed to find a volume group with signature "{0}" on node "{1}"

Cause: An error occurred while attempting to find a volume group with a specific signature on the indicated node.

Action: Resolve the issues described in any accompanying messages and retry.

PRVG-00816: The 'reserve_lock' setting prevents sharing of device "{0}" on node "{1}".

Cause: The reserve_lock setting for the device was preventing the device from being shared on the node indicated.

Action: Change the reserve_lock setting for the device. See the chdev command for further details.

PRVG-00817: The 'reserve_policy' setting prevents sharing of device "{0}" on node "{1}".

Cause: The reserve_policy setting for the device was preventing the device from being shared on the node indicated.

Action: Change the reserve_policy setting for the device. See the chdev command for further details.

PRVG-00818: Disk "{0}" was offline on node "{1}".

Cause: The check to ensure that the specified disk is shared across nodes failed because the indicated disk was offline on the indicated node.

Action: Ensure that the disk is online. Refer to <http://technet.microsoft.com/en-us/library/cc732026.aspx> for more information on how to bring the disks online.

PRVG-00819: The details of storage "{0}" could not be obtained on node "{1}".

Cause: An error occurred while attempting to get the details of the indicated storage. Accompanying messages provide further details.

Action: Resolve the issues described in any accompanying messages and retry.

PRVG-00820: The amount of free space could not be determined for storage "{0}" on node "{1}".

Cause: An error occurred while attempting to get the free space on the indicated storage on the indicated node. Accompanying messages provide further details.

Action: Resolve the issues described in any accompanying messages and retry.

PRVG-00821: The amount of free space could not be determined for ASM disk group "{0}".

Cause: An error occurred while attempting to get the free space on the indicated ASM disk group. Accompanying messages provide further details.

Action: Resolve the issues described in any accompanying messages and retry.

PRVG-00822: The specified database file location "{0}" did not have read and write access for user "{1}" on node "{2}". Actual octal permissions are "{3}".

Cause: The database file location did not have read and write permissions for the indicated user on the indicated node.

Action: If the indicated user intends to be the Oracle installation owner, ensure that the user has read and write access to the database file location.

PRVG-00825: Incorrect NFS mount options "{0}" found for the quorum disk "{1}" mounted on path "{2}" at node "{3}".

Cause: The quorum disk was found mounted with one or more mount options which were not appropriate.

Action: Ensure that the quorum disk is soft mounted with the correct options.

PRVG-00826: No entry was found in the password database for the user name corresponding to the user-ID "{0}" for file "{1}" on node "{2}"

Cause: An attempt to get the user name for the indicated file on the indicated node failed because no entry was found in the password database for the indicated user-id.

Action: Add the user to the system using the 'adduser' command, and then retry the operation."

PRVG-00827: No entry was found in the group database for the group name corresponding to the group-ID "{0}" for file "{1}" on node "{2}"

Cause: An attempt to get the group name for the indicated file on the indicated node failed because no entry was found in the group database for the indicated group-id.

Action: Add the group to the system using the 'groupadd' command, and then retry the operation."

PRVG-00830: Path "{0}" does not exist on nodes "{1}". Storage type for longest existing parent path "{2}" was found as "{3}" on nodes "{1}".

Cause: The sharability check for the storage at the indicated path failed because of the inconsistency described. In particular, the indicated path does not exist on the indicated nodes. Storage of the indicated type did exist at the indicated parent on the nodes shown.

Action: Ensure that the indicated path exists on the indicated nodes and the storage type of the path is consistent across all the nodes.

PRVG-01001: Insufficient number of arguments while executing "{0}"

Cause: An attempt was made to execute the specified script with insufficient number of arguments.

Action: This is an internal error. Contact Oracle Support.

PRVG-01002: Command "{0}" to obtain SCAN configuration failed

Cause: An attempt to execute the displayed command failed.

Action: This is an internal error. Contact Oracle Support.

PRVG-01003: Command "{0}" to check if OCR locations are on shared storage failed

Cause: An attempt to execute the displayed command failed.

Action: This is an internal error. Contact Oracle Support.

PRVG-01004: Command "{0}" to obtain GNS domain and GNS-VIP configuration failed

Cause: An attempt to execute the displayed command failed.

Action: This is an internal error. Contact Oracle Support.

PRVG-01005: Command "{0}" to obtain GNS and GNS-VIP status failed

Cause: An attempt to execute the displayed command failed.

Action: This is an internal error. Contact Oracle Support.

PRVG-01006: Command "{0}" to check if ASM instance is running failed

Cause: An attempt to execute the displayed command failed.

Action: This is an internal error. Contact Oracle Support.

PRVG-01007: Command "{0}" to get ASM disk groups configured on local node failed

Cause: An attempt to execute the displayed command failed.

Action: This is an internal error. Contact Oracle Support.

PRVG-01008: ASM status could not be verified on nodes "{0}"

Cause: An attempt to verify whether ASM was running on the specified nodes failed.

Action: Look at the error messages that accompany this message.

PRVG-01009: Command "{0}" to obtain SCAN name failed

Cause: An attempt to execute the displayed command failed.

Action: This is an internal error. Contact Oracle Support.

PRVG-01010: Command "{0}" to obtain configuration of network resource for network number {1} failed

Cause: An attempt to execute the displayed command failed.

Action: This is an internal error. Contact Oracle Support.

PRVG-01011: The CRS software versions found on cluster nodes "{0}" and "{1}" do not match

Cause: The CRS software version found on the two nodes indicated do not match, or the CRS software version could not be obtained from one of the nodes indicated.

Action: Make sure the existing cluster nodes have the same CRS software version installed before trying to add another node to the cluster.

PRVG-01012: The shared state of the CRS home path "{0}" on nodes to be added does not match the shared state on existing cluster nodes

Cause: The CRS home IS shared on the existing cluster and NOT shared on the nodes to be added, or the CRS home is NOT shared on the existing cluster nodes and IS shared on the nodes to be added.

Action: The CRS home must be shared by all nodes or by none.

PRVG-01013: The path "{0}" does not exist or cannot be created on the nodes to be added

Cause: The path does not exist on the nodes being added and the parent path is not writable.

Action: Ensure that the path identified either exists or can be created.

PRVG-01015: Time server "{0}" has time offsets that are not within permissible limit "{1}" on nodes "{2}".

Cause: Offsets on the identified nodes in the cluster were not within limits for specified Time Server.

Action: Ensure that the offsets for specified time server are within limits on each node of the cluster.

PRVG-01016: The Oracle Clusterware configuration check is not valid in an environment in which Oracle Clusterware is not configured

Cause: A check valid only for an environment with Oracle Clusterware was attempted.

Action: Ensure that the Clusterware has been correctly installed and configured before attempting the check.

PRVG-01017: NTP configuration file "{0}" is present on nodes "{1}" on which NTP daemon or service was not running

Cause: The indicated NTP configuration file was found on the indicated nodes where the NTP daemon or service was not running.

Action: The NTP configuration files must be removed from all nodes of the cluster.

PRVG-01018: NTP daemon or service "{0}" was running on nodes "{1}" on which an NTP configuration file was not found

Cause: The indicated NTP daemon or service was running on the indicated nodes on which no NTP configuration file was found.

Action: NTP service must be uninstalled on all nodes of the cluster and all configuration files must be removed.

PRVG-01019: The NTP configuration file "{0}" does not exist on nodes "{1}"

Cause: The configuration file specified was not available or was inaccessible on the specified nodes.

Action: To use NTP for time synchronization, create this file and set up its configuration as described in your vendor's NTP document. To use CTSS for time synchronization the NTP configuration should be uninstalled on all nodes of the cluster. Refer to section "Preparing Your Cluster" of the book "Oracle Database 2 Day + Real Application Clusters Guide".

PRVG-01020: Check for NTP configuration file "{0}" could not be performed on nodes "{1}"

Cause: Check of existence of NTP configuration file failed as its existence could not be determined.

Action: Look at the accompanying error messages and respond accordingly.

PRVG-01021: NTP configuration file "{0}" found on nodes "{1}"

Cause: During an add node operation a NTP configuration file was found on the new node being added, but it was missing from existing cluster nodes.

Action: To use NTP for time synchronization, create this file and set up its configuration as described in your vendor's NTP document on all nodes of the cluster. If you plan to use CTSS for time synchronization then NTP configuration should be uninstalled on all nodes of the cluster. Refer to section "Preparing Your Cluster" of the book "Oracle Database 2 Day + Real Application Clusters Guide".

PRVG-01024: The NTP daemon or Service was not running on any of the cluster nodes.

Cause: The NTP daemon was not running on any of the cluster nodes.

Action: Look at the accompanying error messages and respond accordingly.

PRVG-01025: Validation of the state of the GNS server failed.

Cause: Proper functioning of the Grid Naming Service (GNS) server cluster could not be validated using client data file for the GNS client cluster. It is possible that GNS is not up, or the DNS domain is not delegated to the GNS server cluster.

Action: Examine the accompanying error messages and respond accordingly to ensure that GNS is up on the GNS server cluster and that the domain delegation is operating correctly. The integrity of GNS can be validated by executing the command 'cluvfy comp gns -postcrsinst' on the GNS server cluster. For a verification of the correct subdomain delegation, use 'cluvfy comp dns' in the server cluster.

PRVG-01026: Node "{0}" is a member of cluster "{1}".

Cause: The cluster name returned from the execution of olsnodes on the node specified does not match the cluster name from the execution of olsnodes on the local

node. The node indicated in the message could not be added to this cluster because it was already a member of the indicated cluster.

Action: Ensure that the node being added is not part of another cluster before attempting to add the node to this cluster.

PRVG-01027: The Oracle Grid Naming Service (GNS) "{0}" did not respond at IP address "{1}".

Cause: The GNS server did not respond to a query sent to the indicated IP address.

Action: Ensure that the GNS daemon is running on the GNS server cluster using the 'srvctl config gns' command. The integrity of GNS can be validated by executing the command 'cluvfy comp gns -postcrsinst' on the GNS server cluster.

PRVG-01029: NTP daemon "{0}" was running on nodes "{1}" but PID file "{2}" was missing.

Cause: While performing prerequisite checks, Configuration Verification Utility (CVU) found that the indicated network time protocol (NTP) daemon was running on the specified nodes, but the daemon had not been started with the PID file command line option. In the absence of the indicated PID file, if the installation proceeds, the Cluster Time Synchronization Services (CTSS) will be started in active mode and there will be two different time synchronization mechanisms running at the same time on the specified nodes.

Action: To use NTP for time synchronization, start the daemon with the PID file command line option and set up its configuration as described in the vendor's NTP document on all nodes of the cluster. Ensure that the PID file specified on the command line matches the PID file indicated in the message. To use CTSS for time synchronization, deconfigure NTP on all nodes of the cluster. Refer to Oracle database documentation for more information.

PRVG-01030: Command "{0}" to get ASM home failed

Cause: An attempt to execute the displayed command failed.

Action: This is an internal error. Contact Oracle Support.

PRVG-01031: Command "{0}" executed to get ASM SID failed

Cause: An attempt to execute the displayed command failed.

Action: This is an internal error. Contact Oracle Support.

PRVG-01032: slewing option "{0}" not found on the NTP daemon command line on nodes "{1}"

Cause: The specified slewing option was not found on the command line of the network time protocol (NTP) daemon on the specified nodes.

Action: Shut down and restart the NTP daemon with the slewing option set. In each case, add '-x' to the network time protocol daemon command line options. For Linux, edit '/etc/sysconfig/ntp'. For SUSE Linux, edit '/etc/sysconfig/ntp' and add '-x' to the OPTIONS variable. For AIX, edit '/etc/rc.tcpip'. For HP-UX edit '/etc/rc.config.d/netdaemons'. For Solaris release 10 or earlier, edit '/etc/inet/ntp.conf'. For Solaris release 11, set the 'slew_always' property by running the command '/usr/sbin/svccfg -s svc:/network/ntp:default setprop config/slew_always = true' as root user and refresh the service by running the command 'svcadm refresh svc:/network/ntp:default'.

PRVG-01033: Inspection of the NTP daemon command line arguments for slewing option "{0}" could not be performed on nodes "{1}".

Cause: An attempt to obtain the command line of the network time protocol (NTP) daemon process running on the specified nodes failed.

Action: Ensure that the specified nodes are accessible. Make sure that the NTP daemon is running on the specified nodes. Examine any accompanying error messages.

PRVG-01036: NTP daemon boot time configuration file "{0}" does not have slewing option "{1}" set on nodes "{2}".

Cause: The network time protocol (NTP) daemon boot time configuration on the specified nodes did not have the specified slewing option set.

Action: Ensure that the slewing option is set in the configuration file on the nodes specified. For more information on the NTP daemon slewing option, refer to NTP daemon manual pages.

PRVG-01037: NTP daemon boot time configuration file "{0}" could not be inspected for slewing option "{1}" on nodes "{2}".

Cause: An attempt to obtain the network time protocol (NTP) daemon boot time configuration file to check if specified slewing option is set failed on the nodes specified.

Action: Ensure that the user running this check has access to the configuration file specified. Examine any accompanying error messages.

PRVG-01040: Command "{0}" to list current Solaris zone failed to run on node "{1}".

Cause: An attempt to run the indicated command to list the current Solaris zone failed and did not produce any output.

Action: Ensure that the user running this check can run this command on the desired node.

PRVG-01041: The command "{0}" to list current Solaris zone did not run successfully on node "{1}". The command exited with status "{2}" and the output was: "{3}".

Cause: An attempt to run the indicated command to list the current Solaris zone failed.

Action: Fix any errors indicated by the command and ensure that the user running this check can run this command on the desired node.

PRVG-01042: Command "{0}" to get current zone name failed to run on node "{1}".

Cause: An attempt to run the indicated command to get the current Solaris zone name failed to run on the indicated node and did not produce any output.

Action: Ensure that the user running this check can run the specified command on the node specified.

PRVG-01043: The command "{0}" to get current zone name did not run successfully on node "{1}". The command exited with status "{2}" and the output was: "{3}".

Cause: An attempt to run the indicated command to get the current Solaris zone name failed.

Action: Fix any errors indicated by the command and ensure that the user running this check can run this command on the desired node.

PRVG-01046: NTP service is not disabled on nodes "{0}".

Cause: An attempt to verify that the network time protocol (NTP) service has been disabled on all nodes found that the service was still enabled on the indicated nodes.

Action: The NTP daemon should be disabled on all Solaris non-global zone nodes and enabled in the global zone. Ensure that the NTP service has been disabled on the indicated nodes by running the command 'svcadm disable ntp'.

PRVG-01047: failed to verify that NTP service has been disabled on nodes "{0}"

Cause: An attempt to verify that the network time protocol (NTP) service had been disabled failed for the indicated nodes.

Action: NTP daemon should be disabled on all Solaris non-global zone nodes and enabled in the global zone. Examine any accompanying error messages, address the reported issues and reissue the command 'svcadm disable ntp'.

PRVG-01050: Voting disk locations with the voting disk identification numbers "{0}" are offline.

Cause: Voting disk locations were found to be offline.

Action: Voting disk must be brought online or should be removed from the configuration by executing 'crsctl delete css votedisk *vdiskGUID* [...]'.

PRVG-01051: The Oracle Clusterware stack is not running on any hub node.

Cause: The Oracle Clusterware stack is not running on any hub node.

Action: Start the Oracle Clusterware stack on at least one hub node.

PRVG-01052: unable to validate device attributes for device "{0}" because keywords "{1}" was used in its UDEV rule

Cause: Device validation for the indicated device could not be completed properly because the indicated keywords were found in the UDEV rule matching that device. The message does not indicate an error in the rule, but a limitation in the validation algorithm. Possibly the rule was correct.

Action: To complete validation, modify the rule to identify the device being checked without the use of the identified keywords, or do nothing, as the rule might have been correct as stated.

PRVG-01060: Failed to retrieve the network interface classification information from an existing CRS home at path "{0}" on the local node

Cause: An attempt to obtain the network interface classification information by running 'oifcfg getif' from an existing CRS home failed on the local node.

Action: Ensure that the user executing the CVU check has read permission for the indicated CRS or Oracle Restart home and that the indicated CRS home path is not left over due to partial clean-up of any previous CRS installation attempts.

PRVG-01062: Leaf Nodes were specified without specifying Grid Naming Service (GNS) Virtual IP address (VIP).

Cause: Leaf Nodes were specified without specifying GNS-VIP. Leaf Nodes require GNS VIP, but do not require GNS subdomain.

Action: If the command line 'cluvfy stage -pre crsinst' is being used, then provide GNS-VIP and GNS subdomain, if needed, using the '-dns' option. If a response file is being used, then verify that the variable 'configureGNS' exists in the specified file and has a valid value.

PRVG-01063: configuration files for more than one time synchronization service were found on nodes of the cluster

Cause: While verifying the setup of the time synchronization services on the cluster nodes, the Configuration Verification Utility (CVU) found that configuration files for more than one type of service were found.

Action: The accompanying messages list the configuration file names along with the nodes on which they were found. Ensure that only one type of time synchronization service is configured on all nodes of the cluster. Remove any identified configuration files that are not required by the configured time synchronization service and retry this command.

PRVG-01066: failed to execute command "{0}" to determine configuration of the daemon "{1}"

Cause: While verifying time synchronization across the cluster nodes, an attempt to query the indicated daemon using the indicated command failed on all of the nodes of the cluster.

Action: Ensure that the indicated command is available on all nodes and that the user running the check has the execute privilege for it. Respond to the error messages that accompany this message and try again.

PRVG-01067: command "{0}" executed on nodes "{1}" produced no output

Cause: While verifying time synchronization across the cluster, the indicated command failed to produce any output on the indicated nodes.

Action: Ensure that the indicated command is available on all nodes and that the user running the check has the execute privilege for it and retry the command.

PRVG-01068: command "{0}" executed on node "{1}" produced an output that could not be parsed

Cause: While verifying time synchronization across the cluster nodes, the indicated command produced output on the indicated node that could not be parsed by the Configuration Verification Utility (CVU).

Action: The output produced by the command accompanies this message. Refer to the output and respond to it.

PRVG-01069: failed to execute command "{0}" on node "{1}"

Cause: While verifying time synchronization across the cluster nodes, the indicated command could not be executed on the indicated node.

Action: Respond to the error messages that accompany this message and try again.

PRVG-01072: daemon "{0}" running on nodes "{1}" does not synchronize to a common time server

Cause: While checking the clock synchronization across the cluster using the command '/usr/bin/chronyc sources', the Cluster Verification Utility (CVU) found that there was no common time server to which all nodes in the cluster synchronize. A list of time servers and the nodes which were configured to use each of them for synchronization accompanies this message.

Action: Reconfigure the indicated daemon so that there is at least one common time server to which all cluster nodes synchronize. If you plan to use Cluster Time Synchronization Service (CTSS) for time synchronization, then the indicated daemon should be uninstalled on all nodes.

PRVG-01073: output of command "{0}" cannot be parsed

Cause: While checking for common time server for clock synchronization across cluster nodes using the indicated command, the Cluster Verification Utility (CVU) could not parse the output of the command.

Action: The output from executing the command is included along with this message. Respond to those messages and retry this command.

PRVG-01076: time servers listed by the command "{0}" on node "{1}" were ignored based on tally codes for the server

Cause: While checking for a common time server for clock synchronization using the indicated command, on the indicated node, the Cluster Verification Utility (CVU) ignored the time servers listed in the accompanying message because of the tally codes found in the command output.

Action: Correct any errors associated with these time servers, on the indicated node and then verify that the tally codes reported by running the indicated command show that these time servers can now be used for clock synchronization, then retry the Cluster Verification Utility command.

PRVG-01100: Found inconsistent 'hosts' entry in file "{0}" on node {1}

Cause: Cluster verification found an inconsistency in the 'hosts' specification entry in name service switch configuration file on the indicated node.

Action: Ensure that the 'hosts' entries define the same lookup order in the name service switch configuration file across all cluster nodes.

PRVG-01101: SCAN name "{0}" failed to resolve

Cause: An attempt to resolve specified SCAN name to a list of IP addresses failed because SCAN could not be resolved in DNS or GNS using 'nslookup'.

Action: Check whether the specified SCAN name is correct. If SCAN name should be resolved in DNS, check the configuration of SCAN name in DNS. If it should be resolved in GNS make sure that GNS resource is online.

PRVG-01102: Command "{0}" to get network information failed.

Cause: An attempt to execute the displayed command failed.

Action: Examine the accompanying error messages for details. Address issues found and retry the command.

PRVG-01103: Command "{0}" to get OCR information failed.

Cause: An attempt to execute the displayed command failed.

Action: Examine the accompanying error messages for details.

PRVG-01104: Unable to create the directory "{0}"

Cause: An attempt to create the directory specified failed on local node.

Action: Ensure that the user running CVU has read and write access to the specified directory, or specify a different directory using the CV_DESTLOC property in the cv/admin/cvu_config file under the software home directory.

PRVG-01105: Error copying file "{0}" to the local node from the source node "{1}"

Cause: The specified file could not be copied from the specified source node to the destination node.

Action: Examine the accompanying error message for details.

PRVG-01106: The OCR locations are not up to date on node "{0}". It has extra locations "{1}".

Cause: The OCR integrity check found that some extra OCR locations are in list on the specified node.

Action: Use the 'ocrconfig -repair' utility to repair the OCR locations on the specified node.

PRVG-01107: The OCR locations are not up to date on node "{0}". The locations "{1}" are not present.

Cause: The OCR integrity check found that some OCR locations were missing from the OCR location list on the specified node.

Action: Use the 'ocrconfig -repair' utility to repair the OCR locations on the specified node.

PRVG-01108: Failed to check OCR locations consistency on node "{0}"

Cause: An attempt to verify OCR locations failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-01110: failed to validate the client GNS file

Cause: An attempt to execute an internal operation to validate the client GNS file failed. This is an internal error.

Action: Contact Oracle Support.

PRVG-01111: failed to validate the GNS VIP

Cause: An attempt to execute an internal operation to validate the Grid Naming Service (GNS) VIP failed. This is an internal error.

Action: Contact Oracle Support.

PRVG-01112: failed to obtain the list of all users that own CRS resources

Cause: During CRS user verification, an attempt to obtain the list of all users that own CRS resources failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-01153: Easy Connect is not configured in the sqlnet.ora in the location "{0}" on the following nodes:

Cause: names.directory_path entry in the sqlnet.ora does not contain 'ezconnect' as one of the name resolution methods

Action: add 'ezconnect' to names.directory_path entry in the sqlnet.ora

PRVG-01154: Easy Connect is not configured in the sqlnet.ora in the location "{0}" on node "{1}"

Cause: names.directory_path entry in the sqlnet.ora does not contain 'ezconnect' as one of the name resolution methods

Action: add 'ezconnect' to names.directory_path entry in the sqlnet.ora

PRVG-01155: Easy Connect configuration could not be determined.

Cause: Easy Connect configuration check could not be completed

Action: Contact Oracle Support.

PRVG-01162: The OS kernel is not running in 64-bit mode on node "{0}".

Cause: The OS kernel was not found to be running in 64-bit mode on the specified node.

Action: Make the kernel run in 64-bit mode on the cluster node. This might involve setting up the symlink /unix -> /usr/lib/boot/unix_64 and rebooting the node.

PRVG-01164: Failed to check the running mode of OS kernel in use

Cause: An attempt to obtain the type (32-bit or 64-bit) of OS kernel using command '/usr/sbin/prtconf -k' failed.

Action: Run the command '/usr/sbin/prtconf -k' manually and follow the command output to fix any issues associated with its execution.

PRVG-01169: The kernel version "{0}" detected on node "{1}" is not supported for this release.

Cause: An attempt to upgrade or install was rejected because the indicated OS kernel version was not supported.

Action: Retry the operation after upgrading to a supported OS kernel version. Refer to Oracle Database documentation for a list of supported OS kernel versions.

PRVG-01170: Private host name "{0}" with private IP address "{1}" on node "{2}" does not belong to any subnet classified for private interconnect

Cause: Private IP retrieved from the current configuration do not belong to any subnet classified for private interconnect.

Action: Ensure that the private host name is configured correctly, use 'oifcfg' tool to classify the subnet containing the private IPs as private using 'oifcfg setif -global <if_name>/subnet:cluster_interconnect' command.

PRVG-01171: Failed to resolve the private host name "{0}" to an IP address on node "{1}"

Cause: IP address for the private host name could not be retrieved.

Action: Ensure that the identified private host name can be resolved to a private IP address.

PRVG-01172: The IP address "{0}" is on multiple interfaces "{1}" on nodes "{2}"

Cause: The given IP address was found on multiple interfaces, when an IP address can be on at most one interface.

Action: Remove the given IP address from all but one interface on each node.

PRVG-01173: The interfaces "{0}" are configured with the same hardware address "{1}" on nodes "{2}"

Cause: The Configuration Verification Utility (CVU) determined that the indicated interfaces had the same hardware address on the indicated nodes.

Action: Reconfigure the indicated interfaces with unique hardware addresses on the indicated nodes and retry CVU checking.

PRVG-01185: Current OS user is not the owner of the existing database installation. [Expected = "{0}" ; Available = "{1}"]

Cause: Current OS user was not found to be the owner of the existing database installation.

Action: Ensure that the OS user upgrading database installation is the owner of the already existing installation.

PRVG-01186: Failed to get the owning OS user name for the database home "{0}"

Cause: An attempt to obtain the database owner information from an existing database installation failed.

Action: Ensure that the OS user executing the CVU check has read permission for database.

PRVG-01191: Failed to check existence of ASM resource

Cause: An attempt to verify existence of ASM resource failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-01192: ASM (pre-11.2) is not at the same version as CRS version {0}

Cause: The ora.asm resource was not found.

Action: Ensure that ASM Configuration Assistant 'asmca -upgradeASM' has been run and ASM has been upgraded.

PRVG-01195: Upgrade checks can only be performed when upgrading to versions greater than or equal to 11.2.0.1.0

Cause: The -dest_version specified was lower than 11.2.0.1.0.

Action: Specify -dest_version greater than or equal to 11.2.0.1.0.

PRVG-01196: CRS configuration file "{0}" missing on node "{1}".

Cause: While verifying time zone consistency across cluster nodes, the Configuration Verification Utility found that the indicated file was missing on the indicated nodes.

Action: Run the 'cluvfy comp software' command, fix any issues it identifies, and then retry this check.

PRVG-01201: OS kernel parameter "{0}" does not have expected configured value on node "{1}" [Expected = "{2}" ; Current = "{3}"; Configured = "{4}"].

Cause: A check of the configured value for an OS kernel parameter did not find the expected value.

Action: Modify the kernel parameter configured value to meet the requirement.

PRVG-01205: OS kernel parameter "{0}" does not have expected current value on node "{1}" [Expected = "{2}" ; Current = "{3}"; Configured = "{4}"].

Cause: A check of the current value for an OS kernel parameter did not find the expected value.

Action: Modify the kernel parameter current value to meet the requirement.

PRVG-01206: Check cannot be performed for configured value of kernel parameter "{0}" on node "{1}"

Cause: Kernel parameter value could not be determined.

Action: Examine the accompanying error message for details.

PRVG-01253: Required Oracle patch is not found on node "{0}" in home "{1}".

Cause: Required Oracle patch is not applied.

Action: Apply the required Oracle patch.

PRVG-01254: Failed to determine Oracle patch status on the node "{0}"

Cause: Oracle patch status could not be determined.

Action: Ensure that OPatch is functioning correctly.

PRVG-01260: Command "{0}" to obtain Oracle patch status failed

Cause: An attempt to execute the displayed command failed.

Action: This is an internal error. Contact Oracle Support.

PRVG-01261: Required Oracle patch "{2}" in home "{1}" is not found on node "{0}".

Cause: An attempted operation could not be completed because the indicated patch had not been applied to the indicated home on the node shown.

Action: Apply the required Oracle patch and retry.

PRVG-01262: failure to determine the status of Oracle patch "{2}" in home "{1}" on node "{0}"

Cause: An attempted operation could not be completed because the Oracle patch status could not be determined. Possibly, the opatch binary was not found or could not read the Oracle home's inventory. Accompanying messages provide further failure details.

Action: Examine the accompanying error messages for details, resolve the problems identified and retry.

PRVG-01265: Failed to determine operating system patch status for patch "{1}" on node "{0}"

Cause: Unable to determine the patch existence.

Action: Manual o/s verification required. Contact IBM support for assistance if needed.

PRVG-01274: Source home "{0}" is not suitable for upgrading to version "{1}".

Cause: The source home version was not suitable for upgrading to the specified version.

Action: Upgrade to a supported version before proceeding to upgrade to the specified version.

PRVG-01278: failed to check suitability of source home "{0}" for upgrading to version "{1}"

Cause: An attempt to verify the suitability of upgrading identified source home to indicated version failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-01297: The following device paths point to the same physical device: "{0}".

Cause: An attempt to check the suitability of listed or discovered device paths for ASM disk group creation found that multiple device paths point to the same physical device.

Action: Ensure that all listed or discovered device paths point to distinct physical devices.

PRVG-01299: ACFS file system does not exist at path "{0}".

Cause: Attempt to verify ACFS file system at the specified file path failed because no ACFS file system was found.

Action: Ensure that ACFS file system is correctly created on the specified location.

PRVG-01300: ACFS verification is not supported on this platform

Cause: ADVM/ACFS device drivers have not yet been ported to this OS or CPU type.

Action: None

PRVG-01301: The COMPATIBLE.ADVM attribute is set to a version "{0}" which is less than the minimum supported version "{1}" for the disk group "{2}" that contains the ACFS path "{3}".

Cause: The COMPATIBLE.ADVM attribute was found to be set to a version which is less than minimum supported version for the ACFS path as indicated.

Action: Ensure that the COMPATIBLE.ADVM attribute is set to 12.1 or higher on UNIX systems and to 12.1.0.2 or higher on Windows systems.

PRVG-01302: Failed to perform the ADVM version compatibility check for the path "{0}"

Cause: An attempt to perform an ADVM version compatibility check for the specified path failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-01303: Invalid device paths "{0}" designate a single device and cannot be used as multiple ASM devices.

Cause: An attempt to check the suitability of indicated device paths for ASM disk group creation found that the device paths do not represent different physical disks, which can affect availability and ASM file striping.

Action: Ensure that device paths selected for ASM disk group creation point to different physical disks and retry the operation.

PRVG-01306: Oracle ACFS is supported on the cluster nodes "{0}" but not on nodes "{1}".

Cause: Configuration Verification Utility (CVU) found that Oracle ACFS is supported only on some cluster nodes but not on all the cluster nodes.

Action: Ensure that Oracle ACFS is supported either on all the cluster nodes or on none of the cluster nodes.

PRVG-01359: Daemon process "{0}" is configured on node "{1}"

Cause: The identified daemon process was found configured on the indicated node.

Action: Ensure that the identified daemon process is not configured on the indicated node.

PRVG-01360: Daemon process "{0}" is running on node "{1}"

Cause: The identified daemon process was found running on the indicated node.

Action: Ensure that the identified daemon process is stopped and not running on the indicated node.

PRVG-01361: failed to read configuration file "{0}" on node "{1}"

Cause: An attempt to check the authentication services parameters failed because the indicated configuration file was not accessible on the indicated node.

Action: Ensure that the indicated configuration file exists on the indicated node and then retry the operation.

PRVG-01362: Authentication method check for the entry "{0}" in the configuration file "{1}" on node "{2}" failed. Native OS authentication is expected to be allowed and the methods "{3}" are not expected to be specified

Cause: A check of the authentication services parameters determined that the sqlnet.authentication_services parameter in the indicated configuration file on the indicated node was not set to an expected value.

Action: Edit the indicated configuration file to allow the use of native OS authentication and avoid the usage of indicated unexpected authentication methods. For Unix platforms, add either 'beq' or 'all' as the value of the sqlnet.authentication_services parameter. For Windows platforms, add either 'nts' or 'all' as the value of the sqlnet.authentication_services parameter. After editing the file, retry the operation.

PRVG-01370: Nodes "{0}" are configured as leaf nodes.

Cause: Indicated cluster nodes were found to be configured as leaf nodes which are not supported in release 19c onward.

Action: Convert the indicated nodes to hub nodes before upgrade.

PRVG-01450: Oracle Clusterware is not installed on nodes "{0}".

Cause: A valid Oracle Clusterware installation was not found on the specified nodes.

Action: Ensure that Oracle Clusterware is installed on the nodes before running this check.

PRVG-01452: CTSS resource status check using command "{0}" failed as the command did not produce output on nodes "{1}"

Cause: An attempt to check the status of the Oracle Cluster Time Synchronization Service (CTSS) resource failed because the command specified did not produce output on the node specified.

Action: Ensure that the command specified exists and the current user has execute permission.

PRVG-01453: Oracle CTSS resource is not in ONLINE state on nodes "{0}"

Cause: The Oracle Cluster Time Synchronization Service (CTSS) resource was either in OFFLINE or UNKNOWN state on the nodes specified.

Action: Check the status of the Oracle CTSS resource using the command 'crsctl check ctss'. If CTSS is not running then restart the Clusterware stack.

PRVG-01454: CTSS resource status check using command "{0}" on node "{1}" failed.

Cause: An attempt to check the status of the Oracle Cluster Time Synchronization Service (CTSS) resource failed because the command specified failed.

Action: Look at the accompanying error messages and respond accordingly.

PRVG-01455: The command "{0}" to query CTSS time offset and reference failed on node "{1}"

Cause: An attempt to query Oracle Cluster Time Synchronization Service (CTSS) for time offset and reference using specified command failed on the node specified.

Action: Look at the accompanying error messages and respond accordingly.

PRVG-01456: The CTSS time offset and reference could not be determined on any node of the cluster.

Cause: An attempt to query CTSS for time offset and reference failed on all nodes of the cluster.

Action: Look at the accompanying error messages and respond accordingly.

PRVG-01457: Query of CTSS for time offset failed on nodes "{0}".

Cause: An attempt to query CTSS for time offset and reference failed on the nodes displayed in the message.

Action: Look at the accompanying error messages and respond accordingly.

PRVG-01508: IPMP fail-over group "{0}" with interface list "{1}" on node "{2}" has interfaces "{3}" which are not part of current private network classifications "{4}"

Cause: Found an additional fail-over dependency on an interface in an IPMP group which is not classified as a cluster interconnect on the identified node.

Action: Ensure that all the identified non-participating network interfaces in the IPMP group are classified as a cluster interconnect on the identified node. Use command 'oifcfg setif -global <if_name>/subnet:cluster_interconnect' to classify the network interface as private.

PRVG-01509: IPMP fail-over group "{0}" with interface list "{1}" on node "{2}" has interfaces "{3}" which are not part of current public network classifications "{4}"

Cause: Found an additional fail-over dependency on an interface in an IPMP group which is not classified as a public interface on the identified node.

Action: Ensure that all the identified non-participating network interfaces in the IPMP group are classified as public network interface on the identified node. Use command 'oifcfg setif {-node nodename | -global} {<if_name>/subnet:public}' to classify the network interface as public.

PRVG-01510: IPMP configuration information cannot be obtained from any of the nodes

Cause: Failed to retrieve the information about IPMP configuration from all nodes.

Action: Ensure that current user has required privileges to retrieve IPMP configuration information if IPMP is required to be configured on the cluster nodes.

PRVG-01511: Failed to get IPMP configuration information from node "{0}"

Cause: Failed to retrieve the information about IPMP configuration from identified node.

Action: Ensure that current user has required privileges to retrieve IPMP configuration information if IPMP is required to be configured on the identified node.

PRVG-01512: Failed to retrieve current selection of public and private network classifications

Cause: Could not retrieve the list of public and private network classifications selected in current configuration.

Action: Ensure that the configuration of public and private network classifications is done correctly during the installation process.

PRVG-01513: Failed to retrieve current selection of public and private network classifications for node "{0}"

Cause: Could not retrieve the list of public and private network classifications selected in current configuration.

Action: Ensure that the configuration of public and private network classifications is done correctly during the installation process.

PRVG-01515: Solaris IPMP daemon "{0}" is not running on node "{1}"

Cause: The indicated daemon process was not running. It may have aborted, been shut down, or simply not have been started.

Action: Install and configure the program if necessary, then start it.

PRVG-01516: Operation to check presence of "{0}" daemon or process failed on node "{1}"

Cause: The operation to check indicated daemon or process failed on node identified.

Action: Ensure that the node is accessible and IPMP configuration on the node is correct.

PRVG-01517: The check for "{0}" daemon or process status failed on nodes "{1}"

Cause: The indicated daemon was not accessible or there was some unknown failure in the check.

Action: Review the messages that accompany this message and fix the problem(s) on the indicated nodes.

PRVG-01521: The NIC configuration file at path "{0}" does not exist for IPMP interface "{1}" on node "{2}"

Cause: The network interface card (NIC) configuration file required for consistent IP network multipathing (IPMP) configuration of the interface across reboots was missing at the indicated path for the identified interface on the node.

Action: Ensure that the IPMP configuration for the indicated network interface is correct and that the NIC configuration file at the identified path exists.

PRVG-01522: The NIC configuration file does not exist for some or all the IPMP interfaces on nodes "{0}"

Cause: The network interface card (NIC) configuration file required for consistent IP network multipathing (IPMP) configuration of the interface across reboots was missing at the indicated path for the identified interface on the indicated nodes.

Action: Ensure that the IPMP configuration for the indicated network interface is correct and that the NIC configuration file at the identified path exists.

PRVG-01526: The IPMP interface "{0}" participating in an IPMP group "{1}" has deprecated flag set on node "{2}"

Cause: The identified IPMP interface was found with deprecated flag set on the indicated node.

Action: Ensure that none of the classified IPMP interfaces have the deprecated flag set to ensure the correct functioning of IPMP on the node.

PRVG-01527: Some of the IPMP interfaces have deprecated flag set on nodes "{0}"

Cause: Some of the IPMP interfaces were found with deprecated flag set on the indicated nodes.

Action: Ensure that none of the classified IPMP interfaces have the deprecated flag set to ensure the correct functioning of IPMP on the indicated nodes.

PRVG-01528: Warning: The IPMP interface "{0}" participating in an IPMP group "{1}" is classified as private interconnection interfaces on node "{2}"

Cause: The identified interface classified as private interconnection interface was found to be a member of an IPMP group on the indicated node. The Highly Available IP Address (HAIP) is not supported on Solaris 11 if IPMP interfaces are classified as private interconnection.

Action: If HAIP support is required then ensure that only non-IPMP interfaces are classified as private interconnection.

PRVG-01529: Warning: Some of the IPMP interfaces are classified as private interconnection interfaces on nodes "{0}"

Cause: The interfaces classified as private interconnection interfaces were found to be a member of an IPMP group on the indicated nodes. The Highly Available IP Address (HAIP) is not supported on Solaris 11 if IPMP interfaces are classified as private interconnection.

Action: If HAIP support is required then ensure that only non-IPMP interfaces are classified as private interconnection.

PRVG-01533: The IPMP interfaces "{0}" classified as public network do not belong to the subnet "{1}" on node "{2}"

Cause: The identified IPMP interfaces classified as public networks were found to have different subnet on the indicated node.

Action: If IPMP interfaces are classified as public network for the clusterware configuration then all the configured interfaces must belong to same subnet.

PRVG-01534: The IPMP interfaces classified as public network do not belong to the public subnet on nodes "{0}"

Cause: The IPMP interfaces classified as public networks were found to have different subnet on the indicated nodes.

Action: If IPMP interfaces are classified as public network for the clusterware configuration then all the configured interfaces must belong to same subnet.

PRVG-01538: The IPMP interfaces "{0}" classified as private interconnection do not belong to the subnet "{1}" on node "{2}"

Cause: The identified IPMP interfaces classified as private interconnection were found to have different subnet on the indicated node.

Action: If IPMP interfaces are classified as private interconnection for the clusterware configuration then all the configured interfaces must belong to same subnet.

PRVG-01539: The IPMP interfaces classified as private interconnection do not belong to the private subnet on nodes "{0}"

Cause: The IPMP interfaces classified as private interconnection were found to have different subnet on the indicated nodes.

Action: If IPMP interfaces are classified as private interconnection for the clusterware configuration then all the configured interfaces must belong to same subnet.

PRVG-01543: The IPMP interfaces "{0}" share the same MAC or hardware address "{1}" on node "{2}"

Cause: The identified interfaces were found to share the same indicated MAC or hardware address on the indicated node.

Action: If an IP Network Multipathing (IPMP) interface is classified as a private or public network, then ensure that it has a unique MAC or hardware address configured on the indicated node.

PRVG-01544: Some or all of the IPMP interfaces share the same MAC or hardware address on nodes "{0}"

Cause: The IP Network Multipathing (IPMP) interfaces were found to share the same MAC or hardware address on the indicated nodes.

Action: If IPMP interfaces are classified as private or public networks, then ensure that they have a unique MAC or hardware address configured on the indicated node.

PRVG-01545: Some of the IPMP group interfaces are not classified as private or public network interfaces on nodes "{0}"

Cause: The IP Network Multipathing (IPMP) group consistency check found an additional fail-over dependency on an interface in an IPMP group which was not classified as either public or private interconnect on the identified nodes.

Action: Ensure that all the IPMP group interfaces are classified as either public or private interconnect on the identified nodes. Use command 'oifcfg setif {-node *nodename* | -global} {<if_name>/subnet:public/cluster_interconnect}' to classify the network interface as public or private interconnect.

PRVG-01546: IPMP group configuration check is skipped. The network configuration command line failed to specify network classifications PUBLIC or PRIVATE.

Cause: The IPMP configuration check could not be performed because the public and private network classifications were omitted from command line input.

Action: Ensure that the configuration of public and private network classifications is specified correctly in the command line input.

PRVG-01550: Failed to retrieve the list of IP addresses on private network from node "{0}"

Cause: An attempt to retrieve the list of private network IP addresses for the private network classifications failed on the indicated node.

Action: Ensure that the configuration of private network classifications is done correctly on the indicated node.

PRVG-01551: Failed to retrieve the list of IP addresses on public network from node "{0}"

Cause: An attempt to retrieve the list of public network IP addresses for the public network classifications failed on the indicated node.

Action: Ensure that the configuration of public network classifications is done correctly on the indicated node.

PRVG-01560: Temporary directory path "{0}" is shared on nodes "{1}"

Cause: The temporary directory path was found to be shared by two or more nodes.

Action: Ensure that the temporary directory path is not shared between the nodes specified.

PRVG-01561: Setting ORA_CRS_HOME variable is not supported

Cause: The environment variable ORA_CRS_HOME has been set before starting an installation or upgrade.

Action: Unset environment variable ORA_CRS_HOME.

PRVG-01562: failed to retrieve the information for the cluster public networks

Cause: An attempt to retrieve the network information for networks classified as public during cluster network connectivity checks failed because there were no networks classified as public.

Action: Ensure that the clusterware is up and running and that at least one of the networks is classified as public and retry the node connectivity check.

PRVG-01563: Could not find a public cluster network to perform VIP subnet checks on the node "{0}".

Cause: An attempt to retrieve the cluster network information classified as public during VIP subnet checks failed because there were no networks classified as public on the specified node.

Action: Ensure that at least one of the cluster networks is classified as public and retry the VIP subnet check on the specified node.

PRVG-01564: The VIP name "{0}" could not be resolved to an IP address.

Cause: An attempt to resolve the indicated VIP name to an IP address during VIP subnet checks failed because the IP address could not be found.

Action: Ensure that the indicated VIP name is a valid host name that can be resolved to an IP address, correct the value and retry the operation.

PRVG-01600: ASM network not specified

Cause: An ASM network was not specified when ASM presence was 'flex'.

Action: Make sure that there is at least one network of type 'ASM' or 'ASM-PRIV' selected in the Network Interface dialog screen of Oracle Universal Installer.

PRVG-01601: ASM network was not configured

Cause: An attempt to verify if the ASM network was configured failed when ASM presence was 'flex'.

Action: Make sure that there is at least one ASM network configured using the 'oifcfg setif' command.

PRVG-01604: Failed to validate ASM credentials in file "{0}"

Cause: An attempt to verify if the ASM credentials in specified credentials file are valid failed.

Action: Make sure that the path to specified file is correct. Also look at accompanying messages and respond accordingly.

PRVG-01605: Failed to validate ASM credentials

Cause: An attempt to verify ASM credentials are valid failed.

Action: Look at the accompanying messages and respond accordingly.

PRVG-01608: Network connectivity check across cluster nodes on the ASM network failed

Cause: An attempt to verify connectivity of cluster nodes on the ASM network failed.

Action: Look at the accompanying messages and respond accordingly.

PRVG-01611: ASM network not specified

Cause: An ASM network was not specified when ASM presence was 'flex'.

Action: Make sure that there is at least one ASM network specified using the -networks command line parameter.

PRVG-01612: ASM disk groups could not be retrieved

Cause: During ASM integrity verification, an attempt to retrieve ASM disk groups failed.

Action: Look at the accompanying messages and respond accordingly.

PRVG-01613: ASM disk group "{0}" did not resolve to any disk

Cause: An attempt to retrieve an associated disk path for the indicated ASM disk group did not resolve to any disk paths.

Action: Ensure that the ASM disk group is correctly configured with valid disk paths and that the ASM filter driver if used lists the associated devices for this disk group when the command 'afdtool -getdevlist' is issued. If ASM filter driver is not in use then ensure that the ASM kfod command 'kfod op=DISKS disks=all dscvgroup=TRUE' lists the associated disks for the indicated ASM disk group.

PRVG-01614: Virtual environment detected. Skipping shared storage check.

Cause: Shared storage check was skipped because of limitations in determining the sharedness of the storage devices in virtual environments.

Action: Ensure that the selected storage devices are shared between the nodes.

PRVG-01615: Virtual environment detected. Skipping shared storage check for disks "{0}".

Cause: Shared storage check for the indicated disks was skipped because of limitations in determining the sharedness of the disks in virtual environments.

Action: Ensure that the indicated disks are shared between the nodes.

PRVG-01616: ASM network not found in interface list of OIFCFG

Cause: An attempt to verify if the ASM network was configured failed when ASM presence was 'flex'.

Action: Make sure that there is at least one ASM network configured using the 'oifcfg setif' command.

PRVG-01650: failed to create required native library context.

Cause: An attempt to initialize a required native library context failed.

Action: Ensure that the Grid user has write authority on Oracle base path.

PRVG-01701: Check for equivalence for user "{0}" from node "{1}" to nodes "{2}" failed.

Cause: The CVU check to verify user equivalence among all cluster nodes failed on the indicated node because user equivalence did not exist for the indicated user between that node and all of the other nodes shown in the message.

Action: Ensure that user equivalence exists between the specified nodes. The command 'cluvfy comp admprv -o user_equiv' can be used with the '-fixup' option to set up the user equivalence. A password is required.

PRVG-01703: Check for user equivalence for user "{0}" failed on all cluster nodes.

Cause: An error occurred while trying to verify user equivalence among the cluster nodes. The accompanying messages provide detailed information about the failure.

Action: Resolve the problems described in the accompanying messages, and retry the operation. The command 'cluvfy comp admprv -o user_equiv' with the '-fixup' option can be used to set up the user equivalence. A password is required.

PRVG-01801: Nodes "{0}" are Windows domain controllers.

Cause: The Configuration Verification Utility determined that the specified nodes are Windows domain controllers. Oracle recommends that Oracle Clusterware and Database software should not be installed on machines that are Windows domain controllers.

Action: Modify the list of nodes to omit the indicated nodes.

PRVG-01803: failed to determine if any of the nodes "{0}" are Windows domain controllers

Cause: The Configuration Verification Utility could not determine if any of the specified nodes are Windows domain controllers.

Action: Examine the accompanying messages and respond accordingly.

PRVG-01900: The directory "{0}" cannot be used as work directory on nodes "{1}".

Cause: An operation requiring remote execution could not complete because the attempt to set up the Configuration Verification Utility remote execution framework

failed because the necessary files could not be copied to the indicated directory on the indicated nodes. The accompanying message provides detailed failure information.

Action: Ensure that the path identified either exists or can be created on the indicated nodes. Ensure that user running this check has sufficient permission to overwrite the contents of the indicated directory. Examine the accompanying error messages, address the issues reported and retry.

PRVG-01901: failed to setup CVU remote execution framework directory "{0}" on nodes "{1}"

Cause: An operation requiring remote execution could not complete because the attempt to set up the Configuration Verification Utility remote execution framework failed on the indicated nodes at the indicated directory location because the CVU remote execution framework version did not match the CVU java verification framework version. The accompanying message provides detailed failure information.

Action: Ensure that the directory indicated exists or can be created and the user executing the checks has sufficient permission to overwrite the contents of this directory. Also review the accompanying error messages and respond to them. An alternate location for the remote execution framework directory can be specified by using the CV_DESTLOC property in the cv/admin/cvu_config file under the software home directory.

PRVG-01903: Directory "{0}" cannot be used as work directory on any of the nodes.

Cause: An operation requiring remote execution could not complete because the attempt to set up the Configuration Verification Utility remote execution framework failed on all nodes. The accompanying message provides detailed failure information.

Action: Ensure that the directory indicated exists or can be created and the user executing the checks has sufficient permission to overwrite the contents of this directory. Also review the accompanying error messages and respond to them.

PRVG-01904: Path "{0}" is not a valid directory.

Cause: An operation to set up the Configuration Verification Utility remote execution framework was rejected because the indicated path did not designate a valid directory.

Action: Retry the operation specifying a path designating an existing directory for which the user executing the checks has sufficient permission to overwrite its contents.

PRVG-02000: The 'search' entry in the existing "{0}" files is inconsistent.

Cause: A check of resolv.conf files across the cluster nodes found inconsistent 'search' entries.

Action: Ensure that all nodes of the cluster have the same 'search' entry in their 'resolv.conf' files.

PRVG-02002: Encountered error in copying file "{0}" from node "{1}" to node "{2}"

Cause: The specified file could not be copied from the specified source node to the destination node.

Action: Examine the accompanying error message for details.

PRVG-02012: The 'domain' entries in the existing "{0}" files are inconsistent.

Cause: A check of nodes' resolv.conf files found inconsistent 'domain' entries.

Action: Make sure that all nodes of the cluster have same 'domain' entry in the file specified.

PRVG-02016: File "{0}" on node "{1}" has both 'search' and 'domain' entries.

Cause: Both 'search' and 'domain' entries were found in the 'resolv.conf' file on the indicated node.

Action: Make sure that only one of these entries exists in the file 'resolv.conf'. It is preferable to use a 'search' entry in resolv.conf.

PRVG-02018: failed to execute DNS query command on nodes "{0}"

Cause: An error happened while querying a domain name server.

Action: Run 'nslookup' on the host name and make sure the name is resolved by all servers defined in the 'resolv.conf' file.

PRVG-02019: Check for equivalence of user "{0}" from node "{1}" to node "{2}" failed

Cause: The CVU check to verify user equivalence for the indicated user between the indicated nodes failed because user equivalence did not exist.

Action: Ensure that user equivalence exists between the specified nodes. The command 'cluvfy comp admprv -o user_equiv' can be used with the '-fixup' option to set up the user equivalence. A password is required.

PRVG-02020: No OHASD entry was found in /etc/inittab file on node "{0}"

Cause: A check of file /etc/inittab did not find the expected entry for OHASD.

Action: Deconfigure Grid Infrastructure and reconfigure it.

PRVG-02026: no response for name "{0}" from the DNS server "{1}" specified in "resolv.conf"

Cause: An attempt to look up the name in DNS has failed.

Action: Make sure that all DNS servers specified in the file 'resolv.conf' respond to all the nodes.

PRVG-02027: Owner of file "{0}" is inconsistent across nodes. [Found = "{1}" on Nodes = "{2}"]

Cause: Ownership of the indicated file was not the same on all cluster nodes.

Action: Change the owner of the indicated file to ensure it is the same on all nodes.

PRVG-02028: Group of file "{0}" is inconsistent across nodes. [Found = "{1}"]

Cause: Ownership group of the indicated file was not the same on all cluster nodes.

Action: Change the group of the indicated file to ensure it is the same on all nodes.

PRVG-02029: Octal permissions of file "{0}" are inconsistent across nodes. [Found = "{1}"]

Cause: Octal permissions of the indicated file were not the same on all cluster nodes.

Action: Change the permissions of the indicated file to ensure they are the same on all nodes.

PRVG-02030: Failed to check attributes of file "{0}" on node "{1}"

Cause: An attempt to retrieve the file system attributes of the specified file failed.

Action: Ensure that the file exists on the system and user has permissions to retrieve the details of specified file.

PRVG-02031: Owner of file "{0}" did not match the expected value on node "{1}". [Expected = "{2}" ; Found = "{3}"]

Cause: A check for file system attributes found that the owner of the indicated file on the indicated node was different from the required owner.

Action: Change the owner of the indicated file to match the required owner.

PRVG-02032: Group of file "{0}" did not match the expected value on node "{1}". [Expected = "{2}" ; Found = "{3}"]

Cause: A check for file system attributes found that the group of the indicated file on the indicated node was different from the required group.

Action: Change the group of the indicated file to match the required group.

PRVG-02033: Permissions of file "{0}" did not match the expected octal value on node "{1}". [Expected = "{2}" ; Found = "{3}"]

Cause: A check for file system attributes found that the permissions of the indicated file on the indicated node were different from the required permissions.

Action: Change the permissions of the indicated file to match the required permissions.

PRVG-02034: Command "{0}" executed on node "{1}" exited with status value "{2}" and gave the following output:

Cause: An executed command produced unexpected results.

Action: Respond based on the failing command and the reported results.

PRVG-02035: Command "{0}" executed on node "{1}" exited with status value "{2}" and gave no output

Cause: An executed command produced unexpected results.

Action: Respond based on the failing command and the reported results.

PRVG-02042: Unable to obtain OLR location from node "{0}"

Cause: A check of the Oracle Local Registry (OLR) could not determine that file's location on the indicated node.

Action: Check the status of OLR using the command 'ocrcheck -config -local' on the indicated node.

PRVG-02043: Command "{0}" failed on node "{1}" and produced the following output:

Cause: An executed command failed.

Action: Respond based on the failing command and the reported results.

PRVG-02044: Command "{0}" failed on node "{1}" and produced no output.

Cause: An executed command failed.

Action: Respond based on the failing command.

PRVG-02045: Operating system function "{0}" failed on node "{1}".

Cause: A call to an Operating System dependent service or function returned an error indication.

Action: This error normally is accompanied by other (higher-level) messages describing the operation that is affected by the failure. It may also include one or more of messages PRVG-2046 and PRVG-2047 providing additional error details. All of the messages should

be examined to assess the error, which may have a very ordinary cause and correction, such as an input file failing to open because the supplied name was misspelled.

PRVG-02046: Operating system error message: "{0}"

Cause: This message accompanies message PRVG-2045 above when the Operating System dependent error data can be converted into a text message.

Action: See message PRVG-2045.

PRVG-02047: Additional information: "{0}"

Cause: This message accompanies message PRVG-2045 and supplies additional information related to the error condition. A single error may include multiple lines of additional information.

Action: See message PRVG-2045.

PRVG-02048: no response for name "{0}" from the DNS server "{1}" specified in "resolv.conf"

Cause: An attempt to look up the name in DNS using the indicated name server has failed.

Action: Remove the obsolete DNS servers specified in the file 'resolv.conf'.

PRVG-02052: There is no 'hosts' entry in the file "{0}" on nodes: "{1}".

Cause: The 'hosts' entry was not found in the indicated name service switch configuration file on the nodes indicated while it was present in others.

Action: Look at the indicated file on all nodes. Make sure that either a 'hosts' entry is defined on all nodes or is not defined on any nodes.

PRVG-02054: The following nodes have multiple 'hosts' entries defined in file "{0}": {1}.

Cause: The nodes specified had multiple 'hosts' entries defined in the file specified.

Action: Make sure that the file specified has only one 'hosts' entry.

PRVG-02058: The 'hosts' entries in the existing "{0}" files are inconsistent.

Cause: A check of nodes' name service switch configuration files found inconsistent 'hosts' entries.

Action: Make sure that all nodes of the cluster have same 'hosts' entry in the file specified.

PRVG-02064: There are no configured name servers in the file '/etc/resolv.conf' on the nodes "{0}"

Cause: Entries for 'nameserver' were not found in the file '/etc/resolv.conf' on the indicated nodes.

Action: Specify the 'nameserver' entry on the indicated nodes.

PRVG-02070: Disk group for ocr location "{0}" is not available on the following nodes:

Cause: Disk group was not found on the specified nodes.

Action: Ensure that the disks underlying the disk group are accessible from the specified nodes.

PRVG-02071: Disk group for ocr location "{0}" is not available on "{1}"

Cause: Disk group was not found on the specified node.

Action: Ensure that the disks underlying the disk group are accessible from the specified node.

PRVG-02078: Execution of command "{0}" on node "{1}" for disk "{2}" showed there was no UUID in the disk label.

Cause: An attempt to retrieve the universally unique ID (UUID) for the indicated disk on the node shown using the indicated command in order to check for sharedness across nodes determined that the disk did not have a UUID. Sharedness could not be checked for this device.

Action: To check sharedness for the indicated device, assigned it a UUID using the commands specific to the platform and retry the sharedness check. Alternatively, select a different device with a UUID for shared access and verify sharedness for that disk.

PRVG-04000: Windows registry key "{0}" is absent on node "{1}"

Cause: Could not find the specified Windows registry key on the identified node.

Action: Contact Oracle Support.

PRVG-04001: Failed to check existence of Windows registry key "{0}" on node "{1}", [{"2}]

Cause: Could not check the existence of specified Windows registry key on the identified node.

Action: Look at the accompanying messages and respond accordingly.

PRVG-04002: Missing '-user <user_name>' argument for selected privilege delegation method "{0}".

Cause: A user name was not specified on the command line for the specified privilege delegation method.

Action: Specify a user name using the '-user' option following the privilege delegation method on the command line.

PRVG-04500: Parameter "{0}" value is not valid

Cause: This is an internal error. The value for the specified parameter is null or empty string.

Action: Contact Oracle Support.

PRVG-04505: Windows user "{0}" cannot be the service user

Cause: An attempt was made to specify the built-in Windows user 'nt authority\\local service' as the service owner.

Action: Specify either the Windows user 'nt authority\\local system' or a Windows domain user without administrative privilege as the service owner.

PRVG-04506: Windows user "{0}" is not a domain user

Cause: An attempt was made to specify a Windows user account local to this system as the service owner.

Action: Specify either the Windows user 'nt authority\\local system' or a Windows domain user without administrative privilege as the service owner.

PRVG-04510: Windows user "{0}" is an administrator on the nodes "{1}"

Cause: The specified Windows user was found to be an administrator on the nodes specified.

Action: Make sure that the Windows user name specified as service user is not an administrator on any of the nodes.

PRVG-04513: User name or password is invalid for Windows user "{0}"

Cause: An attempt to verify the Windows user name and password failed as user name or password is not valid.

Action: Make sure that the Windows user name and password specified are correct.

PRVG-04515: Unable to determine if the Windows user "{0}" is a domain user

Cause: An attempt to determine if the specified Windows user account is a domain user failed.

Action: Examine the accompanying error messages for details.

PRVG-04516: Failed to verify Windows user "{0}" is not an administrator on nodes "{1}"

Cause: An attempt to determine if the specified Windows user is an administrator on the specified nodes failed.

Action: Examine the accompanying error messages for details.

PRVG-04517: Failed to validate the user name and password for Windows user "{0}"

Cause: An attempt to determine if the specified Windows user name and password are valid failed.

Action: Examine the accompanying error messages for details.

PRVG-04520: The OSUSER wallet contains incorrect password for Windows user "{0}"

Cause: An attempt to verify the password stored in OSUSER wallet for the specified Windows user found that the password is invalid.

Action: Use the command 'crsctl modify wallet -type OSUSER' to update the password in the wallet for the specified user.

PRVG-04521: Failed to verify the password stored in OSUSER wallet for Windows user "{0}"

Cause: An attempt to determine if the password stored in OSUSER wallet for specified Windows user is valid failed.

Action: Examine the accompanying error messages for details.

PRVG-04522: Failed to check if Windows user "{0}" can be used as service user

Cause: An attempt to determine if the specified Windows user can be used as a service user failed.

Action: Examine the accompanying error messages for details.

PRVG-04524: Windows user "{0}" is not a member of Windows group "{2}" on nodes "{1}"

Cause: The specified Windows user was not a member of specified Windows group on the nodes specified.

Action: Add the specified Windows user to the specified Windows group using the 'net group' command.

PRVG-04526: Failed to verify if Windows user "{0}" is a member of Windows group "{1}"

Cause: An attempt to determine if the specified Windows user is a member of specified windows group failed.

Action: Examine the accompanying error messages for details.

PRVG-04530: Windows virtual account was specified as the Oracle database home service user.

Cause: An attempt was made to specify the Windows virtual account as Oracle home service user. This type of user is not supported for a Real Application Cluster database home.

Action: Specify either the Windows user 'nt authority\local system', Windows Group Managed Service Account (GMSA) user, or a Windows domain user without administrative privilege as the service user.

PRVG-04531: Windows user "{0}" does not have permissions on directory "{1}" on nodes "{2}"

Cause: The specified Windows user did not have permissions on directory specified on the nodes specified.

Action: Grant full control to the directory specified to the Windows user specified on the nodes specified. Use Windows Explorer or a comparable mechanism to grant full control.

PRVG-04532: Windows user "{0}" does not have permissions on file "{1}" on nodes "{2}"

Cause: The specified Windows user did not have permissions on file specified on the nodes specified.

Action: Grant full control to the file specified to the Windows user specified on the nodes specified. Use Windows Explorer or a comparable mechanism to grant full control.

PRVG-04533: Windows user "{0}" does not have permissions on Windows registry key "{1}" on nodes "{2}"

Cause: The specified Windows user did not have permissions on Windows registry key specified on the nodes specified.

Action: Grant full control to the Windows registry key specified to the Windows user specified on the nodes specified. Use Windows registry tool to grant permissions.

PRVG-04537: Failed to verify Windows user "{0}" has permissions on directory "{2}" on nodes "{1}"

Cause: An attempt to determine if the specified Windows user has permissions on the directory specified on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRVG-04538: Failed to verify Windows user "{0}" has permissions on file "{2}" on nodes "{1}"

Cause: An attempt to determine if the specified Windows user has permissions on the file specified on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRVG-04539: Failed to verify Windows user "{0}" has permissions on Windows registry key "{2}" on nodes "{1}"

Cause: An attempt to determine if the specified Windows user has permissions on the Windows registry key specified on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRVG-04541: Windows user "{0}" is not a Group Managed Service Account (GMSA) user on nodes "{1}".

Cause: The specified Windows user was not a Group Managed Service Account (GMSA) user on the nodes specified.

Action: Make sure that the Windows user specified is a GMSA user on all nodes of the cluster.

PRVG-04543: failed to verify Windows user "{0}" is a Global Managed Service Account (GMSA) user on nodes "{1}"

Cause: An attempt to determine if the specified Windows user is a Global Managed Service Account (GMSA) user on the specified nodes failed.

Action: Examine the accompanying error messages for details.

PRVG-04558: ASM instance was found to be configured and running on nodes "{0}" and not running on the node "{1}" on which upgrade is requested

Cause: An ASM instance was found configured and running on the indicated nodes and not on the identified node on which upgrade was requested.

Action: Ensure that the upgrade is performed on one of the indicated nodes on which the ASM instance is currently configured and running.

PRVG-04560: Default listener for node "{0}" was found configured and running on node "{1}"

Cause: A default listener was found configured and running on the indicated node and not on the node on which the upgrade was requested.

Action: Ensure that the default listener, if configured, is running on the node on which the upgrade is being performed.

PRVG-04562: Failed to determine the status of an ASM instance configuration. Error: {0}

Cause: Attempt to retrieve an information about the current configuration of an ASM instance failed with the indicated error.

Action: Ensure that the ASM instance, if configured, is correctly configured and an ASM instance is up and running on one of the cluster nodes.

PRVG-04563: Failed to determine the status of default listener on the node "{0}" on which upgrade is requested. Error: {1}

Cause: Attempt to retrieve the status of the default listener on the node on which upgrade is requested failed with the indicated error.

Action: Ensure that the default listener, if configured, for the node on which upgrade is requested is correctly configured and is running from the node.

PRVG-04564: File "{0}" could not be created

Cause: ASM disk ownership, group, permission and size checks failed because ASM discovery string processing was unable to create a temporary file.

Action: Ensure that there is at least 1GB space in the location where the file is being created. Ensure that the user executing the check has write permission at the specified location.

PRVG-04567: An ASM instance was found to be configured but the ASM parameter file used for this instance was not found on the node "{0}" on which upgrade is requested.

Cause: An ASM parameter file for an ASM instance configured on the indicated node was not found.

Action: Ensure that the ASM instance is configured using an existing ASM parameter file, SPFILE or PFILE, on the indicated node.

PRVG-04568: An ASM instance was found to be configured but the ASM parameter file does not exist at location "{0}" on the node "{1}" on which upgrade is requested.

Cause: The indicated ASM parameter file did not exist at the identified location.

Action: Ensure that the ASM instance is configured and started using an existing ASM parameter file, SPFILE or PFILE on the indicated node. If a new ASM parameter file is created, restart the ASM instance to use that ASM parameter file.

PRVG-04572: Parameter file "{0}" for ASM instance is not on an ASM disk group.

Cause: The indicated parameter file was not on an ASM disk group.

Action: Ensure that the indicated parameter file is on an ASM disk group.

PRVG-04574: Password file "{0}" for ASM instance is not on an ASM disk group.

Cause: The indicated password file was not on an ASM disk group.

Action: Ensure that the indicated password file is on an ASM disk group using the command `"orapwd input_file='existing password file path' file='destination ASM file path' asm=y force=y"`.

PRVG-04576: ASM password file "{0}" does not exist on nodes "{1}".

Cause: An attempt to upgrade Oracle Grid Infrastructure failed because the indicated ASM password file was not present on indicated nodes.

Action: Ensure that the ASM password file exists at the specified location and retry the upgrade. Refer to the Oracle ASM documentation to create ASM password file or modify the location of an existing ASM password file.

PRVG-04585: failed to retrieve the ASM parameter file location on the node "{0}"

Cause: A CVU pre-upgrade check could not be completed because an attempt to query the currently running ASM instance on the indicated node to obtain the location of its parameter file failed. The accompanying error messages provide detailed failure information.

Action: Ensure that the ASM instance is configured and started using an existing ASM parameter file, SPFILE or PFILE on the indicated node. Examine the accompanying error messages and correct the problem indicated.

PRVG-04586: Password backup file "{0}" for ASM is not on an Oracle ASM disk group.

Cause: The indicated password backup file was not on an Oracle ASM disk group.

Action: Ensure that the indicated password backup file is on an Oracle ASM disk group using the command "orapwd input_file=*existing password file path* file=*destination ASM file path* asm=y force=y".

PRVG-04588: Password file "{0}" and Password backup file "{1}" for ASM are on the same Oracle ASM disk group.

Cause: The indicated password backup file is on the same Oracle ASM disk group as the password file.

Action: Ensure that the indicated password backup file is on a different Oracle ASM disk group than the password file.

PRVG-04600: Nodes "{0}" do not have VIPs configured

Cause: An attempt to verify if the specified nodes that are configured as 'auto' and are currently Leaf nodes but can become Hub nodes have Virtual Internet Protocol (VIP) addresses configured failed because no IP addresses were assigned for the node VIPs.

Action: Ensure that the nodes specified have node VIPs that are configured but not in use.

PRVG-04601: Node VIPs for nodes "{0}" are active

Cause: An attempt to verify if the specified nodes that are configured as 'auto' and are currently Leaf nodes but can become Hub nodes have Virtual Internet Protocol (VIP) addresses that are not active failed because the VIPs for the specified nodes were active.

Action: Ensure that the node VIPs for the nodes specified have VIP's that are not active.

PRVG-04610: Nodes "{0}" do not have VIPs configured

Cause: It was found that specified hub nodes do not have node VIPS configured.

Action: Ensure that the nodes specified have node VIPs that are configured but not in use.

PRVG-04611: Node VIPs for nodes "{0}" are active

Cause: The VIPs for the specified hub nodes were found to be reachable.

Action: Ensure that the node VIPs for the nodes specified have VIP's that are not reachable using ping.

PRVG-04654: Disk discovery string mismatch between ASM instance and GPnP profile. GPnP profile: "{0}", ASM Instance: "{1}".

Cause: Disk discovery strings in the ASM instance and GPnP profile were different.

Action: Use the command 'asmcmd dsset' to set the ASM discovery string to the correct value in both places.

PRVG-04655: The command "{0}" to retrieve ASM discovery string failed

Cause: The specified command executed to retrieve ASM discovery string failed.

Action: Look at the accompanying messages and respond accordingly.

PRVG-04656: The command "{0}" to obtain the list of ASM disks failed

Cause: The specified command executed to retrieve list of ASM disks failed.

Action: Look at the accompanying messages and respond accordingly.

PRVG-04657: The permissions for block devices "{0}" are incorrect on node "{1}" [Expected = {2} octal, Actual = {3}]

Cause: The permissions of the indicated block devices were incorrect on the specified node. Starting in 12g the default ASM disk discovery string was changed from '/dev/raw/raw*' to '/dev/sd*'. The disks corresponding to the block device files in the message were members of ASM disk groups and were accessed using the raw devices (matched by '/dev/raw/raw*' prior to 12g) with the correct permissions. However, the block devices in the message corresponding to the same disks and found with '/dev/sd*' do not have the correct permissions. To ensure continued working of ASM, all disks that were members of disk groups must continue to be members.

Action: Make sure that the permissions for the specified block devices matches the expected value (this will be necessary in the long run because raw devices are being deprecated). Alternatively set the string '/dev/raw/raw*' as the disk discovery path using command 'asmcmd dsset --normal *discovery string*' in ASM 11.2 or later, using command 'alter system set asm_diskstring=*discovery string* scope=spfile;' in 11.1 or earlier ASM.

PRVG-04664: Failed to obtain block device corresponding to raw disk "{0}" on node "{1}"

Cause: An attempt to obtain block device corresponding to specified raw disk failed on node specified. Starting in 12g the default ASM disk discovery string was changed from '/dev/raw/raw*' to '/dev/sd*'. The specified disks were picked up by using the old default disk discovery string '/dev/raw/raw*'. To ensure continued working of ASM, all disks that were members of disks groups must continue to be members.

Action: Look at the accompanying error message and respond accordingly.

PRVG-04665: The owner for block devices "{0}" are incorrect on node "{1}" [Expected = {2}, Actual = {3}]

Cause: The owner of the block device on the node specified were incorrect. Starting in 12g the default ASM disk discovery string was changed from '/dev/raw/raw*' to '/dev/sd*'. The disks corresponding to the block device files in the message were members of ASM disk groups and were accessed using the raw devices (matched by '/dev/raw/raw*' prior to 12g) with the correct ownership. However, the block devices in the message corresponding to the same disks and found with '/dev/sd*' do not have the correct ownership. To ensure continued working of ASM, all disks that were members of disk groups must continue to be members.

Action: Make sure that the owner of the specified block devices matches the expected value (this will be necessary in the long run because raw devices are being deprecated). Alternatively set the string '/dev/raw/raw*' as the disk discovery path using command 'asmcmd dsset --normal *discovery string*' in ASM 11.2 or later, using command 'alter system set asm_diskstring=*discovery string* scope=spfile;' in 11.1 or earlier ASM.

PRVG-04666: The group for block devices "{0}" are incorrect on node "{1}" [Expected = {2}, Actual = {3}]

Cause: The group ownership of the block devices on the node specified were incorrect. Starting in 12g the default ASM disk discovery string was changed from '/dev/raw/raw*' to '/dev/sd*'. The disks corresponding to the block device files in the message were members of ASM disk groups and were accessed using the raw devices (matched by '/dev/raw/raw*')

prior to 12g) with the correct group ownership. However, the block devices in the message corresponding to the same disks and found with '/dev/sd*' do not have the correct group ownership. To ensure continued working of ASM, all disks that were members of disk groups must continue to be members.

Action: Make sure that the group of the specified block devices matches the expected value (this will be necessary in the long run because raw devices are being deprecated). Alternatively set the string '/dev/raw/raw*' as the disk discovery path using command 'asmcmd dsset --normal *discovery string*' in ASM 11.2 or later, using command 'alter system set asm_diskstring=*discovery string* scope=spfile;' in 11.1 or earlier ASM.

PRVG-04669: Could not determine ASM disk discovery string on node "{0}"

Cause: ASM disk ownership, group, permission and size checks failed because the ASM discovery string could not be determined.

Action: Examine the accompanying error messages and correct the problem indicated.

PRVG-04670: File "{0}" could not be read

Cause: An error occurred while reading the specified file while trying to determine whether default ASM discovery string was being used.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-04671: Failed to match the block device "{0}" with the new default discovery string

Cause: The specified block device could not be discovered with the new default discovery string. Starting in 12g the default ASM disk discovery string was changed from '/dev/raw/raw*' to '/dev/sd*'. To ensure proper upgrade of ASM, all disks that were member disks of diskgroups prior to upgrade must continue to be discovered as member disks after upgrade.

Action: Make sure that the specified devices are discoverable using the new default discovery string (this will be necessary in the long run because raw devices are being deprecated). Alternatively set the disk discovery path to '/dev/raw/raw*' using the command 'asmcmd dsset --normal *discovery string*' in ASM 11.2 or later. If SPFILE is in use for 11.1 or earlier ASM, then use the command 'ALTER SYSTEM SET ASM_DISKSTRING=*discovery string* SCOPE=SPFILE;'. Otherwise, update the value of parameter ASM_DISKSTRING in the PFILE of each ASM instance.

PRVG-04672: failed to retrieve ASM discovery string information while checking ASM disk size consistency

Cause: An attempt to obtain ASM discovery string information failed.

Action: Examine the accompanying error message for details.

PRVG-05150: could not determine if path {0} is a valid path on all nodes

Cause: Checking for shared devices could not be executed because the indicated path could not be validated for all nodes. Validation was not possible because the device referenced by the path could not be identified. On Linux systems this can occur if the file /etc/multipath.conf is not readable by the requesting user.

Action: Ensure that the path exists on all of the nodes participating in the operation. On Linux systems, ensure that the user has read access to '/etc/multipath.conf'.

PRVG-05317: The Clusterware is currently being upgraded to version: "{0}".\n The following nodes have not been upgraded and are\n running Clusterware version: "{1}".\n "{2}"

Cause: The CRS integrity may have discovered that your Oracle Clusterware is partially upgraded.

Action: Review warnings and make modifications as necessary. If the warning is due to partial upgrade of Oracle Clusterware stack then continue with upgrade and finish it.

PRVG-05500: Failed to retrieve the disk information for path "{0}"

Cause: Could not retrieve the disk information for the specified path on all nodes.

Action: Ensure that the path specified is an existing path and current user has access permission for this path on all nodes.

PRVG-05501: Failed to retrieve the disk information for path "{0}" on node "{1}"

Cause: Could not retrieve the disk information for the specified path on identified node.

Action: Ensure that the path specified is an existing path and current user has access permission for this path on identified node.

PRVG-05723: Network CRS resource is configured to use DHCP provided IP addresses

Cause: The network Cluster Ready Services (CRS) resource that was configured to request the Dynamic Host Configuration Protocol (DHCP) server for IP addresses was online. DHCP server check must not be performed while the network CRS resource configured to use the DHCP provided IP address is online.

Action: No action is required.

PRVG-05725: The TCP server process with PID "{0}" on node "{1}" failed to exit normally

Cause: The TCP server process with the PID specified, running on the node indicated, failed to exit normally.

Action: Use OS commands to terminate the TCP server process with the indicated PID.

PRVG-05726: Failed to discover DHCP servers on public network listening on port "{0}" using command "{1}"

Cause: An attempt to use the indicated command to discover Dynamic Host Configuration Protocol (DHCP) servers listening on the public network on the indicated port failed.

Action: Contact the network administrator to ensure that the DHCP servers exist on the network. If the DHCP servers are listening on a different port, then retry the command specifying the alternate port using the -port option. If the DHCP has a slow response, then use the CV_MAX_RETRIES_DHCP_DISCOVERY property in the cvu_config file so that the Configuration Verification Utility (CVU) performs a certain number of retries. The default number of retries performed is 5.

PRVG-05727: Command "{0}" to generate DHCP client ID failed

Cause: An attempt to generate client ID using specified command required for 'crsctl discover dhcp', 'crsctl request dhcp' and 'crsctl release dhcp' commands failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-05730: DHCP servers on public network listening on port "{0}" could not provide an IP address for node VIP on node "{1}"

Cause: An attempt to verify if DHCP servers respond to DHCP discover packets sent on the specified port for specified node's node VIP failed, as no response was received.

Action: Contact the network administrator to make sure that DHCP servers exist on the network. If the DHCP servers are listening to a different port then specify it by using -port option. Make sure that DHCP servers can provide VIPs for all nodes in the cluster that can start as a 'hub' node.

PRVG-05731: DHCP servers on network "{2}" listening on port "{0}" could not provide an IP address for node VIP on node "{1}"

Cause: An attempt to verify if DHCP servers respond to DHCP discover packets sent on the specified network and port for specified node's node VIP failed, as no response was received.

Action: Contact the network administrator to make sure that DHCP servers exist on the network specified. If the DHCP servers are listening to a different port then specify it by using -port option. Make sure that DHCP servers can provide VIPs for all nodes in the cluster that can start as a 'hub' node.

PRVG-05732: No DHCP server were discovered on the network "{1}" listening on port {0}

Cause: No reply was received for the DHCP discover packets sent on the specified network and port.

Action: Contact the network administrator to make sure that DHCP servers exist on the network. If the DHCP servers are listening to a different port then specify it by using -port option.

PRVG-05733: Failed to discover DHCP servers on network "{2}" listening on port "{0}" using command "{1}"

Cause: An attempt to use the indicated command to discover Dynamic Host Configuration Protocol (DHCP) servers listening on the indicated network on the indicated port failed.

Action: Contact the network administrator to ensure that the DHCP servers exist on the network. If the DHCP servers are listening on a different port, then retry the command specifying the alternate port using the -port option. If the DHCP has a slow response, then use the CV_MAX_RETRIES_DHCP_DISCOVERY property in the cvu_config file so that the Configuration Verification Utility (CVU) performs a certain number of retries. The default number of retries performed is 5.

PRVG-05736: The "{0}" command returned error "{1}"

Cause: An attempt to discover DHCP servers using specified command failed. The command returned error specified.

Action: Since CVU is operating not operating from a clusterware home it does not have access to all error messages. Look at the Oracle database error messages manual for the exact error message and act accordingly.

PRVG-05737: The file "{0}" could not be copied to "{1}" on local node.

Cause: While attempting to discover Dynamic Host Configuration Protocol (DHCP) servers, the indicated source file could not be copied to the indicated destination file on the local node. Details are provided by the accompanying messages.

Action: Examine the accompanying messages and respond accordingly.

PRVG-05738: The time to discover a DHCP server in the network, exceeded {0} seconds.

Cause: The pre-installation CVU verification of Dynamic Host Configuration Protocol (DHCP) service for the specified network failed to discover a DHCP server within the indicated time.

Action: This check is network load sensitive and can yield different results at different times. Ensure that the DHCP server and the network are not overloaded and retry the check.

PRVG-05740: Oracle Restart installed, requested check is not valid in this environment

Cause: A check invalid for the Oracle Restart environment was attempted.

Action: Check the documentation and use a valid command for this environment.

PRVG-05741: Oracle Restart installed, multiple nodes not valid in this environment

Cause: Multiple nodes were specified as part of the nodelist in an Oracle Restart configuration.

Action: Specify the node on which Oracle Restart has been configured.

PRVG-05745: CRS Configuration detected, Restart configuration check not valid in this environment

Cause: A check valid for the Oracle Restart configuration was attempted in a multi-node cluster environment.

Action: Try a valid check for a multi-node cluster environment.

PRVG-05818: GNS resource is configured to listen on virtual IP address "{0}" for domain "{1}"

Cause: An attempt was made to run 'cluvfy comp dns' command against GNS resource configured to listen to specified domain at specified GNS-VIP while it was online.

Action: If GNS needs to be verified use 'cluvfy comp gns' command. If DNS setup needs to be checked then stop the GNS resource and start 'cluvfy comp dns -server'.

PRVG-05819: VIP address "{0}" is already in use

Cause: The identified VIP address was found to be active on the public network.

Action: Specify a VIP address that is not in use.

PRVG-05820: Failed to retrieve IP address of host "{0}"

Cause: An attempt to retrieve an IP address for the indicated host failed.

Action: Run 'nslookup' on the host name and make sure the name is resolved.

PRVG-05821: The subdomain delegation check was not performed as part of GNS check because it needs 'root' user privileges.

Cause: A Grid Naming Service (GNS) configuration with subdomain was found and the privilege delegation user and password were not provided.

Action: Retry specifying the privilege delegation user and password.

PRVG-05822: Name lookup for FQDN "{0}" failed with test DNS server running at address "{1}" and listening on port {2}.

Cause: An attempt to query the indicated Fully Qualified Domain Name (FQDN) on the test domain name server (DNS) running at the indicated address and port failed.

Action: Ensure that the indicated address is correct.

PRVG-05823: Name lookup for FQDN "{0}" failed.

Cause: An attempt to query the indicated domain name server (DNS) for the indicated Fully Qualified Domain Name (FQDN) failed.

Action: Ensure that Grid Naming Service (GNS) subdomain delegation is set up correctly in the DNS.

PRVG-05824: GNS resource is configured to listen on virtual IP address "{0}" without a forwarded domain.

Cause: An attempt was made to run the 'cluvfy comp dns' command against the Grid Naming Service (GNS) VIP configured at the indicated GNS-VIP while it was online.

Action: If GNS needs to be verified, use the 'cluvfy comp gns' command. If the domain name server (DNS) setup needs to be checked, then stop the GNS resource and start 'cluvfy comp dns'.

PRVG-05825: Subdomain delegation verification for the subdomain "{0}" failed.

Cause: An attempt to verify subdomain delegation for the indicated subdomain failed.

Action: Ensure that Grid Naming Service (GNS) subdomain delegation is set up correctly in the DNS and retry the operation.

PRVG-05830: None of the currently configured VIP addresses belong to the public subnet "{0}" on the network interface "{1}" of the node "{2}".

Cause: No VIP addresses were found on the indicated public subnet on the identified node.

Action: Ensure that the indicated public subnet has at least one VIP address configured on it or deconfigure the public subnet.

PRVG-05831: Public subnet "{0}" has no public IP address except active VIP addresses "{1}" on the node "{2}".

Cause: The identified public subnet did not have any additional IP address other than the configured VIP addresses active on the node.

Action: Ensure that the indicated public subnet has at least one active public IP in addition to the identified VIP address.

PRVG-05832: The subnets of VIPs "{0}" do not match the subnet "{1}" associated with their corresponding public network.

Cause: The Configuration Verification Utility (CVU) determined that the addresses of the indicated VIPs were not on the indicated subnet, which is the subnet of their associated public network interface.

Action: Ensure that all the VIPs associated with each network that have addresses on the subnet associated with that network.

PRVG-05834: Failed to retrieve the configured VIP address information for network resource on each of the cluster nodes.

Cause: An attempt to retrieve the configured node VIP address information failed.

Action: Ensure that the clusterware is up and running and also examine the accompanying messages and respond accordingly.

PRVG-05835: failed to run srvctl command

Cause: An attempt to run srvctl command to get the network information failed. Specific details of the failure are included in the accompanying error messages.

Action: Ensure that the clusterware is up and running, examine the accompanying messages and respond accordingly.

PRVG-05836: failed to retrieve the configured public network list information for the cluster

Cause: An attempt to retrieve the configured public network information failed. Specific details of the failure are included in the accompanying error messages.

Action: Ensure that the clusterware is up and running, examine the accompanying messages and respond accordingly.

PRVG-05905: Windows firewall is enabled on nodes:

Cause: Windows firewall status was found to be enabled.

Action: To disable Windows firewall, on Windows 2003 or earlier run 'netsh firewall set opmode DISABLE'; on Windows 2008 or later run 'netsh advfirewall set allprofiles state off' at command prompt as an administrator on all the indicated nodes.

PRVG-05906: Windows firewall is enabled on the node "{0}"

Cause: Windows firewall status was found to be enabled.

Action: To disable Windows firewall, on Windows 2003 or earlier run 'netsh firewall set opmode DISABLE'; on Windows 2008 or later run 'netsh advfirewall set allprofiles state off' at command prompt as an administrator on the indicated node.

PRVG-05907: Windows firewall status check cannot be performed on nodes:

Cause: An attempt to determine the status of Windows firewall failed.

Action: Ensure that the access permissions for the Oracle user allow access to the Windows Registry and the registry has the REG_DWORD entry named 'EnableFirewall' with value 0 under 'HKEY_LOCAL_MACHINE\System\CurrentControlSet\Services\SharedAccess\Parameters\FirewallPolicy\StandardProfile' and 'HKEY_LOCAL_MACHINE\System\CurrentControlSet\Services\SharedAccess\Parameters\FirewallPolicy\DomainProfile' sub-keys on the node. It is recommended to back up the Windows Registry before proceeding with any changes. Restart your system to make your changes effective.

PRVG-05908: Windows firewall status check cannot be performed on node "{0}"

Cause: An attempt to determine the status of Windows firewall failed.

Action: Ensure that the access permissions for the Oracle user allow access to the Windows Registry and the registry has the REG_DWORD entry named 'EnableFirewall' with value 0 under 'HKEY_LOCAL_MACHINE\System\CurrentControlSet\Services\SharedAccess\Parameters\FirewallPolicy\StandardProfile' and 'HKEY_LOCAL_MACHINE\System\CurrentControlSet\Services\SharedAccess\Parameters\FirewallPolicy\DomainProfile' sub-key on the node. It is recommended to back up the Windows Registry before proceeding with any changes. Restart your system to make your changes effective.

PRVG-05909: Error reading key "{0}" from Windows Registry on node "{1}"

Cause: Specified Windows Registry key could not be read.

Action: Ensure that the specified key exists in Windows Registry and access permissions for the Oracle user allow access to the Windows Registry.

PRVG-05910: Error reading value 'EnableFirewall' under key "{0}" for Windows firewall status on node "{1}"

Cause: Could not read Windows Registry value 'EnableFirewall' under specified key.

Action: Ensure that the access permissions for the Oracle user allow access to the Windows Registry and the Registry value 'EnableFirewall' under specified key is present on the node.

PRVG-06000: OCR "{0}" is on raw or block device storage

Cause: An attempt was made to add OCR storage on a raw or block device.

Action: Choose a different location for storing OCR.

PRVG-06007: The OCR backup location "{0}" does not have enough space. [Expected="{1}" ; Found="{2}"]

Cause: Size of the OCR backup location was found to be insufficient.

Action: Increase the size of the OCR backup location or move the OCR backup to a location with sufficient space.

PRVG-06013: Failed to retrieve CRS active version from OCR dump on node "{0}"

Cause: An attempt to query the CRS active version key from OCR dump failed.

Action: Make sure Oracle Clusterware is up and running. Examine any accompanying error messages for details.

PRVG-06014: Failed to parse OCR dump output: "{0}"

Cause: An attempt to parse OCR dump failed.

Action: Make sure Oracle Clusterware is up and running. Examine any accompanying error messages for details.

PRVG-06015: Error retrieving output of OCR dump command on node "{0}"

Cause: Command 'ocrdump -stdout -xml' produced no output.

Action: Examine any accompanying error messages for details.

PRVG-06016: Failed to retrieve the OCR backup location from node "{0}". Command "{1}" failed with errors.

Cause: An attempt to retrieve the backup location of OCR failed on indicated node.

Action: Make sure Oracle Clusterware is up and running. Examine any accompanying error messages for details.

PRVG-06017: OCR backup is located in the same disk group "{0}" as OCR.

Cause: While checking OCR integrity, it was found that the OCR and its backup are located in the same disk group. It is recommended to locate the OCR backup in a different disk group from the OCR.

Action: If another disk group is available to backup OCR, change the location to the disk group by running the command 'ocrconfig -backuploc'.

PRVG-06020: failed to retrieve CRS active version from node "{0}"

Cause: An attempt to query the CRS active version from the CRS home on the indicated node failed.

Action: Make sure Oracle Clusterware is up and running, address any issues described in accompanying error messages, and retry.

PRVG-06025: Voting disk "{0}" is on RAW or Block storage

Cause: An attempt was made to add voting disk storage on a raw or block device.

Action: Choose a different location for storing Voting disk.

PRVG-06056: Insufficient ASM instances found. Expected {0} but found {1}, on nodes "{2}"

Cause: Fewer than the configured ASM instance count were found running.

Action: Make sure that ASM is started on enough nodes by using the 'srvctl start asm' command.

PRVG-06057: Command "{0}" to check if ASM I/O server resource instances are running failed

Cause: An attempt to execute the displayed command failed.

Action: This is an internal error. Contact Oracle Support.

PRVG-06059: ASM I/O servers are not running on sufficient number of nodes. [Required= {0}; Found= {1}]

Cause: An attempt to verify that ASM I/O servers are running on sufficient number of nodes failed as they running on less number of nodes than I/O server count.

Action: Make sure that ASM I/O servers are started on sufficient number of nodes by using 'srvctl start ioserver' command. If required count is greater than number of nodes in the cluster make sure that the ASM I/O servers are started on all nodes of the cluster.

PRVG-06061: ASM I/O servers running on nodes "{0}" are running on nodes that do not have an ASM instance

Cause: An attempt to determine if all ASM I/O server instances are running on nodes with ASM instances found that on nodes specified I/O servers were running but there were no ASM instances.

Action: The ASM I/O servers can be relocated using the command 'srvctl relocate ioserver' to nodes on which ASM instances are running on.

PRVG-06062: ASM filter driver library is not loaded on nodes "{0}"

Cause: An attempt to check if ASM filter driver library was loaded failed on the nodes specified because the filter driver library was not loaded.

Action: Make sure that the ASM filter driver is installed on all nodes of the cluster and the ASM filter driver is managing all ASM managed disks.

PRVG-06063: Failed to check if the ASM filter driver library is installed on nodes "{0}"

Cause: An attempt to check if ASM filter driver library was loaded failed / on the nodes specified because the ASM filter driver status could not be determined.

Action: Look at the accompanying messages and respond accordingly.

PRVG-06066: Failed to obtain the list of disks managed by ASM on nodes "{0}"

Cause: An attempt to obtain the list of disks managed by ASM on the specified nodes failed.

Action: Look at the accompanying messages and respond accordingly.

PRVG-06067: The command "{0}" failed to run on nodes "{0}"

Cause: An attempt to obtain the list of disks managed by ASM filter driver failed on the nodes specified because the command could not be executed.

Action: Look at the accompanying messages and respond accordingly.

PRVG-06068: The command "{0}" failed to produce any output on nodes "{0}"

Cause: An attempt to obtain the list of disks managed by ASM filter driver failed on the nodes specified because the command did not produce any output.

Action: This is an internal error. Contact Oracle support services. NOTE: Message 6068, TASK_ASM_AFDTOOL_NO_OUTPUT is obsolete. However, it cannot be deleted from this until it is deleted from the translated messages.

PRVG-06069: The disks "{0}" are not managed by ASM filter driver on node "{1}".

Cause: The indicated disks were listed by the ASM filter driver on one or more nodes but were not listed by ASM filter driver on the indicated node.

Action: Ensure that the disks listed by the ASM filter driver are consistent across all the cluster nodes.

PRVG-06070: failed to execute command "{0}" on node "{1}"

Cause: An attempt to execute the specified command on the node specified failed.

Action: Look at the accompanying messages and respond accordingly.

PRVG-06074: The ASM filter driver library is not installed on nodes "{0}".

Cause: The ASM filter driver library was not found installed on the indicated nodes.

Action: Ensure that the ASM filter driver library is consistently installed and loaded across all the cluster nodes.

PRVG-06075: failed to check if the ASM filter driver library is loaded on nodes "{0}".

Cause: An attempt to check whether the ASM filter driver library was loaded failed on the nodes specified because the ASM filter driver status could not be determined.

Action: Look at the accompanying messages and respond accordingly.

PRVG-06078: ASM filter driver library is not supported on current platform for this release "{0}".

Cause: The ASM filter driver library have not been ported for the indicated release on this OS platform.

Action: None

PRVG-06081: The disks "{0}" are not managed by ASM filter driver on node "{1}".

Cause: An attempt to verify that all disks that are managed by ASM are also managed by ASM filter driver failed because the specified disks were being managed by ASM but not by ASM filter driver.

Action: Use the command 'afdtool' to stamp the disks for management by ASM filter driver.

PRVG-06083: The disks "{0}" are not listed by ASM filter driver on node "{1}".

Cause: The CVU check for ASM filter driver configuration consistency determined that the indicated disks were listed by the ASM filter driver on one or more nodes but were not listed by ASM filter driver on the indicated node.

Action: Ensure that the disks listed by the ASM filter driver are consistent across all the cluster nodes. The command 'afdtool -rescan' can be used to perform a rescan of ASM filter driver managed disks on the indicated node and the command 'afdtool -getdevlist ""' can be used to list the AFD managed disks.

PRVG-06084: The ASM parameter "cluster_database" does not have expected value. [Expected = "TRUE"] [Found = "FALSE"]

Cause: The Configuration Verification Utility determined that the indicated ASM parameter value did not have expected value.

Action: Ensure that the indicated ASM parameter value is set to 'TRUE' using the command 'alter system set cluster_database=TRUE scope=spfile', and then retry the operation.

PRVG-06085: failed to retrieve the ASM parameter "{0}" value on the node "{1}"

Cause: An attempt to obtain the indicated ASM parameter value failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, correct the problems indicated there, and then retry the operation.

PRVG-06090: ASM filter driver is installed on node "{0}" but is not supported by Oracle Clusterware release version "{1}" on the current operating system version.

Cause: The ASM filter driver was found installed, but was not supported on the current operating system version by the targeted Oracle Clusterware release.

Action: Ensure that the operating system version is upgraded to the minimum supported version required for the ASM filter driver for the indicated target Oracle Clusterware release version and then retry upgrade. Refer to My Oracle Support note 2034681.1 for more information regarding this requirement.

PRVG-06091: ASM filter driver is not supported on the current operating system version for Oracle Clusterware release version "{0}".

Cause: The ASM filter driver was not supported on the current operating system version for the targeted release.

Action: Ensure that the operating system version is upgraded to the minimum supported version required for the ASM filter driver for the indicated target Oracle Clusterware release version. Refer to My Oracle Support note 2034681.1 for more information regarding this requirement.

PRVG-06095: Oracle ACFS driver is installed on node "{0}" but is not supported by Oracle Clusterware release version "{1}" on the current operating system version.

Cause: The Oracle Automatic Storage Management Cluster File System (Oracle ACFS) driver was found installed, but was not supported on the current operating system version by the targeted Oracle Clusterware release.

Action: Ensure that the operating system version is upgraded to the minimum supported version required for the Oracle ACFS driver for the indicated target Oracle Clusterware release version and then retry upgrade. Refer to My Oracle Support note 1369107.1 for more information regarding this requirement.

PRVG-06096: Oracle ACFS driver is not supported on the current operating system version for Oracle Clusterware release version "{0}".

Cause: The Oracle Automatic Storage Management Cluster File System (Oracle ACFS) driver was not supported on the current operating system version for the targeted release.

Action: Ensure that the operating system version is upgraded to the minimum supported version required for the Oracle ACFS driver for the indicated target Oracle Clusterware release version. Refer to My Oracle Support note 1369107.1 for more information regarding this requirement.

PRVG-07040: Failed to get LV count for "{0}"

Cause: Could not get Logical Volume information for the device specified.

Action: Ensure that the device specified is available.

PRVG-07050: No part of location "{0}" matches an existing path on node "{1}"

Cause: Neither the specified location nor any leading portion thereof matched existing file system paths on the indicated node.

Action: Ensure that the path is absolute and at least some leading portion of it matches an existing file system path on the indicated node.

PRVG-07051: No part of location "{0}" matches an existing path with write permissions for current user on node "{1}"

Cause: Neither the specified location nor any leading portion thereof matched existing file system paths with write permissions on the indicated node.

Action: Ensure that the path is absolute and at least some leading portion of it matches an existing file system path writable by the current user on the indicated node.

PRVG-07080: Failed to retrieve the 'srvctl' version on node "{0}", [{1}]

Cause: Could not get the version of 'srvctl' utility on the identified node.

Action: Look at the accompanying messages and respond accordingly.

PRVG-07090: An internal error occurred within cluster verification fix up framework

Cause: An error occurred while performing the selected fix up operations.

Action: This is an internal error. Contact Oracle Support.

PRVG-07091: Unknown privilege delegation method specified

Cause: An unknown privilege delegation method was specified.

Action: Specify a valid value for the privilege delegation method. 'sudo' and 'root' are the only acceptable method values.

PRVG-07092: User "{0}" does not have sufficient authorization to run this command.

Cause: An attempt to run the Configuration Verification Utility (CVU) command failed because the user did not have sufficient authority to run it.

Action: Use the command line option '-method' to specify one of the privilege delegation methods.

PRVG-07500: File "{0}" not found

Cause: The specified file was not found.

Action: Ensure that the file exists and is readable.

PRVG-07501: An error occurred while parsing file "{0}"

Cause: An error occurred while parsing the document.

Action: Ensure that the document is well formatted and a valid XML document.

PRVG-07503: An I/O error occurred while reading file "{0}"

Cause: An I/O error occurred while parsing the document.

Action: Ensure that the document is accessible. Copy the document to a new location and retry.

PRVG-07504: An internal error occurred while parsing file "{0}"

Cause: An internal error occurred while parsing the document.

Action: This is an internal error. Contact Oracle Support.

PRVG-07505: Failed to get group membership of user "{0}" on node "{1}"

Cause: An attempt to get the group membership of the user on the indicated node failed.

Action: Look at the accompanying error messages displayed and fix the problems indicated.

PRVG-08000: Path "{0}" specified for the '-src_crshome' option is not a valid source CRS home.

Cause: The identified source CRS home was not found to be the configured CRS home.

Action: Specify a valid configured CRS home.

PRVG-08001: CRS home "{0}" is not a valid directory.

Cause: While attempting to determine the nodes on which to perform the verification operation, the Oracle Clusterware home discovered was not a valid directory.

Action: Ensure that any previous Oracle Clusterware installation has been deinstalled properly.

PRVG-08002: The required executable "olsnodes" is missing from the directory "{0}".

Cause: While attempting to determine the nodes on which to perform the verification operation, the 'olsnodes' executable was not found in the Oracle Clusterware home.

Action: Ensure that the Oracle Clusterware was installed properly. Ensure that any previous Oracle Clusterware configuration files have been cleaned up.

PRVG-08003: Unable to retrieve node list from the Oracle Clusterware.

Cause: While attempting to determine the nodes on which to perform the verification operation, the nodes that belonged to the cluster could not be obtained from the Oracle Clusterware.

Action: Ensure that the Oracle Clusterware stack is up so that Cluster Verification Utility (CVU) can retrieve the node list. The node list can be specified using the command line option '-n *nodelist*' or using CV_NODE_ALL property in the 'cvu_config' file so that CVU perform verification operation on those nodes.

PRVG-09001: Failed to read input from command line standard input

Cause: Failed to read the response from standard input.

Action: Ensure that the input is correctly entered on standard input.

PRVG-09003: Failed to read the "{0}" user credentials

Cause: Failed to read the response from standard input.

Action: Ensure that the input is correctly entered on standard input.

PRVG-09015: Failed to execute command "{0}" using "{1}" credentials on node "{2}" with error "{3}"

Cause: An attempt to execute the command with the credentials provided for the identified user across all the nodes failed.

Action: Ensure that the credentials provided are correct.

PRVG-09016: failed with an error "{0}" on node "{1}"

Cause: An operating system error occurred while executing the fix up on the specified node.

Action: Look at the error details and respond accordingly.

PRVG-09018: Privilege delegation method and credentials are not specified

Cause: The privilege delegation method and credentials were not specified.

Action: Ensure that the privilege delegation method and its credentials are specified.

PRVG-09019: Copying required fix up files to directory "{0}" failed on all nodes

Cause: An attempt to copy fix up files to the indicated directory failed on all cluster nodes.

Action: Make sure that the user running fix up has read and write permissions on the indicated directory.

PRVG-09020: Executable file "{0}" not found on node "{1}"

Cause: Indicated executable file was not found at the indicated path on the identified node.

Action: Ensure that the executable file exists at the indicated path.

PRVG-09021: File "{0}" not found on nodes "{1}"

Cause: Indicated file was not found at the indicated path on the identified nodes.

Action: Ensure that the file exists at the indicated path.

PRVG-09023: Manual fix up command "{0}" was not issued by root user on node "{1}"

Cause: The indicated manual command to perform a fix up action was either not issued or was issued by an user other than root.

Action: Ensure that the indicated manual fix up command is executed as root user on the identified node.

PRVG-09025: Failed to update the value of parameter "{0}" in configuration file "{1}" on node "{2}"

Cause: An attempt to update the value of indicated parameter in the configuration file on the identified node failed.

Action: Ensure that the file exists and the privilege delegation method used to run this command is run with correct credentials.

PRVG-09026: Failed to adjust the value of parameter "{0}" using command "{1}" on node "{2}"

Cause: An attempt to update the system parameter value using indicated command failed on the indicated node.

Action: Examine the accompanying error messages for details and also ensure that the command executable exists at the identified path and the privilege delegation method used to run this command is run with correct credentials.

PRVG-09027: Failed to retrieve the current value of parameter "{0}" using command "{1}" on node "{2}"

Cause: An attempt to retrieve the current value of indicated system parameter using identified command failed on the indicated node.

Action: Examine the accompanying error messages for details and also ensure that the command executable exists at the identified path and the privilege delegation method used to run this command is run with correct credentials.

PRVG-09028: Failed to set an environment variable "{0}" on node "{1}"

Cause: An attempt to set an environment variable failed on indicated node.

Action: This is an internal error. Contact Oracle Support.

PRVG-09030: Failed to open configuration file "{0}" on node "{1}"

Cause: An attempt to open the indicated file for read and write operations failed on the indicated node.

Action: Ensure that the file exists and the privilege delegation method used to run this command is run with correct credentials.

PRVG-09031: Missing required data in fix up data file.

Cause: An internal error occurred while performing the selected fix up operations.

Action: This is an internal error. Contact Oracle Support.

PRVG-09032: Failed to create new user "{0}" on node "{1}", command "{2}" failed with error {3}

Cause: An attempt to add specified new user failed on the indicated node.

Action: Ensure that the privilege delegation method used to run this command is run with correct credentials.

PRVG-09033: Failed to create new group "{0}" on node "{1}"

Cause: An attempt to add specified new group failed on the indicated node.

Action: Ensure that the privilege delegation method used to run this command is run with correct credentials.

PRVG-09034: User "{0}" does not exist on node "{1}"

Cause: The specified user name was not known to the operating system on the indicated node.

Action: Ensure that the user account exists on the indicated node.

PRVG-09035: Group "{0}" does not exist on node "{1}"

Cause: The specified group name was not known to the operating system on the indicated node.

Action: Ensure that the group account exists on the indicated node.

PRVG-09036: Failed to add user "{0}" to group "{1}" on node "{2}"

Cause: An attempt to add the indicated user to the group failed on the specified node.

Action: Ensure that the privilege delegation method used to run this command is run with correct credentials and the user and group exist on the node.

PRVG-09037: Failed to get the list of groups for user "{0}" on node "{1}"

Cause: An attempt to retrieve the operating system groups to which the specified user belongs failed on the indicated node.

Action: Ensure that the user account exists on the node.

PRVG-09038: Failed to modify user "{0}" user ID to "{1}" on node "{2}"

Cause: An attempt to modify identified user's ID failed on the indicated node.

Action: Ensure that the privilege delegation method used to run this command is run with correct credentials.

PRVG-09039: Failed to modify group "{0}" group ID to "{1}" on node "{2}"

Cause: An attempt to modify identified group's ID failed on the indicated node.

Action: Ensure that the privilege delegation method used to run this command is run with correct credentials.

PRVG-09040: Failed to get available unique user ID from nodes "{0}"

Cause: An attempt to retrieve an unused unique user ID from the indicated nodes failed.

Action: Ensure that the node is reachable and the user running the command has required privileges to retrieve the information from user accounts database.

PRVG-09041: Failed to get available unique group ID from nodes "{0}"

Cause: An attempt to retrieve an unused unique group ID from the indicated nodes failed.

Action: Ensure that the node is reachable and the user running the command has required privileges to retrieve the information from group accounts database.

PRVG-09042: Failed to get available user ID from node "{0}"

Cause: An attempt to retrieve an unused user ID from the indicated node failed.

Action: Ensure that the node is reachable and the user running the command has required privileges to retrieve the information from user accounts database.

PRVG-09043: Failed to get available group ID from node "{0}"

Cause: An attempt to retrieve an unused group ID from the indicated node failed.

Action: Ensure that the node is reachable and the user running the command has required privileges to retrieve the information from group accounts database.

PRVG-09044: Failed to adjust the 'runlevel' value in file "{0}" on node "{1}"

Cause: An attempt to adjust the 'runlevel' value in entry inside the indicated file failed on the specified node.

Action: Ensure that the indicated file is in correct format and that the entry for 'initdefault' runlevel exists in the file.

PRVG-09045: Failed to install the package "{0}" from source location "{1}" on node "{2}"

Cause: An attempt to install the indicated package failed on the identified node.

Action: Ensure that the package source file exists at the identified location and the 'rpm' tool is available on the node.

PRVG-09046: Fix up for this verification failure is not supported

Cause: An internal error occurred while performing the selected fix up operations.

Action: This is an internal error. Contact Oracle Support.

PRVG-09047: Fix up initial framework setup is not performed, cannot perform fix up operations

Cause: An internal error occurred while performing the selected fix up operations.

Action: This is an internal error. Contact Oracle Support.

PRVG-09048: Fix up is not supported for Operating System parameter "{0}"

Cause: An internal error occurred while performing the selected fix up operations.

Action: This is an internal error. Contact Oracle Support.

PRVG-09049: Failed to create home directory at path "{0}" for newly created user "{1}" on node "{2}"

Cause: An attempt to create the home directory at the indicated path failed for the newly created user on the indicated node.

Action: Manually create the home directory at the indicated path for the newly added user account.

PRVG-09050: Failed to determine the Operating System version on node "{0}"

Cause: An attempt to retrieve the operating system version failed on the identified node.

Action: Ensure that the command is being run in the correct operating system environment.

PRVG-09051: Fix up is not supported for the Operating System parameter "{0}" on current version of the Operating System on node "{1}"

Cause: A fix up operation was requested for an Operating System version that does not support that operation.

Action: None, or address the situation manually on the indicated node.

PRVG-09052: Failed to adjust the value of parameter "{0}" using operating system function call "{1}" on node "{2}" with error \n{3}

Cause: An attempt to update the system parameter value using the indicated system call failed on the indicated node.

Action: Examine the accompanying error messages for details.

PRVG-09053: Failed to retrieve the current value of parameter "{0}" using operating system function call "{1}" on node "{2}" with error \n{3}

Cause: An attempt to retrieve the current value of the indicated system parameter using the identified operating system function call failed on the indicated node.

Action: Examine the accompanying error messages for details.

PRVG-09054: failed to set the 'runlevel' target "{0}" using command "{1}" on node "{2}" with error \n{3}

Cause: An attempt to set the indicated 'runlevel' target failed on the indicated node.

Action: Ensure that the indicated command has execute permissions to run on the indicated node. Examine the accompanying error messages for more details.

PRVG-09055: Failed to verify the existence of Solaris Project name "{0}" on node "{1}"

Cause: An attempt to check the existence of the indicated Solaris Projects failed on the identified node.

Action: Ensure that the project specific configuration is correct on the identified node.

PRVG-09056: Failed to create the Solaris Project "{0}" for Oracle user on node "{1}"

Cause: An attempt to create the indicated Solaris Projects for Oracle user failed on the identified node.

Action: Ensure that the Solaris Project specific configuration is correct on the identified node.

PRVG-09057: Failed to retrieve the home directory of user "{0}" on node "{1}"

Cause: An attempt to retrieve the home directory of the identified user failed on the indicated node.

Action: Ensure that the file /etc/passwd is in correct format and that the contents of this file are correct on the indicated node.

PRVG-09059: Failed to update the IOCP device status to "Available" using command "{0}" on node "{1}". Detailed error: {2}

Cause: An attempt to update the status of an I/O Completion Port (IOCP) to 'Available' on the indicated node failed. The accompanying messages provide detailed failure information.

Action: Rectify the issues described in the detailed messages and retry the operation.

PRVG-09060: Fix up is not supported for daemon or process "{0}"

Cause: An unsupported daemon or process was requested for fix up.

Action: This is an internal error. Contact Oracle Support.

PRVG-09061: Daemon or process "{0}" could not be stopped on node "{1}", command "{2}" failed with error: {3}

Cause: An attempt to stop the indicated daemon or process failed on the identified node.

Action: This is an internal error. Contact Oracle Support.

PRVG-09062: Daemon or process "{0}" could not be stopped permanently on node "{1}", command "{2}" failed with error: {3}

Cause: An attempt to permanently stop the indicated daemon or process failed on the identified node.

Action: This is an internal error. Contact Oracle Support.

PRVG-09063: Daemon or process "{0}" is not running on node "{1}"

Cause: Indicated daemon or process was not found running on the identified node.

Action: Ensure that the daemon name is correct and it is running on the node indicated.

PRVG-09064: Failed to restart the ASMLib driver on node "{0}" using command "{1}". Detailed error: {2}

Cause: An attempt to restart the ASMLib driver failed on the identified node.

Action: Ensure that ASMLib is configured correctly and look at the accompanying messages for details. If the problem persists, contact Oracle Support.

PRVG-09065: Failed to retrieve the unpinned nodes using OLSNODES command "{0}" on node "{1}". Detailed error: {2}

Cause: An attempt to determine the pinned status of the cluster nodes using an OLSNODES command failed on the indicated node.

Action: Ensure that the 'olsnodes' executable tool exists at the specified location and look at the accompanying messages for details.

PRVG-09066: Failed to pin the nodes "{0}" using CRSCCTL command "{1}" on node "{2}". Detailed error: {3}

Cause: An attempt to pin the specified nodes using a CRSCCTL command failed on the indicated node.

Action: Ensure that the 'crsctl' executable tool exists at the specified location and look at the accompanying messages for details.

PRVG-09067: Huge page support is not enabled for Linux kernel on node "{0}".

Cause: Huge pages support was not found configured for the Linux kernel on indicated node.

Action: Ensure that the huge pages support is enabled for the Linux kernel on the indicated node.

PRVG-09068: Failed to determine the recommended value for huge pages on node "{0}".

Cause: An attempt to calculate the recommended value for huge pages failed on the indicated node.

Action: This is an internal error. Contact Oracle Support.

PRVG-09070: Failed to update the settings of device file "{0}" using command "{1}" on node "{2}". Detailed error: {3}

Cause: An attempt to update the major and minor number of the indicated device file failed with the indicated error.

Action: Ensure that the indicated command exists at the specified location and look at the accompanying messages for details.

PRVG-09071: Failed to start the daemon "{0}" using command "{1}" on node "{2}". Detailed error: {3}

Cause: An attempt to start the identified daemon failed on the indicated node. Further details are supplied in the additional messages included.

Action: Rectify the issues described in the detailed messages and retry.

PRVG-09072: failed to disable the resource "{0}" using srvctl command "{1}" on node "{2}". Detailed error: {3}

Cause: An attempt to disable the identified resource failed on the indicated node. See included messages for details.

Action: Ensure that the 'srvctl' executable exists at the specified location and look at the accompanying messages for details.

PRVG-09073: failed to stop the resource "{0}" using srvctl command "{1}" on node "{2}". Detailed error: {3}

Cause: An attempt to stop the identified resource failed on the indicated node. See included messages for details.

Action: Ensure that the 'srvctl' executable exists at the specified location and look at the accompanying messages for details.

PRVG-09074: failed to get the resource "{0}" status using srvctl command "{1}" on node "{2}". Detailed error: {3}

Cause: An attempt to determine the identified resource status on the indicated node. See included messages for details.

Action: Ensure that the 'srvctl' executable exists at the specified location and look at the accompanying messages for details.

PRVG-09075: failed to grant privilege "{0}" to user "{1}" on node "{2}"

Cause: The Automatically generated fix-up script to grant the operating system privilege 'dax_access' to the indicated user failed on the indicated node.

Action: Examine the accompanying messages and rectify the issues that caused the script to fail and rerun the script or insure that the indicated user has the 'dax_access' privilege on the indicated node and rerun CVU.

PRVG-09076: Failure to determine the user's home directory on node "{0}". Operation failed with error "{1}".

Cause: An attempt to retrieve the user's home directory failed on the indicated node. The accompanying messages provide detailed information about the failure.

Action: Ensure that the user's home directory is available on the indicated node, either by setting the environment variable 'HOME' appropriately, or by resolving the problem described in the accompanying messages, and retry the operation.

PRVG-09077: Unable to create the directory "{0}" on node "{1}". Operation failed with error "{2}"

Cause: An attempt by the Configuration Verification Utility (CVU) to create the indicated directory failed on the indicated node. The accompanying messages provide detailed information about the failure.

Action: Ensure that the user running fix-up has read and write permissions on the indicated directory. Resolve the problems described in the accompanying messages and retry the operation.

PRVG-09078: Failure to generate the SSH keys on node "{0}". Command "{1}" failed with error "{2}"

Cause: An attempt to generate SSH keys using the indicated command failed on the indicated node because of the indicated error.

Action: Ensure that the user running fix-up has the privileges required to generate the SSH keys on the indicated node. Resolve the problem described by the indicated error and retry the operation.

PRVG-09079: Failure to update the SSH agent with the SSH keys on node "{0}". Command "{1}" failed with error "{2}"

Cause: An attempt to update the SSH agent with the SSH keys by issuing the indicated command failed on the indicated node because of the indicated error.

Action: Ensure that the user running fix-up has the privileges required to update the SSH agent with the keys on the indicated node. Resolve the problem described by the indicated error and retry the operation.

PRVG-09080: Failure to open file "{0}" to read on node "{1}". Operation failed with error "{2}"

Cause: An attempt to read the indicated file failed on the indicated node because of the indicated error.

Action: Ensure that the file exists at the indicated path and the user running fix-up has read permissions on the indicated file. Resolve the problem described by the indicated error and retry the operation.

PRVG-09081: Failure to write to file "{0}" on node "{1}". Operation failed with error "{2}"

Cause: An attempt to write content to the indicated file failed on the indicated node because of the indicated error.

Action: Ensure that the file exists at the indicated path and the user running fix-up has write permissions on the indicated file. Resolve the problem described by the indicated error and retry the operation.

PRVG-09082: Failure to create file "{0}" on node "{1}". Operation failed with error "{2}"

Cause: An attempt to create the indicated file failed on the indicated node because of the indicated error.

Action: Ensure that the user running fix-up has write permissions on the directory in which the indicated file is being created. Resolve the problem described by the indicated error and retry the operation.

PRVG-09083: Failure to update the permissions for file "{0}" to "{1}" on node "{2}". Operation failed with error "{4}".

Cause: An attempt to update the permissions of the indicated file on the indicated node failed because of the indicated error.

Action: Ensure that the user running fix-up has the required permissions on the directory in which the indicated file exists. Resolve the problem described by the indicated error and retry the operation.

PRVG-09084: failure to connect to nodes "{0}" using SSH with specified credentials for user "{1}"

Cause: An attempt to connect to the indicated node using SSH with specified credentials for the indicated user failed. The accompanying messages provide detailed failure information.

Action: Resolve the problems described in the accompanying messages and retry the operation.

PRVG-09085: failure to set up the fix-up work directory "{0}" on node "{1}"

Cause: An attempt to set up the indicated work directory failed on the indicated node. The accompanying messages provide detailed failure information.

Action: Resolve the problems described in the accompanying messages and retry the operation.

PRVG-09086: failure to connect to node "{0}" using secure FTP with specified credentials for user "{1}"

Cause: An attempt to connect using secure FTP to the indicated node using specified credentials for the indicated user failed. The accompanying messages provide detailed failure information.

Action: Resolve the problems described in the accompanying messages and retry the operation.

PRVG-09087: Failure to rename the file "{0}" to "{1}" on node "{2}". Operation failed with error "{3}".

Cause: An attempt to rename the indicated file on the indicated node failed because of the indicated error.

Action: Ensure that the user running fix-up has write permission for the file which is being renamed. Resolve the problem described by the indicated error and retry the operation.

PRVG-09088: Failure to set up the SSH user equivalence for specified user "{0}" on nodes "{1}". Operation failed with error "{2}".

Cause: An attempt to set up SSH user equivalence for the specified user on the indicated nodes failed because of the indicated error.

Action: Resolve the problem described by the indicated error and retry the operation.

PRVG-09093: Failed to remove the RPM database files from directory "{0}" on node "{1}". The operation failed with the error : {2}

Cause: An attempt by the Configuration Verification Utility (CVU) fix up operation to remove the RPM database files from the indicated directory on the indicated node failed.

Action: Ensure that the user running CVU fixup has read and write permissions for the indicated directory on the indicated node. Resolve the problem described by the indicated error and retry the operation.

PRVG-09094: Failed to rebuild the RPM database using command "{0}" on node "{1}". The operation failed with the error : {2}

Cause: An attempt by the Configuration Verification Utility (CVU) fix up operation to rebuild the RPM database on the indicated node failed.

Action: Ensure that the user running CVU fixup has the privileges required to run the indicated command on the indicated node. Resolve the problem described by the indicated error and retry the operation.

PRVG-10005: unable to determine local host name

Cause: The host name could not be determined.

Action: Check that the host name for the local machine is valid. Look at the accompanying messages. If the problem persists, contact Oracle Support.

PRVG-10006: APPVIP type needs a VIP name. Specify a VIP name using -vip command line option.

Cause: VIP resource name was missing in the command line for APPVIP type.

Action: Specify a VIP name using -vip option.

PRVG-10008: unable to generate client ID for VIP type "{0}", cluster name "{1}", VIP resource name "{2}"

Cause: An attempt to generate client ID for the specified cluster name, VIP type and resource name failed.

Action: Ensure that the cluster name and VIP resource name do not exceed 252 characters. Make sure that VIP type is a valid VIP type. Refer to 'crsctl get clientid -help' for more information.

PRVG-10010: unable to discover DHCP server in the network listening on port "{0}" for client ID "{1}"

Cause: An attempt to discover DHCP server listening on port specified failed.

Action: Ensure that the DHCP servers exist on the network and are listening on port specified. If they are listening on a different port then specify that port using the -port option. For more information refer to help for 'crsctl discover dhcp' command.

PRVG-10011: unable to request DHCP lease for client ID "{0}" on port "{1}"

Cause: An attempt to request DHCP lease for the specified client ID on specified port failed.

Action: Ensure that there are DHCP servers with IP addresses available on the network. If other DHCP servers are available which are listening on a different port specify an alternative port using the -port option. For more information refer to help for 'crsctl request dhcp' command.

PRVG-10013: unable to release DHCP lease for client ID "{0}", on port "{1}"

Cause: An attempt to release DHCP lease for the specified client ID on specified port failed.

Action: Ensure that there are DHCP servers listening on port specified. If the DHCP server is listening on a different port specify an alternative port using -port option. For more information refer to help for 'crsctl release dhcp' command.

PRVG-10014: HOSTVIP type needs a node name. Specify a node name using -n option.

Cause: Node name was missing in the command line for HOSTVIP type.

Action: For HOSTVIP type node name needs to be specified via -n option.

PRVG-10015: VIP type "{0}" is invalid

Cause: An invalid VIP type was specified for DHCP client ID generation.

Action: Ensure that the VIP type is a valid VIP type. Refer to 'crsctl get clientid -help' for more information.

PRVG-10035: Invalid name server "{0}" used to resolve IP addresses.

Cause: An invalid name server was used or specified in /etc/resolv.conf.

Action: Ensure that the name servers in /etc/resolv.conf are valid.

PRVG-10036: value for command line parameter "{0}" is not an integer

Cause: An invalid value was specified for the specified command line parameter.

Action: Resubmit the request with an integer value.

PRVG-10039: invalid subnet "{0}" specified

Cause: An invalid IPv4 or IPv6 subnet was supplied on the command line.

Action: Supply a subnet address that conforms to IETF RFC-950 or IETF RFC-5942.

PRVG-10040: unable to get list of network interfaces

Cause: An attempt to retrieve the list of network interfaces failed.

Action: Look at the accompanying messages for more information.

PRVG-10041: subnet "{0}" is not configured on the node

Cause: The subnet specified did not match subnet of any network interface on this node.

Action: Specify a subnet that matches at least one network interface's subnet on this node.

PRVG-10044: invalid cluster name "{0}" specified

Cause: An invalid cluster name was supplied on the command line.

Action: Specify a cluster name which is at least one character long but no more than 15 characters in length. The cluster name must be alphanumeric, it cannot begin with a numeric character, and it can contain hyphen (-) characters. However, it cannot end with a hyphen (-) character.

PRVG-10045: invalid node name "{0}" specified

Cause: An invalid node name was supplied on the command line.

Action: Specify a node name which is at least one character but no more than 63 characters in length. The node name must be alphanumeric, it cannot begin with a numeric character, and it may contain hyphen (-) characters. However, it cannot end with a hyphen (-) character.

PRVG-10048: Name "{0}" was not resolved to an address of the specified type by name servers "{1}".

Cause: An attempt to look up an address of a specified type for the indicated name using the name servers shown did not yield any addresses of the requested type.

Action: Retry the request providing a different name or querying for a different IP address type.

PRVG-10090: could not retrieve ASM password file location

Cause: An attempt to execute an internal 'cvuhelper' command failed to produce any output while retrieving the ASM password file location. This is an internal error.

Action: Contact Oracle Support.

PRVG-10091: failed to retrieve the ASM password file location for ASM

Cause: An attempt to retrieve the password file location for ASM failed while verifying this file is on an ASM disk group. Possibly no ASM password file was configured.

Action: Ensure that the password file location is set for ASM. Examine the accompanying messages, resolve the problems identified, and retry the operation.

PRVG-10092: could not retrieve ASM password backup file location

Cause: An attempt to execute internal 'cvuhelper' command failed to produce any output while retrieving the ASM password backup file location. This is an internal error.

Action: Contact Oracle Support.

PRVG-10093: failed to retrieve the ASM password backup file location.

Cause: An attempt to retrieve the Oracle ASM password backup file location for Oracle ASM failed, while verifying this file on an Oracle ASM disk group. Possibly, no Oracle ASM password backup file was configured.

Action: Ensure that the password backup file location is set for ASM. Examine the accompanying messages, resolve the problems identified, and retry the operation.

PRVG-10120: Failed to access ASMLib configuration file on the node "{0}"

Cause: ASMLib configuration file '/etc/sysconfig/oracleasm-_dev_oracleasm' or link '/etc/sysconfig/oracleasm' was not found or cannot be accessed on the indicated node.

Action: Ensure that the ASMLib is correctly installed and configured, and specified file is present at the given path and that the user has the necessary access privileges for the configuration file.

PRVG-10121: Failed to retrieve ASMLib configuration value from ASMLib configuration file "{0}" on the node "{1}"

Cause: The check for ASMLib configuration was unable to retrieve the required information from specified configuration file on the indicated node.

Action: Ensure that the ASMLib is correctly installed and configured on all the nodes and that the user has the necessary access privileges for the configuration file.

PRVG-10122: ASMLib configuration value set to configuration parameter "{0}" on the node "{1}" does not match with cluster nodes

Cause: The ASMLib configuration check found inconsistent settings across cluster nodes.

Action: Ensure that the ASMLib is correctly installed and configured on all the nodes with same configuration settings and that the user has the necessary access privileges for the configuration file.

PRVG-10123: ASMLib command utility is absent at path "{0}" on the nodes "{1}"

Cause: ASMLib command utility was absent at the identified file system path on the indicated nodes.

Action: Ensure that the ASMLib is correctly configured on all the cluster nodes with same configuration settings and that the ASMLib version is the same on all cluster nodes.

PRVG-10130: Unable to determine whether file path "{0}" is shared by nodes "{1}"

Cause: An attempt to determine whether the file path is shared across nodes failed.

Action: Examine the accompanying error messages for details.

PRVG-10400: The Windows Time service "W32Time" setting "{0}" in the Windows registry key "HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\W32Time\Config" is greater than the value recommended by Oracle. [Recommended = "{1}"] on nodes: "{2}"

Cause: The indicated Windows Time service setting in the indicated registry key was greater than the value recommended by Oracle.

Action: Modify the indicated Windows Time service setting in the indicated Windows registry key to match the value recommended by Oracle.

PRVG-10401: The Windows Time service "W32Time" setting "{0}" in the Windows registry key "HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\W32Time\Config" is not found. [Recommended value = "{1}"] on nodes: "{2}"

Cause: The indicated Windows Time service setting in the indicated registry key was not found in the specified node.

Action: Add the indicated Windows Time service settings in the indicated Windows registry key with the value recommended by Oracle.

PRVG-10402: The Windows Time service "W32Time" settings in the Windows registry key "HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\W32Time\Config" do not match the values recommended by Oracle.

Cause: The specified Windows Time service settings in the specified registry key were not found or do not match the value recommended by Oracle.

Action: Examine the accompanying error messages for details.

PRVG-10403: More than one time synchronization service was running on nodes of the cluster. Only one should be active on all the nodes at any given time.

Cause: A check to determine whether the time synchronization services were running on nodes of the cluster found that more than one was active.

Action: The accompanying messages will list the time synchronization service names along with the nodes on which they are running. Ensure that only one time synchronization service is active on all nodes of the cluster at any given time by shutting down others.

PRVG-10404: The network time synchronization service with the name "{0}" is not running on nodes: "{1}"

Cause: A check to determine whether the indicated network time synchronization service was running on nodes of the cluster found that it was not running on the indicated nodes.

Action: Ensure that the identified network time synchronization service is running and correctly configured on the indicated nodes. Only one network time synchronization service can be running on nodes of the cluster at any given time.

PRVG-10405: Service check cannot be performed for service "{0}" on nodes: "{1}"

Cause: An error was encountered while trying to determine if the identified service was running on the specified nodes.

Action: Examine the accompanying error messages for details, rectify issues identified and retry.

PRVG-10408: A verified network time synchronization service was not running on all of the cluster nodes. A single verified network time synchronization service should be active on all the nodes at any given time.

Cause: A check to determine whether the network time synchronization services were running on nodes of the cluster found that none was active on any of the cluster nodes.

Action: The accompanying messages list the network time synchronization service names along with the nodes on which they are not running. Examine the accompanying error messages and respond accordingly.

PRVG-10409: The network time synchronization service "{0}" is not installed on nodes: "{1}"

Cause: A check to determine whether the indicated network time synchronization service was running on nodes of the cluster found that that service was not installed on the indicated nodes.

Action: Ensure that the identified network time synchronization service is installed, running and correctly configured on the specified nodes. Only one network time synchronization service can be running on nodes of the cluster at any given time.

PRVG-10430: failed to retrieve the default gateway address on node "{0}".

Cause: The default gateway address was not configured on the specified node.

Action: Ensure that the default gateway address is configured on the specified node.

PRVG-10450: The device specified by path "{0}" is a block device, which is not supported on the current platform.

Cause: An attempt to obtain storage information for a device identified by the indicated path was rejected because the path identified a block device and only character devices were supported on the current platform.

Action: To obtain storage information for the indicated device, retry the request specifying the character device path.

PRVG-10451: failed to retrieve the NFS mount point information for the mount point "{1}" due to timeout after "{2}" seconds

Cause: The cluster verification operation failed because an attempt to retrieve the file system information for the NFS storage at the indicated mount point timed out.

Action: Ensure that the NFS server for the indicated mount point is running or unmount the associated file system.

PRVG-10460: User "{0}" does not belong to group "{1}" selected for privileges "{2}" on node "{3}".

Cause: While performing prerequisite checks, Configuration Verification Utility (CVU) checked group membership for the indicated user and found that the indicated user was not a member of the indicated group selected for the indicated privileges on the indicated node.

Action: Make the user a member of the group on the indicated node.

PRVG-10461: Group "{0}" selected for privileges "{1}" does not exist on node "{2}".

Cause: While performing prerequisite checks, Configuration Verification Utility (CVU) checked for the existence of the indicated group and found that the indicated group selected for the indicated privileges did not exist on the indicated node.

Action: Create the group on the indicated node.

PRVG-10464: The user "{0}" does not have sufficient privileges to access the Oracle Automatic Storage Management (Oracle ASM) devices on nodes "{1}".

Cause: While performing database prerequisite checks, the Cluster Verification Utility (CVU) checked for the granted privileges of the indicated user and found that the indicated user was not a member of the OSDBA group configured in the Grid Infrastructure home and therefore did not have privileges to access the Oracle Automatic Storage Management (Oracle ASM) devices on the indicated nodes.

Action: Examine the accompanying error messages, add the indicated user to the group with OSDBA privileges in the indicated nodes and retry.

PRVG-10466: Failed to determine cluster node roles. Verification will proceed considering nodes "{0}" as hub nodes.

Cause: An attempt to determine cluster node roles failed because CRS was not found running on the local node. Since the verification checks were carried out assuming the indicated nodes were hub nodes, the final results were valid only if the nodes were, in fact, Hub nodes.

Action: To ensure that all checks are done correctly, ensure that CRS is running on the local node and retry.

PRVG-10467: The default Oracle Inventory group could not be determined.

Cause: An attempted Configuration Verification Utility (CVU) validation check failed because either the Oracle Inventory group could not be read from the inventory configuration file or the primary group could not be retrieved. This occurred because either the file did not exist, the property was not found, or the primary group was not found in the /etc/group file. Detailed failure information is provided in the accompanying error messages.

Action: Ensure that the inventory file exists and contains the Oracle Inventory property. On Linux and UNIX machines, verify that the primary group is found in the file /etc/group.

PRVG-10468: unable to read the configured Oracle Inventory group

Cause: Reading from the inventory configuration file failed. Detailed failure information, including the attempted read location, is provided in the accompanying error messages.

Action: Ensure that the inventory location is correct and that it can be read.

PRVG-10472: The CLASS/TYPE attribute configured on the PUBLIC network interfaces "{0}" is set to an unsupported value 'inherited' on nodes "{1}".

Cause: While performing Oracle Grid Infrastructure prerequisite checks, the Configuration Verification Utility (CVU) checked for the network interface attribute CLASS/TYPE configured on the indicated PUBLIC network interfaces and found that the indicated attribute is set to an unsupported value 'inherited' on the indicated nodes.

Action: Configure the indicated network interfaces with the CLASS/TYPE attribute set to 'static' on the indicated nodes and retry.

PRVG-10487: Storage "{0}" is not shared on all nodes.

Cause: The indicated storage was not shared across the nodes.

Action: Review additional error messages for details.

PRVG-10488: Error attempting to obtain the OSASM group from CRS home "{0}"

Cause: An attempt to obtain the OSASM group failed. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying error message for details, resolve the problems identified and retry.

PRVG-10489: Database user OS group is recommended to be different from the OSASM group "{0}"

Cause: The OSASM group was found to be the same as the current user OS group. It is recommended that SYSDBA and SYSASM privileges be separate.

Action: Ensure that the database user OS group is not the same as the OSASM group.

PRVG-10490: The ASM Filter Driver is not available.

Cause: An attempt to resolve a label to a disk failed because the ASM Filter Driver (AFD) was not available. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages for details, resolve the problems identified and retry.

PRVG-10491: The AFD did not recognize the disk label "{0}".

Cause: An attempt to find a disk with the specified label was rejected because the ASM Filter Driver (AFD) did not recognize the label.

Action: Either 1) Retry the operation specifying a disk that is managed by the AFD. The command 'afdtool -getdevlist "*" can be used to list the labels on all AFD managed disks. or 2) Relabel the disk using the command 'asmcmd afd_label label disk' and retry the operation.

PRVG-10496: invalid or missing root element in the XML file "{0}"

Cause: File validity checking determined that the indicated XML file was not valid because the root element was invalid or missing.

Action: Ensure that the root element exists in the indicated XML file.

PRVG-10497: zero or multiple({0}) system elements specified in XML file "{1}"

Cause: File validity checking determined that the indicated XML file was not valid because it contained zero or multiple system elements.

Action: Ensure that only one system element exists in the indicated XML file.

PRVG-10501: Check of hostname length could not be performed on node "{0}"

Cause: The length of the host name could not be retrieved on the node indicated.

Action: Ensure that nodes that will run Oracle database releases prior to 11gR2 have an unqualified host name less than or equal to 8 characters.

PRVG-10502: The length of the host name was greater than 8 characters on node "{0}"

Cause: Length of the hostname should be less than or equal to 8 characters or pre-11gR2 Database releases may not run properly.

Action: Rename the host to have a length less than or equal to 8 characters.

PRVG-10507: CVU found an invalid host name "{0}" which resolves to a loopback address on node "{1}"

Cause: The Configuration Verification Utility (CVU) determined that the indicated host name resolved to a loopback address on the indicated node.

Action: Ensure that the indicated host name does not resolve to a loopback address and retry the CVU operation.

PRVG-10510: User "{0}" is not a domain user, domain name absent

Cause: Could not identify domain name of current user.

Action: Log in to the OS as a domain user.

PRVG-10511: failed to retrieve the host name using command "{0}" on node "{1}"

Cause: An error occurred while retrieving the host name using the indicated command on the indicated node. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRVG-10520: ASM disk label "{0}" did not resolve to any device path on node "{1}"

Cause: ASM disk label could not be resolved to any device on specified node.

Action: Ensure that the specified ASM label is correctly stamped on a shared device on the node specified. To verify the label to disk mapping use tools 'Asmtoolg' on Windows operating system platforms and 'oracleasm' on the Linux operating system platform.

PRVG-10521: Failed to resolve ASM disk label "{0}" to device path on node "{1}"

Cause: Failed to resolve ASM disk label to any device on specified node.

Action: Ensure that the specified ASM label is correctly stamped on a shared device on the node specified and that the labeled devices are accessible to current user. To verify the label to disk mapping use tools 'Asmtoolg' on Windows operating system platforms and 'oracleasm' on the Linux operating system platform.

PRVG-10523: Disk "{0}" is not identified by ASMLib.

Cause: The indicated disk was not identified by ASMLib.

Action: Ensure that the ASMLib is correctly configured on all the cluster nodes and that the indicated disk is listed by 'oracleasm' on the Linux operating system platform.

PRVG-10524: failed to determine whether disk "{0}" is managed by ASMLib

Cause: An attempt to validate whether the indicated disk was managed by ASMLib failed.

Action: Ensure that the ASMLib is correctly configured on all the cluster nodes and that the indicated disk is listed by 'oracleasm' on the Linux operating system platform.

PRVG-10530: Internal error: {0}

Cause: An internal error occurred. The included value is an internal identifier.

Action: Oracle internal error. Contact Oracle Support.

PRVG-10540: OCR location "{0}" is not located on Oracle ASM storage

Cause: An attempt was made to add Oracle Cluster Repository (OCR) storage on a device that is not managed by Oracle Automatic Storage Management (Oracle ASM). All OCR storage must be located on Oracle ASM storage.

Action: Ensure that all OCR storage is located on Oracle ASM and retry the operation.

PRVG-10541: Voting disk "{0}" is not located on Oracle ASM storage

Cause: An attempt was made to add voting disk storage on a device that is not managed by Oracle Automatic Storage Management (Oracle ASM). All voting disk storage must be located on Oracle ASM.

Action: Ensure that all voting disk storage is located on Oracle ASM and retry the operation.

PRVG-10605: Release version [{0}] is consistent across nodes but does not match the active version [{1}].

Cause: During pre-upgrade validation, the Clusterware release version was consistent but did not match the active version. Usually this results from a failed upgrade.

Action: A forced upgrade may be required.

PRVG-10606: Release versions [{0}] are inconsistent across nodes.

Cause: Inconsistent release versions were found on two or more nodes. This might be caused by an upgrade in progress.

Action: Ensure that any pending upgrade is complete.

PRVG-10705: Database version "{0}" is not compatible with the Clusterware version "{1}".

Cause: Clusterware version has to be equal to or greater than the database version.

Action: Upgrade Clusterware to a higher version.

PRVG-10952: Check for consistency of root users primary group failed on the following nodes: "{0}"

Cause: The primary group and group id of the root user was not consistent across all the nodes.

Action: Ensure that the root user's primary group name and ID exists on all the nodes and that the root user is a member of this group.

PRVG-10953: Check for consistency of root users primary group had a command failure on the following nodes: "{0}"

Cause: An OS command issued while checking user group information failed unexpectedly.

Action: Contact Oracle Support.

PRVG-10958: Check for consistency of root users primary group "{0}" on node: "{1}" failed. The group membership of root user for group "{2}" does not exist on the following nodes: "{3}"

Cause: The indicated primary group and group id of the root user was not found in the existing membership groups of the root users on the identified nodes.

Action: Ensure that the indicated primary group name and ID of the root user exists on all the cluster nodes, and that the root user has membership in the indicated group on each of the cluster nodes.

PRVG-10959: Check for consistency of root users primary group had a command failure on the following node: "{0}"

Cause: An OS command issued while checking user group information failed unexpectedly.

Action: Contact Oracle Support.

PRVG-11000: Invalid usage of CVU internal function

Cause: This is an internal error.

Action: Please contact Oracle Support.

PRVG-11001: Failed to execute command "{0}" on node "{1}"

Cause: An error occurred while executing the command.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-11003: SCAN is not configured

Cause: An attempt to retrieve SCAN failed.

Action: Ensure that SCAN is properly defined in this cluster. Use 'srvctl add scan' to add SCAN.

PRVG-11004: SCAN listener is not configured

Cause: An attempt to retrieve SCAN listener configuration failed.

Action: Ensure that SCAN is properly defined in this cluster. Use 'srvctl add scan_listener' to add SCAN listener.

PRVG-11005: Database "{0}" is not defined in this cluster

Cause: An attempt to retrieve cluster-specific metadata about the database failed.

Action: Ensure that the database name was specified correctly. Use 'srvctl add database' to enable Clusterware support for the database.

PRVG-11006: VIPs are not defined for the nodes on which database "{0}" is running

Cause: An attempt to retrieve the VIP on which the indicated database is running failed.

Action: Ensure that VIPs are properly defined in this cluster. Use 'srvctl add vip' to add VIP.

PRVG-11007: No instances are defined for database "{0}"

Cause: An attempt to retrieve database instances for the database failed.

Action: Ensure that at least one database instance is defined. Use 'srvctl add instance' to add database instance.

PRVG-11008: An internal command "cvuhelper" returned "{0}" while fetching the node list for database unique name "{1}".

Cause: An attempt to execute an internal cvuhelper command failed.

Action: Examine the accompanying error messages for details. Address issues found and retry the operation.

PRVG-11009: An internal command "cvuhelper" exited unexpectedly while fetching the node list for database "{0}".

Cause: An attempt to execute an internal cvuhelper command exited unexpectedly.

Action: Examine the accompanying error messages for details. Address issues found and retry the operation.

PRVG-11010: An internal command 'cvuhelper' returned "{0}" while fetching cluster databases.

Cause: An attempt to execute an internal cvuhelper command failed.

Action: Examine the accompanying error messages for details. Address issues found and retry the operation.

PRVG-11011: An internal command 'cvuhelper' exited unexpectedly while fetching cluster databases.

Cause: An attempt to execute an internal cvuhelper command failed.

Action: Examine the accompanying error messages for details. Address issues found and retry the operation.

PRVG-11049: Interface "{0}" does not exist on nodes "{1}"

Cause: The interface was classified as cluster interconnect or public but the interface was not found on the nodes.

Action: Ensure that the same network interface is defined on each node of Cluster.

PRVG-11050: No matching interfaces "{0}" for subnet "{1}" on nodes "{2}"

Cause: The interfaces classified as cluster interconnect or public were not found on the specified subnet on the nodes.

Action: Ensure that at least one interface with specified name is on the specified subnet on each node of Cluster.

PRVG-11051: network list "{0}" is in invalid format

Cause: The processing of a network list argument encountered a syntax error.

Action: Network list is a comma separated list of networks. Each network can be specified in the format "if_name[:subnet_id[:subnet_mask][:public|cluster_interconnect]]. if_name can have "*" as in "eth*" to match interfaces like eth1, eth02, etc. Provide network list in valid format.

PRVG-11052: Interface name is not enclosed within double quotes

Cause: Interface name in the interface list was not enclosed within double quotes.

Action: Provide interface name within double quotes.

PRVG-11053: Invalid subnet type

Cause: Invalid subnet type was specified in interface list.

Action: Provide public or cluster_interconnect as subnet type.

PRVG-11054: Interface "{0}" not found on this node

Cause: Failed to locate the interface on this node.

Action: Provide interface names configured on the node on which CVU is running.

PRVG-11055: Interfaces configured with subnet "{0}" have multiple subnet masks.

Cause: Configuration Verification Utility (CVU) check determined that interfaces of some nodes were configured with different subnet masks for the same subnet number.

Action: This message is accompanied by another message that lists the subnet masks information on the nodes. Ensure that all of the interfaces within the indicated subnet have the same subnet mask on all of the nodes and retry the node connectivity check.

PRVG-11056: Subnet "{0}" has different subnet masks "{1}" on nodes "{2}".

Cause: Configuration Verification Utility (CVU) check determined that interfaces on the indicated ` subnet did not have the same subnet mask, which would result in routing conflicts.

Action: Ensure that all of the interfaces on the indicated subnet have the same subnet mask configured on all of the nodes and retry the node connectivity check.

PRVG-11057: Checking subnet mask consistency...

Cause: NO

Action: n/a

PRVG-11058: Subnet mask consistency check passed.

Cause: NO

Action: n/a

PRVG-11059: Subnet mask consistency check passed for subnet "{0}".

Cause: NO

Action: n/a

PRVG-11060: Subnet mask consistency check failed.

Cause: NO

Action: n/a

PRVG-11061: Different MTU values used across cluster interconnect network interfaces "{0}" on subnets "{1}" with MTU values "{2}" on the node "{3}". The most common MTU value is "{4}".

Cause: Configuration Verification Utility (CVU) connectivity checking determined that the indicated interfaces on the indicated subnets were configured with different maximum transmission units (MTU) values.

Action: Configure the indicated interfaces on the indicated subnets to have the same MTU value and retry the node connectivity check.

PRVG-11065: Node connectivity checks will not be performed on network interfaces "{0}" on node "{1}" because they were down.

Cause: The indicated network interfaces on the indicated nodes were not considered for node connectivity checks because they were down.

Action: If the indicated interfaces are to be used by the cluster bring them up and repeat this test.

PRVG-11067: TCP connectivity from node "{0}": "{1}" to node "{2}": "{3}" failed.

Cause: Errors occurred while attempting to establish Transmission Control Protocol (TCP) connectivity between the two identified interfaces.

Action: Ensure that there are no firewalls blocking TCP operations and no process monitors running that can interfere with the program's network operations. In case of Oracle Linux platform, ensure that the 'iptables' utility program if enabled does not block the TCP communication across the identified interfaces between the indicated nodes. Refer to MOS note 1357657.1 to fix the issue.

PRVG-11068: Highly Available IP (HAIP) is enabled on the nodes "{0}".

Cause: The Configuration Verification Utility (CVU) found that the HAIP was enabled on the indicated nodes. HAIP is not supported on Exadata for Oracle Clusterware 18c release onwards.

Action: Ensure that the HAIP is disabled using 'crsctl modify resource ora.cluster_interconnect.haip -attr "ENABLED=0" -init' command and no instances of ASM and DB are using the HAIP addresses by updating the 'cluster_interconnects' parameter with private IP addresses using SQL before upgrade. Refer to MOS note 2524069.1 for complete steps to disable and remove the HAIP if you are upgrading from Oracle Clusterware 12c release 2 (12.2).

PRVG-11069: IP address "{0}" of network interface "{1}" on the node "{2}" would conflict with HAIP usage.

Cause: One or more network interfaces have IP addresses in the range (169.254.*.*), the range used by HAIP which can create routing conflicts.

Action: Make sure there are no IP addresses in the range (169.254.*.*) on any network interfaces.

PRVG-11070: IP address "{0}" of non-private network interface "{1}" on the node "{2}" would conflict with HAIP usage.

Cause: One or more non-private network interfaces have IP addresses in the range (169.254.*.*), the range used by HAIP which can create routing conflicts.

Action: Make sure there are no IP addresses in the range (169.254.*.*) on any non-private network interfaces.

PRVG-11071: IP address "{0}" of private network interface "{1}" on the node "{2}" with subnet mask "{3}" would conflict with HAIP usage.

Cause: One or more private network interfaces have IP addresses in the range (169.254.*.*) and subnet mask which is not 16-18 bits, the range used by HAIP which can create routing conflicts

Action: Make sure there are no IP addresses in the range (169.254.*.*) with subnet mask which is not 16-18 bits on any private network interfaces.

PRVG-11072: Private network Interface "{0}" on node "{1}" with IP address "{2}" is not Infiniband.

Cause: One or more private network interfaces on the system were not Infiniband. In an Exadata environment, if private interfaces are not Infiniband, connection failures will result.

Action: Make sure all the private interfaces in an Exadata environment are Infiniband type.

PRVG-11073: Subnet on interface "{0}" of node "{1}" is overlapping with the subnet on interface "{2}". IP address range ["{3}"-"{4}"] is overlapping with IP address range ["{5}"-"{6}"].

Cause: IP ranges were overlapping on one or more subnets. This would result in routing failures.

Action: Ensure that subnets do not have overlapping IP address ranges.

PRVG-11074: Private network interface "{0}" on node "{1}" with IP address "{2}" does not have MONITOR option set.

Cause: One or more private network interfaces on the system did not have the MONITOR option in the interface information. This may lead to network failures if the interfaces are disabled or disconnected.

Action: Make sure all the private interfaces have the MONITOR option set. To enable the MONITOR option for a particular interface, run the following command as the root user: `ifconfig interfacename MONITOR`

PRVG-11076: Found deprecated interfaces "{0}" with corresponding IP addresses "{1}" on the following nodes: "{2}". These interfaces will be skipped for node connectivity checks.

Cause: Configuration Verification Utility (CVU) connectivity checking determined that there were interfaces which had the DEPRECATED flag set in the interface information. These deprecated interfaces will not be considered for node connectivity checks.

Action: If the indicated interfaces need to be considered for node connectivity checks, use the `ifconfig` (`ipconfig` for Windows) command to unset the DEPRECATED flag for these interfaces and retry the node connectivity checks.

PRVG-11077: Different MTU values used across the network for interfaces "{0}" on subnets "{1}" with MTU values "{2}" on the node "{3}". The most common MTU value is "{4}".

Cause: Configuration Verification Utility (CVU) connectivity checking determined that there were different maximum transmission unit (MTU) values found on non-private or unclassified interfaces on the indicated subnets.

Action: Configure the indicated interfaces on the indicated subnets to have the same MTU value and retry the connectivity check.

PRVG-11078: node connectivity failed for subnet "{0}"

Cause: Node connectivity checks for the specified subnet failed.

Action: Review the accompanying messages for details of the cause of failure.

PRVG-11079: Subnet value "{1}" of interface "{2}" is invalid on node "{3}".

Cause: Configuration Verification Utility (CVU) connectivity checking determined that the subnet attribute had an invalid value on the indicated node for the indicated interface.

Action: Ensure that the indicated network interface has a valid subnet value for the indicated interface and retry the node connectivity checks.

PRVG-11080: empty or null value in the interface field on node "{1}"

Cause: An internal error occurred.

Action: Contact Oracle Support.

PRVG-11081: unable to find the matching networks for the interface "{0}" and the subnet "{1}" on nodes "{2}"

Cause: Configuration Verification Utility (CVU) connectivity checking determined that the interface-subnet combination was not found on the indicated nodes.

Action: Ensure that the interface-subnet combination is installed, is online on the indicated nodes, and retry the node connectivity checks.

PRVG-11086: could not find any network interface having status as UP on the nodes "{0}"

Cause: Configuration Verification Utility (CVU) connectivity checking determined that the indicated nodes did not have any network interface with status UP

Action: Ensure that there is at least one interface with status UP on the indicated node and retry the node connectivity check.

PRVG-11087: Invalid subnet "{0}" was specified in the interconnect list for the interface "{1}". This interface will not be included in further checks.

Cause: Configuration Verification Utility (CVU) connectivity checking determined that an invalid IPv4 or IPv6 subnet was supplied on the command line or in the CVU variable.

Action: If a specific subnet needs to be considered, supply a subnet address that conforms to IETF RFC-950 or IETF RFC-5942 and retry the operation.

PRVG-11088: Interface "{0}" has invalid value "{1}" for the network attribute "{2}" on the node "{3}".

Cause: An internal error occurred while performing the node connectivity checks.

Action: This is an internal error. Contact Oracle Support.

PRVG-11089: Could not find a valid network entry in the interconnect list "{0}".

Cause: Configuration Verification Utility (CVU) connectivity checking determined that the specified interconnect list did not have a valid network to be considered for the connectivity checks. This could be due to invalid values supplied for one or more interface names, subnets or network types in the interconnect list.

Action: If one or more specific networks need to be considered, supply valid values for the interface name, optional subnet value and optional network type for each network and retry the operation.

PRVG-11090: returned network interface list empty on nodes "{0}"

Cause: Configuration Verification Utility (CVU) node connectivity check determined that network interfaces discovery returned an empty list. This may indicate a configuration problem or an internal error with the remote check.

Action: Verify the operational status of the network interfaces on the indicated nodes, configure the network interfaces according to the documentation and retry the node connectivity check. If the configuration has been validated on the indicated nodes, and the problem persists, contact Oracle Support.

PRVG-11091: Copying directory "{0}" contents from the local node to the remote nodes "{1}" failed.

Cause: Configuration Verification Utility (CVU) framework setup checking determined that the remote execution files from the local node could not be copied to the indicated directory on the indicated remote nodes.

Action: Ensure that the OS user executing the CVU check has write permissions for the indicated directory on the indicated remote nodes and retry the operation.

PRVG-11092: Deleting directory "{0}" contents failed on nodes "{1}".

Cause: Configuration Verification Utility (CVU) framework setup checking determined that the remote execution files in the indicated directory on the indicated nodes could not be deleted.

Action: Ensure that the OS user executing the CVU check has delete permissions for the files in the indicated directory on the indicated nodes and retry the operation.

PRVG-11093: The file "{0}" from the node "{1}" could not be copied to "{2}" on the local node.

Cause: Configuration Verification Utility (CVU) framework node connectivity checking determined that the indicated ping command output file from the indicated node could not be copied to the local node for processing. The accompanying messages provide detailed information about the failure.

Action: Examine the accompanying messages, fix the issues identified and retry the operation.

PRVG-11094: Ping connectivity check from the source IP address "{0}" to the destination IP address "{1}" failed.

Cause: Configuration Verification Utility (CVU) framework node connectivity checking determined that ping connectivity between the indicated source IP address and the destination IP address did not exist.

Action: Ensure that the IP addresses are up and that a valid route exists between them. Examine the accompanying messages, resolve the issues, and retry the operation.

PRVG-11095: The TCP system call "{0}" failed with error "{1}" while executing exectask on node "{2}"

Cause: Configuration Verification Utility (CVU) framework node connectivity checking encountered the indicated error while trying to run the indicated Transmission Control Protocol (TCP) connectivity system call on the indicated node.

Action: Examine the accompanying error message for details, fix the error indicated and then retry the operation. Also, ensure that the firewall rules do not affect the cluster interconnect interfaces, protocols or network address space. On the Linux platform, the iptables or firewalld configuration may interfere with the network connections.

PRVG-11096: Error copying file "{0}" from local node to the directory "{1}" on the remote node "{2}"

Cause: The specified file could not be copied from the local node to the specified directory on the specified remote node. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages for details, fix the error indicated and then retry the operation.

PRVG-11097: unable to reach nodes "{0}" from the local node

Cause: During a verification operation to check that specified nodes are reachable from the local node using the 'ping' command, the verification failed to reach any of the nodes indicated in the message. Either the addresses for those nodes did not resolve correctly or they were unreachable.

Action: Ensure that the indicated nodes are accessible with the 'ping' command. If the host names do not resolve correctly, ensure that the domain naming services cache has been purged using the command '/etc/rc.d/init.d/nscd restart' on Linux and UNIX machines and the command 'ipconfig /flushdns' on Windows operating system machines.

PRVG-11098: Oracle ACFS is configured and Highly Available IP (HAIP) is enabled on the nodes "{0}"

Cause: The Configuration Verification Utility (CVU) found that the HAIP was enabled on the indicated nodes. HAIP is not supported on Exadata for Oracle Clusterware 18c and later.

Action: Oracle ACFS is dependent on HAIP resource. HAIP cannot be disabled during upgrade and should be disabled after successful Oracle Clusterware upgrade operation. After successful Oracle Clusterware upgrade operation, ensure that no instances of Oracle Automatic Storage Management (Oracle ASM) and the databases are using the HAIP addresses by updating the 'cluster_interconnects' parameter with private IP addresses using SQL and disable HAIP using the 'crsctl modify resource ora.cluster_interconnect.haip -attr "ENABLED=0" -init' command on all of the indicated nodes. Refer to MOS note 2524069.1 for additional details.

PRVG-11101: The disk free space could not be determined for file system path "{0}" on nodes "{1}"

Cause: An attempt to determine the disk space for the indicated file system path failed on the nodes indicated. The accompanying messages provide detailed failure information.

Action: Verify that the path indicated exists on the node indicated. Examine the accompanying messages, resolve the issues, and retry the operation.

PRVG-11103: The Free Space Component check failed on node(s) "{0}"

Cause: The free space in the CRS home directory is below the threshold.

Action: Free up space in this directory to avoid disk free space issues.

PRVG-11104: The disk free space for file system path "{0}" on node "{1}" is below "{2}" percent of total disk space. The required free space is "{3}", the available free space is "{4}" and the total disk size is "{5}"

Cause: The disk free space in the specified file system was below the specified minimum threshold as a percentage of total disk space on the node specified.

Action: Ensure that the specified file system has at least the specified required free space.

PRVG-11105: The disk free space for file system path "{0}" on node "{1}" is below required threshold. The required free space is "{2}" and the available free space is "{3}".

Cause: The disk free space in the specified file system was below the specified required minimum threshold on the node specified.

Action: Ensure that the specified file system has at least the required free space.

PRVG-11110: The specified database file location "{0}" did not have read and write access to user "{1}" on node "{2}"

Cause: The database file location did not have read and write permissions to the user on some nodes.

Action: If the current user intends to be the Oracle installation owner, ensure that the user has read and write access to the database file location

PRVG-11111: Path "{0}" is not shared by at least {1} node.

Cause: The path was not shared by sufficient nodes to meet the target hub size.

Action: Select a different path.

PRVG-11112: Path "{0}" is not shared by the following hub nodes: {1}

Cause: Specified hub nodes do not share the path.

Action: Select a path that is shared by all of the hub nodes.

PRVG-11115: Following error occurred while establishing connection to database "{0}"

Cause: An attempt to connect to database failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-11123: AUDIT_FILE_DEST location "{0}" is shared among instances "{1}" of database "{2}"

Cause: Two or more instances of the database were found to be using the same AUDIT_FILE_DEST location on shared storage.

Action: Ensure that AUDIT_FILE_DEST location is not shared among instances.

PRVG-11125: Following error occurred during shared AUDIT_FILE_DEST location check

Cause: An error occurred while performing shared AUDIT_FILE_DEST locations check.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-11126: Oracle home from which database "{0}" is running could not be determined.

Cause: Checks on the directory location pointed to by database initialization parameter 'AUDIT_FILE_DEST' failed to determine the Oracle home from which the specified database was running.

Action: Examine the accompanying messages for details on the cause of failure, address the issues described and retry.

PRVG-11127: Skipping AUDIT_FILE_DEST location check for database "{0}" because software owner "{1}" of the associated Oracle home "{2}" is not the same as current OS user "{3}".

Cause: Checks for the directory location pointed to by database initialization parameter 'AUDIT_FILE_DEST', for the specified database, could not be performed because the software owner of the associated Oracle home was not same as the current operating system user.

Action: Run this check as the specified software owner.

PRVG-11129: Check of subnet "{0}" for multicast communication with multicast group "{1}" failed.

Cause: The Configuration Verification Utility (CVU) determined that the interfaces on the indicated subnet were not able to communicate using the indicated multicast group.

Action: Ensure that multicast is enabled and that a network path exists between the interfaces of the indicated subnet. Also, ensure that the firewall rules do not affect the cluster interconnect interfaces, protocols or network address space. On the Linux platform, the iptables or firewalld configuration may interfere with the network connections.

PRVG-11134: Interface "{0}" on node "{1}" is not able to communicate with interface "{2}" on node "{3}"

Cause: The specified interfaces were not able to communicate using a multicast address.

Action: Ensure that multicast is enabled on the specified interfaces and network path exists between the interfaces.

PRVG-11137: Following error occurred during multicast check

Cause: An error occurred while performing multicast check.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-11138: Interface "{0}" on node "{1}" is not able to communicate with interface "{2}" on node "{3}" over multicast group "{4}"

Cause: The specified interfaces were not able to communicate using a multicast address.

Action: Ensure that multicast is enabled on the specified interfaces and that a network path exists between the interfaces. Also, ensure that the firewall rules do not affect the cluster interconnect interfaces, protocols or network address space. On the Linux platform, the iptables or firewalld configuration may interfere with the network connections.

PRVG-11139: Specified subnets "{0}" could not be found in the cluster network interface configured subnets "{1}"

Cause: The subnets provided in the -network option were not configured in the cluster network interfaces.

Action: Ensure that the subnets specified in the -network option are configured in the cluster and are up and running.

PRVG-11143: The following error occurred during stale database schema statistics check.

Cause: An error occurred while performing database stale schema check.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-11144: Schema objects "{0}" have stale statistics in the database "{1}"

Cause: The specified schema objects were found to have stale statistics in the database.

Action: Refer to MOS note 560336.1 at oracle support to fix the issue.

PRVG-11170: Skipping DHCP check for cluster which has only IPv6 interfaces

Cause: All the public interfaces in a cluster were IPv6.

Action: IPv6 addresses are automatically generated, hence the check is not required.

PRVG-11171: DHCP check failed

Cause: An error occurred while reading network interface information.

Action: n/a

PRVG-11214: An internal command "cvuhelper" exited unexpectedly while fetching the information from Oracle Cluster Registry.

Cause: An attempt to execute an internal cvuhelper command exited unexpectedly.

Action: Examine the accompanying error messages for details. Address issues found and retry the operation.

PRVG-11250: The check "{0}" was not performed because it needs 'root' user privileges.

Cause: In running the pre-requisite test suite for a planned system management operation, the indicated check was not performed because it requires root user privileges, and the root user credentials had not been supplied.

Action: To include the check, reissue the request providing the required credentials for the root user.

PRVG-11300: Parameter "{0}" value is not valid

Cause: This is an internal error. The value for the specified parameter is null or empty string.

Action: Contact Oracle Support.

PRVG-11301: The 'root' user "{0}" password is not valid on the following nodes: {1}.

Cause: An attempt to validate the specified superuser password failed.

Action: Make sure that the 'root' user password specified is correct and valid. Make sure that the password is same across all nodes of the cluster.

PRVG-11302: 'sudo' command does not exist at location "{0}" on nodes "{1}"

Cause: An attempt to verify that the specified user has permission to run sudo command from specified path on specified nodes failed.

Action: Make sure that the specified path to sudo command exists on all nodes. Make sure that the permission to read and execute exists for current user.

PRVG-11303: Commands could not be executed as 'root' using 'sudo' on nodes: {0}.

Cause: An attempt to run commands as 'root' using 'sudo' on specified nodes failed.

Action: Make sure that the 'sudo' command exists on all nodes. Make sure that 'id' command can be executed using 'sudo'.

PRVG-11304: Executing commands as root not permitted

Cause: An attempt was made to execute a command as 'root' user when root execution method and credentials were not specified. This is an internal error.

Action: Contact Oracle Support.

PRVG-11305: Commands could not be executed as user 'root' on nodes: {0}.

Cause: An attempt to run commands as user 'root' on the indicated nodes failed.

Action: Look at the accompanying error messages for details and make sure that: - The command exists on the nodes specified. - The specified command has execute permission on the node specified. - The 'root' user password specified is correct.

PRVG-11306: 'NOPASSWD' option is enabled in sudo configuration on nodes "{0}".

Cause: An attempt to use sudo for root automation was rejected because sudo was configured for 'NOPASSWD' option on the indicated nodes. The 'NOPASSWD' option was not supported.

Action: Remove the 'NOPASSWD' option from the sudo configuration on the indicated nodes and retry the operation.

PRVG-11310: "{0}" nodes were not found in the cluster

Cause: Zero nodes of specified type were found in the cluster.

Action: If this message is accompanied by error messages, respond according to those messages.

PRVG-11314: The operating system groups for the following databases are not consistent across all nodes: {0}

Cause: An operating system group was not found or did not have the same name on all nodes where the corresponding database is present.

Action: Ensure that the same operating system groups exist and have the same name on all nodes where the corresponding database is present.

PRVG-11318: The following error occurred during database operating system groups check. "{0}"

Cause: An error occurred while performing database operating system groups check.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-11320: The database operating system group {0} is inconsistent across nodes {1} for database {2}.

Cause: The specified operating system group was not found or did not have the same group name on all the identified nodes where the database is present.

Action: Ensure that the operating system group exist and have the same group name on all the nodes where the database is present, and invoke the Configuration Verification Utility post-database-install check to ensure the configuration is correct.

PRVG-11321: One of the elements of parameter "{0}" value is not valid

Cause: This is an internal error. The value for one of the array elements for the specified parameter is null or empty string.

Action: Contact Oracle Support.

PRVG-11322: One or more node names "{0}" contain one or more of the following invalid characters "{1}"

Cause: One or more of the supplied node names or the local host name contained invalid characters.

Action: Ensure that all the node names supplied and the local host name contain valid characters. Only alphanumeric characters and hyphens are allowed as per RFC-952.

PRVG-11330: Database operating system groups consistency check failed for the databases "{0}" on nodes "{1}"

Cause: One or more operating system groups were not found or did not have the same group name on all the identified nodes where the database is present.

Action: Ensure that the operating system groups exist and have the same group name on all the nodes where the database is present, and invoke the Configuration Verification Utility post-database-install check to ensure the configuration is correct.

PRVG-11352: Interface "{0}" on node "{1}" is not able to communicate with interface "{2}" on node "{3}" with broadcast address "{4}"

Cause: The specified interfaces were not able to communicate using the broadcast address.

Action: Ensure that broadcast is enabled on the specified interfaces and that the network path allows broadcast. Also, ensure that the firewall rules do not affect the cluster interconnect interfaces, protocols or network address space. On the Linux platform, the iptables or firewalld configuration may interfere with the network connections.

PRVG-11353: Broadcast packets sent on subnet "{0}" with broadcast address "{1}" were not received

Cause: All the interfaces on the subnet were not able to communicate using the broadcast address.

Action: Ensure that broadcast is enabled on all interfaces and that the network path allows broadcast. Also, ensure that the firewall rules do not affect the cluster interconnect interfaces, protocols or network address space. On the Linux platform, the iptables or firewalld configuration may interfere with the network connections.

PRVG-11356: Following error occurred during broadcast check

Cause: An error occurred while performing broadcast check.

Action: Look at the accompanying messages for details on the cause of failure.

PRVG-11366: SCAN IP addresses "{0}" of SCAN "{1}" was not on subnet "{2}"

Cause: SCAN IP was found to be on a different subnet than the one chosen as a public subnet.

Action: Select a different public subnet or change the IP addresses that the SCAN resolves to.

PRVG-11367: SCAN IP addresses "{0}" of SCAN "{1}" were not on subnet "{2}"

Cause: Subnet of network associated with the SCAN were modified but SCAN IP addresses were not modified.

Action: If network associated with the SCAN is DHCP, restart SCAN using 'srvctl stop' and 'srvctl start' commands. If network is static, configure SCAN IP addresses to be

on the subnets of network. If IP addresses were already configured, recreate the SCAN using 'srvctl remove scan' and 'srvctl add scan' commands.

PRVG-11368: A SCAN is recommended to resolve to "{0}" or more IP addresses, but SCAN "{1}" resolves to only "{2}"

Cause: An insufficient number of SCAN IP addresses were defined for the specified SCAN.

Action: Define at least specified number of SCAN IP addresses in DNS for the SCAN.

PRVG-11369: SCAN IP addresses "{0}" of SCAN "{1}" were active before Clusterware installation

Cause: SCAN IP addresses were found to be active on the network before Clusterware installation.

Action: Make sure that the SCAN IP addresses are currently unused.

PRVG-11372: Number of SCAN IP addresses that SCAN "{0}" resolved to did not match the number of SCAN VIP resources

Cause: It was found that the SCAN IP addresses that SCAN resolves to were modified after the SCAN was created.

Action: Modify SCAN using 'srvctl modify scan -n <scan_name>' and listener using 'srvctl modify scan_listener -u'.

PRVG-11373: IPV4 and IPV6 addresses of SCAN VIP resources of SCAN "{0}" were not consistent

Cause: The SCAN resolved to differing numbers of IPv4 and IPv6 addresses.

Action: Recreate the SCAN using 'srvctl remove' and 'srvctl add' commands.

PRVG-11374: SCAN "{0}" was not resolved

Cause: A static SCAN was not resolved to IP addresses.

Action: Make sure that the SCAN is resolved.

PRVG-11375: The Oracle Address Resolution Protocol driver service does not exist on node "{0}".

Cause: The Oracle Address Resolution Protocol driver service was not found in the specified node.

Action: Follow the Oracle Grid Infrastructure Postinstallation Procedures to install the specified service.

PRVG-11376: The Oracle Address Resolution Protocol driver service is not configured with the start type 'auto' as expected on node "{0}".

Cause: The configuration of the Oracle Address Resolution Protocol driver service did not specify the expected start type: 'auto'.

Action: Configure the service by using 'sc.exe <server_name> config oraarpdrv start= auto'.

PRVG-11377: The Oracle Address Resolution Protocol driver service is not configured with the service type 'kernel' as expected on node "{0}".

Cause: The configuration of the Oracle Address Resolution Protocol driver service did not specify the expected service type: 'kernel'.

Action: Configure the service by using 'sc.exe <server_name> config oraarpdrv type= kernel'.

PRVG-11378: The Oracle Address Resolution Protocol driver service is not running on node "{0}".

Cause: The Oracle Address Resolution Protocol driver service was found with current status of 'stopped'.

Action: Start the service by using 'net.exe start oraarpdrv'.

PRVG-11380: IP addresses "{0}" resolved for SCAN "{1}" are not reachable.

Cause: The Configuration Verification Utility found that the indicated SCAN IP addresses configured on the server cluster are not reachable from the client cluster. The accompanying messages provide additional failure details.

Action: Ensure that the indicated SCAN IP addresses configured on the server cluster are up and reachable and retry the CVU check.

PRVG-11381: Valid node checking registration for SCAN listener "{0}" is enabled, and set to "{1}" on node "{2}". Invited nodes which are allowed to register with the SCAN listener do not contain the cluster nodes "{3}".

Cause: The Configuration Verification Utility found that valid node checking registration was enabled for the indicated SCAN listener, which allows only local node IP addresses and invited nodes to register with the scan listener. And the indicated cluster nodes were not in the list of invited nodes for the indicated SCAN listener.

Action: Ensure that valid node checking registration is off or set to 'subnet' or update the invited nodes to include the indicated cluster nodes for the indicated SCAN listener using 'srvctl' command.

PRVG-11382: The permissions on the SCAN listener socket file "{0}" do not match the expected octal value on node "{1}". [Expected = "{2}" ; Found = "{3}"]

Cause: The Configuration Verification Utility found that the permissions of the indicated file on the indicated node were different from the required permissions. This might lead to failure in starting the SCAN listener.

Action: Remove the indicated SCAN listener socket file on the indicated node and restart the SCAN listener.

PRVG-11383: The owner of the SCAN listener socket file "{0}" is not the CRS user on node "{1}". [Expected = "{2}" ; Found = "{3}"]

Cause: The Configuration Verification Utility found that the owner of the indicated file on the indicated node was not the CRS user. This might lead to failure in starting the SCAN listener.

Action: Remove the indicated SCAN listener socket file on the indicated node and restart the SCAN listener.

PRVG-11384: The list of invited nodes allowed to register with the SCAN listener "{0}" contains invalid or unresolvable names "{1}".

Cause: The Configuration Verification Utility found that the indicated invalid or unresolvable names were in the list of invited nodes for the indicated SCAN listener, which would lead to failure in starting or restarting the SCAN listener.

Action: Ensure that all the names in the list of invited nodes for the indicated SCAN listener are valid and resolvable.

PRVG-11400: Node role value is not valid.

Cause: The value passed to CVU for the node role parameter was not one of the allowed values: 'hub', 'leaf' or 'auto'. This is an internal error.

Action: Contact Oracle Support.

PRVG-11401: invalid new node list specified including both nodes with 'auto' role and nodes with 'hub' or 'leaf' role

Cause: The supplied list of new nodes consisted of a mix of nodes with the 'auto' role in combination with nodes having the 'hub' or 'leaf' role.

Action: Either supply a list of new nodes that all have the 'auto' role or supply a list of new nodes that have the 'hub' or 'leaf' role specified for each node, but not both.

PRVG-11402: New nodes cannot have AUTO node role unless the existing cluster consists entirely of AUTO nodes

Cause: An attempt to validate new nodes for addition supplied one or more AUTO role nodes for a cluster with no AUTO role nodes.

Action: Supply a list of new nodes with AUTO role only when the existing cluster contains nodes with AUTO role.

PRVG-11403: A Leaf Node cannot be added unless existing cluster contains at least one Hub Node.

Cause: An attempt was made to add a node with the 'leaf' role when the cluster did not have at least one node with the 'hub' role.

Action: Supply a list of new nodes with the 'leaf' role only when the existing cluster contains at least one node with the 'hub' role.

PRVG-11404: The addition of hub nodes will exceed the target hub size[{0}]

Cause: The request to validate new nodes specified enough hub nodes that the cluster target hub size would be exceeded.

Action: Specify fewer hub nodes.

PRVG-11405: API with node roles argument should be called for Flex Cluster only

Cause: An internal error occurred.

Action: Contact Oracle Support.

PRVG-11406: API with node roles argument must be called for Flex Cluster

Cause: An internal error occurred.

Action: Contact Oracle Support.

PRVG-11407: API called with unequal sized arrays for nodes and VIPs

Cause: An internal error occurred.

Action: Contact Oracle Support.

PRVG-11408: API called with unequal sized arrays for nodes, VIPs and node roles

Cause: An internal error occurred.

Action: Contact Oracle Support.

PRVG-11409: These nodes already appear to be part of the cluster: "{0}"

Cause: The supplied list of new nodes contains some nodes which are already part of the cluster.

Action: Specify new nodes that are not already in the cluster.

PRVG-11410: illegal specification of nodes with 'leaf' role for a non-Flex Cluster

Cause: An attempt was made to add a 'leaf' role node to a non-Flex Cluster.

Action: Remove the 'leaf' role node from the list of nodes being added to the cluster.

PRVG-11415: Password entry for user "{0}" in the database "{1}" did not exist in CVUDB wallet

Cause: No password entry for the specified user for the specified database was found in the CVUDB wallet.

Action: Add a password entry for the user to the CVUDB wallet using 'crsctl add wallet -type CVUDB -name *dbname*'

PRVG-11420: Storage type of the path "{0}" could not be determined

Cause: There was an error in determining storage type of the path.

Action: Examine any accompanying error messages for details.

PRVG-11421: Storage type of the path "{0}" could not be determined

Cause: An internal error occurred.

Action: Contact Oracle Support.

PRVG-11422: Missing GNS subdomain name.

Cause: GNS subdomain name was not provided.

Action: The subdomain name for GNS must be provided via the '-domain' parameter in Oracle Clusterware Version 11.2.

PRVG-11423: The password provided on the command line is not valid for user "{0}"

Cause: The provided password was wrong.

Action: Provide the correct password.

PRVG-11424: Missing GNS subdomain for dynamic public network

Cause: When checking GNS integrity, the public VIPs were configured to use dynamic addresses (DHCP or autoconfig), but the required GNS subdomain was not configured.

Action: Configure a GNS subdomain by using the command 'srvctl add gns'.

PRVG-11425: Failed to validate GNS credential in file "{0}"

Cause: An attempt to validate the Grid Naming Service (GNS) credential failed.

Action: Ensure that the credential file provided has been generated in a GNS server cluster by 'srvctl export gns -clientdata *filename*'.

PRVG-11426: IP address for GNS VIP "{0}" is not consistent across the cluster nodes.

Cause: The Configuration Verification Utility determined that the indicated GNS VIP entry in the hosts file or DNS did not resolve to the same IP address across the cluster nodes.

Action: Ensure that the entry in the hosts file or DNS resolving the IP address for the indicated GNS VIP is consistent across the cluster nodes and retry the CVU check.

PRVG-11427: GNS VIP "{0}" resolves to IP address "{1}" on the majority of cluster nodes but to address "{2}" on nodes "{3}".

Cause: The Configuration Verification Utility determined that the indicated GNS VIP resolved to the indicated different IP address on the indicated nodes.

Action: Ensure that the indicated GNS VIP resolves to the same IP address across the cluster nodes and retry the CVU check.

PRVG-11499: ACFS kernel version "{0}" is different from the version of the ACFS commands "{1}" on node "{2}".

Cause: The ACFS kernel version was found to be different from the version of the ACFS commands on the indicated node.

Action: Ensure that the ACFS kernel version is the same as the version of the ACFS commands on the indicated node.

PRVG-11500: ACFS file systems are not available on Leaf nodes "{1}"

Cause: The specified ACFS path was not suitable for Leaf nodes.

Action: Ensure that you have selected a path that is suitable for all the nodes.

PRVG-11501: Path "{0}" of type "{1}" is not suitable for usage as RAC database software for release "{2}". Supported storage types are "{3}".

Cause: The specified path is not found suitable for usage as RAC database software

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVG-11502: Path "{0}" of type "{1}" is not suitable for usage as RAC database file for release "{2}". Supported storage types are "{3}".

Cause: The specified path is not found suitable for usage as RAC database file

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVG-11503: Path "{0}" of type "{1}" is not suitable for usage as Oracle Clusterware storage for release "{2}". Supported storage types are "{3}".

Cause: The specified path is not found suitable for usage as Oracle Clusterware storage(OCR or Voting Disk).

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVG-11504: Path "{0}" of type "{1}" is not suitable for usage as Single Instance database software for release "{2}". Supported storage types are "{3}".

Cause: The specified path is not found suitable for usage as Single Instance database software

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVG-11505: Path "{0}" of type "{1}" is not suitable for usage as Single Instance database file for release "{2}". Supported storage types are "{3}".

Cause: The specified path is not found suitable for usage as Single Instance database file

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVG-11506: Path "{0}" of type "{1}" is not suitable for ASM for release "{2}". Supported storage types are "{3}".

Cause: The specified path is not found suitable for ASM

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVG-11515: Nodes with mix of 'auto', 'hub' and 'leaf' roles were found in the Flex Cluster.

Cause: The Flex Cluster node role check found nodes with both the 'auto' role and either the 'hub' or 'leaf' roles defined.

Action: Use the 'crsctl set node role' command to make all node roles 'auto', or to make node roles a mix of 'hub' and 'leaf'.

PRVG-11516: New nodes "{0}" with 'hub' or 'leaf' role cannot be added to a Flex Cluster that has 'auto' role nodes.

Cause: An attempt was made to add nodes with the 'hub' or 'leaf' role to a Flex Cluster already having nodes with the 'auto' role.

Action: Only add nodes with the 'auto' role to the cluster.

PRVG-11517: New nodes "{0}" with 'auto' role cannot be added to a Flex Cluster already having nodes with the 'hub' and 'leaf' roles.

Cause: An attempt was made to add nodes with the 'auto' role to an Flex Cluster already having nodes with the 'hub' and 'leaf' role.

Action: Only add nodes with the 'hub' or 'leaf' role to the cluster.

PRVG-11518: Following error occurred during Flex Cluster node role configuration check

Cause: An error occurred while performing the Flex Cluster node role configuration check.

Action: Look at the accompanying messages for the cause of the failure.

PRVG-11550: Package "{0}" is missing on node "{1}"

Cause: The cvuqdisk RPM is not installed on the specified node. This package is required for shared disk validations. During installation, ASM disk validation cannot be performed without this RPM.

Action: Install the required version of the cvuqdisk RPM using fix up action or manual steps as listed in the documentation.

PRVG-11551: Required version of package "{0}" was not found on node "{1}" [Required = "{2}" ; Found = "{3}"].

Cause: The version of installed cvuqdisk RPM does not meet the requirement on the specified node. This package is required for shared disk validations. During installation, ASM disk validation cannot be performed without this RPM.

Action: Install the required version of the cvuqdisk RPM using fix up action or manual steps as listed in the documentation.

PRVG-11635: The ASM disks "{0}" are incorrectly sized

Cause: The indicated ASM disks had incorrect size information in the disk header.

Action: This is an internal error. Contact Oracle Support.

PRVG-11640: The check "{0}" was not performed as it is disabled

Cause: The indicated check was suppressed.

Action: Suppressed checks usually occur at the request of Oracle Support; if this is unexpected, contact Oracle Support.

PRVG-11644: Failed to copy baseline to the remote nodes: "{0}"

Cause: An error occurred while copying the report to the remote nodes

Action: Examine the accompanying error messages for details.

PRVG-11658: Baseline could not be collected for database "{0}".

Cause: "An attempt to collect baseline information using the command 'cluvfy comp baseline -collect database' failed because the indicated database was not configured in clusterware."

Action: Ensure that the database is configured and retry the baseline collection command.

PRVG-11659: Baseline could not be collected for databases in the database home "{0}".

Cause: "An attempt to collect baseline information using the command 'cluvfy comp baseline -collect database' failed because the indicated database home was not installed and configured in clusterware."

Action: Ensure that the database home is installed and is configured and retry the baseline collection command.

PRVG-11671: reference baseline not specified

Cause: The request for baseline cross comparison omitted the required reference baseline.

Action: Retry the command, specifying two baselines with the '-compare' argument.

PRVG-11750: File "{0}" exists on node "{1}".

Cause: The specified file is not expected to be present on the node.

Action: Remove the specified file from the node.

PRVG-11754: Check for existence of directory "{0}" could not be performed on node "{1}".

Cause: An error occurred while checking the existence of the directory on the specified node.

Action: Examine the accompanying error messages for details.

PRVG-11755: Property "{0}" was not found in configuration file "{1}"

Cause: Could not find the specified property in the configuration file.

Action: Define the specified property in the configuration file. Otherwise, the validations needing this property will not be performed.

PRVG-11774: NIC bind order check failed on nodes: "{0}"

Cause: The NIC bind order on the specified nodes did not prioritize the public network above the private network.

Action: Ensure that the public network NIC takes precedence over the private network NIC in the configured network bind order.

PRVG-11775: Failed to retrieve the NIC bind order information on nodes: "{0}"

Cause: An attempt to retrieve the NIC bind order failed on the indicated nodes.

Action: Contact Oracle Support.

PRVG-11776: Failed to retrieve the NIC bind order information from all the nodes

Cause: An attempt to retrieve the NIC bind order information failed on all the nodes.

Action: Contact Oracle Support.

PRVG-11779: Metric value "{0}" for public interface "{1}" is higher than or equal to metric value "{2}" for private interface "{3}" on node "{4}".

Cause: The identified public interface metric value was higher or equal to the identified private interface metric value on the indicated node.

Action: Change the identified public interface metric value to a lower value than the identified private interface metric value.

PRVG-11780: Failed to convert string "{0}" to integer value

Cause: The network interface metric value could not be determined as the identified string to integer conversion failed.

Action: Look at the accompanying messages for details.

PRVG-11800: Failed to discover any devices using the discovery string "{0}" on node "{1}"

Cause: The specified discovery string could not discover any devices on the identified node.

Action: Specify a discovery string that will discover the devices on the given node and make sure the devices to be used as ASM disks have permissions that allow them to be discovered.

PRVG-11816: Windows user "{0}" is a domain user but a conflicting local user account "{1}" exists on node "{2}"

Cause: A conflicting local user account as indicated was found on the identified node.

Action: Ensure that the Windows user account used for Oracle installation and configuration is defined as a domain user on all nodes or as a local user on all nodes, but not a mixture of the two.

PRVG-11817: Windows user "{0}" is a local user but a matching local user account does not exist on nodes "{1}"

Cause: A local user account for an Oracle installation user was not found on the identified nodes.

Action: Ensure that the Windows user account used for Oracle installation and configuration is defined as a domain user on all nodes or as a local user on all nodes, but not a mixture of the two.

PRVG-11818: Windows user "{0}" is a domain user but a conflicting local user account was found on nodes "{1}"

Cause: A conflicting local user account as indicated was found on the identified nodes.

Action: Ensure that the Windows user account used for Oracle installation and configuration is defined as a domain user on all nodes or as a local user on all nodes, but not a mixture of the two.

PRVG-11819: Current Oracle Home User "{0}" is not a domain user

Cause: The current Oracle Home User was found to be a Windows user account local to this system.

Action: Specify a Windows domain user as the Oracle Home User.

PRVG-11820: Error retrieving the account details for user "{0}" from nodes "{1}"

Cause: An error occurred while retrieving the account details of indicated user.

Action: Examine the accompanying error messages for details.

PRVG-11825: Failed to get the Oracle Home user name for Oracle Home "{0}"

Cause: An attempt to retrieve the Oracle Home User for the indicated Oracle Home failed.

Action: Examine the accompanying error messages for details.

PRVG-11826: DNS resolved IP addresses "{0}" for SCAN name "{1}" not found in the name service returned IP addresses "{2}"

Cause: The name resolution setup check for the indicated SCAN name failed because one or more of the indicated IP addresses obtained from DNS could not be found in the IP addresses obtained from the name service on the system as configured in the '/etc/nsswitch.conf' configuration file.

Action: Make sure all the DNS resolved IP addresses are present in the IP addresses obtained from the name service on the system as configured in the '/etc/nsswitch.conf' configuration file by reconfiguring the '/etc/nsswitch.conf' for the indicated SCAN name. Check the Name Service Cache Daemon (/usr/sbin/nscd) by clearing its cache and restarting it.

PRVG-11827: Name service returned IP addresses "{0}" for SCAN name "{1}" not found in the DNS returned IP addresses "{2}"

Cause: The name resolution setup check for the indicated SCAN name failed because one or more of the indicated IP addresses obtained from name service on the system as configured in the '/etc/nsswitch.conf' configuration file could not be found in the IP addresses obtained from DNS.

Action: Make sure all the name service resolved IP addresses obtained from the '/etc/nsswitch.conf' configuration file are present in the DNS resolved IP addresses by reconfiguring '/etc/nsswitch.conf' configuration file for the indicated SCAN name. Check the Name Service Cache Daemon (/usr/sbin/nscd) by clearing its cache and restarting it.

PRVG-11850: The system call "{0}" failed with error "{1}" while executing exectask on node "{2}"

Cause: An attempt to execute exectask on the specified node failed.

Action: Examine the accompanying error message for details or contact Oracle Support.

PRVG-11851: The system call "connect" failed while executing exectask on node "{0}"

Cause: The connect system call failed on the specified node.

Action: Examine the accompanying error message for details. Check the firewall rules. Make sure the firewall rules do not affect the cluster interconnect interfaces, protocols or network address space. On the Linux platform, the iptables or firewalld configuration may interfere with the network connections.

PRVG-11865: Oracle Home "{0}" for the administrator managed database "{1}" instances "{2}" does not exist on nodes "{3}"

Cause: The indicated Oracle Home for the indicated database was not found on the indicated nodes and the automatic root script execution was selected.

Action: Ensure that the indicated Oracle Home exists on the indicated nodes by running 'addNode.sh' or 'addNode.bat' from the indicated Oracle Home on a node that is already in

the cluster before you run the 'root.sh' or 'root.bat' script. Alternatively, remove the indicated administrator managed database instances by using the command 'srvctl remove instance'.

PRVG-11866: Oracle Home "{0}" for the administrator managed database "{1}" instances "{2}" does not exist on nodes "{3}"

Cause: The indicated Oracle Home for the indicated database was not found on the indicated nodes.

Action: Ensure that the indicated Oracle Home exists on the indicated nodes by running 'addNode.sh' or 'addNode.bat' from the indicated Oracle Home on a node that is already in the cluster before you run the 'root.sh' or 'root.bat' script. Alternatively, remove the indicated administrator managed database instances by using the command 'srvctl remove instance'.

PRVG-11867: Oracle Home "{0}" for policy managed database "{1}" does not exist on nodes "{2}"

Cause: The indicated Oracle Home for the indicated database was not found on the indicated nodes.

Action: Ensure that the indicated Oracle Home exists on the indicated nodes by running 'addNode.sh' or 'addNode.bat' from the indicated Oracle Home on a node that is already in the cluster before you run the 'root.sh' or 'root.bat' script.

PRVG-11868: An internal command 'cvuhelper' failed to get the administrator and policy managed database information.

Cause: An attempt to execute an internal cvuhelper command failed.

Action: This is an internal error. Contact Oracle Support.

PRVG-11869: An internal command 'cvuhelper' exited unexpectedly while getting the administrator and policy managed database information.

Cause: An attempt to execute an internal cvuhelper command failed.

Action: This is an internal error. Contact Oracle Support.

PRVG-11870: failed to parse database information from the 'cvuhelper' command output

Cause: An attempt to parse output from an internal cvuhelper command failed.

Action: This is an internal error. Contact Oracle Support.

PRVG-11884: Policy managed database home availability check failed

Cause: One or more policy managed database homes were not found on the nodes being added to the cluster.

Action: Ensure that all the policy managed database homes exist on the nodes being added to the cluster.

PRVG-11885: Oracle Home "{0}" for policy managed database "{1}" does not exist on nodes "{2}"

Cause: The indicated Oracle Home for the indicated database was not found on the indicated nodes and the automatic root script execution was selected.

Action: Ensure that the indicated Oracle Home exists on the indicated nodes by running 'addNode.sh' or 'addNode.bat' from the indicated Oracle Home on a node that is already in the cluster before you run the 'root.sh' or 'root.bat' script.

PRVG-11886: Command "{0}" to get the policy managed database information failed

Cause: An attempt to execute the displayed command failed.

Action: This is an internal error. Contact Oracle Support.

PRVG-11890: failed to determine the space used by directory "{0}" on node "{1}"

Cause: An attempt to determine the space used by the identified directory failed on the indicated node.

Action: Ensure that the current user has read and execute permissions for the directory cited in the message and its subdirectories. Look at the accompanying messages for more details.

PRVG-11891: Connectivity failed between interface "{0}" configured with IP address "{1}" on node "{2}" and interface "{3}" configured with IP address "{4}" on node "{5}" for the subnet "{6}".

Cause: Configuration Verification Utility (CVU) node connectivity checking detected the connectivity problem described in the message. Connectivity for the mentioned subnet could not be verified between the two identified interfaces on the identified nodes.

Action: Verify the interface configurations for the identified network interfaces on the identified nodes using utilities such as ipconfig or ping.

PRVG-11892: Connectivity failed between IP address "{0}" on node "{1}" and IP address "{2}" on node "{3}" for the subnet "{4}".

Cause: Configuration Verification Utility (CVU) node connectivity checking detected the connectivity problem described in the message. Connectivity for the mentioned subnet could not be verified between the two identified IP addresses on the identified nodes.

Action: Verify the IP configurations for the identified network interfaces on the identified nodes using utilities such as ipconfig or ping.

PRVG-11893: RDS connectivity failed between interface "{0}" configured with IP address "{1}" on node "{2}" and interface "{3}" configured with IP address "{4}" on node "{5}" for subnet "{6}".

Cause: Configuration Verification Utility (CVU) node connectivity checking detected the connectivity problem described in the message. Connectivity for the mentioned subnet could not be verified between the two identified interfaces using the 'rds-ping' command on the identified nodes.

Action: Verify the interface configurations for the identified network interfaces on the identified nodes using the utility '/usr/bin/rds-ping'.

PRVG-11894: RDS connectivity failed between IP address "{0}" on node "{1}" and IP address "{2}" on node "{3}" for subnet "{4}".

Cause: Configuration Verification Utility (CVU) node connectivity checking detected the connectivity problem described in the message. Connectivity for the mentioned subnet could not be verified between the two identified IP addresses using the 'rds-ping' command on the identified nodes.

Action: Verify the IP configurations for the identified network interfaces on the identified nodes using the utility '/usr/bin/rds-ping'.

PRVG-11900: Oracle Clusterware is not installed on this node.

Cause: An attempt to execute the command 'cluvfy comp software' was requested, but files associated with Oracle Clusterware installation were not found.

Action: Execute the 'cluvfy comp software' command only on nodes where Oracle Clusterware is installed.

PRVG-11901: Oracle Clusterware is not running on this node.

Cause: An attempt to execute a 'cluvfy' command that requires Oracle Clusterware to be running failed because Clusterware was not running on the node.

Action: Ensure that the Clusterware stack is running and retry 'cluvfy'. If required issue the command 'crsctl start crs' to start the clusterware stack.

PRVG-11902: Oracle Clusterware is not configured on node {0}.

Cause: A 'cluvfy comp software' command was issued on a system that does not have an Oracle Clusterware configuration.

Action: Issue the 'cluvfy comp software' command only on nodes where Oracle Clusterware is configured.

PRVG-11903: The specified destination CRS home {0} is the same as the currently configured CRS home {1}.

Cause: The pre-upgrade prerequisites check failed because the specified destination CRS home was the same as the currently configured CRS home.

Action: Retry the upgrade using the '-dest_crshome' option to specify a CRS home that is different from the currently configured CRS home.

PRVG-11904: The file 'oracle.key' does not exist for Oracle home {0} on node {1}.

Cause: The command 'cluvfy comp software' failed for the indicated node because it does not appear to have a valid Oracle home.

Action: Verify that the installation of Oracle software has completed successfully.

PRVG-11905: The file 'oracle.key' cannot be read on node {0}.

Cause: The command 'cluvfy comp software' failed for the indicated node because it does not have a valid 'oracle.key' file.

Action: Verify that the installation of Oracle software has completed successfully.

PRVG-11906: The Oracle home {0} does not exist.

Cause: The command 'cluvfy comp software' failed because the specified Oracle home could not be found.

Action: Verify that the installation of Oracle software has completed successfully.

PRVG-11907: The Oracle database edition cannot be obtained from file {0} on node {1}.

Cause: The command 'cluvfy comp software' failed because the file which indicates the database edition could not be accessed on the indicated node.

Action: Verify that the installation of Oracle software has completed successfully and that the specified file exists and is readable.

PRVG-11910: failed to locate Oracle base for home "{0}" on node "{1}"

Cause: An attempt to retrieve Oracle base using command <ORACLE_HOME>/bin/orabase failed.

Action: Verify that the installation of the Oracle software has completed successfully and that the Oracle home is set up correctly.

PRVG-11911: Database services count is not available for Oracle Clusterware versions prior to 11.2.

Cause: An attempt was made to retrieve the database services count for an Oracle Clusterware version lower than 11.2.

Action: Make sure that the configured Oracle Clusterware is version 11.2 or greater.

PRVG-11912: Command '{0}' to retrieve database services count failed.

Cause: An attempt to execute the displayed command failed. This is an internal error.

Action: Contact Oracle Support.

PRVG-11913: Syntax errors in the following lines from ONS configuration file "{1}" on node "{0}" :

Cause: Invalid lines were found in the ons.config file at the location and node indicated.

Action: Contact Oracle Support.

PRVG-11914: The ONS configuration file "{0}" does not exist on following nodes: {1}

Cause: The file specified did not exist on the nodes listed, but exists on other nodes.

Action: Contact Oracle Support.

PRVG-11915: ONS configuration file "{0}" does not exist on any node of the cluster. Skipping further checks.

Cause: The ONS configuration file was missing from all of the nodes.

Action: Contact Oracle Support.

PRVG-11919: Unable to create work area directory "{0}"

Cause: An attempt to create the specified directory failed on the local node.

Action: Make sure that the user running Configuration Verification Utility has the authority to create the indicated directory or specify a different (usable) directory using the CV_DESTLOC property in the cv/admin/cvu_config file under the software home directory.

PRVG-11920: Unable to delete CVU work files from directory "{0}"

Cause: An attempt to remove files from the specified directory failed.

Action: Make sure that the user running Configuration Verification Utility has the authority to create the indicated directory or specify a different (usable) directory using the CV_DESTLOC property in the cv/admin/cvu_config file under the software home directory.

PRVG-11921: Error copying ONS configuration file "{0}" from node "{1}" to node "{2}"

Cause: The specified file could not be copied from the specified source node to the destination node.

Action: Examine the accompanying error message for details.

PRVG-11924: Local and remote ONS ports are same on node "{0}"

Cause: The local and remote port specified in the ons.config were the same.

Action: Ensure that different local and remote ports were specified in the ONS configuration file.

PRVG-11928: 'remoteport' entry in the existing ONS configuration file "{0}" is inconsistent

Cause: The ONS configuration file had inconsistent 'remoteport' entries.

Action: Make sure that all nodes of the cluster have the same 'remoteport' entry in the specified file.

PRVG-11930: Path "{0}" is not writeable on nodes "{1}".

Cause: The identified path was not writeable on the indicated nodes.

Action: Ensure that write access is enabled for the current user on the identified path.

PRVG-11931: Path "{0}" is not writeable on node "{1}".

Cause: The identified path was not writeable by current user on the indicated node.

Action: Ensure that write access is enabled for the identified path by the current user.

PRVG-11932: Path "{0}" cannot be created on node "{1}".

Cause: The identified path can not be created on the indicated node.

Action: Ensure that the current user has authorization to create the identified path.

PRVG-11935: Unable to read file "{0}" copied to local scratch area from node: {1}

Cause: An error occurred while trying to read the specified file.

Action: Ensure that the user running Configuration Verification Utility has the authority to create the indicated directory, or specify a different (usable) directory using the CV_DESTLOC property in the cv/admin/cvu_config file under the software home directory. Also, look for messages accompanying this message for details.

PRVG-11937: Oracle Database is not configured to run on nodes "{0}".

Cause: Oracle Database was not configured to run on the indicated nodes. For administrator-managed databases, the database instances were not configured to run on the indicated nodes. For policy-managed databases, the indicated nodes were not in any of the server pools of the database.

Action: Remove the nodes from the command line and rerun the check.

PRVG-11938: Oracle Database is not configured to run on any of the specified nodes.

Cause: Oracle Database was not configured to run on any of the specified nodes.

Action: Ensure that Oracle Database is configured to run on the specified nodes. For administrator-managed databases, ensure that the database instances are configured to run on the nodes. For policy-managed databases, ensure that the nodes are in the server pools of the database.

PRVG-11945: Oracle Database software home location "{0}" does not have required group permissions on node "{1}". [Expected = "{2}" ; Found = "{3}"].

Cause: CVU checking determined that the group permissions were incorrect on the indicated Oracle Database home location on the indicated node.

Action: Ensure that the specified home has the required permissions set and retry the CVU check. An operating system command 'chmod g+rwx' may be used along with the indicated home location to correct the permissions on the node.

PRVG-11946: Oracle Database software home location "{0}" does not have read permission for group on node "{1}".

Cause: CVU checking determined that the group permissions were incorrect on the indicated Oracle Database home location on the indicated node.

Action: Ensure that the specified home has read permission set and retry the CVU check. An operating system command 'chmod g+r' may be used along with the indicated home location to correct the permissions on the node.

PRVG-11947: Oracle Database software home location "{0}" does not have execute permission for group on node "{1}".

Cause: CVU checking determined that the group permissions were incorrect on the indicated Oracle Database home location on the indicated node.

Action: Ensure that the specified home has execute permission set and retry the CVU checks. An operating system command 'chmod g+x' may be used along with the indicated home location to correct the permissions on the node.

PRVG-11950: Executable "{0}" does not exist on any node. The specified home "{1}" is not a valid Oracle home.

Cause: The 'oracle' executable was not found in the expected location on any node.

Action: Specify a valid Oracle home.

PRVG-11951: Executable "{0}" does not exist on node "{1}".

Cause: The 'oracle' executable was not found in the expected location on the specified node.

Action: Ensure that the specified home is a valid Oracle home on the specified node.

PRVG-11960: Set user ID bit is not set for file "{0}" on node "{1}".

Cause: The set user ID bit was not set for the identified file on the indicated node.

Action: Log in as the root user and set the set user ID bit for the identified file using command 'chmod +s file'.

PRVG-11961: failed to check the set user ID bit for file "{0}" on nodes "{1}"

Cause: An attempt to verify the Set user ID bit for the identified file failed on the indicated nodes.

Action: Ensure that the identified file exists and that the user has read and execute permissions on it.

PRVG-11975: The I/O scheduler parameter of device "{0}" did not match the expected value on nodes "{1}". [Expected scheduler = "{2}"; Found scheduler = "{3}"]

Cause: The I/O scheduler parameter of the indicated device was not the expected value on the indicated nodes.

Action: Change the I/O scheduler parameter using 'echo deadline > /sys/block/device/queue/scheduler' command of the indicated device to ensure it is the expected value.

PRVG-11976: The I/O scheduler parameter of device "{0}" that belongs to ASM disk "{1}" of the ASM disk group "{2}" did not match the expected value on nodes "{3}". [Expected scheduler = "{4}"; Found scheduler = "{5}"]

Cause: The I/O scheduler parameter of the indicated device was not the expected value on the indicated node.

Action: Change the I/O scheduler parameter using 'echo deadline > /sys/block/device/queue/scheduler' command for the indicated device to ensure it is the expected value.

PRVG-11977: The I/O scheduler parameter is not configured for device "{0}" on nodes "{1}".

Cause: An attempt to obtain the I/O scheduler corresponding to the specified device failed on the node specified.

Action: Ensure that the specified device has a I/O scheduler parameter configured.

PRVG-11983: Grid Infrastructure home check failed

Cause: The Grid Infrastructure home path was not writable.

Action: Ensure that the Grid Infrastructure user has write permissions for the indicated path.

PRVG-12102: The time difference between nodes "{0}" and "{1}" is beyond the permissible offset of "{2}" seconds

Cause: The Configuration Verification Utility detected a time offset between the indicated nodes was more than the indicated permissible value.

Action: Ensure that the time difference between the indicated nodes is less than the indicated permissible value.

PRVG-12103: The current time offset of "{0}" seconds on node "{1}" is greater than the permissible offset of "{2}" when compared to the time on node "{3}"

Cause: The Configuration Verification Utility detected a time offset between the indicated nodes was more than the permissible value.

Action: Ensure that the time difference between the indicated nodes is less than the indicated permissible value.

PRVG-12104: Failed to retrieve the current time from node "{0}"

Cause: An attempt to retrieve the current time from the indicated node failed with the indicated error.

Action: Examine the accompanying error messages, correct the indicated issues, and then retry the operation.

PRVG-12802: ASM devices "{0}" are not ASM Filter Driver capable.

Cause: The indicated devices were not ASM filter driver capable.

Action: To make them AFD capable, ensure that the devices selected for ASM are configured as block devices on Linux or character devices on AIX and Solaris operating system platforms.

PRVG-12805: Device "{0}" cannot be managed by the ASM Filter Driver on node "{1}".

Cause: The indicated ASM device did not have a correct device type and hence was identified as not AFD capable.

Action: If you intend to use the ASM Filter Driver to manage this device, ensure that the device selected for ASM is a block device on Linux or a character device on AIX and Solaris operating system platforms.

PRVG-12806: failed to discover the device type of devices "{0}" on nodes "{1}"

Cause: An attempt to retrieve the device type of the indicated device failed on the identified nodes.

Action: Ensure that the device is correctly configured on the indicated node and that the user has permission to read its attributes.

PRVG-12807: failed to retrieve the device type of device "{0}" on node "{1}"

Cause: An attempt to retrieve the device type of the indicated devices failed on all the nodes.

Action: Ensure that the device is correctly configured and that the user has permission to read the device attributes. Examine the accompanying error messages for details.

PRVG-12808: ASMLib is installed on nodes "{0}"; ASM Filter Driver will not be used for managing ASM devices.

Cause: ASMLib was found installed on the indicated nodes.

Action: Ensure that ASMLib is not installed on cluster nodes if you plan to use the ASM Filter Driver to manage ASM devices.

PRVG-12809: 'remoteport' entry is missing from ONS configuration file "{1}" on nodes "{0}".

Cause: The Oracle Notification Sservices (ONS) configuration file was missing the remote port entry.

Action: Add the remote port entry to the ONS configuration file.

PRVG-12810: failed to expand the device path discovery string "{0}"

Cause: The requested operation could not be completed because the indicated device path discovery string argument could not be expanded to a list of ASM disk devices.

Action: Retry the request specifying a valid device path discovery string.

PRVG-12855: Configured private networks "{0}" with subnet masks "{1}" do not exist on nodes "{2}".

Cause: The indicated CRS private subnets did not match any subnet available on the identified node.

Action: The network configuration used for the existing CRS installation must be available networks on each of the cluster nodes. Use the 'oifcfg setif' command to correctly configure the subnets for the existing installation.

PRVG-12856: Configured public subnets "{0}" with subnet masks "{1}" do not exist on nodes "{2}".

Cause: The indicated CRS public subnets did not match any subnet available on the identified node.

Action: The network configuration used for the existing CRS installation must be available networks on each of the cluster nodes. Use the 'oifcfg setif' command to correctly configure the subnets for the existing installation.

PRVG-12857: Classified subnet configuration of the current CRS home "{0}" does not match any existing subnets on nodes "{1}".

Cause: The indicated CRS subnet did not match any subnet available on the identified nodes.

Action: The network configuration used for the existing CRS installation must be available networks on each of the cluster nodes. Use the 'oifcfg setif' command to correctly configure the subnet for the existing installation.

PRVG-12858: Following error occurred during the network configuration consistency checks.

Cause: An error occurred while performing the network configuration consistency checks.

Action: Examine the accompanying messages for specific details on the network configuration problem, and rectify the issues.

PRVG-12861: 'options {0}' entry does not exist in resolver configuration file "{1}" on nodes "{2}"

Cause: The indicated option entry was specified on some nodes, but not all of them.

Action: Ensure that the indicated option is either specified consistently or not specified in the resolver configuration file on all cluster nodes.

PRVG-12864: The resolver configuration file "{0}" on the nodes "{1}" has more than one 'options {2}' entry

Cause: The indicated option entry was found more than once on nodes specified in the resolver configuration file indicated.

Action: Ensure that there is only one option entry in the file indicated.

PRVG-12867: 'options {0}' entries in the resolver configuration file "{1}" are inconsistent

Cause: A check of each node's resolv.conf files found inconsistent entries of the indicated option.

Action: Ensure that all nodes of the cluster have same indicated option entry in the file indicated.

PRVG-12869: The product of the 'attempts' option value "{0}" and the 'timeout' option value "{1}" in the resolver configuration file "{2}" is greater than the maximum allowed "{3}".

Cause: A check of node's resolv.conf files found values greater than the maximum allowed.

Action: "Ensure that the product of resolver 'attempts' and 'timeout' is within limits on all nodes.

PRVG-12884: Maximum (MTU) size packet check failed on subnets "{0}"

Cause: The network switch was not configured with jumbo frames or the identified subnets do not support jumbo frames.

Action: Ensure that the network switch is configured with jumbo frames and the network subnets support jumbo frames.

PRVG-12885: ICMP packet of MTU size "{0}" does not go through subnet "{1}".

Cause: The network switch was not configured with jumbo frames or the network subnet does not support the identified MTU size.

Action: Ensure that the network switch is configured with jumbo frames and the network subnet supports the identified MTU size.

PRVG-12886: Interface "{0}" has an invalid MTU value "{1}".

Cause: The retrieved MTU value from ip command contained other than decimal digits.

Action: Configure an MTU value for the identified interface with decimal digits only. Look at the accompanying messages for more details.

PRVG-12887: failed to get the MTU value for interface "{0}" using ip command "{1}" on node "{2}"

Cause: An attempt to obtain the MTU value for the identified interface failed on the indicated node.

Action: Ensure that the indicated executable accessible on the node. Look at the accompanying messages for more details.

PRVG-12893: User "{0}" failed to determine the permissions of path "{1}" on nodes "{2}".

Cause: An attempt to check the permissions of the indicated path failed on the indicated nodes.

Action: Ensure that the indicated path exists on all nodes.

PRVG-12894: Failed to get the groups of user "{0}" on nodes "{1}".

Cause: An attempt to get the groups of the indicated user failed on the indicated nodes.

Action: Ensure that the indicated user exists on the indicated nodes.

PRVG-12895: The group "{1}" of the path "{0}", does not have execute permissions for "others" "{2}" and "group" "{3}" configured on node "{4}".

Cause: The check found a bad permissions configuration of the indicated path on the indicated node.

Action: Ensure that the Grid user has execute permissions on all nodes.

PRVG-12896: The owning group "{0}" of path "{1}" is not in the groups "{2}" of the Grid user on node "{3}".

Cause: The check for permissions of the indicated path found that the group was not in the indicated groups of the Grid user on the indicated node.

Action: Ensure that the Grid user has execute permissions, either by group membership or by the path having execute permissions for others to the indicated groups of the Grid user on all nodes. 1) Change the group of the path to one of the indicated groups 2) Add the Grid user to the group of the path 3) Change the permissions for 'others' 4) Change the permissions for 'group'

PRVG-12914: Oracle Fence service file "{0}" is missing on nodes "{1}".

Cause: The Oracle Fence Service file was not found at the identified path on the indicated nodes.

Action: Install the Oracle Fence Service using the command '<GI_HOME>/bin/crssetup.exe installFence'.

PRVG-12915: The service "{0}" is not configured with the service type 'kernel' as expected on nodes "{1}".

Cause: The configuration of the identified Windows service did not specify the expected service type: 'kernel'.

Action: Configure the service by using 'sc.exe <server_name> config <service_name> type= kernel'.

PRVG-12916: The service "{0}" is not configured with the start type 'auto' as expected on nodes "{1}".

Cause: The configuration of the identified Windows service did not specify the expected start type: 'auto'.

Action: Configure the service by using 'sc.exe <server_name> config <service_name> start= auto'.

PRVG-12917: The service "{0}" is not running on nodes "{1}".

Cause: The identified Windows service was not running on the indicated nodes.

Action: Start the service by using 'net.exe start <service_name>'.

PRVG-12918: The service "{0}" does not exist on nodes "{1}".

Cause: The identified Windows service was not found on the indicated nodes.

Action: Install the Oracle Fence Service using the command '<GI_HOME>/bin/crssetup.exe installFence'.

PRVG-12934: The virtual memory manager tunable parameter "{0}" does not have expected "DEF" value on nodes "{1}" [Expected = "{2}"]

Cause: The identified parameter did not have the expected "DEF" value on the indicated nodes.

Action: Log in to the indicated nodes as the root user and change the identified parameter "DEF" value using command '/usr/sbin/vmo -p -o parameter=value'.

PRVG-12935: The virtual memory manager tunable parameter "{0}" does not have expected "BOOT" value on nodes "{1}" [Expected = "{2}"]

Cause: The identified parameter did not have the expected "BOOT" value on the indicated nodes.

Action: Log in to the indicated nodes as the root user and change the identified parameter "BOOT" value using command '/usr/sbin/vmo -r -o parameter=value'.

PRVG-12936: Processor folding parameter "{0}" is not disabled on nodes "{1}".

Cause: Processor folding was not turned off on the indicated nodes.

Action: Log in to the indicated nodes as the root user and turn off the processor folding using command '/usr/sbin/schedo -p -o parameter=-1'.

PRVG-12937: failed to convert string "{0}" to integer value

Cause: The identified string to integer conversion failed.

Action: Examine the accompanying messages for details.

PRVG-12938: An internal command 'cvuhelper' exited unexpectedly on node "{0}" while running a SQL query on ASM.

Cause: An attempt to execute an internal cvuhelper command failed.

Action: This is an internal error. Contact Oracle Support.

PRVG-12939: An internal command 'cvuhelper' failed to produce any output on node "{0}" while running a SQL query on ASM.

Cause: An attempt to execute an internal cvuhelper command failed.

Action: This is an internal error. Contact Oracle Support.

PRVG-12940: failed to parse 'cvuhelper' command output

Cause: An attempt to parse output from an internal cvuhelper command failed.

Action: This is an internal error. Contact Oracle Support.

PRVG-12941: An internal command 'cvuhelper' failed to run a SQL query on ASM on node "{0}".

Cause: An ASM SQL query failed unexpectedly.

Action: Examine the accompanying error message and correct the problem indicated, if possible. Otherwise, contact Oracle Support.

PRVG-12942: failed to obtain ASM instance configuration on node "{0}"

Cause: An attempt to retrieve information about configuration of an ASM instance on the indicated node failed.

Action: Ensure that the ASM instance, if configured, is correctly configured and an ASM instance is up and running on the indicated node.

PRVG-12943: failed to load Oracle JDBC Driver

Cause: An attempt to load Oracle JDBC Driver failed.

Action: This is an internal error. Contact Oracle Support.

PRVG-12944: failed to obtain credentials to connect to ASM with role {0}

Cause: An attempt to obtain ASM credentials for the current OS user failed.

Action: If the specified role is SYSDBA then ensure that the current OS user is part of the OSDBA group. If the specified role is SYSASM then ensure that the current OS user is part of the OSASM group.

PRVG-12945: An error occurred while establishing connection to ASM with current OS user and connect descriptor:\n"{0}"

Cause: An attempt to connect to ASM failed.

Action: Examine the accompanying error message for details.

PRVG-12946: An error occurred while establishing connection to ASM using role {0}.

Cause: An attempt to connect to ASM failed.

Action: Examine the accompanying error message for details.

PRVG-12947: An internal command 'cvuhelper' failed to obtain ASM connection information on node "{0}".

Cause: An attempt to get ASM connection information failed.

Action: Examine the accompanying error message and correct the problem indicated, if possible. Otherwise, contact Oracle Support.

PRVG-12948: Failed to get ASM connection information. Verification cannot proceed.

Cause: Error occurred while attempting to get ASM connection information.

Action: Examine the accompanying error messages for details, resolve problems identified and retry.

PRVG-12949: Failed to get ASM connection. Verification cannot proceed.

Cause: An error occurred attempting to connect to ASM.

Action: Examine the accompanying error messages for details, resolve problems identified and retry.

PRVG-12950: An internal 'cvuhelper' command exited unexpectedly on node "{0}" while running a SQL query against the GIMR.

Cause: An internal 'cvuhelper' command exited unexpectedly while attempting to run a SQL query against the Grid Infrastructure Management Repository (GIMR). This was an internal error.

Action: Contact Oracle Support.

PRVG-12951: An internal 'cvuhelper' command failed to produce any output on node "{0}" while running a SQL query against the GIMR.

Cause: An internal 'cvuhelper' command failed to produce any output when running a SQL query against the Grid Infrastructure Management Repository (GIMR). This was an internal error.

Action: Contact Oracle Support.

PRVG-12952: failed to parse 'cvuhelper' command output

Cause: An attempt to parse the output of an internal 'cvuhelper' command failed. This was an internal error.

Action: Contact Oracle Support.

PRVG-12953: An internal 'cvuhelper' command encountered an error while running a SQL query against the GIMR on node "{0}".

Cause: A SQL query against the Grid Infrastructure Management Repository (GIMR) failed.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRVG-12954: GIMR is not online on node "{0}".

Cause: An attempt to run a SQL query against the Grid Infrastructure Management Repository (GIMR) failed because the GIMR was not online on the indicated node.

Action: Ensure that the GIMR instance is running on the indicated node. Use command "srvctl status mgmtdb" to check the status of the instance and retry the operation.

PRVG-12955: Management database not running on local node "{0}".

Cause: The Configuration Verification Utility (CVU) determined that management database was not running on the indicated local node, but was running on the remote node. CVU could not connect to the management database instance running on the remote node to get the required free space for Oracle base location.

Action: Ensure that either the management database is running on local node by relocating using 'srvctl relocate mgmtdb' command or perform the upgrade operation on the node where management database is running.

PRVG-12993: ASM is not running on any of the nodes. Verification cannot proceed.

Cause: No ASM instance was found running on any of the nodes while attempting to perform ASM health checks.

Action: Ensure that the ASM instances, if configured, are correctly configured and running on sufficient number of nodes. Use the command 'srvctl config asm' to determine the number of ASM instances that are supposed to be running.

PRVG-13001: target XML file "{0}" for task definition not found

Cause: An attempt to retrieve the task definition failed because the target XML file was missing.

Action: Ensure that the indicated target XML file is available.

PRVG-13122: encountered error in copying file "{0}" from node "{1}" to node "{2}"

Cause: An error was encountered while attempting to copy the indicated file from the indicated source node to the indicated destination node.

Action: Examine the accompanying error message for details. Resolve the issues raised and retry.

PRVG-13123: File "{0}" does not exist on following nodes: {1}.

Cause: File specified did not exist on the nodes listed, but exists on other nodes.

Action: Make sure that the file is either present on all nodes or is not present on any node.

PRVG-13125: unable to create the directory "{0}".

Cause: An attempt by CVU to create the indicated directory failed on the local node.

Action: Make sure that the user running CVU has read and write permissions on the directory indicated or specify a different work area using the CV_DESTLOC property in the cv/admin/cvu_config file under the software home directory.

PRVG-13126: unable to delete files from directory "{0}".

Cause: An attempt by CVU to remove files from the indicated directory failed.

Action: Make sure that the user running CVU has read and write permissions for the directory indicated or specify a different work area using the CV_DESTLOC property in the cv/admin/cvu_config file under the software home directory.

PRVG-13127: unable to read file "{0}" copied to local scratch area from node {1}.

Cause: An error occurred while attempting to read the indicated file.

Action: Make sure that the CV_DESTLOC area was not being used by another process. Make sure that the user running CVU has read and write permissions for the directory. Also look for messages accompanying this message for details.

PRVG-13159: On node "{0}" the file "/etc/resolv.conf" could not be parsed because the file is empty.

Cause: Pre-requisite checking for Oracle grid infrastructure install failed

Action: Ensure that /etc/resolv.conf file is properly configured.

PRVG-13167: File access control is enabled for ASM disk groups "{0}".

Cause: The ASM disk group property ACCESS_CONTROL.ENABLED was set to TRUE for the indicated ASM disk groups

Action: Ensure that the ASM disk group property `ACCESS_CONTROL.ENABLED` is set to the value 'FALSE' by running the command 'asmcmd setattr -G <diskgroup_name> access_control.enabled FALSE' for each disk group.

PRVG-13168: failed to determine the value of ASM disk group property ACCESS_CONTROL.ENABLED

Cause: An ASM query failed unexpectedly.

Action: Examine the accompanying error messages for details. Ensure that the ASM disk group property `ACCESS_CONTROL.ENABLED` is set to the value 'FALSE' by running the command 'asmcmd setattr -G <diskgroup_name> access_control.enabled FALSE' for each disk group.

PRVG-13201: Internal error: {0}

Cause: An internal error occurred. The included value is an internal identifier.

Action: Contact Oracle Support and provide the internal identifier displayed in the message.

PRVG-13202: Stage verification is not supported for cluster of type '{0}'.

Cause: Cluster stage verification could not proceed because verification is not possible for clusters of the indicated type.

Action: Make sure that the cluster type is Oracle Clusterware Application Cluster or do not apply this verification on this cluster.

PRVG-13203: Component verification is not supported for cluster of type '{0}'.

Cause: Cluster component verification could not proceed because verification is not possible for clusters of the indicated type.

Action: Make sure that the cluster type is Oracle Clusterware Application Cluster or do not apply this verification on this cluster.

PRVG-13204: stage verification not possible for cluster type '{0}'.

Cause: Cluster stage verification could not proceed because verification was not possible for clusters of the indicated type. Requested verification applicable on Oracle Flex Cluster.

Action: Request the applicable stage verification for the indicated cluster type.

PRVG-13210: invalid request for SCAN component check for an Oracle Clusterware Application Cluster

Cause: SCAN component verification was requested for an Oracle Application Cluster.

Action: Specify a cluster that is not an Oracle Clusterware Application Cluster or omit the request for SCAN verification.

PRVG-13211: invalid request for node applications check for an Oracle Clusterware Application Cluster

Cause: Node application verification was requested for an Oracle Clusterware Application Cluster.

Action: Specify a cluster that is not an Oracle Clusterware Application Cluster or omit the request for node application verification.

PRVG-13215: CVU 'header.xml' not found in the report zip file.

Cause: The Configuration Verification Utility (CVU) baseline report could not be read because the 'header.xml' was not found in the report zip file.

Action: Ensure that the valid baseline report zip containing the complete CVU baseline report is specified and retry the baseline comparison.

PRVG-13301: The CRSD process identifier (PID) is not available in release "{0}".

Cause: An attempt to retrieve the process identifier for the CRSD process failed because the operation was not available in releases prior to 11.2.0.3.

Action: To use this feature, the Clusterware must be upgraded to a release greater or equal to 11.2.0.3

PRVG-13330: error getting the version of 'cvuqdisk' on node "{0}"

Cause: An attempt to retrieve the version of 'cvuqdisk' failed on the specified node.

Action: Ensure that 'cvuqdisk' is installed properly on the specified node. To check the installation use the command 'rpm -qi cvuqdisk'.

PRVG-13331: could not locate the disk for path "{0}"

Cause: An attempt to locate the disk for the specified path failed.

Action: Ensure that the disk is configured for the indicated path.

PRVG-13332: could not find any disk configured in partition file "{0}"

Cause: An attempt to retrieve the list of disks found no disk configured in the indicated partition file.

Action: Ensure that at least one disk is configured.

PRVG-13333: Path "{0}" is not a valid device path.

Cause: The indicated path does not end with a valid disk name.

Action: Provide a valid device path.

PRVG-13334: Path "{0}" is of unknown device type.

Cause: The type of the device path could not be determined.

Action: Provide a valid device path.

PRVG-13335: could not determine the version of OCFS on node "{0}"

Cause: The OCFS installation directories were not found on the indicated node.

Action: Ensure that the OCFS is installed properly on the specified node.

PRVG-13336: Path "{0}" is an invalid file system path.

Cause: The indicated path was neither a directory path nor a regular file path.

Action: Provide a valid file system path.

PRVG-13337: error getting details of block device on node "{0}"

Cause: An attempt to retrieve the details of the block device failed on the indicated node.

Action: Examine the accompanying error message for details.

PRVG-13338: format error in partition file "{0}" for the entry "{1}"

Cause: An attempt to read the indicated partition file failed because the indicated entry could not be parsed.

Action: Examine the the indicated partition file and correct the format of the entry.

PRVG-13339: could not resolve the path "{0}" on node "{1}"

Cause: The indicated path could not be resolved to produce an absolute pathname.

Action: Ensure that the indicated path is an existing path and that the current user has access permission for this path on identified node.

PRVG-13351: The virtual memory manager tunable parameter "{0}" does not have expected "CUR" value on nodes "{1}" [Expected = "{2}"]

Cause: The identified parameter did not have the expected "CUR" value on the indicated nodes.

Action: Log in to the indicated nodes as the root user and change the identified parameter "CUR" value using command `'/usr/sbin/vmo -o parameter=value'`.

PRVG-13356: The processor scheduler manager tunable parameter "{0}" does not have expected "CUR" value on nodes "{1}" [Expected = "{2}"]

Cause: The identified parameter did not have the expected "CUR" value on the indicated nodes.

Action: Log in to the indicated nodes as the root user and change the identified parameter "CUR" value using command `'/usr/sbin/schedo -o parameter=value'`.

PRVG-13357: The processor scheduler manager tunable parameter "{0}" does not have expected "DEF" value on nodes "{1}" [Expected = "{2}"]

Cause: The identified parameter did not have the expected "DEF" value on the indicated nodes.

Action: Log in to the indicated nodes as the root user and change the identified parameter "DEF" value using command `'/usr/sbin/schedo -p -o parameter=value'`.

PRVG-13358: The processor scheduler manager tunable parameter "{0}" does not have expected "BOOT" value on nodes "{1}" [Expected = "{2}"]

Cause: The identified parameter did not have the expected "BOOT" value on the indicated nodes.

Action: Log in to the indicated nodes as the root user and change the identified parameter "BOOT" value using command `'/usr/sbin/schedo -r -o parameter=value'`.

PRVG-13362: The loopback network interface configured with an IPv4 address was not found on nodes "{0}".

Cause: The Configuration Verification Utility determined that there was no loopback network interface configured with an IPv4 address "127.0.0.1/8" on the indicated nodes.

Action: Log in to the indicated nodes as the root user and configure the loopback network interface with an IPv4 address "127.0.0.1/8" on the indicated nodes.

PRVG-13363: The loopback network interface configured with an IPv6 address was not found on nodes "{0}".

Cause: The Configuration Verification Utility determined that there was no loopback network interface configured with an IPv6 address "::1/128" on the indicated nodes.

Action: Log in to the indicated nodes as the root user and configure the loopback network interface with an IPv6 address "::1/128" on the indicated nodes.

PRVG-13373: The failure flag parameter "{0}" status is panic in the file "{1}" on nodes: "{2}".

Cause: The failure flag parameter value was set to 2 in the identified file on the indicated nodes.

Action: Change the failure flag parameter value to either 0 or 1 to avoid node panic on the indicated nodes, and reboot the system for the changes to take effect.

PRVG-13374: The following lines in file "{0}" could not be parsed on node "{1}" as they are not in proper format:\n{2}

Cause: Invalid lines were found in the indicated file on the indicated node.

Action: Correct the errors indicated. The format of audit rules in the indicated file is "*parameter <value(s)>*". For more details refer to the *audit.rules* man page.

PRVG-13381: File "{0}" does not have required permissions for group on node "{1}". [Expected = "{2}" ; Found = "{3}"].

Cause: The indicated file was found with incorrect permissions for group on the indicated node.

Action: Ensure that the indicated file has the required permissions set. An operating system command 'chmod' may be used along with the indicated file to correct the permissions on the indicated node.

PRVG-13382: File "{0}" does not have required permissions for others on node "{1}". [Expected = "{2}" ; Found = "{3}"].

Cause: The indicated file was found with incorrect permissions for others on the indicated node.

Action: Ensure that the indicated file has the required permissions set. An operating system command 'chmod' may be used along with the indicated file to correct the permissions on the indicated node.

PRVG-13383: There are fewer than the recommended number of voting files in ASM disk group "{0}" of redundancy "{1}". [Expected = "{2}" ; Found = "{3}"].

Cause: The Configuration Verification Utility determined that one or more disks used for voting files in the indicated ASM disk group are offline.

Action: Either 1) Ensure that the offline disks in the indicated ASM diskgroup are online by using the command 'asmcmd online -G *disk group name* -D *disk name*'. The command 'asmcmd lsdisk -p -G *disk group name*' can be used to obtain the status of disks in the indicated ASM disk group. or 2) Use the command 'crsctl query css votedsk' to obtain the list of voting files. Add more disks to the indicated ASM disk group to match the specified expectation.

PRVG-13400: Oracle Clusterware is not configured on nodes "{0}".

Cause: The Configuration Verification Utility (CVU) found that Oracle Clusterware had not been configured on the indicated nodes.

Action: Ensure that Oracle Clusterware is installed and configured on the indicated nodes.

PRVG-13410: The upgrade state of Oracle Clusterware is not as expected to allow upgrade or patch operation. [Expected = "{0}" ; Found = "{1}"]

Cause: The Configuration Verification Utility (CVU) pre-check found that Oracle Clusterware was in the middle of some other operation with the indicated state. An upgrade or a patch application could not be performed in the indicated state.

Action: Use the command 'crsctl query crs activeversion -f' to check the upgrade state of the cluster. Complete the pending clusterware upgrade or patching operation to ensure that Oracle Clusterware is in NORMAL state and retry the operation. Otherwise, contact Oracle Support Services.

PRVG-13411: Oracle Clusterware active patch level "{0}" does not match software patch level "{1}" on node "{2}".

Cause: The Configuration Verification Utility (CVU) found that the indicated Oracle Clusterware active patch level did not match the indicated software patch level on the indicated node. The patching operation was either in progress or not complete on all the nodes.

Action: Complete the patching operation to ensure the Oracle Clusterware active patch level matches the software patch level on all the nodes and retry the operation.

PRVG-13412: Oracle Clusterware active patch level "{0}" value in Oracle Cluster Registry (OCR) does not match the value in Oracle Local Registry (OLR) on node "{2}".

Cause: The Configuration Verification Utility (CVU) found that the indicated Oracle Clusterware active patch level values in OCR and OLR did not match. The patching operation was either in progress or not complete on the indicated node.

Action: Complete the patching operation to ensure the consistency of Oracle Clusterware active patch level and retry the operation.

PRVG-13600: Query of NTP daemon for its time sources could not be performed on all nodes on which NTP daemon was running.

Cause: An attempt to query the NTP daemon for its time sources failed on all the nodes of the cluster because the 'ntpq' command could not be executed successfully. The accompanying messages provide detailed failure information.

Action: Ensure that the NTP daemon query command 'ntpq' is available on all the nodes and the user running the CVU check has execute privileges for it. Examine the accompanying messages, resolve the issues identified, and then retry the operation.

PRVG-13601: Query of NTP daemon for its time sources could not be performed on node "{0}".

Cause: An attempt to query the NTP daemon for its time sources failed on the indicated node because the 'ntpq' command could not be executed successfully. The accompanying messages provide detailed failure information.

Action: Ensure that the NTP daemon query command 'ntpq' is available on the indicated node and the user running the CVU check has execute privileges for it. Examine the accompanying messages, resolve the issues identified, and then retry the operation.

PRVG-13602: NTP daemon is not synchronized with any external time source on node "{0}".

Cause: The output of the command 'ntpq -pn' executed on the indicated node did not list any external NTP daemon synchronization time source. The values of the tally code and 'refid' columns in the command output reported that the NTP daemon is

either not synchronized with any time source or it is synchronized with a locally connected reference clock.

Action: Examine the output of the command 'ntpq -pn'. Modify the NTP configuration to use one or more appropriate external time sources, or correct any problems accessing the currently configured external time sources. Rerun the command 'ntpq -pn' to confirm that the NTP daemon running on the indicated node is now synchronized with at least one external time source, and then retry the operation.

PRVG-13604: Query of chrony daemon for its time sources could not be performed on all nodes on which chrony daemon was running.

Cause: An attempt to query the chrony daemon for its time sources failed on all the nodes of the cluster because the 'chronyc sources' command could not be executed successfully. The accompanying messages provide detailed failure information.

Action: Ensure that the chrony daemon query command 'chronyc' is available on all the nodes and the user running the CVU check has execute privileges for it. Examine the accompanying messages, resolve the issues identified, and then retry the operation.

PRVG-13605: Query of chrony daemon for its time sources could not be performed on node "{0}".

Cause: An attempt to query the chrony daemon for its time sources failed on the indicated node because the 'chronyc sources' command could not be executed successfully. The accompanying messages provide detailed failure information.

Action: Ensure that the chrony daemon query command 'chronyc' is available on the indicated node and the user running the CVU check has execute privileges for it. Examine the accompanying messages, resolve the issues identified, and then retry the operation.

PRVG-13606: chrony daemon is not synchronized with any external time source on node "{0}".

Cause: The output of the command 'chronyc sources' executed on the indicated node did not list any external chrony daemon synchronization time source. The values of the mode and state columns in the command output reported that the chrony daemon is either not synchronized with any time source or is synchronized with a locally connected reference clock.

Action: Examine the output of the command 'chronyc sources'. Modify the chrony configuration to use one or more appropriate external time sources, or correct any problems accessing the currently configured external time sources. Rerun the command 'chronyc sources' to confirm that the chrony daemon running on the indicated node is now synchronized with at least one external time source, and then retry the operation.

PRVG-13609: The path "{0}" resolving to storage of type "{1}" is not suitable for usage as Oracle Clusterware software for release "{2}". Supported storage types are "{3}".

Cause: The Configuration Verification Utility check for storage suitability determined that the storage of the indicated type designated by the indicated path was not suitable for usage as Oracle Clusterware software.

Action: Retry the operation ensuring that the supplied storage path designates storage appropriate for Oracle Clusterware software.

PRVG-13610: No shared storage was found on nodes "{0}".

Cause: The Configuration Verification Utility shared storage discovery did not find any shared storage on the indicated nodes.

Action: Ensure the existence of shared storage on the indicated nodes and retry the operation.

PRVG-13620: Node application "{0}" is offline on node "{1}".

Cause: The indicated node application was found to be offline on the indicated node.

Action: Bring the indicated resource online on the indicated node using the 'srvctl' command.

PRVG-13631: IP address for host "{0}" is not consistent across the cluster nodes.

Cause: The Configuration Verification Utility determined that the indicated host did not resolve to the same IP address across the cluster nodes. The indicated host entry in the hosts file or DNS did not resolve to the same IP address across the cluster nodes.

Action: Ensure that the entry in the hosts file or DNS resolving the IP address for the indicated host is consistent across the cluster nodes and retry the CVU check.

PRVG-13632: Host "{0}" resolves to IP address "{1}" on the majority of cluster nodes but to address "{2}" on nodes "{3}".

Cause: The Configuration Verification Utility determined that the indicated host resolved to the different IP address on the indicated nodes.

Action: Ensure that the indicated host resolves to the same IP address across the cluster nodes and retry the CVU check.

PRVG-13633: Entry for non-loopback IP addresses "{0}" contains 'localhost' alias in the file "{1}" on node "{2}".

Cause: An attempt to validate the hosts file failed because non-loopback IP address entries were found with the 'localhost' alias in the indicated file on the indicated node.

Action: Ensure that the entries containing alias 'localhost' specify only loopback IP addresses.

PRVG-13634: Host VIP "{0}" resolves to multiple IP addresses "{1}" on node "{2}".

Cause: The Configuration Verification Utility determined that the indicated host VIP resolved to more than one IP address on the indicated node.

Action: Ensure that the indicated VIP name does not resolve to more than one IP address in the hosts file or via DNS.

PRVG-13635: Host VIP "{0}" of network type "{1}" resolves to more than two IP addresses "{2}" on node "{3}".

Cause: The Configuration Verification Utility determined that the indicated host VIP resolved to more than two IP addresses on the indicated node.

Action: Ensure that the indicated VIP name does not resolve to more than two IP addresses of the same address type in the hosts file or via DNS.

PRVG-13645: Command "{0}" to get VIP network information failed.

Cause: An attempt to execute the indicated command failed.

Action: Examine the accompanying error messages and correct the problems indicated, if possible. Otherwise, contact Oracle Support.

PRVG-13646: failed to parse VIP network information from the 'cvuhelper' command output

Cause: An attempt to parse the output from an internal cvuhelper command failed.

Action: Examine the accompanying error messages and correct the problems indicated, if possible. Otherwise, contact Oracle Support.

PRVG-13690: The state of Oracle Clusterware is not ONLINE on node "{0}". [Found state = "{1}"]

Cause: The Configuration Verification Utility (CVU) determined that the Oracle Clusterware state is not ONLINE on the indicated node.

Action: Verify the state of the Oracle clusterware using 'crsctl status server' and ensure Oracle Clusterware state is ONLINE on the indicated node.

PRVG-13702: RPM Package Manager database files are corrupt on nodes "{0}".

Cause: The Configuration Verification Utility (CVU) determined that the RPM Package Manager database files were corrupt on the indicated nodes.

Action: Clean and rebuild the RPM Package Manager database by running the command '/bin/rpm --rebuilddb' on the indicated nodes, and then retry the CVU operation.

PRVG-13712: CRS resource parameter "{0}" set to "{1}" on node "{2}". Oracle Clusterware does not allow starting resources on this node. [Expected = "{3}"]

Cause: The Configuration Verification Utility (CVU) determined that the indicated Cluster Ready Services (CRS) resource parameter did not match the expected value on the indicated node.

Action: Ensure that the indicated CRS resource parameter is set to the expected value on the indicated node using the command 'crsctl set resource use'.

PRVH-00100 to PRVH-01507

PRVH-00100: Restricted deletion flag is not set for path "{0}" on node "{1}".

Cause: The Configuration Verification Utility (CVU) determined that the indicated path did not have restricted deletion flag (sticky bit) set on the indicated node.

Action: Ensure that the indicated path has the restricted deletion flag set. Use the operating system command 'chmod +t *path*' to set the restricted deletion flag for the indicated file system path.

PRVH-00101: Restricted deletion flag is set for path "{0}" on node "{1}".

Cause: The Configuration Verification Utility (CVU) determined that the indicated path had a restricted deletion flag (sticky bit) set on the indicated node.

Action: Ensure that the indicated path does not have the restricted deletion flag set. Use the operating system command 'chmod -t *path*' to remove the restricted deletion flag for the indicated file system path.

PRVH-00102: File "{0}" does not exist on node "{1}".

Cause: The Configuration Verification Utility (CVU) determined that the indicated file did not exist on the indicated node.

Action: Ensure that the indicated file exists.

PRVH-00103: Directory "{0}" does not exist on node "{1}".

Cause: The Configuration Verification Utility (CVU) determined that the indicated directory did not exist on the indicated node.

Action: Ensure that the indicated directory exists.

PRVH-00104: Link "{0}" does not exist on node "{1}".

Cause: The Configuration Verification Utility (CVU) determined that the indicated file system link did not exist on the indicated node.

Action: Ensure that the indicated file system link exists.

PRVH-00105: Path "{0}" with permissions "{1}" does not have read permissions for the owner on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have read permissions for the owner on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions for the owner.

PRVH-00106: Path "{0}" with permissions "{1}" does not have write permissions for the owner on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have write permissions for the owner on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions for the owner.

PRVH-00107: Path "{0}" with permissions "{1}" does not have execute permissions for the owner on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the execute permissions for the owner on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions for the owner.

PRVH-00108: Path "{0}" with permissions "{1}" does not have read permissions for the file's group on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the read permissions for the file's group on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions for the file's group.

PRVH-00109: Path "{0}" with permissions "{1}" does not have write permissions for the file's group on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the write permissions for the file's group on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions for the file's group.

PRVH-00110: Path "{0}" with permissions "{1}" does not have execute permissions for the file's group on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the execute permissions for the file's group on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions for the file's group.

PRVH-00111: Path "{0}" with permissions "{1}" does not have read permissions for others on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the read permissions for others on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions for others.

PRVH-00112: Path "{0}" with permissions "{1}" does not have write permissions for others on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the write permissions for others on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions for others.

PRVH-00113: Path "{0}" with permissions "{1}" does not have execute permissions for others on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the execute permissions for others on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions for others.

PRVH-00114: Path "{0}" with permissions "{1}" does not have read permissions for the owner, file's group, and others on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the read permissions for the owner, file's group and other on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions for user, file's group and others.

PRVH-00115: Path "{0}" with permissions "{1}" does not have write permissions for the owner, file's group, and others on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the write permissions for the owner, file's group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions for the owner, file's group and others.

PRVH-00116: Path "{0}" with permissions "{1}" does not have execute permissions for the owner, file's group, and others on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the execute permissions for the owner, file's group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions for the owner, file's group and others.

PRVH-00117: Path "{0}" with permissions "{1}" does not have read permissions for the owner and file's group on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the read permissions for the owner and file's group on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions for the owner and file's group.

PRVH-00118: Path "{0}" with permissions "{1}" does not have write permissions for the owner and file's group on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the write permissions for the owner and file's group on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions for the owner and file's group.

PRVH-00119: Path "{0}" with permissions "{1}" does not have execute permissions for the owner and file's group on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the execute permissions for the owner and file's group on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions for the owner and file's group.

PRVH-00120: Path "{0}" with permissions "{1}" does not have read permissions for the owner and others on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the read permissions for the owner and others on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions for the owner and others.

PRVH-00121: Path "{0}" with permissions "{1}" does not have write permissions for the owner and others on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the write permissions for the owner and others on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions for the owner and others.

PRVH-00122: Path "{0}" with permissions "{1}" does not have execute permissions for the owner and others on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the execute permissions for the owner and others on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions for the owner and others.

PRVH-00123: Path "{0}" with permissions "{1}" does not have read permissions for the file's group and others on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the read permissions for the file's group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions for the file's group and others.

PRVH-00124: Path "{0}" with permissions "{1}" does not have write permissions for the file's group and others on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the write permissions for the file's group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions for the file's group and others.

PRVH-00125: Path "{0}" with permissions "{1}" does not have execute permissions for the file's group and others on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the execute permissions for the file's group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions for the file's group and others.

PRVH-00126: Path "{0}" with permissions "{1}" does not have read permissions for the owner or file's group, or others on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the read permissions for the owner, file's group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions either for the owner or file's group or others.

PRVH-00127: Path "{0}" with permissions "{1}" does not have write permissions for the owner or file's group, or others on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the write permissions for the owner, file's group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions either for the owner or file's group or others.

PRVH-00128: Path "{0}" with permissions "{1}" does not have execute permissions for the owner or file's group, or others on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the execute permissions for the owner, file's group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions either for the owner or file's group or others.

PRVH-00129: Path "{0}" with permissions "{1}" does not have read permissions for the owner or file's group on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the read permissions for the owner and file's group on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions either for the owner or file's group.

PRVH-00130: Path "{0}" with permissions "{1}" does not have write permissions for the owner or file's group on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the write permissions for the owner and file's group on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions either for the owner or file's group.

PRVH-00131: Path "{0}" with permissions "{1}" does not have execute permissions for the owner or file's group on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the execute permissions for the owner and file's group on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions either for the owner or file's group.

PRVH-00132: Path "{0}" with permissions "{1}" does not have read permissions for the owner or others on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the read permissions for the owner and others on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions either for the owner or others.

PRVH-00133: Path "{0}" with permissions "{1}" does not have write permissions for the owner or others on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the write permissions for the owner and others on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions either for the owner or others.

PRVH-00134: Path "{0}" with permissions "{1}" does not have execute permissions for the owner or others on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the execute permissions for the owner and others on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions either for the owner or others.

PRVH-00135: Path "{0}" with permissions "{1}" does not have read permissions for the file's group or others on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the read permissions for the file's group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions either for the file's group or others.

PRVH-00136: Path "{0}" with permissions "{1}" does not have write permissions for the file's group or others on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the write permissions for the file's group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions either for the file's group or others.

PRVH-00137: Path "{0}" with permissions "{1}" does not have execute permissions for the file's group or others on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the execute permissions for the file's group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions either for the file's group or others.

PRVH-00138: Path "{0}" with permissions "{1}" does not have read permissions for the owner or file's group and others on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the read permissions either for the owner or owning group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions either for the owner or file's group and others.

PRVH-00139: Path "{0}" with permissions "{1}" does not have write permissions for the owner or file's group and others on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the write permissions either for the owner or owning group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions either for the owner or file's group and others.

PRVH-00140: Path "{0}" with permissions "{1}" does not have execute permissions for the owner or file's group and others on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the execute permissions either for the owner or owning group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions either for the owner or file's group and others.

PRVH-00141: Path "{0}" with permissions "{1}" does not have read permissions for the file's group or owner and others on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the read permissions either for the file's group or the owner and others on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions either for the file's group or the owner and others.

PRVH-00142: Path "{0}" with permissions "{1}" does not have write permissions for the file's group or owner and others on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the write permissions either for the file's group or the owner and others on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions either for the file's group or the owner and others.

PRVH-00143: Path "{0}" with permissions "{1}" does not have execute permissions for the file's group or owner and others on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the execute permissions either for the file's group or the owner and others on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions either for the file's group or the owner and others.

PRVH-00144: Path "{0}" with permissions "{1}" does not have read permissions for others or the owner and file's group on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the read permissions either for others or the owner and file's group on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions either for others or the owner and file's group.

PRVH-00145: Path "{0}" with permissions "{1}" does not have write permissions for others or the owner and file's group on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the write permissions either for others or the owner and file's group on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions either for others or the owner and file's group.

PRVH-00146: Path "{0}" with permissions "{1}" does not have execute permissions for others or the owner and file's group on node "{2}".

Cause: A check for file system attributes found that the indicated path did not have the execute permissions either for others or the owner and file's group on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions either for others or the owner and file's group.

PRVH-00147: Set group ID bit is not set for file "{0}" on node "{1}".

Cause: The set group ID bit was not set for the identified file on the indicated node.

Action: Log in as the root user and set the set group ID bit for the identified file using command 'chmod g+s *file*'.

PRVH-00148: Set group ID bit is set for file "{0}" on node "{1}".

Cause: The set group ID bit was set for the identified file on the indicated node.

Action: Log in as the root user and remove the set group ID bit for the identified file using command 'chmod g-s *file*'.

PRVH-00149: Set user ID bit is set for file "{0}" on node "{1}".

Cause: The set user ID bit was set for the identified file on the indicated node.

Action: Log in as the root user and remove the set user ID bit for the identified file using command 'chmod -s *file*'.

PRVH-00150: failure to open file "{0}" to read on node "{1}". Operation failed with error "{2}"

Cause: An attempt to read the specified file failed on the indicated node because of the indicated error.

Action: Ensure that the file exists at the indicated path and the user running diagnostics operations has read permissions on the indicated file.

PRVH-00151: Directory "{0}" is not empty on node "{1}".

Cause: The identified directory path was found to be not empty on the indicated node.

Action: Ensure that the identified directory path is empty on the indicated node .

PRVH-00152: Directory "{0}" is an empty directory on node "{1}".

Cause: The identified directory path was found to be an empty directory on the indicated node.

Action: Ensure that the identified directory path is not an empty directory on the indicated node .

PRVH-00153: File "{0}" is not empty on node "{1}".

Cause: The identified path was found to be a non empty file on the indicated node.

Action: Ensure that the identified file path is empty on the indicated node .

PRVH-00154: File "{0}" is empty on node "{1}".

Cause: The identified path was found to be zero bytes file on the indicated node.

Action: Ensure that the identified file path is not empty on the indicated node .

PRVH-00158: User ID "{0}" does not exist on node "{1}".

Cause: The specified user ID did not exist on the specified node.

Action: Create the user with specified ID on the specified node.

PRVH-00159: Group ID "{0}" does not exist on node "{1}".

Cause: The specified group ID did not exist on the specified node.

Action: Create the group with specified group ID on the specified node.

PRVH-00161: File "{0}" is not expected on node "{1}".

Cause: The Configuration Verification Utility (CVU) determined that the indicated file already existed on the indicated node.

Action: Ensure that the indicated file does not exist.

PRVH-00162: Directory "{0}" is not expected on node "{1}".

Cause: The Configuration Verification Utility (CVU) determined that the indicated directory already existed on the indicated node.

Action: Ensure that the indicated directory does not exist.

PRVH-00163: Link "{0}" is not expected on node "{1}".

Cause: The Configuration Verification Utility (CVU) determined that the indicated file system link already existed on the indicated node.

Action: Ensure that the indicated file system link does not exist.

PRVH-00169: Checksum of the file "{0}" is inconsistent across nodes. [Found = "{1}"]

Cause: The Configuration Verification Utility (CVU) determined the checksum of the indicated file was not the same on all cluster nodes.

Action: Ensure the content of the indicated file is consistent on all nodes.

PRVH-00180: Path "{0}" is not a file on node "{1}".

Cause: The Configuration Verification Utility (CVU) determined that the indicated path was not a file but a directory on the identified node.

Action: Ensure that the indicated path exists as file on the identified node.

PRVH-00181: Path "{0}" is not a directory on node "{1}".

Cause: The Configuration Verification Utility (CVU) determined that the indicated path was not a directory on the indicated node.

Action: Ensure that the indicated path exists as directory on the identified node.

PRVH-00182: Path "{0}" is not a link on node "{1}".

Cause: The Configuration Verification Utility (CVU) determined that the indicated path was not a file system link on the identified node.

Action: Ensure that the indicated path exists as file system link on the identified node.

PRVH-00183: Path "{0}" is not expected to be owned by user "{1}" on node "{2}".

Cause: The Configuration Verification Utility (CVU) determined that the indicated path was incorrectly owned by the indicated user on the identified node.

Action: Ensure that the indicated path is not owned by the indicated user on the identified node.

PRVH-00184: Path "{0}" is not expected to be owned by group "{1}" on node "{2}".

Cause: The Configuration Verification Utility (CVU) determined that the indicated path was incorrectly owned by the indicated group on the identified node.

Action: Ensure that the indicated path is not owned by the indicated group on the identified node.

PRVH-00185: Path "{0}" does not allow execution on node "{1}".

Cause: The Configuration Verification Utility (CVU) determined that the indicated path did not allow execution of any executable on the identified node.

Action: Ensure that the indicated path does not have security settings restricting the execution of binaries on the identified node. Security enforced restrictions or Access Control Lists configuration limits the ability to execute binaries from the file system location. Examine the accompanying messages for details on the cause of the failure.

PRVH-00186: Path "{0}" is not owned by user "{1}" and user is not the member of group "{2}" of the path on node "{3}".

Cause: The Configuration Verification Utility (CVU) determined that the indicated path was not owned by the indicated user and the user was not a member of the group of the path on the indicated node.

Action: Ensure that the indicated path is either owned by the indicated user or by a group of which the user is a member on the indicated node.

PRVH-00500: Server categories "{0}" exist with a leaf role.

Cause: Indicated server categories were found to be configured with a leaf role. An attribute setting of 'ACTIVE_CSS_ROLE=leaf' was found for each of these server categories. Nodes with CSS role of leaf are not supported in Oracle Clusterware 19c onward.

Action: Modify each of the indicated server categories to have an attribute setting of 'ACTIVE_CSS_ROLE=hub'. Otherwise, delete the indicated server categories after performing one of the following two corrective actions for each of the server pools which uses any of the indicated server categories: (1) Delete that server category from its SERVER_CATEGORY attribute, if multiple categories are indicated. Otherwise, delete the server pool. (2) Modify the SERVER_CATEGORY of the server pool to replace the indicated server category with a server category that is not configured with a leaf role.

PRVH-00501: ASM filter driver discovery diskstring "{0}" is invalid.

Cause: Configuration Verification Utility check found that the indicated ASM filter driver discovery diskstring contains path names that are invalid OS path names.

Action: Use the command 'asmcmd afd_dsget' to get the current discovery string. Ensure that the discovery string is set correctly to the path names that the OS accepts using the command 'asmcmd afd_dsset <afd_diskstring>' and retry the operation.

PRVH-00510: IPC protocol used by ASM instances is inconsistent across the cluster nodes. ASM instances use the "{0}" protocol on nodes "{1}" and "{2}" protocol on nodes "{3}".

Cause: Configuration Verification Utility (CVU) found that IPC protocol used by ASM instances was not consistent across the cluster nodes.

Action: Ensure that ASM instances use the same protocol on all the cluster nodes for IPC communication. Run the command 'make -f \$ORACLE_HOME/rdbms/lib/ins_rdbms.mk ipc_rds ioracle' to change the protocol to 'rds' or command 'make -f \$ORACLE_HOME/rdbms/lib/ins_rdbms.mk ipc_g ioracle' to change the protocol to 'udp' on the applicable nodes to make the IPC protocol consistent across the cluster nodes. Refer to MOS note 2345406.1 for more details.

PRVH-00511: ASM instances do not use the IPC protocol 'RDS' for IPC communication on nodes "{0}".

Cause: Configuration Verification Utility (CVU) found that IPC protocol used by ASM instances was not RDS on the indicated nodes.

Action: Ensure that the ASM instances use the RDS protocol for IPC communication on the indicated nodes by running the command 'make -f \$ORACLE_HOME/rdbms/lib/ins_rdbms.mk ipc_rds ioracle'. Refer to MOS note 2345406.1 for more details.

PRVH-00512: ASM instances use the IPC protocol 'UDP' for IPC on nodes "{0}".

Cause: The Configuration Verification Utility (CVU) found that the Inter-process Communication (IPC) protocol used by ASM instances was not Reliable Datagram Sockets (RDS) on the indicated nodes. The User Datagram Protocol (UDP) linked Oracle binary upgrade failed on Oracle Exadata environments.

Action: Ensure that the ASM instances use the RDS protocol for IPC on the indicated nodes by running the command 'make -f \$ORACLE_HOME/rdbms/lib/ins_rdbms.mk ipc_rds ioracle'. Refer to MOS note 2345406.1 for more details.

PRVH-00513: ASM instances use the IPC protocol 'RDS' for IPC on nodes "{0}".

Cause: The Configuration Verification Utility (CVU) found that the Inter-process Communication (IPC) protocol used by ASM instances was not User Datagram Protocol (UDP) on the indicated nodes. The Reliable Datagram Sockets (RDS) linked Oracle binary upgrade failed on non-Oracle Exadata environments.

Action: Ensure that the ASM instances use the UDP protocol for IPC on the indicated nodes by running the command 'make -f \$ORACLE_HOME/rdbms/lib/ins_rdbms.mk ipc_g'.

PRVH-00516: failed to retrieve CVU remote execution framework version from node "{1}" during an attempt to setup remote execution framework directory "{0}"

Cause: An operation requiring remote execution could not complete because the attempt to retrieve CVU remote execution framework version failed. The accompanying message provides detailed failure information.

Action: Ensure that the user executing the checks has sufficient permissions to execute an executable under the indicated directory. Refer to the accompanying error messages for execution failure information, resolve the issues and retry the operation.

PRVH-00520: failed to generate HTML report

Cause: Error occurred while generating the requested HTML report for the Configuration Verification Utility operation.

Action: Examine the accompanying error message for details, resolve issues identified and retry the operation.

PRVH-00521: OS kernel parameter "{0}" does not have expected current value on node "{1}" [Expected = "{2}" ; Current = "{3}";].

Cause: The Configuration Verification Utility (CVU) found that the current value for an OS kernel parameter did not match the expected value.

Action: Modify the indicated kernel parameter current value to match the required value.

PRVH-00525: The specified command is only supported from the configured Cluster Ready Services (CRS) or High Availability (HA) home.

Cause: The specified command was not run from the configured CRS or HA home. The command is supported only from configured Cluster Ready Services (CRS) or High Availability (HA) home.

Action: Run the command from the configured CRS or HA home.

PRVH-00554: Grid Infrastructure Management Repository is not yet installed and configured on this cluster.

Cause: Grid Infrastructure Management Repository was selected during Install, however it was not found to be installed or configured.

Action: Ensure that the Grid Infrastructure Management Repository is installed and configured for this cluster.

PRVH-00555: Error encountered while trying to determine whether the Grid Infrastructure Management Repository is configured for the CRS home "{0}".

Cause: The current configuration status of Grid Infrastructure Management Repository for the indicated CRS home was not determined.

Action: Ensure that the Grid Infrastructure Management Repository is installed and configured for the indicated CRS home. Examine the accompanying error message, resolve the problems indicated there, and then retry the operation.

PRVH-00556: The specified command is not compatible with the configured home "{0}". Run command from the location "{1}".

Cause: The specified command was not compatible with the home from which it was run.

Action: Ensure that the command is run from the specified configured home.

PRVH-00557: The specified command is not compatible with the configured home "{0}". This command is only supported from the configured CRS home.

Cause: The specified command was not compatible with the home from which it was run. The command is supported only from configured Cluster Ready Services (CRS) home.

Action: Run the command from the configured CRS home.

PRVH-00558: TCP connectivity failed for the SCAN listeners on cluster "{0}" with SCAN name "{1}" on node "{2}".

Cause: Configuration Verification Utility (CVU) found that connection to SCAN listeners of shared SCAN client failed from the indicated node.

Action: Ensure that SCAN listeners on the indicated shared SCAN server cluster are running. Also, examine the accompanying messages for more details on the cause of failure.

PRVH-00570: Oracle ACFS was found configured with resources "{0}" from CRS home "{1}" but is not available in Oracle Clusterware release version "{2}" for the current operating system platform.

Cause: The Oracle Automatic Storage Management Cluster File System (Oracle ACFS) was found configured, but was not supported on the current operating system platform by the targeted Oracle Clusterware release.

Action: Ensure that the Oracle ACFS is not in use and that no ACFS resources such as volumes or file system resources are present in the current configuration. Deconfigure and remove the indicated Oracle ACFS resources before proceeding. No data will be available to be recovered after installation, as Oracle ACFS is not available in the latest release. Refer to My Oracle Support note 1369107.1 for more information regarding this requirement.

PRVH-00571: Failed to determine if Oracle ACFS resources are configured from CRS home "{0}" on node "{1}", command "{2}" with error {3}

Cause: An attempt to query Oracle Automatic Storage Management Cluster File System (Oracle ACFS) resources failed with the indicated error.

Action: Examine the accompanying error message, resolve the problems indicated there, and then retry the operation.

PRVH-00572: Oracle ACFS Remote was found configured on Indirect Storage Member Cluster with resources "{0}" from CRS home "{1}" but is not available in Oracle Clusterware release version "{2}" .

Cause: The Oracle Automatic Storage Management Cluster File System Remote (Oracle ACFS Remote) was found configured, but was not supported for Indirect Storage Member Clusters on the current operating system platform by the targeted Oracle Clusterware release.

Action: Contact Oracle Support.

PRVH-00573: Oracle ACFS driver from CRS home "{0}" is supported on the current kernel version of the operating system, but will not be supported on the specified target kernel "{1}"

Cause: The Oracle Automatic Storage Management Cluster File System (Oracle ACFS) was found supported on the current operating system kernel version, but was not compatible with the indicated kernel of the operating system.

Action: Ensure that the operating system is only upgraded to the Oracle Automatic Storage Management Cluster File System (Oracle ACFS) supported kernel version. Upgrading the operating system to an unsupported kernel will result in complete loss of ACFS functionality.

PRVH-00574: Failed to determine if Oracle ACFS driver from CRS home "{0}" is compatible with kernel "{1}" , command "{2}" failed with error:

Cause: An attempt to check if Oracle Automatic Storage Management Cluster File System (Oracle ACFS) driver is compatible with the specified kernel failed with the indicated error.

Action: Examine the accompanying error message, resolve the problems indicated there, and then retry the operation.

PRVH-00577: Vendor cluster is detected from CRS home "{0}" but is not supported in Oracle Clusterware release version "{1}".

Cause: Configuration Verification Utility (CVU) detected that the indicated Cluster Ready Services (CRS) home has a vendor cluster configuration which is not supported in the target version of Oracle Clusterware.

Action: Ensure that the vendor cluster configuration is removed after the successful upgrade to the target version of Oracle Clusterware. Refer to My Oracle Support note 2638525.1 for more information regarding this requirement.

PRVH-00578: Vendor cluster is detected but is not supported in Oracle Clusterware release version "{0}".

Cause: Configuration Verification Utility (CVU) detected the vendor cluster configuration which is not supported in the installed version of Oracle Clusterware.

Action: Ensure that the vendor cluster configuration is removed. Refer to My Oracle Support note 2638525.1 for more information regarding this requirement.

PRVH-00580: Oracle ACFS mount points "{0}" are configured with ACFS replication version older than "{1}" release.

Cause: Configuration Verification Utility (CVU) detected that the indicated mount points of Oracle Automatic Storage Management Cluster File System (Oracle ACFS) were configured with the ACFS replication version which is older than the indicated minimum supported version.

Action: Ensure that the Oracle Automatic Storage Management Cluster File System (Oracle ACFS) is configured with newer than the indicated version of ACFS replication. Examine the

accompanying messages for more details. Refer to My Oracle Support note 2608560.1 for more information regarding this requirement.

PRVH-00585: Oracle ACFS mount points "{0}" were found with Oracle ACFS security feature enabled which is not supported in the target Oracle Clusterware release version "{1}".

Cause: Configuration Verification Utility (CVU) detected that the indicated mount points of Oracle Automatic Storage Management Cluster File System (Oracle ACFS) were found with Oracle ACFS security feature enabled which is not supported on the indicated target release version.

Action: Ensure that Oracle ACFS has the security feature disabled for all of the identified mount points. The security feature may be disabled by issuing the command 'acfsutil sec disable -m mount_point'. Refer to the desupport notice in the section entitled 'Changes in Oracle ACFS and Oracle ADVM in Oracle ASM 21c' in the Oracle Automatic Storage Management Cluster File System Administrator's Guide. Refer to My Oracle Support note 2688565.1 for more information regarding this requirement.

PRVH-00586: Oracle ACFS mount points "{0}" were found with Oracle ACFS auditing feature enabled which is not supported in the target Oracle Clusterware release version "{1}".

Cause: Configuration Verification Utility (CVU) detected that the indicated mount points of Oracle Automatic Storage Management Cluster File System (Oracle ACFS) were found with Oracle ACFS auditing feature enabled which is not supported on the indicated target release version.

Action: Ensure that Oracle ACFS has the auditing feature disabled for all of the identified mount points. The auditing feature may be disabled by issuing the command 'acfsutil audit disable -m mount_point -s {encr |sec}'. Refer to the desupport notice in the section entitled 'Changes in Oracle ACFS and Oracle ADVM in Oracle ASM 21c' in the Oracle Automatic Storage Management Cluster File System Administrator's Guide. Refer to My Oracle Support note 2688565.1 for more information regarding this requirement.

PRVH-00591: Oracle ASM Filter Driver (AFD) from CRS home "{0}" is supported on the current kernel version of the operating system, but will not be supported on the specified target kernel "{1}"

Cause: The Oracle ASM Filter Driver (AFD) was found supported on the current operating system kernel version, but was not compatible with the indicated kernel of the operating system.

Action: Ensure that the operating system is only upgraded to the Oracle Oracle ASM Filter Driver (AFD) supported kernel version. Upgrading the operating system to an unsupported kernel will result in complete loss of Oracle Automatic Storage Management functionality.

PRVH-00592: Failed to determine if Oracle ASM Filter Driver (AFD) from CRS home "{0}" is compatible with kernel "{1}" , command "{2}" failed with error:

Cause: An attempt to check if Oracle ASM Filter Driver (AFD) is compatible with the specified kernel failed with the indicated error.

Action: Examine the accompanying error message, resolve the problems indicated there, and then retry the operation.

PRVH-00601: The legacy domain sockets directory path "{0}" is not a filesystem symbolic link to the domain sockets directory "{1}" on nodes "{2}".

Cause: The Configuration Verification Utility (CVU) determined that the indicated symbolic link did not exist on the indicated nodes.

Action: Ensure that the indicated symbolic link exists. If the indicated legacy domain sockets directory exists with contents, then stop the databases and other applications that are using SQL*Net, clear the contents of the directory, create the indicated symbolic link and restart the applications.

PRVH-00602: failed to set up passwordless SSH connectivity on nodes "{0}"

Cause: An operation to perform passwordless SSH connectivity setup failed. The accompanying message provides detailed failure information.

Action: Examine the accompanying error messages, resolve the problems indicated there, and then retry the operation. If the accompanying error messages suggest issues with invalidity or incompatibility of public or private keys, then refer to the Oracle Clusterware documentation to configure SSH manually on the cluster nodes.

PRVH-00611: IP addresses "{0}" of network interfaces "{1}" on the node "{2}" conflicted with High Availability IP (HAIP) usage.

Cause: The Configuration Verification Utility (CVU) determined that the indicated network interfaces had IP addresses in the range 169.254.0.0/19 with netmask 255.255.224.0, the range used by HAIP which can create routing conflicts.

Action: Ensure that there are no IP addresses in the range 169.254.0.0/19 on any network interfaces.

PRVH-00612: GIMR is not online.

Cause: The Configuration Verification Utility (CVU) determined that the Grid Infrastructure Management Repository (GIMR) was not online.

Action: Ensure that the GIMR is enabled and running for the Oracle Clusterware upgrade operation to succeed and retry the operation.

PRVH-00656: User with root privileges attempted to perform Configuration Verification Utility operation.

Cause: User with root privileges attempted an operation which is not supported to be performed as a root user.

Action: Retry the operation with a non-root user.

PRVH-00657: Software checks for software home "{0}" with software owner "{1}" was performed by user "{2}" with insufficient privileges.

Cause: The Configuration Verification Utility (CVU) determined that the software checks for the indicated software home were not performed by the indicated software owner.

Action: Ensure that the operation is performed by the indicated software owner.

PRVH-00662: VM resources exist which are registered with Oracle Virtual Machine Manager (OVMM)

Cause: Configuration Verification Utility (CVU) determined that there were Oracle Virtual Machine resources registered which were no longer supported.

Action: Remove all the Oracle Virtual Machine resources of type 'ora.vm.type' with the command 'srvctl remove vm' and retry the upgrade. Run 'srvctl config vm' command to find all the configured Virtual Machine (VM) resources.

PRVH-00663: Oracle Clusterware software patch level "{0}" value in Oracle Cluster Registry (OCR) does not match the value "{1}" in Oracle Local Registry (OLR) on node "{2}".

Cause: The Configuration Verification Utility (CVU) found that the indicated Oracle Clusterware software patch level values in OCR and OLR did not match. The patching operation was either in progress or not complete on the indicated node.

Action: Complete the patching operation to ensure the consistency of Oracle Clusterware software patch level and retry the operation.

PRVH-00664: Oracle Clusterware active patch level "{0}" does not match release patch level "{1}" on node "{2}".

Cause: The Configuration Verification Utility (CVU) found that the indicated Oracle Clusterware active patch level did not match the indicated release patch level on the indicated node. The patching operation was either in progress or not complete on the indicated node.

Action: Complete the patching operation to ensure the consistency of Oracle Clusterware release patch level and retry the operation.

PRVH-00665: Oracle Clusterware upgrade state is not NORMAL. [Found = "{0}"]

Cause: The Configuration Verification Utility (CVU) pre-check found that Oracle Clusterware was in the middle of an upgrade with the indicated state.

Action: Use the command 'crsctl query crs activeversion -f' to check the upgrade state of the cluster. If the cluster is not intended to be in the middle of an upgrade, then complete the operation to ensure that the cluster is in NORMAL state and retry the operation.

PRVH-00666: No swap devices configured on node "{0}"

Cause: The Configuration Verification Utility (CVU) determined that swap devices were not configured on the indicated node.

Action: Ensure that swap devices configured on the indicated node to get the swap space information.

PRVH-00667: SPFILE "{0}" and SPFILE backup "{1}" for ASM are on the same Oracle ASM disk group.

Cause: The Configuration Verification Utility (CVU) check found that the indicated ASM SPFILE backup file was on the same Oracle ASM disk group as the SPFILE.

Action: Ensure that the ASM SPFILE backup is on a different Oracle ASM disk group than the SPFILE.

PRVH-00668: Version consistency check failed for OPatch utility of the software home "{0}".

Cause: The Configuration Verification Utility (CVU) check found that the version of OPatch utility was not consistent across the cluster.

Action: Refer to accompanying messages for node-wise information of OPatch utility version. Ensure that the OPatch utility version is consistent across the cluster.

PRVH-00676: The state of the Oracle ASM cluster is not as expected to allow patch operation. [Expected = "{0}" ; Found = "{1}"]

Cause: The Configuration Verification Utility (CVU) pre-check found that Oracle ASM cluster was in the middle of some other operation with the indicated state. A patch application could not be performed in the indicated state.

Action: Use the command 'asmcmd showclusterstate' to check the state of the cluster. Complete the Oracle ASM operation with the indicated state to ensure that Oracle ASM cluster is in NORMAL state and retry the operation.

PRVH-00679: Grid Infrastructure Management Repository validation failed on node "{0}".

Cause: The Configuration Verification Utility (CVU) found that Oracle GIMR was not configured properly.

Action: Examine the accompanying error messages for more details and fix the issues identified. Use the command 'mgmtca validateGIMR -report' to validate the configuration and retry the operation.

PRVH-00680: The socket send buffer size could not be set to the value of "{0}" bytes on the container node "{1}", maximum allowed send buffer size on this container node is "{2}" bytes.

Cause: The Configuration Verification Utility (CVU) pre-check found that the socket send buffer size could not be set to the indicated value on the identified container node.

Action: The container node may not control the value in its namespace and hence the required send buffer size may be configured by setting the wmem_max kernel parameter from the Linux host of the container.

PRVH-00681: The socket send buffer default size is not set to the minimum expected value on the container node "{0}". [Expected = "{1}" bytes ; Found = "{2}" bytes]

Cause: The Configuration Verification Utility (CVU) pre-check found that the default value of socket send buffer size was not be set to the indicated minimum expected value on the identified container node.

Action: The container node may not control the value in its namespace and hence the required send buffer size may be configured by setting the wmem_default kernel parameter from the Linux host of the container.

PRVH-00682: The socket receive buffer size could not be set to the value of "{0}" bytes on the container node "{1}", maximum allowed send buffer size on this container node is "{2}" bytes.

Cause: The Configuration Verification Utility (CVU) pre-check found that the socket receive buffer size could not be set to the indicated value on the identified container node.

Action: The container node may not control the value in its namespace and hence the required send buffer size may be configured by setting the rmem_max kernel parameter from the Linux host of the container.

PRVH-00683: The socket receive buffer default size is not set to the minimum expected value on the container node "{0}". [Expected = "{1}" bytes ; Found = "{2}" bytes]

Cause: The Configuration Verification Utility (CVU) pre-check found that the default value of socket receive buffer size was not be set to the indicated minimum expected value on the identified container node.

Action: The container node may not control the value in its namespace and hence the required send buffer size may be configured by setting the rmem_default kernel parameter from the Linux host of the container.

PRVH-00686: AutoUpgrade check "{0}" failed.

Cause: The specified AutoUpgrade check failed during the pre-upgrade checks.

Action: Examine the accompanying error messages for more details, fix the issues identified and retry the operation.

PRVH-00695: Swap size is enabled and set to "{0}" on kubernetes container host "{1}".

Cause: The Configuration Verification Utility (CVU) pre-check found that the specified kubernetes container host had swap size enabled.

Action: Swap size must be disabled on the kubernetes container host. To disable swap space on the container host issue command 'sudo swapoff -a' as root user.

PRVH-00698: Datapatch check "{0}" failed.

Cause: The specified Datapatch check failed during the pre-patch checks.

Action: Examine the accompanying error messages for more details, fix the issues identified and retry the operation.

PRVH-00700: Oracle High availability managed resource "{0}" is found in state "{1}" but is expected to be in state "{2}" on node "{3}".

Cause: The Configuration Verification Utility (CVU) determined that the indicated resource was not in an ONLINE state on the identified node.

Action: Ensure that the indicated resource is enabled and is in an ONLINE state for stable behavior of the Oracle Clusterware functionality.

PRVH-00732: Oracle Autonomous Health Framework service resource "{0}" is not configured.

Cause: The Configuration Verification Utility (CVU) identified the specified Oracle Autonomous Health Framework service resource was not configured.

Action: Ensure that the Oracle Autonomous Health Framework service cluster and its resource is configured.

PRVH-00733: Failed to check the existence of Oracle Autonomous Health Framework service resource "{0}".

Cause: The Configuration Verification Utility (CVU) failed to determine the existence of the specified Oracle Autonomous Health Framework service resource.

Action: Ensure that the Oracle Autonomous Health Framework service cluster and its resource is configured and running. Examine the accompanying error messages and resolve the identified issues.

PRVH-00753: Policy managed database "{0}" was found configured from Oracle Home "{1}" and is not supported from the target release of the Oracle Clusterware

Cause: The Configuration Verification Utility (CVU) identified the indicated policy managed database configured from the specified home which was not supported by the target release of the Oracle Clusterware.

Action: Ensure that the identified policy managed database is converted to an administrator managed database before proceeding to upgrade the Oracle Clusterware home.

PRVH-00755: Policy "{0}" was found configured and is not supported from the target release of the Oracle Clusterware

Cause: The Configuration Verification Utility (CVU) identified the indicated policy configured, which was not supported by the target release of the Oracle Clusterware.

Action: Ensure that the identified policy is deleted using 'crsctl delete policy *name*' command before proceeding to upgrade the Oracle Clusterware home.

PRVH-00757: Server pool "{0}" was found configured and is not supported from the target release of the Oracle Clusterware

Cause: The Configuration Verification Utility (CVU) identified the indicated server pool configured, which was not supported by the target release of the Oracle Clusterware.

Action: Ensure that the identified server pool is deleted using 'crsctl delete sp *name*' command before proceeding to upgrade the Oracle Clusterware home.

PRVH-00979: CVU destination directory path "{0}" is shared on nodes "{1}"

Cause: The Configuration Verification Utility (CVU) determined that the indicated directory path was shared between the indicated nodes.

Action: Ensure that the indicated directory path is not shared between the identified nodes or select a different CVU destination location which is not shared.

PRVH-00980: The executable file "{0}" with ownership "{1}" did not match the expected ownership "{2}" on node "{3}"

Cause: The Configuration Verification Utility (CVU) check found that the indicated file being executed did not have correct ownership.

Action: Examine the accompanying error messages for more details. An alternate work area location may be selected by updating the CV_DESTLOC property inside the cvu_config file in the software home cv/admin/ directory.

PRVH-00982: The executable path "{0}" is a filesystem symbolic link and not a regular file on node "{1}"

Cause: The Configuration Verification Utility (CVU) determined that the indicated path was not a regular file but a filesystem symbolic link on the identified node.

Action: Examine the accompanying error messages for more details. An alternate work area location may be selected by updating the CV_DESTLOC property inside the cvu_config file in the software home cv/admin/ directory.

PRVH-00997: Some of the verification checks will be skipped due to unavailability of required software in the specified destination CRS home path "{0}"

Cause: The Configuration Verification Utility (CVU) check found that the indicated destination CRS home location was either an empty directory or did not contain all of the required software bits.

Action: Ensure that the specified destination CRS home directory is complete and is an up-to-date copy of the targeted version of CRS home.

PRVH-00998: Selected trace location "{0}" does not meet the minimum requirement.

Cause: The Configuration Verification Utility (CVU) check found that the indicated trace location did not meet the minimum prerequisites.

Action: Examine the accompanying error messages for more details. An alternate trace location may be selected by setting an environment variable CV_TRACELOC to any writable directory with sufficient free space.

PRVH-01001: Failed to update the current clock source using command "{0}" on node "{1}". Detailed error: {2}

Cause: An attempt to update the current clock source with the indicated command failed on the indicated node.

Action: Examine the accompanying error messages for details and also ensure that the command executable exists at the identified path and the privilege delegation method used to run this command is run with correct credentials.

PRVH-01002: Parameter "UsePAM" set to "no" in the SSH daemon configuration file "{0}" on node "{1}".

Cause: The Configuration Verification Utility (CVU) determined that the secure shell (SSH) daemon configuration file was updated to not use the Pluggable Authentication Module (PAM) on the indicated node. The shell limits from the limits.conf file would not be in effect if PAM authentication is disabled instead, the default SSH daemon shell limits would be in effect.

Action: Ensure that PAM authentication is enabled by setting the parameter 'UsePAM' to 'yes' in the indicated file on the indicated node to enforce the shell limits from the limits.conf file and retry the fixup operation.

PRVH-01003: CVU automated fix up operation failed in the cluster.

Cause: An attempt to perform the Configuration Verification Utility (CVU) automated fix up operation failed.

Action: Examine the accompanying error message for details, resolve issues identified and retry the operation. To retry the automated fixup operation, stop and start the CVU resource using 'srvctl stop cvu' and 'srvctl start cvu' commands.

PRVH-01004: Failed to generate the fix up data for the failed tasks.

Cause: An attempt to generate the fix up data was failed during Cluster Verification Utility (CVU) automated fix up operation.

Action: Examine the accompanying error message for details, resolve issues identified and retry the operation. To retry the automated fixup operation, stop and start the CVU resource using 'srvctl stop cvu' and 'srvctl start cvu' commands.

PRVH-01501: The location "{0}" for stand alone pluggable CVU home is not suitable to use.

Cause: The Configuration Verification Utility (CVU) determined that the indicated location did not contain the required software or the CVU software version was not supported.

Action: Ensure that the specified location contains the complete bits of CVU software in unzipped form and the CVU software version is greater than or equal to the current Grid Infrastructure software version.

PRVH-01502: failed to run the cluster verification checks from the stand alone pluggable CVU home location "{0}"

Cause: The Configuration Verification Utility (CVU) determined that the cluster verification checks could not be performed from the specified location.

Action: Ensure that the specified location contains the complete bits of CVU software in unzipped form and the CVU software version is greater than or equal to the current Grid Infrastructure software version. Examine the accompanying messages, resolve the issues, and retry the operation.

PRVH-01503: failed to run the cluster verification check "{0}" from the stand alone pluggable CVU home location "{1}"

Cause: The Configuration Verification Utility (CVU) determined that the indicated cluster verification check could not be performed from the specified location.

Action: Ensure that the specified location contains the complete bits of CVU software in unzipped form and the CVU software version is greater than or equal to the current Grid Infrastructure software version. Examine the accompanying messages, resolve the issues, and retry the operation.

PRVH-01505: Oracle Database "{0}" version "{1}" is lower than the minimum compatible version "{2}" for target release version "{3}" of Oracle Clusterware.

Cause: The specified database was found to be not compatible with the target release of Oracle Clusterware.

Action: Upgrade the specified database to a compatible version and retry Oracle Clusterware upgrade.

PRVH-01506: failed to perform the Oracle Database version compatibility check

Cause: The Configuration Verification Utility (CVU) upgrade prerequisite checks failed to determine the compatibility of configured Oracle Databases with target release of the Oracle Clusterware.

Action: Examine the accompanying messages, resolve the issues, and retry the operation.

PRVH-01507: ORAchk/EXAchk checks are skipped.

Cause: The Configuration Verification Utility (CVU) could not determine the location of ORAchk/EXAchk utility to perform the checks.

Action: If the ORAchk/EXAchk checks are required to be performed as part of the Configuration Verification Utility checks, then refer to the Oracle documentation to setup Autonomous Health Framework. Alternatively, the existing ORAchk/EXAchk utility location can be specified using the option "-orachk_loc *location*".

PRVP-01001 to PRVP-05210

PRVP-01001: Invalid command line syntax.

Cause: The command was rejected because the specified syntax was incorrect.

Action: Look at the usage provided for this command and use the correct syntax.

PRVP-01041: value specified "{0}" for command line option '-port' is not a number

Cause: A non-numeric value was specified for command line option '-port'.

Action: Specify a numeric value for the command line option '-port'.

PRVP-01044: Error occurred while opening configuration file "{0}"

Cause: Configuration file could not be opened. It either does not exist or you are not allowed read access.

Action: Provide a usable configuration file.

PRVP-01049: Failed to read the root user password from standard input

Cause: An attempt to read the password for the root user from standard input failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVP-01050: Failed to read the password for 'sudo' user "{1}" from standard input

Cause: An attempt to read the password for specified 'sudo' user from standard input failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVP-01051: Failed to read the password for 'pbrun' user "{1}" from standard input

Cause: An attempt to read the password for specified 'pbrun' user for from standard input failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVP-01052: Command line option -method required when -dhcport is less than 1024. The DHCP port value used is "{0}".

Cause: An attempt to check DHCP was rejected because the user did not have sufficient authority to listen on the specified DHCP port.

Action: DHCP checks when command line option -dhcport is less than 1024 can be run only as root user. When command line option -dhcport is not specified the default value of DHCP port used is 67. Make sure that required credentials are supplied using the command line option -method.

PRVP-01055: '-d <oracle_home>' cannot be specified in combination with '-collect cluster' option.

Cause: The specified command was rejected because it specified '-d <oracle_home>' with an incompatible '-collect' option. The option '-d <oracle_home>' can only be specified with '-collect database' or '-collect all'.

Action: Remove the '-d <oracle_home>' specification or change the '-collect' specification.

PRVP-01056: '-db <db_unique_name>' cannot be combined with the specified '-collect' option.

Cause: The specified command was rejected because it specified '-db <db_unique_name>' with an incompatible '-collect' option. The option '-db <db_unique_name>' can only be specified with '-collect database' or '-collect all'.

Action: Remove the '-db <db_unique_name>' specification or change the '-collect' specification.

PRVP-01057: '-d <oracle_home>' cannot be combined with the specified '-collect' option.

Cause: The specified command was rejected because it specified '-d <oracle_home>' with an incompatible '-collect' option. The option '-d <oracle_home>' can only be specified with '-collect database' or '-collect all'.

Action: Remove the '-d <oracle_home>' specification or change the '-collect' specification.

PRVP-01058: invalid combination of '-asm' option with '-s' option.

Cause: A submitted command was rejected because it specified the '-asm' option with the '-s' option. The options '-asm' and '-s' are mutually exclusive.

Action: Retry the command without specifying the '-asm' or '-s' option or by specifying either the '-asm' or '-s' option, but not both.

PRVP-01059: invalid combination of '-asm' option with '-t software' option

Cause: A submitted command was rejected because it specified the '-asm' option with the '-t software' option. The ASM disks are not suitable for storing Oracle RAC database software executables.

Action: Retry the command specifying the '-asm' option without the '-t software' option.

PRVP-01061: Ignoring domains for the following node names specified with domain "{0}". Verification will proceed with nodes "{1}"

Cause: Node names were specified with domain names, and the domain names were ignored.

Action: Make sure that node names are specified without domain names.

PRVP-01062: One of '{0}' options must be specified. See usage for detail.

Cause: The specified command was rejected because none of the options from the indicated list was specified. One or more options from the indicated list must be specified.

Action: Retry the command specifying the missing option.

PRVP-01070: cluvfy command with the arguments "{0}" not supported through REST API call. In[Unsupported arguments = "{1}"]

Cause: cluvfy command was invoked with the indicated arguments which are not supported through a REST API call.

Action: Retry the command omitting the unsupported arguments.

PRVP-03514: -savedir flag not specified.

Cause: The -savedir flag was not specified while running the baseline collection command through 'runcluvfy'.

Action: Specify a valid value for -savedir flag.

PRVP-03563: Invalid command line option specified. The option '-serviceuser' is not valid with version "{0}".

Cause: Command line option '-serviceuser' was specified with release version earlier than 12c.

Action: Use '-serviceuser' option with 12c or later release.

PRVP-03564: Invalid command line option specified. The option '-serviceuser' is not valid with version "{0}".

Cause: Command line option '-serviceuser' was specified with pre-check for database 12c installation.

Action: Omit the '-serviceuser' option.

PRVP-03756: value specified "{0}" for command line option '-time_out' is not a number.

Cause: A non-numeric value was specified for command line option '-time_out'.

Action: Specify a numeric value for the command line option '-time_out'.

PRVP-03757: value specified "{0}" for command line option '-time_out' is less than the minimum value of 30 seconds

Cause: An insufficient value was specified for command line option '-time_out'.

Action: Specify a value greater than or equal to 30 seconds for the command line option '-time_out'.

PRVP-05104: Invalid value "{0}" found for the variable name "{1}" while parsing file "{2}".

Cause: An invalid value was found for the given variable while parsing the specified file.

Action: Verify that the variable exists in the specified file and has a valid value.

PRVP-05105: No value was found for the variable name "{0}" while parsing file "{1}".

Cause: An empty value was found for the given variable or the variable was not defined in the specified file.

Action: Verify that the variable exists in the specified file and has a valid value.

PRVP-05106: Failure group list size does not match the disk list size for the variable name "{0}" while parsing file "{1}".

Cause: Disks and their associated failure group names were not defined correctly for the indicated variable in the indicated file.

Action: Ensure that each disk has an associated failure group defined or that no failure group is defined for all the disks for the indicated variable in the indicated file.

PRVP-05107: Size of failure group list specified in variable "{0}" is not equal to size of disk list specified in variable "{1}" while parsing file "{2}".

Cause: The size of the failure group list and the size of the disk list defined for the indicated variable were not equal in the indicated file.

Action: Ensure that the size of the failure group list is equal to the size of the disk list defined for the indicated variable in the indicated file, and retry the operation.

PRVP-05153: The specified kernel information is invalid. See usage for detail.

Cause: The specified command was rejected because the value for the indicated option was not in a supported format.

Action: Retry the command specifying the valid kernel version or an absolute path to an existing kernel RPM file.

PRVP-05200: Specified version string '{0}' for option '{1}' is not valid. Specify the version in the form 0.0.0.0.0. See usage for detail.

Cause: The specified command was rejected because the value for the indicated option is not in the format indicated.

Action: Retry the command specifying the version string for the indicated option in the correct format.

PRVP-05201: Cluster Ready Services configuration is not detected. See usage for detail.

Cause: An attempted check for Cluster Ready Services failed because Cluster Ready Services were not configured. The check is valid only when Cluster Ready Services are configured.

Action: Ensure that the Cluster Ready Services have been correctly installed and configured before attempting the check.

PRVP-05202: Oracle Restart configuration is not detected. See usage for detail.

Cause: An attempted check for Oracle Restart failed because Oracle Restart was not configured. The configuration check is valid only when Oracle Restart is configured.

Action: Ensure that the Oracle Restart has been correctly installed and configured before attempting the check.

PRVP-05203: Specified virtual ip address '{0}' for option '{1}' is not valid. Virtual IP address should be in the format {<IP_name>|<IP_address>}/<net_mask>/<interface_name>. See usage for detail.

Cause: The specified command was rejected because the value for the indicated option was not in the format indicated.

Action: Retry the command specifying the virtual IP address for the indicated option in the correct format.

PRVP-05205: Specified packet size "{0}" to test multicast connectivity is not in the allowed range 128 to 2048.

Cause: The specified packet size was not in the indicated range.

Action: Specify the packet size from the indicated range to test the multicast connectivity.

PRVP-05209: Specified iteration count "{0}" is not in the allowed range 5 to 60.

Cause: The specified iteration count was not within the indicated range.

Action: Specify an iteration count within the indicated range.

PRVP-05210: Specified interval "{0}" is not in the allowed range 2 to 30.

Cause: The specified interval was not within the indicated range.

Action: Specify an interval within the indicated range.

QSM-00501 to QSM-03288

QSM-00501: unable to initialize Summary Advisor environment

Cause: The Summary Advisor external procedure initialization process failed.

Action: Contact Oracle Worldwide Support.

QSM-00502: OCI error

Cause: A OCI callback routine reported an error

Action: Contact Oracle Worldwide Support.

QSM-00503: out of memory

Cause: Summary Advisor failed to allocate the necessary memory.

Action: Contact Oracle Worldwide Support.

QSM-00504: internal error

Cause: An internal error occurred.

Action: Contact Oracle Worldwide Support.

QSM-00505: syntax error

Cause: A syntax error occurred.

Action: Correct syntax error if possible or contact Oracle Worldwide Support.

QSM-00506: no fact-tables could be found

Cause: The fact-filter is not specified, and there are no fact-tables in the warehouse. A fact-table is a table having foreign-key constraints to one or more of the dimension-tables in the data warehouse.

Action: Check the fact-filter is correctly specified; check that appropriate constraints exist; and the user has privileges to access the tables

QSM-00507: no dimensions could be found

Cause: The database does not have any dimensions

Action: Create the dimensions in your warehouse

QSM-00508: statistics missing on tables/columns

Cause: The system metadata does not contain statistics on one or more tables or columns. The Advisor needs cardinalities of all fact-tables, and of the level-keys of all dimensions in the data warehouse.

Action: Run ANALYZE on the tables and summaries in the warehouse to collect statistics

QSM-00509: invalid parameter

Cause: The indicated parameter has an invalid value

Action: Supply a value in the proper range

QSM-00510: statistics missing on materialized views

Cause: The system metadata does not contain statistics on one or more materialized views. The Advisor needs cardinalities of all materialized views in the data warehouse.

Action: Run ANALYZE on the tables and materialized views in the warehouse to collect statistics.

QSM-00511: invalid fact-tables specified in fact-filter

Cause: The tables specified in the fact-filter are not valid fact-tables. A fact-table must have foreign-key constraints to one or more of the dimension-tables in the data warehouse.

Action: Check the fact-filter is correctly specified; check that appropriate constraints exist; and the user has privileges to access the tables

QSM-00512: invalid summaries specified in the retention-list

Cause: The summaries specified in the retention-list are not valid.

Action: Check the spelling of the summary-names; check that they are valid; and the user has privileges to access them.

QSM-00513: one or more of the workload tables is missing

Cause: One or both of the workload tables are missing. The two workload tables which should be present in the user's schema are V_192216243_F_5_E_14_8_1 and V_192216243_F_5_E_15_8_1; the former is mapped to WORK\$_IDEAL_MVIEW and the latter to WORK\$_MVIEW_USAGE. The workload tables are created by the Oracle Trace Formatter when the data-collection-file (oraclesm.dat) is formatted by the user.

Action: Check whether the Formatter succeeded in formatting the data collection. Sometimes the V_192216243_F_5_E_14_8_1 (i.e WORK\$_IDEAL_MVIEW) may not be created whereas the other table is created. The most likely cause of this is the init.ora parameters needed to invoke mview-rewrite are not enabled. Check your documentation for all the init.ora parameters which need to be set for mview-rewrite to occur. Another possibility is no GROUP BY queries were issued during the time the data was collected, in which case, run the Trace collection for a longer time to get a representative sampling of the queries issued in the data warehouse.

QSM-00514: the size of must-retain summaries exceeds specified space limit

Cause: The specified space limit is greater than the size of must-retain summaries.

Action: Reduce the number of must-retain summaries or increase the space limit

QSM-00515: operation cancelled by user

Cause: The operation has been cancelled by the user

Action: None

QSM-00516: illegal status detected for run

Cause: The run has encountered an illegal value in the status field of the mview\$_adv_log table. This could be internal error or an application error.

Action: Contact Oracle Worldwide Support.

QSM-00517: Summary Advisor requires a COMPATIBLE setting of 8.1.0.0 or greater

Cause: The current database has a compatibility setting that is earlier than the supported server version.

Action: Adjust the instance parameter COMPATIBLE to 8.1.0.0 or greater.

QSM-00518: Java is not enabled. Please execute INITJVM.SQL and INITQSMA.SQL

Cause: The current database has not been created or upgraded to support Java stored procedures. Summary Advisor requires Java stored procedures.

Action: Log into the database with SYSDBA privileges. Execute the INITJVM.SQL script which is found in the ORACLE home directory under JAVAVM. Next, execute the INITQSMA.SQL script found in the ADMIN directory under the ORACLE home.

QSM-00519: Summary Advisor is not installed. Please execute INITQSMA.SQL.

Cause: The current database has not been created or upgraded to support Summary Advisor. Summary Advisor requires several Java stored procedures.

Action: Log into the database with SYSDBA privileges. Execute the INITQSMA.SQL script found in the ADMIN directory under the ORACLE home. **** ** Messages 520-700 are in the 9i Summary Advisor Java modules 701-708 are Hypothetical Workload generator journal messages

QSM-00710: data access error in module *string*

Cause: SQL Access Advisor detected a severe error while accessing the advisor repository.

Action: See the accompanying error message for appropriate actions.

QSM-00750: the specified value *string* for parameter *string* is invalid or contains an invalid item

Cause: The user attempted to set a task parameter using invalid data.

Action: Adjust the data value and retry the operation.

QSM-00751: the file *string* could not be opened for write access

Cause: Access Advisor could not create the script or report due to a file system error.

Action: Verify the location for file write access and retry the operation.

QSM-00752: the parameter *string* contains an invalid combination of options *string*

Cause: The user specified correct option keywords, but entered a combination that is not supported within Access Advisor.

Action: Validate the correct option usage and retry the operation.

QSM-00753: the specified value *string* is out of the acceptable range of *string* to *string* for parameter *string*

Cause: The user attempted to set a task parameter using invalid data.

Action: Adjust the data value and retry the operation.

QSM-00754: task *string* does not reference a valid workload and therefore cannot be executed

Cause: The user attempted to execute a advisor task that requires a workload.

Action: Specify a workload for the task and retry the operation.

QSM-00755: a set of workload statements already exists for workload *string*

Cause: The user attempted to save workload data into an existing workload that already contains data without specifying APPEND or REPLACE.

Action: Validate the import mode retry the operation.

QSM-00756: the specified workload *string* is being used by one or more advisor tasks

Cause: The user attempted to modify or delete a workload that is currently being used by another task.

Action: Remove the workload reference from the advisor task and retry the operation.

QSM-00757: the specified workload *string* is not referenced by task *string*

Cause: The user attempted to delete invalid workload reference from the task.

Action: Validate the workload reference and retry the operation.

QSM-00758: the specified parameter *string* is not valid for workload *string*

Cause: The user attempted to access a workload parameter that does not exist for the specified workload. The parameter may be misspelled or the user selected a parameter that is not supported by the particular advisor.

Action: Validate the parameter name and retry the operation.

QSM-00759: the user *string* does not exist for the specified workload statement

Cause: The user attempted to add a new SQL statement with an invalid username.

Action: Adjust the name and retry the operation.

QSM-00760: the import mode *string* is invalid for the current operation

Cause: The user attempted to store data in the repository with an invalid import mode.

Action: Use one of the following valid values: NEW, APPEND, or REPLACE.

QSM-00761: the priority *string* is invalid for the current operation

Cause: The user attempted to store data in the repository with an invalid priority.

Action: Use one of the following valid values: 1, 2, 3.

QSM-00762: the specified Summary Advisor workload *string* does not exist

Cause: The user attempted to import an advisor workload from an invalid or non-existent Summary Advisor workload.

Action: Validate the Summary Advisor workload identifier and retry the operation.

QSM-00763: the owner *string* was not found while validating user-defined workload *string.string*

Cause: The user attempted to import an advisor workload from a user who may not access to the table.

Action: Validate the location of the user-defined workload.

QSM-00764: the column *string* was not found in the user-defined workload table *string.string*

Cause: The user attempted to import an advisor workload from a user table that does not contain the required column.

Action: Validate the user-defined workload table and retry the operation.

QSM-00765: cannot validate user-defined workload because table *string.string* is invalid.

Cause: The user attempted to import an advisor workload from a table that is not accessible.

Action: Validate the location of the user-defined workload.

QSM-00766: a SQL statement is required for the current workload operation

Cause: The user attempted to create an entry in a workload collection without specifying a SQL statement.

Action: Validate the SQL statement and retry the operation.

QSM-00767: a SQL cache is not available to user *string*

Cause: The user attempted to collect a workload from the SQL without having authorization.

Action: Validate the user account and retry the operation.

QSM-00768: the search condition is invalid for the requested operation

Cause: The user provided a invalid SEARCH argument to an Access Advisor workload operation. A search condition must be a valid SQL search condition using only the column names specified in the procedure documentation.

Action: Correct the search condition and retry the operation.

QSM-00769: the SQL statement *string* was not found for workload *string*

Cause: The user attempted to access a SQL statement that does not exist in the workload.

Action: Validate the SQL statement identifier and retry the operation.

QSM-00770: the specified workload *string* is already referenced by task *string*

Cause: The user attempted to add a workload reference to a task when the task already contains the reference.

Action: Validate the workload reference and retry the operation.

QSM-00771: the specified SQL statement cannot be stored in the workload because it has no valid table references

Cause: The user attempted to add a workload statement that contains table references that are either system-specified or user-specified invalid tables.

Action: Validate the workload statement and retry the operation.

QSM-00772: the specified SQL statement cannot be stored in the workload due to a statement error

Cause: The user attempted to add a workload statement that contains invalid SQL syntax or an invalid column reference.

Action: Validate the workload statement and retry the operation.

QSM-00773: the parameter *string* contains the invalid *string* name *string*

Cause: The task or workload parameter contains a name that is either too long or does not exist in the database.

Action: Validate the parameter value and retry the operation.

QSM-00774: there are no SQL statements to process for task *string*

Cause: While executing, the specified task found no valid SQL statements to analyze. Possible causes are: an empty workload, table filtering, or username filtering.

Action: Validate the workload and the appropriate task parameters and retry the operation.

QSM-00775: the specified SQL statement cannot be stored in the workload due to invalid table references

Cause: The user attempted to add a workload statement that contains one or more invalid identifier for the parsing user.

Action: Validate the workload statement and retry the operation.

QSM-00776: the user-defined workload *string* is missing the following column: *string*

Cause: The user attempted to import a workload from an external table; however, the table does not contain all of the required columns.

Action: Adjust the target workload table and retry the operation.

QSM-00777: the specified directive *string* is unsupported at this time

Cause: The user attempted to create a directive that is not currently supported.

Action: Check the advisor documentation for valid directives.

QSM-00778: the specified output filename *string* is invalid or cannot be accessed

Cause: The user attempted to create a report or script in a file that cannot be written or created.

Action: Adjust the file name or directory and retry the operation.

QSM-00779: the specified directive conflicts with the existing directive *string*

Cause: The user attempted to add a directive that cannot operate with an existing directive.

Action: Check the advisor documentation for valid directives.

QSM-00780: the task *string* could not be executed because the workload *string* is being modified

Cause: While attempting to execute a task, Access Advisor checks for exclusive access to all of the referenced workloads. If any cannot be reserved, then the execution fails.

Action: Wait until the referenced workloads are free for exclusive access retry the operation.

QSM-00781: the specified value *string* is invalid for parameter *string*. Valid keywords are *string*

Cause: The user attempted to set a task parameter using invalid data.

Action: Adjust the data value and retry the operation

QSM-00782: the specified value *string* is an invalid date format for parameter *string*

Cause: The user attempted to set a task parameter using invalid date formatting directives.

Action: See the Oracle documentation for valid date-formatting and retry the operation.

QSM-00783: the specified value *string* contains an invalid date for parameter *string*

Cause: The user attempted to set a task parameter using invalid date formatting.

Action: A date literal must be in the form DD/MM/YYYY HH24:MI:SS.

QSM-00784: the *string string* referenced in the list *string* is invalid for parameter *string*

Cause: The user attempted to set a task parameter using an invalid username or table specification.

Action: Validate the object name and retry the operation.

QSM-00785: the directive *string* is not supported for task *string* at this time

Cause: The user attempted to add an invalid directive to the current task.

Action: Validate the directive and retry the operation.

QSM-00786: the name *string* is invalid for directive *string*

Cause: The user attempted to add a directive that contains an empty or invalid object name.

Action: Correct the name and retry the operation.

QSM-00787: the tablespace *string* is invalid for directive *string*

Cause: The user attempted to add a directive that contains an empty or invalid tablespace name.

Action: Correct the name and retry the operation.

QSM-00788: The requested recommendation does not support direct implementation

Cause: The user attempted to use the DBMS_ADVISOR.IMPLEMENT_TASK procedure to implement a SQL Access Advisor recommendation that cannot be implemented due to its complexity.

Action: The user must generate a script and implement the recommendation outside of the SQL Access Advisor.

QSM-00789: The requested recommendation requires user editing and cannot be implemented

Cause: The user attempted to use the DBMS_ADVISOR.IMPLEMENT_TASK procedure to implement a SQL Access Advisor recommendation that cannot be implemented because it requires additional scripting information from the user.

Action: The user must generate a script and edit the results.

QSM-00790: the workload *string* cannot be modified or changed because it is being used by task *string*

Cause: The user attempted to change or delete a workload that is referenced by an active task.

Action: Remove references to a workload from any tasks that reference that workload, unless the task is in its initial task state.

QSM-00791: the specified SQL statement cannot be stored in the workload because it contains unsupported statement type

Cause: The user attempted to add a workload statement that contains an invalid statement type. Supported statement types are INSERT, DELETE, UPDATE, SELECT and MERGE.

Action: Validate the workload statement and retry the operation.

QSM-00792: the specified SQL statement cannot be stored in the workload because one or more tables have missing statistics

Cause: The user attempted to add a workload statement that contains a table without statistics. Access Advisor requires all referenced tables to have valid statistics.

Action: Validate the workload statement and retry the operation.

QSM-00793: the specified SQL Tuning Set *string* does not exist

Cause: The user specified a SQL Tuning Set that has not been defined in the SQL Tuning Set repository.

Action: Correct the SQL Tuning Set name and retry the operation.

QSM-00794: the statement can not be stored due to a violation of the *string* filter

Cause: The user attempted to manually add a workload statement that failed a filter test. Manual statements must meet the same filtering guidelines as imported statements.

Action: Adjust the attributes or the filter and retry the operation.

QSM-00795: the SQL Tuning Set repository has not been implemented

Cause: The user attempted to collect a workload from a SQL Tuning Set repository that has not yet been implemented or enabled.

Action: Validate the existence of the repository and retry the operation.

QSM-00796: the specified SQL statement cannot be stored in the workload because table *string* does not have valid statistics

Cause: The user attempted to add a workload statement that references a table with missing statistics.

Action: Gather statistics for the referenced table and retry the operation.

QSM-00797: the specified workload *string* does not exist for the current user

Cause: The user attempted to reference an Access Advisor workload using a name that does not exist in the Advisor repository.

Action: Adjust the name and retry the operation.

QSM-00798: the specified workload *string* already exists

Cause: The user attempted to create the specified workload using a name that already exists in the Advisor repository. Task names must be unique to the database user.

Action: Adjust the name and retry the operation.

QSM-00799: the user-defined workload table *string* cannot be found

Cause: The user has attempted to import a workload from an external table that does not exist or cannot be accessed.

Action: Adjust the target workload table and retry the operation.

QSM-00800: the specified workload name *string* is invalid

Cause: The user has specified an invalid workload name.

Action: Adjust the target workload name and retry the operation.

QSM-00801: the specified username *string* is invalid

Cause: The user has specified an invalid username.

Action: Adjust the target username and retry the operation.

QSM-00802: An error occurred while implementing action *string* (*string*)\n*string*.

Cause: While performing IMPLEMENT_TASK, a specific action operation failed.

Action: Make the necessary adjustments as specified in the secondary message and retry the operation.

QSM-00803: The STORAGE_CHANGE parameter value *string* cannot be zero or negative for partial workloads.

Cause: While performing EXECUTE_TASK, the user specified a STORAGE_CHANGE value that is incompatible with the type of workload data.

Action: Set a positive STORAGE_CHANGE value.

QSM-00804: not enough space for mandatory access structures

Cause: While performing EXECUTE_TASK, the user specified a STORAGE_CHANGE value that leaves no space for mandatory access structures, such as primary key indexes.

Action: Set a greater STORAGE_CHANGE value.

QSM-00805: the specified recommendation *string* value *string* is invalid

Cause: The user has specified an invalid value when attempting to change a recommendation attribute.

Action: Adjust the target attribute value and retry the operation.

QSM-00806: the *string* parameter value must be specified when STORAGE_MODE is set to TOTAL

Cause: While performing EXECUTE_TASK, the user specified a STORAGE_MODE of TOTAL, but failed to set the DEF_MVIEW_OWNER and DEF_INDEX_OWNER to valid owner names.

Action: Set the specified owner to a valid name

QSM-00807: the ANALYSIS_SCOPE parameter value contains an incomplete or invalid combination of options.

Cause: Though the ANALYSIS_SCOPE parameter supports several options, some combination are not supported.

Action: Enter a valid combination of options.

QSM-00808: parameter *string* only permits a single keyword. Choose one of the following: *string*

Cause: The user attempted to set a task parameter using multiple keywords.

Action: Adjust the data value and retry the operation

QSM-00809: the selected number of recommendations exceeds the maximum value of *string*

Cause: While executing GET_TASK_SCRIPT, an attempt was made to fetch a script having too many recommendations. The limit has been set in order to avoid possible performance and out-of-memory errors.

Action: Select a small set of recommendations prior to fetching the script

QSM-00999: Advisor feature is not currently implemented

Cause: The user attempted to execute an unsupported advisor operation.

Action: Verify the availability of the operation.

QSM-01001: query rewrite not enabled

Cause: When query rewrite is disabled, no query rewrite will take place.

Action: Enable query rewrite with ALTER SESSION SET QUERY_REWRITE ENABLE command.

QSM-01002: no query rewrite when OPTIMIZER_MODE is rule based

Cause: Query rewrite did not occur because the OPTIMIZER_MODE was set to RULE.

Action: Change the optimizer mode using the OPTIMIZER_MODE parameter.

QSM-01003: no query rewrite on DDL queries

Cause: If query contains any data definition operations, no query rewrite will take place.

Action: None

QSM-01004: no query rewrite before view merging

Cause: Internal session parameter _QUERY_REWRITE_2 is set to FALSE

Action: Change session parameter with ALTER SESSION command.

QSM-01005: no query rewrite when query has slave SQL

Cause: Current process is a kxfx slave

Action: None

QSM-01006: query rewrite disabled for this query block

Cause: During query rewrite, certain view query blocks cannot be rewritten.

Action: None

QSM-01007: query has NOREWRITE hint

Cause: When query contains a NOREWRITE hint, no query rewrite will take place for that query block.

Action: Remove the NOREWRITE hint from the query

QSM-01008: no query rewrite for update queries

Cause: If a query or part of it has any DML update operations, no query rewrite will take place.

Action: None

QSM-01009: query rewritten with materialized view, *string*, using text match algorithm

Cause: The query was rewritten using a materialized view, because query text matched the definition of the materialized view

Action: None

QSM-01010: table(s) in the query not found in materialized view, *string*

Cause: If the materialized view does not reference the base tables found in the query, it cannot be used for rewrite

Action: None

QSM-01011: when heuristic rewrite not set, rewrite hint required

Cause: When using a stored outline, a rewrite hint is required for query rewrite

Action: None

QSM-01012: SAMPLE clause present in FROM

Cause: If a query contains a SAMPLE clause, query rewrite will not take place

Action: None

QSM-01013: nested aggregates or CONNECT BY/START WITH clause present

Cause: If the query contains nested aggregates, CONNECT BY clause, or START WITH clause, query rewrite will not take place

Action: None

QSM-01014: top level operator in WHERE clause of the query is an OR

Cause: If the top-level operator in the WHERE clause is an OR and there is more than one table in the FROM list, then query rewrite will not take place.

Action: None

QSM-01015: GROUP BY clause has non-columns

Cause: No query rewrite, if there is no valid column in the GROUP BY clause.

Action: None

QSM-01016: Query rewrite does not support aggregate, *string*.

Cause: There was no query rewrite because the query contained DISTINCT aggregates other than the COUNT, MIN, MAX, ANY_VALUE, BOOLEAN_OR_AGG, BOOLEAN_AND_AGG, or EVERY aggregate function.

Action: None

QSM-01017: aggregate argument cannot be converted to canonical form

Cause: Argument of each aggregate in the query needs to be convertible into a canonical form for query rewrite.

Action: None

QSM-01018: single table materialized join view rewrite not required

Cause: Materialized join view is more expensive for rewrite than using the base table

Action: None

QSM-01019: no suitable materialized view found to rewrite this query

Cause: There doesn't exist any materialized view in the dataware house that can be used to rewrite this query.

Action: Consider creating a new materialized view.

QSM-01020: materialized view, *string*, is ineligible

Cause: Materialized view is probably disabled or stale.

Action: Consider enabling the materialized view for rewrite or refreshing it.

QSM-01021: materialized view, *string*, not found in the hint list

Cause: There is a rewrite hint list specified in the query, but this materialized view is not among the hinted ones.

Action: Include this materialized view in the rewrite hint list.

QSM-01022: a more optimal materialized view than *string* was used to rewrite

Cause: Query Rewrite always chooses the most optimal materialized view based on certain parameters, such as cardinality of the materialized view, number of joins etc. The materialized view specified was found to be less optimal.

Action: To force using a materialized view, consider using a rewrite hint.

QSM-01023: materialized view, *string*, has GRANT errors

Cause: Materialized view probably has some metadata errors.

Action: Consider recreating it.

QSM-01024: materialized view, *string*, has unknown compile errors

Cause: Materialized view probably has some metadata errors.

Action: Consider recreating it.

QSM-01025: materialized view, *string*, not found

Cause: The specified materialized view is not found in the database.

Action: Check the spelling or create a new materialized view

QSM-01026: query rewrite is disabled for, *string*

Cause: Query rewrite could not use this materialized view, because query rewrite was not enabled for it.

Action: Enable query rewrite for the materialized view with ALTER MATERIALIZED VIEW "mv" ENABLE QUERY REWRITE command, where "mv" is the name of the materializev view.

QSM-01027: materialized view, *string*, is unusable

Cause: Materialized view probably has some metadata errors.

Action: Consider recreating it.

QSM-01028: materialized view, *string*, is currently being refreshed

Cause: Materialized view cannot be used for query rewrite while it is being refreshed

Action: Rerun the query, after the refresh operation is completed.

QSM-01029: materialized view, *string*, is stale in ENFORCED integrity mode

Cause: A stale materialized view cannot be used for query rewrite when the query rewrite integrity mode is set to ENFORCED.

Action: Refresh the materialized view or alter the rewrite integrity mode with ALTER SESSION QUERY_REWRITE_INTEGRITY = STALE TOLERATED command.

QSM-01030: materialized view, *string*, has PL/SQL functions in ENFORCED integrity mode

Cause: A materialized view with PL/SQL functions in its definition cannot be used for query rewrite when query rewrite integrity is set to ENFORCED.

Action: Consider running the query in STALE TOLERATED mode.

QSM-01031: materialized view, *string*, is stale in TRUSTED integrity mode

Cause: A stale materialized view cannot be used for query rewrite when the query rewrite integrity mode is set to TRUSTED.

Action: Refresh the materialized view or alter the rewrite integrity mode with ALTER SESSION QUERY_REWRITE_INTEGRITY = STALE TOLERATED command.

QSM-01032: materialized view, *string*, not found

Cause: There was no associated metadata for the materialized view.

Action: Check the spelling and re-run the query.

QSM-01033: query rewritten with materialized view, *string*

Cause: The specified materialized view was used to rewrite the given query.

Action: None

QSM-01034: materialized view, *string*, needs a dimension level to join table, *string*

Cause: One or more hierarchical relationship(s) in the table(s) could not be established.

Action: Consider adding a level in the dimension to provide the missing intra- table relationships.

QSM-01035: a row level security policy exists on this table

Cause: Any row level security policy that may exist on a base-table prevents exact text match query rewrite.

Action: None

QSM-01036: unmatched column, *string*, present in query after view merging

Cause: Clearing the columns after view merging failed due to some reasons - bug??

Action: None

QSM-01037: Query Rewrite failed to allocate the necessary query join graph

Cause: Join graph allocation and initialization failed, possibly due to one or more undetermined operand(s) in the query expression.

Action: None

QSM-01038: logical operator(s) could not be processed

Cause: One or more logical operator(s) in the query predicates could not be processed, possibly due to invalid operator(s).

Action: None

QSM-01039: selection present on right hand side of an outer join

Cause: Query cannot be rewritten if any predicate contains a selection on the right hand side of an outer join.

Action: None

QSM-01040: match between the materialized view (*string*) and query join graphs failed

Cause: Query rewrite will not take place if the joins in the query and the materialized view do not have any match.

Action: None

QSM-01041: materialized view, *string*, does not match with a measure in the query

Cause: If a measure (such as SUM, AVERAGE) in the query cannot be matched or computed from the materialized view, it will not be used for rewrite.

Action: None

QSM-01042: anchor and matching join arc check failed for *string*

Cause: If there is a lossy join in the materialized view that doesn't exist in the query, query rewrite will not take place.

Action: None

QSM-01043: join back attempted on a table to the RHS of a semi or anti join for *string*

Cause: Query Rewrite will not occur if a join back is required to a table that appears to the right hand side of a semi or anti-join.

Action: None

QSM-01044: join back attempted on a view for *string*

Cause: Query Rewrite will not occur if a join back to a table is required to find any missing columns.

Action: None

QSM-01046: complex join back on correlated columns not allowed (*string*)

Cause: Query Rewrite will not occur if a join back is required on a column that is referenced by a sub-query.

Action: None

QSM-01047: complex join back on non-MAV rewrite not allowed (*string*)

Cause: Query Rewrite can occur by means of a complex join back only during a MAV rewrite.

Action: None

QSM-01048: join back level(s) not present (*string*)

Cause: Query Rewrite requires joining back to a level of a dimension to find a missing information.

Action: Consider creating a dimension.

QSM-01049: semi-join check failed for materialized view, *string*

Cause: If there is a semi join in the query, then Query Rewrite will create (select distinct *pk-list*, *ref-col* from *mjv*) where *pk-list* is the list of rowids/pk of all *mjv* tables that don't correspond to a right side of a semi-join and *ref-col* are their columns. Query Rewrite will not occur if a join from the materialized view cannot match the semi-join from the query.

Action: None

QSM-01050: roll-up check failed for materialized view, *string*

Cause: A column in the query cannot be computed from the materialized view.

Action: Consider creating a dimension to supply the missing information

QSM-01051: no support for rollup when a window function is present on the column

Cause: No query rewrite if a window function is present on a column that requires a roll-up to compute a measure.

Action: None

QSM-01052: referential integrity constraint on table, *string*, not VALID in ENFORCED integrity mode

Cause: A join present in the materialized view requires validated primary/foreign key constraints in ENFORCED query rewrite integrity mode.

Action: Validate the constraint or change the integrity mode with ALTER SESSION SET QUERY_REWRITE_INTEGRITY = STALE_TOLERATED command.

QSM-01053: NORELY referential integrity constraint on table, *string*, in TRUSTED/STALE TOLERATED integrity mode

Cause: A join present in the materialized view requires RELY mode to be set on the primary/foreign key constraints.

Action: Set the RELY mode with ALTER TABLE *table* MODIFY CONSTRAINT *constraint* RELY command. Alternatively validate the constraint with ALTER TABLE *table* VALIDATE CONSTRAINT *constraint*.

QSM-01054: no join match between query and summary, *string*

Cause: There are no common joins between the query and the the materialized view

Action: None

QSM-01055: Query Rewrite failed to allocate the necessary materialized view join graph

Cause: Join graph allocation and initialization failed, possibly due to one or more undetermined operand(s).

Action: None

QSM-01056: no query rewrite for this DDL expression

Cause: Some SELECT statements which are part of a DDL expression may be eligible for rewrite. These include CREATE AS SELECT and CREATE OUTLINE statements. The given query expression is a DDL expression, which doesn't fall in this category.

Action: None

QSM-01057: no query rewrite for this DML expression

Cause: Current DML is being done using an updatable view, so it is not eligible for rewrite.

Action: None

QSM-01058: MV, *string*, does not have column, *string*, for a joinback

Cause: A GROUP BY column in the query is not present in the GROUP BY clause of of the materialized view. This usually requires a join back to a third table.

Action: None

QSM-01059: HAVING clause in the query block is malformed

Cause: An illegal HAVING clause has been specified in the query.

Action: Correct the query syntax and run the query again.

QSM-01060: illegal subquery in the HAVING clause

Cause: When a HAVING clause has a subquery, then any references to the tables in the outer query should only reference the tables in the GROUP BY clause.

Action: Correct error in the syntax and rerun the query.

QSM-01061: illegal query expression

Cause: An illegal query was specified. Specifically one of the following criteria was not satisfied: (a) All (non-constant, non-aggregate) SELECT expressions in the query should be made up of group expressions. (b) All column references in the HAVING clause should come from the GROUP BY expressions. (c) If there is an ORDER BY clause, then all column references should come from the GROUP BY or SELECT clause, depending on whether the query selects DISTINCT.

Action: Correct error in the syntax and rerun the query.

QSM-01062: query has one or more manual partition(s)

Cause: Query rewrite is not possible if query has any manual partitions.

Action: None

QSM-01063: query has a dictionary table or view

Cause: Query rewrite is not allowed if query references any dictionary tables/views.

Action: None

QSM-01064: query has a fixed table or view

Cause: Query rewrite is not allowed if query references any fixed tables/views

Action: None

QSM-01065: materialized view, *string*, cannot compute measure, *string*, in the query

Cause: If the materialized view cannot compute a measure in the query using the measures in its definition, then query rewrite will not occur.

Action: None

QSM-01066: materialized view, *string*, does not have the column, *string*, from query

Cause: Query rewrite will not occur, if the materialized view cannot provide all the columns that the query has

Action: None

QSM-01067: materialized view, *string*, cannot support the query measure, *string*

Cause: An attempt was made to push a grouping function through an expression specified in the query to transform a measure. Query rewrite will not occur if this measure transformation failed.

Action: None

QSM-01068: no dimensions present

Cause: An attempt was made to load a dimension from the dataware house, but there were no dimensions present.

Action: None

QSM-01069: summary join graph for, *string*, does not have table, *string*

Cause: An attempt to locate an object that is part of a join failed.

Action: None

QSM-01070: equivalence class manager was not found

Cause: An equivalence class manager is required to compute the transitive closure for the columns in an equivalence class.

Action: None

QSM-01071: query rewrite not possible because a join in materialized view % with table % has eliminated some rows found in query

Cause: All lossy joins in the materialized view must be present in the query for query rewrite to occur.

Action: None

QSM-01072: materialized view, *string*, and query have different joins between tables, *string*

Cause: Anchors, if any, in the MV and query match. But the joins between these anchors in the MV and query are different.

Action: None

QSM-01073: query rewrite not possible because materialized view, *string*, has a join not found in query

Cause: Query rewrite may not be possible if the materialized view has some joins that query does not have

Action: None

QSM-01074: query rewrite not possible because materialized view, *string*, and query have different number of joins between tables, *string*

Cause: Query rewrite may not be possible if the query has some joins that the materialized view does not have between the same pair of tables.

Action: n/a

QSM-01075: materialized view, *string*, does not support aggregate function, *string*

Cause: The specified aggregate function is not found in the materialized view.

Action: None

QSM-01076: no materialized join view was found

Cause: To support an MJV rewrite, we require a materialized join view.

Action: None

QSM-01077: materialized view, *string*, is grouping at a higher level than query

Cause: If a query column, which is not present in the materialized view, can be obtained by a rollup within the materialized view, then it should group at a higher level than the materialized view.

Action: None

QSM-01078: materialized view, *string*, is marked invalid

Cause: The materialized view's kglobsta field has KGLSINV bit set.

Action: none ??

QSM-01079: DML operation occurred on a table referenced by MV, *string*

Cause: If any dependent tables of a materialized view undergoes a DML operation, query rewrite may be restricted depending on the query rewrite integrity mode for the session. In this situation, query rewrite will take place only if the rewrite integrity mode is STALE_TOLERATED.

Action: Consider refreshing the materialized view changing the rewrite integrity mode to STALE_TOLERATED.

QSM-01080: invalid dimension, *string*

Cause: This dimension table has authorization or compilation problems.

Action: None

QSM-01081: no primary key or row id found for table, *string*, in MV, *string*

Cause: In order to obtain a missing column, the materialized view needs to join back to the above table. But it lacks the primary key or rowid for the table.

Action: None

QSM-01082: Joining materialized view, *string*, with table, *string*, not possible

Cause: A column in the query is not found in the summary. To obtain the column, a join back of materialized view to the table by means of either the primary key, foreign key or rowid of the table is required. The specified materialized view does not have the primary key, foreign key or rowid of the table to perform the join operation.

Action: Consider building a dimension-table to provide the missing information.

QSM-01083: query text not available - possible inline view

Cause: During the query rewrite transformation, original query was possibly transformed into an inline view.

Action: None

QSM-01084: materialized view *string* has an anchor table *string* not found in query

Cause: A table in a materialized view is an anchor, (a) if it is not joined to any other table or (b) joined to other tables but each of its joins is either lossy or lossless with the above table being child-side table. If an anchor which is present in the materialized view is not found in the query, then query rewrite will not take place.

Action: None

QSM-01085: materialized view, *string*, has a lossy join between tables, *string*

Cause: There are no primary key, foreign key constraints between these tables. But query rewrite is still possible if the lossy join between the above tables also appear in the query

Action: None

QSM-01086: dimension(s) not present or not used in ENFORCED integrity mode

Cause: Query rewrite does not use dimensions in ENFORCED query rewrite integrity mode. If a suitable dimension is present, consider changing the current integrity mode to either TRUSTED or STALE_TOLERATED by using ALTER SESSION SET QUERY_REWRITE_INTEGRITY = command.

Action: None

QSM-01087: query grouping on a column that cannot be derived from materialized view, *string*

Cause: Query is grouping on undetermined columns.

Action: None

QSM-01089: an inline view in the query does not have a materialized view

Cause: General query rewrite is not possible if an inline view in the query does not have a matching materialized view in the meta data.

Action: None

QSM-01090: no query rewrite after view merging

Cause: Internal session parameter `_QUERY_REWRITE_1` is set to FALSE

Action: Change session parameter with ALTER SESSION command.

QSM-01091: cost based optimizer found query rewrite is more expensive

Cause: When cost based optimizer is ON, cost of the rewritten cursor is compared to the cursor generated without query rewrite, and the cheaper one is chosen for execution.

Action: None

QSM-01092: mjb tries to rewrite a semi-join and primary key or rowid missing

Cause: Materialized join view tries to rewrite a semi-join (IN sub-query) and the primary keys or rowids of left tables of semi-joins are missing from MJV.

Action: None

QSM-01093: anti-join marker not found in materialized join view

Cause: Materialized join view has outer join while the query inner join. For rewrite to succeed MV must have an anti-join marker like the rowid or primary key of the right tables of outer join

Action: None

QSM-01094: outer-join filter not found in materialized join view

Cause: Materialized join view has outer join while the query inner join. For rewrite to succeed MV must have an anti-join marker like the rowid or primary key of the right tables of outer join

Action: None

QSM-01095: no suitable grouping_id found in MV with grouping sets

Cause: If materialized aggregate view contains grouping sets, then it also must contain the grouping_id() function. This function must contain all columns in the MV GROUP BY.

Action: None

QSM-01096: Materialized view with grouping sets contains duplicates

Cause: Materialized view with grouping sets contains duplicates and no rewrite is supported for it. For example, GROUP BY GROUPING SET ((a), (a)) is not supported for rewrite.

Action: None

QSM-01097: Materialized view with grouping sets has too long key

Cause: Materialized view with grouping sets has more than 64 different keys in its GROUP BY. No rewrite is supported then.

Action: None

QSM-01098: mv *string* clause more restrictive than query *string* clause

Cause: The materialized view contains a selection condition in the WHERE or HAVING clause that is more restrictive than the corresponding selection condition in the request query.

Action: Change the selection criteria in the request query to be at least as restrictive as the selection criteria in the materialized view, or drop and recreate the materialized view using less restrictive selection criteria.

QSM-01099: non-tolerated reference to stale portion of mv for table *string*

Cause: The materialized view is partially stale. It is stale with respect to one or more partitions in one or more of its detail tables. The request query references one or more such detail partitions.

Action: (1) Change the selection criteria of the request to restrict the query to only the fresh portion of the materialized view, or (2) ALTER {SYSTEM|SESSION} QUERY_REWRITE_INTEGRITY = STALE_TOLERATED or (3) refresh the materialized view.

QSM-01100: containment check failed for mv, *string*

Cause: The materialized view contains a selection condition in the WHERE or HAVING clause that is more restrictive than the corresponding selection condition in the request query.

Action: Change the selection criteria in the request query to be at least as restrictive as the selection criteria in the materialized view, or drop and recreate the materialized view using less restrictive selection criteria.

QSM-01101: rollup(s) took place on mv, *string*

Cause: If query's GROUP BY has one of the higher levels of columns found in the materialized view, then the lower level columns in the materialized view will be rolled up to compute the desired results.

Action: None

QSM-01102: materialized view, *string*, requires join back to table, *string*, on column, *string*

Cause: A column in the query does not appear in the materialized view. Query rewrite will try to obtain this column from the base table, by doing a join back to that column with the MV.

Action: None

QSM-01103: there is a remote table, *string*, referenced in the query

Cause: Query rewrite does not support query with remote tables.

Action: None

QSM-01104: query is using flashback

Cause: Query rewrite does not support flashback.

Action: None

QSM-01105: no primary key or row id in MV, *string*, is found for table, *string*

Cause: In order to obtain a missing column, the materialized view needs to join back to the above table. But it lacks the primary key or rowid for the table.

Action: None

QSM-01106: materialized view, *string*, is stale with respect to some partition(s) in the base table(s)

Cause: Query is requesting some data from the MV that are stale with respect to some partitions in the base tables due to some updates.

Action: refresh the stale partitions and rerun the query

QSM-01107: Partition Containment Tracking (PCT) rewrite is not allowed

Cause: Query rewrite is disabled for PCT through a session parameter

Action: None

QSM-01108: maximum number of disjuncts exceeded in the query *string*

Cause: Query rewrite engine cannot process the query if the number of disjuncts (OR's) in the WHERE clause exceeds the maximum allowed number. The number of disjuncts in the query and the maximum allowed disjuncts are given at the end of the message in the form of (no of disjuncts in query, maximum disjuncts allowed).

Action: None

QSM-01109: while rewriting with MV, *string*, table, *string*, migrated to query delta

Cause: There was an unmatched join on the MV, so a table involved in the join was pushed to the query delta to see if the query can be rewritten

Action: None

QSM-01110: query rewrite not possible with materialized view *string* because it contains a join between tables (*string*) that is not present in the query and that potentially eliminates rows needed by the query

Cause: All lossy joins in the materialized view must be present in the query for query rewrite to occur.

Action: None

QSM-01111: no partition key or partition marker found in MV, *string*

Cause: In order to do query rewrite with fresh partitions of an MV, the MV should have a partition key or partition marker.

Action: None

QSM-01112: WHERE clause of mv, *string*, is more restrictive than query

Cause: The materialized view contains a selection condition in the WHERE clause that is more restrictive than the corresponding selection condition in the request query.

Action: Change the selection criteria in the request query to be at least as restrictive as the selection criteria in the materialized view, or drop and recreate the materialized view using less restrictive selection criteria.

QSM-01113: HAVING clause of mv, *string*, is more restrictive than query

Cause: The materialized view contains a selection condition in the HAVING clause that is more restrictive than the corresponding selection condition in the request query.

Action: Change the selection criteria in the request query to be at least as restrictive as the selection criteria in the materialized view, or drop and recreate the materialized view using less restrictive selection criteria.

QSM-01115: rollup took place on a column with a window function

Cause: There was a rollup to aggregate the data on a column with a window function.

Action: None

QSM-01116: window function computability checks failed

Cause: The window function in the query could not be computed from the materialized view.

Action: None

QSM-01120: recursive rewrite not allowed here

Cause: This query was possibly rewritten with an equivalence which doesn't allow further rewrites.

Action: None

QSM-01121: materialized view, *string*, is TRUSTED in ENFORCED integrity mode

Cause: A stale materialized view created with USING TRUSTED CONSTRAINTS clause cannot be used when the query rewrite integrity mode is set ENFORCED.

Action: Alter materialized view such that it has the ENFORCED CONSTRAINTS ALTER MATERIALIZED VIEW *mv* REFRESH USING ENFORCED CONSTRAINTS

QSM-01123: self-join algorithm could not resolve multiple instances

Cause: The generalized self-join algorithm could not resolve the multiple instances, likely due to mismatch in joins or measures

Action: Consider using aliases in the query to match with the aliases in the materialized view

QSM-01124: set operator materialized view, *string*, doesn't have a marker column

Cause: The specified set operator materialized view does not have a marker column.

Action: Add a marker column to the specified materialized view.

QSM-01125: a more optimal set operator materialized view than *string* was used to rewrite

Cause: Query Rewrite always chooses the most optimal set operator materialized view based on parameters, such as cardinality of the set operator materialized view, number of branches that the set operator materialized view can rewrite etc. The set operator materialized view specified was found to be less optimal.

Action: To force using a set operator materialized view, consider using a rewrite hint.

QSM-01126: query rewritten with set operator materialized view, *string*

Cause: The specified set operator materialized view was used to rewrite the given query.

Action: None

QSM-01127: query rewritten with materialized view(s), *string*

Cause: The query was successfully rewritten with multiple MVs

Action: None

QSM-01128: Multi MV rewrite is disabled

Cause: When multimv query rewrite is disabled, no multimv query rewrite will take place.

Action: Enable multimv query rewrite with ALTER SESSION SET "_MULTIMV_QUERY_REWRITE_ENABLED" = true .

QSM-01129: query has NO_MULTIMV_REWRITE hint

Cause: When the query has this hint no multimv rewrite will be tried for this query

Action: Remove hint from query

QSM-01130: Multi MV rewrite not allowed if at least one query block has no MVs

Cause: When only multimv query rewrite is enabled, every query block should have at least one MV in it's from clause

Action: Disable only multimv query rewrite with ALTER SESSION SET "_ONLY_MULTIMV_QUERY_REWRITE_ENABLED" = false .

QSM-01131: query has ONLY_MULTIMV_REWRITE hint

Cause: When the query has this hint no multimv rewrite will be done if the query has a query block with no MVs in the from clause

Action: Remove hint from query

QSM-01132: query has a named array type column

Cause: When the query has a column of named array type, query rewrite cannot be done

Action: None

QSM-01133: query has an ADT column

Cause: When the query has a column of ADT type, query rewrite cannot be done

Action: None

QSM-01134: query has a hidden or nested table column

Cause: When the query has a hidden or nested table column, query rewrite cannot be done

Action: None

QSM-01135: query has an LOB column

Cause: When the query has a column stored in LOB, query rewrite cannot be done

Action: None

QSM-01136: query has a nested table column

Cause: When the query has a nested table column, query rewrite cannot be done

Action: None

QSM-01137: dimension level, *string*, marked as SKIP WHEN NULL

Cause: Join back is not possible on a level marked as SKIP WHEN NULL in a dimension

Action: None

QSM-01138: Query rewrite is not allowed.

Cause: Query rewrite was not allowed during materialized view validation.

Action: None

QSM-01139: query rewrite with stale materialized view, *string*, requires join back

Cause: Query rewrite was not allowed with a stale materialized view if join back to a base table is required.

Action: None

QSM-01150: query did not rewrite

Cause: See the other messages from explain_rewrite() for explanation"

Action: None

QSM-01168: query rewrite not possible when Fine Grain Auditing is present on a base table

Cause: Query rewrite could not take place because Fine Grain Auditing (FGA) was present on a base table in the query

Action: None

QSM-01169: query rewrite not possible for a CREATE or ALTER VIEW statement

Cause: Query rewrite could not take place because the incoming query was either a CREATE or ALTER VIEW statement

Action: None

QSM-01170: no matching objects found between query and materialized view *string*

Cause: Matching objects were not found between the query and the materialized view. Materialized view may contain only editing views.

Action: None

QSM-01171: query rewritten using partial rewrite

Cause: The query was partially rewritten with one or more materialized views. The rewritten query contains base tables.

Action: None

QSM-01202: query rewrite not possible when OPTIMIZER_MODE is set to rule based

Cause: Query rewrite did not occur because the OPTIMIZER_MODE was set to RULE.

Action: Change the optimizer mode using the OPTIMIZER_MODE parameter.

QSM-01203: query rewrite not possible on DDL queries

Cause: If query contains any data definition operations, no query rewrite will take place.

Action: None

QSM-01204: query rewrite not possible before view merging

Cause: Internal session parameter _QUERY_REWRITE_2 is set to FALSE

Action: Change session parameter with ALTER SESSION command.

QSM-01205: query rewrite not possible when query has slave SQL

Cause: Current process is a kxfx slave

Action: None

QSM-01207: query rewrite not possible when query has a NOREWRITE hint

Cause: When query contains a NOREWRITE hint, no query rewrite will take place for that query block.

Action: Remove the NOREWRITE hint from the query

QSM-01208: query rewrite not possible for update queries

Cause: If a query or part of it has any DML update operations, no query rewrite will take place.

Action: None

QSM-01209: query rewritten with materialized view, *string*, using text match algorithm

Cause: The query was rewritten using a materialized view, because query text matched the definition of the materialized view

Action: None

QSM-01210: query rewrite not possible because no common table(s) found between materialized view *string* and query

Cause: If the materialized view does not reference the base tables found in the query, it cannot be used for rewrite

Action: None

QSM-01211: query rewrite not possible when stored outline does not have a rewrite hint

Cause: When using a stored outline, a rewrite hint is required for query rewrite

Action: None

QSM-01212: query rewrite not possible when SAMPLE clause is present in FROM

Cause: If a query contains a SAMPLE clause, query rewrite will not take place

Action: None

QSM-01213: query rewrite not possible when nested aggregates or CONNECT BY clause or START WITH clause or recursive WITH clause is present

Cause: If the query contains nested aggregates, CONNECT BY clause, or START WITH clause, or recursive with clause, query rewrite will not take place

Action: None

QSM-01214: query rewrite not possible if OR is the top level operator in query WHERE clause

Cause: If the top-level operator in the WHERE clause is an OR and there is more than one table in the FROM list, then query rewrite will not take place.

Action: None

QSM-01215: query rewrite not possible when query GROUP BY clause has non-columns

Cause: No query rewrite, if there is no valid column in the GROUP BY clause.

Action: None

QSM-01218: query rewrite is likely more expensive due to a single table match between materialized view and query

Cause: Materialized join view is more expensive for rewrite than using the base table

Action: None

QSM-01219: no suitable materialized view found to rewrite this query

Cause: There doesn't exist any materialized view in the database that can be used to rewrite this query.

Action: Consider creating a new materialized view.

QSM-01220: materialized view, *string*, is disabled, stale or unusable

Cause: Materialized view is probably disabled or stale.

Action: Consider enabling the materialized view for rewrite or refreshing it.

QSM-01222: materialized view *string* is less optimal than *string*

Cause: Query Rewrite always chooses the most optimal materialized view based on certain parameters, such as cardinality of the materialized view, number of joins etc. The materialized view specified was found to be less optimal.

Action: To force using a materialized view, consider using a rewrite hint.

QSM-01241: query measure cannot be derived from the materialized view *string*

Cause: If a measure (such as SUM, AVERAGE) in the query cannot be matched or computed from the materialized view, it will not be used for rewrite.

Action: None

QSM-01244: join back could not be done on a view for *string*

Cause: Query Rewrite will not occur if a join back to a table is required to find any missing columns.

Action: None

QSM-01246: join back on correlated columns not allowed (*string*)

Cause: Query Rewrite will not occur if a join back is required on a column that is referenced by a sub-query.

Action: None

QSM-01247: join back cannot be done on a materialized view that does not have an aggregate (*string*)

Cause: Query Rewrite can occur by means of a complex join back only during a MAV rewrite.

Action: None

QSM-01248: materialized view does not have the join back level(s) (*string*)

Cause: Query Rewrite requires joining back to level of a dimension to find missing information.

Action: Consider creating a dimension.

QSM-01251: query rewrite cannot perform rollup due to the presence of a window function

Cause: No query rewrite if a window function is present on a column that requires a roll-up to compute a measure.

Action: None

QSM-01256: query rewrite not possible for this DDL statement

Cause: Some SELECT statements which are part of a DDL expression may be eligible for rewrite. These include CREATE AS SELECT and CREATE OUTLINE statements. The given query expression is a DDL expression, which doesn't fall in this category.

Action: None

QSM-01257: query rewrite not possible for this DML statement

Cause: Current DML is being done using an updatable view, so it is not eligible for rewrite.

Action: None

QSM-01263: query rewrite not possible when query references a dictionary table or view

Cause: Query rewrite is not allowed if query references any dictionary tables/views.

Action: None

QSM-01271: query rewrite not possible because a join in materialized view *string* with table *string* has eliminated some rows found in query

Cause: A join from the materialized view to any table that eliminates some rows should be present in the query. Otherwise query rewrite will not occur.

Action: None

QSM-01273: query rewrite not possible because materialized view *string* has a join not found in query

Cause: Query rewrite may not be possible if the materialized view has some joins that query does not have

Action: None

QSM-01274: query rewrite not possible because materialized view *string* and query have different number of joins between tables *string*

Cause: Query rewrite may not be possible if the query has some joins that the materialized view does not have between the same pair of tables.

Action: n/a

QSM-01279: query rewrite not possible because DML operation occurred on a table referenced by materialized view *string*

Cause: If any dependent tables of a materialized view undergoes a DML operation, query rewrite may be restricted depending on the query rewrite integrity mode for the session. In this situation, query rewrite will take place only if the rewrite integrity mode is STALE_TOLERATED.

Action: Consider refreshing the materialized view changing the rewrite integrity mode to STALE_TOLERATED.

QSM-01281: query rewrite not possible because either a primary key or a row id is required to join table *string* with MV *string*

Cause: In order to obtain a missing column, the materialized view needs to join back to the above table. But it lacks the primary key or rowid for the table.

Action: None

QSM-01284: materialized view *string* has an anchor table *string* not found in query

Cause: A table in a materialized view is an anchor, (a) if it is not joined to any other table or (b) joined to other tables but each of its joins is not guaranteed to provide all the rows or joined with the above table being child-side table. If an anchor which is present in the materialized view is not found in the query, then query rewrite will not take place.

Action: None

QSM-01293: anti-join marker not found in materialized view with joins

Cause: Materialized view has outer join while the query has inner join. For rewrite to succeed MV must have an anti-join marker like the rowid or primary key of the right tables of outer join

Action: None

QSM-01295: no suitable grouping_id found in materialized view with grouping sets

Cause: If materialized view contains grouping sets, then it also must contain the grouping_id() function. This function must contain all columns in the MV GROUP BY.

Action: None

QSM-01296: query rewrite not possible because materialized view contains duplicate grouping sets

Cause: Materialized view with grouping sets contains duplicates and no rewrite is supported for it. For example, GROUP BY GROUPING SET ((a), (a)) is not supported for rewrite.

Action: None

QSM-01297: query rewrite not possible because materialized view with grouping sets has more than 176 different keys

Cause: Materialized view with grouping sets has more than 176 different keys in its GROUP BY. No rewrite is supported then.

Action: None

QSM-01298: materialized view *string* clause more restrictive than query *string* clause

Cause: The materialized view contains a selection condition in the WHERE or HAVING clause that is more restrictive than the corresponding selection condition in the request query.

Action: Change the selection criteria in the request query to be at least as restrictive as the selection criteria in the materialized view, or drop and recreate the materialized view using less restrictive selection criteria.

QSM-01299: query rewrite not possible because materialized view *string* is partially stale

Cause: The materialized view is partially stale. It is stale with respect to one or more partitions in one or more of its detail tables. The request query references one or more such detail partitions.

Action: (1) Change the selection criteria of the request to restrict the query to only the fresh portion of the materialized view, or (2) ALTER {SYSTEM|SESSION} QUERY_REWRITE_INTEGRITY = STALE_TOLERATED or (3) refresh the materialized view.

QSM-01303: query rewrite not possible because query references a remote table *string*

Cause: Query rewrite does not support query with remote tables.

Action: None

QSM-01304: query rewrite not possible because query is using flashback

Cause: Query rewrite does not support flashback.

Action: None

QSM-01307: Partition Containment Tracking (PCT) rewrite is not allowed

Cause: Query rewrite is disabled for PCT through a session parameter

Action: None

QSM-01308: number of 'OR's in query exceeded the maximum value *string*

Cause: Query rewrite engine cannot process the query if the number of disjuncts (OR's) in the WHERE clause exceeds the maximum allowed number. The number of disjuncts in the query and the maximum allowed disjuncts are given at the end of the message in the form of (no of disjuncts in query, maximum disjuncts allowed).

Action: None

QSM-01316: window function could not be computed from materialized view *string*

Cause: The window function in the query could not be computed from the materialized view.

Action: None

QSM-01321: query rewrite not possible because materialized view *string* has TRUSTED constraints in ENFORCED integrity mode

Cause: A stale materialized view created with USING TRUSTED CONSTRAINTS clause cannot be used when the query rewrite integrity mode is set ENFORCED.

Action: Alter materialized view such that it has the ENFORCED CONSTRAINTS
ALTER MATERIALIZED VIEW *mv* REFRESH USING ENFORCED CONSTRAINTS

QSM-01332: query rewrite not possible because query has a named array type column

Cause: When the query has a column of named array type, query rewrite cannot be done

Action: None

QSM-01333: query rewrite not possible because query has an ADT column

Cause: When the query has a column of ADT type, query rewrite cannot be done

Action: None

QSM-01334: query rewrite not possible because query has a hidden or nested table column

Cause: When the query has a hidden or nested table column, query rewrite cannot be done

Action: None

QSM-01335: query rewrite not possible because query has an LOB column

Cause: When the query has a column stored in LOB, query rewrite cannot be done

Action: None

QSM-01336: the materialized view you specified (*string*) was not used to rewrite the query

Cause: A materialized view specified by the user in the input was not used to rewrite the query, either because query rewrite failed or another more optimal materialized view was used to rewrite.

Action: None

QSM-01339: rewrite not supported on inline view aggregate

Cause: Query has an inline view with an aggregate. Such inline views cannot be matched to any inline views in materialized views.

Action: None

QSM-01340: no inline view match found between query and materialized view(s)

Cause: Query's inline view does not have a match with any inline views in the materialized view

Action: None

QSM-01341: joins between materialized view *string* and query inline views are different

Cause: There is a mismatch between the joins in the query and materialized view inline views

Action: None

QSM-01342: query rewrite not possible because query has full outer join

Cause: When query block has a table involved in full outer join, query rewrite cannot be done

Action: None

QSM-01343: general inline view rewrite not possible on remote objects

Cause: The general inline view rewrite could not take place because the query had remote objects

Action: None

QSM-01344: general inline view rewrite not possible on this WHERE clause construct

Cause: The general inline view rewrite was not supported with this WHERE clause construct

Action: None

QSM-01345: general inline view rewrite not possible when inline view has subquery

Cause: The general inline view rewrite could not take place because there were subqueries

Action: None

QSM-01346: general inline view rewrite not possible with nested inline views

Cause: General inline view rewrite cannot take place with nested inline views

Action: None

QSM-01347: a query inline view could not be matched with any materialized view inline view

Cause: No materialized view inline views were found to match with a query inline view

Action: None

QSM-01348: an invalid predicate was found in an inline view

Cause: An inline view in the query contained an invalid WHERE clause predicate

Action: None

QSM-01349: general inline view cannot be supported on this inline view

Cause: Certain inline views are unsupported in general inline view rewrite

Action: None

QSM-01350: query rewrite cannot support this inline view

Cause: Certain inline views are unsupported in general inline view rewrite

Action: None

QSM-01351: query inline view has no matching objects with any materialized view inline views

Cause: There were no matching objects between the query inline view and materialized view inline views

Action: None

QSM-01352: SELECT lists of the query and materialized view inline views do not match

Cause: Query inline view's and materialized view inline view's SELECT list items did not match.

Action: None

QSM-01353: no query rewrite on remote objects unless integrity mode is set to stale_tolerated

Cause: Query rewrite's integrity mode should be set to stale_tolerated for query rewrite to occur on queries with remote objects

Action: Set the session parameter, QUERY_REWRITE_INTEGRITY to stale_tolerated

QSM-01354: query rewrite is disabled for remote objects

Cause: Query rewrite was disabled internally for queries referencing remote objects.

Action: None

QSM-01355: multi-mv rewrite not possible in the presence of remote objects

Cause: Multi-MV rewrite not possible for queries referencing remote objects.

Action: None

QSM-01356: query rewrite against cube-organized materialized views not possible when OLAP option is off

Cause: Query rewrite against cube-organized materialized views was not possible because the OLAP option was off.

Action: None

QSM-01357: query rewritten with a stale materialized view, *string*, by on query computation

Cause: Query is rewritten with a stale materialized view by doing on-query computation

Action: None

QSM-01360: query rewritten using ANSI join pass

Cause: The query was rewritten using the ANSI join rewrite pass.

Action: None

QSM-01361: query does not rewrite using ANSI join pass

Cause: The query could not be rewritten using the ANSI join rewrite pass.

Action: None

QSM-01509: equivalence, *string*, matched query text

Cause: The query was rewritten using an equivalence, because query text matched the source statement for this equivalence.

Action: None

QSM-01522: a more optimal equivalence than *string* was used to rewrite

Cause: Query Rewrite always chooses the most optimal equivalence based on certain parameters, such as cardinality of the equivalence, number of joins etc. The equivalence view specified was found to be less optimal.

Action: None

QSM-01526: query rewrite is disabled for equivalence, *string*

Cause: Query rewrite could not use this equivalence, because this equivalence was created as disabled.

Action: Enable this equivalence using `alter_rewrite_equivalence` procedure from package, `dbms_advanced_rewrite`.

QSM-01533: query rewritten with equivalence, *string*

Cause: The specified equivalence was used to rewrite the given query.

Action: None

QSM-01565: equivalence, *string*, cannot compute measure, *string*, in the query

Cause: If a measure in the query cannot be computed using the measures in the equivalence, then query rewrite will not occur.

Action: None

QSM-01567: equivalence, *string*, cannot support the query measure, *string*

Cause: An attempt was made to push a grouping function through an expression specified in the query to transform a measure. Query rewrite will not occur if this measure transformation failed.

Action: None

QSM-01572: equivalence, *string*, and query have different joins between tables, *string*

Cause: Anchors, if any, in the equivalence and query match. But the joins between these anchors in the equivalence and query are different.

Action: None

QSM-01582: Joining equivalence, *string*, with table, *string*, not possible

Cause: A column in the query is not found in the equivalence. To obtain the column, a join back of equivalence to the table by means of either the primary key, foreign key or rowid of the table is required. But join backs are not allowed for equivalence rewrite

Action: None

QSM-01584: equivalence, *string*, has anchor, *string*, not found in query

Cause: If an anchor which is present in the equivalence is not found in the query, then query rewrite will not take place.

Action: None

QSM-01601: rollup(s) took place on equivalence, *string*

Cause: If query's GROUP BY has one of the higher levels of columns found in the equivalence, then the lower level columns in the equivalence will be rolled up to compute the desired results.

Action: None

QSM-01602: equivalence, *string*, requires join back to table, *string*, on column, *string*

Cause: A column in the query does not appear in the equivalence. Query rewrite will try to obtain this column from the base table, by doing a join back to that column with a materialized view. But join backs are not allowed for equivalence rewrite as the required constraints are not guaranteed to be found on the tables in the destination statement of the equivalence.

Action: None

QSM-01610: a lossy join in equivalence, *string*, between tables, *string*, not found in query

Cause: All lossy joins in the equivalence must be present in the query for query rewrite to occur.

Action: None

QSM-01617: equivalence definition is disabled

Cause: There is an equivalence definition that could have been probably used by query rewrite to rewrite the query. But this equivalence is disabled.

Action: None

QSM-01618: equivalence, *string*, is enabled for text match rewrite only

Cause: This equivalence was created for text match rewrite only

Action: None

QSM-01619: equivalence cannot be used in ENFORCED integrity mode

Cause: An equivalence cannot be used for query rewrite when the query rewrite integrity mode is set to ENFORCED.

Action: None

QSM-01621: join backs to base tables not allowed with an equivalence

Cause: Query rewrite needs to do a join back to a base table column to answer this query. But join back is not allowed for an equivalence rewrite

Action: None

QSM-01709: query rewritten with equivalence, *string*, using text match algorithm

Cause: The query was rewritten using an equivalence because query text matched the definition of the equivalence

Action: None

QSM-01784: equivalence *string* has an anchor table *string* not found in query

Cause: A table in an equivalence is an anchor, if (a) it is not joined to any other table or (b) it is joined to other tables but each of its joins is not guaranteed to provide all the rows or joined with the above table being child-side table. If an anchor which is present in the equivalence is not found in the query, then query rewrite will not take place.

Action: None

QSM-01837: recursive query rewrite on equivalence, *string*, not permitted

Cause: The source and destination statements of this equivalence MV are possibly identical. A recursive rewrite on this equivalence can lead to an infinite loop and thus not permitted.

Action: None

QSM-01838: semijoin transformation not supported on equivalence

Cause: There was a semijoin transformation attempted on an equivalence rewrite. Currently this is not allowed

Action: None

QSM-01839: materialized view, *string*, is stale with respect to some logical partition(s) in the base table(s)

Cause: Query is requesting some data from the MV that are stale with respect to some logical partitions in the base tables due to some updates.

Action: refresh the stale logical partitions and rerun the query

QSM-01840: no logical partition key found in MV, *string*

Cause: In order to do query rewrite with fresh logical partitions of an MV, the MV should have a logical partition key.

Action: None

QSM-01841: query rewrite not supported after predicate pushdown

Cause: One or more filter predicates were pushed inside the named view. Query rewrite was not supported after this.

Action: None

QSM-01842: column not found in the materialized view, *string*

Cause: One or more join columns found in the query were not present in the materialized view.

Action: Add the column to the materialized view.

QSM-01843: Materialized view defining query could not be transformed to a two table semijoin query block.

Cause: Materialized view definition was not eligible for join-specific materialized view rewrite because the query could not be transformed to a two table semijoin query block.

Action: Provide additional hints to get a semijoin in the materialized view defining query plan.

QSM-02001: clustered mv container table

Cause: The capability in question is not supported on a materialized view that has a clustered container table.

Action: Recreate the materialized view using a conventional container table.

QSM-02002: DISTINCT aggregate measure in SELECT list

Cause: The capability in question is not supported when the materialized view uses the DISTINCT qualifier on an aggregate function.

Action: Remove the DISTINCT qualifier.

QSM-02003: aggregate function nested within an expression

Cause: The capability in question is not supported when the materialized view contains an aggregate function invocation nested within an outer expression.

Action: Re-phrase the expression such that the aggregate function invocation is not nested.

QSM-02004: grouping column omitted from SELECT list

Cause: The capability in question is not supported when the materialized view contains a column or expression in the GROUP BY clause that is not also present in the list of output select expressions.

Action: Include all GROUP BY expressions in the output select list.

QSM-02005: named view in FROM list

Cause: The capability in question is not supported when a named view appears in the FROM list.

Action: Remove the named view from the FROM list.

QSM-02006: subquery in FROM list

Cause: The capability in question is not supported when a subquery appears in the FROM list.

Action: Remove the subquery from the FROM list.

QSM-02007: multiple instances of the same table or view

Cause: The capability in question is not supported when the same table or view occurs more than once in the FROM list.

Action: Re-phrase the query to avoid multiple instances of the same table. For instance,

QSM-02008: non-join filter condition in WHERE or HAVING clause

Cause: The capability in question is not supported when the materialized view has a selection condition (an expression not representing a join) in the WHERE or HAVING clauses.

Action: Remove the selection filter expression.

QSM-02009: non-inner join

Cause: The capability in question is only supported with inner joins.

Action: Re-phrase the query using an inner join. Remove any outer joins.

QSM-02010: join predicate with operator other than equals (=)

Cause: The capability in question is not supported when the materialized uses a relationship operator other than equals ("=") in a join in the WHERE clause. This is known as a non-equijoin.

Action: Re-phrase the query to avoid the non-equijoin.

QSM-02011: a HAVING clause is present

Cause: The capability in question is not supported when the materialized view uses a HAVING clause.

Action: Remove the HAVING clause.

QSM-02012: a CONNECT BY clause is present

Cause: The capability in question is not supported when the materialized view uses a CONNECT BY clause.

Action: Re-phrase the query to avoid use of the CONNECT BY clause.

QSM-02013: SELECT list includes a RAW data type expression

Cause: The capability in question is not supported when the materialized view uses RAW data type in an expression.

Action: Remove the reference to the RAW expression.

QSM-02014: GROUP BY expression other than a column

Cause: The capability in question is not supported when the materialized view uses an expression other than a simple column reference in the GROUP BY clause.

Action: Re-phrase the query to use only simple column expressions in the GROUP BY clause.

QSM-02015: Index Organized Table (IOT) present in FROM list

Cause: The capability in question is not supported when the materialized view references an Index Organized Table in the FROM list.

Action: Remove the reference to the Index Organized Table.

QSM-02016: clustered table in FROM list

Cause: The capability in question is not supported when the materialized view references a clustered table in the FROM list.

Action: Remove the reference to the clustered table in the FROM list.

QSM-02017: subquery present in the HAVING clause

Cause: The capability in question is not supported when the materialized view uses a subquery in the HAVING clause.

Action: Re-phrase the query to avoid the subquery in the HAVING clause.

QSM-02018: subquery present in the WHERE clause

Cause: The capability in question is not supported when the materialized view uses a subquery in the WHERE clause.

Action: Re-phrase the query to avoid the subquery in the WHERE clause.

QSM-02019: mv references another mv in FROM clause

Cause: The capability in question is not supported when the materialized view is nested (i.e., when it references another materialized view in its FROM list).

Action: Re-phrase the query to avoid reference to the other materialized view.

QSM-02020: container column not in SELECT list with NOT NULL constraint

Cause: The capability in question is not supported when the materialized view's container table has a column that does not correspond to an output expression in the select list, and that column has a NOT NULL constraint. This situation can result in problems during refresh since any new rows inserted into the materialized view will set that column to NULL.

Action: Disable or remove the NOT NULL constraint.

QSM-02021: set operator encountered in mv

Cause: The capability in question is not supported when the materialized view uses set operators such as UNION, UNION ALL, MINUS, etc.

Action: Re-phrase the query to avoid the use of set operators.

QSM-02022: aggregate selections

Cause: The capability in question is not supported when the materialized view uses an aggregate expression in the HAVING clause.

Action: Re-phrase the query to avoid the use of an aggregate in the HAVING clause.

QSM-02023: nested cursor

Cause: The capability in question is not supported when the materialized view uses a nested cursor expression.

Action: Re-phrase the query to avoid use of a nested cursor expression.

QSM-02024: no GROUP BY clause

Cause: The capability in question is not supported when the materialized view does not use a GROUP BY clause.

Action: Re-phrase the query to use a GROUP BY clause.

QSM-02025: no aggregate functions

Cause: The capability in question is not supported when the materialized view uses no aggregate functions.

Action: Re-phrase the query to use aggregate functions.

QSM-02026: non-AND conjunction in WHERE clause

Cause: The capability in question is not supported when the materialized view uses a conjunction other than AND (such as OR) in the WHERE clause.

Action: Re-phrase the query to avoid use of the non-AND conjunction.

QSM-02027: group by ROLLUP

Cause: The capability in question is not supported when the materialized view uses the ROLLUP operator in the GROUP BY clause.

Action: Re-phrase the query to avoid use of the ROLLUP operator.

QSM-02028: group by CUBE

Cause: The capability in question is not supported when the materialized view uses the CUBE operator in the GROUP BY clause.

Action: Re-phrase the query to avoid use of the CUBE operator.

QSM-02029: PL/SQL function invocation

Cause: The capability in question is not supported when the materialized view invokes a PL/SQL function.

Action: Re-phrase the query to avoid use of PL/SQL functions.

QSM-02030: reduced precision specified for prebuilt mv

Cause: The capability in question is not supported when the materialized view is created with the WITH REDUCED PRECISION clause.

Action: DROP the materialized view and re-create it without using the WITH REDUCED PRECISION clause.

QSM-02031: materialized view cannot support any type of query rewrite

Cause: The materialized view cannot be used with query rewrite.

Action: Examine the other messages and documentation to determine the cause of the problem.

QSM-02032: no joins are present in the WHERE clause

Cause: The capability in question is not supported when the materialized view includes no join conditions in the WHERE clause.

Action: Re-phrase the query to include a join.

QSM-02033: no filter conditions are present in the WHERE clause

Cause: The capability in question is not supported when the materialized view includes no filter selection conditions in the WHERE clause.

Action: Add a filter condition.

QSM-02034: no joins are present in the HAVING clause

Cause: The capability in question is not supported when the materialized view includes no joins in the HAVING clause.

Action: Re-phrase the query to include a join.

QSM-02035: no filter conditions are present in the HAVING clause

Cause: The capability in question is not supported when the materialized view includes no filter condition in the HAVING clause.

Action: Re-phrase the query to include a join.

QSM-02036: in-list present in mv

Cause: The capability in question is not supported when the materialized view uses an IN list.

Action: Re-phrase the query to avoid the use of IN lists.

QSM-02037: cannot evaluate constant expression at compile time

Cause: The capability in question is not supported when the materialized view uses a compile-time non-constant expression in a filter condition in the WHERE or HAVING clauses. For example, WHERE X=1 uses a compile-time constant expression in a filter condition. WHERE X=MY_PLSQL_FUNCTION() uses a compile-time non-constant expression in a filter condition.

Action: Re-phrase the query to avoid the use of a compile-time non-constant expressions in filter conditions.

QSM-02038: Partition Change Tracking (PCT) is enabled

Cause: The Partition Change Tracking (PCT) capability is supported for this materialized view.

Action: No action is needed.

QSM-02039: top level mv query uses grouping sets

Cause: The capability in question is not supported when the materialized view use grouping sets.

Action: Re-phrase the query to avoid use of grouping sets.

QSM-02040: top level query contains GSets and the key is too long for rewrite

Cause: The capability in question is not supported when the materialized view uses a grouping set with too many keys.

Action: Reduce the number of grouping set keys.

QSM-02041: nested aggregate function

Cause: The capability in question is not supported when the materialized view nests an aggregate function invocation as an argument to another aggregate function.

Action: Re-phrase the query to avoid the nested aggregate function invocation.

QSM-02042: view or subquery in from list

Cause: The capability in question is not supported when the materialized view references a view or subquery in the FROM list.

Action: Re-phrase the query to avoid the use of views or subqueries in in the FROM list.

QSM-02044: ORDER BY clause in mv

Cause: The capability in question is not supported when the materialized view includes an ORDER BY clause.

Action: Remove the ORDER BY clause.

QSM-02045: START WITH clause in mv

Cause: The capability in question is not supported when the materialized view includes a START WITH clause.

Action: Re-phrase the query to avoid the use of the START WITH clause.

QSM-02047: window function in mv

Cause: The capability in question is not supported when the materialized view uses a window function.

Action: Re-phrase the query to avoid the use of window functions.

QSM-02048: outer join in mv

Cause: The capability in question is not supported when the materialized view uses an outer join.

Action: Re-phrase the query to avoid the use of outer joins.

QSM-02049: subquery using the ANY clause in mv

Cause: The capability in question is not supported when the materialized view uses the ANY clause with a subquery.

Action: Re-phrase the query to avoid the use of the ANY clause.

QSM-02050: subquery using the ALL clause in mv

Cause: The capability in question is not supported when the materialized view uses the ALL clause with a subquery.

Action: Re-phrase the query to avoid the use of the ALL clause.

QSM-02051: subquery using the NOT EXISTS clause in mv

Cause: The capability in question is not supported when the materialized view uses the NOT EXISTS with a subquery.

Action: Re-phrase the query to avoid the use of the NOT EXISTS clause.

QSM-02052: subquery using a select list in mv

Cause: The capability in question is not supported when the materialized view uses a select list.

Action: Re-phrase the query to avoid the use of a select list.

QSM-02053: collection subquery in mv

Cause: The capability in question is not supported when the materialized view uses a collection subquery.

Action: Re-phrase the query to avoid the use of collection subqueries.

QSM-02054: DISTINCT clause in select list in mv

Cause: The capability in question is not supported when the materialized view uses the DISTINCT clause in the select list.

Action: Re-phrase the query to avoid the use of the DISTINCT clause.

QSM-02055: mv references a packed object table or view

Cause: The capability in question is not supported when the materialized view references a packed object table or view.

Action: Re-phrase the query to avoid the use of the packed object tables or views.

QSM-02056: correlated variable and outer join in mv

Cause: The capability in question is not supported when the materialized view uses a correlated variable and an outer join.

Action: Re-phrase the query to avoid the use of the correlated variables or outer joins.

QSM-02057: ROWNUM referenced in mv

Cause: The capability in question is not supported when the materialized view references the ROWNUM function.

Action: Re-phrase the query to avoid the use of the ROWNUM function.

QSM-02058: set operator in mv and compatibility mode is less than 9.0

Cause: The capability in question is not supported when the materialized view uses a set operator and the compatibility mode is less than 9.0.

Action: Re-phrase the query to avoid the use of set operators or set the compatibility mode to 9.0 or greater.

QSM-02059: join may produce duplicate rows in mv

Cause: The capability in question is not supported when the materialized view contains a join condition that can result in duplicate rows in the materialized view.

Action: Re-phrase the query to avoid the occurrence of duplicate rows in the materialized view.

QSM-02061: one or more joins present in mv

Cause: The capability in question is not supported when the materialized view contains joins.

Action: Re-phrase the query to avoid the use of the joins.

QSM-02062: GROUP BY clause in mv

Cause: The capability in question is not supported when the materialized view uses the GROUP BY clause.

Action: Re-phrase the query to avoid the use of the GROUP BY clause.

QSM-02063: aggregate function in mv

Cause: The capability in question is not supported when the materialized view uses an aggregate function.

Action: Re-phrase the query to avoid the use of the aggregate functions.

QSM-02064: subquery in mv

Cause: The capability in question is not supported when the materialized view uses a subquery.

Action: Re-phrase the query to avoid the use of the subqueries.

QSM-02066: Oracle error: see RELATED_NUM and RELATED_TEXT for details

Cause: The capability in question is not supported because an attempt to create the materialized view would result in an error.

Action: Examine the associated Oracle error code in the RELATED_NUM column and the Oracle error text in the RELATED_TEXT column and address the problem.

QSM-02067: no partition key or PMARKER or join dependent expression in select list

Cause: The capability in question is not supported when the materialized view unless the select list (and group by list if a GROUP BY clause is present) includes the partition key or PMARKER function reference to the table in question or an expression join dependent on the partitioning column of the table in question.

Action: Add the partition key or a PMARKER function reference or a join dependent expression to the select list (and the GROUP BY clause, if present).

QSM-02068: relation is not a partitioned table

Cause: The capability in question is not supported when the relation in question is not a partitioned table.

Action: Change the query to reference a partitioned table.

QSM-02069: PCT not supported with multi-column partition key

Cause: The capability in question is not supported when the table in is partitioned on a multi-column key.

Action: Re-phrase the query to reference a table partitioned on a single column key.

QSM-02070: PCT not supported with this type of partitioning

Cause: The capability in question is not supported when the table in question uses certain types of partitioning.

Action: Re-phrase the query to reference a table that is uses a type of partitioning that is supported for this capability.

QSM-02071: internal error: undefined PCT failure code

Cause: An internal Oracle error has occurred.

Action: Report the problem through your normal support channels.

QSM-02072: requirements not satisfied for fast refresh of nested mv

Cause: The capability in question is not supported because one or more of the requirements for this capability have not been satisfied.

Action: Examine the relevant nested materialized view documentation in the Warehouse Guide and address the problem.

QSM-02073: non-primary key RepAPI mv is not fast refreshable

Cause: Fast refresh is supported for RepAPI materialized views only if it is also a primary key materialized view.

Action: Re-design the materialized view to be a primary key materialized view.

QSM-02074: materialized view over Heterogeneous Services link

Cause: The capability in question is not supported when the materialized view uses a heterogeneous link.

Action: Re-design the materialized view to avoid the use of the heterogeneous links.

QSM-02075: materialized view on synonym

Cause: The capability in question is not supported when the materialized view references a synonym, if the compatible parameter is earlier than 10.2.0.

Action: Re-phrase the query to avoid the use of the synonyms.

QSM-02076: sequence number in the mv log is newer than last refresh

Cause: The timestamp of the sequence number in the mv log was after the last refresh time.

Action: A complete refresh is required before the next fast refresh.

QSM-02077: mv log is newer than last full refresh

Cause: The capability in question is not supported when the relevant materialized view log was created after the creation or most recent complete refresh of the materialized view.

Action: Perform a complete refresh of the materialized view.

QSM-02078: mv log must have new values

Cause: The capability in question is not supported when the relevant materialized view log omits new values.

Action: Re-create the materialized view log using the NEW VALUES clause.

QSM-02079: mv log must have ROWID

Cause: The capability in question is not supported when the relevant materialized view log omits ROWIDs.

Action: Re-create the materialized view log using the ROWID clause.

QSM-02080: mv log must have primary key

Cause: The capability in question is not supported when the relevant materialized view log omits primary keys.

Action: Re-create the materialized view log using the PRIMARY KEY clause.

QSM-02081: mv log does not have all necessary columns

Cause: The capability in question is not supported when the relevant materialized view log omits columns referenced in the select list of the materialized view.

Action: Re-create the materialized view log and include all columns referenced in the select list.

QSM-02082: problem with mv log

Cause: The capability in question is not supported because of a problem the materialized view log in question.

Action: Examine the relevant materialized view log and fast refresh documentation in the Warehouse Guide and address the problem.

QSM-02083: mv references PL/SQL function that maintains state

Cause: The capability in question is not supported when the materialized view references a PL/SQL function that maintains state and which may not return the same value every time it is invoked against the same set of rows.

Action: Re-phrase the query to avoid such a PL/SQL function. Or modify the PL/SQL function to avoid state maintenance and change its declaration accordingly.

QSM-02084: DISTINCT clause on a duplicate sensitive aggregate function

Cause: The capability in question is not supported when the materialized view uses the DISTINCT clause in this context.

Action: Re-phrase the query to avoid the use of the DISTINCT clause.

QSM-02086: Materialized view uses the MIN, MAX, ANY_VALUE, BIT_*_AGG, BOOLEAN_*_AGG, or EVERY aggregate function.

Cause: Fast refresh after an update or delete was not supported because the materialized view used the MIN, MAX, ANY_VALUE, BIT_*_AGG, BOOLEAN_*_AGG, or EVERY aggregate function.

Action: Rephrase the query to avoid using MIN, MAX, ANY_VALUE, BIT_*_AGG, BOOLEAN_*_AGG, or EVERY aggregate function.

QSM-02087: materialized view uses the approximate aggregate detail functions

Cause: The capability in question was not supported when the materialized view used the approximate aggregate detail function.

Action: Rephrase the query to avoid using the approximate aggregate detail function.

QSM-02088: mv omits at least one grouping key from the select list

Cause: The capability in question is not supported when the materialized view omits any grouping expressions from the select list.

Action: Include all GROUP BY expressions in the select list.

QSM-02090: SELECT includes an expression that is not just a column

Cause: The capability in question is not supported when the materialized view uses an expression in the select list that is not a simple column reference.

Action: Re-phrase the query to avoid the use of the expressions that are not simple column references.

QSM-02091: mv references a non-repeatable or session-sensitive expression

Cause: The capability in question is not supported when the materialized view uses an expression that may not return the same value each time it is invoked against the same set of rows or that may return different values depending on session parameters.

Action: Re-phrase the query to avoid the use of such expressions.

QSM-02092: mv references a sequence number

Cause: The capability in question is not supported when the materialized view references a sequence number.

Action: Re-phrase the query to avoid the reference to sequence numbers.

QSM-02093: mv uses an object REF clause

Cause: The capability in question is not supported when the materialized view uses an object REF clause.

Action: Re-phrase the query to avoid the use of an object REF clause.

QSM-02096: mv references a named view

Cause: The capability in question is not supported when the materialized view references a view.

Action: Re-phrase the query to avoid references to views.

QSM-02099: mv references a remote table or view in the FROM list

Cause: The capability in question is not supported when the materialized view references a remote table or view in the FROM list.

Action: Re-phrase the query to avoid references to remote tables or views.

QSM-02101: mv references a synonym in the FROM list

Cause: The capability in question is not supported when the materialized view references a synonym in the FROM list.

Action: Re-phrase the query to avoid the reference to the synonym.

QSM-02102: mv FROM list references an object in the SYS schema

Cause: The capability in question is not supported when the materialized view references an object in the SYS schema.

Action: Re-phrase the query to avoid the reference to the SYS schema.

QSM-02104: aggregate function in a filter condition in the HAVING clause

Cause: The capability in question is not supported when the materialized view references an aggregate function in a filter condition in the HAVING clause.

Action: Re-phrase the query to avoid the use of aggregates in filter conditions in the HAVING clause.

QSM-02106: mv uses a filter condition in the WHERE or HAVING clause

Cause: The capability in question is not supported when the materialized view includes a filter condition in the WHERE or HAVING clause.

Action: Re-phrase the query to avoid the use of filter conditions in the WHERE or HAVING clauses.

QSM-02112: top level query has LEFT OUTER, RIGHT OUTER or FULL OUTER join

Cause: The capability in question is not supported when the materialized view uses these types of joins.

Action: Re-phrase the query to avoid the use of these types of joins.

QSM-02113: expression in select list references multiple tables or views

Cause: The capability in question is not supported when the materialized view includes an expression in the select list that references multiple tables or views.

Action: Re-phrase the query to avoid the use of the such expressions.

QSM-02114: no GROUP BY clause, no aggregates and not >= 9.0 compatibility

Cause: The capability in question is not supported when the materialized view has no GROUP BY clause, no aggregates and compatibility mode is less than 9.0.

Action: Re-phrase the query to avoid the include a GROUP BY clause or an aggregate function. Or set compatibility mode to 9.0 or greater.

QSM-02115: mv references a remote object and is refreshed ON COMMIT

Cause: The capability in question is not supported when the materialized view references a remote object and is refreshed ON COMMIT.

Action: Re-phrase the query to avoid the reference to the remote object or alter the materialized view to be refreshed ON DEMAND.

QSM-02116: multiple master sites

Cause: The capability in question is not supported when the materialized view references multiple remote objects that reside at different remote instances.

Action: Re-phrase the query to avoid the use of multiple master sites.

QSM-02117: missing GROUPING_ID or GROUPING functions on GROUP BY column(s)

Cause: The capability in question is not supported when the materialized view uses grouping sets but omits the relevant GROUPING_ID or GROUPING functions.

Action: Re-phrase the query to include the relevant GROUPING_ID or GROUPING functions.

QSM-02118: duplicate grouping sets

Cause: The capability in question is not supported when the materialized view redundantly references grouping sets.

Action: Re-phrase the query to avoid the use of the redundant grouping sets.

QSM-02119: internal error while analyzing required supporting aggregates

Cause: An internal Oracle error has occurred.

Action: Report the problem through your normal support channels.

QSM-02120: compatibility mode must be 9.0 or higher

Cause: The capability in question is not supported when the compatibility mode is less than 9.0.

Action: Set the compatibility mode to 9.0 or higher.

QSM-02121: set operator in a context not supported for fast refresh

Cause: The capability in question is not supported when the materialized view uses a set operator in this context.

Action: Re-phrase the query to avoid the use of the set operator.

QSM-02122: compatibility mode must be 8.1 or higher

Cause: The capability in question is not supported when the compatibility mode is less than 8.1.

Action: Set the compatibility mode to 8.1 or higher.

QSM-02123: subquery and UNION mv's must be primary key mv's

Cause: The capability in question is not supported when the materialized view is not a primary key materialized view and uses subqueries or the union operator in this context.

Action: Re-create the materialized view as a primary key materialized view.

QSM-02124: object type in WHERE clause

Cause: The capability in question is not supported when the materialized view references an object type in the WHERE clause.

Action: Re-phrase the query to avoid the reference to the object type.

QSM-02125: subquery join conditions don't meet requirements for capability

Cause: The capability in question is not supported when the materialized view uses a subquery in a join in this way.

Action: Examine the relevant replication documentation concerning subquery materialized views and address the problem.

QSM-02126: no rowid at master site

Cause: The capability in question is not supported when the materialized view references a remote site that does not support rowids.

Action: Re-phrase the query to avoid the reference to the remote site.

QSM-02127: not supported for this type mv by Oracle version at master site

Cause: The capability in question is not supported when the materialized view uses certain constructs and references an older version, remote Oracle instance.

Action: Re-phrase the query to avoid the use of the construct or upgrade the remote Oracle instance.

QSM-02128: does not meet the requirements of a primary key mv

Cause: The capability in question is not supported when the materialized view fails to meet the requirements of a primary key materialized view.

Action: Examine the relevant primary key materialized view replication documentation and address the problem.

QSM-02129: join or filter condition(s) are complex

Cause: The capability in question is not supported when the materialized view uses a complex join or filter condition.

Action: Re-phrase the query to simplify the join or filter condition.

QSM-02130: expression not supported for fast refresh

Cause: The capability in question is not supported when the materialized view references certain, complex expressions.

Action: Re-phrase the query to simplify the expression.

QSM-02131: agg(expr) requires corresponding SUM(expr) function

Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of the SUM function on the same argument.

Action: Add the SUM function to the select list.

QSM-02132: agg(expr) requires corresponding COUNT(expr) function

Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of the COUNT function on the same argument.

Action: Add the COUNT function to the select list.

QSM-02133: agg(expr) requires corresponding MIN(expr) function

Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of the MIN function on the same argument.

Action: Add the MIN function to the select list.

QSM-02134: agg(expr) requires corresponding MAX(expr) function

Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of the MAX function on the same argument.

Action: Add the MAX function to the select list.

QSM-02135: agg(expr) requires corresponding AVG(expr) function

Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of the AVG function on the same argument.

Action: Add the AVG function to the select list.

QSM-02136: agg(expr) requires corresponding VARIANCE(expr) function

Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of the VARIANCE function on the same argument.

Action: Add the VARIANCE function to the select list.

QSM-02137: agg(expr) requires corresponding STDDEV(expr) function

Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of the STDDEV function on the same argument.

Action: Add the STDDEV function to the select list.

QSM-02138: agg(expr) requires corresponding agg(expr*expr) function

Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of that same aggregate function on the square of the same argument.

Action: Add an invocation of the same aggregate function on the square of the same argument (that is, the argument multiplied by itself).

QSM-02139: agg(expr) requires corresponding agg(expr+expr) function

Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of that same aggregate function on the same argument added to the same argument.

Action: Add the indicated aggregate function to the select list.

QSM-02140: agg(expr) requires corresponding SUM(expr*expr) function

Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of the SUM function on the square of the same argument (the argument multiplied by itself).

Action: Add the SUM function on the square of the argument.

QSM-02141: the reason why the capability is disabled has escaped analysis

Cause: The EXPLAIN_MV analysis engine has failed to capture the reason why the given capability is not possible.

Action: Report the problem through your normal problem reporting channels.

QSM-02142: COUNT(*) is not present in the select list

Cause: The materialized view query omits COUNT(*) from the select list.

Action: Add COUNT(*) to the select list.

QSM-02143: SUM(expr) without COUNT(expr)

Cause: SUM(expr) occurs in the select list without a corresponding COUNT(expr).

Action: Add COUNT(expr) to the select list.

QSM-02144: aggregate functions are present without a GROUP BY clause

Cause: One or more aggregate functions are present in the select list but a GROUP BY clause is not used.

Action: Add a GROUP BY clause.

QSM-02145: GROUP BY clause is present but no aggregate functions are used

Cause: A GROUP BY clause is used but no aggregate functions are present in the select list.

Action: Add an aggregate function to the select list.

QSM-02146: see the reason why REFRESH_FAST_AFTER_INSERT is disabled

Cause: REFRESH_FAST_AFTER_ONETAB_DML is disabled for the same reason that REFRESH_FAST_AFTER_INSERT is disabled.

Action: Correct the problem with REFRESH_FAST_AFTER_INSERT.

QSM-02147: default date format is sensitive to session settings

Cause: You have specified a date conversion operation using either the default format or an incomplete format. The default date format or an incomplete format is sensitive to session settings, and therefore may not be reproducible across different environments.

Action: Specify a complete date format string.

QSM-02148: many to many subquery joins require 9.0 compatibility or higher

Cause: You have specified a many to many join in your materialized view while running in less than 9.0 compatibility mode.

Action: Set your compatibility mode to 9.0 or higher or restructure the materialized view query.

QSM-02149: ON COMMIT with this MV requires 9.0 compatibility or higher

Cause: You have specified a materialized view that uses some combination of the following: joins aggregation filter conditions in the WHERE clause a remote relation in the FROM list a SUM(x) function without a corresponding COUNT(x) function an omitted COUNT(*) aggregate function a MIN() or MAX() aggregate function in combination with the REFRESH ON COMMIT option while running in less than 9.0 compatibility mode.

Action: Set your compatibility mode to 9.0 or higher or restructure the materialized view query.

QSM-02150: select lists must be identical across the UNION operator

Cause: You have specified a materialized view using the UNION operator and the respective queries on each side of the UNION operator do not have the same select list. The RELATED_NAME column shows the alias of the first different select list item. The RELATED_NUM column shows the offset from the SELECT keyword to the start of this select list item.

Action: Restructure the materialized view query such that the respective sides of the UNION operator have identical select lists.

QSM-02151: subquery or named view in FROM list and < 9.0 compatibility

Cause: You have specified a materialized view that references a subquery or named view in its top level FROM list while running in less than 9.0 compatibility mode.

Action: Set compatibility mode to 9.0 or higher or restructure the materialized view query.

QSM-02152: subquery or named view in FROM list even after view merging

Cause: You have specified a materialized view that references a subquery or named view in its top level FROM list that could not be merged during the view merging process.

Action: Restructure the materialized view query.

QSM-02153: inline view or subquery in FROM list not supported for this type MV

Cause: You have specified a materialized view that references an inline view or a subquery. The indicated capability is not supported for this type of materialized view.

Action: Restructure the materialized view query.

QSM-02154: MV is not fast refreshable even with view merging

Cause: You have a materialized view with view in the FROM clause, however it does not meet the criteria for fast refresh after view merging.

Action: Restructure the materialized view query to remove the offending view or the complex construct in the view.

QSM-02161: see the reason why REFRESH_FAST_AFTER_ONETAB_DML is disabled

Cause: REFRESH_FAST_AFTER_ANY_DML is disabled for the same reason that REFRESH_FAST_AFTER_ONETAB_DML is disabled.

Action: Correct the problem with REFRESH_FAST_AFTER_ONETAB_DML.

QSM-02162: the detail table does not have a materialized view log

Cause: The fast refresh cannot be performed because the master table does not contain a materialized view log.

Action: Use the CREATE MATERIALIZED VIEW LOG command to create a materialized view log on the master table.

QSM-02163: cannot use object id columns from materialized view log

Cause: The materialized view log either does not have object id columns logged, or the timestamp associated with the object id columns is more recent than the last refresh time.

Action: A complete refresh is required before the next fast refresh. Add object id columns to the materialized view log, if required.

QSM-02169: the materialized view contains partition extended table name

Cause: Fast refresh of materialized aggregate views and/or materialized join views are not supported if they were defined using partition extended table names.

Action: Create the fast refreshable materialized view without using partition extended table names or create the materialized view as a complete refresh materialized view.

QSM-02170: tables must be identical across the UNION operator

Cause: You have specified a materialized view using the UNION operator and the tables on each side of the UNION operator do not match. Fast refresh is not supported in this context.

Action: Restructure the materialized view query such that the respective sides of the UNION operator have the same table.

QSM-02171: the materialized view has a join operation in the outer UNION block

Cause: Fast refresh is not supported if a materialized view having the UNION operator contains a join operation.

Action: Rewrite the materialized view query without the join.

QSM-02173: the unique constraints does not exist on the join columns of the inner table

Cause: If there are outer joins, unique constraints must exist on the join columns of the inner table. Otherwise, the materialized view can not be fast refreshable.

Action: n/a

QSM-02174: the materialized view does not have a UNION ALL marker column

Cause: For a materialized view with UNION ALL to be fast refreshable, it must have a UNION ALL marker column. This is a constant column, at the same ordinal position in each query block and must have distinct values in each query block.

Action: Add a UNION ALL marker column to each query block in the UNION ALL query defining the materialized view.

QSM-02175: some query block in UNION ALL MV is not fast refreshable

Cause: For a materialized view with UNION ALL to be fast refreshable, each query block must conform to a fast refreshable materialized join view or materialized aggregate view.

Action: Check each query block in the UNION ALL to ensure it is either a materialized view with joins or aggregates.

QSM-02176: MV with UNION ALL in a view is too complex

Cause: If a materialized view has a view whose definition involves a UNION ALL query, then the materialized view's defining query cannot have any clauses other than SELECT or FROM. Other clauses such as WHERE, HAVING, CONNECT BY, or GROUP BY are not allowed. Further more, the FROM clause should have only one item.

Action: Remove any clauses besides SELECT and FROM from the materialized view's defining query.

QSM-02177: MV with UNION ALL in a view must match the view's SELECT list

Cause: If a materialized view has a view whose definition involves a UNION ALL query, then the materialized view's select list must match the underlying view's select list exactly. It must not have any expressions and must not have add/drop/reorder columns from the underlying view.

Action: Use select * when defining a materialized view with a UNION ALL in a view.

QSM-02178: MV has a view with UNION ALL that is not fast refreshable

Cause: The materialized view has a view whose definition involves a UNION ALL query that does not satisfy the requirements for fast refresh.

Action: Check that the defining query of the view being referenced in the materialized view satisfies conditions for fast refresh of a UNION ALL materialized view.

QSM-02179: MV with UNION ALL requires compatibility >= 9.2

Cause: The setting of the COMPATIBLE initialization parameter is less than 9.2.0.

Action: Set COMPATIBLE to 9.2.0 or higher.

QSM-02180: no primary key constraint in the master table

Cause: The explain_mvview assumes that the materialized view is going to be created as the Primary Key materialized view. A Primary Key materialized view can not be created if the base table does not have a primary key constraint.

Action: Add a primary key constraint to the base table, or create the materialized view as Rowid MV by specifying the WITH ROWID option. If the materialized view is a Rowid MV, then it should be able to do complete refresh and even fast refresh, given that the materialized view log on the master table has a rowid.

QSM-02181: a SPREADSHEET clause is present

Cause: The capability in question is not supported when the materialized view uses a SPREADSHEET clause.

Action: Remove the SPREADSHEET clause.

QSM-02182: PCT is enabled through a join dependency

Cause: The capability in question is not supported when the materialized view does not contain some expression join dependent on the partitioning key of relation in question in the select list. For definition of join dependency, please look at Oracle documentation.

Action: Change the query to contain the partitioning key

QSM-02183: Expression to enable PCT not in PARTITION BY of analytic function or SPREADSHEET

Cause: The capability in question is not supported when the expression is not in the PARTITION BY clause

Action: Change the query so that the expression is in the PARTITION BY

QSM-02184: Expression to enable PCT cannot be rolled up

Cause: The capability in question is not supported when the expression is rolled up

Action: Change the query so that the expression is not rolled up

QSM-02185: no partition key or PMARKER in select list

Cause: The capability in question is not supported when the materialized view unless the select list (and group by list if a GROUP BY clause is present) includes either the partition key of or a PMARKER function reference to the table in question.

Action: Add the partition key or a PMARKER function reference to the select list (and the GROUP BY clause, if present).

QSM-02186: PARTITIONED OUTER JOIN is present

Cause: The capability in question is not supported when the materialized view has PARTITIONED OUTER JOIN.

Action: Remove PARTITIONED OUTER JOIN.

QSM-02187: materialized view on external table

Cause: The capability in question is not supported when the materialized view references an external table.

Action: Re-phrase the query to avoid the use of the external tables.

QSM-02188: named view in FROM list not supported for this type MV

Cause: You have specified a materialized view that references a named view. The indicated capability is not supported for this type of materialized view.

Action: Restructure the materialized view query.

QSM-02189: materialized view definition changes

Cause: The definition of the materialized view has changed. Usually redefining the synonym or table in the definition can cause this. The materialized view can not be fast refreshed.

Action: Complete refresh or recreate the materialized view.

QSM-02190: SQL PIVOT or UNPIVOT is present

Cause: The capability in question is not supported when the materialized view has sql PIVOT or UNPIVOT operation.

Action: Remove sql PIVOT or UNPIVOT.

QSM-02191: types of MV logs are not compatible

Cause: The capability in question is not supported when the materialized view is defined on detail tables which do not have a compatible type of materialized view logs, either all timestamp based or commit SCN based.

Action: Complete refresh or recreate materialized view logs.

QSM-02192: commit SCN based MV log is not in consistent state

Cause: The capability in question is not supported when the relevant materialized view log is not in consistent state due to the failure when populating the mapping table of SYS.SNAP_XCMT\$.

Action: Perform a complete refresh of the materialized view.

QSM-02193: unsupported MV on commit SCN based MV logs

Cause: The capability in question is not supported when the relevant materialized view is not supported to be defined on detail tables which have commit SCN based MV logs.

Action: None

QSM-02194: CASE expressions present in materialized view

Cause: The capability in question is not supported when the materialized view contain CASE expressions.

Action: Re-phrase the query to avoid the use of CASE expressions.

QSM-02195: PCT FAST REFRESH is not possible if query contains a named view

Cause: The capability in question was not supported because the materialized view query contained a named view.

Action: Rephrase the query to avoid the use of named views.

QSM-02196: PCT FAST REFRESH is not possible if query contains an inline view

Cause: The capability in question was not supported because the materialized view query contained an inline view.

Action: Rephrase the query to avoid the use of an inline view.

QSM-02197: PCT FAST REFRESH is not possible if query contains a remote table

Cause: The capability in question was not supported because the materialized view query contained a remote table.

Action: Rephrase the query to avoid the use of a remote table.

QSM-02198: PCT FAST REFRESH is not possible if HAVING clause includes a subquery

Cause: The capability in question was not supported because the materialized view query HAVING clause included a subquery.

Action: Rephrase the query to avoid the use of a subquery in the HAVING clause.

QSM-02199: PCT FAST REFRESH is not possible if WHERE clause includes a subquery

Cause: The capability in question was not supported because the materialized view query WHERE clause included a subquery.

Action: Rephrase the query to avoid the use of a subquery in the WHERE clause.

QSM-02200: PCT FAST REFRESH is not possible if query contains LEFT OUTER, RIGHT OUTER or FULL OUTER JOIN

Cause: The capability in question was not supported because the materialized view query contained LEFT OUTER, RIGHT OUTER or FULL OUTER JOIN.

Action: Rephrase the query to avoid the use of LEFT OUTER, RIGHT OUTER or FULL OUTER JOIN.

QSM-02201: PCT FAST REFRESH is not possible if there is a self join or self cartesian product in query

Cause: The capability in question was not supported because the materialized view query contained self join or self cartesian product in the query.

Action: Rephrase the query to avoid the use of self joins or self cartesian product in the query.

QSM-02202: PCT FAST REFRESH is not possible if query has ORDER BY clause

Cause: The capability in question was not supported because the materialized view query contained an ORDER BY clause.

Action: Rephrase the query to avoid the use of the ORDER BY clause.

QSM-02203: PCT FAST REFRESH is not possible if query has set operand query blocks

Cause: The capability in question was not supported because the materialized view query contained set operand query blocks.

Action: Rephrase the query to avoid the use of set operand query blocks.

QSM-02204: PCT FAST REFRESH is not possible if query has an inner query

Cause: The capability in question was not supported because the materialized view query contained an inner query.

Action: Rephrase the query to avoid the use of the inner query.

QSM-02205: PCT FAST REFRESH is not possible if there is a subquery inside select-list

Cause: The capability in question was not supported because the materialized view query contained a subquery inside a select-list.

Action: Rephrase the query to avoid the use of a subquery inside a select-list.

QSM-02206: PCT FAST REFRESH is not possible because this query join may produce extra duplicate rows

Cause: The capability in question was not supported because the materialized view contained a join condition that can result in duplicate rows in the materialized view.

Action: Rephrase the query to avoid the occurrence of duplicate rows in the materialized view.

QSM-02207: PCT FAST REFRESH is not possible for complex queries

Cause: The capability in question was not supported because the materialized view query was too complex.

Action: No action is necessary.

QSM-02208: subquery using the NOT IN clause in materialized view

Cause: The capability in question was not supported when the materialized view uses NOT IN with a subquery.

Action: Rephrase the query to avoid the use of the NOT IN clause.

QSM-02209: a MATCH_RECOGNIZE clause is present

Cause: The capability in question was not supported when the materialized view used a MATCH_RECOGNIZE clause.

Action: Remove the MATCH_RECOGNIZE clause.

QSM-02210: relation is not a table with logical partition tracking defined

Cause: The relation was not a table with logical partition tracking defined.

Action: Change the query to reference a table with logical partition tracking defined.

QSM-02211: no logical partition tracking key in select list

Cause: The select list or group by list did not include the logical partition tracking key of the table.

Action: Add the logical partition tracking key to the select list (and the group by clause, if present).

QSM-02212: internal error: undefined LPT (Logical Partition Tracking) failure code

Cause: An internal Oracle error occurred.

Action: Contact Oracle Support Services.

QSM-02215: LPT FAST REFRESH is not possible for complex queries

Cause: The capability in question was not supported because the materialized view query was too complex.

Action: No action is necessary.

QSM-03112: Invalid CREATE MATERIALIZED VIEW statement\nstring

Cause: The CREATE MATERIALIZED VIEW statement that was passed into the procedure was not a valid one.

Action: Check the reason(s) following the error or the statement and retry the operation.

QSM-03113: Cannot tune the MATERIALIZED VIEW statement\nstring

Cause: The MATERIALIZED VIEW statement could not be tuned.

Action: Check the reason(s) following the error or the statement and retry the operation.

QSM-03114: Cannot tune FOR UPDATE materialized view

Cause: The materialized view was created with the FOR UPDATE option.

Action: Rephrase the statement to avoid the use of the FOR UPDATE option.

QSM-03115: Cannot tune materialized view ON PREBUILT table

Cause: The materialized view was created on a prebuilt table.

Action: Rephrase the statement to avoid the use of the ON PREBUILT option.

QSM-03116: The materialized view is already optimal and cannot be tuned any further

Cause: The materialized view has the capabilities that are specified in the statement.

Action: None

QSM-03117: Cannot tune the materialized view to be fast refreshable

Cause: The materialized view could not be tuned or decomposed to be fast refreshable.

Action: Run the `dbms_mview.explain_mv` to find out the reason.

QSM-03118: Cannot tune the materialized view for general rewrite

Cause: The materialized view could not be tuned for supporting general rewrite.

Action: Run the `dbms_mview.explain_mv` to find out the reason.

QSM-03119: The WHERE/HAVING clause is too complex for general query rewrite

Cause: The WHERE/HAVING was too complex for general rewrite.

Action: Try to simplify the WHERE/HAVING clause in the materialized view defining query.

QSM-03120: Cannot create materialized view log on encrypted columns

Cause: There were encrypted columns in materialized view defining query.

Action: Try to remove the encrypted columns in the materialized view defining query.

QSM-03201: The table *string.string* is classified as a fact table.

Cause: This table has met the criteria of a fact table for the purposes of synchronous refresh.

Action: None. This is an informational message.

QSM-03202: The table *string.string* is classified as a dimension table.

Cause: This table has met the criteria of a dimension table for the purposes of synchronous refresh.

Action: None. This is an informational message.

QSM-03203: The table *string.string* is classified as neither a fact nor a dimension table.

Cause: This table has not met the necessary criteria of a fact table or a dimension table for the purposes of synchronous refresh. Synchronous refresh requires that the defining query of a materialized view conform to either the star or snowflake schema. A table can be either a fact or dimension table.

Action: Check the joins of the query to ensure they conform to the requirements.

QSM-03204: The materialized view passes the join graph eligibility check for synchronous refresh.

Cause: The defining query of the materialized view (MV) conformed to the star or snowflake schema and, therefore, was eligible for synchronous refresh.

Action: None. This is an informational message.

QSM-03205: The materialized view fails the join graph eligibility check for synchronous refresh.

Cause: The defining query of the materialized view (MV) did not conform to the star or snowflake schema and, therefore, was not eligible for synchronous refresh.

Action: Check the joins of the query to ensure they conform to the requirements.

QSM-03206: The fact table is partitioned by *string* and its partition key is *string*.

Cause: The fact table had the indicated partitioning method and key.

Action: None. This is an informational message.

QSM-03207: The materialized view is partitioned by *string* and its partition key is *string*.

Cause: The materialized view (MV) had the indicated partitioning method and key.

Action: None. This is an informational message.

QSM-03208: The partition key of the fact table functionally determines the partition key of the materialized view.

Cause: The analysis by synchronous refresh indicated that the partition key of the fact table functionally determined the partition key of the materialized view (MV), which is a requirement for synchronous refresh eligibility.

Action: None. This is an informational message.

QSM-03209: The materialized view passes the partition key dependency eligibility check for synchronous refresh.

Cause: The analysis by synchronous refresh indicated that the materialized view (MV) passed the partition key dependency eligibility check.

Action: None. This is an informational message.

QSM-03210: The materialized view does not pass the partition key functional dependency check and is not eligible for synchronous refresh.

Cause: The analysis by synchronous refresh indicated that the materialized view (MV) did not pass the partition key dependency eligibility check.

Action: Check the partition keys of both the fact table and materialized view and check the joins of the materialized view to ensure the functional dependency check passes.

QSM-03211: The partition key of the MV can be rolled up from the partition key of the fact table by a join between the fact table and the dimension table *string*.

Cause: The analysis by synchronous refresh indicated there was a rollup relationship between the partition keys of the fact table and the materialized view (MV).

Action: None. This is an informational message.

QSM-03212: The partition key of the MV corresponds to *string* column of the fact table and not to the partition key of the fact table.

Cause: The analysis by synchronous refresh indicated that the the partition key of the materialized view (MV) was related to a column of the fact table and not to the partition key of the fact table.

Action: Check the partition keys of both the fact table and materialized view and and check the joins of the materialized view to ensure the functional dependency check passes.

QSM-03213: The partition key of the MV corresponds to the partition key of the fact table.

Cause: The analysis by synchronous refresh indicated that the partition key of the materialized view (MV) is the same as the partition key of the fact table.

Action: None. This is an informational message.

QSM-03214: The partition key of the MV is derived from table *string* whereas the partition key of the fact table is related by a join to dimension table *string*.

Cause: The analysis by synchronous refresh indicated that the partition key of the materialized view (MV) was related to a column of a dimension table that was not the dimension table to which the partition key of the fact table was joined.

Action: Check the partition keys of both the fact table and materialized view and check the joins of the materialized view to ensure the functional dependency check passes.

QSM-03215: The partition key of the MV is not a column related to the partition key of the fact table.

Cause: The analysis by synchronous refresh indicated that the partition key of the materialized view (MV) was not a column related to the partition key of the fact table.

Action: Check the partition keys of both the fact table and materialized view and check the joins of the materialized view to ensure the functional dependency check passes.

QSM-03216: The partition key of the MV is related to the partition key of the fact table by a join between the fact table and the dimension table *string*.

Cause: The analysis by synchronous refresh indicated that the partition key of the materialized view (MV) was related to the partition key of the fact table by a join.

Action: None. This is an informational message.

QSM-03217: The table *string.string* is classified as both a fact and a dimension table.

Cause: This table has met the necessary criteria of both a fact table and a dimension table for the purposes of synchronous refresh. Synchronous refresh requires that the defining query of a materialized view conform to either the star or snowflake schema. A table can be either a fact or dimension table.

Action: Check the joins of the query to ensure they conform to the requirements.

QSM-03218: More than one table is classified as a fact table.

Cause: More than one of the base tables of the materialized view was classified as a fact table for the purposes of synchronous refresh, which requires exactly one fact table. Synchronous refresh requires that the defining query of a materialized view conform to either the star or snowflake schema. A table can be either a fact or dimension table. However, only one (and exactly one) can be fact table and the rest must be dimension tables.

Action: Check the joins of the query to ensure they conform to the requirements.

QSM-03219: The materialized view is not partitioned and therefore is not eligible for synchronous refresh.

Cause: The materialized view was not partitioned and therefore was not eligible for synchronous refresh.

Action: Partition the materialized view so that it is eligible for synchronous refresh.

QSM-03220: The partition key of the MV belongs to a table other than the fact table.

Cause: The analysis by synchronous refresh indicated that the partition key of the materialized view (MV) was related to a table other than the fact table.

Action: Check the partition keys of both the fact table and materialized view and check the joins of the materialized view to ensure the functional dependency check passes.

QSM-03221: The partition key of the fact table does not appear in the joins of the MV.

Cause: The analysis by synchronous refresh indicated that the partition key of the fact table did not appear in the joins of the materialized view (MV).

Action: Check the partition keys of both the fact table and materialized view and the joins.

QSM-03222: The partition key of the fact table could not be related to the partition key of the MV.

Cause: The analysis by synchronous refresh indicated that the partition key of the fact table cannot be related to the partition key of the materialized view (MV).

Action: Check the partition keys of both the fact table and materialized view and the joins.

QSM-03223: The partition method used in the table or MV is not supported by MV synchronous refresh.

Cause: An attempt was made to do synchronous refresh on a table or materialized view (MV) that used an unsupported partition method.

Action: Check the partition method used in the table or MV definition to make sure it is either range, range-range, range-list, or range-hash partition.

QSM-03224: rows being deleted or updated not in the base table

Cause: The staging log rows to be updated or deleted were not in the base table.

Action: Change the staging log key in the staging log table.

QSM-03225: rows being inserted in the base table

Cause: The staging log rows to be inserted were in the base table.

Action: Change the staging log key in the staging log table.

QSM-03226: Rows being updated had exactly the same old and new values on all columns.

Cause: The staging log rows to be updated had exactly the same old and new values on all columns.

Action: Change some of the column values of the rows being updated or delete the problematic rows from the staging log.

QSM-03227: The USING TRUSTED CONSTRAINTS clause is not specified in the materialized view definition.

Cause: The USING TRUSTED CONSTRAINTS clause was not specified in the materialized view (MV) definition. Therefore, the MV was not eligible for synchronous refresh.

Action: Alter the materialized view to use trusted constraints.

QSM-03228: The refresh option specified in the materialized view definition is not supported.

Cause: The refresh option specified in the materialized view (MV) definition was not supported for synchronous refresh. The only refresh option supported for synchronous refresh is REFRESH FORCE.

Action: Alter the materialized view refresh option to REFRESH FORCE.

QSM-03229: The ON COMMIT refresh option is not supported.

Cause: The ON COMMIT refresh option specified in the materialized view definition was not supported for synchronous refresh. The only refresh option supported for synchronous refresh is ON DEMAND.

Action: Alter the materialized view refresh option to ON DEMAND.

QSM-03230: The materialized view is in an invalid state or not fresh.

Cause: The materialized view was in an invalid state or not fresh. Synchronous refresh requires the materialized view (MV) to be in a valid and fresh state when it is registered or prepared.

Action: Recompile the MV and refresh it to ensure it is valid and fresh.

QSM-03231: ROWID is not allowed in the materialized view registered for synchronous refresh.

Cause: ROWID was used in the defining query of the materialized view.

Action: Remove the ROWID column from the defining query of the materialized view.

QSM-03232: RAW data type is not allowed in the materialized view registered for synchronous refresh.

Cause: RAW data type was used in the defining query of the materialized view.

Action: Remove the RAW data type column from the defining query of the materialized view.

QSM-03233: MIN or MAX is not allowed in the materialized view registered for synchronous refresh.

Cause: MIN or MAX was used in the defining query of the materialized view.

Action: Remove the MIN or MAX expression from the defining query of the materialized view.

QSM-03234: Set operator is not allowed in the materialized view registered for synchronous refresh.

Cause: The set operator was used in the defining query of the materialized view.

Action: Remove the set operator from the defining query of the materialized view.

QSM-03235: OUTER JOIN is not allowed in the materialized view registered for synchronous refresh.

Cause: OUTER JOIN was used in the defining query of the materialized view.

Action: Remove OUTER JOIN from the defining query of the materialized view.

QSM-03236: Subquery is not allowed in the materialized view registered for synchronous refresh.

Cause: A subquery was used in the defining query of the materialized view.

Action: Remove the subquery from the defining query of the materialized view.

QSM-03237: Trigger is not allowed in the base table *string.string* for synchronous refresh.

Cause: A trigger was used in the base table for synchronous refresh.

Action: Remove the trigger from the base table.

QSM-03238: The materialized view was not defined on the base table *string.string* for synchronous refresh.

Cause: There was no materialized view defined on the base table.

Action: Change the base table name.

QSM-03239: Group by CUBE, ROLLUP, or grouping-sets was not allowed in the materialized view registered for synchronous refresh.

Cause: A group by CUBE, ROLLUP, or grouping-sets was used in the defining query of the materialized view.

Action: Remove the group by CUBE, ROLLUP, or grouping-sets from the defining query of the materialized view.

QSM-03240: The object *string.string* used in a materialized view definition was not a table.

Cause: An object was used in the defining query of the materialized view, which was not a table type.

Action: Remove the object from the defining query of the materialized view.

QSM-03241: Currently there is no active operation on the specified synchronous refresh group.

Cause: Either EXECUTE_REFRESH or ABORT_REFRESH returned an error because there was no active operation on the specified synchronous refresh group.

Action: Check the catalog views to determine the status of the synchronous refresh group.

QSM-03242: The synchronous refresh group is in an invalid state for the requested operation.

Cause: Either PREPARE_REFRESH or EXECUTE_REFRESH returned an error because the specified operation was not valid for the specified synchronous refresh group.

Action: Check the catalog views to determine the status of the synchronous refresh group. Refer to the synchronous refresh documentation to find out which refresh operations are valid in the various possible states of the group.

QSM-03243: The synchronous refresh group cannot resume execution.

Cause: EXECUTE_REFRESH returned an error because all possible refresh subgroups had been processed and had a status of either COMPLETE or ABORT.

Action: Check the catalog views to determine the status of the synchronous refresh group and its objects. Refer to the synchronous refresh documentation to find out which refresh operations are valid in the various possible states of the group.

QSM-03244: The partition operations registered on table *string.string* are not valid.

Cause: Either an illegal partition operation was specified in the register partition operation or the partition name was incorrectly specified.

Action: Check that the partition_name belongs to a valid partition and that only one operation is registered for a partition.

QSM-03245: The partition operations registered on partition *string* of table *string.string* conflict with the data supplied in the staging logs.

Cause: The staging log contained changes to rows in the partition that were being registered. These changes occur due to changes specified in the staging log of the fact table or because of updates to dimension tables.

Action: Resolve these conflicts by either unregistering the partition or deleting the rows from the named partition in the staging log of the fact table. If the conflicts are due to dimension updates, provide all changes to the fact table in the staging log rather than attempting to register the partition operations directly.

QSM-03246: The owner of outside partition *string* is *string* whereas it should be *string*.

Cause: When registering the outside table, the user supplied the incorrect owner for the outside table.

Action: Unregister the outside table and register it with the correct owner, which should be the same as the owner of the base table.

QSM-03247: The staging log on table *string.string* has not been prepared.

Cause: PREPARE_REFRESH failed because the staging log for the specified table was not prepared with PREPARE_STAGING_LOG. All staging logs of tables of the group must be prepared before running PREPARE_REFRESH.

Action: Run PREPARE_STAGING_LOG on the specified table. Check that all other tables in the group have been prepared.

QSM-03248: The materialized view *string.string* is already registered.

Cause: The specified materialized view (MV) has already been registered. A MV can be registered only once.

Action: No action is necessary if the MV is in a valid state. If the MV is in an invalid state, unregister the MV and re-register it with REGISTER_MVIEWS.

QSM-03249: The table *string.string* does not have a staging log.

Cause: REGISTER_MVIEWS failed because the staging log for the specified table belonging to the materialized view (MV) being registered did not exist. All tables on a MV are required to have staging logs created on them for the MV to be registered for synchronous refresh.

Action: Create the staging log with the CREATE MATERIALIZED VIEW LOG statement with the FOR SYNCHRONOUS REFRESH clause. If the table already has an ordinary MV log, use the ALTER MATERIALIZED VIEW LOG instead.

QSM-03250: The fact table *string.string* is not referenced by any MV in the group and the changes to dimension tables contain deletes or updates.

Cause: PREPARE_REFRESH found that there was no materialized view (MV) registered for synchronous refresh that contained the specified fact table as one of its base tables and the changes to the dimension tables contained updates or deletes. This error will not occur if the changes to the dimension tables contain only inserts.

Action: There are many ways to handle this situation. Refer to the documentation for details. One way is to unregister all MV's, drop staging logs on the tables or alter them to ordinary logs and apply the changes to the tables. Then the MV's can be refreshed using conventional methods instead of synchronous refresh. If desired, the staging logs on the tables can be re-created and the MV's can be registered for synchronous refresh. Another way is to register a MV which references the specified fact table for synchronous refresh. If no such MV exists, the user can first create one before registering it.

QSM-03251: The fact table *string.string* is not referenced by any MV in the group and its staging log is not empty.

Cause: PREPARE_REFRESH found that there is no materialized view (MV) registered for synchronous refresh that contained the specified fact table as one of its base tables and the staging log for that table specified changes to it. PREPARE_REFRESH supports fact tables without MV's defined on them if they meet two conditions: a) the staging log for the fact table is empty; b) the staging logs for the dimension tables in the group do not specify deletes or updates.

Action: There are many ways to handle this situation. Refer to the documentation for details. Briefly, the two main ways are: 1. Register a MV which references the fact table for synchronous refresh. If no such MV exists, you can create one. 2. Unregister all the MVs in the group; drop staging log on the table or alter it to an ordinary MV log. Re-register the MVs which have been unregistered.

QSM-03252: The synchronous refresh group of table *string.string* is locked by another operation.

Cause: Either REGISTER_PARTITION_OPERATION or UNREGISTER_PARTITION_OPERATION detected that the synchronous refresh group to which the table belonged had been locked by another synchronous refresh operation.

Action: Wait for the other operation to complete before attempting this operation again.

QSM-03253: The synchronous refresh group of table *string.string* has been unlocked by another operation.

Cause: Either REGISTER_PARTITION_OPERATION or UNREGISTER_PARTITION_OPERATION detected that the synchronous refresh group to which the table belonged had been unlocked by another synchronous refresh operation. This is an internal error.

Action: Contact Oracle Support Services for assistance.

QSM-03254: The lock operation on synchronous refresh group *string* failed unexpectedly.

Cause: The lock operation on the specified synchronous refresh group failed unexpectedly. This is an internal error.

Action: Contact Oracle Support Services for assistance.

QSM-03255: The unlock operation on synchronous refresh group *string* failed unexpectedly.

Cause: The unlock operation on the specified synchronous refresh group failed unexpectedly. This is an internal error.

Action: Contact Oracle Support Services for assistance.

QSM-03256: The synchronous refresh group *string* is locked by another operation.

Cause: Either REGISTER_MVIEWS or PREPARE_REFRESH detected that the synchronous refresh group to be processed by the requested operation had been locked by another synchronous refresh operation.

Action: Wait for the other operation to complete before attempting this operation again.

QSM-03257: The synchronous refresh group *string* has been unlocked by another operation.

Cause: Either EXECUTE_REFRESH or ABORT_REFRESH detected that the synchronous refresh group to be processed by the requested operation had been unlocked by another

synchronous refresh operation. This is an unexpected condition and may indicate an internal error.

Action: Contact Oracle Support Services for assistance.

QSM-03258: The value supplied for the parameter *string* is too long.

Cause: The value supplied for the specified parameter exceeded the maximum length allowed for that parameter.

Action: Supply a valid value for the specified parameter.

QSM-03259: The value supplied for the parameter *string* is malformed.

Cause: The value supplied for the specified parameter was invalid.

Action: Supply a valid value for the specified parameter.

QSM-03260: The materialized views being registered are not defined on tables.

Cause: The materialized views being registered were not defined on tables, but were defined on top of other types of objects such as views or materialized views. Synchronous refresh works only with materialized views defined on tables.

Action: Do not register such materialized views for synchronous refresh.

QSM-03261: The partition operation name *string* is not valid.

Cause: Either REGISTER_PARTITION_OPERATION or UNREGISTER_PARTITION_OPERATION detected that the partition operation name did not belong to the DROP, EXCHANGE or TRUNCATE value.

Action: Check the parameter partition operation carefully, and change it to DROP, EXCHANGE or TRUNCATE.

QSM-03262: The object *string.string* is not registered for Synchronous Refresh.

Cause: REGISTER_PARTITION_OPERATION or UNREGISTER_PARTITION_OPERATION detected that either: - This object was not registered for synchronous refresh. - The synchronous refresh group was not in the current run. - The object was not a table type.

Action: Make sure this object is registered for synchronous refresh, the synchronous refresh group is in the current run, and the object is a table type.

QSM-03263: There is already a partition operation registered on *string.string* partition *string*.

Cause: REGISTER_PARTITION_OPERATION detected that there was already a partition maintenance operation (for example, DROP, EXCHANGE or TRUNCATE) registered on the specified partition of the base table.

Action: Use the UNREGISTER_PARTITION_OPERATION to unregister this partition first, and then run REGISTER_PARTITION_OPERATION.

QSM-03264: There is no partition named *string* in base table *string.string*.

Cause: REGISTER_PARTITION_OPERATION detected that there was no partition with the specified name in the base table.

Action: Check the parameter PARTITION_NAME, and make sure it is a valid partition in the base table.

QSM-03265: The outside table *string.string* does not exist.

Cause: REGISTER_PARTITION_OPERATION detected that the outside table schema or table name did not exist or was not valid.

Action: Check the parameters OUTSIDE_PARTN_TABLE_SCHEMA or OUTSIDE_PARTN_TABLE_NAME, and make sure the outside table exists.

QSM-03266: Tablespace of base table *string* does not match the tablespace of outside partition table *string*.

Cause: REGISTER_PARTITION_OPERATION detected that the tablespace of the base table for any partition or subpartition did not match the tablespace of the outside partition table.

Action: Alter the tablespace of outside partition table to match the tablespace of the base table, or check if the outside partition table is eligible for REGISTER_PARTITION_OPERATION or not.

QSM-03267: The outside partition table *string* contains at least one record that is not within the partition range of the base table *string*.

Cause: REGISTER_PARTITION_OPERATION detected that the outside partition table contained at least one record that was not within the partition range of the base table.

Action: Check the records to see if the outside partition table is eligible for the REGISTER_PARTITION_OPERATION.

QSM-03268: Synchronous refresh can only support top partition by RANGE.

Cause: REGISTER_PARTITION_OPERATION detected the base table was not partitioned by RANGE on top.

Action: The base table is not eligible for REGISTER_PARTITION_OPERATION.

QSM-03269: The number of partitions of the base table *string* and the outside table *string* do not match.

Cause: The base table was composite-partitioned. The partition number of the outside partition did not match the number of subpartitions inside the specified partition of the base table.

Action: Check the partitions to see if the outside partition table is eligible for the REGISTER_PARTITION_OPERATION.

QSM-03270: There is no partition operation registered on *string.string* partition *string*.

Cause: UNREGISTER_PARTITION_OPERATION detected that there was no partition maintenance operation (for example, DROP, EXCHANGE and TRUNCATE) registered on the specified partition of the base table.

Action: Use the REGISTER_PARTITION_OPERATION to register this partition first, and then run UNREGISTER_PARTITION_OPERATION.

QSM-03271: The partition name of outside partition table *string* does not match the subpartition name of base table *string*.

Cause: REGISTER_PARTITION_OPERATION detected that the partition name of the outside partition table did not match the subpartition name of base table.

Action: Alter the partition name of outside partition table to match the partition name of the base table, or check if the outside partition table is eligible for REGISTER_PARTITION_OPERATION or not.

QSM-03272: There are no changes loaded for any tables in this group.

Cause: There were no changes recorded for any tables in this group. The changes to a table can be provided in its staging log or by specifying partition change operations with REGISTER_PARTITION_OPERATION.

Action: Provide the appropriate changes to the tables in the group.

QSM-03276: The specified schema *string* of the staging log is different from the owning schema *string* of the base table.

Cause: The user-specified schema of the staging log was different from the owning schema of the base table. They must be in the same schema if the schema of the staging log is specified.

Action: Specify the owning schema of the base table as the schema of the staging log or do not specify the schema for the staging log.

QSM-03277: An internal error related to tracing messages to SYNCREF_MESG has occurred.

Cause: This is an internal error as noted in the message.

Action: Contact Oracle Support Services for assistance.

QSM-03278: The table SYNCREF_MESG is not present in the SYS schema.

Cause: This is an internal error related to tracing messages to the table SYNCREF_MESG. It occurs if the event 31904 is set to level 4 or 8 but the message table SYNCREF_MESG is not created in the SYS schema. Oracle does not support levels 4 and 8 in event 31904.

Action: Execute the command again after unsetting levels 4 and 8 in event 31904.

QSM-03280: One or more materialized views failed to refresh successfully.

Cause: The base tables in the group refreshed successfully but one or more materialized views in the group did not. The status of the group for synchronous refresh operation was set to PARTIAL in this case.

Action: To find the materialized views which failed, query the USER_SR_OBJ_STATUS catalog view. Take one of the following courses of action: * Issue the EXECUTE_REFRESH command again to retry refreshing the views. In this case EXECUTE_REFRESH will internally use the PCT refresh mode to refresh the materialized views. * Issue the ABORT_REFRESH command to abort the refresh of all objects in the group, including the base tables, and restore them to the original state.

QSM-03281: The specified GROUP_ID is not valid.

Cause: The GROUP_ID specified as input to the refresh operation was not valid and does not identify a valid synchronous refresh group.

Action: Provide the correct GROUP_ID. Use the DBMS_SYNC_REFRESH.GET_GROUP_ID to get the correct GROUP_ID.

QSM-03282: A materialized view is registered on a table related to *string.string*.

Cause: The staging log creation on the specified table failed because a table related to it by referential-integrity constraint has a materialized view which was registered for synchronous refresh with the REGISTER_MVIEWS command. Oracle requires that you first register the tables before registering any materialized view defined on them.

Action: Unregister the materialized views defined on the related tables with the UNREGISTER_MVIEWS command. Then, register the tables with synchronous refresh by creating staging logs on them. Finally, register any materialized views you wish to register for synchronous refresh with REGISTER_MVIEWS.

QSM-03283: The materialized view *string.string* has not been registered.

Cause: The specified materialized view was not registered for synchronous refresh.

Action: Register the materialized view with DBMS_SYNC_REFRESH.REGISTER_MVIEWS. Use the USER_SR_OBJ catalog view to verify the materialized view has been registered.

QSM-03284: There is no foreign key constraint defined on *string* referencing *string.string*.

Cause: The table of REGISTER_PARTITION_OPERATION did not define a foreign key constraint on its referred base table.

Action: Define a foreign key constraint on its referred base table and retry the operation.

QSM-03285: There is no primary key constraint defined on *string.string*.

Cause: The table of REGISTER_PARTITION_OPERATION did not define a primary key constraint on it.

Action: Define a primary key constraint on the table and retry the operation.

QSM-03286: Complex materialized view was not allowed for synchronous refresh.

Cause: There was a complex materialized view in the synchronous refresh group.

Action: Remove the complex materialized view in the synchronous refresh group.

QSM-03287: synchronous refresh internal error: [*string*]

Cause: This was an internal error in synchronous refresh.

Action: Contact Oracle Support Services with the complete message.

QSM-03288: Flashback is not allowed in the base table *string.string* for synchronous refresh.

Cause: A staging log was created on a flashback-enabled base table.

Action: Disable flashback on the base table.

RDE-00000 to RDE-08001

RDE-00000: no error

Cause: Operation was successful.

Action: No action needed.

RDE-00001: unspecified error

Cause: An unknown error occurred. This is an internal error.

Action: Contact Oracle Support Services and provide details about how and when the error occurred.

RDE-00002: provider busy

Cause: The provider is processing a request.

Action: This is not an error.

RDE-00003: no value found for service tag *string*.

Cause: A value was not found for the given service tag.

Action: This is normally not an error.

RDE-00004: operation timeout

Cause: A FIND or REGISTER operation timed out.

Action: For a FIND operation, this is only an error if the find was expected to successfully locate a service.

RDE-00005: invalid universe: "*string*"

Cause: An unknown universe was specified for the address.

Action: Specify a valid universe.

RDE-00006: invalid protocol: "*string*"

Cause: An invalid protocol was specified in an address.

Action: Specify a valid protocol.

RDE-00009: data too large for buffer. Buffer length: *number*. Required: *number*.ln

Cause: This error is internal and normally is not seen by users.

Action: Contact Oracle Support Services.

RDE-00010: not found

Cause: A value was not found in a list.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-00011: invalid type: *number*

Cause: The type given for a piece of data was invalid.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-00012: no list name specified.

Cause: A name was not given for a list.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-00013: name busy.

Cause: This is an internal error.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-00014: operation was interrupted.

Cause: An operation was interrupted.

Action: None. This normally is not an error.

RDE-00015: load of provider library failed.

Cause: The load of a library which implements the interface for a provider failed.

Action: Enable tracing to determine the exact error that occurred.

RDE-00016: no provider libraries found.

Cause: It was not possible to locate any provider libraries.

Action: Make sure that the provider libraries have been installed.

RDE-00017: provider error.

Cause: A provider generated an error.

Action: If errors follow, examine them to determine the exact error. Otherwise, enable tracing to determine the exact error.

RDE-00018: regular expression compilation failed. Pattern "*string*" Error: *number*.ln

Cause: The creation of a pattern for use in a comparison failed.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-00019: pattern match failed. String: "*string*" Pattern: "*string*" Error: *number*.ln

Cause: A comparison against a regular expression failed.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-00020: no host name or IP address

Cause: An address must contain either the name of the server or its IP address.

Action: Specify a host name or an IP address in the address.

RDE-00021: no providers found for universe "string".

Cause: A provider was not found for the specified universe.

Action: Either specify a different universe or obtain a provider library for that universe. Examine the errors that follow (if any) for more information.

RDE-00022: property not found.

Cause: A provider property was not found.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-00023: provider not found. Universe "string".

Cause: A provider was not found for the specified universe.

Action: Either specify a different universe or obtain a provider library for that universe.

RDE-00024: address invalid

Cause: The address is not in the correct format.

Action: Specify an address in the correct format. The syntax is described in rd.h.

RDE-00025: service type not specified.

Cause: The service type is not specified in the address.

Action: Specify an address with the service type.

RDE-00026: expected delimiter not found. Expected: "string" Found: "string"

Cause: The delimiter expected in the address was not found.

Action: Correct the address so that the delimiter is present.

RDE-00027: port number not found.

Cause: When a colon (":") follows the host name, it must be followed by a port number.

Action: Specify a port number.

RDE-00028: initialization failed.

Cause: Initialization of RD failed.

Action: Examine the errors that follow this one to determine the problem that is causing the error.

RDE-00029: no server found.

Cause: No server for the specified provider could be found to perform the desired operation.

Action: Start a server for the desired provider or use a different provider.

RDE-00030: memory allocation failure.

Cause: An operation failed because it was not possible to allocate enough process memory.

Action: If memory is low on the system, terminate other processes, or threads, or both, and try the operation again. Otherwise, this is an internal error and Oracle Support Services should be contacted.

RDE-00031: invalid domain: number.

Cause: The application specified an invalid number for the domain.

Action: Specify a correct domain. See rd.h for the allowed values.

RDE-00032: length of service type "*string*" (*number*) is greater than than the maximum allowed: *number*

Cause: The user specified a service type which is longer than that permitted by the provider.

Action: Use a shorter service type.

RDE-00033: no universe specified.

Cause: The user did not specify a universe in the address.

Action: Specify a universe.

RDE-00034: address not registered: "*string*"

Cause: The application attempted to use an address which does not exist.

Action: Specify a registered address.

RDE-00037: invalid service instance tag: *number*

Cause: The value for a service instance tag was incorrect.

Action: Specify a valid tag. They are listed in rd.h.

RDE-00038: invalid protocol type: "*string*" Valid protocols: *string*

Cause: The user specified a protocol which is not supported by the provider.

Action: Specify a valid protocol. The protocol must be at least one character which is not a period (".").

RDE-00039: invalid host name: "*string*"

Cause: The name of the host specified was not in the correct format.

Action: Use the correct host name format. The host name must be one of the following: 1. The name of the machine; 2. A valid IPv4 address (N.N.N.N); 3. A valid IPv6 address (N[:N]*).

RDE-00040: invalid search domain: "*string*"

Cause: The name of the domain searched by the service was not in the correct format.

Action: Use the correct domain name format. A domain is a series of one or more alphanumeric characters.

RDE-00041: no protocol or domain specified.

Cause: The service name was followed by a period separator, but no protocol or domain was found after it.

Action: Specify a valid protocol, or domain, or both.

RDE-00042: invalid port number: "*string*"

Cause: The port specified in the service address was not valid. A port number may only be a positive decimal number.

Action: Specify a valid port number.

RDE-00043: no search domain specified.

Cause: No search domain followed the period separator.

Action: Specify a valid search domain.

RDE-00044: no protocol specified.

Cause: No protocol was specified for the service.

Action: Specify a valid protocol.

RDE-00045: port number required to register with a generic address.

Cause: Because of the requirements of some providers, the port number must be specified when registering using a generic address.

Action: Specify a port number.

RDE-00046: invalid attribute

Cause: An attribute was specified using an incorrect format.

Action: An attribute should be specified using the following format: "name=value[, name1=value1 ...]"

RDE-00047: no name specified for attribute.

Cause: A value was given for an attribute but no name was specified.

Action: Specify a name for the attribute.

RDE-00048: no attribute specified.

Cause: An attribute was not found in the address where it was expected.

Action: Specify a valid attribute. An attribute is composed of a name followed by an equals sign ("=") and then by an optional value. The name and value may both contain spaces.

RDE-00049: expected separator not found. Expected: "*string*" Found: "*string*"

Cause: The separator expected to be present between the mandatory and optional sections of the address was not found.

Action: Specify the separator.

RDE-00050: provider initialization for universe "*string*" failed.

Cause: The operation failed because providers could not be initialized for the specified universe.

Action: The message(s) that follow describe the errors encountered by the providers.

RDE-00051: provider "*string*" error.

Cause: The specified provider failed to perform an operation.

Action: The message(s) that follow describe the errors encountered by the provider.

RDE-00052: invalid numeric value specified: "*string*".

Cause: The value specified as a number was not valid.

Action: Specify a valid number.

RDE-00053: invalid or null service instance.

Cause: The service instance used for an operation is either invalid or null.

Action: Specify a valid service instance.

RDE-00054: invalid operation: *number*.ln

Cause: The operation specified was not valid.

Action: Specify a valid operation.

RDE-00055: no providers available.

Cause: No providers were available for an operation. This may be caused by the failure of a process or service needed by the provider (e.g. the mDNS service).

Action: Examine the trace and log files for details. Ensure that the process or service required by the process is running.

RDE-00056: registration of service instance "*string*" failed.

Cause: The registration of the specified service instance failed.

Action: Examine the errors that follow for more information about the error.

RDE-00057: unregistration of service instance "*string*" failed.

Cause: The deletion of the registration of the specified service instance failed.

Action: Examine the errors that follow for more information about the error.

RDE-00058: confirmation of service instance "*string*" failed.

Cause: The confirmation of the specified service instance failed.

Action: Examine the errors that follow for more information about the error.

RDE-00059: location of service types "*string*" failed.

Cause: It was not possible to retrieve types of services supported by Resource Discovery.

Action: Examine the errors that follow for more information about the error.

RDE-00060: service instance "*string*" was not found.

Cause: The location of the specified service.

Action: Examine the errors that follow for more information about the error.

RDE-00061: retrieval of details about service instance "*string*" failed.

Cause: It was not possible to get details about the specified service instance.

Action: Examine the errors that follow for more information about the error.

RDE-00062: termination failed.

Cause: The call to terminate the use of Resource Discovery failed.

Action: Examine the errors that follow for more information about the error.

RDE-00063: operation failed.

Cause: A FIND or REGISTER operation failed.

Action: Examine the errors that follow for more information about the error.

RDE-00064: retrieval of a provider for universe "*string*" failed.

Cause: It was not possible to retrieve a provider descriptor for the specified universe.

Action: Examine the errors that follow for more information about the error.

RDE-00065: creation of service instance failed.

Cause: An error occurred while trying to assemble a service instance using components.

Action: Examine the errors that follow for more information about the error.

RDE-00066: parsing of service instance "*string*" failed.

Cause: An error occurred while trying to parse the specified address.

Action: Examine the errors that follow for more information about the error.

RDE-00067: location of domain failed.

Cause: An error occurred while trying to locate domains of the specified type.

Action: Examine the errors that follow for more information about the error.

RDE-00068: length of universe component "*string*" (*number*) is longer than the maximum: *number*.

Cause: The string specified for the universe-specific portion of the service instance is longer than the maximum allowed by the provider.

Action: Specify a universe component which is shorter than the maximum. If this error occurs when no universe-specific portion was specified, the provider may have used the service type for the universe-specific component. In that case, make sure that the length of the service type does not exceed the maximum.

RDE-00069: property "*string*" is read-only.

Cause: An error occurred while trying to set a property value. Property had read-only access and could not be altered.

Action: Specify a property name with read/write access.

RDE-01999: internal error

Cause: RD failed due to some unforeseen reason.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-02000: invalid service type: "*string*"

Cause: The user specified a service type which does not conform to the standard specified by RFC's 1034 and RFC 1123. The service type must be one or more characters and must start and end with a letter or digit. The interior characters may be letters, digits, or hyphens.

Action: Specify a service type which conforms to the RFC.

RDE-02001: failed to connect to the mDNS responder.

Cause: The provider was unable to make a connection with the multicast / Domain Name Server (mDNS) responder.

Action: Check to ensure that the responder is running. If it is, this is an internal error and Oracle Support Services should be contacted.

RDE-04000: client waiting

Cause: The client uses this error to signal to the server that it is waiting for query results.

Action: This error is used for signaling between the client and the DNS server. It should not be visible to the user. If it occurs, contact Oracle Support Services

RDE-04001: no error

Cause: Operation was successful.

Action: No action needed.

RDE-04002: unknown error has occurred

Cause: An unknown error has occurred.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04003: no such name

Cause: A record could not be found with the given name.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04004: memory allocation failed

Cause: An operation failed because it was not possible to allocate enough process memory.

Action: If memory is low on the system, terminate other processes, or threads, or both, and try the operation again. Otherwise, this is an internal error and Oracle Support Services should be contacted.

RDE-04005: invalid parameter

Cause: A record contained an illegal or nonexisting value.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04006: invalid reference

Cause: An unknown DNS record was found.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04007: invalid state

Cause: This is an internal error.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04008: invalid flags

Cause: This is an internal error.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04009: unsupported operation

Cause: The provider interface attempted to perform an operation which is not supported by the provider.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04010: not initialized

Cause: This is an internal error.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04011: no cache allocated

Cause: A Domain Name Server (DNS) query failed because no cache was allocated.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04012: service already registered

Cause: The user attempted to register a service that was already registered.

Action: A service should only be registered once.

RDE-04013: service name conflict

Cause: The user attempted to register a service whose name already exists.

Action: A service should only be registered once.

RDE-04014: invalid record entry

Cause: The provider interface attempted to perform an operation whose record contained invalid or nonexistent data.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04015: client software incompatible with server

Cause: The version of the client software used by the provider interface is not compatible with the version of the server software.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04016: invalid interface

Cause: The provider interface attempted to use an unknown interface.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04017: cache size must be increased

Cause: The size of the cache maintained by the provider interface was insufficient and should be increased.

Action: This error is used as a status indicator. It should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04018: configuration changed

Cause: The server configuration changed during an operation.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04019: client should free resources

Cause: This error is used as an internal status indicator and should not be visible outside of the provider.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06000: no more data

Cause: This error is used internally to signal that there is no more data to be passed by the SLP provider.

Action: This error is normal - no action is required.

RDE-06001: no error

Cause: Operation was successful.

Action: This error is normal - no action is required.

RDE-06002: language not supported

Cause: No service could be found that supports the language required.

Action: A service will have to be added or modified which supports the requested language.

RDE-06003: parse error

Cause: The SLP message rejected by a remote SLP agent.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06004: invalid registration

Cause: The SLP provider attempted to register a URL which is malformed.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06005: scope not supported

Cause: This is an internal error.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06006: authenticator not provided

Cause: The SLP provider failed to authenticate itself.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06007: authentication failed

Cause: The SLP provider failed to authenticate itself.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06008: invalid update

Cause: An update for a nonexisting registration was issued, or the update includes a service type or scope different than that in the initial registration.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06009: refresh rejected

Cause: Attempts were made to refresh a registration more frequently than the minimum refresh interval.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06010: feature unimplemented

Cause: An unimplemented feature was used.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06011: buffer overflow

Cause: An outgoing request overflowed the maximum network MTU size.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06012: network timed out

Cause: An reply to an SLP request did not arrive in the configured timeout interval.

Action: Check the network connection and retry the request.

RDE-06013: network initialization failure

Cause: The network failed to initialize properly.

Action: Check the network connection and retry the request.

RDE-06014: memory allocation failed

Cause: The SLP provider was unable to allocate enough process memory.

Action: If memory is low on the system, terminate other processes, or threads, or both, and try the operation again. Otherwise, this is an internal error and Oracle Support Services should be contacted.

RDE-06015: invalid parameter

Cause: The provider attempted to pass an invalid parameter.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06016: network error

Cause: The network failed to initialize properly.

Action: Check the network connection and retry the request.

RDE-06017: internal system error

Cause: The SLP subsystem failed for unknown reasons.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06018: handle in use

Cause: The SLP provider attempted to recursively use a handle.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06019: generic error

Cause: The provider failed for unknown reasons.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06020: unicast query must be sent.

Cause: The provider must send a unicast query.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-08000: invalid service type: "string".

Cause: This is an internal error.

Action: Contact Oracle Support Services.

RDE-08001: failed to connect to the GNS server.

Cause: A connection with the Grid Naming Service (GNS) server failed.

Action: Check to ensure that the Oracle Grid Naming Service Daemon (GNSD) resource is online. If it is, this is an internal error and Oracle Support Services should be contacted.

RDJ-00001 to RDJ-00137

RDJ-00001: OK ADDRESS

Cause: The operation succeeded.

Action: No further action is necessary.

RDJ-00002: invalid operation:

Cause: The operation specified was incorrect.

Action: Specify a valid operation.

RDJ-00003: Error parsing "*string*"\n*string*

Cause: An error occurred parsing an address.

Action: Correct the address using the other information in the error.

RDJ-00004: invalid trace level

Cause: The trace level specified was incorrect.

Action: Specify a valid trace level.

RDJ-00005: Operation: *string* failed. Error: *string*

Cause: An RD operation failed with the specified error.

Action: Re-try the operation with tracing enabled to determine what happened.

RDJ-00006: invalid port number: *number*

Cause: The port number specified for a service is invalid.

Action: Specify a port number that is greater than zero.

RDJ-00008: invalid number specified:

Cause: The number specified contained non-numeric characters.

Action: Specify a number with only numeric characters.

RDJ-00009: invalid address format:

Cause: The format specified for an address was incorrect.

Action: Specify a valid format.

RDJ-00011: results processor may not be null

Cause: A null object was specified for the class that is to process the results of an operation.

Action: Specify a non-null object.

RDJ-00012: invalid instance uniqueness

Cause: The uniqueness value specified for an instance was not valid.

Action: Specify a valid uniqueness value.

RDJ-00013: Invalid service instance attribute

Cause: An attribute specified for a service instance was not valid.

Action: Specify an attribute in the correct format.

RDJ-00015: Invalid service instance tag: "*string*". Available tags:

Cause: The tag value specified for a service instance was incorrect.

Action: Specify a valid tag value.

RDJ-00017: invalid domain type: "*string*". Available domain types:

Cause: The type specified for a domain was not valid.

Action: Specify a valid domain type.

RDJ-00048: Unknown command: "*string*"

Cause: An invalid command was specified.

Action: Specify a valid command.

RDJ-00049: Unknown option: "*string*"

Cause: An invalid option was specified.

Action: Specify a valid option.

RDJ-00052: invalid flag value:

Cause: The value specified for a flag was not valid.

Action: Specify a valid flag value.

RDJ-00053: deletion of trace output file failed:

Cause: The tool attempted to remove a trace file so that it could create a new one. However, the attempt failed.

Action: Examine the accompanying exception for details about what happened.

RDJ-00054: deletion of error log file failed:

Cause: The tool attempted to remove an error log so that it could create a new one. However, the attempt failed.

Action: Examine the accompanying exception for details about what happened.

RDJ-00055: trace file already exists:

Cause: The trace file specified already exists.

Action: Remove the file or specify a file which does not exist.

RDJ-00056: error log already exists:

Cause: The error log specified already exists.

Action: Remove the file or specify a file which does not exist.

RDJ-00057: trace file is a directory:

Cause: The trace file specified is actually a directory.

Action: Specify a file name.

RDJ-00058: error log is a directory:

Cause: The error log specified is actually a directory.

Action: Specify a file name.

RDJ-00059: The trace file "*string*" cannot be created

Cause: The tool failed to create the trace file.

Action: Examine the accompanying exception for details about the error.

RDJ-00060: The error log "*string*" cannot be created. Check permissions on the parent directory:

Cause: The tool failed to create the error log.

Action: Examine the accompanying exception for details about the error.

RDJ-00061: The file stream cannot be created:

Cause: The tool failed to create the Java stream for a file.

Action: Examine the accompanying exception for details about the error.

RDJ-00062: The print stream cannot be created:

Cause: An error occurred when the tool tried to create a Java print stream for a file.

Action: Examine the accompanying exception for details about the error.

RDJ-00063: invalid time-to-live:

Cause: A non-numeric value was specified for the time to live.

Action: Specify a numeric value.

RDJ-00065: Option type must be greater than zero:

Cause: The type specified for an option was less than or equal to zero.

Action: Specify a type which is greater than zero.

RDJ-00134: unknown type:

Cause: The type specified is invalid.

Action: Specify a known type.

RDJ-00135: invalid stream type:

Cause: The stream type specified is invalid.

Action: Specify a known type.

RDJ-00136: invalid argument count:

Cause: The number of arguments specified is invalid.

Action: Specify a valid number of arguments.

RDJ-00137: SRVMContext init has failed.

Cause: An attempt to set up the process environment failed because an error occurred when Resource Discovery tool was initializing CLuSterware Backbone (CLSB) to enable trace file creation.

Action: Determine whether the environment variables ORACLE_HOME and ORACLE_BASE are set. Refer to the Oracle Grid Infrastructure Installation Guide to set them appropriately and retry the operation.

RMAN-00201 to RMAN-20528

RMAN-00201: Do you really want to execute the above repair (enter YES or NO)?

Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00202: Do you want to open the database (enter YES or NO)?

Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00203: Do you want to open resetlogs the database (enter YES or NO)?

Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00204: Do you really want to delete the above objects (enter YES or NO)?

Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00205: Do you really want to drop all backups and the database (enter YES or NO)?

Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00206: Do you really want to drop the database (enter YES or NO)?

Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00207: Do you really want to unregister the database (enter YES or NO)?

Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00208: Want to unregister the database with target db_unique_name (enter YES or NO)?

Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00209: Do you really want to change the above failures (enter YES or NO)?

Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00210: Do you really want to catalog the above files (enter YES or NO)?

Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00211: Error occurred getting response - assuming NO response

Cause: An error occurred reading user response.

Action: No action is required, this is an informational message only.

RMAN-00212: "string" is an invalid response - please re-enter.

Cause: An incorrect response was entered.

Action: Enter a correct response.

RMAN-00550: parser package failed to load

Cause: lpmlloadpkg() return an error indication.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-00551: initialization of parser package failed

Cause: The parser package initialization routine returned an error.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-00552: syntax error in command line arguments

Cause: The arguments supplied to RMAN could not be parsed, or no arguments were supplied at all.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-00553: internal recovery manager package failed to load

Cause: lpmlloadpkg() return an error indication.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-00554: initialization of internal recovery manager package failed

Cause: The internal package initialization routine returned an error.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-00555: target database connect string must be specified

Cause: The TARGET parameter was not specified.

Action: Supply the necessary parameter.

RMAN-00556: could not open CMDFILE "string"

Cause: An error occurred when trying to open the file.

Action: Check that the file name was specified correctly and that the file exists and that the user running RMAN has read permission for the file.

RMAN-00557: could not open MSGLOG "string"

Cause: An error occurred when trying to open the file.

Action: Check that the file name was specified correctly and that the file exists and that the user running RMAN has write permission for the file.

RMAN-00558: error encountered while parsing input commands

Cause: The parser detected a syntax error.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-00562: username too long

Cause: The specified user name exceeds the maximum allowable username length.

Action: Correct the username.

RMAN-00563: password too long

Cause: The specified password exceeds the maximum allowable password length.

Action: Correct the password.

RMAN-00564: host data too long

Cause: The SQL*NET host connect string exceeds the maximum allowable length.

Action: Correct the host string.

RMAN-00565: unable to read input file

Cause: An error occurred while trying to read from STDIN or from the CMDFILE.

Action: Ensure that the cmdfile is readable. The cmdfile must be a text file with 1 line per record.

RMAN-00566: could not open TRACE "*string*"

Cause: An error occurred when trying to open the file.

Action: Check that the file name was specified correctly and that the user running RMAN has write permission for the file.

RMAN-00567: Recovery Manager could not print some error messages

Cause: An error occurred while trying to print the error message stack.

Action: If the associated error message indicates a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-00568: user interrupt received

Cause: The user typed ^C or ATTN.

Action: No action is required.

**RMAN-00569: ===== ERROR MESSAGE STACK FOLLOWS
=====**

Cause: This message precedes an error message stack.

Action: The errors are printed in last-in first-out order. To interpret them correctly, read from the bottom to the top.

RMAN-00570: **end-of-file**

Cause: The end of an inline cmdfile was reached. This is just an informational message.

Action: No action is required.

RMAN-00571:

=====

Cause: Displayed to highlight the error message stack.

Action: The errors are printed in last-in first-out order. To interpret them correctly, read from the bottom to the top.

RMAN-00572: waiting for DBMS_PIPE input

Cause: This message is used only when the PIPE option was specified.

Action: enqueue some RMAN input into the pipe

RMAN-00573: DBMS_PIPE.NEXT_ITEM_TIME returned unknown type code: *number*

Cause: This is an internal error.

Action: contact Oracle Support Services.

RMAN-00574: rman aborting due to errors reading/writing DBMS_PIPE

Cause: RMAN was run with input/output being sent to DBMS_PIPE. An error was encountered while reading from or writing to the pipe. This error should be preceded by information describing the error.

Action: RMAN terminates. Refer to the cause/action for the preceding errors.

RMAN-00575: timeout while trying to write to DBMS_PIPE

Cause: RMAN was running in DBMS_PIPE mode. A timeout occurred while calling DBMS_PIPE.SEND_MESSAGE. This occurs when the pipe is full and no process has dequeued any of the messages. This is usually caused by death of the process that was talking to rman.

Action: RMAN will abort.

RMAN-00576: PIPE cannot be used with CMDFILE

Cause: The PIPE and CMDFILE options cannot be used together. When using the PIPE option, RMAN must obtain its input from the input pipe.

Action: Remove either the PIPE or CMDFILE option.

RMAN-00577: PIPE requires that TARGET be specified on the command line

Cause: The PIPE option obtains its input from, and writes its output to, an Oracle database pipe in the target database. Therefore, the target database connection must be specified on the command line, so that RMAN can connect to the target database to receive its input from the pipe.

Action: Specify the TARGET option on the RMAN command line.

RMAN-00578: pipe *string* is not private and owned by SYS

Cause: The pipe that RMAN needs to use for its input or output is either a public pipe or a private pipe that is not owned by SYS. This is a potential security problem, because it allows a non-SYS user to issue commands to RMAN or to retrieve the RMAN output.

Action: If you are attempting to put data on the RMAN input pipe prior to starting RMAN, so RMAN will process the data on the pipe as soon as it starts, you must be connected as SYS and you must first use the DBMS_PIPE.CREATE_PIPE function to explicitly create the pipe as a private pipe.

RMAN-00579: SCRIPT cannot be used with CMDFILE

Cause: The SCRIPT and CMDFILE options cannot be used together. When using the SCRIPT option, RMAN executes only the specified script.

Action: Remove either the SCRIPT or CMDFILE option.

RMAN-00600: internal error, arguments [string] [string] [string] [string] [string]

Cause: An internal error in recovery manager occurred.

Action: Contact Oracle Support Services.

RMAN-00601: fatal error in recovery manager

Cause: A fatal error has occurred.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-00700: SCRIPT requires that TARGET be specified on the command line

Cause: A SCRIPT option was included on the RMAN command line without a specified TARGET database.

Action: Specify the TARGET option on the RMAN command line.

RMAN-00701: SCRIPT requires that CATALOG be specified on the command line

Cause: A SCRIPT option was included on the RMAN command line without a specified CATALOG recovery catalog.

Action: Specify the CATALOG option on the RMAN command line.

RMAN-00702: The command has no syntax errors

Cause: This is an informational message only.

Action: No action is required.

RMAN-00703: The cmdfile has no syntax errors

Cause: This is an informational message only.

Action: No action is required.

RMAN-01006: error signaled during parse

Cause: An error was signaled during parsing.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-01007: at line *number* column *number* file: *string*

Cause: This is an informational message indicating the line and column where a syntax error was detected.

Action: No action is required.

RMAN-01008: the bad identifier was: *string*

Cause: This is an informational message indicating the identifier token that caused a syntax error.

Action: No action is required.

RMAN-01009: syntax error: found "*string*": expecting one of: "*string*"

Cause: A syntax error was signaled during parsing.

Action: Correct the input.

RMAN-01100: SQL progress reporting message enabled with interval *number* seconds

Cause: This is an informational message indicating the progress of the RMAN command.

Action: No action is required.

RMAN-01101: SQL "*string*" *string*: duration [*string*]

Cause: This is an informational message indicating the progress of the RMAN command.

Action: No action is required.

RMAN-01102: RPC progress reporting message enabled with interval *number* seconds

Cause: This is an informational message indicating the progress of Remote Procedure Call (RPC) invoked by the RMAN command.

Action: No action is required.

RMAN-01103: RPC "*string*" completed: execution count *number*, duration [*string*]

Cause: This is an informational message indicating the progress of Remote Procedure Call (RPC) invoked by the RMAN command.

Action: No action is required.

RMAN-01104: I/O statistics progress reporting enabled with interval *number* seconds

Cause: This is an informational message indicating the enabling of RMAN progress reporting.

Action: No action is required.

RMAN-01105: Non-blocking SQL execution mode enable failed

Cause: This is an informational message. This message indicates that enabling of non-blocking mode failed.

Action: No action is required.

RMAN-01106: Non-blocking SQL execution mode disable failed

Cause: This message indicates that disabling of non-blocking mode failed.

Action: Retry the command.

RMAN-01107: Internal time query or computation call failed

Cause: This message indicates internal time-related call failed during progress reporting.

Action: Progress reporting intervals will not be accurate. No action is required.

RMAN-01108: RMAN Client Diagnostic Trace initialization function *string* failed with error *number*

Cause: This message indicates that RMAN diagnostic tracing initialization failed.

Action: RMAN Client and Server Diagnostic traces will not be generated. Retry the command with debug if diagnostic tracing is required.

RMAN-01109: RMAN Client Diagnostic Trace file : *string*

Cause: This is an informational message indicating the filename where the diagnostic traces is logged.

Action: Use the server trace file(s) for problem diagnosis.

RMAN-01110: RMAN Server Diagnostic Trace file : *string*

Cause: This is an informational message indicating the filename where the server diagnostic traces are logged. RMAN client command identifier corresponding to the server trace is also displayed.

Action: Use the server trace file(s) for problem diagnosis.

RMAN-01111: RMAN Server Diagnostic Trace not dumped, Server ID *number*

Cause: This is an informational message indicating that RMAN server traces were not dumped on server disconnect.

Action: Use Server ID for server process diagnosis, if the server is accessible.

RMAN-01112: RMAN Command Id : *string*

Cause: This is an informational message indicating the command Id for RMAN command.

Action: Use the command ID for identifying server and client trace files.

RMAN-02000: wrong message file version (*msg number* not found)

Cause: The rmanxx.msb file is not the correct version.

Action: Check that the installation was done correctly. The RMAN binary (executable, load module, whatever it is called on your O/S) and the rmanxx.msb file must be from the same version, release, and patch level.

RMAN-02001: unrecognized punctuation symbol "*string*"

Cause: An illegal punctuation character was encountered.

Action: Remove the illegal character.

RMAN-02002: unexpected end of input file reached

Cause: This is probably caused by failure to supply the closing quote for a quoted string.

Action: Correct the input.

RMAN-02003: unrecognized character: *string*

Cause: An input character that is neither an alpha, digit, or punctuation was encountered.

Action: Remove the character.

RMAN-02004: quoted string too big

Cause: A quoted string longer than 2000 bytes was encountered.

Action: This may be caused by a missing close quote. If so, add the missing quote, otherwise shorten the string.

RMAN-02005: token too big

Cause: A token longer than 1000 bytes was encountered

Action: Tokens must be separated by whitespace or punctuation. Either add the missing whitespace or punctuation, or shorten the token.

RMAN-02006: script line too long

Cause: a line longer than 500 bytes was encountered

Action: break the line up into shorter lines

RMAN-02007: Integer value overflow

Cause: Parser failed to convert input string to integer

Action: Acceptable values for integer are from 0 to 2147483648. Retry command using valid integer value.

RMAN-02008: no value exists for variable "*string*"

Cause: The RMAN variable specified was either undefined or null

Action: Verify that a proper value has been given to that variable.

RMAN-02009: unexpected end of command file reached

Cause: This is probably caused by failure to supply the closing brace for a stored script in a command file.

Action: Correct the input.

RMAN-03000: recovery manager compiler component initialization failed

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-03001: recovery manager command sequencer component initialization failed

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-03002: failure of *string* command at *string*

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-03003: command not implemented yet: *string*

Cause: The command is not implemented in the current version.

Action: Avoid using the command.

RMAN-03004: fatal error during execution of command

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-03008: error while performing automatic resync of recovery catalog

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-03009: failure of *string* command on *string* channel at *string*

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-03010: fatal error during library cache pre-loading

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-03011: Recovery Manager *string*

Cause: This is the RMAN banner

Action: No action is required.

RMAN-03012: fatal error during compilation of command

Cause: A fatal error occurred during compilation of a command.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-03013: Copyright (c) 1995, 2003, Oracle Corporation. All rights reserved.

Cause: This is the copyright banner

Action: No action is required.

RMAN-03014: implicit resync of recovery catalog failed

Cause: This message is accompanied by other errors explaining the cause of the failure.

Action: No action is required.

RMAN-03015: error occurred in stored script *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-03017: recursion detected in stored script *string*

Cause: A stored script is calling itself or another script which calls itself.

Action: Remove the recursion.

RMAN-03018: asynchronous RPCs are working correctly

Cause: This is an informational message only.

Action: No action is required.

RMAN-03019: asynchronous RPCs are NOT working

Cause: The RPCTEST command has determined that RPCs are not executing asynchronously. Instead, they are blocking. This is caused by using a SQL*NET driver that does not support non-blocking UPI.

Action: Try using a different SQL*NET driver.

RMAN-03020: asynchronous RPC test will take 1 minute

Cause: This is an informational message only.

Action: No action is required.

RMAN-03023: executing command: *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-03028: fatal error code for command *string* : *number*

Cause: Informational message. This precedes error 3012.

Action: No action is required.

RMAN-03029: echo set on

Cause: a SET ECHO ON command was issued

Action: No action is required.

RMAN-03030: echo set off

Cause: a SET ECHO OFF command was issued

Action: No action is required.

RMAN-03031: this option of set command needs to be used inside a run block

Cause: The option used with the SET command is not valid outside a run block.

Action: Change the SET command or place it inside a run block.

RMAN-03032: this option of set command needs to be used outside of a run block

Cause: The option used with the SET command is not valid inside of a run block.

Action: Change the SET command or place it outside a run block.

RMAN-03033: current log archived

Cause: "ALTER SYSTEM ARCHIVE LOG CURRENT" command completed successfully.

Action: None, this is an informational message.

RMAN-03034: LEVEL *number* is invalid. LEVEL must be between *string* and *string*

Cause: An invalid DEBUG LEVEL was used.

Action: Change the DEBUG LEVEL argument.

RMAN-03035: Debugging turned off

Cause: a DEBUG OFF command was issued

Action: No action is required.

RMAN-03036: Debugging set to level=*number*[*string*], types=*string*

Cause: a DEBUG command was issued

Action: No action is required.

RMAN-03037: Spooling started in log file: *string*

Cause: a SPOOL LOG TO ... command was issued

Action: No action is required.

RMAN-03038: Spooling started in trace file: *string*

Cause: a SPOOL TRACE TO ... command was issued

Action: No action is required.

RMAN-03039: Spooling for log turned off

Cause: a SPOOL LOG OFF command was issued

Action: No action is required.

RMAN-03040: Spooling for trace turned off

Cause: a SPOOL TRACE TO ... command was issued

Action: No action is required.

RMAN-03042: error while analyzing automatic repair options

Cause: This message is accompanied by other errors explaining the cause of the failure.

Action: No action is required.

RMAN-03090: Starting *string* at *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-03091: Finished *string* at *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-03098: *string*RMAN-number: *stringstring*

Cause: This is the message prefix with a possible indentation.

Action: No action is required.

RMAN-03099: job cancelled at user request

Cause: The user interrupted the current job.

Action: None

RMAN-03999: Oracle error occurred while converting a date: ORA-number: *string*

Cause: Internal error converting a date.

Action: Contact Oracle Support Services.

RMAN-04000: memory allocation failure

Cause: A memory allocation request could not be satisfied.

Action: Increase the amount of memory available to RMAN.

RMAN-04001: heap initialization failure

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-04002: OCIPI failed, ORA-string

Cause: OCI process level initialization failed.

Action: This error should not normally occur.

RMAN-04003: OCIINIT failed

Cause: The call to OCIEnvInit failed.

Action: This error should not normally happen. Contact Oracle Customer Support.

RMAN-04004: error from recovery catalog database: string

Cause: Oracle error signaled by catalog database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-04005: error from target database: lnstring

Cause: Oracle error signaled by target database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-04006: error from auxiliary database: string

Cause: Oracle error signaled by auxiliary database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-04007: warning from recovery catalog database: string

Cause: Non fatal Oracle error signaled by catalog database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-04008: warning from target database: lnstring

Cause: Non fatal Oracle error signaled by target database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-04009: warning from auxiliary database: string

Cause: Non fatal Oracle error signaled by auxiliary database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-04010: target database Password:

Cause: No password was provided for the target database.

Action: Provide target database password.

RMAN-04011: recovery catalog database Password:

Cause: No password was provided for the recovery catalog database.

Action: Provide recovery catalog database password.

RMAN-04012: auxiliary database Password:

Cause: No password was provided for the auxiliary database.

Action: Provide auxiliary database password.

RMAN-04013: must connect before startup

Cause: A STARTUP command was attempted before connecting to the database.

Action: Connect to database before attempting STARTUP command.

RMAN-04014: startup failed: *string*

Cause: The database failed to startup.

Action: The cause of the failure is included in the error message. Correct the cause of the failure and retry the startup command.

RMAN-04015: error setting target database character set to *string*

Cause: An error was received while setting the session character set in the target database.

Action: This error should not normally happen. Contact Oracle Customer Support.

RMAN-04016: could not get OCI error handle

Cause: An error was received while initializing the OCI layer.

Action: This error should not normally happen. Contact Oracle Customer Support.

RMAN-04017: startup error description: *string*

Cause: This is an additional informational message that indicates the cause of failure.

Action: See accompanying error messages indicating the cause of failure. No action is required.

RMAN-04020: target database name "*string*" does not match channel's name: "*string*"

Cause: The CONNECT clause in the ALLOCATE command has resulted in a connection to a database which is not the same as the one used to connect to the target database.

Action: Verify that the CONNECT string connects to the same database as the one specified in the TARGET connection for the CONNECT command.

RMAN-04021: target database DBID *string* does not match channel's DBID *string*

Cause: The CONNECT clause in the ALLOCATE command has resulted in a connection to a database which is not the same as the one used to connect to the target database.

Action: Verify that the CONNECT string connects to the same database as the one specified in the TARGET connection for the CONNECT command.

RMAN-04022: target database mount id *string* does not match channel's mount id *string*

Cause: The CONNECT clause in the ALLOCATE command has resulted in a connection to a database which is not the same as the one used to connect to the target database.

Action: Verify that the CONNECT string connects to the same database as the one specified in the TARGET connection for the CONNECT command.

RMAN-04024: starting Oracle instance without parameter file for retrieval of spfile

Cause: The instance could not be started because no default parameter file (either PFILE or SPFILE) could be found. The instance will be started in restricted mode with default parameters.

Action: None - this is an informational message.

RMAN-04025: unable to generate a temporary file

Cause: Creation of a temporary file failed. It could be that the system does not have enough resources (disk space, memory or similar).

Action: Verify and free some system resources memory and try again.

RMAN-04026: unable to open a temporary file: "*string*"

Cause: Opening of a temporary file failed. It could be that the system does not have enough resources (disk space, memory or similar).

Action: Verify and free some system resources memory and try again.

RMAN-04027: unable to write to a temporary file: "*string*"

Cause: Writing to a temporary file failed. It could be that the system does not have enough resources (disk space, memory or similar).

Action: Verify and free some system resources memory and try again.

RMAN-04031: Initialization parameters used for automatic instance: *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-04032: using contents of file *string*

Cause: The specified file was included as part of the auxiliary database parameter file. This is an informational message.

Action: No action is required.

RMAN-04033: cannot open auxiliary parameter file *string*

Cause: An auxiliary parameter file was specified with SET AUXILIARY INSTANCE PARAMETER FILE command but the specified file cannot be found.

Action: Set the parameter file to an existent file or retry the command without setting AUXILIARY INSTANCE PARAMETER FILE.

RMAN-04034: source recovery catalog database Password:

Cause: A password was not provided for the source recovery catalog database.

Action: Provide source recovery catalog database password.

RMAN-04035: error from source recovery catalog database: *string*

Cause: Oracle error signaled by source recovery catalog database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-04036: warning from source recovery catalog database: *string*

Cause: Nonfatal Oracle error signaled by source recovery catalog database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-04037: Connection should be as SYSDBA or as SYSBACKUP

Cause: An unsupported mode was specified on a target or clone connection.

Action: Specify a valid mode and retry the connection.

RMAN-04038: Connection should not specify a mode

Cause: A connection specified a mode when no mode is supported for this kind of connection

Action: Remove the mode specification and retry the connection.

RMAN-05000: CONFIGURE AUXNAME required for datafile *string*

Cause: Either: -) The control file mounted by the auxiliary database does not have an entry for this data file, therefore file name conversion is not possible. -) A COPY DATAFILE TO AUXNAME command was issued, but no auxname was set for this data file.

Action: Use the CONFIGURE AUXNAME command to specify a file name that the auxiliary database can use as a restore destination.

RMAN-05001: auxiliary file name *string* conflicts with a file used by the target database

Cause: RMAN is attempting to use the specified file name as a restore destination in the auxiliary database, but this name is already in use by the target database.

Action: Use the CONFIGURE AUXNAME command to specify a name for the data file that does not conflict with a file name in use by the target db.

RMAN-05002: aborting Tablespace Point-in-Time Recovery

Cause: Previously encountered error(s) were issued which require corrective action.

Action: Resolve the error conditions, and then re-issue the RECOVER command.

RMAN-05003: Tablespace Point-in-Time Recovery is not allowed for tablespace *string*

Cause: The SYSTEM, SYSUAX or a tablespace containing rollback segments is not allowed in Tablespace Point-in-Time Recovery.

Action: Remove the indicated tablespace from the recovery set and retry the operation.

RMAN-05004: target database log mode is NOARCHIVELOG

Cause: An attempt was made to apply Tablespace Point-in-Time Recovery or Pluggable Database Point-in-Time Recovery to a database that is in NOARCHIVELOG mode.

Action: If all required archived log files are available for Tablespace Point-in-Time Recovery or Pluggable Database Point-in-Time Recovery, alter the target database log mode to

ARCHIVELOG and retry the operation. Otherwise, Tablespace Point-in-Time Recovery and Pluggable Database Point-in-Time Recovery cannot be applied to this database.

RMAN-05005: Tablespace Point-in-Time Recovery is not allowed for re-created tablespace *string*

Cause: The requested tablespace has been re-created and is not allowed in Point-in-Time Recovery.

Action: Remove the indicated tablespace from the recovery set and retry the operation.

RMAN-05006: cannot recover clone standby single tablespaces

Cause: Standby recover can only be performed for the whole database.

Action: Change the tablespace list to a database specification.

RMAN-05007: no channel allocated

Cause: A command was entered that requires a channel, and no channel is allocated.

Action: Use ALLOCATE CHANNEL before using the command

RMAN-05008: SKIP clause not valid for normal recovery

Cause: The SKIP clause was specified for non-Tablespace or Table Point-in-Time Recovery.

Action: Remove the UNDO TABLESPACE clause.

RMAN-05009: Block Media Recovery requires Enterprise Edition

Cause: The RECOVER...BLOCK command was specified.

Action: Remove the RECOVER...BLOCK command.

RMAN-05010: target database must be opened in READ WRITE mode for Tablespace Point-in-Time Recovery

Cause: The target database was not opened in read/write mode.

Action: Open the database in read/write mode.

RMAN-05011: auxiliary instance must be in NOMOUNT state for Tablespace Point-in-Time Recovery

Cause: The Auxiliary instance was not in NOMOUNT state.

Action: Open the auxiliary instance in NOMOUNT state.

RMAN-05013: auxiliary control file name *string* conflicts with a file used by the target database

Cause: RMAN is attempting to use the specified control file name for Tablespace Point-in-Time Recovery as a restore destination in the auxiliary database, but this name is already in use by the target database.

Action: Set control_files parameter in the auxiliary instance to a name that does not conflict with a file name in use by the target database.

RMAN-05014: Tablespaces with undo segments were not found in recovery catalog

Cause: The recovery catalog did not have information about tablespaces with undo segments.

Action: Manually specify the tablespaces with undo segments in the optional UNDO tablespaces clause of the RECOVER command.

RMAN-05015: warning: not enough information in recovery catalog for specified point-in-time recovery

Cause: The recovery catalog did not have information about the tablespaces with undo segments at the specified Point-in-Time. This happened because the current recovery catalog was not in use at the specified Point-in-Time. A list of tablespaces with undo segments was supplied.

Action: RMAN assumes that the current set of tablespaces with undo segments is the same set that was in use at the specified Point-in-Time. If the set of tablespaces with undo segments changes, the recovery fails. If recovery fails, use the optional UNDO TABLESPACE clause of the RECOVER command to specify the correct set of tablespaces.

RMAN-05016: failover to previous backup

Cause: This is an informational message to indicate the RMAN could not successfully restore the files using the specified backups. An attempt was made to restore the data file/ archived logs/ control file/SPFILE using a previous existing backup.

Action: See accompanying additional error messages indicating the cause of the failover.

RMAN-05017: no copy of datafile *number* found to recover

Cause: A RECOVER COPY command was not able to proceed because no copy of indicated file was found to recover. Possible causes include the following: 1. no copy of indicated file exists on disk that satisfy the criteria specified in the user's recover operands. 2. copy of indicated data file exists on disk but no incremental backup was found to apply to the data file copy.

Action: One of the following: 1. Use or correct TAG specification to recover a different data file copy. 2. Use BACKUP FOR RECOVER OF COPY command to create necessary incremental backup or copy.

RMAN-05018: some datafile copies cannot be recovered, aborting the RECOVER command

Cause: This error message can follow one or more RMAN-5017 or RMAN-5019 error messages.

Action: See RMAN-5017 or RMAN-5019 error messages documentation for more information.

RMAN-05019: warning: no channel of required type allocated to recover copy of datafile *number*

Cause: A RECOVER COPY command could not proceed because incremental backup sets exist on a device type that has not been allocated.

Action: Use the LIST command to determine which device type is needed, then allocate a channel of that type.

RMAN-05020: cannot specify AUXILIARY DESTINATION option for normal recovery

Cause: The AUXILIARY DESTINATION option was specified for a normal recovery. It is only allowed for Tablespace or Table Point-in-Time Recovery.

Action: Remove the AUXILIARY DESTINATION option and rerun the RECOVER command.

RMAN-05021: this configuration cannot be changed for a BACKUP or STANDBY control file

Cause: The user attempted to modify the configuration which cannot be changed for a BACKUP or STANDBY control file while the mounted control file was either BACKUP or STANDBY. The following configurations can be changed only when connected to primary database instance that has CURRENT/CREATED control file type mounted: CONFIGURE RETENTION POLICY CONFIGURE EXCLUDE CONFIGURE ENCRYPTION CONFIGURE DB_UNIQUE_NAME

Action: Connect to primary database instance and execute the command.

RMAN-05022: TRANSPORT TABLESPACE may not be used with user-managed auxiliary instance

Cause: A user-managed auxiliary instance was specified.

Action: Retry the operation with an RMAN-managed auxiliary instance.

RMAN-05023: TABLESPACE DESTINATION required

Cause: A required TABLESPACE DESTINATION was not specified.

Action: Specify a TABLESPACE DESTINATION and retry the operation.

RMAN-05024: \nList of tablespaces presumed to have UNDO segments

Cause: Accompanying message to 5015.

Action: See action of message 5015.

RMAN-05025: Tablespace string

Cause: Accompanying message to 5015.

Action: See action of message 5015.

RMAN-05026: warning: presuming following set of tablespaces applies to specified point-in-time

Cause: RMAN assumes that the current set of tablespaces with undo segments is the same set that was in use at the specified Point-in-Time. If the set of tablespaces with undo segments changes, the recovery fails. If recovery fails, use the optional UNDO TABLESPACE clause of the RECOVER command to specify the correct set of tablespaces.

Action: RMAN assumes that the current set of tablespaces with undo segments is the same set that was in use at the specified Point-in-Time. If the set of tablespaces with undo segments changes, the recovery fails. If recovery fails, use the optional UNDO TABLESPACE clause of the RECOVER command to specify the correct set of tablespaces.

RMAN-05027: \nList of tablespaces expected to have UNDO segments

Cause: Accompanying message to 5026.

Action: See action of message 5026.

RMAN-05028: Tablespace string

Cause: Accompanying message to 5026.

Action: See action of message 5026.

RMAN-05029: UNDO TABLESPACE clause not valid for normal recovery

Cause: The UNDO TABLESPACE clause was specified for non-Tablespace or Table Point-in-Time Recovery.

Action: Remove the UNDO TABLESPACE clause.

RMAN-05030: CLONE clause only valid for normal recovery

Cause: The CLONE clause was specified for a Tablespace or Logical Point-in-Time Recovery.

Action: Remove the CLONE clause.

RMAN-05031: DATAPUMP DESTINATION clause is only valid for Table Point-in-Time Recovery

Cause: The DATAPUMP DESTINATION clause was specified for a non-Table Point-in-Time Recovery.

Action: Remove the DATAPUMP DESTINATION clause.

RMAN-05032: datafile *string* will be created automatically during restore operation

Cause: The specified data file did not have an available backup.

Action: None. This is an informational message displayed for VALIDATE or PREVIEW option of the RESTORE command.

RMAN-05033: Media recovery start SCN is *string*

Cause: The above system change number (SCN) would be starting media recovery SCN, if the specified files are restored.

Action: None. This is an informational message displayed for PREVIEW option of the RESTORE command.

RMAN-05034: Recovery must be done beyond SCN *string* to clear datafile fuzziness

Cause: The above system change number (SCN) identifies the minimum SCN beyond which the media recovery must be performed on the specific data file to clear the media recovery fuzziness for all data file.

Action: None. This is an informational message displayed for PREVIEW option of the RESTORE command.

RMAN-05035: archived logs generated after SCN *string* not found in repository

Cause: The recovery catalog or target database control file did not have a record of archived logs containing the redo generated after the specified system change number (SCN).

Action: None. To avoid this message, perform a log switch if the database is in open mode.

RMAN-05036: FOR DB_UNIQUE_NAME option cannot be used for this configuration

Cause: An attempt was made to set the configuration which cannot be used with FOR DB_UNIQUE_NAME option.

Action: Remove FOR DB_UNIQUE_NAME option and execute the command.

RMAN-05037: FOR DB_UNIQUE_NAME option cannot be used in nocatalog mode

Cause: An attempt was made to set the remote configuration in nocatalog mode.

Action: Connect to recovery catalog and execute the command.

RMAN-05038: unable to determine UNTIL SCN for TRANSPORT

Cause: No archived logs were found in the control file.

Action: Add UNTIL clause to TRANSPORT command and retry.

RMAN-05039: One or more auxiliary set of datafiles could not be removed

Cause: There was an error while performing Tablespace or Table Point-in-Time Recovery. Some of the restored data files had Oracle Managed Files (OMF) names and were not deleted.

Action: Manually remove the auxiliary set of data files that were not deleted.

RMAN-05040: \n\nList of tablespaces that have been dropped from the target database:

Cause: One or more tablespaces in the recovery set were not found in the control file of the target database.

Action: None. Informational message.

RMAN-05041: Error during export of metadata

Cause: Export of metadata received an error from Data Pump.

Action: This message is accompanied by other error message(s) indicating the cause of the error.

RMAN-05042: Error during import of metadata

Cause: Import of metadata received an error from Data Pump.

Action: This message is accompanied by other error message(s) indicating the cause of the error.

RMAN-05043: Tablespace *string*

Cause: Accompanying message to 5040.

Action: See Action of message 5040.

RMAN-05044: \nPerforming export of metadata...

Cause: This is an informational message only.

Action: No action is required.

RMAN-05045: \nPerforming import of metadata...

Cause: This is an informational message only.

Action: No action is required.

RMAN-05046: Export completed\n

Cause: This is an informational message only.

Action: No action is required.

RMAN-05047: Import completed\n

Cause: This is an informational message only.

Action: No action is required.

RMAN-05048: specified file name *string* conflicts with a file used by the target database

Cause: The specified file name was already in use by another data file in the database.

Action: Use SET NEWNAME command to specify a different name for the data file that does not conflict with a file name in use by the target database.

RMAN-05050: flashing back control file to SCN *string*

Cause: RESTORE command was issued with a SET UNTIL clause and Flashback Database enabled. The control file was flashed back to the SET UNTIL time.

Action: This is an informational message only.

RMAN-05051: analyzing automatic repair options; this may take some time

Cause: This is an informational message only.

Action: No action is required.

RMAN-05052: Repair *string* is not compatible with this version of RMAN.

Cause: The specified repair was not compatible with this version of Recovery Manager (RMAN).

Action: Use a newer version of the RMAN executable.

RMAN-05053: AUXILIARY DESTINATION is only valid when using a RMAN-managed auxiliary instance

Cause: AUXILIARY DESTINATION clause was specified while using an user-managed auxiliary instance.

Action: Do not specify AUXILIARY DESTINATION clause and retry the operation or use a RMAN-managed auxiliary instance.

RMAN-05054: recover block operand *string* cannot be used to recover datafile

Cause: The specified operand could not be used with RECOVER data file command.

Action: Delete the invalid operand and retry the command.

RMAN-05055: recover datafile operand *string* cannot be used to recover block

Cause: The specified operand could not be used with RECOVER block command.

Action: Delete the invalid operand and retry the command.

RMAN-05056: Table *string.string* belongs to SYS

Cause: A SYS table was specified to be recovered.

Action: Remove SYS table, SYS objects cannot be recovered.

RMAN-05057: Table *string.string* not found

Cause: The specified table was not found in the dictionary at the specified point-in-time.

Action: Verify the name of the schema and table, or change the point-in-time and retry the command.

RMAN-05058: Cannot determine tablespace for table *string.string*

Cause: The specified table was not found in the data pump views at the specified point-in-time.

Action: Verify the name of the schema and table, or change the point-in-time and retry the command.

RMAN-05059: Table *string.string* resides in tablespace *string*

Cause: The tablespace that contained the specified table did not allow Tablespace Point-in-Time Recovery.

Action: Remove the offending table before attempting the operation again.

RMAN-05060: block specifier must be specified to recover block

Cause: Block Specifier was not specified in the command.

Action: Specify block specifier and resubmit the command.

RMAN-05061: analyzing automatic repair options complete

Cause: This is an informational message only.

Action: No action is required.

RMAN-05062: image copy needs no roll forward

Cause: The image copy that would be rolled forward by the RECOVER COPY command is already more recent than the specified UNTIL time or system change number (SCN).

Action: Usually this is the result of a recent OPEN RESETLOGS operation, and no action is needed, because the daily backup strategy will start rolling this copy forward after it becomes old enough to be eligible for rolling forward. To force the copy to be rolled forward, specify a more recent UNTIL time or system change number (SCN).

RMAN-05063: Cannot recover specified tables

Cause: Previously encountered errors required corrective action.

Action: Resolve the error conditions and reissue the Table Point-in-Time Recovery command.

RMAN-05064: REMAP TABLE clause is only valid for Table Point-in-Time Recovery

Cause: The REMAP TABLE clause was specified for a non-Table Point-in-Time Recovery.

Action: Remove the REMAP TABLE clause.

RMAN-05065: REMAP TABLESPACE clause is only valid for Table Point-in-Time Recovery

Cause: The REMAP TABLESPACE clause was specified for a non-Table Point-in-Time Recovery.

Action: Remove the REMAP TABLESPACE clause.

RMAN-05066: NOTABLEIMPORT clause is only valid for Table Point-in-Time Recovery

Cause: The NOTABLEIMPORT clause was specified for a non-Table Point-in-Time Recovery.

Action: Remove the NOTABLEIMPORT clause.

RMAN-05067: Table *string* already specified

Cause: The specified table was already specified to be recovered.

Action: Remove the duplicated table and retry the command.

RMAN-05069: New table name *string* for user *string* was already specified for other table

Cause: The same table name for the same user has already been specified for a different table.

Action: Remove or change the duplicated table name and retry the command.

RMAN-05070: Running TRANSPORT_SET_CHECK on recovery set tablespaces

Cause: This is an informational message only.

Action: No action is required.

RMAN-05071: TRANSPORT_SET_CHECK completed successfully

Cause: This is an informational message only.

Action: No action is required.

RMAN-05072: TRANSPORT_SET_CHECK failed

Cause: SYS.TS_PITR_CHECK was not empty for recovery set tablespaces.

Action: Fix dependencies before attempting TSPITR again.

RMAN-05073: Tablespace *string* creation SCN *string* is ahead of point-in-time SCN *string*

Cause: The tablespace was found in the control file but the creation system change number (SCN) of the data file(s) is after the specified point-in-time. This can happen if a previous tablespace point-in-time recovery was performed, for the tablespace.

Action: If a previous TSPITR has been performed drop the tablespace and retry the command. Otherwise, verify the name of the tablespace and/or the point-in-time and resubmit the command.

RMAN-05074: Tablespace *string* does not exist at specified point-in-time SCN *string*

Cause: The tablespace was found in the control file but the creation system change number (SCN) of the data file(s) is after the specified point-in-time.

Action: Verify the name of the tablespace and/or the point-in-time and resubmit the command.

RMAN-05075: Remapped object *string* is not being recovered

Cause: The specified remapped object was not recovered.

Action: Add remapped object to object list or remove this remap specification.

RMAN-05076: Remapped tablespace *string* is not being recovered

Cause: The specified tablespace was not recovered. None of the objects being recovered belong to the specified tablespace.

Action: Revise the object list or remove the remapped tablespace specification.

RMAN-05077: New tablespace *string* does not exist in target database

Cause: The new tablespace in the REMAP TABLESPACE clause could not be found in the target database.

Action: Revise the object list or remove remapped tablespace specification.

RMAN-05078: Table Point-in-Time Recovery requires an UNTIL clause

Cause: Table Point-in-Time Recovery was specified without a point-in-time specification.

Action: Add a point-in-Time specification and retry the command.

RMAN-05079: Table *string* already remapped

Cause: The same table appeared in another remap specification.

Action: Remove the duplicated remapped table and retry the command.

RMAN-05080: Not performing table import after point-in-time recovery

Cause: As requested, Data Pump Import was not performed after the point-in-time recovery was performed.

Action: Manually perform the Data Pump Import of the recovered tables into the target database.

RMAN-05081: Cannot use REMAP clauses if NOTABLEIMPORT clause is used

Cause: The NOTABLEIMPORT clause was specified together with either the REMAP TABLE or REMAP TABLESPACE clause. These clauses are used during importing of the tables and, therefore, are invalid.

Action: Remove the REMAP clauses or remove the NOTABLEIMPORT clause and retry the command.

RMAN-05082: Tablespace *string* already remapped

Cause: The same tablespace appeared in another remap specification.

Action: Remove the duplicated remapped tablespace and retry the command.

RMAN-05083: Partition *string.string.string* not found

Cause: The specified partition was not found in the dictionary at the specified point-in-time.

Action: Verify the name of the schema, table and partition, or change the point-in-time and retry the command.

RMAN-05084: \nPerforming export of tables...

Cause: This is an informational message only.

Action: No action is required.

RMAN-05085: \nPerforming import of tables...

Cause: This is an informational message only.

Action: No action is required.

RMAN-05086: DUMP FILE clause is only valid for Table Point-in-Time Recovery

Cause: The DUMP FILE clause was specified for a non-Table Point-in-Time Recovery.

Action: Remove the DUMP FILE clause.

RMAN-05087: InPerforming export of metadata for specified tablespaces...

Cause: This is an informational message only.

Action: No action is required.

RMAN-05088: DB_CREATE_FILE_DEST is not set

Cause: TO NEW was specified for a RESTORE BACKUPPIECE command but DB_FILE_CREATE_DEST was not set for the target database.

Action: Specify DB_FILE_CREATE_DEST for the target database or specify FORMAT and retry the command.

RMAN-05089: Cannot specify *string* clause with cross-platform restore

Cause: The specified option was used for a cross-platform data file restore.

Action: Remove the option and resubmit the command.

RMAN-05090: FROM PLATFORM clause can only be used with cross-platform datafile restore

Cause: FROM PLATFORM clause was specified for a noncross-platform data file restore.

Action: Remove the clause and resubmit the command.

RMAN-05091: UNTIL cannot be used with cross-platform datafile restore

Cause: An UNTIL command was in effect or an UNTIL clause was specified for a cross-platform data file restore.

Action: Remove the UNTIL clause or command and resubmit the command.

RMAN-05092: Option *string* cannot be used when restoring whole database with cross-platform datafile restore

Cause: The specified option was specified for whole database cross-platform data file restore.

Action: Remove the option and resubmit the command.

RMAN-05093: Restore cannot be mixed with cross-platform datafile restore

Cause: A restore specification was found when a cross-platform data file specification was expected.

Action: Use only one kind of restore specification in a single restore command.

RMAN-05094: Cross-platform whole database restore requires that the database is not mounted

Cause: FOREIGN DATABASE specification was found but the database was not in the correct state.

Action: Make sure that the database is not mounted when performing whole database cross-platform restore.

RMAN-05095: Data Pump import requires the database to be open read/write

Cause: During a cross-platform tablespace restore, DUMP FILE was specified without NOIMPORT and database was not open in read/write mode.

Action: Remove DUMP FILE specification or add NOIMPORT to it or, alternatively, open the database in read/write mode before retrying the command.

RMAN-05096: FROM SERVICE option is not supported for archived logs

Cause: The FROM SERVICE option was supplied but does not apply to restoring archived logs.

Action: Remove the FROM SERVICE operand and reenter the command.

RMAN-05097: could not validate file header for datafile *string* from service *string*

Cause: The specified data file could not be accessed from the indicated service.

Action: Ensure that the data file exists on the service and has same creation SCN as that of target database file. If the error can be corrected, do so and retry the operation.

RMAN-05098: schema *string* already remapped

Cause: The same schema appeared in another remap specification.

Action: Remove the duplicated remapped schema and retry the command.

RMAN-05099: not connected to target database with a password

Cause: A command that restores SPFILE to the target instance from a service name was requested. Such a command requires a password to be present in the connect string used to connect to the target instance.

Action: Exit RMAN session and then connect to target database using command line or CONNECT TARGET command with a password.

RMAN-05100: not connected to auxiliary database with a password

Cause: A command that restores SPFILE to the auxiliary instance from a service name was requested. Such a command requires a password to be present in the connect string used to connect to the auxiliary instance.

Action: Exit RMAN session and then connect to auxiliary instance using command line or CONNECT AUXILIARY command with a password.

RMAN-05101: Point-in-Time Recovery without CATALOG and TARGET not open requires that UNDO TABLESPACE is specified

Cause: A Point-in-Time Recovery was attempted when target database was not open without connection to a recovery catalog. It is necessary that the list of tablespaces with undo segments is provided with the UNDO TABLESPACE clause.

Action: Retry the command specifying the list of tablespaces with undo segments using the UNDO TABLESPACE clause.

RMAN-05102: auxiliary instance must be in the NOMOUNT state for Pluggable Database Point-in-Time Recovery

Cause: The Auxiliary instance was not in the NOMOUNT state.

Action: Put the auxiliary instance into the NOMOUNT state.

RMAN-05103: aborting Pluggable Database Point-in-Time Recovery

Cause: Previously encountered error(s) were issued which require corrective action.

Action: Resolve the error conditions and then re-issue the RECOVER command.

RMAN-05104: Specifying more than one Pluggable Databases is not supported

Cause: The command was attempted on more than one Pluggable Databases. This is not supported.

Action: Separate the task into multiple RMAN commands so that each command operates on one Pluggable Database.

RMAN-05105: Specifying *string* database is not supported.

Cause: This operation was not supported for the Pluggable Database that was specified in the command.

Action: None. This is an informational message only.

RMAN-05106: datafile *string* conflicts with file used by database *string*

Cause: RMAN attempted to use the specified data file number as a restore destination, but this data file number was already in use by the specified database.

Action: Resolve the conflict and retry the command.

RMAN-05107: AUXILIARY DESTINATION option is not specified

Cause: The AUXILIARY DESTINATION option was not specified for Pluggable Database Point-in-Time Recovery or Flashback Pluggable Database. This is a mandatory option for these commands unless Fast Recovery Area is used.

Action: Specify the AUXILIARY DESTINATION option and retry the command.

RMAN-05108: Command is not supported for pluggable database

Cause: Pluggable database specified for this command. This is not supported.

Action: None - informational message only

RMAN-05109: With shared undo, one cannot flashback/PITR to an orphan incarnation of the Pluggable Database.

Cause: Specified UNTIL CHANGE was on an orphan incarnation of the Pluggable Database and the undo was in shared undo mode.

Action: Check the UNTIL CHANGE or UNTIL RESTORE POINT. The pluggable database can only be restored to an orphan incarnation in local undo mode.

RMAN-05110: Pluggable Database *string* must be closed.

Cause: Pluggable Database Point-in-Time Recovery or Flashback Pluggable Database was attempted while the Pluggable Database was open.

Action: Close the Pluggable Database and Retry the Command.

RMAN-05111: Pluggable Database Point-in-Time Recovery is not supported for standby

Cause: Pluggable Database Point-in-Time Recovery was attempted on standby. This is not supported.

Action: None - informational message only.

RMAN-05112: table "*string*"."*string*" already exists

Cause: The specified table was present in the dictionary in the target database.

Action: Verify the name of the schema and table, or change the table name using the REMAP option and retry the command.

RMAN-05113: import completed with errors; Oracle Data Pump dump file *string* is retained

Cause: Import completed with errors.

Action: See Data Pump Import output for details of the problem.

RMAN-05114: datafile *string* name *string* is already used by datafile *string*

Cause: RMAN attempted to use the specified data file name as a restore destination for the indicated data file, but this data file name was already in use by the specified database. This can happen during pluggable database point-in-time recovery to recover a dropped tablespace whose data file name was already in use by a pluggable database.

Action: Add a SET NEWNAME command prior to the RESTORE or RECOVER command to specify the restore destination for this file.

RMAN-05115: Cross-platform INSTANT RESTORE is not supported.

Cause: An instant restore was specified using a data file copy from a different platform.

Action: Specify a different data file copy that is formatted for the same platform where the restore is taking place.

RMAN-05116: feature was not enabled: *string*

Cause: The specified feature is not enabled.

Action: Do not attempt to use this feature.

RMAN-05117: archive logs missing from SCN *string* to SCN *string*

Cause: Archive logs were missing for the SCN range.

Action: Backup the missing archive logs for a successful recovery.

RMAN-05118: recovery will be done up to SCN *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-05119: recovery can not be done to a consistent state.

Cause: No archive logs or backups were found.

Action: Backup archive logs for a successful recovery.

RMAN-05120: failed to open the wallet for restore

Cause: An error occurred while opening the wallet with the specified password.

Action: Ensure that the wallet is configured properly and a correct password is specified.

RMAN-05121: decryption wallet open for *string* of *string* database

Cause: This is an informational message only.

Action: No action is required.

RMAN-05122: There is insufficient disk space *string* MB to perform table recovery of *string* MB.

Cause: The disk space required to perform restore exceeded the available space.

Action: Free the disk space or add more storage.

RMAN-05123: skipping data file *number* because it is not a plugged in data file

Cause: A RESTORE or RECOVER command omitted processing the indicated data file because it was not a plugged in data file.

Action: No action is required.

RMAN-05124: cannot specify *string* clause with PREPLUGIN option

Cause: The specified option was used for a PREPLUGIN data file restore or recover command. This is not supported.

Action: Remove the option and resubmit the command.

RMAN-05125: Reset Pluggable Database is not supported for standby

Cause: Reset Pluggable Database was attempted on standby. This is not supported.

Action: None - informational message only.

RMAN-05126: cannot specify FROM SPARSE or FROM NONSPARSE option for active duplicate

Cause: Either the FROM SPARSE or FROM NONSPARSE option was specified for an active duplicate. The option is only allowed for nonactive duplicate.

Action: Remove the FROM SPARSE or FROM NONSPARSE option and rerun the command.

RMAN-05127: cannot specify FROM SPARSE or FROM NONSPARSE option for restore from service

Cause: Either the FROM SPARSE or FROM NONSPARSE option was specified for a restore from service.

Action: Remove the FROM SPARSE or FROM NONSPARSE option and rerun the command.

RMAN-05128: cannot specify FROM SPARSE or FROM NONSPARSE option for normal recovery

Cause: Either the FROM SPARSE or FROM NONSPARSE option was specified for a normal recovery.

Action: Remove the FROM SPARSE or FROM NONSPARSE option and rerun the command.

RMAN-05129: cannot specify FROM SPARSE or FROM NONSPARSE option for instant restore

Cause: Either the FROM SPARSE or FROM NONSPARSE option was specified for an instant restore.

Action: Remove the FROM SPARSE or FROM NONSPARSE option and rerun the command.

RMAN-05130: cannot specify FROM SPARSE or FROM NONSPARSE option for cross-platform restore

Cause: Either the FROM SPARSE or FROM NONSPARSE option was specified for an ordinary restore with cross-platform clause.

Action: Remove the FROM SPARSE or FROM NONSPARSE option and rerun the command.

RMAN-05131: cannot specify FROM SPARSE or FROM NONSPARSE option for non datafile restore

Cause: Either the FROM SPARSE or FROM NONSPARSE option was specified for restoring a non data file.

Action: Remove the FROM SPARSE or FROM NONSPARSE option and rerun the command.

RMAN-05133: cannot specify SPARSE or NONSPARSE option in proxy backup

Cause: Either the SPARSE or the NONSPARSE option was specified for a proxy backup.

Action: Remove the SPARSE or NONSPARSE option and rerun the command.

RMAN-05134: cannot specify SPARSE or NONSPARSE option in incremental backup

Cause: Either the SPARSE or NONSPARSE option was specified for an incremental backup.

Action: Remove the SPARSE or NONSPARSE option and rerun the command.

RMAN-05135: incompatible use of SPARSE or NONSPARSE option in backup

Cause: An attempt to specify the SPARSE or NONSPARSE option in the BACKUP AS command failed. The BACKUP AS command can only be used to take non-cross-platform FULL or LEVEL 0 backups of data files. However, the option is prohibited for taking inconsistent backups of data files.

Action: Remove the SPARSE or NONSPARSE option or modify the BACKUP command and device configuration.

RMAN-05136: UNTIL cannot be used with PREPLUGIN option

Cause: An UNTIL command was in effect or an UNTIL clause was specified for a PREPLUGIN data file restore or recover command. This is not supported.

Action: Remove the UNTIL clause or command and resubmit the command.

RMAN-05137: destination for foreign data file not specified in RESTORE

Cause: During restoration of a foreign data file, either the destination was not provided using the FORMAT option in the RESTORE command or Oracle Managed Files (OMF) were not configured.

Action: Configure OMF or provide a foreign data file destination using the FORMAT option in the RESTORE command.

RMAN-05138: UNTIL AVAILABLE REDO can only be used with the keyword DATABASE

Cause: UNTIL AVAILABLE REDO was specified with keywords DATAFILE, TABLESPACE or PLUGGABLE DATABASE.

Action: Specify RECOVER DATABASE UNTIL AVAILABLE REDO to recover the whole database.

RMAN-05139: incompatible use of AS ENCRYPTED or AS DECRYPTED option in restore

Cause: An attempt to specify the AS ENCRYPTED or AS DECRYPTED option in a RESTORE command failed. AS ENCRYPTED and AS DECRYPTED can only be specified for tablespace and database objects.

Action: Remove AS ENCRYPTED or AS DECRYPTED or specify a tablespace or the full database as the restore object.

RMAN-05140: cannot perform flashback PDB or PDB PITR across undo switch SCN

Cause: An attempt to flashback a pluggable database (PDB) or a PDB point-in-time recovery (PITR) across an undo switch system change number (SCN) failed.

Action: Flashback or PITR to an SCN or time after the undo switch SCN.

RMAN-05141: target database must be opened for flashback PDB or PDB point-in-time recovery

Cause: The target database was not opened.

Action: Open the database.

RMAN-05142: skipping excluded pluggable database *string* data files

Cause: An RMAN command such as BACKUP, DUPLICATE, FLASHBACK, RECOVER, RESTORE has omitted processing data files belonging to the indicated pluggable database (PDB). This was because the data files belong to the PDB that has been marked excluded from backup and restore operations.

Action: No action is required.

RMAN-05143: Command is not supported for excluded pluggable database *string*

Cause: Pluggable database specified for this command is excluded from backup and restore operations. This is not supported.

Action: None - informational message only.

RMAN-05144: schema *string* does not exist

Cause: The new schema required for remapping did not exist in the database.

Action: Either create the desired schema, or specify the name of a schema that already exists, and retry the command.

RMAN-05145: incompatible option for RECOVER STANDBY DATABASE: *string*

Cause: RECOVER STANDBY DATABASE statement was used to synchronize the standby database from the primary database and the only valid options are FROM SERVICE and PFILE.

Action: Remove the unsupported options and retry.

RMAN-05146: must be connected to standby database to issue RECOVER STANDBY DATABASE

Cause: An attempt was made to recover a standby database from a non-standby database.

Action: Connect to the standby database and reissue the command.

RMAN-05147: instance not started with server parameter file and no PFILE option provided

Cause: SPFILE or PFILE were not provided for the RECOVER STANDBY DATABASE command.

Action: Provide the PFILE option or restart the instance with the SPFILE option.

RMAN-05148: flashback needs to be reenabled on standby open

Cause: Flashback was enabled before the standby database was synchronized but could not be reenabled until the standby database was opened.

Action: Open the standby database in read-only mode and reenable flashback.

RMAN-05149: Either FROM SERVICE or NOREDO clause is required for RECOVER STANDBY DATABASE command.

Cause: Neither FROM SERVICE nor NOREDO clause was provided for the RECOVER STANDBY DATABASE command.

Action: Provide the FROM SERVICE or NOREDO clause and reissue the command.

RMAN-05150: Managed Recovery Process must be disabled before running RECOVER STANDBY DATABASE.

Cause: The Managed Recovery Process was enabled when an attempt was made to run the RECOVER STANDBY DATABASE command.

Action: Stop the Managed Recovery Process and reissue the command.

RMAN-05151: duplicate pluggable database does not support encryption

Cause: An encryption is not supported for duplicating a pluggable database.

Action: Use the SET ENCRYPTION OFF command to turn off encryption and retry the command.

RMAN-05152: data file *number* not processed because it is a plugged in data file

Cause: A RESTORE command omitted processing the indicated data file because it was a plugged in data file.

Action: None. informational message only.

RMAN-05153: ignoring sparse option for non-sparse data file *number*

Cause: The AS SPARSE option was used for a non-sparse data file which is not supported.

Action: None. This is an informational message only.

RMAN-05154: The RECOVER STANDBY DATABASE command does not support using both FROM SERVICE and NOREDO clauses together.

Cause: Both FROM SERVICE and NOREDO clauses were provided for the RECOVER STANDBY DATABASE command.

Action: Remove any one of the two clauses and reissue the command.

RMAN-05155: UNTIL clause not compatible with FROM SERVICE clause

Cause: An UNTIL clause was provided with the RECOVER STANDBY DATABASE FROM SERVICE command.

Action: Remove the UNTIL clause or use NOREDO option.

RMAN-05156: aborting recovery of standby database

Cause: The previously encountered errors require corrective action.

Action: Resolve the error conditions, and reissue the RECOVER STANDBY command.

RMAN-05157: The database must not be mounted on any other instance for RECOVER STANDBY DATABASE command.

Cause: The RECOVER STANDBY DATABASE command was attempted while the database was mounted on another instance.

Action: Ensure that no other instances are mounted, then reissue the RECOVER STANDBY DATABASE command.

RMAN-05158: WARNING: auxiliary (*string*) file name *string* conflicts with a file used by the target database

Cause: Recovery Manager (RMAN) attempted to use the specified file name as a restore destination in the auxiliary database, but this name was already in use by the target database. If the auxiliary database instance can access the storage where the target data files are residing, then the target database file gets overwritten causing corruption in the target database.

Action: Use the CONFIGURE AUXNAME command to specify a name for the data files that do not conflict with a file name in use by the target database. Do not use the NOFILENAMECHECK option, unless you are sure that the target data file name using the given location is not accessible from the auxiliary database instance.

RMAN-05159: duplicating *string* to Oracle Managed File (OMF) location

Cause: This is an informational message only.

Action: No action is required.

RMAN-05160: incompatible use of USING KEY option in restore

Cause: An attempt to specify the USING KEY option in a RESTORE command failed. USING KEY can only be specified with AS ENCRYPTED clause.

Action: Remove USING KEY or specify AS ENCRYPTED.

RMAN-05161: cannot open backup piece *string*

Cause: When attempting to open the specified backup piece, an error was received.

Action: Verify that the specified backup piece exists and is accessible.

RMAN-05162: cannot apply incremental backupset on a foreign database

Cause: Restoring incremental backupsets for a foreign database was not supported.

Action: Use full backupsets when restoring a foreign database.

RMAN-05163: unable to switch data file number *number* with name *string*

Cause: A conflict existed in the current control file for the specified file. This conflict occurred due to a point in time recovery which requested the switch of a file which conflicts either in file number or tablespace attribute with a file in the current control file.

Action: This is an informational message only. A separate switch and recovery of the file is required after pluggable database open resetlogs.

RMAN-05164: cannot perform flashback PDB of dropped PDB *string*

Cause: An attempt to flashback a pluggable database (PDB) which has been dropped was made.

Action: Dropped PDBs cannot be flashed back. Perform PDB point-in-time recovery or replug in the PDB.

RMAN-05165: no name provided for datafile *number* created during recovery

Cause: No name was found for the datafile specified which was created during recovery.

Action: Specify the convert parameter or explicit new name, and retry the command.

RMAN-05166: PDB *string* created during recovery, offlining file *string*

Cause: Specified pluggable database (PDB) was created during recovery.

Action: This is an information message only. PDB should be dropped or recreated after recovery and open of the CDB is complete.

RMAN-05167: Initialization parameter `DB_FILE_NAME_CONVERT` is ignored because `DB_CREATE_FILE_DEST` is also set

Cause: This is an information message only. When both the parameters were set then `DB_CREATE_FILE_DEST` takes precedence.

Action: No action needed unless this behavior is not desired. In that case unset `DB_CREATE_FILE_DEST` to make `DB_FILE_NAME_CONVERT` used.

RMAN-05168: destination path is not under pdb `PATH_PREFIX`

Cause: Specified datapump path name was not under pdb path_prefix.

Action: Specify a path name within the pdb path_prefix

RMAN-05169: cannot use format specifier when connected to a pluggable database and recovery file destination parameter is set

Cause: An attempt to backup data files when connected to a pluggable database (PDB) failed. The format specifier could not be used while the target was set to PDB and the recovery file destination (RFD) parameter was set.

Action: Remove the format specifier and retry the command.

RMAN-05170: Plugin datafile *string* (*string*) cannot be created during recovery and will be offlined.

Cause: Specified datafile is a plugin datafile and cannot be recreated by RMAN during recovery. Plugin datafiles are datafiles present in a PDB when it is created within this CDB context.

Action: The datafile will be added to the controlfile after open resetlogs. If needed at the end of recovery, use any available backups to restore and recover the datafiles. If not needed, drop the PDB or tablespace after database open.

RMAN-05171: Datafile *string* (*string*) is part of skip list hence will not be created.

Cause: Specified datafile is part of a skip list during duplicate. This means the datafile is part of an explicitly skipped PDB or tablespace or it does not belong to an explicitly duplicated PDB or tablespace.

Action: RMAN will automatically decide to offline or offline drop the datafile.

RMAN-05172: Datafile *string* (*string*) is skipped forever and will be dropped.

Cause: Specified datafile was part of a skip forever clause of restore or recovery. RMAN did not create the datafile during recovery and dropped it in order to continue recovery.

Action: This is an information message only.

RMAN-05173: Pluggable databases will not be opened as some are in an invalid state.

Cause: ALTER PLUGGABLE DATABASE ALL OPEN could not be performed as some PDBs were created during recovery. Because of this, their datafiles were offlined and they cannot be opened.

Action: Additional messages will state which PDBs are in an unopenable state. Either restore and recover their datafiles or drop them in order to be able to perform alter pluggable database all open for the valid PDBs.

RMAN-05174: Pluggable database *string* was created during recovery and all of its datafiles are offline, it cannot be opened.

Cause: Specified pluggable database cannot be opened as all of its datafiles were offlined during recovery.

Action: If the PDB is still needed, a separate full restore and recovery session of the PDB needs to be performed. If it is not needed, the PDB should be dropped.

RMAN-05500: the auxiliary database must be not mounted when issuing a DUPLICATE command

Cause: A DUPLICATE command was issued, but the auxiliary database is mounted.

Action: Dismount the auxiliary database.

RMAN-05501: aborting duplication of target database

Cause: Previously encountered errors require corrective action.

Action: Resolve the error conditions, and reissue the DUPLICATE command.

RMAN-05502: the target database must be mounted when issuing a DUPLICATE command

Cause: A DUPLICATE command was issued, but the target database control file is not mounted.

Action: Mount the target database control file by issuing ALTER DATABASE MOUNT via Enterprise Manager or Server Manager.

RMAN-05503: at least one auxiliary channel must be allocated to execute this command

Cause: No auxiliary channels were allocated.

Action: Allocate an auxiliary channel.

RMAN-05504: at least two redo log files or groups must be specified for this command

Cause: Only one redo log file or group was specified

Action: Specify at least one more redo log file or group

RMAN-05505: auxiliary file name conversion of '*string*' exceeds maximum length of *string*

Cause: When the given file name is converted to the name used for the auxiliary database, the converted name is larger than the maximum allowed file name.

Action: Change initialization parameter DB_FILE_NAME_CONVERT to convert to a valid file name.

RMAN-05506: error during recursive execution

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-05507: standby control file checkpoint (*string*) is more recent than duplication point-in-time (*string*)

Cause: A DUPLICATE FOR STANDBY command was issued, but the checkpoint of the control file is more recent than the last archived log or the specified point-in-time.

Action: If an explicit point-in-time was specified, change it to be at least the control file checkpoint; otherwise archive (and backup/copy) the current log.

RMAN-05510: Duplicate finished

Cause: This is an informational message only.

Action: No action is required.

RMAN-05511: Datafile *string* skipped by request

Cause: This is an informational message only.

Action: No action is required.

RMAN-05512: Tablespace *string* cannot be skipped from duplication

Cause: The SYSTEM and SYSAUX tablespaces were not included in the DUPLICATE DATABASE. They must be present.

Action: Remove the SYSTEM and/or SYSAUX tablespace from the SKIP list and retry the operation.

RMAN-05513: cannot duplicate, control file is not current or standby

Cause: Target database did not have a current or standby control file. DUPLICATE requires the target database to have a current or standby control file.

Action: Open database to make control file current or connect to a different database before retrying the command.

RMAN-05514: Tablespace *string* has undo information, cannot skip

Cause: All tablespaces that have undo information must be included in the duplication.

Action: Remove the specified tablespace from the SKIP list and retry the operation.

RMAN-05515: Duplicate for standby does not allow the use of SET UNTIL

Cause: A SET UNTIL clause was specified for the command.

Action: Remove the SET UNTIL clause and try again.

RMAN-05516: duplicate operand specified: *string*

Cause: The specified operand appears more than once in the same DUPLICATE option list

Action: Delete the duplicated operand.

RMAN-05517: tempfile *string* conflicts with file used by target database

Cause: RMAN attempted to use the specified tempfile as a restore destination in the auxiliary database, but this name was already in use by the target database.

Action: Use the SET NEWNAME FOR TEMPFILE command to specify a name for the indicated tempfile, making sure that the new name does not conflict with a file name in use by target database. Alternatively, use DB_FILE_NAME_CONVERT and retry the command.

RMAN-05518: Automatically adding tablespace *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-05519: warning: tablespace *string* is always included when duplicating

Cause: The SYSTEM and SYSAUX tablespaces were included in the DUPLICATE TABLESPACE command. They were automatically included by the command and did not need to be explicitly named.

Action: To avoid this warning,, remove the SYSTEM and/or SYSAUX tablespace from the tablespaces list and retry the operation.

RMAN-05520: database name mismatch, auxiliary instance has *string*, command specified *string*

Cause: The database name specified in the initialization parameter was not the same as the database name provided in the DUPLICATE command.

Action: Correct the database name in the command or adjust the database name of the auxiliary instance.

RMAN-05521: DUPLICATE without CATALOG and TARGET not open requires that UNDO TABLESPACE is specified

Cause: A DUPLICATE was attempted when target database was not open without connection to a recovery catalog. It is necessary that the list of tablespaces with undo segments is provided with the UNDO TABLESPACE clause.

Action: Retry the command specifying the list of tablespaces with undo segments using the UNDO TABLESPACE clause.

RMAN-05522: Skipping tablespace *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-05523: Tablespace *string* is read only and SKIP READONLY was specified

Cause: Conflicting parameters were provided.

Action: Remove SKIP READONLY or remove read-only tablespace from list of tablespaces to duplicate.

RMAN-05524: Tablespace *string* is offline

Cause: It was not possible to duplicate offline tablespaces.

Action: Remove offline tablespace from list or online tablespace to duplicate it.

RMAN-05525: SKIP TABLESPACE cannot be used when using DUPLICATE TABLESPACE

Cause: A SKIP TABLESPACE clause was specified for the command.

Action: Remove the SKIP TABLESPACE clause and try again.

RMAN-05526: datafile *number* not processed because file is OFFLINE IMMEDIATE

Cause: A DUPLICATE command omitted processing the indicated data file because it is offline immediate. The tablespace to which this data file belongs will also not be included. See message 5528.

Action: None, informational message only.

RMAN-05527: Tablespace *string* has one or more OFFLINE IMMEDIATE datafiles

Cause: It was not possible to duplicate a tablespace who had offline immediate tablespaces.

Action: Remove offending tablespace from list or recover data file which are offline immediate in the tablespace before attempting the command again.

RMAN-05528: datafile *number* not processed because file belongs to tablespace with one or more offline immediate datafile (*string*)

Cause: A DUPLICATE command omitted processing the indicated data file because it is part of a tablespace that has offline immediate data file. See message 5526.

Action: No action is required. This is an informational message only.

RMAN-05529: warning: DB_FILE_NAME_CONVERT resulted in invalid ASM names; names changed to disk group only.

Cause: It was not possible to convert ASM Oracle Managed Files names using DB_FILE_NAME_CONVERT parameter. RMAN changed these invalid names to the converted disk group name instead.

Action: No action is required. This is an informational message only. If the automatic change is incorrect, use one of the following options instead of using DB_FILE_NAME_CONVERT for ASM Oracle Managed Files: 1) use RMAN command SET NEWNAME for each Oracle Managed File. 2) set DB_CREATE_FILE_DEST initialization parameter in auxiliary instance and not specify DB_FILE_NAME_CONVERT.

RMAN-05530: an UNTIL TIME or SCN cannot be specified with FROM ACTIVE DATABASE

Cause: A DUPLICATE with FROM ACTIVE DATABASE was specified along with either a SET UNTIL statment or UNTIL clause on the command. This is not supported. A DUPLICATE FROM ACTIVE DATABASE always creates a copy as of the current time.

Action: Check the statement and remove the use of UNTIL.

RMAN-05531: a mounted database cannot be duplicated while datafiles are fuzzy

Cause: A DUPLICATE with FROM ACTIVE DATABASE command was specified while the database was mounted or open read-only. Unless the database is open read/write, the data files cannot be fuzzy.

Action: Open the database read/write, then shutdown cleanly before mounting.

RMAN-05532: PASSWORD FILE specified without FROM ACTIVE DATABASE

Cause: The PASSWORD FILE clause of the DUPLICATE command was specified but the FROM ACTIVE DATABASE clause was not. A password file can only be duplicated if the FROM ACTIVE DATABASE clause has been used.

Action: Remove the PASSWORD FILE clause from the command, or perform an online duplicate of the database by specifying the FROM ACTIVE DATABASE clause.

RMAN-05533: Command *string* is not supported on *string* database

Cause: The specified command is not supported on this type of database. The type of database can be STANDBY, CLONE, or RAC.

Action: Do not use the specified command against this database.

RMAN-05534: warning: LOG_FILE_NAME_CONVERT resulted in invalid ASM names; names changed to disk group only.

Cause: It was not possible to convert ASM Oracle Managed Files names using LOG_FILE_NAME_CONVERT parameter. RMAN changed these invalid names to the converted disk group name instead.

Action: If the automatic change is incorrect, use one of the following options instead of using LOG_FILE_NAME_CONVERT for ASM Oracle Managed Files: 1) Use the LOGFILE clause for online log files. 2) After DUPLICATE completes, create standby log files using the SQL ALTER DATABASE ADD STANDBY LOGFILE command.

RMAN-05535: warning: All redo log files were not defined properly.

Cause: It was not possible to define all the redo log files. This can occur when LOG_FILE_NAME_CONVERT initialization parameter is defined but fails to match all the names or causes names to be created that are not in valid directories.

Action: Query the V\$LOGFILE view to see what redo log files are defined after DUPLICATE has completed. Use the ALTER DATABASE RENAME FILE SQL command to correctly name the existing redo log files.

RMAN-05536: auxiliary logfile name *string* conflicts with a file used by the target database

Cause: RMAN attempted to use the specified logfile name as a standby redo log file in the auxiliary database, but this name was already in use by the target database.

Action: Use or alter LOG_FILE_NAME_CONVERT so that unique logfile names can be generated. Or wait for the command to complete and create standby logfiles using the SQL ALTER DATABASE ADD STANDBY LOGFILE command.

RMAN-05537: DUPLICATE without TARGET connection when auxiliary instance is started with spfile cannot use SPFILE clause

Cause: A DUPLICATE was attempted when the auxiliary database was started with a server parameter file and the SPFILE sub-clause was specified. RMAN cannot restore the server parameter file if the auxiliary database is already started with a server parameter file.

Action: Start the auxiliary database with a client parameter file or do not specify SPFILE sub-clause and retry.

RMAN-05538: warning: implicitly using DB_FILE_NAME_CONVERT

Cause: The duplicated SPFILE had DB_FILE_NAME_CONVERT set and it has been used to produce data file names for the new database.

Action: No action is required. This is an informational message only. If this behavior was not intended, then do not duplicate the server parameter file, or explicitly set `DB_FILE_NAME_CONVERT` in the `DUPLICATE` command and retry the operation.

RMAN-05539: DUPLICATE TARGET DATABASE cannot be used without connecting to the TARGET

Cause: A `DUPLICATE TARGET DATABASE` was attempted and no connection to the `TARGET` database was established.

Action: Connect to `TARGET` or use `DATABASE <db_name>` clause.

RMAN-05540: no archived logs found in repository for database *string*

Cause: Recovery catalog did not have archived log records for the specified database. If database is running in `NOARCHIVELOG` mode, then specify `NOREDO`.

Action: Specify `NOREDO` for `NOARCHIVELOG` databases. Cannot duplicate an `ARCHIVELOG` database unless the recovery catalog or target database control file has archived redo log information about it.

RMAN-05541: no archived logs found in target database

Cause: Target database was running in archived log mode, but control file did not have any archived log records.

Action: Archive current log before retrying command.

RMAN-05542: Only UNTIL TIME can be used with DUPLICATE without TARGET and CATALOG connections

Cause: A `DUPLICATE` without `TARGET` and `CATALOG` connections was attempted specifying an `UNTIL` clause that was not `TIME` based.

Action: Retry the command with an `UNTIL TIME` clause or without an `UNTIL` clause.

RMAN-05543: DUPLICATE without TARGET connection requires that DATABASE is specified

Cause: A `DUPLICATE` without `TARGET` connection was attempted without specifying the database to duplicate.

Action: Retry the command specifying the `DATABASE` to duplicate.

RMAN-05544: Cannot specify ACTIVE DATABASE when not connected to target database

Cause: `DUPLICATE` from `ACTIVE DATABASE` required a connection to the target database.

Action: Connect to target database or remove from `ACTIVE DATABASE` and retry the command.

RMAN-05545: warning: Until SCN *string* is ahead of SCN of last full resync of recovery catalog: *string*

Cause: The specified point-in-time for duplication without a target connection was ahead of the last time that the data file information was resynced to the recovery catalog. Information about offline and read-only data files might be incorrect.

Action: If duplication fails due to incorrectly identified offline and/or read-only data files, specify a point-in-time before the last resync of the recovery catalog and retry the command. Or perform full resync of the target database and retry the command.

RMAN-05546: DUPLICATE without TARGET and CATALOG connections requires that BACKUP LOCATION is specified

Cause: A DUPLICATE without TARGET and CATALOG connections was attempted without specifying BACKUP LOCATION.

Action: Retry the command specifying a BACKUP LOCATION.

RMAN-05547: Checking that duplicated tablespaces are self-contained

Cause: This is an informational message only.

Action: No action is required.

RMAN-05548: The set of duplicated tablespaces is not self-contained

Cause: A DUPLICATE TABLESPACE has specified a set of tablespaces that cannot function independently.

Action: Retry the command without incomplete tablespaces or add other tablespaces to make the set self-contained.

RMAN-05549: The following SYS objects were found in skipped tablespaces

Cause: This is an informational message only.

Action: No action required.

RMAN-05550: TARGET database not open, cannot verify that set of tablespaces being duplicated does not have SYS objects

Cause: This is an informational message only.

Action: No action is required.

RMAN-05551: Not connected to TARGET, cannot verify that set of tablespaces being duplicated does not have SYS objects

Cause: This is an informational message only.

Action: No action is required.

RMAN-05552: Object *string* on tablespace *string*

Cause: A SYS object was found in one of the skipped tablespaces.

Action: Remove object if possible or include tablespace in duplicated tablespaces.

RMAN-05553: SYS objects in skipped tablespaces prevent duplication

Cause: Objects owned by SYS were found in the tablespaces that would not be duplicated.

Action: If using SKIP TABLESPACE, do not skip tablespaces that contain SYS objects. If using DUPLICATE TABLESPACE, make sure to specify all tablespaces containing SYS objects.

RMAN-05554: cannot specify INCARNATION when duplicating without TARGET and CATALOG connections

Cause: A DUPLICATE without TARGET and CATALOG connections was attempted when INCARNATION was also specified.

Action: Retry the command without specifying INCARNATION.

RMAN-05555: Not connected to TARGET or TARGET not open, cannot verify that subset of tablespaces is self-contained

Cause: This is an informational message only.

Action: No action is required.

RMAN-05556: not all datafiles have backups that can be recovered to SCN string

Cause: One or more data files being duplicated could not be restored as no available backups were found.

Action: Change the system change number (SCN) or make backups available for the specified data files and retry the command.

RMAN-05557: Target instance not started with server parameter file

Cause: SPFILE clause was used but target instance was not started with a server parameter file.

Action: Do not specify SPFILE clause, or restart target instance with server parameter file.

RMAN-05558: Must specify DB_UNIQUE_NAME with FOR STANDBY clause

Cause: A DUPLICATE FOR STANDBY ... SPFILE command was issued but DB_UNIQUE_NAME was not provided for the standby database.

Action: Specify a DB_UNIQUE_NAME in the SPFILE clause for the standby database.

RMAN-05559: error converting parameter string, string larger than number

Cause: While attempting to apply a PARAMETER_VALUE_CONVERT to the specified parameter value, the resulting string exceeded the maximum length for a value.

Action: Change the PARAMETER_VALUE_CONVERT so that, when converting the parameter, the maximum length is not reached.

RMAN-05560: Using previous duplicated file string for datafile number with checkpoint SCN of string

Cause: A data file copy from a previous duplicate attempt matching the duplicate name requested was found for the specified data file and will be used instead of restoring the data file from a backup.

Action: No action needed unless this behavior is not desired. In that case, either use a different name for the data file or use NORESUME to avoid using previous data file copies for all the data files.

RMAN-05561: CATALOG did not return information about tablespaces with undo segments

Cause: A DUPLICATE with no target connection was attempted, but the recovery catalog did not have information about the tablespaces with undo segments at the specified point in time. It is necessary that the list of tablespaces with undo segments is provided with the UNDO TABLESPACE clause.

Action: Retry the command specifying the list of tablespaces with undo segments using the UNDO TABLESPACE clause.

RMAN-05562: SPFILE backup not found for database *string* with DBID *number* created before *string* in *string*

Cause: RMAN could not locate a backup of the SPFILE in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05563: SPFILE backup not found for database with DBID *number* created before *string* in *string*

Cause: RMAN could not locate a backup of the SPFILE in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05564: SPFILE backup not found for database *string* created before *string* in *string*

Cause: RMAN could not locate a backup of the SPFILE in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05565: SPFILE backup created before *string* not found in *string*

Cause: RMAN could not locate a backup of the SPFILE in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05566: SPFILE backup not found for database *string* with DBID *number* in *string*

Cause: RMAN could not locate a backup of the SPFILE in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05567: SPFILE backup not found for database with DBID *number* in *string*

Cause: RMAN could not locate a backup of the SPFILE in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05568: SPFILE backup not found for database *string* in *string*

Cause: RMAN could not locate a backup of the SPFILE in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05569: SPFILE backup not found in *string*

Cause: RMAN could not locate a backup of the SPFILE in the specified location.

Action: Provide a different location and retry the command.

RMAN-05570: Duplicate for standby does not allow the use of LOGFILE

Cause: A LOGFILE clause was specified for the command.

Action: Remove the LOGFILE clause and try again.

RMAN-05571: DORECOVER specified for non standby duplication

Cause: A DORECOVER clause was specified and the duplicate did not specify FOR STANDBY.

Action: Remove the DORECOVER clause or add FOR STANDBY and try again.

RMAN-05572: CONTROLFILE backup not found for database *string* with DBID *number* created before *string* in *string*

Cause: RMAN could not locate a backup of the control file in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05573: CONTROLFILE backup not found for database with DBID *number* created before *string* in *string*

Cause: RMAN could not locate a backup of the control file in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05574: CONTROLFILE backup not found for database *string* created before *string* in *string*

Cause: RMAN could not locate a backup of the control file in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05575: CONTROLFILE backup created before *string* not found in *string*

Cause: RMAN could not locate a backup of the control file in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05576: CONTROLFILE backup not found for database *string* with DBID *number* in *string*

Cause: RMAN could not locate a backup of the control file in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05577: CONTROLFILE backup not found for database with DBID *number* in *string*

Cause: RMAN could not locate a backup of the control file in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05578: CONTROLFILE backup not found for database *string* in *string*

Cause: RMAN could not locate a backup of the control file in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05579: CONTROLFILE backup not found in *string*

Cause: RMAN could not locate a backup of the control file in the specified location.

Action: Provide a different location and retry the command.

RMAN-05580: Duplicate for standby does not allow the use of SKIP READONLY

Cause: A SKIP READONLY clause was specified for the command.

Action: Remove the SKIP READONLY clause and try again.

RMAN-05581: Duplicate for standby does not allow the use of SKIP TABLESPACE

Cause: A SKIP TABLESPACE clause was specified for the command.

Action: Remove the SKIP TABLESPACE clause and try again.

RMAN-05582: Duplicate for standby does not allow the use of OPEN RESTRICTED

Cause: An OPEN RESTRICTED clause was specified for the command.

Action: Remove the OPEN RESTRICTED clause and try again.

RMAN-05583: Duplicate for standby does not allow the use of TABLESPACE

Cause: A TABLESPACE clause was specified for the command.

Action: Remove the TABLESPACE clause and try again.

RMAN-05584: Duplicate for standby does not allow the use of NOREDO

Cause: A NOREDO clause was specified for the command.

Action: Remove the NOREDO clause and try again.

RMAN-05585: Duplicate for standby does not allow the use of UNDO TABLESPACE

Cause: A UNDO TABLESPACE clause was specified for the command.

Action: Remove the UNDO TABLESPACE clause and try again.

RMAN-05586: The following materialized objects were found in skipped tablespaces

Cause: This is an informational message only.

Action: No action required.

RMAN-05587: Materialized table *string* on tablespace *string*

Cause: A materialized table was found in one of the skipped tablespaces.

Action: Remove object if possible or include tablespace in duplicated tablespaces.

RMAN-05588: Materialized index *string* on tablespace *string*

Cause: A materialized index was found in one of the skipped tablespaces.

Action: Remove object if possible or include tablespace in duplicated tablespaces.

RMAN-05589: Materialized objects in skipped tablespaces prevent duplication

Cause: Materialized objects found in the tablespaces that would not be duplicated.

Action: If using SKIP TABLESPACE, do not skip tablespaces that contain materialized objects. If using DUPLICATE TABLESPACE, make sure to specify all tablespaces containing SYS objects.

RMAN-05590: Reenabling controlfile options for auxiliary database

Cause: This is an informational message only.

Action: No action is required.

RMAN-05591: Ignoring error, reattempt command after duplicate finishes

Cause: A sql error was received during the execution of command.

Action: Check the accompanying errors.

RMAN-05592: Dropping offline and skipped tablespaces

Cause: This is an informational message only.

Action: No action is required.

RMAN-05593: Could not drop tablespace *string* due to constraints, will reattempt removal after other tablespaces are removed

Cause: This is an informational message only.

Action: No action is required.

RMAN-05594: Could not drop tablespace *string* due to constraints

Cause: The tablespace failed to be dropped several times, no more attempts will be made.

Action: Drop the tablespace manually after duplicate finishes.

RMAN-05595: Leaving database unopened, as requested

Cause: User requested that the new database was not open.

Action: After the database is opened with resetlogs you might want to: - Catalog data file copies of read-only data files - Switch read-only data files to the cataloged data file copies - Online read-only tablespaces - Drop skipped tablespaces - Enable supplemental logging - Enable force logging - Enable change tracking

RMAN-05596: Error while removing created server parameter file

Cause: Server parameter file was not deleted. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors. Remove file manually.

RMAN-05597: Database started with server parameter file and PFILE clause used in command

Cause: A PFILE clause was specified for duplicate command, but database was started with a server parameter file causing a conflict.

Action: Remove PFILE clause from command or restart database without using a server parameter file.

RMAN-05598: SPFILE and PFILE clause specified in command

Cause: SPFILE and PFILE clauses were specified for duplicate command causing a conflict.

Action: Remove either one of the clauses and retry the command.

RMAN-05599: PASSWORD clause is not needed when duplicating for standby database from active database

Cause: PASSWORD clause was specified when creating a standby database from active database. This is not needed, it is automatic.

Action: No action is required. This is an informational message only.

RMAN-05600: Cannot specify UNTIL clause when duplicating from active database

Cause: An UNTIL clause in the command or with a SET UNTIL was in effect for an active database duplication.

Action: Remove UNTIL clause and reattempt duplication.

RMAN-05601: Failed to restore original settings to server parameter file

Cause: An error was received while duplicating the database after the server parameter file was modified by RMAN. An attempt was made to restore original settings to the server parameter file, but the original error was such that it was not possible to restore the settings.

Action: Before reattempting database duplication, the server parameter file needs to be fixed manually with the original values.

RMAN-05602: restarting auxiliary database without server parameter file

Cause: This is an informational message only.

Action: No action is required.

RMAN-05603: not connected to target database with a net service name

Cause: A command that restores files to the auxiliary instance from the target instance was requested. Such a command requires that a net service name be present in the connect string used to connect to the target instance.

Action: Exit RMAN session and then connect to target database using command line or CONNECT TARGET command with a net service name in the connect string. That service name must be valid on the auxiliary instance.

RMAN-05604: Cannot specify SECTION SIZE together with USING COPY

Cause: A SECTION SIZE clause was specified for the command. This option is valid only when USING BACKUPSET or USING COMPRESSED BACKUPSET option is specified.

Action: Remove the SECTION SIZE clause or specify USING BACKUPSET option and try again.

RMAN-05605: Cannot specify USING option when not using ACTIVE DATABASE option

Cause: A USING clause was specified for the command. This option is valid only when ACTIVE DATABASE option is specified.

Action: Remove USING option or specify ACTIVE DATABASE option and try again.

RMAN-05606: Cannot specify SECTION SIZE when not using ACTIVE DATABASE option

Cause: A SECTION SIZE clause was specified for the command. This option is valid only when ACTIVE DATABASE option is used.

Action: Remove SECTION SIZE option or specify ACTIVE DATABASE option and try again.

RMAN-05607: Cannot remove created server parameter file

Cause: Duplicate created a server parameter file that could not be removed because no client parameter file was provided for the command.

Action: Remove manually the created server parameter file.

RMAN-05608: Tablespace *string* cannot be dropped due to partitioned table

Cause: A partitioned table was contained in the tablespaces that were not included in the new database, however the tablespaces cannot be dropped until the table is dropped.

Action: Manually drop the partitioned table and then the tablespaces.

RMAN-05609: Must specify a username for target connection when using active duplicate

Cause: An active duplication was attempted but no username was provided in the connection to the target database.

Action: Specify a username when connecting to the target and retry the operation.

RMAN-05610: Must specify a username for auxiliary connection when using active duplicate

Cause: An active duplication was attempted but no username was provided in the connection to the auxiliary database.

Action: Specify a username when connecting to the auxiliary and retry the operation.

RMAN-05611: Usernames for target and auxiliary connections must be the same when using active duplicate

Cause: An active duplication was attempted but the usernames provided in the connection to the target and auxiliary database are not the same.

Action: Specify the same username when connecting to the target and the auxiliary database and retry the operation.

RMAN-05612: Must specify a password for target connection when using active duplicate

Cause: An active duplication was attempted but no password was provided in the connection to the target database.

Action: Specify a password when connecting to the target and retry the operation.

RMAN-05613: Must specify a password for auxiliary connection when using active duplicate

Cause: An active duplication was attempted but no password was provided in the connection to the auxiliary database.

Action: Specify a password when connecting to the auxiliary and retry the operation.

RMAN-05614: Passwords for target and auxiliary connections must be the same when using active duplicate

Cause: An active duplication was attempted but the passwords provided in the connection to the target and auxiliary database are not the same.

Action: Specify the same password when connecting to the target and the auxiliary database and retry the operation.

RMAN-05615: SKIP and DUPLICATE PLUGGABLE DATABASE cannot be used together

Cause: SKIP PLUGGABLE DATABASE and DUPLICATE PLUGGABLE DATABASE were both specified in the same command. These options are incompatible and cannot be used together.

Action: Remove one of the incompatible options and retry the command.

RMAN-05616: pluggable database *string* cannot be skipped from duplication

Cause: The CDB\$ROOT and PDB\$SEED databases were not included in the DUPLICATE DATABASE. They must be present.

Action: Remove the CDB\$ROOT and PDB\$SEED database from the SKIP list and retry the operation.

RMAN-05617: duplicate operand DUPLICATE TABLESPACE *string* and PLUGGABLE DATABASE *string*

Cause: The specified operand refers to same PLUGGABLE DATABASE in the DUPLICATE option list.

Action: Delete the duplicate operand and retry the command.

RMAN-05618: Ignoring SKIP TABLESPACE *string* because whole PDB *string* is being skipped

Cause: This is an informational message only.

Action: No action is required.

RMAN-05619: SKIP PLUGGABLE DATABASE cannot be used with DUPLICATE TABLESPACE

Cause: A SKIP PLUGGABLE DATABASE clause was specified for the command.

Action: Remove the SKIP PLUGGABLE DATABASE clause and try again.

RMAN-05620: Skipping pluggable database *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-05621: password file location could not be found for the target database

Cause: The password file location did not exist for the target database instance.

Action: Set the password file location for the target database instance.

RMAN-05622: password file location could not be found for the auxiliary database

Cause: The password file location did not exist for the auxiliary database instance.

Action: Set the password file location for the auxiliary database instance.

RMAN-05623: number of patterns (*number*) to PARAMETER_VALUE_CONVERT must be even

Cause: An uneven number of patterns was specified.

Action: Specify one more or one less pattern.

RMAN-05624: data file name not found in the repository for data file number=*number*

Cause: The data file name corresponding to the specified data file number was not found in the control file or recovery catalog.

Action: Use the SET NEWNAME command for data file whose name is not found in the repository and rerun the command.

RMAN-05625: command not allowed when connected to a pluggable database

Cause: A command was attempted that can be performed only in the root container.

Action: Connect to the target and clone the database to the root container and retry the command.

RMAN-05626: The target database must be open.

Cause: A DUPLICATE with FROM ACTIVE DATABASE command was specified while the database was mounted or closed. To perform active database duplication of pluggable databases, the target database must be open in read-only or read/write mode.

Action: Open the target database in read-only or read/write mode and retry the command.

RMAN-05627: The clone database must be open in read/write mode.

Cause: A DUPLICATE with FROM ACTIVE DATABASE command was specified while the database was mounted or closed. To perform active duplication of pluggable databases, the clone database must be open in read/write mode.

Action: Open the target database in read/write mode and retry the command.

RMAN-05628: Target database pluggable database (*string*) does not exist.

Cause: The pluggable database being duplicated did not exist on the target database.

Action: Check the PDB name and retry the command.

RMAN-05629: The target pluggable database (*string*) must be open.

Cause: A DUPLICATE PLUGGABLE DATABASE with FROM ACTIVE DATABASE command was specified while the pluggable database was mounted or closed. When using the DUPLICATE command with pluggable databases, the specified target pluggable database must be open in read-only or read/write mode.

Action: Open the target pluggable database in read-only or read/write mode and retry the command.

RMAN-05630: Clone database pluggable database already exists: *string*.

Cause: The pluggable database specified in the DUPLICATE command was already in existence on the clone database.

Action: Specify a different name for the pluggable database and retry the command.

RMAN-05631: duplicate pluggable database does not allow the use of LOGFILE clause

Cause: A LOGFILE clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the LOGFILE clause and try again.

RMAN-05632: duplicate pluggable database does not allow the use of USING COPY clause

Cause: A USING COPY clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the USING COPY clause and try again.

RMAN-05633: duplicate pluggable database does not allow the use of SKIP READONLY clause

Cause: A SKIP READONLY clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the SKIP READONLY clause and try again.

RMAN-05634: duplicate pluggable database does not allow the use of FOR FARSYNC clause

Cause: A FOR FARSYNC clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the FOR FARSYNC clause and try again.

RMAN-05635: duplicate pluggable database does not allow the use of FOR STANDBY clause

Cause: A FOR STANDBY clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the FOR STANDBY clause and try again.

RMAN-05636: duplicate pluggable database does not allow the use of PFILE/SPFILE clause

Cause: A PFILE/SPFILE clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the PFILE/SPFILE clause and try again.

RMAN-05637: duplicate pluggable database does not allow the use of SKIP TABLESPACE clause

Cause: A SKIP TABLESPACE clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the SKIP TABLESPACE clause and try again.

RMAN-05638: duplicate pluggable database does not allow the use of SKIP PLUGGABLE DATABASE clause

Cause: A SKIP PLUGGABLE DATABASE clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the SKIP PLUGGABLE DATABASE clause and try again.

RMAN-05639: duplicate pluggable database does not allow the use of OPEN RESTRICTED clause

Cause: A OPEN RESTRICTED clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the OPEN RESTRICTED clause and try again.

RMAN-05640: duplicate pluggable database does not allow the use of TABLESPACE clause

Cause: A TABLESPACE clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the TABLESPACE clause and try again.

RMAN-05641: duplicate pluggable database does not allow the use of PASSWORDFILE clause

Cause: A PASSWORDFILE clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the PASSWORDFILE clause and try again.

RMAN-05642: duplicate pluggable database does not allow the use of NOREDO clause

Cause: A NOREDO clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the NOREDO clause and try again.

RMAN-05643: duplicate pluggable database does not allow the use of UNDO TABLESPACE clause

Cause: A UNDO TABLESPACE clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the UNDO TABLESPACE clause and try again.

RMAN-05644: duplicate pluggable database does not allow the use of BACKUP LOCATION clause

Cause: A BACKUP LOCATION clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the BACKUP LOCATION clause and try again.

RMAN-05645: target database change tracking not enabled

Cause: For DUPLICATE pluggable databases, the specified target database must have change tracking enabled.

Action: Enable change tracking on the target database and retry the command.

RMAN-05646: duplicate pluggable database supported only with active duplicate

Cause: Duplicate pluggable database is allowed only for active duplication.

Action: Add FROM ACTIVE DATABASE clause and retry the command.

RMAN-05647: duplicate pluggable database does not allow the use of AS ENCRYPTED or AS DECRYPTED clause

Cause: An AS ENCRYPTED or AS DECRYPTED clause was specified, but this clause is not supported for duplicating a pluggable database.

Action: Remove the AS ENCRYPTED or AS DECRYPTED clause and try again.

RMAN-05648: duplicate pluggable database does not allow the use of DORECOVER clause

Cause: A DORECOVER clause was specified, but this clause is not supported for duplicating a pluggable database.

Action: Remove the DORECOVER clause and try again.

RMAN-05649: duplicate pluggable database does not allow the use of UNTIL SCN or TO RESTORE POINT clause

Cause: A UNTIL SCN or TO RESTORE POINT clause was specified, but this clause is not supported for duplicating a pluggable database.

Action: Remove the UNTIL SCN or TO RESTORE POINT clause and try again.

RMAN-05650: duplicate pluggable database does not allow the use of NOREMOVE clause

Cause: A NOREMOVE clause was specified, but this clause is not supported for duplicating a pluggable database.

Action: Remove the NOREMOVE clause and try again.

RMAN-05651: duplicate pluggable database does not allow the use of NOCHECK clause

Cause: A NOCHECK clause was specified, but this clause is not supported for duplicating a pluggable database.

Action: Remove the NOCHECK clause and try again.

RMAN-05652: duplicate pluggable database does not allow the use of FORCE clause

Cause: A FORCE clause was specified, but this clause is not supported for duplicating a pluggable database.

Action: Remove the FORCE clause and try again.

RMAN-05653: duplicate pluggable database does not allow the use of NOOPEN clause

Cause: A NOOPEN clause was specified, but this clause is not supported for duplicating a pluggable database.

Action: Remove the NOOPEN clause and try again.

RMAN-05654: target database local undo not enabled

Cause: For DUPLICATE pluggable databases (PDBs) or point-in-time recovery of application root PDB or application PDB, the specified target database did not have local undo enabled.

Action: Enable local undo on the target database and retry the command.

RMAN-05655: specified REMOTE_RECOVERY_FILE_DEST parameter is NULL

Cause: For DUPLICATE pluggable databases, the specified clone instance SPFILE REMOTE_RECOVERY_FILE_DEST parameter was NULL.

Action: Set the valid REMOTE_RECOVERY_FILE_DEST parameter at SPFILE and try again.

RMAN-05656: found backup of database ID *string*

Cause: This is an information message only.

Action: No action is required.

RMAN-05657: There are multiple database IDs present.

Cause: There were multiple database IDs present in the BACKUP LOCATION specified. RMAN did not know which database ID to use for the DUPLICATE command.

Action: Use the SET DBID command to specify the database ID before the DUPLICATE command and retry the command.

RMAN-05658: searching for database ID

Cause: This is an information message only.

Action: No action is required.

RMAN-05659: failed to load XML file *string*

Cause: The XML file did not exist or has an invalid format.

Action: Ensure that the XML file exists and has a valid format.

RMAN-05660: error parsing XML file *string*

Cause: XML file has an invalid format.

Action: Ensure that the XML file has a valid format.

RMAN-05661: multiple channel types not allowed for BACKUP LOCATION FROM FILE

Cause: Disk and non-disk channels were allocated for the BACKUP LOCATION FROM FILE option in the DUPLICATE command. Only one channel type can be used when using this option.

Action: Allocate only one channel type and retry the command.

RMAN-05662: The file name for data file *number* of excluded tablespace *string* is missing in the control file.

Cause: The data file was missing. The excluded tablespace was treated as a skipped tablespace but not dropped after DUPLICATE with the existing CONFIGURE EXCLUDE FOR TABLESPACE command was issued.

Action: Issue the ALTER DATABASE RENAME statement to correct the control file and then bring the excluded tablespace online or drop tablespace.

RMAN-05663: One or more multisection pieces are missing.

Cause: One or more multisections pieces were not provided in the backup set list.

Action: Provide the correct list of multisection backup pieces for the RESTORE command.

RMAN-05664: The specified pluggable database (PDB) *string* is an application root PDB.

Cause: This is an informational message only.

Action: No action is required.

RMAN-05665: Application pluggable database *string* is dependent on application root *string*.

Cause: This is an informational message only.

Action: No action is required.

RMAN-05666: Application PDB *string* does not exist as of PITR SCN

Cause: Application root pluggable database (PDB) performed a point-in-time recovery (PITR) to a time before the specified application PDB was created.

Action: Drop the specified application PDB or change the application root version to match the version of the application PDB.

RMAN-05667: unable to drop application pluggable database *string*

Cause: The target connection did not have sufficient privileges to drop the specified application pluggable database (PDB).

Action: Connect as a user with privileges to drop tenant and execute the drop manually.

RMAN-05668: failed to create XML file *string*

Cause: Failed to create the XML file.

Action: Ensure that the XML file location exists.

RMAN-05669: missing element *string* in XML file

Cause: Missing element in the XML file.

Action: Ensure that the XML file contents are correct.

RMAN-05670: "FROM TRANSPORT LIST" was valid after foreign DBID was set

Cause: FROM TRANSPORT LIST was used before foreign database identifier (DBID) was set.

Action: Set FOREIGN DBID and retry the command.

RMAN-05671: no backups found in the transport list

Cause: The transport list was empty.

Action: Ensure that restore preview to transport list command has been run for the tablespace or pluggable database that will be transported.

RMAN-05672: SET FOREIGN DBID is not valid if not connected to catalog

Cause: A foreign database identifier (DBID) translation was required before connecting to the catalog.

Action: Ensure that catalog is provided.

RMAN-05673: Specify *string* clause with TO TRANSPORT LIST or TO TRANSPORT FILE

Cause: The specified option was used without TO TRANSPORT LIST or TO TRANSPORT FILE in the preview command.

Action: Remove the option and resubmit the command.

RMAN-05674: specification does not match any pluginfile set in the repository

Cause: The specified pluginfile set were not found in the recovery catalog or target database control file.

Action: Verify plugin backup set existence and retry the command.

RMAN-05675: Multiple plugin file sets are found in the repository

Cause: There were multiple plugin file backup sets found in the recovery catalog or target database control file with the specified plugin file tag.

Action: Mark one of the plugin file backup set as unavailable and retry the command.

RMAN-05676: command not allowed when foreign DBID is set

Cause: The command could not be run until the foreign database identifier (DBID) was cleared.

Action: Run the SET FOREIGN DBID CLEAR command.

RMAN-05678: cannot use SET FOREIGN DBID command when connected to a target database

Cause: The SET FOREIGN DBID command was run while connected to the target.

Action: Exit the Recovery Manager (RMAN) session and then start a new RMAN session without target database.

RMAN-06000: could not open recovery manager library file: *string*

Cause: The "recover.bsq" file could not be opened.

Action: Check that the file was installed correctly and that the user running RMAN has authority to read the file.

RMAN-06001: error parsing job step library

Cause: A syntax error was encountered while parsing "recover.bsq".

Action: Ensure that the correct version of the file is installed and that it has not been modified in any way.

RMAN-06002: command not allowed when not connected to a recovery catalog

Cause: A command that is allowed only when a recovery catalog connect string was supplied was attempted.

Action: Avoid using the command, or restart RMAN and supply a recovery catalog connect string via the CATALOG parameter.

RMAN-06003: Oracle error from target database: *lnstring*

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-06004: Oracle error from recovery catalog database: *string*

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-06005: connected to target database: *string* (DBID=*string*)

Cause: This is an informational message only.

Action: No action is required.

RMAN-06006: connected to target database: *string* (not mounted)

Cause: This is an informational message only.

Action: No action is required.

RMAN-06007: target database not mounted and db_name not set in init.ora

Cause: The target database has not mounted the control file, and its "init.ora" file does not specify the DB_NAME parameter.

Action: MOUNT the target database, or add the DB_NAME parameter to its "init.ora" and restart the instance.

RMAN-06008: connected to recovery catalog database

Cause: This is an informational message only.

Action: No action is required.

RMAN-06009: using target database control file instead of recovery catalog

Cause: This is an informational message only.

Action: No action is required.

RMAN-06010: error while looking up datafile: *string*

Cause: An error occurred while looking up the specified data file in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure. Ensure that the file name is entered correctly. If the data file was added recently, then a RESYNC CATALOG must be done to update the recovery catalog.

RMAN-06011: invalid level specified: *number*

Cause: An invalid incremental backup level was specified.

Action: Incremental backup level must be between 0 and 4.

RMAN-06012: channel: *string* not allocated

Cause: A RELEASE command was found for a channel identifier that was not yet allocated.

Action: Correct the channel identifier, or add an ALLOCATE CHANNEL command.

RMAN-06013: duplicate channel identifier found: *string*

Cause: A channel identifier was reused without first releasing the channel.

Action: Add a RELEASE CHANNEL command.

RMAN-06014: command not implemented yet: *string*

Cause: Not all commands are implemented for the beta version.

Action: Avoid using the command.

RMAN-06015: error while looking up datafile copy name: *string*

Cause: An error occurred while looking up the specified data file copy name in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure. Ensure that the file name is entered correctly. If the data file copy was created when the recovery catalog was not available, then a RESYNC CATALOG must be done to update the recovery catalog.

RMAN-06016: duplicate backup operand specified: *string*

Cause: The specified operand appears more than once in the same backup specifier or backup command.

Action: Delete the duplicated operand.

RMAN-06017: initialization of parser failed

Cause: The parser package initialization routine returned an error.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-06018: duplicate operand specified in backup specification: *string*

Cause: A backup specification operand appears more than once in a backup specification.

Action: Delete the duplicate operand.

RMAN-06019: could not translate tablespace name "*string*"

Cause: An error occurred while looking up the specified tablespace name in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure. Ensure that the tablespace is entered correctly. If the tablespace was added recently, then a RESYNC CATALOG must be done to update the recovery catalog.

RMAN-06020: connected to auxiliary database (not started)

Cause: This is an informational message only.

Action: No action is required.

RMAN-06021: FROM DATAFILECOPY/BACKUPSET may not be specified with archived logs

Cause: The FROM DATAFILECOPY/BACKUPSET option applies only to data file and control file restores.

Action: Use this option only for data file and control file restores.

RMAN-06022: invalid level specified for image copy: *number*

Cause: An invalid incremental backup level was specified for an image copy.

Action: Incremental backup level must be 0 for image copies.

RMAN-06023: no backup or copy of datafile *number* found to restore

Cause: A data file, tablespace, or database restore could not proceed because no backup or copy of the indicated file was found. It may be the case that a backup or copy of this file exists but does not satisfy the criteria specified in the user's restore operands.

Action: None - this is an informational message. See message 6026 for further details.

RMAN-06024: no backup or copy of the control file found to restore

Cause: A control file restore could not proceed because no backup or copy of the control file was found. It may be the case that a backup or copy of this file exists but does not satisfy the criteria specified in the user's restore operands.

Action: None - this is an informational message. See message 6026 for further details.

RMAN-06025: no backup of archived log for thread *number* with sequence *number* and starting SCN of *string* found to restore

Cause: An archived log restore could not proceed because no backup of the indicated archived log was found. It may be the case that a backup of this file exists but does not satisfy the criteria specified in the user's restore operands.

Action: None - this is an informational message. See message 6026 for further details.

RMAN-06026: some targets not found - aborting restore

Cause: Some of the files specified for restore could not be found. Message 6023, 6024, or 6025 is also issued to indicate which files could not be found. Some common reasons why a file can not be restored are that there is no backup or copy of the file that is known to recovery manager, or there are no backups or copies that fall within the criteria specified on the RESTORE command, or some data file copies have been made but not cataloged.

Action: The Recovery Manager LIST command can be used to display the backups and copies that Recovery Manager knows about. Select the files to be restored from that list.

RMAN-06027: no archived logs found that match specification

Cause: An archived log record specifier did not match any archived logs in the recovery catalog or target database control file.

Action: Resubmit the command with a different archived log record specifier. The Recovery Manager (RMAN) LIST command can be used to display all archived logs that RMAN knows about.

RMAN-06028: duplicate operand specified in restore specification: *string*

Cause: The CHANNEL, TAG, FROM, PARMS, VALIDATE, DEVICE TYPE, CHECK READONLY or DB_UNIQUE_NAME option was specified more than once in the restore command or in one of the restore specifications.

Action: Correct and resubmit the command.

RMAN-06029: the control file may be included only in a datafile backup set

Cause: The "include current/standby control file" option was specified for an archived log backup set.

Action: Use this option only for data file backup sets.

RMAN-06030: the DELETE [ALL] INPUT option may not be used with a datafile backup set

Cause: The DELETE [ALL] INPUT option was specified for a backup that contains the current control file or data file.

Action: Remove the option and resubmit the command.

RMAN-06031: could not translate database keyword

Cause: An error was received when calling DBMS_RCVMAN

Action: This message should be accompanied by other error messages indicating the cause of the error.

RMAN-06032: at least 1 channel of TYPE DISK must be allocated to execute a COPY command

Cause: No channel of TYPE DISK was allocated.

Action: Allocate a channel of TYPE DISK and re-issue the command.

RMAN-06033: channel *string* not allocated

Cause: An rman command requests a specific channel, but the requested channel has not been allocated.

Action: ALLOCATE the channel, or correct the channel identifier.

RMAN-06034: at least 1 channel must be allocated to execute this command

Cause: No channels were allocated.

Action: ALLOCATE a channel.

RMAN-06035: wrong version of recover.bsq, expecting *string*, found *string*

Cause: The "recover.bsq" file is incompatible with the RMAN executable.

Action: Install the correct version of recover.bsq.

RMAN-06036: datafile *number* is already restored to file *string*

Cause: A SET NEWNAME command was issued to restore a data file to a location other than the original data file, and Recovery Manager determined that the best candidate for restoring the file is the data file copy with the same name, therefore the file is already restored and no action need be taken.

Action: None - this is an informational message.

RMAN-06038: recovery catalog package detected an error

Cause: A call to DBMS_RCVMAN returned an error.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-06039: SET NEWNAME command has not been issued for datafile *string*

Cause: A SWITCH command was specified for a data file, but no destination was specified and no SET NEWNAME command has been previously issued for that file. An explicit file to switch to must be specified if no SET NEWNAME command has been issued.

Action: Correct and resubmit the SWITCH command.

RMAN-06040: control file is already restored to file *string*

Cause: The best candidate control file for restoration is the one that is named in the RESTORE CONTROLFILE command, hence no action need be taken.

Action: None - this is an informational message.

RMAN-06041: cannot switch file *number* to copy of file *number*

Cause: An attempt was made to switch a data file to a copy of a different data file.

Action: Correct and resubmit the SWITCH command.

RMAN-06042: PLUS ARCHIVELOG option is not supported with non-datafile backups

Cause: The PLUS ARCHIVELOG option was supplied but does not apply to this type of backup.

Action: Remove the PLUS ARCHIVELOG operand and reenter the command.

RMAN-06043: TAG option not supported for archived log copies

Cause: The tag option was supplied but does not apply to this type of copy.

Action: Remove the TAG operand and reenter the command

RMAN-06045: LEVEL option not supported for archived log or current/standby control file copies

Cause: The LEVEL option was supplied but does not apply to this type of copy.

Action: Remove the LEVEL operand and reenter the command.

RMAN-06046: archived log name: *string*

Cause: An error occurred while translating an archived log name to its recovery catalog RECID/time stamp. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-06047: duplicate datafile *number* specified for restoration from copy

Cause: The indicated data file was specified more than once in the same restore command.

Action: Correct and resubmit the RESTORE command.

RMAN-06048: duplicate control file specified for restoration from copy

Cause: The control file was specified more than once in the same RESTORE command.

Action: Correct and resubmit the RESTORE command.

RMAN-06049: CHECK LOGICAL option not supported for archived log or current/standby control file copies

Cause: The check logical option was supplied but does not apply to this type of copy.

Action: Remove the CHECK LOGICAL operand and reenter the command

RMAN-06050: archived log for thread *number* with sequence *number* is already on disk as file *string*

Cause: An archived log which was requested to be restored (either explicitly or via a range specification) does not need to be restored because it already exists on disk.

Action: None - this is an informational message

RMAN-06051: DELETE INPUT option not implemented yet

Cause: This option was specified in a backup specification.

Action: Remove the DELETE INPUT option.

RMAN-06052: no parent backup or copy of datafile *number* found

Cause: An incremental backup at level 1 or higher could not find any parent backup or copy of the indicated data file. A level 0 backup of the data file will be taken automatically.

Action: This is an informational message only.

RMAN-06053: unable to perform media recovery because of missing log

Cause: This message is accompanied with another message identifying the missing log. The log would be needed to perform the media recovery, but the log is not on disk and no backup set containing the log is available.

Action: Determine if a backup set containing the log can be made available. If so, then use the CHANGE command to make the backup set available and retry the command. If not, then a point-in-time recovery up to the missing log is the only alternative.

RMAN-06054: media recovery requesting unknown archived log for thread *string* with sequence *string* and starting SCN of *string*

Cause: Media recovery is requesting a log whose existence is not recorded in the recovery catalog or target database control file.

Action: If a copy of the log is available, then add it to the recovery catalog and/or control file via a CATALOG command and then retry the RECOVER command. If not, then a point-in-time recovery up to the missing log is the only alternative and database can be opened using ALTER DATABASE OPEN RESETLOGS command.

RMAN-06055: could not find archived log with sequence *string* for thread *string*

Cause: A log which was on disk at the start of media recovery or which should have been restored from a backup set could not be found.

Action: Check the Recovery Manager message log to see if the log was restored by a previous job step. If so, then check the V\$ARCHIVED_LOG view to see if the log is listed in the control file. If so, then validate that the log exists on disk and is readable. If the log was not restored, or was restored but no record of the log exists in V\$ARCHIVED_LOG, then contact Oracle Support Services.

RMAN-06056: could not access datafile *number*

Cause: A backup or copy could not proceed because the data file header could not be read or the header was not valid.

Action: Make the data file accessible or skip it.

RMAN-06057: a standby control file cannot be included along with a current control file

Cause: "current control file" was specified along with "standby control file".

Action: Remove "current control file" or "standby control file" from backup specification.

RMAN-06058: a current control file cannot be included along with a standby control file

Cause: "standby control file" was specified along with "current control file".

Action: Remove "standby control file" or "current control file" from backup specification.

RMAN-06059: expected archived log not found, loss of archived log compromises recoverability

Cause: The archived log was not found. The recovery catalog or target database control file thinks it does exist. If the archived log has in fact been lost and there is no backup, then the database is no longer recoverable across the point-in-time covered by the archived log. This may occur because the archived log was removed by an outside utility without updating the recovery catalog or target database control file.

Action: If the archived log has been removed with an outside utility and the archived log has already been backed up, then you can synchronize the recovery catalog or target database control file by running CROSSCHECK ARCHIVELOG ALL. If the

archived log has not been previously backed up, then you should take a full backup of the database and archived logs to preserve recoverability. Previous backups are not fully recoverable.

RMAN-06060: warning: skipping datafile compromises tablespace *string* recoverability

Cause: SKIP INACCESSIBLE or SKIP OFFLINE option resulted in skipping data file during BACKUP. If the data file has in fact been lost and there is no backup, then the tablespace is no longer recoverable without ALL archived logs since data file creation. This may occur because the data file was deleted by an outside utility or the data file is made OFFLINE [DROP].

Action: If there is no backup of skipped data file and the tablespace has to be recoverable without ALL archived logs since data file creation, then you should make these data file available for backup.

RMAN-06061: warning: skipping archived log compromises recoverability

Cause: SKIP INACCESSIBLE option resulted in skipping archived logs during BACKUP. If the archived log has in fact been lost and there is no backup, then the database is no longer recoverable across the point-in-time covered by the archived log. This may occur because archived log was removed by an outside utility without updating the recovery catalog or target database control file.

Action: If the archived log has been removed with an outside utility and the archived log has already been backed up, then you can synchronize the recovery catalog or target database control file by running CROSSCHECK ARCHIVELOG ALL. If the archived log has not been previously backed up, then you should take a full backup of the database and archived logs to preserve recoverability. Previous backups are not fully recoverable.

RMAN-06062: can not backup SPFILE because the instance was not started with SPFILE

Cause: A backup command requested a backup of the SPFILE, but no SPFILE was used to startup the instance.

Action: Create an SPFILE and re-start the instance using the SPFILE or modify the command.

RMAN-06063: DBID is not found in the recovery catalog

Cause: DBID is not found in the recovery catalog.

Action: Verify that the DBID is correct and restart the command.

RMAN-06064: creating datafile file number=*string* name=*string*

Cause: RESTORE/RECOVER command was issued and there were no backup available for the data file.

Action: This is an informational message only.

RMAN-06065: The operand [*string*] conflicts with another specified operand.

Cause: An attempt was made to use two (or more) conflicting operands within the same statement.

Action: Remove one or both of the conflicting operands.

RMAN-06066: the target database must be mounted when issuing a RECOVER command

Cause: A RECOVER command was issued, but the target database control file is not mounted.

Action: Mount the target database control file by issuing ALTER DATABASE MOUNT via Enterprise Manager or Server Manager.

RMAN-06067: RECOVER DATABASE required with a backup or created control file

Cause: The control file has been restored from a backup or was created via ALTER DATABASE CREATE CONTROLFILE.

Action: Use the RECOVER DATABASE command to perform the recovery.

RMAN-06068: recovery aborted because of missing datafiles

Cause: This error should be accompanied by one or more instances of message ORA-06094.

Action: Refer to message ORA-06094.

RMAN-06069: the file name for datafile *string* is missing in the control file

Cause: Media recovery of a backup control file added this data file to the control file, but it does not set the file name because that is unsafe.

Action: If the data file is on disk, then issue ALTER DATABASE RENAME to correct the control file. Otherwise, RESTORE the data file, and then use SWITCH to make it known to the control file. If the tablespace containing this data file will be dropped, then reissue the RECOVER command with a SKIP clause to skip recovery of this tablespace.

RMAN-06070: DBWR could not identify datafile *string*

Cause: DBWR could not find the specified data file.

Action: Ensure that the data file exists and is accessible.

RMAN-06071: could not open datafile *string*

Cause: An error was encountered when trying to open the specified data file.

Action: Ensure that the data file exists and is accessible.

RMAN-06073: file header is corrupt for datafile *string*

Cause: Oracle detected a corruption in the file header. A media failure has probably occurred.

Action: RESTORE the data file to a new location, then do a SWITCH, and then retry the RECOVER command.

RMAN-06074: file *string* is not an Oracle datafile

Cause: The file header indicates that this file is not a data file. The file may have been overlaid or corrupted.

Action: RESTORE the data file to a new location, then do a SWITCH, and then retry the RECOVER command.

RMAN-06075: datafile *string* does not belong to this database

Cause: The file header indicates that this file belongs to some other Oracle database.

Action: RESTORE the data file to a new location, then do a SWITCH, and then retry the RECOVER command.

RMAN-06076: datafile *string* contains wrong datafile

Cause: The data file header indicates the file contains a different data file number.

Action: RESTORE the data file, and then retry the RECOVER command.

RMAN-06077: datafile *string* is a different version than contained in the control file

Cause: The control file entry for this data file specifies a different version of this data file. Different versions of a data file can exist when a tablespace is dropped, and a new tablespace is created which reuses the same data file numbers.

Action: If the data file is correct, the fix the control file by using the SWITCH command. Otherwise, RESTORE the correct version of this data file and retry the RECOVER command.

RMAN-06078: the control file is older than datafile *string*

Cause: The control file appears to be older than the specified data file, but it is not marked as a backup control file. This indicates that the control file has been replaced with an older version. This error does not occur when a backup control file which was created via Recovery Manager or the ALTER DATABASE BACKUP CONTROLFILE command is restored because such control files are marked as backups.

Action: RESTORE a control file and perform RECOVER DATABASE.

RMAN-06079: database must be mounted to perform recovery

Cause: A RECOVER command was issued, but the target database is not mounted.

Action: Issue ALTER DATABASE MOUNT.

RMAN-06080: SWITCH required for datafile *string*

Cause: The control file record for this data file is for an older incarnation of the data file. A SWITCH command must be issued to updated the control file before doing RECOVER.

Action: Issue SWITCH command then retry RECOVER.

RMAN-06081: error reading datafile header for datafile *string*, code *string*

Cause: X\$KCVFH returned the specified code in the HXERR column when it was queried for the specified data file.

Action: Ensure the data file exists and is readable. Using a newer version of Recovery Manager may return a more meaningful error message. If you have no newer version of Recovery Manager, contact Oracle Support Services.

RMAN-06082: datafile copy tag *string* is ambiguous

Cause: The specified tag refers to multiple data file copies belonging to different data files.

Action: Specify the data file copy by file name rather than by tag.

RMAN-06083: error when loading stored script *string*

Cause: The recovery catalog database returned an error. This error explains the cause of the problem.

Action: Correct the problem and retry.

RMAN-06084: the target database may not be mounted when issuing REPLICATE

Cause: A REPLICATE command was issued, but the target database is already mounted.

Action: dismount the target database control file by issuing ALTER DATABASE CLOSE and ALTER DATABASE DISMOUNT via Enterprise Manager or Server Manager.

RMAN-06085: must use SET NEWNAME command to restore datafile *string*

Cause: A RESTORE command for the specified data file could not find a destination name for the specified data file.

Action: Add a SET NEWNAME command prior to the RESTORE command to specify the restore destination for this file.

RMAN-06086: offline files may only be skipped in a datafile backup set

Cause: The SKIP OFFLINE option was specified for an archived log backup set.

Action: Use this option only for data file backup sets.

RMAN-06087: read-only files may only be skipped in a datafile backup set

Cause: The SKIP READONLY option was specified for an archived log backup set.

Action: Use this option only for data file backup sets.

RMAN-06088: datafile copy *string* not found or out of sync with catalog

Cause: The indicated file is not found, or is found but is not the same file that the recovery catalog thinks it is. It is likely that some operation outside of Recovery Manager has altered the file, or that Recovery Manager has not resynced with the target database.

Action: Re-catalog the file and retry the operation.

RMAN-06089: archived log *string* not found or out of sync with catalog

Cause: The indicated file is not found, or is found but is not the same file that the recovery catalog thinks it is. It is likely that some operation outside of Recovery Manager has altered the file, or that Recovery Manager has not resynced with the target database.

Action: Re-catalog the file and retry the operation.

RMAN-06090: error while looking up control file copy: *string*

Cause: An error occurred while looking up the specified control file copy in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure. Ensure that the file name is entered correctly. If the control file copy was created when the recovery catalog was not available, then a RESYNC CATALOG must be done to update the recovery catalog.

RMAN-06091: no channel allocated for maintenance (of an appropriate type)

Cause: A command was entered that requires a maintenance channel, and no maintenance channel is allocated, or none of the appropriate type.

Action: Use `ALLOCATE CHANNEL FOR MAINTENANCE` before deleting backup pieces, or using the `CROSSCHECK` or `DELETE EXPIRED` commands. Proxy copies require a non-DISK channel.

RMAN-06092: error while looking up backup piece

Cause: An error occurred while looking up the specified backup piece in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure. Ensure that the name or key is entered correctly. If the backup piece was created when the recovery catalog was not available, then a `RESYNC CATALOG` must be done to update the recovery catalog.

RMAN-06093: recovery catalog contains obsolete version of datafile *string*

Cause: The specified data file number was dropped and then reused. The control file mounted by the target database contains the newer version of the data file, but the recovery catalog contains information about only the older version.

Action: Issue a `RESYNC` command to update the recovery catalog, then reissue the failing command. If the error persists, contact Oracle Support Services.

RMAN-06094: datafile *string* must be restored

Cause: A `RECOVER` command was issued, and the recovery catalog indicates the specified data file should be part of the recovery, but this data file is not listed in the control file, and cannot be found on disk.

Action: Issue a `RESTORE` command for this data file, using the same `UNTIL` clause specified to the `RECOVER` command (if any), then reissue the `RECOVER`.

RMAN-06095: a backup control file must be restored to recover datafile *string*

Cause: The control file currently mounted by the target database contains a newer incarnation of the data file than the recovery catalog indicates is appropriate for the Point-in-Time being recovered to.

Action: Restore the control file, using the same `UNTIL` clause specified on the failing `RECOVER` command, then reissue the command. If no control file can be restored, then you should issue a `CREATE CONTROLFILE` command.

RMAN-06096: SWITCH required for newname of datafile *string* to take effect

Cause: A `SET NEWNAME` was issued for this data file, but no `SWITCH` command was issued before the `RECOVER` command.

Action: Issue a `SWITCH` command to make the newname take effect before doing `RECOVER`.

RMAN-06098: the target database must be mounted when issuing a BACKUP command

Cause: A `BACKUP` command was issued, but the target database control file is not mounted.

Action: Mount the target database control file by issuing `ALTER DATABASE MOUNT` via Enterprise Manager or Server Manager.

RMAN-06099: error occurred in source file: *string*, line: *number*

Cause: See accompanying error.

Action: See accompanying error.

RMAN-06100: no channel to restore a backup or copy of datafile *number*

Cause: A data file, tablespace, or database restore could not proceed because the backup of the indicated file exists on a device type that was not allocated for restore.

Action: None - this is an informational message. See message 6026 for further details.

RMAN-06101: no channel to restore a backup or copy of the control file

Cause: A control file restore could not proceed because the backup of the indicated file exists on a device type that was not allocated for restore.

Action: None - this is an informational message. See message 6026 for further details.

RMAN-06102: no channel to restore a backup or copy of archived log for thread *number* with sequence *number* and starting SCN of *string*

Cause: An archived log restore could not proceed because the backup of the indicated file exists on a device type that was not allocated for restore.

Action: None - this is an informational message. See message 6026 for further details.

RMAN-06103: duplicate qualifier found in REPORT command: *string*

Cause: The indicated qualifier appears more than once in a REPORT qualifier list.

Action: delete the duplicate qualifier

RMAN-06104: number of times not backed up must be greater than zero

Cause: The NOT BACKED UP clause of the BACKUP command specified 0 times.

Action: Specify a multiplier value of 1 or greater for the number of times not backed up.

RMAN-06105: duplicate qualifier found in LIST command: *string*

Cause: The indicated qualifier appears more than once in a LIST qualifier list.

Action: delete the duplicate qualifier

RMAN-06106: this command requires that target database be mounted

Cause: A command was issued that requires the target database to be mounted, but the target database is not mounted.

Action: Mount the target database control file by issuing ALTER DATABASE MOUNT via Enterprise Manager or Server Manager.

RMAN-06107: warning: control file is not current for REPORT NEED BACKUP DAYS

Cause: The REPORT NEED BACKUP DAYS command may report some files as requiring backups when they really do not, because the most current online status of the file is not known unless a current control file is mounted.

Action: No action is required, however, a current control file should be mounted, if possible, to get the most accurate REPORT output.

RMAN-06108: changed datafile copy unavailable

Cause: This is an informational message only.

Action: No action is required.

RMAN-06109: changed archived log unavailable

Cause: This is an informational message only.

Action: No action is required.

RMAN-06110: changed control file copy unavailable

Cause: This is an informational message only.

Action: No action is required.

RMAN-06111: changed backup piece unavailable

Cause: This is an informational message only.

Action: No action is required.

RMAN-06112: changed datafile copy available

Cause: This is an informational message only.

Action: No action is required.

RMAN-06113: changed archived log available

Cause: This is an informational message only.

Action: No action is required.

RMAN-06114: changed control file copy available

Cause: This is an informational message only.

Action: No action is required.

RMAN-06115: changed backup piece available

Cause: This is an informational message only.

Action: No action is required.

RMAN-06116: cannot crosscheck unavailable object

Cause: An attempt was made to crosscheck an object which is unavailable.

Action: Make object available and try again or don't crosscheck object.

RMAN-06117: cannot do DELETE EXPIRED on an object which is not expired

Cause: An attempt was made to DELETE EXPIRED an object which is not expired.

Action: Remove EXPIRED keyword, crosscheck object, or don't delete object.

RMAN-06118: a backup control file older than SCN *string* must be used for this recovery

Cause: An attempt was made to recover the database, but some files had no backup, and were not present in the control file at the beginning of the restore. This happens when the control file used during the recovery is a backup control file taken before the creation of some of the files that had no backup. In this situation, the control file that is used must be

taken before the creation of all files that have no backup. This will enable RMAN to automatically re-create all of the files that had no backup.

Action: Restore a control file that was backed up before the specified system change number (SCN). The following RMAN commands can be used to do this: SET UNTIL SCN *x*; (where *x* is the SCN displayed in the message) RESTORE CONTROLFILE;

RMAN-06119: uncataloged datafile copy

Cause: This is an informational message only.

Action: No action is required.

RMAN-06120: uncataloged archived log

Cause: This is an informational message only.

Action: No action is required.

RMAN-06121: uncataloged control file copy

Cause: This is an informational message only.

Action: No action is required.

RMAN-06122: CHANGE .. UNCATALOG not supported for BACKUPSET

Cause: The CHANGE BACKUPSET .. UNCATALOG command was entered. The UNCATALOG operation is not supported with backup set.

Action: Use CHANGE BACKUPSET .. DELETE instead.

RMAN-06123: operation not supported without the recovery catalog or mounted control file

Cause: A command was used which requires a connection to a recovery catalog database or the target database to be mounted. The command cannot be used when no backup repository is available.

Action: If a recovery catalog database is available, then connect to the recovery catalog and retry the command, otherwise enter a different command.

RMAN-06124: error while looking up datafile copy key: *number*

Cause: An error occurred while looking up the specified data file copy key in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure.

RMAN-06125: error while looking up archived log key: *number*

Cause: An error occurred while looking up the specified archived log key in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure.

RMAN-06126: skipping offline file *string*

Cause: The indicated file will not be included in the backup set because it is offline and the SKIP OFFLINE option was specified.

Action: No action is required.

RMAN-06127: skipping read-only file *string*

Cause: The indicated file could not be included in the backup set because it was read-only and the SKIP READONLY option was specified.

Action: No action is required.

RMAN-06128: skipping inaccessible file *string*

Cause: The indicated file will not be included in the backup set because it could not be read, and the SKIP INACCESSIBLE option was specified.

Action: No action is required.

RMAN-06129: invalid reserved channel ID: *string*

Cause: The specified channel id is invalid. DELETE and DEFAULT are reserved channel names and may not be specified by users.

Action: Specify a different channel ID.

RMAN-06131: SKIP OFFLINE and SKIP READONLY are only allowed with current control file

Cause: The target database control file was not current. The SKIP OFFLINE and SKIP READONLY options are only permitted when the target database control file is current. When the target control file is not current, it is not possible to obtain a data file's offline or read-only status.

Action: Remove the SKIP option or mount a current control file on the target database.

RMAN-06132: cannot backup datafile *string* because it is not in the control file

Cause: A backup command was issued that includes the specified data file, but the data file is not listed in the control file. The control file is not current (it is a backup or a created control file).

Action: Recover the control file to make it current, then retry the backup command.

RMAN-06133: recovery catalog may have obsolete data for datafile *string*

Cause: A RESTORE UNTIL was issued, and the recovery catalog choose an older incarnation of the data file than is listed in the control file.

Action: If the recovery catalog has correct data for the data file, then restore a backup control file using the same UNTIL clause, then retry the data file restore. Otherwise, restore a backup of the incarnation of the data file listed in the control file.

RMAN-06134: host command complete

Cause: An operating system command has completed.

Action: None - this is an informational message.

RMAN-06135: error executing host command: *string*

Cause: A host command returned a non-zero return code.

Action: Correct the offending command.

RMAN-06136: Oracle error from auxiliary database: *string*

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-06137: must have recovery catalog for REPORT SCHEMA AT TIME

Cause: A 'REPORT SCHEMA at_clause' command was issued, but there is no recovery catalog database.

Action: If you are not using a recovery catalog, then you may only issue the 'REPORT SCHEMA' command with no at_clause.

RMAN-06138: control file not mounted - must specify AT clause with REPORT command

Cause: A 'REPORT SCHEMA' with no at_clause was issued, and there is no recovery catalog, and there is also no control file mounted at the target database, so there is no place to get the information about the current list of files comprising the database.

Action: Use a recovery catalog or mount a control file at the target database.

RMAN-06139: warning: control file is not current for REPORT SCHEMA

Cause: A 'REPORT SCHEMA' with no at_clause was issued, and there is no recovery catalog, and the control file mounted by the target instance is not current, so the information about the current list of data files may not be current.

Action: Use a recovery catalog or mount a current control file.

RMAN-06140: cannot specify TAG option with LIST INCARNATION

Cause: The TAG option was specified with LIST INCARNATION. This is not permitted because there is no TAG associated with a database incarnation.

Action: Remove the TAG option and re-run the LIST command.

RMAN-06141: cannot specify ARCHIVELOG LIKE option with RESTORE

Cause: The ARCHIVELOG LIKE option was specified with RESTORE. This is not permitted because recovery catalog contains only those records that are not deleted from disk.

Action: Remove the ARCHIVELOG LIKE option and re-run the command.

RMAN-06142: DEVICE TYPE cannot be specified with this command

Cause: The DEVICE TYPE option was specified with a command that does not support it.

Action: Remove the DEVICE TYPE option and re-run the command.

RMAN-06143: LIKE may only be specified with COPY

Cause: The LIKE option was specified with a RMAN command. This is not permitted because only copies of data files, control files or archived logs have file names that may be tested with a LIKE operand.

Action: Remove the LIKE option and re-run the RMAN command.

RMAN-06144: FROM or UNTIL may not be specified with LIST INCARNATION

Cause: The FROM or UNTIL option was specified with LIST INCARNATION. This is not permitted because there is no time associated with a database incarnation.

Action: Remove the FROM or UNTIL option and re-run the LIST command.

RMAN-06145: control file is not current - obsolete file list may be incomplete

Cause: A CHANGE or REPORT command needs to compute the list of backups that are redundant and may be deleted. If the mounted control file is not current, it may not be possible to determine if a satisfactory backup exists for files which have been offline since the last OPEN RESETLOGS.

Action: No action need be taken - this is an informational message only. To ensure a complete report of obsolete backups, mount a current control file.

RMAN-06146: changes found for file *number* beyond offline SCN

Cause: A CHANGE or REPORT command needs to compute the list of backups that are redundant and may be deleted. A backup was found for a file which is shown as offline in the target database control file, but the backup contains changes beyond the system change number(SCN) when the file went offline. This is most likely because the target database control file is not really current, but is a restored copy of an older control file.

Action: Mount a current control file or a backup control file.

RMAN-06147: no obsolete backups found

Cause: A CHANGE or REPORT command could find no files that meet the specified criteria for obsolescence.

Action: None - this is an informational message.

RMAN-06148: redundancy count must be greater than zero

Cause: The REDUNDANCY operand specified for a CHANGE or REPORT OBSOLETE command was zero.

Action: Specify a REDUNDANCY operand of 1 or greater.

RMAN-06149: cannot BACKUP DATABASE in NOARCHIVELOG mode

Cause: A BACKUP DATABASE command was issued, but the target database was in NOARCHIVELOG mode and was open in READ/WRITE mode.

Action: Mount the target database control file by issuing ALTER DATABASE ARCHIVELOG using the Enterprise Manager or Server Manager.

RMAN-06150: auxiliary name for datafile *number* set to: *string*

Cause: This message is issued in response to a CONFIGURE AUXNAME command.

Action: None - this is an informational message.

RMAN-06151: datafile *string* creation SCN *string*

Cause: This is an informational message. It should be accompanied by other messages.

Action: None

RMAN-06152: copy number *number* does not exist

Cause: An attempt was made to specify an invalid copy number in the VALIDATE or RESTORE VALIDATE command.

Action: Specify a valid copy number or run without the FROM COPY option.

RMAN-06153: validation failed for datafile copy

Cause: The CHANGE DATAFILECOPY VALIDATE command discovered that the data file copy could not be found or no longer contains the same data, so its record was deleted from the recovery catalog or target database control file.

Action: None - this is an informational message.

RMAN-06154: validation succeeded for datafile copy

Cause: The CHANGE DATAFILECOPY VALIDATE command discovered that the data file copy still matches its data in the recovery catalog or target database control file.

Action: None - this is an informational message.

RMAN-06155: validation failed for control file copy

Cause: The CHANGE CONTROLFILECOPY VALIDATE command discovered that the control file copy could not be found or no longer contains the same data, so its record was deleted from the recovery catalog or target database control file.

Action: None - this is an informational message.

RMAN-06156: validation succeeded for control file copy

Cause: The CHANGE CONTROLFILECOPY VALIDATE command discovered that the control file copy still matches its data in the recovery catalog or target database control file.

Action: None - this is an informational message.

RMAN-06157: validation failed for archived log

Cause: The CROSSCHECK ARCHIVELOG command determined that the archived log could not be found or no longer contained the same data, so its record was marked expired.

Action: None - this is an informational message.

RMAN-06158: validation succeeded for archived log

Cause: The CROSSCHECK ARCHIVELOG command or VALIDATE HEADER option determined that the archived log still matches its data.

Action: None - this is an informational message.

RMAN-06159: error while looking up backup set

Cause: An error occurred while looking up the specified backup set in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure. Ensure that the key is entered correctly. If the backup set was created when the recovery catalog was not available, then a RESYNC CATALOG must be done to update the recovery catalog.

RMAN-06160: no backup pieces found for backup set key: *number*

Cause: No backup pieces for the requested backup set were found in the recovery catalog, or the target database control file.

Action: Specify an existing backup set.

RMAN-06161: error when inspecting auxiliary file name: *string*

Cause: This error is accompanied by other errors explaining the cause.

Action: Correct the auxiliary file name if it is wrong via the CONFIGURE AUXNAME command.

RMAN-06162: sql statement: *string*

Cause: This is the sql statement about to be executed for a SQL command.

Action: None, informational message only.

RMAN-06163: some datafiles cannot be recovered, aborting the RECOVER command

Cause: This message should be followed by one or more 6162 or 6164 messages.

Action: Check the accompanying errors.

RMAN-06164: warning: no channel of required type allocated to recover datafile *number*

Cause: A RECOVER command could not proceed because incremental backup sets or archived log backup sets exist on a device type that has not been allocated.

Action: Use the LIST command to determine which device type is needed, then allocate a channel of that type.

RMAN-06165: datafile *string* is too old to recover, restore a more recent copy

Cause: The archived logs and/or incremental backup sets required to recover the data file do not exist, but a more recent backup of the data file exists which can be recovered.

Action: Issue a RESTORE for the data file, then reissue the RECOVER command.

RMAN-06166: datafile *string* cannot be recovered

Cause: Incremental backups or archived redo logs needed to recover the data file cannot be found, and no recoverable full backup or data file copy exists.

Action: Use the LIST command to see if there is a backup set or data file copy that can be made AVAILABLE. If not, then the data file is unrecoverable. If a full or data file copy exists, then a Point-in-Time Recovery may be possible.

RMAN-06167: already connected

Cause: a CONNECT command was issued, but RMAN is already connected to the specified database.

Action: RMAN has no DISCONNECT command, so to connect to a different instance, exit RMAN and start it again.

RMAN-06168: no backup pieces with this tag found: *string*

Cause: A tag was used to specify a list of backup pieces, but no backup pieces with this tag could be found.

Action: Make sure the tag is specified correctly.

RMAN-06169: could not read file header for datafile *string* error reason *string*

Cause: The specified data file could not be accessed. The reason codes are: 1 - file name is MISSINGxx in the control file 2 - file is offline 3 - file is not verified 4 - DBWR could not find the file 5 - unable to open file 6 - I/O error during read 7 - file header is corrupt 8 - file is not a

data file 9 - file does not belong to this database 10 - file number is incorrect 12 - wrong file version 15 - control file is not current

Action: If the error can be corrected, do so and retry the operation. The SKIP option can be used to ignore this error during a backup.

RMAN-06170: no control file copy found with offline range RECID *string* STAMP *string* datafile *string*

Cause: This offline range is needed for recovering the specified data file, but the offline range record has aged out of the current control file and no control file copy with the record could be accessed. At least 1 control file copy containing the offline range was found in the recovery catalog and was in AVAILABLE status.

Action: Query the RC_CONTROLFILE_COPY view for the names of all control file copies, then issue a CHANGE CONTROLFILECOPY ... VALIDATE; command for them. Then reissue the RECOVER command.

RMAN-06171: not connected to target database

Cause: A command was issued but no connection to the target database has been established.

Action: Issue a CONNECT TARGET command to connect to the target database.

RMAN-06172: no AUTOBACKUP found or specified handle is not a valid copy or piece

Cause: A restore could not proceed because no AUTOBACKUP was found or specified handle is not a valid copy or backup piece. In case of restore from AUTOBACKUP, it may be the case that a backup exists, but it does not satisfy the criteria specified in the user's restore operands. In case of restore from handle, it may be the handle is not a backup piece or control file copy. In may be that it does not exist.

Action: Modify AUTOBACKUP search criteria or verify the handle.

RMAN-06173: SET NEWNAME command has not been issued for datafile *string* when restore auxiliary

Cause: Auxiliary type was specified for the control file, but no SET NEWNAME command has been previously issued for a data file.

Action: Issue SET NEWNAME command for every data file in the recovery set.

RMAN-06174: not connected to auxiliary database

Cause: An auxiliary command was issued but no connection to a auxiliary database has been established.

Action: Issue a CONNECT AUXILIARY command to connect to the auxiliary database.

RMAN-06175: deleted script: *string*

Cause: A DELETE SCRIPT command was executed.

Action: None, informational message only.

RMAN-06176: no recovery required; all files are read-only, offline, or excluded

Cause: An attempt was made to recover files that were offline or read-only or excluded. A RECOVER DATABASE command does not need to recover any files

because all of the files to be recovered are offline or read-only or excluded. This can only occur when the SKIP clause includes the SYSTEM tablespace or all files are excluded from backup, restore, and recover. All data files of a proxy pluggable database are implicitly excluded.

Action: None. This is an informational message only.

RMAN-06177: restore not done; all files read only, offline, excluded, or already restored

Cause: A RESTORE command does not need to restore any files, because all of the files to be restored are offline, read-only, excluded, or are already restored to their correct destinations.

Action: None, informational message only

RMAN-06178: datafile *number* not processed because file is offline

Cause: A RESTORE DATABASE or RECOVER DATABASE command omitted processing the indicated data file because it is offline clean at the desired point-in-time.

Action: None, informational message only

RMAN-06179: datafile *number* not processed because file is read-only

Cause: A RESTORE DATABASE or RECOVER DATABASE command omitted processing the indicated data file because it is part of a read-only tablespace at the desired point-in-time.

Action: None, informational message only

RMAN-06180: incremental backups require Enterprise Edition

Cause: A BACKUP command with INCREMENTAL LEVEL > 0 was specified.

Action: Use FULL, or INCREMENTAL LEVEL 0.

RMAN-06181: multiple channels require Enterprise Edition

Cause: Attempt to allocate more than 1 channel in a job.

Action: Remove all except one ALLOCATE CHANNEL command.

RMAN-06182: archived log *string* of thread *string* with sequence *string* larger than MAXSETSIZE

Cause: A BACKUP ARCHIVELOG command specified the MAXSETSIZE operand too low. The specified archived log is larger than MAXSETSIZE will allow.

Action: Increase MAXSETSIZE limit.

RMAN-06183: datafile or datafile copy *string* (file number *string*) larger than MAXSETSIZE

Cause: A BACKUP DATAFILE(copy) command specified the MAXSETSIZE operand too low. The specified data file is larger than MAXSETSIZE will allow.

Action: Increase MAXSETSIZE limit.

RMAN-06184: duplicate object in backup specifier: *string string*

Cause: A backup command specifies the same data file or copy of a data file multiple times.

Action: Eliminate the duplicates.

RMAN-06185: Recovery Manager incompatible with *string* database: RMAN *number.number.number.number* to *number.number.number.number* required

Cause: This version of recovery manager was incompatible with the indicated database or the DBMS_BACKUP_RESTORE package installed in the indicated database.

Action: If the database has been upgraded from an earlier version, ensure that the catxxxx.sql script has been run successfully. Re-install dbmsbkrs.sql and prvtbkrs.plb if necessary. Otherwise, use a version of RMAN within the range specified in the error message.

RMAN-06186: PL/SQL package *string.string* version *string* in *string* database is too old

Cause: The specified PL/SQL package is a version that is too old to work with this version of the Recovery Manager (RMAN).

Action: If the database indicated is CATALOG, then you can use the UPGRADE CATALOG command to upgrade the recovery catalog to the most current version. If the database is TARGET or AUXILIARY, then you must either upgrade the specified database or use an older version of RMAN.

RMAN-06187: control file copy *string* not found or out of sync with catalog

Cause: The indicated file is not found, or is found but is not the same file that the recovery catalog thinks it is. It is likely that some operation outside of Recovery Manager has altered the file, or that Recovery Manager has not resynced with the target database.

Action: Re-catalog the file and retry the operation.

RMAN-06188: cannot use command when connected to a mounted target database

Cause: An attempt was made to issue a command that can be used only when there is no connection to the target database or when the target database is not mounted.

Action: Dismount the database or restart RMAN and use the command before connecting to the target database.

RMAN-06189: current DBID *number* does not match target mounted database (*number*)

Cause: SET DBID was used to set a DBID that does not match the DBID of the database to which RMAN is connected.

Action: If the current operation is a restore to copy the database, do not mount the database. Otherwise, avoid using the SET DBID command, or restart RMAN.

RMAN-06190: PL/SQL package *string.string* version *string* in *string* database is not current

Cause: RMAN detected an old version of the specified package. RMAN will execute in backwards-compatible mode.

Action: No action is required, but certain features and bug-fixes may not be available when RMAN runs in backwards-compatible mode. If the database is CATALOG, then you can use the UPGRADE CATALOG command to upgrade the recovery catalog to the most current version. If the database is TARGET or AUXILIARY, then you must either upgrade the specified database or use an older version of RMAN. The files that

must be run to upgrade the target or auxiliary database are dbmsrman.sql and prvtrman.plb.

RMAN-06191: PL/SQL package *string.string* version *string* in *string* database is too new

Cause: RMAN detected an incompatible version of the specified package.

Action: Use a newer version of recovery manager. Message 6439 indicates the minimum required version of recovery manager.

RMAN-06192: maximum value for MAXPIECESIZE or MAXSETSIZE must be between 1 KB and 2048 GB

Cause: Input size for MAXPIECESIZE or MAXSETSIZE was out of range.

Action: Specify a valid size and retry the command.

RMAN-06193: connected to target database (not started)

Cause: This is an informational message only.

Action: The database must be started before any other RMAN commands are issued.

RMAN-06194: target database instance not started

Cause: A command was issued that requires the target database instance be started.

Action: Issue a STARTUP command to start the instance.

RMAN-06195: auxiliary database not started

Cause: A command was issued that requires the auxiliary database instance be started.

Action: Issue a STARTUP AUXILIARY command.

RMAN-06196: Oracle instance started

Cause: A STARTUP command completed successfully.

Action: None, this is an informational message.

RMAN-06197: Total System Global Area *string* bytes

Cause: This is an informational message only.

Action: No action is required.

RMAN-06198: *string string* bytes

Cause: This is an informational message only.

Action: No action is required.

RMAN-06199: database mounted

Cause: This is an informational message only.

Action: No action is required.

RMAN-06200: Changed *string* objects to AVAILABLE status

Cause: This is an informational message only.

Action: No action is required.

RMAN-06201: Deleted *string* objects

Cause: This is an informational message only.

Action: No action is required.

RMAN-06202: Deleted *string* EXPIRED objects

Cause: This is an informational message only.

Action: No action is required.

RMAN-06203: Changed KEEP options for *string* objects

Cause: This is an informational message only.

Action: No action is required.

RMAN-06204: Changed *string* objects to UNAVAILABLE status

Cause: This is an informational message only.

Action: No action is required.

RMAN-06205: Uncataloged *string* objects

Cause: This is an informational message only.

Action: No action is required.

RMAN-06206: Crosschecked *string* objects

Cause: This is an informational message only.

Action: No action is required.

RMAN-06207: warning: *string* objects could not be deleted for *string* channel(s) due

Cause: This is an informational message only.

Action: No action is required.

RMAN-06208: to mismatched status. Use CROSSCHECK command to fix status

Cause: This is an informational message only.

Action: No action is required.

RMAN-06209: List of failed objects

Cause: This is an informational message only.

Action: No action is required.

RMAN-06210: List of Mismatched objects

Cause: This is an informational message only.

Action: No action is required.

RMAN-06211: =====

Cause: This is an informational message only.

Action: No action is required.

RMAN-06212: Object Type Filename/Handle

Cause: This is an informational message only.

Action: No action is required.

RMAN-06213: -----

Cause: This is an informational message only.

Action: No action is required.

RMAN-06214: *string string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-06215: List of objects that must perform same operation at other database

Cause: This is an informational message only.

Action: The specified list of objects were not accessible at connected target database. Re-run the CROSSCHECK command after connecting to database that has DB_UNIQUE_NAME displayed in output for the specified object.

RMAN-06216: warning: db_unique_name mismatch - *string* objects could not be updated

Cause: This is an informational message only.

Action: Run CROSSCHECK command after connecting to a primary or physical standby database that can access the specified objects.

RMAN-06217: not connected to auxiliary database with a net service name

Cause: A command that moves files from the target instance to the auxiliary instance was requested. Such a command requires a net service name be present in the connect string used to connect to the auxiliary instance.

Action: Issue a CONNECT AUXILIARY command and include a net service name in the connect string. That service name must be valid on the target instance.

RMAN-06218: List of objects requiring same operation on database with db_unique_name *string*

Cause: This is an informational message only.

Action: The specified list of objects were not accessible by the target database. Re-run the same command after connecting to database that has DB_UNIQUE_NAME displayed in output for the specified object.

RMAN-06219: List of objects not associated with all known db_unique_names

Cause: This is an informational message only.

Action: The specified list of objects were not accessible by the target database. Re-run the same command after connecting to primary database or physical standby database that can access the specified objects.

RMAN-06220: \nCreating automatic instance, with SID=*string*

Cause: No connection to the auxiliary instance was provided, but the command requires an auxiliary instance.

Action: No action is required unless you want to create a permanent database, in which case you should stop the command and re-run it, providing an auxiliary instance connection.

RMAN-06221: lnRemoving automatic instance

Cause: RMAN is removing the automatic auxiliary instance that was created for this command.

Action: No action is required.

RMAN-06223: starting up automatic instance *string*ln

Cause: This is an informational message only.

Action: No action is required.

RMAN-06224: Automatic instance created

Cause: This is an informational message only.

Action: No action is required.

RMAN-06225: shutting down automatic instance *string*ln

Cause: This is an informational message only.

Action: No action is required.

RMAN-06226: Automatic instance removed

Cause: This is an informational message only.

Action: No action is required.

RMAN-06230: List of Stored Scripts in Recovery Catalog

Cause: This message is issued in response to a LIST SCRIPT NAMES command. The following fields are shown for each script that is stored in the recovery catalog: Header indicating to what database the script belongs. Script Name: name of the script. Description: comment associated with this script.

Action: No action is required.

RMAN-06238: List of Databases

Cause: This message is issued in response to a LIST DB_UNIQUE_NAME command. The following fields are shown for each database that is known to the recovery catalog: DB Key: This is the unique key which identifies this database in the recovery catalog. DB Name: The name of the database. DB ID: The database ID. This is a number which remains the same for the life of the database, even if the database name is changed. DB_UNIQUE_NAME: db_unique_name value for the database.

Action: No action is required.

RMAN-06246: List of Database Incarnations

Cause: This message is issued in response to a LIST INCARNATION OF DATABASE command. The following fields are shown for each database that is registered with the recovery catalog: DB Key: This is the unique key which identifies this database in the recovery catalog. Inc Key: This is the unique key which identifies this incarnation of the database in the recovery catalog. DB Name: The name of the database. DB ID: The database ID. This is a number which remains the same for the life of the database, even if the database name is changed. Status: 'YES' if this is the current incarnation of this database, otherwise 'NO'. Reset SCN: system change number (SCN) of the most recent RESETLOGS operation. Reset Time: Time of the most recent RESETLOGS operation.

Action: No action is required.

RMAN-06250: Report of files that need backup due to unrecoverable operations

Cause: An unlogged change (such as 'create table unrecoverable') has been made to this file, and the most recent backup of the file does not contain those changes.

Action: Take a backup of this file. If this file is lost before a backup is taken, then the unlogged modifications will be lost. The message indicates whether a full backup is required or whether an incremental backup will suffice.

RMAN-06254: List of Pluggable Database Incarnations

Cause: This message is issued in response to a LIST INCARNATION OF PLUGGABLE DATABASE command. The following fields are shown for each pluggable database that belongs to the given database: DB Key: This is the unique key that identifies this database in the recovery catalog. PDB Key: This is the unique key that identifies a pluggable database in the database. PDBInc Key: This is the unique key that identifies this incarnation of the pluggable database in the recovery catalog. DBInc Key: This is the unique key that identifies this incarnation of the database in the recovery catalog. PDB Name: The name of the pluggable database. Status: Tells about parent, current or orphan incarnation. Begin Reset SCN: system change number (SCN) of the start PDB RESETLOGS operation. Begin Reset Time: Time of the start PDB RESETLOGS operation. Inc SCN: system change number (SCN) of the PDB INCARNATION SCN Inc Time: Time of the PDB INCARNATION TIME. End Reset SCN: system change number (SCN) of the end PDB RESETLOGS operation. End Reset Time: Time of the end PDB RESETLOGS operation. Guid : Guid of the pluggable database.

Action: No action is required.

RMAN-06263: *string string string*

Cause: This message is issued in response to the REPORT NEED BACKUP INCREMENTAL command, for those files which would use more than the specified number of incrementals during recovery.

Action: To reduce the number of incremental backups which would be used during recovery of this data file, take a new full backup of this file now.

RMAN-06270: Report of files whose recovery needs more than *number* days of archived logs

Cause: This message is issued in response to the REPORT NEED BACKUP DAYS command for those files which need more than the specified number of days' archived logs for recovery.

Action: To reduce the number of log files needed for recovery of this data file, take a new full or incremental backup now.

RMAN-06274: Report of files that must be backed up to satisfy *number* days recovery window

Cause: This message is issued in response to the REPORT NEED RECOVERY WINDOW OF n DAYS command for those files that must be backed up to satisfy specified retention policy.

Action: To satisfy specified recovery window for this data file, take a new full or incremental backup now.

RMAN-06275: invalid number of days specified for report : *string* days

Cause: This message is issued in response to the REPORT NEED RECOVERY WINDOW OF *n* DAYS or REPORT NEED BACKUP DAYS *n* command when an invalid number of days was specified in input command.

Action: The number of days specified in REPORT command must be greater than zero.

RMAN-06280: Report of obsolete backups and copies

Cause: This message is issued in response to the REPORT OBSOLETE command. Each of the files listed is obsolete because it is more redundant than the level of redundancy specified in the REPORT command.

Action: Depending on your needs, you might need to take new backups.

RMAN-06290: Report of database schema for database with *db_unique_name string*

Cause: This message is issued in response to the REPORT SCHEMA command. The report shows the physical schema of the database at the indicated time. The following fields are shown for each data file and tempfile: File: The file number. Size(MB): The size of the file in mega bytes. Tablespace: The name of the tablespace which contains this file. RB segs: YES if this file is part of a tablespace containing rollback segments, otherwise NO. Datafile/Tempfile Name: The file name. Maxsize(MB): Maximum file size to which file can be extended

Action: No action is required.

RMAN-06300: Report of files with less than *number* redundant backups

Cause: This message is issued when the REPORT NEED BACKUP REDUNDANCY command is used for those files which have less than the specified number of backups which can be used for recovery.

Action: Take another backup of the data files listed.

RMAN-06306: =====

Cause: This message is issued in response to a LIST BACKUP DATABASE/ TABLESPACE/DATAFILE command when some backups were taken with the PROXY option. If a recovery catalog is in use, then the information comes from the recovery catalog, otherwise it comes from the target database control file. The following fields are shown for each proxy data file backup. Key: This is the unique key which identifies this proxy backup in the recovery catalog. This value can be used in a CHANGE command to change its status. If the target database control file is being used as the recovery catalog, then this field uniquely identifies this copy in the control file. File: The file number that this file was copied from. Status: This is the status of the file. Possible values are: A - Available U - Unavailable D - Deleted X - Expired Status 'U' will not be used if the target database control file is being used as the recovery catalog. Completion time: This is the date and time when the backup was created. This column will be printed in the default Oracle date format, unless overridden with a NLS_DATE_FORMAT environment variable. Ckp SCN: This is the checkpoint system change number (SCN) of the backup. The file contains all changes made at or before this SCN. Ckp time: This is the time that the file was last checkpointed. Handle: This is the media manager handle of the proxy backup.

Action: No action is required.

RMAN-06378: List of Backup Sets

Cause: This message is issued in response to a LIST BACKUP command.

Action: No action is required.

RMAN-06400: database opened

Cause: This is an informational message only.

Action: No action is required.

RMAN-06401: database is already started

Cause: A STARTUP command without the FORCE option was issued, but the target database is already started.

Action: Use the FORCE option if you want to restart the database.

RMAN-06402: Oracle instance shut down

Cause: This is an informational message only.

Action: No action is required.

RMAN-06403: could not obtain a fully authorized session

Cause: The most likely cause of this error is that one of the databases to which RMAN had previously connected is not started or has been shutdown. Other error messages should identify exactly which database is the problem.

Action: Startup the database causing the problem.

RMAN-06404: database dismounted

Cause: This is an informational message only.

Action: No action is required.

RMAN-06405: database closed

Cause: This is an informational message only.

Action: No action is required.

RMAN-06406: deleted archived log

Cause: This is an informational message only.

Action: No action is required.

RMAN-06407: auxiliary instance file *string* deleted

Cause: This is an informational message only.

Action: No action is required.

RMAN-06408: recovery catalog upgraded to version *string*

Cause: This is an informational message issued by the UPGRADE CATALOG command. It indicates the version of the recovery catalog schema to which the recovery catalog was just upgraded. Note that this version number may not reflect the version number of your rman executable or target database, because the recovery catalog schema is not changed with each Oracle version.

Action: No action is required.

RMAN-06409: LIKE clause in LIST BACKUP OF ARCHIVELOG is not supported

Cause: LIST BACKUP OF ARCHIVELOG LIKE was used, which is not supported.

Action: Remove LIKE clause from command.

RMAN-06410: cannot use command when channels are allocated

Cause: An attempt was made to issue a command that can be used only when there are no allocated channels.

Action: Do not use the command, or de-allocate channels and use the command when no channels are allocated.

RMAN-06411: backup copies setting out of range (1-4): *number*

Cause: An attempt was made to set backup copies to an invalid value.

Action: Use a value in the specified range.

RMAN-06412: no proxy copy channel found

Cause: A proxy copy was started, but no allocated channel supports proxy copy. This could be because the media management software used by the target database does not support proxy copy, or because all of the allocated channels are of type DISK, which never support proxy copy.

Action: If this is a backup, then either allocate a non-disk channel, or do not use the PROXY option. If this is a restore, then a channel of the same type which created the proxy backup was allocated, but now does not support proxy copy. If proxy copy is no longer supported by the media management software at the target database, the CROSSCHECK or CHANGE commands should be used so that those backups will not be considered for further restores.

RMAN-06413: channel *string* does not support proxy copy

Cause: The channel which was specified for this backup or restore does not support proxy copy. This could be because the media management software used by the target database does not support proxy copy, or because the channel is of type DISK, which never supports proxy copy.

Action: If this is a backup, then either allocate a non-disk channel, or do not use the PROXY option. If this is a restore, then a channel of the same type which created the proxy backup was allocated, but now does not support proxy copy. If proxy copy is no longer supported by the media management software at the target database, the CROSSCHECK command should be used so that those backups will not be considered for further restores.

RMAN-06414: target database COMPATIBLE option does not support proxy copy

Cause: PROXY was specified, and the target database uses a media manager that supports proxy copy, but the COMPATIBLE initialization parameter of the target database must be 8.1.0 or greater to create proxy backups. If the database is downgraded to the earlier version that is specified in the COMPATIBLE parameter, then it will no longer be able to restore proxy backups.

Action: Either take a non-proxy backup or change the target database COMPATIBLE parameter.

RMAN-06415: file *string* cannot be proxy backed up

Cause: The PROXY option was specified, but the media management software used by the target database cannot back up the specified file using proxy copy. If PROXY ONLY was specified, then the backup is terminated. If PROXY was specified, then this file will be placed into a non-proxy backup set.

Action: Remove the ONLY option to place the files into a regular backup set, or contact the media management vendor if you believe that the media management software should support proxy copy of this file.

RMAN-06416: PROXY ONLY was specified and some files could not be proxy copied

Cause: PROXY ONLY was specified, and some of the files to be backed up could not be backed up by the media management software used by the target database. Message 6415 is issued for each file that cannot be proxy copied.

Action: Remove the ONLY option to place the files into a regular backup set, or contact the media management vendor if you believe that the media management software should support proxy copy of these files.

RMAN-06417: command not allowed when connected to a virtual private catalog

Cause: The command that was entered cannot be used while connected to a virtual private catalog.

Action: Connect to the base catalog and re-execute the command.

RMAN-06418: proxy incremental backups with level > 0 not supported

Cause: PROXY was specified for a non-level-zero incremental backup. Proxy backups may only be full or level 0 backups.

Action: Remove one of the conflicting options.

RMAN-06419: file *string* cannot be proxy restored from handle *string*

Cause: The media management software used by the target database indicated that it cannot restore the specified file from the specified backup handle.

Action: Consult the media management software documentation to find out why this restriction exists or contact the media management vendor.

RMAN-06420: some files could not be proxy restored - aborting restore

Cause: Some of the files to be restored could not be restored by the media management software used by the target database. Message 6419 is issued for each file that cannot be restored.

Action: Contact the media management vendor if you believe that the media management software should support proxy copy of these files. The CROSSCHECK or CHANGE commands can be used to remove these proxy copies from the catalog to prevent the RESTORE command from trying to restore from them.

RMAN-06421: sent command to channel: *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-06422: no channels found for SEND command

Cause: No channels with the specified names or device types were found. If no channel qualifiers were specified, then no channels were allocated.

Action: Specify a different channel type or allocate a channel of the desired type.

RMAN-06423: requested limit of *number* exceeds vendor limit of *number*

Cause: A command was used to set the backup piece size limit, but the media management software used by the target database cannot create backup pieces that large.

Action: Specify a smaller backup piece limit.

RMAN-06424: error while looking up proxy copy

Cause: An error occurred while looking up the specified proxy copy in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure. Ensure that the name or key is entered correctly. If the proxy copy was created when the recovery catalog was not available, then a RESYNC CATALOG must be done to update the recovery catalog.

RMAN-06425: *datafile pathname not available*

Cause: This is an informational message only.

Action: No action is required.

RMAN-06426: RECOVERY_CATALOG_OWNER role must be granted to user *string*

Cause: The CREATE CATALOG or UPGRADE CATALOG command was used, but the USERID that was supplied in the CATALOG connect string does not have the RECOVERY_CATALOG_OWNER role granted as a DEFAULT role.

Action: Grant the RECOVERY_CATALOG_OWNER role to the recovery catalog owner.

RMAN-06427: recovery catalog already exists

Cause: The CREATE CATALOG command cannot be used when the recovery catalog already exists.

Action: Use the UPGRADE CATALOG command to upgrade your recovery catalog to the most current version without losing any existing backup data. Use the DROP CATALOG command to remove an existing recovery catalog.

RMAN-06428: recovery catalog is not installed

Cause: A recovery catalog database connection has been made, but the recovery catalog tables and views have not been installed.

Action: If you mis-typed the recovery catalog owner USERID, then correct the USERID and reconnect to the recovery catalog. If this is the first time that you have signed on to Recovery Manager with this recovery catalog owner USERID, then use the CREATE CATALOG command to create the recovery catalog schema. Alternatively, exit RMAN and connect without specifying a recovery catalog connection.

RMAN-06429: *string* database is not compatible with this version of RMAN

Cause: The indicated database is not compatible with this version of the Recovery Manager (RMAN). Other messages have also been issued which detail the cause of the error.

Action: See the other messages. If the database is CATALOG, then you may be able to use the CREATE CATALOG or UPGRADE CATALOG commands to correct the problem. If the database is TARGET or AUXILIARY, then you must either upgrade the target database or use a newer version of the RMAN executable.

RMAN-06430: recovery catalog USERID cannot be SYS

Cause: A recovery catalog connection was made to USERID SYS. The recovery catalog must be created in a USERID other than SYS.

Action: Specify a different USERID in the CATALOG connect string.

RMAN-06431: recovery catalog created

Cause: This is an informational message issued by the CREATE CATALOG command.

Action: No action is required.

RMAN-06432: recovery catalog dropped

Cause: This is an informational message issued by the DROP CATALOG command.

Action: No action is required.

RMAN-06433: error installing recovery catalog

Cause: An error was received from the recovery catalog database while it was being installed. Another error message shows the error message from the server.

Action: The most common reasons for failure to install the recovery catalog are: - Lack of space in the recovery catalog database: allocate more space, use the DROP CATALOG command to remove any partially installed recovery catalog, and retry the command. - Object already exists: This is caused by a partial recovery catalog installation. Use the DROP CATALOG command to remove the partially installed recovery catalog and retry the command.

RMAN-06434: some errors occurred while removing recovery catalog

Cause: Some errors were received from the recovery catalog database while removing the recovery catalog.

Action: Correct the error(s) and retry the command. Note that Recovery Manager intercepts and ignores common errors, such as 'object not found', which can happen while removing a partially installed recovery catalog. Only serious errors will be displayed while removing the recovery catalog.

RMAN-06435: recovery catalog owner is *string*

Cause: This is an informational message issued by the UPGRADE CATALOG and DROP CATALOG commands.

Action: No action is required.

RMAN-06437: cannot drop catalog - catalog is newer than this RMAN

Cause: The DROP CATALOG command was entered, but the recovery catalog was created by a newer version of the Recovery Manager (RMAN). This version of RMAN may not be able to drop the entire recovery catalog.

Action: Use the version of RMAN which most recently created or upgraded the recovery catalog.

RMAN-06438: error executing package DBMS_RCVMAN in *string* database

Cause: Recovery Manager requires the DBMS_RCVMAN package in the SYS schema of the indicated database. Normally this package is installed during database creation. To re-create the package, run the files dbmsrman.sql and prvtmns.plb.

Action: re-create the DBMS_RCVMAN package in the SYS schema.

RMAN-06439: RMAN must be upgraded to version *string* to work with this package

Cause: This message indicates the minimum version of recovery manager required to use the package which was specified in message 6191.

Action: A newer version of RMAN must be used with this package.

RMAN-06440: virtual catalog dropped

Cause: This is an informational message issued by the DROP CATALOG command, when connected to a virtual private catalog. Note that dropping a virtual private catalog does not delete any data, because the catalog data is owned by the base catalog.

Action: No action is required.

RMAN-06441: cannot upgrade catalog - catalog is already newer than this RMAN

Cause: The recovery catalog is already at a version level that is greater than this version of the Recovery Manager. The UPGRADE CATALOG command is not needed.

Action: Either upgrade to a more recent Recovery Manager, or continue to use the current version. Message 6191 will be issued if the recovery catalog is too new to work with this version of Recovery Manager.

RMAN-06443: error upgrading recovery catalog

Cause: An error was received from the recovery catalog database while upgrading the recovery catalog.

Action: Correct the error and retry the command. Note that the Recovery Manager intercepts and ignores common errors, such as 'column already exists,' which can happen if the recovery catalog has already been partially upgraded. Only serious errors will be displayed while upgrading the recovery catalog.

RMAN-06444: error creating *string*

Cause: During the CREATE CATALOG or UPGRADE CATALOG command, the indicated object could not be created due to errors.

Action: Make sure that the RECOVER.BSQ file has not been modified or damaged, and then if this error persists, contact Oracle Support Services. If the error refers to one of the RMAN PL/SQL packages, connect to the recovery catalog owner and query the USER_ERRORS view to find out the details of the compilation errors.

RMAN-06445: cannot connect to recovery catalog after NOCATALOG has been used

Cause: The CONNECT CATALOG command was used after the user had already specified the NOCATALOG option.

Action: Re-start rman if you wish to use a recovery catalog.

RMAN-06446: changed proxy copy unavailable

Cause: This is an informational message only.

Action: No action is required.

RMAN-06447: changed proxy copy available

Cause: This is an informational message only.

Action: No action is required.

RMAN-06448: uncataloged proxy copy

Cause: This is an informational message only.

Action: No action is required.

RMAN-06449: deleted proxy copy

Cause: This is an informational message only.

Action: No action is required.

RMAN-06450: crosschecked proxy copy: found to be 'string'

Cause: This is an informational message only.

Action: No action is required.

RMAN-06451: proxy copy handle=*string* RECID=*string* STAMP=*string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-06452: *string* package upgraded to version *string*

Cause: This is an informational message issued by the UPGRADE CATALOG command. It indicates the version to which the indicated package was just upgraded. Note that this version number may not reflect the version number of your rman executable or target database, because the recovery catalog packages are not changed with each Oracle version.

Action: No action is required.

RMAN-06453: RECOVERABLE may only be used with datafile objects

Cause: An attempt was made to use LIST ... RECOVERABLE .. with OF CONTROLFILE or OF ARCHIVELOG.

Action: Remove the RECOVERABLE keyword and try again.

RMAN-06454: duplexed backups require Enterprise Edition

Cause: The SET COPIES or CONFIGURE BACKUP COPIES command was used to create more than one copy of each backup piece, but Enterprise Edition is not installed.

Action: Do not attempt to create more than one copy of each backup piece.

RMAN-06455: Tablespace Point-in-Time Recovery requires Enterprise Edition

Cause: Tablespace Point-in-Time Recovery was attempted, but Enterprise Edition is not installed.

Action: Do not attempt Tablespace Point-in-Time Recovery.

RMAN-06456: command is obsolete

Cause: This is an informational message only.

Action: No action is required.

RMAN-06457: UNTIL SCN (*string*) is ahead of last SCN in archived logs (*string*)

Cause: UNTIL SCN cannot be more than the last system change number (SCN) of the last archived log

Action: Check the UNTIL SCN.

RMAN-06458: AS COPY option cannot be used with RECOVERY FILES, RECOVERY AREA or DB_RECOVERY_FILE_DEST

Cause: The RECOVERY FILES, RECOVERY AREA or DB_RECOVERY_FILE_DEST was specified with AS COPY.

Action: Remove the AS COPY option and resubmit the command.

RMAN-06459: BACKUP <VALIDATE|DURATION> is not supported with PROXY

Cause: BACKUP <VALIDATE|DURATION> and PROXY were specified in the same backup command.

Action: Remove the incompatible option.

RMAN-06460: control file copy *string* cannot be backed up by proxy.

Cause: The PROXY option was specified, but proxy copy of control file is not supported. This file will be placed into a non-proxy backup set.

Action: No action required, this is an informational message.

RMAN-06461: current control file cannot be backed up by proxy.

Cause: The PROXY option was specified, but proxy copy of control file is not supported. This file will be placed into a non-proxy backup set.

Action: No action required, this is an informational message.

RMAN-06462: no backup sets found on device DISK that match specification

Cause: A backup set record specifier did not match an backup set on device DISK in the recovery catalog.

Action: Resubmit the command with a different backup set record specifier. The Recovery Manager (RMAN) LIST command can be used to display all backup sets that RMAN knows about.

RMAN-06463: Backup set key *string* cannot be backed up by proxy.

Cause: The PROXY option was specified, but proxy copy of backup set is not supported. This file will be placed into a non-proxy backup set.

Action: No action required, this is an informational message.

RMAN-06464: BACKUP BACKUPSET is not supported with VALIDATE option

Cause: BACKUP BACKUPSET and VALIDATE were specified in the same backup command.

Action: To validate a backup set, use the VALIDATE BACKUPSET or RESTORE VALIDATE command.

RMAN-06465: configuration not implemented: *string*

Cause: The configuration is not implemented in the current version.

Action: Avoid using the command.

RMAN-06466: error parsing configuration string (*string*)

Cause: Unsupported configuration string is stored in recovery catalog or target database control file.

Action: Check compatibility matrix rman executable and target database and recover catalog. Use DBMS_BACKUP_RESTORE.DELETECONFIG to remove problematic configuration.

RMAN-06467: could not translate DBA: *number*

Cause: An error was received when calling DBMS_RCVMAN

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-06468: Invalid Data Block Address: *number*

Cause: The DBA specified doesn't belong to the mentioned tablespace

Action: Check the DBA

RMAN-06469: could not translate corruption list

Cause: An error was received when calling DBMS_RCVMAN

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-06470: DEVICE TYPE is supported only when automatic channels are used

Cause: The DEVICE TYPE option was specified with a BACKUP, RESTORE, RECOVER, DUPLICATE, CHANGE, VALIDATE, CROSSCHECK, or DELETE EXPIRED command. This option is allowed only when automatically allocated channels are used.

Action: Remove the DEVICE TYPE option and re-run the command. Or Remove all ALLOCATE commands and re-run the script so that channels are automatically allocated.

RMAN-06471: no configuration found to allocate channels for *string*

Cause: Device type configuration was not found in recovery catalog

Action: Setup device type configuration using configure command for required device type

RMAN-06472: channel id *string* is automatically allocated

Cause: Channel id was used on ALLOCATE/RELEASE command.

Action: Use other channel id that does not belong to reserved channel id's name space

RMAN-06473: SET DATABASE can only be used in case of DUPLICATE without TARGET connection

Cause: A SET DATABASE command was specified when connected to target database or not connected to an auxiliary instance.

Action: Specify the command only when not connected to a target database and when connected to an auxiliary instance in preparation to DUPLICATE without TARGET connection.

RMAN-06474: maintenance channels are not allocated

Cause: RELEASE CHANNEL was used without allocating any maintenance channels.

Action: Allocate maintenance channel before executing this command.

RMAN-06475: parallelism setting out of range (1-254): *number*

Cause: Parallelism for the device type in CONFIGURE PARALLELISM command is out of range

Action: Enter value of parallelism that are within the allowed range.

RMAN-06476: channel number out of range (1-254): *number*

Cause: Channel number entered in CONFIGURE CHANNEL command is out of range.

Action: Enter channel number within allowed range and retry the command. for this device and retry the command

RMAN-06477: configuration value length exceeds 1024

Cause: CONFIGURE CHANNEL command entered has configuration value greater than 1024 bytes.

Action: Reduce the length of CONFIGURE CHANNEL command options

RMAN-06478: warning: datafile copy '*string*' cannot be found on disk

Cause: The CHANGE DATAFILECOPY AVAILABLE command was used, but the data file copy cannot be found on disk.

Action: If the storage containing the data file copy has been removed from the host, restore it and retry the command. If the data file copy is permanently gone, then issue the CHANGE DATAFILECOPY DELETE command for this data file.

RMAN-06479: warning: control file copy '*string*' cannot be found on disk

Cause: The CHANGE CONTROLFILECOPY AVAILABLE command was used, but the control file copy cannot be found on disk.

Action: If the storage containing the control file copy has been removed from the host, restore it and retry the command. If the control file copy is permanently gone, then issue the CHANGE CONTROLFILECOPY DELETE command for this control file.

RMAN-06480: warning: archived log '*string*' cannot be found on disk

Cause: The CHANGE ARCHIVELOG AVAILABLE command was used, but the archived log cannot be found on disk.

Action: If the storage containing the archived log has been removed from the host, restore it and retry the command. If the archived log is permanently gone, then issue the CHANGE ARCHIVELOG DELETE command for this archived log.

RMAN-06481: warning: backup piece '*string*' cannot be found on the storage medium

Cause: The CHANGE BACKUPPIECE AVAILABLE command was used, but the backup piece cannot be found on the storage medium.

Action: If the storage containing the backup piece has been removed from the host, restore it and retry the command. If the backup piece is permanently gone, then issue the CHANGE BACKUPPIECE DELETE command for this backup piece.

RMAN-06482: warning: proxy copy '*string*' cannot be found on the storage medium

Cause: The CHANGE PROXY AVAILABLE command was used, but the proxy copy cannot be found on disk.

Action: If the storage containing the proxy copy has been removed from the host, restore it and retry the command. If the proxy copy is permanently gone, then issue the CHANGE PROXY DELETE command for this proxy copy.

RMAN-06483: changed datafile copy expired

Cause: This is an informational message only.

Action: No action is required.

RMAN-06484: changed control file copy expired

Cause: This is an informational message only.

Action: No action is required.

RMAN-06485: changed archived log expired

Cause: This is an informational message only.

Action: No action is required.

RMAN-06486: changed backup piece expired

Cause: This is an informational message only.

Action: No action is required.

RMAN-06487: changed proxy copy expired

Cause: This is an informational message only.

Action: No action is required.

RMAN-06488: restore from AUTOBACKUP does not allow any other modifiers

Cause: A control file or SPFILE restore from AUTOBACKUP was attempted and other restore options were used.

Action: Do not specify any other options for the control file AUTOBACKUP restore.

RMAN-06489: no configuration found to allocate clone channel *number* for device type *string*

Cause: Target channel configuration could not be used for clone channel as it contains CONNECT option.

Action: Setup clone channel configuration using CONFIGURE CLONE command for required number and type of channels.

RMAN-06490: warning: limit of AUTOBACKUPS for the day has been reached

Cause: No more control file AUTOBACKUPS are possible in this day.

Action: This is a warning message, no action is required.

RMAN-06491: control file AUTOBACKUP format "*string*" contains more than one "*string*" format specifier

Cause: A CONTROLFILE AUTOBACKUP FORMAT cannot have more than one reserved format specifier.

Action: Specify only one reserved format specifier or use an alternative format.

RMAN-06492: control file AUTOBACKUP format "*string*" must specify a "*string*" format specifier

Cause: A reserved format specifier was not specified for the CONTROLFILE AUTOBACKUP FORMAT

Action: Add a specifier to the CONTROLFILE AUTOBACKUP FORMAT

RMAN-06493: only UNTIL TIME clause is allowed when performing a restore from AUTOBACKUP, found: *string*

Cause: For restoring a control file AUTOBACKUP only SET UNTIL TIME can be used. It is not possible to translate the others to a precise day.

Action: Specify SET UNTIL TIME to indicate the day to start the restore of a control file AUTOBACKUP.

RMAN-06494: *string* = *string* is out of range (*string-string*)

Cause: The specified parameter for restoring a control file AUTOBACKUP is out of the valid range.

Action: Change the parameter value to a valid number or do not specify it.

RMAN-06495: must explicitly specify DBID with SET DBID command

Cause: Restore of a control file AUTOBACKUP or ADVISE FAILURE was attempted when the database is not mounted.

Action: Specify the DBID of the database using SET DBID or mount the database.

RMAN-06496: must use the TO clause when the database is mounted or open

Cause: A control file restore was attempted when the database is mounted or open and no alternate destination was specified.

Action: Specify an alternate destination with the TO clause or dismount the database.

RMAN-06497: warning: control file is not current, control file AUTOBACKUP skipped

Cause: Control file AUTOBACKUP is not possible without a current control file.

Action: This is a warning message, no action is required.

RMAN-06498: skipping datafile *string*; already backed up *string* time(s)

Cause: The indicated data file will not be included in the backup set. It is already backed up on the device requested and file is offline/read-only data file. Use the FORCE option to override backup optimization.

Action: No action is required.

RMAN-06499: skipping archived log of thread *string* with sequence *string*; already backed up

Cause: The indicated log file will not be included in the backup set because it is already backed up on the device requested. Use FORCE option to override backup optimization.

Action: No action is required.

RMAN-06500: skipping backup set key *string*; already backed up *string* time(s)

Cause: The indicated backup set will not be copied because it is already backed up on the device requested. Use FORCE option to override backup optimization.

Action: No action is required.

RMAN-06501: skipping datafile *string*; already backed up on *string*

Cause: The indicated data file will not be included in the backup set. It is already been backed up once, or before the since time specified.

Action: No action is required.

RMAN-06502: skipping archived logs of thread *string* from sequence *string* to *string*; already backed up

Cause: Some archived logs were not be backed up because they were already backed up on the device requested.

Action: No action is required. You can use the FORCE option to override backup optimization and force these files to be backed up.

RMAN-06503: skipping backup set key *string*; already backed up on *string*

Cause: The indicated backup set will not be backed up. It has already been backed up on the device once, or before the since time specified.

Action: No action is required.

RMAN-06504: PROXY option with multiple backup copies is not supported

Cause: Multiple backup copies and PROXY option were specified in BACKUP command.

Action: Resolve the conflict.

RMAN-06505: specified DATABASE: *string* does not match previous DATABASE: *string*

Cause: SET DBID was used to set a DBID that translated into a database name that does not match newly specified database name or a previous SET DATABASE set a different database name.

Action: Verify that the correct DBID was specified or avoid using the SET DATABASE command.

RMAN-06506: the MAXSETSIZE option cannot be used with a backup backup set

Cause: The MAXSETSIZE option was specified for a backup backup set command.

Action: Remove the option and resubmit the command.

RMAN-06507: trying alternate file for archived log of thread *number* with sequence *number*

Cause: This is an informational message, appearing when an archived log was found out of sync with catalog database.

Action: No action is required.

RMAN-06508: MAXSETSIZE *string* KBYTES should be greater than block size *string* bytes

Cause: MAXSETSIZE configured or specified in backup command should be greater than database block size.

Action: Specify a larger MAXSETSIZE limit.

RMAN-06509: only SPFILE or control file can be restored from AUTOBACKUP

Cause: A data file or archived log restore from AUTOBACKUP was attempted.

Action: Do not specify DATAFILE or ARCHIVELOG for restore from AUTOBACKUP.

RMAN-06510: RMAN retention policy is set to recovery window of *number* days

Cause: This is an informational message only.

Action: No action is required.

RMAN-06511: RMAN retention policy is set to redundancy *number*

Cause: This is an informational message only.

Action: No action is required.

RMAN-06512: copy will be obsolete on date *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-06513: copy will never be obsolete

Cause: This is an informational message only.

Action: No action is required.

RMAN-06514: archived logs required to recover from this copy will not be kept

Cause: This is an informational message only.

Action: No action is required.

RMAN-06515: archived logs required to recover from this copy will expire when this copy expires

Cause: This is an informational message only.

Action: No action is required.

RMAN-06516: time specified in KEEP UNTIL clause must be after today

Cause: KEEP UNTIL support only a future time.

Action: Correct the time and retry the command.

RMAN-06517: KEEP option is not supported for archived log backups

Cause: The KEEP option is not supported for archived logs.

Action: Either remove KEEP option and retry the command or don't specify archived logs for this backup.

RMAN-06518: backup will be obsolete on date *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-06519: backup will never be obsolete

Cause: This is an informational message only.

Action: No action is required.

RMAN-06520: archived logs will not be kept or backed up

Cause: This is an informational message only.

Action: No action is required.

RMAN-06521: archived logs required to recover from this backup will expire when this backup expires

Cause: This is an informational message only.

Action: No action is required.

RMAN-06522: KEEP FOREVER option is not supported without the recovery catalog

Cause: The KEEP FOREVER option was used, but it requires a connection to a recovery catalog database. The KEEP FOREVER option cannot be used when the backup repository is the target database control file. This is because information about this backup cannot be permanently stored. (If information is stored just in the control file it will be aged out depending on CONTROL_FILE_RECORD_KEEP_TIME initialization parameter.)

Action: If a recovery catalog database is available, then connect to the recovery catalog and retry the command, otherwise use a different KEEP option. 6523, 1, "unused"

RMAN-06524: RMAN retention policy will be applied to the command

Cause: This is an informational message only.

Action: No action is required.

RMAN-06525: RMAN retention policy is set to none

Cause: Command DELETE OBSOLETE and REPORT OBSOLETE requires that either: * RMAN retention policy is not NONE or, * RMAN retention policy is specified with REPORT/DELETE command.

Action: Either configure RMAN retention policy with CONFIGURE command or specify it at the end of DELETE/REPORT command.

RMAN-06526: KEEP option cannot be used with incremental backup

Cause: The KEEP option was specified for a incremental backup.

Action: Remove the option and resubmit the command.

RMAN-06527: KEEP option is not supported for backup of backup sets

Cause: The KEEP option is not supported for backup of backup sets.

Action: Either remove KEEP option and retry the command or don't specify backup sets for this backup.

RMAN-06528: CHANGE ... KEEP not supported for BACKUPPIECE

Cause: The CHANGE BACKUPPIECE ... KEEP command was entered. KEEP attributes cannot be specified for backup pieces.

Action: Use CHANGE BACKUPSET ... KEEP instead.

RMAN-06529: CHANGE ... KEEP not supported for ARCHIVELOG

Cause: The CHANGE ARCHIVELOG ... KEEP command was entered. KEEP attributes cannot be specified for archived logs.

Action: Use CHANGE BACKUPSET ... KEEP instead.

RMAN-06530: CHANGE ... KEEP LOGS not supported for backup set which contains archived logs

Cause: The CHANGE BACKUPSET ... KEEP command was entered, but the BACKUPSET contained archived logs. Backup sets with archived logs cannot have KEEP attributes.

Action: Do not specify backup set with archived logs for the CHANGE BACKUPSET ... KEEP command.

RMAN-06532: redundancy count must be greater than zero

Cause: The REDUNDANCY operand specified for the retention policy was zero.

Action: Specify a REDUNDANCY operand of 1 or greater.

RMAN-06533: KEEP ... NOLOGS option cannot be used when datafiles are fuzzy

Cause: The KEEP ... NOLOGS option was specified for a backup or copy of files in a fuzzy state. This kind of backup requires archived logs for recovery, so archived logs must be kept.

Action: Remove the KEEP ... NOLOGS option or make sure the files are not in a fuzzy state and resubmit the command.

RMAN-06534: archived logs required to recover from this backup will be backed up

Cause: This is an informational message only. An archivelog backup will be created and kept so the specified backup can be recovered to a consistent state.

Action: No action is required.

RMAN-06535: LIST COPY OF SPFILE is not supported

Cause: LIST COPY OF SPFILE was used, which is not supported because SPFILE cannot have a copy.

Action: Remove SPFILE from the command.

RMAN-06536: BACKED UP ... TIMES option is supported only for archived logs

Cause: The BACKUP UP ... TIMES option was used as a qualifier. This option is supported only for archived logs.

Action: Remove the option and resubmit the command.

RMAN-06537: CHANGE ... KEEP not supported for BACKUP

Cause: The CHANGE BACKUP... KEEP command was entered. KEEP attributes cannot be specified for copies and backup pieces in a single command.

Action: Use CHANGE BACKUPSET ... KEEP instead.

RMAN-06538: The expected DB_UNIQUE_NAME is *string*, but found *string*

Cause: This is an informational message.

Action: Check other error messages associated with this message.

RMAN-06539: invalid time specified in KEEP UNTIL clause

Cause: Invalid time was specified in the KEEP UNTIL clause. The KEEP UNTIL clause only supports future time until the year 2120.

Action: Correct the time and retry the command.

RMAN-06540: Tablespace *string* will be excluded from future whole database backups

Cause: This is an informational message only.

Action: No action is required.

RMAN-06541: Tablespace *string* will be included in future whole database backups

Cause: This is an informational message only.

Action: No action is required.

RMAN-06542: file *string* is excluded from whole database backup

Cause: The indicated file will not be included in the backup set because its tablespace is configured as excluded from backup.

Action: No action is required.

RMAN-06543: duplicate or conflicting LIST options: *string* and *string*

Cause: The indicated options conflict with each other or appear more than once in a LIST command.

Action: remove the duplicate/conflicting option from the command.

RMAN-06547: SYSTEM tablespace cannot be excluded from whole database backup

Cause: The SYSTEM tablespace must be included in whole database backup.

Action: Remove the SYSTEM tablespace from the CONFIGURE ... EXCLUDE and retry the operation.

RMAN-06548: connected to auxiliary database: *string* (DBID=*string*)

Cause: This is an informational message only.

Action: No action is required.

RMAN-06549: connected to auxiliary database: *string* (not mounted)

Cause: This is an informational message only.

Action: No action is required.

RMAN-06550: clone database not mounted and db_name not set in init.ora

Cause: The clone database "init.ora" file does not specify the DB_NAME parameter.

Action: Add the DB_NAME parameter to the clone database "init.ora" and restart the instance.

RMAN-06551: error while looking up datafile copy for file number: *string*

Cause: An error occurred while looking up the specified data file copy in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure. If the data file copy was created during a RESTORE with a new name, ensure that the RESTORE completed successfully.

RMAN-06552: newname for datafile *number* was set to NEW, but file was not restored

Cause: A SWITCH command was specified for a data file, but the newname was set to NEW and the file was not restored. If newname is set to NEW, the file must be restored before issuing a SWITCH command.

Action: Correct and resubmit the SWITCH command.

RMAN-06553: DB_CREATE_FILE_DEST must be set for SET NEWNAME ... TO NEW

Cause: The SET NEWNAME ... TO NEW option was specified but the OMF destination init parameter DB_CREATE_FILE_DEST is not set.

Action: Supply a full name to the SET NEWNAME command or set DB_CREATE_FILE_DEST at the target database.

RMAN-06554: warning: file *string* is in backup mode

Cause: A file which is being backed up or copied is in backup mode. RMAN will back up the file anyway, but files do not need to be put into backup mode before backing them up with RMAN.

Action: Use the ALTER TABLESPACE ... END BACKUP statement, at the target database server, to take the files out of backup mode.

RMAN-06555: datafile *string* must be restored from backup created before *string*

Cause: An incomplete recovery session was started, but the file is in newer than the UNTIL TIME clause.

Action: Check the UNTIL TIME clause or restore the file from a sufficient old backup.

RMAN-06556: datafile *string* must be restored from backup older than SCN *string*

Cause: An incomplete recovery session was started, but the file is newer than the UNTIL clause.

Action: Check the UNTIL clause or restore the file from a sufficient old backup.

RMAN-06557: unable to restore archived log of thread *number* with sequence *number*

Cause: Restore of the specified archived log failed because the size of the archived log is larger than available disk space.

Action: One of the following: 1) Increase the MAXSIZE parameter and retry the command. 2) Free up disk space in the recovery area.

RMAN-06558: archived log size of *number* kb is bigger than available space of *number* kb

Cause: This message should be followed by one or more 6557 messages.

Action: Check the accompanying errors.

RMAN-06559: MAXSIZE must be larger than 1 kb

Cause: The MAXSIZE parameter is out of range.

Action: Specify a valid size and retry the command.

RMAN-06560: warning: backup set with key *number* will be read *number* times

Cause: This message should be followed by one or more 6562 messages.

Action: Check the accompanying messages.

RMAN-06561: available space must be larger than *number* kb

Cause: The recovery failed because it requires more disk space. One of the following could have caused this error: 1) The MAXSIZE option is used but is not large enough to restore files. 2) Files should be restored to recovery area, but available disk space is not large enough to restore files.

Action: One of the following: 1) Increase the MAXSIZE parameter and retry the command. 2) Free up disk space in the recovery area.

RMAN-06562: available space of *number* kb needed to avoid reading the backup set multiple times

Cause: A backup set is read more than once. Multiple reads of a backup set can slow restore performance. One of the following could have caused this: 1) The MAXSIZE option is used but is not large enough to restore files. 2) Files should be restored to a recovery area, but the available disk space is not large enough to restore files.

Action: One of the following: 1) Increase the MAXSIZE parameter and retry the command. 2) Free up disk space in the recovery area.

RMAN-06563: control file or SPFILE must be restored using FROM AUTOBACKUP

Cause: RESTORE CONTROLFILE or RESTORE SPFILE was specified without the FROM AUTOBACKUP option when RMAN is not connected to the recovery catalog.

Action: If the recovery catalog is available, connect to the recovery catalog and retry the restore. If the recovery catalog is not available, following is the procedure to restore control file or SPFILE: 1. Specify the DBID of the database with the SET DBID command. 2. If the AUTOBACKUP was created with non-default AUTOBACKUP format, then specify the AUTOBACKUP format using the SET CONTROLFILE AUTOBACKUP FORMAT command. 3. If the backup was created with SBT device, then allocate an SBT channel using the ALLOCATE CHANNEL command. 4. Restore control file or SPFILE by starting the RESTORE ... FROM AUTOBACKUP command.

RMAN-06564: must use the TO clause when the instance is started with SPFILE

Cause: A restore of the SPFILE from AUTOBACKUP was attempted when the instance is started with SPFILE and no alternate destination was specified.

Action: Specify an alternate destination with the TO clause.

RMAN-06565: warning: *string*: sqlcode *number* was caught, automatic retry *#number*

Cause: The RMAN client caught a transient error and will automatically retry several times.

Action: No action required, this is an informational message.

RMAN-06566: target database incarnation not found in control file

Cause: RESETLOGS CHANGE# and/or time of the target database doesn't match any database incarnation in the control file.

Action: One of the following actions can be taken to resolve this error 1) Restore the control file from the incarnation. 2) To populate the new incarnation, inspect or restore an archived log/data file/data file copy/backup set from the target incarnation

RMAN-06567: connected to auxiliary database: *string* (DBID=*string*, not open)

Cause: This is an informational message only.

Action: No action is required.

RMAN-06568: connected to target database: *string* (DBID=*string*, not open)

Cause: This is an informational message only.

Action: No action is required.

RMAN-06569: DATABASE: *string* does not match previous DATABASE: *string*

Cause: SET DBID or SET DATABASE was used to specify the target database name which does not match specified database name in DUPLICATE command.

Action: Verify that the correct DBID or the correct DATABASE was specified or avoid specifying DATABASE in DUPLICATE command.

RMAN-06570: datafile *number* switched to datafile copy "*string*"

Cause: This message was issued in response to a SWITCH command.

Action: No action is required, this is an informational message.

RMAN-06571: datafile *number* does not have recoverable copy

Cause: The SWITCH command with the option TO COPY was specified but the data file has no valid copy to switch to.

Action: Verify whether the data file has a valid data file copy.

RMAN-06572: database is open and datafile *number* is not offline

Cause: The SWITCH command with the option TO COPY was specified, but data file is not offline and database is open.

Action: Either make sure the data file is offline or the database must be mounted but not opened.

RMAN-06573: specified DBID: *string* does not match previous DBID: *string*

Cause: The DBID in the DUPLICATE command did not match the previously specified DBID in the SET DBID command.

Action: Verify that the correct DBID was specified or avoid using DBID in the DUPLICATE command.

RMAN-06575: platform id *number* found in datafile *string* header is not a valid platform id

Cause: The platform id found in the data file header was not recognized.

Action: Verify that this is a valid data file.

RMAN-06576: platform '*string*' (*number*) found in header of datafile *string* does not match specified platform name '*string*' (*number*)

Cause: The platform specified in the command did not match the platform found in the data file header.

Action: Specify the correct platform name and retry the command.

RMAN-06577: FROM TAG option may only be used with datafile copies

Cause: The FROM TAG option was specified for data files.

Action: Remove the option and resubmit the command.

RMAN-06578: INCREMENTAL LEVEL > 0 must be specified with FOR RECOVER OF

Cause: The FOR RECOVER OF option was specified without specifying INCREMENTAL LEVEL > 0.

Action: Specify INCREMENTAL LEVEL > 0 and resubmit the command.

RMAN-06580: the *string* option cannot be used with AS COPY

Cause: The specified option was specified for a backup as copy command.

Action: Remove the option and resubmit the command.

RMAN-06581: option *string* not supported

Cause: This option was specified and it is not supported.

Action: Remove the specified option.

RMAN-06582: AS COPY option cannot be used when backing up backup sets

Cause: The backup set was specified with AS COPY.

Action: Remove the AS COPY option or remove the backup sets.

RMAN-06583: at least 1 channel of TYPE DISK must be allocated to use AS COPY option

Cause: No channel of TYPE DISK was allocated.

Action: Allocate a channel of TYPE DISK and re-issue the command or remove AS COPY.

RMAN-06584: warning: AS BACKUPSET option added due to allocation of multiple channel types

Cause: DISK and non DISK channels were allocated for a backup command. Configuration indicates to produce image copies to DISK, however due to the mixed channel types BACKUPSETS will be created on DISK.

Action: Do not allocate non DISK channels to produce image copies to DISK or allocate only non DISK channels to produce BACKUPSETS only.

RMAN-06585: no copy of datafile *number* found

Cause: An available data file copy for the specified data file could not be found.

Action: make sure that all specified data files have a copy available.

RMAN-06586: no copy of datafile *number* with tag *string* found

Cause: An available data file copy for the specified data file could not be found.

Action: make sure that all specified data files have a copy available.

RMAN-06587: one or more datafile copies were not found

Cause: This error message was accompanied by an additional error message or messages indicating the cause of the error.

Action: Follow the recommended actions of the additional error message or messages.

RMAN-06588: number of patterns (*number*) to DB_FILE_NAME_CONVERT should be even

Cause: An uneven number of patterns was specified.

Action: Specify one more or one less pattern.

RMAN-06589: cannot specify DB_FILE_NAME_CONVERT option without AS COPY

Cause: The DB_FILE_NAME_CONVERT option was specified without AS COPY. This is not permitted for backup set backups where multiple files are combined into a set.

Action: Remove the DB_FILE_NAME_CONVERT option and re-run the BACKUP command.

RMAN-06590: Tablespace *string* cannot be converted

Cause: The system tablespaces could not be transported to other platforms.

Action: Remove the specified tablespace from the CONVERT command and retry the operation.

RMAN-06591: ALLOW INCONSISTENT can only be used with cross-platform backup

Cause: ALLOW INCONSISTENT was specified in a non cross-platform backup command.

Action: Remove ALLOW INCONSISTENT or add a cross-platform backup modifier.

RMAN-06593: platform name '*string*' specified in FROM PLATFORM is not valid

Cause: The platform name was not recognized.

Action: Specify a valid platform name.

RMAN-06594: platform name '*string*' specified in TO PLATFORM is not valid

Cause: The platform name was not recognized.

Action: Specify a valid platform name.

RMAN-06595: platform name '*string*' does not match database platform name '*string*'

Cause: The platform name specified did not match the name of the database performing the conversion.

Action: Specify the correct platform name.

RMAN-06596: *string* requires target database compatibility *string*, currently set to *string*

Cause: A command or option was used that requires a higher database compatibility than is currently set at the target database.

Action: Raise the compatibility of the database before attempting the command again.

RMAN-06597: conversion between platforms '*string*' and '*string*' is not implemented

Cause: Conversion of Oracle data files between the specified platforms was not supported.

Action: Do not do the conversion.

RMAN-06599: Tablespace *string* is not read-only

Cause: A conversion was attempted on a tablespace which is not read-only.

Action: Change the tablespace to read-only and retry the operation.

RMAN-06600: old RMAN configuration parameters:

Cause: This message is issued in response to a CONFIGURE command.

Action: No action is required, this is an informational message only.

RMAN-06601: new RMAN configuration parameters:

Cause: This message is issued in response to a CONFIGURE command.

Action: No action is required, this is an informational message only.

RMAN-06602: TO DESTINATION option can be used only for disk device

Cause: The TO DESTINATION option was specified for non-disk device.

Action: Remove the TO DESTINATION option and resubmit the command.

RMAN-06603: TO DESTINATION option must be specified with RECOVERY AREA, RECOVERY FILES or DB_RECOVERY_FILE_DEST on disk device

Cause: RECOVERY FILES, RECOVERY AREA or DB_RECOVERY_FILE_DEST option was specified in BACKUP command on disk device without specifying TO DESTINATION option.

Action: Specify TO DESTINATION option and retry the command.

RMAN-06604: new RMAN configuration parameters are successfully stored

Cause: This message is issued in response to a CONFIGURE command.

Action: No action is required, this is an informational message only.

RMAN-06605: old RMAN configuration parameters are successfully deleted

Cause: This message is issued in response to a CONFIGURE command.

Action: No action is required, this is an informational message only.

RMAN-06606: RMAN configuration parameters are successfully reset to default value

Cause: This message is issued in response to a CONFIGURE command.

Action: No action is required, this is an informational message only.

RMAN-06607: RMAN configuration parameters for database with db_unique_name string are:

Cause: This message is issued in response to a SHOW command.

Action: No action is required, this is an informational message only.

RMAN-06608: RMAN configuration has no stored or default parameters

Cause: This message is issued in response to a SHOW command.

Action: No action is required, this is an informational message only.

RMAN-06609: AS COPY can be configured only for disk device

Cause: The AS COPY option was specified for non-disk device.

Action: Remove the AS COPY option and resubmit the command.

RMAN-06610: For record type *string* RECIDS from *number* to *number* are re-used before resync

Cause: This message is issued when the control file records were re-used before resyncing to catalog database.

Action: Increase control_file_keep_record_time setting or issue BACKUP command that it will generate fewer control file records, e.g., backup few tablespaces instead of the complete database in one BACKUP command.

RMAN-06611: Following RMAN configuration applied before deleting logs:

Cause: This message is issued in response to a DELETE command.

Action: No action is required, this is an informational message only.

RMAN-06612: Incompatible options were specified for archive log deletion policy

Cause: Incompatible options were specified on CONFIGURE ARCHIVELOG DELETION POLICY command.

Action: Remove incompatible options and retry the command. BACKED UP option can be used individually or combined with SHIPPED or APPLIED option. Following are invalid combination of options: a) TO NONE cannot be used with other options b) SHIPPED ON STANDBY and SHIPPED ON ALL STANDBY cannot be used together. c) APPLIED ON STANDBY and APPLIED ON ALL STANDBY cannot be used together. d) SHIPPED and APPLIED cannot be used together.

RMAN-06613: Connect identifier for DB_UNIQUE_NAME *string* not configured

Cause: The connect identifier for the specified DB_UNIQUE_NAME initialization parameter was not configured.

Action: Do one of the following: - If the DB_UNIQUE_NAME belongs to a connected target database, then define the DB_UNIQUE_NAME parameter in LOG_ARCHIVE_DEST_n at the remote database from where the resynchronization is performed. Otherwise, define DB_UNIQUE_NAME parameter in LOG_ARCHIVE_DEST_n at the target database. Or, - Configure the appropriate connect identifier using the CONFIGURE DB_UNIQUE_NAME RMAN command and rerun the command.

RMAN-06614: DB_UNIQUE_NAME *string* is too long

Cause: The DB_UNIQUE_NAME initialization parameter string was too long.

Action: Configure the appropriate DB_UNIQUE_NAME initialization parameter string and re-run the command.

RMAN-06615: resyncing from database with DB_UNIQUE_NAME *string*

Cause: Resync was performed remotely for the specified DB_UNIQUE_NAME initialization parameter without connecting to it as target database. This type of remote resync has limitations. For example, RMAN output cannot be resynced. Please refer to RMAN documentation for a complete set of limitations.

Action: This is an informational message.

RMAN-06616: RMAN output not resynced for database with DB_UNIQUE_NAME *string*

Cause: V\$RMAN_OUTPUT contents were not resynced when the RESYNC CATALOG FROM DB_UNIQUE_NAME command was executed."

Action: This is an informational message.

RMAN-06617: UNTIL TIME (*string*) is ahead of last NEXT TIME in archived logs (*string*)

Cause: UNTIL TIME was more than the last NEXT TIME of the last archived log.

Action: Check the UNTIL SCN.

RMAN-06618: RMAN client and database version mismatch; indicated database version is *number.number.number.number*

Cause: This version of Oracle Recovery Manager (RMAN) was incompatible with either the indicated database or the DBMS_BACKUP_RESTORE package installed in the indicated database.

Action: If the database is upgraded from an earlier version, ensure that the catuxxx.sql script has run successfully. Reinstall dbmsbkrs.sql and prvtbkrs.plb, if necessary. Otherwise, ensure that the RMAN client version is the same as the target database version.

RMAN-06619: recovery catalog schema version *string* is newer than RMAN version

Cause: The Oracle Recovery Manager (RMAN) client version did not match the catalog schema version number for the database.

Action: This is an informational message. No action is required.

RMAN-06620: DISK channel not supported for FROM FILE option

Cause: DISK channel was allocated when the FROM FILE option was specified.

Action: Specify the SBT CHANNEL or DEVICE TYPE SBT option, and retry the command.

RMAN-06621: Recovery window days must be greater than zero

Cause: The RECOVERY WINDOW operand specified for the retention policy was zero.

Action: Specify a RECOVERY WINDOW operand of 1 or greater.

RMAN-06700: error parsing text script in file *string*

Cause: Incorrect syntax or invalid commands were found.

Action: Fix text script and retry the command.

RMAN-06701: could not construct path for file: "*string*"

Cause: An error was encountered when trying to construct the full pathname for the specified file.

Action: Ensure that the path is correct.

RMAN-06702: could not initialize for input file: "*string*"

Cause: An error was encountered when trying to initialize the specified file for input.

Action: Ensure that the file exists.

RMAN-06703: could not open file: "*string*" (reason=*string*)

Cause: An error was encountered when trying to open the specified file.

Action: Ensure that the file has correct permissions.

RMAN-06705: text script line is too long (>1024)

Cause: A text script contained a line longer than the permitted maximum length.

Action: Split the line in smaller lines and retry the operation.

RMAN-06706: could not close file: "*string*" (reason=*string*)

Cause: An error was encountered when trying to close the specified file.

Action: Ensure that the file has correct permissions and still exists.

RMAN-06707: could not initialize for output file: "*string*"

Cause: An error was encountered when trying to initialize the specified file for output.

Action: Ensure that the file exists.

RMAN-06708: short write while writing file "*string*". Wrote *string* bytes instead of *string* bytes

Cause: An attempt was made to write to a file system that was full.

Action: Ensure that the file system has room for the file. Check system logs.

RMAN-06709: ln No scripts in recovery catalog

Cause: An attempt was made to list the scripts in the catalog, but no scripts could be found in the specified recovery catalog.

Action: No action required, this is an informational message only.

RMAN-06710: script *string* not found in catalog

Cause: An attempt was made to call a script that could not be found in the target database or as a global script in the specified catalog.

Action: Verify the script name and retry the command.

RMAN-06711: global scripts require a TARGET connection

Cause: Connection to a TARGET database was not specified.

Action: Provide a TARGET connection and retry the command.

RMAN-06716: skipping datafile *number*; already restored to file *string*

Cause: Recovery Manager determined that this file is already restored. Use FORCE option to override this optimization.

Action: No action required, this is an informational message only.

RMAN-06717: Could not delete auxiliary instance file *string*

Cause: Auxiliary instance file was not deleted. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-06724: backup not done; all files already backed up

Cause: A BACKUP command does not need to backup any files, because all of the files to backup are already backed up.

Action: No action required, this is an informational message only.

RMAN-06725: database not open: sort area size too small

Cause: sort area size too small to execute RMAN commands.

Action: open the database or increase sort_area_size.

RMAN-06726: could not locate archived log *string*

Cause: The specified archived log could not be found on any allocated channel.

Action: Allocate additional channels on other nodes of the cluster or, if the archived logs has been deleted, use the CROSSCHECK ARCHIVELOG command to correct the recovery catalog or target database control file entries.

RMAN-06727: could not locate datafile copy *string*

Cause: The specified data file copy could not be found on any allocated channel.

Action: Allocate additional channels on other nodes of the cluster or if the data file copy has been deleted, use the CROSSCHECK DATAFILECOPY command to correct the recovery catalog or target database control file entries.

RMAN-06728: could not locate control file copy *string*

Cause: The specified control file copy could not be found on any allocated channel.

Action: Allocate additional channels on other nodes of the cluster or if the control file copy has been deleted, use the CROSSCHECK CONTROLFILECOPY command to correct the recovery catalog or target database control file entries.

RMAN-06729: no backup of the SPFILE found to restore

Cause: A SPFILE restore could not proceed because no backup of the SPFILE was found. It may be the case that a backup of this file exists but does not satisfy the criteria specified in the user's restore operands.

Action: Modify options for the SPFILE restore.

RMAN-06730: no channel to restore a backup of the SPFILE

Cause: A SPFILE restore could not proceed because the backup on a device type that was not allocated for restore.

Action: No action required, this is an informational message only. See message 6026 for further details.

RMAN-06731: command *string:string%%* complete, time left *number:number:number*

Cause: This is an informational message only.

Action: No action is required.

RMAN-06732: database dropped

Cause: This is an informational message only.

Action: No action is required.

RMAN-06733: database unregistered from the recovery catalog

Cause: This is an informational message only.

Action: No action is required.

RMAN-06737: database name "*string*" does not match target database name "*string*"

Cause: The UNREGISTER DATABASE command was used with a database name that does not match the name of the database to which RMAN is connected.

Action: Specify the correct database name or avoid specifying the database name when connected to the target database.

RMAN-06738: database name "*string*" is not unique in the recovery catalog

Cause: The UNREGISTER DATABASE command was used with a database name that is ambiguous.

Action: Use the SET DBID command to specify the database id and resolve the ambiguity.

RMAN-06739: database "*string*" is not found in the recovery catalog

Cause: The UNREGISTER DATABASE command was used with a database name that was not found in the recovery catalog.

Action: Make sure the database name specified in the DROP DATABASE command syntax is correct.

RMAN-06740: database name is not specified

Cause: The command failed because of the following:

- o RMAN is not connected to the target database
- o The database name is not specified in the command
- o DBID is not set with the SET DBID command

Action: Any one of the following actions will fix the problem:

- o Connect to the target database
- o Specify database name
- o Set DBID with SET DBID command

RMAN-06741: database name is "*string*" and DBID is *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-06742: platform name '*string*' longer than *number* characters

Cause: The specified platform name exceeded the maximum allowed platform name.

Action: Correct the platform name.

RMAN-06743: specification does not match any backup set in the repository

Cause: The specified backup sets were not found in the recovery catalog or target database control file.

Action: Verify backup set existence and retry the command.

RMAN-06744: specification does not match any datafile copy in the repository

Cause: The specified data file copies were not found in the recovery catalog or target database control file.

Action: Verify data file copy existence and retry the command.

RMAN-06745: skipping datafile copy *string*; already backed up *string* time(s)

Cause: The indicated data file copy was not included in the backup set because it was already backed up on the device requested.

Action: Use FORCE option to override backup optimization.

RMAN-06746: backup cancelled because there are no files to backup

Cause: There were no files or all files were skipped for this backup set, therefore no backup set was created.

Action: This message is informational only.

RMAN-06747: at least 1 channel of tertiary storage must be allocated to execute this command

Cause: The executed command requires a SBT channel, but no channels of type SBT were configured or allocated.

Action: ALLOCATE or CONFIGURE a SBT channel.

RMAN-06748: more than one channel types were allocated

Cause: RECOVERY FILES, RECOVERY AREA or DB_RECOVERY_FILE_DEST option was specified in BACKUP command, but more than one channel types was used and no DEVICE TYPE or CHANNEL option was specified.

Action: Specify CHANNEL or DEVICE TYPE option and retry the command.

RMAN-06749: restore point *string* does not exist.

Cause: The specified restore point does not exist in v\$restore_point table of the target database.

Action: Check the name of restore point and retry the command.

RMAN-06750: SPFILE cannot be backed up by proxy.

Cause: The PROXY option was specified, but proxy copy of SPFILE is not supported. This file will be placed into a non-proxy backup set.

Action: No action required, this is an informational message only.

RMAN-06751: ASM file *string* cannot be proxy backed up.

Cause: The PROXY option was specified, but proxy copy of ASM file is not supported. This file will be placed into a non-proxy backup set.

Action: No action required, this is an informational message only.

RMAN-06752: error while looking up tempfile: *string*

Cause: An error occurred while looking up the specified tempfile in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure; see those error messages for further information. One possible problem is that the tempfile name was not entered correctly.

RMAN-06753: tempfile not found in the repository

Cause: The specified tempfile is not found in the control file or recovery catalog.

Action: Make sure that the tempfile name is correct and retry

RMAN-06754: INCREMENTAL FROM SCN option is not supported with [*string*]

Cause: The INCREMENTAL FROM SCN option was supplied but does not apply to this type of backup.

Action: Remove the INCREMENTAL FROM SCN operand and reenter the command.

RMAN-06755: warning: datafile *string*: incremental-start SCN is too recent; using checkpoint SCN *string* instead

Cause: The incremental-start system change number (SCN) which was specified when starting an incremental data file backup is greater than the data file checkpoint SCN, which could cause some blocks to be missed.

Action: Specify a smaller incremental-start system change number (SCN).

RMAN-06756: cannot flashback database to non-guaranteed restore point *string* when flashback is off

Cause: The indicated restore point was not guaranteed and flashback was disabled. When flashback is disabled, Oracle can flashback only to guaranteed restore point.

Action: Specify a guaranteed restore point or turn on flashback and retry the command. the command.

RMAN-06757: DB_UNIQUE_NAME "*string*" does not match target database ("*string*")

Cause: The value specified in the FOR DB_UNIQUE_NAME option did not match the DB_UNIQUE_NAME parameter setting of the target database.

Action: Use the RMAN STARTUP command, with no parameter file option, to start the target database without a parameter file, then run the RESTORE SPFILE command again.

RMAN-06758: DB_UNIQUE_NAME is not unique in the recovery catalog

Cause: RMAN could not identify which SPFILE to restore for this target database, because the recovery catalog contained two or more different instances of this database, each with different DB_UNIQUE_NAME values.

Action: Use the FOR DB_UNIQUE_NAME option to specify the name of the instance whose parameter file you want to restore.

RMAN-06759: skipping datafile copies that are already backed up

Cause: Some data file copies were not be backed up because they were already backed up on the device requested.

Action: No action is required. You can use the FORCE option to override backup optimization and force these files to be backed up.

RMAN-06760: skipping archived logs that are already backed up

Cause: Some archived logs were not be backed up because they were already backed up on the device requested.

Action: No action is required. You can use the FORCE option to override backup optimization and force these files to be backed up.

RMAN-06761: skipping backup sets that are already backed up

Cause: Some backup sets were not be backed up because they were already backed up on the device requested.

Action: No action is required. You can use the FORCE option to override backup optimization and force these files to be backed up.

RMAN-06762: ignoring encryption for proxy or image copies

Cause: This information message is displayed when the RMAN client is generating proxy or image copies and encryption was enabled for the input files.

Action: This is an informational message only.

RMAN-06763: specified encryption algorithm not supported

Cause: An encryption algorithm not supported by the database is specified during backup.

Action: Refer to contents of v\$rman_encryption_algorithms view for the list of supported encryption algorithm. Specify a valid encryption algorithm and retry the command.

RMAN-06764: *string*

Cause: An error occurred when processing user request.

Action: n/a

RMAN-06765: Tablespace *string* will be encrypted in future backup sets

Cause: This is an informational message only.

Action: No action is required.

RMAN-06766: Tablespace *string* will not be encrypted in future backup sets

Cause: This is an informational message only.

Action: No action is required.

RMAN-06767: Tablespace *string* will default to database encryption configuration

Cause: This is an informational message only.

Action: No action is required.

RMAN-06768: duplicate or conflicting options are specified: *string* and *string*

Cause: An error occurred when processing the command because user specified two duplicate options or the two options are not allowed to be used together.

Action: Remove one of the above options and retry the command.

RMAN-06769: length of password must be greater than zero

Cause: Zero length password was specified for encrypted backups.

Action: Retry the command using a password with non-zero length.

RMAN-06771: cannot do IMPORT CATALOG after NOCATALOG has been used

Cause: The IMPORT CATALOG command was used after the NOCATALOG option was already specified.

Action: Restart RMAN and connect to recovery catalog if you wish to IMPORT CATALOG.

RMAN-06772: cannot do IMPORT CATALOG before connecting to recovery catalog

Cause: The IMPORT CATALOG command was used before connecting to the recovery catalog.

Action: Connect to recovery catalog using CONNECT CATALOG command if you wish to IMPORT CATALOG.

RMAN-06773: connected to source recovery catalog database

Cause: This is an informational message only.

Action: No action is required.

RMAN-06774: must specify a TNS service name for source recovery catalog database

Cause: The connect string does not contain TNS service name. IMPORT CATALOG without TNS service name is not supported.

Action: Specify a service name and resubmit the command.

RMAN-06775: not connected to source recovery catalog database

Cause: IMPORT CATALOG command was issued but no connection to the source recovery catalog database has been established.

Action: Resubmit IMPORT CATALOG command with correct connect string.

RMAN-06776: source recovery catalog database not started

Cause: IMPORT CATALOG command was issued which requires the source recovery catalog to be open.

Action: Open the source recovery catalog database and re-submit the command.

RMAN-06777: Oracle error from source recovery catalog database: *string*

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-06778: warning: *string*: sqlcode *number* was caught, automatic retry #*string*

Cause: The RMAN client caught a transient error during temporary resource allocate for IMPORT CATALOG command and will automatically retry several times.

Action: No action required, this is an informational message.

RMAN-06779: import validation complete

Cause: This is an informational message only.

Action: No action required.

RMAN-06780: database unregistered from the source recovery catalog

Cause: This is an informational message only.

Action: No action is required.

RMAN-06781: *string* package version *string* in source database is not of version *string*

Cause: The catalog schema version of the source recovery catalog is not the same as the target recovery catalog. The two catalog

Action: UPGRADE source recovery catalog schema and recovery catalog schema to same version and retry the command.

RMAN-06782: Datafile headers of locally managed datafiles need to be updated.

Cause: This is an informational message only.

Action: No action is required.

RMAN-06783: Update of datafile headers of locally managed datafiles finished.

Cause: This is an informational message only.

Action: No action is required.

RMAN-06784: One or more datafile headers of locally managed datafiles were not updated.

Cause: Errors prevented the update of one or more data file headers.

Action: See trace file for details of the problem.

RMAN-06785: This operation might take some time.

Cause: This is an informational message only.

Action: No action is required.

RMAN-06786: could not read file header for datafile *string* to do FLASHBACK.

Cause: The indicated data file header could not be read to do FLASHBACK DATABASE.

Action: If the database must be taken back in time then a restore and incomplete recovery must be performed.

RMAN-06787: warning: TAG *string* option is ignored; backups will be tagged with *string*

Cause: WITH TAG option and TAG option were used together. When WITH TAG option is used, all the backups created by the command will have tag specified with WITH TAG option.

Action: The TAG option can be removed to not display the message.

RMAN-06791: changed the DB_UNIQUE_NAME value from *string* to *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-06792: database db_unique_name is "*string*", db_name is "*string*" and DBID is *string*

Cause: UNREGISTER DB_UNIQUE_NAME or CHANGE DB_UNIQUE_NAME command was executed, hence RMAN displayed the database information for which DB_UNIQUE_NAME the metadata will be removed/renamed in the recovery catalog.

Action: No action required, this is an informational message only.

RMAN-06793: database with db_unique_name *string* unregistered from the recovery catalog

Cause: UNREGISTER DB_UNIQUE_NAME command was executed.

Action: No action required, this is an informational message only.

RMAN-06795: Flashback database logging is not on.

Cause: A FLASHBACK DATABASE command was tried but flashback database logging has not been enabled.

Action: Flashback database logging must be enabled via the ALTER DATABASE FLASHBACK ON command before a FLASHBACK DATABASE command can be tried. If the database must be taken back in time then a restore and incomplete recovery must be performed.

RMAN-06796: Not enough flashback database log data to do FLASHBACK.

Cause: There was not enough flashback database log data to do the FLASHBACK DATABASE.

Action: If the database must be taken back in time then a restore and incomplete recovery must be performed.

RMAN-06797: Grant succeeded.

Cause: This is an informational message issued in response to a GRANT command.

Action: No action required.

RMAN-06798: Revoke succeeded.

Cause: This is an informational message issued in response to a REVOKE command.

Action: No action required.

RMAN-06799: found eligible base catalog owned by *string*

Cause: When creating a virtual private catalog, an 11g base catalog was found, owned by the specified user, and the currently connected catalog user has been granted privileges on this catalog, and can therefore create a virtual private catalog using this base catalog. This is an informational message issued in response to a CREATE VIRTUAL CATALOG command.

Action: No action required.

RMAN-06800: found ineligible base catalog owned by *string*

Cause: When creating a virtual private catalog, an 11g base catalog was found, owned by the specified user, and the currently connected catalog user has not been granted any privileges on this catalog. This is an informational message issued in response to a CREATE VIRTUAL CATALOG command.

Action: No action required.

RMAN-06801: no base catalog found

Cause: When trying to create a virtual catalog, either no base catalog was found, or this user has no privilege to create a virtual catalog against any existing base catalog.

Action: Establish the correct privileges and re-create the virtual catalog.

RMAN-06802: too many eligible base catalogs found

Cause: When trying to create a virtual catalog, more than one base catalog was found that is eligible to be the base catalog for this virtual catalog.

Action: Revoke privileges so that the current catalog user has privileges on only one base catalog, then re-issue the CREATE VIRTUAL CATALOG command.

RMAN-06803: created virtual catalog against base catalog owned by *string*

Cause: A virtual private catalog was created, where the base catalog data is owned by the specified user. This is an informational message issued in response to a CREATE VIRTUAL CATALOG command.

Action: No action required.

RMAN-06804: Enter value for *string*:

Cause: This is a user prompt.

Action: Enter a substitution value to proceed.

RMAN-06805: SET NEWNAME command has not been issued for tempfile *string*

Cause: A SWITCH command was specified for a tempfile, but no destination was specified and no SET NEWNAME command has been previously issued for that file. An explicit file to switch to must be specified if no SET NEWNAME command has been issued.

Action: Correct and resubmit the SWITCH command.

RMAN-06806: compression algorithm '*string*' of release *string* not found

Cause: An unsupported compression algorithm was specified for the backup.

Action: Query the V\$RMAN_COMPRESSION_ALGORITHM view for the list of supported compression algorithms. Specify a valid compression algorithm and retry the command.

RMAN-06807: compression algorithm '*string*' of release *string* cannot be used because database compatibility is less than *string*

Cause: The compression algorithm is not supported because the current compatibility level of the database is too low.

Action: Query the V\$RMAN_COMPRESSION_ALGORITHM view for the list of supported compression algorithms. Specify a valid compression algorithm and retry the command.

RMAN-06808: SECTION SIZE cannot be used when piece limit is in effect

Cause: The SECTION SIZE backup option was used together with the MAXPIECESIZE channel limit. These options are mutually exclusive, because they are independent methods of creating multiple backup pieces with one backup command.

Action: Use one option or the other, but not both.

RMAN-06809: compression algorithm '*string*' of release *string* requires advanced compression option

Cause: The compression algorithm was not supported because it requires advanced compression option to be enabled.

Action: Enable advanced compression option by setting advanced_compression_option_usable=true or specify a different compression algorithm.

RMAN-06810: specification does not match any datafile copy in the repository

Cause: No data file copies were found that match specification in the recovery catalog or target database control file.

Action: Check the specifier.

RMAN-06811: specification does not match any control file copy in the repository

Cause: No control file copies were found that match specification in the recovery catalog or target database control file.

Action: Check the specifier.

RMAN-06812: specification does not match any backup in the repository

Cause: No backups were found that match specification in the recovery catalog or target database control file.

Action: Check the specifier.

RMAN-06813: could not translate pluggable database *string*

Cause: An error occurred while looking up the specified pluggable database in the repository.

Action: Ensure that the database name is entered correctly and retry the command.

RMAN-06814: cannot connect to pluggable database *string*

Cause: An error was received when connecting to database because the database is a pluggable database.

Action: Connect to the root database and retry the command.

RMAN-06815: cannot change the container in RMAN session.

Cause: An attempt was made by to change the container using the ALTER SESSION SET CONTAINER statement.

Action: This operation is not allowed in RMAN session.

RMAN-06817: Pluggable Database *string* cannot be backed up in NOARCHIVELOG mode.

Cause: Backing up the Pluggable Database when database was in NOARCHIVELOG mode is not allowed.

Action: Pluggable Database backups are not allowed when the database is in NOARCHIVELOG mode. Close the container database and backup the complete database using the BACKUP DATABASE command.

RMAN-06818: warning: last archived log from primary database not received at standby database

Cause: An archived log was switched at the primary database during backup at the standby database and this log was not shipped to the standby database. The backup created at the standby database will need more logs to recover.

Action: Check whether the standby database is configured correctly to receive logs from the primary database.

RMAN-06819: current log archived at primary database

Cause: The ALTER SYSTEM ARCHIVE LOG CURRENT command completed successfully at the primary database because the connected target instance was a physical standby database. The switched archived logs were included in the backup so that the backed up files could be recovered to a consistent point-in-time.

Action: None. This is an informational message.

RMAN-06820: warning: failed to archive current log at primary database

Cause: An attempt to switch the archived log at the primary database failed.

Action: Resolve the error messages associated with this message to avoid the warning.

RMAN-06821: backup is not consistent because the last archived log was not received at the standby database

Cause: As part of the KEEP backup operation, the archived log at the primary database was switched but was not shipped to the standby database.

Action: Check whether the standby database is configured correctly to receive logs from the primary database.

RMAN-06822: backup not consistent because switching of archived log failed at the primary

Cause: As part of the KEEP backup operation, the attempt to switch the archived log at the primary database failed.

Action: Resolve the error messages associated with this message to avoid the warning.

RMAN-06823: flashback command failed due to low value of DB_FLASHBACK_RETENTION_TARGET

Cause: An attempt to flashback failed due to the NULL value for OLDEST_FLASHBACK_SCN or OLDEST_FLASHBACK_TIME in V\$FLASHBACK_DATABASE_LOG. This failure can happen when the initial creation of standby is not consistent or when there is not enough space in FRA for 1 hours worth of flashback data.

Action: Increase the value for DB_FLASHBACK_RETENTION_TARGET to a higher value and check the value of OLDEST_FLASHBACK_SCN and OLDEST_FLASHBACK_TIME in V\$FLASHBACK_DATABASE_LOG.

RMAN-06824: cannot connect to remote database

Cause: Connecting to the remote server specified by the database connect string failed.

Action: Check additional error messages for more information.

RMAN-06825: skipping data file copy *string* because it belongs to dropped PDB

Cause: The indicated data file copy was not included in the backup because it belonged to a dropped pluggable database (PDB).

Action: No action is required.

RMAN-06826: skipping backup piece *string* because it belongs to dropped PDB

Cause: The indicated backup piece will not be backed up because it belonged to a dropped pluggable database (PDB).

Action: No action is required.

RMAN-06827: GUID may only be specified with backup

Cause: The GUID option was specified with an RMAN command. This is not permitted because only copies and backups of data files, control files and SPFILE may be tested with a GUID operand.

Action: Remove the GUID option and re-run the RMAN command.

RMAN-06828: no backup pieces with this GUID found: *string*

Cause: A GUID was used to specify a list of backup pieces, but no backup pieces with this tag could be found.

Action: Ensure that GUID is specified correctly.

RMAN-06829: number of times backed up must be greater than zero

Cause: A value less than one was specified for the BACKED UP clause of the BACKUP command.

Action: Specify a value of one or greater for the BACKED UP clause.

RMAN-06830: skipping archived logs when connected to a PDB

Cause: An attempt was made to back up, delete, or validate archived logs when the target was a pluggable database (PDB).

Action: No action is required. This is an informational message.

RMAN-06831: skipping accessible file *string*

Cause: The indicated file could not be restored because the file header could be read, and the SKIP ACCESSIBLE option was specified.

Action: No action is required.

RMAN-06832: invalid mirror number specified: *number*

Cause: An attempt was made to validate data file, database, tablespace, or data file copy with the mirror number 0, 4294967295, or higher.

Action: Use a valid mirror number and retry the command.

RMAN-06833: validate with the mirror option is permitted only for data files

Cause: An attempt was made to validate backup set, archived log, recovery file, control file, or SPFILE with the mirror option.

Action: No action is required. This is an informational message.

RMAN-06834: pluggable database *string* does not have any data files

Cause: An attempt was made to back up data files from a pluggable database (PDB) that did not have any data files.

Action: Remove the PDB from the command and retry.

RMAN-06835: specification does not match any data file in the respository

Cause: No data file found that match specification in the recovery catalog or target database control file. An attempt was made to back up or restore data files of pluggable databases, but none of the specified pluggable database had a data file.

Action: Check the pluggable database specifier.

RMAN-06836: command not supported for far sync instance

Cause: A far sync instance did not have user data files.

Action: No action is required. This is an informational message only.

RMAN-06896: cannot resolve circular path of synonym *string*

Cause: Synonym forms a circular reference that causes an infinite loop.

Action: Drop self-referential synonyms.

RMAN-06897: procedure, function, package, sequence, or type is not supported here

Cause: RMAN does not support DESCRIBE for procedures, functions, packages, sequences, or types.

Action: Use DESCRIBE for tables or views only.

RMAN-06898: recovery catalog is partially upgraded to *string*

Cause: The recovery catalog database was not completely upgraded to the specified version. Either there were some errors during execution of UPGRADE CATALOG or UPGRADE CATALOG was cancelled before completion.

Action: Execute UPGRADE CATALOG again.

RMAN-06899: updating recovery catalog with new database incarnation

Cause: The target database has a new incarnation that has not already been seen by the recovery catalog. This usually happens because a Point-in-Time Recovery was done. RMAN has made the necessary updates to the recovery catalog.

Action: This is an informational message only.

RMAN-06900: warning: unable to generate V\$RMAN_STATUS or V\$RMAN_OUTPUT row

Cause: The routine createRmanStatusRow() or createRmanOutputRow() could add new row into V\$RMAN_STATUS or V\$RMAN_OUTPUT.

Action: Check the associated error messages. If the associated error message indicates a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-06901: warning: disabling update of the V\$RMAN_STATUS and V\$RMAN_OUTPUT rows

Cause: Informational message only.

Action: No action required.

RMAN-06903: backup of datafile *string* was cancelled

Cause: This is an informational message displayed when PARTIAL option of DURATION option was specified on the BACKUP command and backup could not be completed within the given duration time.

Action: Run the BACKUP command to backup cancelled files, or let the next backup window backup the cancelled files. It should be noted that the files that were skipped in the current job will be given preference to other files for next the BACKUP command with DURATION option.

RMAN-06904: backup of archived log for thread *number* with sequence *number* and starting SCN of *string* was cancelled

Cause: This is an informational message displayed when PARTIAL option of DURATION option was specified on the BACKUP command and backup could not be completed within the given duration time.

Action: Run BACKUP command to backup cancelled files, or let the next backup window backup the cancelled files. It should be noted that the files that were skipped in the current job will be given preference to other files for next the BACKUP command with DURATION option.

RMAN-06905: backup of backup set key *number* was cancelled

Cause: This is an informational message displayed when PARTIAL option of DURATION option was specified on the BACKUP command and backup could not be completed within the given duration time.

Action: Run BACKUP command to backup cancelled files, or let the next backup window backup the cancelled files. It should be noted that the files that were skipped in the current

job will be given preference to other files for next the BACKUP command with DURATION option.

RMAN-06906: backup of control file was cancelled

Cause: This is an informational message displayed when PARTIAL option of DURATION option was specified on the BACKUP command and backup could not be completed within the given duration time.

Action: Run BACKUP command to backup cancelled files, or let the next backup window backup the cancelled files. It should be noted that the files that were skipped in the current job will be given preference to other files for next the BACKUP command with DURATION option.

RMAN-06907: MINIMIZE LOAD option not allowed for the specified input files

Cause: This option was specified in a backup command specification for BACKUP BACKUPSET or BACKUP CURRENT CONTROLFILE command.

Action: Remove the MINIMIZE LOAD option and retry the command.

RMAN-06908: warning: operation will not run in parallel on the allocated channels

Cause: RMAN allocated more than one channel for a job, but the job will not run in parallel on these channels because parallelism require Enterprise Edition.

Action: None

RMAN-06909: warning: parallelism require Enterprise Edition

Cause: RMAN allocated more than one channel for a job, but the job will not run in parallel on these channels because parallelism require Enterprise Edition.

Action: None

RMAN-06910: can not invoke parallel recovery for test recovery

Cause: Recover database was called with TEST and PARALLEL option

Action: Call recover database with either just the TEST or PARALLEL option

RMAN-06911: only one PARALLEL or NOPARALLEL clause may be specified

Cause: Recover database was called with PARALLEL and NOPARALLEL option

Action: Call recover database with either just the PARALLEL or NOPARALLEL option.

RMAN-06912: backup of spfile was cancelled

Cause: This is an informational message displayed when PARTIAL option of DURATION option was specified on the BACKUP command and backup could not be completed within the given duration time.

Action: Run BACKUP command to backup cancelled files, or let the next backup window backup the cancelled files. It should be noted that the files that were skipped in the current job will be given preference to other files for next the BACKUP command with DURATION option.

RMAN-06913: validate cancelled because there are no files to validate

Cause: All files for this validate command were skipped, therefore no files to validate.

Action: This message is informational only.

RMAN-06914: BLOCK *string* must be greater or equal to BLOCK *string*

Cause: The value of TO block number was less than the value of from block number.

Action: Increase the value of TO BLOCK past the value of from BLOCK and retry the command.

RMAN-06915: restore point *string* already exists

Cause: The specified restore point already exists on this database.

Action: Use LIST RESTORE POINT to see existing names and retry the command with a unique restore point name.

RMAN-06916: RECOVER DATABASE required for SNAPSHOT TIME recovery

Cause: RECOVER DATABASE must be used for SNAPSHOT TIME recovery.

Action: Use the RECOVER DATABASE command to perform the recovery.

RMAN-06917: skipping backup sets; RECOVERY FILES, RECOVERY AREA or DB_RECOVERY_FILE_DEST option cannot validate backup set

Cause: The RECOVERY FILES, RECOVERY AREA or DB_RECOVERY_FILE_DEST was specified in VALIDATE command to validate backup set. This is not supported.

Action: To validate a backup set, use the VALIDATE BACKUPSET or RESTORE VALIDATE command.

RMAN-06918: warning: allocated SBT channel to the Recovery Appliance in NOCATALOG mode

Cause: The Recovery Appliance might have run out of resources because congestion control could not be enabled in NOCATALOG mode.

Action: Use CATALOG mode to connect RMAN to a Recovery Appliance instance.

RMAN-06919: command not allowed when the Recovery Appliance is running

Cause: The command specified could not be used when the Recovery Appliance was running.

Action: Shut down the Recovery Appliance and retry the command.

RMAN-06920: database *string* is not open read-only

Cause: CONVERT DATABASE attempted on a database that was not open read-only.

Action: Open the database in read-only mode and retry the operation.

RMAN-06921: Convert database check failed

Cause: This database could not be transported because DBMS_TDB.CHECK_DB returned FALSE.

Action: None

RMAN-06922: External table *string.string* found in the database

Cause: An external table was found in the database.

Action: Redefine the table in the transported database.

RMAN-06923: Directory *string.string* found in the database

Cause: A directory object was found in the database.

Action: Redefine the directory in the transported database.

RMAN-06924: BFILE *string.string* found in the database

Cause: A BFILE was found in the database.

Action: Redefine the BFILE in the transported database.

RMAN-06925: BFILEs are used in the system, please redefine them in the transported database

Cause: BFILEs may or may not exist in the database. Automatically performed BFILE check failed because database was open read-only and could not allocate temporary space. This does not affect CONVERT DATABASE operation.

Action: Use DBMS_TDB.CHECK_EXTERNAL to perform BFILE check when the database is open in read/write mode.

RMAN-06926: User *string* with *string* privilege found in password file

Cause: Password file was used.

Action: Re-create the password file on the target platform using ORAPWD for the transported database.

RMAN-06927: Cannot specify NEW DATABASE clause more than once

Cause: NEW DATABASE clause specified more than once

Action: Remove redundant NEW DATABASE clause and retry the operation.

RMAN-06928: Cannot specify ON TARGET PLATFORM clause more than once

Cause: ON TARGET PLATFORM clause specified more than once

Action: Remove redundant ON TARGET PLATFORM clause and retry the operation.

RMAN-06929: Cannot specify TRANSPORT SCRIPT clause more than once

Cause: TRANSPORT SCRIPT clause specified more than once

Action: Remove redundant ON TARGET PLATFORM clause and retry the operation.

RMAN-06930: Cannot specify SKIP clause more than once

Cause: SKIP clause specified more than once

Action: Remove redundant SKIP clause and retry the operation.

RMAN-06931: Cannot specify FROM PLATFORM clause

Cause: CONVERT DATABASE command cannot use FROM PLATFORM clause.

Action: Change FROM PLATFORM clause and retry.

RMAN-06932: Database name '*string*' longer than *number*

Cause: The specified database name exceeded the maximum allowable database name length.

Action: Correct the database name.

RMAN-06933: Transport script name too long

Cause: The specified transport script name exceeded the maximum allowable script name length.

Action: Correct the script name.

RMAN-06934: Format string too long

Cause: The specified format string exceeded the maximum allowable format string length.

Action: Correct the format string.

RMAN-06935: Convert script name too long

Cause: The specified convert script name exceeded the maximum allowable script name length.

Action: Correct the script name.

RMAN-06936: at least 1 channel of TYPE DISK must be allocated to use CONVERT

Cause: A channel of TYPE DISK was not allocated.

Action: Allocate a channel of TYPE DISK and reissue the command.

RMAN-06937: invalid format specifier '*string*'

Cause: An invalid format specifier was found in an RMAN command.

Action: Correct the format specifier and retry the command.

RMAN-06941: Database must be closed and mounted EXCLUSIVE and RESTRICTED.

Cause: DROP DATABASE was attempted while the database was open or not mounted EXCLUSIVE and RESTRICTED.

Action: Change the database state to mounted EXCLUSIVE and RESTRICTED.

RMAN-06942: OPTION *number* is invalid; OPTION must be between *string* and *string*

Cause: An invalid OPTION was used.

Action: Change the OPTION argument.

RMAN-06943: no automatic repair OPTION *number* was listed in ADVISE FAILURE

Cause: The OPTION specified was not one of the automatic repair options listed by ADVISE FAILURE or there were no options listed by the ADVISE FAILURE command.

Action: Change the OPTION argument or resubmit ADVISE FAILURE with a different set of failures.

RMAN-06944: contents of repair script:

Cause: This is an informational message only.

Action: No action is required.

RMAN-06945: no repair script present for REPAIRID *string*

Cause: REPAIRID option specified in the command was invalid or the repair script had been purged from Automated Diagnostic Repository.

Action: Retry REPAIR FAILURE command with a different OPTION number.

RMAN-06946: executing repair script

Cause: This is an informational message only.

Action: No action is required.

RMAN-06947: searching flashback logs for block images until SCN string

Cause: Starting the flashback log search for RECOVER...BLOCK command. The log is searched until the indicated system change number (SCN).

Action: None. This is an informational message displayed for RECOVER...BLOCK command.

RMAN-06948: searching flashback logs for block images

Cause: Starting the flashback log search for RECOVER...BLOCK command. The log is searched until the end of the log.

Action: None. This is an informational message displayed for RECOVER...BLOCK command.

RMAN-06949: finished flashback log search, restored string blocks

Cause: Flashback log search finished for RECOVER...BLOCK command.

Action: None. This is an informational message displayed for RECOVER...BLOCK command.

RMAN-06950: invalid validate option specified: string

Cause: The specified object was invalid with VALIDATE command.

Action: Delete the invalid operand.

RMAN-06951: repair failure complete

Cause: This is an informational message only.

Action: No action is required.

RMAN-06952: database needs to be restarted

Cause: The target database control file was missing.

Action: Restart the instance and repair the database.

RMAN-06953: no automatic repairs were listed by ADVISE FAILURE

Cause: There were no automatic repairs listed by the ADVISE FAILURE command.

Action: Choose a different failure, submit ADVISE FAILURE command, and then submit REPAIR FAILURE command.

RMAN-06954: REPAIR command must be preceded by ADVISE command in same session

Cause: The ADVISE command was not issued in the same session as the REPAIR command.

Action: Submit ADVISE command and then submit the REPAIR command in same session.

RMAN-06955: Network copies are only supported for nonsection image copies.

Cause: An attempt was made to specify BACKUP AUXILIARY FORMAT without specifying the AS COPY clause. A network copy is only supported with an image copy without sections.

Action: Seek an alternate method of copying the desired files.

RMAN-06956: create datafile failed; retry after removing *string* from OS

Cause: An attempt was made to re-create a database file. This attempt failed.

Action: If the indicated file already exists, remove the file from operating system and retry the RMAN command.

RMAN-06957: finished standby search, restored *string* blocks

Cause: Standby search finished for RECOVER...BLOCK command.

Action: None. This is an informational message displayed for RECOVER...BLOCK command.

RMAN-06958: Executing: *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-06959: warning: repair completed but could not verify that failures were fixed by it

Cause: RMAN repair command successfully completed but could not check if the failures were fixed.

Action: Use LIST FAILURE command to verify repair results.

RMAN-06960: EXPDP> *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-06961: IMPDP> *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-06962: Error received during export of metadata

Cause: Data Pump could not perform export of tablespace metadata.

Action: See accompanying datapump messages indicating the cause of the error.

RMAN-06963: Error received during import of metadata

Cause: Data Pump could not perform import of tablespace metadata.

Action: See accompanying datapump messages indicating the cause of the error.

RMAN-06964: option *string* cannot be used with *string*

Cause: Incompatible options were specified that caused the command to fail.

Action: Remove one of the options from the command and retry.

RMAN-06965: Datapump job has stopped

Cause: A Data Pump error has caused the job to stop.

Action: See accompanying datapump messages or look for a Data Pump trace file for the cause of the error.

RMAN-06966: Invalid release number *string*

Cause: An incorrectly formatted release number was specified.

Action: Specify a valid release number in n.n.n.n.n format.

RMAN-06967: finished primary search, recovered *string* blocks

Cause: Primary Database search finished for RECOVER...BLOCK command.

Action: None. This is an informational message displayed for RECOVER...BLOCK command.

RMAN-06968: duplicate DUMP FILE specification

Cause: DUMP FILE specification already encountered for this command.

Action: Remove duplicate DUMP FILE specification and retry the command.

RMAN-06969: duplicate DATAPUMP specification

Cause: DATAPUMP specification already encountered for this command.

Action: Remove duplicate DATAPUMP specification and retry the command.

RMAN-06970: NEWNAME '*string*' for database must include *%number* or *%%U* format

Cause: The newname in SET NEWNAME FOR DATABASE did not include a format specifier to produce different newnames for the data files.

Action: Include %f or %U in the newname or use SET NEWNAME FOR DATABASE TO NEW to ensure data files get different data file names.

RMAN-06971: NEWNAME '*string*' for tablespace must include *%number* or *%%U* format

Cause: The newname in SET NEWNAME FOR TABLESPACE did not include a format specifier to produce different newnames for the data files.

Action: Include %f or %U in the newname or use SET NEWNAME FOR TABLESPACE ... TO NEW to ensure data files get different data file names.

RMAN-06980: The following errors need to be fixed before performing this command

Cause: The tablespaces failed validation by DBMS_TTS.TRANSPORT_SET_CHECK.

Action: Fix accompanying violations before attempting the command again.

RMAN-06981: Violation: *string*

Cause: This message was issued to show a violation obtained from the DBMS_TTS.TRANSPORT_SET_CHECK.

Action: Fix violation before attempting the command again.

RMAN-06982: SQL command with length of *string* exceeds maximum length of *string*

Cause: The SQL command issued exceeded the maximum allowed length.

Action: Retry the command removing unnecessary spaces or use a shorter command.

RMAN-06983: unsupported data type *string* in column *string* for select

Cause: The select list included an unsupported data type. Not all SQL data types are supported by RMAN. Only simple data types are supported.

Action: Remove the column from select list or use a conversion function to change it to a simple data type.

RMAN-06985: *\nstring* rows selected

Cause: This is an informational message only.

Action: No action is required.

RMAN-06986: Statement processed

Cause: This is an informational message only.

Action: No action is required.

RMAN-06987: NUMWIDTH option *string* out of range (*number* through *number*)

Cause: Value for NUMWIDTH option was out of the specified range.

Action: Check the limits of the option and enter a value that is within the range.

RMAN-06988: Only SELECT statements are supported for CATALOG modifier

Cause: SQL CATALOG was specified for a non-SELECT statement.

Action: Do not specify CATALOG or change the statement to be a SELECT statement.

RMAN-06989: *\nno* rows selected

Cause: This is an informational message only.

Action: No action is required.

RMAN-06990: Error in select list

Cause: The specified select list could not be processed.

Action: See accompanying errors for corrective action.

RMAN-06991: Name Null? Type

Cause: This is an informational message only.

Action: No action is required.

RMAN-06992: -----

Cause: This is an informational message only.

Action: No action is required.

RMAN-06993: LONG option *string* out of range (*number* through *number*)

Cause: Value for LONG option was out of the specified range.

Action: Check the limits of the option and enter a value that is within the range.

RMAN-06994: cannot issue *string* command in CATALOG mode when database is a SNAPSHOT STANDBY

Cause: An attempt was made to run a command in CATALOG mode when connected to a SNAPSHOT STANDBY database.

Action: Execute the command in NOCATALOG mode.

RMAN-06995: AT ANY SCN option can be used for DATAFILECOPY only

Cause: AT ANY SCN option was not used with DATAFILE COPY.

Action: No action required.

RMAN-06996: could not translate tablespace "*string*"

Cause: An error occurred while translating a tablespace to a list of data files at the source instance.

Action: Ensure that the tablespace name is entered correctly.

RMAN-06997: could not translate pluggable database "*string*"

Cause: An error occurred while translating a pluggable database to a list of data files at the source instance.

Action: Ensure that the pluggable database name is entered correctly.

RMAN-06998: target file name for file number "*string*" is not unique in the v\$foreign_datafile_copy

Cause: Multiple target file names were found matching the file number.

Action: Resolve the ambiguity by deleting invalid entries in v\$foreign_datafile_copy.

RMAN-06999: target file name for file number "*string*" is not found in the v\$foreign_datafile_copy

Cause: Data files could not be restored from this service. A full restore may not have been performed.

Action: Try a full restore of foreign tablespace or pluggable database and retry the operation.

RMAN-07000: List of SPFILE Backups

Cause: This message is issued in response to a LIST BACKUP OF SPFILE command.

Action: No action is required.

RMAN-07025: *string* is not supported for foreign archived log

Cause: The specified option was not supported for foreign archived log.

Action: Do not use the specified command for foreign archived log.

RMAN-07200: no failures found that match specification

Cause: A failure specifier did not match any failures in the Automated Diagnostic Repository.

Action: Resubmit the command with a different failure specifier. You can use the LIST FAILURE ALL command in Recovery Manager to display all failures known to RMAN.

RMAN-07207: changed *string* failures to HIGH priority

Cause: This is an informational message only.

Action: No action is required.

RMAN-07208: changed *string* failures to LOW priority

Cause: This is an informational message only.

Action: No action is required.

RMAN-07209: closed *string* failures

Cause: This is an informational message only.

Action: No action is required.

RMAN-07210: new failures after most recent LIST FAILURE command

Cause: New failures were found since last LIST FAILURE command in this RMAN session.

Action: No action is required. This is an informational message only.

RMAN-07211: failure option not specified

Cause: ALL, CRITICAL, HIGH, LOW, or list of failure numbers was not specified.

Action: Specify a failure option and resubmit the command.

RMAN-07212: skipping failure *string* because it was CLOSED

Cause: The specified failure has been already closed, so ADVISE FAILURE or CHANGE FAILURE cannot be executed on this failure.

Action: This is an informational message only. No action is required.

RMAN-07213: Mandatory Manual Actions

Cause: This is an informational message only.

Action: No action is required.

RMAN-07215: Automated Repair Options

Cause: This is an informational message only.

Action: No action is required.

RMAN-07220: no manual actions available

Cause: This is an informational message only.

Action: No action is required.

RMAN-07222: =====

Cause: This is an informational message only.

Action: No action is required.

RMAN-07251: Repair script: *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-07252: =====

Cause: This is an informational message only.

Action: No action is required.

RMAN-07253: =====

Cause: This is an informational message only.

Action: No action is required.

RMAN-07255: priority change for failure *string* failed

Cause: An attempt was made to change the priority of a child failure.

Action: Specify the parent failure ID to change the child failure.

RMAN-07256: cannot change priority of child failure

Cause: An attempt was made to change the priority of child failure.

Action: This message should be followed by one or more 7255 messages.

RMAN-07259: *string* critical failures exist; cannot exclude from ADVISE FAILURE

Cause: ADVISE FAILURE was executed for HIGH or LOW priority failures when CRITICAL failures existed.

Action: Execute ADVISE FAILURE with the CRITICAL or ALL options.

RMAN-07262: no automatic repair options available

Cause: This is an informational message only.

Action: No action is required.

RMAN-07263: Database Role: *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-07500: searching for all files that match the pattern *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-07501: searching for all files in the recovery area

Cause: This is an informational message only.

Action: No action is required.

RMAN-07502: List of Files Unknown to the Database

Cause: This message is issued in response to a CATALOG command.

Action: No action is required.

RMAN-07505: no files found to be unknown to the database

Cause: This is an informational message displayed by the CATALOG command. The command either found no files, or all files that matched the specified search pattern were already present in the target database control file.

Action: No action is required.

RMAN-07507: cataloging files...

Cause: This is an informational message only.

Action: No action is required.

RMAN-07508: cataloging done

Cause: This is an informational message only.

Action: No action is required.

RMAN-07509: List of Cataloged Files

Cause: This message is issued in response to a CATALOG command.

Action: No action is required.

RMAN-07513: List of Files Which Were Not Cataloged

Cause: This message is issued in response to a CATALOG command.

Action: No action is required.

RMAN-07514: =====

Cause: This is an informational message only.

Action: No action is required.

RMAN-07515: File Name: *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-07516: Reason: Error reading

Cause: This is an informational message only.

Action: No action is required.

RMAN-07517: Reason: The file header is corrupted

Cause: Either the file is not an Oracle file or the file header is corrupted.

Action: Delete the file using OS utility.

RMAN-07518: Reason: Foreign database file DBID: *string* Database Name: *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-07519: Reason: Error while cataloging. See alert.log.

Cause: This is an informational message only.

Action: No action is required.

RMAN-07520: Reason: Data pump dump file

Cause: This is an informational message only.

Action: No action is required.

RMAN-07521: cannot create recovery catalog in database version *string*; version *string* required

Cause: An attempt was made to use a version of the recovery catalog schema that was incompatible with the version of the database.

Action: Upgrade the catalog database to at least the required version or install the catalog schema in a different database which is of at least the required version.

RMAN-07522: CREATE TYPE privilege must be granted to user *string*

Cause: The CREATE CATALOG or UPGRADE CATALOG command was used, but the USERID that was supplied in the CATALOG connect string does not have the CREATE TYPE privilege granted.

Action: Grant CREATE TYPE privilege to the recovery catalog owner.

RMAN-07523: List of files in Recovery Area not managed by the database

Cause: This message was issued in response to a CATALOG RECOVERY AREA command.

Action: No action is required.

RMAN-07524:

=====

Cause: This is an informational message only.

Action: No action is required.

RMAN-07525: Reason: File is not a supported file type in Recovery Area

Cause: This message should be accompanied by other message(s) indicating the name of file that was not supported in recovery area. Any file other than current control file, online log, archived log, RMAN backups and flashback log is not supported in recovery area. This is an informational message only.

Action: No action is required.

RMAN-07526: Reason: File is not an Oracle Managed File

Cause: This message should be accompanied by other message(s) indicating the name of file that was not a oracle managed file. This is an informational message only.

Action: No action is required.

RMAN-07527: Reason: File was not created using DB_RECOVERY_FILE_DEST initialization parameter

Cause: This message should be accompanied by other message(s) indicating the name of file that was not created using DB_RECOVERY_FILE_DEST initialization parameter. One of the following scenarios caused this error: 1) This is an archived log file and was created when the LOG_ARCHIVE_DEST_n initialization parameter was set explicitly to recovery area location. For example, LOG_ARCHIVE_DEST_1='location=+FRA' where '+FRA' was also your DB_RECOVERY_FILE_DEST value. 2) This is an RMAN backup file and was created in a recovery area using the FORMAT option of the BACKUP command. 3) This is an online log file or current control file and was created prior to setting the recovery area. 4) This file fits none of the above scenarios and is not supported by the recovery area.

Action: All of following actions will resolve future occurrences of this error: 1) To create archived logs in recovery area, set the LOG_ARCHIVE_DEST_n initialization parameter to 'location=USE_DB_RECOVERY_FILE_DEST'. Do not explicitly set the LOG_ARCHIVE_DEST_n initialization parameter to a recovery area location. 2) To create RMAN backups in recovery area, do not use the FORMAT option of the BACKUP command. All of following actions will resolve current problem: 1) If this is an archived log file or an RMAN backup file, use the CATALOG command to re-catalog the files. 2) If this is an online log file or a current control file to be managed by

the recovery area, re-create the file using the DB_RECOVERY_FILE_DEST initialization parameter.

RMAN-07528: number of files not managed by recovery area is *string*, totaling *string*

Cause: This message should be accompanied by other message(s) indicating the list of files. Either the files listed are not known to the database or not managed by recovery area. The number and size of the files are shown. This is an informational message only.

Action: No action is required.

RMAN-07529: Reason: catalog is not supported for this file type

Cause: The CATALOG command encountered one or more files of types that cannot be cataloged. These file types include online redo logs, flashback logs, block change tracking files, and data pump files. This message will be accompanied by other messages indicating the names of the file's that could not be cataloged.

Action: No action is required.

RMAN-07530: Reason: This file type is not requested for cataloging

Cause: This is an informational message only.

Action: No action is required.

RMAN-07531: skipping datafile *number*; already restored to SCN *string*

Cause: Recovery Manager determined that this file was already restored to the specified SCN.

Action: No action required, this is an informational message only.

RMAN-07532: skipping datafilecopy *string*; already recovered to SCN *string*

Cause: Recovery Manager determined that this data file copy was already recovered to the specified SCN.

Action: No action required, this is an informational message only.

RMAN-07535: waiting for ASM instance to release file state object

Cause: This is an informational message only.

Action: No action is required.

RMAN-07536: command not allowed when connected to a Pluggable Database

Cause: A command was attempted that can only be performed in the root container.

Action: Connect to the root container and retry the command.

RMAN-07537: command only allowed in a container database

Cause: A command was attempted that is only allowed in a CDB.

Action: Connect to a CDB and retry the command.

RMAN-07538: Pluggable Database qualifier not allowed when connected to a Pluggable Database

Cause: A command was attempted with Pluggable Database name qualifier. This is not allowed when connected to a Pluggable Database.

Action: Connect to the root container or remove the Pluggable Database qualifier and retry the command.

RMAN-07539: insufficient privileges to upgrade the catalog schema

Cause: UPGRADE CATALOG command was attempted, but the current recovery catalog connection does not have the privileges required to upgrade the catalog schema.

Action: 1. Execute '?/rdbms/admin/dbmsrmanvpc.sql -vpd *owner*' after connecting to a catalog database as SYS to grant VPD-required privileges to the base catalog owner. 2. Connect to RMAN base catalog and perform UPGRADE CATALOG. 3. Execute '?/rdbms/admin/dbmsrmanvpc.sql *owner*' after connecting to a catalog database as SYS to cleanup VPC users schemas associated with this base recovery catalog.

RMAN-07540: Cleanup is required for the VPC user schema

Cause: The VPC user specified in the connect string does have extra privileges granted.

Action: Execute '?/rdbms/admin/dbmsrmanvpc.sql' after connecting to a catalog database as SYS to cleanup VPC users schemas.

RMAN-07541: checkpoint of the data file is more recent than the last archived log

Cause: The checkpoint system change number (SCN) of the data file in the backup was higher than the SCN of the most recent archived log. THE RMAN DUPLICATE command will use the checkpoint SCN of the most recent backup data file as the UNTIL SCN value during restore and recovery.

Action: This is an informational message only.

RMAN-07542: switched to preplugin container *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-07543: recovery catalog does not have VPD support enabled

Cause: An attempt was made to use virtual recovery catalog features without a proper VPD setup for the base catalog.

Action: 1. Execute '?/rdbms/admin/dbmsrmanvpc.sql -vpd *owner*' after connecting to a catalog database as SYS to grant VPD-required privileges to the base catalog owner. 2. Reconnect to RMAN base catalog and perform UPGRADE CATALOG. 3. Retry the failed operation.

RMAN-07544: Execute '?/rdbms/admin/dbmsrmanvpc.sql *string*' as SYS to cleanup VPC users schemas

Cause: There are existing VPC users schemas associated with this base recovery catalog that have to be migrated to the new VPD model.

Action: Execute '?/rdbms/admin/dbmsrmanvpc.sql *owner*' after connecting to a catalog database as SYS to cleanup VPC users schemas associated with this base recovery catalog.

RMAN-07545: skipping data file *string* because it belongs to container *string*

Cause: A RESTORE or RECOVER command omitted processing the indicated data file because it belongs to different PDB from the preplugin container. RESTORE or RECOVER of data files from more than one pluggable database (PDB) in one command is not supported because it belongs to different PDB from the preplugin container.

Action: No action is required.

RMAN-07546: no preplugin container set

Cause: An attempt was made to use the PREPLUGIN clause but no preplugin container was set.

Action: Use the SET PREPLUGIN CONTAINER command to set the preplugin container and retry the command.

RMAN-07547: PREPLUGIN option requires the database to be opened

Cause: The PREPLUGIN option was specified, but the database was not opened.

Action: Open the database and then retry the command. If the database could not be opened, then retry the command after connecting to the target database with the ROOT credential.

RMAN-07548: cannot upgrade catalog using Recovery Appliance RMAN executable

Cause: The recovery catalog that was not a Recovery Appliance catalog could not be upgraded using a Recovery Appliance RMAN executable.

Action: Use an RMAN executable from a database shiphome and upgrade the recovery catalog schema.

RMAN-07549: cannot upgrade catalog using non Recovery Appliance RMAN executable

Cause: Recovery Appliance catalog could not be upgraded using this RMAN executable.

Action: Use RMAN executable from Recovery Appliance shiphome and upgrade the recovery catalog schema.

RMAN-07550: preplugin repository not found for container *string*

Cause: The specified pluggable database (PDB) did not have a preplugin repository.

Action: Check the PDB name and retry the command.

RMAN-07551: data file *string* must be restored or preplugin recovery must be completed

Cause: A RECOVER command was issued, and the recovery catalog indicates the specified data file should be part of the recovery. But this data file is not listed in the control file, and cannot be found on disk or preplugin recovery was incomplete.

Action: Issue a RESTORE command for this data file or complete RECOVER FROM PREPLUGIN to complete preplugin recovery and then reissue the RECOVER.

RMAN-07552: VPC support required when target database is pluggable database

Cause: An attempt was made to use recovery catalog when the target database was a Pluggable Database (PDB). This is supported only when Virtual Private Catalog (VPC) is enabled.

Action: Enable VPC support in the recovery catalog schema and retry the command.

RMAN-07553: warning: RECOVERY WINDOW is more than CONTROL_FILE_RECORD_KEEP_TIME

Cause: The specified RECOVERY WINDOW was more than the CONTROL_FILE_RECORD_KEEP_TIME initialization parameter on target database. Using RMAN without a recovery catalog in such a configuration would result in losing backup information.

Action: Use the recovery catalog or ensure that the RECOVERY WINDOW is not more than CONTROL_FILE_RECORD_KEEP_TIME parameter by changing the RECOVERY WINDOW or CONTROL_FILE_RECORD_KEEP_TIME parameter value. Oracle highly recommends using the recovery catalog to keep backup information for more than a month.

RMAN-07554: warning: CONTROL_FILE_RECORD_KEEP_TIME is too large (string days)

Cause: The CONTROL_FILE_RECORD_KEEP_TIME initialization parameter value was too high. A large value would increase the size of control file and can cause performance issues.

Action: Use the recovery catalog or reduce the CONTROL_FILE_RECORD_KEEP_TIME initialization parameter on target database to less than a month. Oracle highly recommends using the recovery catalog to keep backup information for more than a month.

RMAN-07555: cannot specify NOT BACKED UP BY TAG option with FOR RECOVER OF TAG

Cause: The TAG option was specified with NOT BACKED UP clause. This is not permitted with FOR RECOVER OF TAG option.

Action: Remove the NOT BACKED UP BY TAG option and re-run the command.

RMAN-07556: Following sessions are blocking the catalog schema upgrade

Cause: This message was issued in response to a LIST or UPGRADE command.

Action: No action is required.

RMAN-07557: Following sessions are waiting for catalog schema upgrade to complete

Cause: This message was issued in response to a LIST or UPGRADE command.

Action: No action is required.

RMAN-07558: Following sessions are connected to catalog schema

Cause: This message was issued in response to a LIST command.

Action: No action is required.

RMAN-07562: Recovery Manager running in special maintenance mode

Cause: This message was issued in response to when maintenance argument was specified in RMAN command line options.

Action: No action is required.

RMAN-07563: command not allowed in maintenance mode

Cause: A command that was not allowed in maintenance mode is executed.

Action: It is allowed to execute only TERMINATE or LIST command with CONNECTED USERS option in maintenance mode.

RMAN-07564: command allowed only when connected to catalog owner

Cause: A command that was not allowed while connected to VPC user was processed.

Action: Re-run the command after connecting to the catalog owner.

RMAN-08000: channel *string*: copied datafile *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08001: restore not complete

Cause: All of the backup pieces have been successfully applied, but DBMS_BACKUP_RESTORE package indicates that the restore conversation is not complete. This usually means that the backup set contained corrupt data.

Action: Restore the files from a different backup set, if possible. The Recovery Manager CHANGE BACKUPPIECE UNAVAILABLE can be used to prevent Recovery Manager from attempting to restore from the corrupt backup piece(s).

RMAN-08002: starting full resync of recovery catalog

Cause: This is an informational message only.

Action: No action is required.

RMAN-08003: channel *string*: reading from backup piece *string*

Cause: This is an informational message only.

Action: No action is required.

Cause: This is an informational message only.

Action: No action is required.

RMAN-08030: allocated channel: *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08031: released channel: *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08032: channel *string*: RECID *string* STAMP *string* does not match recovery catalog

Cause: The record that identifies the source file for a copy or backup database does not contain the same data as is stored in the recovery catalog.

Action: Perform a full resync and retry the operation. If the problem persists, then contact Oracle.

RMAN-08033: channel *string*: including datafile copy of datafile *string* in backup set

Cause: This is an informational message only.

Action: No action is required.

RMAN-08034: full resync skipped, target database not mounted

Cause: This is an informational message only.

Action: No action is required.

RMAN-08035: partial resync skipped, target database not mounted

Cause: This is an informational message only.

Action: No action is required.

RMAN-08036: channel *string*: could not create control file record for *string string*

Cause: The record identifying the named file was no longer present in the target database control file, and repeated attempts to inspect the file were unsuccessful in creating the record. This could be because the circular-reuse section of the control file which holds information about the specified type of file is too small and there is other database activity which is causing the record to be overwritten before it can be used.

Action: Try increasing either the size of the control file circular-reuse section for this file type (data file copy or archived log, as indicated in the error message, or the CONTROL_FILE_RECORD_KEEP_TIME initialization parameter. If neither of those remedies works then contact Oracle.

RMAN-08037: channel *string*: unexpected validation return code *string*

Cause: This is an internal error that should never be issued.

Action: Contact Oracle Support Services

RMAN-08038: channel *string*: starting piece *string* at *string*

Cause: This is an informational message only.

Action: No action is required.

Action: No action is required.

RMAN-08093: specifying current control file for proxy backup

Cause: This is an informational message only.

Action: No action is required.

RMAN-08094: channel *string*: specifying datafile(s) for proxy restore

Cause: This is an informational message only.

Action: No action is required.

RMAN-08096: channel *string*: starting validation of datafile backup set

Cause: This is an informational message only.

Action: No action is required.

RMAN-08097: channel *string*: starting validation of archived log backup set

Cause: This is an informational message only.

Action: No action is required.

RMAN-08099: specifying standby control file for proxy backup

Cause: This is an informational message only.

Action: No action is required.

RMAN-08100: channel *string*: starting proxy validation

Cause: This is an informational message only.

Action: No action is required.

RMAN-08101: channel *string*: proxy validation complete

Cause: This is an informational message only.

Action: No action is required.

RMAN-08102: channel *string*: located backup piece: *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08103: channel *string*: could not locate backup piece: *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08104: channel *string*: input backup set: count=*string*, stamp=*string*, piece=*string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08105: channel *string*: backup cancelled because no pieces were found

Cause: All backup sets specified has no pieces. Therefore, no backup set is created.

Action: This is an informational message only.

RMAN-08106: channel *string*: restoring block(s)

Cause: This is an informational message only.

Action: No action is required.

RMAN-08107: skipping inaccessible backup set count=*string* STAMP=*string*

Cause: The indicated backup set will not be backed up because one or more pieces of the backup set could not be read, and the SKIP INACCESSIBLE option was specified.

Action: No action is required.

RMAN-08108: channel *string*: specifying block(s) to restore from backup set

Cause: This is an informational message only.

Action: No action is required.

RMAN-08109: channel *string*: restored block(s) from backup piece *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08110: failover to next copy of backup piece

Cause: This is an informational message only.

Action: No action is required.

RMAN-08111: some blocks not recovered: See trace file for details

Cause: Some blocks not recovered due to errors.

Action: See trace file for details of the problem.

RMAN-08112: archived log failover was done on *string*, check alert log for more info

Cause: This is an informational message to indicate the server found a corrupted block in an archived log and had to switch to another copy of the same archived log in an alternate archived log destination to get corresponding un-corrupted block.

Action: If backup is done with delete input option, nothing needs to be done. Otherwise delete the archived log that has corrupted block(s) as recovery on applying this log would fail. Alert log contains name of the log that has corrupted block(s).

RMAN-08113: including current SPFILE in backup set

Cause: This is an informational message only.

Action: No action is required.

RMAN-08114: channel *string*: restoring SPFILE to PFILE

Cause: This is an informational message only.

Action: No action is required.

RMAN-08115: channel *string*: restoring SPFILE

Cause: This is an informational message only.

Action: No action is required.

RMAN-08116: output file name is original SPFILE location

Cause: This is an informational message only.

Action: No action is required.

RMAN-08117: channel *string*: the AUTOBACKUP does not contain an SPFILE

Cause: The requested AUTOBACKUP does not contain a SPFILE. This is because the instance was not started with a SPFILE when the AUTOBACKUP was created.

Action: No action is required. RMAN will try three older AUTOBACKUPS before signaling ORA-19687.

RMAN-08118: warning: could not delete the following archived redo log

Cause: The routine deleteArchivedLog() could not delete an archived redo log on the target instance.

Action: Check the accompanying file specification and the associated error messages. The file specification indicates what archived redo log on the target instance RMAN was trying to delete and the error messages indicate why RMAN was unable to delete it. Resolve the problem by first confirming that the archived redo log in question has been backed up, do the deletion manually, and then do a crosscheck so that RMAN is aware of the deletion.

RMAN-08119: skipping backup piece handle *string*; already exists

Cause: A BACKUP command does not need to backup control file AUTOBACKUP pieces, because they already exists.

Action: This is an informational message, no action is required.

RMAN-08120: warning: archived log not deleted, not yet applied by standby

Cause: This is an informational message to alert the user that an archived log that should have been deleted was not as it has not been applied to the standby database. The next message identifies the archived log

Action: Archivelog can be deleted after it has been applied to standby database.

RMAN-08121: keep attributes for the backup are deleted

Cause: This is an informational message only.

Action: No action is required.

RMAN-08122: keep attributes for the backup are changed

Cause: This is an informational message only.

Action: No action is required.

RMAN-08123: keep attributes for the datafile/control file copy are deleted

Cause: This is an informational message only.

Action: No action is required.

RMAN-08124: keep attributes for the datafile/control file copy are changed

Cause: This is an informational message only.

Action: No action is required.

RMAN-08125: keep attributes for the proxy copy are deleted

Cause: This is an informational message only.

Action: No action is required.

RMAN-08126: keep attributes for the proxy copy are changed

Cause: This is an informational message only.

Action: No action is required.

RMAN-08127: channel *string*: cataloged backup piece

Cause: This is an informational message only.

Action: No action is required.

RMAN-08128: uncataloged backup piece

Cause: This is an informational message only.

Action: No action is required.

RMAN-08129: failover to piece handle=*string* tag=*string*

Cause: This is an informational message to indicate the server found a corrupted block in a piece and had to switch to another copy of piece to get corresponding un-corrupted block.

Action: See alert log for information on corruption block(s) and the name of the piece that has the corrupted block(s).

RMAN-08130: failover to copy on device type *string*

Cause: This is an informational message to indicate the RMAN could not successfully restore the database using the specified backups. An attempt was made to restore the data files/archived logs/ control file/SPFILE using the same backup set on a different device type.

Action: See accompanying additional error messages indicating the cause of the failover.

RMAN-08131: channel *string*: specifying datafile copies to recover

Cause: This is an informational message only.

Action: No action is required.

RMAN-08132: warning: cannot update recovery area reclaimable file list

Cause: This error should be accompanied by other errors giving the cause of failure to update reclaimable file list.

Action: Check the accompanying error.

RMAN-08133: channel *string*: the AUTOBACKUP does not contain a standby control file.

Cause: The requested AUTOBACKUP did not contain a standby control file.

Action: No action is required, RMAN will try three older AUTOBACKUPS before signaling ORA-19687.

RMAN-08135: some corrupt blocks found during conversion of file *string*

Cause: While converting the specified file from one platform to another, some corrupt blocks were discovered in the specified file. Details about the corruption have been written to a server trace file.

Action: If these corrupt blocks are unexpected, you may be able to use Block Media Recovery at the source database to fix the problem, then re-convert the files.

RMAN-08136: channel *string*: deleting incremental backup(s)

Cause: This is an informational message only.

Action: No Action Required.

RMAN-08137: warning: archived log not deleted, needed for standby or upstream capture process

Cause: An archived log that should have been deleted was not as it was required by upstream capture process or Data Guard. The next message identifies the archived log.

Action: This is an informational message. The archived log can be deleted after it is no longer needed. See the documentation for Data Guard to alter the set of active Data Guard destinations. See the documentation for Streams to alter the set of active streams.

RMAN-08138: warning: archived log not deleted - must create more backups

Cause: An archived log that should have been deleted was not as it did not meet the user specified archive log deletion policy of number of backups required before deleting the logs.

Action: This is an informational message. The archived log can be deleted after more backups are created to satisfy archive log deletion policy.

RMAN-08139: warning: archived redo log not deleted, needed for guaranteed restore point

Cause: An archived log that should have been deleted was not because it is required for guaranteed restore point.

Action: This is an informational message. The archived redo log can be deleted after backups are created or after deleting the guaranteed restore point that requires the log.

RMAN-08140: channel *string*: starting validation of datafile

Cause: This is an informational message only.

Action: No action is required.

RMAN-08141: channel *string*: specifying datafile(s) for validation

Cause: This is an informational message only.

Action: No action is required.

RMAN-08142: including standby control file for validation

Cause: This is an informational message only.

Action: No action is required.

RMAN-08143: including current control file for validation

Cause: This is an informational message only.

Action: No action is required.

RMAN-08144: channel *string*: validation complete, elapsed time: *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08145: channel *string*: starting validation of archived log

Cause: This is an informational message only.

Action: No action is required.

RMAN-08146: channel *string*: specifying archived log(s) for validation

Cause: This is an informational message only.

Action: No action is required.

RMAN-08150: created global script *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08151: replaced global script *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08152: global script *string* written to file *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08153: deleted global script: *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08154: deleted script: *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08155: printing stored global script: *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08156: printing stored script: *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08157: script *string* written to file *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08158: executing script: *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08159: executing global script: *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08160: script commands will be loaded from file *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08161: contents of Memory Script:

Cause: This is an informational message only.

Action: No action is required.

RMAN-08162: executing Memory Script

Cause: This is an informational message only.

Action: No action is required.

RMAN-08163: validation succeeded for backup piece

Cause: The VALIDATE HEADER option determined that the backup piece still matches its data.

Action: None - this is an informational message.

RMAN-08164: validation succeeded for proxy copy

Cause: The VALIDATE HEADER option determined that the proxy copy still matches its data.

Action: None - this is an informational message.

RMAN-08165: could not locate proxy copy *string*

Cause: The specified proxy copy could not be found on proxy channel.

Action: If the proxy copy has been deleted, use the CROSSCHECK BACKUP command to correct the recovery catalog or target database control file entries.

RMAN-08166: validation succeeded for datafile copy and control file copy

Cause: The VALIDATE HEADER option discovered that the data file copy and control file copy still matches its data in the recovery catalog or target database control file.

Action: None - this is an informational message.

RMAN-08167: warning: *string* encountered a piece that was in use

Cause: The backup piece is currently in use by another BACKUP, RESTORE or DELETE operation.

Action: Use LIST to determine if backup has been deleted. If not deleted, then check if any process is hung while accessing the piece and terminate them before retrying DELETE. If using SBT device, then check Media Manager as well. Alternatively, consider the command DELETE FORCE.

RMAN-08168: channel *string*: using compressed network backup set from service *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08169: channel *string*: using network backup set from service *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08180: channel *string*: restore complete, elapsed time: *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08181: media recovery complete, elapsed time: *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08182: channel *string*: validation complete, elapsed time: *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08183: channel *string*: block restore complete, elapsed time: *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08184: added tempfile *string* to tablespace *string* in control file

Cause: This is an informational message only.

Action: No action is required.

RMAN-08185: renamed tempfile *string* to *string* in control file

Cause: This is an informational message only.

Action: No action is required.

RMAN-08186: tempfile *string* size altered in control file

Cause: One of tempfile size attributes AUTOEXTEND, MAXSIZE, NEXTSIZE was altered. This is an informational message only.

Action: No action is required.

RMAN-08187: warning: media recovery until SCN *string* complete

Cause: Media recovery was completed until the indicated system change number (SCN) because the database was in NOARCHIVELOG mode.

Action: This is an informational message only. No action is required.

RMAN-08190: validate found one or more corrupt blocks

Cause: Backup validate found that one or more blocks were corrupt in the specified data files. This message should be followed by 8191 message.

Action: Repair them at your earliest convenience.

RMAN-08191: See trace file *string* for details

Cause: This is an informational message only.

Action: No action is required.

RMAN-08192: uncatalog BACKUPPIECE *string* in NOCATALOG mode

Cause: BACKUPPIECE could not resync due to 'set_stamp' and 'set_count' conflict. This message should be followed by message 20110.

Action: See the action associated with message 20110.

RMAN-08193: skipped datafile file number=*string* name=*string*

Cause: The indicated data file was missing after the initial discovery by RMAN during backup.

Action: Check if the pluggable database or tablespace to which this file belongs is dropped. If so, this is expected behavior.

RMAN-08195: skipping data file *string* because the file was restored

Cause: The specified data file did not have its checkpoint advanced since the previous backup, therefore, it does not need a new incremental backup.

Action: This is an informational message only.

RMAN-08241: starting recovery of nonlogged blocks

Cause: This is an informational message only.

Action: No action is required.

RMAN-08242: recovery of nonlogged blocks complete, elapsed time: *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08300: Run SQL script *string* on the target platform to create database

Cause: This is an informational message only.

Action: No action is required.

RMAN-08301: Edit init.ora file *string*. This PFILE will be used to create the database on the target platform

Cause: This is an informational message only.

Action: No action is required.

RMAN-08302: Run RMAN script *string* on target platform to convert datafiles

Cause: This is an informational message only.

Action: No action is required.

RMAN-08303: To recompile all PL/SQL modules, run utlirp.sql and utlrp.sql on the target platform

Cause: This is an informational message only.

Action: Transport script invokes utlirp.sql and utlrp.sql.

RMAN-08304: To change the internal database identifier, use DBNEWID Utility

Cause: This is an informational message only.

Action: Transport script does not invoke DBNEWID Utility automatically.

RMAN-08305: channel *string*: starting to check datafiles

Cause: This is an informational message only.

Action: No action is required.

RMAN-08306: channel *string*: datafile checking complete, elapsed time: *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08307: Resync in progress: *string string* records resynced

Cause: This is an informational message only.

Action: No action is required.

RMAN-08308: Control file used records for *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08400: Running TRANSPORT_SET_CHECK on specified tablespaces

Cause: This is an informational message only.

Action: No action is required.

RMAN-08401: Cannot specify AS COPY when producing a cross-platform backup

Cause: Cross-platform backup modifier was specified and the type of backup is not a BACKUPSET.

Action: Use CONVERT command instead or specify AS BACKUPSET.

RMAN-08402: Cannot include controlfile in a cross-platform backup

Cause: Cross-platform backup modifier was specified and controlfile backup was also requested.

Action: Do not include controlfile in cross-platform backup or remove cross-platform backup modifiers.

RMAN-08403: Cannot include SPFILE in a cross-platform backup

Cause: Cross-platform backup modifier was specified and SPFILE backup was also requested.

Action: Do not include SPFILE in cross-platform backup or remove cross-platform backup modifiers.

RMAN-08404: Cannot backup a BACKUPSET in a cross-platform backup

Cause: Cross-platform backup modifier was specified and BACKUPSET clause was also requested.

Action: Do not include BACKUPSET clause in cross-platform backup or remove cross-platform backup modifiers.

RMAN-08405: Cannot backup datafile copies in a cross-platform backup

Cause: Cross-platform backup modifier was specified and data file copies were also requested.

Action: Do not include data file copies in cross-platform backup or remove cross-platform backup modifiers.

RMAN-08406: Cannot include archived logs in a cross-platform backup

Cause: Cross-platform backup modifier was specified and ARCHIVELOG clause was also requested.

Action: Do not include ARCHIVELOG clause in cross-platform backup or remove cross-platform backup modifiers.

RMAN-08407: Cannot translate DATAPUMP DESTINATION *string* (reason: *string*)

Cause: The specified DATAPUMP DESTINATION was invalid.

Action: Retry the command with a valid DATAPUMP DESTINATION

RMAN-08408: Cannot specify *string* clause when producing cross-platform backups

Cause: A clause that cannot be used with cross-platform backup was specified.

Action: Do not include the specified clause or remove cross-platform backup modifiers.

RMAN-08409: FROM PLATFORM only allowed with BACKUPPIECE clause

Cause: A BACKUP FROM PLATFORM command was specified with backup objects other than BACKUPPIECE.

Action: Remove FROM PLATFORM or specify BACKUPPIECE clause.

RMAN-08410: Cross-platform backups require the database to be open in read/write mode

Cause: Cross-platform backup modifier was specified, but the database was not open in read/write mode.

Action: Open the database in read/write mode or remove cross-platform backup modifiers.

RMAN-08411: DATAPUMP can only be used with cross-platform backup

Cause: DATAPUMP was specified but TO PLATFORM or FOR TRANSPORT clauses were not used.

Action: Do not specify DATAPUMP clause or specify either TO PLATFORM or FOR TRANSPORT.

RMAN-08412: DATAPUMP cannot be used with whole database cross-platform backup

Cause: DATAPUMP was specified together with whole database cross-platform backup.

Action: Do not specify DATAPUMP clause for a whole database cross-platform backup or specify only tablespaces.

RMAN-08413: Cross-platform backup of backup pieces requires FORMAT clause

Cause: A BACKUP BACKUPPIECE command was specified without FORMAT clause.

Action: Add a FORMAT clause to command and retry.

RMAN-08416: ALLOW INCONSISTENT allowed only for datafile backup

Cause: ALLOW INCONSISTENT was specified for a BACKUP BACKUPPIECE command.

Action: Do not specify ALLOW INCONSISTENT clause for BACKUP BACKUPPIECE command.

RMAN-08417: standby database must be open to do KEEP backups

Cause: KEEP backup was attempted on a standby database that was not open.

Action: Open the standby database in READ ONLY or READ ONLY WITH APPLY mode and retry the command.

RMAN-08418: KEEP or CONSISTENT backups are allowed only with current or standby control file

Cause: KEEP or CONSISTENT backup was attempted on a control file that was not current or standby.

Action: Convert the control file to current or standby and retry the command.

RMAN-08419: KEEP backups cannot find archivelog to make the backup consistent

Cause: Archived logs could not be found to make keep the backup consistent.

Action: Check if the database is opened and if archive logs can be created and retry the command.

RMAN-08420: running UNPLUG on the specified pluggable database: *string*

Cause: This is an informational message only.

Action: This is an informational message only.

RMAN-08421: running UNPLUG or PLUG for cross-endian platform not supported

Cause: There was an attempt to use cross-platform backups to convert the whole database to a different endianness.

Action: No action is required.

RMAN-08423: ALLOW INCONSISTENT cannot be used with UNPLUG during cross-platform backup

Cause: The ALLOW INCONSISTENT clause was specified in a cross-platform backup command.

Action: Remove the ALLOW INCONSISTENT clause.

RMAN-08424: UNPLUG file path : *string*

Cause: This is an informational message only.

Action: This is an informational message only.

RMAN-08425: The USING clause to PLUG can only be used with FROM BACKUPSET clause

Cause: The USING clause was specified in a non-xttrestore conversation.

Action: Specify FROM BACKUPSET.

RMAN-08426: incompatible PDB : *string*

Cause: DBMS_PDB.CHECK_PLUG_COMPATIBILITY did not pass.

Action: Check your plugin.xml file.

RMAN-08427: PDB already exists: *string*

Cause: There was an attempt to plug in an existing pluggable database.

Action: Perform UNPLUG and DROP before performing the restore or plugin.

RMAN-08428: incompatible plugin.xml file for PDB: *string*

Cause: The pluggable database did not have the correct plugin.xml file.

Action: Correct the entries in the plugin.xml file if possible.

RMAN-08429: The FILE_NAME_CONVERT clause can be used only with the USING clause

Cause: The USING clause was not used with the FILE_NAME_CONVERT clause.

Action: Use the USING clause along with the FILE_NAME_CONVERT clause.

RMAN-08430: channel *string*: plugging file *string* for *string*

Cause: An informational message was provided.

Action: This is an informational message only.

RMAN-08431: FILE_NAME_CONVERT missing pattern

Cause: Replacement file name pattern was missing or invalid in the FILE_NAME_CONVERT clause.

Action: Correct the FILE_NAME_CONVERT clause and reissue the statement.

RMAN-08432: Trying to add a data file that is part of a pluggable database with an OMF file name

Cause: There was an attempt to add a data file as an Oracle Managed File (OMF) to the database.

Action: Retry the backup operation with a format specifier.

RMAN-08433: CONSISTENT option can be used to backup database or pluggable database

Cause: The CONSISTENT option was specified to backup an object other than a database or pluggable database. The option can only be used for creating full backups of database or pluggable database in the backup set mode.

Action: Modify and retry the command.

RMAN-08434: Datafile number *number* was dropped from the database hence not backed up

Cause: This is an informational message only.

Action: No action is required.

RMAN-08435: Running DESCRIBE on the specified pluggable database: *string*

Cause: This is an informational message only.

Action: This is an informational message only.

RMAN-08436: Created plug file: *string*

Cause: This is an informational message only.

Action: This is an informational message only.

RMAN-08437: WARNING: Setting decryption on during backup backupset will change the encryption method of the output backup.

Cause: Set decryption command was executed followed by backup backupset command. This will change the encryption properties of the backup according to the current encryption and decryption settings in the RMAN session.

Action: Ensure that the encryption mode desired for the backup is reflected in the RMAN encryption and decryption settings. Dual mode encryption requires both encryption and decryption settings. If a backup is encrypted with dual mode and only one of the encryption modes is provided during backup backupset, the output backup will only be encrypted in the mode provided.

RMAN-08438: too many decryption passwords

Cause: more than 128 passwords provided to decryption clause

Action: provide at most 128 passwords to the decryption clause

Cause: This is an informational message only.

Action: No action is required.

RMAN-08602: channel *string*: no AUTOBACKUPS found in ASM disk group *string*

Cause: The specified ASM area does not have desired AUTOBACKUP.

Action: Check the option UNTIL TIME in case an existing AUTOBACKUP does satisfy the criteria specified in the restore command. Otherwise, verify the values used for the format of the CONFIGURE CONTROLFILE AUTOBACKUP FORMAT command and DB_UNIQUE_NAME to verify whether the ASM area location is set correctly. Note that the DB_UNIQUE_NAME can be specified as option to the restore command.

RMAN-08603: skipping *string*; file in use by another process

Cause: The indicated file was not included in the backup because it is part of another restore or delete operation.

Action: No action is required. Wait for the other operation to complete, then retry.

RMAN-08604: skipping *string*; file deleted from disk

Cause: The indicated file was not included in the backup because it was deleted from the recovery area to reclaim disk space for other operations or deleted manually by another RMAN session.

Action: No action is required.

RMAN-08605: channel *string*: SID=*string* instance=*string* device type=*string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08606: warning: The change tracking file is invalid.

Cause: Backup found changed blocks that were not marked in the change tracking file. See alert log for more information.

Action: Do not use any of the incremental backups taken since the last full backup.

RMAN-08607: List of remote backup files

Cause: RESTORE command detected that one or more remote backup files were required to perform restore operation.

Action: Recall the media from remote site that contains the specified backup files before actual restore operation. The message should be accompanied with the list of remote backup files.

RMAN-08608: Initiated recall for the following list of remote backup files

Cause: This is an informational message displayed when the specified RECALL option of the RESTORE command detected that one or more remote backup files were required to perform the restore operation. The message indicated that RMAN had initiated the request on SBT channel to recall the remote backup files.

Action: No action required.

RMAN-08609: channel *string*: starting incremental datafile backup set

Cause: This is an informational message only.

Action: No action is required.

RMAN-08610: channel *string*: restoring datafile *string* to *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08611: channel *string*: piece handle=*string* tag=*string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08612: channel *string*: failover to duplicate backup on device *string*

Cause: This is an informational message to indicate the RMAN could not successfully restore the files using the specified backups. An attempt was made to restore the data files/ archived logs/ control file/SPFILE using a previous existing backup.

Action: See accompanying additional error messages indicating the cause of the failover.

RMAN-08613: channel *string*: failover to piece handle=*string* tag=*string*

Cause: This is an informational message to indicate the server found a corrupted block in a backup piece and had to switch to another copy of the piece to get the same block.

Action: See alert log for information on corruption block(s) and the name of the backup piece that has the corrupted block(s).

RMAN-08614: channel *string*: errors found reading piece handle=*string*

Cause: This is an informational message to indicate the server found a corrupted block in a backup piece. Accompanying error will describe the action taken.

Action: See alert log for more information.

RMAN-08615: channel *string*

Cause: This is an informational message to indicate the server could not perform the restore due to the included errors. A least recent backup set will be used to perform the restore.

Action: See alert log for information on corruption block(s) and the name of the backup piece that has the corrupted block(s).

RMAN-08616: validating blocks *string* through *string*

Cause: This is an informational message only

Action: No action is required.

RMAN-08617: validation failed for foreign archived log

Cause: The CROSSCHECK FOREIGN ARCHIVELOG command determined that the foreign archived log could not be found or no longer contained the same data, so its record was marked expired.

Action: None - this is an informational message.

RMAN-08618: validation succeeded for foreign archived log

Cause: The CROSSCHECK FOREIGN ARCHIVELOG command determined that the foreign archived log still matches its data.

Action: None - this is an informational message.

RMAN-08619: foreign archived log file name=*string* RECID=*string* STAMP=*string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08620: uncataloged foreign archived log

Cause: This is an informational message only.

Action: No action is required.

RMAN-08621: deleted foreign archived log

Cause: This is an informational message only.

Action: No action is required.

RMAN-08622: channel *string*: restoring all foreign files in backup piece

Cause: This is an informational message only.

Cause: This is an informational message only.

Action: No action is required.

RMAN-08625: channel *string*: restoring Data Pump dump file to *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08626: channel *string*: restoring foreign file *string* to *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08627: channel *string*: foreign piece handle=*string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08628: channel *string*: restoring foreign datafilecopy *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08629: waiting for resources on the Recovery Appliance for *string* channels

Cause: The number of channels required to complete this operation was not available. Channels will be allocated when they become available.

Action: No action is required. This is an informational message only.

RMAN-08630: allocating the required resources on the Recovery Appliance

Cause: The required resources were allocated on a Recovery Appliance.

Action: No action is required. This is an informational message only.

RMAN-08631: channel *string*: starting compressed piece *string* at *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08632: skipping archived log of thread *string* with sequence *string*

Cause: The specified archived log for recovery was skipped because the archived log was not needed for recovery.

Action: This is an informational message. No action is required.

RMAN-08633: archived logs from this backup are not needed for recovery

Cause: Archived logs were not restored from this backup because they were not needed for recovery.

Action: This is an informational message. No action is required.

RMAN-08634: input dump file deletion skipped during dump file backup

Cause: The dump file created during backup was not deleted because the event keepdumpfiles was set.

Action: No action is required. This is an informational message only.

RMAN-08635: channel *string*: all data files in backup session are dropped by the database

Cause: All data files added to a backup session were dropped by the database before the backup session could checkpoint them.

Action: This is an informational message only.

RMAN-08636: Some of the archived logs backup could not be found for restore

Cause: Between media recovery start scn and until scn, some of the archive logs were missing.

Action: No action is required. This is an informational message only.

RMAN-08637: skipping foreign datafile *string* to *string*; already restored to SCN *string*

Cause: Recovery Manager determined that this file was already restored to the specified SCN.

Action: No action required, this is an informational message only.

RMAN-08638: skipping foreign datafilecopy *string*; already recovered to SCN *string*

Cause: Recovery Manager determined that this foreign data file copy was already recovered to the specified SCN.

Action: No action required, this is an informational message only.

RMAN-08639: channel *string*: data file *string* is restored as instant *string*, output file name=*string*, backing file name=*string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08640: instant sparse, instant sparse only, from backupset, and from datafilecopy options are effective only for backup-based duplicate

Cause: Instant sparse, instant sparse only, from backupset, and from datafilecopy options were allowed only for backup-based duplicate operations. These options could not be used for active duplicate operations.

Action: Remove the option and retry the command.

RMAN-08641: for restoring data file *string*, no suitable image copy or backup set found during backup-based duplicate

Cause: Duplicate operation with 'from datafilecopy', 'from backupset', 'instant sparse', or 'instat sparse only' option was executed when no suitable image copies or backup sets of some data files were available at appropriate locations.

Action: Arrange a suitable image copy or backup set of the data file at appropriate location and re-run the duplicate command.

RMAN-08642: instant duplicate options cannot co-occur with from sparse or nonsparse option

Cause: Instant duplicate and sparse or nonsparse duplicate could not happen together.

Action: Remove one option and retry the command.

RMAN-08643: from backupset and from datafilecopy options cannot occur together in a duplicate operation

Cause: Duplicate operation was attempted with two incompatible options.

Action: Remove one option and retry the command.

RMAN-08644: backup controlfile does not have an entry for PDB: *string* datafile: *string*

Cause: There was no PDB information in the controlfile and recover command will offline the files of this PDB.

Action: This PDB needs to be dropped after the CDB is opened.

RMAN-08645: PDB:*string* in duplicate list does not exist in controlfile

Cause: User specified PDB entry did not exist in controlfile.

Action: Add PDB to skip list by using SKIP PLUGGABLE DATABASE clause.

RMAN-08646: skipping PDB: *string* to duplicate

Cause: There was no PDB information in the controlfile and duplicate command will drop this PDB.

Action: No action required, this is an informational message only.

RMAN-08647: Unable to locate dblink *string*

Cause: Incorrect dblink is provided

Action: Make sure that the dblink is valid and remote machine is up.

RMAN-08648: Missing operand *string* in restore specification

Cause: The PLUGIN DBLINK or PLUGIN FILE options was not specified in one of the restore specifications.

Action: Correct and resubmit the command.

RMAN-08649: channel *string*: restoring plug xml file to *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-10000: error parsing target database connect string "*string*"

Cause: An invalid target connect string was supplied.

Action: Specify a valid connect string and re-run the job.

RMAN-10001: error parsing recovery catalog connect string "*string*"

Cause: An invalid recovery catalog connect string was supplied.

Action: Specify a valid connect string and re-run the job.

RMAN-10002: Oracle error: *string*

Cause: The specified Oracle error was received. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-10003: unable to connect to target database

Cause: Recovery manager was unable to connect to the target database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Ensure that that the target database is started, and that the connect string is valid.

RMAN-10004: unable to connect to recovery catalog

Cause: Recovery manager was unable to connect to the recovery catalog

Action: Ensure that that the recovery catalog is started, and that the connect string is valid. This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-10005: error opening cursor

Cause: An error was received while trying to open a cursor. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: If the associated Oracle error message indicates a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10006: error running SQL statement: *string*

Cause: An error message was received while running the SQL statement shown.

Action: If the associated Oracle error message indicates a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10007: error closing cursor

Cause: An error was received while trying to close a cursor. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: If the associated Oracle error message indicates a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10008: could not create channel context

Cause: An error was received while trying create a channel context. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: If the associated Oracle error message indicates a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10009: error logging off of Oracle

Cause: An error was received while disconnecting from Oracle. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: This is an informational message only.

RMAN-10010: error while checking for RPC completion

Cause: Recovery Manager's channel context had an error while checking to see if a remote procedure call had completed. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: If other error messages indicate a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10011: synchronization error while polling for rpc *number*, action=*string*

Cause: Recovery Manager could not synchronize properly with a remote procedure call.

Action: This is an internal error that should not be issued. Contact Oracle Support Services

RMAN-10012: KGU error: *string*

Cause: An error occurred while initializing the KGU subsystem

Action: This is an internal error that should not be issued. Contact Oracle Support Services

RMAN-10013: error initializing PL/SQL

Cause: An error occurred while initializing the PL/SQL subsystem.

Action: This is an internal error that should not be issued. Contact Oracle Support Services

RMAN-10014: PL/SQL error *number* on line *number* column *number*: *string*

Cause: PL/SQL error

Action: The text of this message will be issued by the PL/SQL subsystem. See the PL/SQL error message manual.

RMAN-10015: error compiling PL/SQL program

Cause: An error occurred while compiling a PL/SQL program.

Action: This is an internal error that should not be issued. Contact Oracle Support Services

RMAN-10018: error cleaning up channel context

Cause: An error was received during inter-step cleanup of a channel context.

Action: This is an internal error that should not be issued. Contact Oracle Support Services

RMAN-10020: error initializing Recovery Manager execution layer

Cause: An error was received while initializing the Recovery Manager execution layer in preparation for running a job. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: If other error messages indicate a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10022: error in system-dependent sleep routine

Cause: An error was received while waiting for a remote RPC to complete. The error occurred in the system-dependent sleep routine.

Action: This is an internal error that should not be issued. Contact Oracle Support Services

RMAN-10023: RPC attempted to unrecognized package

Cause: The Recovery Manager internal RPC router received a package name that it could not understand.

Action: This is an internal error that should not be issued. Contact Oracle Support Services

RMAN-10024: error setting up for rpc polling

Cause: The Recovery Manager could not create the RPC polling context which is required to test for RPC completion. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: If other error messages indicate a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10025: connection is already registered for events

Cause: The Recovery Manager could not enable the target database connection to test for RPC completion.

Action: This is an internal error that should not be issued. Contact Oracle Support Services

RMAN-10026: network error *number-number* occurred registering connection

Cause: An network error occurred while attempting to register the target database connection to test for RPC completion.

Action: This is an internal error that should not be issued. The message numbers are issued by the Sql*Net layer. Contact Oracle Support Services

RMAN-10027: could not locate network layer context

Cause: Recovery Manager could not locate a necessary context area while attempting to register the target database connection to test for RPC completion.

Action: This is an internal error that should not be issued. Contact Oracle Support Services

RMAN-10028: network error *number-number* occurred during remote RPC

Cause: An network error occurred while waiting for a remote RPC to complete.

Action: This is an internal error that should not be issued. The message numbers are issued by the Sql*Net layer. Contact Oracle Support Services

RMAN-10029: unexpected return code *number* from PL/SQL execution

Cause: PL/SQL returned an unexpected return code while executing one channel program.

Action: This is an internal error that should not be issued. Contact Oracle Support Services

RMAN-10030: RPC call appears to have failed to start on channel *string*

Cause: An RPC to a target database instance was issued, but was not observed to start within 5 timeouts.

Action: This error is probably accompanied by other error messages giving the precise cause of the failure.

RMAN-10031: RPC Error: ORA-number occurred during call to *string.string*

Cause: An RPC to the target database or recovery catalog database encountered an error.

Action: This error is accompanied with the error message from the server where the error occurred.

RMAN-10032: unhandled exception during execution of job step *number*: *\nstring*

Cause: An unhandled PL/SQL exception occurred during a job step.

Action: This error is accompanied by the error messages describing the exception.

RMAN-10033: error during compilation of job step *number*: *string*

Cause: PL/SQL detected a problem during the compilation of a job step

Action: This error message is accompanied by the error messages describing

RMAN-10034: unhandled exception during execution of job step *number*, error unknown

Cause: PL/SQL detected an unhandled exception during execution of a job step, but no further information available

Action: n/a

RMAN-10035: exception raised in RPC: *\nstring*

Cause: A call to a remote package resulted in an exception.

Action: The exception should indicate what went wrong.

RMAN-10036: RPC call OK on channel *string*

Cause: This is just an informational message. It should be preceded by message 10030.

Action: No action is required.

RMAN-10037: RPC anomaly detected on channel *string*, UPINBLT=*number*

Cause: This is an debugging message and can be ignored.

Action: No action is required.

RMAN-10038: database session for channel *string* terminated unexpectedly

Cause: The database connection for the specified channel no longer exists. Either the session was terminated by some external means or the channel terminated because of an internal error.

Action: Check for an oracle trace file for detailed information on why the session terminated.

RMAN-10039: error encountered while polling for RPC completion on channel *string*

Cause: This error should be accompanied by other errors giving the cause of the polling error.

Action: Check the accompanying errors.

RMAN-10040: asynchronous support not detected, RMAN will run synchronously

Cause: The database connection does not support asynchronous operation, so RMAN will not multi-task work among multiple channels. Multiple channels can still be allocated, but they will not run work concurrently.

Action: Use a connection type that supports asynchronous operations.

RMAN-10041: could not re-create polling channel context following failure

Cause: The RPC polling context, which is required to test for RPC completion, failed and Recovery Manager could not re-create this channel. This message should be accompanied by other error messages indicating the cause of the error.

Action: If other error messages indicate a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10042: retry CONFIGURE CHANNEL command without password in CONNECT string

Cause: CONFIGURE CHANNEL command had a password in the CONNECT string.

Action: Connect to the database without providing password in channel configuration.

RMAN-11000: message number *number* not found in recovery manager message file

Cause: Recovery manager message file is out of date.

Action: Make sure that the recovery manager error message file is current and installed in the correct location.

RMAN-11001: Oracle Error: *lnstring*

Cause: This is an informational message only.

Action: No action is required.

RMAN-11002: could not open a cursor to the target database

Cause: This is an informational message only.

Action: No action is required.

RMAN-11003: failure during parse/execution of SQL statement: *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-11004: format requires *%character* when duplexing

Cause: SET_DUPLEX=ON was specified, but %c was not part of the format.

Action: Include %c in format, or use %U.

RMAN-11005: conflicting media information for piece "*string*"

Cause: While restoring the specified backup piece, RMAN received conflicting information about the physical location of the piece from the Media Management software. This can cause poor restore performance.

Action: If RMAN does not parallelize the restore from all of the available channels, then you should contact the Media Management vendor.

RMAN-11006: warning: test recovery results: Instring

Cause: User called recover database with the test option

Action: None required

RMAN-11007: new media label is "string" for piece "string"

Cause: This is an informational message indicating that the backup piece was moved from one media to another by media management software.

Action: No action is required.

RMAN-12000: execution layer initialization failed

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-12001: could not open channel string

Cause: An ALLOCATE CHANNEL command could not be processed.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-12005: error during channel cleanup

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-12007: cannot allocate more than number channels

Cause: The maximum number of RMAN channels has been exceeded. Note that one channel is reserved for RMAN.

Action: Allocate fewer channels. Contact Oracle if you have a need for more channels in a single job.

RMAN-12008: could not locate backup piece string

Cause: There was at least 1 backup set that could not be accessed by any of the allocated channels.

Action: Allocate additional channels on other nodes of the cluster

RMAN-12009: command aborted because some backup pieces could not be located

Cause: Same as 7008.

Action: Refer to 7008.

RMAN-12010: automatic channel allocation initialization failed

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-12011: multiple records for default device type found in repository

Cause: Configuration for default device type was not consistent.

Action: Re-run CONFIGURE DEFAULT DEVICE TYPE command to set device type.

RMAN-12012: multiple records for *string* parallelism found in repository

Cause: Configuration for device parallelism was not consistent.

Action: Re-run CONFIGURE PARALLELISM command for device to set parallelism.

RMAN-12013: multiple records for *string* channel *number* found in repository

Cause: Configuration for the channel was not consistent.

Action: Re-run CONFIGURE CHANNEL command to configure this channel.

RMAN-12014: multiple records for default channel configuration for *string* found in repository

Cause: Configuration for the channel was not consistent.

Action: Re-run CONFIGURE CHANNEL command to configure the channel.

RMAN-12015: configuration for *string* channel *number* is ignored

Cause: This is an informational message only. Parallelism for the device is less than associated channel number.

Action: To use this configuration increase parallelism for this device. To clear this configuration use CONFIGURE CHANNEL... CLEAR command.

RMAN-12016: using channel *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-12017: could not locate pieces of backup set key *string*

Cause: Copies of the specified backup set key could not be accessed on any of the allocated channels.

Action: Allocate additional channels on other nodes of the cluster or, if the backup pieces has been deleted, use the CROSSCHECK BACKUP command to correct the recovery catalog or target database control file entries.

RMAN-12018: channel *string* disabled, job failed on it will be run on another channel

Cause: This is an informational message displayed whenever a retryable error occurs for the job and there are channels available to run this step.

Action: No action is required.

RMAN-12019: continuing other job steps, job failed will not be re-run

Cause: This is an informational message displayed whenever there is a non-retryable error occurred for the job.

Action: No action is required.

RMAN-12020: error on step filtered for normal output \n*string*

Cause: This message is added when stacking errors for failed jobs after channel failover was performed. It will be filtered from normal output.

Action: No action is required.

RMAN-12021: device type exceeds maximum length of *string*

Cause: The device type indicated was invalid.

Action: Supply a correct device type and retry the allocation.

RMAN-20000: abnormal termination of job step

Cause: A job step encountered an error and could not recover. This error should be followed by other errors indicating the cause of the problem.

Action: Check the accompanying error.

RMAN-20001: target database not found in recovery catalog

Cause: The target database was not found in the recovery catalog.

Action: Ensure that the target database is registered in the recovery catalog. If the target database is a pluggable database, then ensure that CDB\$ROOT has resynced it to recovery catalog.

RMAN-20002: target database already registered in recovery catalog

Cause: target database is already registered in the recovery catalog

Action: if the target database is really registered, there is no need to register it again. Note that the recovery catalog enforces that all databases have a unique DBID. If the new database was created by copying files from an existing database, it will have the same DBID as the original database and cannot be registered in the same recovery catalog.

RMAN-20003: target database incarnation not found in recovery catalog

Cause: RESETLOGS CHANGE# and/or time of the target database doesn't match any database incarnation in the recovery catalog.

Action: if target database was opened with RESETLOGS option then use 'reset database' to register the new incarnation.

RMAN-20004: target database name does not match name in recovery catalog

Cause: name of the target database doesn't match the one stored in the recovery catalog

Action: This is an internal error.

RMAN-20005: target database name is ambiguous

Cause: two or more databases in the recovery catalog match this name

Action: n/a

RMAN-20006: target database name is missing

Cause: target database instance is not started or db_name initialization parameter is not set

Action: startup the instance and make sure that db_name parameter is set

RMAN-20009: database incarnation already registered

Cause: this incarnation is already registered in the recovery catalog

Action: No action is required.

RMAN-20010: database incarnation not found

Cause: database incarnation does not match any database incarnation in the recovery catalog

Action: specify a valid database incarnation key

RMAN-20011: target database incarnation is not current in recovery catalog

Cause: the database incarnation that matches the RESETLOGS CHANGE# and time of the mounted target database control file is not the current incarnation of the database

Action: If 'reset database to incarnation *key*' was used to make an old incarnation current then restore the target database from a backup that matches the incarnation and mount it. You will need to do 'STARTUP NOMOUNT' before you can restore the control file using RMAN. Otherwise use 'reset database to incarnation *key*' make the intended incarnation current in the recovery catalog.

RMAN-20012: not authorized to register new database

Cause: You attempted to register a new database with this recovery catalog, but you are using a virtual private catalog, and you have not been granted permission by the catalog administrator to register this database with this recovery catalog

Action: Ask the catalog administrator to grant permission for you to register this database.

RMAN-20013: error upgrading virtual private catalog

Cause: An error occurred while automatically upgrading a virtual private catalog.

Action: Ensure that the virtual private catalog userid has all of the required privileges, such as being granted the RECOVERY_CATALOG_OWNER role.

RMAN-20014: virtual private catalog owner must be granted RECOVERY_CATALOG_OWNER role

Cause: An attempt was made to establish a virtual private RMAN catalog in a schema that is not granted the RECOVERY_CATALOG_OWNER role.

Action: Grant RECOVERY_CATALOG_OWNER to the virtual private catalog owner.

RMAN-20015: not authorized to share this catalog

Cause: You attempted to share a recovery catalog but were not authorized to do this by the catalog administrator.

Action: Ask the catalog administrator to grant permission for you to share this catalog.

RMAN-20016: virtual private catalog user cannot modify global scripts

Cause: A virtual private catalog user attempted to create, delete, or modify a global script. Virtual private catalog users cannot modify global scripts.

Action: Connect to the catalog owner userid and retry the global script operation.

RMAN-20017: illegal script update operation

Cause: An illegal script operation was performed.

Action: None

RMAN-20018: database not found in recovery catalog

Cause: An attempt was made to grant or revoke catalog access to a database whose name was not registered in the recovery catalog.

Action: Correct the database name and re-issue the GRANT or REVOKE command. If this is an attempt to grant or revoke access to a database that is not yet registered, then re-issue the command using the database ID of the desired database.

RMAN-20019: database name not unique in recovery catalog

Cause: An attempt was made to grant or revoke catalog access to a database whose name is not unique in the recovery catalog.

Action: Re-issue the command specifying the database ID of the desired database.

RMAN-20022: user not found

Cause: An attempt was made to grant a privilege to a user that does not exist.

Action: Reissue the command specifying a user that exists.

RMAN-20023: pluggable database not found in recovery catalog

Cause: An attempt was made to grant or revoke catalog access to a pluggable database whose name was not registered in the recovery catalog.

Action: Correct the pluggable database name and reissue the GRANT or REVOKE command. If this is an attempt to grant or revoke access to a pluggable database that is not yet registered, then reissue the command after registering the desired database.

RMAN-20024: pluggable database name not unique in recovery catalog

Cause: An attempt was made to grant or revoke catalog access to a pluggable database whose name was not unique in the recovery catalog.

Action: Reissue the command specifying the GUID of the desired pluggable database.

RMAN-20025: full resync from CDB\$ROOT database is not done

Cause: Resync from pluggable database detected that a full resync from CDB\$ROOT database is required. One of the following events on target database may have caused this error: 1) database role was changed 2) new database site was found

Action: Perform full resync after connecting to the CDB\$ROOT and retry the command.

RMAN-20026: operation only allowed by CDB\$ROOT

Cause: A command was attempted that is only allowed by CDB\$ROOT.

Action: Connect as CDB\$ROOT and retry the command.

RMAN-20029: cannot make a snapshot control file

Cause: another operation that needs the snapshot control file is in progress

Action: try again later if necessary

RMAN-20030: resync in progress

Cause: this procedure cannot be called while a resync is in progress

Action: This is an internal error.

RMAN-20031: resync not started

Cause: this procedure can only be called in a resync

Action: This is an internal error.

RMAN-20032: checkpoint CHANGE# too low

Cause: the checkpoint change# is less than the one of the previous resync or the checkpoint change# is null

Action: make sure that the right control file is used

RMAN-20033: control file SEQUENCE# too low

Cause: the control file sequence is less than the one of the previous resync

Action: make sure that the right control file is used

RMAN-20034: resync not needed

Cause: the control file has not changed since the previous resync

Action: nothing since the recovery catalog is in sync

RMAN-20038: must specify FORMAT for CONVERT command

Cause: No FORMAT was specified when using CONVERT command.

Action: Resubmit the command using FORMAT clause.

RMAN-20039: format requires character when duplexing

Cause: SET_DUPLEX=ON was specified, but %c was not part of the format.

Action: Include %c in format, or use %U.

RMAN-20044: invalid tablespace name

Cause: An invalid tablespace name was encountered due to the following possible reasons: 1. The specified tablespace name was too long. 2. The prepended pluggable database (PDB) name was part of the tablespace name.

Action: This is an internal error. Check the documentation for the allowed tablespace name length or the correct format for the prepended PDB name.

RMAN-20045: must specify FORMAT for BACKUP INCREMENTAL FROM SCN command

Cause: No FORMAT was specified when using BACKUP INCREMENTAL FROM SCN command.

Action: Resubmit the command using FORMAT clause.

RMAN-20072: full resync from noncurrent control file

Cause: A full resync was attempted from either a standby control file or a backup control file. Only the current control file can do so. Allowing to do otherwise can result in unexpected changes in catalog metadata.

Action: This is an internal error.

RMAN-20073: warning: resync skipped for PDB string as a dictionary integrity check is required

Cause: An attempt was made to resync the Pluggable Database (PDB) information to the recovery catalog when the PDB was not open in read/write mode for the primary database.

Action: Open the PDB in read/write mode and retry the resync command.

RMAN-20078: full resync from standby database was disabled

Cause: Full resync from the standby database was disabled using a configuration parameter.

Action: Perform full resync after connecting to the primary database.

RMAN-20079: full resync from primary database is not done

Cause: Resync from standby detected that a full resync from primary database is required. One of the following events on primary database may have caused this error: 1) one or more tablespaces or data files were added 2) one or more tablespaces or data files were dropped 3) one or more data files status changed

Action: Perform full resync after connecting to the primary database.

RMAN-20081: change stamp for the record

Cause: A record with same recid and stamp is already known to catalog.

Action: None. This error is automatically handled by RMAN client by changing the stamp in control file during resync.

RMAN-20108: control file for remote database cannot be updated

Cause: RESYNC CATALOG FROM DB_UNIQUE_NAME command was attempted, but the control file at the database with DB_UNIQUE_NAME needs to be resynced directly instead of through the current target.

Action: Directly connect as target to the remote database with the specified DB_UNIQUE_NAME and resync.

RMAN-20109: remote database has different database ID

Cause: Command RESYNC CATALOG FROM DB_UNIQUE_NAME was executed and the database ID of the remote database was different than the connected target database.

Action: The remote database should have the same database ID as the database connected as the target database. Fix the connect identifier for the remote database and retry the command.

RMAN-20110: set_stamp set_count conflict

Cause: Resync detected multiple backup sets having the same 'set_stamp' and 'set_count'.

Action: Uncatalog BACKUPPIECE associated with message 8192.

RMAN-20140: database not yet registered in the Recovery Appliance

Cause: The database was not registered in the Recovery Appliance.

Action: Add a database to the Recovery Appliance schema by making a call to ADD_DB call.

RMAN-20141: target database ID mismatch with registered database in the Recovery Appliance

Cause: The database with the same DB_UNIQUE_NAME was already registered in a Recovery Appliance, but the database ID was different than the target database.

Action: Connect to the proper target database, or change the DB_UNIQUE_NAME and register it again in the Recovery Appliance.

RMAN-20142: version stamp of backup XML set is different

Cause: A new backup XML set was generated at the Recovery Appliance since the last read of watermarks.

Action: Retry the reconcile operation.

RMAN-20143: no records found to resync for incarnation view

Cause: The reconcile code at the Recovery Appliance expected incarnation records, but they were not sent by the recovery catalog.

Action: This is an internal error.

RMAN-20144: no records found to resync for tablespace view

Cause: The reconcile code at the Recovery Appliance expected tablespace records, but they were not sent by the recovery catalog.

Action: This is an internal error.

RMAN-20145: no records found to resync for data file view

Cause: The reconcile code at the Recovery Appliance expected data file records, but they were not sent by the recovery catalog.

Action: This is an internal error.

RMAN-20146: no records found to resync for thread view

Cause: The reconcile code at the Recovery Appliance expected thread records, but they were not sent by the recovery catalog.

Action: This is an internal error.

RMAN-20147: no records found to resync for online redo log view

Cause: The reconcile code at the Recovery Appliance expected online redo log records, but they were not sent by the recovery catalog.

Action: This is an internal error.

RMAN-20148: no records found to resync for offline range view

Cause: The reconcile code at the Backup Appaliance expected offline range records, but they were not sent by the recovery catalog.

Action: This is an internal error.

RMAN-20149: required records are purged from the backup XML set at the Recovery Appliance

Cause: The recovery catalog was not reconciled from the Recovery Appliance recently, and records from backup XML set were purged at the Recovery Appliance.

Action: A new backup XML set must be created at the Recovery Appliance.

RMAN-20150: no records found to resync for Pluggable Database view

Cause: The reconcile code at the Recovery Appliance expected Pluggable Database records, but they were not sent by the recovery catalog.

Action: This is an internal error.

RMAN-20151: no records found to resync for Pluggable Database incarnation view

Cause: The reconcile code at the Recovery Appliance expected Pluggable Database incarnation records, but they were not sent by the recovery catalog.

Action: This is an internal error.

RMAN-20201: datafile not found in the recovery catalog

Cause: The specified data file is not found in the recovery catalog

Action: make sure that the data file name is correct and that the recovery catalog is up-to-date

RMAN-20202: Tablespace not found in the recovery catalog

Cause: the specified tablespace is not found in the recovery catalog

Action: make sure that the tablespace name is correct and that the recovery catalog is up-to-date

RMAN-20203: translation in progress

Cause: this procedure can not be called when name translation is in progress

Action: This is an internal error.

RMAN-20204: translation not started

Cause: GETDATAFILE procedure was called before TRANSLATETABLESPACE

Action: This is an internal error.

RMAN-20205: incomplete UNTIL clause

Cause: The sequence# was NULL

Action: This is an internal error.

RMAN-20206: log sequence not found in the repository

Cause: The specified log sequence does not exist in log history of the current database incarnation

Action: check the thread# and sequence#

RMAN-20207: UNTIL TIME or RECOVERY WINDOW is before RESETLOGS time

Cause: UNTIL TIME and RECOVERY WINDOW cannot be less than the database creation time or RESETLOGS time.

Action: Check the UNTIL TIME or RECOVERY WINDOW. If the database needs to be restored to an old incarnation, use the RESET DATABASE TO INCARNATION command.

RMAN-20208: UNTIL CHANGE is before RESETLOGS change

Cause: UNTIL CHANGE cannot be less than the database RESETLOGS change.

Action: Check the UNTIL CHANGE. If the database needs to be restored to an old incarnation, use the RESET DATABASE TO INCARNATION command.

RMAN-20209: duplicate datafile name

Cause: Two data files have the same name

Action: This is an internal error.

RMAN-20211: FROM TIME is before RESETLOGS time

Cause: FROM TIME cannot be less than the database creation time or RESETLOGS time.

Action: Check the FROM TIME. If the database needs to be restored to an old incarnation, use the RESET DATABASE TO INCARNATION command.

RMAN-20212: UNTIL CHANGE is an orphan incarnation

Cause: Specified UNTIL CHANGE was an orphan incarnation.

Action: Check the UNTIL CHANGE or UNTIL RESTORE POINT. If the database needs to be restored or flashed back to an orphan incarnation, use the RESET DATABASE TO INCARNATION command.

RMAN-20213: UNTIL TIME could not be translated to a valid SCN

Cause: Specified UNTIL TIME could not be translated to a valid SCN.

Action: Use a more recent UNTIL TIME.

RMAN-20215: backup set not found

Cause: The specified backup set key was not found in the recovery catalog or target database control file.

Action: Specify a different backup set key.

RMAN-20217: datafile not part of the database

Cause: the data file does not exist or did not exist at until time/scn

Action: check the data file name or number. This is an internal error. for restore database or tablespace.

RMAN-20218: datafile not found in repository

Cause: This is an internal error.

Action: Contact Oracle Support Services.

RMAN-20220: control file copy not found in the repository

Cause: The specified control file was not in the recovery catalog or target database control file or it was marked deleted.

Action: check the file name

RMAN-20221: ambiguous control file copy name

Cause: more than one control file copy in the recovery catalog match the specified name.

Action: n/a

RMAN-20222: datafile name not found in recovery catalog or is ambiguous

Cause: The specified data file name is not the name of a data file that is currently part of the target database, or an UNTIL clause has been specified and the file name was for a different data file at the time specified by the UNTIL clause than it is now.

Action: Use a data file number to specify the data file you want to RESTORE or RECOVER.

RMAN-20223: DB_UNIQUE_NAME mismatch in snapshot control file

Cause: The DB_UNIQUE_NAME value in the snapshot control file was incorrect. This error can occur in Oracle RAC when the snapshot control file location is not shared across nodes and virtual IPs are setup in the remote database from where resynchronization is done using RESYNC CATALOG FROM DB_UNIQUE_NAME command.

Action: To avoid this error, one of the following actions can be taken: 1) Share the control file snapshot location. The snapshot location can be displayed by executing SHOW SNAPSHOT CONTROLFILE NAME at the RMAN prompt. 2) Do not use Virtual IPs in the service name used to define the connect identifiers. The connect identifiers can be displayed using SHOW DB_UNIQUE_NAME command at the RMAN prompt.

RMAN-20230: datafile copy not found in the repository

Cause: The specified data file was not in the recovery catalog or target database control file or it was marked deleted.

Action: check the data file copy name or key

RMAN-20231: ambiguous datafile copy name

Cause: more than one control file copy in the recovery catalog match the specified name.

Action: use the data file copy key to uniquely specify the data file copy

RMAN-20240: archived log not found in the repository

Cause: The specified archived log was not found in the recovery catalog or target database control file or it was marked deleted.

Action: check the archived log name or key

RMAN-20241: ambiguous archived log name

Cause: more than one archived log in the recovery catalog match the specified name

Action: use the archived log key to uniquely specify the archived log

RMAN-20242: specification does not match any archived log in the repository

Cause: No archived logs found that match specification in the recovery catalog or target database control file.

Action: check the archived log specifier

RMAN-20243: database db_unique_name is not known to the recovery catalog

Cause: the user specified DB_UNIQUE_NAME not known to the recovery catalog.

Action: change the database DB_UNIQUE_NAME to a known database value. To display list of known db_unique_names execute LIST DB_UNIQUE_NAME OF DATABASE

RMAN-20244: can not change currently connected database db_unique_name

Cause: the user specified currently connected DB_UNIQUE_NAME value to unregister.

Action: use the DB_UNIQUE_NAME other than connected target database's DB_UNIQUE_NAME value.

RMAN-20245: can not specify db_unique_name option in nocatalog mode

Cause: the user specified DB_UNIQUE_NAME in nocatalog mode.

Action: remove the DB_UNIQUE_NAME option from the command.

RMAN-20246: new db_unique_name is already known to the recovery catalog

Cause: the user specified known DB_UNIQUE_NAME value when renaming a DB_UNIQUE_NAME in the recovery catalog.

Action: change the database DB_UNIQUE_NAME to a known DB_UNIQUE_NAME value; or unregister the new DB_UNIQUE_NAME before renaming an old DB_UNIQUE_NAME value for a database. To display the list of all DB_UNIQUE_NAME for the databases LIST DB_UNIQUE_NAME OF DATABASE command can be executed.

RMAN-20247: specification does not match any foreign archived log in the repository

Cause: No foreign archived logs found that match specification in the recovery catalog or target database control file.

Action: check the foreign archived log specifier

RMAN-20250: offline range not found in the repository

Cause: The specified offline was not found in the recovery catalog or target database control file.

Action: check that recovery catalog is current

RMAN-20260: backup piece not found in the repository

Cause: The specified backup piece was not in the recovery catalog or target database control file or it was marked deleted.

Action: check the backup piece handle or key

RMAN-20261: ambiguous backup piece handle

Cause: more than one backup piece in the recovery catalog match the specified handle

Action: use the backup piece key to uniquely specify the backup piece

RMAN-20272: no parent backup found for the incremental backup

Cause: no available backup or copy that could be used as the parent of the incremental backup was found in the recovery catalog.

Action: take a level 0 backup or copy of the data file first

RMAN-20280: too many device types

Cause: more than 8 device types were allocated

Action: make sure that the job allocates at most 8 different device types

RMAN-20298: DBMS_RCVCAT package not compatible with the recovery catalog

Cause: The version of the recovery catalog tables does not work with this version of the DBMS_RCVCAT package.

Action: Check that the recovery catalog packages and schema are installed correctly. The UPGRADE CATALOG command can be used to upgrade the recovery catalog tables and packages to the most current version.

RMAN-20299: DBMS_RCVMAN package not compatible with the recovery catalog

Cause: The version of the recovery catalog tables does not work with this version of the DBMS_RCVMAN package.

Action: Check that the recovery catalog packages and schema are installed correctly. The UPGRADE CATALOG command can be used to upgrade the recovery catalog tables and packages to the most current version.

RMAN-20310: proxy copy not found in the repository

Cause: The specified proxy copy was not in the recovery catalog or target database control file or it was marked deleted.

Action: check the proxy copy handle or key

RMAN-20311: ambiguous proxy copy handle

Cause: more than one proxy copy in the recovery catalog matches the specified handle

Action: use the proxy copy key to uniquely specify the proxy copy

RMAN-20401: script already exists

Cause: a CREATE SCRIPT was issued, but a script with the specified name already exists.

Action: use a different name or use REPLACE SCRIPT.

RMAN-20501: redo logs from parent database incarnation cannot be applied

Cause: A RESTORE or RECOVER of a data file was requested, but recovery of the data file would require applying redo logs that were generated before the most recent OPEN RESETLOGS.

Action: If a full backup or data file copy from the current database incarnation exists, ensure that it is marked AVAILABLE, and that a channel of the correct device type is allocated. It may also be necessary to remove the FROM BACKUPSET or FROM DATAFILECOPY or FROM TAG operands if these have been specified.

RMAN-20502: DELETE EXPIRED cannot delete objects that exist - run CROSSCHECK

Cause: A DELETE EXPIRED command was run, but the object was actually found to exist. This means the recovery catalog or target database control file is out of sync with reality.

Action: Run CROSSCHECK.

RMAN-20503: DELETE cannot delete expired objects - run CROSSCHECK or DELETE EXPIRED

Cause: A DELETE command was run without EXPIRED option, but the object doesn't exist. This means the recovery catalog or target database control file is out of sync with reality.

Action: Run CROSSCHECK.

RMAN-20504: corruption list not found in recovery catalog

Cause: corruption list is empty

Action: make sure that one or more blocks are marked corrupted in v\$copy_corruption and v\$backup_corruption and recovery catalog is up-to-date.

RMAN-20505: create datafile during recovery

Cause: applying of archived log caused a create data file redo-entry to terminate recovery.

Action: none. This message is never displayed. RMAN automatically detects this case and creates the data file.

RMAN-20506: no backup of archived log found

Cause: during the recover process, no backup was found from which the archived logs could be restored.

Action: this message should be followed by a list of missing archived logs. Please make the necessary archived log backups available and try again.

RMAN-20507: some targets are remote - aborting restore

Cause: during the restore process, one or more backup files were unavailable locally for the restore operation.

Action: This message should be accompanied with the list of remote backup files. Recall these backups from remote location and retry the RESTORE command.

RMAN-20508: temporary resource already in use

Cause: Temporary resource that was allocated for IMPORT CATALOG command was already in use.

Action: Retry IMPORT CATALOG command.

RMAN-20509: temporary resource not found

Cause: Temporary resource that was allocated for IMPORT CATALOG command was not found.

Action: Retry IMPORT CATALOG command.

RMAN-20510: database not found in source recovery catalog database

Cause: Database that was specified in IMPORT CATALOG command was not found in the source recovery catalog database.

Action: Make sure that the database is registered in the source recovery catalog database.

RMAN-20511: database name is ambiguous in source recovery catalog database

Cause: Two or more databases in the source recovery catalog database match this name.

Action: Use DBID option in IMPORT CATALOG command to specify the source database.

RMAN-20512: source database already registered in recovery catalog

Cause: Source database was already registered in the recovery catalog.

Action: If the source database is really registered, there is no need to register it again. Note that the recovery catalog enforces that all databases have a unique DBID. If the new database was created by copying files from an existing database, it will have the same DBID as the original database and cannot be registered in the same recovery catalog.

RMAN-20513: UNTIL TIME or SCN is before Pluggable Database CREATION SCN

Cause: The UNTIL TIME or SCN specified was less than the Pluggable Database CREATION SCN. UNTIL TIME or SCN cannot be less than the Pluggable Database CREATION SCN.

Action: Check the UNTIL TIME or SCN and retry the command.

RMAN-20514: feature requires Oracle Recovery Appliance recovery catalog

Cause: The specified command required the Oracle Recovery Appliance recovery catalog.

Action: Connect to the Oracle Recovery Appliance recovery catalog and retry the command.

RMAN-20516: cannot upgrade the catalog when other RMAN sessions are connected to catalog

Cause: An attempt was made to execute the upgrade catalog command when there were other RMAN sessions already connected to the catalog.

Action: Close all other RMAN sessions that are connected to this catalog and retry the upgrade. If UPGRADE CATALOG is executed in waiting option, the command will execute when the existing connections are drained.

RMAN-20517: UPGRADE CATALOG is in progress. Waiting for it to complete

Cause: An attempt was made to connect to the recovery catalog while the catalog was being upgraded from a separate RMAN session.

Action: No action required. The connection to the recovery catalog will be made once the upgrade operation on the catalog is completed.

RMAN-20518: The tenant was already registered in the catalog database.

Cause: The tenant was already registered in the catalog database. The catalog was being upgraded from a separate RMAN session.

Action: If the tenant is already registered, there is no need to register again. Execute `unregister_tenant` if this tenant is registered in error.

RMAN-20519: user not part of valid tenant

Cause: The user was not part of a valid tenant.

Action: GRANT user database access with the tenant information.

RMAN-20520: not a valid tenant

Cause: The specified tenant was not found.

Action: If tenant is valid, then register the tenant.

RMAN-20521: insufficient privileges to register, update or unregister tenant

Cause: User did not have required privileges to manage tenant.

Action: Connect using the base catalog owner and reissue the command.

RMAN-20522: tenant name is "string" and tenant key is "string"

Cause: This is an informational message only.

Action: No action is required.

RMAN-20523: cannot use SET TENANTID command as DBID already set for RMAN session

Cause: An attempt was made to issue a SET TENANTID command that can be used only when DBID is not set for RMAN session.

Action: Restart RMAN and use the SET TENANTID command to set desired tenant then set desired DBID.

RMAN-20524: cannot unregister tenant user

Cause: An attempt was made to unregister a tenant user that has one or more client databases associated with it.

Action: Unregister the client database(s) and retry the unregistering operation.

RMAN-20525: catalog schema is not multitenant enabled

Cause: An attempt was made to run multitenant APIs on a catalog schema that was not multitenant enabled.

Action: Do not run the specific RMAN command or API on this catalog schema.

RMAN-20526: generated transport file "*string*"

Cause: This is an informational message only.

Action: No action is required.

RMAN-20527: failed to generate transport file "*string*"

Cause: The creation of transport file failed.

Action: Ensure the file location is accessible.

RMAN-20528: conversion of character length to a number failed\n

Cause: The character length portion of the field could not be converted to a number.

Action: Make sure the data is correct.

SCLC-01000 to SCLC-01037

SCLC-01000: Failed to retrieve address of {0}, {1}

Cause: Failed to retrieve current address of the resource.

Action: Make sure that resource is running and that user has read permission on resource profile and try again.

SCLC-01003: Failed to retrieve tier names registered with {0}, {1}

Cause: Failed to retrieve tier names.

Action: Make sure that resource is running and try again.

SCLC-01004: Failed to retrieve members of tier {0} registered with {1}, {2}

Cause: Failed to retrieve tier members.

Action: Make sure that resource is running and try again.

SCLC-01005: Failed to get member tiers, {0}

Cause: Failed to get member tiers.

Action: Make sure that tier specific representatives are running and try again.

SCLC-01006: Failed to get cluster tier instance, {0}

Cause: Failed to get cluster tier instance.

Action: Make sure that cluster tier is configured and try again.

SCLC-01007: Failed to get discovery information for tier {0}, {1}

Cause: Failed to get tier discovery information

Action: Retry after resolving cause stated in message

SCLC-01008: Failed to get filters at location {0} for tier {1}

Cause: Failed to get filters registered at the given location of the tier.

Action: Retry after resolving cause stated in message

SCLC-01009: Failed to set filters {0} at location {1} of the tier {2}, {3}

Cause: Failed to set filters at the given location of the tier.

Action: Retry after resolving cause stated in message

SCLC-01010: Failed to create Discovery Server, {0}

Cause: Failed to initialize Discovery Server

Action: Retry after resolving cause stated in message.

SCLC-01011: Failed to get Discovery Server reference, {0}

Cause: Failed to get Discovery Server reference

Action: Discovery server is not configured properly, contact Oracle support.

SCLC-01013: Failed to get Super Cluster Representative reference, {0}

Cause: Failed to get Super Cluster Representative reference

Action: Super Cluster Representative is not running, start it and retry.

SCLC-01014: Address {0} is not a multicast address

Cause: Given IP Address is not a multicast address and therefore cannot be used for multicast discovery.

Action: Supply a multicast IP address and try again.

SCLC-01015: Failed to retrieve configured multicast address for tier {0}

Cause: Failed to retrieve multicast address.

Action: Retry after resolving cause stated in message

SCLC-01016: Failed to retrieve discovery method for tier {0}

Cause: Failed to retrieve discovery method for the given tier.

Action: Retry after resolving cause stated in message

SCLC-01017: Multicast discovery method is not configured for tier {0}, {1}

Cause: Multicast discovery method is not configured.

Action: This operation is applicable only for Multicast discovery method. Try it after configuring multicast discovery method for this tier.

SCLC-01018: Discovery Server discovery method is not configured for tier {0}, {1}

Cause: Discovery Server discovery method is not configured.

Action: This operation is applicable only for Discovery Server discovery method.

SCLC-01019: Failed to retrieve member list for tier {0}, {1}

Cause: Failed to current retrieve member list for the tier.

Action: Retry after resolving cause stated in message

SCLC-01021: Failed to retrieve name of tier {0}

Cause: Failed to retrieve name of the tier.

Action: Retry after resolving cause stated in message.

SCLC-01022: Failed to update name of the tier {0}, {1}

Cause: Failed to update name of the tier.

Action: Retry after resolving cause stated in message.

SCLC-01025: Failed to retrieve count of representatives for tier {0}

Cause: Failed to retrieve number of representatives configured for the given tier.

Action: Retry after resolving cause stated in message.

SCLC-01026: Failed to update count of representatives for tier {0}, {1}

Cause: Failed to update number of representatives for the given tier.

Action: Retry after resolving cause stated in message.

SCLC-01027: Failed to start {0}, {1}

Cause: Failed to start given server.

Action: Retry after resolving cause stated in message.

SCLC-01028: Failed to stop {0}, {1}

Cause: Failed to stop given server.

Action: Retry after resolving cause stated in message.

SCLC-01029: Failed to check status of {0}, {1}

Cause: Failed to check status of given server.

Action: Retry after resolving cause stated in message.

SCLC-01030: {0} server is not running

Cause: Server is not running.

Action: Retry after starting the server.

SCLC-01031: Illegal argument : {0}

Cause: Given argument is illegal.

Action: See command usage.

SCLC-01032: Usage: {0} {1} {2}

Cause: Prints given action script usage.

Action: None

SCLC-01033: Failed to create super cluster client for tier {0}, {1}

Cause: Failed to create super cluster client for tier.

Action: Retry after resolving cause stated in message.

SCLC-01034: No argument was supplied to {0}

Cause: The tool was invoked without any arguments, see its usage.

Action: Invoke the tool with arguments as documented in its usage.

SCLC-01035: Failed to configure logger for {0}

Cause: An error was encountered while configuring logger for given program. The message is followed by an exception message that contains more information. Most likely source of error is lack of privileges to create/update files in <crs_home>/log/hostname/srvm directory.

Action: Fix the error reported in the exception message by granting privileges to the current user to create/update files in <crs_home>/log/hostname/srvm directory.

SCLC-01036: Failed to start the status listener for the EONS server {0}, {1}

Cause: The specified EONS server failed to either obtain an available port or create the status listener thread.

Action: Check if there are available ports on this system.

SCLC-01037: Failed to create the port file for the EONS server {0} on node {1}

Cause: An error occurred while creating a file in the <crs_home>/eons/init directory.

Action: Ensure that file system permissions are correct and that disk space is available.

SCLS-01000 to SCLS-01005

SCLS-01000: Failed to create super cluster representative server for tier {0}, {1}

Cause: Failed to create super cluster representative server for the given tier.

Action: Retry after resolving cause stated in message.

SCLS-01001: Failed to get ONS runtime of {0}

Cause: Failed to get ONS runtime of the given server.

Action: Retry after resolving cause stated in message.

SCLS-01002: Failed to get current member list of tier {0}

Cause: Failed to get current member list of the given tier.

Action: Retry after resolving cause stated in message.

SCLS-01003: eONS runtime was not running for tier {0}

Cause: eONS runtime was stopped abnormally.

Action: In cluster environment, try `svctl stop nodeapps -n node` and `svctl start nodeapps -n node`. In Oracle Restart environment, try `svctl stop eons` and `svctl start eons`.

SCLS-01004: Failed to set listening port to {0} for {1}

Cause: Failed to update listening port of the eONS runtime for this tier.

Action: Make sure that user has permission to update resource attribute. In cluster environment make sure that the clusterware stack is up.

SCLS-01005: Invalid listening port {0} specified for eONS

Cause: The specified eONS listening port number is invalid.

Action: Valid port numbers on Unix are from 1025 to 65535. Provide a valid port number for eONS to listen on.

SQL-01075 to SQL-02160

SQL-01075: you are currently logged on

Cause: There is already a connection on this host.

Action: Do not attempt the second connection.

SQL-02100: Out of memory (i.e., could not allocate)

Cause: SQLLIB was unable to allocate enough memory to execute the program.

Action: Allocate more memory to the user session, then rerun the program. If the error persists, call customer support for assistance.

SQL-02101: Inconsistent cursor cache. Unit cursor/global cursor mismatch

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02102: Inconsistent cursor cache. No global cursor entry.

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02103: Inconsistent cursor cache. Out of range cursor cache reference

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02104: Inconsistent host cache. No cursor cache available

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02105: Inconsistent cursor cache. Global cursor not found

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02106: Inconsistent cursor cache. Invalid Oracle cursor number

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02107: Program too old for runtime library; please re-compile it

Cause: The program was precompiled by an older version of the Oracle Precompilers, which is incompatible with this release of SQLLIB.

Action: Precompile the program with a newer version of the Oracle Precompilers.

SQL-02108: Invalid descriptor passed to run-time library

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02109: Inconsistent host cache. Host reference is out of range

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02110: Inconsistent host cache. Invalid host cache entry type

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02111: Heap consistency error

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02112: SELECT..INTO returns too many rows

Cause: A SELECT...INTO statement returned more rows than can be stored in the host variable provided.

Action: There are 3 possible solutions: 1. Use the precompiler option `select_error=no`. 2. Declare a host variable with a larger array dimension. 3. Declare a cursor or cursor variable for the select statement.

SQL-02113: Unable to open message file

Cause: SQLLIB was unable to find or open the sqllib message file `sql*.msb`

Action: Check that the file exists in the `mesg` directory and that it is readable

SQL-02114: Invalid SQL Cursor usage: trying to CLOSE a CLOSED cursor

Cause: An attempt was made to CLOSE a cursor that was already CLOSED with `MODE={ANSI|ANSI14}`. A CLOSED cursor can be re-CLOSEd only when `MODE={ORACLE|ANSI13}`.

Action: When `MODE={ANSI|ANSI14}`, verify that a cursor is not already CLOSED before trying to CLOSE it. Specify `MODE={ORACLE|ANSI13}` if a CLOSED cursor is to be re-CLOSEd.

SQL-02115: Code interpretation problem -- check COMMON_NAME usage

Cause: With PRO*FORTRAN, this error occurs if the precompiler option `COMMON_NAME` is specified incorrectly. With other Oracle Precompilers, this error occurs when the precompiler cannot generate a section of code.

Action: With Pro*FORTRAN, when using COMMON_NAME to precompile two or more source modules, make sure to specify a different common name for each module. With other Oracle Precompilers, if the error persists, call customer support for assistance.

SQL-02116: FATAL ERROR: Reentrant code generator gave invalid context

Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02117: Invalid SQL Cursor usage: trying to OPEN an OPENed cursor

Cause: An attempt was made to OPEN a cursor that was already OPENed with MODE={ANSI|ANSI14|ANSI13}. An open cursor can be re-OPENed only when MODE=ORACLE.

Action: When MODE={ANSI|ANSI14|ANSI13}, verify that a cursor is not already OPENed before trying to OPEN it. Specify MODE=ORACLE if an OPENed cursor is to be re-OPENed.

SQL-02118: Invalid row for a WHERE CURRENT OF operation

Cause: An attempt was made to reference a nonexistent row using the CURRENT OF clause in an UPDATE or DELETE statement. This happens when no FETCH has been executed or when FETCH returns a "no data found" error that the program fails to trap.

Action: Check that the last cursor operation succeeded and that the current row of the cursor is valid. The outcome of a cursor operation can be checked in two ways: implicit checking with the WHENEVER statement or explicit checking of SQLCODE in the SQLCA.

SQL-02119: Invalid HSTDEF argument

Cause: A non-null ptr was given for a hstdef as the second argument to a call to sqlrcn when the first argument was also used. Either the first or the second argument to SQLRCN must be null.

Action: Pass a null pointer in either the first or second argument to SQLRCN. *Note: This error *msg* is never actually used. The error *number* is used, given as the return value of sqlrcn if this error occurs.

SQL-02120: First and second arguments to SQLRCN both null

Cause: Both the first and second arguments to sqlrcn were null. An HSTDEF must be passed into SQLRCN in either the form of an OCI lda (first argument) or as an HSTDEF pointer itself (second argument).

Action: Pass in either an OCI LDA or an HSTDEF, but not both. *Note: This error *msg* is never actually used. The error *number* is used, given as the return value of sqlrcn if this error occurs.

SQL-02121: Invalid host name

Cause: The host name passed into a SQLFCN call was not used in a previous call to SQLRCN.

Action: Use the same identifier used in the corresponding SQLRCN call. *Note: This error *msg* is never actually used. The error *number* is used, given as the return value of sqlfcn if this error occurs.

SQL-02122: Invalid OPEN or PREPARE for this database connection

Cause: An attempt was made to execute an OPEN or a PREPARE statement using a cursor that is currently open for another database connection and, therefore, cannot be used for this connection.

Action: Close the cursor to make it available for this connection or use a different cursor for this connection.

SQL-02123: Context referenced in EXEC TOOLS GET CONTEXT statement not found

Cause: The context name given in the EXEC TOOLS GET CONTEXT statement was never stored with an EXEC TOOLS SET CONTEXT statement.

Action: Use the EXEC TOOLS SET CONTEXT statement to save any contexts to be retrieved later.

SQL-02124: NULL value returned by EXEC TOOLS statement

Cause: A NULL value was returned by EXEC TOOLS for a host variable that lacks an indicator variable. This error is returned only when MODE=ANSI. When MODE=ORACLE, although the value of the host variable is indeterminate, no error is generated.

Action: Associate an indicator variable with each host variable to which nulls might be returned.

SQL-02125: Connect error, can't get error text

Cause: No connection (not even to the default host) was available, so SQLLIB could not get the message text for the Oracle error that occurred. However, SQLLIB returns the Oracle error number, which can be used to look up the message.

Action: Look up the appropriate message in the Oracle7 Server Messages manual, and follow the Cause and Action information provided.

SQL-02126: Count of array elements cannot be negative (i.e. < 0)

Cause: The precompiler found a negative number of array elements in the the N or F element of the SQLDA (SQL Descriptor Area, which is used with dynamic SQL Method 4). Before executing the DESCRIBE statement, N must be set to the dimension of the descriptor arrays. After executing the DESCRIBE statement, N must be reset to the actual number of variables DESCRIBEd, which is stored in the F variable.

Action: Check that the N or F variables are set to non-negative values.

SQL-02127: Precompiler/SQLLIB version mismatch

Cause: The program was linked to an older version of SQLLIB, which is incompatible with this release of the Oracle Precompilers.

Action: Relink the program with a newer version of SQLLIB

SQL-02128: Sessions still exist, not logged off

Cause: A host was not removed ("logged off") from SQLLIB because XA still has sessions associated with that host.

Action: Before calling SQLXDH to drop a host, XA must either drop all sessions for that host or set the "doit_anyway" flag. *Note: This error *msg* is never actually used.

The error *number* is used, given as a possible return value to the sqllib xa function sqlxdh.

SQL-02129: Fetched number of bytes is odd.

Cause: The program tried to FETCH an invalid column value into a multi-byte NLS host variable. Specifically, the column did not contain valid double-byte data.

Action: Make sure the column contains only double-byte data. To verify this, use SQL*Plus or Server Manager.

SQL-02130: EXEC TOOLS interface is not available.

Cause: An attempt was made to link with a version of an Oracle tool that does not support the EXEC TOOLS interface. EXEC TOOLS interface.

Action: Either upgrade the Oracle tool, or use the EXEC IAF interface.

SQL-02131: Runtime context in use

Cause: Your application attempted to execute a SQL statement using a runtime context that is already in use.

Action: Rewrite the application to either wait for one thread to complete before executing another SQL statement with the same runtime context, or to allocate and use a separate runtime context for each thread.

SQL-02132: Unable to allocate runtime context

Cause: An attempt to allocate a runtime context failed.

Action: This error typically occurs when the process memory is low. Allocate more memory and run the application again.

SQL-02133: Unable to initialize process for use with threads

Cause: This is an internal error.

Action: Call customer support.

SQL-02134: Invalid runtime context

Cause: The runtime context associated with this statement has not been properly allocated.

Action: Rewrite the application to execute the EXEC SQL CONTEXT ALLOCATE statement before executing any SQL statements.

SQL-02135: Unable to initialize date format using supplied mask

Cause: The runtime library was unable to issue a set date format statement with the date format mask supplied.

Action: Check the validity of the date format and correct if necessary. Check the ORA error number for further information.

SQL-02136: Invalid NCHAR character set id

Cause: An attempt was made to bind or define an NCHAR host variable, and the NLS_NCHAR variable was not set correctly.

Action: Set the NLS_NCHAR environment variable to a valid fixed width character set id and run the application again.

SQL-02137: Multi-threaded agent with no RETURNING clause present

Cause: The EXEC SQL REGISTER CONNECT statement does not contain a RETURNING clause and the agent is running in threaded mode.

Action: Re-code the statement to use a RETURNING clause that references a declared sql_context host variable.

SQL-02138: No external procedure context exists

Cause: The external procedure context passed in the EXEC SQL REGISTER CONNECT statement is not valid.

Action: Ensure that you have done the following: 1. Created the PL/SQL procedure/function with a CONTEXT parameter. 2. Included OCIExtProcContext in the formal parameter list of the external procedure 3. Correctly passed the OCIExtProcContext to the EXEC SQL REGISTER CONNECT statement.

SQL-02139: Unable to get the OCI handles

Cause: The call to OCIExtProcGetEnv failed.

Action: Ensure that the OCIExtProcContext that the external procedure has been created with a CONTEXT parameter and that this context is correctly referenced in the EXEC SQL REGISTER CONNECT statement.

SQL-02140: An unnamed connection already exists

Cause: An attempt to register an external procedure context was made when an unnamed connection already exists for the runtime context.

Action: Do not attempt to establish any connections with the EXEC SQL CONNECT statement from external procedures.

SQL-02141: Collection descriptor has not been allocated

Cause: An unallocated collection descriptor was referenced in a COLLECTION SET or COLLECTION GET statement.

Action: Allocate the collection descriptor with the EXEC SQL ALLOCATE statement. e.g. EXEC SQL ALLOCATE :coldesc_p;

SQL-02142: Collection is NULL

Cause: The collection referenced in an EXEC SQL COLLECTION statement is null.

Action: Check the status of the associated indicator variable prior to executing an EXEC SQL COLLECTION statement.

SQL-02143: Target object has not been properly allocated

Cause: An attempt was made to retrieve elements from a collection into an unallocated object pointer.

Action: Allocate the object pointer with the EXEC SQL ALLOCATE statement.

SQL-02144: Invalid ANSI dynamic usage

Cause: An ANSI allocate, deallocate, get or set descriptor statement was encountered when dynamic option was not set.

Action: Precompile your source with option dynamic=ansi.

SQL-02145: Invalid dynamic descriptor

Cause: An attempt to access an unallocated or invalid descriptor was encountered.

Action: For ANSI descriptors, check that descriptor name is valid and descriptor has been allocated and not previously deallocated. Or if using Oracle descriptors (sqlda) with mode=ansi also use dynamic=oracle.

SQL-02146: Attempt to allocate an existing descriptor

Cause: An attempt allocated a descriptor which has previously been allocated was encountered.

Action: Use and unique descriptor name or deallocate the descriptor before attempting to reallocate it.

SQL-02147: ANSI Dynamic occurrence value out of range

Cause: The value clause in a dynamic GET or SET statement is less than one or greater than MAX given for descriptor allocation.

Action: Supply a number for the VALUE clause between 1 and the MAX occurrences supplied when the descriptor was allocated.

SQL-02148: ANSI Dynamic count value out of range

Cause: The count in a dynamic GET or SET statement is less than one or greater than MAX given for descriptor allocation.

Action: Supply a number for the COUNT clause between 1 and the MAX occurrences supplied when the descriptor was allocated.

SQL-02149: ANSI Dynamic insufficient item descriptor areas

Cause: The SQL statement being described contains more output items (or columns) than were allocated in the descriptor.

Action: Increase the MAX number of occurrences when allocating the descriptor.

SQL-02150: Encountered zero length in ANSI dynamic SET statement

Cause: An invalid length of zero was encountered in an ANSI dynamic statement.

Action: Set the length to a non-zero value

SQL-02151: Invalid host variable for exact numeric SET statement item

Cause: An host variable with an invalid type or length was used to get or set an exact numeric item in an ANSI dynamic statement.

Action: Make sure your host variable is and int or short for C or for COBOL, S9(4) or S9(9) binary/comp/display sign leading separate.

SQL-02152: Invalid numeric variable for use in an array GET/SET statement

Cause: An host variable with type other than int or short for C or S9(4) or S9(9) binary or comp was used for an exact numeric with and array size > 1.

Action: Use only int or short for C or S9(4) or S(9) binary or comp for COBOL when supplying an exact numeric in conjunction with the for clause to indicate arrays. Specifically, display sign leading separate is not allowed in this context.

SQL-02153: Invalid character variable for use in a GET/SET statement

Cause: An host variable with type other than character, string or varchar was found as an item name (other than DATA item) in an ANSI Dynamic GET or SET descriptor statement.

Action: Host variable types for character items (other than the DATA item) in ANSI dynamic GET or SET descriptor statements must not be of type LONG or LONG VARCHAR. Redeclare the variable to be character, string or varchar type

SQL-02154: Invalid or unset data type for host variable in ANSI Dynamic

Cause: An ANSI Dynamic SET statement with item name DATA was encountered with out a valid TYPE having been previously set and option mode=ansi was used

Action: With mode=ansi, you must set the TYPE before setting the DATA. Issue a SET statement with correct item TYPE or, for output issue a DESCRIBE to set the item type. Or use mode=oracle which allows the type to default to the type of the bind/define host variable

SQL-02155: Date Time Interval only valid with Dynamic=ANSI

Cause: An attempt to access the datetime interval code or precision was encountered when type_code option not set to ANSI

Action: Use precompiler option type_code=ansi to access the date time interval code or date time interval precision

SQL-02156: Invalid type for Indicator or Returned Length

Cause: A host variable associated with the item Indicator or Returned Length must be of type short or s9(4) comp. If value semantics and scalar they may also be gotten into display sign leading separate host variables

Action: Use signed short for indicator, ref indicator and returned length, ref returned length host variables in C. For COBOL use s9(4) comp. for GETs only with non-arrays and you may use display sign leading separate host variables

SQL-02157: Source or destination lob is invalid

Cause: One of the lobs used in the lob append call is invalid or possibly null.

Action: Make sure the lobs used in the append call are non-null.

SQL-02158: Unable to establish savepoint

Cause: An internal error occurred while establishing an internal savepoint.

Action: Check trace files for errors and rerun your application.

SQL-02159: exceeded the maximum allowed number of descriptors

Cause: The application exceeded the maximum number of descriptors.

Action: Close the unused descriptors in the application.

SQL-02160: invalid bind buffer

Cause: The application passed an invalid or NULL bind buffer.

Action: Ensure that all bind buffers are valid.

SQL*Loader-00100 to SQL*Loader-03120

SQL*Loader-00100: Syntax error on command-line

Cause: Possible causes for this error include: placing a positional argument after keyword arguments, misspelling a keyword, not balancing parentheses or quotes, or leaving space between the operator, '=', and an argument.

Action: Check the command syntax and the spelling, then retry.

SQL*Loader-00101: Invalid argument for username/password

Cause: The username/password argument specified on the command line was not recognized. Another argument (not identified by a keyword) could be in the position where username/password is expected.

Action: Check the format of the username/password argument, which is the first argument on the command line, if arguments are given without keywords.

SQL*Loader-00102: Invalid control file name on command line

Cause: The control file name specified on the command line was not recognized. It could be misspelled, or another argument (not identified by a keyword) could be in its place. One possible cause is the existence of a space between username and password. See error 101, above. Another is that the specified file name caused an overflow of the output buffer.

Action: Check the spelling and position of the arguments on the command line.

SQL*Loader-00103: Invalid log file name on command line

Cause: The log file name specified on the command line was not recognized. It could be misspelled, or another argument (not identified by a keyword) could be in its place. Another possible cause is that the specified file name caused an overflow of the output buffer.

Action: Check the spelling and position of the arguments on the command line.

SQL*Loader-00104: Invalid bad file name on command line

Cause: The bad file name specified on the command line was not recognized. It could be misspelled, or another argument (not identified by a keyword) could be in its place. Another possible cause is that the specified file name caused an overflow of the output buffer.

Action: Correct it.

SQL*Loader-00105: Invalid data file name on command line

Cause: The datafile name specified on the command line was not recognized. It could be misspelled, or another argument (not identified by a keyword) could be in its place. Another possible cause is that the specified file name caused an overflow of the output buffer.

Action: Check the spelling and position of the arguments on the command line.

SQL*Loader-00106: Invalid discard file name on command line

Cause: The discard file name specified on the command line was not recognized. It could be misspelled, or another argument (not identified by a keyword) could be in its place. Another possible cause is that the specified file name caused an overflow of the output buffer.

Action: Check the spelling and position of the arguments on the command line.

SQL*Loader-00107: Invalid maximum number of discards

Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00108: Invalid number of logical records to load

Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00109: Invalid number of logical records to skip

Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00110: Invalid maximum number of errors

Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00111: Invalid number of rows for bind array or data saves

Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00112: Invalid maximum bind array size

Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00113: Invalid silent mode option

Cause: The only valid options for the SILENT command-line argument are ALL, ERROR, FEEDBACK, or HEADER. The argument could be misspelled, or another argument (not identified by a keyword) could be in its place.

Action: Check the command line and retry.

SQL*Loader-00114: Error in OPTIONS statement

Cause: Command line options specified in the SQL*Loader control file with the OPTIONS clause were found to be incorrect.

Action: Check the format of the OPTIONS clause in the SQL*Loader control file.

SQL*Loader-00115: Invalid direct path option

Cause: The only valid options for the DIRECT command-line argument are TRUE or FALSE. The argument could be misspelled, or another argument (not identified by a keyword) could be in its place.

Action: Check the command line and retry.

SQL*Loader-00116: Error prompting for password\n

Cause: An internal error has occurred.

Action: Contact customer support.

SQL*Loader-00118: Invalid parallel load option\n

Cause: The command-line argument used for the parallel load is incorrect.

Action: Use only TRUE or FALSE as the value for the parallel load option.

SQL*Loader-00119: Invalid parallel file (data file) name on command line\n

Cause: The command-line argument for the parallel file was entered incorrectly. One possible cause is that the specified file name caused an overflow of the output buffer.

Action: Check the command line argument and retry the operation.

SQL*Loader-00120: Invalid _synchro option string\n

Cause: The command-line argument _synchro is incorrect.

Action: Use only one of the allowed modes: see ulminv[].

SQL*Loader-00121: Invalid skip_unusable_indexes option\n

Cause: The command line argument for skip_unusable_indexes is incorrect.

Action: Use only TRUE or FALSE as the value for the skip_unusable_indexes option.

SQL*Loader-00122: Invalid skip_index_maintenance option\n

Cause: The command line argument for skip_index_maintenance is incorrect.

Action: Use only true or false as the value for the skip_index_maintenance option. (Note: only on direct loads!)

SQL*Loader-00123: specified value for bindsize(number) less than readsize(number)\n

Cause: The command line argument specified for bindsize was less than the value of readsize.

Action: No action is required. SQL*Loader automatically adjusts the value of bindsize to equal the value of readsize.

SQL*Loader-00124: specified value for readsize(number) less than bindsize(number)\n

Cause: The command line argument specified for readsize was less than the value of bindsize.

Action: No action is required. SQL*Loader automatically adjusts the value of readsize to equal the value of bindsize.

SQL*Loader-00125: specified value for readsize(number) less than max_record_size(number)\n

Cause: The command line argument specified for readsize was less than the value of max_record_size.

Action: No action is required. SQL*Loader automatically adjusts the value of readsize to equal the value of max_record_size.

SQL*Loader-00126: Invalid read size

Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00127: Invalid maximum record size

Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00128: unable to begin a session

Cause: An error occurred when attempting to start a session on the database.

Action: See the message that follows this message for information on the cause of the error.

SQL*Loader-00129: Invalid number of rows for direct path column array

Cause: The argument's value is inappropriate

Action: Check the command line and retry.

SQL*Loader-00130: Invalid direct path stream size

Cause: The argument's value is inappropriate

Action: Check the command line and retry.

SQL*Loader-00131: Invalid multithreading option

Cause: The only valid options for the MULTITHREADING command-line argument are TRUE or FALSE. The argument could be misspelled, or another argument (not identified by a keyword) could be in its place.

Action: Check the command line and retry.

SQL*Loader-00132: invalid argument for external table option

Cause: The command line argument specified for external_tables was not TRUE or FALSE

Action: Check the command line and retry.

SQL*Loader-00133: Can't specify both direct path and external tables

Cause: Both options for direct path and external tables were indicated. Only one of these can be applied at a time.

Action: Change at least one of the parameters to enable only one.

SQL*Loader-00134: invalid option specified for EXTERNAL_TABLE parameter

Cause: An invalid value was specified for the EXTERNAL_TABLE parameter.

Action: Specify one of the following values. NOT_USED disables use of external tables. GENERATE_ONLY generates the SQL statements that will use external tables to load the data. EXECUTE both generates the SQL statements and then executes them.

SQL*Loader-00135: Invalid argument for RESUMABLE

Cause: The command line argument specified for RESUMABLE was not TRUE or FALSE.

Action: Check the command line and retry.

SQL*Loader-00136: Invalid argument for RESUMABLE_NAME

Cause: The command line argument specified for RESUMABLE_NAME was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00137: Invalid value for RESUMABLE_TIMEOUT

Cause: The command line argument specified for RESUMABLE_TIMEOUT was not a valid positive integer.

Action: Check the command line and retry.

SQL*Loader-00138: Invalid value for DATE_CACHE

Cause: The command line argument specified for DATE_CACHE was not a valid positive integer.

Action: Check the command line and retry.

SQL*Loader-00144: Conflicting load methods: *string/string* specified.

Cause: External table mode and direct path mode were both specified.

Action: Specify only one load method.

SQL*Loader-00145: Invalid value for NO_INDEX_ERRORS

Cause: The command line argument specified was not a valid boolean.

Action: Check the command line and retry.

SQL*Loader-00146: Invalid value for PARTITION_MEMORY

Cause: The command line argument specified was not -1, 0, or positive.

Action: Check the command line and retry.

SQL*Loader-00147: Warning: The NO_INDEX_ERRORS parameter is ignored for direct path parallel loads.

Cause: The NO_INDEX_ERRORS parameter was specified for a parallel load.

Action: Do not use the NO_INDEX_ERRORS parameter for parallel loads.

SQL*Loader-00148: Invalid value for the TABLE parameter.

Cause: The command line argument specified for the TABLE parameter was not a valid string. It is also possible that the schema name or the table name overflowed the output buffer which allows for the maximum identifier size in the database character set.

Action: Check the command line and retry.

SQL*Loader-00149: Control file cannot be specified with the TABLE parameter.

Cause: A control file was specified along with the TABLE parameter.

Action: Check the command line and retry. If you are doing an express mode load, omit the control file. If you are not doing an express mode load, omit the TABLE parameter.

SQL*Loader-00170: invalid value for EMPTY_LOBS_ARE_NULL

Cause: The command line argument specified was not a valid boolean.

Action: Check the command line and retry.

SQL*Loader-00172: invalid value for DIRECT_PATH_LOCK_WAIT

Cause: The command line argument specified was not a valid boolean.

Action: Check the command line and retry.

SQL*Loader-00173: invalid value for DNFS_ENABLE

Cause: The command line argument specified was not a valid boolean.

Action: Check the command line and retry.

SQL*Loader-00174: conflicting values for PARALLEL and DEGREE_OF_PARALLELISM parameters

Cause: Conflicting values were specified for the parallel setting. This could be caused by: 1) having PARALLEL=TRUE and DEGREE_OF_PARALLELISM=NONE(or 1) 2) PARALLEL=FALSE and DEGREE_OF_PARALLELISM being set to a value other than NONE or 1.

Action: Verify the values for PARALLEL and DEGREE_OF_PARALLELISM.

SQL*Loader-00175: invalid number of Direct NFS (dNFS) read buffers

Cause: The argument's value was inappropriate.

Action: Check the command line and retry.

SQL*Loader-00176: Invalid value for the DATE_FORMAT parameter

Cause: The command line argument specified for the DATE_FORMAT parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00177: The DATE_FORMAT parameter can only be specified with the TABLE parameter

Cause: A control file was specified along with the DATE_FORMAT parameter.

Action: Check the command line and retry. If you are doing an express mode load, omit the control file. If you are not doing an express mode load, omit the DATE_FORMAT parameter.

SQL*Loader-00178: Invalid value for the TERMINATED_BY parameter

Cause: The command line argument specified for the TERMINATED_BY parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00179: Invalid hexadecimal value for the TERMINATED_BY parameter

Cause: The command line argument specified for the TERMINATED_BY parameter was not a valid hexadecimal string.

Action: Check the command line and retry.

SQL*Loader-00180: Invalid hexadecimal value for the table-level NULLIF parameter.\n

Cause: The command line argument specified for the table-level NULLIF parameter was not a valid hexadecimal string.

Action: Check the command line and retry.

SQL*Loader-00181: The TERMINATED_BY parameter cannot be specified without the TABLE parameter.\n

Cause: The TERMINATED_BY parameter was specified without the TABLE parameter.

Action: Check the command line and retry. If you are doing an express mode load, include the TABLE parameter and omit the control file. If you are not doing an express mode load, omit the TERMINATED_BY parameter.

SQL*Loader-00182: Invalid value for the ENCLOSED_BY parameter.\n

Cause: The command line argument specified for the ENCLOSED_BY parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00183: invalid hexadecimal value for the ENCLOSED_BY parameter: *string*\n

Cause: The command line argument specified for the ENCLOSED_BY parameter was not a valid hexadecimal string.

Action: Check the command line and retry.

SQL*Loader-00184: The ENCLOSED_BY parameter cannot be specified with the OPTIONALLY_ENCLOSED_BY parameter.\n

Cause: Both the ENCLOSED_BY parameter and the OPTIONALLY_ENCLOSED_BY parameter were specified.

Action: Check the command line and retry. Specify only the ENCLOSED_BY parameter or the OPTIONALLY_ENCLOSED_BY parameter.

SQL*Loader-00185: The ENCLOSED_BY parameter cannot be specified without the TABLE parameter.\n

Cause: The ENCLOSED_BY parameter was specified without the TABLE parameter.

Action: Check the command line and retry. If you are doing an express mode load, include the TABLE parameter and omit the control file. If you are not doing an express mode load, omit the ENCLOSED_BY parameter.

SQL*Loader-00186: Invalid value for the OPTIONALLY_ENCLOSED_BY parameter.\n

Cause: The command line argument specified for the OPTIONALLY_ENCLOSED_BY parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00187: invalid hexadecimal value for the OPTIONALLY_ENCLOSED_BY parameter: *string*\n

Cause: The command line argument specified for the OPTIONALLY_ENCLOSED_BY parameter was not a valid hexadecimal string.

Action: Check the command line and retry.

SQL*Loader-00188: The OPTIONALLY_ENCLOSED_BY parameter cannot be specified with the ENCLOSED_BY parameter.\n

Cause: Both the OPTIONALLY_ENCLOSED_BY parameter and the ENCLOSED_BY parameter were specified.

Action: Check the command line and retry. Specify only the OPTIONALLY_ENCLOSED_BY parameter or the ENCLOSED_BY parameter.

SQL*Loader-00189: The OPTIONALLY_ENCLOSED_BY parameter cannot be specified without the TABLE parameter.\n

Cause: The OPTIONALLY_ENCLOSED_BY parameter was specified without the TABLE parameter.

Action: Check the command line and retry. If you are doing an express mode load, include the TABLE parameter and omit the control file. If you are not doing an express mode load, omit the OPTIONALLY_ENCLOSED_BY parameter.

SQL*Loader-00190: Invalid value for the CHARACTERSET parameter.\n

Cause: The command line argument specified for the CHARACTERSET parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00191: The CHARACTERSET parameter can only be specified with the TABLE parameter.\n

Cause: A control file was specified along with the CHARACTERSET parameter.

Action: Check the command line and retry. If you are doing an express mode load, omit the control file. If you are not doing an express mode load, omit the CHARACTERSET parameter.

SQL*Loader-00192: The CHARACTERSET parameter cannot be specified without the TABLE parameter.\n

Cause: The CHARACTERSET parameter was specified without the TABLE parameter.

Action: Check the command line and retry. If you are doing an express mode load, include the TABLE parameter and omit the control file. If you are not doing an express mode load, omit the CHARACTERSET parameter.

SQL*Loader-00193: Invalid value for the DEGREE_OF_PARALLELISM parameter.\n

Cause: The command line argument specified for the DEGREE_OF_PARALLELISM parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00194: Option *string* specified and ignored for *string* path load.\n

Cause: An option was specified that is not supported for conventional path or direct path.

Action: Do not specify the unsupported option or do not use conventional path or direct path load.

SQL*Loader-00195: Invalid value for the TRIM parameter.\n

Cause: The command line argument specified for the TRIM parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00196: Invalid value for the CSV parameter.\n

Cause: The command line argument specified for the CSV parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00197: Invalid value for the TIMESTAMP_FORMAT parameter.\n

Cause: The command line argument specified for the TIMESTAMP_FORMAT parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00198: The TIMESTAMP_FORMAT parameter can only be specified with the TABLE parameter.\n

Cause: A control file was specified along with the TIMESTAMP_FORMAT parameter.

Action: Check the command line and retry. If you are doing an express mode load, omit the control file. If you are not doing an express mode load, omit the TIMESTAMP_FORMAT parameter.

SQL*Loader-00199: Invalid value for the NULLIF parameter.\n

Cause: The command line argument specified for the NULLIF parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00200: FORMAT clause should not be present - flat data files only\n

Cause: SQL/DS FORMAT clause is not supported.

Action: Remove the FORMAT command from the SQL*Loader control file or

SQL*Loader-00201: There is an invalid value for the CSV clause.\n

Cause: The control file clause specified for CSV was neither CSV WITH EMBEDDED or CSV WITHOUT EMBEDDED.

Action: Check the control file CSV clause syntax and retry.

SQL*Loader-00202: shift-based character sets not supported with CSV format files with embedded record terminators\n

Cause: A CSV format file with embedded record terminators was specified with a shift-based character set.

Action: Either use a nonshift-based character set or do not use CSV format files with embedded record terminators.

SQL*Loader-00203: The NULLIF parameter can only be specified with the TABLE parameter.\n

Cause: A control file was specified along with the NULLIF parameter.

Action: Check the command line and retry. If you are doing an express mode load, omit the control file. If you are not doing an express mode load, omit the NULLIF parameter.

SQL*Loader-00204: Invalid value for the FIELD_NAMES parameter.\n

Cause: The command line argument specified for the FIELD_NAMES parameter was not a valid string. You must specify FIRST, FIRST_IGNORE, ALL, ALL_IGNORE, or NONE.

Action: Check the command line and retry.

SQL*Loader-00205: The FIELD_NAMES parameter can only be specified with the TABLE parameter.\n

Cause: A control file was specified along with the FIELD_NAMES parameter.

Action: Check the command line and retry. If you are doing an express mode load, omit the control file. If you are not doing an express mode load, omit the FIELD_NAMES parameter.

SQL*Loader-00206: Empty field name for field *number* in the FIELD NAMES record in data file\n

Cause: A field name in the FIELD NAMES record was empty.

Action: Specify a valid field name and retry the operation.

SQL*Loader-00207: Missing one or more field names in the FIELD NAMES record in the data file. Found *number* fields, there should be *number* fields.\n

Cause: One or more field names was not listed in the FIELD NAMES record. However, it was listed in the access parameter list for the external table.

Action: Include all field names in the data file and retry the operation.

SQL*Loader-00208: Error on the FIELD NAMES record for table *string*, field *stringstringstring* was not found in the control file.\n

Cause: The listed field was not found in the control file field list. The next error message lists the name of the data file where the error was found.

Action: Check the listed field and fix it. Then retry the operation.

SQL*Loader-00209: error processing the FIELD NAMES record in data file *string*.\n

Cause: An error occurred while processing the FIELD NAMES record for the data file.

Action: See messages that precede this one for more details. Fix the error and retry the operation.

SQL*Loader-00210: first data file is empty, cannot process the FIELD NAMES record\n

Cause: The data file listed in the next message was empty. Therefore, the FIELD NAMES FIRST FILE directive could not be processed.

Action: Check the listed data file and fix it. Then retry the operation.

SQL*Loader-00211: Field name *stringstringstring* in the FIELD NAMES record in the data file is too long.\n

Cause: The field name exceeded the maximum of 30 characters.

Action: Specify at most 30 characters.

SQL*Loader-00212: The field level ENCLOSED BY clause is not allowed with the CSV WITH EMBEDDED clause.\n

Cause: A field level ENCLOSED BY clause was specified with the CSV WITH EMBEDDED clause. All fields must use the same ENCLOSED BY or OPTIONALLY ENCLOSED BY clause for CSV files with embedded record terminators.

Action: Either remove the field level ENCLOSED BY clause, or, if the data file does not contain embedded record terminators, change CSV WITH EMBEDDED to CSV WITHOUT EMBEDDED.

SQL*Loader-00213: Invalid value for the table parameter\n

Cause: The table name specified on the command line was not recognized. It could be misspelled, or another argument (not identified by a keyword) could be in its place. The schema name or the table name may have been too long for a valid database identifier in the database character set.

Action: Check the spelling and position of the arguments on the command line.

SQL*Loader-00214: Invalid value for the table name in the INTO TABLE clause\n

Cause: The table name specified in the INTO TABLE clause was not recognized. The schema name or the table name may have been too long for a valid database identifier in the database character set.

Action: Check the name and try again with a valid table name.

SQL*Loader-00215: Invalid data file name in INFILE statement\n

Cause: The datafile name specified in INFILE statement was not recognized. It could be misspelled, or the length may exceed the maximum file specification allowed on the platform.

Action: Check the spelling and length of the data file specification.

SQL*Loader-00216: Invalid bad file name in BADFILE statement\n

Cause: The bad file name specified in the BADFILE statement was not recognized. It could be misspelled, or the length may exceed the maximum file specification allowed on the platform.

Action: Check the spelling and length of the bad file specification.

SQL*Loader-00217: Invalid discard file name in DISCARDFILE statement\n

Cause: The discard file name specified in the DISCARDFILE statement was not recognized. It could be misspelled, or the length may exceed the maximum file specification allowed on the platform.

Action: Check the spelling and length of the discard file specification.

SQL*Loader-00218: Specified command-line parameter *string* ignored since not an express mode load.\n

Cause: A command-line parameter was specified that is supported only for express mode and not for loads which use a control file.

Action: Omit the option which is not supported if the option is not needed or use the control file syntax for the option. For example, use the CSV WITH EMBEDDED or CSV WITHOUT EMBEDDED control file syntax.

SQL*Loader-00219: Invalid value for parameter SDF_PREFIX\n

Cause: The value for the SDF_PREFIX parameter was not recognized or the value of the parameter was too long.

Action: Verify the value specified and shorten it if possible.

SQL*Loader-00220: invalid value for the exceptions table name in the REENABLE clause

Cause: The table name specified for the exceptions table in the REENABLE disabled constraints clause was not recognized. The schema name or the table name may have been too long for a valid database identifier in the database character set.

Action: Check the name and try again with a valid table name.

SQL*Loader-00221: invalid value for the partition or subpartition name

Cause: The name specified for the partition or subpartition was not recognized. The name may have been too long for a valid database identifier in the database character set.

Action: Check the name and try again with a valid partition or subpartition name.

SQL*Loader-00222: invalid option specified for DEFAULTS parameter

Cause: An invalid value was specified for the DEFAULTS parameter.

Action: Specify one of the following values: - IGNORE to disable loading of default values. - EVALUATE_ONCE to load default values, but evaluate default expressions once at the beginning of the load. - EVALUATE_EVERY_ROW to load default values and evaluate default expressions for each row. - IGNORE_UNSUPPORTED_EVALUTE_ONCE to load default values where supported, ignore otherwise. Evaluate defaults once. - IGNORE_UNSUPPORTED_EVALUTE_EVERY_ROW to load default values where supported, ignore otherwise. Evaluate defaults every row.

SQL*Loader-00223: Warning: The DEFAULTS parameter is ignored for non-direct path loads.

Cause: The DEFAULTS parameter was specified for a non-direct path load.

Action: Do not use the DEFAULTS parameter for non-direct path loads.

SQL*Loader-00225: invalid value for the CREDENTIAL parameter

Cause: The command line argument specified for the CREDENTIAL parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00227: invalid value for the wallet parameter

Cause: The command line argument specified for the wallet parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00228: could not initialize the client wallet

Cause: SQL*Loader could not initialize the client wallet.

Action: Ensure that a valid wallet exists in the default or specified wallet location.

SQL*Loader-00229: could not open the client wallet

Cause: SQL*Loader could not open the client wallet.

Action: Ensure that a valid wallet exists in the default or specified wallet location.

SQL*Loader-00230: object store password not found in the client wallet\n

Cause: SQL*Loader could not load the password from the client wallet.

Action: Ensure that a valid wallet exists in the default or specified wallet location and that it contains the expected credential.

SQL*Loader-00231: object store username not found in the client wallet\n

Cause: SQL*Loader could not load the username from the client wallet.

Action: Ensure that a valid wallet exists in the default or specified wallet location and that it contains the expected credential.

SQL*Loader-00232: could not read from the client wallet\n

Cause: SQL*Loader could not load the username or password from the client wallet.

Action: Ensure that a valid wallet exists in the default or specified wallet location and that it contains the expected credential.

SQL*Loader-00233: invalid value for the PROXY parameter\n

Cause: The command line argument specified for the PROXY parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00234: The proxy value could not be found.\n

Cause: The database property for the http proxy was not set.

Action: Set the http proxy database attribute.

SQL*Loader-00235: External table mode was not used when loading from an object store.\n

Cause: SQL*Loader could not use the external table mode to load from an object store.

Action: None. This is an informational message issued when external table mode would have been used if not loading from an object store.

SQL*Loader-00236: unable to create credential used internally by SQL*Loader\n

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

SQL*Loader-00237: unable to drop credential used internally by SQL*Loader\n

Cause: An internal error has occurred.

Action: Contact Oracle Support Services.

SQL*Loader-00238: invalid value for the GSM_NAME parameter\n

Cause: The command line argument specified for the GSM_NAME parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00239: invalid value for the GSM_HOST parameter\n

Cause: The command line argument specified for the GSM_HOST parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00240: invalid value for the GSM_PORT parameter\n

Cause: The command line argument specified for the GSM_PORT parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00241: invalid value for the READER_COUNT parameter\n

Cause: The command line argument specified for the READER_COUNT parameter was not a valid number.

Action: Check the command line and retry.

SQL*Loader-00242: invalid value for the LOAD_SHARD parameter\n

Cause: The command line argument specified for the LOAD_SHARD parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00243: invalid value for the COMPRESS_STREAM parameter\n

Cause: The command line argument specified for the COMPRESS_STREAM parameter was not a valid boolean value.

Action: Check the command line and retry.

SQL*Loader-00244: Column references in the sequence expression for column *string* are not supported.\n

Cause: The sequence expression for the specified column contained column references.

Action: Remove the column references and retry.

SQL*Loader-00245: invalid value for the OPTIMIZE_PARALLEL parameter\n

Cause: The command line argument specified for the OPTIMIZE_PARALLEL parameter was not a valid boolean value.

Action: Check the command line and retry.

SQL*Loader-00246: The dnfs_enable parameter must be set for object store loads.\n\n

Cause: The dnfs_enable parameter was not set when a credential was specified for an object store load. The dnfs_enable parameter allows I/O to the object store.

Action: Set the dnfs_enable parameter to a value of TRUE when doing object store loads.

SQL*Loader-00248: multiple *string* format masks specified at table level for table *string*\n

Cause: Multiple format masks were specified for the listed datetime data type at the table level for the listed table.

Action: Remove one of the mask specifications and try the operation again.

SQL*Loader-00249: Unexpected error occurred while processing datetime format mask (*string*).\n

Cause: An unexpected error occurred while processing the datetime format mask.

Action: Check the mask and try the operation again with a correct mask. If the problem still occurs, contact Oracle Support Services.

SQL*Loader-00250: Work data sets are not used by SQL*Loader\n

Cause: The SQL*Loader control file contains a WRKDDN statement. SQL*Loader ignores this clause.

Action: No action required. This is an informational message.

SQL*Loader-00251: Sort devices are not used by SQL*Loader\n

Cause: The SQL*Loader control file contains a SORTDEVT statement. SQL*Loader ignores this clause.

Action: No action required. This is an informational message.

SQL*Loader-00252: Sort data sets are not used by SQL*Loader\n

Cause: The SQL*Loader control file contains a SORTNUM statement. SQL*Loader ignores this clause.

Action: No action required. This is an informational message.

SQL*Loader-00253: DB2 partition number has no significance -- ignored\n

Cause: The SQL*Loader control file contains a PART statement. SQL*Loader ignores this clause.

Action: No action required. This is an informational message.

SQL*Loader-00254: Cannot have DISCARDFILE specs here when multiple data files\n

Cause: The SQL*Loader control file contained multiple INFILE statements and a DISCARDFILE statement was found below the RESUME clause.

Action: Move the DISCARDFILE statement above the RESUME clause, so it is adjacent to one of the INFILE statements.

SQL*Loader-00255: Log file for error recovery not used by SQL*Loader\n

Cause: The SQL*Loader control file contains a LOG statement. SQL*Loader ignores this clause.

Action: No action required. This is an informational message.

SQL*Loader-00256: SORTED INDEXES option allowed only for non-parallel direct path.\n

Cause: The SQL*Loader control file contained a SORTED INDEXES statement, but it was not used in a non-parallel direct path load.

Action: Specify a direct path load with DIRECT=TRUE on the command line, remove the statement from the SQL*Loader control file, or

SQL*Loader-00257: TERMINATED BY EOF option not valid with ENCLOSED BY option\n

Cause: A field description in the SQL*Loader control file contains both the TERMINATED BY EOF and the ENCLOSED BY options. These options are mutually exclusive.

Action: Remove either or both of the clauses.

SQL*Loader-00258: Maximum number of SORTED INDEXES (*number*) exceeded on table *string*\n

Cause: There are too many indexes in the SORTED INDEX clause. The message displays the maximum number that are permitted.

Action: Reduce the number of indexes specified in the SORTED INDEX clause or use the conventional path load instead of the direct path load.

SQL*Loader-00259: Could not escalate DDL share lock to exclusive on table *string*\n

Cause: This error occurs when another user has a parse lock on the table, for example, when another user is doing a select on the table. The parse lock should clear momentarily.

Action: Give the parse lock a chance to clear and then retry or else use the conventional path load.

SQL*Loader-00260: TERMINATED BY EOF option available only with LOBFILE option\n

Cause: The TERMINATED BY EOF option can be used only when describing data to be loaded from a LOBFILE. It cannot be specified at the table level and it cannot be for data in "regular" data files.

Action: Verify that you have specified the correct option for TERMINATED BY and verify that the TERMINATED BY option is specified for the correct fields.

SQL*Loader-00261: illegal use of TERMINATED BY for RAW field\n

Cause: The TERMINATED BY option cannot be used for loading data of type RAW from the data file. The only exception is when loading RAW data from LOBFILES. In that case, you may specify the TERMINATED BY EOF option.

Action: Remove the TERMINATED BY option from the RAW field in the SQL*Loader control file.

SQL*Loader-00262: PIECED keyword (on column *string*) allowed only when path is direct\n

Cause: The PIECED keyword cannot be used in a conventional path load.

Action: Remove the PIECED keyword or use the direct path load.

SQL*Loader-00263: PIECED column *string* must be last specified column in table *string*\n

Cause: A column that is not the last column was specified as PIECED.

Action: Remove the PIECED keyword or place the column last.

SQL*Loader-00264: File mode token *string* parsed but ignored\n

Cause: An obsolete file mode token was used in the SQL*Loader control file. As of Release 1.1 of SQL*Loader, the file-processing options string is used to control file processing, rather than keywords like STREAM, RECORD, FIXED, and VARIABLE.

Action: No action required. This message is informational. Removing the obsolete keywords will eliminate the message without changing the way in which the datafile is processed.

SQL*Loader-00265: Unable to get default character set name.\n

Cause: SQL*Loader was unable to locate the default character set name for the environment.

Action: Supply a character set name with the CHARACTERSET keyword.

SQL*Loader-00266: Unable to locate character set handle for *string*.\n

Cause: SQL*Loader could not find the character set handle for the named character set.

Action: Correct the character set name.

SQL*Loader-00267: Control file must be first data file.\n

Cause: The SQL*Loader control file is specified as containing data using the INFILE "*" clause, but other datafiles were named first.

Action: Move the INFILE "*" clause so that it is the first datafile declared in the SQL*Loader control file.

SQL*Loader-00268: UNRECOVERABLE keyword may be used only in direct path.\n

Cause: The UNRECOVERABLE keyword can only be specified in the direct path load.

Action: Use the direct path load or remove the keyword. (Conventional path loads are always recoverable).

SQL*Loader-00269: Null string not allowed as clause comparison text.\n

Cause: A clause is being compared to a null string.

Action: Modify the clause to compare to at least one character.

SQL*Loader-00270: TERMINATED BY EOF valid only for CHAR or RAW datatypes\n

Cause: A field description in the SQL*Loader control file used the TERMINATED BY EOF option when the field was not a RAW or CHAR datatype.

Action: Modify the SQL*Loader control file to either remove the TERMINATED BY EOF clause or change the datatype for the field to be CHAR or RAW.

SQL*Loader-00271: Not a Parallel load. Table level OPTIONS statement ignored.\n

Cause: A table-level OPTIONS statement was specified for a non-parallel load.

Action: Remove the OPTIONS statement from the SQL*Loader control file.

SQL*Loader-00272: Table level OPTIONS statement ignored.\n

Cause: In the parallel load option, the file specified on the command line overrides the file specified in the SQL*Loader control file.

Action: Remove the OPTIONS statement from the SQL*Loader control file.

SQL*Loader-00273: READBUFFERS may be used only in direct path.\n

Cause: The READBUFFERS specification was not entered as part of a direct path.

Action: Use the direct path or remove the READBUFFERS specification from the SQL*Loader control file.

SQL*Loader-00274: At least 2 read buffers have to be specified.\n

Cause: Fewer than 2 read buffers have been specified.

Action: Specify at least 2 read buffers in the READBUFFERS statement, in the SQL*Loader control file.

SQL*Loader-00275: Data is in control file but "INFILE *" has not been specified.\n\n

Cause: The INFILE specification was not entered in the SQL*Loader control file.

Action: If data in the SQL*Loader control file is to be read, specify INFILE * in the SQL*Loader control file.

SQL*Loader-00276: Local storage option overrides global storage.\n

Cause: A storage clause has been specified in the table level options statement and also in the global options statement.

Action: This is only a warning message. Table level options take precedence over global options. Drop the table level options statement if this is not the intent.

SQL*Loader-00277: Local file specification overrides global file specification.\n

Cause: A filename has been specified in the table level options statement and also in the global options statement.

Action: This is only a warning message. Table level options take precedence over global options. Drop the table level options statement if this is not the intent.

SQL*Loader-00278: Incorrect file specification for parallel load.\n

Cause: The filename used to perform the parallel load was entered incorrectly.

Action: Correct the filename and re-invoke parallel loader.

SQL*Loader-00279: Only APPEND mode allowed when parallel load specified.\n

Cause: INSERT, REPLACE, or TRUNCATE mode was used in a parallel load specification.

Action: Change the SQL*Loader control file to use the APPEND keyword and re-invoke the parallel loader.

SQL*Loader-00280: table *string* is a temporary table\n

Cause: The sqlldr utility does not load temporary tables. Note that if sqlldr did allow loading of temporary tables, the data would disappear after the load completed.

Action: Load the data into a non-temporary table.

SQL*Loader-00281: Warning: ROWS parameter ignored in parallel mode.\n

Cause: Specifying save points using the ROWS parameter is not supported for parallel loads.

Action: Remove the ROWS parameter from the command-line arguments or specify a non-parallel direct load to have save points performed.

SQL*Loader-00282: Unable to locate character set handle for character set ID (*number*).\n

Cause: SQL*Loader could not find the character set handle for the given character set ID.

Action: The character set ID was obtained from the database server, the SQL*Loader client does not have knowledge of the given character set ID. Possible mis-match of NLS data on the client and server side.

SQL*Loader-00283: file processing string "*string*" ignored for INFILE **\n*

Cause: The SQL*Loader control file specified INFILE * for a load data file along with an optional file processing string. This message is a warning that the file processing string will be ignored since SQLLDR will expect the data to have the same record format as the SQL*Loader control file.

Action: If the data in the SQL*Loader control file is in the same format as the rest of the SQL*Loader control file, then you don't need to do anything. Removing the file processing string will get rid of this error message. If the data in the SQL*Loader control file has a different record format, then you need to copy the data into a separate file and use that file's name in the INFILE clause.

SQL*Loader-00284: Warning: Input data file *string* specified multiple times.*\n*

Cause: The same input datafile is loaded multiple times. This can occur if the INFILE keyword is placed out of order in the load syntax statement, which causes the filename of the first datafile loaded to default to the name of the control file with an extension or file type of DAT.

Action: Check that INFILE keyword is not placed after one of these - BADFILE/BADDN/DISCARDFILE/DISCARDDN/DISCARDS.

SQL*Loader-00285: *string* may be used only in conventional path.*\n*

Cause: HIDDEN can only be specified in the conventional path load.

Action: Use the conventional path load.

SQL*Loader-00286: ROWS parameter is not supported when loading an IOT.*\n*

Cause: Specifying save points using the ROWS parameter is not supported when loading an IOT.

Action: Remove the ROWS parameter from the command-line arguments.

SQL*Loader-00287: No control file name specified.*\n*

Cause: No control file name was provided at the control prompt.

Action: Provide the name of a valid control file at the prompt or on the command line.

SQL*Loader-00288: Delimiters may not be specified for collections stored in SDF.*\n*

Cause: A TERMINATED BY or ENCLOSED BY clause was found along with an SDF (secondary data files) clause for a nested table or varray field.

Action: The TERMINATED BY or ENCLOSED BY clauses may be specified only if the nested table or VARRAY data is stored in the record in the main data file. If you are loading nested table or VARRAY data from a secondary data file, then you must use COUNT to indicate the number of elements in the secondary data file that are stored in the file.

SQL*Loader-00289: SQL string for column *string* occludes SQL string for column *string*.*\n*

Cause: A SQL string has been associated with both a column object and one of its attributes in the control file. Because the SQL string of the column object will replace the entire column object in the VALUE clause of the INSERT statement, the SQL string of the attribute is ignored. This could cause unexpected or incorrect values to be loaded.

Action: Correct the control file so that only the column object or its attribute has a SQL string, but not both.

SQL*Loader-00290: PIECED keyword (on column *string*) allowed only for lob or long columns

Cause: The PIECED keyword cannot be used for non lob or long columns.

Action: Remove the PIECED keyword or use lob or long column type.

SQL*Loader-00291: Invalid bind variable *string* in SQL string for column *string*.

Cause: A bind variable may not refer to a filler field or to a non-existent field. Also, when running in direct-path mode, a bind variable may not refer to field that represents a LOB stored in a secondary file or a collection.

Action: Remove the offending bind variable from the SQL string.

SQL*Loader-00292: ROWS parameter ignored when an XML, LOB or VARRAY column is loaded

Cause: Command-line arguments contained a ROWS parameter. Specifying save points using the ROWS parameter is not supported when any table being loaded contains a LOB or a column stored as a LOB. XML and VARRAY columns may be stored as a LOB.

Action: Remove the ROWS parameter from the command-line arguments.

SQL*Loader-00293: Missing XMLTYPE directive in control file for table *string*

Cause: A table of sys.xmltype must specify the XMLTYPE directive.

Action: Add XMLTYPE directive to control file.

SQL*Loader-00294: invalid name % specified in TREAT AS clause

Cause: The type name specified in a TREAT AS clause is invalid. It might contain characters that are not valid in the client character set or a quoted string might not be terminated or the name might be too long to contain a valid schema name and type name.

Action: Verify that the type name has valid characters and is not too long. Also, ensure that all quoted strings are terminated.

SQL*Loader-00295: Warning: Table *string*, Column *string* - Quoting rule of object attribute bind variables has changed.

Cause: The quoting rule of bind variables consisting of full object attribute names changed. The old quoting rule is incorrect because it can lead to ambiguous column references. For backward compatibility, current load will continue unless ambiguous column references are detected.

Action: This is only a warning message. Because the quoting rule of object attribute bind variables has changed, it is recommended that the control file be replaced with the new rule. With the new rule, a full object attribute bind variable name is not enclosed in its entirety in double quotes. Instead, each attribute name in the bind variable should be independently quoted as needed. Note that each attribute name is actually an identifier on its own and thus should follow the quoting rules for an identifier. For example, bind variable ':A.B.C' here consists of 3 attribute names (or identifiers): 'A', 'B', and 'C'.

SQL*Loader-00296: Bind variable *string* for column *string* is ambiguous.\n

Cause: A bind variable can only refer to one column in the control file. Current load could not continue due to ambiguous column references.

Action: Fix the bind variable. If this bind variable consists of quotes, check that the quotes are used correctly. For example, the old quoting rule of bind variables consisting of full object attribute names was incorrect because it can lead to ambiguous column references. Let's say we have an expression "LTRIM(:'A.B.C')". Using the old quoting rule, this bind variable can refer to object attribute columns "'A"."B"."C'", "'A.B'.C", and "'A"."B.C'". To avoid this confusion, use the new quoting rule for object attribute bind variables, which is to quote each attribute name independently as needed. In the preceding example, if the intended object attribute column is 'A.B.C', then the expression rewritten as "LTRIM(:A.B.C)" or "LTRIM(:'A"."B"."C') will not lead to ambiguities.

SQL*Loader-00297: Invalid syntax or bind variable in SQL string for column *string*.\n

Cause: See following error message for more information. A SQL string cannot have quoted strings improperly terminated. A bind variable in a SQL string cannot have a length of 0, cannot exceed maximum length of 30 characters, and cannot be missing a double quote.

Action: Fix the SQL string. See following error for more information.

SQL*Loader-00298: Filler field name is too long\n

Cause: The specified filler field name exceeded the maximum of 30 characters.

Action: Specify at most 30 characters.

SQL*Loader-00299: Virtual column *string* in table *string.string* cannot be loaded.\n

Cause: Virtual columns were specified in the control file.

Action: Virtual columns cannot be specified in the control file. Remove the virtual column from the SQL*Loader control file.

SQL*Loader-00300: error while attempting to enable tracing\n

Cause: An error occurred while executing an ALTER SESSION statement to enable tracing. This message will be followed by the error returned from ALTER SESSION.

Action: No action required.

SQL*Loader-00301: string for TERMINATED BY or ENCLOSED BY clause is longer than *number* bytes\n

Cause: The size of a string literal is longer than the maximum number of bytes allowed for an ENCLOSED BY or TERMINATED BY string. This error can also occur if the string needs to be converted to the character set of the data file and the resulting string is too long.

Action: Use shorter strings for the TERMINATED BY and ENCLOSED BY clauses.

SQL*Loader-00303: Non-hex character encountered where hex char expected\n

Cause: A non-hex character was found in a hexadecimal string.

Action: Change it to the intended hexadecimal character.

SQL*Loader-00304: Illegal combination of non-alphanumeric characters\n

Cause: The SQL*Loader control file contains a combination of non-alphanumeric characters that SQL*Loader does not recognize. For example, the combination != is recognized as "not equal", but the combination =! is not valid.

Action: Remove the unrecognized characters from the control file.

SQL*Loader-00305: More than one end of file character encountered\n

Cause: The file contains multiple end-of-file marks.

Action: Remove the excess end-of-file characters.

SQL*Loader-00306: Token longer than max allowable length of *number* chars\n

Cause: The SQL*Loader control file contains a single word or combination of characters (a token) that is longer than the maximum permissible value. The maximum possible value is shown. This error could result from missing spaces, so that multiple tokens are joined.

Action: Check that the proper SQL*Loader control file is being executed. Separate tokens, if joined, or shorten the token.

SQL*Loader-00307: Warning: conflicting lengths *number* and *number* specified for column *string* table *string*\n

Cause: The SQL*Loader control file specifies two different lengths for the named column. There are three ways to specify the length of a field: --with the POSITION keyword: POSITION(1:3) -- with the length specifier: CHAR(6) -- with the implied length of a datatype; for example, INTEGER -- A conflict could occur between any two of these specifications (or among all three, but only two are shown). A common cause of this error is the specification of some numeric datatype, such as INTEGER, when the numeric external form is intended (INTEGER EXTERNAL). The external form consists of character data, so it is considerably longer than the numeric form, which consists of binary data.

Action: No action is necessarily required, because SQL*Loader uses only one of the lengths. Check the log file under the heading "Len" in the table-description section to see which length was used. Adjusting the SQL*Loader control file to produce uniform length specifications will remove the warning.

SQL*Loader-00308: *string* SQL string of column *string* must be in double quotes.\n

Cause: A SQL string was found that was not quoted or in single quotes.

Action: Use double quotes for the SQL string, rather than single quotes.

SQL*Loader-00309: No SQL string allowed as part of *string* field specification\n

Cause: Particular field types do not allow SQL strings as part of their field specification (e.g. field corresponding to a LOB column). This was violated and needs to be corrected.

Action: Remove the SQL string from the particular field specification.

SQL*Loader-00310: Interval partition values of table *string* must be in double quotes.\n

Cause: A string specified for interval partitioning was found that was not quoted or in single quotes.

Action: Use double quotes for the interval partitioning values string, rather than single quotes.

SQL*Loader-00311: Cannot load a sharded table when connected to a shard catalog database: *string.string*\n

Cause: SQL*Loader is connected to a database that is acting as the catalog database for a sharded database and the table identified by the message is a sharded table. SQL*Loader does not support loading sharded tables in a shard catalog database.

Action: Connect to each of the shard database.

SQL*Loader-00312: Multiple INTO clauses are not supported for this type of parallel load.\n

Cause: Multiple INTO clauses were specified when using the DEGREE_OF_PARALLELISM parameter for a direct or conventional path load.

Action: Load one table at a time for this type of parallel load.

SQL*Loader-00350: Syntax error at line *number*.\n

Cause: num identifies the line in the SQL*Loader control file at which the error occurred. This message is followed by another of the form -- Expecting str1, found str2 where str1 is a description of what SQL*Loader expected in the SQL*Loader control file, and str2 is what was found. Then SQL*Loader displays the offending line from the SQL*Loader control file, indicating the location of the error in the line by a caret (^) or an asterisk (*). An example follows: -- SQL*Loader-350: Syntax error at line 28 -- Expecting column name, found keyword CHAR -- col3 ENCLOSED BY "", CHAR ENCLOSED "",

Action: Compare the DDL syntax against the syntax diagrams in Oracle7 Server Utilities and make any necessary corrections.

SQL*Loader-00351: invalid identifier name\n

Cause: An invalid identifier name was specified.

Action: Make sure a valid identifier name is specified.

SQL*Loader-00401: End field position *number* must be greater than or equal to start *number*.\n

Cause: The named field contains a (start:end) clause in which end is less than start.

Action: Modify the clause so that end is greater than or equal to start.

SQL*Loader-00402: Unable to determine length of column *string* from specification\n

Cause: The specified datatype does not have an implied length (for example, a numeric external or RAW datatype), it is not specified with delimiters, no length was specified, and a length cannot be determined from a POSITION clause.

Action: If a POSITION clause is specified, adding an end location to it produces a length specification. This clause then has the form POSITION(start:end) A length can also specified after the datatype, as in INTEGER EXTERNAL (6) Finally, the field could be specified with delimiters, or the datatype changed to one that has an implied length.

SQL*Loader-00403: Referenced column *string* not present in table *string*.\n

Cause: The named column is not present in the given table.

Action: Correct the column name or table name.

SQL*Loader-00404: Column *string* present more than once in *string*'s INTO TABLE block.\n

Cause: The named column is specified more than once in a single INTO TABLE statement.

Action: Remove the extraneous column specification.

SQL*Loader-00405: Need termination delim with optional enclosure delim: column string table string\n

Cause: The named column was specified with an optional enclosure delimiter, but no termination delimiter. Enclosure delimiters can only be optional when termination delimiters are present.

Action: Specify a termination delimiter or make the enclosure delimiters non-optional.

SQL*Loader-00406: If data is all generated, number to load cannot be ALL\n

Cause: When only generated data is loaded, a number to load must be given so SQL*Loader knows when to stop.

Action: Specify a number to load.

SQL*Loader-00407: If data is all generated, number to skip is meaningless\n

Cause: When all data is generated, no file is read, and there are no records to skip.

Action: Remove the number to skip.

SQL*Loader-00408: Physical record stack overflow\n

Cause: An internal error has occurred.

Action: Contact customer support.

SQL*Loader-00409: Number to skip must be table-level, not load-level on continued loads\n

Cause: The SKIP parameter was specified on the command line or in the OPTIONS statement, but the load was specified as continued with CONTINUE_LOAD. When a multiple-table direct load is interrupted, it is possible that a different number of records were loaded into each table. As a result, the number of records to skip must be specified for each table when continuing the load. In this case, the load is specified as continued with the CONTINUE_LOAD statement, and the number of records to skip is given in each INTO TABLE statement. See also messages 410 and 411 for more information.

Action: Check the log file to determine the appropriate number of records to skip for each table and specify this number in the INTO TABLE statement for each table in a continued load or with the command-line SKIP parameter in a standard load.

SQL*Loader-00410: Number to skip must be load-level, not table-level\n

Cause: A SKIP clause was found in the INTO TABLE statement of a standard (non-continued) load. In a standard load, specified with LOAD DATA, it is not possible to skip a different number of records for each table. The number of records to skip must be specified for the entire load by using the SKIP parameter on the command line or in the OPTIONS clause. If table-level skip is required, because a different number of records were loaded into each table (only possible for a multiple-table direct load), then specify a continued load with the CONTINUE_LOAD statement. See also messages 409 and 411 for more information.

Action: If the load was not a multiple-table, direct path load, then move the SKIP clause from the INTO TABLE statements to the command line or to the OPTIONS clause. Otherwise, specify the load as continued with CONTINUE_LOAD.

SQL*Loader-00411: Only a direct path load may be continued

Cause: The load is specified with CONTINUE_LOAD, but DIRECT=FALSE. CONTINUE_LOAD is only possible for a direct path load and is only necessary for a multiple-table, direct path load when a different number of records have been loaded into each table. See also messages 409 and 410 for more information.

Action: If CONTINUE_LOAD is necessary, specify a direct load and put the number of records to skip in each INTO TABLE statement. Otherwise, use the command line or OPTIONS clause to specify the number of records to skip and use LOAD DATA instead of CONTINUE_LOAD.

SQL*Loader-00412: More columns specified for table *string* than the maximum (*number*)

Cause: More columns were specified for the table than the maximum number allowed by the database.

Action: Remove the extraneous columns.

SQL*Loader-00413: NULLIF or DEFAULTIF clause specified for filler field *string* in table *string*

Cause: A NULLIF or DEFAULTIF clause was specified in the SQL*Loader control file for the named filler field. These options cannot be specified for filler fields.

Action: Remove the NULLIF or DEFAULTIF clause from the field definition.

SQL*Loader-00414: no columns to load for table *string*

Cause: There were no fields in the data file to be loaded for the table. Probably all fields were identified as FILLER fields.

Action: Verify that the FILLER attribute was set correctly for the fields.

SQL*Loader-00415: column *string* in table *string* cannot use and be the object of an SDF or LOBFILE

Cause: The named column is identified as the target of a secondary data file (SDF) or LOBFILE clause. However, the column also gets its value from an SDF or LOBFILE. If a field name is named in an SDF or LOBFILE clause, then that field cannot have an SDF or LOBFILE clause.

Action: Verify that the SDF and LOBFILE clauses in the SQL*Loader control file name the correct fields. Also verify that the SDF and LOBFILE clauses are specified for the correct field.

SQL*Loader-00416: SDF clause for field *string* in table *string* references a non existent field

Cause: The secondary data file clause for the field identified another field that doesn't exist in the table definition for the SQL*Loader control file.

Action: Verify the definition of the secondary data file to make sure it identifies the intended field.

SQL*Loader-00417: SQL string (on column *string*) not allowed in direct path

Cause: Because the direct path bypasses SQL processing, the SQL string cannot be used.

Action: Remove the SQL string or use the conventional path.

SQL*Loader-00418: Bad datatype for column *string*\n

Cause: The datatype in the data file specified for the column cannot be used to load the column. This message is often displayed for columns that need to be loaded with special features. For example, BFILE columns can only be loaded via the BFILE directive in the control file; same goes for REF fields. in the SQL*Loader control file. Similarly, REF columns can only be loaded with the REF datatype in the SQL*Loader control file.

Action: Determine the datatype of the column in the database check the documentation for the correct mechanisms to use to load columns of that type.

SQL*Loader-00419: input datatype for column *string* is not supported when loading varrays\n

Cause: The datatype in the SQL*Loader control file for the column is cannot be used to load data in a varray.

Action: Use a different datatype.

SQL*Loader-00420: unsupported datatype conversion requested for column *string* in table *string*\n

Cause: The column needs to have its data converted to another datatype before loading the data. The required conversion cannot be done by sqlldr.

Action: Verify that the correct datatype was specified for the column.

SQL*Loader-00421: error converting data\n

Cause: This message can be displayed as one of the reasons for rejecting a row. The sqlldr utility was attempting to convert data for the column from its datatype in the data file to the datatype for the column in the database. This message should be followed with another message describing the conversion error.

Action: Correct the data in the data file so that it can be converted.

SQL*Loader-00422: constant element count of *number* for column *string* is greater than maximum, *number*\n

Cause: The number of elements specified for a varray column in a table is greater than the maximum number of elements allowed for the type of the varray column.

Action: Increase the number of elements allowed for the type or remove unwanted elements from the data file.

SQL*Loader-00423: element count is greater than maximum allowed for the column\n

Cause: When building a varray from the data file, SQL*Loader encountered more varray elements than are allowed for the column.

Action: The previous error messages contain the name of the column and the row number containing the bad data.

SQL*Loader-00424: table *string* makes illegal reference to collection field *string*\n

Cause: A WHEN, OID or SID clause for the table refers to a field declared inside of a collection.

Action: Move the data containing the value for a SID or OID clause outside of the collection definition.

SQL*Loader-00425: column *string* makes illegal reference to collection field *string*\n

Cause: A clause, such as NULLIF or BFILE clause, for the column refers to a field declared inside of a collection.

Action: Move the data containing the value for a SID or OID clause outside of the collection definition.

SQL*Loader-00426: count of elements in VARRAY *string* comes after the data for the varray\n

Cause: The COUNT clause for a VARRAY field indicates that the count of elements in the varray is stored in another data field. However, that data field comes after the varray data in the data file. Since finding the count field would require SQL*Loader to know the number of elements in the VARRAY first, SQL*Loader requires that the count field come before the VARRAY data.

Action: Move the count field to be before the collection data in the data file.

SQL*Loader-00427: invalid reference to a non-scalar field, expression or a LOB field *string*\n

Cause: The field condition referenced a field which is either a nested table, varray, column object, LOB, expression, or BFILE field. Fields with these types cannot be referenced by other fields.

Action: Correct the NULLIF, DEFAULTIF, REF, or WHEN clause to reference only non-LOB scalar data fields.

SQL*Loader-00428: count for field *string* not stored in character or integer field\n

Cause: The count clause for a field references another field, but the referenced field is not a character or integer datatype.

Action: Modify the count field so that it reference a a data field that has the count in an integere or character format.

SQL*Loader-00429: insufficient number of elements found for varray\n

Cause: The COUNT directive was specified for a varray, but the number of elements found is less than the number specified by the COUNT directive.

Action: Correct the data so that the count and the number of elements agree.

SQL*Loader-00430: NULL nested table element is not allowed\n

Cause: A row in a nested table was set to NULL. Nested tables cannot contain NULL fields.

Action: Correct the data so that there are no NULL rows in the nested table.

SQL*Loader-00431: illegal NULLIF or DEFAULTIF clause specified for nested table column *string*\n

Cause: Rows in a nested table cannot be set to NULL. SQLLDR displays this error when a NULLIF clause was specified for the element that defines the row that make up a nested table. SQLLDR also displays this error if a DEFAULTIF clause is specified for an element that is a named type, since SQLLDR will set a named type to NULL if the DEFAULTIF evaluates to TRUE.

Action: n/a

SQL*Loader-00432: converted data too large\n

Cause: This message is preceded by a message identifying a row and column. It is displayed when there is insufficient room to convert the data from the datatype in the input file to the datatype for the column in the database.

Action: Modify the data so that it fits in the database field.

SQL*Loader-00433: no attributes found for column object *string* in table *string*\n

Cause: No attributes are to be loaded for a column object named in the control file. This can happen if all fields in the definition for the column object in the control are designated as FILLER fields.

Action: Either specify attributes to load for the column object or remove the column object from the control file.

SQL*Loader-00434: Can not load LOB/XML in a nested table along with the parent table.\n

Cause: Loading LOBs and XML data within a nested table at the same time as the parent table is not supported.

Action: Load the nested table with the LOB or XML column separately from the parent table.

SQL*Loader-00435: invalid constant value *string* for nested table column *string*\n

Cause: A constant value was specified for the SETID of a nested table column. An error occurred while translating the character constant into a SETID.

Action: Make sure the constant string contains valid hexadecimal characters and that there are 32 hexadecimal characters.

SQL*Loader-00436: error converting GUID\n

Cause: The value of the field named in the message is used to populate the column named in the message. Because column is a Set ID or an Object ID, the field needs to be converted. This message indicates that there was a conversion error. If the field is a character field, then the conversion error could be caused by too many or too few hexadecimal characters. Also, one or more of the characters in the field might not be a valid hexadecimal character. If the field contains RAW data, then either too many or too few bytes were specified for the field.

Action: Fix the data and reload the row.

SQL*Loader-00437: enabled constraint not allowed on LOB column *string*\n

Cause: An enabled constraint was present on a LOB column.

Action: Disable the constraint and try again.

SQL*Loader-00440: Invalid table specified as scope of a REF\n

Cause: As part of the REF directive one specifies the table name or another fields name which contains the table name of the table which the REF references.

Action: Make sure that the right referenced table name is specified.

SQL*Loader-00456: end of collection found after *number* elements when looking for *number* elements

Cause: A count value was specified for a varray or nested table column and the number of rows found is less than the number of rows specified

Action: Verify that the count field has the correct value and that there is no missing data for the collection.

SQL*Loader-00457: Comparison text of CONTINUEIF LAST must have length 1 not *number*

Cause: The comparison text is too long. It can only be one character.

Action: Reduce the comparison text to one character.

SQL*Loader-00458: Comparison text ('*string*') of CONTINUEIF LAST must be non-whitespace

Cause: The comparison text is a whitespace character (blank or tab).

Action: Change the comparison text to a non-whitespace character.

SQL*Loader-00459: error fetching numeric value for sequence on column (*string*)

Cause: An attempt was made to retrieve a non-numeric value for a sequenced column.

Action: Verify that the data for the sequenced column is numeric. Then retry the operation.

SQL*Loader-00460: Column (*string*), form of use (*number*) does not match char set id of (*number*)

Cause: The given column with the given form of use does not have the same character set ID as a previous column with the same form of use.

Action: This should not happen. Contact ORACLE support and supply the following information: DDL for the table being loaded, and the SQL*Loader control file. ADDED in 8.1

SQL*Loader-00461: direct path loading of datatype for column *string* not supported

Cause: The datatype for the specified column is one that cannot be loaded with direct path.

Action: If the datatype is supported with conventional path, load the table using conventional path.

SQL*Loader-00462: error inserting LOB into column *string*, row %lld, table *string*

Cause: An error occurred while attempting to write a LOB into a row.

Action: See accompanying messages describing why the LOB could not be loaded, what actions sqlldr took (if any), and where the errors may be in order to reload.

SQL*Loader-00463: secondary data file for LOB is *string*

Cause: The secondary data file that was in use for populating the LOB when an error occurred.

Action: n/a

SQL*Loader-00464: file offset for beginning of lob is *string*

Cause: The offset into the secondary data file that contains the start of the LOB that was being written when an error occurred.

Action: n/a

SQL*Loader-00465: *string* directive expects *number* arguments, *number* found.\n

Cause: You specified a directive such as COUNT() or BFILE() in the SQL*Loader control file. This directive specifies a fixed number of arguments, but the SQL*Loader control file contains a different number of arguments.

Action: Correct the SQL*Loader control file so that the directive contains the correct number of arguments.

SQL*Loader-00466: Column *string* does not exist in table *string*.\n

Cause: The SQL*Loader control file specified a table column that does not exist.

Action: n/a

SQL*Loader-00467: attribute *string* does not exist in type *string* for table *string*.\n

Cause: The SQL*Loader control file specified an attribute that does not exist for the specified type. The table that contains the type is also identified in the error message.

Action: Verify that the correct table in the correct schema is named in the SQL*Loader control file. Also verify that the column name is spelled correctly.

SQL*Loader-00468: OID directive expects 1 argument, *number* found.\n

Cause: More than one argument was specified for an OID clause.

Action: Specify the name of the field containing the value to use for the OID. If the OID for the table is user-defined, then do not use the OID clause in the control file.

SQL*Loader-00469: SID directive expects 1 argument, *number* found.\n

Cause: More than one argument was specified for a SID clause.

Action: Only specify the name of the field containing the value to use for the SID in the SID clause.

SQL*Loader-00470: table *string* does not have system generated OID\n

Cause: You specified an OID clause for a table but the table is either not an object table or the table is an object table but the OIDs for the rows are not system generated.

Action: Verify that the you are loading the correct table. If you are, then you must not specify the OID clause for this table. You should use the OID clause only when the table is an object table, has system generated OIDs and when you want to specify OIDs to be assigned to each row of the table.

SQL*Loader-00471: OID or SID clause has an argument that is CONSTANT\n

Cause: You specified a CONSTANT as an argument in an OID clause for an object table or in the SID clause for a nested table column. Since these columns must have unique values, SQL Loader does not allow the a constant to be specified for their values.

Action: Store the OID for each row in a filler field and specify the name of the filler field as an argument.

SQL*Loader-00472: collections can contain only one non FILLER field specification

Cause: More than one non filler field specification is found in a collection field's member field list.

Action: See correct syntax in the Utilities Manual. If indeed there is more than one attribute that makes up the particular collection, then it must be a collection of a object type which needs to be specified using the COLUMN OBJECT field specification syntax.

SQL*Loader-00473: nesting of collections is not allowed

Cause: Nesting of one collection type field description within another is not allowed.

Action: Verify that collection nesting is attempted in the SQL*Loader control file. Correct the mistake.

SQL*Loader-00474: no value set for dynamic file for column *string* in table *string* row *number*

Cause: The data for the named column was in a dynamic LOBFILE or secondary data file. This message is returned when the field containing the name of the file with the data for this field has not been set or is NULL. This could be because the record in the data file does not match the format described by the SQL*Loader control file.

Action: Correct any errors in the data file or the SQL*Loader control file.

SQL*Loader-00475: field for dynamic file name is *string* in table *string*

Cause: This message is always displayed after message 474.

Action: n/a

SQL*Loader-00476: count of elements for collection is not set or null, 0 will be used

Cause: This message is displayed following a message that identifies the column and row that contained the problem. The message indicates that the collection field named in the previous message has the count of elements in the collection stored in another field. This message is displayed if the field containing the count does not have a value or is set to NULL. When this happens, SQL*Loader uses 0 as the number of elements.

Action: If 0 is not the count of elements for the collection, correct the data in the data file.

SQL*Loader-00477: REF directive for field *string* requires at least two arguments

Cause: The SQL Loader control file contains a REF directive for the field, but only one argument was supplied for the directive. The REF directive always requires at least two arguments.

Action: Supply the missing argument to the REF directive. Remember that you must always supply a table name to the REF directive even if the REF is scoped.

SQL*Loader-00478: unable to continue due to missing filename for LOBFILE or SDF

Cause: The name for a LOBFILE or secondary data file is either missing or NULL for the current row. SQL*Loader is unable to continue loading since it can't determine how to get the LOB for the next row.

Action: Correct the data file so that there are valid values for all fields containing the names of LOBFILES and secondary data files.

SQL*Loader-00479: REF directive for column *string* expects *number* arguments; found *number*

Cause: The number of arguments in the REF directive for the column is incorrect.

Action: Specify the correct number of arguments for REF. Remember that the REF directive always requires a table name. Also, primary key REFs require one argument for each field in the primary key.

SQL*Loader-00480: EXPRESSION may not be used with elements of a collection.

Cause: The EXPRESSION keyword is followed by a required SQL string expression and is used to load a column with the result of the SQL string expression instead of with a value from the input data file. However, this capability is not allowed with elements of a collection.

Action: Remove the EXPRESSION keyword and associated SQL string from the collection element in the control file.

SQL*Loader-00481: HIDDEN may not be used with non-scalar fields.

Cause: The HIDDEN keyword is only allowed for scalar fields.

Action: Remove the HIDDEN keyword from the non-scalar field in the control file.

SQL*Loader-00486: sql-strings may not be specified for collection field string.

Cause: A sql-string was specified as part of the description of the field that is inside a nested table or varray. Sql-strings cannot be used to load a field in a varray or nested tables.

Action: Remove the sql-string from the field description. Modify the data file so that it contains the values to be loaded into the column in the collection.

SQL*Loader-00487: COUNT clause required for collection string.

Cause: A VARRAY or NESTED TABLE was defined in the SQL Loader control file and all of the fields in the VARRAY or NESTED TABLE are generated by SQL Loader and do not come from a data file. SQL Loader requires a COUNT clause be specified so that it knows how many elements to add to the VARRAY or NESTED TABLE for each row.

Action: Add a COUNT clause to the VARRAY or NESTED TABLE definition.

SQL*Loader-00488: string not a named collection type for filler field string.

Cause: The FILLER option was specified for a VARRAY or NESTED TABLE field in the SQL Loader control file. However, the type name specified for the field is not the name of a VARRAY or NESTED TABLE type.

Action: Verify that the correct type name was specified. If the type is defined in a different schema, also verify that the correct schema name is specified.

SQL*Loader-00489: cannot insert NULL object into object table string, row %llu

Cause: There was no data specified in the control file, a LOB file, or a secondary data file for this object column.

Action: Place valid data for this column in the appropriate file prior to invoking SQL*Loader to load data into this table.

SQL*Loader-00490: absolute position is not allowed for inline collections.

Cause: The absolute position specification was used for inline collections. Specifying the absolute position for inline collections is not supported.

Action: Use relative positioning for inline collections.

SQL*Loader-00500: Unable to open file (*string*)\n

Cause: SQL*Loader could not open the named file.

Action: Check the operating system messages below this one in the log file.

SQL*Loader-00501: Unable to read file (*string*)\n

Cause: SQL*Loader could not read the named file.

Action: Check the operating system messages following this message in the log file.

SQL*Loader-00502: unable to open data file '*string*' for field *string* table *string*\n

Cause: An attempt to open a LOBFILE or secondary data file failed.

Action: Check the operating system messages following this message for information on why the open failed. Verify that the correct name is specified for the LOBFILE or secondary data file.

SQL*Loader-00503: Error appending extension to file (*string*)\n

Cause: SQL*Loader could not append the default extension to create the filename. The given name could be too long or contain illegal characters.

Action: Check the specified filename.

SQL*Loader-00504: Error skipping records in file (*string*)\n

Cause: SQL*Loader could not open the file or could not read from it.

Action: Check that the file is where it is expected and that read access has been granted.

SQL*Loader-00505: error reading LOBFILE\n

Cause: An attempt to read a secondary data file failed.

Action: Check the operating system message that follows this message for more information.

SQL*Loader-00506: formatting error reading SDF or LOBFILE *string* for column *string* in table *string*\n

Cause: The the record format of the named LOBFILE or SDF file is incorrect.

Action: Fix the record formatting problems in the file.

SQL*Loader-00507: unexpected EOF reading SDF or LOBFILE *string* for column *string* in table *string*\n

Cause: The end of file was reached for a secondary data file or LOBFILE before the data for the current row was found.

Action: If the file is a LOBFILE, verify the correct datatype was specified for the field. If the file is a secondary data file, make sure the record format is specified correctly in the SQL*Loader control file.

SQL*Loader-00508: record formating error in data file *string*\n

Cause: The data found in the data file does not correspond to the record format in the SQL*Loader control file.

Action: Verify that all records in the data file match the format as described in the SQL*Loader control file.

SQL*Loader-00509: System error: *string*\n

Cause: A platform-specific error was returned during an operation. This message is used to display the text of the error.

Action: n/a

SQL*Loader-00510: Physical record in data file (*string*) is longer than the maximum(*number*)\n

Cause: The datafile has a physical record that is too long.

Action: Use CONCATENATE or CONTINUEIF. Break up the physical records.

SQL*Loader-00511: Unable to initialize read functions\n

Cause: SQL*Loader could not initialize the read functions.

Action: Check the errors below this message in the log file for more information.

SQL*Loader-00512: Unable to free read buffer\n

Cause: An internal error has occurred.

Action: Contact customer support.

SQL*Loader-00513: Unable to close file (*string*)\n

Cause: SQL*Loader could not close the named file.

Action: Check the errors below this message in the log file for more information.

SQL*Loader-00514: Error getting elapsed time\n

Cause: SQL*Loader could not get the elapsed time from the system.

Action: No action required.

SQL*Loader-00515: Error getting CPU time\n

Cause: SQL*Loader could not get the CPU time from the system.

Action: No action required.

SQL*Loader-00516: Control file (*string*) has no contents\n

Cause: The named file was found to be empty.

Action: Check that the intended file was referenced and that it is not empty.

SQL*Loader-00517: Error decomposing file name (*string*)\n

Cause: SQL*Loader could not break down the filename into its component parts.

Action: Check the filename for illegal characters.

SQL*Loader-00518: Error reassembling file name (*string*)\n

Cause: SQL*Loader could not put the filename back together again from its components.

Action: Check the filename for illegal characters.

SQL*Loader-00520: Ifimknam failed for file (*string*)\n

Cause: LFI failed to make a name object for the file.

Action: Contact Oracle Worldwide Support.

SQL*Loader-00521: Ifilini failed for file (string)\n

Cause: LFI failed to create or initialize a file object for the file.

Action: Contact Oracle Worldwide Support.

SQL*Loader-00522: lfiopn failed for file (string)\n

Cause: LFI failed to open the file.

Action: Check for any possible operating system errors and/or potential memory problems.

SQL*Loader-00523: error number writing to file (string)\n

Cause: Could not write to specified file.

Action: Check the following: the file actually resides in the specified location you have write privileges on the file you have sufficient disk space you have not exceeded your disk quota If all of these conditions are satisfied, then retry the operation.

SQL*Loader-00524: partial record found at end of datafile (string)\n

Cause: An incomplete record was found at the end of the indicated datafile.

Action: Make sure the last record in the datafile is complete and has the correct terminating character(s). Also, if fixed-length records are in use, verify that no record exceeds the platform-specific length for a single record.

SQL*Loader-00525: OCI return status: success\n

Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00526: OCI return status: success with info\n

Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00527: OCI return status: no data\n

Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00528: OCI return status: error\n

Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00529: OCI return status: invalid handle\n

Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00530: OCI return status: need data\n

Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00531: OCI return status: still executing\n

Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00532: OCI return status: continue

Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00533: OCI return status: unknown, value is *number*

Cause: An unknown status was returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00534: Warning: no files found for INFILE wildcard specification (*string*)

Cause: SQL*Loader could not find a file which matched the INFILE wildcard specification.

Action: Check to make sure that the files exist in order for them to be loaded.

SQL*Loader-00535: Warning: no files found for INFILE subdirectory search specification (*string*)

Cause: SQL*Loader could not find a file which matched the INFILE subdirectory search specification.

Action: Check to make sure that the files exist in order for them to be loaded.

SQL*Loader-00536: No files found for any data parameter specification or INFILE specification

Cause: SQL*Loader could not find a file which matched any of the data parameter specifications or INFILE specifications.

Action: Check to make sure that the files exist in order for them to be loaded.

SQL*Loader-00537: Warning: no files found for data parameter wildcard specification (*string*)

Cause: SQL*Loader could not find a file which matched the data parameter wildcard specification.

Action: Check to make sure that the files exist in order for them to be loaded.

SQL*Loader-00538: Warning: no files found for data parameter subdirectory search specification (*string*)

Cause: SQL*Loader could not find a file which matched the data parameter subdirectory search specification.

Action: Check to make sure that the files exist in order for them to be loaded.

SQL*Loader-00539: No files found for any data parameter specification in express mode

Cause: SQL*Loader could not find a file which matched any of the data parameter specifications. Since there is no control file for express mode, there are no INFILE specifications.

Action: Check to make sure that the files exist in order for them to be loaded.

SQL*Loader-00551: internal error: error initializing sfl

Cause: An internal error occurred while trying to initialize the file I/O component.

Action: Call customer support.

SQL*Loader-00552: insufficient privilege to open file

Cause: SQL*Loader does not have the privileges required to open the file.

Action: Verify that the correct file was specified and that the file has the appropriate permissions.

SQL*Loader-00553: file not found

Cause: The specified file cannot be found.

Action: verify that the correct name exists and whether the file is in the intended location.

SQL*Loader-00554: error opening file

Cause: An error occurred while trying to open the file. No further information is available.

Action: Verify that the file is accessible.

SQL*Loader-00555: unrecognized processing option

Cause: The processing option specified for the file cannot be processed.

Action: Verify that the processing options specified for the file contain legal syntax for the platform where SQL*Loader is running.

SQL*Loader-00556: unable to allocate read buffer

Cause: Attempt to allocate the read buffer failed.

Action: If possible, try specifying a smaller size for the read buffer.

SQL*Loader-00557: unable to allocate memory

Cause: An attempt to allocate some memory to track I/O for the file failed.

Action: Contact customer support.

SQL*Loader-00558: attempt to use SKIP parameter with linked-in loader

Cause: SKIP parameter was specified with a linked-in file processor.

Action: Do not use the SKIP parameter in this case.

SQL*Loader-00559: error closing file

Cause: An error occurred while closing the file.

Action: Contact customer support.

SQL*Loader-00560: error reading file

Cause: An error occurred while reading the file.

Action: Make sure the file is still accessible.

SQL*Loader-00561: end of file

Cause: End of file reached.

Action: n/a

SQL*Loader-00562: record too big

Cause: A record in the file is larger than the read buffer.

Action: Verify that the file is not corrupt. If not, try specifying a larger size for the read buffer.

SQL*Loader-00563: bad length for VAR record\n

Cause: The length portion of a VAR record contains non-numeric data.

Action: Fix the data in the file.

SQL*Loader-00564: illegal hexadecimal literal specified for record delimiter\n

Cause: A hexadecimal literal that contains the record delimiter for the file does not contain a valid hexadecimal string.

Action: Verify that the correct hexadecimal value was specified in the processing options for the file.

SQL*Loader-00565: unexpected error during skip\n

Cause: an unexpected error occurred while attempting to skip records.

Action: This message should be followed by another message giving more specific information about the error

SQL*Loader-00566: partial record found at end of datafile\n

Cause: An incomplete record was found at the end of file.

Action: Make sure the last record in the datafile is complete and has the correct terminating character(s).

SQL*Loader-00567: unable to derive file name\n

Cause: An error occurred while attempting to build a name for a data file, bad file, discard file or log file.

Action: Instead of relying on SQL Loader to build these file names, try specifying full file specifications for these files in the control file or on the SQL Loader command line.

SQL*Loader-00568: error writing to file\n

Cause: Unexpected error occurred while writing to a file. This message is followed by another message with more information about the error.

Action: n/a

SQL*Loader-00569: READSIZE parameter exceeds maximum value *string* for platform\n

Cause: The value specified for the READSIZE parameter on the SQL Loader command line was larger than the maximum size allowed on the platform executing the SQL Loader command

Action: Decrease the size of the READSIZE parameter to be less than the maximum size allowed on the platform.

SQL*Loader-00570: Warning: single bad file specification with multiple data files using *string* file may get overwritten.\n

Cause: The value specified for the BADFILE parameter contained something other than a directory specification (for example, it contained a file name). The INFILE specification had wildcards or the data command line parameter specification contained a comma-separated list or wildcards and the result was more than one data

file. In that case, the BADFILE specification or the BAD command line parameter value should be a directory specification only and should not contain a file name.

Action: No action is needed. This is a warning. However, for a parallel load with external tables or express mode, the file may get overwritten or may get corrupted due to contention on the file by multiple parallel query slaves. Try the operation again with a directory only or omit the parameter and use the default bad file name.

SQL*Loader-00571: Warning: single discard file specification with multiple data files, using *string*, but file may get overwritten.\n

Cause: The value specified for the DISCARDFILE parameter contained something other than a directory specification (for example, it contained a file name). The INFILE specification had wildcards or the data command line parameter specification contained a comma-separated list or wildcards and the result was more than one data file. In that case, the DISCARDFILE specification or the DISCARD command line parameter value should be a directory specification only and should not contain a file name.

Action: No action is needed. This is a warning. However, for a parallel load with external tables or express mode, the file may get overwritten or may get corrupted due to contention on the file by multiple parallel query slaves. Try the operation again with a directory only or omit the parameter and use the default discard file name.

SQL*Loader-00572: Warning: cannot add "_%p" to *string* for file *string*. Using file name as is.\n

Cause: SQL*Loader could not add "_%p" to the file name. The name specified or the derived name may be too long.

Action: No action is needed. This is a warning. However, for a parallel load with external tables or express mode, the file may be overwritten or may get corrupted due to contention on the file by multiple parallel query slaves. Try the operation again with a shorter file name.

SQL*Loader-00573: Error opening the directory (*string*), failed with return code [number].\n

Cause: An error occurred while trying to open the directory (see accompanying error code).

Action: Verify that the directory is accessible.

SQL*Loader-00574: \nCheck the log file:\n *string*\nfor more information about the load.\n

Cause: Informational only.

Action: No action is needed.

SQL*Loader-00575: \nCheck the log files:\n *string*\n *string*\nfor more information about the load.\n

Cause: Informational only.

Action: No action is needed.

SQL*Loader-00576: Error getting count of entries for directory (*string*), failed with return code [number].\n

Cause: An error occurred while trying to get the count of directory entries (see accompanying error code).

Action: Verify that the directory is accessible.

SQL*Loader-00577: Error reading the directory (*string*), failed with return code [*number*].\n

Cause: An error occurred while trying to read the directory (see accompanying error code).

Action: Verify that the directory is accessible.

SQL*Loader-00578: Error finishing wild card search in directory (*string*), failed with return code [*number*].\n

Cause: An error occurred while trying to finish a search for files in a directory that match a wild card specification (see accompanying error code).

Action: This is an informational message. No action is needed.

SQL*Loader-00579: switching to direct path for the load\n

Cause: SQL*Loader could not use the external tables load method for the express mode load. Therefore SQL*Loader tried to use direct path for the load instead of external tables. See any previous messages for more information.

Action: No action is needed. This is an informational message.

SQL*Loader-00582: Warning: cannot remove "_%p" from *string* for file *string*. Using file name as is.\n

Cause: SQL*Loader could not remove "_%p" from the file name.

Action: No action is needed. This is a warning. The file name was used as is.

SQL*Loader-00583: ignoring trim setting with *string*, using value of LDRTRIM\n

Cause: SQL*Loader was doing a direct path or conventional path load. SQL*Loader only supports LDRTRIM for direct path and conventional path. Therefore, LDRTRIM trimming was used for the load. You can get the equivalent of NOTRIM trimming if you use a control file and use the PRESERVE BLANKS clause.

Action: No action is needed. This is an informational message.

SQL*Loader-00584: ignoring DEGREE_OF_PARALLELISM setting with *string*, using value of NONE\n

Cause: DEGREE_OF_PARALLELISM was not supported by SQL*Loader for direct path and conventional path loads. Therefore, the DEGREE_OF_PARALLELISM setting was ignored for the load and treated as a value of NONE.

Action: No action is needed. This is an informational message.

SQL*Loader-00585: defaulting DEGREE_OF_PARALLELISM to NONE since load=*number* was specified\n

Cause: DEGREE_OF_PARALLELISM was defaulted to NONE by SQL*Loader because load=*n* was specified. This assures consistency in the records which get loaded with load=*n*.

Action: No action is needed. This is an informational message.

SQL*Loader-00586: OID directive not allowed for table *string*\n

Cause: The OID directive was specified but the table is not a type table. The OID directive can be specified only for type tables.

Action: Verify that the name of the table is correct. If so, then remove the OID directive.

SQL*Loader-00587: SID directive not allowed for table *string*\n

Cause: The SID directive was specified but the table is not a nested table. The SID directive can be specified only for nested tables.

Action: Verify that the name of the table is correct. If so, then remove the SID directive.

SQL*Loader-00588: XMLTYPE directive not allowed for table *string*\n

Cause: The XMLTYPE directive was specified but the table is not an XML type table. The XMLTYPE directive can be specified only for XMLTYPE tables.

Action: Verify that the name of the table is correct. If so, then remove the XMLTYPE directive.

SQL*Loader-00600: Bind size of *number* bytes increased to *number* bytes to hold 1 row.\n

Cause: The space needed to contain a single row is longer than the specified bind size. The value used for the bind size will be increased to handle the larger size

Action: No action is required. This message will go away if the new value in the error message is specified for the bind size.

SQL*Loader-00601: For INSERT option, table must be empty. Error on table *string*\n

Cause: A non-empty table is being loaded with the INSERT option.

Action: Use the REPLACE keyword to empty the old table and store the new data in its place. Use the APPEND keyword to leave the table's contents intact and add the new data to it.

SQL*Loader-00602: Maximum converted length *number* of column *string* is too big for bind array\n

Cause: The named column cannot undergo the specified character set conversion and still be placed in a contiguous piece of memory on the system.

Action: Specify a shorter data column or eliminate the conversion.

SQL*Loader-00603: Maximum length *number* of column *string* is too big for bind array\n

Cause: The named column cannot be put in a contiguous piece of memory on the system.

Action: Specify a shorter data column.

SQL*Loader-00604: Error occurred on an attempt to commit\n

Cause: An error occurred while trying to commit changes to the database.

Action: Look at the message listed below this one in the log file for more information.

SQL*Loader-00605: Non-data dependent ORACLE error occurred -- load discontinued.\n\n

Cause: An error occurred that is independent of the data. For example, an out-of-space condition. Because all further rows will be rejected, the load is discontinued. (If the error were data dependent, then other rows might succeed.)

Action: See the errors below this one in the log file for more information.

SQL*Loader-00606: Object *string* in INTO TABLE clause is not a local table

Cause: The synonym specified in the INTO TABLE clause in the SQL*Loader control file specifies a remote object via a database link. Only a synonym for an existing local table can be specified in the INTO TABLE clause.

Action: Ensure that a local table name or a synonym for a local table is fully specified in the INTO TABLE clause. The table must already exist.

SQL*Loader-00607: partition not empty for INSERT option; table *string*, partition *string*

Cause: An attempt was made to use the INSERT option on a non-empty partition.

Action: Empty the partition, or use the REPLACE or TRUNCATE option.

SQL*Loader-00608: subpartition not empty for INSERT option; table *string*, subpartition *string*

Cause: An attempt was made to use the INSERT option on a non-empty subpartition.

Action: Empty the subpartition, or use the REPLACE or TRUNCATE option.

SQL*Loader-00609: value used for ROWS parameter changed from *number* to *number*

Cause: SQL Loader adjusted the value it was using for the ROWS parameter to the new value reported. This is an informational message and not an error. SQL Loader will adjust the value of the ROWS parameter if the amount of memory specified by BINDSIZE is not large enough to hold data for the number of rows specified. SQL Loader will also change the value of the ROWS parameter for conventional path loads if the value is larger than 65534. Conventional path load can load at most 65534 rows at a time.

Action: If the limit of 65534 rows for conventional path load is not being reached, then try increasing the value of BINDSIZE.

SQL*Loader-00610: cannot load system partitioned table *string*; partition name(s) required

Cause: An attempt was made to load a system partitioned table with no partitioning clause specified in the SQL*Loader control file.

Action: Specify the partition name(s) in the SQL*Loader control file.

SQL*Loader-00620: Initial enclosure character not found

Cause: A mandatory initial enclosure delimiter was not present. Either it is missing on the current field or the previous field is missing an identical closing delimiter.

Action: Supply the missing delimiters.

SQL*Loader-00621: Field in data file exceeds maximum length

Cause: A field exceeded its maximum allowable length. The maximum length is either the length specified in the SQL*Loader control file, or, for delimitable fields without a length specified, the default maximum length (255 bytes).

Action: Check for missing delimiters and/or shorten the field.

SQL*Loader-00622: Column not found before end of logical record (use TRAILING NULLCOLS)

Cause: The logical record ended before all specified fields were found.

Action: If the missing fields should be loaded as null, use the TRAILING NULLCOLS clause. Otherwise, correct the data.

SQL*Loader-00623: second enclosure string not present

Cause: The logical end of record or the end of a LOBFILE was reached before a second enclosure delimiter was found.

Action: Correct the data file to include the missing delimiter.

SQL*Loader-00624: no terminator found after TERMINATED and ENCLOSED field

Cause: No termination delimiter was found after the enclosed field ended.

Action: Supply the missing termination delimiter.

SQL*Loader-00625: Multibyte character error in control file

Cause: Incomplete multi-byte character strings were found in the SQL*Loader control file.

Action: Edit the SQL*Loader control file to check that all multi-byte character data is valid.

SQL*Loader-00626: Character set conversion buffer overflow

Cause: A conversion from the datafile character set to the client character set required more space than that allocated for the conversion buffer. The size of the conversion buffer is limited by the maximum size of a varchar2 column.

Action: The input record is rejected. The data will not fit into the column.

SQL*Loader-00627: Character set conversion graph not available

Cause: A conversion from the datafile character set to the client character failed due to the conversion graph not being available.

Action: Contact Oracle support. Check NLSRTL installation.

SQL*Loader-00628: Character set conversion error

Cause: A character set conversion error occurred.

Action: Contact Oracle support. Check NLSRTL installation. Provide a reproduceable test case.

SQL*Loader-00640: Variable length field was truncated

Cause: The end of the logical record was encountered before the end of a variable length field. The length of each variable-length field is embedded in the field, so SQL*Loader knows that more data should have been present.

Action: Check the data for inadvertent truncation and verify the SQL*Loader control file specifications against the log file; the field may be starting in the wrong place.

SQL*Loader-00641: Invalid packed decimal nibble

Cause: Each byte in a packed decimal field contains two 4-bit nibbles. Each nibble must have a valid value.

Action: Check the SQL*Loader control file's specifications against the log file to ensure that the field location was specified correctly. Check the contents of the field.

SQL*Loader-00642: Relative start position > absolute field end position

Cause: A field specified as POSITION(*+n:y) had its relative start occur after the absolute position y.

Action: Check that a delimiter is not missing and that the values of *n* and *y* are correct.

SQL*Loader-00643: error executing INSERT statement for table *string*\n

Cause: A fatal error occurred while attempting to insert data into the table.

Action: Refer to the messages that follow for more information. If you specified SQL strings for any of your columns, verify that strings are correct. Specifically, check for balanced parenthesis and correct use of quotation marks. Another format error

SQL*Loader-00644: end of logical record found when reading length of varying length field\n

Cause: While attempting to read the length portion of a varying length field, then end of the logical record was reached.

Action: Verify that the SQL*Loader control file describes the data correctly and that the data in the data file matches the description in the SQL*Loader control file

SQL*Loader-00645: error converting character length field to a number\n

Cause: An error occurred while attempting to convert the characters containing the count portion of a VARCHARC or VARRAWC field.

Action: Verify that the count portion for the column has the correct value.

SQL*Loader-00646: lob set to EMPTY in column *string*, row %lld, table *string*\n

Cause: Encountered errors (for example, parsing errors in LOBFILE) while loading LOBs. The row will remain in the table and its LOB column will be initialized to empty. Loading of other records will continue.

Action: Correct the data file (see accompanying messages) and reload.

SQL*Loader-00647: Integer to number conversion error\n

Cause: An error occurred while attempting to convert an integer to an Oracle number format.

Action: Verify that the integer field in the data file is a valid integer. If the INTEGER(N) syntax was used, then verify that the length specified is valid.

SQL*Loader-00649: Quoted string missing closing quote\n

Cause: A quoted string in the control file is missing a closing quote.

Action: Insert the closing quote as appropriate.

SQL*Loader-00650: incomplete lob data written for column *string*, row %lld, table *string*\n

Cause: Encountered errors (for example, parsing errors in LOBFILE) while loading LOBs using direct path. The row will remain in the table and its LOB column may not be complete. Loading of other records will continue.

Action: Correct the data file (see accompanying messages) and reload.

SQL*Loader-00651: error skipping lob for column *string*, row %lld, table *string*\n

Cause: Encountered errors (for example, parsing errors in LOBFILE) while skipping LOBs.

Action: Correct the data file (see accompanying messages) and reload.

SQL*Loader-00652: Invalid zoned decimal byte.\n

Cause: Each byte of a zoned decimal field must have a valid value based on the character set encoding used. ASCII-based zoned decimals must follow the formats specified in the VAX Architecture Reference Manual. EBCDIC-based zoned decimals must follow the formats specified in the ESA/390 Principles of Operations, version 8.1.

Action: Check the SQL*Loader control file's specifications against the log file to ensure that the field location was specified correctly. Check the contents of the field.

SQL*Loader-00653: XML data set to NULL in column *string*, row %lld, table *string*\n

Cause: Encountered errors (for example, parsing errors in LOBFILE) while loading LOBs into an XML column. The row will remain in the table and its XML column will be initialized to null. Loading of other records will continue.

Action: Correct the data file (see accompanying messages) and reload.

SQL*Loader-00654: Variable length field exceeds maximum length.\n

Cause: A variable length field (with a leading length subfield) exceeded its maximum allowable length. The maximum length is either the length specified in the SQL*Loader control file, or, the default if not specified (4kb).

Action: Shorten the field and its length.

SQL*Loader-00655: cannot load object-relational XML attribute using direct path \n

Cause: The table being loaded contains a column object which contains an XML attribute with a storage type of object-relational. This type of attribute cannot be loaded with direct path.

Action: Perform the load with conventional path mode.

SQL*Loader-00656: position specification for column *string* is not allowed in external table loads\n

Cause: Use of a position specification was present in an external table load.

Action: Either remove the position specification, change the position specification to a field name reference, use direct path, or use conventional path.

SQL*Loader-00657: table *string* loaded using *number* passes, partition memory limit was *number*kb, any data saves possibly ignored\n

Cause: Due to memory use, multiple passes were used to load some partitions.

Action: To decrease the number of passes, consider increasing the partition memory limit using the PARTITION_MEMORY command line option, or by increasing PGA_AGGREGATE_TARGET. Note that increasing the limit too much can cause the load to run out of memory.

SQL*Loader-00658: parallel append loads must specify APPEND_PARALLEL\n

Cause: The table being loaded in parallel append mode did not use APPEND_PARALLEL. Automatic parallel loads cannot use skip=*n* to continue loads because the order of record loading differs from run to run. Consider this when loading a table in parallel, especially when loading into a nonempty table.

Action: Replace APPEND with APPEND_PARALLEL in the control file.

SQL*Loader-00700: Out of memory while performing essential allocations [*number*]\n

Cause: SQL*Loader could not allocate the memory it needs.

Action: Check the operating system and process memory. Increase memory available to SQL*Loader, if possible. If using direct path, try lowering the columnarrayrows option (see log file for current default value).

SQL*Loader-00702: Internal error - *string*\n

Cause: An internal error has occurred.

Action: Make a note of the message and contact customer support.

SQL*Loader-00703: Internal error: argument *number*\n

Cause: An internal error has occurred.

Action: Make a note of the message and the number, then contact customer support.

SQL*Loader-00704: Internal error: *string* [*number*]\n

Cause: An internal error has occurred.

Action: Make a note of the message and the number, then contact customer support.

SQL*Loader-00705: Internal error\n

Cause: An internal error has occurred.

Action: Contact customer support.

SQL*Loader-00706: Bad argument to ulerr [*number*].\n

Cause: An internal error has occurred.

Action: Contact customer support.

SQL*Loader-00708: Internal error: unknown status *number* returned from slif layer\n

Cause: An unknown status was returned by a call to the slif layer.

Action: Contact customer support.

SQL*Loader-00709: Internal error calling SLTS layer: *string* failed\n

Cause: A nonsuccess status was returned by a call to the SLTS layer.

Action: Contact customer support.

SQL*Loader-00710: Internal error: direct path stream buffer not loaded\n

Cause: A direct path stream buffer was built but not loaded.

Action: Contact customer support.

SQL*Loader-00711: Internal error: bad address for little endian UTF16 conversion\n

Cause: Address for little endian UTF16 data not in a valid buffer.

Action: Contact customer support.

SQL*Loader-00712: Internal error: bad address for big endian UTF16 conversion\n

Cause: Address for big endian UTF16 data not in a valid buffer.

Action: Contact customer support.

SQL*Loader-00713: Internal error calling SLTS layer: *string* failed with return code [number].ln

Cause: A nonsuccess status was returned by a call to the SLTS layer.

Action: Contact customer support.

SQL*Loader-00714: Internal error - *string* file: *string* line: numberln

Cause: An internal error occurred.

Action: Make a note of the message and contact Oracle Support Services.

SQL*Loader-00800: *string* specified and ignoredln

Cause: An option was specified that is not supported by External Table load.

Action: Do not specify the unsupported option or do not use External Table load.

SQL*Loader-00801: all INTO TABLE clauses must have the same options (*string*)ln

Cause: At least two INTO TABLE clauses have different options set.

Action: Set the options to be the same or do the loads separately.

SQL*Loader-00802: numeric EXTERNAL with DEFAULTIF clause not supported by External Tableln

Cause: A numeric EXTERNAL type was specified with a DEFAULTIF clause which is not supported by external table load.

Action: Remove the clause if possible or do not use external table load.

SQL*Loader-00803: Field type *string* not supported by External Tableln

Cause: The specified field type is not supported by external table.

Action: Remove the specified field type or do not use external table load.

SQL*Loader-00804: SEQUENCES with intervals are not supported by External Table Load.ln

Cause: A sequence with an interval was specified which is not supported by external table load.

Action: Remove the interval from the sequence, or remove the sequence itself, or do not use external table load.

SQL*Loader-00805: Option *string* not supported by *string*ln

Cause: The specified option is not supported by external table or express mode load.

Action: Remove the specified option or do not use external table load or express mode load.

SQL*Loader-00806: unknown record format specified for data fileln

Cause: The osd string containing file processing options in the control file specified an unknown file processing option.

Action: Verify the correct options are specified for the platform being used.

SQL*Loader-00807: error loading tableln

Cause: An INSERT statement used to load a table from an external table or a temporary internal table failed. The statement that failed is shown immediately preceding this message.

Action: See subsequent messages for more information about the error.

SQL*Loader-00808: error creating sequence: *string*\n

Cause: An attempt to create a sequence needed for the load failed.

Action: See messages that follow this one for information about the failure.

SQL*Loader-00809: error dropping sequence: *string*\n

Cause: A sequence needed to be dropped either because SQL Loader found a sequence with the same name it is trying to create or because SQL Loader is cleaning up from sequences it created at the beginning of the load.

Action: See messages that follow this one for information about why the attempt to drop the sequence failed.

SQL*Loader-00810: error creating external table: *string*\n

Cause: An attempt to create the external table sued for the load failed.

Action: See messages that follow for more information about the failure.

SQL*Loader-00811: error dropping external table: *string*\n

Cause: An error occurred when trying to drop an external table. Note that the table may have been left from a previous load.

Action: n/a

SQL*Loader-00812: error creating internal table: *string*\n

Cause: An error was encountered trying to create a temporary internal table. The internal table is used only when loading multiple tables from the same data file. The internal table is loaded once and the target tables are loaded from the internal table.

Action: n/a

SQL*Loader-00813: error dropping internal table: *string*\n

Cause: An error was encountered trying to drop a temporary internal table. The internal table is used only when loading multiple tables from the same data file. The internal table is loaded once and the target tables are loaded from the internal table. The internal table may have been left from a previous build.

Action: n/a

SQL*Loader-00816: error creating temporary directory object *string* for file *string*\n

Cause: No existing directory object was found in the database for the directory containing the file. Since all files loaded by external tables must be in a directory named by a directory object, SQL Loader tried to create a directory object for the file.

Action: See error messages that follow this message for more information.

SQL*Loader-00817: error dropping directory object *string*\n

Cause: SQL Loader created a directory object as part of an external table load. An attempt to cleanup the directory object failed.

Action: See messages following this one for more information about the error.

SQL*Loader-00820: cannot create WHERE clause with POSITION syntax for table *string*\n

Cause: The EXTERNAL_TABLE parameter was specified for a multi-table load, and a WHEN clause for one of the tables contained a reference to a range of bytes in the record using POSITION syntax. SQL*Loader uses the WHEN clause from the control file to generate the WHERE clause in the INSERT statement. If the WHERE clause contains a reference to a range of bytes in the table, then a valid WHERE clause cannot be generated. Note that SQL*Loader will proceed as if GENERATE_ONLY was specified for the EXTERNAL_TABLE parameter.

Action: Modify the control file to only use field name references in the WHEN clause. Note that this may require creating a filler field. Another alternative is to create one control file for each table to be loaded and load the tables separately. In that case, SQL*Loader can use the access parameter list LOAD WHEN syntax to specify the range of bytes using POSITION syntax for a single table.

SQL*Loader-00821: switching to GENERATE_ONLY\n

Cause: SQL Loader is not able to execute the SQL statements it generated for loading the data using external tables. See previous messages for more information.

Action: n/a

SQL*Loader-00822: operation not supported on external organized table\n

Cause: User attempted an operation on an external table which is not supported.

Action: Don't do that!

SQL*Loader-00823: TREAT AS clause for object tables not supported for external tables\n

Cause: A TREAT AS clause was specified in the INTO TABLE clause for an object table in the SQL*Loader control file and the EXTERNAL_TABLES command line parameter was set to either EXECUTE or GENERATE_ONLY. External tables can be used to load the data, but SQL*Loader does not generate the correct SQL statements to do this.

Action: Use SQL*Loader direct path or SQL*Loader conventional path to load the table.

SQL*Loader-00824: column type *string* not supported by *string*\n

Cause: The column type was not supported by external table or express mode using the external table load method.

Action: Do not use external table or express mode using the external table load method. Try the load using conventional path or direct path as the load method.

SQL*Loader-00825: The database server does not support the load of Primary Key Reference column *string* by SQL*Loader.\n

Cause: An attempt was made to load a primary key reference column.

Action: Do not use primary key reference columns.

SQL*Loader-00826: ROWS parameter is not supported for parallel direct path loading using degree_of_parallelism parameter.\n

Cause: An attempt was made to specify save points with the ROWS parameter when using degree_of_parallelism for a direct path parallel load.

Action: Remove the ROWS parameter from the command line arguments or do not specify the degree_of_parallelism parameter.

SQL*Loader-00827: unable to connect to Global Service Manager(GSM) due to missing or invalid GSM parameters.\n

Cause: An attempt was made to connect to the Global Service Manager sharding library.

Action: Check the values specified for 'gsm_name', 'gsm_host' and 'gsm_port'. All three values must be specified and valid.

SQL*Loader-00828: The commit_discontinued parameter is not supported for parallel loading using degree_of_parallelism parameter.\n

Cause: An attempt was made to specify partial saves with the commit_discontinued parameter when using degree_of_parallelism for a parallel load.

Action: Remove the commit_discontinued parameter from the command line arguments or do not specify the degree_of_parallelism parameter.

SQL*Loader-00901: Error logging on to ORACLE:\n

Cause: An attempt was made to log on to Oracle in direct path load mode.

Action: Ensure that the instance is up and running. Check the Oracle messages below this one in the log file for more information.

SQL*Loader-00902: Error opening cursor: [number] \n

Cause: An internal error has occurred.

Action: Check the Oracle messages below this one in the log file and contact customer support.

SQL*Loader-00903: Database must be at least version number.number.number.number.number for direct path\n

Cause: The direct path load mode is being used with an incompatible database.

Action: Upgrade the database to the specified version or else use the conventional path load.

SQL*Loader-00904: You cannot used the direct path when linked with v5 of the database\n

Cause: The direct path mode is being used after SQL*Loader has been linked with a Version 5 database.

Action: Use the conventional path.

SQL*Loader-00905: Error parsing SQL statement for upi: [number] \n

Cause: Header message.

Action: Check the message below this one in the log file for more information.

SQL*Loader-00906: Error executing SQL statement for upi: [number] \n

Cause: An internal error has occurred.

Action: Check the message below this one in the log file for more information.

SQL*Loader-00909: Loader views must be loaded (as SYS) for direct path to be used\n

Cause: Database views required for the direct path mode are not present.

Action: The Oracle7 Server Administrator's Guide details how to run the required scripts as user SYS for loading the required views.

SQL*Loader-00910: Error binding input variables for upi: [number] \n

Cause: Header message.

Action: Check the message below this one in the log file for more information.

SQL*Loader-00911: Error defining output variable(s) for upi: [number] \n

Cause: Header message.

Action: Check the message below this one in the log file for more information.

SQL*Loader-00913: Error fetching results of select statement (upi): [number] \n

Cause: Header message.

Action: Check the message below this one in the log file for more information.

SQL*Loader-00914: Error locking table *string* in exclusive mode.\n

Cause: The direct path mode could not lock the named table.

Action: Check the message below this one in the log file for more information. Check that the necessary privileges have been granted.

SQL*Loader-00915: Error closing cursor: [number] \n

Cause: Header message.

Action: Check the message below this one in the log file for more information.

SQL*Loader-00916: Error checking path homogeneity\n

Cause: To do a direct path load when the front end and back end of the database are on separate hardware systems, the systems must be identical, using the same machine, operating system, and character set. This error occurs when SQL*Loader detects a difference between the systems that will prevent a direct load from operating properly.

Action: Use a conventional path load for this configuration.

SQL*Loader-00918: The catalog must be loaded (as SYS) for SQL*Loader to be used\n

Cause: The catalog is not loaded.

Action: Logon as user SYS and load the Oracle7 catalog and the views in the script ULVIEW.SQL.

SQL*Loader-00919: Error during upi fetch: [number] \n

Cause: An internal error has occurred.

Action: Check the message below this one in the log file for more information.

SQL*Loader-00925: Error while *string*\n

Cause: An internal error has occurred.

Action: Check the message below this one in the log file for more information. The table or column referenced may not be accessible.

SQL*Loader-00926: OCI error while *string* for table *string*\n

Cause: An OCI error has occurred.

Action: Check the message below this one in the log file for more information. The table or column referenced may not be accessible.

SQL*Loader-00929: Error parsing insert statement for table *string*.\n

Cause: The table's insert statement caused a parse error.

Action: Check all SQL strings that were used.

SQL*Loader-00930: Error parsing insert statement for table *string* column *string*.\n

Cause: The named column's INSERT statement caused a parse error.

Action: Check the message below this one in the log file for more information. Check the SQL string used for this column.

SQL*Loader-00931: OCI error while binding variable for column *string* in table *string*.\n

Cause: An OCI error has occurred.

Action: Check the errors below it for more information. The SQL string for this column may be in error.

SQL*Loader-00932: Could not truncate table *string*.\n

Cause: Truncation of the table was attempted and failed.

Action: Check the following errors for more information. Truncation due to referential constraints should not occur.

SQL*Loader-00933: Specified file *string* not part of database.\n

Cause: The specified filename to load the table is not a database file.

Action: Specify a valid datafile.

SQL*Loader-00934: Incorrect data file *string* specified for table *string*.\n

Cause: A datafile name was given to load the table that is not a part of the tablespace in which the table resides.

Action: Specify a valid datafile.

SQL*Loader-00935: Error verifying required option for parallel load.\n

Cause: An error was encountered because a required option was not found or was invalid.

Action: Correct the problem as described in the accompanying Oracle message.

SQL*Loader-00937: parallel load requested and *string* has enabled triggers or constraints.\n

Cause: A request was made for a parallel direct load, but the object to be loaded has an enabled constraint (check, referential) and/or enabled triggers.

Action: Disable the offending enabled constraints and/or triggers and retry the parallel direct load.

SQL*Loader-00938: partition load requested and *string* has enabled triggers or constraints.\n

Cause: A request was made for a direct load of a single partition, but the object to be loaded has an enabled constraint (check, referential) and/or enabled triggers.

Action: Disable the offending enabled constraints and/or triggers and retry the parallel direct load.

SQL*Loader-00939: OCI error while *string* for table *string* partition *string*\n

Cause: Header message.

Action: Check the following errors for more information. The table or partition referenced may not be accessible.

SQL*Loader-00940: UPI error while setting NCHAR bind attributes for column *string* table *string*\n

Cause: An error occurred while setting the charsetform attribute of an NCHAR column.

Action: This is an internal error. Report to ORACLE support.

SQL*Loader-00941: Error during describe of table *string*\n

Cause: Error while executing a describe of a select list on the given table. Check the error immediately preceding this error.

Action: n/a

SQL*Loader-00942: partition *string* not part of table *string*\n

Cause: the specified partition is not part of the specified table

Action: n/a

SQL*Loader-00943: incorrect datafile *string* specified for table *string* partition *string*\n

Cause: The specified datafile is not in the tablespace of the specified partition. Due to use of FILE= keyword on a partitioned table. When loading all partitions of a partitioned table, the partitions must be in the same tablespace. When loading a single partition, the tablespace of the partition being loaded must be the same as the tablespace in which the specified datafile file resides.

Action: n/a

SQL*Loader-00944: error preparing insert statement for table *string*.\n

Cause: A call to OCIStmtPrepare for the table's insert statement returned an error.

Action: Refer to the message that follows for information about the error returned by OCIStmtPrepare. Make sure the syntax is correct for all SQL strings specified in the SQL*Loader control file.

SQL*Loader-00945: record size *number* too large for direct path \n

Cause: The maximum size of records in the data file is larger than the maximum size supported by direct path, which is 65535

Action: Load the data file using conventional path.

SQL*Loader-00946: OCI error while *string* for table *string* subpartition *string*\n

Cause: Header message.

Action: Check the following errors for more information. The table or subpartition referenced may not be accessible.

SQL*Loader-00947: subpartition load requested and *string* has enabled triggers or constraints\n

Cause: A request was made for a direct load of a single subpartition, but the object to be loaded has an enabled constraint (check, referential) and/or enabled triggers.

Action: Disable the offending enabled constraints and/or triggers and retry the parallel direct load.

SQL*Loader-00948: subpartition *string* not part of table *string*\n

Cause: the specified subpartition is not part of the specified table

Action: n/a

SQL*Loader-00949: incorrect datafile *string* specified for table *string* subpartition *string*\n

Cause: The specified datafile is not in the tablespace of the specified subpartition. Due to use of FILE= keyword on a subpartitioned table. When loading all subpartitions of a subpartitioned table, the subpartitions must be in the same tablespace. When loading a single subpartition, the tablespace of the subpartition being loaded must be the same as the tablespace in which the specified datafile file resides.

Action: n/a

SQL*Loader-00950: Error shipping data structures across 2-task\n

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00951: Error calling once/load initialization\n

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00952: Error calling once/data file initialization\n

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00953: Error shipping read buffer across 2-task\n

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00954: Error shipping index to read buffer across 2-task\n

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00955: Error calling col array build, block formatter\n

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00956: Error calling once/data file finishing\n

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00957: Error shipping text string across 2-task\n

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00958: Error popping data relocation address stack\n

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00959: Error shipping buffer across 2-task\n

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00961: Error calling once/load finishing for table *string*\n

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00962: Error setting user-side Ctrl-C handler\n

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00963: Error clearing user-side Ctrl-C handler\n

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00965: Error *ORA-number* disabling constraint *string* on table *string*\n

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00966: Error *ORA-number* disabling all triggers on table *string*\n

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00969: Error performing file name translation on kernel side\n

Cause: File specified for parallel load is probably not a valid database file.

Action: Specify a valid database file.

SQL*Loader-00970: enabled constraint on an XML column not allowed in direct path\n

Cause: An enabled check constraint existed on an XML column.

Action: Disable the check constraint before attempting to load the table data using the direct path mode, or leave the constraint enabled but use the conventional path mode instead.

SQL*Loader-00971: parallel load option not allowed when loading lob columns\n

Cause: An attempt was made to load lob columns using parallel=true. This error will also be issued when loading columns stored as lobs (such as varrays and xml types)

Action: Do not use the parallel option when loading lob columns.

SQL*Loader-00972: Warning: ROWS parameter ignored when NO_INDEX_ERRORS is used.\n

Cause: Specifying save points using the ROWS parameter was not supported with NO_INDEX_ERRORS=TRUE.

Action: Remove the ROWS parameter from the command-line arguments or do not specify NO_INDEX_ERRORS=TRUE.

SQL*Loader-00973: Warning: ROWS parameter ignored when PARTITION_MEMORY is used.\n

Cause: Specifying save points using the ROWS parameter was not supported with PARTITION_MEMORY=n.

Action: Remove the ROWS parameter from the command-line arguments or do not specify PARTITION_MEMORY=n.

SQL*Loader-00974: database is not available for update\n

Cause: The database was not opened for read/write access. SQL*Loader requires that the database be opened for read/write access.

Action: Verify that the database is opened for read/write access. Then retry the operation.

SQL*Loader-02026: the load was aborted because SQL Loader cannot continue.\n

Cause: The load cannot continue. See the error message before this * message for the cause of the error.

Action: See the action for the error message that precedes this one.

SQL*Loader-02027: This shard load thread was aborted because SQL Loader cannot continue.\n

Cause: A shard load thread could not continue. See the error message before * this message for the cause of the error.

Action: See the action for the error message that precedes this one.

SQL*Loader-02050: Multibyte character error.\n

Cause: Text specified by POSITION or terminated by newlines is invalid.

Action: Edit the SQL*Loader control file or the data file to fix alignment of column.

SQL*Loader-02300: For CSV format files, all fields must be delimited fields. Field string is not delimited.\n

Cause: CSV format files did not have delimited fields. CSV format files must have all delimited fields so that SQL*Loader can process the fields.

Action: Make all of the fields delimited or remove the CSV specification and retry.

SQL*Loader-02301: For FIELD NAMES, all fields must be delimited fields. Field string is not delimited.\n

Cause: Data files with a FIELD NAMES record did not have delimited fields. Data files with a FIELD NAMES record must have all delimited fields so that SQL*Loader can process the field names.

Action: Make all of the fields delimited and retry.

SQL*Loader-02302: Data in the control file not supported with CSV format files.\n

Cause: CSV format file was specified with INFILE * indicating that there was data in the control file.

Action: Move the data to a separate data file and retry.

SQL*Loader-02303: Unable to process LOB Location Specifier field *string*.\n

Cause: The LOB Location Specifier field was not processed correctly.

Action: Make sure the LOB Location Specifier is formatted correctly.

SQL*Loader-02304: LOB Location Specifier for column *string* must be loaded into a LOB column.\n

Cause: The destination column for a LOB Location Specifier field was not a LOB data type.

Action: Make sure the destination column is a LOB data type.

SQL*Loader-02305: LOB Location Specifier for column *string* - invalid offset or length.\n

Cause: The LOB Location Specifier contained an invalid offset or length.

Action: The offset must not be a negative value. The length can only be negative if a value of -1 (for a NULL LOB) is specified.

SQL*Loader-02306: LOB Location Specifier for column *string* failed to read LOB file *string*.\n

Cause: The destination column for a LOB Location Specifier field was not a LOB data type.

Action: Make sure the LOB data file contains valid data.

SQL*Loader-02307: LOB Location Specifier for column *string* failed to read entire length request of *number* bytes from LOB file *string*.\n

Cause: The LOB Location Specifier length request exceeded the length of the lob file. The entire length requested could not be satisfied and will be less than the amount specified.

Action: Make sure the LOB Location Specifier length is correct.

SQL*Loader-02308: LOB Location Specifier failure seeking to offset *number* in LOB file *string*

Cause: The LOB Location Specifier specified an offset in the LOB file which resulted in a seek failure.

Action: Contact Oracle Support Services.

SQL*Loader-02309: error setting session parameter *string*\n

Cause: An error occurred while attempting to alter the user session with the parameter specified.

Action: See subsequent messages for more information about the error.

SQL*Loader-02310: The container map constraint for table *string* was ignored by direct path load.\n

Cause: The container map constraint was detected but was not verified or enforced during a direct path load.

Action: Use conventional path to enforce the container map constraint.

SQL*Loader-02311: The unique constraint for table *string* was ignored by direct path load for the Application Root rows.\n

Cause: The unique constraint was detected but was not verified or enforced for Application Root rows during a direct path load when the sharing level was extended data-linked.

Action: Use conventional path load to enforce the unique constraint including Application Root rows.

SQL*Loader-02312: Sharding key *string* was not being loaded.\n

Cause: The sharding key in the error message was not being loaded.

Action: Include all sharding keys in the SQLLDR control file when loading a sharded table.

SQL*Loader-02313: Conversion of the sharding key failed.\n

Cause: The sharding key value in the error message could not be converted to the column type of the key.

Action: Check to be sure the key value can be converted to the column type of the key.

SQL*Loader-02314: Sharding key was NULL.\n

Cause: The sharding key in the error message contained a NULL value.

Action: Do not attempt to load sharing keys with NULL values.

SQL*Loader-02315: Sharding key *string* cannot be a SQL expression or filler.\n

Cause: The sharding key in the error message was invalid.

Action: Do not specify sharding keys as expressions or fillers.

SQL*Loader-02316: Parallel loading is not allowed.\n

Cause: Parallel loading was not allowed because one reader must be used when loading with LOBFILES that were not terminated by EOF. One reader must be used when SKIP, LOAD, BOM checking, field names, RECNUM, sequences or max discards are specified.

Action: Do not specify the DEGREE_OF_PARALLELISM parameter for this case.

SQL*Loader-02317: Shard *string* to load was not found or is a duplicate.\n

Cause: The shard name in the list of shards to be loaded was not found or was specified multiple times.

Action: Only specify distinct and valid shard names in the list of shards to be loaded.

SQL*Loader-02318: Sharding key *string* was non-character type.\n

Cause: The sharding key in the error message was not a character type.

Action: Do not attempt to load sharing keys with non-character types.

SQL*Loader-02319: Table *string.string* is not a sharded table on a catalog.\n

Cause: An attempt was made to load a table that was not sharded and not on a catalog using automatic parallel shard loading.

Action: Do not attempt to load a table that is not sharded and not on a catalog using parallel shard loading.

SQL*Loader-02320: Sharded table *string.string* is not present on all shards.\n

Cause: Attempt to load a sharded table on catalog when table is not on all shards.

Action: Do not attempt to load a sharded table using parallel shard loading when the table is not on all shards.

SQL*Loader-02321: The [SUB]PARTITION clause is not allowed when loading a sharded table.\n

Cause: Attempt to load a sharded table using the [SUB]PARTITION clause.

Action: Do not attempt to load a sharded table using the [SUB]PARTITION clause.

SQL*Loader-02322: Record does not map to a shard partition.\n

Cause: Sharding key did not map to any partition.

Action: Check data and table definition for correct mapping.

SQL*Loader-02323: Topology fetch from server encountered unexpected error.\n

Cause: An error occurred on the server side with Sharding metadata.

Action: Try the load again. If it still fails, contact Oracle Support Services.

SQL*Loader-02324: Bad data format recieved from server.\n

Cause: An error occurred on the server side with Sharding metadata.

Action: Try the load again, if still fails contact Oracle Support Services.

SQL*Loader-02325: Service role is not a primary service.\n

Cause: Service role was not a primary service.

Action: Create and use a primary service only using parallel load of shards.

SQL*Loader-02326: Global context not initialized.\n

Cause: Internal error.

Action: Contact Oracle Support Services.

SQL*Loader-02327: Record does not map to a shard partition.\n

Cause: Key did not map to any partition.

Action: Check data and table definition for correct mapping.

SQL*Loader-02328: Invalid key type.\n

Cause: The key type did not match the key metadata.

Action: Provide a key type that matches the key metadata.

SQL*Loader-02329: Unsupported key type.\n

Cause: Column type is not a supported key type.

Action: Column type must be a supported type.

SQL*Loader-02330: Timestamp formatting error.\n

Cause: Invalid timestamp format.

Action: Check and fix data with invalid timestamp format.

SQL*Loader-02331: Sharding key character set conversion error.\n

Cause: Invalid character data.

Action: Check and fix data with invalid character data.

SQL*Loader-02332: The database type of the instance does not match that of the SDB context. \n

Cause: Internal error.

Action: Check that the sharding configuration is valid. If valid and still fails, Contact Oracle Support Services.

SQL*Loader-02333: OCI call error.\n

Cause: Internal error.

Action: Contact Oracle Support Services.

SQL*Loader-02334: Global Service Manager (GSM) internal error.\n

Cause: GSM internal error.

Action: Contact Oracle Support Services.

SQL*Loader-02335: Shard data not initialized.\n

Cause: Internal error.

Action: Contact Oracle Support Services.

SQL*Loader-03120: Resumable parameters ignored -- current session not resumable\n

Cause: Current session is not resumable.

Action: Must specify RESUMABLE=TRUE to enable resumable session in order for the RESUMABLE_NAME and RESUMABLE_TIMEOUT parameters to take effect.

TNS-00001 to TNS-12699

TNS-00001: INTCTL: error while getting command line from the terminal

Cause: Improper standard input connection from the terminal.

Action: Normally not visible to the user. Start the INTCTL program again. If error persists, contact Oracle Customer Support.

TNS-00002: INTCTL: error while starting the Interchange

Cause: The Interchange could not be started.

Action: Check the Interchange configuration files (INTCHG.ORA, TNSNET.ORA and TNSNAV.ORA) for errors and confirm that no other programs are using the ADDRESS(es) specified. If error continues, turn on tracing in the Interchange components and examine the trace files to determine the cause of the problem. Be sure to turn tracing off when the problem has been rectified.

TNS-00003: INTCTL: error while sending request to the Interchange

Cause: Improper command sent to the Interchange or the Interchange is not responding. Not normally visible to the user.

Action: Verify that the command sent to the Interchange is valid. Also check that the Interchange is running by using the INTCTL STATUS command. If necessary, start the Interchange using the INTCTL START command.

TNS-00004: INTCTL: error while starting the Navigator

Cause: The Navigator could not be started.

Action: Check to make sure that executables for the Navigator (navgatr) are present in the ORACLE executable directory on your platform. Check the configuration files TNSNET.ORA and TNSNAV.ORA for errors. If error continues, turn on tracing in the Interchange components and examine the trace files to determine the cause of the problem. Be sure to turn tracing off when the problem has been rectified.

TNS-00005: INTCTL: error while sending request to the Navigator

Cause: The Navigator is not responding. Either the Navigator is not running or another process is responding.

Action: Check that the Navigator is running by using the STATUS command of the Interchange Control Utility. Verify that the correct addresses are listed in the TNSNAMES.ORA, TNSNET.ORA, and TNSNAV.ORA configuration files.

TNS-00006: INTCTL: HOST variable is not defined

Cause: The HOST variable was not set.

Action: Set the variable HOST properly and restart the INTCTL program.

TNS-00007: INTCTL: unknown host

Cause: The pointer HOST is set to an unknown hostname.

Action: Set the pointer HOST properly and restart INTCTL program.

TNS-00008: INTCTL: could not contact destination Navigator

Cause: Connection could not be properly established to a Navigator. This may be because the Navigator specified is not running or the Navigator addresses are incorrect.

Action: Check that the Navigator is running by using the STATUS command of the Interchange Control Utility; if necessary, start the Navigator using the START command of the Interchange Control Utility. If it is running and the error persists, contact Oracle Customer Support.

TNS-00009: INTCTL: could not contact destination Connection Manager

Cause: Connection could not be properly established to a Connection Manager. This may be because the Connection Manager (Interchange) specified is not running or the Connection Manager addresses are incorrect.

Action: Make sure the Connection Manager is running by using the STATUS command of the Interchange Control Utility; if necessary, start the Connection Manager using the START command of the Interchange Control Utility. If it is running and the error persists, contact Oracle Customer Support.

TNS-00010: Error while flushing NS context

Cause: Internal NS error; connection may be lost.

Action: Make sure the connection is properly established. If the error persists, then contact Oracle Customer Support.

TNS-00011: INTCTL: error while starting the Connection Manager

Cause: The Connection Manager could not be started.

Action: Assure that the executable can be found in the standard Oracle executable area. Check the configuration file INTCHG.ORA for errors and confirm that no other process is using the ADDRESS(es) for this Connection Manager as specified in TNSNET.ORA. Tracing can also be turned on in the Connection Manager and detailed information about the reason for the error determined. Consult the MultiProtocol Interchange Administrator's Guide and Chapter 2 of this manual for how to turn on tracing.

TNS-00012: INTCTL: error while processing Connection Manager request

Cause: An improper command was sent to the Connection Manager or it is not responding. Not normally visible to the user.

Action: Verify that the correct addresses are listed in the TNSNAMES.ORA, TNSNET.ORA, and TNSNAV.ORA configuration files. Also check that the Connection Manager is running by using the STATUS command of the Interchange Control Utility. If the error persists, contact Oracle Customer Support.

TNS-00013: INTCTL: error while performing NS disconnect command

Cause: Internal NS error. Error in closing down connections.

Action: Make sure the networking protocol being used is properly installed on the machine. If the error persists contact Oracle Customer Support.

TNS-00014: INTCTL: error while opening terminal input channel

Cause: Could not open standard terminal input. Internal error.

Action: Normally not visible to the user. Restart the INTCTL program. If error persists, contact Oracle Customer Support.

TNS-00015: INTCTL: error while closing terminal input channel

Cause: Could not close terminal input channel. Internal error.

Action: Normally not visible to the user. Restart the INTCTL program. If error persists, contact Oracle Customer Support.

TNS-00016: INTCTL: error while performing NS send command

Cause: Internal NS error. Connection may be lost.

Action: If the error persists contact Oracle Customer Support.

TNS-00017: INTCTL: error while performing NS receive command

Cause: Internal NS error. Connection may be lost.

Action: If the error persists contact Oracle Customer Support.

TNS-00018: INTCTL: TNS_ADMIN not defined

Cause: The TNS_ADMIN pointer is improperly set.

Action: No action necessary; TNS_ADMIN need only be set if you want to use a different network environment.

TNS-00019: INTCTL: error initializing the national language interface

Cause: The message file could not be found.

Action: Make sure that the ORACLE environment is set and that the message file is in the correct place.

TNS-00020: INTCTL: missing NAVIGATOR_DATA in TNSNAV.ORA

Cause: TNSNAV.ORA does not contain the NAVIGATOR_DATA component.

Action: Define the ADDRESS(es) for the Navigator, then restart the INTCTL program.

TNS-00021: INTCTL: missing INTERCHANGE_DATA in INTCHG.ORA

Cause: INTCHG.ORA does not contain an INTERCHANGE_DATA component.

Action: Define the correct data for the Connection Manager, then restart the INTCTL program.

TNS-00022: INTCTL: missing CMANAGER_NAME in INTCHG.ORA

Cause: INTCHG.ORA does not contain a CMANAGER_NAME component.

Action: Define the correct name for the CMANAGER_NAME, then restart the INTCTL program.

TNS-00023: INTCTL: missing ADDRESS(es) in config files

Cause: Configuration files do not contain an ADDRESS/ADDRESS_LIST component.

Action: Define the Connection Manager ADDRESS(es) in the TNSNET.ORA file and check the Navigator ADDRESS(es) in the TNSNAV.ORA file, then restart the INTCTL program.

TNS-00024: INTCTL: Unable to contact Navigator to obtain Connection Manager address

Cause: The Navigator is not running.

Action: Verify that the Navigator is running by doing a status request on the Navigator (use the Interchange Control Utility command STATUS). If necessary, start the Navigator using the Interchange Control Utility. Verify that the network is properly configured; if the error persists, contact Worldwide Customer Support.

TNS-00025: INTCTL: The ORACLE environment is not set up correctly

Cause: The ORACLE environment is incorrectly set up.

Action: Refer to the Oracle operating system specific documentation for your platform for information on how the ORACLE environment should be set. Correct it and rerun INTCTL. Make sure the ORACLE environment includes the correct directories.

TNS-00026: INTCTL: TNS_ADMIN directory set, and is being used

Cause: The TNS_ADMIN environment variable is set properly. INTCTL will use the TNS_ADMIN directory. This is only an informative message. If you do not want it to be used, and want the default directory to be used instead, then unset TNS_ADMIN and reexecute.

Action: None

TNS-00027: INTCTL: Could not resolve Navigator's name/address

Cause: The Navigator's name to address definition is missing.

Action: Check TNSNAMES.ORA file and make sure to include a definition for the name specified.

TNS-00028: INTCTL: Could not resolve Connection Manager's name/address

Cause: The Connection Manager's name does not have a definition that the Navigator knows about, nor is the name/address available in the TNSNAMES.ORA file. The name may also be incorrect in the INTCHG.ORA file.

Action: Verify that the Connection Manager's name is in the TNSNET.ORA file read by the Navigator or in the TNSNAMES.ORA file. Be sure that INTCHG.ORA is correct.

TNS-00031: INTCTL: internal NT error

Cause: Problem interfacing to the protocol adapters installed.

Action: Normally not visible to the user. Try starting INTCTL again. If the error persists, check the product installation. If it is correct, contact Oracle Customer Support.

TNS-00032: INTCTL: internal NS error

Cause: Problem interfacing with TNS.

Action: Normally not visible to the user. Try starting INTCTL again. If the error persists, check the product installation. If it is correct, contact Oracle Customer Support.

TNS-00033: INTCTL: internal NL error

Cause: Problem with internal TNS module NL.

Action: Normally not visible to the user. Try starting INTCTL again. If the error persists, check the product installation. If it is correct, contact Oracle Customer Support.

TNS-00034: INTCTL: internal NR error

Cause: Problem with internal Interchange routines.

Action: Normally not visible to the user. Try starting INTCTL again. If the error persists, check the product installation. If it is correct, contact Oracle Customer Support.

TNS-00035: INTCTL: error while constructing full file name

Cause: Problem while constructing the full path for a file name because the path name to the file or the environment variables are incorrect. Files looked up include TNSNAMES.ORA, TNSNAV.ORA, INTCHG.ORA and the error files for the Navigator and Connection Manager.

Action: Check that all environment variables are defined correctly and that all configuration files exist in their correct places.

TNS-00036: INTCTL: error reading from Navigator or Connection Manager error files

Cause: Problem while reading from Navigator or Connection Manager error files generated by the Navigator or Connection Manager when they fail to start.

Action: Check that a standard Network Error directory exists and that all privileges on the directory are appropriate.

TNS-00037: INTCTL: error opening Navigator or Connection Manager error files

Cause: Failed to open Navigator or Connection Manager error files when they have failed to start.

Action: Check that a Network Error directory exists and that all privileges on the directory are appropriate.

TNS-00038: INTCTL: Poorly formed address or command string

Cause: An unacceptable string was encountered while attempting to send a message to either the Navigator or Connection Manager. The addresses provided for either the Navigator or Connection Manager may be incorrectly constructed.

Action: Check all address strings in configuration files (TNSNAMES.ORA, TNSNAV.ORA or TNSNET.ORA) and assure that they are properly formed. Regenerate the files, if possible. If all is correct, please contact Worldwide Customer Support.

TNS-00039: INTCTL: error while spawning a process

Cause: An error was encountered while spawning a process due to an internal operating system dependent problem. Machine resources may be limited.

Action: Retry command. Check permissions on Interchange executables and the current setting of the search path. If necessary, terminate other applications to free up machine resources. If the error persists, contact Oracle Customer Support.

TNS-00040: INTCTL: failed to initialize trace context- Continuing anyway

Cause: Problem while opening specified trace file because of errors in INTCHG.ORA or because the user has incorrect privileges, or the file does not exist.

Action: Check the privileges on the configuration files and ensure that all of them exist in their proper locations.

TNS-00041: INTCTL: Navigator already running. Start operation cancelled

Cause: There is a Navigator already running and listening on the same addresses.

Action: None; the Navigator is already running.

TNS-00042: INTCTL: CMANAGER already running. Start operation cancelled

Cause: There is a Connection Manager already running and listening on the same addresses.

Action: None; the Connection Manager is already running.

TNS-00043: The CMANAGER has active connections, do you still want to stop it (y/n)?

Cause: The CMANAGER that is being stopped has active connections going through. This is the confirmation message.

Action: Respond by pressing y or n. Answering y will cause the active database connection to be dropped; this is not generally recommended.

TNS-00044: INTCTL: You must have an INTCHG.ORA file to contact the Connection Manager

Cause: There was an attempt to contact a default Connection Manager (Interchange) where there was no INTCHG.ORA present in the correct directory.

Action: Create an INTCHG.ORA file. Make sure it is placed in the correct directory and includes the correct name for the Connection Manager you wish to contact.

TNS-00045: INTCTL: Could not contact the Navigator on address

Cause: There was an attempt to contact a Navigator on a specific address which is not responding.

Action: Check the TNSNAV.ORA file for that address. Or check that the Navigator is actually listening on that address.

TNS-00046: INTCTL: Could not contact the CMANAGER on address

Cause: There was an attempt to contact a CMANAGER on a specific address which is not responding.

Action: Verify that the TNSNET.ORA file contains that address. Also check that the CMANAGER is actually listening on that address by using the INTCTL STATUS command. If necessary, start the Connection Manager using the INTCTL START command.

TNS-00060: INTCTL: Bad command: only the STATUS command can be used on remote Interchanges

Cause: The user entered a command that does not exist, or the user tried to make a request other than STATUS to a remote Interchange.

Action: Check the MultiProtocol Interchange Administrator's Guide for a list of INTCTL commands or type HELP for a list of valid commands.

TNS-00061: INTCTL: Bad command or syntax error: You must specify a trace level

Cause: The user did not specify a trace level.

Action: Specify a trace level and retry command.

TNS-00062: INTCTL: Bad command or syntax error: For help type help/h/?

Cause: The user entered an invalid command.

Action: Check the MultiProtocol Interchange Administrator's Guide or type HELP for a list of valid commands.

TNS-00063: INTCTL: Failed to allocate memory for buffers

Cause: INTCTL was unable to allocate memory for internal buffers.

Action: Check the amount of available memory on your machine to ensure that there is enough memory to run this executable. If necessary, free up memory by running fewer programs, then try again.

TNS-00064: INTCTL: Failed to find CMANAGER_NAME in INTCHG.ORA

Cause: INTCTL was unable to find the CMANAGER_NAME parameter in INTCHG.ORA.

Action: Check that the INTCHG.ORA file is properly constructed.

TNS-00065: INTCTL: Command cannot be executed remotely

Cause: A command other than status and version has been attempted remotely.

Action: If you desire execute any command other than status and version, you must run intctl on the interchange machine.

TNS-00070: INTCTL usage: [intctl] *command* <process_name> [argument]\n

Cause: Help message displayed by INTCTL.

Action: None

TNS-00071: where *command* is one of following: \n

Cause: Help message displayed by INTCTL.

Action: None

TNS-00072: * start - start up process_name\n

Cause: Help message displayed by INTCTL.

Action: None

TNS-00073: * stop/abort - stop the process_name\n

Cause: Help message displayed by INTCTL.

Action: None

TNS-00074: * status - get statistics from the process_name\n

Cause: Help message displayed by INTCTL.

Action: None

TNS-00075: NOTE: the user may get the status info of a remoteln

Cause: Help message displayed by INTCTL.

Action: None

TNS-00076: component by specifying the component name in\n

Cause: Help message displayed by INTCTL.

Action: None

TNS-00077: the argument field\n

Cause: Help message displayed by INTCTL.

Action: None

TNS-00078: * log_on - ask process_name to turn logging on

Cause: Help message displayed by INTCTL.

Action: None

TNS-00079: * log_off - ask process_name to turn logging off

Cause: Help message displayed by INTCTL.

Action: None

TNS-00080: * force_log - ask process_name to dump its state

Cause: Help message displayed by INTCTL.

Action: None

TNS-00081: * trace_on - ask process name to turn tracing on

Cause: Help message displayed by INTCTL.

Action: None

TNS-00082: NOTE: the user MUST specify a trace level

Cause: Help message displayed by INTCTL.

Action: None

TNS-00083: (USER or ADMIN) in the argument field

Cause: Help message displayed by INTCTL.

Action: None

TNS-00084: * trace_off - ask process name to turn tracing off

Cause: Help message displayed by INTCTL.

Action: None

TNS-00085: * reread - ask the process name to reread parameter files

Cause: Help message displayed by INTCTL.

Action: None

TNS-00086: * reload - ask the Navigator to reload TNSNET.ORA

Cause: Help message displayed by INTCTL.

Action: None

TNS-00087: * version - ask the process name to display its version number

Cause: Help message displayed by INTCTL.

Action: None

TNS-00088: * exit - quit the Interchange controller

Cause: Help message displayed by INTCTL.

Action: None

TNS-00089: process_name is one of Interchange, CMANAGER, or Navigator

Cause: Help message displayed by INTCTL.

Action: None

TNS-00090: * Interchange - will ask the Interchange\n

Cause: Help message displayed by INTCTL.

Action: None

TNS-00091: * Navigator (or navgatr) - will ask the Navigator only\n

Cause: Help message displayed by INTCTL.

Action: None

TNS-00092: * CMANAGER (or intlsnr) - will ask the Cmanager only\n\n

Cause: Help message displayed by INTCTL.

Action: None

TNS-00093: argument is only supplied to either status or trace_on\n

Cause: Help message displayed by INTCTL.

Action: None

TNS-00094: * to status - argument is considered the remote process_name\n

Cause: Help message displayed by INTCTL.

Action: None

TNS-00095: * to trace_on - argument is considered the trace level\n\n

Cause: Help message displayed by INTCTL.

Action: None

TNS-00100: Unable to allocate memory

Cause: Out of memory on the machine.

Action: Add more memory or run fewer processes.

TNS-00101: File operation error

Cause: Error in accessing reading or writing a particular file.

Action: Check existence of or operating system access to the log and trace file locations.

TNS-00102: Keyword-Value binding operation error

Cause: Not normally visible to the user. May indicate a shortage of memory.

Action: If error persists contact Oracle Customer Support.

TNS-00103: Parameter file load error

Cause: Parameter file process failed.

Action: Check to make sure that all parameter files necessary for the Interchange are present (TNSNAV.ORA, TNSNET.ORA and INTCHG.ORA). If these files are present and properly configured, turn on tracing and repeat the operation. Turn off tracing when the trace is complete. Look in the trace file for errors in the parameter loading process. If error persists contact Oracle Customer Support.

TNS-00104: Data stream open/access error

Cause: Unable to open or access data stream for either log or trace files for the Interchange.

Action: Check read/write permissions on Oracle files and directories.

TNS-00105: Could not initialize tracing

Cause: The INTCHG.ORA file is improperly configured. Verify the trace parameters specified.

Action: If error persists contact Oracle Customer Support.

TNS-00106: Failed to open log file

Cause: Unable to access or obtain write permission to create log file.

Action: Check existence of or access to log file directory.

TNS-00107: Unable to initialize TNS global data

Cause: Not normally visible to the user.

Action: If error persists contact Oracle Customer Support.

TNS-00108: TNS_ADMIN not defined

Cause: TNS_ADMIN pointer is not set.

Action: Set the TNS_ADMIN pointer before running application

TNS-00109: Message could not be printed; not enough memory

Cause: Printing of message failed due to lack of memory. Not normally visible to user.

Action: Increase the resources on your machine. If error persists contact Oracle Customer Support.

TNS-00110: Could not initialize network from file TNSNET.ORA

Cause: Poorly formed network information in network file.

Action: Fix network configuration data to assure that at least one Interchange is defined in TNSNET.ORA.

TNS-00111: Failed to get configuration data from file

Cause: Poorly formed configuration information in network files TNSNET.ORA or TNSNAV.ORA.

Action: Check TNSNET.ORA and TNSNAV.ORA and confirm that they are correct.

TNS-00112: Failed to find configuration file name

Cause: Name specified for configuration file was incorrect.

Action: Check for presence of the configuration file.

TNS-00113: Failed to open error log file

Cause: Could not open log file during startup of Navigator or Connection Manager due to read or write permission problems or non-existent error directory.

Action: Create the standard error directory or assure that if one is present the Interchange executables can write to it.

TNS-00114: Internal error- Allocation of addresses not performed

Cause: Internal error. Should not normally occur.

Action: Contact Oracle Customer Support.

TNS-00115: Could not allocate pump global buffers

Cause: Not enough memory to allocate pump buffers.

Action: Decrease the number of PUMP_BUFFERS in INTCHG.ORA.

TNS-00116: Pump failed during initial bequeath

Cause: Error in assigning connection to a new pump. This error may be caused by insufficient machine resources.

Action: Attempt the connection again. The pump should recover from such a failure. If machine resources appear to be the problem, add more resources // or shut down some active applications. If problem persists, contact Oracle Customer Support.

TNS-00117: Internal error- No data passed through pump

Cause: Internal error. Data expected has not arrived yet.

Action: If error persists, contact Oracle Customer Support.

TNS-00119: Missing PUMP_CONNECTIONS in INTCHG.ORA

Cause: No PUMP_CONNECTIONS parameter specified in INTCHG.ORA.

Action: Add PUMP_CONNECTIONS parameter to INTCHG.ORA.

TNS-00120: Missing PUMPS in INTCHG.ORA

Cause: No PUMPS parameter specified.

Action: Add an appropriate number of PUMPS to INTCHG.ORA.

TNS-00121: Missing CMANAGER_NAME in INTCHG.ORA

Cause: No CMANAGER_NAME parameter specified.

Action: Define the CMANAGER_NAME parameter in INTCHG.ORA; it must match the CMANAGER_NAME parameter used in TNSNET.ORA for that Interchange.

TNS-00122: Missing ADDRESS(es) in TNSNET.ORA file

Cause: No ADDRESS or ADDRESS_LIST parameter specified in TNSNET.ORA.

Action: Define a valid set of ADDRESSes for the Connection Manager in the TNSNET.ORA file.

TNS-00123: Unable to perform a listen on configured ADDRESS(es)

Cause: Another process is already listening on this address or the ADDRESS is incorrectly defined.

Action: Check the ADDRESS(es) defined in TNSNET.ORA (for the Connection Manager) for errors. Verify that another program is not using them.

TNS-00124: Internal error - Unable to create empty address

Cause: - Internal error. Should not normally occur.

Action: If problem persists contact Oracle Customer Support.

TNS-00125: Failed to get number of Interchanges in TNSNET.ORA

Cause: Error in the TNSNET.ORA file.

Action: Check the contents of TNSNET.ORA and eliminate errors. Regenerate the configuration files.

TNS-00126: Missing Connection Manager name and address in TNSNET.ORA

Cause: The Interchange name specified in INTCHG.ORA is not defined in the TNSNET.ORA file.

Action: Define one Connection Manager name and set of addresses for each Interchange in the network. Regenerate the configuration files.

TNS-00127: Missing Connection Manager name in TNSNET.ORA

Cause: One or more Connection Manager names are missing.

Action: Ensure that each Connection Manager name is defined in TNSNET.ORA. Regenerate TNSNET.ORA.

TNS-00128: Missing COMMUNITY in TNSNET.ORA

Cause: One or more ADDRESSes does not have a COMMUNITY assigned.

Action: Ensure that all addresses have a COMMUNITY defined in TNSNET.ORA.

TNS-00129: Internal error - Failed to create new community

Cause: Internal Error. Should not normally occur. There may be a resource limitation problem on the machine.

Action: Stop and restart Interchange. If possible, make more memory available on the machine. If problem persists, contact Oracle Customer Support.

TNS-00130: Failed to create Interchange's internal address

Cause: There is an error in one of the addresses listed in TNSNET.ORA.

Action: Check the file for errors in defining Interchanges.

TNS-00131: Missing COMMUNITY in COMMUNITY_COST_LIST in TNSNET.ORA

Cause: A COMMUNITY keyword-value pair is missing within the COMMUNITY_COST_LIST in TNSNET.ORA.

Action: Define the communities with a COMMUNITY name and associated COST in COMMUNITY_COST_LIST.

TNS-00132: COST value must be an integer greater than 0

Cause: A community has been defined in TNSNET.ORA with a COST of 0.

Action: Assign an alternate value that is greater than 0.

TNS-00133: Missing LOCAL_COMMUNITIES field in TNSNAV.ORA

Cause: Improperly configured TNSNAV.ORA file.

Action: Define the LOCAL_COMMUNITIES fields correctly in TNSNAV.ORA.

TNS-00134: Missing COMMUNITY component in addresses for the Navigator in TNSNAV.ORA

Cause: The addresses specified for the Navigator have no COMMUNITY name.

Action: Ensure that all addresses in the NAVIGATOR_ADDRESSES field have a COMMUNITY entry in the TNSNAV.ORA file.

TNS-00135: Missing TNS error message file

Cause: No error message file present.

Action: Ensure that the ORACLE environment is correctly set for your platform and that there is a message directory that contains the correct error message file.

TNS-00136: Did not register product/facility for TNS error message

Cause: Error message file error.

Action: Ensure that the ORACLE environment is correctly set for your platform and that there is a message directory that contains the correct error message file.

TNS-00137: Failed to get TNS error message file entry

Cause: No TNS error message file present.

Action: Ensure that the ORACLE environment is correctly set for your platform and that there is a message directory that contains the correct error message file.

TNS-00138: Failed to find ORACLE executable directory

Cause: The ORACLE environment is not correctly set.

Action: Ensure that the ORACLE environment is correctly set and the error messages file is in the correct place.

TNS-00139: Internal - Data passed from the Interchange listener is poorly formed

Cause: Internal error in Interchange.

Action: Check that you are using compatible components of the Interchange product, using the INTCTL VERSION command. If problem persists call Oracle Customer Support.

TNS-00140: Interchange specified was not found in network tables

Cause: Could not find the Interchange specified in a control request.

Action: Check that the Interchange specified is indeed in TNSNET.ORA.

TNS-00141: Failed to get file stream information

Cause: Error in the file stream package.

Action: None

TNS-00142: Community mismatch in TNSNAV.ORA

Cause: The communities in the LOCAL_COMMUNITIES entry in TNSNAV.ORA do not correspond with all the communities in the NAVIGATOR_ADDRESSES entry.

Action: Assure that all communities in the NAVIGATOR_ADDRESSES correspond to those in the LOCAL_COMMUNITIES component.

TNS-00143: Illegal PREFERRED_CMANAGERS entry in TNSNAV.ORA

Cause: PREFERRED_CMANAGERS entry in the TNSNAV.ORA used by the Connection Manager. There should only be a PREFERRED_NAVIGATORS entry in the TNSNAV.ORA on an Interchange.

Action: Remove the PREFERRED_CMANGERS entry from TNSNAV.ORA and assure that either no PREFERRED_NAVIGATORS entry is present or that it is correct.

TNS-00144: PUMP_CONNECTIONS value in INTCHG.ORA is too large.

Cause: The number of PUMP_CONNECTIONS specified in INTCHG.ORA is too large to be supported on this platform.

Action: Consult the Oracle operating system specific manual for the maximum value for the number of PUMP_CONNECTIONS.

TNS-00145: PUMPS value in INTCHG.ORA is too large.

Cause: The number of PUMPS specified in INTCHG.ORA is too large to be supported on this platform.

Action: Consult the Oracle operating system specific manual for the maximum value for the number of PUMPS.

TNS-00146: Internal-- Retry data request withing pump.

Cause: The data space provided in order to receive data from the pump is to small.

Action: Operation must be retried with a larger buffer.

TNS-00147: Failed to start a pre-spawned pump.

Cause: The Connection Manager was unable to start a pump during startup.

Action: Check all configuration parameters and assure that they are correct. Turn on tracing to determine the area that the failure occurred in.

TNS-00200: Unable to do nsanswer on context\nresult=string\n

Cause: Requester of service may have aborted or options negotiation failed.

Action: Try making the connection again. If the problem persists call Oracle Customer Support.

TNS-00201: Unable to read answer connection data :string:\n

Cause: Improperly formed connect data sent to the Interchange listener.

Action: If problem persists, check the application using the Interchange (it may be closing down or crashing). Call Oracle Customer Support if the problem cannot be located.

TNS-00202: Failure in redirecting call : \nOriginal to string\n\t Redirect to string\n

Cause: Internal - error could not redirect call to a pump or other Interchange listener. The cause may be insufficient network or machine resources.

Action: Add resources or close some running applications in order to free up resources. If error persists, call Oracle Customer Support.

TNS-00203: Unable to start tracing in intlsnr\n

Cause: Failure in setting up tracing for Interchange listener.

Action: Check file permissions in Network trace directory also check to make sure that if trace file names and directories are specified in INTCHG.ORA, they are correct.

TNS-00204: Started tracing in intlsnrln

Cause: Internal message- Successfully started tracing information.

Action: None

TNS-00205: Turning off tracing in intlsnrln

Cause: Internal message - Turned off tracing in the Interchange listener.

Action: None

TNS-00206: lnlnStatus Information for Interchange *string*:ln

Cause: Message sent back by Interchange as header for status request.

Action: None

TNS-00207: ltUptime : *number days number hr. number min. number sec*ln

Cause: Part of status request.

Action: None

TNS-00208: ltLogging : *string*ln

Cause: Part of status request.

Action: None

TNS-00209: ltTracing : *string*ln

Cause: Part of status request Interchange.

Action: None

TNS-00210: ltTotal Pumps Available : *number*ln

Cause: Part of status request for Connection Manager.

Action: None

TNS-00211: ltTotal Active Pumps : *number*ln

Cause: Part of status request for Connection Manager.

Action: None

TNS-00212: ltTotal Pumps Started : *number*ln

Cause: Part of status request for Connection Manager.

Action: None

TNS-00213: ltAvailable Connections : *number*ln

Cause: Part of status request for Connection Manager.

Action: None

TNS-00214: ltTotal Connections in Use : *number*ln

Cause: Part of status request for Connection Manager.

Action: None

TNS-00215: ltTotal Successful Connections : *number*ln

Cause: Part of status request for Connection Manager.

Action: None

TNS-00216: \tTotal Failed Connections : *number*\n

Cause: Part of status request for Connection Manager.

Action: None

TNS-00217: \tTotal Bytes of Data : *number*\n

Cause: Part of status request for Connection Manager.

Action: None

TNS-00218: \tCurrent Bytes/Sec. : *number*\n

Cause: Part of status request for Connection Manager.

Action: None

TNS-00219: \tPump Strategy : *string*\n

Cause: Part of status request.

Action: None

TNS-00220: \tPump Breakdown\n\t-----\n

Cause: Part of status request.

Action: None

TNS-00221: \tPump Connections Total Data Bytes/Second\n

Cause: Part of status request.

Action: None

TNS-00222: \t-----\n

Cause: Part of status request.

Action: None

TNS-00223: \t*numbernumbernumbernumber*\n

Cause: Part of status request.

Action: None

TNS-00224: No more connections available\n

Cause: More connections were made to the Interchange than are configured in INTCHG.ORA.

Action: Wait until the Interchange is not as busy or change the number of connections allowed in INTCHG.ORA and restart the Interchange.

TNS-00225: Unable to bequeath connection to pump\n

Cause: Unable to start a pump because either the executable cannot be found or too many processes are currently running on a particular machine.

Action: Reduce the number of processes on the machine or increase the resources on the machine.

TNS-00226: Unable to contact pump *number* to send broadcast message *string*\n

Cause: Could not call a particular pump.

Action: None, but if the problem persists call Oracle Customer Support.

TNS-00227: Unable to contact pump; Connection Manager declared pump dead\n

Cause: A pump became an orphaned process. A protocol adapter is not working properly or machine network resources are being over used.

Action: This error is not immediately fatal; the orphaned pump may continue to function. Restart the Interchange when convenient. If the problem persists, call Oracle Customer Support.

TNS-00228: Failure in finding pump data\n

Cause: Internal problem with data passed back from pump.

Action: None

TNS-00229: Error in call: unable to deliver message\n:string:\nstring\nstring\nstring\n

Cause: Destination for call is unavailable.

Action: None

TNS-00230: Cannot start new pump process:\nstring\nstring\nProtocol Adapter errors:*number*

Cause: Unable to create a new process; possibly there are too many processes on the machine.

Action: Free machine resources by exiting other applications on the Interchange machine. If the problem continues you may need more memory on the machine. If you believe there are sufficient resources on the machine but the problem persists, contact Oracle Customer Support.

TNS-00231: Pump is alive\n

Cause: Pump log message sent to Interchange listener.

Action: None

TNS-00232: Unable to setup connection\n

Cause: Error log message sent from pump to indicate failure in initiating connection because of errors in the call string: network problem or resource limitations.

Action: None

TNS-00233: Interchange failed to make contact with destination with errors:\nstring\nstring\nstring\n

Cause: Pump call to destination failed.

Action: Check destination.

TNS-00234: Connect data for failed call:\nCALL DATA =\nstring\nRECEIVE DATA = :*string*:\n

Cause: Connect data supplied for error 00233.

Action: None

TNS-00235: Aborting connection:\nProtocol Aapter errors:\nstring;number,number\nstring;number,number\n

Cause: Pump aborting connection because connection has been up too long, or some other network error on the connection.

Action: None

TNS-00236: Failed to initialize tracing\n

Cause: Pump failed to initialize tracing.

Action: Check that INTCHG.ORA is properly configured.

TNS-00237: Failed to refuse connection\n

Cause: Connection may have aborted before error took place in Pump.

Action: None

TNS-00238: Pump *number* @: *string*:

Cause: Prepended message to all pump log messages.

Action: None

TNS-00239: Connection Manager has been stopped

Cause: Message sent back to control program from Interchange.

Action: None

TNS-00240: Connection Manager: Logging is now ON

Cause: Message sent back to control program from Interchange.

Action: None

TNS-00241: Connection Manager: Logging is now OFF

Cause: Message sent back to control program from Interchange.

Action: None

TNS-00242: Connection Manager: Tracing is now ON

Cause: Message sent back to control program from Interchange.

Action: None

TNS-00243: Connection Manager: Tracing is now OFF

Cause: Message sent back to control program from Interchange.

Action: None

TNS-00244: Connection Manager: Request Failed

Cause: Message sent back to control program from Interchange.

Action: None

TNS-00245: Connection Manager: Failed to open log file

Cause: Message sent back to control program from Interchange.

Action: None

TNS-00246: Connection Manager: Failed to start tracing

Cause: Message sent back to control program from Interchange.

Action: None

TNS-00247: Unable to allocate memory for configuration data from TNSNET.ORA file

Cause: Navigator failed to allocate enough memory for TNSNET.ORA configuration file.

Action: Increase machine resources available for running the Interchange or remove some other running applications from the machine.

TNS-00248: Unable to get information from file :string:\nExiting with NR error:number\n

Cause: TNSNAV.ORA poorly configured or addresses provided are already being used by another application.

Action: Check the syntax of the TNSNAV.ORA file; if necessary, assign new addresses.

TNS-00249: Unable to read network configuration data from file string\n with error:\n string\n

Cause: Network configuration file TNSNET.ORA is missing or poorly configured.

Action: Check to make sure that TNSNET.ORA is properly configured.

TNS-00250: Navigator has been started\n

Cause: Message to log file on Navigator startup.

Action: None

TNS-00251: Failure in nstest: \n

Cause: NS test operation failed due to internal error.

Action: If the problem persists there may be a network problem or resource limitations on the machine. If these do not seem to be causing the problem, call Oracle Customer Support.

TNS-00252: Unable to handle route request:\nstring\n

Cause: Command requested did not exist.

Action: None

TNS-00253: Error in reading network configuration data from file string\n with error\nstring\n

Cause: TNSNET.ORA is poorly configured or nonexistent.

Action: Check to make sure that TNSNET.ORA is properly configured.

TNS-00254: Navigator has been stopped\n

Cause: Message sent to Interchange control program by Navigator confirming it has been stopped.

Action: None

TNS-00255: Closing down log, stopping Navigator\n

Cause: Log message when Navigator is stopped.

Action: None

TNS-00256: Status of Navigator:\n

Cause: Navigator status message component

Action: None

TNS-00257: \tNumber of Successful Requests : *number*\n

Cause: Navigator status message component

Action: None

TNS-00258: \tNumber of Failed Requests : *number*\n

Cause: Navigator status message component

Action: None

TNS-00259: \tDisabled Interchange list:\n\n

Cause: Navigator status message component

Action: None

TNS-00260: \t-----\n

Cause: Navigator status message component

Action: None

**TNS-00261: \tInterchange Name Community Link Down Time Remaining (secs)
\n**

Cause: Navigator status message component

Action: None

TNS-00262: *stringstringnumber*\n

Cause: Navigator status message component

Action: None

TNS-00263: Navigator: Request Failed

Cause: Response from Navigator when a particular request failed.

Action: None

TNS-00264: Navigator: Failed to reload configuration data

Cause: Message sent to the Interchange control program when reload of network configuration failed. TNSNET.ORA Poorly configured or missing.

Action: None

TNS-00265: Navigator: Reloaded network configuration data

Cause: Message sent to Interchange control program when reload of network is successful.

Action: None

TNS-00266: Navigator: Unknown Request

Cause: Request was made to Navigator that it knows nothing about.

Action: None

TNS-00267: Navigator: Internal Error

Cause: Generated when a request was made to the Navigator it knows nothing about.

Action: None

TNS-00268: ON

Cause: On component of message.

Action: None

TNS-00269: OFF

Cause: Off component of message.

Action: None

TNS-00270: *string*: Terminal Error\n*string*\n

Cause: Message put out in error file of executable when it fails to start.

Action: None

TNS-00271: Connection Manager

Cause: Name of the Connection Manager.

Action: None

TNS-00272: Navigator

Cause: Name for the Navigator.

Action: None

TNS-00273: Navigator: Logging is now ON

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00274: Navigator: Logging is now OFF

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00275: Navigator: Tracing is now ON

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00276: Navigator: Tracing is now OFF

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00277: Navigator: Request Failed

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00278: Navigator: Failed to Open Log file

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00279: Navigator: Failed to Start Tracing

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00280: !tMax Avg Bytes/Sec : *number*\n

Cause: Part of status request for Connection Manager.

Action: None

TNS-00281: Connection Manager: Forced Log output\n

Cause: Message sent back to control program from Connection Manager.

Action: None

TNS-00282: Connection Manager: Failed to force log, logging is off\n

Cause: Message sent back to control program from Connection Manager.

Action: None

TNS-00283: \nListening on the following TNS addresses:\n\n

Cause: Message sent back to control program from Connection Manager.

Action: None

TNS-00284: !tmm Max Avg Bytes/Sec : *number*\n

Cause: Part of status request for Connection Manager.

Action: None

TNS-00285: !tAvg Connect Time (secs) : *number*\n

Cause: Part of status request for Connection Manager.

Action: None

TNS-00286: !tMax Connect Time (secs) : *number*\n

Cause: Part of status request for Connection Manager.

Action: None

TNS-00287: !tMin Connect Time (secs) : *number*\n

Cause: Part of status request for Connection Manager.

Action: None

TNS-00288: Navigator: Failed to Disable Interchange

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00289: Navigator: Disabled Interchange

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00290: Navigator: Failed to Enable Interchange

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00291: Navigator: Enabled Interchange

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00292: \tLog File Name :\n\t\tstring\n

Cause: Message sent back to control program showing log file name

Action: None

TNS-00293: \tTrace File Name :\n\t\tstring\n

Cause: Message sent back to control program showing trace file name

Action: None

TNS-00294: Connection Manager: Security is enabled, you cannot STOP the Interchange\n

Cause: Message sent back to control program indicating that the connection manager is secure.

Action: None

TNS-00295: Navigator: Security is enabled, you cannot STOP the Navigator\n

Cause: Message sent back to control program indicating that the Navigator is secure.

Action: None

TNS-00296: \tStoppable : string\n

Cause: Message sent back to control program indicating whether program can be stopped.

Action: None

TNS-00297: \tLogging Level : string\n

Cause: Message sent back to control program indicating whether program can be stopped.

Action: None

TNS-00298: Request to Navigator:\nstring\n

Cause: Log entry for request to Navigator.

Action: None

TNS-00299: Response from Navigator:\nstring\n

Cause: Log entry for request to Navigator.

Action: None

TNS-00300: *Disabling Interchange : string\n**

Cause: Log entry for disabling a particular Interchange.

Action: None

TNS-00301: *Enabling Interchange : string\n**

Cause: Log entry for disabling a particular Interchange.

Action: None

TNS-00302: Connection Manager: Unknown Request

Cause: Request sent by Interchange control program is unknown.

Action: None

TNS-00303: Connection Manager: Reread parameter data

Cause: Request sent by control manager to control programming indicating that parameter data was read.

Action: None

TNS-00304: Status Information for Connection Manager:\n

Cause: Message sent back by Interchange as header for status request.

Action: None

TNS-00305: The Navigator encountered an invalid/unknown trace level\n

Cause: Message sent back by the Navigator indicating an invalid trace level.

Action: Reattempt the request with a correct trace level.

TNS-00306: Connection Manager encountered an invalid/unknown trace level\n

Cause: Message sent back by the Connection Manager indicating an invalid trace level.

Action: Reattempt the request with a correct trace level.

TNS-00307: Navigator: Reread parameter data

Cause: Request sent by the Navigator to control program indicating that parameter data was read.

Action: None

TNS-00308: Navigator: Failed to open log while rereading parameter data

Cause: Request sent by the Navigator to control program indicating that it could not reopen log file after rereading parameter data.

Action: None

TNS-00309: Connection Manager: Failed to open log while re-reading parameter data

Cause: Request sent by the Connection Manager to control program indicating that it could not reopen log file after rereading parameter data.

Action: None

TNS-00310: Navigator: Failed to start tracing after rereading parameter data

Cause: Message sent back to control program from Navigator.

Action: None

TNS-00311: Connection Manager: Failed to start tracing after rereading parameter data

Cause: Message sent back to control program from Connection Manager.

Action: None

TNS-00312: Connection Manager: Failed to get version information

Cause: Message sent back to control program from Connection Manager.

Action: None

TNS-00313: Navigator: Failed to get version information

Cause: Message sent back to control program from Connection Manager.

Action: None

TNS-00314: Protocol Adapter Errors: *number,number*

Cause: Protocol Adapter errors which go with message 233

Action: None

TNS-00315: Failed to allocate larger connect data area for getting pump data: *number*

Cause: Could not allocate a large enough area to get pump statistics; continue without them.

Action: None

TNS-00316: Ran out of data buffers in the pump

Cause: The Interchange is resource limited by having too few data buffers in the pump.

Action: If the problem persists (that is, there are a lot of log messages), increase the number of pump buffers by increasing the value of the parameter PUMP_BUFFERS in INTCHG.ORA. Then shutdown and restart the Interchange to make the changes take effect.

TNS-00317: Failed to contact Connection Manager

Cause: Connection Manager is not running.

Action: Start the Connection Manager and retry

TNS-00501: Cannot allocate memory

Cause: Sufficient memory could not be allocated to perform the desired activity.

Action: Either free some resource for TNS or add more memory to the machine. For further details, turn on tracing and reexecute the operation.

TNS-00502: Invalid argument

Cause: An internal function received an invalid parameter.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00503: Illegal ADDRESS parameters

Cause: An illegal set of protocol adapter parameters was specified.

Action: Check the parameters within the ADDRESS section of the TNSNAMES.ORA file. It may be helpful to turn on tracing and look at the addresses specified in the trace file, checking for spelling or other errors. Be sure to turn tracing off when the trace is complete.

TNS-00504: Operation not supported

Cause: An internal function received a request to perform an operation that is not supported (on this machine).

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00505: Operation timed out

Cause: The requested operation could not be completed within the timeout period.

Action: Check the network of the failed connection for connectivity and congestion. Check if TCP SYNs are getting dropped by listener when error is reported during connection establishment. For TCP, use netstat or ss utility to get TCP statistics. For further details, turn on tracing and reexecute the operation.

TNS-00506: Operation would block

Cause: An internal operation did not commence because to do so would block the current process and the user has requested that operations be non-blocking.

Action: None needed; this is an information message.

TNS-00507: Connection closed

Cause: Normal "end of file" condition has been reached; partner has disconnected.

Action: None needed; this is an information message.

TNS-00508: No such protocol adapter

Cause: The protocol adapter requested for this connection does not exist.

Action: Install the protocol adapter or use one that is available. Be sure that the correct protocols are listed in the configuration files.

TNS-00509: Buffer overflow

Cause: Too much data for buffer.

Action: Reexecute with larger receive buffer or smaller send buffer.

TNS-00510: Internal limit restriction exceeded

Cause: Too many files or sockets open simultaneously (or some other resource has been depleted).

Action: For further details, trace the operation for protocol details.

TNS-00511: No listener

Cause: The connect request could not be completed because no application is listening on the address specified, or the application is unable to service the connect request in a sufficiently timely manner.

Action: Ensure that the supplied destination address matches one of the addresses used by the listener - compare the TNSNAMES.ORA entry with appropriate LISTENER.ORA file (or TNSNAV.ORA if the connection is to go by way of an Interchange. Start the listener on the remote machine.

TNS-00512: Address already in use

Cause: Specified listener address is already being used.

Action: Start your listener with an unused address.

TNS-00513: Destination host unreachable

Cause: Contact cannot be made with remote party.

Action: Make sure the network driver is functioning and the network is up.

TNS-00514: Contexts have different wait/test functions

Cause: Two protocol adapters have conflicting wait/test functions.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00515: Connect failed because target host or object does not exist

Cause: The address specified is not valid, or the program being connected to does not exist.

Action: Ensure the ADDRESS parameters have been entered correctly; the most likely incorrect parameter is the node name. Ensure that the executable for the server exists (perhaps "oracle" is missing.)

TNS-00516: Permission denied

Cause: User has insufficient privileges to perform the requested operation.

Action: Acquire necessary privileges and try again.

TNS-00517: Lost contact

Cause: Partner has unexpectedly gone away.

Action: Investigate partner application for abnormal termination.

TNS-00518: Incomplete read or write

Cause: A data send or receive failed.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00519: Operating system resource quota exceeded

Cause: The current user has exceeded the allotted resource assigned in the operating system.

Action: Acquire more operating system resource, or perform a different function.

TNS-00520: Syntax error

Cause: The supplied connect descriptor contains illegal syntax.

Action: Check the syntax of the connect descriptor for correct syntax.

TNS-00521: Missing keyword

Cause: The supplied connect descriptor is missing one or more TNS keywords.

Action: Check the syntax, and ensure all required keywords are present.

TNS-00522: Operation was interrupted

Cause: An internal operation was interrupted and could not complete.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00523: Previous operation was busy

Cause: Operation tried could not be successfully completed because the requested resource was busy.

Action: Attempt the operation again. If error persists, contact Oracle Customer Support.

TNS-00524: Current operation is still in progress

Cause: Internal operation is still in progress but will complete.

Action: None; wait for operation to complete.

TNS-00525: Insufficient privilege for operation

Cause: Operating system failed to complete operation because user lacked sufficient privileges.

Action: Check your platform-specific privileges.

TNS-00526: No caller (false async event)

Cause: Internal error.

Action: For further details, turn on tracing and reexecute the operation.

TNS-00527: Protocol Adapter not loadable

Cause: On some platforms (for example OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter is missing or one of its supporting libraries is missing, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that could not be loaded.

TNS-00528: Protocol Adapter not loaded

Cause: On some platforms (for example OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter has not been loaded, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that has not been loaded.

TNS-00530: Protocol adapter error

Cause: A generic protocol adapter error occurred.

Action: For further details, turn on tracing and reexecute the operation.

TNS-00532: No previous async operation to wait on

Cause: Internal protocol adapter error.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00533: Connection dissolved or not yet made

Cause: Internal protocol adapter error.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00534: Failed to grant connection ownership to child

Cause: Internal protocol adapter error.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00535: Failed to send or receive disconnect message

Cause: Internal protocol adapter error.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00536: Connection entered inappropriate state

Cause: Internal protocol adapter error.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00537: Index into protocol adapter table is out of legal range

Cause: Internal protocol adapter error.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00539: Network or Protocol services are down

Cause: The Network services on or from your node are not running or have stopped running.

Action: Restart your network or protocol services on this platform. If error persists, contact Oracle Customer Support.

TNS-00540: SSL protocol adapter failure

Cause: The SSL protocol adapter encountered an error.

Action: In most cases, this error should only be pair with a more meaningful ORA- error.

TNS-00541: underlying transport does not exist.

Cause: The SSL protocol adapter was unable to locate an adapter for the protocol that it is going to use as the data transport.

Action: In most cases, the underlying transport is TCP. Make sure that the Oracle Net TCP/IP adapter was installed.

TNS-00542: SSL Handshake failed

Cause: The SSL protocol adapter was unable to connect to another process.

Action: This error can be caused by a variety of problems including the termination of the peer process. Enable Oracle Net tracing and attempt the connection again. The trace file should give some clues as to what the exact problem is.

TNS-00543: internal error

Cause: The SSL protocol adapter encountered an unexpected error.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00544: unsupported operation

Cause: The SSL adapter could not perform a given command.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00545: parameter retrieval failure

Cause: The SSL protocol adapter was not able to retrieve a configuration parameter for some reason.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00546: control failure

Cause: The SSL protocol adapter was unable to perform a command.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00547: user information retrieval failed

Cause: The SSL protocol adapter was unable to retrieve information about the remote user.

Action: Examine the first error in the error stack. It should describe the error in more detail.

TNS-00548: value specified for client authentication parameter is not boolean

Cause: The value specified for the parameter that specifies that SSL client authentication is to be used was not boolean.

Action: Specify a correct value for the parameter.

TNS-00549: value specified for the SSL version is not valid

Cause: The value specified for the SSL version is not valid.

Action: Specify a valid value for the SSL version.

TNS-00550: disconnection error

Cause: The SSL protocol adapter encountered an error when the underlying transport disconnected.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00551: underlying transport connection failed

Cause: The underlying transport adapter used by the SSL adapter failed to connect.

Action: Enable Oracle Net tracing and try the connection again. If the connection fails, examine the trace file to determine the cause.

TNS-00552: no valid cipher suites were specified

Cause: SSL cipher specs were specified, but none were valid.

Action: Specify correct cipher suites.

TNS-00553: read failed

Cause: The SSL adapter failed to read data from its connection.

Action: Examine the contents of sqlnet.log for more information. Enable Oracle Net tracing and try the connection again. If the connection fails, examine the trace file to determine the cause.

TNS-00554: write failed

Cause: The SSL adapter failed to send data over its connection.

Action: Examine the contents of sqlnet.log for more information. Enable Oracle Net tracing and try the connection again. If the connection fails, examine the trace file to determine the cause.

TNS-00555: no directory specified for wallet resource locator

Cause: It was specified that a file was to be used from which to retrieve a wallet, but no directory was specified for the wallet.

Action: Specify the directory where the wallet is located.

TNS-00556: no method specified for wallet retrieval

Cause: A wallet resource locator was specified, but no method was given for the retrieval of the wallet.

Action: Specify the method by which the method is to be retrieved.

TNS-00557: unsupported wallet retrieval method

Cause: The method specified for wallet retrieval is not supported. Currently, only files are supported for wallet retrieval.

Action: Specify "FILE" as the wallet retrieval method.

TNS-00558: Entrust login failed

Cause: Entrust failed to authenticate the username, password, and/or profile name that was presented.

Action: Specify correct values for the username, password or profile name. If no data was prompted for, contact Oracle support.

TNS-00559: load of Entrust certificate failed

Cause: An error occurred while attempting to validate the provided Entrust certificate.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00560: extraction of name from Entrust certificate failed

Cause: An error occurred while attempting to extract a name from an Entrust certificate.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00563: could not parse SSL_CIPHER_SUITES

Cause: An error occurred while attempting to parse SSL_CIPHER_SUITES in sqlnet.ora.

Action: Check the value of SSL_CIPHER_SUITES specified in sqlnet.ora. For further details, turn on tracing and reexecute the operation.

TNS-00565: SSL protocol adapter failed to locate wallet

Cause: An error occurred while attempting to locate wallet for SSL/TLS

Action: Check and ensure that the parameter `WALLET_LOCATION` is correctly specified in `sqlnet.ora`. For further details, turn on tracing and reexecute the operation.

TNS-00566: SSL protocol adapter failed to open wallet

Cause: An error occurred while attempting to open wallet for SSL/TLS

Action: Check and ensure that the parameter `WALLET_LOCATION` is correctly specified in `sqlnet.ora`. For further details, turn on tracing and reexecute the operation.

TNS-00580: Read failed due to closed or invalid transport connection

Cause: Read attempt was made on a transport connection which was previously terminated or is somehow deemed to be invalid.

Action: Indicates a substantial transport level failure. Check the O/S configuration for the particular transport or contact the transport provider. For further details, turn on tracing and reexecute the operation.

TNS-00581: Send failed due to timeout

Cause: The send operation did not complete within the allowed time interval.

Action: Error is informational. Note, repeated receipt of this error could indicate an attempted Denial-Of-Service attack. Also, if the receipt of this error interferes w/ a customer's normal operations, the customer may wish to lengthen the timeout.

TNS-00582: Receive failed due to timeout

Cause: The receive operation did not complete within the allowed time interval.

Action: Error is informational. Note, repeated receipt of this error could indicate an attempted Denial-Of-Service attack. Also, if the receipt of this error interferes w/ a customer's normal operations, the customer may wish to lengthen the timeout.

TNS-00583: Valid node checking: unable to parse configuration parameters

Cause: Valid node checking was unable to parse the configuration due to syntactical errors.

Action: Ensure that the configuration syntax matches the Oracle reference manual documented syntax. For further details, turn on tracing and reexecute the operation.

TNS-00584: Valid node checking configuration error

Cause: Valid node checking specific Oracle Net configuration is invalid.

Action: Ensure the hosts specified in the "invited_nodes" and "excluded_nodes" are valid. For further details, turn on tracing and reexecute the operation.

TNS-00586: Operation aborted due to interruption

Cause: The operation is aborted because it is interrupted by the upper layer.

Action: None

TNS-00587: Invalid HTTP response or response parse error.

Cause: HTTP upgrade response got either invalid HTTP Status line or the response headers are invalid.

Action: Please turn on network trace for further diagnosis.

TNS-00588: Invalid HTTP request or request parse error.

Cause: HTTP upgrade request got either invalid HTTP request line or the request headers are invalid.

Action: Please turn on network trace for further diagnosis.

TNS-00589: Websocket upgrade request failed

Cause: HTTP upgrade failed either because the server does not support or the request cannot be fulfilled at this time.

Action: Please turn on network trace for further diagnosis. Look for full HTTP response reason code in the network trace file.

TNS-00597: Connection rejected - Rate Limit exceeded

Cause: IP Rate limit exceeded.

Action: IP will be unblocked after the specified block time.

TNS-00601: Windows service not running

Cause: The operation could not be completed because requested service is not available or running.

Action: Create and start the windows service and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-01000: spawn [<listener_name>] <spawn_alias> [<(ARGUMENTS='arg0, arg1,...')>]\n

Cause: Control program usage message.

Action: None

TNS-01001: start [<listener_name>] : start listener\n

Cause: Control program usage message.

Action: None

TNS-01002: stop [<listener_name>] : stop listener\n

Cause: Control program usage message.

Action: None

TNS-01003: status [<listener_name>] : get the status of listener\n

Cause: Control program usage message.

Action: None

TNS-01004: reload [<listener_name>] : reload the parameter files and SIDs\n

Cause: Control program usage message.

Action: None

TNS-01005: trace OFF | USER | ADMIN | SUPPORT [<listener_name>] : set tracing to the specified level\n

Cause: Control program usage message.

Action: None

TNS-01006: set password : set the password for subsequent calls\n

Cause: Control program usage message.

Action: None

TNS-01007: quit | exit : exit LSNRCTL\n

Cause: Control program usage message.

Action: None

TNS-01008: version [<listener_name>] : get the version information of the listener\n

Cause: Control program usage message.

Action: None

TNS-01009: service [<listener_name>] : get the service information of the listener\n

Cause: Control program usage message.

Action: None

TNS-01010: stats [<instance_name>] : get the statistics of the listener\n

Cause: Control program usage message.

Action: None

TNS-01013: set|show trc_{ } [value]: set|show trace parameters of current listener\n

Cause: Control program usage message.

Action: None

TNS-01014: set|show log_{ } [value]: set|show log parameters of current listener\n

Cause: Control program usage message.

Action: None

TNS-01015: set|show parm_name [value]: sets|shows current listener parm values\n

Cause: Control program usage message.

Action: None

TNS-01016: change_password [<listener_name>]: changes the password of the listener\n

Cause: Control program usage message.

Action: None

TNS-01017: set|show current_listener [<listener_name>]: sets|shows current listener\n

Cause: Control program usage message.

Action: None

TNS-01018: save_config [<listener_name>]: saves configuration changes to parameter file\n

Cause: Control program usage message.

Action: None

TNS-01019: set rawmode ON | OFF: set output mode for services and status commands\n

Cause: Control program usage message.

Action: None

TNS-01020: STATUS of the LISTENER\n

Cause: Control program status message.

Action: None

Cause: Listener logging message.

Action: None

TNS-01099: *string * string * string * string * number*

Cause: Listener logging message.

Action: None

TNS-01100: TNS returned error *number* when attempting to start the listener

Cause: The bequeath (BEQ) mechanism that LSNRCTL uses to start the listener failed.

Action: If NS error code 12538 is also returned then the BEQ driver is not installed; call Oracle Worldwide Support as the BEQ driver should always be installed. If this is not the problem then the error is probably caused by the fact that the TNSLSNR executable cannot be found in the place expected in your platform's ORACLE environment. Verify that the full pathname of the TNSLSNR executable as displayed by LSNRCTL is correct.

TNS-01101: Could not find listener name or service name *string*

Cause: The listener name or service name could not be resolved by name-lookup.

Action: Verify that the listener name or service name specified to LSNRCTL has the correct name and address defined in LISTENER.ORA or in TNSNAMES.ORA.

TNS-01102: TNS application contacted was not the listener

Cause: Another TNS application such as the Interchange was listening at the address contacted. There may be another TNS application listening at the address contacted and the data returned is not in the appropriate format.

Action: Verify that the listener name or service name specified to LSNRCTL has the correct name and address defined in LISTENER.ORA or in TNSNAMES.ORA.

TNS-01103: Protocol specific component of the address is incorrectly specified

Cause: The ADDRESS used to contact the listener is not correctly specified. This error occurs because the address fails to specify the destination of the listener. The address is well formed (for example, there are no missing parentheses) but it is missing a protocol specific component. For example, this is the error returned when the HOST component is missing from a TCP/IP address string.

Action: Edit the ADDRESS in LISTENER.ORA to include the required protocol-specific keywords. For more information about the keywords required by different protocol adapters, see the Oracle operating system specific documentation for your platform.

TNS-01106: Listener using listener name *string* has already been started

Cause: Another listener is already listening on one of the ADDRESSes specified.

Action: Shutdown the previous listener specified by the listener name before starting this one.

TNS-01107: A valid trace level was not specified

Cause: Failed to specify a valid trace level for the LSNRCTL trace command.

Action: Specify one of OFF, USER, ADMIN, or SUPPORT. Type "LSNRCTL help trace" for more information or consult Chapter 2 of this manual for an introduction to the concepts of tracing.

TNS-01108: Listener password prompt failed

Cause: Password not entered via tty

Action: Enter the listener password on a tty device

TNS-01109: Listener password encryption failed

Cause: Possibly garbled password entered

Action: Re-enter the listener password, using valid ASCII characters. If problem persists, contact Oracle Customer Support.

TNS-01110: Mismatch - password unchanged

Cause: New password and reentered new password are different"

Action: Re-enter the listener password, make sure that New password and reentered new password are the same

TNS-01111: Log status can either be ON or OFF

Cause: Failed to specify a log status value for the LSNRCTL log_status command.

Action: Specify one of ON or OFF. Type "LSNRCTL help set log_status" for more information or consult Chapter 2 of this manual for an introduction to the concepts of logging.

TNS-01112: Plug and play can either be ON or OFF

Cause: Failed to specify a valid value for the LSNRCTL use_plugandplay command.

Action: Specify one of ON or OFF. Type "LSNRCTL help set use_plugandplay" for more information.

TNS-01113: save_config_on_stop can either be ON or OFF

Cause: Failed to specify a valid value for the LSNRCTL save_config_on_stop command.

Action: Specify one of ON or OFF. Type "LSNRCTL help set save_config_on_stop" for more information.

TNS-01114: LSNRCTL could not perform local OS authentication with the listener

Cause: LSNRCTL failed to obtain system resources (heap memory, or shared memory) needed to perform local OS authentication with the listener.

Action: Make sure that system resources like shared memory and heap memory are available for LSNRCTL tool to execute properly.

TNS-01115: OS error *string* creating shared memory segment of *string* bytes with key *string*

Cause: The shared memory segment could not be created as requested. For example, a segment with the provided key may already exist, or the size may be outside of system allowed range.

Action: Use the error code to determine the exact cause of the problem. In certain cases the problem may be resolved by adjusting the system-imposed limits such as the maximum number of allowed shared memory segments, or their maximum and minimum sizes. In other cases, resources need to be freed up first for the operation to succeed.

TNS-01116: Listener alias name given as connect identifier is too long

Cause: The listener alias name you were attempting to resolve was too long.

Action: The maximum length of a listener alias name is 255 bytes; this limit has been exceeded. Use a smaller listener alias name.

TNS-01117: Invalid argument was specified for stop command

Cause: Failed to specify a valid argument for the LSNRCTL stop command.

Action: Make sure a valid argument is specified with stop command.

TNS-01150: The address of the specified listener name is incorrect

Cause: The address on which the listener attempted to listen contains a syntax error.

Action: For the listener name or service name specified to LSNRCTL, check that the address or connect descriptor is well-formed. You can find the listener name in LISTENER.ORA, or you can access the listener through the service name in TNSNAMES.ORA.

TNS-01151: Missing listener name, *string*, in LISTENER.ORA

Cause: The listener could not find the listener name specified.

Action: Make sure valid addresses on which to listen are specified for the listener name in LISTENER.ORA.

TNS-01152: All addresses specified for the listener name, *string*, failed

Cause: The listener failed to listen on any of the specified addresses.

Action: Make sure that another application is not listening on the addresses specified or check that the appropriate protocol adapters are installed. Turn on tracing and execute again for more information.

TNS-01153: Failed to process string: *string*

Cause: The string specified is not well-formed.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-01154: SID detected in old format that is no longer supported

Cause: One of the SIDs was specified in an obsolete format.

Action: Check LISTENER.ORA for a line of the form: *sid* = (SID=(ORACLE_HOME=<oracle_home>)) OR *sid* = (SID_DESC=(ORACLE_HOME=<oracle_home>)) The above format is no longer supported and SID_LIST_<listener_name> format described in the Oracle9i Net Services Reference

Guide should be used. For example, SID_LIST_LISTENER =
(SID_LIST=(SID_DESC=(SID_NAME=*sid*)(ORACLE_HOME=<oracle_home>)))

TNS-01155: Incorrectly specified SID_LIST_string parameter in LISTENER.ORA

Cause: SID_LIST_<listener_name> in LISTENER.ORA has an error in it.

Action: Be sure this parameter is specified as described in the Oracle9i Net Services Reference Guide. For example, SID_LIST_LISTENER =
(SID_LIST=(SID_DESC=(SID_NAME=*sid*)(ORACLE_HOME=<oracle_home>)))

TNS-01156: Missing or inappropriate PROTOCOL, TIMEOUT or POOL_SIZE parameter from PRESPAWN_DESC

Cause: PRESPAWN_DESC in each SID_DESC does not have required fields.

Action: Be sure the parameters required for PRESPAWN_DESC are specified in each SID_DESC. For example, SID_LIST_LISTENER =
(SID_LIST=(SID_DESC=(SID_NAME=*sid*)(PRESPAWN_MAX=5)
(ORACLE_HOME=<oracle_home>)(PRESPAWN_DESC=(PROTOCOL=tcp)
(POOL_SIZE=10)(TIMEOUT=30)))) Add or correct these parameters in the LISTENER.ORA file

TNS-01157: Can only listen on number addresses - ignoring string

Cause: Too many addresses were given to listen on.

Action: Reduce the number of addresses to listen on and use another listener to listen on the remaining addresses.

TNS-01158: Internal connection limit reached, preventing dispatcher from connecting

Cause: The internal Oracle Net connection list is full. Too many dispatchers are connected to the listener; therefore, no more dispatchers are allowed to connect.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-01159: Internal connection limit has been reached; listener has shut down

Cause: The internal Oracle Net connection list is full. The listener is configured to use too many Oracle Net connections.

Action: Reduce the number of listen addresses or services connected to the listener. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-01160: Trace level was not specified

Cause: Failed to specify a trace level for the trace command.

Action: Specify one of OFF, USER, ADMIN, or SUPPORT. Users should not see this error if LSNRCTL is being used.

TNS-01161: Spawn alias string was not found. Check listener parameter file

Cause: The alias specified to spawn a program was not found in LISTENER.ORA.

Action: This is not seen in normal use of Oracle Net.

TNS-01162: Syntax error in the address resolved from the spawn alias: string

Cause: The alias specified to spawn a program was not a valid NVstring.

Action: This is not seen in normal use of Oracle Net.

TNS-01163: Failed to spawn process: *string*

Cause: The process failed to start correctly.

Action: This is not seen in normal use of Oracle Net.

TNS-01164: No spawn alias sent to listener

Cause: The spawn command was issued without an alias.

Action: This is not seen in normal use of Oracle Net.

TNS-01165: Spawn alias has no program name set in it

Cause: The spawn alias in LISTENER.ORA is incorrectly specified.

Action: This is not seen in normal use of Oracle Net.

TNS-01166: Listener rejected registration or update of service ACL

Cause: Received registration or update information could not be processed because it was invalid, or an internal error occurred.

Action: Not normally visible to the user. For further details, turn on tracing and restart the instance. If error persists, contact Oracle

TNS-01167: The command *string* is not supported by the listener contacted

Cause: The listener does not recognize the command.

Action: This is caused when a newer version of LSNRCTL contacts an old listener. Upgrade listener if executing this command is important.

TNS-01168: Cannot allocate memory

Cause: Sufficient memory could not be allocated to perform the desired activity.

Action: Either free some resource for TNS, or add more memory to the machine. For further details, turn on tracing and reexecute the operation.

TNS-01169: The listener has not recognized the password

Cause: The listener has the password security mechanism enabled and requires the correct password to execute any command other than VERSION. The user attempted to issue one of the privileged administrative commands, but could not be successfully authenticated with the password provided.

Action: If an authorized user is attempting the command, then use the SET PASSWORD command at the LSNRCTL prompt with the listener password. If you do not know the password, then you are trying to execute an inappropriate command.

TNS-01170: Event detection broke for address: *string*

Cause: The event detection mechanism for the address specified returned an error.

Action: Future attempts to detect events on this address will fail. The listener will deallocate the listen address and connections will no longer be accepted for this address. This error is not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-01171: Event detection broke for dispatcher: *string*

Cause: The event detection mechanism for the dispatcher specified returned an error.

Action: Future attempts to detect events on this dispatcher will fail. The listener will deallocate the dispatcher and connections will no longer be redirected to this dispatcher. This error is not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-01172: Listener has shut down since all listen addresses have been deallocated

Cause: The event detection mechanism broke and caused all listen addresses to be removed.

Action: Error 1170 has occurred and caused all the listen addresses to be deallocated. Since all the listen addresses have been removed, no more connections can be established to this listener so it shuts itself down. This error is not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-01173: Missing or inappropriate PRESPAWN_MAX parameter from SID_DESC

Cause: PRESPAWN_MAX in each SID_DESC does not have required fields.

Action: Be sure the parameters required for PRESPAWN_DESC are specified in each SID_DESC. For example, SID_LIST_LISTENER =
(SID_LIST=(SID_DESC=(SID_NAME=*sid*)(PRESPAWN_MAX=15)
(ORACLE_HOME=<oracle_home>)(PRESPAWN_DESC=(PROTOCOL=tcp)
(POOL_SIZE=10)(TIMEOUT=30)))) Add or correct these parameters in the LISTENER.ORA file

TNS-01174: The sum of the POOL_SIZES from each PRESPAWN_DESC is greater than the PRESPAWN_MAX

Cause: The minimum value for PRESPAWN_MAX should be the sum of the POOL_SIZES.

Action: Be sure the parameters required for PRESPAWN_DESC are specified in each SID_DESC. For example, SID_LIST_LISTENER =
(SID_LIST=(SID_DESC=(SID_NAME=*sid*)(PRESPAWN_MAX=15)
(ORACLE_HOME=<oracle_home>)(PRESPAWN_DESC=(PROTOCOL=tcp)
(POOL_SIZE=10)(TIMEOUT=30))(PRESPAWN_DESC=(PROTOCOL=ipc)
(POOL_SIZE=5)(TIMEOUT=15)))) Add or correct these parameters in the LISTENER.ORA file

TNS-01175: Password unchanged

Cause: Unable to set the new password

Action: Be sure to see that the new password has legal ASCII characters. Try to set the password again.

TNS-01176: Error in loading the new parameter value

Cause: Illegal values given for the parameters

Action: Make sure that the parameter values are valid refer to the manual for the legal values for parameters

TNS-01177: Log Status is OFF. Log file/directory unchanged

Cause: Log status needs to be set ON for changing the log file

Action: use command set log_status ON to set the log status of the listener ON.

TNS-01178: Trace Level is 0. Trace file/directory unchanged

Cause: Trace Level needs to be set for changing the trace file/directory

Action: use command `set trc_level ON` to set the trace level

TNS-01179: Listener cannot load instance class "*string*"

Cause: Instance tried to register as a class unknown to listener.

Action: check LISTENER.ORA and/or instance configuration, and reference platform documentation to find the instance classes available for the listener on this platform.

TNS-01180: Missing listener object *string* in Directory Server

Cause: The listener could not find the listener object specified.

Action: Make sure the listener object is present in the Directory Server.

TNS-01181: Internal registration connection limit reached

Cause: The number of registration connections has reached the maximum. No more registrations are allowed until some of the existing registration connections are completed.

Action: Disconnect existing registration connections if they are no longer needed.

TNS-01182: Listener rejected registration of service "*string*"

Cause: Received registration information could not be processed because it was invalid, or an internal error occurred.

Action: Not normally visible to the user. For further details, turn on tracing and restart the instance. If error persists, contact Oracle Customer Support.

TNS-01183: Listener rejected registration or update of instance "*string*"

Cause: Received registration or update information could not be processed because it was invalid, or an internal error occurred.

Action: Not normally visible to the user. For further details, turn on tracing and restart the instance. If error persists, contact Oracle Customer Support.

TNS-01184: Listener rejected registration or update of service handler "*string*"

Cause: Received registration or update information could not be processed because it was invalid, or an internal error occurred.

Action: Not normally visible to the user. For further details, turn on tracing and restart the instance. If error persists, contact Oracle Customer Support.

TNS-01185: Registration attempted from a remote node

Cause: It was determined that the registering instance is not located on the same node as the listener. It is required that the instance be colocated with the listener for this type of service registration.

Action: Check the configuration of the registering instance. Ensure that `local_listener` parameter specifies only local listeners. Use `remote_listener` parameter to specify remote listeners.

TNS-01186: Client connection was dropped based on a filtering rule

Cause: Listener was configured with a filtering rule which explicitly specified that the client connection should be terminated without returning an error to the client.

Action: Modify the filtering rules if the client should be allowed access to the requested service.

TNS-01187: No proxy service handler available

Cause: One of the following conditions has occurred: - the proxy service was not registered - the proxy service was registered, but was blocking new connections - all of the registered proxy service handlers were blocking new connections

Action: If the proxy service is not registered it may need to be restarted. If the proxy service handlers are busy and not accepting new connections more of them may need to be started to handle the load.

TNS-01188: Listener cannot operate with incompatible transport protocols

Cause: Listener was configured with multiple listening addresses with different and incompatible transport protocols. Listener cannot operate efficiently in such configuration.

Action: Modify the existing listener configuration by removing the listening address that caused the error. Configure a separate listener to listen on this address.

TNS-01189: The listener could not authenticate the user

Cause: The user attempted to issue a privileged administrative command, but could not be successfully authenticated by the listener using the local OS authentication mechanism. This may occur due to one of the following reasons: 1. The user is running a version of LSNRCTL that is lower than the version of the listener. 2. The user is attempting to administer the listener from a remote node. 3. The listener could not obtain the system resources needed to perform the authentication. 4. The local network connection between the listener and LSNRCTL was terminated unexpectedly during authentication message exchange, such as if LSNRCTL program was suddenly aborted. 5. The communication between the listener and LSNRCTL is being intercepted by a malicious user. 6. The software that the user is running is not following the authentication protocol, indicating a malicious user.

Action: Make sure that administrative commands are issued using the LSNRCTL tool that is of a version equal or greater than the version of the listener, and that the tool and the listener are running on the same node. You can issue the VERSION command to find out the version of the listener. If a malicious user is suspected, use the information provided in the listener log file to determine the source and nature of the requests. Enable listener tracing for more information. If the error persists, contact Oracle Support Services.

TNS-01190: The user is not authorized to execute the requested listener command

Cause: Most of the listener administrative commands are only intended to be issued by privileged users, for example DBAs or system administrators. If the listener password is not set, then the listener only accepts administrative requests from LSNRCTL running with the same OS credentials, or running as a local administrator (also referred to as super user).

Action: If an authorized user is attempting the command, then make sure that LSNRCTL is executed with the same OS user credentials as the running listener, or as a local administrator.

TNS-01191: Failed to initialize the local OS authentication subsystem

Cause: Initialization of the security subsystem failed during listener startup or reload. The listener could not obtain system resources (memory, or file descriptors) needed for local OS authentication security mechanism.

Action: Make sure that system resources like shared memory and heap memory are available for listener to execute properly. For further details, turn on tracing and execute the operation again. If the error persists, contact Oracle Support Services.

TNS-01192: Missing SID_LIST_ value left of equation for SID description in LISTENER.ORA

Cause: SID description in LISTENER.ORA had an error in it.

Action: Make sure the lines of code in LISTENER.ORA containing SID_DESC or SID begin with SID_LIST_ <listener_name> on the left side of the equation. For example,
SID_LIST_LISTENER=(SID_LIST=(SID_DESC=(SID_NAME=sid)
(ORACLE_HOME=<oracle_home>)))

TNS-01193: Listener cannot operate with specified secure transport

Cause: Listener was configured with transport protocols which are either invalid or none of the secure transport protocols are present in listening addresses.

Action: Modify the existing listener configuration by specifying a valid transport protocol in secure transport list.

TNS-01194: The listener command did not arrive in a secure transport

Cause: Most of the listener administrative commands are only intended to be issued in a secure transport, which are configured in secure_control_ parameter. If the parameter is set, then the listener accepts administrative requests only on those secure transports.

Action: Make sure the command is issued using a transport specified in secure transport list.

TNS-01196: Unable to initialize GSM IPC channel

Cause: IPC API returned an error

Action: Not normally visible to the user. For further details, turn on tracing and restart the instance. If error persists, contact Oracle Support Services.

TNS-01197: Listener failed to create the end point

Cause: Internal error. Unable to get subnet mask for the ip address.

Action: OS failure. Turn on tracing for further details

TNS-01198: Listener failed to initialize valid node list

Cause: VNCR options are not properly initialized in listener.ora or OS API failed.

Action: Check VNCR options i.e. valid_node_checking_for_registration, registration_invited_nodes, registration_excluded_nodes in listener.ora For further details, turn on tracing.

TNS-01199: Warning! Different databases have registered the same service

Cause: Different databases have registered the same service.

Action: In a multitenant container database (CDB) setup, this error indicates the usage of identical Oracle Net service name by multiple CDBs. The default Oracle Net service name for a pluggable database (PDB) in a CDB is derived from PDB name, so ensure that multiple

CDBs registering with the same listener are not using identical PDB names. However, this error can be safely ignored if the usage of identical Oracle Net service name across multiple databases is intentional.

TNS-01200: The listener must be `suid root`

Cause: The ownership privileges of the `TNSLSNR` executable are incorrect.

Action: Contact your DBA or system administrator to change the ownership of the file to be `suid root` and restart the listener. This action is necessary because the user that started the process should claim ownership.

TNS-01201: Listener cannot find executable *string* for SID *string*

Cause: The executable for the Oracle dedicated server process cannot be found.

Action: Check the appropriate `SID_DESC` in `LISTENER.ORA` to make sure that the `ORACLE_HOME` component is pointing to a valid location. If this component is not set, then check the value of the `ORACLE_HOME` environment variable.

TNS-01202: Missing the dba group (*string*) specified by `DBA_GROUP` in `SID_DESC`

Cause: The dba group specified is missing from `/ETC/GROUP`.

Action: Check the `DBA_GROUP` parameter in the `SID_DESC` in `LISTENER.ORA` and verify it has a valid entry in `/ETC/GROUP`.

TNS-01203: Missing the account (*string*) specified by `DEFAULT_USER_ACCOUNT` in `SID_DESC`

Cause: The unprivileged OS account is missing from `/etc/passwd`.

Action: Check the `DEFAULT_USER_ACCOUNT` parameter in the `SID_DESC` in `LISTENER.ORA` and verify it has a valid entry in `/etc/passwd`. This is the account that the Oracle shadow process will be started with if the the connecting client has database privileges or does not exist on this machine.

TNS-01204: Unprivileged account (*string*) is in dba group (*string*)

Cause: The unprivileged account has DBA privileges. The unprivileged account specified by `DEFAULT_USER_ACCOUNT` in the `SID_DESC` in `LISTENER.ORA` is a member of the dba group specified by `DBA_GROUP` in `SID_DESC`. The unprivileged account cannot belong to the dba group because this would be a security violation with `OP$` logins.

Action: Remove the unprivileged account from the dba group.

TNS-01205: HTTP Services configuration error

Cause: HTTP Services configuration missing in config files.

Action: Configure with right parameters.

TNS-01206: Missing required HTTP headers

Cause: HTTP headers needed for HTTP Services missing in request.

Action: Ensure sending required HTTP headers.

TNS-01207: No HTTP X-Forwarded header

Cause: Missing X-Forwarded HTTP header.

Action: Ensure sending X-Forwarded HTTP headers with service name as prefix.

TNS-01208: No HTTP ORCL_NQNET_EDB_NAME or X-DB-SERVICE header

Cause: Missing ORCL_NQNET_EDB_NAME HTTP or X-DB-SERVICE header.

Action: Ensure sending ORCL_NQNET_EDB_NAME HTTP header with engine db name.
For SCAN listener ensure X-DB-SERVICE header.

TNS-01209: No (protocol=tcps) in HTTP Services listening address.

Cause: TLS/tcps protocol is mandatory for HTTP Services.

Action: Set protocol=tcps and set wallet in configuration.

TNS-01210: HTTP Parsing error.

Cause: Invalid HTTP message.

Action: Ensure all required valid HTTP headers are sent.

TNS-01211: HTTP Headers not received or in-complete.

Cause: Invalid/Insufficient HTTP headers.

Action: Send correct/valid required HTTP headers.

TNS-01212: HTTP Handler not found.

Cause: HTTP handler not found.

Action: Make sure services registered with HTTP handler.

TNS-01213: Outbound HTTP Handler creation error.

Cause: Creation of outbound HTTP handler failed.

Action: Ensure HTTP Handlers are registered with Listener.

TNS-01250: Failed to get ADR Path for trace/alert directory

Cause: The diagnosability API to get the service path returned an error

Action: None

TNS-01251: Cannot set trace/log directory under ADR

Cause: ADR trace and log directories cannot be set by the user.

Action: None

TNS-01300: \nERROR at *string*\n

Cause: Listener logging message.

Action: None

TNS-01301: TNS error structure:

Cause: Listener logging message.

Action: None

TNS-01302: nr err code: *number*

Cause: Listener logging message.

Action: None

TNS-01303: ns main err code: *number*

Cause: Listener logging message.

Action: None

TNS-01304: ns secondary err code: *number*

Cause: Listener logging message.

Action: None

TNS-01305: nt main err code: *number*

Cause: Listener logging message.

Action: None

TNS-01306: nt secondary err code: *number*

Cause: Listener logging message.

Action: None

TNS-01307: nt OS err code: *number*

Cause: Listener logging message.

Action: None

TNS-01308: *string * string * numberstring*

Cause: Listener logging message.

Action: None

TNS-01309: *string * string * string * string * numberstring*

Cause: Listener logging message.

Action: None

TNS-01351: Listener failed to initialize log suppress node list

Cause: log suppress nodes options are not properly initialized in listener.ora.

Action: Check LOG_SUPPRESS_NODES in listener.ora For further details, turn on tracing.

TNS-01352: Failed to create conduit with *string*

Cause: The listener could not create conduit with the listener name specified for migration.

Action: Make sure valid address is used or specified listener is running. For further details, turn on tracing.

TNS-01353: Failed to inherit listen endpoint

Cause: The listener could not inherit listen endpoint from the listener name specified for migration.

Action: Make sure valid address is used or specified listener is running. For further details, turn on tracing.

TNS-01354: Rule list syntax is inappropriate

Cause: The provided rule list syntax is not correct

Action: Make sure that the rule list syntax is appropriate.

TNS-01355: No NAT endpoint configured in listener.ora

Cause: Listener not able to find out where to connect to get NAT mapping

Action: Configure NAT_END_POINT_*listener alias* with NAT Proxy address

TNS-01356: Connection attempt to NAT Proxy server failed

Cause: Connection attempt failed.

Action: Ensure NAT Proxy host and port are reachable from this machine

TNS-01357: Failed to receive data from NAT Proxy

Cause: Reading from NAT Proxy connection failed

Action: Ensure NAT Proxy can respond to NAT Proxy requests. Use OPC Request ID from log file for further information.

TNS-01358: XML Parser initialization failure

Cause: Failed to create XML Context"

Action: Enable network tracing for further information"

TNS-01359: Too big response from NAT Proxy

Cause: Buffer is insufficient to read full data sent by NAT Proxy

Action: Ensure NAT Proxy is responding as expected.

TNS-01360: HTTP error

Cause: NAT Proxy sent HTTP error

Action: Ensure NAT Proxy is responding as expected. See log for further details.

TNS-01361: Unexpected HTTP response

Cause: No NAT IP in NAT Proxy HTTP response

Action: Use OPC Request ID from log file for further information.

TNS-01362: Unexpected REDIRECT packet from SCAN

Cause: Unexpected REDIRECT packet from SCAN

Action: Ensure SCAN is working as expected

TNS-01363: HTTP Parsing error

Cause: Not able to parse HTTP response from NAT Proxy

Action: Ensure NAT Proxy is responding as expected.

TNS-01364: No NEXT_HOP configured

Cause: Not able to find SCAN end point to connect.

Action: Ensure NEXT_HOP_*listener alias* or NEXT_HOP in service alias

TNS-01365: SCAN Connect error

Cause: Failed to connect SCAN.

Action: Ensure SCAN host and port is reachable from this machine.

TNS-01366: No OCID configured

Cause: Not able to find OCID in listener.ora or in service alias

Action: Ensure OCID_*listener alias* in listener.ora or OCID in service alias.

TNS-01367: No HTTP headers

Cause: No HTTP headers are received or illegal HTTP headers

Action: Ensure client sends valid HTTP headers

TNS-01400: Instance "*string*"\t\t has *number* handlers.

Cause: Control program status message.

Action: None

TNS-01401: Class: *string*

Cause: Control program status message.

Action: None

TNS-01427: Goodness : *string*, Delta : *string*

Cause: Goodness and Delta values for a Service Instance

Action: None

TNS-01428: *number days number hr. number min. number sec*\n

Cause: Control program status message.

Action: None

TNS-01429: Invalid options used or missing arguments/options

Cause: Wrong options/arguments used.

Action: Check options if they are correct and are in correct order.

TNS-01430: Could not find instance name or service name

Cause: The instance name or service name given is not present.

Action: Check the name. Check if the instance/service with that name is running.
Check if there is atleast one instance/service running

TNS-01441: Number of filtering rules currently in effect: *number*

Cause: Control program status message

Action: None

TNS-01442: No filtering rules currently in effect.

Cause: Control program status message

Action: None

TNS-02020: set displaymode RAW | COMPAT | NORMAL | VERBOSE: output mode for lsnrctl display

Cause: Control program usage message.

Action: None

TNS-02021: DIRECT_HANDOFF can be either ON or OFF.

Cause: Invalid value for the LSNRCTL direct_handoff parameter.

Action: Specify one of ON or OFF.

TNS-02022: show rules: Show rules that are currently in effect

Cause: Control program usage message.

Action: None

TNS-02023: shutdown [<listener_name>] : shutdown all non-admin endpoints of listener

Cause: Control program usage message.

Action: None

TNS-02024: servacl [<listener_name>] : get the service ACLs information of the listener

Cause: Control program usage message.

Action: None

TNS-02025: tenantkey [<listener_name>] : get the service tenantkey information of the listener

Cause: Control program usage message.

Action: None

TNS-02401: gdbname *string* too long, allowed *number* characters

Cause: gdbname or domain name too long.

Action: Check the gdbname parameter in listener.ora, shorten it.

TNS-02402: Bad CLBGNAMEs parameter in tnsnames.ora

Cause: CLBGNAMEs parameter in tnsnames.ora is bad.

Action: Check the CLBGNAMEs parameter format and correct it. Make sure that the tnsnames.ora file is there.

TNS-02403: Bad alias *string* or alias not present in tnsnames.ora

Cause: An alias was expected in tnsnames.ora but was not found or was not correctly formed.

Action: Check the tnsnames.ora for the alias and make sure it is correctly formed.

TNS-02404: Service *string* contains no local handlers

Cause: The listener found no suitable handler to redirect to.

Action: Make sure that there is at least one handler for this node.

TNS-02405: GMS call failed, check GMS logs.

Cause: A GMS call made by the listener failed.

Action: Check if the GMS is up and running. See GMS-client trace files for more information.

TNS-02501: Authentication: no more roles

Cause: When a process attempted to retrieve a role from the authentication service, no more were available.

Action: None. This error is used internally and occurs in the normal course of events.

TNS-02502: Authentication: unable to find initialization function

Cause: The native authentication service was unable to call the initialization function for the specified service because it does not exist.

Action: If this service adaptor came directly from Oracle, contact Oracle Customer Support, as this error should never happen. Otherwise, add an initialization function for the service being used.

TNS-02503: Parameter retrieval failed

Cause: The native service layer was unable to retrieve a parameter from a configuration file.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02504: Parameter count retrieval failed

Cause: The native service layer was unable to determine the number of arguments given for a configuration parameter.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02505: Authentication: null context pointer provided

Cause: The function nau_ini() was passed a null pointer as the pointer to the context that it is supposed to use.

Action: Call nau_ini() with a pointer to a context structure.

TNS-02506: Authentication: no type string

Cause: An authentication context structure does not contain a string that describes the authentication service being used.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02507: Encryption: algorithm not installed

Cause: After picking an algorithm, the server was unable to find an index for it in its table of algorithms. This should be impossible because the algorithm was chosen (indirectly) from that list.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-02508: Encryption: server negotiation response in error

Cause: The server's response in negotiation was in error.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-02509: Authentication: invalid process state

Cause: The state in which a process is running does not correspond to any of the values which are valid.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02510: Invalid numeric data type

Cause: The type of a piece of numeric data that was received does not correspond to one of the valid values.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02511: Invalid data type

Cause: The type of a piece of data that was received or to be transmitted did not correspond to any of the correct values.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02512: Invalid status received

Cause: A process received a value as a status flag which was unknown.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02513: Requested data type does not match retrieved type

Cause: A service requested data whose type does not match that of the segment which was sent from the other process.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02514: Invalid packet received

Cause: A process received a data packet which was not meant for the native services layer.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02515: Encryption/crypto-checksumming: unknown control type

Cause: An encryption or crypto-checksumming algorithm "control" function was called, but did not recognize the "type" argument it was given.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-02516: No data available

Cause: A native service attempted to retrieve data but no data was available to be received.

Action: The error is not normally visible as it usually is only used to signal the end of a data stream. If the error becomes visible, enable tracing to reproduce the problem and contact Oracle Customer Support.

TNS-02517: key smaller than requested size

Cause: The key returned by negotiation was smaller than the size requested by some service (either encryption or crypto-checksumming).

Action: The error is not normally visible. If the error persists, enable tracing to reproduce the problem and contact Oracle Customer Support.

TNS-02518: key negotiation error

Cause: An error occurred while the two sides of the connection were negotiating an encryption or crypto-checksumming key.

Action: The error is not normally visible. If the error persists, enable tracing to reproduce the problem and contact Oracle Customer Support.

TNS-02519: no appropriate key-negotiation parameters

Cause: No appropriate key-negotiation parameters are available for the key size requested either by encryption or by crypto-checksumming.

Action: The error is not normally visible. Enable tracing to reproduce the problem and contact Oracle Customer Support.

TNS-02520: encryption/crypto-checksumming: no Diffie-Hellman seed

Cause: The "sqlnet.crypto_seed" parameter is missing from the SQLNET.ORA parameters file.

Action: Add this line to SQLNET.ORA: sqlnet.crypto_seed = "randomly-chosen text"

TNS-02521: encryption/crypto-checksumming: Diffie-Hellman seed too small

Cause: The "sqlnet.crypto_seed" parameter in the SQLNET.ORA parameter file for Oracle Net is too small.

Action: Add more randomly-chosen text to it.

TNS-02524: Authentication: privilege check failed

Cause: An error occurred when the authentication service attempted to verify that a user had a specific database privilege.

Action: This error should not happen normally. Enable tracing and attempt to repeat the error. Contact Customer Support.

TNS-02525: encryption/crypto-checksumming: self test failed

Cause: The encryption/crypto-checksumming service detected an error while running tests on the active encryption or checksumming algorithm.

Action: Contact Customer Support.

TNS-02526: server proxy type does not match client type

Cause: The authentication type selected by the server does not match that picked by the client.

Action: Contact Oracle Customer Support

TNS-03501: OK

Cause: The operation succeeded.

Action: No action necessary.

TNS-03502: Insufficient arguments. Usage: tns ping address [count]

Cause: Some required command-line arguments are missing.

Action: Re-enter the command using the correct arguments.

TNS-03503: Could not initialize NL

Cause: The network library could not be initialized.

Action: This is an internal error which should not normally be visible. Ensure that memory is available to run the application and that there are no other operating system problems, and then attempt the command again.

TNS-03504: Service name too long

Cause: The service name you are attempting to ping is too long.

Action: Re-enter the command using the correct service name.

TNS-03505: Failed to resolve name

Cause: The service name you provided could not be found in TNSNAMES.ORA, an Oracle Names server, or a native naming service.

Action: Verify that you entered the service name correctly. You may need to ensure that the name was entered correctly into the network configuration.

TNS-03506: Failed to create address binding

Cause: The TNSPING utility found the requested address or service name, but received an internal error when trying to use it.

Action: This is an internal error which should not normally be visible. Ensure that memory is available to run the application and that there are no other operating system problems, and then attempt the command again.

TNS-03507: Failure looking for ADDRESS keyword

Cause: The TNS address did not contain an ADDRESS keyword.

Action: If you entered the TNS address on the command line, be sure that the syntax is correct. If you entered a service name on the command line, the address contains the wrong information. You should verify that the information was entered correctly.

TNS-03508: Failed to create address string

Cause: The TNSPING utility received an internal error when generating an address.

Action: This is an internal error which should not normally be visible. Ensure that memory is available to run the application and that there are no other operating system problems, and then attempt the command again.

TNS-03509: OK (*number msec*)

Cause: The operation succeeded, in this amount of time.

Action: No action necessary.

TNS-03510: Failed due to I/O error

Cause: An I/O operation failed, perhaps due to a resource failure or premature window termination.

Action: This is an internal error which should not normally be visible. Do not close the TNSPING window before all I/O operations have completed.

TNS-03511: Used parameter files:\nstring\n

Cause: Prints out the path of the parameter files(sqlnet.ora,tnsnames.ora) used in the process of resolving the NAME.

Action: None

TNS-03512: Used *string* adapter to resolve the alias\n

Cause: Prints out the name of the adapter which resolved the TNS alias.

Action: None

TNS-03513: Attempting to contact *string*\n

Cause: Attempting to contact a given TNS address.

Action: None

TNS-03601: Failed in route information collection

Cause: The route could either not connect, or encountered an unsupported version of Oracle Net.

Action: Check if Oracle Net along all nodes is version 2.3 or greater.

TNS-03602: Insufficient arguments. Usage: *trcroute address*

Cause: Some required command-line arguments are missing.

Action: Re-enter the command using the correct arguments.

TNS-03603: Encountered a node with a version earlier than SQL*Net 2.3

Cause: Versions of SQL*Net before 2.3 do not support trcroute.

Action: Find the node that isn't responding to trcroute.

TNS-04001: *string*

Cause: CMCTL general message.

Action: None

TNS-04002: The command completed successfully.

Cause: Not applicable.

Action: None

TNS-04003: Syntax Error.

Cause: The command issued has a wrong syntax.

Action: Check for the command issue syntax, and correct the problem.

TNS-04004: Unable to encrypt the supplied password.

Cause: The password that was supplied to the ADMINISTER command could not be encrypted.

Action: Change the password to something acceptable. See Oracle Net Services documentation for valid password values.

TNS-04005: Unable to resolve address for *string*.

Cause: The alias name supplied with the ADMINISTER command could not be resolved to an Oracle Connection Manager address.

Action: Check if your an entry for the alias is present in either CMAN.ORA file or in TNSNAMES.ORA file.

TNS-04006: Invalid password

Cause: The password given with the ADMINISTER command could not be verified by the Oracle Connection Manager instance.

Action: Retry with the correct password.

TNS-04007: Internal error *number*.

Cause: Not normally visible to the user.

Action: If error persists, contact Oracle Support Services.

TNS-04008: *string* | *string*

Cause: String parameter value.

Action: None

TNS-04009: *string* | *number*

Cause: Integer parameter value.

Action: None

TNS-04010: Command cannot be issued before the ADMINISTER command.

Cause: A command was issued before administering the Oracle Connection Manager instance.

Action: Enter the ADMINISTER command before retrying this command.

TNS-04011: Oracle Connection Manager instance not yet started.

Cause: A command was issued when Oracle Connection Manager was not yet started or already shutdown.

Action: Start Oracle Connection Manager.

TNS-04012: Unable to start Oracle Connection Manager instance.

Cause: CMCTL was unable to start the Oracle Connection Manager instance. Some of the possible reasons include: cmadmin not present in ORACLE_HOME/bin, Invalid parameter in configuration repository, wrong parameter values, or log directory not present.

Action: 1. Check whether log directory is present, and is writable. Log directory can be found at ORACLE_HOME/network/log, or as specified by the LOG_DIRECTORY parameter in CMAN.ORA. 2. Turn on logging or tracing to get more information about this error. 3. Correct any parameter errors (or mismatched paranthesis), and retry starting Oracle Connection Manager. 4. If the problem persists, contact Oracle Support Services.

TNS-04013: CMCTL timed out waiting for Oracle Connection Manager to start

Cause: Oracle Connection Manager internal registrations have not been completed.

Action: Turn on logging or tracing to get more information about this error. If the problem persists, contact Oracle Support Services.

TNS-04014: Current instance *string* is already started

Cause: An ADMINISTER command was issued to administer an Oracle Connection Manager instance that is already started.

Action: None

TNS-04015: Current instance *string* is not yet started

Cause: An ADMINISTER command was issued to an instance that has not yet been started.

Action: None

TNS-04016: Connecting to *string*

Cause: CMCTL is connecting to the the specified Oracle Connection Manager address.

Action: None

TNS-04017: Please wait. Shutdown in progress.

Cause: A command which cannot be used while Oracle Connection Manager is shutting down was issued.

Action: Wait for some time before retrying the command.

TNS-04018: Instance already started

Cause: The STARTUP command was issued to an instance which was already started.

Action: None

TNS-04019: Starting Oracle Connection Manager instance *string*. Please wait...

Cause: The STARTUP command was issued for an Oracle Connection Manager instance. CMCTL is waiting for the instance to start.

Action: None

TNS-04020: CMCTL Version: *number.number.number.number.number*

Cause: None.

Action: None

TNS-04021: The SET command is unsuccessful for parameter *string*.

Cause: The value set for the parameter was out of range.

Action: See Oracle Net Services documentation for value ranges for the parameters.

TNS-04022: *string* parameter *string* set to *string*.

Cause: Parameter value was successfully set.

Action: None

TNS-04023: Command failed.

Cause: The command issued failed to complete successfully.

Action: Retry command. If problem persists, contact Oracle Support Services.

TNS-04037: Connections refer to *string*.

Cause: The ADMINISTER command resolved to the address in the specified message string.

Action: None

TNS-04044: Specified gateways do not exist.

Cause: One or more specified gateway IDs do not exist.

Action: Specify correct gateway IDs.

TNS-04045: Invalid specification of time

Cause: The time specified with the GT (greater than) option was invalid.

Action: Check Oracle Net Services documentation for valid time specification.

TNS-04046: Invalid specification for source

Cause: The source specified with the FROM option was invalid.

Action: Check Oracle Net Services documentation for valid source specification.

TNS-04047: Invalid specification for destination

Cause: The destination specified with the TO option was invalid.

Action: Check Oracle Net Services documentation for valid destination specification.

TNS-04048: Specified service does not exist.

Cause: The service specified with the FOR option did not exist.

Action: None

TNS-04049: Specified connections do not exist

Cause: One or more connection IDs do not exist.

Action: None

TNS-04050: Invalid specification for gateway ID.

Cause: The gateway ID specified is invalid.

Action: Check Oracle Net Services documentation for a valid gateway ID specification.

TNS-04063: Remote administration disabled in the Oracle Connection Manager instance.

Cause: CMCTL attempted to connect to a remote Oracle Connection Manager instance in which remote administration was disabled.

Action: Set parameter `remote_admin=on` in the remote instance before starting it.

TNS-04064: The number of CMCTL sessions exceeds MAX_CMCTL_SESSIONS.

Cause: The Oracle Connection Manager instance already has MAX_CMCTL_SESSIONS number of CMCTLs connected to it.

Action: Use an already connected CMCTL, or, use a higher value for the parameter MAX_CMCTL_SESSIONS in the CMAN.ORA file.

TNS-04065: The number of remote CMCTL sessions exceeds (MAX_CMCTL_SESSIONS-1)

Cause: The Oracle Connection Manager instance already has (MAX_CMCTL_SESSIONS-1) number of remote CMCTL sessions connected to it.

Action: Use an already connected CMCTL, or, use a higher value for the parameter MAX_CMCTL_SESSIONS in the CMAN.ORA file.

TNS-04066: The following log events can be enabled or disabled:

Cause: None

Action: None

TNS-04067: Number of connections: *number*.

Cause: Either no information qualifier (COUNT/DETAIL) was present in SHOW CONNECTIONS command, or, COUNT was used as the information qualifier.

Action: None

TNS-04068: Cannot start an Oracle Connection Manager instance remotely.

Cause: CMCTL was used to start Oracle Connection Manager instance in a remote host.

Action: Use a local CMCTL to start the Oracle Connection Manager.

TNS-04069: Sleeping for *number* seconds...

Cause: CMCTL is idle for specified seconds. This feature is only provided for testing purposes.

Action: None

TNS-04070: Cannot administer a remote Oracle Connection Manager instance.

Cause: An attempt was made to administer a remote Oracle Connection Manager instance which is not allowed.

Action: Use a local CMCTL session to administer the Oracle Connection Manager instance.

TNS-04071: Connections closed successfully. Number closed: *number*.

Cause: The specified connections were closed successfully.

Action: None

TNS-04072: Unable to suspend atleast one of the gateways.

Cause: CMCTL was unable to suspend one or more gateways. Possible reason could be suspending a gateway that was already suspended or suspending a gateway that was not present.

Action: Turn on tracing and logging, retry operation. Information in the log files would help.

TNS-04073: Passwords do not match.

Cause: The new password and its confirmation do not match

Action: Use SET PASSWORD again.

TNS-04074: Invalid value for the parameter *string*.

Cause: The parameter value set using the SET command is invalid.

Action: See Oracle Net Services documentation for the valid values of the parameter.

TNS-04075: Cannot use ADMINISTER directly from the command line.

Cause: ADMINISTER can only be issued from the CMCTL> prompt.

Action: Use the -c option with any command instead of ADMINISTER.

TNS-04076: Invalid specification for state.

Cause: The state specified with "in" option is invalid.

Action: Check Oracle Net Services documentation for valid state specification.

TNS-04077: WARNING: No password set for the Oracle Connection Manager instance.

Cause: A connection to the Oracle Connection Manager instance was made with no password from the user.

Action: Ignore the warning if the Oracle Connection Manager is secure enough. Otherwise, use SET PASSWORD command to set a new password for the instance.

TNS-04078: Unable to resume atleast one of the gateways.

Cause: CMCTL was unable to resume one or more gateways. Possible reason could be resuming a gateway that was ready for connections, or resuming a gateway that was not present.

Action: Turn on tracing and logging, retry operation. Information in the log files would help.

TNS-04079: Cannot administer Oracle Connection Manager with no CMAN.ORA, and port = *number*.

Cause: CMAN.ORA is not present or address not configured in CMAN.ORA, and the net service name in the TNSNAMES.ORA contains a nondefault Oracle Connection Manager port.

Action: Either change the TNSNAMES.ORA entry to use the default port, or configure the CMAN.ORA file with the Oracle Connection Manager's address.

TNS-04080: Failed to reload

Cause: Oracle Connection Manager failed to reload the new configuration due to errors in the configuration file.

Action: Set log_level to support and retry operation. Error encountered will be logged in the log file of CMADMIN.

TNS-04081: Event groups:

Cause: None

Action: None

TNS-04082: *string event string set to string.*

Cause: Event value was successfully set.

Action: None

TNS-04083: Failed to save password

Cause: Oracle Connection Manager failed to save the password in the configuration file.

Action: Check for the permissions on the configuration file. The file should have WRITE permissions.

TNS-04084: WARNING: Non-reloadable parameters have retained their values.

Cause: Values of non-reloadable parameters were changed, or, one or more non-reloadable parameters having non-default values were added to the parameter file.

Action: See Oracle Net Services documentation for a list of non-reloadable parameters.

TNS-04085: Password not changed since last save.

Cause: Password has not been changed since it was last saved.

Action: None

TNS-04086: Invalid value for the event *string*.

Cause: The event value set using the SET EVENT command is invalid.

Action: See Oracle Net Services documentation for the valid values of the event.

TNS-04087: Unable to shutdown atleast one of the gateways.

Cause: CMCTL was unable to shutdown one or more gateways. Possible reason could be shutting down a gateway that was not present.

Action: Turn on tracing and logging, retry operation. Information in the log files would help.

TNS-04088: Unable to close atleast one of the connections.

Cause: CMCTL was unable to close one or more connections. Possible reason could be closing a connection that was not present.

Action: Turn on tracing and logging, retry operation. Information in the log files would help.

TNS-04089: Alias name too long.

Cause: User entered an alias name that exceeded 64 characters.

Action: Retry with a shorter alias name. Alias names have to be less than 65 characters.

TNS-04090: *string* : *number*

Cause: Integer parameter value.

Action: None

TNS-04091: *string* : *string*

Cause: Integer parameter value.

Action: None

TNS-04096: Command not supported in Traffic Director mode.

Cause: This command is not supported by CMAN in Traffic Director mode.

Action: None

TNS-04110: Service *string* added to `http_service_list` of *string*. Check `cmgw` trace file for confirmation.

Cause: Value was supposedly added.

Action: None

TNS-04111: Service *string* deleted from `http_service_list` of *string*. Check `cmgw` trace file for confirmation.

Cause: Value was successfully deleted.

Action: None

TNS-04112: Connection failed with error: *stringnumber*.

Cause: CMCTL could not connect to the specified destination.

Action: Check details of the error. Turn on tracing and logging, retry operation. Information in the log file would help.

TNS-04140: Migration completed successfully.

Cause: CMMIGR has successfully completed the migration of the old CMAN.ORA file to the new format.

Action: None

TNS-04141: Unable to find CMAN.ORA file.

Cause: CMMIGR was not able to find CMAN.ORA file.

Action: Check whether CMAN.ORA file is present in `$TNS_NAME/admin`, or in `$ORACLE_HOME/network/admin`, or in the path specified in the command line.

TNS-04142: CMAN.ORA file has an invalid format.

Cause: CMMIGR was unable to recognize the format of CMAN.ORA file.

Action: Check for the syntax errors in CMAN.ORA file, and correct them.

TNS-04143: Unable to write the new CMAN.ORA file.

Cause: CMMIGR was unable to create the new CMAN.ORA file due to insufficient permissions.

Action: Set WRITE permissions to the directory in which CMAN.ORA file is to be written.

TNS-04144: Nothing to migrate

Cause: CMMIGR did not find anything in the old CMAN.ORA file that has an equivalent in the new format.

Action: None

TNS-04191: invalid CMAN in Traffic Director mode configuration\n

Cause: An attempt was made to connect to CMAN in Traffic Director mode with invalid configuration.

Action: Correct the configuration of CMAN in Traffic Director mode before starting it. Check and correct the wallet credentials and proxy authorization. Check with CMAN in Traffic Director mode admin to get more info from traces and sqlnet.log.

TNS-04201: Trace Assistant Usage ERROR: Missing File name\n

Cause: Trace file name argument is missing

Action: Put the trace file name as the last command line argument for for this tool.

TNS-04202: Trace Assistant Usage ERROR: Not enough arguments \n

Cause: The *file name* and/or the *options* arguments are missing

Action: Put the right number of command line arguments.

TNS-04203: Trace Assistant Usage ERROR: Invalid options \n

Cause: The options provided are not valid

Action: Check the valid options for this tool.

TNS-04204: Trace Assistant Internal ERROR: Couldn't Open trace file\n

Cause: The trace file name given doesn't exist or it is not accessible for this user.

Action: Check the spelling, and permissions of the trace file.

TNS-04205: Trace Assistant Internal ERROR: Memory\n

Cause: Possible memory problem

Action: Verify the amount of available memory on the system.

TNS-04206: Trace Assistant Internal ERROR: Packet Type\n

Cause: The packet type read by trcAsst is not valid.

Action: Verify that your trace file is not corrupted. If trace file looks OK, with not strange characters in it, contact World Wide Support and provide trace file to them.

TNS-04207: Trace Assistant Internal ERROR: Packet Length\n

Cause: The packet being decode is corrupted.

Action: Verify that your trace file is not corrupted. If trace file looks OK, with not strange characters in it, contact World Wide Support and provide trace file to them.

TNS-04208: Trace Assistant Internal ERROR: Fatal\n

Cause: Fatal internal error

Action: Contact World Wide Support.

TNS-04209: Trace Assistant Internal ERROR: Type Error \n

Cause: Internal type error,

Action: Contact World Wide Support.

TNS-04210: Trace Assistant Internal ERROR: End of File\n

Cause: Reaching End of File to soon. Not able to decode trace file. Your trace file appears to be truncated.

Action: Generate another trace file. This trace file can not be decoded.

TNS-04211: Trace Assistant Internal ERROR: CORE\n

Cause: Internal System Error

Action: Contact World Wide Support.

TNS-04212: Trace Assistant Internal ERROR: NACOM Type Error \n

Cause: Not able to decode Network Authentication information

Action: Contact World Wide Support.

TNS-04231: Trace Assistant WARNING: Assuming Oracle trace format\n

Cause: This trace file may not be a Network trace file. The default format (Oracle Trace) will be assumed.

Action: None

TNS-04232: Trace Assistant WARNING: Not retrieving all rows \n

Cause: Trace Assitante won't retrieve all the rows data.

Action: None

TNS-04233: Trace Assistant WARNING: Going beyond Packet length\n

Cause: Trying to read beyond packet length. The trace file may be corrupted

Action: None

TNS-04234: Trace Assistant WARNING: won't decode TTC \n

Cause: Trace assistant does not have enough information to decode TTC data. This maybe an old trace file or from a platform that trace assistant does not understand.

Action: None

TNS-04235: Trace Assistant WARNING: Unknown TTC protocol\n

Cause: Trace Assistant has reached a point in which the TTC protocol can not be understood.

Action: None

TNS-07445: exception encountered: core dump

Cause: Serious error: signal received.

Action: An Incident has been created for this error in the Automatic Diagnostic Repository (ADR). When logging a service request, use the Incident Packaging Service (IPS) from the Support Workbench or the ADR Command Interpreter (ADRCI) to automatically package the relevant trace information.

TNS-12150: TNS:unable to send data

Cause: Unable to send data. Connection probably disconnected.

Action: Reestablish connection. If the error is persistent, turn on tracing and reexecute the operation.

TNS-12151: TNS:received bad packet type from network layer

Cause: Internal error.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12152: TNS:unable to send break message

Cause: Unable to send break message. Connection probably disconnected.

Action: Reestablish connection. If the error is persistent, turn on tracing and reexecute the operation.

TNS-12153: TNS:not connected

Cause: Not currently connected to a remote host.

Action: Reestablish connection.

TNS-12154: TNS:could not resolve the connect identifier specified

Cause: A connection to a database or other service was requested using a connect identifier, and the connect identifier specified could not be resolved into a connect descriptor using one of the naming methods configured. For example, if the type of connect identifier used was a net service name then the net service name could not be found in a naming method repository, or the repository could not be located or reached.

Action: - If you are using local naming (TNSNAMES.ORA file): - Make sure that "TNSNAMES" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA) - Verify that a TNSNAMES.ORA file exists and is in the proper directory and is accessible. - Check that the net service name used as the connect identifier exists in the TNSNAMES.ORA file. - Make sure there are no syntax errors anywhere in the TNSNAMES.ORA file. Look for unmatched parentheses or stray characters. Errors in a TNSNAMES.ORA file may make it unusable. - If you are using directory naming: - Verify that "LDAP" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Verify that the LDAP directory server is up and that it is accessible. - Verify that the net service name or database name used as the connect identifier is configured in the directory. - Verify that the default context being used is correct by specifying a fully qualified net service name or a full LDAP DN as the connect identifier - If you are using easy connect naming: - Verify that "EZCONNECT" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Make sure the host, port and service name specified are

correct. - Try enclosing the connect identifier in quote marks. See the Oracle Net Services Administrators Guide or the Oracle operating system specific guide for more information on naming.

TNS-12155: TNS:received bad datatype in NSWMARKER packet

Cause: Internal error during break handling.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12156: TNS:tried to reset line from incorrect state

Cause: Internal error during break handling.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12157: TNS:internal network communication error

Cause: Internal error during network communication.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12158: TNS:could not initialize parameter subsystem

Cause: Unable to locate parameter file.

Action: Verify that a valid parameter file exists, is readable and contains valid values.

TNS-12159: TNS:trace file not writeable

Cause: The trace file to be generated is not writeable by this user.

Action: If the user does not have write permissions in the directory to which the trace file will be written, contact an administrator to get the proper permissions or set the TRACE_DIRECTORY_CLIENT parameter in the net profile (SQLNET.ORA file) to a directory the user can write to.

TNS-12160: TNS:internal error: Bad error number

Cause: Corrupt error reporting subsystem.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12161: TNS:internal error: partial data received

Cause: The connection may be terminated.

Action: Reconnect and try again. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12162: TNS:net service name is incorrectly specified

Cause: The connect descriptor corresponding to the net service name in TNSNAMES.ORA or in the directory server (Oracle Internet Directory) is incorrectly specified.

Action: If using local naming make sure there are no syntax errors in the corresponding connect descriptor in the TNSNAMES.ORA file. If using directory naming check the information provided through the administration used for directory naming. If using ORACLE_SID, please check if ORACLE_SID is set.

TNS-12163: TNS:connect descriptor is too long

Cause: The connect descriptor corresponding to the net service name specified as the connect identifier is too long. The maximum length for a connect descriptor is 512 bytes and this limit has been exceeded.

Action: Check the net service name's connect descriptor in the local naming file (TNSNAMES.ORA) or in the directory server (Oracle Internet Directory). Use a smaller connect descriptor. If this is not possible, contact Worldwide Customer Support.

TNS-12164: TNS:Sqlnet.fdf file not present

Cause: The sqlnet.fdf file doesn't exist in \$ORACLE_HOME/network/admin.

Action: The sqlnet.fdf file is required for Oracle Tracing to occur. Either install the sqlnet.fdf file in \$ORACLE_HOME/network/admin or turn off tracing in your ORA file.

TNS-12165: TNS:Trying to write trace file into swap space.

Cause: Oracle Trace doesn't allow writing trace information into your swap space.

Action: Oracle Trace cannot write trace information into swap space so either disable tracing or redirect trace files to be written to another area of your disk.

TNS-12166: TNS:Client can not connect to HO agent.

Cause: NVstring contained DESCRIPTION/HO.

Action: Call HO agent from integrating server.

TNS-12168: TNS:Unable to contact LDAP Directory Server

Cause: Cannot contact LDAP directory server to get Oracle Net configuration.

Action: Verify that the directory server is up and accessible from the network. Verify that directory access configuration is correct. For more information see the Oracle Internet Directory Administrators Guide or the Oracle Net Administrators Guide.

TNS-12169: TNS:Net service name given as connect identifier is too long

Cause: The net service name you are attempting to resolve is too long.

Action: The maximum length of a net service name is 255 bytes; this limit has been exceeded. Use a smaller net service name. If this is not possible, contact Worldwide Customer Support.

TNS-12170: TNS:Connect timeout occurred

Cause: The server shut down because connection establishment or communication with a client failed to complete within the allotted time interval. This may be a result of network or system delays; or this may indicate that a malicious client is trying to cause a Denial of Service attack on the server.

Action: If the error occurred because of a slow network or system, reconfigure one or all of the parameters SQLNET.INBOUND_CONNECT_TIMEOUT, SQLNET.SEND_TIMEOUT, SQLNET.RECV_TIMEOUT in sqlnet.ora to larger values. If a malicious client is suspected, use the address in sqlnet.log to identify the source and restrict access. Note that logged addresses may not be reliable as they can be forged (e.g. in TCP/IP).

TNS-12171: TNS:could not resolve connect identifier: *string*

Cause: A connection to a database or other service was requested using a connect identifier, and the connect identifier specified could not be resolved into a connect descriptor using one of the naming methods configured. For example, if the type of connect identifier used was a net service name then the net service name could not be found in a naming method repository, or the repository could not be located or reached.

Action: - If you are using local naming (TNSNAMES.ORA file): - Make sure that "TNSNAMES" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA) - Verify that a TNSNAMES.ORA file exists and is in the proper directory and is accessible. - Check that the net service name used as the connect identifier exists in the TNSNAMES.ORA file. - Make sure there are no syntax errors anywhere in the TNSNAMES.ORA file. Look for unmatched parentheses or stray characters. Errors in a TNSNAMES.ORA file may make it unusable. - If you are using directory naming: - Verify that "LDAP" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Verify that the LDAP directory server is up and that it is accessible. - Verify that the net service name or database name used as the connect identifier is configured in the directory. - Verify that the default context being used is correct by specifying a fully qualified net service name or a full LDAP DN as the connect identifier - If you are using easy connect naming: - Verify that "EZCONNECT" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Make sure the host, port and service name specified are correct. - Try enclosing the connect identifier in quote marks. See the Oracle Net Services Administrators Guide or the Oracle operating system specific guide for more information on naming.

TNS-12196: TNS:received an error from TNS

Cause: The navigation layer received an error from TNS.

Action: See the error log file for the specific TNS error.

TNS-12197: TNS:keyword-value resolution error

Cause: The navigation layer received an error while trying to look up a value for a keyword.

Action: Check the syntax of the connect descriptor.

TNS-12198: TNS:could not find path to destination

Cause: Could not navigate a path through Interchanges to the destination. This error occurs if an invalid community is in the address string, or the address includes a protocol that is not available or the TNSNAV.ORA file does not have a correct CMANAGER address specified or the Interchange is down.

Action: Assure that Interchanges necessary to get to the desired destination are up and have available capacity for an additional connection. Also check that the correct community and protocol have been specified in the CMANAGER address used.

TNS-12200: TNS:could not allocate memory

Cause: Out of memory on machine.

Action: Reconfigure machine to have more storage or run fewer applications while the Interchange is running.

TNS-12201: TNS:encountered too small a connection buffer

Cause: TNS connection buffer supplied by the application was too small to retrieve the data sent back.

Action: Supply a larger connection buffer. If problem persists, call Worldwide Customer Support.

TNS-12202: TNS:internal navigation error

Cause: Internal navigation error.

Action: Not normally visible to the user. For further details contact Worldwide Customer Support.

TNS-12203: TNS:unable to connect to destination

Cause: Invalid address specified or destination is not listening. This error can also occur because of underlying network or network transport problems.

Action: Verify that the net service name you entered was correct. Verify that the ADDRESS portion of the connect descriptor which corresponds to the net service name is correct. Ensure that the destination process (for example the listener) is running at the remote node.

TNS-12204: TNS:received data refused from an application

Cause: The application using Connection Manager refused the connection at the listener.

Action: Make sure that the application listener at the destination is functioning correctly. If it is and the problem persists, contact Worldwide Customer Support.

TNS-12205: TNS:could not get failed addresses

Cause: Internal navigation error.

Action: Not normally visible to the user. For further details contact Worldwide Customer Support.

TNS-12206: TNS:received a TNS error during navigation

Cause: Internal navigation error because of an unexpected TNS error.

Action: Look at the log file to find the TNS error. If necessary, turn on tracing and repeat the operation.

TNS-12207: TNS:unable to perform navigation

Cause: Improperly configured navigation file TNSNAV.ORA.

Action: Check the syntax of the TNSNAV.ORA file on the application's machine, and verify that it lists the correct communities.

TNS-12208: TNS:could not find the TNSNAV.ORA file

Cause: Either the ORACLE environment is not set up correctly, or the TNSNAV.ORA file is not present.

Action: Ensure that the ORACLE environment is set up appropriately on your platform and that a TNSNAV.ORA file is present.

TNS-12209: TNS:encountered uninitialized global

Cause: Application calling navigation routine has not properly configured the global variables. There are no TNSNAV.ORA files available, or they are defective.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12210: TNS:error in finding Navigator data

Cause: Application calling navigation routine has not properly configured the TNSNAV.ORA file.

Action: Check the syntax of the TNSNAV.ORA file.

TNS-12211: TNS:needs PREFERRED_CMANGERS entry in TNSNAV.ORA

Cause: TNSNAV.ORA does not have a PREFERRED_CMANGERS defined.

Action: Add a PREFERRED_CMANGERS entry to the TNSNAV.ORA file.

TNS-12212: TNS:incomplete PREFERRED_CMANGERS binding in TNSNAV.ORA

Cause: The PREFERRED_CMANGERS binding in the client's TNSNAV.ORA file does not have a CMANAGER_NAME specified.

Action: Define the CMANAGER_NAME as part of the PREFERRED_CMANGERS binding. Use of the Oracle Network Manager should eliminate this error.

TNS-12213: TNS:incomplete PREFERRED_CMANGERS binding in TNSNAV.ORA

Cause: The PREFERRED_CMANGERS binding in the client's TNSNAV.ORA file does not have an ADDRESS specified.

Action: Define the ADDRESS as part of the PREFERRED_CMANGERS binding.

TNS-12214: TNS:missing local communities entry in TNSNAV.ORA

Cause: There is no LOCAL_COMMUNITIES entry in TNSNAV.ORA.

Action: Define the LOCAL_COMMUNITIES for this node in the TNSNAV.ORA file.

TNS-12215: TNS:poorly formed PREFERRED_NAVIGATORS Addresses in TNSNAV.ORA

Cause: Address binding for PREFERRED_NAVIGATORS entry is improperly entered. entry.

Action: Check your PREFERRED_NAVIGATORS entry and fix it in TNSNAV.ORA

TNS-12216: TNS:poorly formed PREFERRED_CMANGERS addresses in TNSNAV.ORA

Cause: Address binding for the PREFERRED_CMANGERS entry in the client's TNSNAV.ORA file is improperly entered.

Action: Define the ADDRESS as part of the PREFERRED_CMANGERS binding.

TNS-12217: TNS:could not contact PREFERRED_CMANGERS in TNSNAV.ORA

Cause: There is a syntax error in the PREFERRED_CMANGERS entry, or addresses specified are wrong, or the intended Connection Managers are unavailable.

Action: Check the PREFERRED_CMANGERS entries in the client's TNSNAV.ORA file and correct them or talk with your network administrator to determine if the specified Connection Managers are available. Verify that the Interchanges are active by using the INTCTL STATUS command.

TNS-12218: TNS:unacceptable network configuration data

Cause: Poorly formed network configuration data. For example, a PREFERRED_CMANGERS entry may have an incorrect CMANAGER_NAME in the client's TNSNAV.ORA file. Or an Interchange downtime parameter (TIMEOUT_INTERVAL) on the Navigator may be set to zero in INTCHG.ORA.

Action: Check the entries in TNSNAV.ORA and the Interchange configuration files and correct them. If necessary, talk with your network administrator to determine if the specified Interchanges (Connection Managers) are available and properly configured. Use the Oracle Network Manager to generate the configuration files if necessary.

TNS-12219: TNS:missing community name from address in ADDRESS_LIST

Cause: This error occurs when an ADDRESS_LIST has some ADDRESSES in it that have no COMMUNITY component and others that do have a COMMUNITY component.

Action: Check that in the connect descriptors you are using either all the ADDRESSES have a COMMUNITY component or all do not.

TNS-12221: TNS:illegal ADDRESS parameters

Cause: An illegal set of protocol adapter parameters was specified. In some cases, this error is returned when a connection cannot be made to the protocol transport.

Action: Verify that the destination can be reached using the specified protocol. Check the parameters within the ADDRESS section of TNSNAMES.ORA or in the directory. Legal ADDRESS parameter formats may be found in the Oracle operating system specific documentation or the Oracle Net Administrator's Guide. Protocols that resolve names at the transport layer are vulnerable to this error if not properly configured or names are misspelled.

TNS-12222: TNS:no support is available for the protocol indicated

Cause: The protocol requested in the ADDRESS portion of the connect descriptor identified through the net service name is not available. If the supplied ADDRESS is typographically correct then support for that protocol is not installed.

Action: Install support for the protocol or correct typographical error, as appropriate.
Note: if the supplied address was derived from resolving the net service name, check the address in the appropriate file (TNSNAMES.ORA, LISTENER.ORA) or in the directory server.

TNS-12223: TNS:internal limit restriction exceeded

Cause: Too many TNS connections open simultaneously.

Action: Wait for connections to close and re-try.

TNS-12224: TNS:no listener

Cause: The connection request could not be completed because the listener is not running.

Action: Ensure that the supplied destination address matches one of the addresses used by the listener - compare the TNSNAMES.ORA entry with the appropriate LISTENER.ORA file (or TNSNAV.ORA if the connection is to go by way of an Interchange). Start the listener on the remote machine.

TNS-12225: TNS:destination host unreachable

Cause: Contact can not be made with remote party.

Action: Make sure the network driver is functioning and the network is up.

TNS-12226: TNS:operating system resource quota exceeded

Cause: The current user has exceeded the allotted resource assigned in the operating system.

Action: Acquire more operating system resource, or perform a different function.

TNS-12227: TNS:syntax error

Cause: The supplied connect descriptor contains illegal syntax.

Action: Check the syntax of the connect descriptor in TNSNAMES.ORA.

TNS-12228: TNS:protocol adapter not loadable

Cause: On some platforms (such as Windows) protocol support is loaded at run-time. If the shared library (or DLL) for the protocol adapter is missing or one of its supporting libraries is missing then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will include the name of the shared library (or DLL) that could not be loaded.

TNS-12229: TNS:Interchange has no more free connections

Cause: One or more Interchanges along the path to the destination desired has no more free connections available to be used for this call.

Action: Try again later when the Interchanges are less busy, or contact your network administrator to have him determine which interchange it is, and increase the number of connections available on that interchange.

TNS-12230: TNS:Severe Network error occurred in making this connection

Cause: This error is reported by an interchange which fails to make contact with the destination due to a physical network error while calling a destination.

Action: Try again later when the network service may have been fixed or report the problem to your Network Administrator so that he may fix the problem.

TNS-12231: TNS:No connection possible to destination

Cause: This error is reported by an interchange which fails to find a possible connection along the path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

TNS-12232: TNS:No path available to destination

Cause: This error is reported by an interchange which fails to find a possible path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

TNS-12233: TNS:Failure to accept a connection

Cause: This error is reported by an interchange which fails to accept a connection due to a redirect failure.

Action: Report the problem to your Network Administrator so that he may isolate the interchange problem.

TNS-12234: TNS:Redirect to destination

Cause: This error is reported by an interchange which determines that this interchange is not the right gateway and needs to redirect the connection to another gateway along the path to the destination.

Action: None

TNS-12235: TNS:Failure to redirect to destination

Cause: This error is reported by an interchange which fails to redirect a connection to another interchange along the path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

TNS-12236: TNS:protocol support not loaded

Cause: On some platforms (such as Windows) protocol support is loaded at run-time. If the shared library (or DLL) for the protocol adapter has not been loaded, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that has not been loaded.

TNS-12238: TNS: NT Operaion is aborted

Cause: The NT operation is aborted because it is interrupted by upper layer to cleanup the database session.

Action: None

TNS-12241: TNS: Windows service not running

Cause: The operation could not be completed because requested service is not available or running.

Action: Create and start the windows service before the operation to be performed. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12261: Cannot connect to database. Syntax error in Easy Connect connection string *string*

Cause: A connection to a database or other service was requested using an incorrect Easy Connect connection string.

Action: - Verify that "EZCONNECT" is listed as one of the values of the NAMES.DIRETORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Make sure the host, port and service name specified are correct. - Try enclosing the connect identifier in quote marks.

TNS-12262: Cannot connect to database. Could not resolve hostname *string* in Easy Connect connection string *string*

Cause: A connection to a database or other service was requested using a hostname or Easy Connect connection string but the hostname is invalid and could not be resolved.

Action: - Verify that "EZCONNECT" is listed as one of the values of the NAMES.DIRETORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Make sure the hostname specified is correct. - Try enclosing the connect identifier in quote marks.

TNS-12268: server uses weak encryption/crypto-checksumming version

Cause: Encryption/crypto-checksumming version used by server is not supported by client configuration.

Action: Upgrade the server to use strong version of the encryption and crypto-checksumming adapter. If support for weaker version is needed, add the following to

sqlnet.ora file to allow connections to weak servers: `sqlnet.allow_weak_crypto = true`
CAUTION: This parameter allows insecure network connections between a client and server. Hence, it must not be used unless the server cannot be updated to run stronger version of the encryption and crypto-checksumming adapter. User is strongly advised to consider the implications of this parameter before configuring it to allow weak connections.

TNS-12269: client uses weak encryption/crypto-checksumming version

Cause: Encryption/crypto-checksumming version used by client is not supported by server configuration.

Action: Upgrade the client to use stronger version of the encryption and crypto-checksumming adapter. If support for weaker version is needed, add the following to sqlnet.ora file to allow connections to weak clients: `sqlnet.allow_weak_crypto_clients = true`
CAUTION: This parameter allows insecure network connections between a client and server. Hence, it must not be used unless the client cannot be updated to run stronger version of the encryption and crypto-checksumming adapter. User is strongly advised to consider the implications of this parameter before configuring it to allow weak connections.

TNS-12270: Client NOT using TCPS protocol to connect to server

Cause: This error is specific to RADIUS authentication. Any connection other than TCPS between DB Client and DB Server cannot use RADIUS authentication.

Action: Use TCPS between DB Client and DB Server to use RADIUS authentication.

TNS-12500: TNS:listener failed to start a dedicated server process

Cause: The process of starting up a dedicated server process failed. The executable could not be found or the environment may be set up incorrectly.

Action: Turn on tracing at the ADMIN level and reexecute the operation. Verify that the ORACLE Server executable is present and has execute permissions enabled. Ensure that the ORACLE environment is specified correctly in LISTENER.ORA. The Oracle Protocol Adapter that is being called may not be installed on the local hard drive. Please check that the correct Protocol Adapter are successfully linked. If error persists, contact Oracle Customer Support.

TNS-12502: TNS:listener received no CONNECT_DATA from client

Cause: No CONNECT_DATA was passed to the listener.

Action: Check that the service name resolved from TNSNAMES.ORA has the CONNECT_DATA component of the connect descriptor.

TNS-12503: TNS:listener received an invalid REGION from client

Cause: Invalid REGION was passed to the listener.

Action: Check the REGION name specified in the CONNECT_DATA component of the connect descriptor.

TNS-12504: TNS:listener was not given the SERVICE_NAME in CONNECT_DATA

Cause: The listener was not configured with a default service and SERVICE_NAME was missing from the CONNECT_DATA received by the listener.

Action: Possible solutions are: - Configure DEFAULT_SERVICE parameter in LISTENER.ORA with a valid service name. Reload the listener parameter file using reload [`<listener_name>`]. This should be done by the LISTENER administrator. - If using a service name, Check that the connect descriptor corresponding to the service name in TNSNAMES.ORA has a SERVICE_NAME or SID component in the CONNECT_DATA.

TNS-12505: Cannot connect to database. SID string is not registered with the listener at string. (CONNECTION_ID=string)

Cause: A listener process initially handles all connections to Oracle Database. The connection request received by the listener specified a system identifier (SID) for an instance (usually a database instance) that either has not yet dynamically registered with the listener or has not been statically configured in the listener's listener.ora configuration file. This error may be a temporary condition that occurs after the listener has started but before the database instance registers with the listener.

Action: Do the following: - Check for mistakes in the specified connection string. - Check that the SID parameter in the connection string or that the tnsnames.ora file connect descriptor specifies an instance known by the listener. - Wait a moment and try to connect again. The database instance registration may not yet be complete. - Use the CONNECTION_ID value to track this connection attempt in trace files for further diagnosis. To find which instances are currently known by the listener, you can: - Ask the Database Administrator. - Review the connection string shown in the cloud service console. - Or, if you have access to the machine where the listener is running, you can run one of the following: * Isnrctl services * Or, when a listener is named in the listener.ora file, run: Isnrctl services <listener_name> * Or, if a Oracle Connection Manager (Oracle CMAN) proxy listener is named in the cman.ora file, run: cmctl show services -c <cman_name>

TNS-12506: TNS:listener rejected connection based on service ACL filtering

Cause: The client is not present in Service Access Control List.

Action: Add the client's address in Service ACL.

TNS-12508: TNS:listener could not resolve the COMMAND given

Cause: The COMMAND given to listener is not supported.

Action: This is not seen in normal use of Oracle Net.

TNS-12509: TNS:listener failed to redirect client to service handler

Cause: The dispatcher terminated unexpectedly

Action: Attempt to connect again and if the same error occurs, contact the DBA to check the state of the dispatchers for this SID. If the problem persists, turn on tracing in the listener to determine the TNS error caused by the redirect.

TNS-12510: TNS:database temporarily lacks resources to handle the request

Cause: The dispatchers appear to be busy handling other requests.

Action: Attempt the connection again. If error persists, ask the DBA to increase the number of dispatchers and/or dispatchers' limit on number of connections/sessions that they can accept.

TNS-12511: TNS:service handler found but it is not accepting connections

Cause: The dispatchers notified the listener that they temporarily do not accept new connections.

Action: Attempt the connection again. If error persists, contact the DBA to check the state of the dispatchers and/or ask him to increase the number of dispatchers.

TNS-12513: TNS:service handler found but it has registered for a different protocol

Cause: The dispatchers registered for this service are connected to the listener by way of a different network protocol than that of the client.

Action: Contact the DBA to register a dispatcher on your protocol.

TNS-12514: TNS:listener does not currently know of service requested in connect descriptor

Cause: The listener received a request to establish a connection to a database or other service. The connect descriptor received by the listener specified a service name for a service (usually a database service) that either has not yet dynamically registered with the listener or has not been statically configured for the listener. This may be a temporary condition such as after the listener has started, but before the database instance has registered with the listener.

Action: - Wait a moment and try to connect a second time. - Check which services are currently known by the listener by executing: `lsnrctl services listener name` - Check that the `SERVICE_NAME` parameter in the connect descriptor of the net service name used specifies a service known by the listener. - If an easy connect naming connect identifier was used, check that the service name specified is a service known by the listener. - Check for an event in the listener.log file.

TNS-12515: TNS:listener could not find a handler for this presentation

Cause: None of the listener's known service handlers are registered as supporting the presentation protocol required by the connecting client.

Action: Check that the destination service is configured to accept the presentation protocol.

TNS-12516: TNS:listener could not find available handler with matching protocol stack

Cause: None of the known and available service handlers for the given `SERVICE_NAME` support the client's protocol stack: transport, session, and presentation protocols.

Action: Check to make sure that the service handlers (e.g. dispatchers) for the given `SERVICE_NAME` are registered with the listener, are accepting connections, and that they are properly configured to support the desired protocols.

TNS-12518: TNS:listener could not hand off client connection

Cause: The process of handing off a client connection to another process failed.

Action: Turn on listener tracing and re-execute the operation. Verify that the listener and database instance are properly configured for direct handoff. If problem persists, call Oracle Support.

TNS-12519: TNS:no appropriate service handler found

Cause: The listener could not find any available service handlers that are appropriate for the client connection.

Action: Run "`lsnrctl services`" to ensure that the instance(s) have registered with the listener, and are accepting connections.

TNS-12520: TNS:listener could not find available handler for requested type of server

Cause: None of the known and available service handlers for requested type of server (dedicated or shared) are appropriate for the client connection.

Action: Run "`lsnrctl services`" to ensure that the instance(s) have registered with the listener and that the appropriate handlers are accepting connections.

TNS-12521: TNS:listener does not currently know of instance requested in connect descriptor

Cause: The listener received a request to establish a connection to a database or other service. The connect descriptor received by the listener specified in addition to the service name an instance name for an instance (usually a database instance) that either has not yet dynamically registered with the listener or has not been statically configured for the listener. This may be a temporary condition such as after the listener has started, but before the database instance has registered with the listener.

Action: - Wait a moment and try to connect a second time. - Check which instances are currently known by the listener by executing: `lsnrctl services listener_name` - Check that the `INSTANCE_NAME` parameter in the connect descriptor specifies an instance name known by the listener. - Check for an event in the listener.log file.

TNS-12522: TNS:listener could not find available instance with given INSTANCE_ROLE

Cause: There are not any available and appropriate database instances registered with the listener, that are part of the service identified by `SERVICE_NAME` given in the connect descriptor and that have the specified `INSTANCE_ROLE` (and `INSTANCE_NAME`, if specified).

Action: Check to make sure that the `INSTANCE_ROLE` specified is correct. Run "lsnrctl services" to ensure that the instance(s) have registered with the listener and that they are ready to accept connections.

TNS-12523: TNS:listener could not find instance appropriate for the client connection

Cause: The listener could not find any available (database) instances, that are appropriate for the client connection.

Action: Run "lsnrctl services" to ensure that the instance(s) are registered with the listener, and have status `READY`.

TNS-12524: TNS:listener could not resolve HANDLER_NAME given in connect descriptor

Cause: The `HANDLER_NAME` in the `CONNECT_DATA` was not found in the listener's tables for the specified `SERVICE_NAME` and `INSTANCE_NAME`.

Action: Check to make sure that the `HANDLER_NAME` specified is correct.

TNS-12525: TNS:listener has not received client's request in time allowed

Cause: The listener disconnected the client because the client failed to provide the necessary connect information within the allowed time interval. This may be a result of network or system delays; or this may indicate that a malicious client is trying to cause a Denial of Service attack on the listener.

Action: If the error occurred because of a slow network or system, reconfigure `INBOUND_CONNECT_TIMEOUT` to a larger value. If a malicious client is suspected, use the address in listener.log to identify the source and restrict access. Turn on tracing for more information.

TNS-12526: TNS:listener: all appropriate instances are in restricted mode

Cause: Database instances supporting the service requested by the client were in restricted mode. The Listener does not allow connections to instances in restricted mode. This condition may be temporary, such as during periods when database administration is performed.

Action: Attempt the connection again. If error persists, then contact the database administrator to change the mode of the instance, if appropriate.

TNS-12527: TNS:listener: all instances are in restricted mode or blocking new connections

Cause: All appropriate database instances supporting the service requested by the client reported that they either were in restricted mode or were blocking the new connections. The Listener does not allow connections to such instances. This condition may be temporary, such as at instance startup.

Action: Attempt the connection again. If error persists, then contact the database administrator to check the status of the instances.

TNS-12528: TNS:listener: all appropriate instances are blocking new connections

Cause: All instances supporting the service requested by the client reported that they were blocking the new connections. This condition may be temporary, such as at instance startup.

Action: Attempt the connection again. If error persists, then contact the administrator to check the status of the instances.

TNS-12529: TNS:connect request rejected based on current filtering rules

Cause: Connection Manager and its listener were configured with filtering rules specifying that the connect request be rejected.

Action: If this connect request should be allowed, then contact the administrator to modify the filtering rules.

TNS-12530: TNS:listener: rate limit reached

Cause: Listener has reached connection or service rate limit and hence rejected the connection.

Action: Attempt the connection again. If the error occurs frequently, contact the database administrator to increase connection or service rate limit.

TNS-12531: TNS:cannot allocate memory

Cause: Sufficient memory could not be allocated to perform the desired activity.

Action: Either free some resource for TNS, or add more memory to the machine. For further details, turn on tracing and reexecute the operation.

TNS-12532: TNS:invalid argument

Cause: An internal function received an invalid parameter.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12533: TNS:illegal ADDRESS parameters

Cause: An illegal set of protocol adapter parameters was specified. In some cases, this error is returned when a connection cannot be made to the protocol transport.

Action: Verify that the destination can be reached using the specified protocol. Check the parameters within the ADDRESS section of TNSNAMES.ORA. Legal ADDRESS parameter formats may be found in the Oracle operating system specific documentation for your platform. Protocols that resolve names at the transport layer (such as DECnet object names) are vulnerable to this error if not properly configured or names are misspelled.

TNS-12534: TNS:operation not supported

Cause: An internal function received a request to perform an operation that is not supported (on this machine).

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12535: TNS:operation timed out

Cause: The requested operation could not be completed within the time out period.

Action: Look at the documentation on the secondary errors for possible remedy. See SQLNET.LOG to find secondary error if not provided explicitly. Turn on tracing to gather more information.

TNS-12536: TNS:operation would block

Cause: An internal operation did not commence because to do so would block the current process and the user has requested that operations be non-blocking.

Action: None needed; this is an information message.

TNS-12537: TNS:connection closed

Cause: "End of file" condition has been reached; partner has disconnected.

Action: None needed; this is an information message.

TNS-12538: TNS:no such protocol adapter

Cause: The protocol adapter requested (by way of the "(PROTOCOL=..)" keyword-value pair in a TNS address) is unknown. If the supplied address is typographically correct then the protocol adapter is not installed.

Action: Install the protocol adapter or correct typographically error, as appropriate.

Note: if the supplied address was derived from resolving the service name, check the address in the appropriate file (TNSNAMES.ORA, LISTENER.ORA or SQLNET.ORA).

TNS-12539: TNS:buffer over- or under-flow

Cause: Buffer too small for incoming data or too large for outgoing data.

Action: This restriction (which is associated with CONNECT DATA) is not normally visible to the user. For further details, turn on tracing and reexecute the operation; contact Oracle Customer Support.

TNS-12540: TNS:internal limit restriction exceeded

Cause: Too many TNS connections open simultaneously.

Action: Wait for connections to close and re-try.

TNS-12541: TNS:no listener

Cause: The connection request could not be completed because the listener is not running.

Action: Ensure that the supplied destination address matches one of the addresses used by the listener - compare the TNSNAMES.ORA entry with the appropriate LISTENER.ORA file (or TNSNAV.ORA if the connection is to go by way of an Interchange). Start the listener on the remote machine.

TNS-12542: TNS:address already in use

Cause: Specified listener address is already being used.

Action: Start your listener with a unique address.

TNS-12543: TNS:destination host unreachable

Cause: Contact can not be made with remote party.

Action: Make sure the network driver is functioning and the network is up.

TNS-12544: TNS:contexts have different wait/test functions

Cause: Two protocol adapters have conflicting wait/test functions.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12545: Connect failed because target host or object does not exist

Cause: The address specified is not valid, or the program being connected to does not exist.

Action: Ensure the ADDRESS parameters have been entered correctly; the most likely incorrect parameter is the node name. Ensure that the executable for the server exists (perhaps "oracle" is missing.) If the protocol is TCP/IP, edit the TNSNAMES.ORA file to change the host name to a numeric IP address and try again.

TNS-12546: TNS:permission denied

Cause: User has insufficient privileges to perform the requested operation.

Action: Acquire necessary privileges and try again.

TNS-12547: TNS:lost contact

Cause: Partner has unexpectedly gone away, usually during process startup.

Action: Investigate partner application for abnormal termination. On an Interchange, this can happen if the machine is overloaded.

TNS-12548: TNS:incomplete read or write

Cause: A data send or receive failed.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12549: TNS:operating system resource quota exceeded

Cause: The current user has exceeded the allotted resource assigned in the operating system.

Action: Acquire more operating system resource, or perform a different function.

TNS-12550: TNS:syntax error

Cause: The supplied connect descriptor contains illegal syntax.

Action: Check the syntax of the connect descriptor in TNSNAMES.ORA.

TNS-12551: TNS:missing keyword

Cause: The supplied connect descriptor is missing one or more TNS keywords.

Action: Check the syntax, and ensure all required keywords are present.

TNS-12552: TNS:operation was interrupted

Cause: An internal operation was interrupted and could not complete.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12554: TNS:current operation is still in progress

Cause: An internal operation is still in progress.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12555: TNS:permission denied

Cause: User has insufficient privileges to perform the requested operation.

Action: Acquire necessary privileges and try again.

TNS-12556: TNS:no caller

Cause: TNS detected an incoming connect request but there was no caller.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12557: TNS:protocol adapter not loadable

Cause: On some platforms (such as OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter is missing or one of its supporting libraries is missing then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will include the name of the shared library (or DLL) that could not be loaded.

TNS-12558: TNS:protocol adapter not loaded

Cause: On some platforms (such as OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter has not been loaded, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that has not been loaded.

TNS-12560: TNS:protocol adapter error

Cause: A generic protocol adapter error occurred.

Action: Check addresses used for proper protocol specification. Before reporting this error, look at the error stack and check for lower level transport errors. For further details, turn on tracing and reexecute the operation. Turn off tracing when the operation is complete.

TNS-12561: TNS:unknown error

Cause: A generic protocol error occurred.

Action: For further details, turn on tracing and reexecute the operation.

TNS-12562: TNS:bad global handle

Cause: Internal error - bad 'gbh' argument passed to TNS from caller. System may have been linked with old libraries.

Action: Not normally visible to the user, contact Oracle Customer Support.

TNS-12563: TNS:operation was aborted

Cause: NT operation was interrupted by the upper layer.

Action: None

TNS-12564: TNS:connection refused

Cause: The connect request was denied by the remote user (or TNS software).

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation.

TNS-12566: TNS:protocol error

Cause: An unexpected TNS protocol error has occurred.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12569: TNS:packet checksum failure

Cause: The data received is not the same as the data sent.

Action: Attempt the transaction again. If the error is persistent, turn on tracing and reexecute the operation.

TNS-12570: TNS:packet reader failure

Cause: An error occurred during a data receive.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12571: TNS:packet writer failure

Cause: An error occurred during a data send.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12574: TNS:Application generated error

Cause: This error was generated by peer application. Please see secondary errors for the actual cause.

Action: Action should be taken on secondary error.

TNS-12575: TNS:dhctx busy

Cause: The handoff over a dhctx failed as dhctx was already busy with an ongoing handoff.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12576: TNS:handoff not supported for this session

Cause: Handoff of an established session was attempted which either had tcps as its transport or NA options were enabled for this session.

Action: Check the transport setting as well as NA options. If error persists, contact Oracle Customer Support.

TNS-12578: TNS:wallet open failed

Cause: An error was encountered while trying to open the specified wallet.

Action: For further details, turn on tracing and re-execute the operation.

TNS-12579: TNS:transport connection failed

Cause: An error was encountered while trying to create transport connection.

Action: Likely reasons include host may be down, outbound transport connection may be blocked by network or any other transport connectivity issue. If error persists, contact Oracle Customer Support.

TNS-12582: TNS:invalid operation

Cause: An internal function received an invalid request.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12583: TNS:no reader

Cause: A send operation has been requested but partner has already disconnected.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12585: TNS:data truncation

Cause: A receive operation has completed with insufficient data to satisfy the user's request.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12589: TNS:connection not bequeathable

Cause: An attempt to hand-off a connection from one process to another has failed because the protocol provider does not support it.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12590: TNS:no I/O buffer

Cause: An attempt to perform an I/O operation failed because no buffer was available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12591: TNS:event signal failure

Cause: The TNS software is unable to signal an event occurrence.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12592: TNS:bad packet

Cause: An ill-formed packet has been detected by the TNS software.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12593: TNS:no registered connection

Cause: An attempt to solicit network event activity has failed because no connections are registered for event notification.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12595: TNS:no confirmation

Cause: TNS is unable to get requested confirmation acknowledgment from remote partner.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12596: TNS:internal inconsistency

Cause: TNS has detected an internal inconsistency.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12597: TNS:connect descriptor already in use

Cause: Internal error - illegal use of connect descriptor.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12598: TNS:banner registration failed

Cause: The registration of a product banner with the Oracle server failed.

Action: This is an error which is not normally visible externally. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

TNS-12599: TNS:cryptographic checksum mismatch

Cause: The data received is not the same as the data sent.

Action: Attempt the transaction again. If error persists, check (and correct) the integrity of your physical connection.

TNS-12600: TNS: string open failed

Cause: The creation of a string in ORACLE NLS format failed.

Action: This is an internal error, enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

TNS-12601: TNS:information flags check failed

Cause: The TNS information flags set by the process prior to connection negotiation were not present after the negotiation was finished.

Action: This is an internal error. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

TNS-12602: TNS: Connection Pooling limit reached

Cause: The operation failed because maximum active current connections has been reached. It may not be a real error when the Connection Pooling feature is enabled. It is possible that the application later reissues the operation and successfully grabs the connection pool slot and proceeds.

Action: This is an internal error. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

TNS-12606: TNS: Application timeout occurred

Cause: A network session did not reach an application-defined stage within the allowed time interval.

Action: This is an error which does not normally appear at the high level. The action to take is application specific, and is detailed in the higher level error description.

TNS-12607: TNS: Connect timeout occurred

Cause: A network session did not reach a predefined connect stage within the allowed time interval.

Action: This is an error which does not normally appear at the high level. The action to take is application specific, and is detailed in the higher level error description.

TNS-12608: TNS: Send timeout occurred

Cause: The send or write operation did not complete within the allowed time interval.

Action: Check if the peer host is available. Increase the send timeout value if necessary.

TNS-12609: TNS: Receive timeout occurred

Cause: The receive or read operation did not complete within the allowed time interval.

Action: Check if the peer host is available. Increase the receive timeout value if necessary.

TNS-12611: TNS:operation is not portable

Cause: Attempted operation is not portable.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12612: TNS:connection is busy

Cause: Attempted operation failed because it conflicts with an ongoing action or status of the connection.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12615: TNS:preempt error

Cause: A request to service an event failed because no event notification has yet been posted.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12616: TNS:no event signals

Cause: The operation failed because the type of data specified is unknown.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12618: TNS:versions are incompatible

Cause: The two machines are running incompatible versions of TNS.

Action: Check the version numbers, and upgrade the machine with the smaller one.

TNS-12619: TNS:unable to grant requested service

Cause: The connect request failed because requested service could not be provided by the local TNS software.

Action: If appropriate, reexecute with reduced service requirements.

TNS-12620: TNS:requested characteristic not available

Cause: The connect request failed because a requested transport characteristic could not be supported by the remote TNS software.

Action: If appropriate, reexecute with reduced requirements.

TNS-12622: TNS:event notifications are not homogeneous

Cause: An attempt to register a connection for event notification failed because the event notification type conflicts with existing registrations.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12623: TNS:operation is illegal in this state

Cause: Connection is half-duplex and a full-duplex operation was attempted.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12624: TNS:connection is already registered

Cause: An attempt to register a connection for event notification failed because the connection is already registered.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12625: TNS:missing argument

Cause: An operation failed because an argument was missing"

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12626: TNS:bad event type

Cause: An attempt to register a connection for event notification failed because the event type is unknown.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12628: TNS:no event callbacks

Cause: An attempt to register a connection for event notification failed because asynchronous callbacks are not available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12629: TNS:no event test

Cause: An attempt to register a connection for event notification failed because the ability to test for events is not available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12630: Native service operation not supported

Cause: An operation requested by a user is not supported by the native services component.

Action: This may be an internal error if the operation should have been supported.

TNS-12631: Username retrieval failed

Cause: The authentication service failed to retrieve the name of a user.

Action: Enable tracing to determine which routine is failing.

TNS-12632: Role fetch failed

Cause: The authentication service failed to retrieve one of the user's roles.

Action: Enable tracing to determine which routine is failing.

TNS-12633: No shared authentication services

Cause: The list of authentication services specified by the user does not match those supported by the process.

Action: Either specify another list or relink the executable with the desired services.

TNS-12634: Memory allocation failed

Cause: Process was unable to allocate memory.

Action: Terminate other processes in order to reclaim needed memory.

TNS-12635: No authentication adapters available

Cause: The executable was not linked with any authentication service adapters but the sqlnet.ora parameter that determines whether or not authentication is required was set to true.

Action: Either disable the parameter or relink the executable with service adapters.

TNS-12636: Packet send failed

Cause: A process was unable to send a packet to another process. Possible causes are: 1. The other process was terminated. 2. The machine on which the other process is running went down. 3. Some other communications error occurred.

Action: If the cause is not obvious, contact Oracle Customer Support.

TNS-12637: Packet receive failed

Cause: A process was unable to receive a packet from another process. Possible causes are: 1. The other process was terminated. 2. The machine on which the other process is running went down. 3. Some other communications error occurred.

Action: If the cause is not obvious, contact Oracle Customer Support.

TNS-12638: Credential retrieval failed

Cause: The authentication service failed to retrieve the credentials of a user.

Action: Enable tracing to determine the exact error.

TNS-12639: Authentication service negotiation failed

Cause: No match was found between the types of authentication services that the client supports and those that the server is using.

Action: Possible solutions: 1. Change the entry in sqlnet.ora that determines which services are to be used. 2. Relink the client with at least one of the authentication service adapters that the server supports. 3. Relink the server with at least one of the authentication service adapters that the client supports. 4. Disable authentication on both the client and server.

TNS-12640: Authentication adapter initialization failed

Cause: The function specified in the authentication table entry for the service failed.

Action: Enable tracing to determine the exact error.

TNS-12641: Authentication service failed to initialize

Cause: The authentication service failed during initialization.

Action: Enable tracing to determine the exact error.

TNS-12642: No session key

Cause: A process has no session key associated with it because the authentication service being used does not use one.

Action: If a session key is required, use another authentication service.

TNS-12643: Client received internal error from server

Cause: The client process received an error from the server that indicated that an internal Oracle Net native services error had occurred.

Action: Enable tracing on both processes and attempt to recreate the problem. If successful in recreating the problem, contact Oracle Customer Support.

TNS-12644: Kerberos ticket has expired.

Cause: An expired Kerberos ticket was used in an authentication attempt.

Action: Run "okinit" to renew the ticket.

TNS-12645: Parameter does not exist.

Cause: A sqlnet.ora parameter from which a value was needed does not exist.

Action: Set the parameter in the parameter file.

TNS-12646: Invalid value specified for boolean parameter

Cause: The value specified for a parameter was set to a value other than true/false or on/off.

Action: Correct the value of the parameter.

TNS-12647: Authentication required

Cause: The parameter that controls whether authentication is required was set to true, but the executable does not have an authentication service linked in.

Action: Either re-link the executable with an authentication service adapter or disable the parameter.

TNS-12648: Encryption or data integrity algorithm list empty

Cause: A list-of-algorithms parameter was empty, e.g. "()".

Action: Change the list to contain the name of at least one installed algorithm, or remove the list entirely if every installed algorithm is acceptable.

TNS-12649: Unknown encryption or data integrity algorithm

Cause: A list-of-algorithms parameter included an algorithm name that was not recognized.

Action: Either remove that algorithm name, correct it if it was misspelled, or install the driver for the missing algorithm.

TNS-12650: No common encryption or data integrity algorithm

Cause: The client and server have no algorithm in common for either encryption or data integrity or both.

Action: Choose sets of algorithms that overlap. In other words, add one of the client's algorithm choices to the server's list or vice versa.

TNS-12651: Encryption or data integrity algorithm unacceptable

Cause: The algorithm the server chose to use for encryption or data integrity was not one of the choices acceptable to the client. This is either the result of an internal error, of a network data transmission error, or of deliberate tampering with the transmitted data.

Action: For further details, turn on tracing, re-execute the operation, and contact Oracle Customer Support.

TNS-12652: String truncated

Cause: Not enough memory was allocated for a string so it had to be truncated

Action: If it is OK that the string is truncated, then it is not an error. Otherwise, call the routine that reported the error again with a larger string buffer.

TNS-12653: Authentication control function failed

Cause: The control function utilized by the authentication service driver failed.

Action: Enable tracing to determine the exact error.

TNS-12654: Authentication conversion failed

Cause: The authentication service was unable to convert the credentials of a user from the format specific to the format into the ORACLE format.

Action: Enable tracing to determine the exact error.

TNS-12655: Password check failed

Cause: The authentication service being used was unable to verify the provided password.

Action: Enable tracing to determine the exact error.

TNS-12656: Cryptographic checksum mismatch

Cause: The cryptographic checksum received with a packet of incoming data didn't match the checksum computed by the receiving end. This indicates that the packet was tampered with or otherwise corrupted in transit.

Action: Look for sources of data corruption, perhaps including deliberate tampering.

TNS-12657: No algorithms installed

Cause: The near side of the connection required the use of a service (either encryption or checksumming) when no algorithms for that service were installed.

Action: Remove the "ON" requirement for that service.

TNS-12658: ANO service required but TNS version is incompatible

Cause: A client process that is running an earlier version of TNS attempted to connect but the connection failed because the server process required that an ANO service (authentication, encryption, etc.) be used.

Action: Relink the calling executable and retry the connection or eliminate the requirement that the service be used on the server side.

TNS-12659: Error received from other process

Cause: An error was received by one or more services from the process on the other side of the connection.

Action: Enable tracing to determine the exact error(s). The error(s) is (are) not returned directly because an error generated by a server may not make sense on the client side and vice-versa.

TNS-12660: Encryption or crypto-checksumming parameters incompatible

Cause: One side of the connection specified "REQUIRED" for encryption or crypto-checksumming, while the other side specified "REJECTED".

Action: Change the "REQUIRED" side to "REQUESTED" if the you want encryption or crypto-checksumming to be optional, or change the "REJECTED" side to "ACCEPTED" if you do not want the service to be optional.

TNS-12661: Protocol authentication to be used

Cause: The authentication service has determined that the Oracle Net transport protocol in use is to be utilized to authenticate a user's identity.

Action: This error is used solely to communicate information between the authentication service and the Oracle Net session layer and should not normally be visible. If the error is seen, contact Oracle Worldwide Support.

TNS-12662: proxy ticket retrieval failed

Cause: The authentication adapter used by Oracle Net failed to retrieve the credentials needed to authenticate a database link.

Action: Enable tracing to determine the exact error.

TNS-12663: Services required by client not available on the server

Cause: Service(s) that was (were) required by the client process were not available on the server process.

Action: Configure the server with the services required by the client (best solution) or delete the requirement from the configuration file of the client (least secure).

TNS-12664: Services required by server not available on the client

Cause: Service(s) that was (were) required by the server process were not available on the client process.

Action: Configure the client with the services required by the server (best solution) or delete the requirement from the configuration file of the server (least secure).

TNS-12665: NLS string open failed

Cause: A native service was unable to make a string available for use by the National Language Support component.

Action: Make sure the National Language Support component has been properly. If it has, enable tracing and report the problem to Customer Support.

TNS-12666: Dedicated server: outbound transport protocol different from inbound

Cause: The protocol specified for an externally-identified outbound connection from a dedicated server (database link) was not the same as that used for the inbound connection. It is not possible for Oracle Net to authenticate a proxy connection that uses a protocol that is different from that which was used for the connection to the dedicated server.

Action: Specify the same protocol in the Oracle Net connect descriptor for the outbound connection as that used for the inbound connection.

TNS-12667: Shared server: outbound transport protocol different from inbound

Cause: The protocol specified for an externally-identified outbound connection from a shared server (database link) was not the same as that used for the inbound connection. It is not possible for Oracle Net to authenticate a proxy connection that uses a protocol that is different from that which was used for the connection to the shared server.

Action: Specify the same protocol in the Oracle Net connect descriptor for the outbound connection as that used for the inbound connection

TNS-12668: Dedicated server: outbound protocol does not support proxies

Cause: The protocol specified to perform an externally-identified proxy connection (database link) from a dedicated server does not support proxy connections.

Action: Specify a protocol in the Oracle Net connect descriptor used for the connection that does support externally-authenticated proxy connections. NOTE: Because of a limitation in Oracle Net, the protocol used for the proxy connection must be the same as that used for the connection from the client to the server.

TNS-12669: Shared server: outbound protocol does not support proxies

Cause: The protocol specified to perform an externally-identified proxy connection (database link) from a shared server does not support proxy connections.

Action: Specify a protocol in the Oracle Net connect descriptor used for the connection that does support externally-authenticated proxy connections. NOTE: Because of a limitation in Oracle Net, the protocol used for the proxy connection must be the same as that used for the connection from the client to the server.

TNS-12670: Incorrect role password

Cause: A password supplied for a role could not be validated by the authentication service.

Action: Supply the correct password.

TNS-12671: Shared server: adapter failed to save context

Cause: The adapter for the authentication service failed when it tried to save the data needed for proxy connections (database links) through the shared server.

Action: Enable tracing to determine the exact error. Contact Oracle Customer Support if the reason is not obvious.

TNS-12672: Database logon failure

Cause: The authentication service adapter in use encountered an error it attempted to validate the logon attempt of a user.

Action: Enable tracing to determine the exact error encountered by the adapter.

TNS-12673: Dedicated server: context not saved

Cause: A connection was marked as being a proxy connection (database link) from a dedicated server but no inbound context was present.

Action: This error should not normally be visible to the user. Contact Oracle Customer Support.

TNS-12674: Shared server: proxy context not saved

Cause: A connection was marked as being a proxy connection (database link) from a shared server but no inbound context was present.

Action: This error should not normally be visible to the user. Contact Oracle Customer Support.

TNS-12675: External user name not available yet

Cause: The authentication service in use was not able to return the external name of a user of the ORACLE server because it is not available to the service yet.

Action: This is just an informational message and should not normally be visible to the user. If the error does appear, contact Oracle Customer Support.

TNS-12676: Server received internal error from client

Cause: The server process received an error from the client which indicated that an internal Oracle Net native services error had occurred.

Action: Enable tracing on both processes and attempt to recreate the problem. If the problem recurs, contact Oracle Customer Support.

TNS-12677: Authentication service not supported by database link

Cause: The authentication service used by the proxy process (database link) was unable to find the adapter being used by the client in its list of authentication mechanisms.

Action: Specify an authentication adapter that is shared by the client and the server being used for the database link.

TNS-12678: Authentication disabled but required

Cause: The configuration parameters that control whether authentication is disabled or required were both set to TRUE.

Action: Set one or both of the parameters to FALSE.

TNS-12679: Native services disabled by other process but required

Cause: The remote process has disabled native services but the local process requires them.

Action: Enable native services on the remote process or disable them locally.

TNS-12680: Native services disabled but required

Cause: The process has disabled native services but at least one service is required.

Action: Enable native services or change the configuration file so that none of the available services are required.

TNS-12681: Login failed: the SecurID card does not have a pincode yet

Cause: The SecurID card that is used to logon to Oracle, does not have a pincode assigned to it.

Action: Use one of the programs supplied by Security Dynamics to assign a pincode to the card.

TNS-12682: Login failed: the SecurID card is in next PRN mode

Cause: The SecurID card and the SecurID server are out of sync and the server requires the next cardcode to resynchronize the card.

Action: Use one of the programs supplied by Security Dynamics to resynchronize the SecurID card.

TNS-12683: encryption/crypto-checksumming: no Diffie-Hellman seed

Cause: The "sqlnet.crypto_seed" parameter is missing from the SQLNET.ORA parameters file.

Action: Add this line to SQLNET.ORA: sqlnet.crypto_seed = "randomly-chosen text"

TNS-12684: unsupported encryption/crypto-checksumming version

Cause: Encryption/crypto-checksumming version used by remote is not supported by this configuration.

Action: Upgrade the remote client/server to use higher version of encryption/crypto-checksumming adapter. If the support for lower version is needed, add the following to sqlnet.ora file: CLIENT: (to allow connections to weak servers)
 sqlnet.allow_weak_crypto = true SERVER: (to allow connections from weak clients)
 sqlnet.allow_weak_crypto_clients = true CAUTION: This parameter allows insecure network connections between a client and server. Hence, it must not be used unless the remote endpoint cannot be updated to run the higher version of the encryption adapter. User is strongly advised to carefully consider the implications of this parameter before configuring it to allow weak connections.

TNS-12685: Native service required remotely but disabled locally

Cause: A native service is required by the remote process but native services have been disabled locally.

Action: Enable native services locally or change the configuration parameters on the remote host so that no native services are required.

TNS-12686: Invalid command specified for a service

Cause: An operation which does not exist was specified for a native service.

Action: This is a programming error and should not normally be visible to the user. If the error does appear, contact Oracle Customer Support.

TNS-12687: Credentials expired.

Cause: The credentials that are used to authenticate the user for the requested connection have expired.

Action: Renew your credentials. Refer to the documentation specific for your Network Authentication Adapter on how to do this.

TNS-12688: Login failed: the SecurID server rejected the new pincode

Cause: There are a number of reasons why the SecurID server would refuse a pincode: - The user might not have permission to make up his own pincode. - The pincode was either too short or too long. Valid pincodes consist of minimal four, but no more than eight characters. - The pincode contains any non alphanumeric characters.

Action: Reexecute the operation and make sure to use a pincode that satisfies the above requirements. If the problem persists, turn on tracing at the Oracle Server side of the connection and examine the trace file for the exact error.

TNS-12689: Server Authentication required, but not supported

Cause: Server Authentication is required for this connection, but not supported by both sides of the connection.

Action: Make sure both sides of the connection have the correct version of Advanced Networking Option, and that the Authentication Adapter supports Server Authentication.

TNS-12690: Server Authentication failed, login cancelled

Cause: Server Authentication is required, but the server's credentials were found invalid by the client.

Action: Make sure that the server has a valid set of credentials. Refer to your authentication adapter specific documentation on how to do this.

TNS-12691: TTC RPC (*string*) not supported by Oracle Connection Manager in Traffic Director mode

Cause: Oracle Connection Manager in Traffic Director mode does not support the specified Two-Task Common (TTC) Remote Procedure Call(RPC).

Action: Do not use functionality that issues the specified TTC RPC which was disallowed by Oracle Connection Manager in Traffic Director mode

TNS-12692: functionality (*string*) not supported by Oracle Connection Manager in Traffic Director mode

Cause: Oracle Connection Manager in Traffic Director mode does not support the specified functionality.

Action: Do not use functionality that is not supported by Oracle Connection // Manager in Traffic Director mode.

TNS-12693: PRCP is not configured in Oracle Connection Manager in Traffic Director mode

Cause: The client was attempting to connect using Proxy Resident Connection Pool (PRCP) while PRCP is not configured in Oracle Connection Manager in Traffic Director mode.

Action: The client should use PRCP connections only when PRCP is configured in Oracle Connection Manager in Traffic Director mode.

TNS-12694: non-PRCP connection requested when PRCP is configured in Oracle Connection Manager in Traffic Director mode

Cause: The client was attempting a non Proxy Resident Connection Pool (PRCP) connection while PRCP was configured in Oracle Connection Manager in Traffic Director mode.

Action: The client should only use PRCP connections when PRCP is configured in Oracle Connection Manager in Traffic Director mode.

TNS-12695: This statement cannot be executed with Oracle Connection Manager in Traffic Director mode with PRCP enabled

Cause: The client did not send enough information to execute the statement with Oracle Connection Manager in Traffic Director mode with Proxy Resident Connection Pooling (PRCP) enabled.

Action: This client needs a patch that will fix the issue. Alternatively, it needs to be upgraded to Oracle Database Release 18.1 or later. Contact Oracle Customer Support for the patch.

TNS-12696: Double Encryption Turned On, login disallowed

Cause: The user is using a Secure Protocol Adapter that has Encryption turned ON as well as ANO Encryption.

Action: Take one of the following actions: - Turn off ANO encryption. - Set the SQLNET.IGNORE_ANO_ENCRYPTION_FOR_TCPS parameter to TRUE. - Set IGNORE_ANO_ENCRYPTION_FOR_TCPS to TRUE in the SECURITY clause of the client's TNS connect string. Refer to the Database Net Services Reference for more details.

TNS-12697: Internal error occurred in Oracle Connection Manager in Traffic Director Mode. Reason code: *string*\n

Cause: Internal error occurred in Oracle Connection Manager in Traffic Director Mode processing

Action: Enable tracing for Oracle Connection Manager in Traffic Director Mode to get more information.

TNS-12699: Native service internal error occurred.

Cause: An internal error occurred in the native services component.

Action: Enable tracing to determine the exact error. Contact Oracle Support.

UDE-00001 to UDE-00054

UDE-00001: user requested cancel of current operation

Cause: User has requested a cancellation of current job.

Action: No action is needed.

UDE-00002: invalid username or password

Cause: An invalid username or password was specified.

Action: Retry with a valid username and password.

UDE-00003: all allowable logon attempts failed

Cause: Attempts were repeatedly made to log on with an invalid username or password.

Action: Shut down the utility, then restart and retry with a valid username and password.

UDE-00004: operation generated ORACLE error *number*

Cause: The operation unexpectedly produced the specified error. Refer to the description of that error for more information.

Action: Refer to the description of the reported error for possible actions.

UDE-00005: unexpected End-Of-File encountered while reading input

Cause: Encountered an End-Of-File while reading the user input.

Action: If input to export is being redirected, check the file for errors.

UDE-00006: failed to allocate memory of size *number*

Cause: Unable to allocate the necessary memory.

Action: Record the messages that follow and report this to Oracle Customer Support as an Export internal bug.

UDE-00007: attempt to free unallocated memory

Cause: An attempt was made to free memory that was not allocated.

Action: Contact Oracle Worldwide Support

UDE-00010: multiple job modes requested, *string* and *string*.

Cause: Multiple job modes were specified.

Action: Specify only one valid mode, then retry.

UDE-00011: parameter *string* is incompatible with parameter *string*

Cause: An invalid combination of parameters was specified.

Action: Refer to documentation for the set of valid modes, then retry.

UDE-00012: table mode exports only allow objects from one schema

Cause: Multiple schemas were selected for export.

Action: Retry export specifying only one schema.

UDE-00013: internal expdp error.

Cause: Fatal internal Data Pump client error.

Action: Contact Oracle Customer Support

UDE-00014: invalid value for parameter, '*string*'.

Cause: Could not parse the specified parameter or parameter value.

Action: Refer to documentation for valid parameter values.

UDE-00015: invalid context or job state for parameter, '*string*'.

Cause: Invalid job state or context for specified parameter.

Action: Refer to documentation for correct parameter usage.

UDE-00016: '*string*' parameter requires a value.

Cause: Parameter was specified without a value.

Action: Refer to documentation for correct parameter usage.

UDE-00017: Data Pump job is already executing.

Cause: Incorrect Data Pump job state for requested operation.

Action: Refer to documentation for correct usage.

UDE-00018: Data Pump client is incompatible with database version *string*

Cause: The Export utility is at a higher version than the database version and is thereby incompatible.

Action: Use the same version of Export utility as the database.

UDE-00019: '*string*' parameter list is too long.

Cause: Requested parameter list exceeds 4000 character maximum.

Action: Reduce the specified number of parameter values and rerun.

UDE-00020: Data Pump client is incompatible with Data Pump API.

Cause: The Export utility is at a higher version than the Data Pump server and is thereby incompatible.

Action: Use the same version of Export utility as the server.

UDE-00022: unsupported administrative privilege specified in connect string

Cause: The connect string specified an administrative privilege that was not supported by the data pump.

Action: Specify an administrative privilege that the data pump supports. These are SYSDBA and SYSBACKUP.

UDE-00023: parameter *string* is incompatible with database version *string*

Cause: An invalid combination of parameters and database was specified.

Action: Use parameters that are valid for the database version. Refer to documentation for the set of valid parameters, then retry.

UDE-00024: unable to establish a session key

Cause: The Data Pump command line client and Data Pump server could not negotiate a session key for the encryption password.

Action: Contact Oracle Support Services.

UDE-00050: Unable to setup parameter processing.

Cause: An unexpected error occurred during parameter manager initialization.

Action: Record the messages that follow and report this to Oracle Customer Support as an Export internal bug.

UDE-00051: unable to set NLS_NUMERIC_CHARACTERS to required defaults.

Cause: Export was unable to set NLS_NUMERIC_CHARACTERS to ','.

Action: Record the accompanying messages and report this as an Export internal error to Oracle customer support.

UDE-00052: incorrect Data Pump client for operation: *string*

Cause: Export client attempted to attach to import job.

Action: Use appropriate client when attaching to an existing job

UDE-00053: unrecognized client command '*string*'

Cause: Invalid interactive client command.

Action: Refer to documentation for valid client commands.

UDE-00054: Deprecated Legacy Mode parameter '*string*' specified at or on: *string*

Cause: The Legacy Mode parameter specified has no corresponding Data Pump mapping.

Action: Review the location referred to in the error message (either 'Command Line', 'Parameter File', or 'Environment Variable') and remove the parameter.

UDI-00001 to UDI-00054

UDI-00001: user requested cancel of current operation

Cause: User has requested a cancellation of current job.

Action: No action is needed.

UDI-00002: invalid username or password

Cause: An invalid username or password was specified.

Action: Retry with a valid username and password.

UDI-00003: all allowable logon attempts failed

Cause: Attempts were repeatedly made to log on with an invalid username or password.

Action: Shut down the utility, then restart and retry with a valid username and password.

UDI-00004: operation generated ORACLE error *number*

Cause: The operation unexpectedly produced the specified error. Refer to the description of that error for more information.

Action: Refer to the description of the reported error for possible actions.

UDI-00005: unexpected End-Of-File encountered while reading input.

Cause: Encountered an End-Of-File while reading the user input.

Action: If input to import is being redirected, check the file for errors.

UDI-00006: failed to allocate memory of size *number*

Cause: Unable to allocate the necessary memory.

Action: Record the messages that follow and report this to Oracle Customer Support as an Import internal bug.

UDI-00007: attempt to free unallocated memory

Cause: An attempt was made to free memory that was not allocated.

Action: Contact Oracle Customer Support

UDI-00010: multiple job modes requested, *string* and *string*.

Cause: Invalid job mode was specified.

Action: Specify only one valid mode, then retry.

UDI-00011: parameter *string* is incompatible with parameter *string*

Cause: An invalid combination of parameters was specified.

Action: Refer to documentation for the set of valid modes, then retry.

UDI-00012: table mode imports only allow objects from one schema

Cause: Multiple schemas were selected for import.

Action: Retry import specifying only one schema.

UDI-00013: internal impdp error.

Cause: Fatal internal Data Pump client error.

Action: Contact Oracle Customer Support.

UDI-00014: invalid value for parameter, '*string*'

Cause: Could not parse the specified parameter or parameter value.

Action: Refer to documentation for valid parameter values.

UDI-00015: invalid context or job state for parameter, '*string*'.

Cause: Invalid job state or context for specified parameter.

Action: Refer to documentation for correct parameter usage.

UDI-00016: '*string*' parameter requires a value.

Cause: Parameter was specified without a value.

Action: Refer to documentation for correct parameter usage.

UDI-00017: Data Pump job is already executing.

Cause: Incorrect Data Pump job state for requested operation.

Action: Refer to documentation for correct usage.

UDI-00018: Data Pump client is incompatible with database version *string*

Cause: The Import utility is at a higher version than the database version and is thereby incompatible.

Action: Use the same version of Import utility as the database.

UDI-00019: '*string*' parameter list is too long.

Cause: Requested parameter list exceeds 4000 character maximum.

Action: Reduce the specified number of parameter values and rerun.

UDI-00020: Data Pump client is incompatible with Data Pump API.

Cause: The Export utility is at a higher version than the Data Pump server and is thereby incompatible.

Action: Use the same version of Export utility as the server.

UDI-00022: unsupported administrative privilege specified in connect string

Cause: The connect string specified an administrative privilege that was not supported by the data pump.

Action: Specify an administrative privilege that the data pump supports. These are SYSDBA and SYSBACKUP.

UDI-00023: parameter *string* is incompatible with database version *string*

Cause: An invalid combination of parameters and database was specified.

Action: Use parameters that are valid for the database version. Refer to documentation for the set of valid parameters, then retry.

UDI-00024: unable to establish a session key

Cause: The Data Pump command line client and Data Pump server could not negotiate a session key for the encryption password.

Action: Contact Oracle Support Services.

UDI-00050: unable to setup parameter processing.

Cause: An unexpected error occurred during parameter manager initialization.

Action: Record the messages that follow and report this to Oracle Customer Support as an Import internal bug.

UDI-00051: unable to set NLS_NUMERIC_CHARACTERS to required defaults.

Cause: Import was unable to set NLS_NUMERIC_CHARACTERS to ','.

Action: Record the accompanying messages and report this as an Import internal error to Oracle Customer Support.

UDI-00052: incorrect Data Pump client for operation: *string*

Cause: Import client attempted to attach to export job.

Action: Use appropriate client when attaching to an existing job

UDI-00053: unrecognized client command '*string*'

Cause: Invalid interactive client command.

Action: Refer to documentation for valid client commands.

UDI-00054: Deprecated Legacy Mode parameter '*string*' specified at or on: *string*

Cause: The Legacy Mode parameter specified has no corresponding Data Pump mapping.

Action: Review the location referred to in the error message (either 'Command Line', 'Parameter File', or 'Environment Variable') and remove the parameter.

WLMD-02005 to WLMD-02021

WLMD-02005: Classifier {0} for PC {1} is too long.

Cause: The classifier for the specified performance class (PC) was too long.

Action: Shorten the classifier in the policy set.

WLMD-02006: Total classifier length for PC {0} is too large.

Cause: In aggregate the classifiers for this performance class (PC) were too long.

Action: Remove or shorten classifiers in the policy set.

WLMD-02011: The DBWLM application for the system {0} cannot be undeployed because it is still enabled.

Cause: The DBWLM application was undeployed when it was enabled.

Action: Disable the DBWLM application and then undeploy it.

WLMD-02014: Oracle Clusterware infrastructure has reported a failure.

Cause: There was a problem in the Oracle Clusterware.

Action: Check the exception and, if needed the Oracle Clusterware logs, and correct the issue reported there. Then enable Quality of Service Management (QoS) and retry this operation.

WLMD-02015: QoS configuration key {0} could not be retrieved.

Cause: The key did not exist in the Quality of Service Management (QoS) persistent storage.

Action: Contact Oracle Support Services for assistance.

WLMD-02017: Could not retrieve credential information for database {0}.

Cause: An attempt to open the database wallet and read the credential information failed.

Action: Re-enable the database for Quality of Service Management (QoS) from the associated Enterprise Manager console for that database.

WLMD-02018: The task {0} has failed to terminate.

Cause: This is an internal error.

Action: Please provide logs to Oracle Support Services. Quality of Service Management (QoS) restarted automatically.

WLMD-02019: Cluster {0} state change detected. The action requested may no longer be appropriate or possible.

Cause: There was a change to the Oracle Clusterware state since the action was recommended.

Action: Consider implementing actions from the current recommendation.

WLMD-02020: The regular expression for grouping Database Services did not compile.

Cause: This is an internal error.

Action: Contact Oracle Support Services for assistance.

WLMD-02021: Operation to generate a new database password was unsuccessful.

Cause: There is most likely a JDK incompatibility issue for the current version of Quality of Service Management (QoS).

Action: Contact Oracle Support Services for assistance.

WLMF-03002 to WLMF-03029

WLMF-03002: The Quality of Service Management (QoS) user {0} is not authorized to perform this operation {1}.

Cause: The Quality of Service Management (QoS) user did not have the permission to perform this operation.

Action: To enable the QoS user to perform the indicated operation, check the JAVA security policy setup and grant the QoS user the applicable security permissions.

WLMF-03003: The Quality of Service Management (QoS) service user does not have the necessary permission to retrieve the JAVA security Subject associated with the current access control context {0}.

Cause: The Quality of Service Management (QoS) user did not have the necessary permissions to retrieve the JAVA security Subject within the current access control context.

Action: To enable the QoS user to retrieve the JAVA security Subject, check the security policy setup and grant this user the applicable permissions.

WLMF-03004: Version check failed or not performed. Operation could not be performed.

Cause: The operation to exchange the supported version numbers between the server and the client had not been called or had failed.

Action: This is an internal error. Contact Oracle Support Services for assistance.

WLMF-03005: Application .ear file is corrupt.

Cause: Quality of Service Management (QoS) .ear file was corrupt.

Action: Contact Oracle Support Services for assistance.

WLMF-03006: Unsupported version. The client supports versions {0} to {1}.

Cause: An attempt to start the Quality of Service Management (QoS) failed because the client's version was not supported by the QoS.

Action: Contact Oracle Support Services for assistance.

WLMF-03007: Required policy set does not exist.

Cause: There was no policy set in persistent storage.

Action: Create a new policy set.

WLMF-03008: Invalid argument. Argument {0} was provided with value {1}.

Cause: The specified value of the argument was invalid.

Action: Please contact Oracle Support Services.

WLMF-03009: The policy set is corrupt.

Cause: The Quality of Service Management (QoS) policy set retrieved from persistent storage was corrupt.

Action: Create a new policy set and enable Quality of Service Management (QoS).

WLMF-03010: There is no policy set in QoS persistent storage.

Cause: The policy set was not found in Quality of Service Management (QoS) persistent storage.

Action: Create a new policy set and enable Quality of Service Management (QoS).

WLMF-03011: QoS is not enabled.

Cause: Quality of Service Management (QoS) was not enabled for this operation.

Action: Enable Quality of Service Management (QoS) and retry the operation.

WLMF-03012: The component {0} tried to transition from state {1} to {2}, but the current state is {3}. This is illegal.

Cause: This is an internal error.

Action: Contact Oracle Support Services with trace information. Quality of Service Management (QoS) will restart automatically.

WLMF-03013: QoS implement action ID {0} has expired.

Cause: The Quality of Service Management (QoS) implement action ID has expired.

Action: Implement a current recommendation.

WLMF-03014: The What If Analysis could not be performed.

Cause: Quality of Service Management (QoS) is unable to perform the What If Analysis because its timestamp is invalid or expired.

Action: Perform another What If Analysis.

WLMF-03015: The action {0} is in progress and it will complete at {1}. The current time is {2}.

Cause: Unable to execute the action because a previous action has not completed.

Action: Wait until the current action is completed.

WLMF-03016: Internal error encountered.

Cause: This is an internal error.

Action: Contact Oracle Support Services with Quality of Service Management (QoS) log information. Clusterware has restarted Quality of Service Management (QoS) automatically.

WLMF-03017: The operating system has reported a failure.

Cause: There was a problem in the operating system.

Action: Check the exception and the accompanying error messages for details, and correct the issue. Then enable Quality of Service Management (QoS).

WLMF-03018: QoS service is not in the expected state.

Cause: Quality of Service Management (QoS) was not in the correct state to perform the requested operation.

Action: Retry the operation shortly.

WLMF-03019: Required library could not be loaded.

Cause: A library which Quality of Service Management (QoS) depends upon could not be loaded.

Action: Contact Oracle Support Services.

WLMF-03020: Requested action was not implemented.

Cause: Quality of Service Management (QoS) detected a change in system state that invalidated the performance projections.

Action: Implement a current recommendation

WLMF-03021: Persistent key {0} had invalid value.

Cause: Quality of Service Management (QoS) found a corrupt key value in its attempt to retrieve data from the persistent store when starting or restarting.

Action: Contact Oracle Support Services.

WLMF-03022: Policy set or policy corruption.

Cause: Quality of Service Management could not be restarted because it could not read its configuration data from the cluster registry.

Action: Contact Oracle Support Services.

WLMF-03023: Persistent storage not found.

Cause: Quality of Service Management (QoS) could not find the persistent storage when starting or restarting.

Action: Contact Oracle Support Services.

WLMF-03024: An unsupported parameter was passed to Quality of Service Management.

Cause: An attempt to start Quality of Service Management (QoS) was rejected because the deployment type was specified as GLOBAL rather than LOCAL.

Action: Contact Oracle Support Services.

WLMF-03025: Invalid argument. Argument {0} was provided with value {1} and it must be less than argument {2} with value {3}.

Cause: The specified value of the argument was invalid.

Action: Contact Oracle Support Services.

WLMF-03027: The Grid Infrastructure Management Repository version is incompatible with Quality of Service Management (QoS).

Cause: An attempt to enable Quality of Service Management was rejected because the current version was not supported by the Grid Infrastructure Management Repository (GIMR).

Action: Contact Oracle Support Services.

WLMF-03028: Data retrieval operation failed. Error {0} {1}, encountered.

Cause: Quality of Service Management (QoS) failed to retrieve the requested information.

Action: Retry the action. If it fails repeatedly contact Oracle Support Services.

WLMF-03029: Quality of Service Management (QoS) was unable to create directory {0} for local database wallet files.

Cause: Quality of Service Management failed to create a directory to store Oracle wallets on the local node.

Action: Contact Oracle Support Services.

165

WLMV-08000 to WLMV-08000

WLMV-08000: WLMV-8000: QoS schema of type <{0}> encountered errors.

Cause: The Quality of Service Management (QoS) schema validation encountered errors.

Action: Contact Oracle Support Services.

XAG-00001 to XAG-01104

XAG-00001: invalid verb '*string*' specified on command line

Cause: The agctl command was issued with an unknown verb argument.

Action: Use agctl with the --help option to display all valid verbs and make sure that a valid verb is specified.

XAG-00002: invalid object '*string*' specified on command line

Cause: The object specified on the command line was not recognized.

Action: Use agctl with the --help option to display valid verbs, objects, and options. Ensure that a valid combination of verb and object is specified.

XAG-00201: missing mandatory option '*string*'

Cause: The specified mandatory command option was missing.

Action: Supply the required option.

XAG-00202: Directory or file '*string*' does not exist.

Cause: The directory or file specified on the command line does not exist.

Action: Specify a directory path or file that exists.

XAG-00203: Path '*string*' is not a directory.

Cause: The specified file system path is not a directory.

Action: Specify a file system directory.

XAG-00204: File '*string*' is not readable, (error: *string*).

Cause: An attempt to open the indicated file for read access failed.

Action: Ensure that the user has read permission on the indicated file.

XAG-00205: File '*string*' is not writable.

Cause: An attempt to open the indicated file for write access failed.

Action: Ensure that the user has write permission on the indicated file.

XAG-00206: invalid or unexpected text '*string*'

Cause: Text on the command line was neither an option nor part of a value.

Action: Refer to 'agctl --help' for information on command syntax and arguments.

XAG-00207: invalid instance name '*string*'

Cause: The specified instance name contained illegal characters.

Action: Ensure the instance name doesn't contain special characters '[].@#\$\$%^&*()+='.
Reissue the command with a valid instance name.

XAG-00208: Missing mandatory instance name.

Cause: The mandatory instance name was missing.

Action: Ensure an instance name is specified and reissue the command.

XAG-00209: Invalid number '*string*' for option *string*.

Cause: A value specified on the command line option is not numeric.

Action: Ensure the value contains only decimal digits 0-9.

XAG-00210: Option '*string*' must be followed by a value.

Cause: An option that requires a value was specified without one.

Action: Specify the option with a value. Refer to 'agctl --help' for additional information.

XAG-00211: The '*string*' and '*string*' options cannot both be supplied.

Cause: Conflicting options were specified on the command.

Action: Reissue the command specifying only one of the two options. Refer to 'agctl --help' for additional information.

XAG-00212: Instance '*string*' is not yet registered.

Cause: The instance name specified on the command line was not registered to Oracle Clusterware.

Action: Use 'agctl add' command to register an instance to Oracle Clusterware.

XAG-00213: Web server '*string*' does not exist.

Cause: The web server specified on the command line is not registered to Oracle Clusterware.

Action: Use 'agctl add webserver' command to register a web server to Oracle Clusterware first and then reissue the command.

XAG-00214: Instance '*string*' was already enabled.

Cause: The enable command failed because the instance is already enabled.

Action: If this is the expected state then this is not an error. If it is not then an instance can be disabled with the 'agctl disable' command.

XAG-00215: Instance '*string*' was already disabled.

Cause: The disable command failed because the instance is already disabled.

Action: If this is the expected state then this is not an error. If it is not then an instance can be enabled with the 'agctl enable' command.

XAG-00216: Instance '*string*' is already running.

Cause: The start command failed because the instance is already running.

Action: If this is the expected state then this is not an error. If it is not then an instance can be stopped with the 'agctl stop' command.

XAG-00217: failed to add type '*string*'

Cause: An error occurred while creating a new resource type in Oracle Clusterware.

Action: Correct the problem indicated in the accompanying messages and then retry.

XAG-00218: invalid option '*string*'

Cause: The text specified on the command line was not a known option.

Action: Use `agctl` with the `--help` option to display all valid options, and make sure that a valid option is specified.

XAG-00219: Instance '*string*' is not running.

Cause: The stop command failed because the instance is not running.

Action: If this is the expected state then this is not an error. If it is not then an instance can be started with the `'agctl start'` command.

XAG-00220: Instance '*string*' was already registered.

Cause: The instance name specified on the command line is already registered to Oracle Clusterware.

Action: If this is the expected state then this is not an error. If it is not then an instance can be removed with the `'agctl remove'` command.

XAG-00221: No option was specified for '*modify string*' operation.

Cause: An attempt was made to modify an instance, but no option is specified on the command line.

Action: Use `'agctl modify --help'` command to display all valid options for modify command and make sure that a valid option is specified.

XAG-00222: User doesn't have root privilege to create VIP resource.

Cause: The network/ip/user VIP resource is to be created in Oracle Clusterware, but the user does not have root privilege to create the VIP resource.

Action: Ensure that user have root privilege to create VIP resource and then reissue the command.

XAG-00223: User doesn't have root privilege to remove VIP resource.

Cause: The network/ip/user VIP resource is to be removed from Oracle Clusterware, but the user does not have root privilege to remove the VIP resource.

Action: Ensure that user have root privilege to remove VIP resource and then reissue the command.

XAG-00224: User doesn't have root privilege to modify VIP resource.

Cause: The network/ip/user VIP resource is to be modified in Oracle Clusterware, but the user does not have root privilege to modified the VIP resource.

Action: Ensure that user have root privilege to modify VIP resource and then reissue the command.

XAG-00225: Server pool '*string*' does not exist.

Cause: The server pool specified on the command line is not registered to Oracle Clusterware.

Action: Ensure that server pool exists in Oracle Clusterware and then reissue the command.

XAG-00226: Instance '*string*' was already enabled at node '*string*'.

Cause: The enable command with node option failed because the instance is already enabled on specified node.

Action: If this is the expected state then this is not an error. If it is not then an instance can be disabled with the 'agctl disable' command.

XAG-00227: Instance '*string*' was already disabled at node '*string*'.

Cause: The disable command with node option failed because the instance is already disabled on specified node.

Action: If this is the expected state then this is not an error. If it is not then an instance can be enabled with the 'agctl enable' command.

XAG-00228: VIP name '*string*' does not exist.

Cause: The VIP name specified on the command line is not registered to Oracle Clusterware.

Action: Ensure that VIP name exists in Oracle Clusterware and then reissue the command.

XAG-00229: Removing running resource '*string*' requires the --force option.

Cause: An attempt was made to remove resource that is still running.

Action: Use the --force option with the remove command.

XAG-00230: Failed to stop running instance '*string*'.

Cause: An attempt was made to stop an instance that is still running.

Action: Correct the problem indicated in the accompanying messages, and then retry.

XAG-00231: The *string* instance does not exist.

Cause: An attempt to add the an instance specified in the message failed because the instance did not exist.

Action: Use 'agctl add' command to register an instance to Oracle Clusterware and then reissue the command.

XAG-00233: Database '*string*' does not exist or is not registered.

Cause: The specified Oracle database does not exist or is not registered to Oracle Clusterware.

Action: Add the database to Oracle Clusterware using 'srvctl add database'.

XAG-00234: Invalid database name '*string*'.

Cause: The specified database name is not conforming to Oracle database name standards.

Action: Correct the database name.

XAG-00235: Incorrect qualifier '*string*' specified for database.

Cause: An incorrect qualifier was specified for a database. The only acceptable value is: 'global'

Action: Correct the qualifier.

XAG-00236: Database service '*string*' does not exist or is not registered.

Cause: The specified Oracle database service does not exist or is not registered to Oracle Clusterware.

Action: Add the database service to Oracle Clusterware using 'srvctl using service'.

XAG-00237: File system resource '*string*' does not exist or is not registered.

Cause: The specified file system resource is not registered to Oracle Clusterware.

Action: Add the file system resource to Oracle Clusterware using Clusterware administrative tools.

XAG-00238: The IP address is already registered to Oracle Clusterware with *string* resource.

Cause: The specified IP address is already registered to Oracle Clusterware with another resource.

Action: Use an IP address that is not associated with another Oracle Clusterware.

XAG-00239: duplicate options *string* '*string*' specified

Cause: A command line option was specified more than once.

Action: Omit one option or the other; refer to 'agctl --help' for additional information.

XAG-00240: Siebel instance '*string*' already registered with Siebel Enterprise name '*string*' and Siebel Server name '*string*'

Cause: The Siebel instance with Enterprise name and Server name was already registered to Oracle Clusterware.

Action: Use 'agctl add siebel_server' command to register an instance with a different Enterprise name or Server name.

XAG-00241: PeopleSoft Application Server instance '*string*' is already registered with PeopleSoft Server Domain name '*string*'.

Cause: The PeopleSoft Application Server instance with Server Domain name was already registered with Oracle Clusterware.

Action: Reissue the 'agctl' command to register an instance with a different Server Domain name.

XAG-00242: PeopleSoft Batch Server instance '*string*' is already registered with PeopleSoft Scheduler Database name '*string*'.

Cause: The PeopleSoft Batch Server instance with Scheduler Database name was already registered with Oracle Clusterware.

Action: Reissue the 'agctl' command to register an instance with a different Scheduler Database name.

XAG-00243: PeopleSoft Web PIA Server instance '*string*' is already registered with PeopleSoft Server Domain name '*string*'.

Cause: The PeopleSoft Web PIA Server instance with Server Domain name was already registered with Oracle Clusterware.

Action: Reissue the 'agctl' command to register an instance with a different Server Domain name.

XAG-00244: '*uniform*' is not a valid '*instance_count*' without the '*server_pool*' option.

Cause: An attempt to register an instance using the 'agctl' command failed because '*uniform*' was specified as the '*instance_count*' option, but the '*server_pool*' option was not included.

Action: Reissue the 'agctl' command and include the 'server_pool' option to register the instance with 'instance_count' specified as 'uniform'.

XAG-00245: The value of 'instance_count' option is invalid.

Cause: An attempt to register an instance using the 'agctl' command failed because the specified 'instance_count' option was invalid. The 'instance_count' option must be either 'uniform' or a number greater than zero.

Action: Reissue the 'agctl' command specifying the value of the 'instance_count' option as either 'uniform' or a number greater than zero.

XAG-00250: Node '*string*' duplicated in the node list.

Cause: An attempt to register an instance using the 'agctl' command failed because a node name appears more than once in the node list.

Action: Reissue the 'agctl' command specifying a node list without duplicates.

XAG-00251: Node '*string*' is not a member of the cluster.

Cause: The specified node was not a member of the cluster.

Action: Reissue the 'agctl' command specifying only nodes that are in the cluster.

XAG-00252: Clusterware internal VIP '*string*' cannot be used by applications.

Cause: The application could not be registered because a VIP reserved for CRS was specified when registering.

Action: Create an application-specific VIP resource using appvipcfg and specify it when registering the application.

XAG-00253: Parameter '*string*' value is not valid, must be one of '*string*'.

Cause: A wrong parameter value was passed to agctl.

Action: Pass a valid value from list of permissible values.

XAG-00254: The value of 'mysql_type' option is invalid.

Cause: An attempt to register an instance using the 'agctl' command failed because the specified 'mysql_type' option was invalid. The 'mysql_type' option must be either 'MYSQL' or 'MONITOR'.

Action: Reissue the 'agctl' command specifying the value of the 'mysql_option' option as either 'MYSQL' or 'MONITOR'.

XAG-00255: The 'monitor_agent' option is invalid for MySQL type of 'MONITOR'.

Cause: An attempt to register an instance using the 'agctl' command failed because the 'monitor_agent' option was specified for MySQL type of 'MONITOR'.

Action: Reissue the 'agctl' command without specifying the 'monitor_agent' option.

XAG-00256: Monitor Agent '*string*' does not exist.

Cause: The MySQL Enterprise Monitor Agent specified on the command line is not registered to Oracle Clusterware.

Action: Use 'agctl add mysql_server' command with mysql_type of 'MONITOR' to register a MySQL Enterprise Monitor Agent to Oracle Clusterware.

XAG-00257: The Monitor Agent '*string*' specified is invalid.

Cause: The Monitor Agent specified on the command line is not a valid MYSQL_TYPE. The Monitor Agent must be a 'MONITOR' MYSQL_TYPE.

Action: Reissue the 'agctl' command specifying the Monitor Agent with a 'MONITOR' MYSQL_TYPE.

XAG-00258: The Oracle GoldenGate OGG_HOME directory '*string*' is already registered with '*string*' Oracle GoldenGate instance.

Cause: An attempt to add or modify an Oracle GoldenGate resource to Oracle Clusterware was rejected because another Oracle GoldenGate resource with the same OGG_HOME directory was already registered.

Action: Rerun the command 'agctl add or modify goldengate' to register an instance with a different Oracle GoldenGate OGG_HOME directory.

XAG-00259: The --use_local_services option was supplied without --db_services option.

Cause: An attempt to use the --use_local_services option was rejected because that option required also supplying the --db_services option, which was not specified.

Action: Reissue the command without the --use_local_services option, or with both the --db_services option and the --use_local_services option.

XAG-00260: The option '*string*' is invalid for this Goldengate installation type.

Cause: An option provided to agctl does not apply to the configured GoldenGate installation.

Action: Reissue the command by omitting the reported option.

XAG-00261: Goldengate installation type cannot be modified.

Cause: The option --service_manager cannot be specified for 'agctl modify'

Action: Reissue the command by omitting the '--service_manager' option.

XAG-00262: The user does not have root privileges to create Goldengate credentials.

Cause: The agctl command to register the GoldenGate instance with CRS was executed as a non-root user.

Action: Reissue the command as 'root'.

XAG-00263: The GoldenGate home directory '*string*' cannot be registered with Oracle Clusterware.

Cause: The specified GoldenGate installation directory does not contain the required files for integration with CRS.

Action: Reissue the command by specifying the correct GoldenGate location

XAG-00264: This Grid Infrastructure version is not supported for GoldenGate MicroServices Architecture.

Cause: An attempt to register a GoldenGate instance failed because the Oracle Grid Infrastructure version was older than 12.1.0.2.0.

Action: Reissue the command after upgrading to version 12.1.0.2.0 or higher.

XAG-00265: missing mandatory option : --user

Cause: An attempt to register a resource failed because the agctl command was run as superuser, but the --user option was not specified.

Action: Reissue the command by specifying the --user option.

XAG-00266: The resource cannot be registered with Oracle Clusterware using Standalone Agents.

Cause: An attempt to register a resource failed because an existing XAG resource was already registered to Oracle Clusterware with Bundled Agents.

Action: Use the 'agctl add' command from the Oracle Clusterware home or remove the existing XAG resource and then reissue the command.

XAG-00267: The resource cannot be registered with Oracle Clusterware using Bundled Agents.

Cause: An attempt to register a resource failed because an existing XAG resource was already registered to Oracle Clusterware with Standalone Agents.

Action: Use the 'agctl add' command from the Standalone Agents or remove the existing XAG resource and then reissue the command.

XAG-00268: The Oracle Grid Infrastructure Standalone Agents cannot be upgraded.

Cause: An attempt to upgrade a resource failed because an existing XAG resource was already registered to Oracle Clusterware with Bundled Agents.

Action: Remove the existing XAG resource from the Oracle Clusterware home and then reissue the command.

XAG-00269: The Oracle Grid Infrastructure Bundled Agents cannot be upgraded.

Cause: An attempt to upgrade a resource failed because an existing XAG resource was already registered to Oracle Clusterware with Standalone Agents.

Action: Remove the existing XAG resource from the Standalone Agents and then reissue the command.

XAG-00270: The Oracle GoldenGate container '*string*' specified is invalid.

Cause: The Oracle GoldenGate container specified on the command line was not a valid container.

Action: Reissue the 'agctl' command specifying a valid Oracle GoldenGate container.

XAG-00271: The --filesystems_always option was supplied without --filesystems option.

Cause: An attempt to use the --filesystems_always option was rejected because that option requires also supplying the --filesystems option, which was not specified.

Action: Reissue the command without the --filesystems_always option, or specify both the --filesystems option and the --filesystems_always option.

XAG-00272: The Oracle GoldenGate OGG_VAR_HOME directory '*string*' is already registered with '*string*' Oracle GoldenGate instance.

Cause: An attempt to add or modify an Oracle GoldenGate resource to Oracle Clusterware was rejected because another Oracle GoldenGate resource with the same OGG_VAR_HOME directory was already registered.

Action: Rerun the command 'agctl add or modify goldengate' to register an instance with a different Oracle GoldenGate OGG_VAR_HOME directory.

XAG-00273: The Oracle GoldenGate OGG_HOME directory '*string*' specified is invalid.

Cause: An attempt to add an Oracle GoldenGate resource to Oracle Clusterware was rejected because the OGG_HOME directory is a symbolic link.

Action: Rerun the command 'agctl add goldengate' to register an instance with an absolute OGG_HOME directory path.

XAG-01001: failed to copy file '*string*' to '*string*' (error: *string*)

Cause: An error occurred while copying the specified file.

Action: If this occurs on an 'agctl remove' request, correct the indicated problem and then reissue the request. If it occurs on an 'agctl add' request, the instance has been registered so the request cannot be reissued. In this case, contact Oracle Support Services.

XAG-01002: Could not set ownership on '*string*' (error: *string*)

Cause: failed to set ownership on the specified file or directory

Action: If this occurs on an 'agctl remove' request, correct the indicated problem and then reissue the request. If it occurs on an 'agctl add' request, the instance has been registered so the request cannot be reissued. In this case, contact Oracle Support Services.

XAG-01003: failed to create directory '*string*'

Cause: An error occurred while creating trace log directory.

Action: Ensure the directory path exists and the user has write access to it, and reissue the command.

XAG-01004: failed to open trace file '*string*' for writing

Cause: An error occurred while opening trace log file for writing.

Action: Ensure the user has write access to the directory and file and reissue the command.

XAG-01100: The E-Business Suite Concurrent Manager is already registered with Oracle Clusterware.

Cause: An attempt to register an E-Business Suite Concurrent Manager instance with Oracle Clusterware was rejected because a Concurrent Manager instance was already registered.

Action: None

XAG-01101: The user does not have root privilege to create E-Business Suite Credentials.

Cause: An attempt to create E-Business Suite Credentials in Oracle Clusterware was rejected because the user did not have root privileges.

Action: Retry the operation logged in as the root user.

XAG-01102: E-Business Suite is not supported on this version of Clusterware.

Cause: An attempt to create an E-Business Suite Concurrent Manager (EBSCM) Clusterware resource was rejected because EBSCM was not supported for Clusterware versions older than 12.1.0.1.

Action: Install E-Business Suite Concurrent Manager in a Cluster that is at version 12.1.0.1 or later.

XAG-01103: The user does not have root privilege to manage the MySQL systemd service.

Cause: An attempt to create a MySQL resource with systemd was rejected because the user did not have sudo access.

Action: Reissue the command after root privileges to manage the MySQL service with systemd have been granted.

XAG-01104: The service name '*string*' is not registered to systemd.

Cause: An attempt to create a MySQL resource with systemd was rejected because the service name specified on the command line was not registered to systemd.

Action: Reissue the command after the service name has been registered to systemd.

XOQ-00101 to XOQ-02563

XOQ-00101: unknown error

Cause: An unexpected internal error occurred.

Action: Report this error to Oracle Support Services.

XOQ-00102: system failure

Cause: An unexpected internal error occurred.

Action: Report this error to Oracle Support Services.

XOQ-00103: An OLAP API method failed.

Cause: An unexpected internal error occurred.

Action: Report this error to Oracle Support Services.

XOQ-00104: not implemented

Cause: An OLAP API query was issued that requires an unimplemented feature.

Action: Check the classes and methods in the OLAP API Java documentation for alternative ways to construct the query.

XOQ-00105: unknown error

Cause: An unexpected internal error occurred.

Action: Report this error to Oracle Support Services.

XOQ-00106: SQL query failed: "(string)"

Cause: A SQL query generated by the OLAP component failed to execute.

Action: Examine the error message to determine the possible cause of failure, or contact Oracle Support Services.

XOQ-00107: current operation cancelled

Cause: An Oracle operation was interrupted by CTRL+C or another cancelling operation.

Action: Continue with the next operation.

XOQ-00201: error opening connection

Cause: An error occurred while initializing the connection for the OLAP API.

Action: Ensure that Oracle Database is properly installed with the OLAP option. If the problem persists, then contact Oracle Support Services.

XOQ-00203: error retrieving connection information for the server

Cause: An error occurred while retrieving the connection parameter information.

Action: Ensure that Oracle Database is properly installed with the OLAP option. If the problem persists, then contact Oracle Support Services.

XOQ-00204: error initializing second DataProvider on a JDBC connection

Cause: The Java client tried to open multiple DataProviders over one JDBC connection.

Action: Close the first DataProvider before initializing the second DataProvider.

XOQ-00223: error executing an OLAP DML command

Cause: A syntactic or referential error in the command string prevented execution of an OLAP DML command.

Action: Correct the syntax of the OLAP DML command.

XOQ-00225: error closing the connection

Cause: An error occurred while closing the connection for the OLAP API.

Action: Report this error to Oracle Support Services.

XOQ-00229: cannot retrieve information for the connection

Cause: An error occurred while preparing OLAP API connection information.

Action: Report this error to Oracle Support Services.

XOQ-00232: error sharing the session

Cause: An unexpected error occurred.

Action: Report this error to Oracle Support Services.

XOQ-00233: error obtaining the system

Cause: An unexpected error occurred.

Action: Report this error to Oracle Support Services.

XOQ-00234: error obtaining the module version

Cause: An unexpected error occurred.

Action: Report this error to Oracle Support Services.

XOQ-00251: Default database is not set.

Cause: An unexpected error occurred.

Action: Report this error to Oracle Support Services.

XOQ-00286: error creating a definition manager

Cause: An error occurred while preparing an OLAP API query for use.

Action: Examine the ErrorStack for more detail about the reason for the failure.

XOQ-00287: error adding analytic workspace "(string)" to branch

Cause: An unexpected error occurred while adding an analytic workspace to a branch.

Action: Report this error to Oracle Support Services.

XOQ-00288: unable to commit transaction

Cause: An error occurred while trying to commit changes to a cube or dimension.

Action: Examine the error stack for more detail about the reason for the failure.

XOQ-00289: error executing DDL "(string)" for metadata object "(string)"

Cause: An error occurred while executing the DDL.

Action: Check the metadata object and examine the error stack for the reason for the failure.

XOQ-00400: failed to map CWM object "(string))" to XML or IDL

Cause: An error occurred while preparing a metadata object to return to the client.

Action: Check the metadata object for unusual characteristics, such as extremely long text attributes, unusual characters in text attributes,

XOQ-00401: a string could not be created with the name "string", because that name is already used by an existing string.

Cause: An error occurred while trying to create a metadata object with the name of an existing object.

Action: Rename one of the objects so that its ID is unique.

XOQ-00500: no metadata provider "(string)" available

Cause: A MetadataProvider could not be found for the specified type of metadata.

Action: Ensure that your code requests metadata type CWM.

XOQ-00501: table "(string)" and/or column "(string)" not found

Cause: A metadata object was mapped to a table or column that does not exist.

Action: Run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any reported problems with the metadata object.

XOQ-00502: cannot create more than one CursorManager for a source

Cause: An attempt was made to create a second CursorManager for a source in a transaction.

Action: Use only one CursorManager or upgrade to newer OLAP API jar files.

XOQ-00503: cannot create server cursor

Cause: An error occurred while executing the SQL for an OLAP API query.

Action: Examine the ErrorStack for details about the failure.

XOQ-00504: cannot execute the query

Cause: An error occurred while executing the SQL for an OLAP API query.

Action: Examine the ErrorStack for details about the failure.

XOQ-00505: The number of cursor inputs (string) does not match the number of bind sources (string).

Cause: The bind source specified in the cursor manager did not have matching cursor input.

Action: Specify a cursor input for each bind source.

XOQ-00506: cannot parse XML string from the client

Cause: An error occurred while parsing query or metadata definitions sent by the client.

Action: Examine the error output for details about the failure.

XOQ-00507: source definition not found with ID "(string)"

Cause: The query referred to a source definition that did not exist.

Action: Examine the error output for details about the failure.

XOQ-00508: metadata object not found with ID "(string)"

Cause: The query referred to a metadata object that did not exist.

Action: Correct the query so it refers to existing metadata objects.

XOQ-00509: Invalid value string "(string)" is used for a value of dimension "(string)".

Cause: The query contained an incorrectly formatted value string. The accepted formats are "HIERARCHY::LEVEL::VALUE" in hierarchy-qualified value mode, or "[Dimension].[Hierarchy].[Level].[Value]" in ODBO compatibility mode.

Action: Correct the value string used in the query, or select values using the localValue attribute. For example,
`dimensionSource.select(dimension.getLocalValueAttribute().getSource().eq("value"));`

XOQ-00510: NULL key found in hierarchy

Cause: The hierarchy was not identified as a skip-level hierarchy, although it contained NULL values.

Action: Correct the metadata for the hierarchy to mark it as a skip-level hierarchy.

XOQ-00511: Query will result in a Cartesian product.

Cause: An incorrect join condition was used in the query.

Action: Examine the mappings for the metadata objects and correct the query.

XOQ-00600: internal error code, arguments: [string], [string], [string], [string], [string], [string], [string], [string]

Cause: A process encountered an exceptional condition. This is the generic internal error number for Oracle program exceptions.

Action: Report as a bug. The first argument is the internal error number.

XOQ-00603: Fatal error occurred: unwise to proceed.

Cause: An Oracle session was in an unrecoverable state.

Action: Log in to Oracle again so a new session is created automatically. Examine the session trace file for more information.

XOQ-00699: internal error, arguments: [string], [string], [string], [string], [string], [string], [string], [string]

Cause: An internal inconsistency was detected that did not end the process.

Action: Report a bug and include the internal error, which is the first argument in the error message.

XOQ-00700: error compiling OLAP DML command

Cause: A syntactic or referential error in the OLAP DML command caused a compilation error.

Action: Correct the syntax of the OLAP DML command. The error stack may provide more detail about the error. Before trying again, enable the OLAP DML BADLINE option to get more detailed messages.

XOQ-00701: error compiling OLAP DML expression

Cause: A syntactic or referential error in the OLAP DML expression caused a compilation error.

Action: Correct the syntax of the OLAP DML expression. The error stack may provide more detail about the error. Before trying again, enable the OLAP DML BADLINE option to get more detailed messages.

XOQ-00702: no OLAP DML code to compile

Cause: SPLExecutor::executeCommand was called with an empty command string.

Action: Ensure that an OLAP DML command is passed to SPLExecutor::executeCommand.

XOQ-00703: error executing OLAP DML command "(string)"

Cause: A syntactic or referential error in the command string prevented the execution of an OLAP DML command.

Action: Examine the error stack for more detail about the error. Correct the OLAP DML command and try again.

XOQ-00704: error evaluating OLAP DML expression

Cause: A syntactic or referential error in the expression string prevented the evaluation of an OLAP DML expression.

Action: Examine the error stack for more detail about the error. Correct the OLAP DML expression and try again.

XOQ-00705: no OLAP DML expression to evaluate

Cause: An SPLExecutor::evaluateExpression method was called with an empty expression string.

Action: Ensure that an OLAP DML command is passed to the SPLExecutor::evaluateExpression method.

XOQ-00850: cannot create fundamental snapshot: definition id "(string)" not recognized

Cause: A cursor could not be created because the source referred to an unrecognized metadata object.

Action: If the source uses an MdmDimension or MdmMeasure that is created with an MdmCustomObjectFactory, then ensure that the Mtm definition is complete and refers only to existing objects.

XOQ-00851: cannot create Mdm property: definition id "(string)" not recognized

Cause: A cursor was not created because the source referred to an unrecognized metadata object.

Action: If the source uses an MdmDimension or MdmMeasure that is created with an MdmCustomObjectFactory, then ensure that the Mtm definition is complete and refers only to existing objects.

XOQ-01000: A portion of the query results in an empty selection and a 0-extent cursor.

Cause: The selection for one or more dimensions of a source yielded no members, so no data was retrieved for the source.

Action: Check the dimension selections to ensure that all references to hierarchies, levels, and members are correct. Evaluate each dimension query separately to identify the faulty one.

XOQ-01100: Query is not supported by the current generator.

Cause: The source involved a construct that was syntactically correct but is not currently supported.

Action: Check the source for unsupported constructs. For example, some releases require that a measure source be joined to sources for hierarchies and not to sources for dimensions.

XOQ-01150: unknown problem with OLAP Catalog

Cause: An error occurred while reading the OLAP Catalog.

Action: Run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01151: OCI error:\nstring

Cause: An exception was raised by Oracle Call Interface.

Action: Correct the problems identified in the error message.

XOQ-01200: metadata problem for MdmAttribute "string"

Cause: Metadata for the MdmAttribute was incomplete or inconsistent. Possible causes are: 1) The MdmAttribute did not have an associated MtmAttributeMap. 2) The MtmAttributeMap existed, but there was no mapped expression for a requested MtmDimensionMap.

Action: If the MdmAttribute is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MdmAttribute is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01201: metadata problem for MdmMeasure "string"

Cause: Metadata for the MdmMeasure was incomplete or inconsistent. Possible causes are: 1) The MdmMeasure did not have an associated MtmMeasureMap. 2) The MtmMeasureMap existed, but there was no mapped expression for a requested MtmBaseCube. 3) The MtmMeasureMap existed, but had no associated MtmCube.

Action: If the MdmMeasure is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MdmMeasure is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01202: metadata problem for MdmLevel "string"

Cause: Metadata for the MdmLevel was incomplete or inconsistent. The MdmLevel did not have an associated MtmLevelMap.

Action: If the MdmLevel is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MdmLevel is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01203: metadata problem for MdmHierarchy "string"

Cause: Metadata for the MdmHierarchy was incomplete or inconsistent. The MdmHierarchy did not have an associated MtmHierarchyMap.

Action: If the MdmHierarchy is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MdmHierarchy is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01204: metadata problem for MdmListDimension "string"

Cause: Metadata for the MdmListDimension was incomplete or inconsistent.

Action: If the MdmListDimension is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MdmListDimension was read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01205: metadata problem for MdmPrimaryDimension "string"

Cause: Metadata for the MdmPrimaryDimension was incomplete or inconsistent. The MdmPrimaryDimension (also known as MdmUnionHierarchy) did not have an associated MtmPrimaryDimensionMap.

Action: If the MdmPrimaryDimension is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MdmPrimaryDimension is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01206: metadata problem for cube "string"

Cause: Metadata for the cube was incomplete or inconsistent. This happened for one of the following reasons: 1) No MtmBaseCube was associated with a requested hierarchy combination. 2) One of the MtmMeasureMaps associated with an MtmCube was NULL. 3) Something was wrong with an MtmCubeDimensionality associated with an MtmBaseCube.

Action: If the hierarchy combination, measure map, or cube is created or modified using the OLAP Metadata API, then ensure that the objects are created and mapped correctly. If the attribute hierarchy combination, measure map, or cube is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01207: metadata problem for hierarchy combination "string"

Cause: Metadata for the hierarchy combination was incomplete or inconsistent.

Action: If the hierarchy combination is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the hierarchy combination is read from the OLAP Catalog, then run PL/SQL procedure

CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01208: metadata problem for MtmBaseCube "string"

Cause: Metadata for the MtmBaseCube was incomplete or inconsistent. An MtmBaseCube had no associated MtmTabularSource.

Action: If the MtmBaseCube is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MtmBaseCube is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01209: metadata problem for attributes on dimension "string"

Cause: Metadata for the attributes on the dimension was incomplete or inconsistent.

Action: If the attributes or dimension is created or modified using the OLAP Metadata, then ensure that the objects are created and mapped correctly. If the attributes or dimension are read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01210: metadata problem for table map for list dimension "string"

Cause: Metadata for the table map for the list dimension was incomplete or inconsistent.

Action: If the table map or dimension is created or modified using the OLAP Metadata API, then ensure that the objects are created and mapped correctly. If the table map or dimension is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01211: metadata problem for MdmValueHierarchy "string"

Cause: Metadata for the MdmValueHierarchy was incomplete or inconsistent. Possible causes are: 1) The MtmValueLevelHierarchyMap for the MdmValueHierarchy did not have an associated MtmSolvedLevelHierarchyMap. 2) The MtmValueLevelHierarchyMap for the MdmValueHierarchy was invalid.

Action: If the MdmValueHierarchy or MtmValueLevelHierarchyMap is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MdmValueHierarchy or MtmValueLevelHierarchyMap is read from the OLAP Catalog, run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01212: aggregation metadata problem for cube "string"

Cause: Aggregation metadata for the cube was incomplete or inconsistent.

Action: If the cube is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the cube is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01213: metadata problem for MdmLevelHierarchy "string"

Cause: Metadata for the table mapping for the MdmLevelHierarchy was incomplete or inconsistent. The MtmLevelHierarchyMap for the MdmLevelHierarchy had no associated MtmTabularSource.

Action: If the MdmLevelHierarchy is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MdmLevelHierarchy is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01214: metadata problem with dimension order specification for "string"

Cause: Metadata for the custom sort column was incomplete or inconsistent. An MtmDimensionOrderSpecification had no associated OrderByExpression.

Action: If the MtmDimensionOrderSpecification is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MtmDimensionOrderSpecification is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01215: metadata problem with mapped RDBMS column "string"

Cause: Metadata for the mapped RDBMS column was incomplete or inconsistent. There was a problem identifying the RDBMS table that owns the associated RDBMS column.

Action: If the RDBMS column is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the RDBMS column is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01216: metadata problem with mapping for snowflake hierarchy "string"

Cause: Mapping metadata for the snowflake hierarchy was incomplete or inconsistent. There was a problem identifying a mapping for the associated snowflake hierarchy.

Action: If the hierarchy is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the hierarchy is read from the OLAP Catalog, run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01217: metadata problem with mapping for hierarchy "string"

Cause: Mapping metadata for the hierarchy was incomplete or inconsistent. A mapping for the associated hierarchy could not be identified. The problem may be the way the dimension was mapped in one of the cubes and may be in the GID column.

Action: If the hierarchy is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the hierarchy is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01218: metadata problem with mapping for hierarchy "string"

Cause: Mapping metadata for the hierarchy was incomplete or inconsistent. A mapping for the associated hierarchy could not be identified, possibly because of the way the dimension was mapped in one of the cubes.

Action: If the hierarchy is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the hierarchy is read from the OLAP Catalog, run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01219: metadata problem with mapping for hierarchy "*string*"

Cause: Mapping metadata for the hierarchy was incomplete or inconsistent. The ET column for the associated hierarchy could not be identified.

Action: If the hierarchy is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the hierarchy is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01300: invalid dimension member value "*(string)*"

Cause: An invalid dimension value was specified as part of an MdmCustomMember.

Action: Check the values passed to the MdmCustomMembers. All dimension members must be in unique value form. The problem could be in the memberValue, the parentValue, an attributeExpression, or the measureExpression.

XOQ-01301: invalid measure expression in MdmCustomMember "*(string)*"

Cause: A measure expression in an MdmCustomMember was invalid.

Action: Ensure that the measure expression in each MdmCustomMember is valid. Ensure that any square brackets are balanced.

XOQ-01302: query not supported in local value mode

Cause: Some feature of the query required unique value mode to be enabled.

Action: Either enable unique value mode, or rewrite the query to remove any features that depend on unique value mode. MdmCustomMembers require unique value mode.

XOQ-01303: incorrect cube dimensionality

Cause: The metadata that defines the dimensionality of a cube was incorrect.

Action: Check the metadata for the dimensionality of the cubes being queried. Ensure that the number of join columns on the fact table matches the number of join columns on the dimension table.

XOQ-01304: Custom members feature is not supported.

Cause: The query included custom members that could not be processed.

Action: Check if any solved cubes are in GROUPING SET or ROLLUP form in the query. Rewrite them in ET form.

XOQ-01305: invalid model assignment

Cause: The definition of a model assignment was invalid.

Action: Ensure that all assignments are defined so the assigned source does not have a qualified source as an input. The assignment may have been created explicitly, or it may have been created implicitly from a custom member definition.

XOQ-01306: cannot generate cursor manager for MdmValueHierarchy

Cause: A cursor manager could not be created on a query containing an MdmValueHierarchy, because the hierarchy had no LevelExpressions and was not compiled in an analytic workspace.

Action: Either add LevelExpressions to the SolvedValueHierarchyMap of the MdmValueHierarchy, or create a AWPrimaryDimensionOrganization on the hierarchy's MdmPrimaryDimension. Build the dimension using a COMPILE command.

XOQ-01307: Cannot generate MdmCubeMap "string" on MdmCube "string". The MdmCubeMap contains no MdmCubeDimensionalityMap for dimension "string".

Cause: The MdmCubeMap was missing an MdmCubeDimensionalityMap for the specified dimension.

Action: Ensure that the MdmCubeMap has an MdmCubeDimensionalityMap for each dimension of the MdmCube.

XOQ-01308: Primary dimension "string" on cube "string" has multiple dimension levels but no hierarchy.

Cause: A PrimaryDimension had more than one DimensionLevel, but no hierarchies and no MemberListMap.

Action: Add a Hierarchy or MemberListMap to the PrimaryDimension.

XOQ-01400: invalid metadata objects

Cause: One or more Mdm or Mtm metadata objects was invalid. A list of the invalid objects follows this error.

Action: Examine the list of invalid metadata objects and correct the errors reported for each object. For objects created or modified using the OLAP Metadata API, make the necessary changes on the client. For objects created from the OLAP Catalog, either modify the metadata tables or modify the Mdm and Mtm objects using the OLAP Metadata API.

XOQ-01401: validation error

Cause: An error occurred while validating an Mdm or Mtm metadata object, but the cause of the error could not be determined.

Action: Check the metadata object and its dependencies for inconsistencies.

XOQ-01411: attribute mapping not defined for hierarchy "(string)"

Cause: An MtmAttributeMap had no mapping for a requested MtmDimensionMap, and it had no default value.

Action: Use the OLAP Metadata API to create an expression that provides the attribute value for the required MtmDimensionMap. Add it to the MtmAttributeMap as a mapping for the given MtmDimensionMap. If the attribute is read from the OLAP Catalog, then correct the attribute mapping in the OLAP Catalog tables.

XOQ-01421: A hierarchy must contain at least one level.

Cause: An MdmHierarchy was defined without any levels.

Action: Add a level to the requested MdmHierarchy using the OLAP Metadata API. If the hierarchy is read from the OLAP Catalog, then add a level to the hierarchy in the catalog table, or remove the hierarchy from the table if it is no longer relevant.

XOQ-01422: Hierarchy does not match hierarchy map: hierarchy map does not contain level map for "(string)".

Cause: The levels contained in an MdmHierarchy were inconsistent with the level maps contained in the corresponding MtmHierarchyMap.

Action: Use the OLAP Metadata API to correct the hierarchy or hierarchy map so they are consistent.

XOQ-01423: Hierarchy does not match hierarchy map: hierarchy does not contain level "(string)".

Cause: The levels contained in an MdmHierarchy are inconsistent with the level maps contained in the corresponding MtmHierarchyMap.

Action: Use the OLAP Metadata API to correct the hierarchy or hierarchy map so they are consistent.

XOQ-01424: Hierarchy must be declared skip-level, because it contains level expressions that can be null.

Cause: One of the MtmLevelMaps of an MdmHierarchy was defined by a level expression that can be null. Hierarchies containing levels with nullable expressions must be declared skip-level.

Action: Either set the MtmHierarchyMap to be skip-level using the OLAP Metadata API, or declare the expression for the MtmLevelMap as not nullable.

XOQ-01431: Primary dimension must have at least one hierarchy.

Cause: An MdmPrimaryDimension was defined without any hierarchies.

Action: Add a hierarchy to the requested MdmPrimaryDimension using the OLAP Metadata API. If the primary dimension is read from the OLAP Catalog, then add a hierarchy to the primary dimension in the catalog table, or remove the primary dimension from the table if it is no longer relevant.

XOQ-01432: Primary dimension and union hierarchy map are inconsistent: union hierarchy map does not contain hierarchy map for "(string)".

Cause: The hierarchies contained in an MdmPrimaryDimension were inconsistent with the hierarchy maps contained in the corresponding MtmPrimaryDimensionMap.

Action: Use the OLAP Metadata API to correct the MdmPrimaryDimension or MtmPrimaryDimensionMap so they are consistent.

XOQ-01433: Primary dimension and union hierarchy map are inconsistent: primary dimension does not contain hierarchy "(string)".

Cause: The hierarchies contained in an MdmPrimaryDimension were inconsistent with the hierarchy maps contained in the corresponding MtmPrimaryDimensionMap.

Action: Use the OLAP Metadata API to correct the MdmPrimaryDimension or MtmPrimaryDimensionMap so they are consistent.

XOQ-01434: Time dimension must have EndDate and TimeSpan attributes.

Cause: A time dimension did not have an EndDate or a TimeSpan attribute.

Action: Create an EndDate and a TimeSpan attribute using the OLAP Metadata API, and add them to the time dimension using the appropriate functions. If the time dimension already has an EndDate and a TimeSpan attribute, then ensure that they have been added to the time dimension. If the time dimension is read from the OLAP Catalog, then define the EndDate and TimeSpan attributes in the catalog.

XOQ-01441: Measure does not contain cube dimension "(string)".

Cause: An MdmMeasure and its associated MtmPartitionedCube contained different sets of dimensions.

Action: Use the OLAP Metadata API to correct the MdmMeasure or the MtmPartitionedCube so they are consistent. If the measure and cube are read from the OLAP Catalog, then ensure that the dimensions are consistent in the catalog.

XOQ-01442: Measure contains dimension "(string)", which does not exist on the cube.

Cause: An MdmMeasure and its associated MtmPartitionedCube contained different sets of dimensions.

Action: Use the OLAP Metadata API to correct the MdmMeasure or the MtmPartitionedCube so they are consistent. If the measure and cube are read from the OLAP Catalog, then ensure that the dimensions are consistent in the catalog.

XOQ-01443: Measure contains dimension "(string)", which is not a primary dimension.

Cause: An MdmMeasure referred to dimensions that were not primary dimensions.

Action: Use the OLAP Metadata API to change the MdmMeasure to refer to primary dimensions. If the measure is read from the OLAP Catalog, then change the catalog so the MdmMeasure refers only to primary dimensions.

XOQ-01444: Cube is not partitioned.

Cause: An MtmMeasureMap referred to an MtmBaseCube instead of an MtmPartitionedCube.

Action: Use the OLAP Metadata API to change the MtmMeasureMap to refer to an MtmPartitionedCube. If the measure is read from the OLAP Catalog, then change the catalog so the MtmMeasureMap refers to the MtmPartitionedCube.

XOQ-01445: Measure is not a member of its partitioned cube.

Cause: An MtmMeasureMap referred to an MtmPartitionedCube as its owner, but the MtmPartitionedCube does not include the MtmMeasureMap among its measures.

Action: Use the OLAP Metadata API to add the MtmMeasureMap as a member to its MtmPartitionedCube. If the measure is read from the OLAP Catalog, then correct the catalog so the MtmPartitionedCube refers to the MtmMeasureMap.

XOQ-01446: Measure has no mapping for cube "(string)".

Cause: An MtmMeasureMap contained no mapped expressions for the requested MtmBaseCube, and it did not have a default mapped expression.

Action: Use the OLAP Metadata API to create an expression that provides the measure value for the required MtmBaseCube. Add the expression to the MtmMeasureMap as a mapping for the given MtmBaseCube. If the measure is read from the OLAP Catalog, then correct the measure mapping in the OLAP Catalog tables.

XOQ-01461: Partitioned cube has no base cube for hierarchy combination ("(string)").

Cause: A partitioned cube had no base cube for the requested hierarchy combination.

Action: Use the OLAP Metadata API to create a base cube for the required hierarchy combination. If the cube is read from the OLAP Catalog, then add a base cube to the partitioned cube in the OLAP Catalog tables.

XOQ-01462: Partitioned cube does not contain measure "(string)".

Cause: A partitioned cube and one of its base cubes referred to different sets of measure maps.

Action: Use the OLAP Metadata API to add or remove measure maps as necessary to make the partitioned cube consistent with all of its base cubes. If the cube is read from the OLAP Catalog, then correct the cube in the OLAP Catalog tables.

XOQ-01463: Base cube does not contain measure "(string)".

Cause: A partitioned cube and one of its base cubes referred to different sets of measure maps.

Action: Use the OLAP Metadata API to add or remove measure maps as necessary to make the partitioned cube consistent with all of its base cubes. If the cube is read from the OLAP Catalog, then correct the base cube in the OLAP Catalog tables.

XOQ-01464: Partitioned cube does not contain dimension "(string)".

Cause: A partitioned cube and one of its base cubes referred to different sets of dimension maps.

Action: Use the OLAP Metadata API to add or remove dimension maps as necessary to make the partitioned cube consistent with all of its base cubes. If the cube is read from the OLAP Catalog, then correct its dimensions in the OLAP Catalog tables.

XOQ-01465: Base cube does not contain dimension "(string)".

Cause: A partitioned cube and one of its base cubes referred to different sets of dimension maps.

Action: Use the OLAP Metadata API to add or remove dimension maps as necessary to make the partitioned cube consistent with all of its base cubes. If the cube is read from the OLAP Catalog, then correct its dimensions in the OLAP Catalog tables.

XOQ-01466: Base cube does not contain dimension for dimensionality "(string)".

Cause: A base cube's dimensionalities contained a set of dimension maps that was inconsistent with the base cube's set of dimension maps.

Action: Use the OLAP Metadata API to add or remove dimension maps or dimensionalities as necessary to make the sets of dimension maps consistent. If the cube is read from the OLAP Catalog, then correct its dimensionalities in the OLAP Catalog tables.

XOQ-01467: Base cube does not contain dimensionality for dimension "(string)".

Cause: A base cube's dimensionalities contained a set of dimension maps that was inconsistent with the base cube's set of dimension maps.

Action: Use the OLAP Metadata API to add or remove dimension maps or dimensionalities as necessary to make the sets of dimension maps consistent. If the cube is read from the OLAP Catalog, then correct its dimensionalities in the OLAP Catalog tables.

XOQ-01468: Base cube solved status does not match dimensionality "(string)" solved status.

Cause: A base cube was solved, but one of its dimensionalities was unsolved, or the reverse.

Action: Use the OLAP Metadata API to correct the inconsistency. If the cube is read from the OLAP Catalog, then correct its dimensionalities in the OLAP Catalog tables.

XOQ-01481: Dimension "*(string)*" appears in multiple aggregation steps.

Cause: Every dimension in the cube must appear in one and only one aggregation step.

Action: Use the OLAP Metadata API to remove the extraneous aggregation steps from the cube. If the cube is read from the OLAP Catalog, then correct its aggregation specification in the OLAP Catalog tables.

XOQ-01482: no aggregation step found for dimension "*(string)*"

Cause: A dimension did not have an aggregation step. Every dimension in the cube must appear in one and only one aggregation step.

Action: Use the OLAP Metadata API to add an appropriate aggregation step to the cube. If the cube is read from the OLAP Catalog, then correct its aggregation specification in the OLAP Catalog tables.

XOQ-01483: Invalid aggregation step for dimension "*(string)*": Dimension is not part of the cube.

Cause: An aggregation step referred to a dimension that was not a dimension of the cube.

Action: Use the OLAP Metadata API to remove the extraneous aggregation steps from the cube. If the cube is read from the OLAP Catalog, then correct its aggregation specification in the OLAP Catalog tables.

XOQ-01484: Cannot modify "*string*" while in a branch in a way that invalidates its materialized view.

Cause: A change was attempted in a branch to an object that had an associated materialized view. The change would invalidate that materialized view.

Action: Disable the materialized view on the object before creating the branch.

XOQ-01485: Cannot modify "*string*" in the branch, because its analytic workspace is not in the branch.

Cause: A modification was attempted on an object whose analytic workspace had not been added to the branch.

Action: Add the associated analytic workspace to the branch.

XOQ-01486: Consistent solve has two aggregation steps over dimension "*string*".

Cause: A consistent solve had more than one aggregation steps over the dimension.

Action: Modify the consistent solve to remove or replace one of the aggregation steps.

XOQ-01487: Consistent solve has two precompute models over dimension "*string*".

Cause: A consistent solve had more than one precompute model over the dimension.

Action: Modify the consistent solve to remove or replace one of the precompute models.

XOQ-01488: Consistent solve has two dynamic models over dimension "*string*".

Cause: A consistent solve had more than one dynamic model over the dimension.

Action: Modify the consistent solve to remove or replace one of the dynamic models.

XOQ-01489: Consistent solve has a model "string" with invalid explicit dimension "string".

Cause: An explicit dimension of a model in a consistent solve was not a dimension of the cube and measure.

Action: Modify the consistent solve to remove or replace this model.

XOQ-01490: Consistent solve has a model "string" with invalid base dimension "string".

Cause: The base dimension of a model in a consistent solve was not a dimension of the cube and measure.

Action: Modify the consistent solve to remove or replace this model.

XOQ-01491: Consistent solve has an invalid aggregation step over dimension "string".

Cause: The aggregation step for a consistent solve was not over a dimension of the cube and measure.

Action: Modify the consistent solve to remove or replace this aggregation step.

XOQ-01492: invalid order of steps for consistent solve

Cause: A consistent solve did not list precompute models first, then aggregation steps, and dynamic models last.

Action: Reorder the steps in the consistent solve or remove some of the steps.

XOQ-01493: Invalid specification for dimension "string" in precompute condition for cube "string"

Cause: The precompute condition contained an invalid specification. When a precompute percent is also specified, the precompute condition can specify only that the last dimensions in the cube's consistent solve specification are not precomputed.

Action: Remove the cube's precompute condition or precompute percent, or rewrite the cube's precompute condition so that it specifies only NONE for dimensions at the end of the cube's consistent solve specification.

XOQ-01494: invalid target dimension or attribute "string"

Cause: The attribute and its target dimension or attribute were in different analytic workspaces.

Action: Remove the attribute's target, or specify a target dimension or attribute that is in the same analytic workspace.

XOQ-01495: cannot specify both a target attribute "string" and a target dimension "string"

Cause: The attribute has both a target dimension and a target attribute.

Action: Remove either the attribute's target dimension or its target attribute.

XOQ-01496: loaded data incompatible with data type "string"

Cause: A data type change could not be made because data loaded for the object could not be represented by the data type.

Action: Clear the data prior to making the data type change.

XOQ-01497: Data type "string" is not allowed for an indexed attribute.

Cause: An invalid data type was specified for an indexed attribute.

Action: Either change the data type or set CreateIndex to False, set PopulateLineage to False, remove any target attributes or target dimensions from the attribute, and remove the attribute from the list of UniqueKeyAttributes in all dimension levels.

XOQ-01498: Calculation model "string" specifies invalid explicit dimension "string".

Cause: A dimension calculation model specified the owning dimension as an explicit dimension.

Action: Remove the owning dimension from the calculation model's explicit dimensions.

XOQ-01499: Measure folder "string" cannot appear twice in a sequence of nested folders.

Cause: A measure folder was nested under itself as a subfolder.

Action: Remove the nested subfolder.

XOQ-01502: Consistent solve cannot vary the aggregation method of dimension "string" during aggregation.

Cause: The OVER clause specified the same dimension as either the AGGREGATE USING DIMENSION clause or the dimension of the attribute in the AGGREGATE USING ATTRIBUTE clause.

Action: Specify different dimensions in the OVER clause and the DIMENSION clause or ensure that the dimension in the OVER clause is not the dimension of the attribute in the ATTRIBUTE clause.

XOQ-01503: Consistent solve cannot vary the aggregation method because "string" is not a dimension or dimension attribute of the cube.

Cause: An attempt was made to vary aggregation methods by a dimension or attribute of a dimension not in the cube.

Action: Specify the aggregation methods by measure, dimension or indexed attribute of a dimension that is used in the cube.

XOQ-01504: The hierarchy level "string" is mapped to a constant but the level is not the top of the hierarchy.

Cause: A lower hierarchy level was mapped to a constant.

Action: Remap all lower levels to variable expressions.

XOQ-01600: XOQ-01600: OLAP DML error while executing DML "string"\nstring

Cause: An OLAP DML expression in an analytic workspace failed.

Action: This is an unexpected error. Examine the rest of the error stack for more details.

XOQ-01601: error while loading data for string "string" into the analytic workspace

Cause: An error occurred while executing a generated SQL statement and loading the result into the analytic workspace. The error could be caused by bad SQL or bad data.

Action: Examine the rest of the error stack for more details. If build logging is enabled, the SQL will be displayed in the OUTPUT column of the cube build log.

XOQ-01700: Cube "string" is not part of an analytic workspace.

Cause: The cube was not built because it was not deployed in an analytic workspace.

Action: Remove the cube from the list of objects in the build process, or deploy the cube in an analytic workspace.

XOQ-01701: Dimension "*string*" is not part of an analytic workspace.

Cause: The dimension was not built because it is not deployed in an analytic workspace.

Action: Remove the dimension from the list of objects in the build process, or deploy the dimension in an analytic workspace.

XOQ-01702: Objects from multiple analytic workspaces cannot be built in a single process.

Cause: A single build process contained objects from more than one analytic workspace.

Action: Change the build process to include objects in only a single analytic workspace.

XOQ-01703: error during parse of build process script: "*string*", "*string*"

Cause: The current build process failed because of an error in the build script.

Action: Correct the error in the script.

XOQ-01704: unknown model "*string*"

Cause: The current build process failed because the model in the build script does not exist.

Action: Change the build script to refer to an actual model.

XOQ-01705: CLEAR command cannot run on a dimension.

Cause: A CLEAR command is in a build specification for a dimension.

Action: Remove the CLEAR command.

XOQ-01706: An unexpected condition occurred during the build: "*string*".

Cause: An internal error occurred during the build.

Action: Report this error to Oracle Support Services.

XOQ-01707: Oracle job "*string*" failed while executing slave build "*string*" with error "*string*".

Cause: A build job spawned by the current process failed.

Action: Examine the trace file for the slave build to determine the cause of the failure.

XOQ-01708: SOLVE command cannot run on a dimension.

Cause: A SOLVE command was in a build specification for a dimension.

Action: Remove the SOLVE command.

XOQ-01709: *string* command cannot run on a cube.

Cause: An invalid build command was in a build specification for a cube.

Action: Remove the invalid build command.

XOQ-01710: unknown build item "*string*"

Cause: A build item was not a cube or a dimension.

Action: Check the list of build items to ensure that they are all valid.

XOQ-01711: Aggregation path for hierarchies on dimension "*string*" is inconsistent.

Cause: The definition of parents was ambiguous among hierarchies, or a loop was defined within a hierarchy.

Action: Fix the mappings or delete the hierarchies.

XOQ-01712: "*string*" failed validation as a level hierarchy.

Cause: A member of the hierarchy had one of these problems: 1) The member's level was not part of the hierarchy. 2) The member's parent was at the same or a lower level of the hierarchy.

Action: Redefine the hierarchy as a value hierarchy or fix the level mappings.

XOQ-01713: "*string*" failed validation as a non-skip-level hierarchy.

Cause: A member of the hierarchy had one of these problems: 1) The member had no parent but was not in the top level of the hierarchy. 2) The member's parent was two or more levels above in the hierarchy.

Action: Mark the hierarchy as a skip-level hierarchy or fix the level mappings.

XOQ-01714: "*string*" failed validation as a non-ragged hierarchy.

Cause: A member of the hierarchy had no children but was not in the lowest level of the hierarchy.

Action: Mark the hierarchy as a ragged hierarchy or fix the level mappings.

XOQ-01715: Hierarchy "*string*" has no members for some levels.

Cause: No members existed for some levels defining this hierarchy.

Action: Fix the mappings or the hierarchy definition.

XOQ-01716: Definition of a hierarchy "*string*" does not allow raggedness.

Cause: Leaf members of a hierarchy were on different levels.

Action: Fix the mappings or the hierarchy definition.

XOQ-01717: illegal parent for calculated member "*string*"

Cause: The parent for this member was not a member of a dimension or hierarchy.

Action: Fix the calculated member parent data.

XOQ-01718: A calculated member "*string*" and its parent have inconsistent level definitions.

Cause: Levels of a calculated member and its parent are inconsistent with the current hierarchy.

Action: Fix level data for a calculated member or its parent.

XOQ-01719: incorrect level for a calculated member "*string*"

Cause: The level of a calculated member was invalid, or it was not in this hierarchy level.

Action: Fix the level data for the calculated member.

XOQ-01720: Calculated members in hierarchy "%(1)" cannot be organized.

Cause: A loop existed among calculated members.

Action: Fix the parent data for calculated members to remove the loop.

XOQ-01721: ValueHierarchy "*string*" does not have unique keys.

Cause: AddUniqueKeyPrefix was set to True on an AWPrimaryDimensionOrganization, and a load was attempted on a ValueHierarchy.

Action: Do one of the following: 1) Perform the load on DimensionLevels. 2) If the keys are in fact unique, then set AddUniqueKeyPrefix on the AWPrimaryDimensionOrganization to False.

XOQ-01722: Cube "*string*" mapping to "*string*" is invalid. Cubes must map to DimensionLevels for PrimaryDimensions whose keys are not unique.

Cause: AddUniqueKeyPrefix was set to True on an AWPrimaryDimensionOrganization, and a cube was not mapped to a DimensionLevel.

Action: Either map the cube to a DimensionLevel or, if the keys are in fact unique, set AddUniqueKeyPrefix on the AWPrimaryDimensionOrganization to False.

XOQ-01723: CLEAR AGGREGATES command cannot run within a FOR...BUILD group.

Cause: A CLEAR AGGREGATES command was found within a FOR...BUILD group as part of a build.

Action: Change the command to CLEAR VALUES or remove it from the FOR...BUILD group.

XOQ-01724: invalid USING clause

Cause: An invalid USING clause was specified on a cube or cube dimension with an associated materialized view.

Action: Specify a valid USING clause or omit the USING clause.

XOQ-01725: unknown named build specification "*string*"

Cause: A USING clause specified an unknown named build specification."

Action: Ensure that the name in the USING clause is correct.

XOQ-01726: The partition dimension "*string*" in cube "*string*" is missing an ET view.

Cause: The partition dimension was missing an embedded totals view. This may have been caused by using EIF import to create the analytic workspace."

Action: Ensure that the partition dimension has an ET view.

XOQ-01727: Specified refresh method "*string*" is invalid.

Cause: An invalid refresh method was specified for a build.

Action: Specify a valid refresh method.

XOQ-01728: Atomic refresh is not supported.

Cause: Multiple objects were specified in the build script, or the add_dimensions flag was set to true. Atomic refresh is not supported for builds involving two or more cube materialized views.

Action: Specify the atomic parameter as false, or build the objects individually.

XOQ-01729: Explicit SCN build is not allowed.

Cause: A build involving cube materialized views specified AS OF SCN for a build.

Action: Remove explicit SCN from the build script.

XOQ-01730: Refresh method "*string*" requires a suitable materialized view.

Cause: The cube was not associated with a FAST or REWRITE materialized view, as required by the specified refresh method.

Action: Change the refresh method or the type of materialized view associated with the cube.

XOQ-01731: Atomic build is not supported in a branch.

Cause: An atomic build was requested while there was an active branch in the session.

Action: Either run the build without the atomic setting or close the branch.

XOQ-01732: Object "*string*" cannot build in a branch because it has a materialized view.

Cause: A build was attempted in a branch on an object that has an associated materialized view.

Action: Turn off the materialized view on the object before creation of a branch.

XOQ-01733: Invalid cube map "*string*" is specified in a LOAD command.

Cause: A FROM clause was specified in a LOAD command that does not correspond to any cube map in the build cube.

Action: Remove the FROM clause or specify a valid cube map.

XOQ-01734: Time dimension "*string*" is specified in a COMPILE command, but attribute "*string*" on level "*string*" has no mapping.

Cause: One of the following attributes was specified but not mapped: END_DATE, START_DATE, or TIMESPAN.

Action: Define a mapping for the unmapped attribute.

XOQ-01735: Cube cannot be refreshed because dimension "*string*" is stale.

Cause: An attempt was made to refresh a cube with a materialized view when one of the cube's dimensions has a stale materialized view.

Action: Refresh the dimension's materialized view before refreshing the cube.

XOQ-01736: Cube "*string*" cannot be aggregated because it is compressed.

Cause: An attempt was made to run a nonconsistent solve aggregation on a compressed cube. This is not supported.

Action: Redefine the cube to be noncompressed or do not attempt to run the aggregation.

XOQ-01737: FAST_SOLVE cannot be used to build cube "*string*". Build must use COMPLETE.

Cause: An attempt was made to use FAST_SOLVE build on a cube that must use a COMPLETE build (for example, an initial build).

Action: Use a FORCE or a COMPLETE build on the cube.

XOQ-01738: Level of dimension member "string" cannot change from "string" to "string" within a single load.

Cause: A dimension member was mapped to more than one level.

Action: Change the mapping so each dimension member is mapped to only one level.

XOQ-01739: Unknown or invalid measure "string" is specified in an assignment.

Cause: The target of an assignment was specified as a measure that was not part of the cube being built.

Action: Specify a valid measure of the cube as the assignment target.

XOQ-01740: Unknown or invalid dimension "string" is specified in an assignment.

Cause: The target of an assignment was qualified by a dimension that was not part of the cube or attribute being built.

Action: Specify a valid dimension of the cube or attribute.

XOQ-01741: unsupported assignment qualification for dimension "string"

Cause: The target of an assignment was qualified by something other than a literal text value.

Action: Specify a literal text value for the qualified dimension member.

XOQ-01742: NO COMMIT option cannot be specified on build "string".

Cause: The NO COMMIT option was specified on a build that includes cubes backed by materialized views or that has non zero parallelism.

Action: Do not specify the NO COMMIT option for this build.

XOQ-01743: Cannot apply automatic order because circular dependency exists between build objects "string" and "string".

Cause: The build objects contained two or more metadata objects that depend on each other.

Action: Either do not specify automatic order, or remove one of the properties that cause the circular dependency.

XOQ-01744: The LOAD PRUNE command cannot be used with cube "string".

Cause: A build specification contained a LOAD PRUNE command for a cube that did not support the PRUNE option. To be compatible with the LOAD PRUNE command, a cube must have exactly one CubeMap; the CubeMap must contain a CubeDimensionalityMap for the partition dimension; the CubeDimensionalityMap for the partition dimension must specify a MappedDimension; and the MappedDimension object must contain a DimensionMap.

Action: Remove the PRUNE option from the LOAD command.

XOQ-01745: Unknown or invalid hierarchy "string" is specified in a maintain dimension command.

Cause: The hierarchy specified in a maintain dimension command was not part of the dimension being built.

Action: Specify a valid hierarchy of the dimension in the maintain dimension command.

XOQ-01746: Unknown or invalid level "string" is specified in a maintain dimension command.

Cause: The level specified in a maintain dimension command was not part of the dimension being built.

Action: Specify a valid level of the dimension in the maintain dimension command.

XOQ-01747: Dimension member "string" is not a valid member of dimension "string".

Cause: The member specified in the maintain dimension command was not a valid member of the dimension.

Action: Specify a valid member in the maintain dimension command.

XOQ-01748: Dimension member "string" is already a member of dimension "string".

Cause: The member specified in the dimension insert command was already a member of the dimension.

Action: Change the dimension insert command to a dimension merge command.

XOQ-01749: Dimension member "string" is not a member of dimension "string".

Cause: The member specified in the dimension update or dimension delete command was not a member of the dimension.

Action: Specify an existing member of the dimension in the dimension update or dimension delete command.

XOQ-01750: Dimension member "string" is already a member of hierarchy "string".

Cause: The member specified in the dimension insert command was already a member of the hierarchy.

Action: Change the dimension insert command to a dimension merge command.

XOQ-01751: Dimension member "string" is not a member of hierarchy "string".

Cause: The member specified in the dimension update or dimension delete command was not a member of the hierarchy.

Action: Specify an existing member of the hierarchy in the dimension update or dimension delete command.

XOQ-01752: Member "string" appears both in level "string" and in level "string" of dimension "string".

Cause: A modification to a dimension member was attempted that would cause the member to belong to two different levels.

Action: Change the maintain dimension command to modify the level of all hierarchies to which the dimension member belongs.

XOQ-01753: Unknown or invalid attribute "string" is specified in an assignment.

Cause: The target of an assignment was specified as an attribute that was not part of the dimension being built.

Action: Specify a valid attribute of the dimension as the assignment target.

XOQ-01754: SOLVE command cannot run on a subset of cube measures when sparse type is COMPRESSED and measure storage is INDEPENDENT.

Cause: The build specification contains a partial list of cube measures with COMPRESSED cube sparsity and INDEPENDENT measure storage.

Action: Correct the build specification in one of these ways: Remove the SOLVE command, list all measures of the cube, or build the entire cube.

XOQ-01755: Dimension member "*string*" requires a prefix to be created in dimension "*string*".

Cause: The AddUniqueKeyPrefix option was turned on, but the member name did not have a valid prefix.

Action: Turn off AddUniqueKeyPrefix or specify the member name with a valid prefix: the level name if the member is added to a level, or an underscore if it is not.

XOQ-01756: Member "*string*" appears inconsistently in level "*string*" across hierarchies of dimension "*string*".

Cause: A modification to a dimension member was attempted that would cause the member to belong to multiple hierarchies at different levels.

Action: Change the maintain dimension command to modify the level of all hierarchies to which the dimension member belongs.

XOQ-01757: Dimension "*string*" does not belong to build cube "*string*".

Cause: The specified dimension in the build script did not belong to the build cube.

Action: Specify dimensions that belong to the build cube.

XOQ-01758: Measure "*string*" does not belong to build cube "*string*".

Cause: The specified measure in the build script did not belong to the build cube.

Action: Specify measures that belong to the build cube.

XOQ-01759: The build specification includes an invalid ORDER BY clause.

Cause: The specified ORDER BY clause did not contain a single attribute of the partition dimension.

Action: Remove or correct the ORDER BY clause.

XOQ-01799: unspecified error

Cause: A mismatch existed between the C++ and the OLAP DML versions of the code.

Action: Verify the installation of the product.

XOQ-01800: ALTER privilege is required on object "*string*" in schema "*string*".

Cause: An attempt was made to modify a metadata object without having the ALTER privilege on that object.

Action: Request the ALTER privilege on the object from the DBA.

XOQ-01801: CREATE privilege is required for object "*string*" in schema "*string*".

Cause: An attempt was made to create a new metadata object without the necessary privileges.

Action: Request the CREATE ANY privilege to create the object in any schema or the CREATE privilege to create it only in your own schema.

XOQ-01802: DROP privilege is required for object "*string*" in schema "*string*".

Cause: An attempt was made to delete a metadata object without the DROP privilege on that object.

Action: Request the DROP privilege on the object from the DBA.

XOQ-01803: SELECT privilege is required for object "string" in schema "string".

Cause: An attempt was made to read a metadata object without the SELECT privilege on that object.

Action: Request the SELECT privilege on the object from the DBA.

XOQ-01900: The dimension level has invalid or no unique key attributes.

Cause: The dimension level had an associated materialized view, but it had no unique key attributes.

Action: Create at least one unique key attribute.

XOQ-01901: No measures or dimensionalities are in the cube.

Cause: Measures and dimensionalities were not added to the cube.

Action: Add at least one measure or dimensionality to the cube.

XOQ-01902: No analytic workspace is specified in the analytic workspace primary dimension organization.

Cause: An analytic workspace was not added to the analytic workspace primary dimension organization.

Action: Add an analytic workspace to the analytic workspace primary dimension organization.

XOQ-01903: The unique key attribute has no corresponding base attribute.

Cause: A dimension level whose primary dimension had an associated materialized view contained a unique key attribute that did not have an associated base attribute.

Action: Create a base attribute that corresponds to the unique key attribute.

XOQ-01904: The dimension level has no base attributes.

Cause: A dimension level whose primary dimension had an associated materialized view did not have base attributes.

Action: Create base attributes that correspond to the unique key attributes of the dimension level.

XOQ-01905: GenerateRefreshMV is not specified in AWCubeOrganization.

Cause: The AWCubeOrganization was not marked for a refresh materialized view, but it was marked for rewrite materialized view.

Action: Set GenerateRefreshMV on the AWCubeOrganization if it has been marked for GenerateRewriteMV.

XOQ-01906: The analytic workspace referenced by the AWCubeOrganization does not match that of analytic workspace primary dimension organization "string".

Cause: The analytic workspace referred to by the AWCubeOrganization did not match that of its corresponding analytic workspace primary dimension organization.

Action: Set the analytic workspace of the AWCubeOrganization to match that of its corresponding analytic workspace primary dimension organization.

XOQ-01907: The AWCubeOrganization is marked for GenerateRefreshMV, but analytic workspace primary dimension organization "string" is not.

Cause: The AWCubeOrganization was marked for GenerateRefreshMV.

Action: If the AWCubeOrganization is marked for GenerateRefreshMV, then mark the analytic workspace primary dimension organization also.

XOQ-01908: The cube has no dimensionalities.

Cause: The AWCubeOrganization was marked for GenerateRefreshMV, but there were no dimensionalities.

Action: Add dimensionalities to the cube and mark the analytic workspace primary dimension organization for GenerateRefreshMV.

XOQ-01909: The hierarchy level has an invalid or no associated dimension level.

Cause: Either a dimension level was not created on the primary dimension, or the primary dimension on the dimension level was not the same as the primary dimension on the hierarchy.

Action: Assure that the hierarchy level is associated with exactly one dimension level in the same primary dimension.

XOQ-01910: The level hierarchy has no hierarchy levels.

Cause: Hierarchy levels were not created on the level hierarchy.

Action: Create at least one level for the hierarchy.

XOQ-01911: The specified default hierarchy does not exist.

Cause: A default hierarchy was specified, but it was not created.

Action: Create a hierarchy on the primary dimension, then set it as the default hierarchy.

XOQ-01912: The cube has no organization.

Cause: Neither an AWCubeOrganization nor a ROLAP cube organization existed on the cube.

Action: Create either an AWCubeOrganization or ROLAP cube organization on the cube.

XOQ-01913: The base measure has an invalid or no data type specified.

Cause: A SQL data type on the base measure was either not specified or invalid.

Action: Create a valid SQL data type on the base measure.

XOQ-01914: The primary dimension has no organization.

Cause: Neither an analytic workspace primary dimension organization nor a ROLAP primary dimension organization existed on the primary dimension.

Action: Create either an analytic workspace primary dimension organization or ROLAP primary dimension organization on the primary dimension.

XOQ-01915: The hierarchy level has no hierarchy level map.

Cause: A hierarchy level map did not exist on the hierarchy level.

Action: Create a hierarchy level map for the hierarchy levels of dimensions with associated materialized views.

XOQ-01916: The AWCubeOrganization has no analytic workspace.

Cause: An analytic workspace was not specified for the AWCubeOrganization.

Action: Create an analytic workspace for AWCubeOrganization in which the cube will be deployed.

XOQ-01917: The base attribute has an invalid or no data type specified.

Cause: A SQL data type on the base attribute was either not specified or invalid.

Action: Create a valid SQL data type on the base attribute.

XOQ-01918: The sparse type must be COMPRESSED when the AWCubeOrganization is marked for GenerateRefreshMV.

Cause: When the AWCubeOrganization was marked for GenerateRefreshMV, the sparse type was not COMPRESSED.

Action: Set the sparse type to COMPRESSED on the AWCubeOrganization.

XOQ-01919: The sparse dimensions of the AWCubeOrganization must contain all dimensions or none.

Cause: The sparse dimensions did not contain either all dimensions or none, although the AWCubeOrganization was marked for GenerateRefreshMV.

Action: Set sparse dimensions on the AWCubeOrganization to include all the dimensions or none.

XOQ-01920: Sparse dimensions of the AWCubeOrganization must be specified with a subset of the cube dimensionalities.

Cause: The sparse dimensions did not specify a subset of the cube dimensionalities, although the AWCubeOrganization was not marked for GenerateRefreshMV.

Action: Set sparse dimensions on the AWCubeOrganization to include a subset of the cube dimensionalities.

XOQ-01921: The dimensionality does not reference a primary dimension.

Cause: A primary dimension was not specified on the dimensionality.

Action: Set the primary dimension on the dimensionality.

XOQ-01922: The dimension referenced in dimensionality "string" is specified more than once in this cube.

Cause: Duplicate dimensions were specified in the dimensionality of the cube.

Action: Remove duplicate dimensionality specifications.

XOQ-01923: Assignment "string" has no member expression and does not correspond to a custom member.

Cause: An expression or a custom member was missing in the assignment.

Action: Specify an expression for the assignment, or check that its name corresponds to a known custom member.

XOQ-01924: Custom member "string" has no member expression.

Cause: An expression was missing in the custom member.

Action: Specify an expression for the custom member.

XOQ-01925: PrecomputePercent cannot be used with this cube.

Cause: PrecomputePercent can be used only with a compressed cube.

Action: Remove the PrecomputePercent property from this cube.

XOQ-01926: PrecomputePercentTop cannot be used with this cube.

Cause: PrecomputePercentTop can be used only with a compressed partitioned cube.

Action: Remove the PrecomputePercentTop property from this cube.

XOQ-01927: invalid PrecomputePercent value

Cause: PrecomputePercent value was not in the valid range. A PrecomputePercent value must be between 0 and 100, and if the cube has a secondary partition level then the PrecomputePercent value cannot be 0.

Action: Change the PrecomputePercent value.

XOQ-01928: invalid PrecomputePercentTop value

Cause: PrecomputePercentTop value was not in the valid range between 0 and 100.

Action: Change the PrecomputePercentTop value.

XOQ-01929: incompatible values for PrecomputePercent and PrecomputePercentTop

Cause: A PrecomputePercentTop value can be greater than 0 only when the PrecomputePercent value is greater than 0.

Action: Change the PrecomputePercent value or the PrecomputePercentTop value.

XOQ-01930: The cube dimensionality map has no mapped dimension.

Cause: A mapped dimension was not specified for the cube dimensionality map.

Action: Specify a mapped dimension on the cube dimensionality map. The mapped dimension must be the dimension or hierarchy level that corresponds to the mapped data.

XOQ-01931: MeasureStorage is incompatible with MVoption.

Cause: MeasureStorage was defined as SHARED.

Action: Specify MeasureStorage as INDEPENDENT.

XOQ-01932: NullStorage is incompatible with MVoption.

Cause: NullStorage was defined as GENERIC.

Action: Specify NullStorage as MV_READY.

XOQ-01933: invalid list of sparse dimensions

Cause: List of sparse dimensions was not contiguous among all cube dimensions.

Action: Change the order of the cube dimensions.

XOQ-01934: Sparse dimensions are not last.

Cause: Sparse dimensions were not last in the list cube dimensions, as required for compressed cubes.

Action: Change the order of the cube dimensions.

XOQ-01935: invalid definition of SPARSE_GLOBAL cube

Cause: SPARSE_GLOBAL cube must have at least two dimensions, at least one sparse dimension, and partitions.

Action: Change the definition of the cube.

XOQ-01936: invalid partition dimension for SPARSE_GLOBAL cube

Cause: SPARSE_GLOBAL cube cannot have a sparse partition dimension.

Action: Change the definition of the cube.

XOQ-01937: incompatible HierarchyConsistencyRule and MVOption

Cause: HierarchyConsistencyRule must be set to STAR_CONSISTENT for this MVOption.

Action: Change the HierarchyConsistencyRule.

XOQ-01938: PrecomputeCondition cannot be used with this cube.

Cause: PrecomputeCondition was used with a compressed cube, but it requires an uncompressed cube.

Action: Remove PrecomputeCondition property from this cube.

XOQ-01939: MappedDimension "string" specified for a CubeDimensionalityMap is not mapped.

Cause: The MappedDimension property of a CubeDimensionalityMap pointed to a dimension that was not mapped.

Action: Change the MappedDimension property to reference a dimension that is mapped, or add a map to the current MappedDimension. For example, if MappedDimension points to a DimensionLevel, then the DimensionLevel must contain a MemberListMap.

XOQ-01940: BaseAttribute "string" is specified on a DimensionLevel as both a UniqueKeyAttribute and a VisibleAttribute.

Cause: A BaseAttribute on a DimensionLevel can be specified as either a UniqueKeyAttribute or a VisibleAttribute, but not both.

Action: Remove either the Visible or the UniqueKey setting for the attribute.

XOQ-01941: The HierarchyLevelMap for HierarchyLevel "string" must contain a KeyExpression and a Query.

Cause: HierarchyLevelMap missing a KeyExpression, Query, or both.

Action: Specify a KeyExpression and Query for the HierarchyLevelMap.

XOQ-01942: A BaseAttribute cannot be removed while it is a UniqueKeyAttribute on DimensionLevel "string".

Cause: The BaseAttribute is a UniqueKeyAttribute of a DimensionLevel.

Action: Remove the attribute as a UniqueKeyAttribute.

XOQ-01943: An AttributeMap refers to a nonexistent attribute.

Cause: An AttributeMap referred to a nonexistent attribute.

Action: Ensure all AttributeMaps point to an existing attribute.

XOQ-01944: BaseAttribute "string" already exists on this dimension object.

Cause: A BaseAttribute was added to a dimension object more than once.

Action: Do not add the same BaseAttribute to a dimension object.

XOQ-01945: The cube dimensionality map has no join condition.

Cause: A join condition was not specified for the CubeDimensionalityMap.

Action: Specify a join condition on the cube dimensionality map.

XOQ-01946: BaseAttribute "string" is mapped by more than one attribute map.

Cause: A BaseAttribute was mapped more than once.

Action: Do not map the same BaseAttribute more than once.

XOQ-01947: Measure "string" is mapped by more than one MeasureMap.

Cause: A measure was mapped more than once.

Action: Do not map the same measure more than once.

XOQ-01948: CubeDimensionality "string" is mapped by more than one CubeDimensionalityMap.

Cause: A cube dimensionality was mapped more than once.

Action: Do not map the same cube dimensionality more than once.

XOQ-01949: The AWCubeOrganization for cube "string" is marked as DENSE but contains SPARSE dimensions.

Cause: The AWCubeOrganization was marked as DENSE but contained SPARSE dimensions.

Action: Either mark the cube as SPARSE, or remove the SPARSE dimensions.

XOQ-01950: The AWCubeOrganization for cube "string" contains multiple BuildSpecifications with the same name.

Cause: The AWCubeOrganization contains multiple BuildSpecifications with the same name.

Action: Ensure all BuildSpecifications on an AWCubeOrganization are named uniquely.

XOQ-01951: A time dimension requires at least two of the following attributes: END_DATE, START_DATE and TIMESPAN.

Cause: A time dimension was created without the required attributes.

Action: Add the required attributes and mark them as the appropriate type.

XOQ-01952: The CubeMap for cube "string" must contain either a query or a From clause.

Cause: The CubeMap did not have a query or From clause.

Action: Specify a query or From clause for the CubeMap.

XOQ-01953: cannot commit changes to CWM or AWXML metadata

Cause: The transaction contained changes to metadata objects stored in CWM or AWXML format.

Action: Use the DBMS_CUBE.UPGRADE function to upgrade the metadata objects to a format that supports changes.

XOQ-01954: Object cannot be renamed to "string" because that name is already being used by an existing object.

Cause: The transaction attempted to change an object name to a name that was already taken.

Action: Change the object name to a different name and commit the transaction again.

XOQ-01955: Cannot rename object to "string" because that name is invalid.

Cause: The transaction attempted to change an object name to a name that was either too long or contained invalid characters.

Action: Change the object name to a different name, and commit the transaction again.

XOQ-01956: The object cannot be renamed.

Cause: The transaction attempted to change the name of a database object such as a table or a column. This object cannot be renamed through the OLAP API client. It must be renamed with a DDL statement such as RENAME or ALTER TABLE.

Action: Restore the object name to its previous value or rollback the transaction containing the rename. Then use an appropriate DDL statement to rename the object.

XOQ-01957: A cube cannot have both rewrite materialized views and either a ragged or a skip-level hierarchy. The hierarchy is "string".

Cause: The cube had rewrite materialized views and either a ragged or a skip-level hierarchy.

Action: Either mark the cube to exclude rewrite materialized views, or adjust the hierarchy so it is neither ragged nor skip-level.

XOQ-01958: The derived measure has an invalid data type or no data type.

Cause: Either a valid SQL data type was not specified on the derived measure, or the data type could not be derived from the expression.

Action: Create a valid SQL data type on the derived measure.

XOQ-01959: The derived measure has a missing or invalid expression.

Cause: An expression on the derived measure was either not specified or invalid.

Action: Create a valid expression on the derived measure.

XOQ-01960: Circular dependency exists between string "string" and string "string".

Cause: The OLAP API transaction contained two or more metadata objects that depend on each other.

Action: Remove either one or both of the properties that cause the circular dependency.

XOQ-01961: Object string "string" cannot be dropped while it is still a dependency of string "string".

Cause: An attempt was made to drop a metadata object that was referenced by another metadata object.

Action: Remove the reference to the metadata object being dropped.

XOQ-01962: Object "string" has an invalid name.

Cause: An attempt was made to create an object with a name that was too long or contained invalid characters.

Action: Use a valid name and commit the transaction again.

XOQ-01963: MappedDimension "string" does not match CubeDimensionality "string" specified for a CubeDimensionalityMap.

Cause: The MappedDimension property of a CubeDimensionalityMap did not point to a dimension or subdimension that had the same dimensionality as the CubeDimensionalityMap.

Action: Change the MappedDimension property to reference a dimension with the same dimensionality as the CubeDimensionalityMap.

XOQ-01964: Cannot drop MappedDimension "string" of the CubeDimensionalityMap.

Cause: An attempt was made to drop a dimension that is a MappedDimension of a CubeDimensionalityMap.

Action: Remove the reference to the dimension being dropped from the CubeDimensionalityMap.

XOQ-01965: Missing Cube Dimensionality Map for Cube Dimensionality "string".

Cause: A CubeDimensionalityMap was not found for a CubeDimensionality.

Action: Add a CubeDimensionalityMap for the CubeDimensionality.

XOQ-01966: Cannot drop PartitionLevel "string" of AWCubeOrganization.

Cause: An attempt was made to drop a dimension that is a PartitionLevel of an AWCubeOrganization Map.

Action: Remove the reference to the dimension being dropped from the AWCubeOrganization.

XOQ-01967: Attribute "string" is invalid.

Cause: An attempt was made to commit a dimension with an invalid attribute.

Action: Correct the attribute or delete it from the dimension.

XOQ-01968: UniqueKey attribute "string" has an invalid multilingual flag set.

Cause: The attribute had the multilingual flag set. An attribute cannot have this flag set and be a unique key.

Action: Remove this flag on the attribute or do not make the attribute a unique key.

XOQ-01969: Attribute cannot be both multilingual and indexed.

Cause: An indexed attribute had the multilingual flag set.

Action: Unset the createIndex flag on the analytic workspace attribute organization or unset the populate lineage flag on the attribute.

XOQ-01970: Attribute "string" has no attribute map.

Cause: The attribute had no corresponding attribute map on the hierarchy level.

Action: Create an attribute map on the attribute.

XOQ-01971: A dependency cannot be added on the organizationalSchema to the cube because measure "string" is invalid.

Cause: An attempt was made to commit an organizationalSchema that contained an invalid measure.

Action: Correct the measure.

XOQ-01972: A dependency cannot be added on the organizationalSchema to the cube because the cube has been deleted.

Cause: An attempt was made to commit an organizationalSchema that contained a deleted cube.

Action: Remove the cube reference from the organizationalSchema.

XOQ-01973: UniqueKey attribute "string" on the dimension level is invalid.

Cause: The uniqueKey attribute was invalid.

Action: Correct the uniqueKey attribute or delete it from the dimension level.

XOQ-01974: Attribute map "string" is invalid.

Cause: An attribute on the attribute map was invalid.

Action: Correct the attribute or delete it from the dimension.

XOQ-01975: The DimensionMap for Dimension "string" must contain either a query or a From clause

Cause: The DimensionMap did not have a query or From clause.

Action: Specify a query or From clause for the DimensionMap.

XOQ-01976: No key expression is defined on this dimension map owned by "string".

Cause: A key expression was not defined on the dimension map.

Action: Define a key expression on the dimension map.

XOQ-01977: Measure "string" does not exist in cube "string".

Cause: The measure associated with the measure map did not exist in the cube.

Action: Correct the measure map or add the measure to the cube.

XOQ-01978: The number of dimensionalities on cube "string" does not match the number of cube dimensionality maps on the cube map.

Cause: The number of cube dimensionalities did not equal the number of cube dimensionality maps on the cube map.

Action: Correct the cube dimensionality mappings.

XOQ-01979: Measure map "string" refers to an invalid measure, "string".

Cause: The measure was invalid.

Action: Correct the measure or delete it from the cube.

XOQ-01980: Dimension "string" is created before the attribute cube GID relation is added.

Cause: The dimension was created before the attribute cube GID relation was added.

Action: Add the attribute cube GID relation.

XOQ-01981: A generic metadata validation error has occurred.

Cause: An attempt was made to commit with invalid metadata.

Action: Correct the metadata.

XOQ-01982: A generic metadata validation error occurred against "string".

Cause: An attempt was made to commit with invalid metadata.

Action: Correct the metadata.

XOQ-01983: The dimension "string" is referenced more than once in the precompute list of the AWCubeOrganization.

Cause: Duplicate dimensions were specified in the precompute list of the AWCubeOrganization.

Action: Remove duplicate dimensions from the precompute list.

XOQ-01984: The dimension "string" referenced in the precompute list of the AWCubeOrganization is not part of cube "string".

Cause: A dimension specified in the precompute list of the AWCubeOrganization is not part of the cube.

Action: Remove the dimension from the precompute list.

XOQ-01985: The ET attribute prefix of "string" specified for dimension "string" of cube "string" is invalid.

Cause: The ET attribute prefix was invalid. The ET attribute prefix: 1) Must be fewer than six characters 2) Cannot be a substring of any MdmDimensionality or MdmMeasure column names.

Action: Correct the ET attribute prefix, or omit the prefix to use the default value.

XOQ-01986: The LevelHierarchy "string" contains more than one HierarchyLevel for DimensionLevel "string".

Cause: If HierarchyConsistencyRule is CONSISTENT or STAR_CONSISTENT, then a DimensionLevel within a LevelHierarchy can have only one HierarchyLevel.

Action: Correct the HierarchyLevels in the LevelHierarchy.

XOQ-01987: A subset of the following HierarchyLevels is ordered inconsistently in PrimaryDimension "string": "string".

Cause: If HierarchyConsistencyRule is CONSISTENT or STAR_CONSISTENT, then HierarchyLevels cannot form loops between LevelHierarchies.

Action: Eliminate the loop.

XOQ-01988: name conflict between string "string" and string "string"

Cause: Two metadata objects with the same parent had the same name. This duplication was allowed in Oracle Database 10 Release 2 (10.2) and earlier, but it is not valid for metadata objects in Oracle Database 11 Release 1 (11.1) and later.

Action: Run DBMS_CUBE.INITIALIZE_CUBE_UPGRADE which will populate a table (default name CUBE_UPGRADE_INFO) with new names to resolve the conflicts.

XOQ-01989: Level "string" is not uniquely mapped.

Cause: More than one level was mapped to the same expression. If a dimension has materialized views, it cannot have more than one level mapped to the same expression.

Action: Uniquely map all levels or create the dimension without materialized views.

XOQ-01990: Cube "string" cannot override the aggregation maps for this measure.

Cause: The consistent solve specification was invalid on the measure.

Action: Modify the cube so it is uncompressed with independent measure storage.

XOQ-01991: The data type of this measure in cube "string" or its mapped expression is incompatible with materialized views.

Cause: The data type of a numeric measure in a cube with a materialized view had restricted scale or precision.

Action: Change the data type to NUMBER without any qualifications.

XOQ-01992: The OLAP DML data type cube storage qualifications "string" in cube "string" are incompatible with materialized views.

Cause: The cube storage data type of the AWCubeOrganization with a materialized view had restricted scale or precision.

Action: Remove precision and scale restrictions on the NUMBER data type from the cube storage.

XOQ-01993: The data type of base attribute "string" or its mapped expression is incompatible with materialized views.

Cause: The data type of the attribute or its mapped expression is not supported by materialized views.

Action: Change the data type of the attribute or its mapped expression.

XOQ-01994: Primary dimension "string" and the cube have incompatible organizations.

Cause: The organizations of the primary dimension and of the cube were incompatible. If a cube has an AWCubeOrganization, then all of its primary dimensions must have analytic workspace primary dimension organizations.

Action: Create an analytic workspace primary dimension organization on the primary dimension.

XOQ-01995: Object "string" does not exist.

Cause: A cube or dimension was defined in terms of an object that does not exist.

Action: Create the missing object or redefine the cube or dimension.

XOQ-01996: The object cannot be renamed.

Cause: An attempt was made to rename an object without the necessary permissions to alter all of the dependent objects.

Action: Do not attempt to rename the object.

XOQ-01997: A partition level of the cube is invalid.

Cause: The hierarchy level specified as a partition level of the cube was invalid.

Action: Remove the partition level from the cube or specify a valid hierarchy level.

XOQ-01998: cannot partition a cube by two different dimensions: "string" and "string"

Cause: The cube was defined with partitioning by levels from different dimensions.

Action: Ensure that all partition levels for the cube belong to the same dimension.

XOQ-01999: More than one ORDER BY element is specified in the CUSTOMORDER clause.

Cause: The CUSTOMORDER contained more than one ORDER BY element.

Action: Specify only one ORDER BY element in the CUSTOMORDER clause.

XOQ-02000: PrimaryDimension "string" is not a valid TimeDimension for the time series expression.

Cause: PrimaryDimension was not a TimeDimension.

Action: Specify a TimeDimension for the time series expression.

XOQ-02001: table "string" not found

Cause: A table used to map a cube or dimension does not exist. It may have been deleted after the original mapping.

Action: Create the table or remap to a different table.

XOQ-02002: Table "string" does not contain column "string".

Cause: A column used to map a cube or dimension does not exist. It may have been deleted after the original mapping.

Action: Create the column or remap to a different column.

XOQ-02003: Expression "string" is only valid within a model.

Cause: The expression can only be specified as the right hand side of a model assignment.

Action: Redefine the expression to remove all model-specific features.

XOQ-02004: object string "string" not found

Cause: The referenced object may have been deleted.

Action: Specify an existing object.

XOQ-02005: The string "string" referenced from object "string" is not found.

Cause: The referenced object was not found. It may have been deleted.

Action: Specify an existing object.

XOQ-02006: invalid reference to table "string" in mapping "string"

Cause: An expression in a mapping object referred to a table that is not part of the mapping query.

Action: Make sure that all expressions in the mapping object refer only to columns from the mapping query.

XOQ-02007: cannot parse OLAP syntax string

Cause: The OLAP syntax string was invalid and could not be parsed.

Action: Replace the syntax with a valid syntax string.

XOQ-02008: cannot parse OLAP syntax string "string": string

Cause: The OLAP syntax string was invalid and could not be parsed.

Action: Replace the syntax with a valid syntax string.

XOQ-02009: Function "string" is not supported by the analytic workspace.

Cause: A function was specified that is not supported by the OLAP DML language.

Action: Remove the unsupported function from the expression.

XOQ-02010: Data type "string" is not supported by the analytic workspace.

Cause: A data type was specified that is not supported by the OLAP DML language.

Action: Use a supported data type.

XOQ-02011: invalid column expression "string"

Cause: The OLAP DML expression was invalid in this context.

Action: Replace the expression with a valid syntax string.

XOQ-02012: missing expression in object "string"

Cause: A mapping object did not contain all the expressions needed to perform the requested action.

Action: Add the necessary expressions to the mapping object.

XOQ-02013: Missing query and From clause in object "string".

Cause: A mapping object contained neither a query nor a From clause.

Action: Add the necessary query or From clause to the mapping object.

XOQ-02014: missing condition in object "string"

Cause: A mapping object did not contain all the conditions that were needed to perform the requested action.

Action: Add the necessary conditions to the mapping object.

XOQ-02015: Dimension or hierarchy has too many Grouping ID columns.

Cause: The number of Grouping ID columns exceeded the maximum allowed columns. Possible causes are: 1) Attribute spreading was enabled for some attributes in the dimension. 2) There were too many levels defined for the dimension or hierarchy.

Action: Do one of the following: 1) Disable attribute spreading for some or all of the attributes. 2) Eliminate some attributes. 3) Eliminate some levels.

XOQ-02017: The object "string" is duplicated in the syntax expression "string".

Cause: A list in a syntax expression contained a duplicated object.

Action: Remove the duplicated object.

XOQ-02100: cannot parse server XML string

Cause: An internal error occurred while parsing query or metadata definitions.

Action: Examine the error output for more detail about the reason for the failure.

XOQ-02101: Invalid object type is used for object reference with id "string".

Cause: An object of the wrong type was specified as an object reference in the XML document.

Action: Correct the XML document to reference an object of the correct type.

XOQ-02102: cannot find object "string"

Cause: An object that does not exist was referenced in the XML document.

Action: Create the referenced object or correct the XML document to reference an existing object.

XOQ-02103: invalid XML attribute "string" with value "string" for element "string" and object "string"

Cause: An XML attribute in the XML document was invalid.

Action: Correct the invalid attribute in the XML document.

XOQ-02104: invalid XML element "string"

Cause: An XML element in the XML document was invalid.

Action: Correct the invalid element in the XML document.

XOQ-02105: invalid XML element "string" for object "string"

Cause: An XML element in the XML document was invalid.

Action: Correct the invalid element in the XML document.

XOQ-02106: invalid property "string" with value "string" for object "string" in XML document

Cause: The XML document did not specify the object property correctly.

Action: Correct the invalid property in the XML document.

XOQ-02107: invalid property "string" with key::value "string" for object "string" in XML document

Cause: The XML document did not specify the object property correctly.

Action: Correct the invalid property in the XML document.

XOQ-02108: invalid XML document: string at line string

Cause: An internal error occurred while parsing the XML document.

Action: Examine the error output for more detail about the reason for the failure.

XOQ-02110: a string with ID "string" cannot be created because another object with that ID already exists.

Cause: An attempt was made through the XML to create an object with an ID that was already used on an existing object.

Action: Rename the new object or delete the existing one.

XOQ-02111: Object type "string" is invalid for export.

Cause: An attempt was made to export an object of an inappropriate type. Only objects of type analytic workspace, database schema, cube, cube dimension, measure folder, and cube build process are allowed for export.

Action: If the object is a subobject of a cube or cube dimension, then call the export procedure passing the cube or cube dimension as an argument instead of the object itself.

XOQ-02112: invalid XML attribute "*string*" with value "*string*" for element "*string*"

Cause: An XML attribute in the XML document was invalid.

Action: Correct the invalid attribute in the XML document.

XOQ-02113: Unable to parse XML because the compatibility setting is below the minimum setting of 11.0.0.0.0.

Cause: The compatibility setting was below the minimum for parsing XML.

Action: Set the compatibility to 11.0.0.0.0 or higher.

XOQ-02114: Unable to write XML because the compatibility setting is below the minimum setting of 11.0.0.0.0.

Cause: The compatibility setting was below the minimum for writing XML.

Action: Set the compatibility to 11.0.0.0.0 or higher.

XOQ-02115: Metadata object type "*string*" cannot be renamed on import.

Cause: The object type in the rename table was not a leaf object type, or the leaf object type could not be renamed.

Action: Enter a valid object type in the rename table.

XOQ-02116: Metadata object id "*string*" is not valid.

Cause: The object id in the rename table was null or contained invalid characters.

Action: Enter a valid object id in the rename table.

XOQ-02117: The new name "*string*" for object "*string*" is not valid.

Cause: The new name in the rename table was either null or empty.

Action: Enter a valid new name in the rename table.

XOQ-02118: Two new names for object "*string*" with type "*string*" are in the rename table.

Cause: The rename table contained two different new names for the same object.

Action: Remove one of the rows from the rename table.

XOQ-02200: cannot upgrade object "*string*"

Cause: The object could not be upgraded.

Action: Apply the modifications suggested by the other error messages that typically accompany this one. Then attempt the upgrade again. If you cannot correct the error, try exporting the XML definition for the object using DBMS_CUBE.EXPORT_XML, and reimporting the object into a different schema.

XOQ-02201: object "*string*" not found

Cause: The upgrade command referred to an object that did not exist.

Action: Correct the object identifier and try again.

XOQ-02202: Object "*string*" cannot be upgraded because its name is the same as an existing object.

Cause: The upgrade failed because the object name was the same as the name of an existing object. In earlier versions of Oracle Database, a cube, dimension, or measure folder could have the same name as a database table. In Oracle Database 11g and later, cubes, dimensions, measure folders, and RDBMS tables must all have different names.

Action: Change the object name and try the upgrade again.

XOQ-02203: Analytic workspace "*string*" cannot be upgraded because it contains customization "*string*".

Cause: The upgrade failed because the analytic workspace contained a customization. Customizations are not supported in releases after Oracle Database 10g.

Action: Remove the customization and attempt the upgrade again. To remove all customizations, call the upgrade procedure with the DeleteCustomizations option set to YES.

XOQ-02204: Cannot upgrade object "*string*": only analytic workspaces and database schemas are valid arguments to the UPGRADE command.

Cause: The identified argument of the UPGRADE command was an object that was neither type oracle.olapi.metadata.mdm.MdmDatabaseSchema nor type oracle.olapi.metadata.deployment.AW.

Action: If the object is in an analytic workspace or a database schema, call the UPGRADE command and use the analytic workspace or the database schema as an argument instead of the object.

XOQ-02205: Cannot upgrade analytic workspace "*string*": the analytic workspace version is too old.

Cause: An attempt was made to upgrade an analytic workspace that was formatted for Oracle Database 10.1.0.2 or earlier. Only analytic workspaces from Oracle Database 10.1.0.3 and later can be upgraded using DBMS_CUBE.UPGRADE.

Action: Upgrade the analytic workspace to release 10.1.0.3 or later using methods described in the OLAP documentation for Oracle 10.1.0.3. Then use DBMS_CUBE.UPGRADE to upgrade the analytic workspace to Release 11g.

XOQ-02206: Cannot upgrade object "*string*": the metadata is already using the current version.

Cause: An attempt was made to upgrade an analytic workspace that is already formatted correctly for the current version.

Action: Do not use the DBMS_CUBE.UPGRADE facility for this analytic workspace.

XOQ-02207: cannot process mapping "*string*": *string*

Cause: An object stored in an Oracle Database 10g analytic workspace contained an invalid mapping.

Action: Replace the mapping with a valid one. If the problem persists, set the IgnoreMappingErrors option to YES in the UPGRADE or COMMIT options.

XOQ-02208: Object contains multiple mappings.

Cause: A dimension or measure stored in an Oracle OLAP 10g analytic workspace contained multiple mappings. This is not supported in releases after Oracle Database 10g.

Action: Modify the object to use only one mapping. If the problem persists, set the IgnoreMappingErrors option to YES in the UPGRADE or COMMIT options.

XOQ-02209: cannot process aggregation "string": string

Cause: An object stored in an Oracle Database 10g analytic workspace contained an invalid aggregation.

Action: Replace the aggregation with a valid one. If the problem persists, set the IgnoreMappingErrors option to YES in the UPGRADE or COMMIT options.

XOQ-02210: Legacy metadata contains invalid mappings.

Cause: An object stored in an Oracle Database 10g analytic workspace contained mappings that could not be converted to post-10g format.

Action: Examine the list of invalid mappings and correct the errors reported for each object using Analytic Workspace Manager in 10g compatibility mode. If the problem persists, set the IgnoreMappingErrors option to YES in the UPGRADE or COMMIT options.

XOQ-02211: The MdmPrimaryDimension cannot be upgraded because a compile step failed with this message: "string".

Cause: A dimension could not be compiled.

Action: Correct the compilation errors in the analytic workspace. If the problem persists, set the IgnoreCompileErrors option to YES in the UPGRADE options. This allows other objects in the analytic workspace to be upgraded. Then fix and recompile the problem dimension so you can use it.

XOQ-02212: The expression for this MdmMeasure cannot be read. Analytic workspace "string" was not attached when the connection was opened.

Cause: The Oracle Database 10g analytic workspace contained a derived measure. Derived measures can only be upgraded if the analytic workspace is attached before the first call to DataProvider.createSession or DataProvider.initialize.

Action: Attach the analytic workspace before calling DataProvider.createSession or DataProvider.initialize. Alternatively, set the IgnoreMappingErrors option to YES in the UPGRADE or COMMIT options to suppress this error message. The derived measure will become an MdmBaseMeasure after the upgrade.

XOQ-02213: cannot read legacy metadata

Cause: The database contained metadata stored in an Oracle Database 10g analytic workspace or in CWM format. The metadata could not be converted to post-10g format because of problems in the stored metadata.

Action: Examine the list of errors and make corrections to the metadata using Analytic Workspace Manager in 10g compatibility mode. If the problem persists and is preventing you from accessing 11g metadata, set the MetadataReaderMode option to 11_ONLY in the connection properties.

XOQ-02214: error reading legacy metadata object: string

Cause: One of the metadata objects, which was stored in either an Oracle Database 10g analytic workspace or CWM format, could not be converted to post-10g format.

Action: Make corrections to the metadata using Analytic Workspace Manager in 10g compatibility mode. If the problem persists and is preventing you from accessing post-10g metadata, set the MetadataReaderMode option to 11_ONLY in the connection properties.

XOQ-02300: Build completed with warnings.

Cause: The build completed successfully, but some of the data may be incorrect due to inconsistencies in the metadata or input data.

Action: If cube build logging is enabled, examine the OUTPUT column of the cube build log for more details.

XOQ-02400: An invalid cube dimension name was specified in a call to function DBMS_CUBE.GET_BREAKOUT_DIMENSIONS.

Cause: The cube dimension name was invalid.

Action: Specify a valid cube dimension name.

XOQ-02401: An invalid cube name was specified in the drillThrough operation.

Cause: The cube name was invalid.

Action: Specify a valid cube name.

XOQ-02402: Cube "string" is not dimensioned by "string".

Cause: The specified dimension was not a dimension of the cube.

Action: Specify a valid dimension of the cube.

XOQ-02403: QDR "string" is invalid.

Cause: The specified qualified data reference was invalid.

Action: Specify a valid qualified data reference.

XOQ-02404: The cube specified in QDR "string" is invalid.

Cause: The cube specified in the qualified data reference was invalid.

Action: Specify a valid cube in the qualified data reference.

XOQ-02405: The measure specified in QDR "string" is invalid.

Cause: The measure specified in the qualified data reference was invalid.

Action: Specify a valid stored measure in the qualified data reference. A calculated measure or an expression is not allowed.

XOQ-02406: Dimension "string" on cube "string" is not referenced in the QDR qualifier.

Cause: The specified dimensions referenced in the qualified data reference did not include all the dimensions on the cube.

Action: Specify valid dimensions in the qualified data reference.

XOQ-02407: The expression "string" for cube dimension "string" in the QDR is not supported.

Cause: A dimension specified in the qualified data reference is currently not supported.

Action: Specify a valid expression value for the cube dimension in the qualified data reference.

XOQ-02408: Cube "*string*" is not dimensioned by QDR qualifier "*string*".

Cause: The dimension specified in the qualified data reference was not a dimension of the cube.

Action: Specify a valid dimension of the cube in the qualified data reference.

XOQ-02409: Invalid ET column "*string*" specified in a call to function DBMS_CUBE.DRILL_THROUGH.

Cause: An invalid embedded-total column was specified for drill through.

Action: Specify a valid embedded-total column for drill through.

XOQ-02410: ET column "*string*" does not correspond to a valid metadata object.

Cause: An invalid embedded-total column was specified for drill through.

Action: Specify a valid embedded-total column for drill through.

XOQ-02411: Invalid mapped object "*string*" in drill through

Cause: An invalid mapped object was encountered when processing the ET columns during drill through.

Action: Specify a valid mapping for the metadata object.

XOQ-02412: Invalid member "*string*" in cube dimension "*string*" in the drill-through QDR

Cause: An invalid member value was specified in the qualified data reference for a cube dimension.

Action: Specify a valid member value in the qualified data reference for the cube dimension.

XOQ-02413: Drill through is not allowed on cube "*string*".

Cause: An invalid cube was specified in a call to function DBMS_CUBE.DRILL_THROUGH.

Action: Specify a valid cube to perform drill through.

XOQ-02414: Cube dimension "*string*" was specified more than once in QDR "*string*".

Cause: A duplicate dimension was specified in the qualified data reference.

Action: Specify a cube dimension for every dimensionality in the qualified data reference.

XOQ-02415: Specified dimension member not found in a valid hierarchy of cube dimension "*string*".

Cause: The dimension member is not part of any valid hierarchy.

Action: Ensure that the dimension member is included in a valid hierarchy.

XOQ-02416: More than one Hierarchy ET view on cube dimension "*string*" was specified for drill through.

Cause: More than one Hierarchy ET view on the same dimension was specified for drill through.

Action: Ensure that only one Hierarchy ET view per dimension is referenced in drill through.

XOQ-02500: Derived attribute "*string*" is not a DIM_KEY.

Cause: The derived attribute specified in the CUSTOMORDER clause was not the DIM_KEY. A derived attribute in a CUSTOMORDER clause can only be the DIM_KEY.

Action: Specify the DIM_KEY or use a base attribute in the CUSTOMORDER clause.

XOQ-02501: Attribute "*string*" is not part of the primary dimension.

Cause: The attribute specified in the CUSTOMORDER clause was not part of the primary dimension. An attribute in the CUSTOMORDER clause must be part of the primary dimension.

Action: Specify an attribute of the CUSTOMORDER clause that is part of the primary dimension.

XOQ-02502: Attribute "*string*" is not a visible attribute of the hierarchy.

Cause: The attribute specified in the CUSTOMORDER clause was not a visible attribute of the hierarchy. An attribute in the CUSTOMORDER clause of a hierarchy must be a visible attribute of the hierarchy.

Action: Specify a visible attribute in the CUSTOMORDER clause of the hierarchy.

XOQ-02503: No attribute is specified for the CUSTOMORDER clause.

Cause: The object specified in the CUSTOMORDER clause was not an attribute. Only an attribute can be specified in the CUSTOMORDER clause.

Action: Specify an attribute in the CUSTOMORDER clause.

XOQ-02504: The object contains multiple descriptions of type "*string*" for the language "*string*".

Cause: An object contained multiple descriptions for the same type on the same language.

Action: Ensure there is only one description on an object for each type for each language.

XOQ-02505: The CubeMap for cube "*string*" contains both a query and a From clause.

Cause: The CubeMap had a query and a From clause.

Action: Specify either a query or a From clause for the CubeMap but not both.

XOQ-02506: The DimensionMap for dimension "*string*" contains both a query and a From clause.

Cause: The DimensionMap had a query and a From clause.

Action: Specify either a query or From clause for the DimensionMap but not both.

XOQ-02507: The DimensionMap for dimension "*string*" contains a From clause with duplicate queries.

Cause: The DimensionMap had a From clause with duplicate queries.

Action: Remove the duplicate queries in the From clause for the DimensionMap.

XOQ-02508: The CubeMap for cube "*string*" contains a From clause with duplicate queries.

Cause: The CubeMap had a From clause with duplicate queries.

Action: Remove the duplicate queries in the From clause for the CubeMap.

XOQ-02509: Analytic workspace "*string*" has an invalid name.

Cause: An attempt was made to create an analytic workspace with an invalid name. Analytic workspace names cannot contain lower-case letters.

Action: Change the analytic workspace name to a valid name, and commit the transaction.

XOQ-02510: The SolvedMap for Object "*string*" contains a From Clause with multiple queries

Cause: The SolvedMap had a From Clause with multiple queries.

Action: Remove multiple queries in the From Clause for the SolvedMap.

XOQ-02511: The cube storage DATE data type is incompatible with materialized views.

Cause: The AWCubeOrganization had a cube storage data type of DATE, which was incompatible with materialized views.

Action: Either change the cube storage data type to DATETIME or create the cube without materialized views.

XOQ-02512: *string* in XOQ-02512: OLAP DML error while compiling formula for measure "*string*"

Cause: The measure expression in the derived measure could not be compiled.

Action: Redefine the measure expression for the derived measure.

XOQ-02513: A rewrite materialize view cannot be created for cube "*string*" because the aggregation from the consistent solve specification is incompatible.

Cause: The consistent solve specification specified an aggregation that was not uniform over all dimensions and hierarchies or was not one of the supported aggregation operators.

Action: Change the aggregation on the consistent solve specification to be uniform and one of the supported aggregation types.

XOQ-02514: The attribute "*string*" is mapped to different expressions on the two HierarchyLevels "*string*" and "*string*".

Cause: An attribute was mapped to different expressions on two different HierarchyLevels that have the same DimensionLevel.

Action: Change the attribute mappings so that the target expression is the same on all HierarchyLevels having the same DimensionLevel.

XOQ-02515: The MVCreationOptions of REFRESH ON COMMIT, REFRESH START WITH, and REFRESH NEXT are not supported.

Cause: The MVCreationOptions of either an AWPrimaryDimensionOrganization or an AWCubeOrganization contained unsupported settings.

Action: Ensure that the MVCreationOptions of AWPrimaryDimensionOrganizations and AWCubeOrganizations do not set REFRESH ON COMMIT and do not specify REFRESH START WITH or REFRESH NEXT.

XOQ-02516: The MdmValueHierarchy has no value hierarchy map.

Cause: The MdmValueHierarchy did not contain a value hierarchy map.

Action: Add a SolvedValueHierarchyMap to all value hierarchies contained in dimensions with associated materialized views.

XOQ-02517: The data type "string" of the base attribute or base measure is different from the mapped expression "string".

Cause: Either the base attribute or base measure with the mapped expression was set to an inconsistent data type, or it was mapped to an expression of a different data type from its fixed data type.

Action: When changing a mapped expression for a base attribute or base measure, ensure that the expression has the same data type; otherwise, set the data type of the base attribute or base measure to NULL first. When a base attribute or a base measure has an existing mapped expression, do not set it to a different data type.

XOQ-02518: Object cannot be renamed to "string" because that name is already being used by an existing object.

Cause: A row in the CUBE_UPGRADE_INFO table had a value in the NEW_NAME column that was not unique.

Action: Fix the CUBE_UPGRADE_INFO table by using an UPDATE command or running DBMS_CUBE.INITIALIZE_CUBE_UPGRADE.

XOQ-02519: The mapped dimension in the cube dimensionality map of a cube materialized view must be either a dimension level or a hierarchy level.

Cause: "The mapped dimension in the cube dimensionality map of a cube materialized view was a primary dimension."

Action: "Change the mapped dimension in the cube dimensionality map of a cube materialized view to a dimension level or a hierarchy level."

XOQ-02520: The mapped dimension in the cube dimensionality map of a query-rewrite-enabled cube materialized view must be the lowest hierarchy level on all hierarchies in the dimension.

Cause: "The mapped dimension in the cube dimensionality map of a query-rewrite-enabled cube materialized view was not the lowest hierarchy level on a hierarchy in the dimension."

Action: "Change the mapped dimension in the cube dimensionality map of a query-rewrite-enabled cube materialized view to a hierarchy level or a dimension level that is the lowest hierarchy level on all hierarchies in the dimension."

XOQ-02521: The object description of type "string" for language "string" was truncated to the maximum number of characters (string).

Cause: An object had a description that was too long. The description was shortened automatically.

Action: No action is necessary. Consider rephrasing the description to make it fit within the maximum length.

XOQ-02522: The values for attribute "string" in level "string" must be unique.

Cause: The IsLevelUnique flag was set to true for the attribute, but the attribute values in the given level were not unique.

Action: Either set the IsLevelUnique flag to false, or load unique values into the attribute.

XOQ-02523: unsupported data type "string"

Cause: The data type specified for cube storage was invalid or not supported.

Action: Specify a supported SQL data type.

XOQ-02524: A SQL data type and an OLAP DML data type have both been specified and/or modified for cube storage. The OLAP DML cube storage data type specification will be ignored

Cause: The data type for cube storage was specified in both SQL and in OLAP DML resulting in the use of the SQL data type.

Action: Specify a supported data type in either SQL or OLAP DML format.

XOQ-02525: A mismatch exists between the measure data type "*string*" and cube storage data type "*string*"

Cause: Measure storage was defined as SHARED and the data type for the measure was not an exact match to that of the cube storage type. This may result in data inconsistencies.

Action: Specify an exact match between the measure data type and the cube storage data type when measure storage is SHARED. Either set the IsLevelUnique flag to false, or load unique values into the attribute.

XOQ-02526: UniqueKey attribute "*string*" has an invalid populate lineage flag set.

Cause: The attribute had the populate lineage flag set. This flag does not need to be set on a unique key attribute.

Action: Optionally remove this flag on the attribute or do not make the attribute a unique key.

XOQ-02527: Hierarchy levels "*string*" and "*string*" contain different unique key attributes that are mapped to the same expression.

Cause: Two different unique key attributes on different levels of a primary dimension were mapped to the same expression. Such mappings are not allowed if the dimension is part of a query-rewrite-enabled cube.

Action: Uniquely map the unique key attributes or create the cube without a REWRITE materialized view.

XOQ-02528: The derived measure "*string*" cannot be designated as the default measure for the cube.

Cause: A derived measure was designated as the default measure on a cube that has materialized views.

Action: To designate a default measure for the cube, choose a measure that is not derived, or remove the materialized views from the cube.

XOQ-02529: The base attribute "*string*" of dimension "*string*" cannot be given an NVL expression because it is indexed.

Cause: An NVL expression was specified for a base attribute that is indexed. An attribute is indexed if it is explicitly marked as indexed by the user, or if it is a unique key attribute, or if the populate lineage flag is set.

Action: Remove the NVL expression or change the attribute so that it is not indexed, is not a unique key, and does not have the populate lineage flag set.

XOQ-02530: A maintain dimension command cannot be specified as part of a default build specification or named build specification.

Cause: Either a named build specification or the default build specification for a cube or dimension specified a maintain dimension command.

Action: Remove the maintain dimension command from the default build specification or named build specification.

XOQ-02531: The sparse type must be COMPRESSED or SPARSE when a secondary partition level is specified.

Cause: A secondary partition level was specified for the AWCubeOrganization when its sparse type was not COMPRESSED or SPARSE.

Action: Set the sparse type to COMPRESSED or SPARSE on the AWCubeOrganization, or remove all secondary partition levels.

XOQ-02532: cannot specify a secondary partition level without also specifying a (primary) partition level.

Cause: A secondary partition level was specified for an AWCubeOrganization that had no (primary) partition level.

Action: Specify a (primary) partition level before specifying additional secondary partition levels.

XOQ-02533: The cube dimensionality map has neither a join condition nor an expression.

Cause: Neither a join condition nor an expression were specified for the CubeDimensionalityMap.

Action: Specify either a join condition, an expression, or both on the cube dimensionality map.

XOQ-02534: The data type "string" of the base attribute or base measure "string" is different from the mapped expression "string".

Cause: Either the base attribute or base measure with the mapped expression was set to an inconsistent data type, or it was mapped to an expression of a different data type from its fixed data type.

Action: When changing a mapped expression for a base attribute or base measure, ensure that the expression has the same data type; otherwise, set the data type of the base attribute or base measure to NULL first. When a base attribute or a base measure has an existing mapped expression, do not set it to a different data type.

XOQ-02535: The view name "string" defined on the object "string" is not unique.

Cause: The user-defined view name was already in use.

Action: Ensure that all user-defined view names are unique.

XOQ-02537: The procedure is not supported for the version of the analytic workspace of the cube or dimension.

Cause: The version of the analytic workspace of the cube or dimension was earlier than 12c.

Action: Do not use the procedure for the objects in the current analytic workspace.

XOQ-02538: Materialized views cannot be created for the cube dimension because it has no level hierarchies.

Cause: The cube dimension had no level hierarchies.

Action: Do not create a materialized view for the cube dimension.

XOQ-02539: Specified rewrite type is invalid.

Cause: An invalid rewrite type was specified for creating a materialized view.

Action: Specify a valid rewrite type.

XOQ-02540: Specified refresh type is invalid.

Cause: An invalid refresh type was specified for creating a materialized view.

Action: Specify a valid refresh type.

XOQ-02541: Specified USING constraints clause is invalid.

Cause: An invalid USING constraints clause was specified for creating a materialized view.

Action: Specify a valid USING constraints clause.

XOQ-02542: mismatch between MVOption and RefreshType

Cause: MVOption was set to COMPLETE_REFRESH, but RefreshType was set to FAST.

Action: Either set MVOption to FAST_REFRESH or REWRITE, or set RefreshType to COMPLETE or FORCE.

XOQ-02543: Specified version for the analytic workspace "string" is invalid.

Cause: An invalid version was specified for creating an analytic workspace.

Action: Specify a valid version.

XOQ-02544: The cube or dimension "string" has no analytic workspace organization.

Cause: No analytic workspace organization was specified for the cube or dimension.

Action: Specify an analytic workspace organization for the cube or dimension.

XOQ-02545: Invalid SQLMap in the cube or dimension.

Cause: The SQLMap feature is not supported.

Action: Use supported mappings for the cube or dimension.

XOQ-02546: A dimensionality cannot be specified on a measure.

Cause: A dimensionality was specified on a measure.

Action: Specify the dimensionality on a cube.

XOQ-02547: Object "string" cannot be mapped to ET view string because this transaction is also modifying the ET view.

Cause: An object being modified was mapped to an ET (Embedded Totals) view that required an update because of changes to its owning object.

Action: If the object is mapped to the ET view of another object, then split the updates into multiple transactions. If the object is mapped to its own ET view, then either specify a unique ET view name or ensure that the mapped source name already exists and allow Oracle OLAP to create a new default name.

XOQ-02548: The derived measure expression references invalid object "string".

Cause: The derived measure expression referenced an invalid object.

Action: Ensure the objects referenced in the derived measure expression are valid.

XOQ-02549: The cube name or cube dimension name is missing.

Cause: No cube name or cube dimension name was specified for creating a materialized view.

Action: Specify a cube name or cube dimension name.

XOQ-02550: Cannot create "string" while in a branch.

Cause: The creation of a top level object within a schema was attempted in a branch.

Action: Create the top level object outside of the branch.

XOQ-02551: Invalid loop type specified for the derived measure.

Cause: The loop type specified for the derived measure was invalid.

Action: Specify either INNER, OUTER, or DENSE for the loop type of the derived measure.

XOQ-02552: Invalid metadata property value "string" specified.

Cause: The metadata property contained both a single value and a list value.

Action: Specify either a single value or a list value for the metadata property.

XOQ-02553: cannot rename "string" while in a branch

Cause: The renaming of an object was attempted in a branch.

Action: Rename the object outside of the branch or, if the object is a custom member, you may drop it and re-create it with the new name within the branch.

XOQ-02554: Dimensions "string" and "string" cannot be mapped on the leaf level to the same dimension source table "string" when materialized views are enabled on the cube.

Cause: Materialized views were enabled when an attempt was made to map two dimensions to the same source table. This is not allowed unless the source table is a fact table.

Action: Specify a different mapping for one of the dimensions.

XOQ-02555: The join condition on CubeDimensionalityMap "string" is invalid.

Cause: The join condition did not refer to the fact table and the relevant dimension table.

Action: Specify a join condition that refers to the fact table and the relevant dimension table.

XOQ-02556: The named build process does not contain a build specification.

Cause: An attempt was made to create a named build process without providing a build specification.

Action: Provide build items for the named build process.

XOQ-02557: Object cannot be dropped while it is still a dependency of another object.

Cause: An attempt was made to drop a metadata object that was referenced by another object.

Action: Remove the reference to the metadata object being dropped.

XOQ-02558: The base attribute "string" of dimension "string" cannot be given an NVL expression because it is multilingual.

Cause: An NVL expression was specified for a base attribute that is multilingual.

Action: Remove the NVL expression or change the attribute so that it is not multilingual.

XOQ-02559: Cannot create or rename the object "*string*" because the object name conflicts with a reserved keyword.

Cause: An attempt was made to use a reserved name for an object.

Action: Rename the object.

XOQ-02560: Analytic workspace "*string*" referenced in "*string*" does not exist.

Cause: An attempt was made to modify an object that referenced a non-existent analytic workspace.

Action: Create the analytic workspace before referencing it.

XOQ-02561: Cube "*string*" cannot share the aggmap of "*string*" because "*string*" is not a cube in the same analytic workspace.

Cause: An attempt was made to share the aggmap of something other than a cube in the same analytic workspace.

Action: Remove the aggmap cube value or correct it to be the name of a cube in the same analytic workspace.

XOQ-02562: Cube "*string*" cannot share the aggmap of "*string*" because "*string*" is sharing the aggmap of "*string*".

Cause: An attempt was made to share the aggmap of a cube that was itself sharing the aggmap of another cube.

Action: Modify or remove the shared aggmap property of at least one of the first two cubes.

XOQ-02563: Cannot rename "*string*" because the object is not existent.

Cause: An attempt was made to rename a nonexistent object in a branch.

Action: Create the object with a new name.
