Action: Try the password that you have not used for the specified number of days or the specified number of password changes Refer to the password parameters in the CREATE PROFILE statement

ORA-28008: invalid old password

Cause: old password supplied is wrong; Hence user cannot be authenticated using old password

Action: Supply the correct old password for authentication

ORA-28009: connection as SYS should be as SYSDBA or SYSOPER

Cause: connect SYS/password is no longer a valid syntax

Action: Try connect SYS/password as SYSDBA or connect SYS/password as SYSOPER

ORA-28010: cannot expire external users, global users, or users with no authentication method

Cause: If a user account is created as IDENTIFIED EXTERNALLY, IDENTIFIED GLOBALLY, NO AUTHENTICATION, this account cannot be expired.

Action: Expire the password of a user that has "PASSWORD" as its AUTHENTICATION_TYPE in DBA_USERS views.

ORA-28011: the password has expired; change your password now

Cause: The password of the user's account has expired. Since the user's account is associated with a password profile with an UNLIMITED password grace period, the user will not be prompted to input a new password (as normally happens for accounts with a limited grace period). Instead, ORA-28011 warning message will continue to be displayed upon each successful login to the user account, until the user changes their password.

Action: Change the password or contact the database administrator.

ORA-28012: connection as *string* should use AS *string*

Cause: An attempt was made to connect as an administrative user without using AS SYSBACKUP, AS SYSDG, or AS SYSKM.

Action: Try connecting with AS SYSBACKUP, AS SYSDG, or AS SYSKM.

ORA-28013: the password has expired

Cause: The password of the proxy user expired.

Action: Connect directly as proxy user to change the password or contact the DBA.

ORA-28014: cannot drop administrative user or role

Cause: An attempt was made to drop an administrative user or role. An administrative user or role can be dropped only by SYS during migration mode.

Action: Drop the administrative user or role during migration mode.

ORA-28015: account unlock attempted on read-only database but a conflicting account lockout on the primary exists

Cause: An attempt to unlock an account on a read-only database was prevented, because the account was previously marked as locked on the primary database. All attempts to unlock the account on the read-only database will be prevented as long as the overriding "account locked" condition exists at the primary database.

Action: If this database is part of a Data Guard configuration, perform the account unlock action on the primary database. If this database is read-only, then set the database to read/write and perform the account unlock action.

ORA-28016: Privilege *string* cannot be granted to SYS.

Cause: An attempt was made to grant SYSBACKUP, SYSDG or SYSKM to the SYS user. These administrative privileges cannot be granted to SYS.

Action: Try granting the administrative privilege to other users.

ORA-28017: The password file is in the legacy format.

Cause: An attempt was made to perform one of the following operations, but none of these operations are allowed while the password file is in LEGACY format. - Attempting to grant SYSBACKUP, SYSDG or SYSKM privileges. - Attempting to grant an administrative privilege to a user who has large password verifiers, for example, SHA-512 hashed verifiers. - Attempting to grant a common administrative privilege to a common user in a multitenant container database (CDB).

Action: Create the password file in the new format ("12" or higher) or migrate the existing password file in LEGACY format to the new format ("12" or higher) using the INPUT_FILE option, then retry the operation.

ORA-28018: This operation requires connection as SYS or SYSBACKUP.

Cause: An attempt was made to execute a command even though the user was not connected as SYS or SYSBACKUP.

Action: Connect as SYS or SYSBACKUP and retry this command.

ORA-28019: audit cannot be configured on administrative privileges

Cause: An attempt was made to configure audit on an administrative privilege using either the AUDIT, NOAUDIT, CREATE AUDIT POLICY, or ALTER AUDIT POLICY command.

Action: For traditional audit, use AUDIT_SYS_OPERATIONS to audit administrative privileges. If this is a unified audit, use action-based auditing to audit administrative users.

ORA-28021: cannot grant global roles

Cause: The role granted was IDENTIFIED GLOBALLY. Global roles can only be granted via a central authority for the domain.

Action: Use ALTER ROLE to change the type of role (from IDENTIFIED GLOBALLY to other, such as IDENTIFIED BY password), or allocate it to a global user via the central authority.

ORA-28022: cannot grant external roles to global user or role

Cause: The role granted was IDENTIFIED EXTERNALLY. External roles cannot be granted to global users, to global roles or to any other roles.

Action: Use ALTER ROLE to change the type of the role being granted (from IDENTIFIED EXTERNALLY to other, such as NOT IDENTIFIED) or use ALTER USER to change the type of the user that is the grantee.

ORA-28023: must revoke grants of this role to other user(s) first

Cause: The role altered to IDENTIFIED GLOBALLY was granted to one or more other users and/or roles. Global roles cannot be granted to any user or role.

Action: Use REVOKE to revoke the role from other users or roles first.

ORA-28024: must revoke grants of external roles to this role/user

Cause: The user or role altered to IDENTIFIED GLOBALLY has external roles directly granted - these must be revoked, since external roles cannot be granted to global users or roles.

Action: Use REVOKE to revoke the external roles from the user or role to be ALTERed.

ORA-28025: missing or null external name

Cause: The IDENTIFIED EXTERNALLY AS or IDENTIFIED GLOBALLY AS clause was specified with a valid external name.

Action: Provide a valid external name.

ORA-28026: user with same external name already exists

Cause: The external name specified for the user being created or altered already exists for another user.

Action: External names must be unique among users. Specify another.

ORA-28027: privileged database links may be used by global users

Cause: Only users IDENTIFIED GLOBALLY may use a privileged database link.

Action: Either change the user to a global user or try to use a different database link.

ORA-28028: could not authenticate remote server

Cause: During the course of opening a privileged database link, the remote server was not securely identified using the network security service. Additional errors should follow.

Action: Consult the network security service documentation on how to properly configure the remote server.

ORA-28029: could not authorize remote server for user *string*

Cause: During the course of opening a privileged database link, the remote server was found to lack the necessary authorizations to connect as the current global user. This may be because the server was not authorized by the network security service. Or it may be because the local server is restricting access by the remote server using the DBMS_SECURITY_DOMAINS_ADMIN package.

Action: Grant the remote server the proper authorization to connect as the given global user, and check that the local server is not restricting access.

ORA-28030: Server encountered problems accessing LDAP directory service

Cause: Unable to access LDAP directory service

Action: Please contact your system administrator

ORA-28031: maximum of *string* enabled roles exceeded

Cause: The user attempted to enable too many roles.

Action: Enable fewer roles.

ORA-28032: Your password has expired and the database is set to read-only

Cause: Your password expired and needs to be changed before your login request can be processed. Because the database is currently open in read-only mode, the password change operation cannot be performed on this database.

Action: Log in to the primary database to change your password, then retry your login request at the standby database.

ORA-28034: cannot grant *string* to an Oracle supplied user

Cause: The KEEP DATE TIME, KEEP SYSGUID or KEEP SEQUENCE privilege could not be granted to an Oracle supplied user.

Action: Grant privilege directly to the application user.

ORA-28035: Cannot Get Session Key for Authentication

Cause: Client and server cannot negotiate shared secret during logon

Action: User should not see this error. Please contact your system administrator

ORA-28036: HTTP digest authentication cannot be configured for this user

Cause: An attempt was made to configure HTTP digest authentication for a global user, an external user, a no authentication type user, or a SYS user.

Action: Contact your system administrator.

ORA-28037: Cannot Get Session Key for RACF Authentication

Cause: Client and server cannot negotiate shared secret during logon

Action: User should not see this error. Please contact your system administrator

ORA-28038: disallow O2LOGON

Cause: turn off O2LOGON

Action: n/a

ORA-28039: cannot validate Kerberos service ticket

Cause: The Kerberos service ticket provided was invalid or expired

Action: Provide a valid, unexpired service ticket.

ORA-28040: The database does not accept your client's authentication protocol; login denied.

Cause: No common authentication protocol was found between the database client and server.

Action: Set the values of the SQLNET.ALLOWED_LOGON_VERSION_SERVER and SQLNET.ALLOWED_LOGON_VERSION_CLIENT parameters on both the client and

on the server to values that match the minimum version software supported in the system. This error is also raised when the client is authenticating to a user account which was created without a verifier suitable for the client software version. In this situation, that account's password must be reset, in order for the required verifier to be generated and allow the authentication to proceed successfully.

ORA-28041: authentication protocol internal error

Cause: Authentication protocol failed with an internal error.

Action: Contact Oracle Support Services.

ORA-28042: Server authentication failed

Cause: Server failed to authenticate itself to the client

Action: Confirm that the server is a valid database server.

ORA-28043: invalid bind credentials for DB-OID connection

Cause: The Database password stored in the wallet did not match the one in OID .

Action: Use DBCA to reset the database password so that it is the same in database wallet and in OID.

ORA-28044: unsupported directory type

Cause: The database tried to work with a directory which is not OID.

Action: Enterprise User Security works only with Oracle Internet Directory. Update the ldap.ora file to reflect an appropriate OID.

ORA-28045: SSL authentication between database and OID failed

Cause: Server failed to authenticate itself to the Directory.

Action: Make sure the sqlnet.ora used is pointing to the wallet with the right certificate.

ORA-28046: Password change for SYS disallowed

Cause: REMOTE_LOGIN_PASSWORDFILE is set to SHARED, prohibiting SYS password changes.

Action: Change setting of REMOTE_LOGIN_PASSWORDFILE to EXCLUSIVE or NONE.

ORA-28047: database is not a member of any enterprise domain in OID

Cause: An enterprise user login was attempted on a database that is not a member of any enterprise domain in OID.

Action: An administrator should put the database into an enterprise domain in OID, and then the user should reconnect.

ORA-28048: database is a member of multiple enterprise domains in OID

Cause: An enterprise user login was attempted on a database that is a member of multiple enterprise domains in OID.

Action: An administrator should put the database into only one enterprise domain in OID, and then the user should reconnect.

ORA-28049: the password has expired

Cause: The enterprise user's password has expired and the password needs to be changed.

Action: change the password in the directory or contact the directory administrator.

ORA-28050: specified user or role cannot be dropped

Cause: The user or role specified in the DROP statement was a reserved Oracle object that could not be dropped.

Action: None

ORA-28051: the account is locked

Cause: The enterprise user has consecutively entered the wrong password for maximum number of times specified in the realm's password policy profile.

Action: Contact the directory administrator.

ORA-28052: the account is disabled

Cause: The enterprise user's account in the directory has been disabled.

Action: Contact the directory administrator.

ORA-28053: the account is inactive

Cause: The enterprise user's account in the directory is currently not active.

Action: Contact the directory administrator.

ORA-28054: the password has expired. *string* Grace logins are left

Cause: The enterprise user's password has expired. The user is able to login because he has *gracelogins* left.

Action: change the password in the directory or contact the directory administrator.

ORA-28055: the password will expire within *string* days

Cause: The enterprise user's password is about to expire.

Action: Change the password in the directory or contact the directory administrator.

ORA-28056: Writing audit records to Windows Event Log failed

Cause: Unable to write an audit entry to the Windows event log used as the audit trail.

Action: Check the error number for a possible operating system error. If there is no error, contact Oracle Support Services.

ORA-28057: name of the password file could not be constructed

Cause: Possibly environment variable ORACLE_SID was not set.

Action: Set value for the ORACLE_SID environment variable.

ORA-28058: login is allowed only through a proxy

Cause: This account is marked "proxy only connect".

Action: Connect through a proxy user.

ORA-28059: Cross-instance call failed

Cause: An attempt to inform other Oracle RAC instances of a security event failed.

Action: Log into each instance to perform the administrative action.

ORA-28060: A data redaction policy already exists on this column.

Cause: A data redaction policy was already in existence on this column.

Action: Specify a column which does not already have a redaction policy defined on it, or use DBMS_REDACT.ALTER_POLICY to alter the existing redaction policy for this column.

ORA-28061: This object cannot have a data redaction policy defined on it.

Cause: An attempt was made to define a data redaction policy on an object other than a table or view. Note that a data redaction policy cannot be defined on an editioned view, or on specialized tables created internally by the server in conjunction with various features such as materialized view.

Action: Specify the name of a table or view.

ORA-28062: The policy expression is too long.

Cause: The policy expression was longer than 4000 characters.

Action: Specify a policy expression of at most 4000 characters.

ORA-28063: The policy expression is empty.

Cause: The EXPRESSION parameter to DBMS_REDACT.ADD_POLICY was empty.

Action: A nonempty policy expression must be specified in the EXPRESSION parameter to DBMS_REDACT.ADD_POLICY.

ORA-28064: The redaction function is not valid.

Cause: The FUNCTION_TYPE parameter to DBMS_REDACT.ADD_POLICY was invalid.

Action: Specify the FUNCTION_TYPE parameter to DBMS_REDACT.ADD_POLICY as one of the following: DBMS_REDACT.NONE, DBMS_REDACT.FULL, DBMS_REDACT.RANDOM, DBMS_REDACT.PARTIAL, DBMS_REDACT.REGEXP, or DBMS_REDACT.NULLIFY. Note that only none redaction, full redaction, and NULL redaction may be applied to columns of type BLOB, and only none redaction, full redaction, NULL redaction, and regular expression-based redaction may be applied to columns of type CLOB or NCLOB.

ORA-28066: invalid column "string"

Cause: An invalid column was specified in the COLUMN_NAME parameter.

Action: Check the columns in the object and specify the right column name.

ORA-28067: missing or invalid column name

Cause: A valid column name was not specified in the COLUMN_NAME parameter when a column name was required. Note that when using DBMS_REDACT.ALTER_POLICY, the default action is DBMS_REDACT.ADD_COLUMN

Action: Specify the name of a column.

ORA-28068: The object "string" does not have a data redaction policy.

Cause: The specified object did not have a data redaction policy defined on it.

Action: Specify the name of an object which has a data redaction policy, or use DBMS_REDACT.ADD_POLICY to add a data redaction policy.

ORA-28069: A data redaction policy already exists on this object.

Cause: A data redaction policy was already in existence on this object.

Action: Specify a table or view which does not already have a redaction policy defined on it, or use DBMS_REDACT.ALTER_POLICY to alter the existing redaction policy for this object.

ORA-28070: The column "*string*" does not have a data redaction policy.

Cause: A data redaction policy was not defined on the specified column.

Action: Specify the name of a column for which a data redaction policy is defined.

ORA-28071: The action is not valid.

Cause: The ACTION parameter to DBMS_REDACT.ALTER_POLICY was invalid.

Action: Specify the ACTION parameter to DBMS_REDACT.ALTER_POLICY as one of the following values: DBMS_REDACT.MODIFY_EXPRESSION, DBMS_REDACT.MODIFY_COLUMN, DBMS_REDACT.ADD_COLUMN, or DBMS_REDACT.DROP_COLUMN.

ORA-28072: The specified policy name is incorrect.

Cause: The POLICY_NAME parameter was incorrect.

Action: Specify the POLICY_NAME parameter with the name of the redaction policy currently defined on the object.

ORA-28073: The column "*string*" has an unsupported data type or attribute.

Cause: The column had a data type or attribute which is not supported by data redaction. The supported data types are CHAR, NCHAR, VARCHAR2, NVARCHAR2, NUMBER types, BINARY_FLOAT, BINARY_DOUBLE, DATE, TIMESTAMP, CLOB, NCLOB, and BLOB, except as listed below for certain function types: For DBMS_REDACT.PARTIAL and DBMS_REDACT.RANDOM, the CLOB, NCLOB, and BLOB datatypes are not supported. For DBMS_REDACT.REGEXP, the NUMBER, BINARY_FLOAT, BINARY_DOUBLE, DATE, TIMESTAMP, and BLOB datatypes are not supported. Virtual columns and base columns of virtual columns are not supported by data redaction. Columns with the INVISIBLE attribute are not supported by data redaction (this applies to both user-specified hidden columns and system-generated hidden columns). Vector encoded columns are not supported by data redaction. Columns with the IS JSON constraint are not supported.

Action: Specify the name of a column which has a supported data type and supported attributes. For columns with the IS JSON constraint, create a view on the columns and add the redaction policy to the view.

ORA-28074: The "*string*" field of the redaction parameters is not valid.

Cause: The redaction parameters that were specified had one or more invalid fields.

Action: Specify the redaction parameters with valid fields. Refer to Oracle Database documentation for additional information.

ORA-28075: The data redaction policy expression has an error.

Cause: The data redaction policy expression had an error.

Action: Contact the data redaction policy administrator. To correct this error, when invoking the ADD_POLICY and ALTER_POLICY procedures of the data redaction DBMS_REDACT package, the policy administrator must specify a valid policy expression for the EXPRESSION parameter. Check the trace file for the name of the affected policy and the error, and correct the data redaction policy expression.

ORA-28076: An attribute was not specified for SYS_SESSION_ROLES.

Cause: An attribute was not specified for the SYS_SESSION_ROLES namespace in the policy expression.

Action: Specify an attribute for SYS_SESSION_ROLES in the policy expression.

ORA-28077: The attribute specified (*string*) exceeds the maximum length.

Cause: The attribute specified in the policy expression for the SYS_SESSION_ROLES namespace exceeded the maximum length.

Action: Change the policy expression to use a valid attribute for SYS_SESSION_ROLES namespace.

ORA-28078: A regular expression parameter is missing or invalid.

Cause: Even though the function_type was DBMS_REDACT.REGEXP, the possible causes for this error include: - One or more of the regular expression parameters were missing or invalid - The REGEXP_PATTERN failed to compile properly - The regular expression replacement operation failed

Action: Specify the regular expression parameters according to Oracle documentation. At a minimum, you must specify the REGEXP_PATTERN and REGEXP_REPLACE_STRING parameters. Ensure that the REGEXP_PATTERN can compile properly as a regular expression. For example, test it with REGEXP_REPLACE in a SQL query against a column containing some of the data to be redacted.

ORA-28079: The policy was already enabled.

Cause: The redaction policy specified has already been enabled.

Action: Only disabled redaction policies can be enabled.

ORA-28080: The policy was already disabled.

Cause: The redaction policy specified has already been disabled.

Action: Only enabled redaction policies can be disabled.

ORA-28081: Insufficient privileges - the command references a redacted object.

Cause: The command referenced a redacted column in an object protected by a data redaction policy.

Action: If possible, modify the command to avoid referencing any redacted columns. Otherwise, drop the data redaction policies that protect the referenced tables and views, or ensure that the user issuing the command has the EXEMPT REDACTION POLICY system privilege, then retry the operation. The EXEMPT REDACTION POLICY system privilege is required for creating or refreshing a materialized view when the materialized view is based on an object protected by a data redaction policy. The EXEMPT REDACTION POLICY system privilege is required for performing a data pump schema-level export including any object protected by a data redaction policy. All data redaction policies are listed in the REDACTION_COLUMNS catalog view.

ORA-28082: The parameter *string* is invalid.

Cause: The specified parameter was either empty or too long. If the DBMS_REDACT.ADD_POLICY or DBMS_REDACT.ALTER_POLICY was invoked and the function_parameters was not NULL, the operation was prevented because you can only specify a value for the function_parameters argument only when the function_type is DBMS_REDACT.PARTIAL.

Action: Specify a parameter of correct length. See the Oracle documentation for length requirements.

ORA-28083: A redacted column was referenced in a virtual column expression.

Cause: This redacted column was referenced in a virtual column expression.

Action: Ensure the column expression definition for any virtual column does not refer to any redacted columns. To check for columns with redaction policies, use the REDACTION_COLUMNS catalog view which lists all data redaction policies.

ORA-28085: The input and output lengths of the redaction do not match.

Cause: As specified, the redaction parameters produced an output with a length different to that of the input.

Action: Use regular expression redaction instead of partial redaction.

ORA-28086: The data redaction policy expression has an error.*lnstring*

Cause: The data redaction policy expression had an error.

Action: Specify a valid policy expression. The data redaction policy expression must be written in SQL, and must be a valid predicate to use in the following SQL query.
SELECT 1 FROM DUAL WHERE policy_expression;

ORA-28087: The policy expression has an unsupported (use of) operator '*string*'.

Cause: The policy expression used an unsupported operator, or used an operator in an unsupported way.

Action: Modify the policy expression to use only the supported operators in a supported way. Supported operators include "=", "!", ">", "<", ">=", "<=", the length operators, the substring operators, and the context operators (SYS_CONTEXT and XS_SYS_CONTEXT). For a complete list of the supported operators, and the supported ways the allowed operators can be used, refer to the section on data redaction policy expressions in the Oracle documentation.

ORA-28088: The policy expression has an unsupported PL/SQL function *string.string.string*.

Cause: The policy expression had an unsupported PL/SQL function.

Action: Modify the policy expression to use a supported PL/SQL function. The supported PL/SQL functions include the Oracle Label Security dominates functions, and the Oracle Apex session state functions, V and NV. Refer to Oracle database documentation for additional information.

ORA-28089: invalid SYS_CONTEXT namespace *string* in policy expression

Cause: The SYS_CONTEXT (or XS_SYS_CONTEXT) namespace used in the policy expression was not valid.

Action: Modify the policy expression to use a valid namespace. Supported namespaces include USERENV, SYS_SESSION_ROLES, XS\$SESSION and the namespaces listed in the DBA_CONTEXT catalog view.

ORA-28090: unsupported nesting of function *string.string.string* within function *string.string.string* in policy expression

Cause: The policy expression had an unsupported PL/SQL function nesting.

Action: Modify the policy expression to use only supported PL/SQL function nesting. The Oracle Label Security functions NUMERIC_LABEL, CHAR_TO_LABEL, and SA_SESSION can only be used from within the Label Security dominated functions. For a complete list of supported PL/SQL function nesting, refer to the section on writing policy expressions in the Oracle documentation for data redaction.

ORA-28091: unsupported use of PL/SQL function *string.string.string* in policy expression

Cause: The policy expression used a PL/SQL function in an unsupported way.

Action: Modify the policy expression to use the PL/SQL function properly. The parameters to the Oracle Label Security functions NUMERIC_LABEL, CHAR_TO_LABEL, and SA_SESSION must be constants. For a complete list of the supported ways that PL/SQL functions can be used in a policy expression, refer to the Oracle documentation.

ORA-28092: The parameter *string* with value '*string*' has an error.

Cause: The value of the parameter had an error. If DBMS_REDACT.CREATE_POLICY_EXPRESSION was invoked and the POLICY_EXPRESSION_NAME parameter had an error, the policy expression name either already existed, or was invalid. If DBMS_REDACT.DROP_POLICY_EXPRESSION was invoked and the POLICY_EXPRESSION_NAME parameter had an error, the policy expression either did not exist, was still in use (was applied to a column), or was invalid. If DBMS_REDACT.APPLY_POLICY_EXPR_TO_COL was invoked and the POLICY_EXPRESSION_NAME parameter had an error, a policy expression may already exist on this column. Only one policy expression may be associated with any given column. The name of any Oracle Data Redaction policy expression associated with a given column can be found in the REDACTION_EXPRESSIONS catalog view. If the DBMS_REDACT.ADD_POLICY was invoked and the OBJECT_SCHEMA parameter referenced the APEX, Sharding (GSMADMIN_INTERNAL) or Spatial installation schema, the operation was prevented. Data redaction policies are not supported on objects within the APEX, Sharding (GSMADMIN_INTERNAL) or Spatial installation schema. If the DBMS_REDACT.ADD_POLICY was invoked and the OBJECT_NAME references a metadata-linked view, the operation was prevented. Data redaction policies are not supported on metadata-linked views. If the DBMS_REDACT.ADD_POLICY was invoked and the OBJECT_NAME references an OLAP analytic workspace table, the operation was prevented. Data redaction policies are not supported on OLAP analytic workspaces.

Action: Provide a valid value for the parameter. If DBMS_REDACT.CREATE_POLICY_EXPRESSION was invoked and the parameter was POLICY_EXPRESSION_NAME, provide a valid (new or existing) policy expression name. The names of all existing Oracle Data Redaction policy expressions can be found in the REDACTION_EXPRESSIONS catalog view. For the POLICY_EXPRESSION_NAME parameter of the DBMS_REDACT.DROP_POLICY_EXPRESSION procedure, provide a valid existing policy expression name which is not currently in use (applied to any column). The names of the columns to which a given policy expression is currently applied can be found in the REDACTION_EXPRESSIONS catalog view. For the POLICY_EXPRESSION_NAME parameter of the DBMS_REDACT.APPLY_POLICY_EXPR_TO_COL procedure, either provide NULL to remove the current policy expression association of the column, or provide a valid existing policy expression name. There is currently no API to alter an existing association. For now it must first be dropped followed by applying the new association. The names of all existing policy expressions can be found in the REDACTION_EXPRESSIONS catalog view. If DBMS_REDACT.ADD_POLICY was invoked, provide an OBJECT_SCHEMA which is not the APEX or Spatial installation schema. Data redaction policies are not supported on objects within the APEX or Spatial installation schema. If DBMS_REDACT.ADD_POLICY

was invoked, provide an OBJECT_NAME that does not reference a metadata-linked view. If DBMS_REDACT_ADD_POLICY was invoked, provide an OBJECT_NAME that does not reference an OLAP analytic workspace table.

ORA-28093: operation on column *string* is not supported by data redaction

Cause: The operation was not supported by data redaction.

Action: Perform only supported operations on any object which has a data redaction policy or which depends on an object with a data redaction policy. To check for columns with redaction policies, use the REDACTION_COLUMNS catalog view which lists all of the data redaction policies.

ORA-28094: SQL construct not supported by data redaction

Cause: The query had a SQL construct that was not supported by data redaction.

Action: Rewrite the query to avoid using an unsupported construct. Consult the Oracle documentation for details.

ORA-28095: The parameter *string* is unexpected.

Cause: Parameter in PL/SQL function was not NULL or was not equal to the default value. If DBMS_REDACT.ALTER_POLICY was invoked, the parameters object_name and policy_name are required. If the action is DBMS_REDACT.ADD_COLUMN, it only accepts the following parameters: Required: column_name function_parameters (only when function_type is DBMS_REDACT.PARTIAL) regexp_pattern (only when function_type is DBMS_REDACT.REGEXP or DBMS_REDACT.REGEXP_WIDTH) regexp_replace_string (only when function_type is DBMS_REDACT.REGEXP or DBMS_REDACT.REGEXP_WIDTH) regexp_position (only when function_type is DBMS_REDACT.REGEXP or DBMS_REDACT.REGEXP_WIDTH) regexp_occurrence (only when function_type is DBMS_REDACT.REGEXP or DBMS_REDACT.REGEXP_WIDTH) regexp_match_parameter (only when function_type is DBMS_REDACT.REGEXP or DBMS_REDACT.REGEXP_WIDTH) Optional: action function_type policy_description column_description If the action is DBMS_REDACT.MODIFY_COLUMN, it only accepts the following parameters: Required: action column_name function_parameters (only when function_type is DBMS_REDACT.PARTIAL) regexp_pattern (only when function_type is DBMS_REDACT.REGEXP or DBMS_REDACT.REGEXP_WIDTH) regexp_replace_string (only when function_type is DBMS_REDACT.REGEXP or DBMS_REDACT.REGEXP_WIDTH) regexp_position (only when function_type is DBMS_REDACT.REGEXP or DBMS_REDACT.REGEXP_WIDTH) regexp_occurrence (only when function_type is DBMS_REDACT.REGEXP or DBMS_REDACT.REGEXP_WIDTH) regexp_match_parameter (only when function_type is DBMS_REDACT.REGEXP or DBMS_REDACT.REGEXP_WIDTH) Optional: function_type policy_description column_description If the action is DBMS_REDACT.DROP_COLUMN, it only accepts the following parameters: Required: action column_name If the action is DBMS_REDACT.MODIFY_EXPRESSION, it only accepts the following parameters: Required: action expression Optional: policy_description If the action is DBMS_REDACT.SET_POLICY_DESCRIPTION, it only accepts the following parameters: Required: action Optional: policy_description If the action is DBMS_REDACT.SET_COLUMN_DESCRIPTION, it only accepts the following parameters: Required: action column_name Optional: column_description Other parameters are not supported.

Action: Do not use parameters that are not supported.

ORA-28100: policy function schema is invalid

Cause: The schema in which the policy function was defined did not exist.

Action: Drop the policy and re-create it with a policy function owned by a valid user.

ORA-28101: policy already exists

Cause: A policy with the same name for the same object already exists.

Action: Check if the policy has already been added or use a different policy name.

ORA-28102: policy does not exist

Cause: Try to drop/enable/refresh a non-existent policy.

Action: Correct the policy name argument.

ORA-28103: adding a policy to an object owned by SYS is not allowed

Cause: Try to add a policy to a table or a view owned by SYS.

Action: You can not perform this operation.

ORA-28104: input value for *string* is not valid

Cause: Input value for the argument was not valid.

Action: Specify a valid argument value.

ORA-28105: cannot create security relevant column policy in an object view

Cause: Security relevant column argument is not null in policy creation for an object view

Action: n/a

ORA-28106: input value for argument #*string* is not valid

Cause: Input values for the argument is missing or invalid.

Action: Correct the input values.

ORA-28107: policy was disabled

Cause: Try to flush a disabled policy.

Action: If the policy is supposed to be enforced, it must be enabled.

ORA-28108: circular security policies detected

Cause: Policies for the same object reference each other.

Action: Drop the policies

ORA-28109: the number of related policies has exceeded the limit of 16

Cause: Too many policies are involved in the same objects.

Action: Drop one or more policies. Or combine a few of them into one.

ORA-28110: policy function or package *string.string* has error

Cause: The policy function may have been dropped, or is no longer valid.

Action: Check the status of the function and correct the problem. Or re-create the policy with a valid function.

ORA-28111: insufficient privilege to evaluate policy predicate

Cause: Predicate has a subquery which contains objects that the owner of policy function does not have privilege to access.

Action: Grant appropriate privileges to the policy function owner.

ORA-28112: failed to execute policy function

Cause: The policy function has one or more error during execution.

Action: Check the trace file and correct the errors.

ORA-28113: policy predicate has error

Cause: Policy function generates invalid predicate.

Action: Review the trace file for detailed error information.

ORA-28115: policy with check option violation

Cause: Policy predicate was evaluated to FALSE with the updated values.

Action: Check the trace file and correct the errors.

ORA-28116: insufficient privileges to do direct path access

Cause: Users with insufficient privileges attempting to do direct path access of tables with fine grain access control policies.

Action: Ask the database administrator to do the operation. Note that users can work with security administrator to temporarily drop/disable the policies at time of export, import, or load, but this has security implication, and thus access of the database must be controlled carefully.

ORA-28117: integrity constraint violated - parent record not found

Cause: try to update/insert a child record with new foreign key values, but the corresponding parent row is not visible because of fine-grained security in the parent.

Action: make sure that the updated foreign key values must also visible in the parent

ORA-28118: policy group already exists

Cause: try to create a policy group that already exists

Action: n/a

ORA-28119: policy group does not exist

Cause: try to drop a policy group that does not exist

Action: n/a

ORA-28120: driving context already exists

Cause: try to create a driving context that already exists

Action: n/a

ORA-28121: driving context does not exist

Cause: try to drop a driving context that does not exist

Action: n/a

ORA-28122: can not update SYS_DEFAULT policy group

Cause: An attempt was made to execute either DBMS_RLS.CREATE_POLICY_GROUP or DBMS_RLS.DELETE_POLICY_GROUP using SYS_DEFAULT as the policy group name.

Action: Do not attempt to CREATE or DELETE the SYS_DEFAULT policy group. This action is not permitted.

ORA-28123: Driving context '*string,string*' contains invalid group '*string*'

Cause: A previous call to DBMS_SESSION.SET_CONTEXT specified an invalid policy group.

Action: Ensure that a valid policy group is passed to DBMS_SESSION.SET_CONTEXT when initializing a policy driving context.

ORA-28124: Column *string* in sec_relevant_cols cannot be of an object data type

Cause: A column specified in sec_relevant_cols was of an object data type.

Action: Ensure that none of the columns specified in sec_relevant_cols is of an object data type or XMLType.

ORA-28125: A protected base column was referenced in an unprotected virtual column expression.

Cause: A protected base column was referenced in an unprotected virtual column expression.

Action: Check the policy definition and make sure that the virtual column is also protected.

ORA-28126: Attribute association failed for policy "*string*".

Cause: An attempt was made to associate a global application context attribute to either a context-sensitive or shared context-sensitive policy. Only local application context attribute association is supported.

Action: Specify a local application context attribute.

ORA-28132: The MERGE INTO syntax does not support the security policy.

Cause: The MERGE INTO syntax did not support a security policy on the destination table, because the policy's statement_types did not include each of INSERT, UPDATE and DELETE or the policy had security-relevant column.

Action: If you do not have the privilege to modify the security policy, then instead of MERGE INTO, use the INSERT, UPDATE and DELETE DML statements on the table that has a security policy defined on it. If you have the privilege to modify the security policy, then redefine it in such a way that statement_types includes all of the DML statement types (INSERT, UPDATE and DELETE) or ensure that the policy does not have a security-relevant column.

ORA-28134: object cannot have fine-grained access control policy

Cause: Only tables, views, or synonyms of tables or views may have VPD policies

Action: No action required.

ORA-28135: VPD check option silent error event**ORA-28136: Ignore check option error**

ORA-28137: Invalid FGA audit Handler

Cause: An invalid audit handler was specified.

Action: Specify a valid audit handler.

ORA-28138: Error in Policy Predicate

Cause: An invalid policy predicate was specified.

Action: Please specify a valid policy Predicate for the FGA policy

ORA-28139: Maximum allowed Fine Grain Audit Policies Exceeded

Cause: A maximum of 256 policies can be enabled on an object

Action: Drop or disable an existing policy before creating more

ORA-28140: Invalid column specified

Cause: Column name specified during policy creation is invalid

Action: Please specify a valid column name. Object columns are not supported

ORA-28141: error in creating audit index file

Cause: ORACLE was not able to create the file being used to hold audit file names.

Action: Examine the directory pointed to by the initialization parameter "audit_file_dest." Make sure that all of the following is true: 1. The directory exists. 2. The name indeed points to a directory and not a file. 3. The directory is accessible and writable to the ORACLE user.

ORA-28142: error in accessing audit index file

Cause: ORACLE was not able to access the file being used to hold audit file names.

Action: Make sure the file exists in the directory pointed to by the initialization parameter "audit_file_dest" and is readable by the ORACLE user.

ORA-28143: Invalid argument passed to FGA ADD_POLICY procedure

Cause: Invalid input argument was specified for FGA ADD_POLICY procedure.

Action: Specify correct type and number of arguments to FGA ADD_POLICY procedure.

ORA-28144: Failed to execute fine-grained audit handler

Cause: An error was encountered while executing fine-grained audit handler.

Action: Refer to the trace file for details.

ORA-28145: XDS policy already exists for *string*

Cause: An XDS policy was enabled for an object that already has an associated XDS policy.

Action: Specify a different policy name or call enable_xds with the overwrite paramter set to TRUE.

ORA-28146: invalid operation for policy "*string*"

Cause: Attribute association (NAMESPACE, ATTRIBUTE) was specified for an invalid policy type. Attribute association can be specified only for context-sensitive and shared context-sensitive policy types.

Action: Do not perform any unsupported operation.

ORA-28147: The specified attribute association ("*string*", "*string*") is already attached to policy "*string*".

Cause: An attempt was made to create the attribute association using names that were already used by existing attribute association of the policy.

Action: Adjust the names and retry the operation.

ORA-28148: The specified attribute association ("*string*", "*string*") is not attached to policy "*string*".

Cause: An attempt was made to drop the attribute association that was not attached to the policy.

Action: Adjust the names and retry the operation.

ORA-28149: input value for argument "*string*" is missing

Cause: Only one input value was specified for the (NAMESPACE, ATTRIBUTE) arguments.

Action: Specify an input value for both (NAMESPACE, ATTRIBUTE) arguments.

ORA-28150: proxy not authorized to connect as client

Cause: A proxy user attempted to connect as a client, but the proxy was not authorized to act on behalf of the client.

Action: Grant the proxy user permission to perform actions on behalf of the client by using the ALTER USER ... GRANT CONNECT command.

ORA-28151: more than one user name specified for command

Cause: More than one user name was specified for an ALTER USER command.

Action: Try the command again with only one user name.

ORA-28152: proxy user '*string*' may not specify initial role '*string*' on behalf of client '*string*'

Cause: A proxy user attempted to specify an initial role for a client, but the client does not possess the role.

Action: Change the proxy user so that it does not specify the role or grant the role to the client.

ORA-28153: Invalid client initial role specified: '*string*'

Cause: A role specified by a proxy user as an initial role to be activated upon connecting on behalf of a client is invalid.

Action: Connect again as the client specifying a valid role.

ORA-28154: Proxy user may not act as client '*string*'

Cause: A proxy user may not assume the identity of a privileged user in order to limit the privileges that a proxy may possess.

Action: Execute the statement again specify a client other than a privileged user.

ORA-28155: user '*string*' specified as a proxy is actually a role

Cause: A user specified in an AUDIT *operation* BY *proxy* ON BEHALF OF *client* is actually a role.

Action: Execute the statement again with a valid proxy user.

ORA-28156: Proxy user '*string*' not authorized to set role '*string*' for client '*string*'

Cause: A proxy user has not been granted the right to use a role on behalf of a client.

Action: Execute the command ALTER USER *client* GRANT CONNECT THROUGH PROXY *proxy* to grant the needed role.

ORA-28157: Proxy user '*string*' forbidden to set role '*string*' for client '*string*'

Cause: A proxy user was forbidden to use a role on behalf of a client through the command ALTER USER *client* GRANT CONNECT THROUGH *proxy* WITH ALL ROLES EXCEPT *role*

Action: Execute the command ALTER USER *client* GRANT CONNECT THROUGH PROXY *proxy* to grant the needed role.

ORA-28158: missing ALL keyword

Cause: Keyword missing.

Action: Provide missing keyword.

ORA-28159: missing BEHALF keyword

Cause: Keyword missing.

Action: Provide missing keyword.

ORA-28160: missing EXCEPT keyword

Cause: Keyword missing.

Action: Provide missing keyword.

ORA-28161: missing ROLES keyword

Cause: Keyword missing.

Action: Provide missing keyword.

ORA-28162: missing THROUGH keyword

Cause: Keyword missing.

Action: Provide missing keyword.

ORA-28163: GRANT already specified

Cause: The GRANT clause was specified twice.

Action: Use only one GRANT clause.

ORA-28164: REVOKE already specified

Cause: The REVOKE clause was specified twice.

Action: Use only one REVOKE clause.

ORA-28165: proxy '*string*' may not specify password-protected role '*string*' for client '*string*'

Cause: A proxy user attempted to activate a role on behalf of a client which has a password associated with it. Since the proxy does not have a password, this activation cannot be allowed.

Action: Attempt to activate a different role or change the role administratively so that there is no password.

ORA-28166: duplicate rolename in list

Cause: The name of a role was specified more than once in a list.

Action: Repeat the command specifying the role once.

ORA-28168: unused error

ORA-28169: unsupported certificate type

Cause: The type of certificate from which the server is to extract the credentials of the client is not supported.

Action: Specify a supported type.

ORA-28170: unsupported certificate version

Cause: The version of the certificate from which the server is to extract the credentials of the client is not supported.

Action: Specify a supported version.

ORA-28171: unsupported Kerberos version

Cause: the version the Kerberos ticket which the server is to use to validate the identity of the client is not supported.

Action: Specify a supported version.

ORA-28172: distinguished name not provided by proxy

Cause: A client user is to be identified using a distinguished name, but none was provided by the proxy user.

Action: Provide a distinguished name.

ORA-28173: certificate not provided by proxy

Cause: A client user is to be identified using a certificate but none was provided by the proxy user.

Action: Provide a certificate.

ORA-28174: Kerberos ticket not provided by proxy

Cause: A client user is to be authenticated using a Kerberos ticket but none was provided by the proxy user.

Action: Provide a Kerberos ticket.

ORA-28175: incorrect certificate type

Cause: the type of certificate provided by the proxy user to identify a client user does not match the type that is required.

Action: Provide a certificate of the correct type.

ORA-28176: incorrect certificate version

Cause: the version of certificate provided by the proxy user to identify a client user does not match the version that is required.

Action: Provide a certificate of the correct version.

ORA-28177: incorrect Kerberos ticket version

Cause: the version of Kerberos ticket provided by the proxy user to authenticate a client user does not match the version that is required.

Action: Provide a Kerberos ticket of the correct version.

ORA-28178: password not provided by proxy

Cause: A client user is to be authenticated using a database password but none was provided by the proxy user.

Action: Provide a password.

ORA-28179: client user name not provided by proxy

Cause: No user name was provided by the proxy user for the client user.

Action: Either specify a client database user name, a distinguished name or an X.509 certificate.

ORA-28180: multiple authentication methods provided by proxy

Cause: More than one authentication method was specified by the proxy user for the client user.

Action: Specify only one of the following: a client database user name, a distinguished name or an X.509 certificate.

ORA-28181: proxy 'string' failed to enable one or more of the specified initial roles for client 'string'

Cause: Attempt to enable specified initial roles after logon resulted in failure.

Action: Check that the initial roles are valid, granted to client, and not password protected.

ORA-28182: cannot acquire Kerberos service ticket for client

Cause: An attempt to use a Kerberos forwardable ticket granting ticket to obtain a Kerberos service ticket failed.

Action: Check that the Kerberos forwardable ticket granting ticket belongs to the client, is valid, and that the key distribution center is available.

ORA-28183: proper authentication not provided by proxy

Cause: A client user must be authenticated but no authentication credentials were provided by the proxy user.

Action: Provide some form of authentication credentials.

ORA-28184: global user cannot have proxy permissions managed in the directory

Cause: The client name specified was a global user.

Action: Use ALTER USER to change the type of user (from IDENTIFIED GLOBALLY to something else, such as IDENTIFIED BY password or IDENTIFIED EXTERNALLY).

ORA-28185: cannot alter user with administrative privilege to proxy-only connect user

Cause: An attempt was made to alter a user with administrative privilege to a proxy-only connect user.

Action: This user cannot be altered to proxy-only connect user.

ORA-28186: cannot grant *string* to a proxy-only connect user

Cause: An attempt was made to grant administrative privilege like SYSDBA, SYSOPER, SYSASM, SYSBACKUP, SYSDG, SYSKM, or SYSRAC to a proxy-only connect user. Since proxy authentication using an administrative privilege is not supported, such grants are not allowed.

Action: None

ORA-28187: cannot alter global user to proxy-only connect user

Cause: An attempt was made to alter global user to proxy-only connect.

Action: None

ORA-28188: cannot alter user SYS/SYSBACKUP/SYSDG/SYSKM/SYSRAC to be identified as globally

Cause: An attempt was made to alter SYS/SYSBACKUP/SYSDG/SYSKM/SYSRAC to be identified as globally.

Action: None

ORA-28190: SYSRAC administrative privilege cannot be granted to other users

Cause: An attempt was made to grant SYSRAC administrative privilege to a user. This administrative privilege can only be used in operating system authentication and cannot be granted to other users.

Action: Use connection string '/' as 'SYSRAC' from an operating system account in the OSRAC group to connect to the database with the SYSRAC privilege.

ORA-28191: cannot grant administrative privileges to a user with non-ASCII or non-EBCDIC characters in the user name

Cause: An attempt to grant privileges to a user failed. Administrative privileges like SYSDBA, SYSOPER, SYSASM, SYSBACKUP, SYSDG, SYSKM, and SYSRAC cannot be granted to a user with non-ASCII or non-EBCDIC characters in the user name.

Action: Grant administrative privileges to users that have user names with only ASCII or EBCDIC characters.

ORA-28200: IDENTIFIED USING already specified

Cause: The IDENTIFIED USING clause was specified twice.

Action: Use only one IDENTIFIED USING clause.

ORA-28201: invalid command to enable secure application role '*string*'

Cause: An attempt to enable the secure application role outside of the scope of the designated package failed.

Action: Enable the role using the designated package.

ORA-28206: password length less than *number* characters

Cause: The password entered by the user did not meet the minimum length criteria.

Action: Enter a password which meets the minimum length criteria.

ORA-28207: password contains the user name

Cause: The provided password contained the user name.

Action: Enter a password that does not contain the user name.

ORA-28208: password contains the user name in reverse

Cause: The provided password contained the reverse of the user name.

Action: Enter a password that does not contain the reverse of the user name.

ORA-28209: password contains the server name

Cause: The provided password contained the server name.

Action: Enter a password that does not contain the server name.

ORA-28210: password too simple

Cause: The password was simple enough to guess.

Action: Enter a complex password.

ORA-28211: new password should differ from the old password by *string* or more characters

Cause: The new and old passwords should differ by at least the minimum number of characters as defined by the administrator.

Action: Enter a password that differs from the previous password by at least the minimum required number of changed characters, as defined by the administrator.

ORA-28212: password must NOT contain a double-quotation

Cause: The double-quotation mark character is reserved as a password delimiter.

Action: Enter a password without any double-quotation marks.

ORA-28213: password must contain *number* or more letters

Cause: The password did not meet the minimum required number of alphabetic characters.

Action: Enter a password containing at least the minimum number of alphabetic characters.

ORA-28214: password must contain *number* or more uppercase characters

Cause: The password did not meet the minimum required number of uppercase alphabetic characters.

Action: Enter a password containing at least the minimum number of uppercase alphabetic characters.

ORA-28215: password must contain *number* or more lowercase characters

Cause: The password did not meet the minimum required number lowercase alphabetic characters.

Action: Enter a password containing at least the minimum number of lowercase alphabetic characters.

ORA-28216: password must contain *number* or more digits

Cause: The password did not contain the minimum number of digits.

Action: Enter a password containing at least the minimum number of digits.

ORA-28217: password must contain *number* or more special characters

Cause: The password did not contain the minimum number of special characters.

Action: Enter a password containing at least the minimum number of special characters.

ORA-28218: password length more than 30 bytes

Cause: The length of the password exceeds 30 bytes.

Action: Enter a password containing a maximum of 30 bytes.

ORA-28219: password verification failed for mandatory profile

Cause: The new password did not meet the necessary password complexity requirements of the mandatory profile.

Action: Contact the DBA for the rules about choosing the new password.

ORA-28220: invalid schema name *string* or password verification function *string*

Cause: A nonexistent or invalid schema name or password verification function was specified. This occurred when you attempted to create or alter a profile with PASSWORD_VERIFY_FUNCTION parameter value containing a non-SYS user owned schema qualified function and either of the following was true: - The ALLOWED_PVF_OWNERS system parameter was not configured to allow schema qualified password verification function. - The user schema was not allowed to own the password verification function. - The password verification function was created as an INVOKER rights PL/SQL function.

Action: Specify a valid schema name or password verification function for PASSWORD_VERIFY_FUNCTION parameter. Depending on the error, either one of the following should be done: - If the ALLOWED_PVF_OWNERS system parameter is set to NULL (default value), please contact your database administrator to have it set to an appropriate value (comma separated list of database users) to allow schema qualified password verification function. - If the user schema is not allowed to own the password verification function, please contact your database administrator to add the user as part of ALLOWED_PVF_OWNERS system parameter value. Only users specified as ALLOWED_PVF_OWNERS system parameter value are allowed to own password verification function. - If the password verification function is created as an INVOKER rights PL/SQL function, please create it as DEFINER rights PL/SQL function and retry {CREATE|ALTER} PROFILE operation. INVOKER rights PL/SQL functions are not allowed as password verification function due to security reasons.

ORA-28221: REPLACE not specified

Cause: User is changing password but password verification function is turned on and the original password is not specified and the user does not have the alter user system privilege.

Action: Supply the original password.

ORA-28222: may not modify reserved user

Cause: An attempt was made to change or grant to a reserved user account.

Action: None

ORA-28223: first login requires password change

Cause: This user was globally authenticated. Password policy settings in Oracle Internet Directory (OID) requires the password to be changed for the first connection. Further connections to the database will be denied if the password in OID is not changed.

Action: Connect to the OID to change the password.

ORA-28225: The EXPIRE PASSWORD ROLLOVER PERIOD clause is specified with a disallowed IDENTIFIED clause or a NO AUTHENTICATION clause

Cause: The ALTER USER statement incorrectly included a disallowed IDENTIFIED clause or a NO AUTHENTICATION clause with the EXPIRE PASSWORD ROLLOVER PERIOD clause.

Action: Use only one of the above clauses in the ALTER USER statement and resubmit the command.

ORA-28226: EXPIRE PASSWORD ROLLOVER PERIOD clause already specified

Cause: In ALTER USER statement the EXPIRE PASSWORD ROLLOVER PERIOD clause was specified more than once.

Action: Remove all but one of the EXPIRE PASSWORD ROLLOVER PERIOD clauses and resubmit the command.

ORA-28227: Gradual password rollover is not supported for administrative users.

Cause: An attempt was made to grant an administrative privilege to a user that is associated with a password profile having a non-zero value for the PASSWORD_ROLLOVER_TIME profile limit. The gradual password rollover feature is not supported for administrative users.

Action: Ensure that the user being granted the administrative privilege is not associated with a password profile having a non-zero PASSWORD_ROLLOVER_TIME limit, and resubmit the command.

ORA-28228: REPLACE clause not specified

Cause: Attempt was made to change the password, but user has been granted administrative privilege(s).

Action: Provide the original password on REPLACE clause.

ORA-28231: no data passed to obfuscation toolkit

Cause: A NULL value was passed to a function or procedure.

Action: Make sure that the data passed is not empty.

ORA-28232: invalid input length for obfuscation toolkit

Cause: Length of data submitted for encryption or decryption is not a multiple of 8 bytes.

Action: Make sure that the length of the data to be encrypted or decrypted is a multiple of 8 bytes.

ORA-28233: double encryption not supported

Cause: The obfuscation toolkit does not support the encryption of already-encrypted data.

Action: Do not attempt to encrypt already-encrypted data.

ORA-28234: key length too short

Cause: The key specified is too short for the algorithm. DES requires a key of at least 8 bytes. Triple DES requires a key of at least 16 bytes in two-key mode and 24 bytes in three-key mode.

Action: Specify a longer key.

ORA-28235: algorithm not available

Cause: The encryption algorithm desired is not available.

Action: Run the installer to install the needed algorithm in Oracle Advanced Security.

ORA-28236: invalid Triple DES mode

Cause: An unknown value was specified for the mode in which triple DES encryption is to run.

Action: Specify a valid value. See the package declaration for a list of valid values.

ORA-28237: seed length too short

Cause: The seed specified for the key generation routine must be at least 80 characters.

Action: Specify a longer seed.

ORA-28238: no seed provided

Cause: A NULL value was passed in as the seed to be used in generating a key.

Action: Provide a non-NULL value for the seed.

ORA-28239: no key provided

Cause: A NULL value was passed in as an encryption or decryption key.

Action: Provide a non-NULL value for the key.

ORA-28261: CURRENT_USER can not be used in PLSQL Definer's Right procedure.

Cause: An attempt to retrieve CURRENT_USER using SYS_CONTEXT PLSQL interface.

Action: Use a SQL statement to query CURRENT_USER inside a DR procedure.

ORA-28262: Global application context cannot be used after failing over with Transparent Application Continuity.

Cause: An attempt was made to retrieve the global application context value in a failed over session.

Action: Determine if the application can use Application Continuity instead of Transparent Application Continuity, or use the Local Application Context instead of Global Application Context

ORA-28263: unused error**ORA-28264: Client identifier is too long**

Cause: The length of the client identifier is longer than 64

Action: Set a client identifier whose length is less than 64.

ORA-28265: Namespace beginning with 'SYS_' is not allowed.

Cause: Namespace beginning with 'SYS_' was not allowed.

Action: Use a namespace that does not begin with 'SYS_'.

ORA-28267: Invalid NameSpace Value

Cause: Context NameSpace conflicts with reserved key words or a secure Namespace is not allowed for this type of Application Context.

Action: Use a valid namespace.

ORA-28268: Exceeded the maximum allowed size for Context information in a session

Cause: The maximum size specified by the `_session_context_size` init.ora parameter was exceeded.

Action: Please change the value for `_session_context_size` in the init.ora file.

ORA-28270: Malformed user nickname for password authenticated global user.

Cause: An attempt to login as password-authenticated global user with a malformed user nickname.

Action: Make sure the nickname is valid and re-login.

ORA-28271: No permission to read user entry in LDAP directory service.

Cause: ORACLE server does not have read permission on user nickname's X.500 user entry.

Action: Make sure ORACLE server is using right SSL credentials to connect to LDAP directory services. Make sure permissions for LDAP user entries are right.

ORA-28272: Domain policy restricts password based GLOBAL user authentication.

Cause: Domain policy does not allow password-authenticated GLOBAL users.

Action: Make sure ORACLE server is using right SSL credentials to connect to LDAP directory services. Make sure `orclDBAuthTypes` attributes within Oracle enterprise domain object is either set to PWD or ALL.

ORA-28273: No mapping for user nickname to LDAP distinguished name exists.

Cause: ORACLE server cannot map the given user nickname to LDAP distinguished name.

Action: Make sure user entries in LDAP are correctly provisioned with correct user nickname attribute values.

ORA-28274: No ORACLE password attribute corresponding to user nickname exists.

Cause: LDAP user entry corresponding to user nickname does not have a ORACLE password attribute or the attribute is not initialized.

Action: Make sure user entries in LDAP are correctly provisioned with correct ORACLE password attribute values.

ORA-28275: Multiple mappings for user nickname to LDAP distinguished name exist.

Cause: The given user nickname maps to more than one LDAP distinguished name.

Action: Make sure user nickname is unique within the enterprise.

ORA-28276: Invalid ORACLE password attribute.

Cause: The ORACLE password attribute of a user entry has an invalid format.

Action: Make sure ORACLE password attribute value is RFC-2307 compliant.

ORA-28277: LDAP search, while authenticating global user with passwords, failed.

Cause: The LDAP search for finding the appropriate user entry and ORACLE password failed.

Action: Make sure LDAP directory service is up and running.

ORA-28278: No domain policy registered for password based GLOBAL users.

Cause: No policy about password authenticated GLOBAL users has been registered.

Action: Add attribute orclDBAuthTypes to the database server's Enterprise domain.

ORA-28279: Error reading ldap_directory_access init parameter.

Cause: ldap_directory_access parameter is not specified correctly.

Action: Make sure spfile.ora has ldap_directory_access set correctly. Possible correct values are PASSWORD, SSL and NONE.

ORA-28280: Multiple entries for ORACLE database password exist.

Cause: The ORACLE password attribute of a user entry has multiple entries of ORACLE database password.

Action: Make sure ORACLE password attribute has one entry for ORACLE Database password.

ORA-28281: Global application context is not updated on one or more Oracle RAC instances

Cause: While updating global application context across Oracle RAC instances, the background process errored out or the timeout expired due to some failure.

Action: Ensure every instance in Oracle RAC is operational and retry the operation.

ORA-28290: Multiple entries found for the same Kerberos Principal Name

Cause: Multiple user entries has been configured with the same krbPrincipalName

Action: Modify enterprise user's entry to assign its Kerberos principal name Make sure the user entries in LDAP are provisioned correctly.

ORA-28291: No Kerberos Principal Value found.

Cause: Oracle server fails to get value of krbPrincipalName attribute

Action: Make sure user entries are correctly provisioned with correct Kerberos principal value

ORA-28292: No Domain Policy registered for Kerberos based authentication

Cause: The enterprise domain entry is not configured for Kerberos based global authentication.

Action: Modify orclDBAuthType of the database server's enterprise domain entry and assign it "ALL" or "KRB5"

ORA-28293: No matched Kerberos Principal found in any user entry

Cause: Oracle server fails to find the principal in the user search base

Action: Make sure the user search base is correct. Use ESM to configure the enterprise user its Kerberos principal name

ORA-28300: No permission to read user entry in LDAP directory service.

Cause: ORACLE server does not have read permission on user entries.

Action: Make sure ORACLE server is using right credentials to connect to LDAP directory services. Make sure permissions for LDAP user entries are configured correctly.

ORA-28301: Domain Policy hasn't been registered for SSL authentication.

Cause: An attempt was made to authenticate with SSL, but the database enterprise domain was not configured for SSL authentication.

Action: Modify orclDBAuthType of the server's enterprise domain entry and assign it "ALL" or "SSL".

ORA-28302: User does not exist in the LDAP directory service.

Cause: An attempt was made to authenticate with SSL using the user's certificate, but there was no user entry in the LDAP server that matched the user's Distinguished Name.

Action: Add an user entry whose DN matches the user's PKI DN in the LDAP directory.

ORA-28303: Distinguished name for user exceeds maximum supported length

Cause: The user's distinguished name (DN) exceeded the maximum supported length.

Action: Shorten the user's distinguished name (DN) and retry.

ORA-28304: Oracle encrypted block is corrupt (file # *string*, block # *string*)

Cause: The indicated encrypted block was corrupt. This was an in-memory corruption. The exact cause is unknown. Possible causes could be: - the encryption wallet is incorrect or corrupted - the tablespace encryption key is incorrect or corrupted - decryption engine failure - actual logical error exists in decrypted block

Action: Review the encryption wallet and the keys stored in it to ensure they are valid and correct.

ORA-28305: unable to get valid WALLET_LOCATION

Cause: An invalid WALLET_LOCATION was specified in the sqlnet.ora file, or the ORACLE_BASE or ORACLE_HOME environment vairable was not set properly.

Action: Correct WALLET_LOCATION in the sqlnet.ora file, or properly set the ORACLE_BASE or ORACLE_HOME environment variable.

ORA-28306: The directory user has *string* groups mapped to different database global users.

Cause: A directory user connected to the database while there were multiple directory user's groups mapped to different shared database global users.

Action: No action is required if by design the user's multiple groups need to be mapped to different database global users. Otherwise, create an exclusive database global user mapping for the directory user, or ensure that the directory user has only one mapped shared database global user.

ORA-28307: The directory current time *string* is unreasonable.

Cause: Either the directory service time was earlier than year 1900, or the format was incorrect.

Action: Ensure that the directory service clock is set properly.

ORA-28308: The directory server type *string* is not supported.

Cause: The database tried to work with a directory service which was not supported.

Action: Update the dsi.ora or ldap.ora file to reflect an appropriate directory server type.

ORA-28309: failed to get the service user's credential from the wallet.

Cause: An attempt was made to get the service user's credential from the wallet. However, either the wallet was not found or the service user's credential was missing in the wallet.

Action: Check the wallet path and update the wallet with the service user's credential.

ORA-28310: Role with same external name already exists.

Cause: The external name specified for the role being created or altered already exists for another role.

Action: External names must be unique among roles. Specify another.

ORA-28311: Oracle encrypted data block not encrypted (file # *string*, block # *string*)

Cause: The indicated data block was found unencrypted in a fully encrypted tablespace. The exact cause is unknown. Possible causes could be: - An encrypted data block is tampered and replaced with an unencrypted data block. - An Oracle internal issue.

Action: Collect block dump and redo dump for this block, and contact Oracle Support Services.

ORA-28312: Proxy user is not supported with DSI.

Cause: Proxy user authentication is currently not supported with Directory Service Integration (DSI).

Action: Do not use proxy user authentication with DSI.

ORA-28313: LDAP server connection is down.

Cause: The LDAP server is down or the connection to the LDAP server is closed.

Action: Retry the connect operation.

ORA-28314: The current user database link is not supported with DSI.

Cause: An attempt was made to use the current user database link with Directory Services Integration (DSI).

Action: Do not use the current user database link with DSI.

ORA-28315: encryption key mismatched for file # *string*

Cause: Oracle tablespace encryption could not verify the master key or the tablespace key for this data file. The exact cause is unknown. Possible cause could be: - The encryption wallet was incorrect. - The encryption wallet was incorrectly shared between databases. - The tablespace encryption key was incorrect or corrupted.

Action: Review the encryption wallet and the keys stored in it to ensure that they are valid, and contact Oracle Support Services.

ORA-28316: LDAP user, group or domain is not found.

Cause: The user, group or domain was not found on the LDAP server.

Action: Check the LDAP user name or domain name.

ORA-28330: encryption is not allowed for this data type or the data type is invalid

Cause: The data type was not supported for column encryption or the data type was invalid.

Action: n/a

ORA-28331: encrypted column size too long for its data type

Cause: The column was both encrypted and one of the following: -for VARCHAR2 when extended character data types were disabled, the length specified was > 3932; -for VARCHAR2 when extended character data types were enabled, the length specified was > 32699; -for CHAR, the length specified was > 1932; -for NVARCHAR2 when extended character data types were disabled, the length specified was > 1966; -for NVARCHAR2 when extended character data types were enabled, the length specified was > 16349; -for NCHAR, the length specified was > 966; -for RAW when extended character data types were disabled, the length specified was > 3932; -for RAW when extended character data types were enabled, the length specified was > 32699;

Action: Reduce the column size.

ORA-28332: cannot have more than one password for the encryption key

Cause: More than one password was specified in the user command.

Action: n/a

ORA-28333: column is not encrypted

Cause: An attempt was made to rekey or decrypt an unencrypted column.

Action: n/a

ORA-28334: column is already encrypted

Cause: An attempt was made to encrypt an encrypted column.

Action: n/a

ORA-28335: referenced or referencing FK constraint column cannot be encrypted

Cause: encrypted columns were involved in the referential constraint

Action: n/a

ORA-28336: cannot encrypt SYS owned objects

Cause: An attempt was made to encrypt columns in a table owned by SYS.

Action: n/a

ORA-28337: the specified index may not be defined on an encrypted column

Cause: Index column was either a functional, domain, or join index.

Action: n/a

ORA-28338: Column(s) cannot be both indexed and encrypted with salt

Cause: An attempt was made to encrypt index column with salt or an attempt was made to create an index on encrypted column with salt.

Action: Alter the table and specify column encrypting without salt.

ORA-28339: missing or invalid encryption algorithm

Cause: Encryption algorithm was missing or invalid in the user command.

Action: Must specify a valid algorithm.

ORA-28340: A different encryption algorithm has been chosen for the table or tablespace.

Cause: Existing encrypted columns or tablespace were associated with a different algorithm.

Action: Do not specify an algorithm, or specify the same one for the existing encrypted columns or tablespace.

ORA-28341: cannot encrypt constraint column(s) with salt

Cause: An attempt was made to encrypt constraint columns with salt.

Action: Encrypt the constraint columns without salt.

ORA-28342: integrity check fails on column key

Cause: Encryption metadata may have been improperly altered.

Action: n/a

ORA-28343: fails to encrypt data

Cause: data or encryption metadata may have been improperly altered or the security module may not have been properly setup

Action: n/a

ORA-28344: fails to decrypt data

Cause: data or encryption metadata may have been improperly altered or the security module may not have been properly setup

Action: n/a

ORA-28345: cannot downgrade because there exists encrypted column

Cause: An attempt was made to downgrade when there was an encrypted column in the system.

Action: Decrypt these columns before attempting to downgrade.

ORA-28346: an encrypted column cannot serve as a partitioning column

Cause: An attempt was made to encrypt a partitioning key column or create partitioning index with encrypted columns.

Action: The column must be decrypted.

ORA-28347: encryption properties mismatch

Cause: An attempt was made to issue an ALTER TABLE EXCHANGE PARTITION | SUBPARTITION command, but encryption properties were mismatched.

Action: Make sure encryption algorithms and columns keys are identical. The corresponding columns must be encrypted on both tables with the same salt and non-salt flavor.

ORA-28348: index defined on the specified column cannot be encrypted

Cause: An attempt was made to encrypt a column which is in a functional index, domain index, or join index.

Action: drop the index

ORA-28349: cannot encrypt the specified column recorded in the materialized view log

Cause: An attempt was made to encrypt a column which is already recorded in the materialized view log.

Action: drop the materialized view log

ORA-28350: cannot encrypt the specified column recorded in CDC synchronized change table

Cause: An attempt was made to encrypt a column which is already recorded in CDC synchronized change table.

Action: drop the synchronized change table

ORA-28351: cannot encrypt the column of a cluster key

Cause: An attempt was made to encrypt a column of the cluster key. A column of the cluster key in a clustered table cannot be encrypted.

Action: None

ORA-28353: failed to open wallet

Cause: The database was unable to open the security module wallet due to an incorrect wallet path or password. It is also possible that a wallet had not been created. Type mkwallet from command line for instructions. If the database is configured to use Oracle Key Vault as the TDE keystore, the database may be having difficulty finding the Oracle Key Vault configuration file. If Oracle Key Vault is used as the keystore, check if the Oracle Key Vault configuration file is in the right directory. When the instance initialization parameter WALLET_ROOT is configured, Oracle Key Vault configuration file should be located at the following paths \$WALLET_ROOT/okv/conf for CDB\$ROOT and \$WALLET_ROOT/PDB-GUID/okv/conf for a pluggable database (PDB) in isolated mode. The PDB GUID can be obtained by querying GUID from DBA_PDBS view. When WALLET_ROOT is not set, Oracle Key Vault configuration file should be under \$OKV_HOME/conf.

Action: Execute the command again using the correct wallet password or verifying that a wallet exists in the specified directory. If necessary, create a new wallet and initialize it. When Oracle Key Vault is used, refer to the documentation for information on endpoint enrollment and provisioning.

ORA-28354: Encryption wallet, auto login wallet, or HSM is already open.

Cause: Either the encryption wallet, auto login wallet, or hardware security module (HSM) keystore was already open.

Action: None

ORA-28355: failed to initialize security module

ORA-28356: invalid open wallet syntax

Cause: The command to open the wallet contained improper spelling or syntax.

Action: If attempting to open the wallet, verify the spelling and syntax and execute the command again.

ORA-28357: password required to open the wallet

Cause: A password was not provided when executing the open wallet command, the isolate keystore command, or the unite keystore command.

Action: Retry the command with a valid password.

ORA-28358: improper set key syntax

Cause: The command to set the master key contained improper spelling or syntax.

Action: If attempting to set the master key for Transparent Database Encryption, verify the spelling and syntax and execute the command again.

ORA-28359: invalid certificate identifier

Cause: The certificate specified did not exist in the wallet.

Action: Query the V\$WALLET fixed view to find the proper certificate identifier for certificate to be used.

ORA-28360: security module internal error**ORA-28361: Master key not yet set.**

Cause: The master key for the instance was not set.

Action: Execute the ADMINISTER KEY MANAGEMENT SET KEY command to set a master key for the database instance.

ORA-28362: master key not found

Cause: The required master key could not be located. This may be caused by the use of an invalid or incorrect wallet.

Action: Check the wallet location parameters to see if the correct wallet is specified. Also, verify that a single sign-on (SSO) wallet is not being used when an encrypted wallet is intended.

ORA-28363: buffer provided not large enough for output

Cause: A provided output buffer is too small to contain the output.

Action: Check the size of the output buffer to make sure it is initialized to the proper size.

ORA-28364: invalid wallet operation

Cause: The command to operate the wallet contained improper spelling or syntax.

Action: Verify the spelling and syntax and execute the command again.

ORA-28365: wallet is not open

Cause: The security module wallet was not opened.

Action: Open the wallet. In and Oracle RAC environment, open the wallet on all instances for the container.

ORA-28366: invalid database encryption operation

Cause: The command for database encryption contained improper spelling or syntax.

Action: Verify the spelling and syntax and execute the command again.

ORA-28367: wallet does not exist

Cause: The Oracle wallet has not been created or the wallet location parameters in sqlnet.ora specifies an invalid wallet path.

Action: Verify that the WALLET_LOCATION or the ENCRYPTION_WALLET_LOCATION parameter is correct and that a valid wallet exists in the path specified.

ORA-28368: cannot auto-create wallet

Cause: The database failed to auto create an Oracle wallet. The Oracle process may not have proper file permissions or a wallet may already exist.

Action: Confirm that proper directory permissions are granted to the Oracle user and that neither an encrypted or obfuscated wallet exists in the specified wallet location and try again.

ORA-28369: cannot add files to encryption-ready tablespace when offline

Cause: You attempted to add files to an encryption-ready tablespace when all the files in the tablespace were offline.

Action: Bring the tablespace online and try again

ORA-28370: ENCRYPT, DECRYPT or REKEY option not allowed

Cause: An attempt was made to specify the ENCRYPT, DECRYPT or REKEY option on an unsupported tablespace.

Action: Remove this option and retry the statement.

ORA-28371: ENCRYPTION clause or ENCRYPT option not allowed

Cause: An attempt was made to specify the ENCRYPTION clause or ENCRYPT option for system and undo tablespaces.

Action: Remove one or both of these options and retry the statement.

ORA-28372: missing ENCRYPT option for encrypted tablespace

Cause: An attempt was made to specify the ENCRYPTION property for the CREATE TABLESPACE statement without specifying the ENCRYPT option to encrypt the tablespace.

Action: Add the ENCRYPT option and retry the statement.

ORA-28373: missing or out of order ENCRYPTION clause

Cause: An attempt was made to specify the ENCRYPT or DECRYPT option in the CREATE TABLESPACE statement or to specify the ENCRYPT or REKEY option in the ALTER TABLESPACE statement without first specifying the ENCRYPTION property for the tablespace.

Action: Add the ENCRYPTION clause or correct the syntax, and retry the statement.

ORA-28374: typed master key not found in wallet

Cause: You attempted to access encrypted tablespace or redo logs with a typed master key not existing in the wallet.

Action: Copy the correct Oracle Wallet from the instance where the tablespace was created.

ORA-28375: cross-endian backup conversion of encrypted tablespace is not supported

Cause: You attempted to perform a cross-endian backup conversion for encrypted tablespaces.

Action: Do not attempt to perform a cross-endian backup conversion of encrypted tablespaces because it is not supported.

ORA-28376: cannot find PKCS11 library

Cause: The HSM vendor's library cannot be found.

Action: Place the HSM vendor's library in the following directory structure: For Unix like system: /opt/oracle/extapi/[32,64]/hsm/{VENDOR}/{VERSION}/libapiname.ext For Windows systems: %SYSTEM_DRIVE%\oracle\extapi\{32,64}\hsm\{VENDOR}\{VERSION}\libapin//ame.ext [32, 64] - refers to 32bit or 64bit binary. {VENDOR} - The name of the vendor supplying the library. {VERSION} - Version of the library, preferably in num#.num#.num# format.

ORA-28377: No need to migrate from wallet to HSM

Cause: There are either no encrypted columns or all column keys are already encrypted with the HSM master key.

Action: No action required.

ORA-28378: Wallet not open after setting the Master Key

Cause: The Master Key has been set or reset. However, wallet could not be reopened successfully.

Action: Reopen the wallet.

ORA-28379: a different integrity algorithm has been chosen for the table

Cause: Encrypted columns were associated with a different algorithm.

Action: You do not need to specify an algorithm, or specify the same one for the existing encrypted columns.

ORA-28382: Global wallet operation in RAC failed

Cause: Wallet operation in RAC failed.

Action: Check V\$WALLET_ENCRYPTION table to verify if the wallet operation succeeded on any instance. Retry the operation.

ORA-28383: cannot do a PKI certificate-based Master Key migration

Cause: A PKI certificate-based Master Key migration was not allowed.

Action: Execute a symmetric Master Key migration.

ORA-28384: cannot perform Tablespace Encryption

Cause: Tablespace Encryption was attempted when PKI certificate-based Master Key was in use.

Action: Perform a symmetric Master Key Rekey.

ORA-28385: cannot perform a PKI certificate-based migration

Cause: A PKI certificate-based migration to HSM was attempted.

Action: Perform a symmetric Master Key migration.

ORA-28386: cannot perform a PKI certificate-based Master Key Rekey

Cause: A PKI certificate-based Master Key Rekey was attempted when Tablespace Encryption or HSM was in use.

Action: Perform a symmetric Master Key Rekey or disable Tablespace Encryption for all tablespaces.

ORA-28387: Could not acquire an enqueue for wallet operation in Oracle RAC

Cause: Enqueue to block TDE operations in Oracle RAC database could not be obtained.

Action: Retry the wallet operation.

ORA-28388: database is not open in read/write mode

Cause: Database was not open in read/write mode and could not perform these wallet operations.

Action: Open the database in read/write mode and retry this command.

ORA-28389: cannot close auto login wallet

Cause: Auto login wallet could not be closed because it was opened with another wallet or HSM requiring a password.

Action: Close the wallet or HSM with a password.

ORA-28390: auto login wallet not open but encryption wallet may be open

Cause: Auto login wallet was not open. But, the encryption wallet may still be open and subsequent TDE operations might succeed.

Action: If auto login wallet is closed but TDE operations succeed, check the status of the encryption wallet and close that if required.

ORA-28391: cannot close wallet or HSM, password mismatch

Cause: Password provided did not match the password of the open wallet or HSM.

Action: Provide the correct password for wallet or HSM to close the wallet or HSM.

ORA-28392: invalid close wallet syntax

Cause: The command to close the wallet contained improper spelling or syntax.

Action: If attempting to close the wallet, verify the spelling and syntax and execute the command again.

ORA-28393: password required to close the wallet

Cause: A password was not provided when executing the close wallet command.

Action: Retry the command with a valid password.

ORA-28394: decryption of data of length *string* failed

Cause: Decryption of data failed. Error may be due to plain text data in an external file being submitted for decryption, data encrypted with a different key or a utility being submitted for decryption, or TDE encrypted data in data files being corrupted.

Action: Verify that the correct external file is being specified or contact Oracle Support Services.

ORA-28395: could not write the new master key to the wallet

Cause: An attempt was made to write the new master key to the wallet. The wallet or the parent directory may not have the proper file permissions to write the master key in the wallet.

Action: Check the password-based wallet, auto login wallet, the parent directory permissions and disk space availability on the file system. Make sure that the Oracle processes have read/write permissions on the password-based and auto login wallets. Retry the command.

ORA-28396: rekey of enc\$ dictionary table failed

Cause: One or more master keys required for the rekey operation could not be found in the wallet. Either incorrect master key identifiers were inserted into the enc\$ dictionary table or the wallet containing the referenced master keys were improperly modified or deleted.

Action: Restore the most recent copy of the wallet and try again.

ORA-28397: cannot bring file *string* online since it has a passphrase-wrapped key

Cause: The encrypted tablespace file was rewrapped using passphrase through the DBMS_TTS.PASSPHRASE_REWRAP_KEY procedure. Therefore it cannot be part of the database until it is converted by RMAN.

Action: Do not attempt to bring files with passphrase-wrapped keys online.

ORA-28398: cannot rewrap encryption key for this file

Cause: Cannot rewrap encryption key for this file because it was not from an encrypted tablespace, or it had already been rewrapped.

Action: Verify that the file is a copy of a file from an encrypted tablespace.

ORA-28403: file *string* cannot be modified because it is an online data file

Cause: An attempt was made to modify an online data file when the file was not expected to be part of the database.

Action: Check the status of the file and its tablespace and make sure it is offline or is a copy of a data file

ORA-28404: role cannot be altered

Cause: An attempt was made to alter the role to become a global, external, password protected, or secure application role. The role could not be altered because it was already granted to one or more other roles or program units.

Action: Use REVOKE to revoke the role from other roles first.

ORA-28405: cannot grant secure role to a role

Cause: Role granted was a password protected or secure application role. This role can only be granted directly to a user.

Action: Grant the role directly to a user.

ORA-28407: Hardware Security Module failed with PKCS#11 error *string(string)*

Cause: The Hardware Security Module (HSM) connection may have been lost or another internal HSM error was reached.

Action: Check the error. For more information on the error, check the trace files and try the following: 1) Retry the command. If the error repeats, go to step 2. 2) Verify that the HSM is configured correctly and connected. Retry the command. If the error repeats, go to step 3. 3) Ask your Security Officer to close and open the security module. Retry the command. If the error repeats, go to step 4. 4) Bounce the database if possible. Retry the command. If the error repeats, contact Oracle Support Services or your HSM vendor's support.

ORA-28408: encryption using passphrase failed

Cause: Encryption with the passphrase failed which was likely due to an invalid or missing passphrase or due to an internal error.

Action: Verify that the passphrase is provided and try the operation again. If the problem persists contact Oracle Support Services.

ORA-28409: decryption using passphrase failed

Cause: Decryption with the passphrase failed which was likely due to an invalid or missing passphrase or due to an internal error.

Action: Verify that the passphrase is provided and try the operation again. If the problem persists contact Oracle Support Services.

ORA-28410: No need to migrate from HSM to wallet.

Cause: There were either no encrypted columns or all column keys were already encrypted with the wallet master key.

Action: No action required.

ORA-28411: auto login wallet cannot be open during migration

Cause: Auto login wallet could not be opened during migration.

Action: Close the auto login wallet and try the migration again.

ORA-28412: cannot determine the database migration status

Cause: The migration status of the database could not be determined.

Action: Verify if the migration status is correct in props\$ and, if not, correct it. Shutdown and startup the database.

ORA-28414: specified keys are in HSM

Cause: Master key rekey or activation failed because the keys were in Hardware Security Module(HSM) but the configuration indicated that the keys were in wallet.

Action: Correct the sqlnet.ora configuration to HSM or migrate to wallet.

ORA-28415: specified keys are in wallet

Cause: Master key rekey or activation failed because the keys were in wallet but the configuration indicated that the keys were in Hardware Security Module (HSM) or Oracle Key Vault (OKV).

Action: Correct the sqlnet.ora file configuration to wallet or migrate to HSM or Oracle Key Vault. If WALLET_ROOT is set, set the dynamic instance initialization parameter

TDE_CONFIGURATION to have a value of FILE. If the keys were migrated back to wallet, set TDE_CONFIGURATION to FILE|HSM or FILE|OKV based on the keystore that was in use. In case of migration to HSM/OKV, set TDE_CONFIGURATION to HSM|FILE or OKV|FILE based on the new keystore type.

ORA-28416: specify the correct keystore in the sqlnet.ora file or in TDE_CONFIGURATION

Cause: Either the keystore specified in the sqlnet.ora file or TDE_CONFIGURATION was incorrect.

Action: When migrating to HSM or Oracle Key Vault, the keystore specified in sqlnet.ora file should be HSM or Oracle Key Vault and similarly when migrating to wallet, the keystore specified in sqlnet.ora should be wallet. Check if the sqlnet.ora file configuration is correct and, if not, correct it. If WALLET_ROOT is configured, during migration to HSM or Oracle Key Vault the KEYSTORE_CONFIGURATION value of the dynamic instance initialization parameter TDE_CONFIGURATION should be set to HSM|FILE or OKV|FILE based on the keystore that will be used after the migration has completed. Similarly when migrating to wallet, KEYSTORE_CONFIGURATION value of TDE_CONFIGURATION should be set to FILE|HSM or FILE|OKV.

ORA-28417: password-based keystore is not open

Cause: Password-based keystore was not opened.

Action: Close the auto login keystore, if required, and open a password-based keystore or use the FORCE KEYSTORE clause.

ORA-28418: password-based HSM is not open

Cause: Password-based Hardware Security Module (HSM) was not opened.

Action: Close the auto login keystore, if required, and open a password-based HSM or use the FORCE KEYSTORE clause.

ORA-28419: migration from wallet to Hardware Security Module (HSM) failed

Cause: The TDE_MASTER_KEY_ID entry did not exist in props\$ table. A subsequent attempt to add TDE_MASTER_KEY_ID entry into props\$ failed.

Action: Verify why the TDE_MASTER_KEY_ID entry was deleted from the props\$ table. Retry the command.

ORA-28420: cannot open resetlogs from a restore point prior to wallet creation

Cause: The open resetlogs, open read-only, or standby activation operation failed because the restore point is prior to the wallet creation, and the data file does not contain the database key information as stored in the control file.

Action: Restore to a restore point after the wallet creation, or rebuild the control file with existing data files.

ORA-28421: cannot FINISH a tablespace encrypt, decrypt or rekey command which has not started

Cause: The ALTER TABLESPACE FINISH [ENCRYPT | DECRYPT | REKEY] command did not find a failed attempt for tablespace encrypt, decrypt or rekey.

Action: Check if tablespace already has a desired key version and reissue the command without FINISH keyword if necessary.

ORA-28422: operation disallowed: concurrent master key rekey

Cause: Concurrent master key rekey was detected.

Action: Wait for the master key rekey operation to complete and retry the command.

ORA-28423: current operation disallowed: *string* tablespace is being encrypted, decrypted, or rekeyed

Cause: The specified tablespace was being concurrently encrypted, decrypted, or rekeyed.

Action: Wait for the concurrent operation to complete and retry the command.

ORA-28424: ENCRYPT, DECRYPT or REKEY option already specified

Cause: In the CREATE or ALTER TABLESPACE statement, the ENCRYPT, DECRYPT or REKEY option was specified more than once.

Action: Remove all but one of the ENCRYPT, DECRYPT or REKEY options.

ORA-28425: missing a valid FILE_NAME_CONVERT clause

Cause: A valid FILE_NAME_CONVERT clause was not specified with the ALTER TABLESPACE [ENCRYPT | DECRYPT | REKEY] statement. The FILE_NAME_CONVERT clause is required unless Oracle Managed Files are being used.

Action: Specify a valid FILE_NAME_CONVERT clause and retry the command.

ORA-28426: must FINISH a tablespace encrypt, decrypt or rekey command first

Cause: The ALTER TABLESPACE [ENCRYPT | DECRYPT | REKEY] command found a previously failed attempt for tablespace encrypt, decrypt or rekey.

Action: Issue the ALTER TABLESPACE FINISH [ENCRYPT | DECRYPT | REKEY] command to complete the attempt for tablespace encrypt, decrypt or rekey.

ORA-28427: cannot create, import or restore unencrypted tablespace: *string* in Oracle Cloud

Cause: The specified tablespaces were not encrypted, or were not allowed to be decrypted. Oracle Cloud mandates that all tablespaces must be encrypted.

Action: Create, import or restore an encrypted tablespace, or encrypt the specified tablespace, or do not decrypt the specified tablespace.

ORA-28428: cannot encrypt or decrypt a data file in mount mode when the database is open elsewhere

Cause: An attempt was made to encrypt or decrypt a data file in mount mode when the database was already opened by another Oracle RAC instance.

Action: Ensure that the database is not open anywhere and retry the command.

ORA-28429: cannot encrypt or decrypt a data file on standby when it is open read-only

Cause: An attempt was made to encrypt or decrypt a data file on a standby database when it was already opened in read-only mode.

Action: Restart the standby instance in mount mode and retry the command.

ORA-28430: cannot encrypt or decrypt a data file for online tablespace *string*

Cause: An attempt was made to encrypt or decrypt a data file for an online tablespace.

Action: Bring the tablespace offline and retry the command.

ORA-28431: cannot encrypt an already encrypted data file *string*

Cause: An attempt was made to encrypt a data file that was already encrypted in an encrypted tablespace.

Action: Check if the data file belongs to an encrypted tablespace.

ORA-28432: cannot encrypt data file *string* in seed pluggable database

Cause: An attempt was made to encrypt a data file that was part of a seed pluggable database, which is not allowed.

Action: Check if the data file belongs to a seed pluggable database.

ORA-28433: mismatched encryption property between data file *string* and tablespace *string*

Cause: Either an unencrypted data file in an encrypted tablespace or an encrypted data file in an unencrypted tablespace was found. When bringing a tablespace online or opening the database, all data files in an encrypted tablespace must be encrypted, and all data files in an unencrypted tablespace must be unencrypted.

Action: Encrypt all of the data files in the tablespace before resuming the operation.

ORA-28434: cannot decrypt an unencrypted data file *string*

Cause: An attempt was made to decrypt a data file that was unencrypted.

Action: Check if the data file belongs to an encrypted tablespace.

ORA-28435: cannot decrypt data file *string* which is not encrypted with the database key

Cause: An attempt was made to decrypt a data file that was not encrypted with the database key. Only data files encrypted with the ALTER DATABASE DATAFILE ENCRYPT or ALTER TABLESPACE ENCRYPTION OFFLINE ENCRYPT statement are encrypted with the database key.

Action: Check if the data file belongs to an encrypted tablespace with a different key from the database key in the V\$DATABASE_KEY_INFO view, or use the ALTER TABLESPACE ENCRYPTION ONLINE DECRYPT statement instead.

ORA-28436: cannot encrypt data file *string* in SYSTEM or SYSAUX tablespace

Cause: An attempt was made to encrypt a data file that was a part of the SYSTEM or SYSAUX tablespace, which is not allowed in compatibility lower than 12.2.

Action: Check if the data file belongs to SYSTEM or SYSAUX tablespace, or change the database compatibility to 12.2 or later.

ORA-28437: unexpected FILE_NAME_CONVERT clause with Oracle Managed Files

Cause: A FILE_NAME_CONVERT clause was specified with the ALTER TABLESPACE [ENCRYPT | DECRYPT | REKEY] statement, which is not allowed when the database is using Oracle Managed Files.

Action: Remove the FILE_NAME_CONVERT clause and retry the command.

ORA-28438: ALTER TABLESPACE *string* ENCRYPTION *stringstring* operation not complete

Cause: The ALTER TABLESPACE [ENCRYPT | DECRYPT | REKEY] command started but could not complete for all the data files of this tablespace.

Action: Check if all the data files are online and if the specified FILE_NAME_CONVERT clause covers all the data files of this tablespace, and retry the command with FINISH keyword, if V\$ENCRYPTED_TABLESPACES shows that the tablespace is not in NORMAL status.

ORA-28439: cannot close wallet when SYSTEM, SYSAUX, UNDO, or TEMP tablespaces are encrypted

Cause: An attempt was made to close the wallet for a database with an encrypted SYSTEM, SYSAUX, UNDO, or TEMP tablespace.

Action: Decrypt the tablespace and retry the command.

ORA-28440: cannot offline encrypt or decrypt data file *string* - file is in use or recovery

Cause: An attempt was made to offline encrypt or decrypt a data file that was online in an open instance, being encrypted or decrypted by another session, or was being recovered.

Action: Ensure that the tablespace is offline and no other encrypt or decrypt operation is performed on this data file, and end all recovery sessions.

ORA-28441: RMAN clone instance cannot open wallet

Cause: The RMAN clone instance failed to open the auto login wallet in an operation such as a pluggable database (PDB) or tablespace point-in-time recovery because the auto login wallet was incorrectly configured, or did not exist.

Action: Check and correct the auto-login wallet configuration or create an auto-login wallet from the password wallet, and retry the operation.

ORA-28442: Rekey of the TDE master encryption key is not permitted when the database is in restricted mode.

Cause: An attempt was made to rekey the Transparent Data Encryption (TDE) master encryption key when the database was in restricted mode.

Action: Open the database in read-write mode and retry the command.

ORA-28443: cannot access the TDE wallet

Cause: An attempt was made to access the Transparent Data Encryption (TDE) master encryption key in the TDE wallet.

Action: Create a TDE wallet, provision a TDE master encryption key in the wallet and ensure that the wallet is open.

ORA-28444: cannot enforce encryption of dictionary data

Cause: Either encryption of the dictionary data was already enforced or an attempt was made to enforce encryption of the dictionary data with compatible parameter earlier than release 12.2.0.2.

Action: Ensure that the compatible parameter is later than release 12.2.0.2 because earlier versions cannot handle encrypted dictionary data.

ORA-28445: Execution of the command failed.

Cause: Command execution failed due to an internal error.

Action: Check the trace file to learn the exact cause.

ORA-28446: cannot execute dictionary data rekey/delete key

Cause: Could not find an existing data encryption key.

Action: Ensure that a data encryption key exists before regenerating or deleting it.

ORA-28447: insufficient privilege to execute ALTER DATABASE DICTIONARY statement

Cause: An attempt was made to execute the ALTER DATABASE DICTIONARY statement without the necessary SYSKM privilege. For CONTAINER = ALL clause, the user must have the commonly granted SYSKM privilege or the user must have the local SYSKM privilege.

Action: Ensure that the user has the necessary privilege before executing the DDL.

ORA-28448: The ALTER DATABASE DICTIONARY statement was used incorrectly.

Cause: ALTER DATABASE DICTIONARY statement was used incorrectly.

Action: Ensure that a valid ALTER DATABASE DICTIONARY statement is executed.

ORA-28449: cannot use an invalidated database link

Cause: An attempt was made to use an invalid database link.

Action: Reset the password of the invalidated database link.

ORA-28450: encryption specified with CREATE DATABASE or CREATE PLUGGABLE DATABASE

Cause: The encryption option was specified in a CREATE DATABASE or a CREATE PLUGGABLE DATABASE statement.

Action: Do not specify encryption in the CREATE DATABASE or CREATE PLUGGABLE DATABASE statement.

ORA-28451: incomplete ALTER DATABASE LINK statement

Cause: An attempt was made to reset the password for an invalid shared database link without providing either the CONNECT TO clause, the AUTHENTICATED BY schema_name clause or the IDENTIFIED BY password clause.

Action: In the ALTER SHARED DATABASE LINK statement, ensure to provide all these clauses - - CONNECT TO - AUTHENTICATED BY schema_name - IDENTIFIED BY password

ORA-28452: ALTER DATABASE DICTIONARY statement is not allowed during rolling upgrade if LOB signature is enabled.

Cause: An attempt was made to execute the ALTER DATABASE DICTIONARY statement during rolling upgrade when large object (LOB) signature was enabled.

Action: Disable the LOB signature.

ORA-28453: ENCRYPT option not allowed

Cause: An attempt was made to specify the ENCRYPT option on an already encrypted tablespace.

Action: Remove this option and retry the statement with another option.

ORA-28454: DECRYPT option not allowed

Cause: An attempt was made to specify the DECRYPT option on a tablespace that was not encrypted.

Action: Remove this option and retry the statement with another option.

ORA-28455: ENCRYPT option not allowed.

Cause: An attempt was made to specify the ENCRYPT option on a tablespace with an incompatible setting of TABLESPACE_ENCRYPTION.

Action: If TABLESPACE_ENCRYPTION=DECRYPT_ONLY, then do not specify the CREATE or ALTER TABLESPACE statement with an ENCRYPT clause.

ORA-28456: ENCRYPTED files found with TABLESPACE_ENCRYPTION is set to DECRYPT_ONLY.

Cause: An attempt was made to open a database with encrypted tablespace files and an incompatible setting of TABLESPACE_ENCRYPTION.

Action: If TABLESPACE_ENCRYPTION=DECRYPT_ONLY, then decrypt all the encrypted tablespaces.

ORA-28457: ENCRYPT_NEW_TABLESPACES can only be set to ALWAYS when TABLESPACE_ENCRYPTION is set to AUTO_ENABLE.

Cause: An attempt was made to modify ENCRYPT_NEW_TABLESPACES to a value other than ALWAYS when TABLESPACE_ENCRYPTION is set to AUTO_ENABLE.

Action: Modify TABLESPACE_ENCRYPTION either in the server parameter file (SPFILE) or parameter file (PFILE) before the instance startup to a value other than AUTO_ENABLE, if ENCRYPT_NEW_TABLESPACES need not to be ALWAYS.

ORA-28458: cannot create, import or restore unencrypted tablespace: *string* when TABLESPACE_ENCRYPTION is set to AUTO_ENABLE.

Cause: The specified tablespace was not allowed to be decrypted because TABLESPACE_ENCRYPTION was set to AUTO_ENABLE.

Action: Either do not decrypt the tablespace or change the TABLESPACE_ENCRYPTION setting.

ORA-28459: cannot encrypt the unencrypted tablespace: *string* when TABLESPACE_ENCRYPTION is set to DECRYPT_ONLY.

Cause: The specified tablespace was not allowed to be encrypted because TABLESPACE_ENCRYPTION was set to DECRYPT_ONLY.

Action: Either do not encrypt the tablespace or change the TABLESPACE_ENCRYPTION setting.

ORA-28460: ENCRYPT_NEW_TABLESPACES can only be set to DDL when TABLESPACE_ENCRYPTION is set to DECRYPT_ONLY.

Cause: An attempt was made to modify ENCRYPT_NEW_TABLESPACES to a value other than DDL when TABLESPACE_ENCRYPTION is set to DECRYPT_ONLY.

Action: Modify TABLESPACE_ENCRYPTION either in the server parameter file (SPFILE) or parameter file (PFILE) before the instance startup to a value other than DECRYPT_ONLY, if ENCRYPT_NEW_TABLESPACES need not to be DDL.

ORA-28461: The requested cryptographic operation (*string*) is not FIPS-compliant.

Cause: The attempt was not compliant with the Federal Information Processing Standards (FIPS).

Action: Review the Federal Information Processing Standards (FIPS) and retry with FIPS compliant operations, such as a different algorithm or longer key size.

ORA-28500: connection from ORACLE to a non-Oracle system returned this message:

Cause: The cause is explained in the forwarded message.

Action: See the non-Oracle system's documentation of the forwarded message.

ORA-28501: communication error on heterogeneous database link

Cause: An unexpected communication failure occurred on a heterogeneous database link to a non-Oracle system. The message above will be followed by a second message generated by the connected non-Oracle system.

Action: See the documentation for the non-Oracle system for an explanation of the second error message.

ORA-28502: internal communication error on heterogeneous database link

Cause: A communication error internal to ORACLE's heterogeneous services has occurred.

Action: Contact Oracle customer support.

ORA-28503: The bind value cannot be translated into SQL text for the non-Oracle system.

Cause: A SQL statement used bind variables on a Heterogeneous Services database link to a non-Oracle system, but the non-Oracle system did not support bind variables.

Action: Change the SQL statement so that it does not use bind variables.

ORA-28504: The ROWID was not found in the ROWID cache for the Heterogeneous Services database link.

Cause: The ROWID cache for Heterogeneous Services held no entry that corresponded to the specified ROWID. The ROWID entry may have been overwritten in the ROWID cache.

Action: Enlarge the Heterogeneous Services ROWID cache size by increasing the value of the Heterogenous Services initialization parameter HS_ROWID_CACHE_SIZE.

ORA-28505: cannot get non-Oracle system capabilities from *string*

Cause: ORACLE was unable to retrieve capability information for the non-Oracle system connected through a heterogeneous database link. This capability information should be stored in data dictionary tables viewable with the HS_CLASS_CAPS or HS_INST_CAPS data dictionary views.

Action: Contact the DBA to check the server data dictionary table named in the error message. If table contents are incorrect, the DBA should restore all data dictionary content for this FDS_CLASS_NAME and/or FDS_INST_NAME. It usually is sufficient to delete all current data dictionary content for this class and/or instance and initiate a new connection to let the connected agent upload new data dictionary content to the server.

ORA-28506: A parsing error has occurred in data dictionary translation for *string* stored in *string*.

Cause: A reference to an Oracle data dictionary table or view name on a Heterogeneous Services database link to a non-Oracle system could not be translated. The Oracle data

dictionary tables shown with view HS_CLASS_DD contained invalid SQL for the data dictionary translation.

Action: Contact Oracle Support.

ORA-28507: error in data dictionary view *string*

Cause: The initialization parameter table for the Heterogeneous Services was not available, or its structure (number of columns or column types) was incorrect.

Action: Verify correct installation of the following Heterogeneous Services' initialization parameter views: HS_CLASS_INIT and HS_INST_INIT. If these views are not available, make sure you ran the script CATHS.SQL in the \$ORACLE_HOME/rdbms/admin directory.

ORA-28508: invalid value *string* for Heterogeneous Services initialization parameter *string*

Cause: The specified Heterogeneous Services initialization parameter had an invalid value when attempting to connect to a non-Oracle system.

Action: Check the Heterogeneous Services and agent documentation to determine acceptable values

ORA-28509: unable to establish a connection to non-Oracle system

Cause: Initialization of a database link to a non-Oracle system failed to connect to the Heterogeneous Services agent process for this non-Oracle system.

Action: Check the Net8 service name definition in the following places: -- the USING clause of the CREATE DATABASE LINK statement -- the TNSNAMES.ORA file -- the Oracle Names Server The following are possible reasons for name mismatches: -- The USING clause in the CREATE DATABASE LINK statement has to match the service name defined in the TNSNAMES.ORA file or in the Oracle Names Server. -- The protocol-specific information in the service name definition must match the protocol-specific definition of the responding listener. -- The SID=*name* in the service name definition (in the TNSNAMES.ORA file or in Oracle Names Server) must match the value in the LISTENER.ORA file for the responding listener.

ORA-28510: heterogeneous database link initialization failed

Cause: Initialization of a heterogeneous database link to a non-Oracle system failed due to an error identified by the agent for this non-Oracle system.

Action: Make sure the non-Oracle system is up and running and that all of the environment and initialization values for the agent are set correctly.

ORA-28511: lost RPC connection to heterogeneous remote agent using SID=*string*

Cause: A fatal error occurred in one of the following places: -- the connection between the ORACLE server and the agent -- the heterogeneous services remote agent itself -- the connection to the non-Oracle system This error occurred after communication had been established successfully.

Action: Check for network problems and remote host crashes. The problem is probably in the agent software. If so, contact a customer support representative of the agent vendor.

ORA-28512: cannot get data dictionary translations from *string*

Cause: ORACLE was unable to retrieve data dictionary translation information for the non-Oracle system connected through a heterogeneous database link. This data dictionary translation information should be stored in data dictionary tables viewable with the HS_CLASS_DD or HS_INST_DD data dictionary views.

Action: Ask your DBA to check the server data dictionary table named in the error message. If table contents are incorrect, the DBA should restore all data dictionary content for this FDS_CLASS_NAME and/or FDS_INST_NAME. It usually is sufficient to delete all current data dictionary content for this class and/or instance and initiate a new connection to let the connected agent upload new data dictionary content to the server.

ORA-28513: internal error in heterogeneous remote agent

Cause: An internal error has occurred in the Oracle remote agent supporting a heterogeneous database link.

Action: Make a note of how the error was produced and contact the customer support representative of the agent vendor.

ORA-28514: heterogeneous database link initialization could not convert system date

Cause: The system date was not retrievable.

Action: Verify that the ORACLE server's host machine and operating system are operational. This error should not occur unless low level system functions are failing.

ORA-28515: cannot get external object definitions from *string*

Cause: ORACLE was unable to retrieve definitions of distributed external procedures or remote libraries registered for the non-Oracle system instance, probably because the underlying data dictionary table does not exist or is malformed.

Action: Verify that the ORACLE server's Heterogeneous Services data dictionary was installed correctly. If the Heterogeneous Services data dictionary is not installed, execute the CATHS.SQL script in the \$ORACLE_HOME/rdbms/admin directory.

ORA-28518: data dictionary translation has illegal translation type

Cause: A data dictionary translation definition, either in the ORACLE server data dictionary or in data dictionary content uploaded from a Heterogeneous Services agent, specified an illegal translation type code. Legal values are 'T' or 't' for 'translate', 'M' or 'm' for 'mimic'. Information on the exact data dictionary translation causing the error is written to a trace (*.TRC) file for the ORACLE instance and to the ORACLE instance's alert log. This error occurs when a Heterogeneous Services agent uploads data dictionary content to an ORACLE server on the first connection from the server to the agent.

Action: Contact the customer support of the agent vendor.

ORA-28519: no heterogeneous data dictionary translations available

Cause: The ORACLE server's data dictionary did not define data dictionary translations for the connected non-Oracle system, and automatic self-registration (data dictionary upload) was disabled.

Action: Ask a DBA to resolve this problem. The easiest solution is to enable automatic self-registration by setting the ORACLE server's HS_AUTO_REGISTER initialization parameter to TRUE. An alternative is to load the Heterogeneous Services data dictionary with information specific for the non-Oracle system by executing a SQL script supplied by the

agent vendor. If the script is run and the error persists, contact the customer support representative of the agent vendor.

ORA-28520: error initializing heterogeneous data dictionary translations

Cause: ORACLE was unable to retrieve data dictionary translations for the non-Oracle system instance, probably because the underlying data dictionary table does not exist or is formed incorrectly.

Action: Verify that the ORACLE server's Heterogeneous Services data dictionary was installed correctly. If the Heterogeneous Services data dictionary is not installed, execute the CATHS.SQL script in the \$ORACLE_HOME/rdbms/admin directory. If the connected agent, identified by FDS_CLASS_NAME, requires a custom installation script for the ORACLE server, verify that the script has been run. If both scripts were executed and the error persists, contact the customer support representative of the agent vendor.

ORA-28521: no heterogeneous capability information available

Cause: The ORACLE server's data dictionary did not contain capability definitions for the connected non-Oracle system, and automatic self-registration (data dictionary upload) was disabled.

Action: Ask a DBA to resolve this problem. The easiest resolution is to enable automatic self-registration by setting the ORACLE server's HS_AUTO_REGISTER initialization parameter to TRUE. An alternative is to load the Heterogeneous Services data dictionary with information specific for the non-Oracle system by executing a SQL script supplied by the agent vendor. If the script is run and the error persists, contact the customer support representative of the agent vendor.

ORA-28522: error initializing heterogeneous capabilities

Cause: ORACLE was unable to retrieve capability definitions for the non-Oracle system instance, probably because the underlying data dictionary table does not exist or is formed incorrectly.

Action: Verify that the ORACLE server's Heterogeneous Services data dictionary was installed correctly. If the Heterogeneous Services data dictionary is not installed, execute the CATHS.SQL script in the \$ORACLE_HOME/rdbms/admin directory. If the connected agent, identified by FDS_CLASS_NAME, requires a custom installation script for the ORACLE server, verify that the script has been run. If both scripts were executed and the error persists, contact the customer support representative of the agent vendor.

ORA-28523: ORACLE and heterogeneous agent are incompatible versions

Cause: An operation on a database link attempted to connect to a non-Oracle system, but the ORACLE instance and the agent process for the non-Oracle system are incompatible.

Action: Ask your DBA to confirm configuration of both the ORACLE instance and the agent. Additional information on the version incompatibility is logged in trace (*.TRC) files, the ORACLE instance and the agent, and in the ORACLE instance's alert log. Check the documentation for your agent to find out which releases of the Oracle Server are supported.

ORA-28525: unable to create Heterogeneous Services error message text

Cause: Incorrect arguments were passed into the error message creation routine.

Action: Contact Oracle customer support.

ORA-28526: invalid describe information returned to Heterogeneous Services

Cause: The Heterogeneous Services received invalid describe information for a select list, bind list, or stored procedure from the Heterogeneous Services agent. This indicates a problem with the Heterogeneous Services' non-Oracle system agent.

Action: Contact customer support of the agent vendor.

ORA-28527: Heterogeneous Services datatype mapping error

Cause: Either an Oracle datatype could not be mapped to a non-Oracle datatype, or a non-Oracle datatype could not be mapped to an Oracle datatype. These mappings are defined as capability definitions in the ORACLE server's data dictionary.

Action: Verify that the ORACLE server's data dictionary has been initialized with correct capability definitions for the connected FDS_CLASS_NAME and FDS_INST_NAME. If table contents are incorrect, a DBA should restore all data dictionary content for this FDS_CLASS_NAME and/or FDS_INST_NAME. It usually is sufficient to delete all current data dictionary content for this class and/or instance and initiate a new connection to let the connected agent upload new data dictionary content to the server. If the error persists contact the customer support representative of the agent vendor.

ORA-28528: Heterogeneous Services datatype conversion error

Cause: Either an Oracle datatype could not be converted to a non-Oracle datatype, or a non-Oracle datatype could not be converted to an Oracle datatype. The following are possible reasons for the conversion failure: -- overflow problems (in the case of numbers) -- length limitations (in the case of character strings) -- invalid values passed into the conversion routines

Action: Contact customer support of the agent vendor. If the problem is due to size discrepancies between Oracle and the non-Oracle system, it may not be possible to convert the value.

ORA-28529: invalid or missing parameter in Net8 service name definition

Cause: There was an invalid or missing Heterogeneous Services parameter in the Net8 service name definition stored in either the TNSNAMES.ORA file or in the Oracle Names Server.

Action: Ask your DBA to make sure the information in the Net8 service definition is correct and complete. The correct information that should be included in the Net8 service definition can be found in the agent's documentation.

ORA-28530: Heterogeneous Services initialization error in NLS language ID

Cause: Heterogeneous Services was unable to initialize an NLS language ID. Both the ORACLE server and the Heterogeneous Services agent for the connected non-Oracle system must have language IDs.

Action: Contact Oracle customer support.

ORA-28533: Heterogeneous Services coercion handling error

Cause: The Heterogeneous Services encountered an error in coercion handling. The HS can, if the agent vendor so chooses, perform extra processing on SQL statements that contain implicit coercions or that contain coercion functions such as TO_CHAR, TO_NUMBER or TO_DATE. This functionality is controlled by coercion-related capabilities. HS logic reports this error when it encounters an error in one of these capability definitions.

Action: The capability table settings are controlled by the agent vendor and can be modified by the DBA. Contact your DBA and agent vendor and get the correct set of capabilities installed.

ORA-28534: Heterogeneous Services preprocessing error

Cause: One of the things that the Heterogeneous Services can do is to preprocess parts of SQL statements that contain implicit coercions or calls to explicit coercion functions like TO_CHAR TO_NUMBER or TO_DATE. For example, it could convert a call to TO_DATE to a bind variable, pre-evaluate the TO_DATE function call and pass the resulting value to the non-Oracle system as the bind value. This behavior is controlled by some coercion related capabilities. If the capabilities are set incorrectly, the HS could encounter errors when it attempts to do the preprocessing. If it does then this error will be signaled.

Action: The capability table settings are controlled by the agent vendor and can be modified by the DBA. Contact your DBA and agent vendor and get the correct set of capabilities installed.

ORA-28535: invalid Heterogeneous Services context

Cause: A Heterogeneous Services agent's driver module called an HS service routine with an invalid HS context value. This probably is a logic error in the driver.

Action: Contact Oracle customer support or your agent vendor.

ORA-28536: error in processing Heterogeneous Services initialization parameters

Cause: An error described by a subsequent error message prevented successful processing of Heterogeneous Services initialization parameters from the ORACLE server data dictionary.

Action: Check server data dictionary views HS_CLASS_INIT, HS_INST_INIT, and HS_ALL_INITS. Look for conditions which could produce the error identified in the error message immediately following this one.

ORA-28537: no more result sets

Cause: This error code was used internally within Oracle Database Gateway and Heterogeneous Services code and should not be reported to a client program.

Action: Contact Oracle customer support.

ORA-28538: result set not found

Cause: The client program tried fetching from a result set that is not open anymore. Many gateways will, on execution of a stored procedure, automatically close all result sets that were returned by any previously executed stored procedure.

Action: Check the documentation for the gateway that you are using and see if it will automatically close currently open result sets each time a stored procedure is executed. Then check if your client program is doing anything that violates this rule. If it is, fix your program. If it is not then contact Oracle customer support.

ORA-28539: gateway does not support result sets

Cause: The client program tried executing a stored procedure that returns one or more result sets through a gateway that does not have result set support.

Action: Check the documentation for the gateway that you are using and see if it supports result sets returned from stored procedures. If it does not, then the only way

of accessing such stored procedures is to upgrade to a version of the gateway that does support result sets (if such a version exists). If the gateway does have result set support and you are still seeing this error then contact Oracle customer support.

ORA-28540: internal result set error

Cause: A protocol error internal to Heterogeneous Services or Oracle Database Gateway code has occurred.

Action: Contact Oracle customer support.

ORA-28541: Error in HS init file on line *number*.\n

Cause: A syntax error occurred in the gateway initialization file.

Action: Check gateway init file to correct the syntax error. For further information, check the error message in the gateway trace file.

ORA-28542: Error in reading HS init file \n

Cause: Reading the gateway init file generated an error.

Action: Check the gateway initialization file name to see that the gateway initialization file actually exists. Check the ifile parameter to see that it points to the correct location.

ORA-28543: Error initializing apply connection to non-Oracle system

Cause: Attempt to initialize connection to non-Oracle for heterogeneous replication failed.

Action: Check if the listener used to connect to the gateway is up and is correctly configured. Make sure that the database link used has been configured correctly and, if a tnsnames alias has been used in the database link definition, make sure that the configuration of the entry in tnsnames.ora has been done correctly.

ORA-28544: connect to agent failed, probable Net8 administration error

Cause: Net8 reported a failure to make a RSLV connection or a protocol mode error when the Oracle server attempted to establish communication with a Heterogeneous Services agent or an external procedure agent. This usually is due to an administration error in setting up Net8 service definitions in TNSNAMES.ORA or LISTENER.ORA: A basic network connection is opened, but it connects to a program which does not use the appropriate protocol. This often is a sign that the connection goes to the wrong program.

Action: Check Net8 administration in the following ways: -- When using TNSNAMES.ORA or an Oracle Names server, make sure that the connection from the ORACLE server uses the correct service name or SID. -- Check LISTENER.ORA on the agent's host machine to assure that the service name or SID refers to the correct agent executable in its (PROGRAM=...) clause. -- Confirm in TNSNAMES.ORA or the equivalent service definition that service 'extproc_connection_data' does NOT contain (HS=), or that the service definition used by a Heterogeneous Services database link DOES contain (HS=).

ORA-28545: error diagnosed by Net8 when connecting to an agent

Cause: An attempt to call an external procedure or to issue SQL to a non-Oracle system on a Heterogeneous Services database link failed at connection initialization. The error diagnosed by Net8 NCR software is reported separately.

Action: Refer to the Net8 NCRO error message. If this isn't clear, check connection administrative setup in tnsnames.ora and listener.ora for the service associated with the Heterogeneous Services database link being used, or with 'extproc_connection_data' for an external procedure call.

ORA-28546: connection initialization failed, probable Net8 admin error

Cause: A failure occurred during initialization of a network connection from the Oracle server to a second process: The connection was completed but a disconnect occurred while trying to perform protocol-specific initialization, usually due to use of different network protocols by opposite sides of the connection. This usually is caused by incorrect Net8 administrative setup for database links or external procedure calls. The most frequent specific causes are: -- Database link setup for an Oracle-to-Oracle connection instead connects to a Heterogeneous Services agent or an external procedure agent. -- Database link setup for a Heterogeneous Services connection instead connects directly to an Oracle server. -- The `extproc_connection_data` definition in `tnsnames.ora` connects to an Oracle instance instead of an external procedure agent. -- Connect data for a Heterogeneous Services database link, usually defined in `tnsnames.ora`, does not specify (HS=). -- Connect data for an Oracle-to-Oracle database link, usually defined in `tnsnames.ora`, specifies (HS=).

Action: Check Net8 administration in the following ways: -- When using `TNSNAMES.ORA` or an Oracle Names server, make sure that the connection from the `ORACLE` server uses the correct service name or SID. -- Check `LISTENER.ORA` on the connection end point's host machine to assure that this service name or SID connects to the correct program. -- Confirm in `TNSNAMES.ORA` or the equivalent service definition that service '`extproc_connection_data`' does NOT contain (HS=), or that the service definition used by a Heterogeneous Services database link DOES contain (HS=).

ORA-28547: connection to server failed, probable Oracle Net admin error

Cause: A failure occurred during initialization of a network connection from a client process to the Oracle server. The connection was completed but a disconnect occurred while trying to perform protocol-specific initialization, usually due to use of different network protocols by opposite sides of the connection. This usually is caused by incorrect Oracle Net administrative setup for database links or external procedure calls. The most frequent specific causes are: -- The connection uses a connect string which refers to a Heterogeneous Services agent instead of an Oracle server. -- The connection uses a connect string which includes an (HS=) specification. -- Hitting Ctrl+C before connection initialization is complete. -- Using DRCP on Windows with `SQLNET.AUTHENTICATION_SERVICES` set to NTS. -- Connection timeout due to `SQLNET.INBOUND_CONNECT_TIMEOUT` parameter when all shared servers are busy in shared server configuration. -- The character set of the database is not recognized by the client process, which may be caused by an incorrect or unnecessary setting of the `ORA_NLS10` client environment variable or by a new or user-defined character set installed in the Oracle server and used for the database.

Action: Check Oracle Net administration in the following ways: -- When using `TNSNAMES.ORA` or an Oracle Names server, make sure that the client connection to the Oracle server uses the correct service name or SID. -- Check `LISTENER.ORA` on the connection end point's host machine to assure that this service name or SID refers to the correct server. -- Confirm in `TNSNAMES.ORA` or the equivalent service definition that the connect string does not contain (HS=). -- Set `SQLNET.AUTHENTICATION_SERVICES` to NONE when using DRCP on Windows. -- Verify the NLS configuration of the Oracle client process. Ensure that the database character set is supported by the Oracle client software. If necessary, upgrade the Oracle client software or install the missing user-defined character set.

ORA-28550: pass-through SQL: cursor not found

Cause: A value passed to a pass-through SQL function or procedure call as a cursor does not identify a currently open cursor.

Action: Use a cursor number returned by the pass-through SQL OPEN_CURSOR call.

ORA-28551: pass-through SQL: SQL parse error

Cause: A non-Oracle system rejected text supplied as a pass-through SQL statement.

Action: Ensure that the SQL supplied to the pass-through SQL PARSE call is legal for the non-Oracle system.

ORA-28552: pass-through SQL: call flow error

Cause: A pass-through SQL function was called in an invalid order.

Action: Correct program flow by changing the order of API calls to match the flow described in the manual.

ORA-28553: pass-through SQL: invalid bind-variable position

Cause: A pass-through SQL function referring to the position of a bind variable in the currently-parsed SQL statement supplied an invalid bind-variable position. Valid values are 1 through n, where n is the number of bind-variable place-holders in the SQL text.

Action: Verify that the bind-variable position parameter is in the correct range to represent a place-holder in the SQL text. Confirm that the SQL text uses the correct syntax for a bind-variable place-holder, as required by the non-Oracle system.

ORA-28554: pass-through SQL: out of cursors

Cause: The maximum number of open cursors has been exceeded.

Action: Close open cursors by using the pass-through SQL CLOSE_CURSOR function.

ORA-28555: pass-through SQL: required parameter missing or NULL

Cause: An attempt was made to pass a NULL value to a non-NULL parameter.

Action: Use a non-NULL value for the parameter.

ORA-28556: authorization insufficient to access table

Cause: A query attempted to access a table in the non-Oracle system that is either privileged or has privileged columns.

Action: Contact the DBA for the non-Oracle system. The DBA can grant permission to access the privileged table or columns.

ORA-28557: unknown *string* for database link to non-Oracle system

Cause: When attempting to connect to a non-Oracle system through a Heterogeneous Services database link, the agent supporting this non-Oracle system failed to return FDS_CLASS_NAME and/or FDS_INST_NAME. ORACLE requires these names to configure the heterogeneous database link.

Action: Contact the DBA to check setup of the connection and the Heterogeneous Services agent.

ORA-28558: HS_FDS_CONNECT_STRING undefined for non-Oracle system

Cause: A database link to a non-Oracle system had no HS_FDS_CONNECT_STRING initialization parameter in the ORACLE server's data dictionary for Heterogeneous Services. Without this parameter, the connection could not be completed.

Action: Contact your DBA to verify correct setup of an HS_FDS_CONNECT_STRING entry in the ORACLE Heterogeneous Services data dictionary.

ORA-28559: FDS_CLASS_NAME is string, FDS_INST_NAME is string

Cause: An associated error was reported in another message, and this message supplies supplementary information to assist diagnosis of that error. FDS_CLASS_NAME and FDS_INST_NAME are used to access information in tables and views of the ORACLE data dictionary that direct operation of Heterogeneous Services on a database link to a non-Oracle data store.

Action: Use the FDS_CLASS_NAME and FDS_INST_NAME values to check ORACLE data dictionary contents when necessary to diagnose the cause of the associated error.

ORA-28560: error in configuration of agent process

Cause: An ORACLE server invoked a function not supported by the connected agent (Heterogeneous Services or external procedures). The most probable cause is incorrect Net8 setup, resulting in use of the wrong agent executable.

Action: Check Net8 administration in the following ways: -- When using TNSNAMES.ORA or an Oracle Names server, make sure that the connection from the ORACLE server uses the correct SID. -- Check LISTENER.ORA on the agent's host machine to assure that this SID refers to the correct agent executable in its (PROGRAM=...) clause.

ORA-28561: unable to set date format on non-Oracle system

Cause: Initialization of a Heterogeneous Services connection to set the date format to be used on the connected non-Oracle system.

Action: If the Oracle data dictionary supplies a value for the HS_NLS_DATE_FORMAT parameter, confirm that this value is formatted correctly by the rules of the non-Oracle system. Also check for additional information in log and trace files generated by the Heterogeneous Services agent.

ORA-28562: Heterogeneous Services data truncation error

Cause: A select operation was attempted with an insufficient data buffer to satisfy the request.

Action: Contact your DBA to verify whether your gateway initialization parameter HS_KEEP_REMOTE_COLUMN_SIZE is set appropriately based on your requirement. If it is, make sure the sizes of bind parameters are sufficient. If the problem persists, contact Oracle Support Services.

ORA-28575: unable to open RPC connection to external procedure agent

Cause: Initialization of a network connection to the extproc agent did not succeed. This problem can be caused by network problems, incorrect listener configuration, or incorrect transfer code.

Action: Check listener configuration in LISTENER.ORA and TNSNAMES.ORA, or check Oracle Names Server.

ORA-28576: lost RPC connection to external procedure agent

Cause: A fatal error occurred in either an RPC network connection, the extproc agent, or the invoked 3GL after communication had been established successfully.

Action: First check the 3GL code you are invoking; the most likely cause of this error is abnormal termination of the invoked "C" routine. If this is not the case, check for network problems. Correct the problem if you find it. If all components appear to be

normal but the problem persists, the problem could be an internal logic error in the RPC transfer code. Contact your customer support representative.

ORA-28577: argument *string* of external procedure *string* has unsupported datatype *string*

Cause: While transferring external procedure arguments to the agent, an unsupported datatype was detected.

Action: Check your documentation for the supported datatypes of external procedure arguments.

ORA-28578: A protocol error occurred during a callback from an external procedure.

Cause: An internal protocol error occurred while trying to process a callback to the Oracle server from an external procedure or function.

Action: Contact Oracle Support.

ORA-28579: network error during callback from external procedure agent

Cause: An internal network error occurred while trying to execute a callback to the Oracle server from the user's 3GL routine.

Action: Contact Oracle customer support.

ORA-28580: recursive external procedures are not supported

Cause: A callback from within a user's 3GL routine resulted in the invocation of another external procedure.

Action: Make sure that the SQL code executed in a callback does not directly call another external procedure, or indirectly results in another external procedure, such as triggers calling external procedures, PL/SQL procedures calling external procedures, etc.

ORA-28581: protocol error while executing recursive external procedure

Cause: An internal protocol error occurred while trying to execute an external procedure resulting from a callback in another external procedure.

Action: Contact Oracle customer support.

ORA-28582: a direct connection to this agent is not allowed

Cause: A user or a tool tried to establish a direct connection to either an external procedure agent or a Heterogeneous Services agent, for example: "SVRMGR> CONNECT SCOTT/TIGER@NETWORK_ALIAS". This type of connection is not allowed.

Action: When executing the CONNECT statement, make sure your database link or network alias is not pointing to a Heterogeneous Option agent or an external procedure agent.

ORA-28583: remote references are not permitted during agent callbacks

Cause: A Heterogeneous Services agent issued a callback to the Oracle server which attempted to access a remote system. This is not supported.

Action: Make sure that SQL code issued by Heterogeneous Services agents does not reference a database link.

ORA-28584: heterogeneous apply internal error

Cause: The apply slave process encountered an error while trying to apply changes through a gateway to a non-Oracle system.

Action: Make sure that the apply database link is correctly configured and that the gateway listener and the non-Oracle system are correctly set up and are up and running. If everything is configured correctly and the problem still occurs, contact Oracle customer support. errors 28590 - 28599 are reserved for the HS agent control utility

ORA-28590: agent control utility: illegal or badly formed command

Cause: The user has issued an unrecognized or syntactically incorrect command.

Action: Refer to documentation and correct the syntax of the command.

ORA-28591: agent control utility: unable to access parameter file

Cause: The agent control utility was unable to access its parameter file. This could be because it could not find its admin directory or because permissions on directory were not correctly set.

Action: The agent control utility puts its parameter file in either the directory pointed to by the environment variable AGTCTL_ADMIN or in the directory pointed to by the environment variable TNS_ADMIN. Make sure that at least one of these environment variables is set and that it points to a directory that the agent has access to.

ORA-28592: agent control utility: agent SID not set

Cause: The agent needs to know the value of the AGENT_SID parameter before it can process any commands. If it does not have a value for AGENT_SID then all commands will fail.

Action: Issue the command SET AGENT_SID *value* and then retry the command that failed.

ORA-28593: agent control utility: command terminated with error

Cause: An error occurred during the processing of the command. There could be several causes. A SET or an UNSET command could have been issued after the agent was started. This is illegal. The user may have attempted to start two agents with the same SID value or the user could have attempted to shutdown an agent that is no longer running.

Action: If the user wishes to issue a SET or an UNSET command, he should make sure the agent is shutdown first by issuing the SHUTDOWN command.

ORA-28594: agent control utility: invalid parameter name

Cause: The user tried to set or unset an invalid agent parameter.

Action: Refer to documentation and correct the parameter name.

ORA-28595: Extproc agent: Invalid DLL Path

Cause: The path of DLL supplied for the extproc execution was invalid.

Action: Ensure that the DLL path is set properly using the EXTPROC_DLLS environment variable.

ORA-28596: Extproc agent: Invalid or disabled credential string

Cause: The credential of the PL/SQL library supplied for the extproc execution was invalid.

Action: Ensure that the credential of the PL/SQL library is valid and enabled. errors 28600 - 28620 are reserved for bitmap indexes

ORA-28601: invalid [no]MINIMIZE option

Cause: user didn't type this alter table <table_name> MINIMIZE RECORDS_PER_BLOCK or alter table <table_name> NOMINIMIZE RECORDS_PER_BLOCK

Action: reenter correct sql command

ORA-28602: statement not permitted on tables containing bitmap indexes

Cause: table has bitmap indexes and user is minimizing or nominimizing records_per_block

Action: drop all bitmap indexes before changing records_per_block

ORA-28603: statement not permitted on empty tables

Cause: table is empty and statement does not work on empty tables

Action: try statement after loading your data

ORA-28604: table too fragmented to build bitmap index (string,string,string)

Cause: The table has one or more blocks that exceed the maximum number of rows expected when creating a bitmap index. This is probably due to deleted rows. The values in the message are: (data block address, slot number found, maximum slot allowed)

Action: Defragment the table or block(s). Use the values in the message to determine the FIRST block affected. (There may be others).

ORA-28605: bitmap indexes cannot be reversed

Cause: user tried to create reverse bitmap index

Action: don't do this; it is not supported

ORA-28606: block too fragmented to build bitmap index (string,string)

Cause: The block(s) exceed the maximum number of rows expected when creating a bitmap index. This is probably due to maximum slot allowed set too low. The values in the message are: (slot number found, maximum slot allowed)

Action: alter system flush shared_pool; update tab\$ set spare1 = 8192 where obj# = (select obj# from obj\$ where NAME=<table_name> AND owner# = <table_owner>; commit;

ORA-28611: bitmap index is corrupted - see trace file for diagnostics

Cause: Validate Index detected bitmap corruption in its argument index

Action: Drop this bitmap index and create a new one.

ORA-28650: Primary index on an IOT cannot be rebuilt

Cause: An attempt is made to issue alter index rebuild on IOT-TOP

Action: Use Alter table MOVE to reorganize the table(IOT)

ORA-28651: Primary index on IOTs can not be marked unusable

Cause: An attempt is made to mark IOT-TOP unusable thru ALTER INDEX

Action: Remove the option UNUSABLE

ORA-28652: overflow segment attributes cannot be specified

Cause: During ALTER MOVE ONLINE of a index-organized table, the user attempted to enter one or more of the following options: OVERFLOW, PCTTHRESHOLD,INCLUDING.

Action: Remove the illegal option(s).

ORA-28653: tables must both be index-organized

Cause: Attempt to exchange a non IOT table/partition with a partition/table respectively

Action: Ensure that non-partitioned and partitioned tables are both index-organized.

ORA-28654: table and partition not overflow compatible

Cause: If one of the tables (partitioned/non-partitioned) has overflow data segment and the other one doesn't.

Action: Ensure that non-partitioned and partitioned tables both have overflow data segment or neither one does.

ORA-28655: Alter table add overflow syntax error

Cause: Syntax error

Action: Check the syntax.

ORA-28656: incomplete attribute specification

Cause: The attribute specification is not done for all partitions"

Action: Specify the storage attributes either for ALL partitions or NONE

ORA-28658: This operation is supported only for Index-Organized tables

Cause: Attempt to perform some IOT specific operation on a non-IOT

Action: don't do this. This is not supported

ORA-28659: COMPRESS must be specified at object level first

Cause: Attempt to specify COMPRESS at partition level without first specifying at the table level

Action: Specify COMPRESS at table level. Use ALTER TABLE xxx MODIFY DEFAULT ATTRIBUTES COMPRESS ...

ORA-28660: Partitioned Index-Organized table may not be MOVED as a whole

Cause: Attempt to MOVE partitioned IOT as a whole

Action: don't do this. This is not supported

ORA-28661: Object already has COMPRESS clause specified

Cause: Attempt to specify compress for iot/index which already has a compression clause.

Action: This is a 'create time only' attribute

ORA-28662: IOT index and overflow segments must share the same LOGGING attribute

Cause: Attempt to specify LOGGING for one segment and NOLOGGING for the other segment.

Action: don't do that

ORA-28663: Logging/Nologging attribute can not be specified in the statement ALTER TABLE ADD OVERFLOW

Cause: Attempt to specify LOGGING for a Alter Table Add Overflow.

Action: don't do that

ORA-28664: a partitioned table may not be coalesced as a whole

Cause: User attempted to coalesce a partitioned IOT using ALTER TABLE COALESCE statement, which is illegal

Action: Coalesce the table a partition at a time (using ALTER TABLE MODIFY PARTITION COALESCE)

ORA-28665: table and partition must have same compression attribute

Cause: User attempted to EXCHANGE a compression enabled partition with a compression disabled table or vice versa OR the # of columns compressed is different for table and partition

Action: Make sure the compression attributes match If they don't, fix it using ALTER TABLE MOVE [PARTITION] COMPRESS

ORA-28666: option not allowed for an index on UROWID column(s)

Cause: User attempted to build a REVERSE or COMPRESSED or GLOBAL partitioned index on UROWID column(s)

Action: Build the index without these options

ORA-28667: USING INDEX option not allowed for the primary key of an IOT

Cause: User attempted to define storage attributes for the primary key index of an Index-Organized table with USING INDEX clause. All the storage attribute defined for the (IOT)table applies to the primary key index and a separate USING INDEX clause is not required.

Action: Remove the USING INDEX clause and specify all attributes directly for the table

ORA-28668: cannot reference mapping table of an index-organized table

Cause: An attempt to directly access the mapping table of an index-organized table

Action: Issue the statement against the parent index-organized table containing the specified mapping table.

ORA-28669: bitmap index can not be created on an IOT with no mapping table

Cause: User attempted to create a bitmap index on an index-organized table without a mapping table.

Action: Enable bitmap indexes on the Index-organized table by creating a mapping table using 'ALTER TABLE .. MOVE MAPPING TABLE'.

ORA-28670: mapping table cannot be dropped due to an existing bitmap index

Cause: User attempted to drop the mapping table with NOMAPPING option when the IOT has one or more bitmap indexed.

Action: Drop the bitmap index(es) before dropping the mapping table.

ORA-28671: UPDATE BLOCK REFERENCES may not be used on a partitioned index as a whole

Cause: User attempted to UPDATE BLOCK REFERENCES on a partitioned index using ALTER INDEX UPDATE BLOCK REFERENCES statement, which is illegal.

Action: Issue a partition level operation with ALTER INDEX .. PARTITION .. UPDATE BLOCK REFERENCES

ORA-28672: UPDATE BLOCK REFERENCES may not be used on a global index

Cause: User attempted to UPDATE BLOCK REFERENCES on a global partitioned or non-partitioned index. This feature is not supported for non-partitioned or global partitioned index on a partitioned IOT and a global partitioned index on a non-partitioned IOT.

Action: Use online index [partition] rebuild to fix the block references

ORA-28673: Merge operation not allowed on an index-organized table

Cause: User attempted merge operation on an index-organized table. Merge is not supported on a IOT .

Action: Use updates and inserts on index-organized table .

ORA-28674: cannot reference transient index-organized table

Cause: An attempt was made to directly access a transient table created on behalf of a index-organized table partition maintenance operation.

Action: Issue the statement against the associated permanent index-organized table.

ORA-28700: Only roles can be attached to or detached from program units.

Cause: An attempt was made to grant object privileges or system privileges to program units.

Action: Grant the privileges to a role first, and then grant the role to the program units.

ORA-28701: Keyword PROCEDURE, FUNCTION, or PACKAGE is either missing or not correct.

Cause: The keyword PROCEDURE, FUNCTION, or PACKAGE was either missing before the program unit, or it was not consistent with the type of the program unit.

Action: Include the correct keyword PROCEDURE, FUNCTION or PACKAGE right before each program unit according to its type.

ORA-28702: Program unit *string* is not owned by the grantor.

Cause: An attempt was made to attach roles to or detach roles from one or more program units by someone other than the owner or SYS. Only a program unit owner or SYS can attach roles to or detach roles from a program unit.

Action: Specify only the program units owned by the grantor in the command.

ORA-28703: Only regular database roles can be attached to or detached from program units.

Cause: An attempt was made to attach non-supported types of roles to or detach them from program units. Application roles, secure application roles, external roles, global roles, and light-weight roles cannot be attached to or detached from program units.

Action: Remove any application role, secure application role, external role, global role, and light-weight role from the command.

ORA-28704: Role *string* is not directly granted to the owner of the program units.

Cause: An attempt was made to attach roles that were not directly granted to the owner of the program units. The roles must be granted to the owner directly in order to attach them to the owner's program units.

Action: Grant the role to the owner of the program unit first.

ORA-28705: The grantor does not have privileges to grant the role *string* to the program units.

Cause: Privileges to grant a role to a program unit were insufficient. The grantor must have the GRANT ANY ROLE privilege or the ADMIN option or the DELEGATE option for the role to do the operation.

Action: Obtain the required privilege and retry.

ORA-28706: duplicate program unit *string* found in list

Cause: A duplicate program unit was found in the GRANTEE clause.

Action: Specify each program unit only once.

ORA-28707: Reserved word ALL was used with roles in the REVOKE command to detach roles from program units.

Cause: An attempt was made to use reserved word ALL jointly with roles in a REVOKE command to detach roles from program units.

Action: Do not specify roles in the privilege clause except for the reserved word ALL.

ORA-28708: More than *string* roles were attached to the program unit.

Cause: Too many roles were currently attached to the program unit.

Action: Detach some roles from the program unit.

ORA-28709: Roles with DELEGATE option can only be granted to users.

Cause: One of the grantees was not a user when trying to grant roles with the DELEGATE option.

Action: Verify that the grantees are users and try the operation again.

ORA-28714: OCI_BATCH_ERRORS or OCI_RETURN_ROW_COUNT_ARRAY mode can only be specified for INSERT, UPDATE, DELETE or MERGE statement.

Cause: OCI_BATCH_ERRORS or OCI_RETURN_ROW_COUNT_ARRAY mode was specified in a statement which is not INSERT, UPDATE, DELETE or MERGE.

Action: Specify OCI_BATCH_ERRORS or OCI_RETURN_ROW_COUNT_ARRAY only for INSERT, UPDATE, DELETE or MERGE statements.

ORA-28715: OCI_STMT_SCROLLABLE_READONLY can only be specified for SELECT statements.

Cause: OCI_STMT_SCROLLABLE_READONLY mode was specified for a non-SELECT statement.

Action: Specify OCI_STMT_SCROLLABLE_READONLY only for SELECT statements.

ORA-28716: Invalid buffer or buffer size for OCIServerRelease2() \n

Cause: A zero length or null buffer was specified for the OCIServerRelease2().

Action: Specify a valid buffer and length.

ORA-28721: invalid argument (*string*)

Cause: Argument (%s) was not valid.

Action: Ensure that the correct parameter is provided.

ORA-28722: invalid file handle

Cause: The file parameter handle was not valid.

Action: Ensure that the correct parameter handle is provided.

ORA-28724: OCI encountered OraCoroutine Error(*number*) from (*string*)

Cause: OCI encountered an internal error

Action: Contact Oracle Support Services

ORA-28725: invalid CMAN in Traffic Director mode configuration\n

Cause: An attempt was made to connect to Connection Manager (CMAN) in Traffic Director mode with an invalid configuration.

Action: Correct the configuration of CMAN in Traffic Director mode before starting it. Check and correct the wallet credentials and proxy authorization. Check with CMAN in Traffic Director mode administrator to get more information from traces and sqlnet.log.

ORA-28726: set current schema operation failed because the given schema name is either invalid or does not exist

Cause: An attempt was made to set the schema to a non-existent value.

Action: Specify an existing schema name or ask the database administrator to create a new schema.

ORA-28727: trace event set or reset operation failed

Cause: An attempt was made to set or reset a trace event dynamically.

Action: Use the correct event number and trace level.

ORA-29250 to ORA-32799

ORA-29250: Invalid index specified in call to dbms_sql.bind_array

Cause: An invalid index was specified in a call to bind_array of dbms_sql. The index may have been null or of an improper value.

Action: Correct the index value by modifying your PL/SQL program and try the bind_array call again.

ORA-29251: Index1 is greater than Index2 in call to dbms_sql.bind_array

Cause: The value of index1 was greater than the value for index2 in the call to bind_array. This is illegal since the elements of the table that will be bound are those with indexes greater than or equal to index1 and less than or equal to index2.

Action: Correct the value of the two indexes and try the call to again bind_array.

ORA-29252: Collection does not contain elements at index locations in the call to dbms_sql.bind_array.

Cause: The bound table did not contain elements at both index locations in the call to bind_array of dbms_sql. This was not allowed. Both index locations must contain elements. tab.exists(index1) and tab.exists(index2) must both return true.

Action: Either modify the two indexes or the contents of the table and retry the call.

ORA-29253: Invalid count argument passed to procedure dbms_sql.define_array

Cause: The count argument specified in the call to procedure define_array of package dbms_sql had an invalid value. Invalid values are negative numbers and nulls. The argument must be a positive integer.

Action: Correct your PL/SQL program so that only valid arguments are passed to define_array and try again.

ORA-29254: Invalid lower_bound argument passed to procedure dbms_sql.define_array

Cause: The lower_bound argument specified in the call to procedure define_array had an invalid value. Legal values are all integers (both positive and negative) including zero. The null value is illegal.

Action: Correct your PL/SQL program so that only valid arguments are passed to define_array and try again.

ORA-29255: Cursor contains both bind and define arrays which is not permissible

Cause: Both define_array and bind_array have been called on this cursor. This was illegal. It was not possible for a cursor to contain both array binds and array defines. The semantics of this setting were invalid. Array defines were used to move data from select queries into PL/SQL tables and array binds to bind PL/SQL tables to non-select queries.

Action: Modify your PL/SQL program to only perform calls to one of the two functions depending on the kind of cursor at hand.

ORA-29256: Cursor contains both regular and array defines which is not valid.

Cause: Both `define_array` and `define_column` have been called on this cursor. It was not valid for a cursor to both contain regular and array defines. Array defines were used to move data from SELECT queries into PL/SQL tables and regular defines to move data from SELECT queries into PL/SQL variables.

Action: Modify your PL/SQL program to only perform calls to one of the two functions depending on need.

ORA-29257: host *string* unknown

Cause: The specified host was unknown.

Action: Check the spelling of the host name or the IP address. Make sure that the host name or the IP address is valid.

ORA-29258: buffer too small

Cause: The input or output buffer was too small for the operation.

Action: Increase the size of the buffer and retry the operation.

ORA-29259: end-of-input reached

Cause: The end of the input was reached.

Action: If the end of the input is reached prematurely, check if the input source terminates prematurely. Otherwise, close the connection to the input.

ORA-29260: network error: *string*

Cause: A network error occurred.

Action: Fix the network error and retry the operation.

ORA-29261: bad argument

Cause: A bad argument was passed to the PL/SQL API.

Action: Check the arguments passed to the PL/SQL API and retry the call.

ORA-29262: bad URL

Cause: An improperly formed URL was passed to the PL/SQL API.

Action: Check the URL and retry the call.

ORA-29263: HTTP protocol error

Cause: A HTTP protocol error occurred during the HTTP operation.

Action: Check the HTTP server that the HTTP operation was performed to make sure that it follows the HTTP protocol standard.

ORA-29264: unknown or unsupported URL scheme

Cause: The URL scheme was unknown or unsupported.

Action: Check the URL to make sure that the scheme is valid and supported.

ORA-29265: HTTP header not found

Cause: The requested HTTP header was not found.

Action: Check to make sure that the requested HTTP header is present.

ORA-29266: end-of-body reached

Cause: The end of the HTTP response body was reached.

Action: If the end of the HTTP response is reached prematurely, check if the HTTP response terminates prematurely. Otherwise, end the HTTP response.

ORA-29267: illegal call

Cause: The call to the PL/SQL API was illegal at the current stage of the operation.

Action: Retry the call at a different stage of the operation.

ORA-29268: HTTP client error *string*

Cause: The HTTP response indicated that the HTTP client error occurred.

Action: Fix the HTTP client error and retry the HTTP request.

ORA-29269: HTTP server error *string*

Cause: The HTTP response indicated that the HTTP server error occurred.

Action: Fix the HTTP server error and retry the HTTP request. Contact the administrator of the HTTP server when necessary.

ORA-29270: too many open HTTP requests

Cause: Too many HTTP requests were opened.

Action: End some HTTP requests and retry the HTTP request.

ORA-29271: not connected

Cause: The network connection was not made while the network operation was attempted.

Action: Retry the network operation after the network connection is made successfully.

ORA-29272: initialization failed

Cause: The UTL_HTTP package failed to initialize.

Action: Free up some memory or other system resources and retry the operation.

ORA-29273: HTTP request failed

Cause: The UTL_HTTP package failed to execute the HTTP request.

Action: Use `get_detailed_sqlerrm` to check the detailed error message. Fix the error and retry the HTTP request.

ORA-29274: fixed-width multibyte character set not allowed for a URL

Cause: The character set used as an encoding of the URL is a fixed-width multibyte character set and is not allowed for a URL.

Action: Use the corresponding variable-width multibyte character set for the URL instead.

ORA-29275: partial multibyte character

Cause: The requested read operation could not complete because a partial multibyte character was found at the end of the input.

Action: Ensure that the complete multibyte character is sent from the remote server and retry the operation. Or read the partial multibyte character as RAW.

ORA-29276: transfer timeout

Cause: Timeout occurred while reading from or writing to a network connection.

Action: Check the remote server or the network to ensure that it responds within the timeout limit. Or increase the timeout value.

ORA-29277: invalid SMTP operation

Cause: The SMTP operation was invalid at the current stage of the SMTP transaction.

Action: Retry the SMTP operation at the appropriate stage of the SMTP transaction.

ORA-29278: SMTP transient error: *string*

Cause: A SMTP transient error occurred.

Action: Correct the error and retry the SMTP operation.

ORA-29279: SMTP permanent error: *string*

Cause: A SMTP permanent error occurred.

Action: Correct the error and retry the SMTP operation.

ORA-29280: invalid directory object

Cause: A corresponding directory object does not exist.

Action: Correct the directory object parameter, or create a corresponding directory object with the CREATE DIRECTORY command.

ORA-29281: invalid mode

Cause: An invalid value was specified for file open mode.

Action: Correct the mode to be one of the values: 'r','a', or 'w'.

ORA-29282: invalid file ID

Cause: A file ID handle was specified for which no corresponding open file exists.

Action: Verify that the file ID handle is a value returned from a call to UTL_FILE.FOPEN.

ORA-29283: invalid file operation*string*

Cause: An attempt was made to read from a file or directory that does not exist, or file or directory access was denied by the operating system.

Action: Verify file and directory access privileges on the file system, and if reading, verify that the file exists.

ORA-29284: file read error

Cause: An attempt to read from a file failed.

Action: Verify that the file exists, and that it is accessible, and that it is open in read mode.

ORA-29285: file write error

Cause: Failed to write to, flush, or close a file.

Action: Verify that the file exists, that it is accessible, and that it is open in write or append mode.

ORA-29286: internal error

Cause: A fatal error occurred while allocating PL/SQL session memory.

Action: Verify that the PL/SQL session is connected and that adequate memory resources are available.

ORA-29287: invalid maximum line size

Cause: An invalid maximum line size value was specified.

Action: Correct the maximum line size to be in the range [1, 32767].

ORA-29288: invalid file name

Cause: An invalid file name or a file name of an invalid length was specified.

Action: Correct the file name.

ORA-29289: directory access denied

Cause: A directory object was specified for which insufficient privilege was granted.

Action: Grant access to the directory object using the command GRANT [privilege] ON DIRECTORY [object] TO [username];.

ORA-29290: invalid offset specified for seek

Cause: An attempt was made to seek past the end of the file, or both the absolute and relative offsets were NULL, or absolute offset was less than zero.

Action: If specifying an absolute offset, ensure it is in the range [0, *total number of bytes in the file*], or if specifying a relative offset, ensure it is no greater than the current byte position plus the number of bytes remaining in the file.

ORA-29291: file remove operation failed

Cause: A file deletion attempt was refused by the operating system.

Action: Verify that the file exists and delete privileges granted on the directory and the file.

ORA-29292: file rename operation failed

Cause: A file rename attempt was refused by the operating system either because the source or destination directory does not exist or is inaccessible, or the source file isn't accessible, or the destination file exists.

Action: Verify that the source file, source directory, and destination directory exist and are accessible, and that the destination file does not already exist.

ORA-29293: A stream error occurred during compression or uncompression.

Cause: The stream state was discovered to be invalid during compression or uncompression, or an invalid compression quality was requested or a NULL or invalid compression parameter was detected.

Action: Verify that quality is within the range [0,9] and that valid input source data exists.

ORA-29294: A data error occurred during compression or uncompression.

Cause: An error occurred while compressing or uncompressing input source.

Action: Verify that source data is a valid compressed or uncompressed data set.

ORA-29295: invalid mime header tag

Cause: An error occurred while scanning string for mime header tag

Action: Verify that source data is a valid mime header string, in the format: `=?charset?encoding?encoded string?='`

ORA-29296: invalid encoded string

Cause: An error occurred while decoding the input string

Action: Verify that source data is a valid encoded string.

ORA-29297: The compressed representation is too big.

Cause: The compressed output was too big to return.

Action: Do not attempt to compress the source data.

ORA-29298: Character set mismatch

Cause: The character set mode in which the file was opened did not match the character set of the read or write operation.

Action: Use the correct UTL_FILE read and write procedures which correspond to the character set mode in which the file was opened.

ORA-29299: invalid handle for piecewise compress or uncompress

Cause: The process program opened too many handles, and the specified handle was either uninitialized or outside a valid range.

Action: Close some handles and verify that the specified handle is opened or within a valid range.

ORA-29300: ORACLE error, tablespace point-in-time recovery

Cause: Another ORACLE error occurred in the DBMS_PITR package.

Action: See the text of the error message for a description of the error.

ORA-29301: wrong DBMS_PITR package function/procedure order

Cause: The DBMS_PITR package function/procedure was called in an incorrect order.

Action: Restart tablespace point-in-time recovery with a correct procedure.

ORA-29302: database is not open clone

Cause: The database was not opened as a clone database.

Action: Mount the database clone and open the database.

ORA-29303: user does not login as SYS

Cause: The user did not log in as SYS to perform tablespace point-in-time recovery in a clone database.

Action: Log in as SYS and restart tablespace point-in-time recovery.

ORA-29304: tablespace 'string' does not exist

Cause: The selected tablespace does not exist in the database.

Action: Check the list of tablespaces in V\$TABLESPACE and select a valid tablespace.

ORA-29305: cannot point-in-time recover tablespace '*string*'

Cause: An attempt was made to ALTER the tablespace to be read only.

Action: Check if the tablespace is SYSTEM or with online rollback segment.

ORA-29306: datafile *string* is not online

Cause: The selected datafile was not online.

Action: Bring the the datafile online and rename it if necessary.

ORA-29307: datafile *string* error, *string*

Cause: The datafile is not ready for tablespace point-in-time recovery.

Action: Check the correct tablespace point-in-time recovery procedure.

ORA-29308: view TS_PITR_CHECK failure

Cause: Some objects which crossed the boundary of the recovery set were not allowed in the tablespace point-in-time recovery.

Action: Query TS_PITR_CHECK and resolve the boundary crossing objects.

ORA-29309: export dump file was generated by different version of DBMS_PITR package

Cause: The version of DBMS_PITR is different from the version of the cloned database.

Action: Load the version of DBMS_PITR which matches the version of the cloned database.

ORA-29310: database is not open, or opened as a clone

Cause: Either the database was not open, or an attempt was made to open it as a cloned database.

Action: Open the production database instead.

ORA-29311: export dump file was not generated by this database, *string* does not match

Cause: The export dump files were imported to an incorrect database.

Action: Open the correct production database and try the import again.

ORA-29313: tablespace '*string*' cannot be imported twice

Cause: This is an internal error.

Action: Contact your database administrator.

ORA-29314: tablespace '*string*' is not OFFLINE FOR RECOVER nor READ ONLY

Cause: Tablespace clean SCN is either 0 or invalid.

Action: ALTER the tablespace OFFLINE FOR RECOVER.

ORA-29315: tablespace '*string*' has been recreated

Cause: An attempt was made to recover a tablespace to a point-in-time before it was recreated.

Action: Choose a different point in time for recovery.

ORA-29316: datafile *string* been imported twice

Cause: This is an internal error.

Action: Contact your database administrator.

ORA-29317: datafile *string* does not exist

Cause: The specified datafile could not be found in the production database.

Action: Copy the datafile from the clone database.

ORA-29318: datafile *string* is online

Cause: The datafile is online.

Action: Take the datafile offline.

ORA-29319: datafile *string* is not correct

Cause: An incorrect datafile was copied to the production database. The datafile information in the export dump file differs with the information in the datafile in the production database.

Action: Copy the datafile from the clone database to the production database.

ORA-29320: datafile header error

Cause: An error occurred during reading datafile header.

Action: Copy the correct datafile from the clone database to the production database, then retry the operation.

ORA-29321: too many datafiles added since the point-in-time

Cause: Too many datafiles were added to the recovery set since the point-in-time recovery.

Action: Divide the recovery set into smaller subsets and retry.

ORA-29322: SCN string size too long -- maximum size 58 bytes/characters

Cause: Too many characters in specifying the SCN string

Action: Remove all unnecessary characters. Only 15 characters are required for both the hex and decimal representation of the 48 bit SCN.

ORA-29323: ALTER DATABASE SET COMPATIBILITY command not supported by *string*

Cause: The ALTER DATABASE SET COMPATIBILITY command failed because one or more instances do not support dynamic compatible setting change.

Action: No action required.

ORA-29324: SET COMPATIBILITY release string format is wrong

Cause: It should be of the form x.x.x

Action: Use the correct format.

ORA-29325: SET COMPATIBILITY release number lower than *string*

Cause: The SET COMPATIBILITY release compatibility release number was lower than the current compatible setting.

Action: Specify a higher release number.

ORA-29326: SET COMPATIBILITY release number higher than *string*

Cause: The ALTER DATABASE SET COMPATIBILITY command failed because one or more instances had a lower release number.

Action: Specify a lower release number.

ORA-29327: unsupported client compatibility mode used when talking to the server

Cause: The client compatibility mode is higher than the version of the server.

Action: Using SET COMPATIBILITY command, specify the same release number as the server.

ORA-29328: too many datafiles in this tablespace '*string*'

Cause: Too many datafiles in this bitmap tablespace. ORACLE does not support at this moment.

Action: Call Oracle Support.

ORA-29329: Table not of type XMLType

Cause: Table is not XMLType table

Action: Ensure table is a XMLType table

ORA-29330: Source script length too big

Cause: Source script length exceeded the maximum size of 4 Gigabytes.

Action: Make sure source script length is not greater than 4 Gigabytes.

ORA-29331: HTTP redirection *string*

Cause: The HTTP response indicated a redirection to another location.

Action: Retry the HTTP request at the redirected location.

ORA-29332: Network access control list check failed with unexpected error:\n*string*

Cause: An unexpected error occurred while performing network ACL check.

Action: Turn on network ACL tracing event 10937 level 6 to gather more information.

ORA-29335: tablespace '*string*' is not read only

Cause: The tablespace is not read only.

Action: Make the tablespace read only and retry the operation.

ORA-29336: Internal error [*string*] [*string*] from DBMS_PLUGTS

Cause: Internal error from package DBMS_PLUGTS.

Action: Call Oracle Support.

ORA-29337: tablespace '*string*' has a non-standard block size (*string*)

Cause: The tablespace has a non-standard block size and making such a tablespace read-write is not permitted.

Action: Use some other mechanism to import the data

ORA-29338: datafile *string* is in an undesired state (*string*, *string*)

Cause: The referred datafile is not in a state ready for tablespace copy operation. For example, the datafile may be offline. The datafile needs to be ONLINE, and either READ ONLY or READ WRITE.

Action: Put the datafile into the desired state.

ORA-29339: tablespace block size *string* does not match configured block sizes

Cause: The block size of the tablespace to be plugged in or created does not match the block sizes configured in the database.

Action: Configure the appropriate cache for the block size of this tablespace using one of the various (db_2k_cache_size, db_4k_cache_size, db_8k_cache_size, db_16k_cache_size, db_32K_cache_size) parameters.

ORA-29340: export file appears to be corrupted: [*string*] [*string*] [*string*]

Cause: This is caused either by a corrupted export file or by an Oracle internal error.

Action: Make sure the export file used for transportable tablespace is not corrupted. If the error still occurs, call Oracle support.

ORA-29341: The transportable set is not self-contained

Cause: The set of objects in the set of tablespaces selected are not self-contained.

Action: Consider using different export options, or removing some of the pointers that caused the violation, or selecting a different set of tablespaces.

ORA-29342: user *string* does not exist in the database

Cause: The referred user is one of the owners of data in the pluggable set. This user does not exist in the database.

Action: Consider either creating the user in the database or map the user to a different user via FROM_USER and TO_USER import options.

ORA-29343: user *string* (mapped from user *string*) does not exist in the database

Cause: The referred user is one of the owners of data in the pluggable set. This user does not exist in the database.

Action: Consider either creating the user or map the original user to a different user.

ORA-29344: Owner validation failed - failed to match owner '*string*'

Cause: The system failed to match the referred owner. There are two cases that this may occur. (1) This user owns data in the transportable set, but this user is not specified in the TTS_OWNERS list of the import command line option, assuming that TTS_OWNERS is specified. (2) This user is specified in the TTS_OWNER list, but this user does not own any data in the transportable set.

Action: Retry import with a different OWNER list.

ORA-29345: cannot plug a tablespace into a database using an incompatible character set

Cause: Oracle does not support plugging a tablespace into a database using an incompatible character set.

Action: Use import/export or unload/load to move data instead.

ORA-29346: invalid tablespace list

Cause: the tablespace list supplied to dbms_tts.transport_set_check PL/SQL routine is in an incorrect format.

Action: Check the manual and use the correct format.

ORA-29347: Tablespace name validation failed - failed to match tablespace '*string*'

Cause: The system failed to match the referred tablespace. There are 2 cases that this may happen. (1) This tablespace is in the transportable set, but it is not specified in the TABLESPACES list of the import command line option, assuming that TABLESPACES is specified. (2) This tablespace is in the TABLESPACES list, but it is not in the transportable set.

Action: Retry the operation with the correct TABLESPACES list.

ORA-29348: You must specify the datafiles to be plugged in

Cause: The datafiles to be plugged in are not specified.

Action: Specify the datafiles via the import DATAFILES command line option.

ORA-29349: tablespace '*string*' already exists

Cause: Tried to plug-in a tablespace which already exists.

Action: Drop the offending tablespace if possible. Otherwise use a different method (e.g., import/export) to move data.

ORA-29350: server version *string* incompatible with package *string* version *string***ORA-29351: can not transport system, sysaux, or temporary tablespace '*string*'**

Cause: The referred tablespace is either the system tablespace, the sysaux tablespace, or a temporary tablespace.

Action: Do not include this tablespace in the transportable set.

ORA-29352: event '*string*' is not an internal event

Cause: The DBMS_SYSTEM.WAIT_FOR_EVENT procedure was called with an event name that is not an internal event.

Action: Check the list of events from X\$KSLED and verify the event name parameter passed to the WAIT_FOR_EVENT procedure.

ORA-29353: The transportable list is too long.

Cause: The transportable list exceeds the buffer size of 32767.

Action: Reduce the list of tablespaces to transport.

ORA-29354: cannot transport rekeying tablespace '*string*'

Cause: An attempt to transport a tablespace, or unplug a pluggable database containing a tablespace in the middle of a tablespace encrypt, decrypt, or rekey failed.

Action: Wait for the tablespace rekey to finish, or use the ALTER TABLESPACE ENCRYPTION FINISH [ENCRYPT | DECRYPT | REKEY] command to resume and finish the encrypt, decrypt, or rekey operation first.

ORA-29355: NULL or invalid *string* argument specified

Cause: The named argument was either invalid or specified as a NULL

Action: Specify non-null, valid arguments.

ORA-29356: These parameters can be specified only for directives that refer to consumer groups.

Cause: A parameter was specified as an argument to procedure CREATE_PLAN_DIRECTIVE or UPDATE_PLAN_DIRECTIVE of package DBMS_RESOURCE_MANAGER that is not allowed when the GROUP_OR_SUBPLAN is a plan. Only the following parameters are allowed when GROUP_OR_SUBPLAN is a plan: - MGMT_P1, MGMT_P2, MGMT_P3, MGMT_P4, MGMT_P5, MGMT_P6, MGMT_P7, MGMT_P8 - UTILIZATION_LIMIT

Action: Specify only these parameters when GROUP_OR_SUBPLAN is a plan.

ORA-29357: object *string* already exists

Cause: The name specified as an argument to procedure CREATE_PLAN, CREATE_CDB_PLAN, CREATE_CONSUMER_GROUP, or CREATE_CATEGORY of package DBMS_RESOURCE_MANAGER was already in use.

Action: Specify an unused name.

ORA-29358: resource plan *string* does not exist

Cause: An invalid plan name was specified as an argument to procedure UPDATE_PLAN or UPDATE_CDB_PLAN of package DBMS_RESOURCE_MANAGER.

Action: Specify an existing plan name.

ORA-29359: invalid method name *string* specified for resource plan *string*

Cause: An invalid method was specified as an argument to procedure CREATE_PLAN or UPDATE_PLAN of package DBMS_RESOURCE_MANAGER.

Action: Specify a valid method name.

ORA-29360: resource plan *string* contains multiple directives for subplan *string*

Cause: A resource plan and its subplans had more than one directive for a particular subplan.

Action: Modify the resource plan or its subplans so that there is at most one directive for this subplan.

ORA-29361: value *string* for *string* is outside valid range of 0 to 100

Cause: An invalid value was specified for a plan directive parameter.

Action: Specify a value between 0 and 100 inclusive.

ORA-29362: plan directive *string*, *string* does not exist

Cause: A nonexistent plan directive was specified for procedure UPDATE_PLAN_DIRECTIVE or UPDATE_CDB_PLAN_DIRECTIVE of package DBMS_RESOURCE_MANAGER.

Action: Specify an existing plan directive for update.

ORA-29363: plan directive *string*, *string* is mandatory and cannot be modified or deleted

Cause: An attempt was made to modify a mandatory plan directive.

Action: Do not attempt to modify mandatory plan directives because they are required by the Resource Manager and cannot be modified.

ORA-29364: plan directive *string*, *string* already exists

Cause: An attempt was made to create a plan directive that already exists.

Action: Retry the create operation using different values.

ORA-29365: parameters *string* and *string* cannot both be set

Cause: An attempt was made to set both parameters.

Action: Only set one of parameters or neither of them.

ORA-29366: invalid CONSUMER_GROUP argument specified

Cause: An invalid consumer group name was specified.

Action: Specify a non-NULL, valid consumer group name.

ORA-29367: object *string* does not exist

Cause: A non-existent object name was specified as an argument to procedure CREATE_PLAN_DIRECTIVE of package DBMS_RESOURCE_MANAGER.

Action: Specify a valid plan or consumer group name.

ORA-29368: consumer group *string* does not exist

Cause: A non-existent consumer group was specified.

Action: Specify an existing consumer group.

ORA-29369: invalid method name *string* specified for consumer group *string*

Cause: An invalid method name was specified as an argument to procedure CREATE_CONSUMER_GROUP or UPDATE_CONSUMER_GROUP of package DBMS_RESOURCE_MANAGER.

Action: Specify a valid method name.

ORA-29370: pending area is already active

Cause: An attempt was made to activate a pending area that is already active.

Action: Wait until the pending area is no longer active; then, retry the operation.

ORA-29371: pending area is not active

Cause: An attempt was made to make changes without creating a pending area.

Action: Invoke procedure CREATE_PENDING_AREA before making any changes.

ORA-29372: value for argument *string* is too long; it must be less than or equal to *string* characters

Cause: An attempt was made to specify a string that exceeded the maximum length for that parameter.

Action: Use a value that fits within the specified limit.

ORA-29373: resource manager is not on

Cause: An attempt was made to execute an operation that cannot be executed with the resource manager being off

Action: Turn on the resource manager and try again.

ORA-29374: resource plan *string* in top-plan *string* has no plan directives

Cause: A plan was created in the pending area that is an orphan or stand-alone.

Action: Create plan directives if needed. Otherwise, delete the plan.

ORA-29375: sum of values *string* for level *string*, plan *string* exceeds *string*

Cause: The sum of plan directive parameter values for the specified plan level exceeded the limit specified.

Action: Alter the values for the level so that the sum is less than the limit specified.

ORA-29376: number of consumer groups *string* in plan *string* exceeds *string*

Cause: The number of consumer groups in the specified plan was more than the limit specified.

Action: Change the plan so that the number of consumer groups is less than the limit specified.

ORA-29377: consumer group *string* is not part of top-plan *string*

Cause: OTHER_GROUPS was not included as part of the specified top-plan. Each top plan must include the built-in consumer group OTHER_GROUPS.

Action: Create a plan directive with the argument GROUP_OR_SUBPLAN being OTHER_GROUPS somewhere in the top-plan.

ORA-29378: invalid consumer group mapping priorities

Cause: The mapping priorities were not unique integers within the valid range.

Action: Set the mapping priorities to unique integers within the documented range.

ORA-29379: resource plan *string* is involved in a loop in top-plan *string*

Cause: A loop was discovered while validating a top-plan.

Action: Check the plans that have the specified plan as a GROUP_OR_SUBPLAN, and remove the plan directive that causes the loop.

ORA-29380: resource plan *string* is currently active and cannot be deleted

Cause: An attempt was made to delete an active plan in the pending area. No changes can be made to active plans.

Action: Delete the plan when it is not in use.

ORA-29381: plan/consumer_group *string* referred to by another plan and cannot be deleted

Cause: An attempt was made to delete a plan or consumer group that is referred to by another plan.

Action: Remove all plan directives that have the plan or consumer group as GROUP_OR_SUBPLAN; then delete the plan or consumer group.

ORA-29382: validation of pending area failed

Cause: Invalid changes were attempted in the pending area.

Action: See documentation and the error messages that follow this one.

ORA-29383: all leaves of top-plan *string* must be consumer groups

Cause: An attempt was made to create or modify the specified top-plan but it has some plans as leaves.

Action: To identify which plans and/or plan directives need to be modified, look at all plans that have no plan directives. Then, alter the top-plan so that all its leaves are consumer groups.

ORA-29384: number of consumer groups and subplans for plan *string* exceeds *string*

Cause: An attempt was made to create or modify the specified plan, but the plan has more than 28 consumer groups or subplans.

Action: Make sure the specified plan points to no more than 28 distinct consumer groups or subplans.

ORA-29385: cannot create plan directive from *string* to *string*

Cause: An attempt was made to create a plan directive from a plan to itself.

Action: Make sure the arguments PLAN and GROUP_OR_SUBPLAN to procedure CREATE_PLAN_DIRECTIVE of package DBMS_RESOURCE_MANAGER are different.

ORA-29386: plan or consumer group *string* is mandatory and cannot be deleted or modified

Cause: An attempt was made to delete or modify the specified mandatory plan or consumer group.

Action: Do not attempt to delete or modify mandatory plans and consumer groups.

ORA-29387: no top-plans found in the pending area

Cause: The VALIDATE_PENDING_AREA procedure found that either the intended top-plan(s) are involved in a loop or there are no top-plans.

Action: Check all edges going from a subplan to the intended top-plan. Make sure the top plan does not have any plan referring to it.

ORA-29388: plan/consumer_group *string* is part of more than one top-plan

Cause: An attempt was made to delete a subtree that includes a plan or consumer group that is part of more than one top-plan as part of procedure DELETE_PLAN_CASCADE or package DBMS_RESOURCE_MANAGER. Such a plan or consumer group cannot be deleted.

Action: Check the ancestors of the plan or consumer group and make sure it is only part of the top-plan that includes the subtree being deleted.

ORA-29389: too many errors during validation

Cause: The number of errors detected during validation is too high.

Action: Perform the necessary actions to remove some errors, and retry validation.

ORA-29390: some resource plans are not part of any top-plan

Cause: An attempt was made to create or modify some plans in the pending area that are not part of any top-plan

Action: Remove these plans and try validation again.

ORA-29391: *string* and *string* must be mandatory to create a mandatory plan directive

Cause: An attempt was made to create a mandatory plan directive where either PLAN or GROUP_OR_SUBPLAN or both were not mandatory

Action: Recreate these objects as mandatory and then create the plan directive.

ORA-29392: cpu parameters for level *string* for plan *string* must be zero

Cause: The cpu parameters for the specified level had a non-zero value, which is not a valid value for the plan's current cpu policy.

Action: Change the cpu level parameters for the specified level to zero or change the plan cpu policy.

ORA-29393: user *string* does not exist or is not logged on

Cause: An invalid user name was specified as argument to procedure SET_INITIAL_CONSUMER_GROUP of package DBMS_RESOURCE_MANAGER or SWITCH_CONSUMER_GROUP_FOR_USER of package DBMS_SYSTEM or the specified user was not logged on.

Action: Specify a valid user name.

ORA-29394: session id *string* and serial# *string* do not exist

Cause: Invalid session id and serial# were specified as arguments to procedure SWITCH_CONSUMER_GROUP_FOR_SESS of package DBMS_SYSTEM.

Action: Specify valid values from the view V\$SESSION.

ORA-29395: cannot set the initial consumer group to *string*

Cause: An attempt was made to set the initial consumer group of a user to OTHER_GROUPS or an INTERNAL_USE group.

Action: Certain groups are only for the resource manager's internal use. Specify another consumer group.

ORA-29396: cannot switch group to *string*

Cause: An attempt was made to switch the consumer group of a user or a session to OTHER_GROUPS or an INTERNAL_USE group.

Action: Certain groups are only for the resource manager's internal use. Specify another consumer group.

ORA-29397: cannot grant/revoke switch privilege for *string*

Cause: An attempt was made to grant or revoke the privilege to switch to OTHER_GROUPS or an INTERNAL_USE group.

Action: Certain groups are only for the resource manager's internal use. Specify another consumer group.

ORA-29398: invalid privilege name specified

Cause: An invalid privilege name was specified as an argument to procedure GRANT_SYSTEM_PRIVILEGE or REVOKE_SYSTEM_PRIVILEGE of package DBMS_RESOURCE_MANAGER_PRIVS.

Action: Specify a valid privilege name.

ORA-29399: user *string* does not have privilege to switch to consumer group *string*

Cause: An attempt was made to set the initial consumer group of the specified user but the user does not have the privilege to switch to that group.

Action: Grant the privilege to switch to the consumer group to the user and then set the initial group.

ORA-29400: data cartridge error\n*string*

Cause: An error has occurred in a data cartridge external procedure. This message will be followed by a second message giving more details about the data cartridge error.

Action: See the data cartridge documentation for an explanation of the second error message.

ORA-29401: data cartridge internal error [*string*]

Cause: The data cartridge encountered an unexpected condition. The argument is a string that identifies the internal error to Oracle development. This argument and the database version number are critical in identifying the root cause.

Action: Contact Oracle Support Services.

ORA-29430: too many files open

Cause: Too many UTL_FILE files were opened.

Action: Close some files and retry the UTL_FILE call.

ORA-29431: empty directory path

Cause: The directory object mapped to an empty directory.

Action: Ensure that the directory path is not empty.

ORA-29432: invalid file access

Cause: The file was opened in an unexpected mode.

Action: Correct the mode of opening the file.

ORA-29433: path traverses a symlink

Cause: The directory path contained a symlink.

Action: Ensure that the directory path does not contain a symlink.

ORA-29434: nonexistent file or path

Cause: The expected file or path did not exist.

Action: Ensure that the file or directory path exists.

ORA-29435: cannot open file

Cause: There was an access error on the file.

Action: Ensure that Oracle process has access to the directory path and file.

ORA-29436: link file object is disallowed

Cause: The file was a link.

Action: Ensure that the file is not a link.

ORA-29437: unexpected "LFI" error

Cause: An internal error occurred in the UTL_FILE.

Action: Contact Oracle Support Services.

ORA-29470: Effective userid or roles are not the same as when cursor was parsed

Cause: The effective userid or roles on this call to DBMS_SQL are not the same as those at the time the cursor was parsed.

Action: Make sure the effective userid and roles are the same as when cursor was parsed.

ORA-29471: DBMS_SQL access denied

Cause: DBMS_SQL access was denied due to security concerns.

Action: Check the alert log and trace file for more information.

ORA-29472: DBMS_SQL.OPEN_CURSOR failed. security_level is outside the valid range of 0 to 2

Cause: An invalid security_level value was specified.

Action: Specify a valid range of 0 to 2.

ORA-29473: privilege checking level specified for 'string' must be between 0 and 2

Cause: Invalid privilege checking level specified.

Action: Correct the privilege checking level specified.

ORA-29474: DBMS_SQL.OPEN_CURSOR failed. security_level of 0 is not allowed

Cause: Security level of 0 is specified with DBMS_SQL.OPEN_CURSOR.

Action: Specify a valid security level.

ORA-29475: useLogonRoles=>TRUE not permitted with userid=>NULL

Cause: An unsupported combination of argument values was present in a call to DBMS_SYS_SQL.PARSE_AS_USER.

Action: Specify a valid combination of argument values.

ORA-29476: DBMS_SQL.CLOSE_CURSOR failed

Cause: An attempt was made to close a DBMS_SQL cursor while it was executing under its own context.

Action: Rewrite the program so that it does not attempt to close a DBMS_SQL cursor while it is executing under its own context.

ORA-29477: SQL statement size in bytes is too big

Cause: The size of the SQL statement exceeded 4 gigabytes -1.

Action: Reduce the size of the SQL statement.

ORA-29478: Implicit result cannot be returned through this statement.

Cause: An attempt was made to return an implicit result through a statement type other than a PL/SQL or DML statement.

Action: Implicit results can only be returned through a PL/SQL or DML statement.

ORA-29479: Cannot return any more implicit results, limit 2,147,483,647 reached.

Cause: An attempt was made to return more than the maximum number of implicit results permitted.

Action: Ensure the number of implicit results does not exceed 2,147,483,647.

ORA-29480: No more implicit results to retrieve.

Cause: An attempt was made to retrieve implicit results when none were available.

Action: This is an internal error.

ORA-29481: Implicit results cannot be returned to client.

Cause: An attempt was made to return implicit results to an older version client that is not capable of receiving these implicit results.

Action: Upgrade the Oracle Database Client software.

ORA-29482: Cannot specify both userid or username and xs_sessionid

Cause: An unsupported combination of argument values was present in a call to DBMS_SYS_SQL.PARSE_AS_USER.

Action: Specify a valid combination of argument values.

ORA-29483: Cannot specify both userid and username

Cause: An unsupported combination of argument values was present in a call to DBMS_SYS_SQL.PARSE_AS_USER.

Action: Specify a valid combination of argument values.

ORA-29484: Cannot specify both xs_sessionid and useLogonRoles=>TRUE

Cause: An unsupported combination of argument values was present in a call to DBMS_SYS_SQL.PARSE_AS_USER.

Action: Specify a valid combination of argument values.

ORA-29485: Complex type bind or define is not a linked type.

Cause: A complex type bound or defined in one container, where cursor execution occurs in another container, was not an object or metadata linked type.

Action: Verify that all complex types that are bound or defined in one container while execution occurs in another container are object or metadata linked types.

ORA-29486: no container support

Cause: The container parameter was specified in the DBMS_SYS_SQL.PARSE_AS_USER call.

Action: Replace the DBMS_SYS_SQL.PARSE_AS_USER call with the DBMS_SQL.PARSE call.

ORA-29490: insufficient privilege

Cause: The ADM_PARALLEL_EXECUTE role needed to execute the subprogram was not granted.

Action: Obtain ADM_PARALLEL_EXECUTE role and try again.

ORA-29491: invalid table for chunking

Cause: An attempt was made to chunk a table by ROWID, but the table was not a physical table or the table was an IOT. physical table or the table is an IOT.

Action: Use a table which has physical ROWID.

ORA-29492: invalid state for create chunk

Cause: An attempt was made to create chunks on a task which was not in the CREATED state.

Action: Make sure that the task is in the CREATED state.

ORA-29493: invalid status

Cause: An attempt was made to set an invalid value to the chunk status.

Action: Make sure that the status value is valid.

ORA-29494: invalid state for run task

Cause: An attempt was made to execute the task which was not in the CHUNKED state.

Action: Make sure that the task is in the CHUNKED state.

ORA-29495: invalid state for resume task

Cause: An attempt was made to resume execution but the task was not the FINISHED_WITH_ERROR or CRASHED state.

Action: Make sure that the task is in the FINISHED_WITH_ERROR or CRASHED state.

ORA-29496: Parameter [*string*] is null or its value length exceeds the maximum limit [*string*]

Cause: The input argument was null, or it exceeded the maximum length limit.

Action: Make sure that the argument is not null, and its length is within the limit.

ORA-29497: duplicate task name

Cause: A task with the same name was already in existence.

Action: Use another name.

ORA-29498: task not found

Cause: The task did not exist.

Action: Use an existing task.

ORA-29499: chunk not found

Cause: The specified chunk did not exist.

Action: Specify an existing chunk.

ORA-29500: NAMED keyword is invalid in CREATE JAVA CLASS

Cause: A NAMED keyword was specified in the CREATE JAVA CLASS statement. NAMED keywords are valid only in CREATE JAVA SOURCE or RESOURCE statements.

Action: Remove the NAMED keyword from the CREATE JAVA CLASS statement.

ORA-29501: invalid or missing Java source, class, or resource name

Cause: The required name for a Java source, class, or resource was invalid or missing.

Action: Specify a valid name.

ORA-29502: NAMED keyword required in CREATE JAVA RESOURCE

Cause: The name for a Java resource was not specified. The name must be specified with the NAMED keyword.

Action: Specify a valid name with the NAMED keyword.

ORA-29503: SCHEMA keyword not valid with NAMED keyword

Cause: SCHEMA and NAMED keywords were used together in the same CREATE JAVA command, but only one may be used in a CREATE JAVA command.

Action: Remove either the NAMED or the SCHEMA keyword.

ORA-29504: invalid or missing schema name

Cause: The required schema name was invalid or missing.

Action: Specify a valid schema name.

ORA-29505: AS keyword is invalid in CREATE JAVA CLASS or RESOURCE

Cause: The AS keyword was used in CREATE JAVA CLASS or RESOURCE. The AS keyword is valid only in CREATE JAVA SOURCE.

Action: Use the USING keyword in CREATE JAVA CLASS or RESOURCE.

ORA-29506: invalid query derived from USING clause

Cause: The USING clause did not form a valid query.

Action: Correct the USING clause.

ORA-29507: query derived from USING clause found zero or many rows

Cause: The USING clause defined a query that either did not return any values, or returned more than one value.

Action: Correct the USING clause.

ORA-29508: query derived from USING clause did not select a value of type *string*

Cause: The USING clause did not form a query that selects a value of the type specified by the term following the USING keyword.

Action: Correct the USING clause.

ORA-29509: incorrectly formed Java binary class definition

Cause: An attempt was made to create a Java class using data expected to be in binary (Java .class) format. The data was found not to be in this format, or to be incorrectly formed.

Action: Correct the definition data.

ORA-29510: name, *string.string*, already used by an existing object

Cause: A CREATE JAVA command attempted to create a source, class, or resource object with a name that is already in use.

Action: Drop the existing object that is using the desired name, or use a different name for the new object.

ORA-29511: could not resolve Java class

Cause: A CREATE AND RESOLVE NOFORCE JAVA CLASS command specified definition data that could not be resolved, or resolution failed for some referenced class.

Action: Remove the NOFORCE option or remove impediments to resolution.

ORA-29512: incorrectly formed name resolver specification

Cause: A name resolver was not specified in the required form: ((*name pattern* , *schema name*) ...)

Action: Correct the specification.

ORA-29513: referenced class name too long

Cause: An attempt was made to import a .class file containing a class name of length greater than %d. The .class file could not be imported because the referenced class name was too long.

Action: Shorten the referenced class name in the .class file.

ORA-29514: class name contains illegal character

Cause: An attempt was made to import a .class file containing a character that cannot be converted to the server character set. The .class file could not be imported because of the illegal character.

Action: Correct the illegal character in the .class file.

ORA-29515: exit called from Java code with status *string*

Cause: Java code included a call to java.lang.Runtime.exitInternal.

Action: Do not include this call unless non-local exit is desired.

ORA-29516: Aurora assertion failure: *string*

Cause: An internal error occurred in the Aurora module.

Action: Contact Oracle Worldwide Support.

ORA-29517: recursive resolution failed for a referenced class

Cause: An attempt to resolve a referenced class failed.

Action: Review the errors for referenced classes and complete the necessary actions to correct them.

ORA-29518: name *string* resolved to an object in schema *string* that is not a Java class

Cause: A referenced name was resolved to an object that is not a Java class.

Action: Adjust name resolver or add missing Java class.

ORA-29519: name *string* resolved via a synonym in schema *string* to a class with a different name

Cause: A referenced name was resolved to a synonym, which translated to a class whose name does not match the referenced name.

Action: Adjust name resolver or add missing Java class.

ORA-29520: name *string* resolved to a class in schema *string* that could not be accessed

Cause: An attempt to access a referenced class failed.

Action: Adjust authorizations or name resolution.

ORA-29521: referenced name *string* could not be found

Cause: Name resolution failed to find an object with the indicated name.

Action: Adjust name resolver or add missing Java class.

ORA-29522: authorization error for referenced name *string.string*

Cause: An attempt was made to resolve a class that is not authorized to use the indicated referenced class.

Action: Adjust authorizations or name resolution.

ORA-29523: authorization error for unknown referenced name

Cause: An attempt was made to resolve a class that is not authorized to use a referenced class. The name of the referenced class could not be determined.

Action: Adjust authorizations or name resolution.

ORA-29524: wrong types of arguments in call to '*string*'

Cause: A method was called with argument(s) of incompatible type(s).

Action: Adjust caller.

ORA-29525: referenced name is too long: '*string*'

Cause: An attempt was made to create a class that references a name longer than 4000 characters. The class could not be created because the name is too long.

Action: Adjust the definition.

ORA-29526: created Java class *string"string"*

Cause: An informational message, not an error.

Action: None

ORA-29527: created Java source *string"string"*

Cause: An informational message, not an error.

Action: None

ORA-29528: invalid Java call in trigger *string*

Cause: The Java method specified in trigger does not exist or cannot be called as used.

Action: Adjust trigger definition.

ORA-29529: invalid function or method call *string* in trigger *string*

Cause: The function or method specified in Java trigger call expression could not be resolved.

Action: Adjust trigger definition.

ORA-29530: could not create shortened name for *string*

Cause: Insert into shortened name translation table failed.

Action: Retry the insert.

ORA-29531: no method *string* in class *string*

Cause: An attempt was made to execute a non-existent method in a Java class.

Action: Adjust the call or create the specified method.

ORA-29532: Java call terminated by uncaught Java exception: *string*

Cause: A Java exception or error was signaled and could not be resolved by the Java code.

Action: Modify Java code, if this behavior is not intended.

ORA-29533: attempt to overwrite class or resource *string* while defining or compiling *string.string*

Cause: A class or resource defined by a SQLJ source conflicted with an existing object.

Action: Remove existing object, or modify SQLJ source.

ORA-29534: referenced object *string.string* could not be resolved

Cause: Name resolution determined that the indicated object is referenced but could not be resolved.

Action: Correct name resolver or address resolution problems in the referenced class, or correct compilation problems in its source.

ORA-29535: source requires recompilation

Cause: The reason the current class object was invalid is recorded with the source object from which it was compiled.

Action: Inspect errors in the source object and take the necessary corrective actions.

ORA-29536: badly formed source: *string*

Cause: An attempt was made to create a Java source object with text that could not be parsed adequately to determine the class(es) defined by it.

Action: Correct errors in source.

ORA-29537: class or resource cannot be created or dropped directly

Cause: An attempt was made to create or drop a Java class or resource that is known to result from compilation of an existing Java source object.

Action: Act on the class or resource by acting on the source, or change the source so that it no longer defines the class or resource.

ORA-29538: Java not installed

Cause: An attempt was made to use a Java command when Java is not installed.

Action: Install Java, or do not use the command.

ORA-29539: Java system classes already installed

Cause: An attempt was made to use the CREATE JAVA SYSTEM command in a database where the Java system classes already are installed.

Action: Use CREATE OR REPLACE JAVA SYSTEM.

ORA-29540: class *string* does not exist

Cause: Java method execution failed to find a class with the indicated name.

Action: Correct the name or add the missing Java class.

ORA-29541: class *string.string* could not be resolved

Cause: An attempt was made to execute a method in a Java class that had not been previously and cannot now be compiled or resolved successfully.

Action: Adjust the call or make the class resolvable.

ORA-29542: class *string* already defined by source *string*

Cause: An attempt was made to create a Java source object that would define a class that is already defined by a different Java source object.

Action: Either drop the old source or modify the new source.

ORA-29543: Java command *string* not yet implemented

Cause: An attempt was made to use a Java command that is not yet implemented.

Action: Do not use the command.

ORA-29544: invalid type

Cause: The type argument in a call to a Java export or import command did not have a recognized value.

Action: Correct the value.

ORA-29545: badly formed class: *string*

Cause: An attempt was made to create a Java class object with bytecodes that were rejected by the Java verifier.

Action: It is possible that an attempt was made to create the Java class from a damaged class file, in which case the CREATE should be reattempted with a correct class file. It is also possible that the message is the result of using "-" in the resolver so that the verifier could not check the correctness of some code. In that case, the class needs to be created with a resolver.

ORA-29546: badly formed resource: *string*

Cause: An attempt was made to create a Java resource object with data that was rejected by the Java verifier.

Action: Correct the data.

ORA-29547: Java system class not available: *string*

Cause: An attempt was made to use a command that requires a Java system class that was not yet present or was invalid.

Action: Load the system classes, or do not use the command.

ORA-29548: Java system class reported: *string*

Cause: A command that uses a Java system class was aborted due to an error reported by the Java system class.

Action: Correct the error that was reported.

ORA-29549: class *string.string* has changed, Java session state cleared

Cause: A class in use by the current session was redefined or dropped, invalidating the current Java session state and requiring that it be cleared.

Action: No action required.

ORA-29550: Java session state cleared

Cause: The Java state in the current session became inconsistent and was cleared.

Action: No action required.

ORA-29551: could not convert *string* to Unicode

Cause: A string in the database character set could not be converted to Unicode, as required for use by Java.

Action: Correct the string.

ORA-29552: verification warning: *string*

Cause: An attempt was made to create a Java class object with bytecodes that caused the Java verifier to issue a warning.

Action: It is possible that the Java class was created from a damaged class file, in which case the CREATE should be reattempted with a correct class file. It is also possible that the message is the result of using "-" in the resolver so that the verifier could not check the correctness of some code. In that case, the class needs to be created with a resolver.

ORA-29553: class in use: *string.string*

Cause: An attempt was made to modify a Java class that is in use in the current call.

Action: Correct the code in use in this call.

ORA-29554: unhandled Java out of memory condition

Cause: The session encountered an out of memory condition in Java from which it could not recover. Java session state was cleared.

Action: No action required.

ORA-29555: Java source, class or resource is not allowed here

Cause: A Java source, class, or resource was specified in an inappropriate place in a statement.

Action: Make sure the name is correct or remove it.

ORA-29556: object type has changed

Cause: A database object name that named a Java source, class, or resource now names an object of a different type.

Action: No action required.

ORA-29557: Java system class *string* cannot be modified

Cause: A command was attempted that would have modified a Java system class.

Action: No action required.

ORA-29558: JAccelerator (NCOMP) not installed. Refer to Install Guide for instructions.

Cause: JAccelerator (NCOMP) is not installed.

Action: Please refer to the Post-installation Tasks section in the Database Install Guide for instructions on how to install JAccelerator (NCOMP).

ORA-29561: Java VM JIT not supported on this platform.

Cause: Java VM JIT is not supported on this platform.

Action: No action required.

ORA-29655: USING clause is incompatible with its supertype

Cause: The USING clause of a type has to be the same as its supertype or compatible with it.

Action: Make sure the USING clause is compatible with its supertype.

ORA-29656: Invalid option for USING

Cause: The class has to implement the required interface for the value of the option for USING.

Action: Make sure the USING clause is supported.

ORA-29657: class defined in EXTERNAL NAME clause is used in another subtype

Cause: The supertype has an existing type that has the same value for the EXTERNAL NAME.

Action: Make sure the EXTERNAL NAME clause is unique among subtypes.

ORA-29658: EXTERNAL NAME clause is not compatible with its supertype

Cause: The EXTERNAL NAME clause of the type is not a subclass of the supertype EXTERNAL NAME.

Action: Make sure the EXTERNAL NAME clause of the type is a subclass of the EXTERNAL NAME of its supertype.

ORA-29659: SQLJ Object Type validation failed to get default connection

Cause: Unable to connect using the JDBC default connection.

Action: No action required.

ORA-29660: Unable to find the class defined in the EXTERNAL NAME clause

Cause: The class is not loaded in the database.

Action: Make sure the EXTERNAL NAME corresponds to a loaded class in the the database.

ORA-29661: Unable to find the superclass of the defined in the EXTERNAL NAME

Cause: The class is not loaded in the database.

Action: Make sure the superclass of the EXTERNAL NAME is loaded in the the database.

ORA-29662: Unable to find a field that matches one or more of the attributes

Cause: The EXTERNAL NAME option of one or more attributes do not match any fields in the defined class.

Action: Make sure the EXTERNAL NAME option of each attribute matches a field in the defined in the defined class.

ORA-29663: Unable to find a method that matches one or more of the functions

Cause: The EXTERNAL NAME option of one or more functions do not match any method in the defined class.

Action: Make sure the EXTERNAL NAME option of each function matches a method in the defined in the defined class.

ORA-29664: Unable to generate the helper class for the defined type

Cause: The helper class used for supporting SQLJ Object Type is not generated.

Action: No Action is required.

ORA-29665: Java thread deadlock detected

Cause: The Java VM has detected a thread deadlock.

Action: Modify the Java program to avoid the deadlock condition.

ORA-29701: unable to connect to Cluster Synchronization Service

Cause: Connect to CSS failed or timed out.

Action: Verify the state of the CSS. If the CSS was not started, start it and then retry the database startup. If the CSS died or is not responding, check the Oracle and CSS trace files for errors and contact Oracle Support Services.

ORA-29702: error occurred in Cluster Group Service operation

Cause: An unexpected error occurred while performing a CGS operation.

Action: Verify that the LMON process is still active. Check the Oracle LMON trace files for errors. Also, check the related CSS trace file for errors.

ORA-29703: error occurred in global enqueue service operation

Cause: An unexpected error occurred while performing a global enqueue service operation.

Action: Check oracle trace files for errors.

ORA-29704: cannot specify ACTIVE_INSTANCE_COUNT in 8.1.5 or earlier release

Cause: The ACTIVE_INSTANCE_COUNT parameter was specified when one of the instances in the cluster was running Oracle 8.1.5 or an earlier release.

Action: Restart the instance without specifying the ACTIVE_INSTANCE_COUNT parameter. Or, upgrade all instances to Oracle 8.1.6 or later release and then specify the parameter.

ORA-29705: ACTIVE_INSTANCE_COUNT is *string* which is incompatible with the value in other instances

Cause: The value of the ACTIVE_INSTANCE_COUNT parameter must be the same in all Oracle cluster database instances.

Action: Check your initialization parameter files in all instances and ensure that the ACTIVE_INSTANCE_COUNT parameter has the same value. Then restart the instance.

ORA-29706: incorrect value *string* for parameter ACTIVE_INSTANCE_COUNT

Cause: The ACTIVE_INSTANCE_COUNT parameter must be set to 1 in a two node cluster database configuration or unspecified if a secondary instance is not needed.

Action: Check your initialization parameter files and correct the value of the ACTIVE_INSTANCE_COUNT parameter. If you are configuring a two node primary/secondary cluster database, set this value to 1. Otherwise, do not specify any value for the parameter.

ORA-29707: inconsistent value *string* for initialization parameter *string* with other instances

Cause: The value of the initialization parameter in error must be identical on all Oracle cluster database instances and was not.

Action: Check your INIT.ORA files on all instances and ensure that the initialization parameters in error have the same value.

ORA-29708: error occurred in Cluster Synchronization Services

Cause: An unexpected error occurred while performing a CSS operation.

Action: Verify the state of the CSS. If the CSS died or is not responding, check the ORACLE and CSS trace files for errors and contact Oracle Support Services.

ORA-29709: Communication failure with Cluster Synchronization Services

Cause: Could not communicate with CSS to complete the operation.

Action: Verify the state of the CSS. If the CSS died or is not responding, check the ORACLE and CSS trace files for errors and contact Oracle Support Services.

ORA-29710: Current operation aborted by Cluster Synchronization Services

Cause: The operation could not be performed or CSS was shutting down.

Action: Check the log file of Cluster Synchronization Services daemon to verify the state of the service. Start the service if needed; otherwise, contact Oracle Support Services.

ORA-29711: error occurred during registration of Oracle process with CSS

Cause: An unexpected error occurred while performing a Cluster Synchronization Services (CSS) operation.

Action: Confirm that the database, and any ASM instances on which it depends, is operating normally. An outage in one of these can cause this error and it is an expected result. Otherwise, contact Oracle Support Services.

ORA-29735: instance specified no longer exists

Cause: A client of the global enqueue service specified an instance that no longer existed.

Action: Process aborts current operation due to termination of an instance

ORA-29736: Instances running in the cluster are only read-mostly or read-only instances.

Cause: The instances that were running were only read-mostly or read-only instances which causes the whole cluster to shut down.

Action: Start the regular read/write instances and then restart read-mostly or read-only instances.

ORA-29738: This feature is not allowed on read-mostly instances.

Cause: The attempted feature was not allowed on read-mostly instances.

Action: The feature is not supported on read-mostly instances as this can be achieved on the other cluster instances which are not read-mostly.

ORA-29739: Read-mostly and Read-only instances cannot be part of same cluster

Cause: The Read-mostly and Read-only instances were part of the same cluster.

Action: Start the instance using an instance mode of the already existing Read-only Instance Mode nodes.

ORA-29740: evicted by instance number *string*, group incarnation *string*

Cause: This instance was evicted from the group by another instance of the cluster database group for one of several reasons, which may include a communications error in the cluster and failure to issue a heartbeat to the control file.

Action: Check the trace files of other active instances in the cluster group for indications of errors that caused a reconfiguration.

ORA-29741: IMR active for some, but not all members of cluster

Cause: The IMR feature is not active for this instance, but is active for another instance in the cluster database.

Action: Ensure that all instances have the same value for the `_imr_active` init.ora parameter

ORA-29742: incompatible Instance Membership Recovery protocol among instances

Cause: The selected Instance Membership Recovery protocol was not compatible with other running instances in the cluster database.

Action: Check the Instance Membership Recovery initialization parameters of all instances to ensure their consistency.

ORA-29743: exiting from instance membership recovery protocol because this instance is not in good health

Cause: This instance did not participate in the instance membership recovery protocol because it was not in good health. Some or all of its receivers were not making progress. Therefore, this instance terminated itself.

Action: Check the alert log, LMON and LMHB trace files for any errors and contact Oracle Support Services

ORA-29744: Oracle RAC is not supported in SE release 19c and later

Cause: The database was configured with Oracle Real Application Clusters (Oracle RAC) enabled in Oracle Database Standard Edition (SE).

Action: If you plan to continue using Oracle RAC with Oracle Database 19c or later releases, install Oracle Database Enterprise Edition (EE) to upgrade your database. If you plan to continue using SE without Oracle RAC enabled, convert your database to a single instance Oracle Database before upgrading.

ORA-29746: Cluster Synchronization Service is being shut down.

Cause: The administrator has shut down the Cluster Synchronization Service daemon. This error message is intended to be informative to users on the status of the service.

Action: Check the log file of the Cluster Synchronization Service daemon to verify the state of the service.

ORA-29760: instance_number parameter not specified

Cause: The init.ora file did not contain a value for the instance_number which is required to identify this instance to other instances of the database running on the same cluster

Action: Assign a value to the instance_number parameter in the init.ora parameter file

ORA-29770: global enqueue process *string* (OSID *string*) is hung for more than *string* seconds

Cause: The specified process makes no progress within the maximum allowed time.

Action: Check the alert file and relevant trace files and contact Oracle Support Services with the incident information.

ORA-29771: process *string* (OSID *string*) blocks *string* (OSID *string*) for more than *string* seconds

Cause: The specified process blocked a global enqueue process for the maximum allowed time.

Action: Check the alert file and relevant trace files and contact Oracle Support Services with the incident information.

ORA-29780: unable to connect to GPnP daemon [*string*]

Cause: Attempt to connect to the GPnP daemon failed with the error reported.

Action: Take the corrective action to resolve the error reported. Refer to GPnP logs and documentation to figure out why the call failed.

ORA-29783: GPnP attribute SET failed with error [*string*]

Cause: An attempt to set the Grid Plug and Play (GPnP) attribute failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

ORA-29784: Attribute update operation not permitted

Cause: The update operation for attributes was not permitted because Cluster Synchronization Services (CSS) was not running on the host.

Action: Start Cluster Synchronization Services (CSS) and retry the operation.

ORA-29785: GPnP attribute GET failed with error [*string*]

Cause: An attempt to get the Grid Plug and Play (GPnP) attribute failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

ORA-29786: Oracle Restart attribute GET failed with error [*string*]

Cause: An attempt to get the Oracle Restart attribute failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

ORA-29787: Oracle Restart attribute SET failed with error [string]

Cause: An attempt to set the Oracle Restart attribute failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

ORA-29788: Network interface query failed with error [string]

Cause: Attempt to get the network information failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

ORA-29790: Cannot change user session parameters for a non-user session

Cause: An attempt was made to change user session parameters for a non-user session.

Action: Execute the operation when connected with a user session

ORA-29791: Transactions cannot be replayed

Cause: The user attempted to replay a transaction.

Action: Reconnect and re-execute the transaction.

ORA-29800: invalid name for operator

Cause: The name specified for the operator is incorrect.

Action: Specify a correct name for the operator.

ORA-29801: missing RETURN keyword

Cause: The RETURN keyword has not been specified.

Action: Specify the RETURN keyword or check the SQL statement.

ORA-29802: missing CONTEXT keyword

Cause: The CONTEXT keyword has not been specified.

Action: Specify the CONTEXT keyword or check the SQL statement.

ORA-29803: missing ANCILLARY keyword

Cause: The ANCILLARY keyword has not been specified.

Action: Specify the ANCILLARY keyword or check the SQL statement.

ORA-29804: missing DATA keyword

Cause: The DATA keyword has not been specified.

Action: Specify the DATA keyword or check the SQL statement.

ORA-29805: missing COLUMN keyword

Cause: Keyword COLUMN is expected .

Action: Either specify the COLUMN keyword or specify another option.

ORA-29806: specified binding does not exist

Cause: The operator binding which has been specified does not exist.

Action: Ensure that the operator binding that has been specified does exist.

ORA-29807: specified operator does not exist

Cause: The operator which has been specified does not exist.

Action: Ensure that the operator that has been specified does exist.

ORA-29808: specified primary operator binding does not exist

Cause: The specified binding for the primary operator does not exist.

Action: Ensure that the specified binding for the primary operator exists.

ORA-29809: cannot drop an operator with dependent objects

Cause: The operator which is being dropped has some dependent objects.

Action: Either drop the dependent objects first and then issue the DROP OPERATOR command or specify the FORCE option with DROP OPERATOR.

ORA-29810: inadequate operator privileges

Cause: The user does not have the appropriate privileges to perform the specified operation on the operator.

Action: Grant the appropriate privileges to the user and then reissue the statement.

ORA-29811: missing STATISTICS keyword

Cause: This is not a valid option with the ASSOCIATE command.

Action: Specify STATISTICS keyword after the ASSOCIATE command.

ORA-29812: incorrect object name specified

Cause: The specified name is not a valid name.

Action: Specify the correct name of the object with for which an association needs to be defined.

ORA-29813: non-supported object type with associate statement

Cause: The type of object specified is not supported with the associate statistics statement.

Action: Use a valid object type with the associate command.

ORA-29814: expecting USING or DEFAULT keyword

Cause: Expecting the USING or DEFAULT keyword after the names of object(s).

Action: Provide the USING or DEFAULT keyword.

ORA-29815: object being associated is not present

Cause: The object for which the association is being defined is not present.

Action: Ensure that all the objects for which the association is being defined are present.

ORA-29816: object being disassociated is not present

Cause: Object which is being disassociated is not present.

Action: Ensure that the object which needs to be disassociated is present.

ORA-29817: non-supported option with disassociate statement

Cause: The type of object specified is not supported with the disassociate statistics statement.

Action: Use a object type which is supported with the disassociate command.

ORA-29818: column name not properly specified

Cause: Name of the column should contain the table and the column name.

Action: Specify a valid column name.

ORA-29819: cannot associate default values with columns

Cause: User tried to associate DEFAULT values with columns which is not a valid option .

Action: Specify a valid option.

ORA-29820: the statistics type is not present

Cause: The statistics type which is being associated with object(s) is not present.

Action: Ensure that the type which contains the statistics functions is present.

ORA-29821: specified primary operator does not exist

Cause: The specified primary operator does not exist.

Action: Check the primary operator and the signature specified.

ORA-29822: selectivity cannot be specified for the type of object

Cause: User tried to associate selectivity with index or indextypes which is not allowed .

Action: Specify a valid option.

ORA-29823: object being analyzed is not a table

Cause: The object being analyzed is not a table and is not supported

Action: Specify only a supported option.

ORA-29824: operator is invalid

Cause: The operator is invalid.

Action: Drop and recreate the operator.

ORA-29825: invalid name for indextype

Cause: Indextype name or Indextype schema name has invalid characters.

Action: Verify that the name has valid characters and it is not a reserved word.

ORA-29826: keyword FOR is missing

Cause: FOR keyword must be provided with Create Indextype statement.

Action: Use FOR keyword and provide relevant operator information.

ORA-29827: keyword USING is missing

Cause: USING keyword and corresponding implementation details must be provided.

Action: Provide USING keyword and relevant implementation details with Create Indextype statement.

ORA-29828: invalid name for implementation type

Cause: Implementation type or Implementation schema name is invalid.

Action: Verify that the name has valid characters and it is not a reserved word.

ORA-29829: implementation type does not exist

Cause: The implementation type specified with USING clause could not be found.

Action: Check to see if the type exists and the user has EXECUTE privilege on this type.

ORA-29830: operator does not exist

Cause: The operator could not be found.

Action: Verify that the operator exists and the user has EXECUTE privilege for this operator.

ORA-29831: operator binding not found

Cause: The specified binding for the operator is not available from the operator schema object.

Action: Verify that the operator with the specified binding exists.

ORA-29832: cannot drop or replace an indextype with dependent indexes

Cause: One or more indexes are dependent upon the indextype.

Action: Drop all the indexes which are dependent upon the indextype before dropping the indextype itself.

ORA-29833: indextype does not exist

Cause: There is no indextype by the specified name.

Action: Use public views for the indextypes to see if an indextype by the specified name has been created.

ORA-29834: REF datatype not supported with operators

Cause: The user specified a REF datatype which is not supported in CREATE OPERATOR.

Action: Reissue the CREATE OPERATOR statement without the REF datatype.

ORA-29835: ODCIGETINTERFACES routine does not return required interface(s)

Cause: The ODCIObjectList returned by the ODCIGetInterfaces routine does not contain the interface(s) required by the current usage.

Action: Ensure that the ODCIGetInterfaces routine returns the name(s) of the required interface(s).

ORA-29836: failed to validate referenced operators

Cause: One of the operators referenced cannot be compiled.

Action: Try to recompile the operators which are referenced by this indextype. Use USER_INDEXTYPE_OPERATORS view to find out the referenced operators.

ORA-29837: insufficient privileges to execute implementation type

Cause: User does not have privileges to execute the implementation type.

Action: The owner of the implementation type must grant appropriate privileges to the user.

ORA-29838: insufficient privileges to execute the operator(s)

Cause: User does not have privileges to execute one of the operators.

Action: The owner of the operators must grant appropriate privileges to the user .

ORA-29839: failed to validate implementation type

Cause: Implementation type cannot be compiled.

Action: Try to compile the implementation type.

ORA-29840: indextype and implementation type are not in same schema

Cause: Indextype and implementation type are in different schema.

Action: Put the indextype and implementation type in the same schema.

ORA-29841: invalid option for ALTER INDEXTYPE

Cause: The user specified an invalid option with the ALTER INDEXTYPE command

Action: Choose a valid option with the ALTER INDEXTYPE command

ORA-29842: option not supported with the version *string* of the indextype interface

Cause: User specified an option which is not supported with the version of the indextype interface provided

Action: User should either not request for this option or should provide an implementation type that implements the correct version of the indextype interface.

ORA-29843: indextype should support atleast one operator

Cause: User attempted to drop all the operators from the indextype

Action: Do not drop all the operators from the indextype

ORA-29844: duplicate operator name specified

Cause: User attempted to add an operator name to an indextype which is already supported by the indextype

Action: Remove the duplicate operator and retry the command

ORA-29845: indextype does not support local domain index on *string* partitioned table

Cause: User specified a create local domain index statement using an indextype that does not support local domain indexes on tables partitioned with the given method

Action: Use a different indextype or build a global domain index

ORA-29846: cannot create a local domain index on a *string* partitioned table

Cause: User specified a create local domain index statement on a table partitioned using a method not supported by domain indexes

Action: Build a global domain index on the partitioned table

ORA-29847: cannot create a local domain index on a partitioned index-organized table

Cause: User specified a create local domain index statement on a partitioned index-organized table

Action: Build a global domain index on the partitioned index-organized table

ORA-29848: error occurred in the execution of ODCIINDEXMERGEPARTITION routine

Cause: Failed to successfully execute the ODCIIndexMergePartition routine.

Action: Check to see if the routine has been coded correctly.

ORA-29849: error occurred in the execution of ODCIINDEXSPLITPARTITION routine

Cause: Failed to successfully execute the ODCIIndexSplitPartition routine.

Action: Check to see if the routine has been coded correctly.

ORA-29850: invalid option for creation of domain indexes

Cause: The user specified an invalid option like ASC, DESC, SORT or a parallel clause, partitioning clause or physical attributes clause.

Action: Choose one of the valid clauses for creation of domain indexes.

ORA-29851: cannot build a domain index on more than one column

Cause: User attempted to build a domain index on more than one column.

Action: Build the domain index only on a single column.

ORA-29852: keyword IS is missing

Cause: IS keyword must be specified with Create Index statement for domain indexes.

Action: Use IS keyword and then specify the indextype name.

ORA-29853: keyword UNIQUE may not be used in creating domain indexes

Cause: An attempt was made to create a domain index with the UNIQUE attribute.

Action: Remove UNIQUE from the CREATE INDEX statement.

ORA-29854: keyword BITMAP may not be used in creating domain indexes

Cause: An attempt was made to create a domain index with the BITMAP attribute.

Action: Remove BITMAP from the CREATE INDEX statement.

ORA-29855: error occurred in the execution of ODCIINDEXCREATE routine

Cause: Failed to successfully execute the ODCIIndexCreate routine.

Action: Check to see if the routine has been coded correctly.

ORA-29856: error occurred in the execution of ODCIINDEXDROP routine

Cause: Failed to successfully execute the ODCIIndexDrop routine.

Action: Check to see if the routine has been coded correctly.

ORA-29857: domain indexes and/or secondary objects exist in the tablespace

Cause: An attempt was made to drop a tablespace which contains secondary objects and/or domain indexes.

Action: Drop the domain indexes in his tablespace. Also, find the domain indexes which created secondary objects in this tablespace and drop them. Then try dropping the tablespace.

ORA-29858: error occurred in the execution of ODCIINDEXALTER routine

Cause: Failed to successfully execute the ODCIIndexAlter routine.

Action: Check to see if the routine has been coded correctly.

ORA-29859: error occurred in the execution of ODCIINDEXTRUNCATE routine

Cause: Failed to successfully execute the ODCIIndexTruncate routine.

Action: Check to see if the routine has been coded correctly.

ORA-29860: cannot truncate a table with domain indexes marked LOADING

Cause: The table has domain indexes defined on it that are marked LOADING.

Action: Wait to see if the ongoing index DDL ends and the index state changes from LOADING state. Else ,drop the domain indexes marked as LOADING with the FORCE option.

ORA-29861: domain index is marked LOADING/FAILED/UNUSABLE

Cause: An attempt has been made to access a domain index that is being built or is marked failed by an unsuccessful DDL or is marked unusable by a DDL operation.

Action: Wait if the specified index is marked LOADING Drop the specified index if it is marked FAILED Drop or rebuild the specified index if it is marked UNUSABLE.

ORA-29862: cannot specify FORCE option for dropping non-domain index

Cause: A DROP INDEX FORCE was issued for a non-domain index.

Action: Reissue the command without the FORCE option.

ORA-29863: warning in the execution of ODCIINDEXCREATE routine

Cause: A warning was returned from the ODCIIndexCreate routine.

Action: Check to see if the routine has been coded correctly Check user specified log tables for greater detail.

ORA-29864: analyzing domain indexes marked LOADING/FAILED not supported

Cause: Tried to analyze a domain index which was marked as LOADING or FAILED.

Action: If the index was marked LOADING, wait till it is marked valid before retrying the analyze. If index was marked FAILED, drop it OR rebuild it and retry the analyze.

ORA-29865: indextype is invalid

Cause: The indextype is invalid.

Action: Drop and recreate the indextype.

ORA-29866: cannot create domain index on a column of index-organized table

Cause: Tried to create a domain index on a column of an index-organized table.

Action: Do not attempt to create a domain index on columns of an index-organized table.

ORA-29867: cannot create a domain index on a LONG column

Cause: The user attempted to create a domain index on a column of LONG datatype.

Action: Do not create a domain index on a LONG column.

ORA-29868: cannot issue DDL on a domain index marked as LOADING

Cause: Tried to issue a DROP/ALTER/TRUNCATE on a domain index in a LOADING state.

Action: Wait till the index operation completes OR issue a DROP INDEX FORCE to drop the index.

ORA-29869: cannot issue ALTER without REBUILD on a domain index marked FAILED

Cause: Tried to issue a DROP/ALTER on a domain index in a FAILED state.

Action: Truncate the table to mark the index as valid OR do ALTER INDEX REBUILD to rebuild the index.

ORA-29870: specified options are only valid for altering a domain index

Cause: Specified the ONLINE or PARAMETERS clause with a non-domain index.

Action: Reissue the statement with the correct syntax for alter.

ORA-29871: invalid alter option for a domain index

Cause: The user specified an invalid option for altering a domain index.

Action: Reissue the alter statement with a valid option.

ORA-29872: parameters clause cannot be combined with the specified options

Cause: The user combined PARAMETERS clause with other alter index options.

Action: Reissue the statement with the correct syntax for alter.

ORA-29873: warning in the execution of ODCIINDEXDROP routine

Cause: A warning was returned from the ODCIIndexDrop routine.

Action: Check to see if the routine has been coded correctly Check the user defined warning log tables for greater details.

ORA-29874: warning in the execution of ODCIINDEXALTER routine

Cause: A warning was returned from the ODCIIndexAlter routine.

Action: Check to see if the routine has been coded correctly Check the user defined warning log tables for greater details.

ORA-29875: failed in the execution of the ODCIINDEXINSERT routine

Cause: Failed to successfully execute the ODCIIndexInsert routine.

Action: Check to see if the routine has been coded correctly.

ORA-29876: failed in the execution of the ODCIINDEXDELETE routine

Cause: Failed to successfully execute the ODCIIndexDelete routine.

Action: Check to see if the routine has been coded correctly.

ORA-29877: failed in the execution of the ODCIINDEXUPDATE routine

Cause: Failed to successfully execute the ODCIIndexUpdate routine.

Action: Check to see if the routine has been coded correctly.

ORA-29878: warning in the execution of ODCIINDEXTRUNCATE routine

Cause: A warning was returned from the ODCIIndexTruncate routine.

Action: Check to see if the routine has been coded correctly Check the user defined warning log tables for greater details.

ORA-29879: cannot create multiple domain indexes on a column list using same indextype

Cause: An attempt was made to define multiple domain indexes on the same column list using identical indextypes.

Action: Check to see if a different indextype can be used or if the index can be defined on another column list.

ORA-29880: such column list already indexed using another domain index and indextype

Cause: An attempt was made to create multiple domain indexes on a column list using indextypes which do not have disjoint operators.

Action: Check to see if the operator sets for the indextypes can be made disjoint.

ORA-29881: failed to validate indextype

Cause: Indextype cannot be compiled.

Action: Try to compile the indextype which is referenced by the domain index.

ORA-29882: insufficient privileges to execute indextype

Cause: User does not have privileges to execute the indextype.

Action: The owner of the indextype must grant appropriate privileges to the user.

ORA-29883: cannot create a domain index on column expressions

Cause: User specified an expression in the column list.

Action: Specify only simple columns in the column list for domain index.

ORA-29884: domain index is defined on the column to be dropped

Cause: An ALTER TABLE DROP COLUMN was issued on a column on which a domain index exists.

Action: Drop the domain index before attempting to drop the column.

ORA-29885: domain index is defined on the column to be modified

Cause: An ALTER TABLE MODIFY COLUMN was issued on a column on which a domain index exists.

Action: Drop the domain index before attempting to modify the column.

ORA-29886: feature not supported for domain indexes

Cause: Feature is not supported for domain indexes.

Action: No action required.

ORA-29887: cannot support row movement if domain index defined on table

Cause: An ALTER TABLE ENABLE ROW MOVEMENT was issued on a table which has a domain index defined on it.

Action: Drop the domain index if you want to enable row movement and then reissue the command.

ORA-29888: cannot create domain index on a table with row movement enabled

Cause: A create domain index statement was issued on a table that has row movement enabled.

Action: Disable the row movement in the table and then reissue the create domain index statement.

ORA-29890: specified primary operator does not have an index context

Cause: The primary operator does not have an index and scan contexts.

Action: Create the primary operator with a context clause.

ORA-29892: indextypes with array DML do not support the given data type

Cause: The user specified a REF or a LONG datatype which is not supported in CREATE/ALTER INDEXTYPE WITH ARRAY DML (DATA_TYPE, VARRAY_TYPE).

Action: Reissue the CREATE/ALTER INDEXTYPE statement without the REF or LONG datatype.

ORA-29893: indextypes without column data do not need the given data type

Cause: WITH ARRAY DML (DATA_TYPE, VARRAY_TYPE) option and WITHOUT COLUMN DATA option conflicted in an alter indextype statement

Action: Reissue the ALTER INDEXTYPE statement without the conflict.

ORA-29894: base or varray datatype does not exist

Cause: One of the base and varray datatypes specified in WITH ARRAY DML (DATA_TYPE, VARRAY_TYPE) clause could not be found.

Action: Check to see if the datatype exists and the user has EXECUTE privilege on this datatype.

ORA-29895: A duplicate base data type was specified.

Cause: An attempt was made to add a base data type to an indextype with an ARRAY DML that is already supported by the indextype.

Action: Remove the duplicate base data type and retry the command.

ORA-29896: Length of PARAMETER string longer than *string* characters

Cause: An attempt was made to specify a parameter value that is longer than the allowed maximum.

Action: Reduce the parameter value length.

ORA-29897: invalid domain index "*string*" found on the same column

Cause: An attempt was made to create a domain index on the same column where an invalid domain index exists.

Action: Drop the invalid index and reissue the CREATE INDEX statement.

ORA-29900: operator binding does not exist

Cause: There is no binding for the current usage of the operator.

Action: Change the operator arguments to match any of the existing bindings or add a new binding to the operator.

ORA-29901: function underlying operator binding does not exist

Cause: The function underlying the operator binding does not exist.

Action: Ensure that the function corresponding to the operator invocation exists.

ORA-29902: error in executing ODCIIndexStart() routine

Cause: The execution of ODCIIndexStart routine caused an error.

Action: Examine the error messages produced by the indextype code and take appropriate action.

ORA-29903: error in executing ODCIIndexFetch() routine

Cause: The execution of ODCIIndexFetch routine caused an error.

Action: Examine the error messages produced by the indextype code and take appropriate action.

ORA-29904: error in executing ODCIIndexClose() routine

Cause: The execution of ODCIIndexClose routine caused an error.

Action: Examine the error messages produced by the indextype code and take appropriate action.

ORA-29905: method *string* does not exist in type *string.string*

Cause: A required method with the required signature does not exist in the specified type.

Action: Add the required method to the type.

ORA-29906: indextype *string.string* does not exist

Cause: The indextype does not exist.

Action: Create the indextype.

ORA-29907: found duplicate labels in primary invocations

Cause: There are multiple primary invocations of operators with the same number as the label.

Action: Use distinct labels in primary invocations.

ORA-29908: missing primary invocation for ancillary operator

Cause: The primary invocation corresponding to an ancillary operator is missing.

Action: Add the primary invocation with the same label as the ancillary operator.

ORA-29909: label for the ancillary operator is not a literal number

Cause: The label used for invoking the ancillary operator is not a literal number.

Action: Use a literal number as the label.

ORA-29910: invalid callback operation

Cause: Encountered an invalid callback operation.

Action: Ensure that all the callbacks executed from callouts are valid in the statement context.

ORA-29911: null scan context returned by ODCIIndexStart() routine

Cause: The ODCIIndexStart() routine returned a null scan context

Action: Ensure that the ODCIIndexStart() routine returns a non-null scan context.

ORA-29913: error while executing *string* routine

Cause: The execution of the specified data cartridge routine caused an error, or the implementation of the data cartridge routine returned the ODCI_ERROR return code.

Action: Review the other error messages associated with this error and take the appropriate action to resolve them.

ORA-29914: ODCIGETINTERFACES routine does not return required stream version

Cause: The ODCIObjectList returned by the ODCIGetInterfaces routine does not contain the required stream version for external tables.

Action: Ensure that the ODCIGetInterfaces routine returns the required stream version.

ORA-29915: FOR UPDATE clause cannot be used when selecting a collection operand.

Cause: Collection operands cannot be updated.

Action: Remove FOR UPDATE clause.

ORA-29917: cannot lock a table which gets its rows from a collection operand

Cause: Tables which gets its rows from a collection operand cannot be locked

Action: Don't lock the table

ORA-29918: cannot create domain indexes on temporary tables

Cause: An attempt was made to create a domain index on a temporary table

Action: Either create another type of index on the temporary table or change the table from temporary to a permanent table

ORA-29919: failed in the execution of the ODCIINDEXUPDPARTMETADATA routine

Cause: Failed to successfully execute the ODCIINDEXUPDPARTMETADATA routine.

Action: Check to see if the routine has been coded correctly.

ORA-29920: failed in the partition maintenance operation of secondary table

Cause: Failed to successfully execute the partition maintenance operation of a secondary table in system managed domain index.

Action: Check to see if the partition of a secondary table exists.

ORA-29921: ancillary operator not supported with set view query block

Cause: The ancillary operator matched to a primary operator was outside a UNION ALL view query block while the primary operator was contained in one of the UNION ALL branches.

Action: Define the UNION ALL view query block to contain both the primary and ancillary operators, so that the operators are contained by the query block in the UNION ALL branch, rather than in the query block outside of the view.

ORA-29922: Invalid rowid returned by the user-defined query methods

Cause: An invalid row identifier was returned by the user-defined query methods.

Action: Check the implementation of the indextype methods to make sure that the index creation and query methods are correct.

ORA-29925: cannot execute *string*

Cause: The specified function does not exist or does not have an appropriate signature.

Action: Implement the function with the appropriate signature.

ORA-29926: association already defined for the object

Cause: The object for which the association is being defined, already has a statistics type associated with it.

Action: Disassociate the object and then associate the object.

ORA-29927: error in executing the ODCIStatsCollect / ODCIStatsDelete routine

Cause: The ODCIStatsCollect / ODCIStatsDelete function is causing an error.

Action: Check the ODCIStatsCollect / ODCIStatsDelete function.

ORA-29928: duplicate default selectivity specified

Cause: The keyword DEFAULT SELECTIVITY can only be specified once.

Action: Remove the duplicate keyword.

ORA-29929: missing SCAN Keyword

Cause: The scan context is not specified.

Action: Supply the SCAN keyword.

ORA-29930: COMPUTE ANCILLARY DATA specified without the INDEX CONTEXT clause

Cause: The COMPUTE ANCILLARY DATA option was specified without the WITH INDEX CONTEXT clause.

Action: Specify the WITH INDEX CONTEXT option.

ORA-29931: specified association does not exist

Cause: One or more of the object(s) that have been specified to be disassociated, do not have an association defined for them.

Action: Verify the objects which have an association defined and issue the disassociate command again.

ORA-29932: the type being dropped is a statistics type

Cause: Some objects have defined their statistics methods in the type being dropped.

Action: First drop the relevant associations using the DISASSOCIATE command and then retry the DROP command, or use the FORCE option with DROP TYPE command.

ORA-29933: object being disassociated has some user defined statistics stored

Cause: There are some user defined statistics collected for the object being disassociated.

Action: First delete the user defined statistics and then reissue the DISASSOCIATE command or specify the FORCE option with DISASSOCIATE.

ORA-29934: index specified for association is not a domain index

Cause: The user issued an ASSOCIATE STATISTICS command with an index which is not a domain index.

Action: Issue an ASSOCIATE STATISTICS WITH INDEXES command on a domain index only

ORA-29935: missing FROM keyword

Cause: The keyword FROM is missing.

Action: Specify the FROM keyword or check the SQL statement.

ORA-29936: NULL association is allowed only with a column or an index

Cause: User tried to use the ASSOCIATE command with a schema object other than a column or an index

Action: Specify the NULL clause only with a column or an index

ORA-29937: domain index cannot be system-managed

Cause: An ASSOCIATE STATISTICS command was issued with a domain index which is system-managed.

Action: Check to see if the domain index has been implemented with system-managed storage tables. To associate statistics with a system-managed domain index, issue ASSOCIATE STATISTICS command with the indextype of this domain index.

ORA-29938: both indextype and statistics type should be system-managed

Cause: Either an ASSOCIATE STATISTICS WITH SYSTEM MANAGED STORAGE TABLES command was issued with an indextype which is not system-managed, or an ASSOCIATE STATISTICS command was issued with an indextype which is system-managed.

Action: Check to see if both indextype and statistics type are implemented with system-managed storage tables.

ORA-29939: could not implicitly transform user-managed domain index to system-managed domain index

Cause: Implicit validation of a user-managed domain index with a system-managed indextype failed.

Action: Issue an ALTER INDEX COMPILE command on the domain index.

ORA-29940: User-managed domain indexes are not allowed on interval-partitioned tables.

Cause: An attempt was made to create a local user-managed domain index on an interval-partitioned table.

Action: Convert the underlying index type to system-managed.

ORA-29941: Cannot convert a table with user-managed local domain indexes to interval partitioning.

Cause: An attempt was made to convert a range-partitioned table with local user-managed domain indexes to interval partitioning.

Action: Either convert the underlying index type to system-managed or drop the local user-managed domain index before converting the table to interval partitioning.

ORA-29950: warning in the execution of ODCIINDEXMERGEPARTITION routine

Cause: A warning was returned from the ODCIIndexMergePartition routine.

Action: Check to see if the routine has been coded correctly Check user specified log tables for greater detail.

ORA-29951: warning in the execution of ODCIINDEXSPLITPARTITION routine

Cause: A warning was returned from the ODCIIndexSplitPartition routine.

Action: Check to see if the routine has been coded correctly Check user specified log tables for greater detail.

ORA-29952: cannot issue DDL on a domain index partition marked as LOADING

Cause: Tried to issue a DROP/ALTER/TRUNCATE on a domain index partition in a LOADING state.

Action: Wait till the index partition operation completes OR issue a DROP INDEX FORCE to drop the index OR issue a ALTER TABLE DROP PARTITION to drop the partition.

ORA-29953: Cannot issue a DDL statement on domain index partition *string* which is in FAILED status.

Cause: Attempted to start a partition maintenance operation on a table with the specified domain index partition in a FAILED state or to modify the parameters of that specified domain index partition in a FAILED state.

Action: Rebuild the index partition by using the ALTER INDEX REBUILD PARTITION statement or remove all rows from the partition using the ALTER TABLE TRUNCATE PARTITION statement.

ORA-29954: domain index partition is marked LOADING/FAILED/UNUSABLE

Cause: An attempt has been made to access a domain index that is being built or is marked failed by an unsuccessful DDL or is marked unusable by a DDL operation.

Action: Wait if the specified index partition is marked LOADING Rebuild the specified index partition if it is marked FAILED or UNUSABLE.

ORA-29955: error occurred in the execution of ODCIINDEXEXCHANGEPARTITION routine

Cause: Failed to successfully execute the ODCIIndexExchangePartition routine.

Action: Check to see if the routine has been coded correctly.

ORA-29956: warning in the execution of ODCIINDEXEXCHANGEPARTITION routine

Cause: A warning was returned from the ODCIIndexExchangePartition routine.

Action: Check to see if the routine has been coded correctly Check user specified log tables for greater detail.

ORA-29957: cannot create a function-based domain index on a *string* table

Cause: User specified an unsupported create function-based domain index statement.

Action: Issue the create function-based domain index statement only on supported types of tables.

ORA-29958: fatal error occurred in the execution of ODCIINDEXCREATE routine

Cause: Failed to successfully execute the ODCIIndexCreate routine.

Action: Check to see if the routine has been coded correctly.

ORA-29959: error in the execution of the *string* routine for one or more of the index partitions

Cause: An error occurred during execution of the routine for one or more of the index partitions

Action: Check the *_IND_PARTITIONS view to see which partitions are marked FAILED.
Rebuild or Truncate the FAILED index partitions

ORA-29960: line *string*, *string*

Cause: The ODCIIndex DDL routine has put a warning message into table SYS.ODCI_WARNINGS\$

Action: Check the warning message

ORA-29961: too many warnings occurred in the execution of ODCIIndex DDL routine

Cause: The number of warnings during the ODCIIndex DDL routine is too high.

Action: Query table SYS.ODCI_WARNINGS\$ to get more warning messages

ORA-29962: fatal error occurred in the execution of ODCIINDEXALTER routine

Cause: Failed to successfully execute the ODCIIndexAlter routine.

Action: Check to see if the routine has been coded correctly.

ORA-29963: missing BINDING keyword

Cause: Keyword BINDING is expected .

Action: Specify the BINDING keyword or check the SQL statement.

ORA-29964: missing ADD or DROP keyword

Cause: One of the keywords ADD or DROP is expected.

Action: Specify the ADD or DROP keyword or check the SQL statement.

ORA-29965: The specified binding does not exist

Cause: The binding specified in the DROP BINDING clause is not a valid binding for this operator.

Action: Specify an existing binding for this op in DROP BINDING clause.

ORA-29966: The only binding of an operator cannot be dropped

Cause: This operator only has one binding. It cannot be dropped using Alter Operator Drop Binding.

Action: If you wish to drop the entire operator, call Drop Operator.

ORA-29967: Cannot drop an operator binding with dependent objects

Cause: The operator binding that is being dropped has dependent objects.

Action: Either drop the dependent objects first and then issue the ALTER OPERATOR DROP BINDING command or specify the FORCE option with ALTER OPERATOR DROP BINDING.

ORA-29968: No primary operator bindings found for ancillary binding #*string*

Cause: At least one ancillary binding of the specified operator could not be validated because all of its associated primary operator bindings have been dropped.

Action: Either drop the ancillary binding whose primary operators are missing, or drop the entire operator, if this is the only binding. This binding cannot be re-validated.

ORA-29970: Specified registration id does not exist

Cause: An incorrect regid value was passed to dbms_chnf procedure.

Action: pass the correct regid value.

ORA-29971: Specified table name not found or does not have any registrations

Cause: The database could not locate the passed in table name

Action: Check the table name passed in.

ORA-29972: user does not have privilege to change/ create registration

Cause: User passed in an incorrect or someone else's regid/ handle.

Action: Check the passed in regid/ reg handle

ORA-29973: Unsupported query or operation during change notification registration

Cause: The user attempted to register an unsupported query type or an unsupported operation like a DML/DDDL for change notification.

Action: Please check the statement being executed and refer to the documentation.

ORA-29974: Internal event for PL/SQL debugging

Cause: None

Action: None

ORA-29975: Cannot register a query in the middle of an active transaction

Cause: User tried to register a query within an uncommitted transaction.

Action: Commit the transaction and retry.

ORA-29976: Unsupported query for registration in guaranteed mode

Cause: An operator or expression in the query was incompatible with query registration in the guaranteed granularity mode.

Action: Check all expressions, clauses and operators in the query and refer to the documentation for supported query types. The application can reattempt the query registration in best effort mode.

ORA-29977: Unsupported column type for query registration in guaranteed mode

Cause: An attempt was made to register a query with an unsupported column type or too many columns.

Action: Examine all column datatypes in the expression and refer to the documentation for supported query types. The application can reattempt the query registration in best effort mode.

ORA-29978: Internal event for tracing Inband Notifications

Cause: None

Action: None

ORA-29979: unsupported row size for query result change notification

Cause: An attempt was made to register query result change notification (QRCN) on a table with more than 255 columns.

Action: Use object change notification (OCN) instead.

ORA-29981: Cannot register query: conflicting DDL in progress

Cause: A query registration was attempted while there was a concurrent DDL in progress.

Action: Retry the query registration.

ORA-29982: Table type not supported for query registration in guaranteed mode

Cause: The user attempted to register a query involving an unsupported table type.

Action: Examine all tables in the query registration and refer to the documentation for supported table types. The application can reattempt registration in best effort mode.

ORA-29983: Unsupported query for Continuous Query Notification

Cause: The query cannot be registered for Continuous Query Notification.

Action: The query has some constructs that make it incompatible with Continuous Query Notification like synonyms or views. Please check the documentation for complete list.

ORA-29984: Internal event to force CHNF registrations

Cause: None

Action: None

ORA-29985: Query Registration is only supported for automatic undo management

Cause: User is using manual undo management

Action: Switch to using automatic undo management

ORA-30000: missing either trim specification or char expression in TRIM

Cause: Since FROM is specified in TRIM function, either trim specification (TRAILING, HEADING, BOTH) or trim character or both must be specified.

Action: Add either trim specification (TRAILING, HEADING, BOTH) or trim character or both.

ORA-30001: trim set should have only one character

Cause: Trim set contains more or less than 1 character. This is not allowed in TRIM function.

Action: Change trim set to have only 1 character.

ORA-30002: SYS_CONNECT_BY_PATH function is not allowed here

Cause: SYS_CONNECT_BY_PATH function was called at places other than the SELECT list and ORDER BY clause.

Action: Remove calls to SYS_CONNECT_BY_PATH function at places other than the SELECT list and ORDER BY clause.

ORA-30003: illegal parameter in SYS_CONNECT_BY_PATH function**ORA-30004: when using SYS_CONNECT_BY_PATH function, cannot have separator as part of column value**

Cause: A column value contained the string that the SYS_CONNECT_BY_PATH function was to use to separate column values.

Action: Specify another separator for the SYS_CONNECT_BY_PATH function to use which does not occur in any column value, then retry.

ORA-30005: missing or invalid WAIT interval

Cause: A non-zero integer must be specified for wait interval (in seconds) after the WAIT keyword.

Action: Correct the syntax and retry.

ORA-30006: resource busy; acquire with WAIT timeout expired or DTP service is unavailable

Cause: The requested resource was busy or the Distributed Transaction Processing (DTP) service was being relocated.

Action: Retry the operation later.

ORA-30007: CONNECT BY ROOT operator is not supported in the START WITH or in the CONNECT BY condition

Cause: An attempt was made to use CONNECT BY ROOT operator in the START WITH or in the CONNECT BY condition.

Action: Remove CONNECT BY ROOT operator from the START WITH or from the CONNECT BY condition.

ORA-30008: CONNECT BY clause must reference a PRIOR

Cause: A CONNECT BY clause did not include a predicate referencing a PRIOR so there was no condition connecting a parent row to its child row.

Action: Add a reference to a PRIOR in the CONNECT BY clause.

ORA-30009: Not enough memory for *string* operation

Cause: The memory size was not sufficient to process all the levels of the hierarchy specified by the query.

Action: In WORKAREA_SIZE_POLICY=AUTO mode, set PGA_AGGREGATE_TARGET to a reasonably larger value. Or, in WORKAREA_SIZE_POLICY=MANUAL mode, set SORT_AREA_SIZE to a reasonably larger value.

ORA-30010: Not enough I/O buffers for the sort operation

Cause: The sort was unable to allocate enough I/O buffers.

Action: Increase the amount of memory allowed for the sort or increase the maximum number of I/O buffers allowed in the system and retry the query.

ORA-30011: Error simulated: psite=*string*, ptype=*string*

Cause: error generated for testing purposes.

Action: None

ORA-30012: undo tablespace '*string*' does not exist or of wrong type

Cause: the specified undo tablespace does not exist or of the wrong type.

Action: Correct the tablespace name and reissue the statement.

ORA-30013: undo tablespace '*string*' is currently in use

Cause: the specified undo tablespace is currently used by another instance.

Action: Wait for the undo tablespace to become available or change to another name and reissue the statement.

ORA-30014: operation only supported in Automatic Undo Management mode

Cause: the operation is only supported in automatic undo mode.

Action: restart instance in Automatic Undo Management mode before retrying operation.

ORA-30015: previously offlined undo tablespace '*string*' is still pending

Cause: the current operation is not allowed because an undo tablespace containing active transactions is pending from a previous SWITCH UNDO operation. The operation will be allowed again after all transactions in the previous undo tablespace are committed.

Action: Wait for all previous transactions to commit before reissuing the current statement.

ORA-30016: undo tablespace '*string*' is already in use by this instance

Cause: the specified undo tablespace is currently used by this instance. The operation failed.

Action: If the specified undo tablespace name is wrong, reissue the statement with the correct name.

ORA-30017: segment '*string*' is not supported in *string* Undo Management mode

Cause: the type of the specified undo segment is incompatible with the current undo management mode of the instance.

Action: Check the undo segment name and the undo management mode and reissue statement if necessary.

ORA-30018: Create Rollback Segment failed, USN *string* is out of range

Cause: the system runs out of undo segment number. Too many undo segments exist.

Action: drop some of the unused undo segments and retry operation.

ORA-30019: Illegal rollback Segment operation in Automatic Undo mode

Cause: This operation only allowed in Manual Undo mode.

Action: restart instance in Manual Undo_Management mode and retry operation.

ORA-30021: Operation not allowed on undo tablespace

Cause: This operation is not allowed on undo tablespaces

Action: Check the tablespace name and reissue command if necessary

ORA-30022: Cannot create segments in undo tablespace

Cause: Cannot create segments in undo tablespace

Action: Check the tablespace name and reissue command

ORA-30023: Duplicate undo tablespace specification

Cause: Cannot create more than one undo tablespace during database creation

Action: Modify the command to contain only one undo tablespace

ORA-30024: Invalid specification for CREATE UNDO TABLESPACE

Cause: You have specified an clause that should not used with CREATE UNDO TABLESPACE

Action: Drop the clause from the command and reissue it.

ORA-30025: DROP segment '*string*' (in undo tablespace) not allowed

Cause: Explicit DROP operation is not allowed on undo tablespace segments

Action: Check the undo segment name and reissue statement if necessary.

ORA-30026: Undo tablespace '*string*' has unexpired undo with *string*(sec) left, Undo_Retention=*string*(sec)

Cause: Tried to drop a tablespace that contains unexpired undo information

Action: lower setting of UNDO_RETENTION or wait a while before reissue command to drop undo tablespace

ORA-30027: Undo quota violation - failed to get *string* (bytes)

Cause: the amount of undo assigned to the consumer group of this session has been exceeded.

Action: ask DBA to increase undo quota, or wait until other transactions to commit before proceeding.

ORA-30029: no active undo tablespace assigned to instance

Cause: the current instance does not have an active undo tablespace assigned to execute transactions.

Action: ask DBA to create an undo tablespace, online the undo tablespace and then retry operation.

ORA-30030: suppress resumable related error message

Cause: none

Action: This event is to be used if the errors 30031 and 30032 wish to be suppressed.

ORA-30031: the suspended (resumable) statement has been aborted

Cause: DBA or the user aborted the execution of the suspended statement in the resumable session

Action: None

ORA-30032: the suspended (resumable) statement has timed out

Cause: A correctible error was signaled in the resumable session and the error was not cleared within the timeout interval.

Action: Fix the correctible error within the timeout. Default is 2 hours. Or increase the (resumable) timeout.

ORA-30033: Undo tablespace cannot be specified as default user tablespace

Cause: It is incorrect to specify undo tablespace as default user tablespace

Action: Check the tablespace name and reissue the command

ORA-30034: Undo tablespace cannot be specified as temporary tablespace

Cause: Undo tablespace cannot be specified as default temporary tablespace for the user

Action: Check the tablespace name and reissue the command

ORA-30035: Undo tablespace cannot be specified as default temporary tablespace

Cause: Undo tablespace cannot be specified as default temporary tablespace for the database

Action: Check the tablespace name and reissue the command

ORA-30036: unable to extend segment by *string* in undo tablespace '*string*'

Cause: the specified undo tablespace has no more space available.

Action: Add more space to the undo tablespace before retrying the operation. An alternative is to wait until active transactions to commit.

ORA-30037: Cannot perform parallel DML after a prior DML on the object

Cause: Attempt to perform parallel DML after another DML on the same object in the same transaction.

Action: Use bitmap segments to perform multiple (parallel) DML operations on the same object. Or commit before issueing the DML

ORA-30038: Cannot perform parallel insert on non-partitioned object

Cause: Attempt to perform parallel insert on a non-partitioned object after a previous DML on the object in the same transaction.

Action: Commit before issueing the insert.

ORA-30039: Cannot drop the undo tablespace

Cause: Cannot drop an undo tablespace that is in use

Action: Switch to a different undo tablespace and then try to drop

ORA-30040: Undo tablespace is offline

Cause: Cannot operate on an offlined undo tablespace

Action: Online the undo tablespace and redo the operation

ORA-30041: Cannot grant quota on the tablespace

Cause: User tried to grant quota on an undo or temporary tablespace

Action: Check the tablespace name and reissue the command

ORA-30042: Cannot offline the undo tablespace

Cause: Cannot offline an undo tablespace that is in use

Action: Switch to a different undo tablespace and then try to offline

ORA-30043: Invalid value '*string*' specified for parameter '*Undo_Management*'

Cause: the specified undo management mode is invalid

Action: Correct the parameter value in the initialization file and retry the operation.

ORA-30044: RETENTION can only specified for an undo tablespace

Cause: An attempt was made to specify RETENTION for a tablespace that is not an undo tablespace.

Action: Modify the CREATE TABLESPACE statement.

ORA-30045: No undo tablespace name specified

Cause: If Create Database has the datafile clause, then undo tablespace name has to be specified, unless using OMF.

Action: Specify the undo tablespace name.

ORA-30046: Undo tablespace *string* not found in control file.

Cause: The specified undo tablespace is not present in the control file.

Action: Modify the CREATE CONTROLFILE statement that created the current control file to include undo tablespace(s) and reissue the statement.

ORA-30051: VERSIONS clause not allowed here

Cause: A VERSIONS clause was specified when it was not allowed.

Action: Do not use the VERSIONS clause

ORA-30052: invalid lower limit snapshot expression

Cause: The lower limit snapshot expression was below the UNDO_RETENTION limit.

Action: Specify a valid lower limit snapshot expression.

ORA-30053: invalid upper limit snapshot expression

Cause: The upper limit snapshot expression is greater than the SQL statement read snapshot.

Action: Specify a valid upper limit snapshot expression.

ORA-30054: invalid upper limit snapshot expression

Cause: The upper limit snapshot expression is less than the lower limit snapshot expression.

Action: Specify a valid upper limit snapshot expression.

ORA-30055: NULL snapshot expression not allowed here

Cause: The snapshot expression is NULL.

Action: Specify a non-NULL snapshot expression.

ORA-30063: Internal Event to Test NTP

Cause: none

Action: None

ORA-30067: Internal Event to turn on nested debugging info

Cause: none

Action: None

ORA-30068: Internal Event to turn on nested

Cause: none

Action: None

ORA-30071: conversion between datetime/interval and string fail

Cause: An error occurs during a conversion between datetime/interval and string data type due to one of the following reasons: - The buffer is too short to hold the result. - The format string is bad.

Action: Correct the problem and try again.

ORA-30072: invalid time zone value

Cause: The value specified for the time zone string, which appears in ALTER SESSION statement, environment variable ORA_SDTZ, or a datetime factor, is not valid.

Action: Specify a valid time zone value.

ORA-30073: invalid adjustment value

Cause: The value is none of the followings: 'ADJUST', 'NO_ADJUST', 'ANSI_DATE', 'ADJUST_WITH_ANSI_DATE'. 'NO_ADJUST' is the default value.

Action: set it to one of the three values

ORA-30074: GLOBAL partitioned index on TIME/TIMESTAMP WITH TIME ZONE not allowed

Cause: try to GLOBAL partitioned index on TIME/TIMESTAMP WITH TIME ZONE.

Action: Do not GLOBAL partitioned index on TIME/TIMESTAMP WITH TIME ZONE.

ORA-30075: TIME/TIMESTAMP WITH TIME ZONE literal must be specified in CHECK constraint

Cause: User is trying to create a constraint on a time or timestamp with or without time zone column without explicitly specifying the time zone.

Action: Use time or timestamp with time zone literals only.

ORA-30076: invalid extract field for extract source

Cause: The extract source does not contain the specified extract field.

Action: Specify a valid extract field for the extract source.

ORA-30077: illegal casting between specified datetime types

Cause: Cannot cast between the specified datetime types.

Action: No action required.

ORA-30078: partition bound must be TIME/TIMESTAMP WITH TIME ZONE literals

Cause: An attempt was made to use a time/timestamp expression whose format does not explicitly have time zone on a TIME/TIMESTAMP or TIME/TIMESTAMP WITH TIME ZONE column.

Action: Explicitly use TIME/TIMESTAMP WITH TIME ZONE literal.

ORA-30079: cannot alter database time zone when the database contains TIMESTAMP WITH LOCAL TIME ZONE columns

Cause: An attempt was made to alter the database time zone when there were tables containing TIMESTAMP WITH LOCAL TIME ZONE columns in the database.

Action: Do not alter the database time zone when there are tables containing TIMESTAMP WITH LOCAL TIME ZONE columns. Alternatively, export the tables containing TIMESTAMP

WITH LOCAL TIME ZONE columns and drop them before altering the database. Finally, re-import the dropped tables.

ORA-30081: invalid data type for datetime/interval arithmetic

Cause: The data types of the operands are not valid for datetime/interval arithmetic.

Action: Specify valid data types for datetime/interval arithmetic.

ORA-30082: datetime/interval column to be modified must be empty to decrease fractional second or leading field precision

Cause: datetime/interval column with existing data is being modified to decrease fractional second or leading field precisions.

Action: Such columns are only allowed to increase the precisions.

ORA-30083: syntax error was found in interval value expression

Cause: A syntax error was found during parsing an interval value value expression.

Action: Correct the syntax.

ORA-30084: invalid data type for datetime primary with time zone modifier

Cause: When a time zone modifier is specified, the data type of datetime primary must be one of the following: TIME, TIME WITH TIME ZONE, TIMESTAMP, TIMESTAMP WITH TIME ZONE.

Action: Specify a valid data type.

ORA-30085: syntax error was found in overlaps predicate

Cause: A syntax error was found during parsing an overlaps predicate.

Action: Correct the syntax.

ORA-30086: interval year-month result not allowed for datetime subtraction

Cause: An attempt was made to specify interval year to month as the result of datetime subtraction.

Action: This is not allowed currently due to unclear specification in SQL Standards for this interval type. Change the interval type to interval day to second and resubmit statement.

ORA-30087: Adding two datetime values is not allowed

Cause: An attempt was made to add two datetime values.

Action: This addition is not allowed.

ORA-30088: datetime/interval precision is out of range

Cause: The specified datetime/interval precision was not between 0 and 9.

Action: Use a value between 0 and 9 for datetime/interval precision.

ORA-30089: missing or invalid *datetime field*

Cause: A *datetime field* (YEAR, MONTH, DAY, HOUR, MINUTE, SECOND) is expected but not found, or a *datetime field* specified the *end field* in an *interval qualifier* is more significant than its *start field*.

Action: n/a

ORA-30091: secondary translation table not loaded

Cause: The secondary translation table for DST patching on TSTZ data was not loaded.

Action: Load the secondary translation table.

ORA-30092: function not allowed at this stage of DST upgrade process

Cause: Query included a function that is not allowed in the current state of DST upgrade process.

Action: This function is not allowed at the current stage of DST upgrade.

ORA-30093: function not allowed until the database is restarted

Cause: Query included a function that is not allowed until the database is restarted.

Action: Shut down and restart the database.

ORA-30094: failed to find the time zone data file for version *string* in \$ORACLE_HOME/oracore/zoneinfo

Cause: There was no corresponding time zone data file in \$ORACLE_HOME/oracore/zoneinfo for the input time zone version.

Action: None

ORA-30095: table created/altered with `TIMESTAMP WITH TIME ZONE` not allowed at current DST upgrade stage

Cause: An attempt was made to create or alter a table to have columns of `TIMESTAMP WITH TIME ZONE` data type or user-defined data types involving `TIMESTAMP WITH TIME ZONE` data type when DST upgrade is in `BEGIN UPGRADE` stage.

Action: Re-issue create/alter table DDL after `DBMS_DST.BEGIN_UPGRADE` is complete.

ORA-30096: imported table "*string*"."*string*" with `TIMESTAMP WITH TIME ZONE` data is not ready for access

Cause: An attempt was made to read or update an imported table with `TIMESTAMP WITH TIME ZONE` data, which has not completed the import process through transportable tablespace mode.

Action: Re-issue SQL statement after transportable tablespace import is complete.

ORA-30097: ambiguous `TIMESTAMP WITH TIME ZONE` data is not allowed at current DST upgrade state

Cause: An attempt was made to insert the ambiguous `TIMESTAMP WITH TIME ZONE` data into a table that had not completed the Daylight Saving Time upgrade process.

Action: Reissue DML statement after the DST upgrade is complete with the table.

ORA-30098: affected `TIMESTAMP WITH TIME ZONE` data is not allowed at current DST upgrade state

Cause: An attempt was made to insert the affected `TIMESTAMP WITH TIME ZONE` data into a table that had not completed the Daylight Saving Time upgrade process.

Action: Reissue DML statement after the DST upgrade is complete with the table.

ORA-30099: delete is not allowed on tables with triggers at current DST upgrade state

Cause: An attempt was made to delete `TIMESTAMP WITH TIME ZONE` data from a table with triggers that had not completed the Daylight Saving Time upgrade process.

Action: Reissue DML statement after the DST upgrade is complete with the table.

ORA-30100: internal error [*number*]

Cause: An internal error has occurred.

Action: Contact Oracle Worldwide Support and report the error.

ORA-30101: unknown parameter name '*string*'

Cause: You have misspelled the parameter name.

Action: Spell the parameter name correctly.

ORA-30102: '*string*' is not in the legal range for '*string*'

Cause: The value of the parameter is not within the legal range.

Action: Refer to the manual for the allowable values for this parameter.

ORA-30103: '*string*' contains an illegal integer radix for '*string*'

Cause: An illegal integer radix specification was found.

Action: Only 'd', 'h', 'D', and 'H' may be used as radix specifications.

ORA-30104: '*string*' is not a legal integer for '*string*'

Cause: The value is not a valid integer.

Action: Specify only valid integers for this parameter.

ORA-30105: '*string*' is not a legal boolean for '*string*'

Cause: The value is not a valid boolean.

Action: Refer to the manual for allowable boolean values.

ORA-30106: reserved for future use

Cause: None.

Action: None

ORA-30107: parameter name abbreviation '*string*' is not unique

Cause: The abbreviation given was not unique.

Action: Use a longer abbreviation to make the parameter name unique.

ORA-30108: invalid positional parameter value '*string*'

Cause: An invalid positional parameter value has been entered.

Action: Remove the invalid positional parameter.

ORA-30109: could not open parameter file '*string*'

Cause: The parameter file does not exist.

Action: Create an appropriate parameter file.

ORA-30110: syntax error at '*string*'

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

ORA-30111: no closing quote for value '*string*'

Cause: A quoted string was begun but not finished.

Action: Put a closing quote in the proper location.

ORA-30112: multiple values not allowed for parameter '*string*'

Cause: You attempted to specify multiple values for a parameter which can take only one value.

Action: Do not specify more than one value for this parameter.

ORA-30113: error when processing file '*string*'

Cause: A problem occurred when processing this file.

Action: Examine the additional error messages and correct the problem.

ORA-30114: error when processing from command line

Cause: A problem occurred when processing the command line.

Action: Examine the additional error messages and correct the problem.

ORA-30115: error when processing an environment variable

Cause: A problem occurred when processing an environment variable.

Action: Examine the additional error messages and correct the problem.

ORA-30116: syntax error at '*string*' following '*string*'

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

ORA-30117: syntax error at '*string*' at the start of input

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

ORA-30118: syntax error at '*string*' at the end of input

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

ORA-30119: unable to obtain a valid value for '*string*'

Cause: No valid value was obtained for this parameter.

Action: Rerun the application and enter a valid value.

ORA-30120: '*string*' is not a legal oracle number for '*string*'

Cause: The value is not a valid oracle number.

Action: Refer to the manual for allowable oracle number values.

ORA-30121: '*string*' is not an allowable value for '*string*'

Cause: The value is not a legal value for this parameter.

Action: Refer to the manual for allowable values.

ORA-30122: value 'string' for 'string' must be between 'number' and 'number'

Cause: The value of the parameter is not within the legal range.

Action: Specify a value that is within the legal range.

ORA-30129: invalid function argument received

Cause: A function received an invalid argument

Action: Check function calls, make sure correct arguments are being passed.

ORA-30130: invalid parameter key type received

Cause: A function received an invalid parameter key type

Action: Check parameter key types in function calls

ORA-30131: number of keys being set exceeds allocation

Cause: Number of parameter keys being set exceeds allocation

Action: Reduce the number of keys being set or increase allocation

ORA-30132: invalid key index supplied

Cause: The key index specified was not within bounds

Action: Change key index to ensure it lies within bounds

ORA-30133: reserved for future use

Cause: None.

Action: None

ORA-30134: reserved for future use

Cause: None.

Action: None

ORA-30135: OCI Thread operation fails

Cause: An OCI Thread function call has failed.

Action: Check the function call to make sure that the correct parameters are being passed and take the appropriate action.

ORA-30136: Drop-in compatibility is not supported for this application

Cause: The current application is statically linked with defopt.o from an older release, which is incompatible with the current client shared library.

Action: 1) Relink the application against the new release of the client library; or 2) Relink the application against the older release of the client library without statically linking defopt.o.

ORA-30150: Invalid argument passed to OCIFile function

Cause: An invalid argument is passed to the OCIFile function. The most common cause is that a NULL pointer is passed where a non-NULL pointer is expected.

Action: Make sure that the values passed as arguments are valid. Esp check for NULL pointers.

ORA-30151: File already exists

Cause: Tried to open a file with OCI_FILE_EXCL flag and the file already exists.

Action: OCIFile is supposed throw this exception in this case.

ORA-30152: File does not exist

Cause: The OCIFile function requires the file to exist, but it does not.

Action: Make sure that the file exists.

ORA-30153: An invalid File Object is passed to the OCIFile function

Cause: An invalid File Object is passed to the OCIFile function.

Action: Make sure that the file object is a valid one. Create a new file object by calling OCIFileOpen if needed.

ORA-30154: The memory address given as buffer for OCIFileRead/Write is invalid

Cause: An invalid memory address is given as the buffer pointer for OCIFileRead/Write.

Action: Make sure that the required memory is allocated and pass a valid memory address as buffer pointer.

ORA-30155: An I/O Error occurred during an OCIFile function call

Cause: An I/O error occurred at the system level.

Action: This is a system error and the action will depend on the error.

ORA-30156: Out of disk space

Cause: The disks associated with the underlying file system are full.

Action: Create more disk space.

ORA-30157: An invalid argument was given to operating system call

Cause: The OS call was called with an invalid argument.

Action: Check the values passed. If unsuccessful to solve the problem contact ORACLE support.

ORA-30158: The OCIFileWrite causes the file to exceed the maximum allowed size

Cause: There is no space to write to the file. Its size is at the maximum limit.

Action: Up to the user.

ORA-30159: OCIFileOpen: Cannot create the file or cannot open in the requested mode

Cause: The create flag was specified in OCIFileOpen such that the file was to be created. But unable to do so. Or the file already exists and the permissions on it doesn't allow the file to be opened in in the requested open mode

Action: Check whether the user has permissions to create the specified file or if the file exists whether the permissions on it allow the requested open mode.

ORA-30160: Unable to access the file

Cause: The function was unable to access the existing the file.

Action: Check if the user has the required permissions on the file.

ORA-30161: A system error occurred during the OCIFile function call

Cause: A system error occurred while executing the OCIFile function.

Action: Depend on the error.

ORA-30162: The OCIFile context is not initialized

Cause: The function OCIFileInit need to be called before calling any other OCIFile function to initialize the OCIFile context.

Action: Call the function OCIFileInit need to be called before calling any other OCIFile function.

ORA-30163: The thread safety initialization failed

Cause: The call to SlgInIt failed in OCIFileInit.

Action: Contact support

ORA-30175: invalid type given for an argument

Cause: There is an argument with an invalid type in the argument list.

Action: Use the correct type wrapper for the argument.

ORA-30176: invalid format code used in the format string

Cause: There is an invalid format code in the format string.

Action: Replace the invalid format code with a valid one.

ORA-30177: invalid flag used in a format specification

Cause: There is an invalid flag in a format specification.

Action: Replace the invalid flag with a valid one.

ORA-30178: duplicate flag used in a format specification

Cause: There is a duplicate flag in a format specification.

Action: Remove the duplicate flag.

ORA-30179: invalid argument index used in a format code

Cause: Zero or negative argument index or index not following (."

Action: Replace the invalid argument index with a valid one.

ORA-30180: argument index is too large

Cause: An argument index exceeds actual number of arguments supplied.

Action: Fix format string or pass additional arguments.

ORA-30181: integer in argument index is not immediately followed by)

Cause: Missing closing parenthesis in argument index.

Action: Fix the format specification.

ORA-30182: invalid precision specifier

Cause: Period in format specification not followed by valid format.

Action: Replace the invalid precision specifier with a valid one.

ORA-30183: invalid field width specifier

Cause: Invalid field width supplied.

Action: Replace the invalid field width with a valid one.

ORA-30184: argument type not compatible with a format code

Cause: Bad argument type given for a format code.

Action: Make format and arguments be compatible.

ORA-30185: output too large to fit in the buffer

Cause: The buffer is not large enough to hold the entire output string.

Action: Fix the buffer size and length passed in.

ORA-30186: " must be followed by four hexadecimal characters or another "

Cause: In the argument of SQL function UNISTR, a " must be followed by four hexadecimal characters or another "

Action: Fix the string format

ORA-30187: Permission denied for 'string' to access procedure GET_KEY.

Cause: The client was unauthorized to invoke the procedure DBMS_INTERNAL_CLKM.GET_KEY.

Action: DBMS_INTERNAL_CLKM.GET_KEY is an Oracle GoldenGate feature and can only be accessed by Oracle GoldenGate.

ORA-30188: reserved for future use

Cause: None.

Action: None

ORA-30189: reserved for future use

Cause: None.

Action: None

ORA-30190: reserved for future use

Cause: None.

Action: None

ORA-30191: missing argument list

Cause: No argument list supplied.

Action: Modify the argument list to have at least OCIFormatEnd in it.

ORA-30192: OGG Service URI: string failed to string process: string name: string - OGG message: string

Cause: Oracle GoldenGate (OGG) AdminService or DistributionService operation failed.

Action: Refer to the Oracle GoldenGate message for required action.

ORA-30193: OGG sharding function called in non-OGG sharding deployment

Cause: Internal error. An Oracle GoldenGate (OGG) specific sharding functionality was called in a non-Oracle GoldenGate sharding deployment.

Action: Contact Oracle Support Services.

ORA-30194: Invalid combination of OGG Sharding deployment parameters specified

Cause: The values specified for Oracle GoldenGate (OGG) sharding deployment parameters (number of shards, number of chunks, replication factor and distribution factor) were not compatible with each other.

Action: Ensure that the following invariants hold for each shardgroup: number of chunks \geq number of shards number of shards \geq replication factor distribution factor \geq replication factor - 1

ORA-30195: OGG command payload contains invalid operation code *string*

Cause: Internal error. The payload for Oracle GoldenGate (OGG) command sent from the Sharding Catalog to the shard database contained invalid operation code.

Action: Contact Oracle Support Services.

ORA-30196: Sharding configuration parameter '*string*' is not set in the shard database.

Cause: Internal error. A database initialization parameter required by the shard database was not set during deployment.

Action: Contact Oracle Support Services.

ORA-30197: reserved for future use

Cause: None.

Action: None

ORA-30198: reserved for future use

Cause: None.

Action: None

ORA-30199: reserved for future use

Cause: None.

Action: None

ORA-30200: Wrong NLS item was passed into OCINlsGetInfo()

Cause: The item is not supported NLS item

Action: Correct the item number passed to OCINlsGetInfo().

ORA-30201: Unable to load NLS data object

Cause: It may be caused by invalid NLS environment setting

Action: Check your NLS environment setting such as ORA_NLS33

ORA-30202: NULL pointer to OCIMsggh was passed to OCIMsg function

Cause: The NULL pointer was passed.

Action: Check your value of OCIMsggh pointer.

ORA-30203: Cannot open message file

Cause: The message may not exist in your system.

Action: Check your message for the given product and facility.

ORA-30204: buffer is not large enough

Cause: The destination buffer is not large enough for storing converted data.

Action: Check the size of the destination buffer.

ORA-30205: invalid Character set

Cause: The specified character set is invalid.

Action: Check if the character set ID is valid.

ORA-30303: Internal error

ORA-30304: Internal error

ORA-30305: Debug mode

ORA-30306: Internal error

ORA-30307: Internal error

ORA-30308: Internal error

ORA-30331: summary does not exist

Cause: A nonexistent summary name was specified.

Action: Check the spelling of the summary name.

ORA-30332: container table already in use by other summary

Cause: Another summary is already using this table as a container table.

Action: Select another table or materialized view as the container table for this summary.

ORA-30333: dimension does not exist

Cause: The dimension named in a dimension DDL statement does not exist.

Action: Check the spelling of the dimension name.

ORA-30334: illegal dimension level name

Cause: A level name in a dimension ddl statement did not conform to SQL identifier rules.

Action: Use a level name that begins with a letter, consists of only letters, digits, and underscores and contains no more than 30 characters.

ORA-30335: JOIN KEY clause references a level not in this hierarchy

Cause: The level name specified with the REFERENCES portion of a JOIN KEY clause in a dimension DDL statement does not reference a level in the hierarchy that contains the JOIN KEY clause.

Action: Check the spelling of the level name.

ORA-30336: no child for specified JOIN KEY

Cause: The level specified in the REFERENCES portion of a JOIN KEY clause in a dimension DDL statement does not have a child level.

Action: Check the spelling of the level name referenced in the JOIN KEY clause. If the referenced level is the first level in the hierarchy, you need not and must not specify a JOIN KEY clause.

ORA-30337: multiple JOIN KEY clauses specified for the same parent level

Cause: Multiple JOIN KEY clauses were specified for a given parent level in a dimension hierarchy.

Action: Match up each JOIN KEY clause with the level it references in the hierarchy. Eliminate the redundant JOIN KEY clause.

ORA-30338: illegal dimension hierarchy name

Cause: An illegal dimension hierarchy name was specified in a dimension DDL statement.

Action: Make sure the name begins with a letter, contains only letters, digits and underscore and contains no more than 30 characters. If you qualify the name with the owner name, make sure the owner name conforms with the requirements for an owner name on your system.

ORA-30339: illegal dimension attribute name

Cause: An illegal dimension attribute name was specified in a dimension DDL statement.

Action: Make sure the name begins with a letter, contains only letters, digits and underscore and contains no more than 30 characters. If you qualify the name with the owner name, make sure the owner name conforms with the requirements for an owner name on your system.

ORA-30340: illegal dimension name

Cause: An illegal dimension name was specified in a dimension DDL statement.

Action: Make sure the name begins with a letter, contains only letters, digits and underscore and contains no more than 30 characters. If you qualify the name with the owner name, make sure the owner name conforms with the requirements for an owner name on your system.

ORA-30341: dropped level has references

Cause: An attempt was made to drop a level using the default or RESTRICT option in a dimension while references to that level remain in the dimension. References can occur in hierarchies and attributes within the dimension.

Action: First remove any referenes to the level prior to dropping it, or specify the CASCADE option with the DROP LEVEL clause.

ORA-30342: referenced level is not defined in this dimension

Cause: A reference to a level not defined within the dimension was found.

Action: Check the spelling of the level name.

ORA-30343: level name is not unique within this dimension

Cause: Two or more levels were defined with the same name.

Action: Check the spelling of the level names.

ORA-30344: number of child cols different from number of parent level cols

Cause: The number of child columns specified in a JOIN KEY clause is not the same as the number of columns in the specified parent level.

Action: Check the child columns and the columns in the definition of the referenced parent level and correct the discrepancy.

ORA-30345: circular dimension hierarchy

Cause: A circularity was found in a dimension hierarchy.

Action: Check the hierarchy for a level name that occurs more than once.

ORA-30346: hierarchy name must be unique within a dimension

Cause: The same name was used for more than one hierarchy in a dimension.

Action: Check the spelling of the hierarchy name.

ORA-30347: a table name is required to qualify the column specification

Cause: A table name was omitted in a column specification where where the column must be qualified by the table name.

Action: Qualify the column with the table name.

ORA-30348: ADD and DROP cannot both be specified

Cause: One or more ADD clauses were found in the same ALTER DIMENSION statement with one or more DROP clauses.

Action: Separate your ADD operations into one ALTER DIMENSION statement and your DROP operations into another.

ORA-30349: specified dimension hierarchy does not exist

Cause: A hierarchy name was encountered that is not defined within the dimension.

Action: Check the spelling of the hierarchy name.

ORA-30350: specified dimension attribute does not exist

Cause: An attribute name was encountered that is not defined within the dimension.

Action: Check the attribute name spelling.

ORA-30351: query rewrite does not currently support this expression

Cause: A complex expression was specified that is not currently supported by query rewrite.

Action: Reduce the complexity of the expression.

ORA-30352: inconsistent numeric precision or string length

Cause: The SELECT expression was of a different numeric precision or string length than the corresponding container column. Therefore, query rewrite cannot guarantee results that are identical to the results obtained with the un-rewritten query.

Action: Correct the precision or string length difference, specify the WITH REDUCED PRECISION option, or disable the REWRITE option on the materialized view.

ORA-30353: expression not supported for query rewrite

Cause: The SELECT clause referenced UID, USER, ROWNUM, SYSDATE, CURRENT_TIMESTAMP, MAXVALUE, a sequence number, a bind variable, correlation variable, a set result, a trigger return variable, a parallel table queue column, collection iterator, a non-deterministic date format token RR, etc.

Action: Remove the offending expression or disable the REWRITE option on the materialized view.

ORA-30354: Query rewrite not allowed on SYS relations

Cause: A SYS relation was referenced in the select clause for a materialized view with query rewrite enabled.

Action: Remove the reference to the SYS relation from the select clause or disable the REWRITE option on the materialized view.

ORA-30355: materialized view container does not exist

Cause: A DROP TABLE command was issued directly against the materialized view container table.

Action: Use the DROP MATERIALIZED VIEW command to clean up the residual meta data for the materialized view. Then use the CREATE MATERIALIZED VIEW statement to recreate the materialized view. Thereafter, use the DROP MATERIALIZED VIEW command rather than the DROP TABLE command to drop a materialized view.

ORA-30356: the specified refresh method is not supported in this context

Cause: The refresh method that was specified is not currently supported.

Action: Specify a different refresh method or change the context to enable support of the chosen refresh method.

ORA-30357: this PL/SQL function cannot be supported for query rewrite

Cause: The statement referenced a PL/SQL function that is not marked DETERMINISTIC.

Action: Perform one of the following actions: - Remove the use of the PL/SQL function. - Mark the PL/SQL function as DETERMINISTIC. - Disable the REWRITE option on the materialized view. The function should be marked DETERMINISTIC only if it always returns the same result value for any given set of input argument values, regardless of any database state or session state. Do not mark the function as DETERMINISTIC if it has any meaningful side-effects.

ORA-30358: summary and materialized view are not in same schema

Cause: An internal Oracle error occurred.

Action: Report the problem through your normal support channels.

ORA-30359: Query rewrite is not supported on SYS materialized views

Cause: An attempt was made to enable the REWRITE option on a materialized view in the SYS schema.

Action: Create the materialized view in a different schema or disable the REWRITE option.

ORA-30360: REF not supported with query rewrite

Cause: The statement contained a REF operator. Repeatable behavior cannot be guaranteed with the REF operator. Therefore, query rewrite cannot support the REF operator.

Action: Remove the reference to the REF operator or disable the REWRITE option on the materialized view.

ORA-30361: unrecognized string type

Cause: An internal Oracle error occurred.

Action: Report the problem through your normal support channels.

ORA-30362: dimension column cannot be a sequence

Cause: The dimension statement referenced a column that is a sequence.

Action: Remove the reference to the sequence.

ORA-30363: columns in a dimension column list must be in the same relation

Cause: The dimension statement contained a column list where the columns are not all from the same relation.

Action: Specify the list of columns using only columns from a single relation.

ORA-30364: this level has the same set of columns as another

Cause: The level definition contained the same set of columns as another level.

Action: Eliminate the redundant level definition.

ORA-30365: left relation in the JOIN KEY clause cannot be same as right

Cause: The relation of the child columns on the left side of the JOIN KEY clause was the same as that of the parent level on the right side.

Action: Remove the JOIN KEY clause. It is not required or allowed when the child and the parent are in the same relation.

ORA-30366: child JOIN KEY columns not in same relation as child level

Cause: The relation of the child columns on the left side of the JOIN KEY clause differed from that of that child level.

Action: Specify the correct child columns in the JOIN KEY clause.

ORA-30367: a JOIN KEY clause is required

Cause: A JOIN KEY clause was omitted in a dimension statement. A JOIN KEY clause is required when the child level and the parent level are not in the same relation.

Action: Specify a JOIN KEY clause to indicate how the relation of the child level joins to the relation of the parent level.

ORA-30368: ATTRIBUTE cannot determine column in a different relation

Cause: An ATTRIBUTE clause in a dimension statement specified a determined column on the right that is in a different relation than that of the level on the left.

Action: Specify attributes only for those dimension levels that functionally determine other columns within the same relation.

ORA-30369: maximum number of columns is 32

Cause: A list of columns was specified using more than 32 columns.

Action: Specify the list using no more than 32 columns.

ORA-30370: set operators are not supported in this context

Cause: A set operator such as UNION, UNION ALL, INTERSECT, or MINUS was encountered in an unsupported context, such as in a materialized view definition.

Action: Re-specify the expression to avoid the use of set operators.

ORA-30371: column cannot define a level in more than one dimension

Cause: A column was used in the definition of a level after it had already been used to define a level in a different dimension.

Action: Reorganize dimension levels and hierarchies into a single dimension such that no column is used to define levels in different dimensions. There is no limit on the number of levels or hierarchies you can place in a dimension. A column can be used to define any number of levels provided all such levels are in the same dimension and provided no two levels contain identical sets of columns.

ORA-30372: fine grain access policy conflicts with materialized view

Cause: A fine grain access control procedure has applied a non-null policy to the query for the materialized view.

Action: In order for the materialized view to work correctly, any fine grain access control procedure in effect for the query must return a null policy when the materialized view is being created or refreshed. This may be done by ensuring that the usernames for the creator, owner, and invoker of refresh procedures for the materialized view all receive a null policy by the user-written fine grain access control procedures.

ORA-30373: object data types are not supported in this context

Cause: An object data type was encountered in an unsupported context.

Action: Re-specify the expression to avoid the use of objects.

ORA-30374: materialized view is already fresh

Cause: If the materialized view is fresh, ORACLE ignores the ALTER MATERIALIZED VIEW *mv* RELY FRESH command, and issues this error message.

Action: None

ORA-30375: materialized view cannot be considered fresh

Cause: If the materialized view is invalid or unusable, it cannot be considered fresh with the ALTER MATERIALIZED VIEW *mv* CONSIDER FRESH command.

Action: None

ORA-30376: prevent sharing of a parsed query of an explain rewrite session

Cause: Explain rewrite generates a shared cursor after parsing the user query. Raising this error will prevent the cursor from being shared.

Action: None

ORA-30377: table *string*.MV_CAPABILITIES_TABLE not found

Cause: You have used the DBMS_MVIEW.EXPLAIN_MVIEW() API before you have defined the MV_CAPABILITIES_TABLE.

Action: Invoke the admin/utlxmv.sql script after connecting to the desired schema.

ORA-30378: MV_CAPABILITIES_TABLE is not compatible with Oracle version

Cause: One or more column definitions in the MV_CAPABILITIES_TABLE is either missing or incompatible with the current Oracle version.

Action: Connect to the appropriate schema, DROP TABLE MV_CAPABILITIES_TABLE and recreate it by invoking the admin/utlxmv.sql script prior to invoking the DBMS_MVIEW.EXPLAIN_MVIEW() API.

ORA-30379: query txt not specified

Cause: You have attempted use DBMS_MVIEW.EXPLAIN_REWRITE() API using an empty query text argument

Action: Input a valid SQL query

ORA-30380: REWRITE_TABLE does not exist

Cause: You have used the DBMS_MVIEW.EXPLAIN_REWRITE() API before you have created the REWRITE_TABLE.

Action: Create it using the admin/utlxrw.sql script after connecting to the desired schema

ORA-30381: REWRITE_TABLE is not compatible with Oracle version

Cause: One or more column definitions in the REWRITE_TABLE is either missing or incompatible with the current Oracle version.

Action: Connect to the appropriate schema, DROP TABLE REWRITE_TABLE and recreate it by invoking the admin/utlxrw.sql script prior to invoking the DBMS_MVIEW.EXPLAIN_REWRITE() API.

ORA-30382: DROP MATERIALIZED VIEW *string.string* operation is not complete

Cause: The drop materialized view operation got an unexpected error while dropping summary object.

Action: Issue the drop materialized view command again

ORA-30383: specified dimension level does not exist in the attribute

Cause: An attribute level was encountered that is not defined within the attribute.

Action: Check the attribute level name spelling.

ORA-30384: specified column name does not exist in the attribute

Cause: A column was encountered that is not defined within the attribute.

Action: Check the attribute column name spelling.

ORA-30385: specified attribute relationship ('*string*' determines '*string*') exists

Cause: The specified attribute relationship has already been declared in one of the attribute clauses

Action: Remove the duplicate attribute relationship

ORA-30386: invalid SQL statement for DECLARE_REWRITE_EQUIVALENCE

Cause: Either the source or destination statement is NULL

Action: Verify both source and destination statement are valid

ORA-30387: invalid rewrite mode for REWRITE_EQUIVALENCE API

Cause: The specified rewrite mode is not supported by REWRITE_EQUIVALENCE API

Action: Verify the rewrite mode is supported by REWRITE_EQUIVALENCE API

ORA-30388: name of the rewrite equivalence is not specified

Cause: The name of the rewrite equivalence is NULL

Action: Input a valid rewrite equivalence name

ORA-30389: the source statement is not compatible with the destination statement

Cause: The SELECT clause of the source statement is not compatible with the SELECT clause of the destination statement

Action: Verify both SELECT clauses are compatible with each other such as numbers of SELECT list items are the same and the datatype for each SELECT list item is compatible

ORA-30390: the source statement is not equivalent to the destination statement

Cause: the set of rows returned by the source SQL text is not the same as the set of rows returned by the destination SQL text

Action: Make sure both source and destination statement return the same number of rows

ORA-30391: the specified rewrite equivalence does not exist

Cause: the specified rewrite equivalence does not exist

Action: Verify the rewrite equivalence has been created

ORA-30392: the checksum analysis for the rewrite equivalence failed

Cause: the given checksum does not match with that generated from the source and destination statements.

Action: Verify the create safe rewrite equivalence statement to see if it has been modified.

ORA-30393: a query block in the statement did not rewrite

Cause: A query block with a REWRITE_OR_ERROR hint did not rewrite

Action: Verify the rewrite equivalence has been created

ORA-30394: source statement identical to the destination statement

Cause: The source statement was identical to the destination statement

Action: Make sure both source and destination statements are not identical

ORA-30397: multiple JOIN KEY clauses specified for the same child level

Cause: Multiple JOIN KEY clauses were specified for a given child level in a dimension hierarchy.

Action: Eliminate the redundant JOIN KEY clauses.

ORA-30398: illegal JOIN KEY clause

Cause: A JOIN KEY clause was specified that did not conform to certain requirements. A JOIN KEY clause connecting a child level with its non-immediate ancestor level is allowed only when that child level and its ancestor level satisfy the following conditions: 1. The immediate parent of the child level must be a skip level. 2. The child level cannot be a skip level. 3. The ancestor level must be a non-skip level. 4. The ancestor level must be the nearest non-skip level to the child level in the hierarchy.

Action: Modify the JOIN KEY clause so that it satisfies the conditions mentioned above.

ORA-30399: a skip level must have at least one column that allows NULL values

Cause: A SKIP clause cannot be specified with a level when all of the columns that make up the level have NOT NULL constraints.

Action: Drop the SKIP clause.

ORA-30400: identical JOIN KEY clauses

Cause: Two JOIN KEY clauses with identical child keys and parent levels were specified.

Action: Eliminate the redundant JOIN KEY clause.

ORA-30401: JOIN KEY columns must be non-null

Cause: The dimension statement failed because the column(s) in the JOIN KEY clause permitted NULL values. The JOIN KEY columns are related to the columns of the dimension's skip levels in one or both of the following ways: 1. A skip level is defined over one or more of the JOIN KEY columns. 2. The attribute clauses of a skip level determine one or more of the JOIN KEY columns.

Action: Modify the JOIN KEY columns so that they do not allow NULL values.

ORA-30403: Daylight Saving Time (DST) upgrade in progress

Cause: Daylight Saving Time upgrade was in progress on a table in the materialized view.

Action: Wait until all tables in the materialized view have gone through DST upgrade.

ORA-30405: hive_table_name missing

Cause: The Hive table name was missing.

Action: Provide the name of the hive table in order to fetch its metadata.

ORA-30406: invalid or missing cluster_id or hive URI

Cause: The cluster ID or the hive URI (Uniform Resource Identifier) or both were missing.

Action: Provide the missing cluster ID or hive URI in order to fetch hive metadata.

ORA-30407: external table not found

Cause: The external table was not found.

Action: Create the specified external table before attempting the operation.

ORA-30408: invalid platform for hive catalog views or DBMS_HADOOP package

Cause: There was an attempt to create hive catalog views or a DBMS_HADOOP package on a platform other than Linux x86-64.

Action: None

ORA-30409: External table partitions are identical to hive table partitions.

Cause: There was an attempt to synchronize an external table with a hive table when external table partitions were identical to the hive table partitions.

Action: None

ORA-30410: External table metadata is incompatible with the source hive table.

Cause: There was an attempt to synchronize an external table with the source hive table with incompatible metadata.

Action: None

ORA-30411: Partition collision occurred because of a data type conversion error.

Cause: There was an attempt to create an Oracle external table partition from a Hive table partition with a partition key value identical to that of an existing partition. The Hive table partition key was of type decimal, but the Oracle table partition key was of type NUMBER(10, 0).

Action: None

ORA-30412: Oracle table to be merged with Hive table is not a Hive external table type.

Cause: An attempt was made to merge external Hive table partitions with a hybrid Oracle table, whose external partitions are not of the Hive type.

Action: None

ORA-30413: Oracle table to be merged with Hive table is already a hybrid partitioned table.

Cause: An attempt was made to merge external Hive table partitions with an already hybrid partitioned Oracle table.

Action: None

ORA-30414: Oracle table to be merged with Hive table must be a list partitioned table.

Cause: An attempt was made to merge external Hive table partitions with an unpartitioned or a non-list partitioned Oracle table.

Action: None

ORA-30415: Oracle table to be merged with Hive table cannot be an external table.

Cause: An attempt was made to merge external Hive table partitions with an Oracle external table.

Action: None

ORA-30416: Hive table to be merged with Oracle table has to be a non-empty partitioned table.

Cause: An attempt was made to merge an external non-partitioned or empty partitioned Hive table with an Oracle table.

Action: None

ORA-30417: The EXTERNAL MODIFY clause cannot be used to modify the location for an ORACLE_BIGDATA external table.

Cause: The EXTERNAL MODIFY clause was used to change the location for an ORACLE_BIGDATA external table.

Action: Create a new external table for the new location.

ORA-30418: cannot execute SELECT FOR UPDATE command from an external partition in a hybrid partitioned table

Cause: A SELECT FOR UPDATE operation on an external partition from a hybrid partitioned table was attempted.

Action: Check if an external partition is selected from a hybrid partitioned table.

ORA-30420: *string* is not a valid identifier

Cause: All identifiers used in the DBMS_OLAP package must have at most 30 characters, and must start with a letter that is followed by any combination of letters, numerals, and the signs '\$', '_', and '#'. Other characters cannot be used in identifiers. The rules for DBMS_OLAP identifiers are the same as for PL/SQL identifiers.

Action: Rename object to conform to the DBMS_OLAP naming rules and try again.

ORA-30430: list does not contain any valid summaries

Cause: List is empty or does not contain the names of existing summaries

Action: Verify that the list of names passed to refresh contains the name of at least one existing summary object

ORA-30431: refresh method must be ANY or INCREMENTAL or FORCE_FULL, not *string*

Cause: An invalid refresh method was specified

Action: Verify that the refresh method is one of 'ANY' or 'INCREMENTAL' or 'FORCE_FULL'

ORA-30432: summary '*string.string*' is in INVALID state

Cause: The summary is in INVALID state and cannot be refreshed

Action: n/a

ORA-30433: '*string.string*' is not a summary

Cause: There is no such summary, therefore it cannot be refreshed

Action: Verify the correct name of the summary

ORA-30434: refresh method must be one of FC?AN, not '*string*'

Cause: An invalid refresh method was specified

Action: Verify that the refresh method is one of 'FC?AN'

ORA-30435: job_queue_processes must be non-zero in order to refresh summaries

Cause: The server must be started with parameter 'job_queue_processes' greater than zero

Action: Correct the value of job_queue_processes and restart the server instance

ORA-30436: unable to open named pipe '*string*'

Cause: The refresh process was unable to open a named pipe to the job queue process usually because of insufficient system resources

Action: This is an internal error. Notify ORACLE technical support

ORA-30437: all job queue processes have stopped running

Cause: All of the job queue processes used by refresh have stopped for some reason. At least one job queue process must be running in order to refresh summaries.

Action: This is an internal error. Notify ORACLE technical support

ORA-30438: unable to access named pipe '*string*'

Cause: The refresh process was unable to access a named pipe to the job queue process after it successfully opened the pipe. This usually indicates an internal or operating system error condition.

Action: This is an internal error. Notify ORACLE technical support

ORA-30439: refresh of '*string.string*' failed because of *string*

Cause: The refresh job queue process encountered an error and is reporting it. The accompanying text of the message indicates cause of the error

Action: Varies, depending upon the reported cause.

ORA-30440: can't fast refresh;refresh complete or set event 30441 for partial refresh

Cause: Both DML and direct-load are performed against detail tables. Fast refresh can only process direct-load inserts.

Action: Refresh complete or set event 30441 to enable partial refresh with only direct-load inserts

ORA-30441: enable partial refresh when both DML and direct load inserts occur

ORA-30442: can not find the definition for filter *string*

Cause: For the specified filterid parameter, there is no corresponding filter definition found in the advisor repository

Action: Use a valid filterid generated by the create_filter function

ORA-30443: definition for filter *string's* item *string* is invalid

Cause: The specified filter is invalid. It contains at least one invalid filter item. If a filter item has a string list, it becomes illegal when the string list cannot be successfully parsed. If the filter item contains a range definition, and the lower bound of the range is greater than the higher bound, the item also becomes invalid.

Action: Remove the illegal filter with the purge_filter sub-program and redefine a correct filter

ORA-30444: rewrite terminated by the sql analyzer

Cause: The sql analyzer terminates the rewrite process

Action: This is an internal error. Notify ORACLE technical support

ORA-30445: workload queries not found

Cause: No workload queries in the advisor repository can satisfy the specified filter

Action: Redefine a new filter or load additional workload queries that can satisfy the specified filter

ORA-30446: valid workload queries not found

Cause: None of the specified queries can be successfully parsed. The error may come from many sources: SQL syntax error, the owner specified by the `load_workload` subprograms do not match the real user who generates the SQL statement

Action: Only load valid SQL statements into the advisor repository. Make sure the statements can be parsed with privilege of the owner as specified in the owner parameter of the `load_workload()` subprogram.

ORA-30447: internal data for run number *string* is inconsistent

Cause: Users should not explicitly modify summary advisor's internal tables. Such modifications may cause inconsistency in the internal tables and result in this error.

Action: Users can call the `DBMS_OLAP.PURGE_RESULTS` subprogram to remove the inconsistent data from summary advisor's internal tables

ORA-30448: internal data of the advisor repository is inconsistent

Cause: Users should not explicitly modify summary advisor's internal tables. Such modifications may cause inconsistency in the internal tables and result in this error.

Action: This is an internal error. Notify ORACLE technical support

ORA-30449: syntax error in parameter *string*

Cause: The syntax for the specified parameter is incorrect

Action: Check ORACLE documentation for the correct syntax

ORA-30450: refresh_after_errors was TRUE; The following MVs could not be refreshed: *string*

Cause: One or more errors occurred during a refresh of multiple summaries.

Action: The `number_of_failures` parameter returns the count of how many failures occurred. The trace logs for each refresh operation describe the each individual failure in more detail

ORA-30451: internal error

Cause: An internal error was detected by the summary refresh subsystem, and aborted the refresh operation

Action: Notify ORACLE support.

ORA-30452: cannot compute AVG(X), VARIANCE(X) or STDDEV(X), without COUNT(X) or SUM(X)

Cause: Incremental refresh of summaries requires a `COUNT(X)` column in order to incrementally refresh `AVG(X)`. It requires both `SUM(X)` and `COUNT(X)` columns in order to refresh `STDDEV(X)` or `VARIANCE(X)`

Action: Make sure that the required columns are part of the summary definition if incremental refresh capability is desired.

ORA-30453: summary contains AVG without corresponding COUNT

Cause: Incremental refresh of summaries with `AVG(X)` requires a `COUNT(X)` column to be included in the summary definition

Action: Make sure that the required columns are part of the summary definition if incremental refresh capability is desired.

ORA-30454: summary contains STDDEV without corresponding SUM & COUNT

Cause: Incremental refresh of summaries with STDDEV(X) requires COUNT(X) and SUM(X) columns to be included in the summary definition

Action: Make sure that the required columns are part of the summary definition if incremental refresh capability is desired.

ORA-30455: summary contains VARIANCE without corresponding SUM & COUNT

Cause: Incremental refresh of summaries with VARIANCE(X) requires COUNT(X) and SUM(X) columns to be included in the summary definition

Action: Make sure that the required columns are part of the summary definition if incremental refresh capability is desired.

ORA-30456: '*string.string*' cannot be refreshed because of insufficient privilege

Cause: The user lacks one or more permissions that are required in order to refresh summaries.

Action: Make sure that the user is granted all required privileges.

ORA-30457: '*string.string*' cannot be refreshed because of unmanaged NOT NULL columns in container

Cause: The container object for the summary contains one or more unmanaged columns do not allow nulls, and which do not specify a default value for those columns.

Action: Make sure that default values are specified for all NOT NULL columns that are not part of the summary definition.

ORA-30458: '*string.string*' cannot be refreshed because the refresh mask is *string*

Cause: An attempt was made to incrementally refresh a summary that is not incrementally refreshable.

Action: Do not attempt to incrementally refresh the summary; use full refresh instead.

ORA-30459: '*string.string*' cannot be refreshed because the refresh method is NONE

Cause: An attempt was made to refresh a summary whose refresh method is NONE

Action: Summaries whose refresh method is NONE (NEVER REFRESH) cannot be refreshed. Alter the summary to change the default refresh method from NONE to some other value.

ORA-30460: '*string.string*' cannot be refreshed because it is marked UNUSABLE

Cause: An attempt was made to refresh a summary which is UNUSABLE

Action: Determine why the summary is UNUSABLE, re-enable it, and retry the refresh.

ORA-30461: '*string.string*' cannot be refreshed because it is marked DISABLED

Cause: An attempt was made to refresh a summary which is DISABLED

Action: Determine why the summary is DISABLED, re-enable it, and retry the refresh.

ORA-30462: unsupported operator: *string*

Cause: An attempt was made to refresh a summary containing an unsupported operator

Action: Verify that all columns of the summary contain expressions that are refreshable.

ORA-30463: '*string*' is not a detail table of any summary

Cause: The list of tables passed to refresh_dependent contains at least one invalid table name. That table is not a detail table of any summary and is therefore an invalid input to refresh_dependent

Action: Verify the correct name of all tables in the list

ORA-30464: no summaries exist

Cause: A call was made to refresh_all_mvviews, but no summaries exist. At least one summary must exist before calling refresh_all_mvviews

Action: Create one or more summaries

ORA-30465: supplied run_id is not valid: *string*

Cause: There are three possible causes: The specified run_id does not exist; the run_id was created by another user other than the current user; the run_id has already been used.

Action: Call DBMS_OLAP.CREATE_ID to create a new id

ORA-30466: can not find the specified workload *string*

Cause: The specified workload_id is not valid

Action: Use a valid workload_id or DBMS_OLAP.WORKLOAD_ALL

ORA-30467: internal data for filter number *string* is inconsistent

Cause: Users should not explicitly modify summary advisor's internal tables. Such modifications may cause inconsistency in the internal tables and result in this error.

Action: Users can call the DBMS_OLAP.PURGE_FILTER subprogram to remove the inconsistent data from summary advisor's internal tables

ORA-30475: feature not enabled: *string*

Cause: The specified feature is not enabled.

Action: Do not attempt to use this feature.

ORA-30476: PLAN_TABLE does not exist in the user's schema

Cause: Estimate_Summary_Size uses Oracle SQL "EXPLAIN PLAN" command to estimate cardinality of the specified select-clause. This requires a table called the PLAN_TABLE in the user's schema. For more information refer to the SQL Reference Manual.

Action: Create the PLAN_TABLE as described for EXPLAIN PLAN. On most systems a script utlxplan.sql will create this table.

ORA-30477: The input select_clause is incorrectly specified

Cause: The input select-clause parameter to Estimate_Summary_Size is incorrectly specified and cannot be compiled.

Action: Check the syntax of the select-clause.

ORA-30478: Specified dimension does not exist

Cause: the specified dimension to be verified does not exist

Action: Check the spelling of the dimension name

ORA-30479: Summary Advisor error\Instring

Cause: An error has occurred in the Summary Advisor package This message will be followed by a second message giving more details about the nature of the error.

Action: See the Summary Advisor documentation for an explanation of the second error message.

ORA-30480: DISTINCT option not allowed with GROUP BY CUBE or ROLLUP**ORA-30481: GROUPING, GROUPING_ID, and GROUP_ID cannot be used without GROUP BY**

Cause: GROUPING functions were used without specifying the GROUP BY clause.

Action: Grouping functions (GROUPING, GROUPING_ID, and GROUP_ID) are used to identify the exact level of aggregation for a subtotal for a GROUP BY ROLLUP, CUBE or GROUPING SETS query. Specify a GROUP BY clause in the query, and specifically use GROUP BY extensions ROLLUP, CUBE or GROUPING SETS.

ORA-30482: DISTINCT option not allowed for this function

Cause: The aggregation function did not support the DISTINCT option.

Action: If DISTINCT functionality is desired, rewrite the expression. Apply the DISTINCT clause in a nested SELECT statement to produce the desired values, and then apply the aggregation function in an outer SELECT statement.

ORA-30483: window functions are not allowed here

Cause: Window functions are allowed only in the SELECT list of a query. And, window function cannot be an argument to another window or group function.

Action: n/a

ORA-30484: missing OVER clause, or invalid identifier found for window function

Cause: The OVER keyword was expected but not found. It may be due to one of the following reasons. 1. The OVER clause for the window function was missing. 2. There were unexpected identifiers before the OVER keyword. Note that for FIRST_VALUE, LAST_VALUE, NTH_VALUE, LEAD, and LAG, the IGNORE/RESPECT NULLS and FROM FIRST/LAST can only be specified either in the argument or before the OVER keyword. 3. A ranking function was given, and it was intended to be used to aggregate, but the argument of the function was missing.

Action: Fix the syntax by adding the OVER clause for the window function if it was missing, or removing invalid identifiers, or adding an argument for ranking functions.

ORA-30485: missing ORDER BY expression in the window specification

Cause: Either the ORDER BY expression is mandatory for this function, or there is an aggregation group without any ORDER BY expression.

Action: n/a

ORA-30486: invalid window aggregation group in the window specification

Cause: If the window specification is specified using RANGE option and there are multiple ORDER BY expressions, then the aggregation group cannot contain any expression (It can only have CURRENT ROW, UNBOUNDED PRECEDING, or UNBOUNDED FOLLOWING). First end point (bound) cannot be UNBOUNDED FOLLOWING and second end point cannot be UNBOUNDED PRECEDING. If the first end point is CURRENT ROW, then second end point can only be CURRENT ROW or *expr* /UNBOUNDED FOLLOWING. If the first end point is *expr* FOLLOWING, then second end point can only be *expr*/UNBOUNDED FOLLOWING.

Action: n/a

ORA-30487: ORDER BY not allowed here

Cause: DISTINCT functions and RATIO_TO_REPORT cannot have an ORDER BY

Action: n/a

ORA-30488: argument should be a function of expressions in PARTITION BY

Cause: The argument of the window function should be a constant for a partition.

Action: n/a

ORA-30489: Cannot have more than one rollup/cube expression list

Cause: GROUP BY clause has more than one rollup/cube expression list.

Action: Modify the query such that only one rollup/cube expressions appear per sub-query.

ORA-30490: Ambiguous expression in GROUP BY ROLLUP or CUBE list

Cause: An expression in the GROUP BY ROLLUP or CUBE list matches an expression in the ordinary GROUP BY expression list

Action: Remove the expression from either ordinary GROUP BY expression list or ROLLUP or CUBE expression list

ORA-30491: missing ORDER BY clause**ORA-30492: One of FIRST or LAST keywords is expected.****ORA-30493: The percentile value specified is out of the range of 0 to 1.**

Cause: The percentile value specified for the PERCENTILE_CONT and PERCENTILE_DISC function was not in the range of 0 to 1.

Action: Specify a value that is in the range of 0 to 1.

ORA-30494: argument [*string*] (*string*) of WIDTH_BUCKET function is NULL or invalid

Cause: An invalid value was specified for the WIDTH_BUCKET function.

Action: Refer to Oracle documentation for a list of valid values for the WIDTH_BUCKET function.

ORA-30495: The argument should be of numeric or date/datetime type.**ORA-30496: argument [*string*] of function *string* should be a constant**

Cause: The specified argument was not a constant.

Action: Change this argument type to be constant.

ORA-30497: argument [*string*] of function *string* should be a constant or a function of expressions in GROUP BY

Cause: The specified argument was neither a constant nor a function of expressions in the GROUP BY clause.

Action: Change the argument type to be a constant or a function of expressions in the GROUP BY clause.

ORA-30498: ALL option not allowed for this function**ORA-30500: database open triggers and server error triggers cannot have BEFORE type**

Cause: An attempt was made to create a trigger that fires before the database is open or before server errors, but these types of triggers are not supported.

Action: Do not attempt to create a trigger that fires before the database is open or before server errors.

ORA-30501: instance shutdown triggers cannot have AFTER type

Cause: An attempt was made to create a trigger that fires after an instance shutdown, but this type of trigger is not supported.

Action: Do not attempt to create a trigger that fires after an instance shutdown.

ORA-30502: system triggers cannot have INSERT, UPDATE, or DELETE as triggering events

Cause: An attempt was made to create a system trigger with INSERT, UPDATE, or DELETE triggering events, but this type of trigger is not supported because a system trigger does not have a base table.

Action: Do not attempt to create a system trigger with INSERT, UPDATE, or DELETE triggering events.

ORA-30503: system triggers cannot have a REFERENCING clause

Cause: An attempt was made to use a REFERENCING clause with a system trigger, but this type of trigger is not supported because a system triggers does not have a base table.

Action: Do not use a REFERENCING clause with a system trigger.

ORA-30504: system triggers cannot have a FOR EACH ROW clause

Cause: An attempt was made to use a FOR EACH ROW clause with a system trigger, but this type of trigger is not supported because a system triggers does not have a base table.

Action: Do not use a FOR EACH ROW clause with a system trigger.

ORA-30505: system triggers should not reference a column in a WHEN clause

Cause: An attempt was made to use a WHEN clause to reference a column with a system trigger, but this type of trigger is not supported because a system trigger does not have a base table.

Action: Change the WHEN clause to an appropriate clause.

ORA-30506: system triggers cannot be based on tables or views

Cause: An attempt was made to base a system trigger on a table or a view.

Action: Make sure the type of the trigger is compatible with the base object.

ORA-30507: normal triggers cannot be based on a schema, a database, or a pluggable database

Cause: An attempt was made to base a normal trigger on a schema, a database, or a pluggable database, but normal triggers can be based only on tables or views.

Action: Make sure the type of the trigger is compatible with the base object.

ORA-30508: client logon triggers cannot have BEFORE type

Cause: An attempt was made to create a trigger that fires before logon. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires before logon.

ORA-30509: client logoff triggers cannot have AFTER type

Cause: An attempt was made to create a trigger that fires after logoff. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires after logoff.

ORA-30510: system triggers cannot be defined on the schema of SYS user

Cause: An attempt was made to define a system trigger on the schema of SYS user. This type of trigger is not supported currently.

Action: Do not attempt to create a system trigger defined on the schema of SYS user.

ORA-30511: invalid DDL operation in system triggers

Cause: An attempt was made to perform an invalid DDL operation in a system trigger. Most DDL operations currently are not supported in system triggers. The only currently supported DDL operations are table operations, pluggable database operations, ALTER COMPILER operations, and ALTER SESSION operations.

Action: Remove invalid DDL operations in system triggers.

ORA-30512: cannot modify *string.string* more than once in a transaction

Cause: An attempt was made to modify an object more than once in a transaction. This error is usually caused by a DDL statement that fires a system trigger that tries to modify the same object. It can also happen when an attempt is made to perform more than one DDL operation on a queue table in the same transaction without issuing a commit between operations.

Action: Do not create system triggers that might modify an already modified object. Also, do not specify more than one DDL operation on a queue table in the same transaction.

ORA-30513: cannot create system triggers of INSTEAD OF type

Cause: Only BEFORE or AFTER triggers can be created on system events.

Action: Change the trigger type to BEFORE or AFTER.

ORA-30514: system trigger cannot modify tablespace being made read only

Cause: A before trigger tries to modify a tablespace which is being made READ ONLY as the part of DDL operation

Action: Modify the trigger to avoid modifications to the objects in the same tablespace as the one which is being made read only, or use autonomous transactions to commit modifications

ORA-30515: suspend triggers cannot have BEFORE type

Cause: An attempt was made to create a trigger that fires before execution suspended. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires before execution suspended.

ORA-30516: database role change triggers cannot have BEFORE type

Cause: An attempt was made to create a trigger that fires before the role change completed. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires before the role change completes.

ORA-30550: index depends on a package/function spec/body which is not valid

Cause: the functional indexes depends on some invalid/non-existent package/function spec/body

Action: verify that all the package/functions which the index depends on exist and are valid

ORA-30551: The index depends on a package/type body which does not exist

Cause: the functional indexes depends on a package/type body which does not exist

Action: create the package/type body

ORA-30552: The package/procedure/function cannot be changed

Cause: The package/procedure/function is deterministic and some object depends on it

Action: Drop the other object which depends on the package/function/procedure you are trying to change

ORA-30553: The function is not deterministic

Cause: The function on which the index is defined is not deterministic

Action: If the function is deterministic, mark it DETERMINISTIC. If it is not deterministic (it depends on package state, database state, current time, or anything other than the function inputs) then do not create the index. The values returned by a deterministic function should not change even when the function is rewritten or recompiled.

ORA-30554: Function-based index *string.string* is disabled.

Cause: Attempted to access a function-based index that was marked disabled because the function, on which the index depends, was changed.

Action: Perform one of the following actions: 1) Drop the index using the DROP INDEX command. 2) Rebuild the index using the ALTER INDEX REBUILD command. 3) Enable the index using the ALTER INDEX ENABLE command. 4) Make the index usable using the ALTER INDEX UNUSABLE command.

ORA-30555: global index partitioning key is an expression

Cause: An attempt was made to use an expression as a partitioning key in an index.

Action: Do not attempt to use an expression as index partitioning key.

ORA-30556: either functional or bitmap join index is defined on the column to be modified

Cause: An ALTER TABLE MODIFY COLUMN was issued on a column on which either a functional index or bitmap join index exists.

Action: Drop the functional or bitmap join index before attempting to modify the column.

ORA-30557: function based index could not be properly maintained

Cause: The user updated a column on which a function based index is present which was not successfully updated

Action: Determine the error in updating the index and fix the problem

ORA-30558: internal error [*string*] in function based index

Cause: This is an internal error.

Action: Contact Worldwide support with the exact error text.

ORA-30560: SAMPLE clause not allowed**ORA-30561: SAMPLE option not allowed in statement with multiple table references**

Cause: SAMPLE option was used in statement with multiple table references.

Action: Check the SQL statement and rewrite if necessary.

ORA-30562: SAMPLE percentage must be in the range [0.000001,100)**ORA-30563: outer join operator (+) is not allowed here**

Cause: An attempt was made to reference (+) in either the select-list, CONNECT BY clause, START WITH clause, or ORDER BY clause.

Action: Do not use the operator in the select-list, CONNECT BY clause, START WITH clause, or ORDER BY clause.

ORA-30564: index maintenance clause not allowed for ADD partition to RANGE partitioned tables

Cause: The clause INVALIDATE or UPDATE GLOBAL INDEXES is allowed only for ADD partition to a HASH partitioned table or ADD subpartition to a composite partitioned table.

Action: Remove clause and reissue operation

ORA-30565: Only one INVALIDATE or UPDATE GLOBAL INDEXES clause may be specified

Cause: The clause INVALIDATE or UPDATE GLOBAL INDEXES was specified more than once.

Action: Remove all but one of the INVALIDATE or UPDATE GLOBAL INDEXES clause and reissue the statement

ORA-30566: index maintenance clause not allowed for this command

Cause: The clause INVALIDATE or UPDATE GLOBAL INDEXES is not allowed for this command

Action: Remove clause and reissue operation

ORA-30567: name already used by an existing log group

Cause: The specified log group name has to be unique.

Action: Specify a unique name for the log group. The name cannot be the same as any other log group, constraint, or cluster hash expression.

ORA-30568: cannot drop log group - nonexistent log group

Cause: The <log_group_name> specified in alter table drop log group is incorrect or nonexistent.

Action: Reenter the statement using the correct log group name.

ORA-30569: data type of given column is not supported in a log group

Cause: An attempt was made to include a column in a log group with one of these unsupported data types: LONG, VARRAY, nested table, object, or LOB.

Action: Change the column data type or remove the log group. Then, retry the operation.

ORA-30570: SEGMENT SPACE MANAGEMENT option already specified

Cause: In CREATE TABLESPACE, the SEGMENT SPACE MANAGEMENT option was specified more than once.

Action: Remove all but one of the SEGMENT SPACE MANAGEMENT specifications.

ORA-30571: invalid SEGMENT SPACE MANAGEMENT clause

Cause: An invalid option appears for SEGMENT SPACE MANAGEMENT clause.

Action: Specify one of the valid options: AUTO, MANUAL.

ORA-30572: AUTO segment space management not valid with DICTIONARY extent management

Cause: in CREATE TABLESPACE, the AUTO SEGMENT SPACE MANAGEMENT was used with a DICTIONARY extent management clause.

Action: Either specify LOCAL extent management or remove the AUTO SEGMENT SPACE MANAGEMENT specification.

ORA-30573: AUTO segment space management not valid for this type of tablespace

Cause: in CREATE TABLESPACE, the AUTO SEGMENT SPACE MANAGEMENT was used while creating an UNDO or TEMPORARY tablespace.

Action: Remove the AUTO SEGMENT SPACE MANAGEMENT clause.

ORA-30574: Cannot create rollback segment in tablespace with AUTO segment space management

Cause: A rollback segment is being created in a tablespace that was created with AUTO segment space management.

Action: Create the rollback segment in a different tablespace.

ORA-30575: ConText Option not installed

Cause: Oracle executable doesn't have ConText Option linked in

Action: get the correct version of Oracle

ORA-30577: SAMPLE group size must be in the range [1,UB4MAXVAL]

ORA-30600: Oracle Text error\string

Cause: Oracle Text component failed. More information about the specific failure is available in the errors that follow.

Action: Check the actions for the errors that follow.

ORA-30601: Oracle Text encountered an initialization error string.

Cause: The Oracle Text component failed to initialize due to an internal error.

Action: Contact Oracle Support Services.

ORA-30602: timeout waiting for postings lists batches

Cause: Oracle Text component failed to acquire SGA memory for writing batches of postings lists. All available memory was used by other background processes. A predefined timeout elapsed but no memory was freed.

Action: No action is necessary. The process will be retried automatically at a later time.

ORA-30603: Oracle Text index is not available or busy

Cause: Oracle Text index is either disabled, unusable, incomplete, or in the middle of some DDL operation.

Action: For background processes this error can be ignored. All background processes working on this index will be removed. For foreground processes the operation should be retried at a later time.

ORA-30604: Oracle Text index no longer exists or altered

Cause: Oracle Text component attempted to access an index that either no longer exists or was altered in such a way that automatic index maintenance is no longer applicable.

Action: For background processes this error can be ignored. All background processes working on this index will be removed. For foreground processes the operation should be retried at a later time.

ORA-30605: invalid combination of SCORE labels for JSON_TEXTCONTAINS

Cause: User specified same SCORE label operand for multiple JSON_TEXTCONTAINS predicates.

Action: Ensure that all SCORE labels are the same or all are distinct, if they are all on the same column. Ensure that all SCORE labels that query from different column are distinct.

ORA-30606: invalid argument for JSON_TEXTCONTAINS SCORE label

Cause: User specified an invalid input for JSON_TEXTCONTAINS SCORE label.

Action: Ensure that JSON_TEXTCONTAINS SCORE label is a constant number.

ORA-30625: method dispatch on NULL SELF argument is disallowed

Cause: A member method of a type is being invoked with a NULL SELF argument.

Action: Change the method invocation to pass in a valid self argument.

ORA-30626: function/procedure parameters of remote object types are not supported**ORA-30645: reject limit out of range**

Cause: Reject limit specifies the number of records rejected before terminating a table scan. The range is either a number between 1..100000 or UNLIMITED if no limit is intended.

Action: Change the token representing the reject limit to either a number in the range of 0 and 100000 or the keyword UNLIMITED.

ORA-30646: schema for external table type must be SYS

Cause: A schema other than SYS was specified for the TYPE

Action: For this version of oracle server always use schema name SYS.

ORA-30647: error retrieving access parameters for external table *string.string*

Cause: An error occurred when fetching the access parameters for the specified external or hybrid-partitioned table.

Action: If the access parameter is a query which returns a CLOB, check EXTERNAL_TAB\$ to make sure the query is correct.

ORA-30648: missing LOCATION keyword

ORA-30649: missing DIRECTORY keyword

Cause: DEFAULT DIRECTORY clause missing or incorrect.

Action: Provide the DEFAULT DIRECTORY.

ORA-30650: missing PARAMETERS keyword

ORA-30651: missing CLOB keyword

ORA-30652: missing LIMIT keyword

ORA-30653: reject limit reached

Cause: the reject limit has been reached.

Action: Either cleanse the data, or increase the reject limit.

ORA-30654: missing DEFAULT keyword

Cause: DEFAULT DIRECTORY clause not specified or incorrect.

Action: Provide the DEFAULT DIRECTORY.

ORA-30655: Cannot lock rows in external tables with SELECT FOR UPDATE.

Cause: Attempted to lock rows of an external table using SELECT FOR UPDATE. Rows in external tables cannot be locked.

Action: Use SELECT without the FOR UPDATE clause with external tables.

ORA-30656: column type not supported on external-organized or hybrid-partitioned table

Cause: An attempt was made to create an external-organized table or hybrid-partitioned table with a column of type LONG, LOB, BFILE, ADT, or VARRAY.

Action: These column types are not supported, change the DDL.

ORA-30657: operation not supported on external organized table

Cause: User attempted on operation on an external table which is not supported.

Action: Don't do that!

ORA-30658: attempt was made to create a temporary table with EXTERNAL organization

Cause: An attempt was made to create an External Organized Temporary table. This is not supported.

Action: Don't do that!

ORA-30659: too many locations specified for external-organized or hybrid-partitioned table

Cause: An attempt was made to create or query an external-organized or hybrid-partitioned table with more than the maximum allowed (32767) locations specified.

Action: Use fewer location clauses. Either consider concatenating the input files or creating two external-organized or hybrid-partitioned tables with the input files split between them.

ORA-30661: NOT NULL constraint violated on fetch from external or hybrid-partitioned table (*string*)

Cause: A NULL entry was detected in the column with a NOT NULL constraint during a fetch from an external or hybrid-partitioned table.

Action: Remove the NOT NULL constraint on that column or update the external or hybrid-partitioned table entry.

ORA-30663: An EXTERNAL MODIFY clause can only be specified for an external or hybrid-partitioned table.

Cause: An EXTERNAL MODIFY clause was specified when querying a table that was not an external or hybrid-partitioned table.

Action: Remove the EXTERNAL MODIFY clause from the query.

ORA-30664: column *string* not found in projected column list for external table

Cause: A requested column was not found in the projected column list.

Action: Remove the column from the query and retry.

ORA-30665: invalid NOT NULL constraint specified on a DEFAULT ON NULL column

Cause: A NOT NULL constraint was not specified correctly on a DEFAULT ON NULL column.

Action: If a NOT NULL constraint is specified on a DEFAULT ON NULL column, it must be enabled and nondeferrable.

ORA-30666: cannot modify NOT NULL constraint on a DEFAULT ON NULL column

Cause: The NOT NULL constraint on a DEFAULT ON NULL column could not be modified.

Action: Do not modify the NOT NULL constraint on a DEFAULT ON NULL column.

ORA-30667: cannot drop NOT NULL constraint on a DEFAULT ON NULL column

Cause: The NOT NULL constraint on a DEFAULT ON NULL column could not be dropped.

Action: Do not drop the NOT NULL constraint on a DEFAULT ON NULL column. The only way to drop the constraint is to remove the ON NULL property of the column default.

ORA-30668: LATERAL cannot follow CROSS APPLY or OUTER APPLY

Cause: An attempt was made to follow the CROSS APPLY or OUTER APPLY keyword with the LATERAL keyword.

Action: Do not include the LATERAL keyword after CROSS APPLY or OUTER APPLY.

ORA-30669: table can have only one identity column

Cause: An attempt was made to specify more than one identity column on a table.

Action: Specify only one identity column per table.

ORA-30670: invalid NOT NULL constraint specified on an identity column

Cause: A NOT NULL constraint was not specified correctly on an identity column.

Action: If a NOT NULL constraint is specified on an identity column, it must be enabled and nondeferrable.

ORA-30671: cannot modify NOT NULL constraint on an identity column

Cause: The NOT NULL constraint on an identity column could not be modified.

Action: Do not modify the NOT NULL constraint on an identity column.

ORA-30672: cannot drop NOT NULL constraint on an identity column

Cause: The NOT NULL constraint on an identity column could not be dropped.

Action: Do not drop the NOT NULL constraint on an identity column. The only way to drop the constraint is to remove the identity property of the column with ALTER TABLE MODIFY *column* DROP IDENTITY.

ORA-30673: column to be modified is not an identity column

Cause: An attempt was made to modify the identity properties of that is not an identity column.

Action: Modify the identity properties of an identity column.

ORA-30674: identity column cannot have a default value

Cause: An attempt was made to add a default value to an identity column.

Action: Do not modify an identity column with a default value.

ORA-30675: identity column must be a numeric type

Cause: An attempt was made to create or alter an identity column with a non-numeric data type.

Action: Do not assign a non-numeric data type to an identity column.

ORA-30676: socket read or write failed

Cause: A problem kept a socket from reading or writing the expected amount of data. More specific information is not available.

Action: Try re-establishing a connection. You may need to restart whatever program is at the other end of the socket that failed, or you may need to have some problem on your network fixed.

ORA-30677: session is already connected to a debugger

Cause: An attempt to connect a session to a debugger could not proceed because the session is already connected to some debugger.

Action: Either use the option to force a connection or first disconnect the session from its existing debugger.

ORA-30678: too many open connections

Cause: An attempt to open a connection failed because too many are already open by this session. The number of allowed connections varies as some may be in use through other components which share the same pool of allowed connections.

Action: Retry after closing some other connection. The number of connections supported is currently not adjustable.

ORA-30679: JDWP-based debugging not supported in this configuration

Cause: An attempt to open a debugging connection failed because this server configuration cannot support the required asynchronous socket traffic detection.

Action: This feature will not work under this server configuration. Either the feature is not supported on this platform at all, or is available only through use of a `protocol=tcp` dispatcher in shared-server configurations. Please consult the platform-specific documentation and "readme" material.

ORA-30680: debugger connection handshake failed

Cause: A problem occurred when trying to establish a debugger connection. This might indicate that the port specified as the location of the debugger is actually being used by some other type of application.

Action: Correct the host or port specifications if they are incorrect, and verify that the debugger is properly waiting for a connection.

ORA-30681: improper value for argument EXTENSIONS_CMD_SET

Cause: An improper parameter value was provided in a call to `DBMS_DEBUG_JDWP.CONNECT_TCP`.

Action: Correct the indicated parameter value and try again.

ORA-30682: improper value for argument OPTION_FLAGS

Cause: An improper parameter value was provided in a call to `DBMS_DEBUG_JDWP.CONNECT_TCP`.

Action: Correct the indicated parameter value and try again.

ORA-30683: failure establishing connection to debugger

Cause: An error was indicated when trying to establish a connection to a debugger. Usually a TNS error will display along with this message to further explain the problem, although this TNS error will likely be hidden if you choose to trap the error.

Action: Correct the indicated parameter value and try again.

ORA-30684: request timed out

Cause: The request was not processed within the given time.

Action: Try the request at a later time.

ORA-30685: package version is not compatible with Oracle version

Cause: The installed version of the package from which this error is raised is not compatible with this release of Oracle.

Action: Install a compatible version of the package's spec and body.

ORA-30686: no dispatcher accepted TCP/IP connection request

Cause: A connection had to be routed through a local socket rather than a dispatcher. When this occurs, shared servers are less beneficial because the session that owns the socket cannot relinquish the process until the socket is closed. The most likely cause is that no dispatcher is configured for `protocol=tcp`.

Action: To improve the scalability of your configuration, configure a dispatcher for `protocol=tcp`. To route these particular connections through a particular set of dispatchers, you can specify `presentation=kgas`. However, if you haven't done so, any `protocol=tcp` dispatcher will be used.

ORA-30687: session terminated by debugger

Cause: The execution of the session was stopped by the debugger. This can occur because of an explicit request sent by the debugger, or because the debugger disconnected without requesting the ORACLE server to let the session continue to run after the disconnection. It can also occur if the ORACLE server needs to disconnect the debugger at a time when the person controlling the debugger might not expect, such as upon a reset of the related package state or a change of the login user. To prevent continuing the execution using debugger-introduced modifications that might have been intended to be temporary, the ORACLE server needs to fully terminate the session.

Action: This is in response to a debugger request; it is not an error. No action is required.

ORA-30688: maximum program calling depth exceeded

Cause: Your program contains a set of calls that are too deep to be handled. Only transitions between the different execution engines (SQL, PL/SQL, and Java) count in reaching this limit; calls within the same engine don't count.

Action: Restructure your program so as to not call so deeply. Perhaps some recursion can be replaced with iteration.

ORA-30689: improper value for ORA_DEBUG_JDWP

Cause: An improper value was used for `ORA_DEBUG_JDWP` when trying to establish a connection to a debugger. The value either did not conform to the format of `ORA_DEBUG_JDWP` or was too long.

Action: Correct the value for `ORA_DEBUG_JDWP` and try again.

ORA-30690: timeout occurred while registering a TCP/IP connection for data traffic detection

Cause: A timeout occurred while registering a TCP/IP connection for data traffic detection.

Action: Retry the operation later.

ORA-30691: failed to allocate system resources while registering a TCP/IP connection for data traffic detection

Cause: System resources ran out while registering a TCP/IP connection for data traffic detection.

Action: Retry the operation later.

ORA-30695: JDWP message format problem

Cause: A message passed from one software subcomponent to another using the JDWP protocol appears invalidly formatted.

Action: This is an internal error. Contact ORACLE Support Services.

ORA-30696: request aborted by the target session

Cause: The request was aborted by the target session. Possible causes include an unresolved error while the request was processed or the target session had aborted.

Action: Correct the issue in the target session and try again.

ORA-30725: JDWP-based debugging is not yet available

Cause: This feature is not yet available for use.

Action: Please wait for a future release.

ORA-30726: cannot specify referenced column list here

Cause: An attempt was made to specify a referenced column list for a referential constraint involving a REF column.

Action: Remove the referenced column list specification.

ORA-30727: duplicate referential constraint for a REF column

Cause: Multiple referential constraints were specified for a single REF column.

Action: Remove the duplicate referential constraint and retry the operation.

ORA-30728: maximum number of columns exceeded

Cause: Adding referential constraint on a REF column requires the the creation of an additional column.

Action: Drop some columns and retry the operation.

ORA-30729: maximum number of columns exceeded

Cause: Adding scope or referential constraint on a REF column requires the creation of additional columns if the target table's object identifier is primary key based.

Action: Drop some columns and retry the operation.

ORA-30730: referential constraint not allowed on nested table column

Cause: An attempt was made to define a referential constraint on a nested table column.

Action: Do not specify referential constraints on nested table columns.

ORA-30731: scope constraint not allowed on nested table column when the nested table is being created

Cause: An attempt was made to define a scope constraint on a nested table column when the nested table is being created.

Action: Do not specify a scope constraint on a nested table column when creating it. Instead, specify it using the ALTER TABLE statement.

ORA-30732: table contains no user-visible columns

Cause: An attempt was made to query on a system table which has no user-visible columns.

Action: Do not query on a system table that has no user-visible columns.

ORA-30733: cannot specify rowid constraint on scoped ref column

Cause: An attempt was made to specify rowid constraint on a scoped REF column.

Action: Remove the rowid constraint and then retry the operation.

ORA-30734: cannot specify scope constraint on ref column with rowid

Cause: An attempt was made to specify scope constraint on a REF column with the rowid constraint.

Action: Remove the scope constraint and then retry the operation.

ORA-30735: cannot create multiple subtables of the same type under a supertable

Cause: An attempt was made to create under a supertable (superview), a subtable(subview) of the same type as another existing subtable (subview).

Action: Drop the existing subtable(subview) and retry the operation.

ORA-30736: objects in a table or view hierarchy have to be in the same schema

Cause: An attempt was made to create a subtable(subview) under a supertable(superview) located in another schema.

Action: Connect as schema owner of the superobject and retry the operation.

ORA-30737: cannot create subtable of a type which is not a subtype of the type of the supertable

Cause: An attempt was made to create a subtable(subview) of a type which is not a subtype of the type of the super object.

Action: Change the type of the subtable to be a subtype of the superobject's type and then retry the operation.

ORA-30738: object "string" does not exist in schema "string"

Cause: The specified object does not exist.

Action: Ensure that the specified object exists and retry the operation.

ORA-30739: cannot drop a table that has subtables

Cause: The user tried to drop a table that has subtables defined under it.

Action: Drop all subtables before trying this operation.

ORA-30740: cannot grant UNDER privilege on this object

Cause: The user tried to grant UNDER privilege on an object that is not one of the following : non final object type, object table of non final type, object view of non final type.

Action: Ensure that the UNDER privilege is granted on a valid object.

ORA-30741: WITH HIERARCHY OPTION can be specified only for SELECT or READ privileges

Cause: An attempt was made to specify WITH HIERARCHY OPTION for a privilege other than SELECT or READ.

Action: Ensure that the WITH HIERARCHY OPTION is specified only with the SELECT or READ privilege.

ORA-30742: cannot grant SELECT or READ privilege when WITH HIERARCHY OPTION is specified on the object

Cause: An attempt was made to grant the SELECT or READ privilege when the WITH HIERARCHY OPTION was specified on an object that is not one of the following: - Object table of non-final type - Object view of non-final type

Action: Ensure that the SELECT or READ privilege is granted on a valid object when the WITH HIERARCHY OPTION is specified.

ORA-30743: "string" is not an object view

Cause: The specified object is not an object view.

Action: Specify an object view and retry the operation.

ORA-30744: "string" is not an object table

Cause: The specified object is not an object table.

Action: Specify an object table and retry the operation.

ORA-30745: error occurred while trying to add column "string" in table "string"

Cause: The user tried to add a subtype which tried to alter the tables dependent on the supertype.

Action: Ensure that the table will not exceed the columnlimit on adding this subtype.

ORA-30746: error occurred while trying to drop column "string" in table "string"

Cause: The user tried to drop a subtype with VALIDATE option which tried to check for stored instances of the type in the stated table

Action: Delete all instances of this subtype and then drop the type.

ORA-30747: cannot create substitutable tables or columns of non final type *string.string*

Cause: The user tried to create substitutable table or column of a non final type. This operation is not currently supported.

Action: Change the statement to create a non substitutable table/column.

ORA-30748: column *string* already enabled to store objects of type *string.string*

Cause: The user is trying to enable a column to store instances of a type for which it is already enabled.

Action: None

ORA-30749: column *string* not enabled to store objects of type *string.string*

Cause: The user is trying to disable a column from storing instances of a type for which it is already enabled.

Action: None

ORA-30750: cannot enable column *string* to store objects of type *string.string*

Cause: The user is trying to enable a column to store instances of a subtype. The error is raised due to one of the following :

Action: Fix the cause of the error and retry the operation.

ORA-30751: cannot disable column *string* from storing objects of type *string.string*

Cause: The user is trying to drop a type from being stored in a substitutable column or table. This error is raised due to one of the following reasons : - the column is enabled to store instances of some subtype of the type being dropped. - the column is enabled to store instances of only one type

Action: Fix the cause of the error and retry the operation.

ORA-30752: column or table *string* is not substitutable

Cause: The user is performing an operation that is not allowed on non substitutable column or table.

Action: None

ORA-30753: column or table *string* is substitutable

Cause: The user is performing an operation that is not allowed on substitutable column or table.

Action: None

ORA-30754: column or table *string* stores objects of only one type

Cause: The user is trying to perform an operation that is not allowed on object column or table that is enabled to store instances of a single type.

Action: None

ORA-30755: error during expansion of view hierarchy

Cause: There was an error while trying to expand a view hierarchy. This could be due to invalid subviews (or subviews with errors)

Action: Ensure that all subviews are valid e.g. alter view ... compile and retry the operation.

ORA-30756: cannot create column or table of type that contains a supertype attribute

Cause: The user tried to create a column or table of an object type that contains a supertype attribute. This is not supported because it leads to infinite recursion in our current storage model. Note that creating a column of a type implies that we create columns corresponding to all subtype attributes as well.

Action: Change the type definition to contain a supertype REF attribute instead of the supertype object attribute.

ORA-30757: Type information could not be accessed.

Cause: Either operations were performed on the newly created subtype while the session was in progress, or the type information was not available in the object cache.

Action: Commit changes, end the user session, reconnect, and retry. If the error persists, contact Oracle Support.

ORA-30758: cannot specify local on a non-partitioned table

Cause: The user specified local or global for a nested table storage parameter while the base table is non-partitioned.

Action: None

ORA-30759: nested table cannot be partitioned for a composite partitioned base table

Cause: The user specified local or nested table parameters inside partition clause for a composite partitioned table.

Action: Issue the DDL without nested table partition clauses for composite partitioned table.

ORA-30760: cannot drop system-generated hidden object column

Cause: An attempt was made to drop a system-generated hidden object column

Action: None

ORA-30765: cannot modify scope for an unscoped REF column

Cause: An attempt was made to modify the scope for an unscoped REF column.

Action: Use an ALTER TABLE ADD SCOPE FOR command instead.

ORA-30766: cannot modify scope for a REF column with a REFERENCES constraint

Cause: An attempt was made to modify the scope for a REF column with a REFERENCES constraint.

Action: Drop the REFERENCES constraint, and retry the operation.

ORA-30767: OID type mismatch

Cause: An attempt was made to modify the scope for a REF column to a table whose object identifier's type is different from that of the original scoped table.

Action: n/a

ORA-30768: Cannot evaluate pipelined function

Cause: Pipelined functions can only be used in a TABLE expression in the from clause.

Action: Use a non-pipelined function instead.

ORA-30770: Cannot specify storage options for fixed size opaque type

Cause: Storage clause was specified during table creation for a fixed size opaque type.

Action: Do not provide storage option clause.

ORA-30771: Cannot add more than one referential constraint on REF column "string"

Cause: Multiple referential constraints were specified for a single REF column.

Action: Remove the additional referential constraints and retry the operation.

ORA-30772: opaque types do not have default constructors

Cause: Constructor invocation did not succeed, since no user-defined constructors were defined for the opaque type, and since opaque types do not have default constructors.

Action: Add user-defined constructors to opaque type, or specify a member or static method for the opaque type.

ORA-30773: opaque types do not have default constructors

Cause: Constructor invocation did not succeed, since no user-defined constructors were defined for the opaque type, and since opaque types do not have default constructors.

Action: Add user-defined constructors to opaque type, or specify a member or static method for the opaque type.

ORA-30774: Library "string" was erroneously defined as a trusted library for opaque types

Cause: User has defined some library as trusted library for opaque types.

Action: Trusted libraries for opaque types can only be defined in internal code.

ORA-30926: Attempted to update the same row.

Cause: The operation attempted to update a column to a different value twice in the same row.

Action: Modify the conditions in the operation so that every source row matches exactly one row in the table being updated.

ORA-30927: Unable to complete execution due to failure in temporary table transformation

Cause: In memory temporary tables we create are aged out of shared pool before we are able to grab them again.

Action: Reduce activities that use a lot of shared pool space or wait for a while, then retry.

ORA-30928: Connect by filtering phase runs out of temp tablespace

Cause: It is probably caused by the fact that there is a loop in the data.

Action: Please retry the query with the NO_FILTERING hint. If the same error still occurs, then increase temp tablespace.

ORA-30929: ORDER SIBLINGS BY clause not allowed here

Cause: ORDER SIBLINGS BY clause is specified in a query which doesn't have CONNECT BY clause.

Action: Remove ORDER SIBLINGS BY clause or add CONNECT BY clause.

ORA-30930: NOCYCLE keyword is required with CONNECT_BY_ISCYCLE pseudocolumn

Cause: CONNECT_BY_ISCYCLE was specified in a query which does not have the NOCYCLE keyword.

Action: Remove CONNECT_BY_ISCYCLE or add NOCYCLE.

ORA-30931: Element 'string' cannot contain mixed text.

Cause: An XML element was not declared as mixed and therefore could not contain multiple text nodes.

Action: Declare this element type as mixed in its schema.

ORA-30932: Reference node 'string' not contained in specified parent node 'string'

Cause: When using a reference node, it must have the specified parent node

Action: Use a node in the specified parent as the reference

ORA-30933: Element 'string' may not appear at this point within parent 'string'

Cause: The ordering specified by the content model of the parent does not allow for this element to occur at this position.

Action: Reorder the child elements to conform with the content model of the parent element

ORA-30934: '*string*' (*string* node) cannot be inserted in parent '*string*' (*string* node)

Cause: The schema does not allow a child node of this type to be inserted into a parent node of this type. For example, only element nodes may only be inserted into a document

Action: Insert only child nodes that make sense for this node type

ORA-30935: XML maxoccurs value (*string*) exceeded

Cause: An attempt was made to insert more than maxoccurs values into a schema-based XML document.

Action: Do not insert more than maxoccurs values into the document.

ORA-30936: Maximum number (*string*) of '*string*' XML node elements exceeded

Cause: An attempt was made to insert more than the allowed number of elements (specified by the maxoccurs facet) into an XML document.

Action: Do not attempt to add more than the maximum number of elements to XML documents.

ORA-30937: No schema definition for '*string*' (namespace '*string*') in parent '*string*'

Cause: The schema definition for the parent node being processed does not allow for the specified child node in its content model. Note that any typecasting via `xsi:type` must occur before the schema definitions for the new type can be used.

Action: Only insert elements and attributes declared in the schema. Check to make sure that `xsi:type` (if used) is specified first.

ORA-30938: No prefix defined for namespace '*string*' (particle *string*)

Cause: An XML namespace mapping (`xmlns:prefix=namespace URL`) must be defined for each particle (element or attribute) stored in an schema-constrained XMLType document.

Action: Add an `xmlns` attribute definition (attribute name=`xmlns:prefix` and value=`namespace URL`) to the current XMLType document. The safest place to add this attribute is in the root node of the document to ensure that the mapping will be in scope.

ORA-30939: Order violation: Element '*string*' may not follow element '*string*'

Cause: The XML schema specifies a content model that is sequential, where the order of nodes in the instance must follow the order specified by the schema, and this instance relies on the schema validity to avoid maintaining instance order information

Action: Insert elements only in the order specified in the schema

ORA-30940: Cannot resolve prefix '*string*' for QName node '*string*'

Cause: An attempt was made to store a QName value without having a valid namespace in scope for that prefix.

Action: Declare the namespace for the prefix used

ORA-30941: Cannot specify empty URI for non-default namespace '*string*'

Cause: An attempt was made to insert a namespace declaration for a non-default namespace using an empty URI string.

Action: Specify a non-empty URI for namespace declarations other than the default namespace.

ORA-30942: XML Schema Evolution error for schema '*string*' table *string* column '*string*'

Cause: The given XMLType table/column which conforms to the given schema had errors during evolution. For more information, see the more specific error below this one

Action: Based on the schema, table and column information in this error and the more specific error below, take corrective action

ORA-30943: XML schema '*string*' is dependent on XML schema '*string*'.

Cause: Not all dependent XML schemas were specified or the XML schemas were not specified in a proper order.

Action: Include the URL of all participant and dependent XML schemas through the procedure argument SCHEMAURLS in a correct order. For example, if XML schema S depends on XML schema T, then T must appear before S.

ORA-30944: Error during rollback for XML schema '*string*' table *string* column '*string*'

Cause: The given XMLType table/column which conforms to the given schema had errors during a rollback of XML schema evolution. For more information, see the more specific error below this one

Action: Based on the schema, table and column information in this error and the more specific error below, take corrective action

ORA-30945: Could not create mapping table '*string*'

Cause: A mapping table could not be created during XML schema evolution. For more information, see the more specific error below this one

Action: Ensure that a table with the given name does not exist and retry the operation

ORA-30946: XML Schema Evolution warning: temporary tables not cleaned up

Cause: An error occurred after the schema was evolved while cleaning up temporary tables. The schema evolution was successful

Action: If the user needs to remove the temporary tables, use the mapping table to get the temporary table names and drop them.

ORA-30947: Dependent table '*string*' of XML schema '*string*' is version-enabled.

Cause: An evolving XML schema had dependent XMLType tables that were version-enabled.

Action: Disable versioning on the XMLType table.

ORA-30948: Illegal in-place XML schema evolution operation: *string*

Cause: An attempt was made to make an XML schema change that is not permitted through in-place XML schema evolution.

Action: Ensure that the XML schema changes specified in the XMLDiff argument to DBMS_XMLSCHEMA.inPlaceEvolve are permitted.

ORA-30951: Element or attribute at Xpath *string* exceeds maximum length

Cause: An attempt was made to insert a node of length exceeding the maximum length (specified by the maxLength facet) into an XML document.

Action: Do not attempt to add a node exceeding the maximum length to XML documents.

ORA-30952: illegal configuration of HTTP/HTTPS in xdbconfig.xml

Cause: An attempt was made to update xdbconfig.xml when either 1) a value was specified for http2-port but not for http2-protocol (or vice versa), OR 2) http-port and http2-port were set to the same value.

Action: Specify values for both elements http2-port and http2-protocol, AND set different values for http-port and http2-port.

ORA-30953: XML minoccurs value (*string*) violated

Cause: An attempt was made to delete more than the required minimum number of elements (specified by the minoccurs facet) from an XML document.

Action: Do not attempt to delete more than the required minimum number of elements that must be present from the XML document.

ORA-30954: char *string* is invalid in *string*

Cause: An invalid XML character was found.

Action: Use only characters allowed by the XML specification.

ORA-30955: The XML Index does not exist or is not asynchronous

Cause: An attempt was made to synchronize a nonexistent XML Index or a synchronous XML Index.

Action: Create the XML Index in asynchronous mode.

ORA-30956: invalid option for XML Index

Cause: Unexpected error.

Action: File a bug.

ORA-30957: cannot downgrade because there are XML indexes

Cause: An attempt was made to downgrade a database that has XML indexes.

Action: Drop all XML indexes before attempting the downgrade.

ORA-30958: operation directly on the Pending Table is disallowed

Cause: An illegal operation was attempted on secondary objects of an XML Index.

Action: Try appropriate operation on the XML Index.

ORA-30959: The indexed column is not stored in CLOB.

Cause: An attempt was made to create an XML Index on an OR-XMLType column.

Action: Re-create the XML Index on a CLOB-XMLType column.

ORA-30960: The entity is neither an XPATH nor a NAMESPACE.

Cause: The given string had invalid syntax.

Action: Check the syntax for XPATH and NAMESPACE.

ORA-30961: internal SQL statement is too long

Cause: unexpected internal error

Action: File a bug and provide the test case.

ORA-30962: inconsistent ODCI input arguments

Cause: unexpected internal error

Action: File a bug and provide the test case.

ORA-30963: The indexed column is not of XMLType.

Cause: An attempt was made to create an XML Index on a non-XMLType column.

Action: Re-create the XML Index on an XMLType column.

ORA-30964: The XML Index was not usable.

Cause: The domain index for XML was not created properly. The Path Table is missing.

Action: Drop and re-create the XML Index.

ORA-30965: fragment does not fit into the VARCHAR2 VALUE column

Cause: The fragment size exceeded the max size.

Action: Re-create the XML Index with values stored in CLOB.

ORA-30966: error detected in the XMLIndex layer

Cause: An unexpected internal error occurred while performing an XMLIndex operation.

Action: Check the Oracle trace files for errors and contact Oracle Support Services.

ORA-30967: operation directly on the Path Table is disallowed

Cause: illegal operation on secondary objects of a domain index

Action: Try appropriate operation on the domain index.

ORA-30968: invalid XPATH or NAMESPACE option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30969: invalid syntax for PARAMETERS

Cause: An attempt was made to specify an invalid option.

Action: Check and use valid options.

ORA-30970: unsupported option for XMLIndex

Cause: An attempt was made to specify an invalid option for the XMLIndex.

Action: Check and use valid options for the XMLIndex.

ORA-30971: illegal operation on the Path Table

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate command on the XML Index.

ORA-30972: invalid ALTER INDEX option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30973: invalid Path Table option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30974: invalid Path Id Index option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30975: invalid Order Key Index option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30976: invalid Parent Order Key Index option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30977: invalid Value Index option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30978: The XML Index is not locally partitioned.

Cause: An attempt was made to create a global partitioned XML Index.

Action: Do not attempt to create global partitioned XML Index or to maintain a non-local partitioned XML Index.

ORA-30979: Partitioned XML Index not yet supported.

Cause: An attempt was made to create a partitioned XML Index.

Action: Do not attempt to create partitioned XML Index.

ORA-30980: null or invalid value specified for parameter: *string*

Cause: The value specified for the mandatory parameter was null or invalid.

Action: Ensure that all the input parameter values are valid. Consult the Oracle documentation for valid parameter values.

ORA-30982: Invalid option for a partition of an XML Index

Cause: An invalid option was specified at the partition level.

Action: Remove the invalid option.

ORA-30984: The XMLType column has to be declared as virtual

Cause: The XMLType column was not declared as virtual when creating a structured XMLIndex.

Action: The XMLType column has to be declared as virtual when creating a structured XMLIndex.

ORA-30985: The virtual XMLType column for chaining is missing

Cause: The virtual XMLType column for chaining was missing when creating a structured XML index.

Action: A virtual XMLType column for chaining has to be specified when creating a structured XML Index.

ORA-30986: XMLIndex with more than one virtual column is not allowed.

Cause: An attempt was made to create an XMLIndex with more than one virtual column.

Action: Create an XMLIndex with only one virtual column.

ORA-30987: XML Index on XML DB repository does not exist

Cause: An attempt was made to operate on a non-existent XML Index on XML DB repository.

Action: First create the index using DBMS_XDB_ADMIN.CREATE_REPOSITORY_XML_INDEX. Try the operation again.

ORA-30989: XML Index on an Index Organized Table is not yet supported

Cause: XML Index supported only on Heap Organized Table.

Action: Contact Oracle Support Services.

ORA-30990: insufficient privileges to change owner of resource *string*

Cause: An attempt was made to change the *Owner* field of an XML DB resource without sufficient privileges to do so.

Action: Switch to SYS before performing the ownership change, or have the intended recipient of the resource perform the transfer.

ORA-30991: cannot use DOM to add special attribute to schema-based parent

Cause: An attempt was made to add or remove an *xsi:schemaLocation*, *xsi:noNamespaceSchemaLocation*, *xsi:type*, or *xsi:nil* attribute to or from a schema-based XML node using DOM.

Action: Use the updateXML operator instead of DOM.

ORA-30992: error occurred at Xpath *string*

ORA-30993: complex type *string* is not referred by any global element

ORA-30994: Invalid argument for DOM stream

Cause: Either a null or a nonleaf node was passed.

Action: Use a combination of DOM API and DOM streams to produce desired effect.

ORA-30995: DOM streams operations cannot be performed on null/invalid node

Cause: The node is NULL or inexistent

Action: Check the input parameters.

ORA-30996: Streams operations over non-existent stream

Cause: The stream passed is NULL or invalid.

Action: Check the input parameters.

ORA-30997: XSL processing of XML failed with error LPX-*string*

Cause: An LPX routine (XML/XSL processing) returned an error while transforming an XML doc.

Action: Look up the LPX error and follow its corrective action.

ORA-30998: transformation error: *string*

Cause: Error occurred while transforming an XML doc with an XSL style sheet.

Action: Contact Oracle Support Services.

ORA-30999: XML context creation failed while *string*

Cause: Error occurred while creating XML context.

Action: Contact Oracle Support Services.

ORA-31000: Resource '*string*' is not an XML schema document.

Cause: The specified schema URL did not refer to a registered XML schema.

Action: Check that schema URL refers to a registered XML schema.

ORA-31001: invalid resource handle or path name "*string*"

Cause: An invalid resource handle or path name was passed to the XDB hierarchical resolver.

Action: Pass a valid resource handle or path name to the XDB hierarchical resolver.

ORA-31002: Path name *string* is not a container.

Cause: The specified path name did not represent a container.

Action: Specify a path name or resource handle that represents a container.

ORA-31003: Parent with name *string* already contains a child entry with name *string*.

Cause: An attempt was made to insert a duplicate child into the XDB hierarchical resolver.

Action: Insert a unique name into the container.

ORA-31004: Length *string* of the BLOB in XDB\$H_INDEX is below the minimum (*string*).

Cause: The calculated size of the BLOB in the CHILDREN column of the XDB\$H_INDEX table was less than the required minimum without being chained.

Action: Set the value of the DB_BLOCK_SIZE initialization parameter to at least 2000. For XDB to run at its fastest, set DB_BLOCK_SIZE to 8000.

ORA-31005: Path name length *string* exceeds maximum length *string*.

Cause: The length of a path name passed to the XDB hierarchical resolver exceeded the maximum length.

Action: Choose a shorter path name and retry the statement.

ORA-31006: Path name segment length *string* exceeds maximum length *string*.

Cause: The length of a path name segment passed to the XDB hierarchical resolver exceeded the maximum length of a path name segment.

Action: Choose a shorter path name segment and retry the statement.

ORA-31007: Attempted to delete non-empty container *string*/*string*

Cause: An attempt was made to delete a non-empty container in the XDB hierarchical resolver.

Action: Either perform a recursive deletion, or first delete the contents of the container.

ORA-31008: LPX context creation failed while *string*

Cause: Error occurred while creating LPX context because of an unexpected NULL value.

Action: Contact Oracle Support Services.

ORA-31009: Access denied for property *string*

Cause: An attempt was made to access a property you don't have access to

Action: Check the ACL to see what privileges you have for this property

ORA-31010: XML element index *string* exceeds maximum insertion index *string*.

Cause: An attempt was made to insert an XML element at an invalid index location in the node.

Action: Choose an index that falls within the allowed range.

ORA-31011: XML parsing failed

Cause: XML parser returned an error while trying to parse the document.

Action: Check if the document to be parsed is valid.

ORA-31012: Given XPATH expression not supported

Cause: XPATH expression passed to the function is currently unsupported.

Action: Check the xpath expression and change it to use a supported expression.

ORA-31013: invalid XPATH expression

Cause: The XPATH expression passed to the function was invalid.

Action: Check the XPATH expression for possible syntax errors.

ORA-31014: Attempted to delete the root container

Cause: An attempt was made to delete the root container in the hierarchical index.

Action: Do not delete the root container.

ORA-31015: Attempted to insert entry without name

Cause: An attempt was made to insert an entry into the hierarchical resolver without a child name.

Action: Supply a child name and try inserting again.

ORA-31016: Attempted to delete entry without name

Cause: An attempt was made to delete an entry from the hierarchical resolver without a child name.

Action: Supply a child name and try deleting again.

ORA-31017: Error generating unique OID for XML document

Cause: An error occurred while generating a globally unique OID for storing an XML document.

Action: n/a

ORA-31018: Error deleting XML document

Cause: The XMLType object pointed to by the given REF could not be deleted because either the REF was invalid or it pointed to a non-existent table.

Action: Either use FORCE deletion or supply a valid REF.

ORA-31019: Recursive deletion snapshot too old for *string*/*string*

Cause: Changes were made to the structure of a directory while it was being recursively deleted.

Action: Try deleting the directory again.

ORA-31020: The operation is not allowed, Reason: *string*

Cause: The operation attempted is not allowed

Action: See reason and change to a valid operation.

ORA-31021: Element definition not found

Cause: The element definition was not found.

Action: Supply the definition for the element or use a defined element.

ORA-31022: Element not found

Cause: The element was not found.

Action: Make sure the specified element exists.

ORA-31023: Index size error

Cause: The index is greater than the allowed value.

Action: Make sure the index is less than allowed value.

ORA-31024: Parser initialization failed with LPX-*string* error\nwhile *string*

Cause: Error occurred while initializing a parser.

Action: Contact Oracle Support Services.

ORA-31025: Invalid document element

Cause: An attempt was made to replace the data at an invalid index number in the XML document

Action: Supply a correct occurrence number and try again.

ORA-31026: unable to allocate additional memory while \n*string*

Cause: A dynamic memory allocation failure occurred.

Action: Report this problem to a database administrator.

ORA-31027: Path name or handle *string* does not point to a resource

Cause: An attempt was made to retrieve a resource based on a path name or resource handle that points to an entity other than a resource.

Action: Do not attempt to retrieve a resource based on that path name or resource handle.

ORA-31028: Resource metadata length *string* exceeded maximum length *string*

Cause: An attempt was made to insert resource metadata that exceeded the maximum length of that type of metadata.

Action: Keep resource metadata within its allowed length.

ORA-31029: Cannot bind to unsaved resource

Cause: An attempt was made to bind to a resource that had not been saved to disk.

Action: Bind only to saved resources.

ORA-31030: Unable to retrieve XML document

Cause: The resource had an invalid (dangling) REF to an XML document.

Action: Rebind the resource using a valid XMLType REF.

ORA-31031: cannot create context to parse an XPathInstring

Cause: Error occurred while parsing an XPath.

Action: Contact Oracle Support Services.

ORA-31032: XML parsing failed with error LPX-string\nwhile string

Cause: An LPX routine returned an error while transforming an XML doc.

Action: Look up the LPX error and follow its corrective action.

ORA-31033: Requested number of XML children string exceeds maximum string

Cause: An attempt was made to add more than the maximum number of allowable children in an XML element.

Action: Redefine the schema to allow breaking up of the children among siblings.

ORA-31034: invalid node set encountered while executing string

Cause: The given node set was either NULL or has an invalid type associated with it.

Action: Contact Oracle Support Services.

ORA-31035: Could not bind locked resource to path string\nstring

Cause: An attempt was made to bind an existing resource to a new location in the hierarchy, but a lock could not be obtained on the resource.

Action: Commit or roll back the transaction that has the lock on the resource.

ORA-31036: XSL processing context initialization failed

Cause: A error occurred while creating a XSL context.

Action: Contact Oracle Support Services.

ORA-31037: Invalid XML attribute name string

Cause: The attribute name in the XML document did not match anything in the associated schema.

Action: Supply only schema-defined or XML standard attributes.

ORA-31038: Invalid string value: "string"

Cause: The text in the XML document did not represent a valid value given the datatype and other constraints in the schema.

Action: Ensure that the specified value in XML documents is valid with respect to the datatype and other constraints in the schema.

ORA-31039: XML namespace length *string* exceeds maximum *string*

Cause: The length of the disk-formatted XML namespace exceeded the maximum.

Action: Keep XML namespace declarations below the maximum length.

ORA-31040: Property *string*: XML type (*string*) not compatible with internal memory type (*string*)

Cause: The XML datatype given is inconsistent with the database datatype, and a conversion cannot be made.

Action: This is an internal error, generally resulting from corruption of the compiled XML schema. Re-register schemas, or contact Oracle support.

ORA-31041: Property *string*: Memory type (*string*) not compatible with database type (*string*)

Cause: The memory type associated with this property is mapped to an incompatible database type, and a conversion cannot be made.

Action: This is an internal error, generally resulting from corruption of the compiled XML schema. Re-register schemas, or contact Oracle support.

ORA-31042: too many properties in type '*string*'

Cause: Too many properties were specified for the type. The type can only have the same number of properties (elements and attributes) as the number of columns in a table.

Action: Modify the XML schema to move properties into sub-elements that are not inlined.

ORA-31043: element '*string*' not globally defined in schema '*string*'

Cause: The specified element name was not defined globally (at the top level) of the XML schema. Elements must be defined globally to be the root of an XMLType object.

Action: Check the XML schema definition to ensure that the specified element name has been defined globally (at the top level).

ORA-31044: Top-level prefix length *string* exceeds maximum *string*

Cause: An attempt was made to save to disk a top-level XML namespace prefix whose length exceeded the maximum.

Action: Do not define XML namespace prefixes that exceed the maximum length.

ORA-31045: Cannot store more than *string* extras outside the root XML node

Cause: An attempt was made to store more than the maximum number of XML extras (e.g. comments and processing instructions) either before or after the document's root node.

Action: Keep the number of extras outside the root node below the maximum.

ORA-31046: Incorrect argument(s) specified in the operator

Cause: One or more of the arguments specified in the operator in the query are incorrect

Action: Correct the arguments specified in the operator

ORA-31047: Could not retrieve resource data at path *string*

Cause: An error occurred while retrieving the contents and/or metadata of a resource.

Action: Contact Oracle customer support.

ORA-31048: Unsaved resources cannot be updated

Cause: An attempt was made to update a resource that was never saved to disk.

Action: Perform a resource insertion instead.

ORA-31050: Access denied

Cause: The requested access privileges have not been granted to the current user.

User must be granted privileges prior to resource access.

Action: Check the set of requested access privileges to make sure that they are included in the set of access privileges granted to the user.

ORA-31051: requested access privileges not supported

Cause: The requested access privileges were not supported for the specified resource.

Action: Ensure that the set of requested access privileges are valid access privileges for the specified resource.

ORA-31052: Cannot delete ACL with other references

Cause: The requested deletion of an ACL resource cannot proceed. The ACL is in use by other resources.

Action: Remove the resources that are making reference to the ACL in question and try again.

ORA-31053: The value of the depth argument in the operator cannot be negative

Cause: The value of the depth argument passed to the primary operator is not a positive integer

Action: Pass a positive value of the depth argument

ORA-31054: The *string* operator cannot have an ancillary operator

Cause: An ancillary operator was used with an operator which does not support ancillary operators

Action: Remove the ancillary operator in the query

ORA-31055: cannot insert NULL XMLType element into RESOURCE_VIEW

Cause: The element which was being inserted into RESOURCE_VIEW was NULL.

Action: Specify a XMLType element that is not NULL to insert into RESOURCE_VIEW.

ORA-31056: The document being inserted does not conform to *string*

Cause: The XMLType element being inserted into the RESOURCE_VIEW does not conform to the specified Schema

Action: Insert an element which conforms to the specified Schema

ORA-31057: Display Name of the element being inserted is null

Cause: The Display Name of the element which is being inserted into the RESOURCE_VIEW is null

Action: Specify the Display Name and insert the element into RESOURCE_VIEW

ORA-31058: cannot modify read-only XOBs

Cause: Read-Only XOBs cannot be modified.

Action: Use only read operations on such a XOB.

ORA-31059: Cannot insert root XML document node if it already exists

Cause: An attempt was made to insert a root node into an XML document that already had a root node.

Action: Call the appropriate replace function to replace the node instead of inserting it anew.

ORA-31060: Resource at path *string* could not be deleted.

Cause: An error occurred when an attempt was made to delete the named resource.

Action: Check the error stack for detailed information on this issue. Examine the next error on the stack, take appropriate action, and then retry the operation.

ORA-31061: XDB error: *string*

Cause: The specified error occurred in XDB.

Action: Correct the error or contact Oracle Support Services.

ORA-31062: Cannot delete an unsaved resource

Cause: An attempt was made to delete a resource that had not been saved to disk.

Action: Delete only saved resources.

ORA-31063: XPath compilation failed: *string*.\n*string*

Cause: XPath compilation failed for specified reason.

Action: Contact Oracle Support Services.

ORA-31064: Cannot instantiate abstract element or property [*string*]

Cause: An attempt was made instantiate an abstract element.

Action: Use only read operations on such elements.

ORA-31065: Cannot modify read-only property [*string*]

Cause: An attempt was made to modify an immutable XML node.

Action: Use only read operations on such properties.

ORA-31066: Insertion of *string* into *string* creates a cycle.

Cause: An attempt was made to insert a link into the XDB hierarchy that would create a cycle in the tree.

Action: Ensure that links to existing resources do not cause cycles.

ORA-31067: XML nodes must be updated with valid nodes and of the same type

Cause: An attempt was made to use updateXML to update an XML node with a node of another type.

Action: Ensure that the node specified by the XPath matches the type of new data provided.

ORA-31068: updateXML expected data format [*string*] instead of [*string*]

Cause: An attempt was made to use updateXML to update data with a node of the incorrect type. Text and attribute nodes must be updated with string data, whereas element nodes must be updated with XMLType data.

Action: Use CREATEXML or getStringVal to coerce the new data to the proper format.

ORA-31069: Cannot apply typed changes to non-schema-based XMLType nodes.

Cause: Attempted to insert, delete, or update a non-schema-based XMLType node using an XML schema definition.

Action: Change non-typed nodes only by referencing their tag names.

ORA-31070: invalid database user ID *string*

Cause: An attempt was made to set an invalid user ID in an XDB resource metadata property.

Action: Verify the validity of the user ID and try again.

ORA-31071: Invalid database username or GUID *string*

Cause: An attempt was made to set an invalid username or GUID into an XDB resource metadata property.

Action: Verify the validity of the username or GUID and try again.

ORA-31072: Too many child nodes in XMLType fragment for updateXML

Cause: An attempt was made to pass an XMLType fragment with multiple children as new data for the updateXML operator.

Action: Extract the desired child from the XMLType before passing it to updateXML as the desired new XML node.

ORA-31073: resource not retrieved using pathname

Cause: An attempt was made to access the pathname of a resource that was either never saved to disk or was loaded using a method other than with its pathname.

Action: Perform the pathname operations only on resources obtained using a pathname.

ORA-31074: XML comment length *string* exceeds maximum *string*

Cause: The length of the disk-formatted XML comment exceeded the maximum.

Action: Keep outer XML comments declarations below the maximum length.

ORA-31075: invalid *string* declaration in XML Schema

Cause: The XML schema contains an invalid declaration identified by the message.

Action: Fix the identified error and try again.

ORA-31076: required attribute "*string*" not specified

Cause: The XML schema does not specify a required attribute.

Action: Specify a value for the required attribute.

ORA-31077: invalid attribute "*string*" specified

Cause: The XML schema specifies an invalid attribute.

Action: Remove specification of the invalid attribute.

ORA-31078: error in SQL mapping information

Cause: There is an error in the SQL type and table specification within the XML Schema.

Action: Ensure that all specified SQL types and tables are valid and compatible with the corresponding XML types.

ORA-31079: unable to resolve reference to *string* "*string*"

Cause: The identified type or attribute or element could not be resolved.

Action: Make sure that the name corresponds to a valid XML (simple/complex) type or attribute or element and try again.

ORA-31080: type not specified for attribute or element "*string*"

Cause: The identified attribute or element does not have a type.

Action: Make sure that every attribute and element has a valid type specification.

ORA-31081: name not specified for global declaration

Cause: The XML schema does not specify the name for the global declaration of attribute or element or simpleType or complexType.

Action: Specify names for all global declarations.

ORA-31082: invalid attribute "*string*" specified in declaration of "*string*"

Cause: The XML schema specifies an invalid attribute.

Action: Remove specification of the invalid attribute.

ORA-31083: error while creating SQL type "*string*". "*string*"

Cause: An error occurred while trying to create the SQL type based on the specification of a complex type.

Action: Fix the identified error and try again.

ORA-31084: error while creating table "*string*". "*string*" for element "*string*"

Cause: An error occurred while trying to create the table based on the declaration for the identified element.

Action: Fix the identified error and try again.

ORA-31085: schema "*string*" already registered

Cause: An attempt was made to register a schema with the same URL as a previously registered schema.

Action: Register the schema with a different URL.

ORA-31086: insufficient privileges to register schema "*string*"

Cause: An attempt was made to register a schema without sufficient privileges.

Action: Make sure that the user has sufficient privileges to register the schema.

ORA-31087: insufficient privileges to delete schema "*string*"

Cause: An attempt was made to delete a schema resource without sufficient privileges.

Action: Make sure that the user has sufficient privileges to delete the schema.

ORA-31088: object "*string*"."*string*" depends on the schema

Cause: An attempt was made to delete a schema which has dependent objects.

Action: Either drop the dependent objects prior to deleting the schema or use the CASCADE or FORCE options.

ORA-31089: schema "*string*" does not target namespace "*string*"

Cause: The schema document contains references (via include and import definitions) to other schemas that do not belong to valid namespaces.

Action: Make sure that all schemas referenced via include definitions target the same namespace as the parent schema. Further make sure that the namespace specified in the import definition matches the actual target namespace of the specified schema.

ORA-31090: invalid database schema name "*string*"

Cause: The XML schema document contains an invalid database schema name. For example, the value of attribute SQLSchema

Action: Make sure that all database user/schema names specified in the XML schema document refer to existing database users/schemas.

ORA-31091: empty string specified as a SQL name

Cause: The XML schema document contains a null SQL name. For example, the values of attributes SQLName, SQLType, defaultTable.

Action: Make sure that all names of SQL schema objects specified in the XML schema document are valid SQL names. Otherwise, remove such attributes from the schema and try again.

ORA-31092: invalid SQL name "*string*"

Cause: The XML schema document contains an invalid SQL name. For example, the values of attributes SQLName, SQLType, defaultTable.

Action: Make sure that all names of SQL schema objects specified in the XML schema document are valid SQL names. This implies that the database length and other restrictions on names be satisfied.

ORA-31093: null or invalid value specified for parameter *string*

Cause: The argument value passed for the specified parameter was null or invalid.

Action: Ensure that all of the input argument values are valid.

ORA-31094: incompatible SQL type "*string*" for attribute or element "*string*"

Cause: The SQL type information provided in the XML schema is not compatible with the XML datatype for the specified attribute or element.

Action: Make sure that the specified SQL types are compatible with the declared XML datatypes.

ORA-31095: cannot generate *string* : "*string.string*" already exists

Cause: The type/table name specified in the XML schema document cannot be generated because it is already being used.

Action: Use different names for types/tables or use the NOGEN mode so that schema compiler does not generate new types/tables.

ORA-31096: validation failed for schema

Cause: The XML Schema could not be validated.

Action: Make sure that the SQLType and other datatype mapping is valid.

ORA-31097: Hierarchical Index not empty

Cause: An attempt was made to rebuild the hierarchical index which is not empty.

Action: Delete all rows in the hierarchical index and then rebuild it.

ORA-31099: internal XDB security error

Cause: An internal XDB security error has occurred.

Action: Contact Oracle Support Services.

ORA-31100: internal XDB locking error

Cause: An internal XDB locking error has occurred.

Action: Contact Oracle Support Services.

ORA-31101: token "*string*" not given while locking resource "*string*"

Cause: An attempt was made to lock a resource when the principal already owned a lock given by the token.

Action: Attempt the lock again with the token.

ORA-31102: Already locked in exclusive mode. Cannot add lock.

Cause: The resource is already locked in exclusive mode. Cannot add another lock.

Action: Unlock the existing lock.

ORA-31103: cannot obtain an exclusive lock on the resource because it is already locked in shared mode

Cause: An exclusive lock could not be obtained because the resource was already locked in shared mode.

Action: Choose a compatible lock mode such as a shared lock or wait for the shared lock to be released.

ORA-31104: cannot find lock with token "*string*" on "*string*"

Cause: The specified lock could not be located because the token was incorrect, unlocked, or expired.

Action: Ensure the specified token and state are correct for the specified lock. After this, retry the operation.

ORA-31105: User does not own lock with supplied token "*string*".

Cause: The lock corresponding to the supplied token was not owned by the user.

Action: Supply the correct token while being connected as the correct user.

ORA-31106: parent container locked

Cause: The action failed because a parent container was locked.

Action: Supply the lock token on the parent container or unlock it.

ORA-31107: resource "*string*" locked by name lock

Cause: The operation failed because the lock requests caused the whole requested Uniform Resource Identifier (URI) to be locked.

Action: Supply a lock token or unlock the lock.

ORA-31108: The action failed because resource *string* is locked.

Cause: A delete or rename command failed because of an existing lock.

Action: Release the lock and try again.

ORA-31109: Action failed as parent resource *string* is locked

Cause: Delete/Rename failed because of an lock on parent resource

Action: Do lockdiscovery to find the lock and delete it.

ORA-31110: action failed as resource *string* is locked

Cause: A delete or rename operation failed because one of the children resources was locked.

Action: Either wait until the child resource is unlocked or remove the lock and try again.

ORA-31111: table *string* cannot be hierarchically enabled

Cause: Trigger *tablename_xdb_pittrigger* already exists

Action: Either the table is already hierarchically enabled or the user trigger *tablename_xdb_pittrigger* needs to be dropped. Delete all rows in the hierarchical index and then rebuild it.

ORA-31112: fail to *string* for *string* port using xdb configuration

Cause: port number for the defined presentation is not valid

Action: Either the port number is already in use or it is protected. Specify another port number.

ORA-31113: XDB configuration may not be updated with non-schema compliant data

Cause: An attempt was made to update the XDB configuration resource with non-schema or non-schema compliant data.

Action: Check the document to make sure it is schema based and schema compliant.

ORA-31114: XDB configuration has been deleted or is corrupted

Cause: The XDB configuration resource has been deleted or corrupted.

Action: Reinstall XDB, or reinsert a valid configuration document.

ORA-31115: XDB configuration error: *string*

Cause: An error related to XDB configuration has occurred.

Action: Make sure the configuration resource contains valid data.

ORA-31116: Tablespace not specified correctly

Cause: XDB cannot be moved to the specified tablespace.

Action: Specify a valid tablespace.

ORA-31117: Table "*string*"."*string*" is not resource metadata enabled

Cause: This table does not have a RESID column for resource metadata

Action: Use disable/enable_hierarchy to enable resource metadata

ORA-31118: System schema "*string*" is already registered.

Cause: An attempt was made to register an XML schema with the same URL as a system XML schema.

Action: Change the schema URL to avoid conflicts with system XML schemas.

ORA-31119: XDB configuration cannot be updated on all instances

Cause: An attempt was made to update XDB configuration.

Action: Ensure that each instance is correctly configured with its listener.

ORA-31120: usedPort cannot be invoked in a Pluggable Database

Cause: An attempt was made to invoke 'usedPort' in a Pluggable Database.

Action: Connect to the root container and invoke 'usedPort'.

ORA-31121: The value of operator *string* cannot be FALSE.

Cause: The value of the operator that was specified was FALSE.

Action: Specify an operator that evaluates to TRUE.

ORA-31122: The right hand side value for operator *string* did not evaluate to TRUE.

Cause: The value on the right hand side that was specified for the operator did not evaluate to TRUE.

Action: Specify a value on the right hand side that evaluates to TRUE.

ORA-31127: RCList cannot contain noncommitted resource configuration

Cause: A commit was not executed after adding a resource configuration to an RCList by calling DBMS_RESCONFIG.ADDRESCONFIG()

Action: Make sure a commit is executed after calling DBMS_RESCONFIG.ADDRESCONFIG()

ORA-31128: The event handler calls cannot exceed the depth of *string*

Cause: Tried to fire an event with depth exceeding the maximum.

Action: Make sure the event that is being fired does not generate infinitely recursive calls, either to itself or to other functions or procedures.

ORA-31129: Unable to retrieve repository's resource configuration

Cause: Tried to access a resource configuration referenced by the XDB repository that has been deleted.

Action: Disassociate the resource configuration from the repository.

ORA-31130: Specified resource configuration is not associated with given resource

Cause: Tried to delete a nonexistent resource configuration from the configuration list of the target resource.

Action: Make sure that the resource and resource configuration names are specified correctly and the resource configuration belongs to the configuration list of the given resource.

ORA-31131: *RCList* contains OID that is not a resource configuration OID

Cause: The OID in *RCList* element was not a resource configuration OID.

Action: Update the *RCList* element and resubmit statement.

ORA-31132: could not invoke event handler "*string*"."*string*"

Cause: A attempt failed to invoke an invalid event handler. Either the handler did not exist or the handler could not be compiled successfully.

Action: Verify that the named handler exists and recompile it. Ensure that the recompilation is successful.

ORA-31133: invoker's rights not currently allowed for handler "*string*"."*string*"

Cause: An attempt was made to invoke an event handler with invoker's rights when the SET-INVOKER attribute in the resource configuration that defines the handler was not set to TRUE.

Action: Either redefine the named handler with definer's rights or change the SET-INVOKER attribute in the resource configuration that defines the named handler to TRUE.

ORA-31134: Cannot delete a configuration that is referenced by other resources

Cause: Attempted to delete a resource configuration that was referenced by other resources.

Action: Remove all references to the target resource configuration by executing DELETERESCONFIG or DELETEREPOSITORYRESCONFIG procedures in DBMS_RESCONFIG package or specify the DELETE_FORCE option in the DELETERESOURCE statement.

ORA-31135: Resource has already been rendered

Cause: One of the following has occurred: 1) Attempted to invoke setRender* method after the resource was rendered through a setRender* method or after data was written to the output stream. 2) Attempted to access the output stream of the resource after a setRender* method was executed on the resource.

Action: Remove the method causing the problem.

ORA-31136: Resource configuration *string* is already associated with the resource *string*

Cause: The resource configuration already exists in the resource configuration list of the resource or the repository

Action: Check if this resource configuration really needs to be added. If so, remove it from resource and repository lists before adding it.

ORA-31137: Index out of range

Cause: The position specified was not valid.

Action: Check (0 <= pos < size of the configuration list of the target resource)

ORA-31138: Resource configuration is being referenced by another resource.

Cause: Attempted to add a resource configuration to the repository that was referenced by an existing resource.

Action: Remove the resource configuration from other resource before you retry adding it to the repository.

ORA-31139: Invalid resource configuration list

Cause: Attempted to create or update a resource that had duplicate resource configurations or conflicted with the repository configurations.

Action: Correct the resource configuration list and re-submit statement.

ORA-31140: Illegal operation: *string*

Cause: Tried to invoke a method when it was not allowed.

Action: Do not execute the indicated method.

ORA-31141: Must specify a valid path value

Cause: The path specified for the *defaultChildConfig* or *defaultChildACL* element must refer to an existing resource.

Action: Correct problem and resubmit statement.

ORA-31142: Must specify the schema for each listener

Cause: The schema element was not specified.

Action: Correct problem and resubmit statement.

ORA-31143: XDB_SET_INVOKER role is required

Cause: XDB_SET_INVOKER role was required to set the SET-INVOKER attribute to TRUE.

Action: Correct problem and resubmit statement.

ORA-31144: Implementation language for *string* is not specified

Cause: Implementation language for specified listener source was not specified.

Action: Correct problem and resubmit statement.

ORA-31145: Duplicate listener, *string*, found in resource configuration

Cause: Duplicate listener source was found in resource configuration.

Action: Remove duplicates and resubmit statement.

ORA-31146: Invalid listener source *string.string*

Cause: The listener source specified in the resource configuration did not exist or was invalid.

Action: Correct the listener source in the *listener* element and resubmit statement.

ORA-31147: *string* is not an ACL resource

Cause: The specified resource did not conform to *acl.xsd* schema.

Action: Specify a valid path for the *defaultChildACL* element and resubmit statement.

ORA-31148: *string* is not a valid resource configuration

Cause: The resource specified in the *defaultChildConfig* element while creating a resource configuration or specified as the *rpath* in a call using `DBMS_RESCONFIG` package did not conform to `XDBResConfig.xsd` schema.

Action: Specify a valid path and resubmit statement.

ORA-31149: no such schema: *string*

Cause: Nonexistent schema defined in the resource configuration.

Action: Specify a valid schema in the resource configuration and resubmit statement.

ORA-31150: unrecoverable error in handler *string*

Cause: The named handler raised an exception.

Action: This message is followed by a second message giving more details about the error. Check the second error message for more information.

ORA-31151: Cyclic definition encountered for *string*: "*string*"

Cause: The schema definition for this type has cycles.

Action: Remove cyclic definition and re-compile schema.

ORA-31153: Cannot create schema URL with reserved prefix "`http://xmlns.oracle.com/xdbschemas/`"

Cause: This prefix is reserved for XDB extended schema URLs and cannot be used in a user specified URL.

Action: Modify the prefix to a different one.

ORA-31154: invalid XML document

Cause: The XML document is invalid with respect to its XML Schema.

Action: Fix the errors identified and try again.

ORA-31155: attribute *string* not in XDB namespace

Cause: The specified attribute was not prefixed with the XDB namespace.

Action: Ensure that all XDB specified attributes are prefixed with the XDB namespace, and then try again.

ORA-31157: Invalid Content-Type charset

Cause: HTTP Content-Type header had a charset that Oracle does not understand.

Action: Fix the Content-Type header in the HTTP request.

ORA-31158: schema "*string*" currently being referenced

Cause: The specified schema URL is currently being referenced by the same session. This could happen because of PLSQL XMLType variables still in scope.

Action: Ensure all references to this schema in this session are released, and then try the operation again.

ORA-31159: Oracle XML DB is in an invalid state.

Cause: Oracle XML DB internal tables are in an invalid state, probably because the database was not upgraded or the upgrade was not successful.

Action: Ensure that the database is upgraded successfully. If the problem persists, then contact Oracle Support.

ORA-31160: max substitution group size *string* exceeded by "*string*" (*string*) for head element "*string*" (*string*)

Cause: The maximum limit on nested substitution groups has been exceeded by an element.

Action: Delete specified schema and re-register it after removing the offending substitution element.

ORA-31161: element or attribute "*string*" cannot be stored out of line

Cause: An element or attribute of a simple type has SQLInline=false

Action: Remove the SQLInline=false qualification for the offending element or attribute

ORA-31162: element or attribute "*string*" has no SQLType specified

Cause: Schema registration was invoked with GENTYPES=false without specifying a SQLType for some element or attribute

Action: Specify a SQLType for the offending element or attribute and register the schema again

ORA-31163: element or attribute "*string*" has invalid attribute value "*string*" (should be "*string*")

Cause: An element or attribute for a complex type derived by restriction has an attribute whose value is different from that in the base type

Action: Remove the mismatched attribute values from the offending element or attribute

ORA-31164: cannot load object-relational XML attribute using direct path \n

Cause: The table being loaded contains a xml column with object-relational storage. The xmltype column contains a type with subtypes. This type of attribute cannot be loaded with direct path.

Action: Perform the load with conventional path mode.

ORA-31165: cannot load object-relational XML attribute using direct path

Cause: The table that was loaded contained an XML column with object-relational storage. The XMLType column either contains an out-of-line partitioned table or the table itself is partitioned by one of the attributes of XMLType. This type of table cannot be loaded with direct path.

Action: Perform the load with conventional path mode.

ORA-31167: XML nodes over 64K in size cannot be inserted

Cause: An attempt was made to insert an XML Text Node with a size greater than 64K. This is not supported.

Action: Create text nodes under 64K.

ORA-31168: Node localname and namespace values should be less than 64K

Cause: An attempt was made to specify an XML Node with localname or namespace value greater than or equal to 64K. This is not supported.

Action: Node localnames and namespace values should be under 64K.

ORA-31169: Number of children (*string*) defined in '*string*' exceeds maximum (*string*).

Cause: An attempt was made to define more than the allowed number of children in a complexType element of an XML schema document.

Action: Modify the XML schema document to move children of a complexType into sub-elements that are not stored inline.

ORA-31170: Cyclic Schema Registration without using FORCE option

Cause: An attempt was made to register cyclic schemas with FORCE = false.

Action: Use FORCE = true when registering cyclic schemas.

ORA-31171: schema processing error LSX-*string*while *string*

Cause: An LSX routine returned an error.

Action: Look up the LSX error and follow its corrective action.

ORA-31172: cannot load ADT column or XMLType column using direct path

Cause: The table being loaded contained an ADT column or XMLType column with object-relational or binary storage and supplemental logging was enabled for the table. Direct path load is not supported for such tables when supplemental logging is enabled.

Action: Perform the load with conventional path mode.

ORA-31176: API not supported in this release

Cause: This API was not supported.

Action: None

ORA-31180: DOM Type mismatch in invalid PL/SQL DOM handle

Cause: The specified PL/SQL DOM handle is referencing a DOM Node whose DOM Type that does not match the one available in the session. This could happen because the pl/sql handle was reused, or the original document is no longer available.

Action: Ensure that the pl/sql handle for the target node is valid and try the operation again.

ORA-31181: PL/SQL DOM handle accesses node that is no longer available

Cause: The specified pl/sql handle is referencing a node in a DOM Document that is no longer available.

Action: Ensure that the pl/sql handle for the target node is valid and try the operation again.

ORA-31182: Too many PL/SQL DOM handles specified

Cause: An attempt was made to create a PL/SQL DOM handle that exceeded the maximum allowable number of PL/SQL DOM handles.

Action: Free PL/SQL DOM handles and try the operation again.

ORA-31183: Node type *string* cannot be converted to desired type

Cause: The given node's type cannot be converted correctly for this operation. For example, a DOM Element cannot be converted to Document Fragment

Action: Pass a valid node type for the conversion.

ORA-31185: DOM Nodes do not belong to the same DOM Document

Cause: The specified PL/SQL DOM Node does not belong to the parent DOM Document of the referring DOM Node.

Action: Ensure that both the DOM Nodes are part of the same DOM Document.

ORA-31186: Document contains too many nodes

Cause: Unable to load the document because it has exceeded the maximum allocated number of DOM nodes.

Action: Reduces the size of the document.

ORA-31187: Cannot Add Node '*string*' (type='*string*') to Simple Type Node '*string*'

Cause: Trying to add attribute/element nodes to a simple type against the schema definition. Simple types can have only special attribute like namespaces, xsi:nil etc.

Action: Use a valid node for the operation.

ORA-31188: The specified printing option is invalid

Cause: The printing option specified in the operation is invalid.

Action: Use a valid printing option for the operation.

ORA-31190: Resource *string* is not a version-controlled resource

Cause: Either one of the following is the cause: - Checkout is requested for a resource that isn't under version control". Only version-controlled resource can be checked out. - Checkout is requested for a row of a non-versioned table.

Action: put the resource under version-control before checking out.

ORA-31191: Resource *string* is already checked out

Cause: Either one of the following is the cause: - Checkout is requested for a resource that is already checked out to the workspace by the same of different user.

Action: checked in the resource from the workspace before checking out

ORA-31192: Resource *string* has not been checked out.

Cause: An attempt was made to check in or uncheck out a resource that was not checked out by a user in a workspace.

Action: Check out the resource from the workspace before checking in.

ORA-31193: This versioning feature isn't supported for resource *string*

Cause: Either one of the following is the cause: - Container cannot be put under version-controlled.

Action: Avoid using these features.

ORA-31194: Resource *string* is already deleted

Cause: Access a version-controlled resource that is already deleted.

Action: Recreate the resource. Remove the cyclic definitions in the type and retry compilation.

ORA-31195: XML node '*string*' (type=*string*) does not support this operation

Cause: The given node's type is not supported for this operation. For example, trying to add children to an attribute node, or passing in a document node as a child, are unsupported operations.

Action: Use a valid node type for the operation.

ORA-31196: XML nodes over *string* in size cannot be printed

Cause: An attempt was made to use an XML Text Node with a size greater than 64K, or an XML Comment Node with a size greater than 4K. These cannot be printed. For example, trying to add children to an attribute node, or passing in a document node as a child, are unsupported operations.

Action: Use getClobVal() or getStringVal() to print the Document.

ORA-31197: Error in processing file *string*

Cause: An error occurred while operating on the specified file. The possible causes are the file header is corrupt or check the next error on stack

Action: Ensure that the specified file is correct. Look at the next error on the stack and take appropriate action.

ORA-31198: Mismatch in number of bytes transferred due to non-binary mode

Cause: An error occurred while reading the specified file. The most probable cause is that the transfer was initiated in ASCII mode.

Action: Ensure that the transfer mode is set to BINARY

ORA-31199: Warning in processing file *string*

Cause: A warning was raised while operating on the specified file. However, the current operation was completed successfully.

Action: This is primarily an informational message. Look at the next error on the stack to obtain further information.

ORA-31200: Invalid ACL Argument

Cause: A System Constraining ACL was passed as one of the arguments to this function.

Action: Please ensure that none of the aclid arguments are for the System Constraining ACL.

ORA-31201: DBMS_LDAP: generic error: *string*

Cause: There has been an error in the DBMS_LDAP package.

Action: Please report the error number and description to Oracle Support.

ORA-31202: DBMS_LDAP: LDAP client/server error: *string*

Cause: There is a problem either on the LDAP server or on the client.

Action: Please report this error to the LDAP server administrator or your Database administrator.

ORA-31203: DBMS_LDAP: PL/SQL - Init Failed.

Cause: There has been an error in the DBMS_LDAP Init operation.

Action: Please check the host name and port number, or report the error number and description to Oracle Support.

ORA-31204: DBMS_LDAP: PL/SQL - Invalid LDAP Session.

Cause: There has been an error in the DBMS_LDAP bind operation.

Action: Please check the session handler that you use for binding, or report the error number and description to Oracle Support.

ORA-31205: DBMS_LDAP: PL/SQL - Invalid LDAP Auth method.

Cause: There has been an error in the DBMS_LDAP bind operation.

Action: Please check the authentication credentials that you use for binding, or report the error number and description to Oracle Support.

ORA-31206: DBMS_LDAP: PL/SQL - Invalid LDAP search scope.

Cause: There has been an error in the DBMS_LDAP search operation.

Action: Please check the search scope that you use for search, or report the error number and description to Oracle Support.

ORA-31207: DBMS_LDAP: PL/SQL - Invalid LDAP search time value.

Cause: There has been an error in the DBMS_LDAP search operation.

Action: Please check the search time value that you use for search, or report the error number and description to Oracle Support.

ORA-31208: DBMS_LDAP: PL/SQL - Invalid LDAP Message.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP message that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31209: DBMS_LDAP: PL/SQL - LDAP count_entry error.

Cause: There has been an error in the DBMS_LDAP count_entry operation.

Action: Please check the LDAP count_operation, or report the error number and description to Oracle Support.

ORA-31210: DBMS_LDAP: PL/SQL - LDAP get_dn error.

Cause: There has been an error in the DBMS_LDAP get_dn operation.

Action: Please check the LDAP get_dn, or report the error number and description to Oracle Support.

ORA-31211: DBMS_LDAP: PL/SQL - Invalid LDAP entry dn.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the entry dn that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31212: DBMS_LDAP: PL/SQL - Invalid LDAP mod_array.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP mod_array that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31213: DBMS_LDAP: PL/SQL - Invalid LDAP mod option.

Cause: There has been an error in the DBMS_LDAP populate_mod_array operation.

Action: Please check the LDAP mod option that you use for LDAP populate_mod_array operation, or report the error number and description to Oracle Support.

ORA-31214: DBMS_LDAP: PL/SQL - Invalid LDAP mod type.

Cause: There has been an error in the DBMS_LDAP populate_mod_array operation.

Action: Please check the LDAP mod type that you use for LDAP populate_mod_array operation, or report the error number and description to Oracle Support.

ORA-31215: DBMS_LDAP: PL/SQL - Invalid LDAP mod value.

Cause: There has been an error in the DBMS_LDAP populate_mod_array operation.

Action: Please check the LDAP mod value that you use for LDAP populate_mod_array operation, or report the error number and description to Oracle Support.

ORA-31216: DBMS_LDAP: PL/SQL - Invalid LDAP rdn.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP rdn value that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31217: DBMS_LDAP: PL/SQL - Invalid LDAP newparent.

Cause: There has been an error in the DBMS_LDAP rename_s operation.

Action: Please check the LDAP newparent value that you use for LDAP rename_s operation, or report the error number and description to Oracle Support.

ORA-31218: DBMS_LDAP: PL/SQL - Invalid LDAP deleteoldrdn.

Cause: There has been an error in the DBMS_LDAP rename_s operation.

Action: Please check the LDAP deleteoldrdn value that you use for LDAP rename_s operation, or report the error number and description to Oracle Support.

ORA-31219: DBMS_LDAP: PL/SQL - Invalid LDAP notypes.

Cause: There has been an error in the DBMS_LDAP explode_dn or explode_rdn operation.

Action: Please check the LDAP notypes value that you use for LDAP explode_dn or explode_rdn operation, or report the error number and description to Oracle Support.

ORA-31220: DBMS_LDAP: PL/SQL - Invalid LDAP SSL wallet location.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP sslwrl value that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31221: DBMS_LDAP: PL/SQL - Invalid LDAP SSL wallet passwd.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP sslpasswd value that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31222: DBMS_LDAP: PL/SQL - Invalid LDAP SSL authentication mode.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP sslauth value that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31223: DBMS_LDAP: cannot open more than *string* LDAP server connections

Cause: An attempt was made to open more than the maximum allowed LDAP server connections.

Action: Free unused connections.

ORA-31224: DBMS_LDAP: invalid LDAP session

Cause: An attempt was made by a PL/SQL module to use an LDAP session which is not valid and might have already been closed.

Action: Check the LDAP session handle in PL/SQL module involving DBMS_LDAP.

ORA-31225: DBMS_LDAP: invalid BER_ELEMENT

Cause: An attempt was made by a PL/SQL module to use a BER_ELEMENT which is not valid and might have already been freed.

Action: Check the BER_ELEMENT in PL/SQL module involving DBMS_LDAP.

ORA-31226: DBMS_LDAP: MOD_ARRAY size limit exceeded

Cause: An attempt was made by a PL/SQL module to add an element beyond the MOD_ARRAY size limit.

Action: Increase the MOD_ARRAY size limit in PL/SQL module involving DBMS_LDAP.

ORA-31227: DBMS_LDAP: invalid LDAP MESSAGE handle

Cause: An attempt was made by a PL/SQL module to use an LDAP MESSAGE handle which is not valid and might have already been freed.

Action: Check the LDAP MESSAGE handle in PL/SQL module involving DBMS_LDAP.

ORA-31228: DBMS_LDAP: invalid MOD_ARRAY

Cause: An attempt was made by a PL/SQL module to use a MOD_ARRAY which is not valid and might have already been freed.

Action: Check the MOD_ARRAY in PL/SQL module involving DBMS_LDAP.

ORA-31229: DBMS_LDAP: invalid input parameter

Cause: An invalid argument has been passed by a PL/SQL module to a DBMS_LDAP subprogram

Action: Check the input argument to the DBMS_LDAP subprogram in PL/SQL module involving DBMS_LDAP.

ORA-31230: DBMS_LDAP: unable to dynamically allocate additional memory

Cause: An error occurred during dynamic memory allocation from session heap.

Action: Verify that adequate memory resources are available.

ORA-31231: DBMS_LDAP: invalid PROPERTY_SET

Cause: An attempt was made by a PL/SQL module to use a PROPERTY_SET which is not valid and might have already been freed.

Action: Check the PROPERTY_SET in PL/SQL module involving DBMS_LDAP.

ORA-31232: DBMS_LDAP: invalid MOD_PROPERTY_SET

Cause: An attempt was made by a PL/SQL module to use a MOD_PROPERTY_SET which is not valid and might have already been freed.

Action: Check the MOD_PROPERTY_SET in PL/SQL module involving DBMS_LDAP.

ORA-31398: DBMS_LDAP: Shared servers are not supported.

Cause: The session executing functions from the DBMS_LDAP package is being handled by a shared server in the Database.

Action: Use dedicated database sessions to execute functions in the DBMS_LDAP package.

ORA-31399: Cannot contact LDAP server *string* at port *number*

Cause: The LDAP server specified could not be contacted. This can happen if the server is down or inaccessible.

Action: Contact the administrator of the LDAP server

ORA-31400: DBMS_LDAP: missing or invalid scheduler credential

Cause: An attempt was made to perform a simple username and password-based authentication to the directory server using a non-existent or an invalid scheduler credential. This error could also occur if the credential existed as a synonym and there was insufficient privileges on the base credential pointed to by the synonym.

Action: Reissue the command using a scheduler credential object that exists or create a new credential object and then reissue the command. Do not qualify the credential name with a schema name. The credential name should be owned by the current user invoking the DBMS_LDAP method. If the credential is owned by a different user, create a synonym pointing to the credential, request the database administrator to grant EXECUTE privilege on the credential and then reissue the command.

ORA-31401: change source *string* is not an existing change source

Cause: The caller did not use the name of an existing change source. The name given does not match the name of any existing change source.

Action: Check the spelling of the change source name. Choose an existing change source.

ORA-31402: unrecognized parameter *string*

Cause: Unrecognized parameter was detected.

Action: Check for too many parameters in the call.

ORA-31403: change table *string* already contains a column *string*

Cause: Issued ALTER_CHANGE_TABLE with an add operation but a column by this name already exists in the specified table.

Action: Check the names and call the procedure again.

ORA-31404: all input parameters are null

Cause: All input parameters are null. At least one property must be altered.

Action: Call the procedure again, making sure that all the required parameters have been specified. Ensure that at least one parameter is not null. Refer to user documentation for the correct way of calling this procedure.

ORA-31405: cannot make changes while change set *string* is advancing

Cause: The change set is currently advancing. Change sources related to an advancing change set cannot be altered. Change tables related to the advancing change set cannot be created, altered or dropped. Some or all the parameters of the change set cannot be altered while the set is advancing.

Action: Wait until the change set has finished advancing, then reissue the command. If altering the change set, only the `advance_enable` parameter can be altered during an advance.

ORA-31406: change source *string* is referenced by a change set

Cause: The operation cannot complete because this change source is referenced by one or more change sets.

Action: Drop the change sets first, then re-issue the command. May have to drop some change tables before the change sets are dropped.

ORA-31407: end_date must be greater than the begin_date

Cause: The end data of the change set is earlier than the begin date. The end date must always be later in time than the begin date, so that the duration between the begin and end dates is a positive amount of time.

Action: Change the begin date and/or the end date, so that the end date is later than the begin date.

ORA-31408: invalid value specified for begin_scn or end_scn

Cause: The `begin_scn` was not greater than zero. The `end_scn` was less than zero. The `end_scn` was less than the `begin_scn`.

Action: Check the values of both `begin_scn` and `end_scn`. Correct them to make sure that they form a legal SCN range. An `end_scn` value of zero indicates an infinite scn range.

ORA-31409: one or more values for input parameters are incorrect

Cause: One or more of the inputs to the procedure had invalid values.

Action: Identify the bad parameter(s) and supply correct values to the procedure.

ORA-31410: change set *string* is not an existing change set

Cause: Could not find an existing change set by this name.

Action: Check the spelling of the change set name. Call the procedure again, passing the correct change set name.

ORA-31411: change set *string* is referenced by a change table

Cause: The operation cannot be performed because the change set contains one or more change tables.

Action: You will need to drop the change table(s) first, then repeat the operation

ORA-31412: change set *string* is disabled and cannot be advanced

Cause: The specified change set is disabled. The change set needs to be enabled for the operation to succeed.

Action: Determine why the change set is disabled and correct this condition. Alter the change set specifying 'y' for `advance_enable` then retry the operation.

ORA-31413: change set *string* is currently being advanced

Cause: An advance operation is in progress for this change set and we only allow one at a time.

Action: Since the change set is currently being advanced, the best action is to wait for it to finish advancing. Only one caller at a time can advance the change set. Check for the cause of long running advance operations.

ORA-31414: error(s) occurred during change table advance

Cause: One or more errors occurred during the advance operation.

Action: Check the log file(s) for a more detailed report of the underlying errors.

ORA-31415: change set *string* does not exist

Cause: Specified change set does not exist or the user does not have access to the publications in that change set. The name specified did not match the name of any existing change set. Certain privileges are required to access the publications within that change set.

Action: Check the name and call the procedure again, with the name of an existing change set. Contact the publisher or database administrator if user privileges are required to access the publications in the change set.

ORA-31416: invalid SOURCE_COLMAP value

Cause: A `source_colmap` value of 'y' was specified for an asynchronous change table.

Action: Specify a `source_colmap` parameter value of 'n' and call the procedure again.

ORA-31417: column list contains control column *string*

Cause: Reserved column name was specified in a column list or column type parameter.

Action: Control columns are selected with separate parameters. If you did not want a control column, then change the name of the specified column so that it does not conflict with a reserved column name.

ORA-31418: source schema *string* does not exist

Cause: Trying to create a synchronous change table and the source schema did not match any existing schema names in the database.

Action: Specify the name of an existing schema.

ORA-31419: source table *string* does not exist

Cause: When creating a synchronous change table, the underlying source table must exist when the procedure is called. In this case, the source table did not exist.

Action: Specify the name of an existing table.

ORA-31420: unable to submit the purge job

Cause: When creating the first change table, a purge job is submitted to the job queue. Submission of this purge job failed.

Action: Make sure that job queue processes are enabled and are currently running. If this does not solve the problem, contact Oracle.

ORA-31421: change table does not exist

Cause: Specified change table does not exist.

Action: Recheck the name, and call the procedure again using an existing change table.

ORA-31422: owner schema *string* does not exist

Cause: Value specified for the owner parameter does not contain the name of an existing schema in the database.

Action: Recheck the name, and call the procedure again using an existing schema name.

ORA-31423: change table *string* does not contain column *string*

Cause: Issued ALTER_CHANGE_TABLE with a drop operation and the specified column does not exist in the change table.

Action: Recheck the names, and call the procedure again.

ORA-31424: change table has active subscriptions

Cause: The change table is subscribed to, so it cannot be dropped.

Action: Do not drop a change table while there are active subscribers. If this is an emergency, use the FORCE parameter. This will forcibly drop the change table out from under all subscribers.

ORA-31425: subscription does not exist

Cause: The subscription either did not exist or did not belong to this user.

Action: Call the function again with a valid subscription name.

ORA-31426: cannot modify active subscriptions

Cause: The subscription was already activated so that additional calls to SUBSCRIBE were prohibited.

Action: Subscribe to all the desired tables and columns before activating the subscription. Ensure that the correct subscription name is specified.

ORA-31427: publication *string* already subscribed

Cause: The subscription already contained this publication.

Action: Check the values of subscription_name and publication_id. Check any other subscribe calls to see if they subscribe to columns that are shared among more than one publication on the same source table. Do not attempt to subscribe to the same publication more than once in the same subscription. Use the publication_id variant of the SUBSCRIBE call if needed to specify precise publications.

ORA-31428: no publication contains all the specified columns

Cause: One or more of the specified columns cannot be found in a single publication.

Action: Change the subscription request to select only columns that are in the same publication. Consult the USER_PUBLISHED_COLUMNS view to see current publications.

ORA-31429: subscription has not been activated

Cause: The called procedure required an activated subscription.

Action: Check the subscription name and correct if necessary. Call the ACTIVATE_SUBSCRIPTION procedure for this subscription and then reissue the original command.

ORA-31430: subscriber view exists

Cause: A view that is already in use was specified for the subscriber view.

Action: Call the SUBSCRIBE procedure using a different subscriber view name.

ORA-31431: all source tables must belong to the synchronous change set

Cause: Not all of the source tables belong to the synchronous change set.

Action: Check the spelling of the source tables. Make sure that all of the source tables belong to the synchronous change set.

ORA-31432: invalid source table

Cause: Either the schema_name.source_table did not exist or it did not belong to this subscription.

Action: Check the spelling of the schema_name and source_table. Verify that the specified table exists in the specified schema and is subscribed to by the subscription.

ORA-31433: subscriber view does not exist

Cause: The subscription did not contain this subscriber view.

Action: Recheck the name, and specify the name of an existing subscriber view.

ORA-31434: purge is currently running

Cause: Called the PURGE procedure while a purge job was currently running.

Action: Wait for purge to complete before reissuing this command.

ORA-31435: an error occurred during the purge operation

Cause: An error occurred during the purge operation

Action: Check the logfile for a more detailed report of the underlying errors.

ORA-31436: duplicate change source string

Cause: A change source by the specified name already exists.

Action: Recreate the change source with a unique name.

ORA-31437: duplicate change set string

Cause: A change set by the specified name already exists.

Action: Recreate the change set with a unique name.

ORA-31438: duplicate change table string

Cause: A change table by the specified name already exists.

Action: Recreate the change table with a unique name.

ORA-31439: subscription is already active

Cause: The subscription is already active.

Action: Check name and retry.

ORA-31440: change set *string* is empty and cannot be advanced

Cause: User attempted to advance a change set which does not contain any change tables. Without change tables, a change set cannot be advanced.

Action: Create change tables in the change set, then retry the advance.

ORA-31441: table is not a change table

Cause: User attempted to execute the DROP_CHANGE_TABLE procedure on a table that is not a CHANGE table. This can also occur when a CHANGE table object has been orphaned. CHANGE tables can become orphaned after a CREATE_CHANGE_TABLE failure or an incomplete DROP_CHANGE_TABLE.

Action: Check spelling. If error was due to an incorrect name, then retry the procedure using the correct name. To drop a table that is not a CHANGE table, or an orphaned CHANGE table, use the DROP TABLE DDL command instead.

ORA-31442: operation timed out while acquiring lock on *string*

Cause: CDC attempted to acquire a lock on the resource, but the operation timed out.

Action: Retry the operation later.

ORA-31443: deadlock detected while acquiring lock on *string*

Cause: CDC attempted to acquire a lock on the resource, but encountered a deadlock.

Action: Contact Oracle corporation

ORA-31444: parameter error while acquiring lock on *string*

Cause: CDC attempted to acquire a lock on the resource, but encountered a problem passing parameters to the lock manager.

Action: Contact Oracle corporation

ORA-31445: invalid lock handle while acquiring lock on *string*

Cause: CDC attempted to acquire a lock on the resource, but encountered a invalid lock handle, which did not correspond to any existing handle.

Action: Contact Oracle corporation

ORA-31446: this session does not own the lock handle for *string*

Cause: CDC attempted to acquire a lock on the resource, does not own the the lock associated with the lock. This is an internal error.

Action: Contact Oracle corporation

ORA-31447: cannot create change tables in the SYS schema

Cause: Attempted to create a change table in the SYS schema. This is not allowed.

Action: Use a different existing schema and retry the command.

ORA-31448: invalid value for change_source

Cause: The specified value was not a valid name for a Change Source.

Action: Specify a valid name and retry the command.

ORA-31449: invalid value for change_set_name

Cause: The specified value was not a valid name for a Change Set.

Action: Specify a valid name and retry the command.

ORA-31450: invalid value for change_table_name

Cause: The specified value was not a valid name for a Change Table.

Action: Specify a valid name and retry the command.

ORA-31451: invalid value string for capture_values, expecting: OLD, NEW, or BOTH

Cause: The specified value was not a valid option for a capture_values.

Action: Specify a valid option and retry the command.

ORA-31452: invalid value string for parameter, expecting: Y or N

Cause: The specified value was not Y or N.

Action: Specify Y or N for the parameter and retry the command.

ORA-31453: invalid value string for parameter, expecting: Y, N, or NULL

Cause: The specified value was not Y, N or NULL.

Action: Specify Y, N or NULL for the parameter and retry the command.

ORA-31454: invalid value string for operation parameter, expecting: ADD or DROP

Cause: The specified value was not ADD or DROP.

Action: Specify ADD or DROP and retry the command.

ORA-31455: nothing to ALTER

Cause: The specified column list is NULL and all optional control columns are 'N'.

Action: Specify one or more columns to ALTER.

ORA-31456: error executing a procedure in the DBMS_CDC_UTILITY package

Cause: An internal attempt to invoke a procedure within the DBMS_CDC_UTILITY package failed.

Action: Check the trace logs for more information. Ensure that the package has been installed successfully. Try issuing a DESCRIBE command from SQL on the package. If it fails, then try reinstalling the package. If it succeeds then try invoking one of the procedures from SQL.

ORA-31457: maximum length of description field exceeded

Cause: The maximum number of characters permitted in the description field was exceeded.

Action: The maximum length of the description field is 30 characters. Ensure the length does not exceed this value and retry the command.

ORA-31458: an internal error occurred

Cause: This is an internal error.

Action: Contact Oracle Worldwide Customer Support and report the error.

ORA-31459: system triggers for DBMS_CDC_PUBLISH package are not installed

Cause: One or more required system triggers are not installed. These triggers are required for the proper operation of Change Data Capture. Operations on Change tables cannot continue.

Action: Install or reenble the triggers, or reinstall the package.

ORA-31460: logfile location *string* is not an existing directory

Cause: The directory specification for logfile location for the change source, does not correspond with an existing directory, or the directory was not accessible.

Action: 1. Create the directory if it does not exist. If the directory does exist, change the file system permissions so the directory can be accessed. OR 2. perform ALTER CHANGE SOURCE and change the logfile_location to be an existing directory that contains the logfiles

ORA-31461: logfile location *string* contains no files that match pattern *string*

Cause: The directory specification for logfile location for the change source, does not contain any files whose names pattern-match the logfile_suffix.

Action: 1. Make sure that the logfile location contains logfiles whose names match the logfile_suffix pattern for the change set. OR 2. perform ALTER CHANGE SOURCE and change the logfile_suffix such that it matches the names of existing logfiles in the directory

ORA-31462: internal error while accessing metadata

Cause: An unexpected internal error occurred while CDC was accessing its internal Metadata.

Action: Contact Oracle Corporation

ORA-31463: logfile location *string* is an empty directory

Cause: The directory specification for logfile location for the change source, is an empty directory

Action: 1. Make sure it is the correct location of the logfiles. If it is, make sure the directory contains logfiles. OR 2. perform ALTER CHANGE SOURCE and change the logfile_location to be an existing directory that contains the logfiles

ORA-31464: target table for the change table no longer exists

Cause: User tried to drop a change table but its underlying storage table (that contains the change data) has been dropped.

Action: Contact Oracle Corporation

ORA-31465: cannot obtain a lock on the subscription

Cause: A timeout occurred while trying to place a lock on the subscription. Another session had already acquired the lock on the subscription.

Action: Ensure the subscription name is correct and correct it if necessary. If it is already correct, try the operation again after the session holding the lock has released it.

ORA-31466: no publications found

Cause: Did not find any publications that matched the input parameters or the user does not have the privileges to access the specified publication.

Action: Check the input parameters on the call to SUBSCRIBE. Validate that the proposed source table has been published by checking the USER_PUBLICATIONS view for that source table. Contact the publisher if user privileges are required to access the publication. Retry the command with correct security or publication information.

ORA-31467: no column found in the source table

Cause: The OBJECT_ID flag was set to 'Y' on the call to CREATE_CHANGE_TABLE and change table belongs to the synchronous change set. The corresponding object column was not detected in the source table.

Action: Create the change table with the OBJECT_ID flag set to 'N' or investigate why the object column is not in the source table and add it to the source table.

ORA-31468: cannot process DDL change record

Cause: The change set has stop_on_ddl enabled and was trying to process a DDL change record.

Action: Check the alert log to find out what the DDL record contained. Make any necessary changes to the change tables. Call ALTER_CHANGE_SET with recover_after_error and remove_ddl set to 'Y'.

ORA-31469: cannot enable Change Data Capture for change set *string*

Cause: The change set has reached the specified limit that was set up by the CREATE_CHANGE_SET command.

Action: Check the alert log to find out whether capture, apply or both reached the limit. Once apply reaches its limit, the change set is permanently disabled. Create a new change set with new limits to continue capturing data.

ORA-31470: asynchronous change tables must contain the RSID\$ column

Cause: If creating an asynchronous change table, the RSID was set to 'N'. If altering an asynchronous change table with an operation parameter of 'DROP' RSID was set to 'Y'.

Action: When creating asynchronous change tables, always specify 'Y' for the RSID parameter. When altering asynchronous change tables always specify 'N' for RSID.

ORA-31471: invalid OBJECT_ID value

Cause: An object_id value of 'y' was specified for an asynchronous change table.

Action: Specify an object_id parameter value of 'n' and call the procedure again.

ORA-31472: Importing Change Data Capture version *string.string* is too new

Cause: An attempt was made to Import a file that was exported by a newer version of Oracle than the target instance.

Action: If possible, re-export the file using a version of export that matches the import target. Objects can not be imported into previous versions of Oracle that did not support them.

ORA-31473: date bound out of range

Cause: The upper_bound or lower_bound specified in extend_window or purge_window API is beyond the range of records in the change set.

Action: Either select a bound that is within range or do not select an upper or lower bound at all.

ORA-31474: Invalid change view window

Cause: The specified upper_bound or lower_bound is forcing a condition where the change view window will have nothing in it.

Action: Select a different upper_bound or lower_bound and reissue the API call that produced the error. Alternatively, make the upper_bound or lower_bound parameter NULL and reissue the API call.

ORA-31475: redo log catalog contains no metadata for the source table

Cause: While advancing a change set, an CDC attempted to query the LogMiner dictionary system tables to obtain the columns from the source table. The query returned no rows. This may be because none of the redo logs contains a catalog, or it may be an internal error.

Action: First, verify that the source system contains the source table. execute dbms_logmnr_d.build procedure to populate the redos log with logminer dictionary information. If this has been done and the problem persists, then contact Oracle Corporation

ORA-31476: a change table data column is missing from the source table

Cause: While advancing a change set, an CDC determined that at least one of the data columns in a change table does not match the name of any of the columns in the source table. The source table column list is stored in dictionary table SYSTEM.LOGMNR_OBJ\$

Action: Make sure that all of the data columns of the change table have the same names as the corresponding columns in the source table, and that all the columns exist in the source table.

ORA-31477: could not detach LogMiner session during cleanup

Cause: Failure during detach from a LogMiner session during advance of an asynchronous change set. This is an internal error. This exception is raised when a previous exception occurred during the internal protocol with LogMiner, after which Change Data Capture attempted to detach the LogMiner session as part of recovery. The detach session also failed

Action: Contact Oracle Corporation

ORA-31478: could not detach LogMiner session after change set advance

Cause: Failure during detach from a LogMiner session after successful advance of an asynchronous change set. This is an internal error. This exception is raised when an asynchronous change set has been successfully advanced but CDC was unable to detach from the LogMiner session

Action: Contact Oracle Corporation

ORA-31479: could not create LogMiner session

Cause: Failure during create of a new LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31480: staging database and source database cannot be the same

Cause: A CDC API call specified a source database name that matched the staging database on which the CDC API call is being executed.

Action: Make sure that the CDC API call is being executed from the staging database and that the source database is correctly specified. The source database and staging database need to be different databases.

ORA-31481: change source *string* is not a HotLog change source

Cause: A change source was specified that was not a HotLog change source, but a HotLog change source was required.

Action: Correct the call to supply a HotLog change source.

ORA-31482: invalid option for non-distributed Hotlog change source

Cause: A CDC API call specified `enabled_source = 'Y'` on a non-Distributed HotLog change source.

Action: Specify a Distributed HotLog change source.

ORA-31483: cannot have spaces in the parameter *string*

Cause: The specified parameter contained at least 1 space character.

Action: Check the value of the specified parameter. Remove the spaces and reissue the CDC API call.

ORA-31484: source database version must be at least 9.2.0.6 or greater

Cause: The source database is not at version 9.2.0.6 or higher.

Action: Upgrade the source database to 9.2.0.6 or higher.

ORA-31485: invalid database link

Cause: The database link used to connect from a staging database to a source database was invalid. The database link may not exist, may not be accessible to the current user, or may have been redefined since the Distributed HotLog change source was originally created.

Action: Make sure that there is a database link to the `source_database` for the Distributed HotLog change source. Make sure this database link is accessible to the current user.

ORA-31486: cannot support column *string* in this configuration

Cause: The specified column cannot be used in a Distributed HotLog configuration when the source database version is 9.2.0.6 or 10.1.0.0.

Action: Remove the specified column from the `CREATE_CHANGE_TABLE` or `ALTER_CHANGE_TABLE` CDC API call.

ORA-31487: cannot support begin dates or end dates in this configuration

Cause: The specified values cannot be used in a Distributed HotLog configuration.

Action: Remove the specified values from the `CREATE_CHANGE_SET` CDC API call.

ORA-31488: cannot support change set *string* in this configuration

Cause: Change sources with the hot mine option enabled are limited to 1 change set. The system detected an existing change set so a second one can not be created.

Action: Associate the change set with a different change source.

ORA-31489: invalid DDL_MARKERS value

Cause: A DDL_MARKERS value of 'y' was specified for an synchronous change table.

Action: Specify a DDL_MARKERS parameter value of 'n' and call the procedure again.

ORA-31490: could not attach to LogMiner session

Cause: Failure during attach to a LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31491: could not add logfile to LogMiner session

Cause: Failure during add logfile to a LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31492: could not set session parameters for LogMiner session

Cause: Failure during set parameters for a LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31493: could not prepare session for LogMiner session

Cause: Failure during prepare session for a LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31494: could not activate a LogMiner session

Cause: Failure during activation of a LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31495: error in synchronous change table on "*string*"."*string*"

Cause: There was an error originating from this synchronous change table. One possible cause is that schema redefinition has occurred on the source table and one or more columns in the change table are now a different type than corresponding source columns. Another possible cause is that there is a problem accessing the synchronous change table.

Action: Check further error messages in stack for more detail about the cause. If there has been schema redefinition, drop and recreate the synchronous change table.

ORA-31496: must use DBMS_CDC_PUBLISH.DROP_CHANGE_TABLE to drop change tables

Cause: An attempt was made to use the SQL command DROP TABLE for change tables, but DROP TABLE is not supported for change tables.

Action: Use the DBMS_CDC_PUBLISH.DROP_CHANGE_TABLE procedure instead of the DROP TABLE command.

ORA-31497: invalid value specified for first_scn

Cause: The first_scn was not greater than zero or was less than the previous value of first_scn.

Action: Check the value of first_scn. Correct it to make sure it is an integer greater than zero and greater than any previous value for this change source.

ORA-31498: description and remove_description cannot both be specified

Cause: The description and remove_description parameters were both specified.

Action: Check the values of description and remove_description. Correct call to only supply one of these values.

ORA-31499: null value specified for required parameter *string*

Cause: A null value was specified for a parameter that requires an explicit value.

Action: Correct call to supply a value for this parameter.

ORA-31500: change source *string* is not a ManualLog change source

Cause: A change source was specified that is not a ManualLog change source, but a ManualLog change source is required.

Action: Correct call to supply a ManualLog change source.

ORA-31501: change source *string* is not an AutoLog change source

Cause: A change source was specified that was not an AutoLog change source, but an AutoLog change source was required.

Action: Correct call to supply an AutoLog change source.

ORA-31502: invalid number supplied for supplemental_processes

Cause: The caller supplied an invalid value for supplemental_processes. The value must be a positive integer.

Action: Correct call to supply a positive integer value for supplemental_processes.

ORA-31503: invalid date supplied for begin_date or end_date

Cause: The caller supplied an invalid value for begin_date or end_date. The value must be a valid date value.

Action: Correct call to supply a valid date value for begin_date and/or end_date.

ORA-31504: cannot alter or drop predefined change source

Cause: The caller attempted to alter or drop one of the predefined change sources HOTLOG_SOURCE or SYNC_SOURCE.

Action: Do not attempt to alter or drop a predefined change source or correct call to supply the name of a user-created change source.

ORA-31505: cannot alter or drop predefined change set

Cause: The caller attempted to alter or drop the predefined change set SYNC_SET.

Action: Do not attempt to alter or drop the predefined change set or correct call to supply the name of a user-created change set.

ORA-31506: duplicate subscription name *string*

Cause: A subscription by the specified name already exists.

Action: Recreate the subscription with a unique name.

ORA-31507: *string* parameter value longer than maximum length *string*

Cause: A value was specified for a parameter that was longer than the maximum permitted length.

Action: Correct the call to supply a shorter value for this parameter that fits within the maximum length.

ORA-31508: invalid parameter value for synchronous change set

Cause: A parameter value was specified that is not supported for synchronous change sets.

Action: Correct the call to supply only valid parameter values for a synchronous change set. Synchronous change sets only support the default values for the following parameters: begin_scn, end_scn, begin_date, end_date, stop_on_ddl, supplemental_processes.

ORA-31509: publication does not exist

Cause: The specified publication did not exist or the specified subscription subscribed to a publication that no longer exists.

Action: Recheck the publication or subscription specified. Either call the procedure again with an existing publication or create a new subscription that only subscribes to existing publications.

ORA-31510: name uses reserved prefix CDC\$

Cause: A name was specified that starts CDC\$. The name prefix CDC\$ is reserved for use by Oracle Corporation.

Action: Change the name so it does not start with characters CDC\$

ORA-31511: name exceeds maximum length of 30 characters

Cause: A name was supplied that exceeds the maximum length of 30 characters.

Action: Change the name so it does not exceed 30 characters

ORA-31512: name cannot contain double quotation marks

Cause: A name containing a double quotation mark was supplied. Subscription names cannot contain the double quotation mark.

Action: Change the name so it has no double quotation marks

ORA-31513: unsupported column type specified in change table

Cause: A source column of an unsupported type was specified for inclusion in a change table. Columns types of LOB or LONG are not currently supported for change capture.

Action: Change the column list so that it does not include columns of LOB or LONG types.

ORA-31514: change set *string* disabled due to capture error

Cause: This change set has encountered a capture error and was disabled.

Action: Contact the change set's publisher to request that the capture error be resolved. Subscriptions using this change set cannot be activated or have their subscription windows extended or purged until the capture error is resolved.

ORA-31515: CDC change source *string* already exists

Cause: A Change Data Capture change source intended for import already existed.

Action: Either verify that the existing change source has the desired characteristics or drop the existing change source and perform the import again.

ORA-31516: CDC change set *string* already exists

Cause: A Change Data Capture change set intended for import already existed.

Action: Either verify that the existing change set has the desired characteristics or drop the existing change set and perform the import again.

ORA-31517: CDC change table *string.string* already exists

Cause: A Change Data Capture change table intended for import already existed.

Action: Either verify that the existing change table has the desired characteristics or drop the existing change table and perform the import again.

ORA-31518: change column *string* already exists in CDC change table *string.string*

Cause: A column in a Change Data Capture change table intended for import was already present in the change table.

Action: Either verify that the change table contains the desired columns or drop the change table and perform the import again.

ORA-31519: CDC subscription *string* already exists

Cause: A Change Data Capture subscription intended for import already existed.

Action: Either verify that the existing subscription has the desired characteristics or drop the existing subscription and perform the import again.

ORA-31520: CDC subscription *string* already subscribes to publication ID *string*

Cause: A Change Data Capture subscription intended for import already subscribed to a publication.

Action: Either verify that the existing subscription has the desired characteristics or drop the existing subscription and perform the import again.

ORA-31521: CDC subscription *string* already subscribes to publication ID *string* column *string*

Cause: A Change Data Capture subscription intended for import already subscribed to a published column.

Action: Either verify that the existing subscription has the desired characteristics or drop the existing subscription and perform the import again.

ORA-31522: could not find Streams object *string* for CDC change set *string*

Cause: An underlying Streams capture, apply, or queue was missing for an imported Change Data Capture change set.

Action: Drop the imported change set because it is invalid. Retry the import, ensuring that STREAMS_CONFIGURATION=y is specified.

ORA-31523: could not find change source *string* for CDC change set *string*

Cause: The change source was missing for an imported Change Data Capture change set.

Action: Drop the imported change set because it is invalid. Verify that the schema containing the missing change source was included in the original export. If needed, perform the export again, including the schema of the missing change source.

ORA-31524: could not find change set *string* for CDC change table *string.string*

Cause: The change set was missing for an imported Change Data Capture change table.

Action: Drop the imported change table because it is invalid. Verify that the schema containing the missing change set was included in the original export. If needed, perform the export again, including the schema of the missing change set.

ORA-31525: could not find column *string* in CDC change table *string.string*

Cause: A column was missing for an imported Change Data Capture change table.

Action: It is likely that this table existed before the import operation and import did not overwrite it. Determine whether the imported change table should supercede the original table. If so, drop the original table and retry the import. If not, the change table must have a different name in order to be imported.

ORA-31526: could not find source table *string.string* for CDC change table *string.string*

Cause: The source table was missing or was not set up correctly for an imported Change Data Capture change table. A synchronous change table requires the source table to exist and have the Change Data Capture trigger defined on it. An asynchronous change table requires table rules to be defined for the source table.

Action: Drop the imported change table because it is invalid. Verify that the schema containing the source table was included in the original export. If needed, perform the export again, including the schema of the source table. If change table is asynchronous, ensure that STREAMS_CONFIGURATION=y is specified for the import.

ORA-31527: could not find source column *string* for CDC change table *string.string*

Cause: A source column was missing for an imported Change Data Capture change table.

Action: Drop the imported change table because it is invalid. Verify that the schema containing the source table was included in the original export. If needed, perform the export again, including the schema of the missing source table.

ORA-31528: could not find change set *string* for CDC subscription *string*

Cause: The change set was missing for an imported Change Data Capture subscription.

Action: Drop the imported subscription because it is invalid. Verify that the schema containing the missing change set was included in the original export. If needed, perform the export again, including the schema of the missing change set.

ORA-31529: could not find publication for CDC subscriber view *string.string*

Cause: A publication was missing for an imported Change Data Capture subscription.

Action: Drop the imported subscription because it is invalid. Verify that the schema containing the missing publication was included in the original export. If needed, perform the export again, including the schema of the missing publication.

ORA-31530: could not find published column *string* for CDC subscriber view *string.string*

Cause: A published column was missing for an imported Change Data Capture subscription.

Action: Drop the imported subscription because it is invalid. Verify that the schema containing the missing published column was included in the original export. If needed, perform the export again, including the schema of the missing published column.

ORA-31531: could not find column *string* in CDC subscriber view *string.string*

Cause: A column was missing in a subscriber view for an imported Change Data Capture subscription.

Action: It is likely that this view existed before the import operation and import did not overwrite it. Determine whether the imported subscriber view should supercede the original view. If so, drop the original view and retry the import. If not, the subscriber view must have a different name in order to be imported.

ORA-31532: cannot enable change source *string*

Cause: The change source cannot be enabled when there is no change table created in any of the change sets associated with the change source.

Action: Add a change table to a change set before enabling the the change source.

ORA-31533: only one change set (*string*) is allowed in change source

Cause: A Distributed HotLog change source can contain at most one change set.

Action: Create a new change source and create the change set in the new change source.

ORA-31534: Change Data Capture *string* publisher *string* is missing DBA role

Cause: The publisher does not have the DBA role, which is required by the Change Data Capture operation.

Action: Grant the DBA role the Change Data Capture publisher.

ORA-31535: cannot support change source *string* in this configuration

Cause: Each database can only have one change source with hot mine option enabled. The system detected an existing hot mine change source in the database, therefore, a second hot mine change source cannot be created.

Action: Remove the existing change source and create this new change source again.

ORA-31536: cannot support encrypted column *string* in the source table

Cause: One of the columns specified in the parameter COLUMN_TYPE_LIST was an encrypted column in the source table

Action: remove the encrypted column in the parameter COLUMN_TYPE_LIST

ORA-31537: specified purge date is invalid

Cause: The purge date specified was an invalid date or was outside of the range of data currently in the change set.

Action: Do not specify purge date or specify a date that is within the range of data in the change set.

ORA-31538: change set *string* disabled

Cause: This change set was disabled.

Action: Contact the change set's publisher to request that the change set be enabled. Subscriptions using this change set cannot be activated or have their subscription windows extended or purged until the change set is enabled.

ORA-31539: no privilege to create job

Cause: This change table could not be created because the create job privilege is needed to submit the default purge job.

Action: Grant the create job privilege and try again

ORA-31540: *string* is not a valid identifier

Cause: All Change Data Capture (CDC) identifiers must have at most 30 characters, and must start with a letter that is followed by any combination of letters, numerals, and the signs '\$', '_', and '#'. Other characters cannot be used in identifiers. The rules for CDC identifiers are the same as for PL/SQL identifiers.

Action: Rename object to conform to CDC naming rules and try again.

ORA-31541: cannot enable supplemental log data in pluggable database when supplemental logging is not enabled in CDB\$ROOT and database is in shared undo mode

Cause: An attempt was made to enable supplemental logging in a pluggable database when database was in shared undo mode and supplemental logging was not already enabled in CDB\$ROOT.

Action: Enable supplemental logging in CDB\$ROOT or switch to local undo mode and then retry the command.

ORA-31542: Either ENABLE LOGICAL REPLICATION or DISABLE LOGICAL REPLICATION can be specified, but not both.

Cause: One of three possible actions caused the error: 1) ENABLE LOGICAL REPLICATION was specified more than once. 2) DISABLE LOGICAL REPLICATION was specified more than once. 3) Both ENABLE LOGICAL REPLICATION and DISABLE LOGICAL REPLICATION were specified.

Action: Remove all but one of the ENABLE LOGICAL REPLICATION or DISABLE LOGICAL REPLICATION clauses; then, reissue the command.

ORA-31543: cannot disable logical replication when there is table-level supplemental log data

Cause: An attempt was made to disable logical replication for a table when there was table-level supplemental log data.

Action: Remove all table-level supplemental log data; then, disable logical replication.

ORA-31544: cannot disable logical replication when trying to add table-level supplemental log data

Cause: An attempt was made to disable logical replication and add table-level supplemental log data at the same time.

Action: Remove all table-level supplemental log data and then disable logical replication. Or, do not disable logical replication, and add supplemental logging.

ORA-31546: cannot drop supplemental logging on table with *string*

Cause: An attempt was made to drop supplemental logging for this table.

Action: Remove the condition that caused this error. Or, do not drop supplemental log data.

ORA-31547: cannot disable logical replication on table with *string*

Cause: An attempt was made to disable logical replication for this table.

Action: Remove the condition that caused this error. Or, do not disable logical replication.

ORA-31600: invalid input value *string* for parameter *string* in function *string*

Cause: A NULL or invalid value was supplied for the parameter.

Action: Correct the input value and try the call again.

ORA-31601: Function *string* cannot be called now that fetch has begun.

Cause: The function was called after the first call to FETCH_XXX.

Action: Correct the program.

ORA-31602: parameter *string* value "*string*" in function *string* inconsistent with *string*

Cause: The parameter value is inconsistent with another value specified by the program. It may be inconsistent with the object type associated with the OPEN context, or it may be of the wrong datatype (a boolean rather than a text string or vice versa).

Action: Correct the program

ORA-31603: object "*string*" of type *string* not found in schema "*string*"

Cause: The specified object was not found in the database.

Action: Correct the object specification and try the call again.

ORA-31604: invalid *string* parameter "*string*" for object type *string* in function *string*

Cause: The specified parameter value is not valid for this object type.

Action: Correct the parameter and try the call again.

ORA-31605: the following was returned from *string* in routine *string*:\nLPX-number: *string*

Cause: An LPX routine (XML/XSL processing) returned an internal error number to its PL/SQL wrapper routine in facility KUX which provides the implementation for package UTL_XML.

Action: Look up the LPX error number and follow its corrective action.

ORA-31606: XML context *number* does not match any previously allocated context

Cause: A method in package UTL_XML was called with an invalid XML context handle. All handles must have previously been allocated by UTL_XML.XMLINIT.

Action: Always call XMLINIT before any other methods in package UTL_XML.

ORA-31607: function *string* is inconsistent with transform.

Cause: Either (1) FETCH_XML was called when the "DDL" transform was specified, or (2) FETCH_DDL was called when the "DDL" transform was omitted.

Action: Correct the program.

ORA-31608: specified object of type *string* not found

Cause: The specified object was not found in the database.

Action: Correct the object specification and try the call again.

ORA-31609: error loading file "*string*" from file system directory "*string*"

Cause: The installation script initmeta.sql failed to load the named file from the file system directory into the database.

Action: Examine the directory and see if the file is present and can be read.

ORA-31610: cannot call this function from a non-master process

Cause: Called a Data Pump process model function from a process which is not a master process.

Action: Create a master process first. Then call the function from the master process. If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31612: allocation of process descriptor failed

Cause: During creation of a control process or a worker process, a failure occurred allocating a process descriptor for the process.

Action: Try the operation again. If the error occurs again, contact Oracle Support Services and report the error.

ORA-31613: Master process *string* failed during startup.

Cause: The master process whose name is listed failed during startup.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31614: routine *string* received this error from *string*: *lnstring*

Cause: The call to the specified routine failed and the specific error text is included in this error message (the last %s string).

Action: Correct inputs to the specified routine.

ORA-31615: routine *string* received this error: *lnstring*

Cause: The specified routine failed and the specific error text is included in this error message (the last %s string).

Action: Correct inputs to the specified routine.

ORA-31616: unable to write to dump file "*string*"

Cause: The Oracle Data Pump Export utility was unable to write to the export file. This could be the result of a device error. This message is usually followed by a device message from the operating system.

Action: Take the appropriate action to restore the device.

ORA-31617: unable to open dump file "*string*" for write

Cause: The Oracle Data Pump Export utility was unable to open and write to the export file. This message is usually followed by device messages from the operating system.

Action: Take appropriate action to restore the device.

ORA-31618: FILESIZE is outside valid range of *string*KB to *string*TB

Cause: The value specified for the FILESIZE parameter was either too small to hold the header information for the export file, plus any data, or exceeded the allowed maximum size for a dump file.

Action: Retry the operation using a value for FILESIZE that falls within the valid range.

ORA-31619: invalid dump file "*string*"

Cause: Either the file was not generated by the Oracle Data Pump Export utility or the file was corrupt.

Action: If the file was generated by the Oracle Data Pump Export utility, report this as an Oracle Data Pump Import bug and submit the export dump file to Oracle Support.

ORA-31620: file or device "*string*" cannot be specified for *string* operation

Cause: There was an inappropriate use of file or device in the current operation.

Action: Correct operation or job setup.

ORA-31621: error creating master process

Cause: Setup to create a master process failed.

Action: Refer to any following error messages for possible actions. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31622: premature end of file at block *string*

Cause: The end of the dump file input was reached unexpectedly. This is caused either by a corrupted Oracle Data Pump Export dump file or by an Oracle internal error. This message should be preceded by another message identifying the name of the dump file in question.

Action: Retry the Oracle Data Pump Import operation. Contact Oracle Support if the problem persists.

ORA-31623: a job is not attached to this session via the specified handle

Cause: An attempt to reference a job using a handle which is invalid or no longer valid for the current session.

Action: Select a handle corresponding to a valid active job or start a new job.

ORA-31624: A job cannot be modified after it has started.

Cause: The user attempted to change the definition of a Data Pump job through filters, transforms or parameters after it had started. These changes can only be made while defining a job.

Action: Stop the current job and rerun it with the correct definition.

ORA-31625: Schema *string* is needed to import this object, but is inaccessible

Cause: An error occurred when attempting to import objects. The schema specified is needed to import this object, but access to this schema is not available.

Action: Refer to any following error messages for possible actions. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31626: job does not exist

Cause: An invalid reference to a job which is no longer executing, is not executing on the instance where the operation was attempted, or that does not have a valid Master Table. Refer to any following error messages for clarification.

Action: Start a new job, or attach to an existing job that has a valid Master Table.

ORA-31627: API call succeeded but more information is available

Cause: The user specified job parameters that yielded informational messages.

Action: Call DBMS_DATAPUMP.GET_STATUS to retrieve additional information.

ORA-31628: error getting worker process exception

Cause: Attempt to get a worker process exception failed.

Action: Refer to any following error messages for possible actions. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31629: unable to allocate additional memory

Cause: A dynamic memory allocation failure occurred.

Action: Report this problem to a database administrator.

ORA-31630: a job name is required to attach a job for user *string*

Cause: No job name was supplied for an attach and the user has either no jobs executing or multiple jobs executing.

Action: Provide a job name for attach to use in selecting an executing job, or to use for restarting a stopped job.

ORA-31631: privileges are required

Cause: The necessary privileges are not available for operations such as: restarting a job on behalf of another owner, using a device as a member of the dump file set, or omitting a directory object associated with any of the various output files. Refer to any following error messages for additional information.

Action: Select a different job to restart, try a different operation, or contact a database administrator to acquire the needed privileges.

ORA-31632: master table "*string.string*" not found, invalid, or inaccessible

Cause: A Master Table is required but no such table exists, or the content is not consistent with that of a valid Master Table, or the table is not accessible. Refer to any following error messages for clarification.

Action: Make sure a valid Master Table exists, and eliminate any problems indicated by the following error messages.

ORA-31633: unable to create master table "*string.string*"

Cause: Job creation failed because a Master Table and its indexes could not be created, most commonly due to the pre-existence of a table with the same name (job name) in the user schema. Refer to any following error messages for clarification.

Action: Select a different job name, DROP the existing table, or eliminate any problems indicated by the following error messages.

ORA-31634: job already exists

Cause: Job creation or restart failed because a job having the selected name is currently executing. This also generally indicates that a Master Table with that job name exists in the user schema. Refer to any following error messages for clarification.

Action: Select a different job name, or stop the currently executing job and re-try the operation (may require a DROP on the Master Table).

ORA-31635: unable to establish job resource synchronization

Cause: A lock used in synchronizing Data Pump resources during job creation and deletion could not be obtained during job creation. This indicates that a process for some other Data Pump job has not released the lock due to an internal error.

Action: Eliminate the processes for any failed Data Pump job and try to create the new job again. If the error continues to occur, contact Oracle Customer Support and report the error.

ORA-31636: session is already attached to job *string* for user *string*

Cause: The session executing the attach is already attached to the specified job.

Action: Select a different job or create a new session.

ORA-31637: cannot create job *string* for user *string*

Cause: Unable to create or restart a job. Refer to any following or prior error messages for clarification.

Action: Eliminate the problems indicated.

ORA-31638: cannot attach to job *string* for user *string*

Cause: Unable to attach a job to a session. Refer to any following or prior error messages for clarification.

Action: Eliminate the problems indicated.

ORA-31639: unexpected data found

Cause: The Master Table or Data Pump file contents appear invalid. The table or file may not have been produced by a Data Pump job, or they may have been corrupted.

Action: Select a different job name (Master Table) or replace the table or file with one produced by Data Pump.

ORA-31640: unable to open dump file "*string*" for read

Cause: Oracle Data Pump Import was unable to open and read the export file. This message is usually followed by device messages from the operating system.

Action: Take the appropriate action to restore the device.

ORA-31641: unable to create dump file "*string*"

Cause: Oracle Data Pump Export was unable to create or write to the specified file.

Action: Check the file name and file system for the source of the error.

ORA-31642: the following SQL statement fails: *lnstring*

Cause: An internal error was generated from package DBMS_METADATA.

Action: Contact Oracle Customer Support and report the error.

ORA-31643: Unable to close dump file "*string*".

Cause: Either Oracle Data Pump Export or Oracle Data Pump Import was unable to close the dump file. This message is usually followed by device messages from the operating system.

Action: Take appropriate action to restore the device.

ORA-31644: unable to position to block number *string* in dump file "*string*"

Cause: Either Oracle Data Pump Export or Oracle Data Pump Import was unable to position the file pointer to a specific block within the dump file. This message is usually followed by device messages from the operating system.

Action: Take the appropriate action based on the device messages.

ORA-31645: unable to read from dump file "*string*"

Cause: Import could not read from the dump file. This could be the result of a device error. This message is usually followed by a device message from the operating system.

Action: Take the appropriate action to restore the device.

ORA-31648: Timeout before master process *string* finished initialization.

Cause: The master process whose name is listed started up but did not finish its initialization within the allowed time limit.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31649: control process *string* violated startup protocol

Cause: The specified control process started but then exited before notifying the creating process that it was finished with initialization.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Support and report the error.

ORA-31650: timeout waiting for master process response

Cause: After creating the job infrastructure and sending the initial message to the master process, it failed to respond in the allotted time and most likely aborted during startup.

Action: Retry the open or attach request. Contact Oracle Customer Support if the problem persists.

ORA-31651: communication error with master process - detaching job

Cause: Unexpected failure trying to communicate with the master process.

Action: Attach again and retry operation. Contact Oracle Customer Support if the problem persists.

ORA-31652: command response message was invalid type - detaching job

Cause: Something horribly wrong with the command/response protocol.

Action: Reattach and retry operation. Contact Oracle Customer Support if the problem persists.

ORA-31653: unable to determine job operation for privilege check

Cause: Failure trying to determine the operation of the current job in order to test for appropriate privileges.

Action: Retry in case it's an intermittent failure. If it still fails, detach, reattach, and retry the call. Contact Oracle Customer Support if the problem persists.

ORA-31654: unable to convert file or volume size as specified to a number

Cause: File or volume size specification has an error that prevents it from being converted into a numeric value.

Action: Fix the call.

ORA-31655: no data or metadata objects selected for job

Cause: After the job parameters and filters were applied, the job specified by the user did not reference any objects.

Action: Verify that the mode of the job specified objects to be moved. For command line clients, verify that the INCLUDE, EXCLUDE and CONTENT parameters were correctly set. For DBMS_DATAPUMP API users, verify that the metadata filters, data filters, and parameters that were supplied on the job were correctly set.

ORA-31656: cannot use TABLESPACE_EXPR filter with transportable mode

Cause: A TABLESPACE_EXPR metadata filter was supplied for a transportable mode import job. Transportable mode import does not support the subsetting of tablespaces from a dump file set.

Action: Remove the filter expression.

ORA-31657: data filter name can not be defaulted

Cause: A null data filter name was supplied.

Action: Fix the call to specify a data filter name.

ORA-31658: specifying a schema name requires a table name

Cause: The caller specified a schema name but neglected to specify a corresponding table name.

Action: Fix the call to include a table name.

ORA-31659: status message was invalid type - detaching job

Cause: Message from the master process on the status queue had an invalid message type, indicating a failure in the protocol.

Action: Reattach and retry the operation. Contact Oracle Customer Support if the problem persists.

ORA-31660: metadata filter name can not be defaulted

Cause: A null metadata filter name was supplied.

Action: Fix the call to specify a metadata filter name.

ORA-31661: there are no metadata transform values of type VARCHAR2

Cause: The specified metadata transform value was an invalid type.

Action: Fix the call to specify a valid metadata transform value.

ORA-31662: metadata transform name can not be defaulted

Cause: A null metadata transform name was supplied.

Action: Fix the call to specify a metadata transform name.

ORA-31663: metadata remap name can not be defaulted

Cause: A null metadata remap name was supplied.

Action: Fix the call to specify a metadata remap name.

ORA-31664: unable to construct unique job name when defaulted

Cause: The job name was defaulted, and the name creation algorithm was unable to find a unique job name for this schema where the table name (for the master table) didn't already exist.

Action: Specify a job name to use or delete some of the existing tables causing the name conflicts.

ORA-31665: mode can only be defaulted for IMPORT and SQL_FILE operations

Cause: The job mode can not be null except for IMPORT and SQL_FILE operations.

Action: Fix the call to specify the job mode.

ORA-31666: Master process *string* had an unhandled exception.

Cause: A Data Pump process model master process had an unhandled exception condition.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31667: parameter name can not be defaulted

Cause: A null was supplied for the parameter name.

Action: Fix the call by providing a valid parameter name.

ORA-31668: Timeout before worker process *string* finished initialization.

Cause: The worker process whose name is listed started up but did not finish its initialization within the allowed time limit.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if

possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31669: Worker process *string* violated startup protocol.

Cause: The worker process whose name is listed started up but then exited before notifying the creating process that it was finished with initialization.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31670: Username argument must be specified and non-null.

Cause: Called change user with a NULL username or a null string.

Action: Specify a valid username argument. If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31671: Worker process *string* had an unhandled exception.

Cause: A Data Pump process model worker process had an unhandled exception condition.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31672: Worker process *string* died unexpectedly.

Cause: A Data Pump process model worker process died unexpectedly, so PMON is cleaning up the process.

Action: Check your system for problems. Check the trace file for the process, if one was created, for any additional information. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31673: worker process interrupt for normal exit by master process

Cause: A worker process was requested to clean up and exit because the master process is doing a normal exit.

Action: If this error occurs from a Data Pump client (e.g. expdp or impdp), it means that the master process for the operation exited prematurely. Try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31674: worker process interrupt for unhandled exception in master process

Cause: A worker process was requested to clean up and exit because an unhandled exception occurred in the master process.

Action: If this error occurs from a Data Pump client (e.g. expdp or impdp), it means that the master process for the operation had an unhandled exception. Check the log file for the operation and the trace file for the master process for any additional information. Try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31675: worker process interrupt for unexpected death of master process

Cause: A worker process was requested to clean up and exit (signaled by PMON, doing cleanup because the master process died unexpectedly).

Action: If this error occurs from a Data Pump client (e.g. expdp or impdp), it means that the master process for the operation died unexpectedly. Check the log file for the operation and the trace file for the master process for any additional information. Try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31676: illegal value for number of workers, *string*

Cause: Called create worker processes with an illegal number of workers specified.

Action: Make sure that the number of workers value is greater than 0 and less than the maximum value for the platform (normally 32767). If this error occurs from a Data Pump client (e.g. expdp or impdp) and you specified the parallel parameter, try the operation again with a smaller value for the parallel parameter. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31679: Table data object *string* cannot be imported or exported using a network link.

Cause: The table object contained at least one type that requires direct path and at least one type that requires insert as select or external tables to import the data. There is no method available to export or import this data over a database link.

Action: Export this table and data to a file and then import the same table and data from that file.

ORA-31686: error creating worker processes

Cause: Setup to create worker processes failed.

Action: Refer to any following error messages for possible actions. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31687: error creating worker process *string* with worker id *string*

Cause: Attempt to create the listed worker process failed.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31688: Worker process *string* failed during startup.

Cause: The worker process whose name is listed failed during startup.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31689: illegal value for base worker id, *string*

Cause: Called create worker processes with an illegal base worker id value specified.

Action: Make sure that the base worker id value is greater than 0 and less than the maximum value for the platform (normally 32767). If this error occurs from a Data Pump client (e.g.

expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31690: Process name buffer size must be specified and must be greater than 0.

Cause: Called get worker exception and either specified NULL or 0 for the buffer size argument.

Action: Be sure to specify a buffer size that is big enough to hold the worker process name (e.g. 30 bytes). If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31691: The worker received message number *string* from the MCP, which is invalid.

Cause: Bad code.

Action: Fix mcp code and reissue export/import command.

ORA-31692: The following SQL statement failed trying to insert a row into the Master table:\n*string*

Cause: Bad code.

Action: Fix code and reissue export/import command.

ORA-31693: Table data object *string* failed to load/unload and is being skipped due to error:\n*string*

Cause: Table failed to load or unload due to some error.

Action: Check load/unload error, correct problem and retry command.

ORA-31694: master table *string* failed to load/unload

Cause: Master table failed to load or unload.

Action: Check load/unload error, correct problem and retry command.

ORA-31695: Inconsistent master table on restart. The following SQL statement returned *string* identical objects.\n*string*

Cause: Master table on restart has the same object inserted multiple times.

Action: Restart not possible, reissue original export/import.

ORA-31696: unable to export/import *string* using client specified *string* method

Cause: Table attributes prevent client specified method for exporting or importing data.

Action: Use default 'DATA_ACCESS' parameter value.

ORA-31697: aborting operation at process order number *string*

Cause: User asked for it.

Action: Don't ask for it.

ORA-31698: Error stack buffer size must be specified and must be greater than 0.

Cause: Called get worker exception and either specified NULL or 0 for the error stack size argument.

Action: Be sure to specify an error stack buffer size that is big enough to hold the error stack string (e.g. 4096 bytes). If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31700: very long string supplied for *string* parameter

Cause: A very long string was supplied for the specified parameter in the initialization parameter file.

Action: Use a valid facility.level such as "local1.notice" as described in the manual pages of the Syslog.

ORA-31701: Event to enable xmltype table export/import with schema

Cause: Event to enable xmltype table export/import with schema

Action: Disable the event at level 0x100

ORA-31702: This privilege has already been granted.

Cause: The GRANT statement contained a privilege that was already granted to the user.

Action: Remove the privilege from the statement and retry.

ORA-31703: cannot grant *string* privilege on behalf of other users

Cause: Granting of the privilege was attempted by a user other than SYS or the owner.

Action: Granting of the privilege can only be done by SYS or the owner.

ORA-31704: cannot revoke *string* privilege on behalf of other users

Cause: Revoking of the privilege was attempted by a user other than SYS or the owner.

Action: Revoking of the privilege can only be done by SYS or the owner.

ORA-31705: failed to get library object

Cause: An error occurred while trying to lock the library object.

Action: Retry the operation later.

ORA-31706: role *string* not granted commonly or does not exist

Cause: Either the role was not granted commonly to the user, or the role did not exist.

Action: Create the role or grant the role commonly to the user and retry the operation.

ORA-31707: cannot grant *string* privilege

Cause: Granting of privilege INHERIT PRIVILEGES or TRANSLATE SQL was attempted to an invalid user.

Action: Grant the privilege to a valid user.

ORA-31708: role *string* not granted commonly or does not exist

Cause: Either the role was not granted commonly to the user, or the role did not exist.

Action: Create the role or grant the role commonly to the user and retry the operation.

ORA-31901: the current operation was cancelled by the user

Cause: The user requested to cancel current operation

Action: No action is necessary

ORA-31903: cannot unregister materialized view for Synchronous refresh

Cause: One or more materialized views in the materialized views list were not registered for Synchronous refresh.

Action: Check catalog views for which materialized views are registered.

ORA-31905: Synchronous refresh cannot be used for materialized view "*string*".*string*\n*string*

Cause: The materialized view did not meet the requirements for Synchronous refresh.

Action: The query defining the materialized view must conform to a star or snowflake schema, the fact-table and materialized view must both be partitioned, and the partition-key of the materialized view must be functionally-dependent on the partition-key of the fact-table. Run CAN_SYNCREF_TABLE to obtain more diagnostics and troubleshoot the problem further.

ORA-31906: Staging log of "*string*".*string*" contains rows which do not belong to any of the table's partitions.

Cause: Synchronous refresh detected this error during PREPARE_REFRESH.

Action: Check the data in the staging log for validity. If the data is valid, create additional partitions,, including a default partition if needed, with the ALTER TABLE command.

ORA-31907: Synchronous refresh of "*string*".*string*" results in rows which do not belong to any of the materialized view's partitions.

Cause: Synchronous refresh detected this error during PREPARE_REFRESH.

Action: Check the data in the staging logs of the materialized view's base tables for validity. If the data is valid, create additional partitions, including a default partition if needed, with the ALTER MATERIALIZED VIEW command.

ORA-31908: cannot modify the contents of a table with a staging log

Cause: An attempt was made to alter the contents of a table with a staging log.

Action: Do not use the following ALTER TABLE statements on a table with a staging log: * ALTER TABLE EXCHANGE PARTITION * ALTER TABLE DROP PARTITION * ALTER TABLE TRUNCATE PARTITION You must use the REGISTER_PARTITION_OPERATION procedure in the DBMS_SYNC_REFRESH package to perform these operations.

ORA-31909: base table "*string*".*string*" must have primary key or foreign key when creating a staging log

Cause: The base table did not have a primary or foreign key defined.

Action: Define primary key or foreign key on the base table.

ORA-31910: staging log exists on table "*string*".*string*"

Cause: Staging log was already generated on the base table.

Action: Do not attempt to create the staging log.

ORA-31911: MV log on table "*string*".*string*" is not completely consumed.

Cause: Materialized views (MV) referencing the base table were not refreshed.

Action: Refresh all the MVs referencing the base table before altering MV log to staging log.

ORA-31912: Cannot alter MV log. MV log was not created on table "*string*". "*string*"

Cause: Materialized view (MV) log was not created on the base table.

Action: Do not alter the MV log.

ORA-31913: Log is already an MV log on table "*string*". "*string*".

Cause: An attempt was made to alter a staging log to a materialize view (MV) log when it was already an MV log.

Action: Do not alter the MV log.

ORA-31914: Staging log was created on table "*string*". "*string*"

Cause: Staging log was not created on base table.

Action: Do not alter the staging log.

ORA-31915: At least one MV referencing table "*string*". "*string*" is REFRESH ON COMMIT.

Cause: At least one materialize view (MV) referencing a table is defined as REFRESH ON COMMIT.

Action: Do not create or alter to the staging log.

ORA-31916: Staging log on table "*string*". "*string*" cannot be dropped or altered.

Cause: The current group contained a materialize view (MV) referencing the table.

Action: Do not drop or alter the staging log.

ORA-31917: illegal operation on a table which has been locked by synchronous refresh

Cause: DML or DDL was used on a base table that had a staging log or was locked by synchronous refresh. The synchronous refresh operation locks tables related to the refresh group at PREPARE_REFRESH time and unlocks them after the EXECUTE_REFRESH is done to prevent wrong results.

Action: Do not perform DML or DDL on such tables. You cannot modify tables locked by PREPARE_REFRESH until you have done the corresponding EXECUTE_REFRESH.

ORA-31918: The materialized view "*string*". "*string*" is registered for synchronous refresh and cannot be altered or dropped.

Cause: The materialized view was registered for synchronous refresh.

Action: Do not drop or alter the materialized view.

ORA-31919: Value of DMLTYPE\$\$ column is not one of ('I','D','UO','UN') in staging log "*string*". "*string*".

Cause: Value of DMLTYPE\$\$ column was not one of ('I','D','UO','UN').

Action: Update the staging log.

ORA-31920: 'UO' and 'UN' row counts or key values not matched in the staging log "*string*". "*string*".

Cause: 'UO' and 'UN' row counts or key values were not matched in the staging log.

Action: Update the staging log.

ORA-31921: Staging log rows to be updated, deleted or inserted were invalid.\nstring

Cause: The staging log rows to be updated, deleted or inserted were invalid.

Action: Change the staging log key in the staging log table.

ORA-31922: Foreign key must contain partition key in table "string"."string".

Cause: The foreign key did not contain a partition key. If a table does not have a primary key, the foreign key must contain a partition key.

Action: Change the foreign key or partition key in the table.

ORA-31923: must have primary key or partition key in table "string"."string"

Cause: The table did not have a primary key or a partition key.

Action: Add a primary key or partition key to the table.

ORA-31924: must have either primary key or foreign key in table "string"."string"

Cause: The table did not have a primary key or a foreign key.

Action: Add a primary key or foreign key to the table.

ORA-31925: Every row in staging log "string"."string" should contain non-NULL values for all the columns comprising staging log key.

Cause: The staging log contained NULL values in key columns.

Action: Fill in non-NULL values to the staging log key columns.

ORA-31926: Type "string" is not supported for synchronous refresh.

Cause: An attempt was made to create a staging log on a base table containing an unsupported data type.

Action: Do not attempt synchronous refresh on this base table. Refer to the documentation.

ORA-31927: Staging log does not exist on table "string"."string".

Cause: An attempt to prepare a staging log that did not exist.

Action: Create a staging log on the table first.

ORA-31928: Synchronous refresh error\nstring

Cause: An error occurred in the synchronous refresh package (DBMS_SYNC_REFRESH). This message will be followed by a second message giving more details about the nature of the error.

Action: See the synchronous refresh documentation for an explanation of the second error message.

ORA-31930: The table is locked by synchronous refresh and the requested operation cannot be performed.

Cause: An attempt was made to perform a PMOP (partition maintenance operation) or otherwise modify a table that was locked by synchronous refresh. The synchronous refresh operation locks tables related to the refresh group at PREPARE_REFRESH time and unlocks them after the EXECUTE_REFRESH is done to prevent wrong results.

Action: Do not perform PMOPs or modify the table between the execution of PREPARE_REFRESH and EXECUTE_REFRESH. You can do these operations before PREPARE_REFRESH or after EXECUTE_REFRESH.

ORA-31932: cannot allocate memory of *string* bytes for query expression

ORA-31933: error occurred during refresh statistics processing at *string*\n*string*

Cause: An error was detected by the refresh statistics subsystem at the position indicated by the first argument in the error message. The secondary error is indicated by the second argument in the error message. This error message is recorded in the trace file and alert log but is not thrown and the refresh operation is not aborted because of this error.

Action: Fix the problems indicated in the secondary error.

ORA-31934: error occurred while shrinking the materialized view log at *string*\n*string*

Cause: An error was detected while shrinking the materialized view (MV) log during refresh at the position indicated by the first argument in the error message. The secondary error is indicated by the second argument in the error message. This error message is recorded in the trace file and alert log but is not thrown and the refresh operation is not aborted because of this error.

Action: Fix the problems indicated in the secondary error, or disable MV log shrink during refresh by setting the parameter `_mv_refresh_shrink_log` to FALSE.

ORA-31935: REFRESH FAST of "*string*"."*string*" unsupported with SKIP_EXT_DATA = FALSE

Cause: The REFRESH command specified the value of the parameter SKIP_EXT_DATA as FALSE. This materialized view does not support fast refresh when SKIP_EXT_DATA = FALSE is specified.

Action: Use REFRESH COMPLETE with SKIP_EXT_DATA = FALSE to refresh with data from external partitions. If you do not want to use data from external partitions, you can use fast refresh with SKIP_EXT_DATA = TRUE.

ORA-31946: cannot read from an automatically created materialized view

Cause: An attempt was made to query an automatically created materialized view.

Action: Do not directly query an automatically created materialized view.

ORA-31947: cannot alter or drop automatically created materialized view

Cause: An attempt was made to alter or drop an automatically created materialized view.

Action: Do not perform the action on automatically created materialized view.

ORA-31948: cannot alter or drop materialized view log used by automatically created materialized view

Cause: An attempt was made to alter or drop a materialized view log used by automatically created materialized view.

Action: Do not perform the action on materialized view log used by automatically created materialized view.

ORA-31951: invalid SCALE value

Cause: The value was not within the allowable range.

Action: Correct the value and try again.

ORA-31952: invalid second argument

Cause: The second argument was not an integer, bind variable, or the keyword PARTITION.

Action: Specify either the keyword PARTITION or an integer or a bind variable.

ORA-31953: expected MIN or MAX aggregate not found

Cause: Either a matching pair of MIN and MAX aggregates were missing or an aggregate other than MIN or MAX was found.

Action: Specify only matching pairs of MIN and MAX aggregates.

ORA-31954: duplicate MIN or MAX aggregate found

Cause: The same MIN or MAX aggregate was found more than once.

Action: Specify a MIN or MAX aggregate only once.

ORA-31955: incorrect join found

Cause: A join other than equality left outer join was found.

Action: Specify only simple equality left outer joins with the fact table on the left side.

ORA-31956: construct or object 'string' not allowed for zonemap

Cause: A construct or object not allowed in the zonemap definition was found.

Action: Remove the construct or object that is not allowed in the zonemap definition.

ORA-31957: table *string* not joined

Cause: A table without a join to the fact table was found.

Action: Specify a left outer join between this table and the fact table.

ORA-31958: fact table *string* already has a zonemap *string* on it

Cause: The fact table already had a zonemap.

Action: Drop the existing zonemap and repeat the command.

ORA-31959: internal error during the refresh of zonemap "*string*". "*string*"

Cause: An internal error was detected by the zonemap refresh subsystem and the refresh operation was aborted.

Action: Call Oracle Support Services.

ORA-31960: must use DROP MATERIALIZED ZONEMAP to drop "*string*". "*string*"

Cause: An attempt was made to drop a zonemap using a command other than DROP MATERIALIZED ZONEMAP.

Action: Use the DROP MATERIALIZED ZONEMAP command.

ORA-31961: must use ALTER MATERIALIZED ZONEMAP to alter "*string*". "*string*"

Cause: An attempt was made to alter a zonemap using a command other than ALTER MATERIALIZED ZONEMAP.

Action: Use the ALTER MATERIALIZED ZONEMAP command.

ORA-31962: cannot fast refresh zonemap "*string*"."*string*"

Cause: The fast refresh operation was not possible because DML had occurred to one or more dimension tables of the zonemap.

Action: Specify the force ('?') or complete ('C') option.

ORA-31964: matching GROUP BY expression required

Cause: A matching GROUP BY expression was not found in the SELECT list.

Action: Specify an expression in the SELECT list that matches with the GROUP BY expression.

ORA-31965: incorrect predicate found

Cause: A predicate other than simple equality left outer join predicate was found.

Action: Specify only simple equality left outer join predicates with the fact table on the left side.

ORA-31966: invalid option specified to alter "*string*"."*string*"

Cause: An invalid option was used to alter a zonemap table.

Action: Choose a valid option with the ALTER TABLE command.

ORA-31967: built-in aggregate function must be named ZONE_ID\$

Cause: The name for built-in aggregate function was not ZONE_ID\$.

Action: Specify zone_id\$ or "ZONE_ID\$" as the name for aggregate built-in function.

ORA-31968: internal error during the staleness tracking of zonemap "*string*"."*string*"

Cause: An internal error was detected by the zonemap staleness tracking subsystem and the DML operation on the zonemap fact table was aborted.

Action: Call Oracle Support Services.

ORA-31969: ZONEMAP not supported for table stored in tablespace of this storage type

Cause: An attempt was made to define ZONEMAP on a table stored in non-Oracle Exadata storage.

Action: Create this table in a tablespace residing on Oracle Exadata storage and then define a ZONEMAP on it.

ORA-31970: cannot comment on the materialized zonemap

Cause: An attempt was made to issue a COMMENT ON TABLE statement on a materialized zonemap.

Action: Issue a COMMENT ON MATERIALIZED ZONEMAP statement instead.

ORA-31972: cannot drop or alter the internal index on a materialized zone map

Cause: An attempt was made to drop or alter the internal index used by a materialized zone map.

Action: Do not drop or alter the internal index on a materialized zone map. Operate on the materialized zone map instead.

ORA-31973: invalid option specified to alter "*string*"."*string*"

Cause: An invalid option was used to alter a materialized view log table.

Action: Choose a valid option with the ALTER TABLE command.

ORA-31974: missing GROUP BY clause in CREATE MATERIALIZED ZONEMAP statement

Cause: A CREATE MATERIALIZED ZONEMAP statement did not have a GROUP BY clause in the AS subquery.

Action: Add a GROUP BY clause to the AS subquery of the CREATE MATERIALIZED ZONEMAP statement. The GROUP BY clause must use the same SYS_OP_ZONE_ID function expression specified for the first column of the SELECT list of the subquery.

ORA-31975: too many GROUP BY expressions in CREATE MATERIALIZED ZONEMAP statement

Cause: The GROUP BY clause of the AS subquery of a CREATE MATERIALIZED ZONEMAP statement contained more than one expression.

Action: Update the GROUP BY clause of the AS subquery of the CREATE MATERIALIZED ZONEMAP statement to have one expression, which must be the same SYS_OP_ZONE_ID function expression specified for the first column of the SELECT list of the subquery.

ORA-31976: invalid expression in the GROUP BY clause of a CREATE MATERIALIZED ZONEMAP statement

Cause: The GROUP BY clause of the AS subquery of a CREATE MATERIALIZED ZONEMAP statement contained an expression that was not the SYS_OP_ZONE_ID function expression.

Action: Update the GROUP BY clause of the AS subquery of the CREATE MATERIALIZED ZONEMAP statement to have one expression, which must be the same SYS_OP_ZONE_ID function expression specified for the first column of the SELECT list of the subquery.

ORA-31990: failed to process parameter "*string*" from SPFILE

Cause: An error was encountered while processing parameters from the SPFILE.

Action: Update the parameter value using the ALTER SYSTEM SET statement with scope set to SPFILE, and try opening the pluggable database again.

ORA-31991: error occurred processing parameter '*string*'

Cause: The parameter could not be specified for a pluggable database.

Action: Remove the parameter and try again.

ORA-31992: error while processing parameter '*string*'

Cause: An error was encountered while processing a comment for the parameter.

Action: Update or remove the comment and try again.

ORA-31993: cannot overwrite parameter file '*string*'

Cause: The specified parameter file or server parameter file was already in existence.

Action: Delete the parameter file or server parameter file and try again.

ORA-31994: APPEND option is not applicable to single value parameters

Cause: An attempt was made to use the APPEND option with ALTER SYSTEM SET or ALTER SESSION SET for a single value parameter.

Action: Drop the APPEND option while setting a single value parameter with ALTER SYSTEM SET or ALTER SESSION SET.

ORA-31995: error occurred processing parameter '*string*'

Cause: The combined length of all the parameter values was more than the allowed maximum.

Action: Reduce the parameter value length and retry the command.

ORA-31997: APPEND option is not applicable with scope=both

Cause: The ALTER SYSTEM SET command was issued with an invalid combination of options.

Action: If the parameter needs to be set in both spfile and memory, then reissue ALTER SYSTEM SET ... APPEND with scope=spfile and scope=memory specified separately. For example: ALTER SYSTEM SET '_fix_control'='33423456:1' APPEND scope=memory;

ORA-31998: cannot have more than *string* values for the list parameter *string*, *string* values supplied

Cause: An attempt was made to set a list parameter with more values than it supported.

Action: Reduce the number of values in the list parameter. When using APPEND flag, ensure that the number of existing values plus the new values fit within the above limit.

ORA-31999: This parameter is not directly user modifiable, update '*_fix_control*' instead

Cause: An attempt was made to modify parameter which can not be modified directly by user.

Action: Modify *_fix_control* parameter instead.

ORA-32000: write to SPFILE requested but SPFILE is not modifiable

Cause: An ALTER SYSTEM command or an internal self-tuning mechanism requested a write to the SPFILE but the SPFILE was not modifiable.

Action: Perform an in-memory parameter update only.

ORA-32001: write to SPFILE requested but no SPFILE is in use

Cause: An ALTER SYSTEM command or an internal self-tuning mechanism requested a write to the SPFILE but no SPFILE was in use.

Action: Re-start the instance using an SPFILE, or execute ALTER SYSTEM SET SPFILE.

ORA-32002: cannot create SPFILE already being used by the instance

Cause: A create spfile command is trying to write to an SPFILE that was used to startup the instance.

Action: Specify a different SPFILE name

ORA-32003: error occurred processing parameter '*string*'

Cause: An error occurred while parsing the parameter file.

Action: See additional errors to determine the root cause.

ORA-32004: obsolete or deprecated parameter(s) specified for *string* instance

Cause: Obsolete or deprecated parameters for this instance type were specified in the SPFILE or the PFILE on the server side.

Action: See alert log for a list of parameters that are obsolete or deprecated. Remove them from the SPFILE or the server side PFILE.

ORA-32005: error while parsing size specification [*string*]

Cause: The value specified for an alter operation on a size parameter is not valid

Action: Correct the value and retry the operation

ORA-32006: *string* initialization parameter has been deprecated

Cause: A deprecated parameter was specified at startup

Action: Consult Oracle documentation to find new parameters to use instead.

ORA-32007: internal

Cause: A parameter error occurred.

Action: Call Oracle support.

ORA-32008: error while processing parameter update at instance *string*

Cause: An error occurred while processing a parameter on a remote instance.

Action: See accompanying error messages.

ORA-32009: cannot reset the memory value for instance *string* from instance *string*

Cause: Memory resets of local parameters are only allowed.

Action: Retry the query for the local instance if needed.

ORA-32010: cannot find entry to delete in SPFILE

Cause: The SPFILE did not contain the sid.parameter entry.

Action: Change the sid and/or the parameter.

ORA-32011: cannot restore SPFILE to location already being used by the instance

Cause: A restore operation trying to write to an SPFILE that was used to startup the instance.

Action: Specify a different SPFILE name

ORA-32012: cannot reset the memory value of initialization parameter

Cause: An attempt was made to reset the memory value of a parameter that has not been modified.

Action: None

ORA-32013: failure in verifying parameters from the restored SPFILE

Cause: Failure during processing of parameters from restored SPFILE. It could be that restore image of the SPFILE is corrupted.

Action: Further diagnostic information should be in the error stack.

ORA-32014: error processing parameter "*string*" from the SPFILE restore image

Cause: Failure during processing of parameters from restored SPFILE. It could be that restore image of the SPFILE is corrupted.

Action: Further diagnostic information should be in the error stack.

ORA-32015: unable to restore SPFILE

Cause: Failure during SPFILE restore. It could be that the restore destination is not valid.

Action: Further diagnostic information should be in the error stack.

ORA-32016: parameter "*string*" cannot be updated in SPFILE

Cause: Database is mounted.

Action: Unmount the database to update the parameter in the SPFILE

ORA-32017: failure in updating SPFILE

Cause: A failure occurred while updating the SPFILE.

Action: See associated errors.

ORA-32018: parameter cannot be modified in memory on another instance

Cause: Parameter adjustment can take a very long time

Action: Modify the parameter individually on each instance using the SID clause of the alter system command

ORA-32019: The parameter SPFILE cannot be updated in the server parameter file.

Cause: An attempt was made to update the parameter SPFILE in the server parameter file.

Action: Convert the server parameter file into a parameter file and then add the parameters needed and recreate the server parameter file.

ORA-32020: SID='*' clause needed to modify this parameter

Cause: The parameter did not have the same value on all RAC instances.

Action: Retry the command by specifying SID='*'

ORA-32021: parameter value longer than *string* characters

Cause: An attempt was made to alter a parameter value but the number of characters in the parameter value was longer than the allowed maximum. For a list parameter, one of the values in the list was longer than the allowed maximum.

Action: Reduce the parameter value length and retry the command. For the DISPATCHERS parameter, use listener aliases to reduce value length.

ORA-32022: parameter *string* value longer than *string* characters

Cause: The combined length of all the parameter values was more than the allowed maximum.

Action: Reduce the parameter value length and retry the command. For the DISPATCHERS parameter, use listener aliases to reduce value length.

ORA-32024: invalid directory specified for audit_file_dest parameter

Cause: Either the directory did not exist, it was not writable, or the path contained reference to the parent directory.

Action: Retry the command by specifying a valid directory or granting appropriate directory permissions.

ORA-32025: *string.string* is not a table or view object.

Cause: An attempt was made to set the audit table to a non-table object or a non-view object.

Action: Specify a valid table or view object for the audit table option.

ORA-32026: *string.string* has fewer columns compared to *string* table.

Cause: An attempt was made to set the audit table to a table or view object that has fewer columns compared to the base audit table.

Action: Specify a valid table or view object for the audit table option.

ORA-32027: There is no *string* column with the matching type in *string.string*.

Cause: An attempt was made to set the audit table to a table or view object that does not have a column with the same name and type as the one in the audit table.

Action: Specify a valid table or view object for the audit table option.

ORA-32028: Syslog facility or level not recognized

Cause: Syslog facility or level did not conform to the standard facility or level provided in the syslog.h file

Action: Specify a facility or level such as "LOCAL1.NOTICE" which conforms to the syslog.h file

ORA-32029: resetting with SCOPE=MEMORY or SCOPE=BOTH is currently not supported

Cause: An attempt was made to reset an in-memory parameter value

Action: Specify SCOPE=SPFILE if applicable, or explicitly set the parameter to the desired value

ORA-32030: an SPFILE is already associated with the instance

Cause: An attempt was made to update the parameter SPFILE on an instance that was already associated with an spfile.

Action: Restart the instance with a parameter file.

ORA-32031: illegal reference of a query name in WITH clause

Cause: forward or recursive reference of a query name in WITH clause is not allowed.

Action: Correct query statement, then retry.

ORA-32032: free temporary object number not available

Cause: Too many queries using temp table transformation are currently being run to use up all temporary object numbers.

Action: Turn off temporary table transformation or wait, then retry

ORA-32033: unsupported column aliasing

Cause: column aliasing in WITH clause is not supported yet

Action: specify aliasing in definition subquery and retry

ORA-32034: unsupported use of WITH clause

Cause: Improper use of WITH clause because one of the following two reasons: 1. nesting of WITH clause within WITH clause not supported yet 2. For a set query,

WITH clause can't be specified for a branch. 3. WITH clause cannot be specified within parenthesis.

Action: correct query and retry

ORA-32035: unreferenced query name defined in WITH clause

Cause: There is at least one WITH clause query name that is not referenced in any place.

Action: remove the unreferenced query name and retry

ORA-32036: unsupported case for inlining of query name in WITH clause

Cause: There is at least one query name which is inlined more than once because its definition query is too simple and references another query name. This is currently unsupported yet.

Action: remove such query name and retry

ORA-32037: unsupported use of LEVEL in membership condition

Cause: An attempt was made to use LEVEL in membership condition with subquery that is not supported.

Action: Rewrite query to avoid using LEVEL in membership condition

ORA-32038: number of WITH clause column names does not match number of elements in select list

Cause: A list of column aliases or names was specified for a WITH clause query name but the number of elements in the list did not match the number of elements in the select list of the definition query.

Action: Update the column alias list or the select list to ensure they have the same number of elements.

ORA-32039: recursive WITH clause must have column alias list

Cause: A WITH clause query referred to itself (recursive) but did not have a column alias list specified for it.

Action: Add a column alias list for the WITH clause query name.

ORA-32040: recursive WITH clause must use a UNION ALL operation

Cause: A WITH clause query referred to itself (recursive) but did not use a UNION ALL operation in its definition query.

Action: Rewrite the recursive WITH clause query to use a UNION ALL operation.

ORA-32041: UNION ALL operation in recursive WITH clause must have only two branches

Cause: A WITH clause query referred to itself (recursive) but used a UNION ALL operation with more than two branches, which is not currently supported.

Action: Rewrite the recursive WITH clause query to use only two branches in the UNION ALL operation.

ORA-32042: recursive WITH clause must reference itself directly in one of the UNION ALL branches

Cause: A WITH clause query referred to itself (recursive) indirectly, such as through a subquery or view.

Action: Rewrite the recursive WITH clause query to refer to itself directly in the FROM clause of one of the UNION ALL branches.

ORA-32043: recursive WITH clause needs an initialization branch

Cause: A WITH clause query referred to itself (recursive) but did not have a branch in a UNION ALL with no references to itself (the initialization branch or anchor member).

Action: Rewrite the recursive WITH query to have a branch in a UNION ALL operation with no references to itself.

ORA-32044: cycle detected while executing recursive WITH query

Cause: A recursive WITH clause query produced a cycle and was stopped in order to avoid an infinite loop.

Action: Rewrite the recursive WITH query to stop the recursion or use the CYCLE clause.

ORA-32045: maximum level of recursion reached while executing recursive WITH query

Cause: A recursive WITH query reached the maximum level of recursion specified and was stopped.

Action: Increase the maximum level of recursion or use the CYCLE clause.

ORA-32046: sequence column name for SEARCH clause must not be part of the column alias list

Cause: The SEARCH clause for a recursive WITH query specified a sequence column that was already listed in the column alias list for the WITH clause query name.

Action: Specify a different name for the sequence column for the SEARCH clause or remove the name from the column alias list.

ORA-32047: cycle mark value and non-cycle mark value must be one byte character string values or boolean constants

Cause: The cycle mark or the non-cycle mark values specified in the CYCLE clause of a recursive WITH query were not one byte character string values or not boolean constants as required.

Action: Specify a one byte character string or a boolean constant for the cycle mark and non-cycle mark values of the CYCLE clause for the recursive WITH query.

ORA-32048: cycle mark column name for CYCLE clause must not be part of the column alias list

Cause: The CYCLE clause for a recursive WITH query specified a cycle mark column that was already listed in the column alias list for the WITH clause query name.

Action: Specify a different name for the cycle mark column for the CYCLE clause or remove the name from the column alias list.

ORA-32049: duplicate name found in column alias list for WITH clause

Cause: The column alias list for a WITH clause element contained a name which appeared more than once in the list.

Action: Remove the duplicate name from the column alias list.

ORA-32050: *string* operation failed

Cause: A mapping operation failed.

Action: Check FMON trace files for errors.

ORA-32051: mapping service not available

Cause: The mapping service was never started or previously failed to start properly.

Action: Set FILE_MAPPING to TRUE if it is not currently set. Otherwise, check FMON trace files for an ORA-32052 error.

ORA-32052: failed to start mapping service

Cause: The mapping service failed to start properly.

Action: Check FMON trace files for errors.

ORA-32053: operation not supported

Cause: Mapping libraries do not support operation.

Action: Check whether mapping libraries are available and whether operation is supported by the libraries.

ORA-32054: lost communication with FMPUTL process

Cause: Lost communication with mapping utility.

Action: Check FMON and FMPUTL trace files for errors.

ORA-32055: invalid file type

Cause: Invalid file type used when mapping files.

Action: Specify one of expected file types.

ORA-32056: invalid number of extents

Cause: Invalid number of extents used for map operation.

Action: Specify a non-negative number of extents.

ORA-32057: invalid lock mode

Cause: An invalid mode was used for a lock operation.

Action: Specify one of expected lock modes.

ORA-32058: operation restricted to SYSDBA users

Cause: Operation requires SYSDBA privileges.

Action: Connect to the database as SYSDBA.

ORA-32059: deadlock detected on mapping structures

Cause: Mapping structures already locked by the same session.

Action: Unlock mapping structures before proceeding with current operation.

ORA-32060: channel failure

Cause: Channel failure between foreground and background process.

Action: Check foreground trace files for errors.

ORA-32100: operation invalid on transient object

Cause: Trying to perform an operation on transient object which is valid only on persistent objects

Action: Make sure object is persistent

ORA-32101: cannot create OCI Environment

Cause: An OCI Environment could not be created for OCCI

Action: Insure that the parameters to the creatEnvironment method are valid

ORA-32102: invalid OCI handle

Cause: An invalid OCI handle is passed to an OCI call.

Action: This is an internal OCCI Error. Please contact customer support.

ORA-32103: error from OCI call

Cause: An error code other than OCI_ERROR is returned from an OCI call.

Action: This is an internal OCCI Error. Please contact customer support.

ORA-32104: cannot retrieve OCI error message

Cause: Error message after an OCI call could not be retrieved.

Action: This is an internal OCCI Error. Please contact customer support.

ORA-32106: array fetch not allowed without setBuffer on all columns

Cause: The setBuffer method was not called for all column positions and the next method was called to fetch more than one row.

Action: Call the setBuffer method for all column positions if next is to be called to fetch more than one row.

ORA-32107: internal OCI memory allocation failure

Cause: Memory could not be allocated from an OCI heap.

Action: Increase the process memory size.

ORA-32108: max column or parameter size not specified

Cause: The max column or parameter size is not specified.

Action: Specify the max size by setMaxColumnSize or setMaxParamSize.

ORA-32109: invalid column or parameter position

Cause: An invalid column or parameter position is specified.

Action: Specify a valid column or position number.

ORA-32110: Connection not specified

Cause: A null connection was passed.

Action: Pass a valid, non-null connection.

ORA-32113: Null object passed

Cause: Null object was passed.

Action: Pass a non-null object.

ORA-32114: Cannot perform operation on a null LOB

Cause: The LOB instance on which the operation was attempted was null.

Action: Use a valid, non-null LOB instance to perform this operation.

ORA-32116: Buffer size is less than amount specified

Cause: The buffer size specified for the LOB read or write operation was less than the amount to be read or written.

Action: The buffer size must be equal to or greater than the amount to be read from or written to the LOB.

ORA-32117: Source LOB is null

Cause: The source LOB instance on which the operation was attempted was null.

Action: Use a valid, non-null source LOB instance for this operation.

ORA-32118: Cannot perform operation on a null FILE

Cause: The FILE instance on which the operation was attempted was null.

Action: Use a valid, non-null FILE instance to perform this operation.

ORA-32120: Buffer size is less than amount specified

Cause: The buffer size specified for the FILE read or write operation was less than the amount to be read or written.

Action: The buffer size must be equal to or greater than the amount to be read from or written to the FILE.

ORA-32121: Source FILE is null

Cause: The source FILE instance on which the operation was attempted was null.

Action: Use a valid, non-null source FILE instance for this operation.

ORA-32123: Attribute number is out of range

Cause: The attribute number passed is greater than the total number of attributes of the described object.

Action: Pass the attribute number within the allowable range.

ORA-32124: Illegal attribute passed

Cause: The attribute passed is not applicable for the described object.

Action: Pass a valid attribute.

ORA-32125: Attribute type is not appropriate

Cause: The return type of the get method does not match the type of the attribute being passed.

Action: Call the appropriate get method.

ORA-32126: Cannot perform operations on a null REF

Cause: The REF instance on which the operation was attempted was null.

Action: Use a valid, non-null REF instance to perform this operation.

ORA-32127: REFs do not belong to any connection

Cause: Neither of the REFs being compared had associated connection information.

Action: At least one of the REFs being compared must be associated with a valid connection.

ORA-32128: setDataBuffer called after fetch has started

Cause: Fetch from result set has already started and the setDataBuffer call was made.

Action: Call the setDataBuffer method before calling the next() method.

ORA-32129: cannot get information about this column

Cause: The setDataBuffer method was called to get information about this column. Therefore, the current method cannot be called.

Action: Use the information from the buffers specified in the setDataBuffer call.

ORA-32131: bind data type cannot be changed

Cause: The setXXX method is called again with a different data type than originally specified, or the setXXX method is called for a subsequent iteration without being called before the first iteration.

Action: Call the setXXX method with the same data type as done before the first iteration. If no setXXX method was called for this parameter position the first iteration, then make sure that a setXXX method is called before the first addIteration method is called.

ORA-32132: maximum iterations cannot be changed

Cause: The setMaxIterations is called after a setXXX method has been called.

Action: Call the setMaxIterations method before calling any setXXX methods.

ORA-32133: Cannot get stream from LOB/FILE

Cause: An open stream exists on the the LOB/FILE on which the operation was attempted.

Action: Close the stream before getting another.

ORA-32134: Cannot assign LOBs

Cause: An open stream exists on the target LOB.

Action: Close the stream on the target LOB before assigning the LOBs.

ORA-32135: Cannot assign FILEs

Cause: An open stream exists on the target FILE.

Action: Close the stream on the target FILE before assigning the FILEs.

ORA-32136: Cannot perform operation on an invalid stream

Cause: The LOB/FILE from which the stream was obtained had been nullified or destroyed.

Action: Use a valid stream.

ORA-32139: Cannot write to the stream

Cause: A write was performed after the last buffer was written.

Action: Close this stream and get a new stream to perform the write.

ORA-32140: cannot perform this operation on stream

Cause: Either a read is attempted from a stream in write mode, or a write is attempted on a stream in read mode.

Action: Check the status of the stream to find out the valid operations that can be performed.

ORA-32141: get method does not match the type of the parameter

Cause: The getXXX method called on the Statement object does not match the type of the bind parameter.

Action: Call the getXXX method that is the same as the type of the parameter.

ORA-32142: maximum number of iterations exceeded

Cause: The addIteration exceeds the maximum number of iterations set by the setMaxIterations method.

Action: Increase the maximum number of allowed iterations.

ORA-32143: Environment not specified

Cause: A null environment was passed.

Action: Pass a valid, non-null environment.

ORA-32144: Cannot perform operation on a null interval

Cause: The interval involved in this operation is null.

Action: Use valid, non-null interval instance to perform this operation.

ORA-32145: Environment not specified

Cause: The interval on which the operation was attempted was null and no environment was specified.

Action: Specify non-null environment or perform the operation on a non null instance.

ORA-32146: Cannot perform operation on a null date

Cause: The date involved in this operation is null.

Action: Use valid, non-null date instance to perform this operation.

ORA-32147: Environment not specified

Cause: The date on which the operation was attempted was null and no environment was specified.

Action: Specify non-null environment or perform the operation on a non null instance.

ORA-32150: Cannot perform operation on a null timestamp

Cause: The timestamp involved in this operation is null.

Action: Use valid, non-null timestamp instance to perform this operation.

ORA-32151: Environment not specified

Cause: The timestamp on which the operation was attempted was null and no environment was specified.

Action: Specify non-null environment or perform the operation on a non null instance.

ORA-32152: Cannot perform operation on a null number

Cause: The number involved in this operation is null.

Action: Use valid, non-null number instance to perform this operation.

ORA-32153: Environment not specified

Cause: The number on which the operation was attempted was null and no environment was specified.

Action: Specify non-null environment or perform the operation on a non null instance.

ORA-32154: Anydata context not specified

Cause: A null anydata context was passed.

Action: Pass a valid, non-null anydata context.

ORA-32155: Anydata not specified

Cause: A null anydata was passed.

Action: Pass a valid, non-null anydata.

ORA-32156: Cannot perform operation on stream

Cause: This operation is not applicable to streams obtained from LOBs.

Action: n/a

ORA-32157: Infinity not supported**ORA-32158: Invalid type passed**

Cause: An inapplicable type was passed to this call.

Action: Pass an applicable type.

ORA-32159: Cannot set prefetch options for a null Type

Cause: A null Type name was passed.

Action: Pass an non-null Type name.

ORA-32161: Cannot perform piecewise fetch

Cause: Zero amount was passed and buffer size was less than LOB size

Action: Specify a larger buffer or use Stream

ORA-32162: Read/Write SQL method not registered

Cause: readSQL/writeSQL method was NULL or was not registered

Action: Register readSQL/writeSQL by calling put method in Map

ORA-32163: Method called on Invalid Environment type

Cause: A non-XA call made on an XA Environment or XA call made on non-XA Environment

Action: Make sure Environment type is OK

ORA-32164: Method called on Invalid Connection type

Cause: A non-XA call made on an XA Connection or XA call made on non-XA Connection

Action: Make sure Connection type is OK

ORA-32165: Cannot get XA environment

Cause: Incorrect dbname string was passed or the XA connection has not been opened

Action: Pass the correct dbname string or check if the XA connection is open

ORA-32166: Cannot get XA connection

Cause: Incorrect dbname string was passed or the XA connection has not been opened

Action: Pass the correct dbname string or check if the XA connection is open

ORA-32167: No payload set on the Message

Cause: An attempt was made to enqueue a message without setting a payload on it.

Action: Set a payload on the message before calling the send method.

ORA-32168: Cannot perform operation on a null AnyData

Cause: The AnyData instance on which the operation was attempted was null.

Action: Use a valid, non-null AnyData instance to perform this operation.

ORA-32169: Execution completed successfully but the number of rows affected is more than the maximum value of the unsigned integer.

Cause: The row count was larger than the maximum value of the unsigned integer. OCCI clients using 'executeUpdate()' cannot retrieve row counts larger than the maximum value of the unsigned integer.

Action: Use 'getUb8RowCount()' to get the correct row count. Use 'execute()' and 'getUb8RowCount()' for large updates.

ORA-32300: cannot drop a secondary materialized view "*string*". "*string*"

Cause: An attempt was made to drop a materialized view of a nested table column's storage table.

Action: Drop the materialized view that contains the nested table column. This will implicitly drop all secondary materialized views.

ORA-32301: object-relational materialized views must be primary key based

Cause: An attempt was made to create an object-relational materialized view that is not primary key based.

Action: Create the materialized view with the PRIMARY KEY keyword.

ORA-32302: object materialized views must be object ID based

Cause: An attempt was made to create an object materialized view that is not object ID based.

Action: Create the materialized view using the OF clause but omit any ROWID or PRIMARY KEY clauses.

ORA-32303: mviews with user-defined types cannot reference multiple master sites

Cause: For materialized views with user-defined types, the definition query cannot reference tables from different master sites.

Action: Do not create materialized views with user-defined types referencing multiple master sites.

ORA-32304: materialized views with user-defined types cannot use prebuilt table

Cause: An attempt was made to create a materialized view with the ON PREBUILT TABLE option.

Action: Do not create the materialized view with the ON PREBUILT TABLE option.

ORA-32305: RepAPI materialized views with user-defined types are not supported

Cause: An attempt was made to create a RepAPI materialized view with user-defined types.

Action: Do not create a RepAPI materialized view with user-defined types.

ORA-32306: updatable materialized views with user-defined types must use SELECT *

Cause: An attempt was made to create an updatable materialized view with user-defined types where the definition query did not use SELECT * at the topmost level.

Action: Rewrite the definition query so that SELECT * is used at the topmost level.

ORA-32307: must use FROM ONLY clause when referencing an object table

Cause: An attempt was made to create a materialized view whose definition query references object tables without the FROM ONLY clause.

Action: Rewrite the definition query to use the FROM ONLY clause for all the object tables in the query.

ORA-32308: object materialized views must use SELECT *

Cause: An attempt was made to create an object materialized view where the definition query did not use SELECT * at the topmost level.

Action: Rewrite the definition query so that SELECT * is used at the topmost level.

ORA-32309: object mview type "string"."string" does not match the master table type

Cause: An attempt was made to create an object materialized view whose type does not match the type of the master object table.

Action: Redefine the type so that it matches the type of the master object table.

ORA-32310: object materialized views must select from an object table

Cause: An attempt was made to create an object materialized view whose definition query did not select from an object table.

Action: Rewrite the definition query to select from an object table.

ORA-32311: materialized view definition query selects an unsupported user-defined type

Cause: An attempt was made in the definition query to select an embedded user-defined type, function returning a user-defined type, or a function whose arguments are user-defined types.

Action: Rewrite the definition query to exclude these unsupported user-defined types.

ORA-32312: cannot refresh a secondary materialized view "string"."string"

Cause: An attempt was made to refresh a materialized view of a nested table column's storage table.

Action: Refresh the materialized view that contains the nested table column. This will implicitly refresh all secondary materialized views.

ORA-32313: REFRESH FAST of "string"."string" unsupported after PMOPs

Cause: A Partition Maintenance Operation (PMOP) has been performed on a detail table, and the specified materialized view does not support fast refresh after PMOPs.

Action: Use REFRESH COMPLETE. Note: you can determine why your materialized view does not support fast refresh after PMOPs using the DBMS_MVIEW.EXPLAIN_MVIEW() API.

ORA-32314: REFRESH FAST of "string"."string" unsupported after deletes/updates

Cause: One or more deletes or updates has been performed on one or more of the detail tables referenced by the specified materialized view. This materialized view does not support fast refresh after deletes or updates.

Action: Use REFRESH COMPLETE. Note: you can determine why your materialized view does not support fast refresh after deletes or updates using the DBMS_MVIEW.EXPLAIN_MVIEW() API.

ORA-32315: REFRESH FAST of "string"."string" unsupported after mixed DML and Direct Load

Cause: One or more of the materialized view logs on the detail tables referenced by the specified materialized view omits the sequence number option. Such a log cannot be used to refresh a materialized view after deletes or updates and direct path insert.

Action: Use REFRESH COMPLETE. Note: you can use the DBMS_MVIEW.EXPLAIN_MVIEW() API to determine which materialized view logs omit the sequence number option.

ORA-32316: REFRESH FAST of "string"."string" unsupported after mixed DML

Cause: One or more of the materialized view logs on the detail tables referenced by the specified materialized view omits the sequence number option. Such a log cannot be used to refresh a materialized view after deletes or updates have been performed on multiple detail tables.

Action: Use REFRESH COMPLETE. Note: you can use the DBMS_MVIEW.EXPLAIN_MVIEW() API to determine which materialized view logs omit the sequence number option.

ORA-32317: cannot run a job from a job

Cause: An attempt was made to execute a job from within another job.

Action: Do not submit jobs that run other jobs.

ORA-32318: cannot rename a materialized view

Cause: Renaming a materialized view or its base table is not supported.

Action: Do not rename the base table of a materialized view.

ORA-32319: Cannot use direct loader log to FAST REFRESH materialized view "string"."string"

Cause: The direct loader log might have been dropped

Action: Need to do complete refresh

ORA-32320: REFRESH FAST of "string"."string" unsupported after container table PMOPs

Cause: A Partition Maintenance Operation (PMOP) has been performed on the materialized view, and no materialized view supports fast refresh after container table PMOPs.

Action: Use REFRESH COMPLETE. Note: you can determine why your materialized view does not support fast refresh after PMOPs using the DBMS_MVIEW.EXPLAIN_MVIEW() API.

ORA-32321: REFRESH FAST of "string"."string" unsupported after detail table TRUNCATE or MOVE

Cause: A detail table was truncated or moved. A materialized view did not support fast refresh after a detail table was truncated or moved.

Action: Use REFRESH COMPLETE. Note: you can determine why your materialized view does not support fast refresh after TRUNCATE or MOVE using the DBMS_MVIEW.EXPLAIN_MVIEW() API.

ORA-32322: PCT refresh of "string"."string" not allowed the sequence of DMLs/PMOPs

Cause: A table join dependent on another table on which PCT refresh is enabled has changed

Action: Use REFRESH FORCE which will pick the best possible refresh method on the materialized view

ORA-32330: invalid operation on online redefinition interim table "string"."string"

Cause: An invalid operation was performed on an interim table which was being used for online redefinition of a table.

Action: Do not perform any unsupported operation on the interim table.

ORA-32331: type "string"."string" is incompatible with the master site

Cause: A type used by the materialized view was found to be incompatible with its corresponding type on the master site. This could be because the type does not exist on the master site or has been evolved to a different version from that on the materialized view site.

Action: Make sure that the types used by the materialized view are the same on both the materialized view and master sites.

ORA-32332: cannot refresh materialized view "*string*"."*string*" as type evolution has occurred

Cause: The types used by the materialized view or its master tables have been evolved.

Action: Ensure that the types used by the materialized view have been evolved to the same version at both the master and materialized sites. Then, before refreshing the materialized view, evolve the materialized view using ALTER MATERIALIZED VIEW.

ORA-32333: disable table scn update for Materialized view

Cause: an event is set for disabling table scn update to prevent deadlock situation. (bug 1376209)

Action: disable null refresh and/or base table scn update for Materialized view

ORA-32334: cannot create prebuilt materialized view on a table already referenced by a MV

Cause: the table on which the materialized view is created as prebuilt is already referenced by a materialized view

Action: create the materialized view on a different table

ORA-32335: dimension must have at least one level

Cause: An level-less dimension is not allowed.

Action: Do not drop the only level of a dimension.

ORA-32336: cannot use USING NO INDEX to create materialized view "*string*"."*string*"

Cause: The USING NO INDEX option was specified to create an updatable primary key based materialized view, an index-organized materialized view or an object-id materialized view.

Action: Do not use the USING NO INDEX option to create an updatable primary key based materialized view, an index-organized materialized view or an object-id materialized view.

ORA-32337: cannot alter materialized view or zonemap to refresh on commit with pending changes

Cause: There were some pending changes in the detail tables.

Action: Perform on-demand refresh of the materialized view or zonemap to synchronize the data between the materialized view and the detail tables and then issue the ALTER MATERIALIZED VIEW or ALTER MATERIALIZED ZONEMAP statement.

ORA-32338: on commit refresh grab all the detailed tables

Cause: an event is set to let on-commit MV refresh to grab all the detailed tables, no matter whether they have modified or not.

Action: n/a

ORA-32339: cannot alter materialized view with the PMOP

Cause: the materialized view is not allowed to have destructive PMOPS such as DROP, TRUNCATE and EXCHANGE (sub)partition. The UGA flag of i_am_a_refresh should be set first.

Action: execute set_i_am_a_refresh first before alter materialized view with the PMOP.

ORA-32340: cannot tune the materialized view definition

Cause: Due to constructs in the materialized view definition, it could not be tuned to be fast-refreshable or rewriteable.

Action: Execute DBMS_MVIEW.EXPLAIN_MVIEW to determine the cause.

ORA-32341: The EXPLAIN_MVIEW facility failed to explain the materialized view "string"."string"

Cause: The dependent object(s) of the materialized view may have changed. The materialized view may no longer be valid.

Action: Execute ALTER MATERIALIZED VIEW COMPILE and to determine the status of the materialized view in catalog views.

ORA-32342: The EXPLAIN_MVIEW facility failed to explain the materialized view statement

Cause: An error exists in the materialized view definition. As a result, the materialized view statement could not be explained.

Action: Check the syntax of the statement. If it is a CREATE MATERIALIZED VIEW statement, then also check the PARAMETERS specified for the materialized view.

ORA-32344: cannot create a secondary materialized view with synonym as base table

Cause: It is not supported to create a secondary materialized view with synonym in the FROM clause.

Action: Removed the synonym(s) from the statement.

ORA-32345: fail to refresh the materialized view string.string due to the changed synonym

Cause: The definition of one or more synonyms in the from clause have changed. The structure of the materialized view has become invalid.

Action: Restore the synonym(s) or drop the materialized view and recreate it again.

ORA-32346: ON COMMIT materialized view refresh caused changes to the master table/materialized view

Cause: ON COMMIT refresh of a read-only materialized view changed the master table/materialized view. A trigger on the refreshed materialized view may be the cause.

Action: Do not create triggers on materialized view which update the master table/materialized view.

ORA-32347: NULL capabilities during explain mview

Cause: The supplied defining query did not generate any capabilities information.

Action: Replace the query since it is not suitable for creating a materialized view.

ORA-32348: revalidate summary object based on user input

Cause: An event was set to specify the number of attempts that the system needed to make in order to validate an invalidated summary object.

Action: Revalidate an invalidated summary object based on user input.

ORA-32349: cannot reference prebuilt table in definition query for materialized view

Cause: The prebuilt container table of the materialized view was referenced in the definition query.

Action: Change the definition query to reference a non-prebuilt table.

ORA-32350: ON COMMIT refresh obtain shared lock for all the detailed tables

Cause: An event was set to let ON COMMIT refresh to obtain a shared lock for all the detailed tables, whether they have been modified or not.

Action: No action necessary.

ORA-32351: database link name cannot start with a number while creating materialized view

Cause: This event was disabled by default. If enabled, the fix for bug 6074902 will be disabled and you will be unable to create database links starting with a number when creating a materialized view on remote tables.

Action: No action necessary.

ORA-32352: cannot refresh materialized view *string.string* using out-of-place fast refresh

Cause: Out-of-place fast refresh was either not enabled on this materialized view or not possible after changes to the base table made since the last refresh.

Action: Specify the FORCE or COMPLETE option for out-of-place refresh.

ORA-32353: cannot refresh materialized view *string.string* using out-of-place PCT refresh

Cause: Out-of-place Partition Change Tracking (PCT) refresh was either not enabled on this materialized view or not possible after changes to the base table made since the last refresh.

Action: Specify the FORCE or COMPLETE option for out-of-place refresh.

ORA-32354: cannot refresh materialized view *string.string* using out-of-place complete refresh

Cause: The materialized view did not qualify for out-of-place complete refresh.

Action: Set the 'out_of_place' parameter to 'false'.

ORA-32355: out-of-place refresh cannot be used in atomic mode

Cause: Both 'atomic_refresh' and 'out_of_place' parameters were set to 'true' in the refresh interface.

Action: Either set the 'atomic_refresh' parameter to 'false' or set the 'out_of_place' parameter to 'false'.

ORA-32357: failed to refresh on-commit materialized view *string.string*

Cause: There was an error in the refresh path of the on-commit materialized view.

Action: Examine the other messages on the error stack in the alert log and take corrective action.

ORA-32358: cannot perform on-query computation for materialized view *string.string*

Cause: The ENABLE ON QUERY COMPUTATION option was specified for the materialized view [owner].[mv_name] but on-query computation was not feasible for the change scenario.

Action: Alter the materialized view [owner].[mv_name] to disable on-query computation, or refresh the materialized view [owner].[mv_name] before issuing the query again.

ORA-32359: cannot specify the FRESH_MV hint for this query

Cause: The query included a construct that was not supported by the on-query computation, and so the FRESH_MV hint could not be specified. The on-query computation does not support the CONNECT BY clause, the MATERIALIZE hint, or spreadsheet queries.

Action: Remove the FRESH_MV hint from the query.

ORA-32360: cannot ENABLE ON QUERY COMPUTATION for a refresh-on-commit materialized view

Cause: The ENABLE ON QUERY COMPUTATION option was specified when the ON COMMIT REFRESH option was also specified.

Action: Remove the ENABLE ON QUERY COMPUTATION option or specify refresh options other than ON COMMIT REFRESH.

ORA-32361: cannot ENABLE ON QUERY COMPUTATION for the materialized view

Cause: On-query computation was not feasible for the materialized view being created or altered.

Action: Remove the ENABLE ON QUERY COMPUTATION option or make the materialized view capable of on-query computation.

ORA-32362: cannot create system-partitioned materialized view

Cause: An attempt to create a system-partitioned materialized view failed.

Action: Remove the PARTITION BY SYSTEM clause from the materialized view definition query.

ORA-32363: prebuilt table managed column cannot be a virtual column

Cause: An attempt was made to create a materialized view on a prebuilt table that has a managed column which is a virtual column.

Action: Do not include the column in the materialized view definition.

ORA-32364: cannot perform on-query computation for this query

Cause: The FRESH_MV hint was specified for the query but on-query computation was not feasible due to conflicting system settings or processes.

Action: Remove the FRESH_MV hint from the query to run the query without on-query computation. To run the query with on-query computation, verify that the system settings are compatible with this feature.

ORA-32365: refresh abort initiated on auto materialized view

Cause: An attempt was made to abort fast refresh on an auto materialized view.

Action: None

ORA-32366: mview definition query cannot include an inline external table clause

Cause: An attempt was made to include an inline external table clause in the materialized view definition query.

Action: Remove the inline external table clause from the materialized view definition query. Alternatively, you can replace the inline external table clause with a reference to an external table having the same properties.

ORA-32367: unsupported fast refreshable JSON materialized view

Cause: An attempt was made to create an unsupported fast refreshable JavaScript Object Notation (JSON) materialized view.

Action: Create a supported fast refreshable JSON materialized view. Currently, only a replication JSON materialized view with no joins or aggregates is supported to refresh fast.

ORA-32368: cannot create JSON materialized view without relational table

Cause: An attempt was made to create a JavaScript Object Notation (JSON) materialized view without a relational table.

Action: Create a supported JSON materialized view including the relational table in the FROM list.

ORA-32369: cannot refresh materialized view *string.string* using LPT fast refresh

Cause: LPT (Logical Partition Tracking) fast refresh was either not enabled on this materialized view or not possible after changes to the base table made since the last refresh.

Action: Specify the FORCE or COMPLETE option instead of LPT fast refresh.

ORA-32370: cannot create logical partition tracking on a table that already has logical partition tracking enabled

Cause: An attempt was made to create logical partition tracking on a table that already had logical partition tracking enabled.

Action: Do not create logical partition tracking on a table that already has logical partition tracking enabled, or try creating logical partition tracking after dropping the existing logical partition tracking.

ORA-32371: no logical partition tracking defined on table *string.string*

Cause: An attempt was made to drop logical partition tracking that was not defined.

Action: Do not drop logical partition tracking that is not defined.

ORA-32372: invalid options specified when creating logical partition tracking

Cause: An attempt was made to create logical partition tracking with invalid options specified.

Action: Do not create logical partition tracking with invalid options specified. Refer documentation for details.

ORA-32373: MAXVALUE must be specified for all columns

Cause: In the VALUES LESS THAN clause for the last logical partition of logical partition tracking, MAXVALUE must be specified for all columns.

Action: Ensure that VALUES LESS THAN clause for the last logical partition of logical partition tracking has MAXVALUE specified for all columns.

ORA-32374: non-existent partitioning column in CREATE LOGICAL PARTITION TRACKING statement

Cause: The partitioning column specified in the CREATE LOGICAL PARTITION TRACKING statement was not one of the columns of the specified table.

Action: Ensure that all columns in the partitioning column list are columns of the table being specified.

ORA-32375: data type or length of a logical partition tracking column on a table cannot be changed

Cause: The ALTER TABLE statement was issued in an attempt to modify the data type or the length of a logical partition tracking column on the table specified in the ALTER TABLE statement.

Action: Do not modify the data type or length of the logical partition tracking columns on a table.

ORA-32376: cannot CREATE LOGICAL PARTITION TRACKING on a partitioning column that already has logical or physical partitions defined

Cause: The partitioning column specified in the CREATE LOGICAL PARTITION TRACKING statement already had valid logical or physical partitions defined.

Action: Ensure that the logical partitioning column specified does not have any valid logical or physical partitions defined.

ORA-32377: cannot refresh on-commit materialized views in a distributed transaction

Cause: An attempt was made to refresh on-commit materialized views in a distributed transaction

Action: Do not run Data Manipulation Language(DML) on tables that have on-commit materialized views in a distributed transaction. If this error occurs, run on-demand fast refresh or complete refresh to the on-commit materialized views.

ORA-32378: cannot have a partitioning column that already has a logical partition tracking defined

Cause: The partitioning column specified in the ALTER TABLE statement already had logical partition tracking defined.

Action: Ensure that the partitioning column specified does not have any valid logical partition tracking defined.

ORA-32379: unsupported table type for logical partition tracking

Cause: An unsupported table type was passed to CREATE LOGICAL PARTITION TRACKING statement.

Action: Ensure table is not a global temporary or a private temporary table or an materialized view log. Refer documentation for details.

ORA-32400: cannot use object id columns from materialized view log on "string"."string"

Cause: The materialized view log either does not have object id columns logged, or the timestamp associated with the object id columns is more recent than the last refresh time.

Action: A complete refresh is required before the next fast refresh. Add object id columns to the materialized view log, if required.

ORA-32401: materialized view log on "string"."string" does not have new values

Cause: Materialized view log on the indicated table does not have new values information.

Action: Add new values to materialized view log using the ALTER MATERIALIZED VIEW LOG command.

ORA-32403: cannot use new values from mv log on "string"."string"

Cause: The materialized view log either does not have new values logged, or the timestamp associated with the new values columns is more recent than the last refresh time.

Action: Perform a complete refresh is required before the next fast refresh.

ORA-32404: snapshot log uses Change Data Capture which is not enabled for this database

Cause: A snapshot log that utilizes Change Data Capture is being imported to a database where Change Data Capture has not been enabled.

Action: First enable Change Data Capture on the database then retry the import.

ORA-32405: cannot alter tablespace for existing materialized view log

Cause: The tablespace specification for the existing materialized view log cannot be altered or changed.

Action: remove the tablespace clause from the statement.

ORA-32406: cannot alter partitioning for existing materialized view log

Cause: The partitioning specification for the existing materialized view log cannot be altered or changed.

Action: remove the partitioning clause from the statement.

ORA-32407: cannot exclude new values when materialized view log includes new values

Cause: The excluding new values specification for the existing materialized view log cannot be accepted when including new values is the current option.

Action: change excluding new values clause.

ORA-32408: materialized view log on "string"."string" already has new values

Cause: The materialized view log on the indicated table already has new values.

Action: No action required.

ORA-32409: materialized view log on "string"."string" already excludes new values

Cause: The materialized view log on the indicated table already excludes new values.

Action: No action required.

ORA-32411: materialized view definition query exceeds the maximum length

Cause: The materialized view definition query exceeds the 64K limit.

Action: Change the materialized view definition query so that it does not exceed the maximum length of 64K.

ORA-32412: encrypted column "string" not allowed in the materialized view log

Cause: The materialized view log being created/alterd is to capture an encrypted column of the base table.

Action: Do not capture the encrypted column.

ORA-32413: allow concurrent refresh of materialized view and truncate

Cause: This event is set to allow concurrent refresh of materialized view and truncate of base table; it prevents a deadlock situation. (bug 6710019)

Action: Set this event to allow concurrent refresh of materialized view and truncate of the base table.

ORA-32414: materialized view logs are not compatible with each other for fast refresh

Cause: An attempt was made to create a fast refreshable materialized view on tables which have commit SCN-based materialized view logs and tables which have timestamp-based materialized view logs.

Action: Use COMPLETE REFRESH or change underlying materialized view logs to make them compatible with each other for fast refresh.

ORA-32415: fast refreshable remote materialized view on a detail table with commit SCN-based materialized view log is not supported

Cause: The materialized view creation failed because fast refreshable remote materialized view on a detail table with commit SCN-based materialized view log was not supported.

Action: None

ORA-32416: one or more commit SCN-based materialized view logs are not in consistent state for fast refresh

Cause: Dictionary table "SYS"."SNAP_XCMT\$" is not in consistent state.

Action: No action required.

ORA-32417: must use DROP MATERIALIZED VIEW LOG to drop "string"."string"

Cause: An attempt was made to drop materialized view log using a command other than DROP MATERIALIZED VIEW LOG.

Action: No action required.

ORA-32418: COMMIT SCN keyword only appears in CREATE MATERIALIZED VIEW LOG statement

Cause: An attempt was made to alter an existing materialized view log to have commit SCN.

Action: No action required.

ORA-32419: on commit materialized view is not supported on detail tables with commit SCN-based materialized view logs

Cause: An attempt was made to create an on commit materialized view on detail tables with commit SCN-based materialized view logs.

Action: No action required.

ORA-32420: unsupported fast refreshable materialized view defined on detail tables which have commit SCN-based materialized view logs

Cause: An attempt was made to create an unsupported fast refreshable materialized view on detail tables with commit SCN based materialized view logs.

Action: No action required.

ORA-32421: commit SCN-based materialized view log is not supported on a table with LOB column(s)

Cause: An attempt was made to create a commit SCN-based materialized view log on a table which has LOB column(s).

Action: No action required.

ORA-32422: commit SCN-based materialized view log cannot be created on table "string"."string" when there exist direct load/PMOP log entries for the table

Cause: An attempt was made to create a commit SCN-based materialized view log on a table which had direct load/PMOP log entries in sys.sumdelta\$ and sys.sumpartlog\$.

Action: Refresh the table's dependent materialized views before creating commit SCN-based materialized view log on the table.

ORA-32423: commit SCN-based materialized view log cannot be dropped on table "string"."string" when there exist direct load/PMOP log entries for the table

Cause: An attempt was made to drop a commit SCN-based materialized view log on a table which had direct load/PMOP log entries in sys.sumdelta\$ and sys.sumpartlog\$.

Action: Refresh the table's dependent materialized views before dropping commit SCN-based materialized view log on the table.

ORA-32424: materialized view log on "string"."string" already has this purge option

Cause: Materialized view log on the indicated table already has the purge option specified.

Action: Specify a different purge option or omit the purge option.

ORA-32425: asynchronous and scheduled purge option is not allowed on commit SCN-based materialized view log

Cause: An attempt was made to create or alter a commit SCN-based materialized log with asynchronous and scheduled purge option.

Action: Specify a different purge option or omit the purge option.

ORA-32426: materialized view log on "string"."string" in DST upgrade

Cause: The materialized view log was created or altered on a table that had a Daylight Saving Time upgrade in progress.

Action: Wait until DST upgrade finishes on the master table.

ORA-32427: materialized view contains unsupported NLS transformation

Cause: An attempt was made to create or alter materialized view under NLS settings which transformed the materialized view's defining query in ways not by supported by Oracle.

Action: Contact Oracle support or workaround problem by removing NLS settings or modifying the materialized view's defining query.

ORA-32428: on-statement materialized join view error: string

Cause: An error related to on-statement materialized join view was received.

Action: Refer to the error message for more information.

ORA-32429: commit SCN-based materialized view log cannot be created on AQ table

Cause: An attempt was made to create a commit SCN-based materialized view log on an Oracle Database Advanced Queuing (AQ) table.

Action: Do not create a commit SCN-based materialized view log on AQ tables.

ORA-32430: materialized view log cannot be created on read-only database

Cause: An attempt was made to create a materialized view log on a read-only database.

Action: Do not create a materialized view log on a read-only database.

ORA-32431: materialized view cannot be created on tables having inconsistent sharing

Cause: An attempt was made to create a materialized view on tables having inconsistent sharing.

Action: Do not create a materialized view on tables having inconsistent sharing, or ensure that tables have consistent sharing.

ORA-32432: materialized view log on a duplicated table cannot be altered when shard DDL is enabled

Cause: An attempt was made to alter the materialized view log on a duplicated table when the shard DDL was enabled.

Action: Disable shard DDL to alter the materialized view log on a duplicated table.

ORA-32433: cannot rename a materialized view log

Cause: Renaming a materialized view log was not supported.

Action: Do not rename a materialized view log.

ORA-32434: cannot alter materialized view log with the PMOP

Cause: The materialized view log was not allowed to have destructive partition maintenance operations (PMOPS) such as DROP, TRUNCATE and EXCHANGE partition or subpartition.

Action: Do not DROP, TRUNCATE and EXCHANGE partition or subpartition of a materialized view log.

ORA-32435: failed to refresh materialized view due to mismatched column datatype

Cause: The materialized view refresh failed because one or more columns in the materialized view was a different data type compared to the corresponding column(s) in the master table.

Action: Check further error messages in the stack for more detail about the cause. If the master table column has been altered or redefined, drop the materialized view and re-create it.

ORA-32436: failed to qualify for join specific materialized view: string

Cause: An error related to join specific materialized join view was received.

Action: Refer to the error message for more information.

ORA-32460: maximum number of private temporary tables per session exceeded

Cause: An attempt was made to create a private temporary table that exceeded the maximum allowable private temporary tables per session.

Action: Drop some of the private temporary tables.

ORA-32461: unable to complete creation of in-memory private temporary table

Cause: An attempt was made to create an in-memory private temporary table that was no longer in the shared pool.

Action: Reduce the activities that use shared pool space, then retry creating the in-memory private temporary table.

ORA-32462: cannot use an object modified in current transaction

Cause: An object modified in the current transaction was found during the creation of in-memory private temporary table using CREATE TABLE AS SELECT (CTAS).

Action: Split the CTAS statement into CREATE TABLE followed by INSERT SELECT.

ORA-32463: cannot create an object with a name matching private temporary table prefix

Cause: An attempt was made to create an object with a name matching private temporary table prefix (either ORA\$PTT_ or value in parameter, private_temp_table_prefix).

Action: Choose a different name.

ORA-32464: private temporary table feature is disabled

Cause: An attempt was made to create a private temporary table but the feature was disabled.

Action: Enable the feature by setting the parameter, private_temp_table_prefix, to a unique value starting with ORA\$.

ORA-32465: value specified for the parameter is incorrect

Cause: An attempt was made to modify the PRIVATE_TEMP_TABLE_PREFIX parameter to a value that does not comply as specified in the documentation.

Action: The prefix value should be of the form ORA\$*3uniqueCharacters*.

ORA-32466: Cannot associate a private temporary table with a domain.

Cause: An attempt was made to associate a private temporary table with a domain, which was not allowed.

Action: Do not associate a private temporary table with a domain.

ORA-32480: SEARCH and CYCLE clauses can only be specified for recursive WITH clause elements

Cause: A SEARCH or a CYCLE clause was specified for a WITH clause element that was not recursive.

Action: Remove the SEARCH or CYCLE clause, or add recursion to the WITH clause element.

ORA-32481: cycle value for CYCLE clause must be different from the non-cycle value

Cause: A CYCLE clause was specified for a recursive WITH query but the cycle value was the same as the non-cycle or DEFAULT value.

Action: Change either the cycle or the non-cycle values so that they no longer match.

ORA-32482: sequence column for SEARCH clause must be different from the cycle mark column for CYCLE clause

Cause: A SEARCH clause and a CYCLE clause was specified for a recursive WITH query, but the sequence column of the SEARCH clause matched the cycle mark column of the CYCLE clause.

Action: Change either the sequence column or the cycle mark column so that they no longer match.

ORA-32483: duplicate name found in sort specification list for SEARCH clause of WITH clause

Cause: A SEARCH clause was specified for a recursive query with a sort specification list which contained duplicate names.

Action: Remove the duplicate names from the sort specification list of the SEARCH clause.

ORA-32484: duplicate name found in cycle column list for CYCLE clause of WITH clause

Cause: A CYCLE clause was specified for a recursive query with a cycle column list which contained duplicate names.

Action: Remove the duplicate names from the cycle column list of the CYCLE clause.

ORA-32485: element in cycle column list of CYCLE clause must appear in the column alias list of the WITH clause element

Cause: An element in the cycle column list of a CYCLE clause that was specified for a recursive WITH query did not appear in the column alias list of the WITH clause element.

Action: Change the cycle column list to use only names which are listed in the column alias list of the WITH clause element.

ORA-32486: unsupported operation in recursive branch of recursive WITH clause

Cause: The recursive component of the UNION ALL in a recursive WITH clause element used an operation that was currently not supported. The following should not be used in the recursive branch of the UNION ALL operation: GROUP BY, DISTINCT, MODEL, grouping sets, CONNECT BY, window functions, HAVING, aggregate functions.

Action: Rewrite the query without the unsupported operation.

ORA-32487: unsupported join in recursive WITH query

Cause: The recursive component of a recursive WITH clause element contained one of the following: - A LEFT OUTER join where the right side was the recursive query name. - A RIGHT OUTER join where the left side was the recursive query name. - A FULL OUTER join involving the recursive query name.

Action: Rewrite the query without the unsupported join operation.

ORA-32488: missing column alias list in WITH clause element *string*

Cause: The specified WITH clause element used the SEARCH clause or the CYCLE clause or both but did not have a column alias list specified for it.

Action: Add a column alias list for the WITH clause element. That is, add a list of aliases for the select list items following the WITH clause element name.

ORA-32489: element in sort specification list of SEARCH clause did not appear in the column alias list of the WITH clause element

Cause: An element in the sort specification list of a SEARCH clause that was specified for a recursive WITH query did not appear in the column alias list of the WITH clause element.

Action: Change the sort specification list to use only names which are listed in the column alias list of the WITH clause element.

ORA-32490: recursive query name referenced more than once in recursive branch of recursive WITH clause element

Cause: The recursive component of the UNION ALL in a recursive WITH clause element referenced the recursive query name more than once. Only one reference to the recursive query name is allowed in the recursive branch of a recursive WITH clause element.

Action: Rewrite the query using only one reference to the recursive query name in the recursive branch of the recursive WITH clause element.

ORA-32491: cycle mark value and non-cycle mark value for CYCLE clause must be either all character values or boolean values

Cause: A CYCLE clause was specified for a recursive WITH query but the cycle mark value and the non-cycle value or DEFAULT value were not all character values or boolean values.

Action: Change either the cycle mark or the non-cycle mark values so that they are the same data type.

ORA-32499: operation not supported with old CONNECT BY clause

Cause: The query used the old CONNECT BY clause on operations that are not supported.

Action: Disable the old CONNECT BY clause by disabling the `_old_connect_by_enabled` parameter.

ORA-32500: Dirname '*string*' cannot exceed '*string*' characters

Cause: Path name too long

Action: Use shorter pathname than maximum specified for dirname.

ORA-32501: Writing SGA to file failed

Cause: Underlying OSDs encountered an error

Action: Check additional information. `slrcerrno` contains `errno`.

ORA-32502: Cannot execute command. Flash Freeze is not in effect

Cause: This command can only be issued after a flash freeze

Action: Refer to instructions for flash freeze and Oracle diagnostics.

ORA-32503: Mapping SGA from file failed

Cause: Underlying OSDs encountered an error

Action: Check additional information. `slrcerrno` contains `errno`.

ORA-32504: expecting one of *string*, *string*, *string*, or *string* but found *string*

Cause: illegal value specified for create watchpoint mode

Action: specify one of the expected modes

ORA-32505: too many watchpoints

Cause: too many watchpoints created

Action: increase appropriate initialization parameters

ORA-32506: expecting one of *string*, *string*, or *string* but found *string*

Cause: invalid arguments provided

Action: provide one of the expected arguments

ORA-32507: expecting *string* but found *string*

Cause: invalid arguments to command

Action: provide one of the expected arguments

ORA-32508: no such watchpoint id

Cause: invalid watchpoint id

Action: use oradebug show to list valid watchpoint ids

ORA-32509: watchpoint was already deleted

Cause: trying to delete an already deleted watchpoint

Action: use oradebug show to list valid watchpoint ids

ORA-32510: cannot create watchpoint on unreadable memory

Cause: trying to create watchpoint on invalid address

Action: provide a different valid address

ORA-32511: cannot create watchpoint in memory needed by watchpointing code

Cause: overlap exists between requested memory range to watch and internal memory structures that watchpointing operations need

Action: provide a different address range

ORA-32512: type '*string*' is unknown

Cause: trying to dump an invalid type name

Action: specify a known type

ORA-32514: cannot dump multiple '*string*' types: structure size is unknown

Cause: trying to dump an invalid address

Action: provide a different valid address

ORA-32515: cannot issue ORADEBUG command '*string*' to process '*string*'; prior command execution time exceeds *string* ms

Cause: The process targeted to execute the ORADEBUG command was busy executing another ORADEBUG command for a time greater than the timeout value specified.

Action: Increase the timeout value.

ORA-32516: cannot wait for process '*string*' to finish executing ORADEBUG command '*string*'; wait time exceeds *string* ms

Cause: The execution of the ORADEBUG command took longer than the the timeout value specified.

Action: Increase the timeout value.

ORA-32517: cannot issue ORADEBUG command '*string*' to process '*string*' (prior command execution time exceeds *string* ms); total wait time exceeds *string* ms

Cause: The process targeted to execute the ORADEBUG command was busy executing another ORADEBUG command. But, because the total wait time for all targeted processes exceeded the maximum wait time, the ORADEBUG command was not issued to the target process.

Action: Increase the timeout value.

ORA-32518: cannot wait for process '*string*' to finish executing ORADEBUG command '*string*' (waited *string* ms); total wait time exceeds *string* ms

Cause: The total wait time for all targeted processes exceeded the maximum wait time, therefore the wait for the targeted process to finish executing the ORADEBUG command was aborted.

Action: Increase the timeout value.

ORA-32519: insufficient privileges to execute ORADEBUG command: *string*

Cause: Sufficient privileges were not granted.

Action: Perform the operation using a database session that has the required privileges. See the Oracle ORADEBUG documentation for more details.

ORA-32520: error authenticating credentials

Cause: An error was encountered while authenticating credentials.

Action: Check the other error messages for additional information or contact Oracle Support Services.

ORA-32521: error parsing ORADEBUG command: *string*

Cause: An invalid ORADEBUG command was specified.

Action: Specify the correct ORADEBUG command and arguments.

ORA-32522: restricted heap violation while executing ORADEBUG command: [*string*] [*string*] [*string*]

Cause: An invalid memory heap was used in an ORADEBUG command.

Action: Try executing the ORADEBUG command in the current process or contact Oracle Support Services.

ORA-32523: watchpoint cannot be created in dynamic processes

Cause: An attempt was made to create a watchpoint in a process involving threads.

Action: Check the process mode or try creating watchpoints only in the static non-threaded processes.

ORA-32550: Replacement occurred despite hint to the contrary

Cause: This should never be signalled; it's internal.

Action: Report to Oracle support.

ORA-32575: Explicit column default is not supported for modifying views

Cause: Default keyword was used to modify views.

Action: Use implicit default - omitting column-value pair.

ORA-32576: missing TYPE keyword

Cause: keyword TYPE is missing.

Action: Use TYPE keyword.

ORA-32577: username must be SYS or SYSTEM

Cause: A user name of SYS or SYSTEM was not specified when providing a password in the CREATE DATABASE statement.

Action: Only passwords for the SYS and SYSTEM users can be provided in the CREATE DATABASE statement. Re-issue the statement with passwords for users SYS or SYSTEM.

ORA-32578: password for SYS already specified

Cause: A password for the SYS user was specified twice in the CREATE DATABASE statement.

Action: Re-issue the CREATE DATABASE statement with only one password for the SYS user.

ORA-32579: password for SYSTEM already specified

Cause: A password for the SYSTEM user was specified twice in the CREATE DATABASE statement.

Action: Re-issue the CREATE DATABASE statement with only one password for the SYSTEM user.

ORA-32580: both SYS and SYSTEM passwords must be provided

Cause: Passwords for both the SYS and SYSTEM users were not provided in the CREATE DATABASE statement. If one of the passwords was provided, then both should be provided.

Action: Re-issue the CREATE DATABASE statement with a password for both the SYS and SYSTEM users.

ORA-32581: missing or invalid password

Cause: An incorrect password was provided for the SYS or SYSTEM user in the CREATE DATABASE statement.

Action: Re-issue the CREATE DATABASE statement with a valid password.

ORA-32582: table function with left correlation to a table cannot also be left outer-joined to the table

Cause: A table function T2 contains a reference to a table T1. T2 is also left outer-joined to T1. This is not allowed.

Action: Remove the reference to T1 from T2 or remove the left outer-join specification (+).

ORA-32583: Input CURSOR to table function must project PARTITION BY columns.

Cause: An attempt was made to pass a CURSOR argument to a pipelined table function whose projected columns did not include all the columns specified in the PARTITION BY, ORDER BY, or CLUSTER BY clauses of the pipelined table function.

Action: Ensure that the columns projected from the CURSOR argument of a pipelined table function includes the PARTITION BY, ORDER BY, and CLUSTER BY columns of the pipelined table function.

ORA-32584: missing LOG keyword

Cause: keyword LOG is missing.

Action: Use LOG keyword.

ORA-32585: duplicate specification of a supplemental log attribute

Cause: In a create/alter DDL a supplemental log attribute is specified more than once.

Action: Rewrite the Create/Alter DDL such that it has a single occurrence of any supplemental log attribute.

ORA-32586: multiple specification of a supplemental logging attribute

Cause: The primary key, unique index, foreign key or all column supplemental logging attribute can be specified at most once in a create/alter ddl.

Action: Rewrite the Create/Alter DDL with single occurrence of the offending supplemental logging attribute.

ORA-32587: Cannot drop nonexistent *string* supplemental logging

Cause: specified supplemental log attribute does not exist.

Action: None

ORA-32588: supplemental logging attribute *string* exists

Cause: specified supplemental logging attribute exists.

Action: retry the alter/create ddl after removing this supplemental logging attribute.

ORA-32589: unable to drop minimal supplemental logging

Cause: Minimal supplemental logging could not be dropped as one of primary key, foreign key, unique or all column supplemental logging is enabled at the database level.

Action: Use V\$DATABASE to determine the databasewide supplemental logging directives. Minimal supplemental logging could be dropped if and only if no other databasewide supplemental logging directives are enabled.

ORA-32590: log group specification not allowed here

Cause: Supplemental log specification is not allowed in the statement.

Action: Remove the supplemental log specification from the statement.

ORA-32591: connect string too long

Cause: The connect string specified for the database link was more than 2000 characters.

Action: Specify a connect string less than 2000 characters.

ORA-32592: all columns in log group can not be no log columns

Cause: A supplemental log group must have at least one column of scalar type that is not marked as no log.

Action: Redefine the supplemental log group with at least one column of scalar type that is not marked as no log.

ORA-32593: database supplemental logging attributes in flux

Cause: there is another process actively modifying the database wide supplemental logging attributes.

Action: Retry the DDL or the LogMiner dictionary build that raised this error.

ORA-32594: invalid object category for COMMENT command

Cause: The object category specified is not a valid object for which to use the COMMENT command.

Action: Retry the COMMENT command by specifying an accepted object category. (ie, Table, Operator, Indextype, etc.)

ORA-32595: DDL statement cannot be audited with BY SESSION specified

Cause: An attempt was made to audit a DDL statement with BY SESSION clause specified. DDL statements can be audited BY ACCESS only.

Action: Specify BY ACCESS instead of BY SESSION to audit the DDL statement.

ORA-32596: duplicate ALTER USER or CREATE USER option

Cause: An ALTER USER option was duplicated.

Action: Remove the duplicate option.

ORA-32597: database supplemental logging attributes inconsistent

Cause: failed to propagate supplemental logging attributes to all RAC instances. Most likely caused by an instance leaving the RAC while this DDL was in progress.

Action: Retry the DDL or the LogMiner dictionary build that raised this error.

ORA-32598: user names cannot be changed in ALTER DATABASE LINK command

Cause: An attempt was made to change the fixed user name of the database link.

Action: To change the fixed username of the database link, drop the existing database link and recreate it with the correct username.

ORA-32599: cannot create a view in SYS schema with V\$ or GV\$ name prefix

Cause: An attempt was made to create a view in SYS schema with V\$ or GV\$ name prefix, which is reserved for fixed views.

Action: Provide a different name for the view or use a different schema.

ORA-32600: RETENTION and PCTVERSION cannot be used together

Cause: cannot use both RETENTION and PCTVERSION together.

Action: Use either RETENTION or PCTVERSION.

ORA-32601: value for retention cannot be provided

Cause: cannot give a value for Retention Period.

Action: do not provide the value for parameter.

ORA-32602: FREEPOLLS and FREELIST GROUPS cannot be used together

Cause: cannot use both FREEPOLLS and FREELIST GROUPS together.

Action: Use either FREEPOLLS or FREELIST GROUPS.

ORA-32603: invalid FREEPOLLS LOB storage option value

Cause: The specified FREEPOLLS LOB storage option value must be an integer.

Action: Choose an appropriate integer value and retry the operation.

ORA-32604: invalid REBUILD option

Cause: Keyword FREEPOLLS expected after the REBUILD keyword.

Action: User must specify FREEPOLLS keyword.

ORA-32605: invalid REBUILD option

Cause: cannot rebuild freepools while creating table with lob column.

Action: User must not specify REBUILD... in this context.

ORA-32606: missing NAV keyword in MODEL clause

Cause: The NAV keyword was not specified where it was expected.

Action: Specify the NAV keyword or check the SQL statement.

ORA-32607: invalid ITERATE value in MODEL clause

Cause: The specified ITERATE value must be a 4 byte positive integer.

Action: Choose an appropriate value and retry the operation.

ORA-32608: missing INCREMENT or DECREMENT keyword in FOR loop

Cause: INCREMENT or DECREMENT keyword was not specified where it is expected.

Action: Specify the INCREMENT or DECREMENT keyword or check the SQL statement.

ORA-32609: missing REFERENCE keyword in MODEL clause

Cause: The REFERENCE keyword was not specified where it is expected.

Action: Specify the REFERENCE keyword or check the SQL statement.

ORA-32610: missing SINGLE REFERENCE or DIMENSION keyword in MODEL clause

Cause: SINGLE REFERENCE or DIMENSION keyword was not specified where it is expected.

Action: Specify the applicable keywords or check the SQL statement.

ORA-32611: incorrect use of MODEL CV operator

Cause: CV function was used outside a dimension expression, in UNTIL condition, or with non-dimensional arguments.

Action: Check the SQL statement and rewrite if necessary.

ORA-32612: invalid use of FOR loop

Cause: The MODEL FOR loop was used where it is not allowed. FOR loops are not allowed in complex dimensional predicates, on the right hand side of rules, or in the until condition.

Action: Check the SQL statement and rewrite if necessary.

ORA-32613: not a MODEL cell

Cause: The operator requires a MODEL cell as operand.

Action: Specify MODEL cell as operand, check SQL statement.

ORA-32614: illegal MODEL SELECT expression

Cause: An expression other than MODEL aliases, constants, or expressions of the two is specified in the MODEL SELECT clause.

Action: Reformulate the query, perhaps nesting inside another SELECT.

ORA-32615: incorrect use of MODEL IS ANY predicate

Cause: IS ANY predicate is used outside dimension expression or with non-dimensional or different dimensional arguments.

Action: Check the SQL statement and rewrite if necessary.

ORA-32616: missing DIMENSION BY keyword in MODEL clause

Cause: The DIMENSION keyword was not specified where it is expected.

Action: Specify the DIMENSION keyword or check the SQL statement.

ORA-32617: missing MEASURES keyword in MODEL clause

Cause: The MEASURES keyword was not specified where it is expected.

Action: Specify the MEASURES keyword or check the SQL statement.

ORA-32618: incorrect use of MODEL PREVIOUS function

Cause: The MODEL PREVIOUS function was used outside of MODEL "ITERATE UNTIL" clause, or was nested.

Action: Check the SQL statement and rewrite if necessary.

ORA-32619: incorrect use of MODEL ITERATION_NUMBER

Cause: ITERATION_NUMBER was used outside of an iterated MODEL.

Action: Check the SQL statement and rewrite if necessary.

ORA-32620: illegal subquery within MODEL rules

Cause: A subquery was used illegally within the MODEL rule.

Action: Check the SQL statement and rewrite if necessary.

ORA-32621: illegal aggregation in UNTIL iteration condition

Cause: An aggregate function was used in UNTIL condition.

Action: Check the SQL statement and rewrite if necessary.

ORA-32622: illegal multi-cell reference

Cause: Multi-cell reference was specified on a measure expression without an aggregate function.

Action: Use an aggregate function on the measure expression or qualify the cell reference.

ORA-32623: incorrect use of MODEL PRESENT* functions

Cause: A PRESENT* function (IS PRESENT, PRESENTV, PRESENTNNV) was used in a measure expression.

Action: Check the SQL statement and rewrite if necessary.

ORA-32624: illegal reordering of MODEL dimensions

Cause: The expressions to qualify dimensions were specified in an incorrect order within a cell reference.

Action: Reorder dimension expressions in the cell reference.

ORA-32625: illegal dimension in cell reference predicate

Cause: A non-positional dimension was referenced in the predicate.

Action: Check the SQL statement and rewrite if necessary.

ORA-32626: illegal bounds or increment in MODEL FOR loop

Cause: FOR loop allows only numeric and datetime without timezone type for bounds. Only constants of interval and numeric types are allowed as increment/decrement expressions.

Action: Check the SQL statement and rewrite if necessary.

ORA-32627: illegal pattern in MODEL FOR LIKE loop

Cause: The FOR LIKE pattern had zero or more than one wild characters.

Action: Simplify the pattern to have a single wildcard character.

ORA-32628: invalid nesting of MODEL cell reference

Cause: MODEL cell reference was nested too deeply.

Action: Avoid deep nesting of cell references and rewrite if necessary.

ORA-32629: measure used for referencing cannot be updated

Cause: A measure used in nested referencing is updated by a MODEL rule in the automatic order MODEL.

Action: Modify the SQL statement or use sequential order MODEL.

ORA-32630: multiple assignment in automatic order MODEL

Cause: A MODEL cell was updated on the same measure in multiple MODEL rules. Multiple assignment is not allowed in automatic order MODELS as it causes in ambiguity and nondeterminism.

Action: Use sequential order MODEL or rewrite the rule to avoid this.

ORA-32631: illegal use of objects in MODEL

Cause: An object column was used as a MODEL column. Object types are not allowed as partition by, dimension by or measure expressions.

Action: Check the SQL statement and rewrite if necessary.

ORA-32632: incorrect subquery in MODEL FOR cell index

Cause: An illegal subquery was specified in MODEL FOR cell index. A subquery used in a MODEL FOR cell index can not have subqueries, correlation, binds and references to WITH tables.

Action: Check the SQL statement and rewrite if necessary.

ORA-32633: MODEL subquery FOR cell index returns too many rows

Cause: Subquery in MODEL FOR cell index returned more than the allowed maximum.

Action: Split the rule into multiple ones.

ORA-32634: automatic order MODEL evaluation does not converge

Cause: Evaluation using automatic rule ordering did not reach a convergence point.

Action: Modify the rules or use sequential order instead.

ORA-32635: not a single cell reference predicate

Cause: A predicate that is not a single cell reference predicate was specified where a single cell reference predicate was expected. A single cell reference predicate is either a constant expression or a predicate of the form <dimension_key = constant_expr>

Action: Make sure that the predicate is a proper single cell reference. In some cases, you might have to put explicit type conversion operators (or casts) on the constant expression.

ORA-32636: Too many rules in MODEL

Cause: The number of rules (possibly after rule unfolding) exceeded the maximum number of rules allowed.

Action: Reduce the number of rules.

ORA-32637: Self cyclic rule in sequential order MODEL

Cause: A self-cyclic rule was detected in the sequential order MODEL. Sequential order MODELS cannot have self cyclic rules to guarantee that the results do not depend on the order of evaluation of the cells that are updated or inserted.

Action: Use ordered rule evaluation for this rule.

ORA-32638: Non unique addressing in MODEL dimensions

Cause: The address space defined for the MODEL (partition by and dimension by expressions) do not uniquely identify each cell.

Action: Rewrite the MODEL clause. Using UNIQUE SINGLE REFERENCE option might help.

ORA-32639: Aggregate functions on reference MODELS are not allowed

Cause: An aggregate function was specified on the cells of a reference MODEL.

Action: Check the SQL statement and rewrite if necessary.

ORA-32640: FOR LIKE loops are not allowed for multi-byte character types

Cause: FOR LIKE loops was specified for a multi-byte character type.

Action: Check the SQL statement and rewrite if necessary.

ORA-32641: invalid expression in MODEL rule ORDER BY clause

Cause: An invalid expression was specified in the MODEL rule ORDER BY clause where only expressions of dimension and measure columns and reference MODEL cell references are allowed

Action: Modify the order by clause in the MODEL rule.

ORA-32642: non-unique cell values from the ORDER BY clause

Cause: The MODEL rule ORDER BY clause did not generate unique values for all cells that satisfy the predicates in the left side of the rule.

Action: Modify the rule ORDER BY clause in the MODEL rule.

ORA-32643: invalid use of window function in MODEL rule

Cause: The window functions can not be used in SQL Model rules that have FOR-loops on the left side or aggregates on the right side.

Action: Modify the MODEL rule.

ORA-32644: this function is not allowed outside of MODEL clause

Cause: A function allowed only within the MODEL clause is used outside of MODEL clause.

Action: Rewrite the SQL statement.

ORA-32645: GROUPS based window aggregation group not allowed in MODEL rule

Cause: An attempt was made to specify SQL Model rules with window functions defined with the GROUP-based window aggregation group.

Action: Modify the MODEL rule.

ORA-32646: window aggregation group exclusion not allowed in MODEL rule

Cause: The window functions specified with the EXCLUDE clause for the window aggregation group could not be used in SQL Model rules.

Action: Modify the MODEL rule.

ORA-32647: *string*: invalid measure expression in left hand side of MODEL rule

Cause: The left hand side of a MODEL rule was expected to be a MEASURE expression.

Action: Modify the MODEL rule.

ORA-32648: *string*: invalid argument for MODEL CV operator

Cause: The argument for the CV operator of the MODEL clause was expected to be either a dimension by or a partition by expression.

Action: Modify the argument of the MODEL CV operator to be a dimension by of a partition by expression.

ORA-32649: *string*: invalid argument for MODEL IS ANY predicate

Cause: The argument for the IS ANY predicate of the MODEL clause was expected to be a dimension by expression.

Action: Modify the argument of the MODEL IS ANY predicate to be a dimension by expression.

ORA-32650: *string*: invalid measure expression

Cause: An expression that was not a measure expression was provided when a measure expression was expected.

Action: Modify the query to use a measure expression.

ORA-32690: Hash Table Infrastructure ran out of memory

Cause: Not enough memory.

Action: Increase memory.

ORA-32695: HTI: Not enough memory

Cause: Memory is not enough.

Action: Increase memory.

ORA-32696: HTI: No free slot

Cause: There is not enough memory.

Action: Increase memory.

ORA-32700: error occurred in DIAG Group Service

Cause: An unexpected error occurred while performing a DIAG Group Service operation.

Action: Verify that the DIAG process is still active. Also, check the Oracle DIAG trace files for errors.

ORA-32701: Possible hangs up to hang ID=*string* detected

Cause: Hang Manager detected one or more hangs. These could be valid hangs that require action or the system could be overloaded causing very slow progress which can be interpreted as hangs. If hang resolution is enabled, Hang Manager may attempt to resolve the hang by terminating the ultimate blocker.

Action: Check the incident logs associated with this message for diagnostic information.

ORA-32702: Rolling migration is going on

Cause: DIAG detected rolling migration in IPC.

Action: No action needed. DIAG is shutting down for rolling migration. This error number is solely used for internal purposes.

ORA-32703: deadlock detected: *string*

Cause: Oracle sessions waiting for resources were deadlocked.

Action: Reissue any commands that failed and contact Oracle Support Services with the incident information.

ORA-32704: Oracle RAC deadlock detected: *string*

Cause: Oracle sessions or processes using Global Enqueue Service were deadlocked waiting for resources.

Action: Reissue any commands that failed and contact Oracle Support Services with the incident information.

ORA-32706: invalid parameter name or value for Oracle Hang Manager

Cause: An invalid parameter name or value was passed to the DBMS_HANG_MANAGER package when setting an Oracle Hang Manager parameter.

Action: Choose a documented parameter name and value.

ORA-32707: internal error of Oracle Hang Manager parameter management

Cause: An internal error was encountered while processing the Oracle Hang Manager parameter management request.

Action: Check the alert log file for error details.

ORA-32708: DBMS_HANG_MANAGER package not supported for this instance type

Cause: Oracle Hang Manager parameter management was not supported for this instance type.

Action: No action required.

ORA-32717: Hang Manager has reset session infrastructure

Cause: Dynamic sessions forced a session increment.

Action: No action required.

ORA-32730: Command cannot be executed on remote instance

Cause: DIAG is not registered with DIAG Group Service

Action: Issue the command without the cluster database syntax

ORA-32731: Another Parallel Oradebug session is in progress

Cause: Another session for Parallel Oradebug is in progress with the database

Action: Issue the command later when the current session finishes

ORA-32732: Parallel Oradebug session is aborted

Cause: Group reconfiguration is occurring among DIAGs

Action: Issue the command later when group reconfiguration completes

ORA-32733: Error occurred when executing Parallel Oradebug

Cause: Error is encountered during executing command at local node

Action: Check alert log and DIAG trace file for error detail

ORA-32734: Error occurred when sending Oradebug command to remote DIAGs

Cause: IPC communication problem encountered

Action: Check IPC communication between DIAGs and issue the command again

ORA-32735: DIAG process is not running in the instance

Cause: DIAG process is not alive

Action: Check error in DIAG trace file and issue the command again when DIAG is restarted

ORA-32736: Hang analysis aborted due to wrong message type

Cause: DIAG received wrong message.

Action: Check DIAG trace files for errors.

ORA-32737: Hang analysis aborted due to failed memory allocation

Cause: DIAG couldn't allocate buffer for remote copy.

Action: Check DIAG trace files for errors.

ORA-32738: Hang analysis aborted due to failed memory copy

Cause: DIAG couldn't copy buffer to remote node.

Action: Check DIAG trace files for errors.

ORA-32739: Hang analysis aborted due to failed heap re-grow

Cause: DIAG couldn't re-grow the heap for wait-for-graphs.

Action: Check DIAG trace files for errors.

ORA-32740: The requested operation cannot be proceeded

Cause: Operation was aborted because instance termination was in progress.

Action: Retry later after restarting the instance.

ORA-32741: Hang analysis already going on

Cause: Hang analysis was already in process globally or for the instance.

Action: Wait for the current operation to complete and re-run the command.

ORA-32742: Hang analysis initialize failed

Cause: Hang analyzer was not able to allocate memory to initialize.

Action: Check the trace files.

ORA-32743: command cannot be executed on remote instance

Cause: The database was not mounted in SHARED mode.

Action: Mount the database in SHARED mode.

ORA-32766: instr with negative offset: use varchar semantics on LOBs

Cause: The current varchar behavior is different. e.g. `instr('abcd', 'cd', -2, 1)` returns 3, whereas `instr(to_clob('abcd'), 'cd', -2, 1)` returns 0, (i.e. no match), because the reverse search starts from offset -2, which points to 'c' and moving backward, i.e. 'd' is ignored. This is symmetric to `instr('dcba', 'dc', 2, 1)`, which returns 0.

Action: ORACLE uses the same varchar semantics on LOBs (`instr`). Using the same example, `instr(to_clob('abcd'), 'cd', -2, 1)` will return 3 as in the varchar case.

ORA-32767: No server connection for this operation

Cause: The client side `sql` or `plsql` function operation requires a connection to the server, but currently no client/server connection existed.

Action: Establish a client/server connection.

ORA-32771: cannot add file to bigfile tablespace

Cause: An attempt was made to add the second file to a bigfile tablespace.

Action: Do not use this command with bigfile tablespace.

ORA-32772: BIGFILE is invalid option for this type of tablespace

Cause: An attempt was made to create a bigfile tablespace that is dictionary managed or locally managed with manual segment-space management.

Action: Either change the tablespace type to locally managed with automatic segment-space management, or create a SMALLFILE tablespace instead.

ORA-32773: operation not supported for smallfile tablespace *string*

Cause: An attempt was made to perform an operation which is supported only for bigfile tablespaces, e.g. resize tablespace.

Action: Use the appropriate clause of the ALTER DATABASE DATAFILE command instead.

ORA-32774: more than one file was specified for bigfile tablespace *string*

Cause: More than one datafile or tempfile was specified in CREATE TABLESPACE command for a bigfile tablespace.

Action: Change command to contain only one file or create a smallfile tablespace instead.

ORA-32775: cannot change size attributes of read only tablespace *string*

Cause: An attempt was made to change size attributes of a tablespace that is read only.

Action: Change the tablespace to read/write and retry the operation.

ORA-32776: Local temporary tablespaces are not allowed in a tablespace group.

Cause: An attempt was made to create or alter a tablespace group to contain a tablespace that is a local temporary tablespace.

Action: Use a tablespace that is not a local temporary tablespace or do not include this tablespace in a group.

ORA-32777: DDL operations are disabled on local temporary tablespaces FOR RIM.

Cause: A DDL operation on a local temporary tablespace FOR RIM was attempted in a system without any read-only running instances.

Action: Add at least one read-only instance to the cluster.

ORA-32778: DDL operations are disabled on local temporary tablespaces FOR LEAF.

Cause: A DDL operation on a local temporary tablespace FOR LEAF was attempted in a system without any read-only running instances.

Action: Add at least one read-only instance to the cluster.

ORA-32779: Operation is not allowed for the local temporary tablespace created FOR RIM or FOR LEAF.

Cause: Local temporary tablespace that was created using FOR RIM or FOR LEAF could not be used as the default local temporary tablespace.

Action: Use the local temporary tablespace that is created FOR ALL.

ORA-32782: duplicate window name specified

Cause: A duplicate window name was specified in the WINDOW clause.

Action: Specify different window names for each window in the WINDOW clause.

ORA-32783: Window specification referencing a window name cannot have PARTITION BY clause.

Cause: An attempt was made to define a PARTITION BY clause in the window specification that referenced a window name.

Action: When referencing a window name in the window specification, define the PARTITION BY clause in the definition of the window name.

ORA-32784: The window name referenced did not exist.

Cause: The window specification referenced a window name that was not defined.

Action: Reference a window name that is already defined in the WINDOW clause.

ORA-32785: cannot define a new window specification in which another defined window specification with WINDOWING clause is referenced

Cause: An attempt was made to define a new window specification in which another defined window specification with the WINDOWING clause was referenced.

Action: When referencing a defined window specification, directly reference the name after the OVER keyword instead of adding parenthesis which would be interpreted as defining a new window specification.

ORA-32786: referenced window name with ORDER BY clause specified already

Cause: An attempt was made to specify an ORDER BY clause with a window specification that already referenced a window name that was defined with the ORDER BY clause.

Action: Do not specify the ORDER BY clause with a window specification that already references a window name that was defined with the ORDER BY clause.

ORA-32787: invalid window specification

Cause: A syntax error was found during parsing of the window specification.

Action: Correct the syntax and try again.

ORA-32788: Operation is not allowed due to invalid or mismatched tablespace type.

Cause: Local temporary tablespace could not be used as the default temporary tablespace; Temporary tablespace could not be used as the default local temporary tablespace.

Action: Change the tablespace type and use the valid tablespace.

ORA-32790: Element '*string*' cannot share the default table '*string*' with element '*string*'

Cause: An element in the restriction shared a default table with the corresponding element in its supertype.

Action: Change the default table's name for the element in restriction.

ORA-32791: prebuilt table managed column cannot have a default on null

Cause: An attempt was made to create a materialized view on a prebuilt table that has a managed column with a default on null expression.

Action: Either remove the default on null property, or do not include the column in the materialized view definition.

ORA-32792: prebuilt table managed column cannot be an identity column

Cause: An attempt was made to create a materialized view on a prebuilt table that has a managed column that is an identity column.

Action: Either remove the identity property, or do not include the column in the materialized view definition.

ORA-32793: cannot alter a system-generated sequence

Cause: An attempt was made to alter a system-generated sequence.

Action: A system-generated sequence, such as one created for an identity column, cannot be altered.

ORA-32794: cannot drop a system-generated sequence

Cause: An attempt was made to drop a system-generated sequence.

Action: A system-generated sequence, such as one created for an identity column, cannot be dropped.

ORA-32795: cannot insert into a generated always identity column

Cause: An attempt was made to insert a value into an identity column created with GENERATED ALWAYS keywords.

Action: A generated always identity column cannot be directly inserted. Instead, the associated sequence generator must provide the value.

ORA-32796: cannot update a generated always identity column

Cause: An attempt was made to update an identity column created with GENERATED ALWAYS keywords.

Action: A generated always identity column cannot be directly updated.

ORA-32797: identity column sequence mismatch in ALTER TABLE EXCHANGE PARTITION

Cause: The two tables specified in the EXCHANGE have identity columns with sequences that are neither both increasing nor decreasing.

Action: Ensure that the identity columns have sequences with INCREMENT BY having the same sign.

ORA-32798: cannot use ANSI RIGHT or FULL outer join with a left correlation

Cause: An attempt was made to use a lateral view with a left correlation to the first operand of an ANSI RIGHT or FULL outer join.

Action: Rewrite the query without the left correlation.

ORA-32799: cannot rename a system-generated sequence

Cause: An attempt was made to rename a system-generated sequence.

Action: A system-generated sequence, such as one created for an identity column, cannot be renamed.

ORA-32800 to ORA-32857

ORA-32800: internal error *string*

Cause: An unexpected error occurred.

Action: Contact Oracle Support Services.

ORA-32801: invalid value *string* for *string*

Cause: An invalid value was specified for a parameter.

Action: Specify a valid value for the parameter.

ORA-32802: value for *string* must be *string*

Cause: An invalid value was specified for a parameter.

Action: Specify the value as indicated by the message.

ORA-32803: value for *string* cannot be altered

Cause: An attempt was made to alter a value that cannot be altered.

Action: Retry the operation without altering the indicated value.

ORA-32804: invalid value *string*, *string* should have form *string*

Cause: A value specified for a parameter has the incorrect form.

Action: Specify a string of the correct form.

ORA-32805: identifier for *string* too long, maximum length is *string* characters

Cause: An identifier string exceeded the maximum allowed length.

Action: Specify a string whose length is less than the maximum allowed length.

ORA-32806: value for *string* is too long, maximum length is *string*

Cause: A value exceeded its maximum allowed length.

Action: Specify a value whose length is less than the maximum allowed length.

ORA-32807: message system link *string* already exists

Cause: A message system link of the specified name already exists.

Action: Specify a different name.

ORA-32808: message system link *string* does not exist

Cause: A message system link of the specified name does not exist.

Action: Specify a message system link name that already exists.

ORA-32809: foreign queue *string* is already registered

Cause: The foreign queue has already been registered for this message system link (NAME@MSGLINK).

Action: Specify a different name that is not being used for this message system link.

ORA-32810: foreign queue *string* is not registered

Cause: The foreign queue (NAME@MSGLINK) has not been registered for this message system link.

Action: Specify the name of a registered foreign queue.

ORA-32811: subscriber *string* already exists

Cause: The specified subscriber identifier already exists.

Action: Specify a different identifier.

ORA-32812: subscriber *string* does not exist

Cause: The specified subscriber identifier does not exist.

Action: Specify an existing subscriber identifier.

ORA-32813: propagation schedule *string* already exists

Cause: The specified propagation schedule identifier already exists.

Action: Specify a different identifier.

ORA-32814: propagation schedule *string* does not exist

Cause: The specified propagation schedule identifier does not exist.

Action: Specify a schedule identifier that already exists.

ORA-32815: message system link *string* is referenced by a foreign queue

Cause: An attempt was made to remove a message system link currently referenced by one or more registered foreign queues.

Action: Unregister all foreign queues using this message system link and retry the operation.

ORA-32816: foreign queue *string* is referenced by a subscriber or schedule

Cause: An attempt was made to unregister a foreign queue currently referenced by one or more subscribers or propagation schedules.

Action: Remove all subscribers and propagation schedules using this foreign queue and retry the operation.

ORA-32817: message system link *string* is not configured with a log queue for *string*

Cause: An attempt was made to add a propagation subscriber but the message system link was not configured with a log queue for the indicated propagation type.

Action: Alter the message system link to configure the link with a log queue for this propagation type.

ORA-32818: AQ queue *string* does not exist

Cause: An operation was attempted where the specified AQ queue does not exist.

Action: Specify the name of an existing AQ queue.

ORA-32819: AQ queue *string* must be a normal queue

Cause: An operation was attempted where the specified AQ queue exists but is not a normal queue.

Action: Specify the name of an AQ queue which was created as a normal queue (NORMAL_QUEUE).

ORA-32820: subscriber queue and exception queue must use same message system link

Cause: An operation was attempted for INBOUND propagation where the specified subscriber queue and exception queue reference different message system links.

Action: Specify an exception queue that is a registered foreign queue of the same message system link as the subscriber queue.

ORA-32821: subscriber queue and exception queue must have same payload type

Cause: An operation was attempted for OUTBOUND propagation where the AQ queues used for the subscriber queue and exception queue have different payload types.

Action: Specify an exception queue that has the same payload type as the subscriber queue.

ORA-32822: subscriber *string* is marked for removal

Cause: An administration operation was attempted for a subscriber which is marked for removal. If attempting to remove a subscriber, the Messaging Gateway agent is not running or is running but unable to remove the subscriber at this time.

Action: Do not issue propagation administration commands for a subscriber for which removal is pending. Wait for the subscriber to be removed by the agent or issue REMOVE_SUBSCRIBER with the FORCE option to force the subscriber to be removed.

ORA-32823: subscriber exists for queue *string* and destination *string*

Cause: An attempt was made to create a propagation subscriber when one already exists for the specified queue and destination pair.

Action: Specify a different queue and destination pair, or remove the subscriber using that pair and retry the operation.

ORA-32824: schedule exists for source *string* and destination *string*

Cause: An attempt was made to create a propagation schedule when one already exists for the specified source and destination pair.

Action: Specify a different source and destination pair, or remove the schedule using that pair and retry the operation.

ORA-32825: Messaging Gateway agent has not been started

Cause: An attempt was made to shut down the Messaging Gateway agent when it is not started.

Action: No action required.

ORA-32826: Messaging Gateway agent has already been started

Cause: An attempt was made to start the Messaging Gateway agent when it is already started.

Action: No action required.

ORA-32827: Messaging Gateway agent must be shut down

Cause: An operation was attempted that requires the Messaging Gateway agent to be shut down.

Action: Issue SHUTDOWN, wait for MGW_GATEWAY view to show a NOT_STARTED status, and retry the operation. CLEANUP_GATEWAY may need to be issued to reset the gateway state if the agent fails to shut down after a reasonable time period.

ORA-32828: Messaging Gateway agent must be running

Cause: An operation was attempted that requires the Messaging Gateway agent to be started and responsive.

Action: Issue STARTUP, wait for MGW_GATEWAY view to show a RUNNING status, and retry the operation.

ORA-32829: Messaging Gateway agent cannot be shut down while it is starting

Cause: An attempt was made to shut down the Messaging Gateway agent when it is in the process of starting and initializing.

Action: Wait for MGW_GATEWAY view to show a RUNNING status and retry the operation. CLEANUP_GATEWAY may need to be issued to reset the gateway state if the agent fails to start after a reasonable time period.

ORA-32830: result code *string* returned by Messaging Gateway agent

Cause: The Messaging Gateway agent terminated abnormally due to an unexpected error.

Action: Review the Messaging Gateway log file for further information regarding the problem. Resolve the problem and start the Messaging Gateway agent. Contact Oracle Support Services if the problem cannot be resolved.

ORA-32831: timed out trying to acquire administration lock

Cause: A timeout occurred when attempting an administration operation. Either an administration operation was attempted while the Messaging Gateway agent was starting and initializing, or two administration operations were attempted at the same time.

Action: Retry the operation. If the Messaging Gateway agent is starting, wait for MGW_GATEWAY view to show a RUNNING status and retry the operation.

ORA-32832: failure *string* trying to acquire administration lock

Cause: An unexpected error occurred trying to acquire administration lock.

Action: Retry the operation. Contact Oracle Support Services if the error persists.

ORA-32833: failure *string* trying to release administration lock

Cause: An unexpected error occurred trying to release administration lock.

Action: Contact Oracle Support Services if the error persists.

ORA-32834: Messaging Gateway agent user has not been set

Cause: A Messaging Gateway agent user has not been configured.

Action: Create a database user having role MGW_AGENT_ROLE and issue DB_CONNECT_INFO to configure an agent user.

ORA-32835: database user *string* does not exist

Cause: The specified database user does not currently exist.

Action: Create the user and grant all necessary privileges and roles.

ORA-32836: database user *string* must be granted role *string*

Cause: The specified database user does not have a required role.

Action: Grant the user the indicated role.

ORA-32837: invalid configuration state *string*

Cause: The specified configuration state is invalid.

Action: Remove and re-create the configured entities. Contact Oracle Support Services if the problem cannot be identified or resolved.

ORA-32838: exceeded maximum number of properties

Cause: An attempt was made to alter a property list where the number of properties in the resulting list exceeds the maximum allowed.

Action: Order the elements of the alter list differently so the number of elements in the resulting list is less than the maximum.

ORA-32839: property *string* is reserved, names with MGWPROP\$_ prefix are not valid

Cause: An attempt was made to specify a reserved name for a property name.

Action: Use a non-reserved name.

ORA-32840: property name cannot be NULL

Cause: An attempt was made to use NULL for a property name.

Action: Specify a non-NULL name.

ORA-32841: invalid value for property *string*

Cause: An attempt was made to specify an invalid value for a property.

Action: Specify a valid property value.

ORA-32842: value for property *string* cannot be altered

Cause: An attempt was made to alter a property that cannot be altered.

Action: Retry the operation without altering the indicated property.

ORA-32843: value for *string* is outside the valid range of *string* to *string*

Cause: A value was specified that is not in the valid range.

Action: Specify a value within the indicated range.

ORA-32844: exceeded maximum number of *string* values

Cause: An attempt was made to add a value of the specified type but the maximum number of such values has been reached.

Action: No action required.

ORA-32845: Messaging Gateway agent is already running

Cause: An attempt was made to start the Messaging Gateway agent when an agent instance is already running.

Action: Shut down the Messaging Gateway agent currently running, verify the agent process has been terminated, and start the Messaging Gateway agent.

ORA-32846: Messaging Gateway agent cannot be started; status is *string*

Cause: An attempt to start the Messaging Gateway agent failed due to the indicated agent status. A BROKEN status indicates a problem that requires user intervention before the agent can be started.

Action: Review the MGW_GATEWAY view and the Messaging Gateway log file for further information. Resolve the problem and start the Messaging Gateway agent. Contact Oracle Support Services if the problem cannot be resolved.

ORA-32847: operation is not supported on this platform

Cause: An attempt was made to perform an operation that is not supported on this platform.

Action: Switch to a platform on which the operation is supported.

ORA-32848: foreign queue DOMAIN required for JMS unified connections

Cause: A DOMAIN was not specified when registering a foreign queue for a messaging system link that is configured to use the JMS unified messaging model.

Action: Specify a non-NULL value for the DOMAIN parameter.

ORA-32849: *string* cannot be set unless *string* is set

Cause: An attempt was made to specify a value for a parameter that cannot be set unless an associated parameter is also set.

Action: Specify a valid value for both parameters, or, do not specify a value for either parameter.

ORA-32850: agent *string* does not exist

Cause: The specified Messaging Gateway agent name did not exist.

Action: Specify an existing agent name.

ORA-32851: agent *string* already exists

Cause: The specified Messaging Gateway agent name already existed.

Action: Specify a different agent name.

ORA-32852: agent *string* is referenced by a message system link

Cause: An attempt was made to remove a Messaging Gateway agent currently referenced by one or more message system links.

Action: Remove all message system links associated with this agent and retry the operation.

ORA-32853: propagation job *string* does not exist

Cause: The specified propagation job identifier did not exist.

Action: Specify an existing identifier.

ORA-32854: propagation job *string* already exists

Cause: The specified propagation job identifier already existed.

Action: Specify a different identifier.

ORA-32855: propagation job *string* is marked for removal

Cause: An administration operation was attempted for a propagation job which is marked for removal. If attempting to remove a job, the Messaging Gateway agent is not running or is running but unable to remove the job at this time.

Action: Do not issue propagation administration commands for a job for which removal is pending. Wait for the job to be removed by the agent, or, issue REMOVE_JOB with the FORCE option to force the job to be removed.

ORA-32856: operation not supported for propagation job

Cause: An attempt was made to perform an operation that was not supported for a propagation job.

Action: Perform the operation using a propagation job procedure.

ORA-32857: propagation job exists for source *string* and destination *string*

Cause: An attempt was made to create a propagation job, subscriber, or schedule when a propagation job already existed for the specified source and destination pair.

Action: Specify a different source and destination pair, or remove the propagation job using that pair and retry the operation.

ORA-33000 to ORA-37999

ORA-33000: (AGOPEN00) AGGMAP *workspace object* cannot be accessed because it was compiled by a more recent version of *string*.

Cause: The AGGMAP was already compiled by a more recent version of the product than was being used to execute this command.

Action: Recompile the AGGMAP in the current version.

ORA-33002: (XSAGDNGL00) In AGGMAP *workspace object*, the FLOOR argument of *number* must be less than the CEILING argument of *number*.

Cause: The user specified a floor argument greater than the ceiling argument.

Action: Adjust the floor and ceiling arguments so that the floor is less than the ceiling.
OBSOLETE, please remove this

ORA-33003: (XSAGDIMDROP) *workspace object*, to be transformed during data load, must be a base dimension and not otherwise referenced in the AGGMAP.

Cause: The user tried to specify a dimension in a dataflow-related clause in an aggmap which is already in another RELATION statement, DIMENSION statement, or possibly dimensioning the AGGMAP, or they specified a composite or conjoint dimension, or an object which is not a dimension

Action: Remove the conflicting reference or specify a valid object

ORA-33004: (XSAGDNGL01) *workspace object* is not a relationship array.

Cause: A RELATION clause in the AGGMAP named a workspace object that is not a relation.

Action: Name a valid self-relation in the RELATION statement.

ORA-33005: (XSAGDIMBREAK) invalid breakout for dimension *workspace object*

Cause: An invalid dimension or relation in a BREAKOUT DIMENSION statement in an AGGMAP command was specified. Either the object was not a valid relation, was not over the specified dimension, or was multidimensional.

Action: Specify a valid relation.

ORA-33006: (XSAGDNGL02) The relation *workspace object* is not related to itself.

Cause: A relation was named in a RELATION clause of the AGGMAP that is not a self-relation.

Action: Name a valid self-relation in the RELATION statement.

ORA-33007: (XSAGPVAR) *workspace object* may only be used as one of: an OPERATOR, ARGS, or FROMVAR variable.

ORA-33008: (XSAGDNGL03) The relation *workspace object* is not a relation over a base dimension of AGGMAP *workspace object*.

Cause: A relation was named in a RELATION clause of the AGGMAP that is not a relation for a base dimension of the AGGMAP.

Action: Name a valid self-relation in the RELATION statement, that is, one that has a dimension that dimensions the AGGMAP.

ORA-33009: (XSAGDNGLPREC) In AGGMAP *workspace object*, PRECOMPUTE can only be specified either for the entire AGGMAP or for individual RELATION statements.

Cause: PRECOMPUTE was either specified both as a line in the AGGMAP and on at least one of the RELATION lines, or it was specified more than once as a line of the AGGMAP.

Action: Remove either the PRECOMPUTE line, or the PRECOMPUTE specification for all of the RELATION lines.

ORA-33010: (XSAGDNGL04) Relation *workspace object* is duplicated in the AGGMAP *workspace object*.

Cause: Two RELATION statements in the AGGMAP reference the same relation object.

Action: Remove the duplicate RELATION statement.

ORA-33012: (XSAGDNGL05) AGGMAP *workspace object* contains invalid syntax.

Cause: A line in the AGGMAP contains invalid syntax.

Action: Change the line to have valid syntax.

ORA-33014: (XSAGDNGL06) In AGGMAP *workspace object*, variable operator *workspace object* cannot be dimensioned by rollup dimension *workspace object*.

Cause: Operator variables cannot have the rollup dimension as one of their base dimensions.

Action: Modify the definition of the operator variable so that the current rollup dimension is not one of its bases.

ORA-33016: (XSAGDNGL07) In AGGMAP *workspace object*, *workspace object* is not a valid operator or variable name.

Cause: An invalid argument was supplied to the OPERATOR clause in the relation statement.

Action: Fix the OPERATOR clause so that it specifies either a valid variable name or a valid operator.

ORA-33018: (XSAGDNGL08) In AGGMAP *workspace object*, the data type of *workspace object* must be TEXT, not *string*.

Cause: An operator variable was supplied whose data type is not TEXT.

Action: Change the operator clause to reference a TEXT variable.

ORA-33022: (XSAGDNGL10) The measure dimension *workspace object* must be a TEXT or ID base dimension that does not dimension AGGMAP *workspace object*, but is in the same analytic workspace.

Cause: A MEASUREDIM was supplied in the AGGMAP that was not acceptable.

Action: Modify the MEASUREDIM clause to specify a valid dimension.

ORA-33024: (XSAGDNGL11) AGGMAP workspace object contains duplicate information.

Cause: The aggmap contains multiple instances of a clause that can only be specified once.

Action: Remove the extra clause.

ORA-33026: (XSAGDNGL12) In AGGMAP workspace object, workspace object is not a valid valueset.

Cause: A line in the AGGMAP contains an invalid element where a valid valueset is required.

Action: Change the line to have a valid valueset.

ORA-33028: (XSAGDNGL13) In AGGMAP workspace object, workspace object should be scalar, not a dimensioned valueset.

Cause: A line in the AGGMAP contains a dimensioned valueset where a scalared valueset is required.

Action: Change the line to have a scalar valueset.

ORA-33030: (XSAGDNGL14) In AGGMAP workspace object, you can have either a single independent PROTECT statement or PROTECT statements in your RELATION statements.

Cause: The AGGMAP either specified multiple PROTECT statements not on a RELATION line, or specified PROTECT statements both independently and on RELATION lines.

Action: Correct the AGGMAP to have valid syntax.

ORA-33032: (XSAGDNGL15) In AGGMAP workspace object, VALUESET workspace object must be in extra dimensions of the relation.

Cause: The RELATION phrase contains a VALUESET which is not over the extra dimension of the RELATION.

Action: Correct the RELATION phrase to contain a valueset over the extra dimension or not to contain any valueset.

ORA-33034: (XSAGDNGL16) In AGGMAP workspace object, VALUESET workspace object in PRECOMPUTE phrase must be in the self dimension of the relation.

Cause: The precompute phrase contains a valueset which is not over the self dimension of the relation.

Action: Correct the relation phrase to contain a valueset over the self dimension or not to contain any valueset.

ORA-33036: (XSAGDNGL17) ARGS option workspace object must be a TEXT variable.

Cause: An ARGS value had a non-text data type.

Action: Use a text variable for ARGS.

ORA-33038: (XSAGDNGL18) In AGGMAP workspace object, RELATION workspace object contains hierarchy dimensions that are also dimensions of the AGGMAP.

Cause: Hierarchy dimensions(extra dimensions) of a RELATION in the AGGMAP are base dimensions of the AGGMAP.

Action: Correct the RELATION not to have hierarchy dimensions(extra dimensions) which are also base dimensions of the AGGMAP.

ORA-33040: (XSAGDNGL19) In AGGMAP workspace object, VALUESETS workspace object and workspace object are both over the same hierarchy dimension.

Cause: Two or more different VALUESETS over the same hierarchy dimension are used in the AGGMAP.

Action: Use the same VALUESET for two RELATION phrases or use two different VALUESETS over two different hierarchy dimensions.

ORA-33042: (XSAGDNGL20) In AGGMAP workspace object, VALUESET workspace object must qualify all relations dimensioned by workspace object.

Cause: A VALUESET over a hierarchy dimension qualifies some RELATIONS but not all RELATIONS dimensioned by the same hierarchy dimension.

Action: Use the same VALUESET to qualify all the RELATIONS dimensioned by the same hierarchy dimension.

ORA-33044: (XSAGDNGL21) AGGREGATE operator string requires a WEIGHTBY clause, but the ARGS clause in AGGMAP workspace object did not specify one.

Cause: The user used an operator which needs weight values but not provided the weight values.

Action: Provide weight values using a WEIGHTBY clause.

ORA-33045: (XSAGDNGL51) The AGGREGATE operator string does not require a weight, but ARGS clause in AGGMAP workspace object specified workspace object as a weight.

Cause: The ARGS variable specified a weight even though one is not needed.

Action: Modify the ARGS variable so that it does not specify a weight for that operation.

ORA-33046: (XSAGDNGL22) In AGGMAP workspace object, you can specify only one SCREENBY clause.

Cause: The AGGMAP contained multiple SCREENBY clauses.

Action: Remove one of the SCREENBY clauses from the AGGMAP.

ORA-33048: (XSAGDNGL23) In AGGMAP workspace object, the relation workspace object and the relation workspace object are both over the same base dimension.

Cause: The AGGMAP contains incompatible RELATION statements.

Action: Remove one of the RELATION statements from the AGGMAP.

ORA-33050: (XSAGDNGL24) AGGMAP workspace object cannot be used to aggregate workspace object, because it is defined in a different analytic workspace.

Cause: The user attempted to aggregate a variable in another analytic workspace.

Action: Create an AGGMAP in the other analytic workspace to aggregate that variable.

ORA-33052: (XSAGDNGL25) AGGMAP workspace object is a dimensioned AGGMAP; it can only be used to aggregate like-dimensioned variables.

Cause: The user attempted to aggregate a variable with different dimensions than the AGGMAP. This is only possible with undimensioned AGGMAPs.

Action: Create a new undimensioned AGGMAP.

ORA-33058: (XSAGDNGL28) In AGGMAP workspace object, error code string is greater than the maximum error code of number.

Cause: The user specified an invalid ERRORMASK value.

Action: Remove the invalid value from the ERRORMASK list.

ORA-33060: (XSAGDNGL29) In AGGMAP workspace object, the value for the ERRORLOG MAX option must be greater than 0.

Cause: The user specified an ERRORLOG MAX of 0 or a negative number.

Action: Adjust the AGGMAP so that it uses a positive number.

ORA-33062: (XSAGDNGL30) In ALLOCMAP workspace object, WEIGHTBY option workspace object must be a numerical VARIABLE or FORMULA.

Cause: The WEIGHTBY clause requires numerical VARIABLE or FORMULA but the user used invalid objects.

Action: Correct the WEIGHTBY clause to use a valid numerical VARIABLE or FORMULA.

ORA-33064: (XSAGDNGL31) In AGGMAP workspace object, the hierarchy dimension QDR workspace object cannot refer to the related dimension of the relation.

Cause: The user specified an invalid hierarchy dimension qualified data reference.

Action: Adjust the AGGMAP so that it uses a valid dimension value qualified data reference.

ORA-33066: (XSAGDNGL32) In AGGMAP workspace object, the hierarchy dimension QDR workspace object must be a hierarchy dimension of the relation.

Cause: The user specified an invalid qualified data reference for the hierarchy dimension.

Action: Adjust the AGGMAP so that it uses a valid dimension value qualified data reference.

ORA-33068: (XSAGDNGL33) In AGGMAP workspace object, the hierarchy dimension QDR over dimension workspace object must specify a positive dimension offset.

Cause: The user specified an invalid qualified data reference for the hierarchy dimension.

Action: Adjust the AGGMAP so that it uses a valid dimension value qualified data reference.

ORA-33070: (XSAGDNGL34) In AGGMAP workspace object, all QDRs of dimension workspace object must map to the same dimension position.

Cause: The user specified two conflicting hierarchy dimension qualified data references.

Action: Adjust the AGGMAP so that it uses a consistent qualified data reference.

ORA-33072: (XSAGDNGL35) In AGGMAP workspace object, the hierarchy dimension QDR over dimension workspace object must be specified for every relation dimensioned by that hierarchy dimension.

Cause: Multiple dimensions share the same hierarchy dimension, but it is only qualified within a subset of the AGGMAP relations.

Action: Adjust the AGGMAP so that it uses consistent qualified data references.

ORA-33074: (XSAGDNGL36) In AGGMAP workspace object, the offset number is not a valid offset into dimension workspace object.

Cause: The hierarchy dimension offset is an invalid dimension position.

Action: Adjust the AGGMAP so that it uses valid qualified data references.

ORA-33076: (XSAGDNGL37) In AGGMAP workspace object, the value 'number' is not a valid value of dimension workspace object.

Cause: The hierarchy dimension offset is an invalid dimension position.

Action: Adjust the AGGMAP so that it uses valid qualified data references.

ORA-33078: (XSAGDNGL39) In AGGMAP workspace object, the hierarchy dimension QDR workspace object must refer to a dimension.

Cause: The user specified an invalid qualified data reference for the hierarchy dimension.

Action: Adjust the AGGMAP so that it uses a valid dimension value qualified data reference.

ORA-33080: (XSAGDNGL40) In AGGMAP workspace object, you cannot reference dimension workspace object with both a RELATION statement and a DIMENSION statement.

Cause: The user included both RELATION and DIMENSION statements in the AGGMAP referring to the same AGGMAP.

Action: Remove one of the conflicting clauses.

ORA-33082: (XSAGDNGL41) In AGGMAP workspace object, the non-dimensioned valueset workspace object must have a parent QDR in its VALUESET statement over the VALUESET's base dimension.

Cause: The VALUESET statement specified a scalar valueset but did not include a qualified data reference to specify the parent.

Action: Add a qualified data reference specifying the parent to the VALUESET statement.

ORA-33084: (XSAGDNGL42) In AGGMAP workspace object, you cannot qualify the dimensioned valueset workspace object.

Cause: The VALUESET line referred to a dimensioned valueset.

Action: Use a non-dimensioned valueset to limit the status of the dimensioned one.

ORA-33086: (XSAGINIT01) AGGMAP workspace object cannot be dimensioned by a conjoint dimension.

Cause: The specified AGGMAP was dimensioned by a conjoint dimension.

Action: Use the CHGDFN command to change the conjoint to a composite dimension.

ORA-33088: (XSAGINIT03) You do not have read permission for AGGMAP object workspace object.

ORA-33090: (XSAGINIT05) AGGMAP workspace object requires read permission on workspace object

Cause: The AGGMAP referenced an object to which the user did not have read permission.

Action: Grant read permission on the specified object.

ORA-33092: (XSAGCOMP04) number is not the name of a MODEL in any attached analytic workspace.

Cause: An invalid model name was attached to an AGGMAP.

Action: Remove the model from the AGGMAP or create a model with that name.

ORA-33094: (XSAGGMAPLIST01) Your expression uses too much execution space. Eliminate recursion or reduce the levels of nesting.

Cause: formulas likely refer to each other recursively or with a great deal of depth.

Action: eliminate recursion and flatten formula trees.

ORA-33098: (APABBR01) A value of '%V' is not valid for the *workspace object* option.

Cause: An invalid value was specified for the named option.

Action: Set a valid value for the option.

ORA-33100: (APABBR02) A value of '*number*' is not valid for the *workspace object* option.

Cause: An invalid value was specified for the named option.

Action: Set a valid value for the option.

ORA-33106: (APESCBAS01) '*string*' is not a valid value for the ESCAPEBASE option. Valid values are 'd' and 'x'.

Cause: An invalid value was specified for the ESCAPEBASE option.

Action: Specify one of the valid values 'd' or 'x'.

ORA-33108: (APFTMAX01) MAXFETCH must be in the range of 1,000 to 2,147,483,647.

Cause: The value specified for the MAXFETCH option was out of range.

Action: Supply a MAXFETCH value in the range of 1,000 to 2,147,483,647.

ORA-33112: (APFTBUFF01) FETCHBUFFER must be between 1,000 and 64,512.

Cause: A value was specified for the FETCHBUFFER option that was out of range.

Action: Specify a FETCHBUFFER value between 1,000 and 64,512.

ORA-33114: (APLIKESC01) *string* is not a valid value for the LIKEESCAPE option because it is more than one character long.

Cause: An invalid value was specified for the LIKEESCAPE option.

Action: Specify a LIKEESCAPE value that is only one character long.

ORA-33116: (APMSTYPE00) MODSIMULTYPE must be either AITKENS or GAUSS.

Cause: An invalid value was specified for the MODSIMULTYPE option.

Action: Specify one of the valid MODSIMULTYPE values, AITKENS, or GAUSS.

ORA-33118: (APMTOLER00) Value *number* is out of range for MODTOLERANCE.

Cause: A value was specified for the MODTOLERANCE option that was out of range.

Action: Specify a MODTOLERANCE value between -308 and 308.

ORA-33120: (APMOVFLO00) Value *number* is out of range for MODOVERFLOW.

Cause: A value was specified for the MODOVERFLOW option that was out of range.

Action: Specify a MODOVERFLOW value between -308 and 308.

ORA-33122: (APMGAMMA00) MODGAMMA must be a whole number greater than or equal to zero.

Cause: An invalid value was specified for the MODGAMMA option.

Action: Specify a MODGAMMA value greater than or equal to zero.

ORA-33124: (APMITERS00) MODMAXITERS must be a whole number greater than zero.

Cause: An invalid value was specified for the MODMAXITERS option.

Action: Specify a MODMAXITERS value greater than zero.

ORA-33126: (APMDAMPF00) MODDAMP must be greater than or equal to zero and less than one.

ORA-33128: (APMERROR00) MODERROR must be either STOP, CONTINUE, or DEBUG.

Cause: An invalid value was specified for the MODERROR option.

Action: Specify a MODERROR option that is one of the valid values STOP, CONTINUE, or DEBUG.

ORA-33130: (APMERROR01) The current connection type does not support interactive debugging.

Cause: A value of DEBUG was supplied for the MODERROR option in an environment that does not support interactive debugging.

Action: Specify one of the other valid MODERROR values, STOP or CONTINUE.

ORA-33132: (APPGMGR00) The *workspace object* option value must be between 0 and *number*.

Cause: The option value specified was outside the range of valid values.

Action: Specify an option value within the valid range.

ORA-33134: (APSORTBUFSZ01) The value of SORTBUFFERSIZE must be a number between 0 and *number*. You supplied *number*.

Cause: An invalid value was specified for the SORTBUFFERSIZE option.

Action: Supply a value in the range indicated by the error message.

ORA-33136: (APSPARSX01) The value of SPARSEINDEX cannot be a multi-line string.

Cause: The value specified for the SPARSEINDEX option consisted of more than one line of text.

Action: Specify a SPARSEINDEX value containing only a single line of text.

ORA-33138: (APSPARSX02) The value '*number*' is not valid for SPARSEINDEX.

Cause: An invalid value was specified for the SPARSEINDEX option.

Action: Specify a value for SPARSEINDEX that is one of BTREE, BTREE64, or HASH.

ORA-33140: (AUTOCOMP1) *workspace object* is being compiled automatically.

Cause: The named OLAP object needed to be recompiled because of a change in one or more of the objects to which it referred.

Action: No action is required.

ORA-33141: (XSAWFREEZE1) The analytic workspace *string* is already frozen.

Cause: An attempt was made to freeze an analytic workspace that was already frozen.

Action: Thaw the analytic workspace before trying to freeze it again.

ORA-33142: (BADSYN00) The format of the *string* command is incorrect.

Cause: There was an error in the syntax of the indicated command.

Action: Consult Oracle documentation for the correct command syntax.

ORA-33143: (XSAWFREEZE2) The analytic workspace *string* must be attached RW or RX.

Cause: The analytic workspace must be writable to change the freeze state.

Action: The analytic workspace must be detached and attached either RW or RX before freezing or thawing it again.

ORA-33145: (XSAWFREEZE3) Cannot rollback analytic workspace *string*; generations are in use.

Cause: One or more generations due to be destroyed as part of a rollback to freeze command are currently in use.

Action: Get sessions using those generations to detach the AW.

ORA-33146: (BINENG00) The width argument for binary conversion can only be specified for INTEGER and BOOLEAN data.

Cause: Only INTEGER and BOOLEAN data types have a fixed width.

Action: Omit the width argument.

ORA-33147: (XSAWFREEZE4) The analytic workspace *string* is not frozen.

Cause: An attempt was made to "rollback to freeze" an analytic workspace that is not frozen.

Action: Only execute this command on a frozen analytic workspace.

ORA-33148: (BINENG01) The width argument for binary conversion must be 1, 2, or 4.**ORA-33150: (BOOLTOK01) *string* is not a Boolean.**

Cause: Valid Boolean values are yes, no, y, n, on, off, true, or false.

Action: Use a valid Boolean value.

ORA-33152: (CDELETE03) The *workspace object* dimension does not have a value at position *number*.

Cause: This physical position cannot be deleted because it does not exist.

Action: This is an internal error. Contact Oracle Support.

ORA-33154: (CFINDVAL01) The *workspace object* dimension does not have identifiers.**ORA-33156: (CFINDVAL02) exceeds 2**63.**

Cause: This dimension is too large.

Action: Convert this application to use partitions.

ORA-33158: (CGETPOS02) The *workspace object* dimension does not have a value numbered *number*.

ORA-33160: (CGETSEQ02) The *workspace object* dimension does not have a value at position *number*.

Cause: This physical position does not exist.

Action: This may be an internal error. Contact Oracle Support.

ORA-33166: (CGFIN02) The number of periods of the *string* function cannot be dimensioned by time.

ORA-33168: (CGFIN03) The salvage value argument of the *string* function must be dimensioned by the time dimension.

ORA-33170: (CGFIN04) The decline factor argument of the *string* function cannot be dimensioned by the time dimension.

Cause: The decline factor argument was dimensioned by the TIME dimension.

Action: Use a scalar decline factor argument.

ORA-33172: (CGFIN05) The portion argument of the *string* function cannot be dimensioned by time.

ORA-33174: (CGFIN06) The switch period argument of the DEPRDECLSW function cannot be dimensioned by time.

ORA-33176: (CGMCALC01) The member list expression in aggregation phrase *number* is multidimensional.

Cause: The MCALC function requires a member list with one dimension.

Action: Use a list with one dimension.

ORA-33178: (CGMCALC02) *workspace object* appears as the dimension of more than one member list expression.

ORA-33180: (CGMCALC03) WEIGHTBY can only be specified for the AVERAGE aggregation method.

ORA-33182: (CGMCALC04) The base measure expression is not dimensioned by *workspace object*.

ORA-33184: (CGMCALC05) A valueset argument to MCALC must have one dimension and be a valueset of the same dimension.

Cause: The VALUESET argument to MCALC must be a self relation of a single dimension.

Action: Use a VALUESET that has one dimension that is the same as its VALUESET // dimension.

ORA-33186: (CGMODSET01) The ACROSS option is not supported in model equations.

ORA-33188: (CGMODSET02) The left-hand side of an equation involves the *workspace object* dimension, whereas the '*number*' term on the right-hand side involves *workspace object*.

Cause: A dimension mismatch was detected in a model equation.

Action: Ensure that the target and source expressions of the equation refer to the same model dimension.

ORA-33190: (CGMODSET03) MODEL assignment triggered in unexpected context.

Cause: An internal error caused Oracle OLAP to attempt to compile a MODEL assignment when no MODEL was being compiled.

Action: If the problem persists, contact Oracle Support Services.

ORA-33192: (CGTCVT00) TCONVERT requires an argument dimensioned by time.

ORA-33194: (CGTCVT01) The argument to TCONVERT cannot be dimensioned by more than a single time dimension.

ORA-33196: (CGTCVT03) Invalid conversion method for TCONVERT.

ORA-33198: (CGTCVT04) The two conversion methods requested of TCONVERT are incompatible.

Cause: This is a syntax error using the TCONVERT dimension.

Action: Check Oracle documentation on Compatible Aggregation and Allocation Methods and retry.

ORA-33200: (CGTCVT05) You cannot convert by both DAY and PERIOD. You must use one or the other.

ORA-33202: (CGTCVT06) The breakout dimension *workspace object* is not a time dimension.

ORA-33204: (CGTCVT07) In converting data from time dimension *workspace object* to *workspace object* using TCONVERT, a conversion direction must be given.

ORA-33206: (CGTCVT08) It is not possible to convert data dimensioned by *workspace object* to be dimensioned by *workspace object*.

ORA-33208: (CGTDF00) You can only find the start or end of a time period.

ORA-33210: (CGTDF01) The argument of the BEGINDATE or ENDDATE function must be dimensioned by exactly one time dimension.

ORA-33213: (CINSERT06) The target position for MAINTAIN ADD or MAINTAIN MOVE cannot fall in the range of session-only values.

Cause: The user specified either a BEFORE or AFTER clause specifying a position in the range of SESSION dimension values.

Action: Do not use a position clause, or specify a position before the first SESSION value.

ORA-33214: (CINSERT02) The *workspace object* dimension is too large.

Cause: The dimension has too many values.

Action: Deleted values can still take up space in the dimension and cause this error. Try removing the deleted values by exporting the dimension to EIF and reimporting it with the REPLACE DELETE option.

ORA-33215: (CINSERT07) You cannot add session-only values to the *workspace object* dimension.

Cause: The user tried to add a SESSION dimension value while a spreadsheet cursor was open.

Action: Try adding the SESSION value while the cursor is not active.

ORA-33216: (CINSERT03) The *workspace object* dimension does not have a value numbered *number*.

ORA-33217: (CINSERT20) Custom member values cannot be added to concat dimension *workspace object*, or to any of its bases, because it is not defined as UNIQUE.

Cause: Only UNIQUE concat dimensions can have custom member values.

Action: Use the CHGDFN command to change the concat dimension to UNIQUE and retry.

ORA-33218: (CINSERT04) %K is not a valid value for the *workspace object* dimension. Values for this dimension can have at most *number* significant digits after rounding to *number* decimal places.

Cause: The user attempted to insert a value that had too many digits into a NUMBER dimension. For instance, the user might have tried to insert the value 99999 (5 digits) into a dimension with data type NUMBER(4).

Action: Use a smaller number for the dimension value, or define a new dimension with a larger precision and replace the old dimension with the new one.

ORA-33219: (CINSERT05) %K cannot be added to *workspace object* because it is already a value of the dependent UNIQUE concat dimension *workspace object*, from leaf dimension *workspace object*.

Cause: A value cannot be added to a dimension if it conflicts with an existing value in a unique concat dimension containing this dimension.

Action: The concat(s) causing the conflict could be CHGDFNed to NOT UNIQUE, or either of the duplicate values could be renamed to make them UNIQUE.

ORA-33220: (CLOPEN01) The time dimension *workspace object* cannot be accessed because it consists of time periods not recognized in this release of *string*.

ORA-33222: (CLOPEN02) The dimension *workspace object* cannot be accessed because it was created by an incompatible version of *string*.

ORA-33223: (CMOVE03) You cannot move a session-only dimension value.

Cause: The user named a SESSION dimension value in the MAINTAIN MOVE command.

Action: Do not try to MAINTAIN MOVE session-only dimension values.

ORA-33224: (CMOVE02) The *workspace object* dimension does not have a value at position *number*.

ORA-33226: (COLDEL01) The starting column must be between 1 and the maximum width of a text value (*number*). You cannot start removing at column *number*.

ORA-33228: (COLDEL02) The columns to be removed must be between 1 and the maximum width of a text value (*number*). You cannot remove column *number*.

Cause: The column number is invalid.

Action: Choose a valid column number.

ORA-33230: (COLDEL03) The number of columns to be removed must be greater than zero. You cannot remove *number* columns.

ORA-33232: (COLEXTR01) The starting column must be between 1 and the maximum width of a text value (*number*). *number* is out of range.

ORA-33234: (COLEXTR02) The columns to be extracted must be between 1 and the maximum width of a text value (*number*). You cannot extract column *number*.

ORA-33236: (COLEXTR03) The number of columns to be extracted must be greater than or equal to zero. You cannot extract *number* columns.

ORA-33238: (COLINS01) The starting column must be between 0 and the maximum width of a text value (*number*). You cannot start inserting at column *number*.

ORA-33240: (COLREP01) The starting column must be between 1 and the maximum width of a text value (*number*). You cannot start replacing at column *number*.

ORA-33242: (COMPOSITE01) *workspace object* is a dimension composite and does not have position numbers that can be used in this context.

ORA-33243: (XSDPART51) *workspace object* is a PARTITION TEMPLATE and does not have position numbers that can be used in this context.

Cause: An attempt was made to discover or supply the position number associated with a member of a PARTITION TEMPLATE.

Action: Avoid referring to PARTITION TEMPLATE values by their position numbers.

ORA-33244: (CRENAME01) The *workspace object* dimension does not have a value at position *number*.

ORA-33246: (CRENAME02) The *workspace object* dimension does not have identifiers that can be renamed.

ORA-33247: (CRENAME03) %K is already a value of the dependent UNIQUE concat dimension *workspace object*, from leaf dimension *workspace object*.

Cause: A value cannot be renamed in a dimension if the new value conflicts with an existing value in a unique concat dimension containing this dimension.

Action: The concat(s) causing the conflict could be CHGDFNed to NOT UNIQUE, or either of the duplicate values could be changed to make them UNIQUE.

ORA-33248: (CTDDEL04) Deletions from time dimension *workspace object* must occur at either end. *number* values were not deleted.

ORA-33250: (CTDINSRT00) You attempted to add a value that was outside the allowable range of dates for time dimension *workspace object*.

ORA-33252: (CTXENG00) The CONTEXT name cannot be NA.

ORA-33254: (CTXENG01) CONTEXT '*number*' already exists.

ORA-33256: (CTXENG02) CONTEXT '*number*' does not exist.

ORA-33258: (CTXENG03) *workspace object* has not been saved in CONTEXT '*number*'.

ORA-33260: (DIMSHOW01) Partition *number* does not exist.

Cause: The DIMSHOW command specified a nonexistent partition.

Action: Specify the name of an existing partition, or remove the PARTITION qualification from the DIMSHOW command.

ORA-33261: (DIMSHOW02) A partition name may be specified only for a partitioned variable.

Cause: A PARTITION qualification was provided for an object other than a partitioned variable.

Action: Remove the PARTITION qualification.

ORA-33262: (DBERR01) Analytic workspace *string* does not exist, or you do not have sufficient privileges to access it.

Cause: The analytic workspace requested does not seem to be in the current database

Action: Check that you are in the correct schema and have access to the requested AW.

ORA-33263: Could not create analytic workspace *string*

Cause: A serious error was encountered while trying to set up the tables for the named analytic workspace. Possible causes for this error include: - A tablespace that cannot be written to. - Corrupt metadata about which analytic workspace exist. - Table names that the code cannot use. - There are remains of a partially removed analytic workspace.

Action: There should be another error on the error stack. Consult this error to determine what is causing the problem and remove that table.

ORA-33264: (DBERR02) Analytic workspace *string* cannot be accessed because it has been damaged or belongs to an incompatible version of *string*.**ORA-33265: (DBERRBSZ) Analytic workspace *string* cannot be opened. Tablespace blocksize *number* does not match database cache size *number*.**

Cause: The blocksize of the containing tablespace did not match the database cache size.

Action: Change either size to make them consistent, or set the OLAP_PAGE_POOL_SIZE parameter to 0 to allow automatic OLAP pool management when the compatibility is greater than 10.2.

ORA-33266: (DBERR03) Analytic workspace (AW) *string* cannot be accessed because it was last modified by an incompatible version of *string*.

Cause: The online analytical processing (OLAP) code was unable to process the internal metadata for the specified AW when attaching the AW.

Action: This is most commonly encountered when the AW was previously used on a different platform (for example, Windows 32-bit and Windows 64 bit). The AW needs to be re-created on the current platform.

ORA-33267: (DBERRRLS) Analytic workspace *string* cannot be accessed because it has fine-grained access control applied to it

Cause: An attempt was made to access the specified analytic workspace's LOB table. The OLAP option detected the table had fine-grained security applied to it. The OLAP option requires full access to this table to operate correctly.

Action: Remove the fine-grained access control.

ORA-33268: (DBERRTHW) Analytic workspace *string* cannot be attached with the THAW option because it was frozen with the NOTHAW option

Cause: An attempt to attach the AW using the thaw option was made; the AW was frozen using the NOTHAW option.

Action: Either attempt the command again without the THAW option.

ORA-33269: error while operating on '*string*'

Cause: Creation of an analytic workspace for the specified object failed.

Action: This error is always signaled with another error to provide more context. Resolve the error for the named object in order for the analytic workspace creation to succeed.

ORA-33270: (DBERR05) Analytic workspace *string* already exists.

Cause: The AW CREATE command was passed the name of an analytic workspace that already exists

Action: Specify a different name.

ORA-33272: (DBERR06) Analytic workspace *string* cannot be opened.**ORA-33273: (XSCHKRLS01) Analytic workspace *string* has open cursors and cannot be detached.**

Cause: A session attempted to detach an analytic workspace while there are cursors open against it.

Action: Close the open cursor before attempting to close the analytic workspace.

ORA-33274: (DBERR07) Timed out while trying to lock analytic workspace *string* for *string*.

Cause: A lock operation that was supposed to happen very quickly was taking too long. It can be due to another session being stopped while holding that lock, another session crashing while holding that lock, or an internal error.

Action: If another session is stopped, resume that session to let it release the lock. If another session has crashed, wait for a few minutes while a background process recovers the lock. Contact Support if none of the situations above apply.

ORA-33275: Autonomous transaction query of an UPDATED analytic workspace is not supported

Cause: The user made attempt to reference an analytic workspace that has uncommitted updates within an autonomous query.

Action: Either COMMIT or ROLLBACK your uncommitted changes, or don't use an autonomous transaction.

ORA-33276: (DBERR08) Another user has analytic workspace *string* attached.**ORA-33277: Analytic Workspace *string.string* could not be upgraded.**

Cause: A serious error was encountered while trying to alter the tables for the named analytic workspace. Possible causes for this error include: - A tablespace could not be written to. - The metadata for this analytic workspace may be corrupt. * Table names that the code cannot use. * There are remains of a partially removed analytic workspace.

Action: There should be another error on the error stack. Consult this error to determine what is causing the problem and remove that table.

ORA-33278: (DBERR09) Analytic workspace *string* cannot be attached in RW or EXCLUSIVE mode until the changes made and updated in MULTI mode are committed or rolled back.

Cause: There are still changes to this analytic workspace that were updated and not committed when the workspace was attached in MULTI mode.

Action: Either try attaching the workspace in RO or MULTI mode or commit or roll back the transaction before trying to attach the workspace in RW or EXCLUSIVE mode.

ORA-33279: (DBERRDDP) Analytic workspace *string* cannot be accessed because the AWLOB column has deduplication enabled.

Cause: An attempt was made to access the specific LOB table of the analytic workspace. The OLAP option detected that the LOB column has deduplication enabled. The OLAP option does not support deduplication.

Action: Alter the table to disable LOB deduplication.

ORA-33280: (DBERR10) Analytic workspace *string* cannot be attached in MULTI mode until the changes made and updated in RW or EXCLUSIVE mode are committed or rolled back.

Cause: There were still changes to this analytic workspace that were updated and not committed when the workspace was attached in RW or EXCLUSIVE mode.

Action: Either try attaching the workspace in RO, RW, or EXCLUSIVE mode or commit or roll back the transaction before trying to attach the workspace in MULTI mode.

ORA-33281: Analytic workspace *string* cannot be modified during a Data Guard rolling upgrade.

Cause: An attempt was made to attach the specified analytic workspace for write while the instance was in the middle of a Data Guard rolling upgrade. The Oracle OLAP option does not support this.

Action: Delay the modifications until after the rolling upgrade completes.

ORA-33282: (DBERR11) cannot wait for analytic workspace *string* to become available since doing so would cause a deadlock.

Cause: The attempt to attach the analytic workspace using the WAIT keyword caused a deadlock situation. The WAIT keyword is not allowed. This was an error in the application.

Action: Attach the multiple analytic workspaces in the same order that they were locked to avoid deadlock if these analytic workspaces were locked at the same time.

ORA-33284: (DBERR12) Analytic workspace *string* cannot be opened in MULTI mode before converting it by the latest version of *string*.

Cause: The AW is stored in 9i format.

Action: Convert the AW to a later format

ORA-33285: This operation is not permitted on analytic workspaces.

Cause: An attempt was made to directly modify the contents of a table containing an analytic workspace.

Action: Do not modify the table directly; let the OLAP option modify it.

ORA-33286: (DBERR14) The specified access mode for analytic workspace *string* is invalid.

Cause: An attempt was made to change the access status for the specified analytic workspace to an invalid value.

Action: The only access modes accepted by the AW PROMOTE command are RW and RO, possibly with a WAIT or NOWAIT added.

ORA-33287: This DDL operation is not allowed on table "*string*".*string*"

Cause: A DDL operation was attempted on an analytic workspace table.

Action: No action required. Many DDL operations on analytic workspace tables are restricted to Oracle only.

ORA-33288: (DBERR15) Another user has incompatible access to analytic workspace *string*, and the wait timeout has expired.

Cause: An attempt to access an analytic workspace conflicted with another user's access, and the timeout specified has elapsed.

Action: Wait until the conflicting user is done.

ORA-33289: The Flashback Table operation is not supported on OLAP analytic workspace tables.

Cause: An attempt was made to perform the Flashback Table operation on a table containing an analytic workspace, which is not allowed.

Action: Do not perform a Flashback Table operation on analytic workspace tables.

ORA-33290: (DBERR17) Analytic workspace *string* cannot be attached in the mode you requested because another user has it attached in an incompatible mode.

Cause: The attempt to access an analytic workspace conflicted with another user's access, and no timeout was specified

Action: Wait until the conflicting user is finished.

ORA-33291: (DBERRSYNC) Analytic workspace *string* cannot be attached RW until a RESYNC command has brought it up to the current generation.

Cause: Another session has updated the analytic workspace since it was attached in the current session.

Action: Use a RESYNC AW command to bring the analytic workspace up to the most recent version.

ORA-33292: An attached analytic workspace is blocking this command.

Cause: An attempt was made to drop a tablespace containing an analytic workspace that is currently attached.

Action: Detach the analytic workspace before dropping the tablespace.

ORA-33293: There are OLAP cubes and dimensions referencing an analytic workspace in the tablespace.

Cause: An attempt was made to drop a tablespace containing an analytic workspace that is referenced by OLAP cube and dimension objects.

Action: Drop the OLAP cube and dimension objects before dropping the tablespace.

ORA-33294: (DBERR19) Analytic workspace *string* cannot be created, deleted, or renamed while flashback mode is in effect.

ORA-33296: (DBERR21) Analytic workspace *string* can only be attached read-only (RO) while tablespace *string* is READONLY.

Cause: The underlying tablespace of the analytic workspace is in READONLY status.

Action: Attach the analytic workspace in RO mode or alter the tablespace.

ORA-33297: (DBERR22) Analytic workspace *string* cannot be opened because it was last modified by an incompatible version of *string*.

Cause: The user attempted to attach an old OLAP Services analytic workspace that cannot be converted by this version of OLAP Services.

Action: Either create a new analytic workspace or try using a version of OLAP Services compatible with the one that created this analytic workspace.

ORA-33298: (AWUPG01) Analytic workspace *string* is already in the newest format allowed by the current compatibility setting.

Cause: You ran the DBMS_AW.CONVERT procedure on an analytic workspace that was created in or previously upgraded to the current compatibility mode.

Action: If upgrading the analytic workspace is necessary, upgrade the database instance and then re-run DBMS_AW.CONVERT. If the new features offered by upgrading the analytic workspace are not required, then no action is needed.

ORA-33300: (DBERRPLAT) Analytic workspace *string* encountered an error that may indicate that it was created on a different platform.

Cause: An attempt to transport an analytic workspace from a different platform failed.

Action: Transport the analytic workspace using a supported method, either by using export/import or by rebuilding it using an XML template.

ORA-33301: Unsupported ALTER TABLE operation attempted on analytic workspace table "*string*". "*string*"

Cause: An attempt was made to modify an analytic workspace table using the ALTER TABLE statement.

Action: The OLAP option can manage the table.

ORA-33303: Operation disallowed on OLAP analytic workspace table "*string*". "*string*".

Cause: An attempt was made to perform an operation on an analytic workspace table that was not allowed.

Action: Do not perform the action on the table.

ORA-33304: (DBVALID02) Note: Record *number* was allocated but not used. This can result in wasted space.

Cause: This is a benign message. The AW VALIDATE command found an analytic workspace has some inaccessible space.

Action: Either nothing, or export and recreate the analytic workspace

ORA-33307: Oracle OLAP analytic workspace table was renamed to an invalid name

Cause: An attempt was made to rename an Oracle OLAP analytic workspace (AW) table to a name that did not start with \"AW\$\" or that contained characters that may occur only in quoted identifiers which are not supported by Oracle OLAP DML.

Action: Do not rename the Oracle OLAP AW table to an invalid name.

ORA-33310: (DECIMAL) The number of decimal places must be between *number* and *number*, or *number*. It cannot be *number*.

Cause: A value was specified for the DECIMALS option that was out of range.

Action: Supply a value for DECIMALS that is within the range specified by the error message text.

ORA-33311: The schema cannot be specified when renaming an analytic workspace.

Cause: An attempt was made to rename an analytic workspace that was not in the user's schema. This is not allowed.

Action: Connect as the owner of the analytic workspace to rename it or use DBMS_AW.AW_COPY to move it.

ORA-33312: (DELIDENT01) *workspace object* cannot be deleted while there are objects dimensioned by it, or formulas, programs, valuesets, or relations that use it.**ORA-33313: (DELIDENT05) *workspace object* cannot be deleted because it is the target of an external partition of a partitioned variable.**

Cause: User attempted to delete a variable, but some partitioned variable was defined to use that variable as the target of one of its external partitions.

Action: DELETE the partitioned variable or CHGDFN DROP PARTITION the the external partition from the partitioned variable, then delete the target variable.

ORA-33314: (DELIDENT02) *workspace object* cannot be deleted while it is executing.**ORA-33315: (XSDELIDENTANON) You cannot delete *workspace object* while looping over unnamed composite *workspace object*.**

Cause: While looping over the named anonymous composite, an attempt was made to delete an object which is dimensioned by it.

Action: Delete the object outside of a loop over the dimension.

ORA-33316: (DELIDENT03) You cannot delete *workspace object* because you do not have PERMIT permission for it or it is readonly.**ORA-33318: (DELIDENT04) The variable *workspace object* cannot be deleted while its NA trigger is executing.****ORA-33320: (DNAMELEN00) The object name *string* has more than *number* characters.****ORA-33324: (DOSCMD01) The current directory is *string*.**

Cause: The user entered a CDA command with no arguments.

Action: This is an informational message. No user action is required.

ORA-33325: (DOSCMD02) Current directory alias is not set.

Cause: A file name was specified without a directory component, and there was no current directory alias set to supply the missing directory name.

Action: Use the CDA command to establish a current directory alias, or provide a file name with an explicit directory component.

ORA-33332: (DSSEXIST01) Use the AW command to establish a current analytic workspace. Then start your current activity again.

Cause: There is no currently active analytic workspace. The command that generated the error requires an active analytic workspace to operate on.

Action: Run an AW ATTACH or AW CREATE command to establish an active workspace.

ORA-33334: (DSSEXIST04) Analytic workspace *string* is not attached.

Cause: The specified analytic workspace was currently not attached to the session, or the name was misspelled.

Action: Attach the analytic workspace with the AW ATTACH command, or correct the spelling of the name.

ORA-33336: (DSSEXIST04A) Analytic workspace *string* is not attached.

Cause: The specified analytic workspace is currently not attached to the session, or the name is misspelled.

Action: Attach the analytic workspace with the AW ATTACH command, or correct the spelling of the name .

ORA-33338: (DSSEXIST05) You cannot specify the EXPTEMP analytic workspace.

Cause: The command requires a permanent analytic workspace to operate on.

Action: Specify an analytic workspace other than EXPTEMP.

ORA-33339: You cannot detach analytic workspace *string*. It is in use by an API branch.

Cause: The OLAP API is in a branch, and you are not allowed to detach the AW while the branch is active.

Action: End the branch before detaching the AW.

ORA-33340: (DTINFRMT00) A format cannot be an empty string.

ORA-33342: (DTINFRMT01) '*number*' is not a valid format for a *string* value because it has a single angle bracket > that is not part of a field specification.

ORA-33344: (DTINFRMT02) '*number*' is not a valid format for a *string* value because an angle bracket (<) cannot be the last character.

Cause: The command was truncated or an angle bracket was specified as the last character which is an invalid format.

Action: Remove the last character or restore the truncated text.

ORA-33346: (DTINFRMT03) '*number*' is not a valid format for a *string* value because '*string*' is an unrecognized specification.

ORA-33348: (DTINFRMT04) *number* is not a valid format because the B specifier cannot be used with a date.

ORA-33350: (DTINFRMT05) '*number*' is not a valid format because the '*string*' specification cannot be used with a date.

Cause: The format specified in the error only applies to dimensions.

Action: Choose a format that is valid for date data.

ORA-33352: (DTINFRMT06) '*number*' is not a valid format for a *string* value because the B specifier cannot be used with a period field.

ORA-33354: (DTINFRMT07) '*number*' is not a valid format because the *NAME* specification can only be used once.

ORA-33356: (DTINFRMT08) '*number*' is not a valid VNF format because it contains an ordinal specification.

ORA-33358: (DTINFRMT09) '*number*' is an ambiguous VNF format. The '*string*' specification must be followed by a space or separation character.

Cause: Space or separation character was missing.

Action: Add a space or separation character.

ORA-33360: (DTINFRMT10) '*number*' is not a valid VNF format because at least two of the specifications are of the same type.

ORA-33362: (DTINFRMT11) '*number*' is not a valid VNF format because it does not contain enough fields to match one of the defined VNF templates.

ORA-33364: (DTINFRMT12) '*number*' is not a valid VNF format because it contains more information than is allowed.

ORA-33366: (DTINFRMT13) '*number*' is not a valid format for a *string* value because the '*string*' specification has no closing angle bracket >.

ORA-33368: (DTINFRMT14) '*number*' is not a valid format for a *string* value because it contains more than one line of text.

ORA-33370: (DTTOVC01) Unable to print dates longer than *number* characters.

ORA-33372: (DUPCLCHK01) *workspace object* appears more than once in the dimension list.

ORA-33374: (DUPCLCHK02) *workspace object* appears more than once in the dimension list. (It is also a base dimension of *workspace object*.)

Cause: The dimension appeared once at the top level of the dimension list and also appeared somewhere further down in a conjoint or a composite.

Action: Remove either the dimension itself or the conjoint that contains it from the dimension list.

ORA-33376: (DUPCLCHK03) *workspace object* and *workspace object* cannot both appear in a dimension list because they share at least one base dimension (*workspace object*).

ORA-33381: (EIFEXPRT20) You cannot EXCLUDE bases from *workspace object*, because it is not a concat dimension.

ORA-33382: (EIFEXPRT01) You cannot export two objects with the same name (*string*).

ORA-33383: (EIFEXPRT21) You cannot EXCLUDE *workspace object* because it is not a base of *workspace object*.

ORA-33384: (EIFEXPRT02) You cannot rename a dimension (*workspace object*) when you export it.

ORA-33385: (EIFEXPRT22) You cannot EXCLUDE *workspace object*, because it is not a dimension.

ORA-33386: (EIFEXPRT03) The expression beginning with *string* has no data type.

ORA-33387: (EIFEXPRT23) EXCLUDE or EXCLUDING can only be used following the name of a concat dimension.

ORA-33388: (EIFEXPRT04) The expression beginning with *string* has too many dimensions.

ORA-33389: (EIFEXPRT24) Concat dimension *workspace object* has *number* bases. You cannot EXCLUDE more than *number* of them.

ORA-33390: (EIFEXPRT05) There are no objects to export.

ORA-33391: (EIFEXPRT25) concat dimension *workspace object* has only 1 base, which cannot be EXCLUDED.

ORA-33392: (EIFEXPRT07) SCATTER name *workspace object* must be a text variable of one dimension shared with the expression.

ORA-33393: (EIFIMPRT01) Object *string* exists in both the EIF file and the current analytic workspace.

Cause: An object with the given name was found in both the EIF file and the current analytic workspace.

Action: Rename the object in the analytic workspace that is causing the name conflict. If the object named in the error message belongs to a cube or a cube dimension, rename that cube or cube dimension.

ORA-33394: (EIFEXPRT08) SCATTER type *workspace object* must be a text variable with the same dimension as the name.

ORA-33396: (EIFEXPRT09) The SCATTER expression must have at least two dimensions and be numeric if TYPE is given.

ORA-33398: (EIFEXPRT10) The SCATTER type value must be INTEGER, SHORTINTEGER, SHORT, or DECIMAL, not *number*.

Cause: An attempt was made to specify a non-numeric SCATTER type value.

Action: Ensure that the SCATTER value is of type INTEGER, SHORTINTEGER, SHORT, or DECIMAL.

ORA-33400: (EIFEXPRT11) The scatter name value *number* is not a valid EIF object name.

ORA-33402: (EIFEXPRT12) You cannot export an unnamed dimension composite by itself, but only with an object dimensioned by it.

ORA-33404: (EIFEXPRT13) The format for exporting an expression is:\nEXPORT expression AS name

ORA-33406: (EIFEXPRT14) *workspace object* is not a legal name for an EIF file object.

ORA-33408: (EIFEXPRT15) You cannot use the SCATTER AS syntax because EIFVERSION is set to *number*, and that version cannot import scattered objects.

ORA-33409: (EIFEXPRT16) You cannot use the FULLMAPID or RELATIVEMAPID syntax because NOAPI has been specified.

Cause: An attempt was made to specify FULLMAPID or RELATIVEMAPID syntax with the NOAPI option.

Action: Either specify the API option instead of NOAPI, or remove the FULLMAPID or RELATIVEMAPID option.

ORA-33416: (EIFPATHLIST) You tried to set EIFEXTENSIONPATH to one or more illegal path names.

ORA-33420: (EIFMAKEF03) The EXPORT command has terminated because of insufficient disk space. One or more files could not be created.

ORA-33422: (EIFMAKEF04) Due to insufficient disk space, the extension count of the EIF files(s) could not be recorded. To avoid any potential errors when the file is imported, DO NOT move, delete, or rename any of the EIF extension files. These are files of the form *string.string*, where %3p is the extension number. There are *number* such files.

ORA-33424: (EIFMAKEF05) *workspace object* cannot be exported because EIFVERSION is set to *number*, and objects cannot have more than 6 dimensions in that version.

ORA-33425: (EIFMAKEF15) CAUTION: Exporting NTEXT objects using *string* for the EIF file character set can cause loss of data. To preserve all NTEXT data, export using the UTF8 character set for the EIF file.

Cause: The user exported an object with data type NTEXT, but the EIF file that will result from the EXPORT command is not written in Unicode. Because no non-Unicode file can represent all possible Unicode data, it is possible that some data will be lost when converting from the Unicode NTEXT object to the EIF file. The EIF file will be written in the character set indicated by the "nls_charset" argument of the EXPORT command, or, if no such argument is present, in the database character set.

Action: If the user is certain that the contents of the NTEXT object can be represented in the specified character set, then no action is necessary. Otherwise, the user can add "nls_charset 'UTF8'" to the EXPORT command string. This will result in the EIF file being written in UTF8 Unicode, which can represent all the data contained in NTEXT objects.

ORA-33426: (EIFMAKEF06) The expression named *string* cannot be exported because EIFVERSION is set to *number*, and objects cannot have more than 6 dimensions in that version.

ORA-33427: (EIFMAKEF16) CAUTION: NTEXT object *workspace object* will be exported with type TEXT.

Cause: User attempted to export an object whose data type is NTEXT, but the EIFVERSION option indicates a version of Express / Oracle OLAP that does not support the NTEXT data type. The object will be exported as a TEXT object instead.

Action: No action needed.

ORA-33428: (EIFMAKEF07) One or more SCATTER AS expressions cannot be exported because EIFVERSION is set to *number*, and objects cannot have more than 6 dimensions in that version.

ORA-33429: (EIFMAKEF17) CAUTION: NTEXT expression will be exported with type TEXT.

Cause: User attempted to export an expression whose data type is NTEXT, but the EIFVERSION option indicates a version of Express / Oracle OLAP that does not support the NTEXT data type. The expression will be exported as a TEXT object instead.

Action: No action needed.

ORA-33430: (EIFMAKEF08) workspace object cannot be exported because EIFVERSION is set to *number*, and that version does not use *string* objects.

ORA-33432: (EIFMAKEF09) You cannot use the name *string*, because EIFVERSION is set to *number*. That version does not allow object names longer than *number* bytes.

Cause: The object name was too long for the analytic workspace format represented by the current setting of the EIFVERSION option.

Action: Change the value of the EIFVERSION option, or remove the object from the list of objects to be exported.

ORA-33433: (EIFMAKEF09A) You cannot use the name *string*, because EIFVERSION is set to *number*. That version does not allow object names longer than *number* characters.

Cause: The object name was too long for the analytic workspace format represented by the current setting of the EIFVERSION option.

Action: Change the value of the EIFVERSION option, or remove the object from the list of objects to be exported.

ORA-33434: (EIFMAKEF10) You cannot export the AGGMAP object *workspace object* from this version of *string* to version 6.3. The internal format of an AGGMAP has changed too much.

ORA-33436: (EIFMAKEF11) You cannot write an EIF file using the *string* character set, because EIFVERSION is set to *number*. That version does not support that character set.

ORA-33438: (EIFSPARS00) *number* values of *workspace object* will be exported as NA, because they are not in the current status of its base dimensions.

ORA-33440: (EQUUPDATE01) The expression for formula *workspace object* contains invalid syntax.

ORA-33442: (ESDREAD01) Discarding compiled code for *workspace object* because there is no NAME dimension.

ORA-33443: (ESDREAD14) Discarding compiled code for *workspace object* because analytic workspace *string* is not attached.

Cause: A program used an analytic workspace name in a qualified object name. The named analytic workspace is not attached at program run time.

Action: No action necessary. The program will be automatically recompiled. It is likely that the recompile will fail with an appropriate exception code, in which case the signaled condition should be corrected and the program re-run.

ORA-33444: (ESDREAD02) Discarding compiled code for *workspace object* because *number* could not be found.

ORA-33445: (ESDREAD15) Discarding compiled code for *workspace object* because *workspace object* and *workspace object*, which were not partition-dependent when the code was compiled, are now partition-dependent.

Cause: Two variables are "partition-dependent" if they share any external partition target variables, or if one is the target of an external partition of the other. If object names referred to non-partition-dependent variables at compile time but refer to partition-dependent variables in the run-time context, the OLAP DML program, formula, or model will be automatically recompiled.

Action: None needed.

ORA-33446: (ESDREAD03) Discarding compiled code for *workspace object* because *number* is now a *string*. It was another kind of object when the code was compiled.

ORA-33447: (ESDREAD16) Discarding compiled code for *workspace object* because *workspace object* and *workspace object*, which were partition-dependent when the code was compiled, are now not partition-dependent.

Cause: Two variables are "partition-dependent" if they share any external partition target variables, or if one is the target of an external partition of the other. If object names referred to partition-dependent variables at compile time but refer to non-partition-dependent variables in the run-time context, the OLAP DML program, formula, or model will be automatically recompiled.

Action: None needed.

ORA-33448: (ESDREAD04) Discarding compiled code for *workspace object* because *number* now has *string* data, whereas it had *string* data when the code was compiled.

Cause: The data type of the specified variable has changed.

Action: None

ORA-33449: (ESDREAD17) Discarding compiled code for *workspace object* because the partition method or partition dimension of *number* has changed since it was compiled.

Cause: The partitioning method (LIST, RANGE, or CONCAT) or the partition dimension of the partition template was different from what it was when the code was compiled. This required recompilation of the code.

Action: None needed.

ORA-33450: (ESDREAD05) Discarding compiled code for *workspace object* because *number* now has more or fewer dimensions than it had when the code was compiled.

Cause: The dimensionality of the specified object has changed.

Action: None needed.

ORA-33452: (ESDREAD06) Discarding compiled code for *workspace object* because *number* is now dimensioned by *workspace object*. It was dimensioned by *workspace object* when the code was compiled.

Cause: The dimensionality of the specified object has changed.

Action: None needed.

ORA-33454: (ESDREAD07) Discarding compiled code for *workspace object* because *number* is now *string workspace object*, whereas it was *string workspace object* when the code was compiled.

Cause: The specified object has changed.

Action: None needed.

ORA-33456: (ESDREAD08) Discarding compiled code for *workspace object* because *number* is a(n) *string*, which *string* did not expect to find in a compiled program.

Cause: The type of the specified object has changed.

Action: None needed.

ORA-33458: (ESDREAD09) Discarding compiled code for *workspace object* because *number* is now type *string*, whereas it was type *string* when the code was compiled.

Cause: The type of the specified object has changed.

Action: None needed.

ORA-33460: (ESDREAD10) Discarding compiled code for *workspace object* because object *workspace object* is not in analytic workspace *string*.

Cause: The specified object is not in the same analytic workspace it was in when the compiled object was compiled.

Action: None needed.

ORA-33462: (ESDREAD10A) Discarding compiled code for *workspace object* because object *number* is not in analytic workspace *string*.

Cause: The specified object was not in the same analytic workspace it was when the compiled object was compiled

Action: None needed.

ORA-33464: (ESDREAD11) Discarding compiled code for *workspace object* because two external objects that were different at compile time are now the same object (*workspace object*).

ORA-33466: (ESDREAD12) Discarding compiled code for *workspace object* because model dimension *number* is not in the same analytic workspace as solution variable *number*.

ORA-33468: (ESDREAD13) Discarding compiled code for *workspace object* because *number* is no longer a surrogate of dimension *workspace object*.

Cause: When the compiled code was saved, the specified object was a surrogate of a certain dimension. Now the specified object is a surrogate of a different dimension.

Action: No action needed; program automatically recompiles.

ORA-33472: (EXPCHECK1) The *workspace object* formula cannot be edited or compiled while it is executing.

ORA-33474: (EXPCOMP01) The calculation expression in formula *workspace object* contains a format error.

ORA-33475: (EXPCOMP02) Invalid expression '*number*'.

Cause: The expression had a syntax error.

Action: Consult the Oracle OLAP Expression syntax documentation to correct your expression syntax.

ORA-33476: (EXPORT00) Target file (*string*) already exists. No data is being exported.

ORA-33478: (FCFINI02) too many NA values in the input data to FORECAST

Cause: The input data provided for the FORECAST command contained too many NA values, preventing FORECAST from generating interpolated values.

Action: Reduce the number of NA values in the input data, or choose a different forecasting method.

ORA-33480: (FCFINI04) An error occurred while filling in the NA values in the input data.

Cause: A mathematical error occurred while FORECAST was attempting to fill in NA values in the input data. This may have been caused by an attempt to raise a number to a negative exponent or to take the square root of a negative number.

Action: Set the DIVIDEBYZERO and ROOTOFNEGATIVE options to TRUE and reexecute the FORECAST.

ORA-33482: (FCFINI05) Calculation of starting values and handling of NA values in the input data require at least two cycles of input data.

Cause: There were not enough values in the input data to allow for the calculation of starting values or for the filling in of NA values.

Action: Provide at least two cycles of input data.

ORA-33484: (FCFINI06) An error occurred while calculating starting values for the smooth, trend, and seasonal series.**ORA-33486: (FCFINI07) *string* cannot calculate starting values from this input data.****ORA-33488: (FCFINI08) The forecast input has resulted in a divide-by-zero error in the calculation of the smoothed data series.****ORA-33490: (FCFINI09) The forecast input has resulted in a divide-by-zero error in the calculation of the seasonal index series.****ORA-33492: (FCINFO00) There is no saved forecast calculation for the INFO function to retrieve.****ORA-33494: (FCREATE01) File *string* is already open on file unit number *number*.****ORA-33508: (FILEREAD01) Fileunit *number* is invalid. FILEREAD and FILEVIEW can only access input files opened with the FILEOPEN function.**

Cause: The specified fileunit number did not refer to a file opened for input by FILEOPEN.

Action: Use the LISTFILES command to list available files, or the FILEOPEN function to open a new input file.

ORA-33510: (FILEREAD04) Unexpected EOF encountered in string while importing data.**ORA-33512: (FILESET01A) The value of the PAGESIZE option must be greater than the combined values of TMARGIN and BMARGIN.**

Cause: You must leave at least one line on the page for content.

Action: Increase PAGESIZE or decrease the margins.

ORA-33514: (FILESET02) The value of the TABEXPAND option must be between 0 and 100 inclusive. You specified *number*.

ORA-33516: (FILESET04) You can set the *string* attribute only if the fileunit is used exclusively for output.

ORA-33520: (FINENG01) The number of periods specified in the *string* function must be greater than 0 and less than or equal to *number*.

ORA-33522: (FINENG02) The second argument of the *string* function cannot be NA while the corresponding first argument is not NA.

ORA-33524: (FINENG03) Both the first and second arguments of the *string* function must be nonnegative.

ORA-33526: (FINENG04) An asset value cannot be NA when the corresponding salvage value is not NA.

ORA-33528: (FINENG05) The asset value must be greater than the salvage value.

ORA-33530: (FINENG06) The first period depreciation strategy argument of the *string* function cannot be NA.

ORA-33532: (FINENG07) The first period depreciation strategy argument of the *string* function must evaluate to the word FULL or HALF.

ORA-33534: (FINENG08) The rate argument of payment or interest function cannot be NA while the corresponding principal argument is not NA.

ORA-33536: (FINENG09) Both the principal and rate arguments of the payment and interest functions must be nonnegative.

ORA-33538: (FINENG10) An internal error (*number*) has occurred while evaluating an interest or payment function.

ORA-33540: (FINENG11) The decline-factor argument must be greater than 0.

ORA-33542: (FISOPEN01) A file identifier cannot exceed *number* characters.

ORA-33546: (FNAMEQRY01) You must specify a file unit number for the *string* option of FILEQUERY.

ORA-33554: (FORCHECK01) The status or contents of *workspace object* cannot be changed while looping over it.

Cause: A program has attempted to change or limit a dimension while inside a loop over that dimension.

Action: To handle this error in your program, use the TRAP command to catch the 'FORCHECK01' error.

ORA-33555: (FORCHECK03) While looping over alias dimension *workspace object*, you cannot change the contents of its base *workspace object*.

ORA-33556: (FORCHECK51) While looping over concat dimension *workspace object*, you cannot change the contents of its leaves.

ORA-33557: (MAINTCHK01) You cannot *string* values of dimension *workspace object* during a loop over it.

Cause: An attempt was made to insert or delete a value of the specified dimension while some loop over that dimension was active. - The loop could be an explicit FOR or ACROSS loop, or a natural expression evaluation or OLAP_TABLE loop. - The loop could be over the dimension itself or over a derived dimension (like a composite

or partition template) or dimension alias that included it. * The insert or delete could be explicitly caused by the MAINTAIN command. * An attempt to assign a value to a variable or partition dimensioned by a composite during a loop over that composite using a qualified data reference (QDR), and that the exception was generated by the engine's attempt to insert a new position in the composite to hold the new value.

Action: Move the dimension maintenance or QDR-based variable assignment outside the dimension loop.

ORA-33558: (LOCKCHECK01) The status or contents of the *workspace object* dimension cannot be changed while the LOCK_LANGUAGE_DIMS option is set to *value*.

Cause: A LIMIT or MAINTAIN was attempted on the named language dimension while the boolean option LOCK_LANGUAGE_DIMS was set to YES.

Action: SET LOCK_LANGUAGE_DIMS to NO and retry the MAINTAIN or LIMIT.

ORA-33560: (FORECAST00) The time dimension (*workspace object*) has no values in status. The forecast cannot be calculated.

ORA-33562: (FORECAST01) The forecast LENGTH must be an non-NA value that is greater than or equal to zero.

ORA-33564: (FORECAST02) Sum of forecast LENGTH and number of time dimension values in status equals *number*. The maximum is *number*.

ORA-33566: (FORECAST03) The values of ALPHA, BETA, and GAMMA must be greater than zero and less than or equal to one.

ORA-33568: (FORECAST04) The forecast PERIODICITY must be greater than or equal to 2.

ORA-33570: (FORECAST05) The forecast PERIODICITY must be less than or equal to the number of historical observations in the input data.

ORA-33572: (FORECAST07) In a forecast calculation, the time dimension (*number*) must have consecutive values in status.

ORA-33574: (FORECAST09) The forecast length extends beyond the end of the time dimension (*number*). Only *number* values will be calculated.

ORA-33576: (FORECAST10) The number of non-NA observations must be greater than 1 to calculate a TREND forecast.

ORA-33578: (FORECAST11) The number of positive observations must be greater than 1 to calculate an EXPONENTIAL forecast.

ORA-33580: (FORECAST12) The number of historical periods (*number*) exceeds the number of values in the current status of *workspace object* (*number*).

ORA-33582: (FORECAST13) The number of historical periods must be a non-NA value greater than zero.

ORA-33596: (FORECAST106) No forecast values can be shown since no FCNAME variable was specified to hold the results of the forecast.

ORA-33610: (FORSTEP01) Program control transferred into a FOR loop from outside the loop. This transfer is not allowed.

ORA-33612: (FPUTENG01) The file unit operand of the FILEPUT command does not have a value.

ORA-33614: (FPUTENG02) File *string* was opened for input only.

Cause: An attempt was made to write to a file that was opened for READ access.

Action: Close the file and then open it for WRITE or APPEND access.

ORA-33616: (FPUTENG04) The FROM file unit operand of the FILEPUT command does not have a value.

ORA-33618: (FPUTENG05) There is not sufficient room on the page to write data. Check your PAGESIZE, TMARGIN, BMARGIN and header values.

ORA-33620: (FRACRPOS01) *string* is not a valid field option for a record in *string* format.

ORA-33622: (FRAPPEND01) You cannot specify a position when appending to an INTEGER dimension.

ORA-33624: (FRASSIGN01) *workspace object* is a WORKSHEET. You cannot use the Data Reader to assign values to it.

ORA-33625: (FRASSIGN02) You cannot use the APPEND keyword with concat dimension *workspace object*.

Cause: User used the APPEND keyword on a CONCAT target in a FILEREAD, SQL FETCH or SQL SELECT command.

Action: APPENDING a value to one of the CONCATs leaves automatically appends to the CONCAT.

ORA-33626: (FRATPUSH01) *string* is not a valid field option for a record in *string* format.

ORA-33628: (FRATPUSH02) Dimension maintenance attributes can only be specified on the left side of the equal sign.

ORA-33630: (FRCBCHEK01) Invalid file unit *number*. Files read by FILEREAD or FILEVIEW must be input files opened via the FILEOPEN function.

ORA-33632: (FRCBCHEK02) No current record is available for file unit *number*.

ORA-33634: (FRCBSET01) *string* is not a valid value for the ORIGIN option of FILESET. Valid values are: *string*.

ORA-33636: (FRERROR01) *number* is not a valid value for *string*. Values for this attribute cannot be less than 1.

ORA-33638: (FRERROR02) *number* is not a valid value for SPACE because it results in a *string* value of *number*.

ORA-33640: (FRERROR03) There is no field of width *number* at column *number*. The current record is only *number* bytes long.

ORA-33642: (FRERROR04) *number* is not a valid width for *string string* data.

ORA-33644: (FRERROR05) NA is not a valid width for *string string* data. There is no default width for this data type.

ORA-33646: (FRERROR06) The string '*string*' is not a valid *string* value.

ORA-33648: (FRERROR07) The current packed field contains the invalid hexadecimal digit "*character*".

ORA-33650: (FRERROR08) The current packed field contains the invalid sign digit "*character*".

ORA-33652: (FRERROR09) *value* is not a valid *workspace object*.

ORA-33654: (FRERROR10) The *workspace object* dimension does not have a value numbered *number*.

ORA-33656: (FRERROR11) The time dimension *workspace object* is empty. You cannot append integer positions to it unless it has at least one value.

ORA-33658: (FRFILPUT01) File *string* is invalid. Source files for FILEPUT must be input files opened via the FILEOPEN function.

ORA-33660: (FRFILPUT02) You cannot write from file *string* to file *string*, because the output file was not opened with the BINARY option.

ORA-33662: (FRFILPUT03) You cannot write from file *string* to file *string*, because the output file was opened with the BINARY option.

ORA-33664: (FRSPARSE01) You cannot specify a dimension list for *workspace object* because it is not a conjoint dimension.

ORA-33666: (FRSTRDLM01) The *string* expression cannot have more than one line.

ORA-33668: (FRSTRDLM02) *number* is not a valid value for the *string* expression.

ORA-33670: (FRSTRDLM03) The *string* and DELIMITER expressions cannot have the same value.

ORA-33672: (FRSTRDLM04) A CSV DELIMITER cannot be set to a double quote or NULL.

ORA-33674: (FTCODE00) Data block size *number* exceeds the maximum size of *number*.

ORA-33678: (GETSCAL00) The text expression specifying a DIMENSION data type cannot evaluate to NA.

ORA-33680: (GETTIMER00) first

ORA-33682: (GETTIMER01) The *number* parameter to *string* is dimensioned by more than one time dimension.

ORA-33684: (GETTIMER02) The *number* parameter to *string* must be dimensioned by a time dimension, or an explicit time dimension must be given.

Cause: If you use a DAY, WEEK, MONTH, or QUARTER dimension, the time dimension will be chosen by this command or function.

Action: If you do not use one of these dimensions, this command or function requires that you supply a time dimension.

ORA-33686: (GETTIMER03) The *number* parameter to *string* is not dimensioned by *workspace object*.

ORA-33688: (GETTIMER04) The dimension composite *workspace object* cannot be used as a time dimension.

ORA-33690: (GETXVAL01) The formula *workspace object* cannot be recursively evaluated because the RECURSIVE option is set to NO.

ORA-33692: (GROWENG01) GROWRATE requires a time dimension with at least two values in status.

Cause: The formula for GROWRATE returned a divide-by-zero error with a status length of zero or one.

Action: Change the time dimension status to include the first and last values for GROWRATE.

ORA-33694: (GROWENG02) The expression in the GROWRATE function must have non-NA values at the beginning and end of the given time interval.

ORA-33696: (GROWENG03) The beginning and ending values of the expression in GROWRATE must both be positive or both be negative.

ORA-33698: (GROWENG04) Cannot calculate the growrate for the values given

ORA-33700: (GROWENG05) The first value of the expression in the GROWRATE function must not be zero.

Cause: The first value provided in the GROWRATE function was invalid.

Action: The first value in the GROWRATE function must not be zero.

ORA-33704: (ILPCHECK01) *workspace object* is not a program.

ORA-33706: (ILPCHECK12) The *workspace object* program cannot be compiled because it contains structural errors.

ORA-33708: (ILPCHECK13) The *workspace object* program cannot be compiled while it is executing.

ORA-33712: (ILPCHECK22) The *workspace object* program cannot be executed because it contains structural errors.

ORA-33720: (ILPCHECK43) The *workspace object* program cannot be hidden or unhidden while it is executing.

ORA-33722: (ILPCOMP05) All *string* statements must precede the first non-declarative statement.

ORA-33724: (ILPCOMP07) The *workspace object* program could not be compiled because of an unrecoverable error.

Cause: The previous errors prevent the program from compiling.

Action: Fix the program and retry.

ORA-33726: (ILPENG02) *workspace object* cannot be used more than once in simultaneous or nested FOR statements or ACROSS commands.

ORA-33728: (ILPINIT01) You cannot initialize *workspace object* because it is currently running.

ORA-33730: (ILPLNK01) Discarding compiled code for *workspace object* because it was compiled with code version *number*. The current code version is *number*.

ORA-33732: (ILPONLY) The *string* function can only be used in a program.

ORA-33734: (ILPPUT01) Label *string* conflicts with at least one other label in *workspace object*. Labels must be unique for the first 8 characters.

Cause: There was a compiler error.

Action: Find the duplicate label and give it a unique name.

ORA-33736: (ILPPUT02) The *workspace object* program contains unmatched DO or DOEND statements.

Cause: The program has a compiler error.

Action: Fix the unmatched DO or DOEND statements.

ORA-33738: (ILPPUT03) Program *workspace object* either contains unmatched IF, WHILE, TEMPSTAT, FOR, or IF THEN ELSE statement, or contains duplicate labels.

Cause: There was a compiler error.

Action: Find the structural error and fix it.

ORA-33740: (ILPPUT04) On the line defining label *string* in the *workspace object* program, the text following the label is ignored.

Cause: Extra text following the label was ignored.

Action: Remove the extraneous text.

ORA-33742: (ILPPUT06) The *workspace object* program contains too many source lines. The limit is *number* lines. The program has been truncated.

Cause: A program was automatically truncated because there were too many source lines.

Action: Change the code that generates programs to handle a large number of commands with multiple programs.

ORA-33744: (ILPPUT07) Program *workspace object* contains text on the same line as a DO or DOEND statement.

Cause: There was a program compiler error.

Action: Remove the extraneous text.

ORA-33746: (ILPPUT08) *number* must be preceded by an IF clause.

Cause: There was a compiler error.

Action: Add the missing IF clause.

ORA-33748: (ILPPUT09) *number* must be preceded by a THEN clause.

Cause: There was a compiler error.

Action: Add the missing THEN clause.

ORA-33750: (ILPXEQ01) A referenced object can no longer be located. Execution will continue in interpreted mode.

Cause: This is a warning message that is only printed when COMPILEWARN is on.

Action: Turn off COMPILEWARN if you do not want to see this message.

ORA-33756: (ILTRK01) No data has been recorded by the TRACKPRG command.

ORA-33758: (IMPQUAF0) The EIF file *string* does not have any objects in it.

ORA-33760: (IMPQUAF02) \nThere are *number* objects in the EIF file:

ORA-33762: (XSCHGDIM01) Invalid LIMIT argument starting at *string*.

ORA-33766: (INFOFC00) Invalid second argument to INFO(FORECAST *string*).

ORA-33768: (INFOMOD00) Invalid second argument to INFO(MODEL *string*).

ORA-33770: (INFOPARS01) Invalid second argument to INFO(PARSE *string*).

ORA-33772: (INFOFORG00) Invalid second argument to INFO(REGRESS *string*).

ORA-33774: (INTERP1) *string* is not a command.

ORA-33776: (INTERP1A) *workspace object* is not a command.

ORA-33780: (INTERP3) The *string* command can only be used in a program.

ORA-33782: (INTERP4) The *string* command cannot be executed by ampersand substitution.

ORA-33784: (INTERP5) Ampersand substitution is not permitted in a *string* statement.

Cause: An ampersand substitution was attempted. This is not allowed in ARGUMENT or VARIABLE commands.

Action: Rewrite the program to work around this limitation.

ORA-33788: (INTTOK01) *string* is not composed solely of digits.

ORA-33790: (IOERROR01) I/O error on file *string*: *string*.

ORA-33792: (IOERROR02) I/O error on file *string*: Error text not available.

ORA-33796: (IOEXECUT00) The file identifier argument of *string* does not have a value.

ORA-33798: (IOEXECUT01) File *string* is the current OUTFILE or LOG unit, and cannot be closed with the FILECLOSE command.

ORA-33800: (IOEXECUT02A) The LENGTH argument to the FILEGET function (*number*) is negative.

ORA-33802: (IOEXECUT02B) File *string* was opened for writing.

ORA-33804: (IOEXECUT02C) File *string* was opened for binary input. You must use FILEREAD or FILENEXT to read data from this file.

ORA-33806: (IOEXECUT03A) The *string* option of FILEQUERY is not supported in this version of *string*.

ORA-33808: (IOEXECUT03B) You have requested a FILEQUERY option that is not supported in this version of *string*.

ORA-33810: (IOEXECUT04A) The *string* option of FILESET is not supported in this version of *string*.

ORA-33812: (IOEXECUT04B) The *string* option of a file cannot be changed by the FILESET command.

ORA-33814: (IOEXECUT04C) The value to be set for the *string* option cannot be NA.

ORA-33816: (IOEXECUT04D) You have requested a FILESET option that is not supported in this version of *string*.

ORA-33818: (IOEXECUT05) File unit *number* is invalid. *string* can access only input files opened via the FILEOPEN function.

ORA-33820: (IOEXECUT06) The file name argument to *string* cannot be null or blank.

ORA-33822: (IRR01) Time dimension *workspace object* has a range in status of *number* periods. The maximum range allowed by the IRR function is *number* periods.

ORA-33824: (ISDBUILD01) A local scalar named *string* already exists.

ORA-33826: (LINEDEL01) The number of the first line to remove must be between 1 and the total number of lines of the expression. *number* is out of range.

Cause: The line number of the expression to be removed was larger than the number of lines in the expression.

Action: Change the line number to be removed to be between 1 and the total number of lines in the expression.

ORA-33828: (LINEDEL02) You must remove at least one line. You cannot remove *number* lines.

ORA-33830: (LINEINS01) The line number after which inserting begins (*number*) is negative.

ORA-33832: (LINEREP01) The number of the first line to replace must be between 1 and the expression's total number of lines. *number* is out of range.

ORA-33834: (LINEXTR01) The line number of the first line to extract must be greater than 0. You cannot start extracting at line *number*.

ORA-33836: (LINEXTR02) You must extract at least one line. You cannot extract *number* lines.

ORA-33838: (LLPINIT05) You attempted to loop over the time dimension *workspace object* beyond the allowable range of dates.

ORA-33840: (LOOPCODE01) Multiple relations exist between *workspace object* and the dimensions of the expression to be aggregated. One is *workspace object*, and another is *workspace object*.

ORA-33842: (LOOPCODE02) *workspace object* cannot be used for aggregation. It is unrelated to the data's dimensions, or it is less aggregate than one of them.

ORA-33844: (LOOPCODE03) Time dimensions *workspace object* and *workspace object* are both dimensions of the data. Breaking out the aggregation by time is ambiguous.

ORA-33846: (LXNXTREC00) The input line was terminated by an end-of-file that occurred sooner than expected. The line might be incomplete.

ORA-33848: (LXNXTREC01) The input line was truncated to the maximum allowable size of *number* characters.

ORA-33852: (LXPARSE01) You provided extra input starting at '*string*'.

ORA-33854: (LXTOKEN01) The statement cannot be parsed because it is too long or too complex.

ORA-33856: (LXSUBST01) *string* is not a valid ampersand-substitution expression.

ORA-33858: (LXSUBST02) The value of the ampersand-substitution expression is NA.

ORA-33860: (MAKEDCL01) You have no current analytic workspace. You must attach or create an analytic workspace before defining a new object.

ORA-33862: (MAKEDCL02) You must specify a data type when you define a *string*.

ORA-33864: (MAKEDCL03) You cannot use the data type attribute when you define a *string*.

Cause: This object type does not accept a user specified data type.

Action: Omit the data type.

ORA-33866: (MAKEDCL04) Your current analytic workspace does not contain an object named *workspace object*.

ORA-33868: (MAKEDCL05) You must specify two or more dimensions when you supply a dimension list for a WORKSHEET.

ORA-33870: (MAKEDCL06) You cannot use the *string* attribute when you define a *string*.

ORA-33872: (MAKEDCL07) The *string* DIMENSION must have a data type (ID, NTEXT, TEXT, NUMBER, DATETIME, TIMESTAMP, or INTEGER), a time period, or a list of bases for a conjoint dimension.

ORA-33874: (MAKEDCL08) *string* is not the name of a valid option.

ORA-33876: (MAKEDCL09) *string* must be an INTEGER dimension.

ORA-33878: (MAKEDCL10) Nested composites are not supported when compatability is 11 or greater.

ORA-33880: (MAKEDCL11) Dimensions specified for a WORKSHEET must be INTEGER dimensions.

Cause: A WORKSHEET requires two integer dimensions.

Action: Accept the default WORKSHEET dimensions WKSCOL and WKSROW, or define your own integer dimension.

ORA-33882: (MAKEDCL12) You cannot use the *string* attribute when you define a *string* of type *string*.

ORA-33883: (MAKEDCL36) You cannot use the *string* attribute when you define an EXTERNAL partition with an existing target.

Cause: User gave the TEMPORARY keyword in the definition of an external partition whose target variable was previously defined.

Action: Any storage characteristics of the external partition are determined by the target variable. These attributes should be set when the target is defined, not when the external partition is defined.

ORA-33884: (MAKEDCL13) You can specify the TEMPORARY attribute only for a variable, dimension, relation, valueset, or worksheet.

ORA-33886: (MAKEDCL14) You cannot define an object dimensioned by **NAME**, because it is a special reserved dimension used to organize your analytic workspace dictionary.

ORA-33888: (MAKEDCL15) You cannot use the *string* attribute when you define a fixed-width **TEXT** *string*.

Cause: **OWNSPACE** and **SHAREDSPACE** attributes were not supported in a version 9 analytic workspace.

Action: Upgrade to a more recent version.

ORA-33890: (MAKEDCL16) You cannot use the dimension list attribute when you define a *string*.

ORA-33892: (MAKEDCL17) You cannot use the *string* attribute when you define a scalar *string*.

ORA-33893: (MAKEDCL18) The **TEMPORARY** attribute cannot be specified for this type of dimension

ORA-33894: (MAKEDCL20) The **WIDTH** attribute can only be used with non-scalar **TEXT** and **INTEGER** variables, or with **TEXT** dimensions.

ORA-33895: (MAKEDCL19) You can specify the **SHAREMAP** attribute only for a multiply dimensioned variable, relation, valueset, or worksheet.

ORA-33896: (MAKEDCL21) The **WIDTH** attribute for **TEXT** data must be a number between 1 and 4000.

ORA-33898: (MAKEDCL22) The **WIDTH** attribute for **INTEGER** data must be 1.

ORA-33900: (MAKEDCL23) The **NOHASH** attribute is only valid for conjoint dimensions.

ORA-33902: (MAKEDCL24) The *string* attribute is only valid for conjoint dimensions and dimension composites.

ORA-33904: (MAKEDCL25) *workspace object* is a dimension composite or is dimensioned by a dimension composite. You cannot use it as the type of a *string*.

ORA-33908: (MAKEDCL27) You cannot use the *string* attribute when you define a **DIMENSION ALIAS**, **CONCAT**, or **PARTITION TEMPLATE**.

Cause: The specified attribute could not be applied to a **DIMENSION ALIAS**, **CONCAT**, or **PARTITION TEMPLATE**.

Action: Remove the attribute from the **DIMENSION ALIAS**, **CONCAT**, or **PARTITION TEMPLATE** definition and retry the operation.

ORA-33910: (MAKEDCL28) You cannot specify a data type when you define a **DIMENSION ALIAS**, **CONCAT**, or **PARTITION TEMPLATE**.

ORA-33911: (MAKEDCL29) You cannot define a *string* in analytic workspace *string* because it has not been upgraded to version *string*.

Cause: User attempted to define an object that requires a certain compatibility setting in an AW that has not been upgraded to that compatibility level.

Action: Make sure that the database is running in the appropriate compatibility mode, and upgrade the AW.

ORA-33912: (MAKEDCL30) An AGGMAP cannot be dimensioned by a conjoint dimension.

ORA-33914: (MAKEDCL31) You cannot define a dimension alias of another dimension alias.

ORA-33916: (MAKEDCL32) The dimension alias target *workspace object* is not a simple dimension.

ORA-33918: (MAKEDCL33) You cannot define a surrogate of dimension *workspace object* because it is a *string*.

Cause: Not all kinds of dimensions can have surrogates. The user attempted to define a surrogate of a prohibited kind of dimension.

Action: Do not attempt to define a surrogate on this dimension.

ORA-33920: (MAKEDCL34) The *string* SURROGATE must have one of the following data types: ID, NTEXT, TEXT, NUMBER, DATETIME, TIMESTAMP, or INTEGER.

Cause: The user attempted to define a surrogate without specifying a valid data type.

Action: Specify the data type (ID, NTEXT, TEXT, NUMBER, or INTEGER) in the definition of the surrogate.

ORA-33922: (MAKEDCL35) You cannot define a surrogate of dimension *workspace object* because it is a time dimension.

Cause: The user attempted to define a surrogate on a dimension that has type DAY, WEEK, MONTH, or YEAR.

Action: Do not attempt to define a surrogate on this dimension.

ORA-33934: (MISCOPTI01) OFF

ORA-33936: (MISCOPTI04) NA

ORA-33938: (MISCOPTI05) Press *Enter* to continue.

ORA-33940: (MISCOPTI06) *DDMTXTYY*

ORA-33942: (MODCALL01) Model *workspace object* cannot be run because another model is already active.

ORA-33944: (MODCALL02) Model *workspace object* needs a solution variable; one was not provided.

ORA-33946: (MODCALL03) Model *workspace object* does not take a solution variable, because it has no model dimensions.

ORA-33948: (MODCALL04) A solution variable must be provided for model *workspace object*; however, *workspace object* is not a variable.

ORA-33950: (MODCALL05) The solution variable specified for the model *workspace object* must be numeric. Variable *workspace object* is type *string*.

ORA-33952: (MODCALL08) A solution variable must be specified for model *workspace object*; however, *workspace object* has no dimensions.

ORA-33954: (MODCALL09) Solution variable *workspace object* is not dimensioned by *workspace object*, which is a dimension of model *workspace object*.

ORA-33956: (MODCALL10) The execution of model *workspace object* cannot be completed due to an internal error (TYPE = *number*).

ORA-33958: (MODCALL11) The syntax for invoking a model is:\n model-name [solution-variable] [NOWARN]

ORA-33960: (MODCALL14) Model *workspace object* contains simultaneous equations.

ORA-33962: (MODCALL15) Model *workspace object* failed to converge after *number* iterations in block *number*.

ORA-33964: (MODCALL16) Model *workspace object* diverged during iteration *number* in block *number* while executing statement *number* of model *workspace object*.

ORA-33966: (MODCALL17) The solution variable *workspace object* is referenced as a variable in model *workspace object*.

ORA-33968: (MODCALL18) Solution variable *workspace object* is dimensioned by *workspace object*, which is not a dimension of model *workspace object* but is a dimension of a model execution block.

ORA-33970: (MODCALL19) Solution variable *workspace object* is not dimensioned by *workspace object*, but model *workspace object* contains dimension-based equations that reference its values.

ORA-33972: (MODCHECK01) *workspace object* is not a model.

ORA-33973: (MODCHECK02) The *workspace object* model cannot be compiled while it is executing.

ORA-33974: (MODCHECK12) The *workspace object* model cannot be compiled because it contains structural errors.

ORA-33975: (MODCHECK13) The *workspace object* model cannot be hidden or unhidden while it is executing.

ORA-33976: (MODCHECK22) The *workspace object* model cannot be executed because it contains structural errors.

ORA-33978: (MODCOMP01) *workspace object* has already been named in a DIMENSION statement in this model.

ORA-33980: (MODCOMP02) DIMENSION statements are not allowed after an equation has appeared.

ORA-33982: (MODCOMP03) DIMENSION statements are not allowed after an INCLUDE statement has appeared.

ORA-33983: (MODCOMP15) The DIMENSION statement must list the dimensions of any included models.

ORA-33984: (MODCOMP04) INCLUDE statements are not allowed after an equation has appeared.

ORA-33986: (MODCOMP05) Only one INCLUDE statement is allowed in a model.

ORA-33988: (MODCOMP06) An INCLUDE statement must refer to another model; *workspace object* is not a model.

ORA-33990: (MODCOMP08) Models cannot be included recursively; *workspace object* has already been included.

ORA-33992: (MODCOMP09) The format of the DIMENSION command is:\n DIMENSION dimension1 [dimension2...]

ORA-33994: (MODCOMP10) The format of the INCLUDE command is:\n INCLUDE model

ORA-33996: (MODCOMP11) *workspace object* is not named in a DIMENSION statement in this model.

ORA-33998: (MODCOMP12) You cannot use both *workspace object* and *workspace object* as model dimensions, because *workspace object* is a surrogate of *workspace object*.

Cause: The user attempted to include both a dimension and its surrogate in the DIMENSION statement of a model.

Action: Use either the dimension or the surrogate in the DIMENSION statement of the model, but not both.

ORA-34000: (MODCOMP13) You cannot use both *workspace object* and *workspace object* as model dimensions, because they are both surrogates of dimension *workspace object*.

Cause: The user attempted to include two dimension surrogates of the same dimension in the DIMENSION statement of a model.

Action: Use either of the two surrogates in the DIMENSION statement of the model, but not both.

ORA-34001: (MODCOMP14) Concat leaf dimension *workspace object* already is used in a DIMENSION statement, either explicitly or as a leaf of another concat dimension.

Cause: Either two concat dimensions which share a common leaf dimension, or a concat and one of its leaves where both specified in the DIMENSION statement(s).

Action: Do not specify overlapping concat dimensions, or any leaves of specified concat dimensions.

ORA-34004: (MODGRAPH01) The model *workspace object* cannot be compiled due to internal error *number*. Contact Oracle OLAP Technical support.

ORA-34006: (MODINFO00) There is no saved model information for the INFO function to retrieve.

ORA-34008: (MODINFO01) Model *workspace object* has not been compiled; the information requested is available only after compilation.

ORA-34010: (MODINFO02) Model *workspace object* has not been executed; the information requested is available only after execution.

ORA-34012: (MODPUT06) The *workspace object* model contains too many source lines. The limit is *number* lines. The model has been truncated.

ORA-34014: (MONITOR01) No data has been recorded by the MONITOR command.

ORA-34016: (MONITOR02) No program name has been supplied for the MONITOR command.

ORA-34018: (MSCGADD01) *workspace object* is an INTEGER dimension. Specify only the number of values to be added, not the specific values themselves.

ORA-34019: (MSCGADD03) workspace object is not a LIST PARTITION TEMPLATE.

Cause: User attempted to MAINTAIN ADD or DELETE a list value from a RANGE or CONCAT partition template.

Action: Partitioning in a RANGE or CONCAT partition template cannot be changed using the MAINTAIN command.

ORA-34020: (MSCGADD02) workspace object is not a time dimension. You cannot add time periods to it.**ORA-34021: (MSCGADD04) You must specify a partition when maintaining PARTITION TEMPLATE workspace object.**

Cause: User attempted to MAINTAIN ADD or DELETE a list value from a LIST partition template, but didn't specify which partition to add to or delete from.

Action: Specify the partition: maintain (template) add to partition (partitionname) (values) or maintain (template) delete from partition (partitionname) (values)

ORA-34022: (MSCGDEL02) You can only delete time periods from a time dimension.**ORA-34024: (MSCGMRG01) The RELATE keyword cannot be specified when the MERGE expression has no dimensions.**

Cause: The MERGE expression did not contain dimensions.

Action: Specify a valid MERGE expression or refer to Oracle Database documentation for the correct syntax. Dimensions are required in the MERGE expression when using the RELATE keyword.

ORA-34026: (MSCGMRG02) workspace object is not a relationship between workspace object and the dimensions of the source expression.**ORA-34028: (MSCGMRG03) workspace object, the value of the RELATE relation, is not one of the dimensions of the source expression.****ORA-34030: (MSCGPOS00) workspace object is a time dimension. You can add values to it only FIRST or LAST.**

Cause: There are no gaps in time dimensions. New periods must be added to the beginning or the end.

Action: The only acceptable syntax is n PERIODS FIRST or n PERIODS LAST.

ORA-34031: (MSCGPOS02) Position keywords may not be specified when adding values to DATETIME dimension workspace object.

Cause: The position of DATETIME dimension values is automatically maintained. Dimension values are automatically maintained in a sorted order.

Action: Do not specify BEFORE, AFTER, FIRST or LAST for DATETIME dimension values.

ORA-34032: (MSCGPOS01) Position keywords may not be specified when adding values to dimension composite workspace object.

Cause: You cannot specify a position when adding values to it. You cannot specify a position for new composite dimension values.

Action: Do not use FIRST, LAST, BEFORE, or AFTER.

ORA-34034: (MSEXECUT00B) value is already a value of workspace object.**ORA-34036: (MSEXECUT00C) number is already a value of workspace object.**

ORA-34038: (MSEXECUT01) The expression for the position to add, merge, or delete is NA.

Cause: The position argument was NA.

Action: Use a correct position argument.

ORA-34039: (TRGPRG02) *workspace object* cannot be deleted while its trigger is executing.

ORA-34040: (TRGSET01) The TRIGGERASSIGN command can only be used in an ASSIGN TRIGGER.

ORA-34041: (TRGPRG01) A TRIGGER cannot be called recursively for the same object and event.

ORA-34042: (MSEXECUT03A) The expression for the position to be renamed is NA.

ORA-34044: (MSEXECUT03B) The expression for the new dimension value is NA.

ORA-34046: (MSEXECUT03C) *value* is already a value of *workspace object*.

Cause: An attempt to rename a dimension value failed because the new value already exists.

Action: Rename the dimension member to a unique value.

ORA-34048: (MSEXECUT04) Time dimension *workspace object* is empty. You must give it a value before you can add periods to its beginning or end.

ORA-34050: (MSEXECUT05) The expression for the argument to BEFORE or AFTER is NA.

ORA-34052: (MSEXECUT06) All dimension values must be single line values.

ORA-34054: (MSEXECUT07) *number* is already a value of *workspace object*.

ORA-34056: (MSEXECUT08) The number of periods to add cannot be negative, zero, or NA.

ORA-34058: (MSEXECUT09) The number of periods to delete cannot be negative, zero, or NA.

Cause: The number of periods was not valid.

Action: Use a positive integer for the number of periods.

ORA-34059: (MSEXECUT12) You cannot delete non session-only dimension values from unique concat dimension *workspace object*.

Cause: The user tried to apply MAINTAIN DELETE to a non-SESSION value.

Action: Only use MAINTAIN DELETE to remove SESSION values from a concat dimension.

ORA-34060: (MSEXECUT10) You do not have permission to maintain *workspace object*.

ORA-34061: (MSEXECUT11) Session-only values cannot be added to non-unique concat dimension *workspace object*, or any of its base dimensions.

Cause: Only UNIQUE concat dimensions can have custom member values.

Action: Use the CHGDFN command to change the concat dimension to UNIQUE and retry.

ORA-34062: (MXARGS01) = Args:

ORA-34066: (MXARGS03) values of

ORA-34068: (MXBREAK01) The BREAK statement can only be used within a FOR or WHILE loop or within a SWITCH statement.

ORA-34070: (MXBREAK02) The CONTINUE statement can only be used within a FOR or WHILE loop.

ORA-34072: (MXCALL01) *workspace object* is not a PROGRAM.

ORA-34074: (MXCGAF01) The *string* function cannot be used with *string* data.

ORA-34076: (MXCGAF02) *workspace object* is neither a dimension nor the name of a relationship array.

ORA-34078: (MXCGAF03) The dimension *workspace object* appears more than once as an argument to *string*.

ORA-34082: (MXCGAF05) Specify the STATUS keyword only if at least one of the breakout dimensions is not a dimension of the expression argument.

ORA-34084: (MXCGAF06) You cannot specify *workspace object* as a breakout dimension because it is a dimension composite.

ORA-34086: (MXCGAF07) You can only specify a qualified data reference to a breakout relation object. *workspace object* is not a relation.

ORA-34088: (MXCGCE04) The THEN and ELSE expressions must evaluate to values of the same dimension.

ORA-34090: (MXCGCHRL01) The expression argument to *string* is not dimensioned by *workspace object*.

ORA-34092: (MXCGCON01) The use of a hexadecimal value (*string*) is not supported.

ORA-34094: (MXCGCUM00) In the CUMSUM function, the relation (*workspace object*) must refer to the accumulation dimension (*workspace object*).

ORA-34096: (MXCGCUM01) The reset parameter '*workspace object*' is neither a RELATION nor a DIMENSION.

Cause: The reset parameter was not valid.

Action: Find or define a valid reset parameter.

ORA-34098: (MXCGCUM02) The STATUS keyword has no effect unless the first argument has more than one dimension.

ORA-34100: (MXCGCVT01) Values of type *string* are expected.

ORA-34102: (MXCGFIOF01) The *string* option of FILEQUERY is not supported in this version of *string*.

ORA-34104: (MXCGGET01) *workspace object* is not a type of object that contains data values.

ORA-34106: (MXCGGET03) FILEREAD attributes can be specified only in the context of a FILEREAD or FILEVIEW command.

ORA-34108: (MXCGGET04) FILEREAD attributes cannot be specified for the NAME dimension.

Cause: An attempt was made to use the GET function to read NAME dimension values in a FILEREAD or FILEVIEW command.

Action: If you need this list of names read them into a text variable.

ORA-34110: (MXCGGET05) FILEREAD attributes cannot be specified for a constant.

ORA-34112: (MXCGGT01) Values of type *string* cannot be read with the MANY option.

ORA-34114: (MXCGGT02) The RAW attribute applies only to TEXT.

ORA-34116: (MXCGHCVT00) To convert TEXT to date use:\n CONVERT(expression DATE [dateorder])

ORA-34118: (MXCGHCVT01) To convert date to TEXT or ID use:\n CONVERT(expression {ID|TEXT} [dateformat])

ORA-34120: (MXCGHCVT02) To convert time dimension periods to TEXT or ID use:\n CONVERT(expression {ID|TEXT} [vnf-format])

ORA-34124: (MXCGHCVT04) CONVERT(expression *string*\nTo [format])

ORA-34126: (MXCGKEY01) The first argument to the KEY function must be an expression yielding a dimension value.

Cause: The First argument is not a dimension value.

Action: Specify the name of a dimension or a relation.

ORA-34128: (MXCGKEY02) You cannot apply the KEY function to *workspace object* because it is not a conjoint dimension or composite.

Cause: The first argument must be a conjoint or composite dimension.

Action: The KEY function cannot be used with this dimension.

ORA-34130: (MXCGKEY03) *workspace object* is not a component of conjoint dimension *workspace object*.

Cause: The second argument must be a base dimension of the first.

Action: Choose a valid base dimension.

ORA-34132: (MXCGKEY04) *workspace object* is not a component of composite *workspace object*.

Cause: The second argument must be a base dimension of the first.

Action: Choose a valid base dimension.

ORA-34134: (MXCGLA01) You are trying to perform an invalid operation. Dates cannot be exponentiated.

ORA-34136: (MXCGMOVE00) The first argument to the *string* function is not dimensioned by *workspace object*.

Cause: The expression argument was not dimensioned by the dimension argument.

Action: Specify one of the expression's dimensions.

ORA-34138: (MXCGNPV03) The interest rate expression in the NPV function cannot be dimensioned by *workspace object*.

ORA-34140: (MXCGPFC01) Argument number *number* in the call to *workspace object* is not a simple expression.

ORA-34141: (MXCGPUT00) You cannot use the ASSIGN keyword with DIMENSION *workspace object*.

Cause: User used the ASSIGN keyword on a DIMENSION target in a FILEREAD, SQL FETCH or SQL SELECT command.

Action: To create a new dimension value in a FILEREAD, SQL FETCH or SQL SELECT command, use the APPEND keyword.

ORA-34142: (MXCGPUT01) You cannot assign values to a *string*.

ORA-34143: (MXCGPUT02) You cannot assign values to SURROGATE *workspace object* because it is type INTEGER.

Cause: The user attempted to assign a value to a dimension surrogate whose data type is INTEGER. INTEGER surrogates, like INTEGER dimensions, cannot have values assigned to them. They can only be referenced by position.

Action: Do not attempt to assign values to an INTEGER surrogate. Values will automatically appear and disappear from the INTEGER surrogate as positions are added to or removed from the underlying dimension.

ORA-34144: (MXCGPUT04) A model cannot assign values to a *string*.

ORA-34145: (MXCGPUT03) You cannot use the APPEND keyword with SURROGATE *workspace object*.

Cause: User used the APPEND keyword on a SURROGATE target in a FILEREAD, SQL FETCH or SQL SELECT command.

Action: To assign a value to a SURROGATE in a FILEREAD, SQL FETCH or SQL SELECT command, use the ASSIGN keyword.

ORA-34146: (MXCGQDR01) A qualified data reference (QDR) has this format:\n name(dimension1 dimvalue1 [dimension2 dimvalue2...])

ORA-34148: (MXCGQDR02) *workspace object* cannot be used as a qualifier because it is a COMPOSITE or PARTITION TEMPLATE. You can use its component dimensions instead.

ORA-34150: (MXCGQDR05) A dimension can be named only once in a qualified data reference. *workspace object* has been named more than once.

ORA-34152: (MXCGQDR06) The dimensions named in a qualified data reference must be dimensions of the qualified object. *workspace object* is not dimensioned by *workspace object*.

ORA-34154: (MXCGQDR10) *workspace object* has no dimensions, so it cannot have a qualified data reference.

ORA-34156: (MXCGRA00) You cannot compare time periods of different lengths or phases.

ORA-34158: (MXCGRA01) cannot subtract time periods of different lengths or phases

Cause: The expression contained two incompatible time periods.

Action: Specify time periods with the same length and phase.

ORA-34160: (MXCGRA02) The format of the IN operator is \n *date* IN *time dimension value*.**ORA-34162: (MXCGRAVL01) The expression to be unraveled is not dimensioned by *workspace object*.****ORA-34164: (MXCGVAR01) A dimension used to define a local *string* variable cannot be located. Execution cannot continue.**

Cause: A local relation or valueset has become invalid, most probably because an object used by the currently executing program has been deleted.

Action: This is an internal error that should be referred to Oracle technical support.

ORA-34168: (MXCGVFC01) Invalid context for the VALUE function.**ORA-34170: (MXCGVFC02) Data Reader attributes apply to the VALUE function only when it is used in a FILEREAD or FILEVIEW command.****ORA-34172: (MXCGWKDT01) The argument to the WKSDATA function must be the name of a WORKSHEET.****ORA-34176: (MXCHGDCL01) *workspace object* is not the kind of object whose index type can be changed.****ORA-34177: (MXCHGDCL19) *number* cannot be deleted because one or more partitioned variables instantiate it.**

Cause: User attempted to CHGDFN DELETE a partition template, but some partitioned variable had data in the partition specified for deletion.

Action: Drop the partitions that are causing the problem, then retry.

ORA-34178: (MXCHGDCL02) *workspace object* cannot be changed to NOHASH. Only an object that was originally defined as NOHASH can be changed back to NOHASH.**ORA-34179: (MXCHGDCL20) *workspace object* is not a PARTITION TEMPLATE.**

Cause: User specified an object that is not a partition template where a partition template is required.

Action: Supply the name of a partition template.

ORA-34180: (MXCHGDCL03) *workspace object* is not a conjoint dimension and cannot be changed in this manner.**ORA-34181: (MXCHGDCL21) *workspace object* is not a partitioned VARIABLE.**

Cause: User specified an object that is not a partitioned variable in a place where a partitioned variable is required.

Action: Supply the name of a partitioned variable.

ORA-34182: (MXCHGDCL04) SEGWIDTH not changed from "*string*\nwrong"

Cause: SEGWIDTH requires one value for each dimension.

Action: Include values for each dimension of the specified object.

ORA-34183: (MXCHGDCL22) Partition *number* already exists.

Cause: User attempted to ADD a partition that already existed to a partitioned variable.

Action: None required - the partition already exists.

ORA-34184: (MXCHGDCL05) *string* is not a valid segment width.

ORA-34185: (MXCHGDCL23) Only dimension composites can have optional inversions. *workspace object* is not a dimension composite.

ORA-34186: (MXCHGDCL06) You cannot change *workspace object* to a dimension composite, because it is used as the type of a PROGRAM, RELATION or VALUESET.

ORA-34188: (MXCHGDCL07) Only conjoint dimensions can be redefined as composites. *workspace object* is not a conjoint dimension.

ORA-34190: (MXCHGDCL08) You cannot convert the conjoint dimension *workspace object* to a composite because it has the NOHASH attribute.

ORA-34192: (MXCHGDCL09) *workspace object* is a dimension composite and its definition cannot be changed to NOHASH.

ORA-34194: (MXCHGDCL10) You cannot change *workspace object* to a composite while there are permissions applied to it.

Cause: Permissions for composites must be applied through its base dimensions.

Action: Remove the permissions, change the dimension to a composite, and then apply permissions to the base dimensions.

ORA-34196: (MXCHGDCL11) Only dimension composites can be redefined as DIMENSIONS. *workspace object* is not a dimension composite.

ORA-34198: (MXCHGDCL12) You cannot change *workspace object* to a composite because its dimension list has one or more duplications.

ORA-34200: (MXCHGDCL13) You cannot change *workspace object* to a dimension composite because there are one or more formulas dimensioned by it.

ORA-34202: (MXCHGDCL14) *workspace object* is not a time dimension.

ORA-34204: (MXCHGDCL15) *workspace object* is not the kind of object to which SEGWIDTH can be applied.

ORA-34206: (MXCHGDCL16) You cannot change *workspace object* to a dimension composite because there are one or more relations dimensioned by it.

Cause: Relations can be dimensioned by conjoint dimensions, but not by composite dimensions.

Action: Do not change the dimension.

ORA-34208: (MXCHGDCL17) You cannot change *workspace object* to a dimension composite because it is used in one or more concat dimensions.

Cause: The specified dimension was used as a base in a concat dimension.

Action: Delete the concat dimension.

ORA-34210: (MXCHGDCL18) You cannot change *workspace object* to a dimension composite because one or more surrogates has been defined for it.
Cause: The user attempted to redefine a conjoint dimension as a composite, but the conjoint has one or more surrogates defined. A dimension that has surrogates cannot be redefined as a composite.

Action: Either delete all surrogates for the dimension, or do not attempt to redefine the dimension as a composite.

ORA-34212: (MXCLASS01) An expression was specified where a DIMENSION or a VALUESET was expected.

ORA-34214: (MXCLASS02) *workspace object* is not a dimension.

ORA-34216: (MXCOMP001) *workspace object* cannot be compiled because it is not a PROGRAM, MODEL, AGGMAP, or FORMULA.

ORA-34218: (MXCTX01) *workspace object* cannot be in a CONTEXT because it is not a scalar variable.

ORA-34220: (MXCTX02) *workspace object* cannot be in a CONTEXT because it is not data.

ORA-34222: (MXCTX03) *workspace object* cannot be in a CONTEXT because it is a dimension composite.

ORA-34224: (MXDCL01) Analytic workspace *string* is not attached.

ORA-34226: (MXDCL02) REUSE can only be specified for SIMPLE, COMPOSITE, and CONJOINT dimensions.

ORA-34228: (MXDCL03) Only dimensions can have time periods.

Cause: 'day week month quarter year' syntax is only for dimensions.

Action: Use the dimension keyword before this syntax.

ORA-34230: (MXDCL04) You provided an invalid time period.

ORA-34232: (MXDCL05) A DAY dimension cannot be phased with a BEGINNING or ENDING phrase.

ORA-34234: (MXDCL06) The beginning date translates to an invalid end date.

Cause: The end date may not exceed year 9999.

Action: Fix the begin date.

ORA-34236: (MXDCL07) REUSE cannot be specified in AWs that have not been upgraded to version 12.

ORA-34238: (MXDCL08) A dimension cannot have a data type of DATE.

ORA-34240: (MXDCL09) You cannot specify EXPTEMP as an analytic workspace.

ORA-34242: (MXDCL10) You cannot specify an analytic workspace in this command.

ORA-34243: (MXDCL11) You can only use the *string* keyword when defining a COMPOSITE.

Cause: User supplied the COMPRESSED keyword when defining an object that was not a COMPOSITE.

Action: If the intent is to create a compressed composite, make sure that the object type is COMPOSITE. Otherwise, remove the COMPRESSED keyword from the command string and rerun.

ORA-34246: (MXDCL18) You cannot define an object with a recursive SPARSE dimension list.

Cause: A SPARSE dimension was specified that included a SPARSE dimension as one of its base dimensions.

Action: Define the sparse dimension using the base dimensions of the nested SPARSE dimensions rather than using the existing SPARSE dimension.

ORA-34248: (MXDCL19) You cannot specify a dimension list for the *workspace object* dimension.

ORA-34250: (MXDCL20) The *workspace object* dimension is in the wrong analytic workspace to be used in this DEFINE command.

ORA-34252: (MXDCL21) You have specified the wrong number of dimensions for *workspace object*.

ORA-34254: (MXDCL22) *workspace object* does not belong in the dimension list for composite *workspace object*, or it is in the wrong position.

ORA-34256: (MXDCL23) You must specify a dimension list for *string workspace object* when using it in a definition.

ORA-34258: (MXDCL24) Dimension composite *number* does not exist.

ORA-34260: (MXDCL25) You cannot use *number* to dimension a *string* because it is, or involves, a dimension composite. Use the composite's bases instead.

Cause: The user attempted to use a COMPOSITE in the dimension list of an object that does not allow for such dimensions.

Action: Use the base dimensions of the COMPOSITE in the dimension list.

ORA-34262: (MXDCL26) The object name *string!string* can only be defined in analytic workspace *string*, not in the EXPRESS analytic workspace.

ORA-34264: (MXDCL27) The object name *string!string* can only be defined in analytic workspace *string*, not in analytic workspace *string*.

ORA-34268: (MXDCL29) *string* objects must be type DIMENSION.

ORA-34270: (MXDCL30) You cannot specify a data type when defining a dimension alias.

ORA-34272: (MXDCL31) You cannot specify a dimension list when defining a dimension *string*.

ORA-34274: (MXDCL32) You cannot specify a width when defining a dimension alias.

ORA-34276: (MXDCL33) (Precision, Scale) arguments can only be used with a NUMBER variable or dimension.

Cause: The user attempted to use NUMBER(Precision) or NUMBER(Precision, Scale) as the datatype in a definition for some object other than a DIMENSION or VARIABLE, such as a FORMULA or PROGRAM. This error can also be produced in cases where a NUMBER data type is not allowed at all.

Action: Use the NUMBER type without specifying a precision or scale. If a NUMBER data type is not allowed at all, this fix will only change the exception message to something more specific.

ORA-34279: (MXDCL37) CONCAT can only be used when defining a DIMENSION.

Cause: The CONCAT keyword was used incorrectly.

Action: Retry the command without the CONCAT keyword.

ORA-34280: (MXDCL38) PARTITION BY can only be used when defining a PARTITION TEMPLATE.**ORA-34281: (MXDCL39) A (precision code) argument can only be used with DATETIME or TIMESTAMP dimensions.****ORA-34284: (MXDCL52) A SPARSE dimension cannot be specified in this context.****ORA-34286: (MXDCL53) workspace object cannot be used in this context because it is a string.**

Cause: User specified a dimension composite, conjoint, or partition template in a place where that kind of dimension is not allowed. For instance, a relation cannot be dimensioned by a composite, and only a variable can be dimensioned by a partition template.

Action: Usually, the offending dimension can be replaced with its bases. For instance, a relation cannot be dimensioned by a composite of PRODUCT and GEOG, but it can be dimensioned by both PRODUCT and GEOG instead.

ORA-34298: (MXDCLEQ01) workspace object was not defined as a formula, so you cannot use the EQ command to give it a value.**ORA-34300: (MXDCLEQ02) workspace object is not a time dimension, so you cannot define a VNF formatting string for it.****ORA-34302: (MXDCLEQ03) workspace object is not a DATETIME or TIMESTAMP dimension, formula, program, or variable, so you cannot define a DATE_FORMAT formatting string for it.****ORA-34304: (MXDCLILP01) There is no current program definition. Define a program or use the CONSIDER command before using the PROGRAM command.****ORA-34306: (MXDCLILP02) workspace object was not defined as a program.**

Cause: An attempt was made to use the PROGRAM command on an object that was not defined as a program. The PROGRAM command only works for objects defined as programs.

Action: Specify the name of a valid program with the PROGRAM command.

ORA-34308: (MXDCLILP03) Since you have no current program definition, your PROGRAM entries will be discarded. Type END to return to command level.

ORA-34310: (MXDCLILP04) The *workspace object* program cannot be redefined while it is executing.

ORA-34312: (MXDCLMOD01) There is no current model definition. Define a model or use the CONSIDER command before using the MODEL command.

ORA-34314: (MXDCLMOD02) *workspace object* was not defined as a model.

ORA-34316: (MXDCLMOD03) Since there is no current model definition, the MODEL statements will be discarded. Type END to return to the command line.

ORA-34318: (MXDCLAGR01) There is no current aggmap definition. Define an aggmap or use the CONSIDER command before using the AGGMAP command.

ORA-34320: (MXDELETE00) The object *workspace object* is not in the *string* analytic workspace.

ORA-34324: (MXFETCH01) The ACROSS and DOWN keywords cannot be set to NONE at the same time.

ORA-34336: (MXGO00) The *string* keyword can only be used for a model.

ORA-34338: (MXDIMEN01) An object cannot have more than *number* dimensions.

ORA-34340: (MXDINSRT01) An object named *number* already exists in analytic workspace *string*.

ORA-34342: (MXDSS01) IMPORTANT: Analytic workspace *string* is read-only. Therefore, you will not be able to use the UPDATE command to save changes to it.
Cause: This is an informational message that reminds you that you may not save changes to the specified analytic workspace.

Action: None, unless it was desired to save changes to the analytic workspace. In that case, detach and reattach the analytic workspace read-write.

ORA-34344: (MXDSS03) Analytic workspace *string* is not attached.

Cause: The command attempted to operate on an analytic workspace that is not currently attached, or the name of the analytic workspace is misspelled.

Action: Attach the analytic workspace or correct the spelling.

ORA-34346: (MXDSS04) The *string* analytic workspace cannot be detached.

Cause: The specified analytic workspace is an internal workspace and may not be detached by the user.

Action: Specify a different analytic workspace to detach.

ORA-34348: (MXDSS05) *string* is used only for internal purposes and cannot be accessed as an analytic workspace.

Cause: The command attempted to operate on an internal analytic workspace used by the system.

Action: Specify a different analytic workspace.

ORA-34350: (MXDSS06) *string* is an open analytic workspace.

Cause: The specified analytic workspace was in use.

Action: The AW DELETE, AW RENAME, AW TRUNCATE, and AW CREATE commands require an analytic workspace that is not currently in use.

ORA-34356: (MXDSS09) Analytic workspace *string* is attached in read-only mode, therefore you cannot change its *string*.

Cause: The analytic workspace was attached in read-only mode because of which it could not be changed.

Action: Detach the analytic workspace and then re-attach it to enable the read/write mode.

ORA-34357: (MXDSS10) *string* is not an alias of analytic workspace *string*.

Cause: User attempted to use AW UNALIAS on a nonexistent alias.

Action: Ensure that the command specified the correct analytic workspace and alias. The alias must have been assigned (using AW ALIAS) during the current session and must not have been removed by a previous AW UNALIAS or AW DETACH command.

ORA-34358: (MXDSS14) *number* other users reading

Cause: Used for AW LIST output formatting when %d > 1

Action: None

ORA-34359: (MXDSS11) *string* appears twice in the alias list.

Cause: The user included the same name twice in the alias list of an AW ALIAS or AW UNALIAS command.

Action: Remove the duplicate name, and retry the operation.

ORA-34360: (MXDSS15) *number* other users writing

Cause: Used for AW LIST output formatting when %d > 1

Action: None

ORA-34362: (MXDSS16) Program *number* does not exist.

Cause: The specified program name could not be found.

Action: Change the name to a program that exists.

ORA-34364: (MXDSS17) The read/write status of analytic workspace *string* has not been changed. To change it, detach and re-attach the analytic workspace.

ORA-34370: (MXDSS21) Permission to attach analytic workspace *string* denied by a PERMIT program.

Cause: Access to the analytic workspace was denied by the Analytic Workplace's (AW) PERMIT_READ program (when the AW was attaching for read) or PERMIT_WRITE program (when the AW was attaching for write).

Action: The owner of the analytic workspace must adjust the appropriate PERMIT program to allow access.

ORA-34371: (MXDSS22) Schema name "*string*" contains characters that are not allowed in an analytic workspace name.

Cause: The specified or default schema name contained characters that can occur only in quoted identifiers, which are not supported in OLAP DML.

Action: Specify a schema name containing only characters that can appear in a nonquoted identifier.

ORA-34372: (MXDSS26) An analytic workspace named *string* is already attached.

Cause: The attempt to attach the named analytic workspace failed because there was already an analytic workspace with that name attached.

Action: Only one analytic workspace of a given name may be attached at a time. The currently attached analytic workspace must be detached before you can attach the new analytic workspace.

ORA-34373: schema name contains unsupported characters

Cause: The specified or default schema name, contained characters that can occur only in quoted identifiers, which are not supported in OLAP DML.

Action: Specify a schema name containing only characters that can appear in a nonquoted identifier.

ORA-34376: (MXDSS28) *string* is not a valid analytic workspace name. Analytic workspace names must be *number* characters or less, can contain only letters, digits, underscores, and dollar signs, and cannot begin with a digit or dollar sign.

Cause: The specified analytic workspace or ALIAS name was too long or contained invalid characters.

Action: Ensure that the analytic workspace name meets the specified criteria.

ORA-34378: (MXDSS29) *string* is a reserved word and cannot be used as an analytic workspace name.

Cause: An attempt was made to create an analytic workspace using a reserved word.

Action: Choose a different name for the analytic workspace.

ORA-34380: (MXEXPORT00) You can only export one worksheet to a spreadsheet file.

ORA-34382: (MXEXPORT01) Worksheets are the only objects you can export to spreadsheet files. *workspace object* is not a worksheet.

ORA-34384: (MXFILEIO01) The *string* option of FILESET is not supported.

ORA-34386: (MXFILEIO02) No more than 9 arguments can be supplied to FILESET.

ORA-34388: (MXFILERD01) The format of the FILEREAD command is:\n FILEREAD unit [STOPAFTER n] [STRUCTURED | CSV | RULED] [fieldlist]

ORA-34390: (MXFILERD02) The format of the FILEVIEW command is:\n FILEVIEW unit [STRUCTURED | RULED] [fieldlist]

ORA-34392: (MXFORCAS00) You cannot calculate a forecast for an expression with no dimensions.

ORA-34394: (MXFORCAS01) You cannot calculate a forecast with an STSEASONAL expression with no dimensions.

ORA-34396: (MXFORCAS02) The expression to be forecast is not dimensioned by *workspace object*.

ORA-34398: (MXFORCAS03) The STSEASONAL expression must be dimensioned by only one dimension.

ORA-34400: (MXFORCAS04) time-series

ORA-34402: (MXFORCAS05) When you specify the forecast LENGTH, you must also specify an FCNAME.

ORA-34404: (MXFORCAS06) When you specify METHOD WINTERS, you must also specify the PERIODICITY.

ORA-34406: (MXFORCAS07) When STSMOOTHED, STTREND, or STSEASONAL is specified, they must all be specified.

ORA-34408: (MXFORCAS08) You specified a forecast phrase that is valid only when METHOD WINTERS is specified.

ORA-34410: (MXFORCAS09) The arguments to FCNAME, FCSMOOTHED, FCTREND, and FCSEASONAL must be numeric. *workspace object* is not numeric.

ORA-34412: (MXFORCAS10) FCNAME, FCSMOOTHED, FCTREND, and FCSEASONAL variables must be dimensioned by time dimension *workspace object*. *workspace object* is not.

ORA-34414: (MXGETFLD01) Your FILEREAD or FILEVIEW statement specifies no width for a *string string* field. There is no default width for this data type.

ORA-34416: (MXGETFLD02) *string* data cannot be read as a *string* value.

ORA-34418: (MXGETFLD03) A STRUCTURED or CSV record cannot contain *string* data.

ORA-34420: (MXGETFLD04) The *string* option of FILEREAD or FILEVIEW cannot be specified for *string* data.

ORA-34422: (MXGETFLD05) The SCALE option of FILEREAD or FILEVIEW cannot be specified for BINARY data other than INTEGER.

ORA-34424: (MXGETFLD06) The *string* option of FILEREAD or FILEVIEW cannot be specified for *string string* data.

ORA-34426: (MXGETFLD07) Values read into the relation *workspace object* must be INTEGER position numbers of its conjoint value dimension.

ORA-34428: (MXGETFLD08) Values read into conjoint dimension *workspace object* must be either INTEGER position numbers or a bracketed list of base dimension values.

ORA-34430: (MXGETFLD09) No data type was specified for one or more of the base dimensions of conjoint dimension *workspace object*.

ORA-34432: (MXGETFLD10) *workspace object* cannot be assigned time dimension data.

ORA-34434: (MXGETFLD11) You cannot read values of a dimension composite directly. You can specify a bracketed list of base dimension values.

ORA-34436: (MXGETFLD12) No data type was specified for one or more of the base dimensions of a dimension composite.

ORA-34438: (MXGETSVN01) A value of the *workspace object* dimension must be a single expression without surrounding angle brackets .

ORA-34440: (MXGETSVN02) A value of the *workspace object* dimension must be a combination of *number* base dimension values surrounded by angle brackets .

ORA-34442: (MXGETSVN03) You cannot use a Qualified Object Name as a value of the NAME dimension.

ORA-34444: (MXGETSVN04) Dimension *workspace object* is not a concatenated dimension.

ORA-34446: (MXGETSVN05) Dimension *workspace object* is not a base of concatenated dimension *workspace object*.

ORA-34448: (MXGOTO01) *string* is not defined as a label.

ORA-34450: (MXIFERR) The IF keyword must be followed by a BOOLEAN expression. The expression starting with *string* is *string*.

ORA-34452: (MXIMPORT01) *string* is a reserved keyword that cannot be used in this context.

ORA-34454: (MXIMPORT02) When importing a spreadsheet, CSV file, or PRN file, the target must be a worksheet. *workspace object* is not a worksheet.

ORA-34456: (MXIMPORT03) The STOPAFTER specification cannot be NA.

ORA-34458: (MXIMPORT04) The RULER expression cannot be missing or NA. Cause: The RULER expression was missing.

Action: Add a RULER expression.

ORA-34460: (MXIMPORT05) The expression identifying the file cannot be NA.

ORA-34462: (MXIMPORT06) The STOPAFTER specification cannot be less than one. The value was *number*.

ORA-34464: (MXIMPORT07) TEXTSTART and TEXTEND are supported only for STRUCTURED PRN files. DELIMITER is supported for STRUCTURED PRN and CSV files.

ORA-34466: (MXIMPORT08) Target *workspace object* is not in analytic workspace *string*.

ORA-34468: (MXIMPORT09) *workspace object* is not a valid target name. You cannot use a Qualified Object Name to specify a target in an EIF import.

ORA-34476: (MXINFO01) The first argument to the *string* function must be FORECAST, PARSE, REGRESS, SEASADJ, or MODEL.

ORA-34478: (MXLOG01) Disk file *string* cannot be opened; it is in use.

ORA-34480: (MXMAINT01) You cannot *string* values of conjoint dimension *workspace object*.

ORA-34481: (MXMAINT07) You cannot *string* values of PARTITION TEMPLATE *workspace object*.

Cause: User attempted to use the MAINTAIN command with some keyword other than ADD or DELETE on a partition template.

Action: It is not possible to MAINTAIN a partition template, except to add or delete values of a partition list.

ORA-34482: (MXMAINT02) You cannot *string* values of time dimension workspace object.

ORA-34484: (MXMAINT03) You cannot *string* values of dimension composite workspace object.

ORA-34486: (MXMAINT04) You cannot maintain dimension alias workspace object.

Cause: Dimension aliases cannot be maintained.

Action: Maintain the base dimension.

ORA-34487: (MXMAINT08) You cannot *string* values of non-unique concat dimension workspace object.

Cause: The specified MAINTAIN operation can only be applied to UNQUE concats.

Action: Use the CHGDFN command to change the concat dimension to UNIQUE and retry.

ORA-34488: (MXMAINT05) You cannot *string* values of concat dimension workspace object.

ORA-34489: (MXMAINT06) You cannot maintain workspace object because it is a SURROGATE.

Cause: The user attempted to use the MAINTAIN command on a dimension surrogate. The MAINTAIN command can only be used with real dimensions, not surrogates.

Action: Use the MAINTAIN command to modify the underlying dimension of the surrogate instead.

ORA-34490: (MXMOVE00) You cannot use Qualified Object Names in the MOVE command except as part of an expression.

ORA-34492: (MXMSERR00) Analytic workspace object workspace object does not exist.

Cause: The referenced object did not exist in an attached analytic workspace.

Action: Specify an object name from one of the attached analytic workspaces.

ORA-34494: (MXMSERR01) Analytic Workspace *string* does not contain an object named workspace object.

Cause: The object name was not in the specified Analytic Workspace (AW).

Action: Use the DESCRIBE command to find out whether the object is in another Analytic Workspace (AW).

ORA-34496: (MXNAME01) The NAME dimension is available only when you have an active analytic workspace.

ORA-34498: (MXNAME02) You cannot use the NAME dimension in this context.

ORA-34500: (MXNAME03) *string* is a reserved keyword that cannot be used in this context.

ORA-34502: (MXNAME03A) *number* is a reserved keyword that cannot be used in this context.

Cause: A reserved keyword was specified as the name of the object or analytic workspace. Reserved keywords cannot be used as the names for objects or analytic workspaces.

Action: Specify another name other than a reserved keyword for the object or analytic workspace.

ORA-34504: (MXNAME04) You have no current analytic workspace.

ORA-34506: (MXNAME05) *string* is a local variable that cannot be used in this context.

Cause: This context required the name of a defined object.

Action: You may need to define an object with this name or rename your local variable if has the same name as a defined object.

ORA-34508: (MXNAME06) You cannot qualify references to the NAME dimension.

ORA-34512: (MXNEGERR) The NOT operator can only be used with BOOLEAN expressions. The expression at *string* is *string*.

ORA-34514: (MXOPERR) You cannot *string string* data in the expression that begins with '*string*'.

Cause: The user attempted an invalid operation.

Action: n/a

ORA-34516: (MXPROPER01) A property name cannot be NA.

ORA-34518: (MXPROPER02) A property named *string* does not exist.

ORA-34520: (MXPROPER03) A property name cannot be a multi-line text.

ORA-34522: (MXPROPER04) A property name must be between *number* and *number* bytes long. You supplied a name of *number* bytes.

ORA-34524: (MXPROPER05) The object properties in this analytic workspace cannot be read, because they were created by an incompatible version of *string*.

ORA-34526: (MXPSHPOP01) You cannot *string workspace object* because it is not a scalar variable.

ORA-34528: (MXPSHPOP02) You cannot *string workspace object* because it is not data.

ORA-34530: (MXPSHPOP03) You cannot *string workspace object* because it is a *string*.

ORA-34534: (MXPUTQDR01) A FILEREAD attribute list is not valid in this context.

ORA-34538: (MXRECAP01) The format of the RECAP command is:\n RECAP [ALL|n] [string] [FILE pathname]

ORA-34540: (MXRECAP02) RECAP does not support multi-line strings.

ORA-34542: (MXRECAP03) There are no entries in the command log.

ORA-34544: (MXRECAP04) No matching commands were found.

ORA-34546: (MXRECAP05) The format of the REDO command is:\n REDO [n] [oldtext newtext [option]]

ORA-34548: (MXRECAP06) There is no occurrence *number* of '*number*' in the command.

ORA-34550: (MXRECAP07) Command number *number* is not available.

ORA-34552: (MXRECAP08) Multi-line strings cannot be used in editing the command.

ORA-34554: (MXRECAP09) The string '*number*' does not occur in the command.
Cause: A search string was specified in the REDO or REEDIT command that could not be found in the command to be modified.

Action: Check the command string to make sure that it contains at least one occurrence of the search string.

ORA-34556: (MXRECAP10) Substituting *number* for *number* would cause the command to exceed the maximum command length (*number*).

ORA-34558: (MXRECAP11) The format of the REEDIT command is:\n REEDIT [n] oldtext newtext [option]

ORA-34560: (MXRECAP12) The *string* command cannot be saved in the command log by REDO or REEDIT or executed by REDO.

Cause: The command was one of a small set of commands that could not be logged, including RECAP, REEDIT, REDO, and empty strings.

Action: Do not attempt REDO or REEDIT on this command.

ORA-34562: (MXRENAME02) An object named *number* already exists in analytic workspace *string*.

ORA-34564: (MXRENAME03) The SPARSE keyword changes a named composite to unnamed. You cannot apply it to an unnamed composite.

ORA-34566: (MXRENAME04) Only integer dimensions can be named *string*.

ORA-34568: (MXRENAME05) You cannot rename *workspace object* because you do not have PERMIT rights to do it or it is readonly.

ORA-34570: (MXRENAME06) The dimension composite *workspace object* is not in analytic workspace *string*.

ORA-34572: (MXRENAME07) cannot change *workspace object* to an unnamed composite because it is not a composite

Cause: The specified object could not be renamed to SPARSE because it was not a composite.

Action: None

ORA-34574: (MXRENAME08) You cannot change *workspace object* to an unnamed composite because it has permissions attached.

ORA-34576: (MXRENAME09) You cannot change *workspace object* to an unnamed composite because there are pushed statuses associated with it.

ORA-34578: (MXRENAME10) You cannot change *workspace object* to an unnamed composite because there are no objects dimensioned by it.

ORA-34580: (MXRENAME11) You cannot change *workspace object* to an unnamed composite because there are properties associated with it.

ORA-34582: (MXRENAME12) You cannot change *workspace object* to an unnamed composite, because there is already an unnamed composite with the same base dimensions.

ORA-34584: (MXRENAME13) You cannot change *workspace object* to an unnamed composite, because it appears in the dimension list of unnamed composite *workspace object*.

ORA-34586: (MXRENAME14) You cannot change *workspace object* to an unnamed composite, because unnamed composite *workspace object* appears in its dimension list.

ORA-34588: (MXRENAME15) The object *workspace object* is not in analytic workspace *string*.

ORA-34592: (MXRENAME17) You cannot change *workspace object* to an unnamed composite, because it would cause the dependent object *workspace object* to exceed the limit for the number of named dimensions.

ORA-34594: (MXROLLUP01) *workspace object* is not a data variable.

ORA-34596: (MXROLLUP02) The data type (*string*) of *workspace object* is not INTEGER, DECIMAL, or SHORTDECIMAL.

ORA-34598: (MXROLLUP03) *workspace object* is not related to itself.

ORA-34600: (MXROLLUP04) *workspace object* is not dimensioned by *workspace object*.

Cause: The ROLLUP variable was not dimensioned by the ROLLUP dimension.

Action: Specify a correct base dimension to ROLLUP.

ORA-34602: (MXROLLUP05) You must specify which dimension to roll up, since *workspace object* has more than one dimension.

ORA-34604: (MXROLLUP06) *workspace object* is not a relationship array.

ORA-34606: (MXROLLUP07) *workspace object* does not yield values of *workspace object*.

ORA-34608: (MXROLLUP08) *workspace object* is not dimensioned by *workspace object*.

ORA-34610: (MXROLLUP09) The relationship array *workspace object* shares the *workspace object* dimension with *workspace object*. It can only share the rollup dimension itself.

ORA-34612: (MXSHELL01) Your program or expression uses too much execution space. Eliminate recursion or reduce the levels of nesting.

ORA-34614: (MXSHOWCD00) No command was given. There is nothing to show.

ORA-34616: (MXSHOWCD01) No code is generated for the *string* command.

ORA-34618: (MXSHOWCD02) The compiled code for *workspace object* cannot be displayed because the program has been hidden.

ORA-34620: (MXSHOWCD03) No compiled code exists for *string workspace object*.

ORA-34622: (MXSHOWCD04) No text exists for *string workspace object*.

ORA-34624: (MXSORT01) Sort criterion *number* is not dimensioned by *workspace object*.

ORA-34626: (MXSORT02) You must convert WORKSHEET values to a simple data type before using them as a sort criterion.

Cause: The data type used for the sort criterion was not one data type.

Action: Use the CONVERT function to cast the sort criterion to a single data type.

ORA-34628: (MXSQL99) The SQL "*string*" command can only be used in a program, and it must be compiled before it can be executed.

ORA-34630: (MXSQL00) The format of the SQL DECLARE command is:\n SQL DECLARE cursor-name CURSOR FOR select-command

ORA-34632: (MXSQL01) The format of the SQL OPEN command is:\n SQL OPEN cursor-name

ORA-34634: (MXSQL02) The format of the SQL CLOSE command is:\n SQL CLOSE cursor-name

ORA-34636: (MXSQL03) The format of the SQL FETCH command is:\n SQL FETCH cursor-name [LOOP [count]] INTO :host-var [:host-var ...] [THEN filereadactions]

ORA-34637: (MXSQL11) The format of the SQL IMPORT command is:\n SQL IMPORT cursor-name INTO :host-var [:host-var ...]\n [THEN filereadactions]

ORA-34638: (MXSQL04) The format of the SQL CLEANUP command is:\n SQL CLEANUP

ORA-34639: (MXSQL05) The format of the SQL SELECT command is:\n SQL SELECT rest of select statement INTO :host-var [:host-var ...] [THEN filereadactions]

ORA-34642: (MXSQL08) The format of the SQL PREPARE command is:\n SQL PREPARE statement-name FROM non-select-command

ORA-34644: (MXSQL09) The format of the SQL EXECUTE command is:\n SQL EXECUTE statement-name

ORA-34646: (MXSQL10) The format of the SQL PROCEDURE command is:\n SQL PROCEDURE procedure-name [(parameter {, parameter})]

ORA-34647: (MXSQL18) The text expression in a CURSOR FOR TEXT declaration cannot be NA.

Cause: The text for the SELECT expression in a CURSOR FOR TEXT declaration was evaluated at compile time as NA.

Action: Specify a text expression that is not NA at the time the program containing the SQL DECLARE is compiled.

ORA-34648: (MXSQL19) The SQL command is incomplete.

ORA-34650: (MXSQL20) The SELECT command is not supported by *string*. You must declare a cursor to retrieve SQL data.

ORA-34652: (MXSQL21) The SQL command contains a syntax error.

ORA-34654: (MXSQL23) Host variable expected; use :: to escape a colon.

ORA-34656: (MXSQL24) Additional WHERE clause conditions with CURRENT OF *cursor name* syntax

Cause: A SQL UPDATE or DELETE statement tried to use the CURRENT of *cursor name* syntax with a WHERE clause containing multiple conditions.

Action: When using the CURRENT OF *cursor name* syntax make sure it is the only condition in the WHERE clause.

ORA-34658: (MXSQL25) The words CURSOR FOR TEXT must be followed by a compile-time text expression specifying a SELECT command.

Cause: A SQL DECLARE *csr* CURSOR FOR TEXT command lacked a text expression, or the expression was otherwise invalid.

Action: Specify a single text expression that can be evaluated at compile time to yield a SELECT statement

ORA-34660: (MXSQL26) SQL cursor *string* has already been declared in this compilation.

ORA-34662: (MXSQL27) SQL statement *string* has already been prepared in this compilation.

ORA-34665: (MXSQL30) Concat dimension *workspace object* cannot be used as a target host variable. You must specify one of its leaves, and then set the concat's status from that leaf.

ORA-34666: (MXSWITCH01) Only one DEFAULT label is allowed in a SWITCH.

ORA-34668: (MXSWITCH02) The format of a DEFAULT label statement is:\n DEFAULT:

ORA-34670: (MXSWITCH03) Invalid syntax in case label expression

ORA-34672: (MXSWITCH04) The format of a CASE label statement is:\n CASE case-expression:

ORA-34674: (MXTRACE01) There is no trace in effect.

ORA-34676: (MXTRAP01) *string* is not defined as a label.

ORA-34680: (MXUPDATE03) Analytic workspace *string* is read-only. Therefore, the UPDATE command will not save changes.

Cause: The specified analytic workspace was attached read-only when the OLAP UPDATE command was issued. Any unsaved changes will be lost.

Action: The analytic workspace will need to be attached read-write and the changes made again before they can be saved.

ORA-34682: (MXUPDATE04) You have no attached analytic workspaces.

Cause: The OLAP AW UPDATE command was executed without any analytic workspaces attached for write operations.

Action: Attach an analytic workspace for write, redo the changes, and retry the AW UPDATE command.

ORA-34684: (MXUPDATE05) All of your attached analytic workspaces are read-only. Therefore, the UPDATE command will not save changes.

Cause: The AW UPDATE command did not find an analytic workspace that is attached for write.

Action: Attach the analytic workspace that needs changes for write make the desired changes, and issue the AW UPDATE command again.

ORA-34686: (MXVAR02) *string* is not a valid data type for a declarative statement.

ORA-34688: (MXVAR03) *workspace object* cannot be used as a variable or argument type because it is the name of a dimension composite.

ORA-34690: (MXWATCH01) There are no watchpoints set.

ORA-34691: (MXXEQ00A) The value *value* is greater than the specified precision (*number, number*) for *workspace object*.

Cause: A numeric value was entered that exceeded the precision defined for this object. For example, for an object defined to be NUMBER(3,2), the precision or the maximum number of significant decimal digits is 3. The scale or the number of digits from the decimal point to the least significant digit is 2. In this case, a value of 123.89 will cause the error because the precision allows a maximum of 3 digits and 2 of them must be to the right of the decimal point. A value of 3.89 will not cause the error.

Action: Enter a value that complies with the precision defined for the object.

ORA-34692: (MXXEQ01) A division by zero was attempted. Set DIVIDEBYZERO to YES if you want NA to be returned as the result of division by zero.

ORA-34693: (MXXEQ00B) The value *value* is greater than the specified precision (*number, number*).

Cause: A numeric value was entered that exceeded the specified precision for this operation. For example, for a specified precision of NUMBER(3,2), the precision or the maximum number of significant decimal digits is 3. The scale or the number of digits from the decimal point to the least significant digit is 2. In this case, a value of 123.89 will cause the error because the precision allows a maximum of 3 digits and 2 of them must be to the right of the decimal point. A value of 3.89 will not cause the error.

Action: Enter a value that complies with the specified precision limit.

ORA-34694: (MXXEQ02) Unsupported conversion of RELATION data was attempted.

ORA-34696: (MXXEQ03A) "*number*" is not a number.

ORA-34698: (MXXEQ03B) "*number*" is not a Boolean.

ORA-34700: (MXXEQ05) Function calls are too deeply nested to be evaluated.

ORA-34702: (MXXEQ13) "*number*" is not a valid number format.

ORA-34704: (MXXEQ14) "*number*" does not match number format "*number*".

ORA-34706: (MXXEQ35) *value* is not a valid *workspace object*.

ORA-34708: (MXXEQ36) *value* does not exist.

ORA-34710: (MXXEQ37) Positions in the product of breakout dimensions of an aggregation function cannot exceed 263.**

ORA-34712: (NAFILENAME) The expression identifying the file cannot be NA or blank.

ORA-34718: (NLSCHARSET02) *number* is not a valid, installed NLS character set.

ORA-34719: (NLSCHARSET03) Character data loss in NTEXT/TEXT conversion

Cause: When character set conversion happens between TEXT and NTEXT either implicitly or explicitly, some characters are lost due to no mapping characters in the destination character set.

Action: Make sure all the characters can be mapped to destination character set or set NLS_NCHAR_CONV_EXCP to be FALSE. Note: This message is the OLAP equivalent of ORA-12713.

ORA-34720: (NLSCHARSET04) An unknown character set conversion error occurred.

ORA-34722: (NLSCHARSET05) CAUTION: Character data loss in character set conversion from *string* to *string*

Cause: Some operation required a string to be converted into a different character set, but the string contained characters that didn't exist in the new character set.

Action: Choose different character sets.

ORA-34726: (NLSCHARSET06) CAUTION: String truncated during character set conversion from *string* to *string*

Cause: Some operation required a string to be converted into a different character set. The string required more bytes in the new encoding, and exceeded some byte limit on its allowable length, causing some characters to be removed from the end of the string.

Action: If the byte limit is due to using the ID datatype, consider using the CHAR datatype instead. If the byte limit is due to the limit of 4000 bytes per line of CHAR data, break the long line up into multiple lines.

ORA-34730: (NLSCHARSET08) CAUTION: During character set conversion, some of hidden program *workspace object* was truncated or could not be converted.

ORA-34731: (NLSSORT01) '*number*' is not a valid NLS_SORT specification.

Cause: An unrecognized NLS_SORT value was specified in the SORT command or the SORT, SORTLINES or UNIQUELINES function.

Action: Specify a supported NLS_SORT value.

ORA-34732: (NOCONSIDER) You have no current definition. Define an object or use the CONSIDER command before using the *string* command.

ORA-34738: (NOUPDATE) A severe problem has been detected. Analytic workspace operations have been disabled.

Cause: A previous severe error marked the session so that it could not perform any updates.

Action: Use the EXPORT command to save your work, then start a new session.

ORA-34740: (NOUPDATEDB) Changes made to the *string* analytic workspace are not saved.

Cause: A previous, severe error marked the session so that it could not perform any UPDATES.

Action: Use the EXPORT command to save your work, then start a new session.

ORA-34744: (NPV01) Time dimension *workspace object* has a range in status of *number* periods. The maximum range allowed for the NPV function is *number* periods.

ORA-34746: (NPV02) The interest rate in the NPV function is *number*. The value must be greater than -1.

ORA-34748: (NUMARGS1) You supplied *number* argument(s) to the *string* function. You must supply at least *number*.

ORA-34750: (NUMARGS2) The *string* function cannot have any arguments.

ORA-34752: (NUMARGS3) You supplied *number* arguments to the *string* function. It can have no more than *number* arguments.

ORA-34754: (NUMARGS4) You supplied *number* argument(s) to a function that requires at least *number*.

ORA-34756: (NUMARGS5) You supplied arguments to a function that does not take arguments.

ORA-34758: (NUMARGS6) You supplied *number* arguments to a function that can have no more than *number* arguments.

ORA-34760: (NXHANDLE01) Decimal overflow in context that is unprotected by the DECIMALOVERFLOW option. Contact Oracle OLAP technical support.

ORA-34761: (NXHANDLEALLO) A decimal overflow occurred during an ALLOCATE operation.

Cause: While performing an ALLOCATE operation, a decimal overflow occurred. This created unreliable results.

Action: Correct the data or use a higher precision data type.

ORA-34762: (NXHANDLE02) A decimal overflow has occurred. Set DECIMALOVERFLOW to YES if you want NA to be returned as the result of a decimal overflow.

ORA-34764: (NXHANDLE03) A decimal overflow occurred during a ROLLUP operation. The results are not reliable.

ORA-34766: (NXHANDLE04) A decimal overflow occurred during an AGGREGATE operation. The results are not reliable.

ORA-34768: (NXHANDLE05) A decimal overflow occurred while parsing the AGGMAP.

ORA-34770: (OBJENG02) The object name argument to the OBJ function cannot be NA.

ORA-34772: (OBJENG03) *number* contains more than one name.

ORA-34774: (OBJENG04) 'number' is not the name of a dimension or composite.

ORA-34776: (OBJENG05) Analytic workspace object *number* does not exist.

ORA-34778: (OBJENG06) You cannot use the OBJ function on objects in analytic workspace *string*.

Cause: The OBJ function was used against the EXPTEMP analytic workspace.

Action: Use the OBJ function on any analytic workspace other than EXPTEMP.

ORA-34780: (OBJLIST01) Analytic workspace '*string*' is not attached.

ORA-34782: (OBJSAVE2) Analytic Workspace *string* already has the maximum number of objects (*number*).

Cause: The Analytic Workspace has too many objects.

Action: Redesign the Analytic Workspace to not exceed the maximum number of objects.

ORA-34786: (OCI02) The total length of all output variables cannot be more than *number* bytes.

ORA-34796: (OCI08) SQL host variable *number* cannot be bound.

Cause: The data type of the host variable is not supported.

Action: Specify only variables of supported types as host variable names.

ORA-34798: (OCI09) OLAP OCI operation canceled.

ORA-34800: (OCI10) OLAP OCI operation returned '*string*'.

ORA-34802: (OCI11) OLAP OCI operation caused ROLLBACK past an UPDATE of an attached analytic workspace. Current operation canceled.

Cause: ROLLBACK past the UPDATE of one of the attached Analytic Workspaces was called. The current operation is aborted, and the Analytic Workspace detached.

Action: Change the called SQL procedure to avoid the ROLLBACK

ORA-34804: (OCI12) The value of SQL host variable *number* is too long. Use the WIDE keyword for columns that may exceed *number* bytes.

Cause: The host variable had a text value longer than the maximum SQL VARCHAR length

Action: Use the WIDE keyword in the host variable specification, e.g. :WIDE
OLAP_object_name

ORA-34805: (OCI13) Statement *number* must have at least one host variable.

Cause: Statements prepared with DIRECT=YES must have at least one host variable.

Action: Add a host variable to the prepared statements declaration.

ORA-34806: (OCI14) Statement *number* can only be executed within an ACROSS command.

Cause: Statements prepared with DIRECT=YES must be executed in an ACROSS command.

Action: Execute the statement within an ACROSS command.

ORA-34830: (OFCENG02) The *string* function cannot be applied to the dimension composite *workspace object*.

Cause: The specified function could not be applied to the dimension composite. Dimension composites do not have status lists. Status is based on the status of the base dimensions.

Action: Do not apply status directly to a dimension composite.

ORA-34832: (OFCENG03) *number* is not the name of a dimension or valueset.

ORA-34833: (OFCENG04) The *string* function cannot be applied to the PARTITION TEMPLATE *workspace object*.

Cause: Partition templates did not have status lists.

Action: Do not try to apply status to a partition template.

ORA-34834: (OKUNDSS01) Analytic workspace *string* must remain current because the *workspace object* program is still executing in it.

ORA-34836: (OKUNDSS03) Analytic workspace *string* cannot be detached because a currently executing command depends upon an object (*workspace object*) it contains.

Cause: Analytic workspaces can only be detached when they are not being referenced by currently executing code. This error might occur when multiple queries are executed by the user code and one of those processes tries to detach the Analytic Workspace.

Action: Restructure the application so this condition does not occur.

ORA-34840: (OPCREATE01) The *string* option must be declared with datatype *string*.

Cause: An attempt was made to declare the option with the wrong datatype.

Action: Declare the option with the correct datatype.

ORA-34841: (OPCREATE02) The *string* option must be declared with the READONLY attribute.

Cause: An attempt was made to declare the option without the READONLY attribute.

Action: Declare the option READONLY.

ORA-34842: (OPTWIDTH) *workspace object* must be between *number* and *number*. It cannot be *number*. Its previous value was retained.

ORA-34844: (OPUTNA00) You cannot set an option to NA. The previous value of *workspace object* was retained.

ORA-34846: (OVERRIDE01) *number*

ORA-34848: (PARSE01) The text to be parsed is NA.

ORA-34852: (PHASTOVC00) Unsupported type

ORA-34854: (PMTSETUP00) Permission expression for *workspace object* is invalid and will be treated as FALSE.

ORA-34856: (PMTSETUP01) Permission for *workspace object* does not have proper dimensionality of the BY expression.

ORA-34858: (PMTUPDAT01) Permission expression for *workspace object* is invalid and will not be stored.

ORA-34859: (PMTUPDAT07) Permission condition for *workspace object* contains an expression longer than *number* bytes and cannot be stored.

Cause: One of the components of the PERMIT condition was too long.

Action: Rewrite the condition to shorten it.

ORA-34860: (PMTUPDAT02) You do not have PERMIT rights for *workspace object*.

ORA-34862: (PMTUPDAT03) *workspace object* is not a dimension, so you cannot give it MAINTAIN permission.

ORA-34864: (PMTUPDAT04) A BY clause cannot be given with *string* permission for *workspace object*.

ORA-34866: (PMTUPDAT05) You cannot apply permissions to dimension composite *workspace object*. Instead, you can apply permissions to its base dimensions.

ORA-34868: (PMTUPDAT06) You cannot apply permissions to dimension alias *workspace object*. Instead, you can apply permissions to the aliased dimension.

ORA-34870: (PERMIT01) You do not have permission to read this value of *workspace object*.

ORA-34871: (PERMIT06) Session-only value '*value*' of *workspace object* has been deleted because a PERMIT change has revealed a duplicate value.

Cause: Execution of a PERMIT command revealed a permanent dimension or surrogate value having the same name as the SESSION value.

Action: If the SESSION value is still needed, add it with a different name.

ORA-34872: (PERMIT02) You do not have permission to write this value of *workspace object*.

ORA-34873: (PERMIT07) You cannot write this value of *workspace object* since it is readonly.

ORA-34874: (PERMIT03) You do not have permission to run *workspace object*.

ORA-34876: (PERMIT04) You do not have permission to read AGGMAP *workspace object*.

ORA-34877: (PERMIT05) You cannot apply permissions to concat dimension *workspace object*. Instead, you may apply permissions to its leaf dimension(s).

ORA-34880: (PPDTORDR00) DATEORDER must be YMD, YDM, MYD, MDY, DYM, or DMY.

ORA-34882: (PPENG00) The level name for *string* cannot be NA.

ORA-34884: (PPENG01) *number* does not match a PUSHLEVEL command.

Cause: The POPLEVEL command failed because the level name did not match an active PUSHLEVEL command.

Action: Look for redundant POP commands since this level may have already been popped.

ORA-34886: (PPENG02) The option *workspace object* is read-only. Since its value cannot be popped, it cannot be pushed.

ORA-34888: (PPENG03) The status list for *workspace object* is protected by the TEMPSTAT command.

ORA-34892: (PPESCCH01) The ESCAPECHAR option requires a single character.

ORA-34894: (PPESCCH02) The '*string*' character is an invalid choice for the ESCAPECHAR option.

ORA-34896: (PPMONTHS00) At least 12 month names must be given. Only *number* were provided.

Cause: There must be at least one name for each month. Not enough names were provided.

Action: Provide at least 12 names.

ORA-34897: (PPMONTHS01) Blank lines are not allowed in the MONTHNAMES option.

Cause: There is at least one blank line in the string populating the MONTHNAMES option. We do not allow blank month names.

Action: Remove the blank line(s) from the string.

ORA-34900: (PPWKDAYS00) At least 7 day names must be given. Only *number* were provided.

Cause: There must be at least one name for each day. Not enough names were provided.

Action: Make sure there are at least 7 names in the string.

ORA-34901: (PPWKDAYS01) Blank lines are not allowed in the DAYNAMES option.

Cause: There is at least one blank line in the string populating the DAYNAMES option. We do not allow blank day names.

Action: Remove the blank line(s) from the string.

ORA-34902: (PPWKDNY01) The value of WEEKDAYSNEWYEAR must be a number between 1 and 7.

ORA-34904: (VCFMT001) must be multi-line

ORA-34908: (VCFMT003) missing arg

ORA-34990: (PRNIMPRT01) CAUTION: *number* line(s) in a TEXT PRN file were too long. Each line was truncated to *number* bytes.

ORA-34992: (PRNIMPRT02) CAUTION: *number* field(s) in a STRUCTURED PRN or CSV file were too long. Each field was truncated to *number* bytes.

ORA-34994: (PRNIMPRT03) Unexpected EOF encountered in string while importing data.

ORA-34996: (PRNIMPRT04) Unexpected character '*character*' at end of string.

ORA-35000: (PRNRULER01) The RULER specification does not have any valid field descriptions.

ORA-35002: (PRNRULER02) Zero is not a valid repeat count.

ORA-35004: (PRNRULER03) The repeat count *number* was not followed by a field type.

ORA-35006: (PRNRULER04) The character '*character*' is not a valid field type. The valid types are A, S and T.

ORA-35008: (PRNRULER05) A field description (type *character*) does not include a field width.

Cause: The field width was missing.

Action: Add a field width.

ORA-35010: (PRNRULER06) The width (*number*) for an A or T field was too large. The limit is *number*.

ORA-35012: (PRNRULER07) Zero is not a valid width for an S field.

ORA-35014: (PRNRULER08) A repeat count or field width (*string*) was too large. The limit is *number*.

ORA-35016: (QFCHECK00) The analytic workspace and EIF file definitions of *workspace object* have a mismatched type.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35017: (QFCHECK06) The analytic workspace and EIF file definitions of *workspace object* have different partitioning methods.

Cause: Importing from an EIF file or LOB into an existing analytic workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an analytic workspace that does not already contain an object with the same name.

ORA-35018: (QFCHECK01) The analytic workspace and EIF file definitions of *workspace object* have a mismatched data type.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35019: (QFCHECK07) The Analytic Workspace and EIF file definitions of *workspace object* have different partition dimensions.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35020: (QFCHECK02) The analytic workspace and EIF file definitions of *workspace object* have mismatched dimensioning.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35021: (QFCHECK08) The EIF file definition of *workspace object* has some partitions that are not present in the existing Analytic Workspace object.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35022: (QFCHECK03) The analytic workspace and EIF file definitions of *workspace object* have a mismatched relation.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35023: (QFCHECK09) The analytic workspace and EIF file definitions of *workspace object* have incompatible partition definitions.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35024: (QFCHECK04) The analytic workspace and EIF file definitions of *workspace object* have mismatched time dimension attributes.

Cause: Importing from an EIF file or LOB into an existing analytic workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an analytic workspace that does not already contain an object with the same name.

ORA-35026: (QFCHECK05) The analytic workspace and EIF file definitions of *workspace object* have a mismatched ALIASOF dimension.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35028: (QFASCII00) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35029: (QFPART00) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35030: (QFDATA00) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35031: (QFSVNS00) The IMPORT command has terminated because of a defect in the EIF file.

Cause: The EIF file contains a compressed composite with defective aggregation data.

Action: Re-create the EIF file using the NOAGGR keyword.

ORA-35032: The IMPORT command terminated because of a defect in the EIF file.

Cause: This was an unexpected error.

Action: Re-create the EIF file or restore it from a backup. If the problem persists, contact Oracle Support.

ORA-35036: (QFGETBUF00) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35038: (QFGETHDR00) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35040: The IMPORT command has terminated because of a defect in the EIF file.

Cause: This is an unexpected error.

Action: Re-create the EIF file or restore it from a backup. If the problem persists, contact Oracle Support.

ORA-35042: (QFOBJECT92) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35044: The IMPORT command terminated because of a defect in the EIF file.

Cause: An unexpected error occurred because of a defect in the EIF file which caused the IMPORT command to terminate.

Action: Re-create the EIF file or restore it from a backup. If the problem persists, contact Oracle Support.

ORA-35046: The IMPORT command terminated because of a defect in the EIF file.

Cause: There was an unexpected error.

Action: Re-create the EIF file or restore it from a backup. If the problem persists, contact Oracle Support.

ORA-35048: (QFOBJECT97) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35050: The IMPORT command terminated because of a defect in the EIF file.

Cause: There was an unexpected error.

Action: Re-create the EIF file or restore it from a backup. If the problem persists, contact Oracle Support.

ORA-35052: (QFPUTILP98) The IMPORT command has terminated because of a defect in the EIF file.**ORA-35054: The IMPORT command has terminated because of a defect in the EIF file.**

Cause: This is an unexpected error.

Action: Re-create the EIF file or restore it from a backup. If the problem persists, contact Oracle Support.

ORA-35056: The IMPORT command terminated because of a defect in the EIF file.

Cause: This an unexpected error.

Action: Re-create the EIF file or restore it from a backup. If the problem persists, contact Oracle Support.

ORA-35058: The IMPORT command has terminated because of a defect in the Express Interchange File (EIF).

Cause: There is a defect in the EIF.

Action: Re-create the EIF or restore it from a backup. If the problem persists, contact Oracle Support.

ORA-35060: The IMPORT command has terminated because of a defect in the EIF file.

Cause: This is an unexpected error.

Action: Re-create the EIF file or restore it from a backup. If the problem persists, contact Oracle Support.

ORA-35062: (QFGET01) Duplicate files found for extension number *number* of EIF file *string*.

Cause: IMPORT searched the directories specified in EIFEXTENSIONPATH and found two EIF extension files with the same name (differing at most by the case used in the final name component).

Action: Delete, rename or move any files that are not to be read by IMPORT.

ORA-35066: (QFGET03) Extension number *number* is missing for EIF file *string*.

Cause: IMPORT searched the directories specified in EIFEXTENSIONPATH and could not find the appropriately numbered extension file.

Action: Move the missing file into one of the searched directories.

ORA-35070: (QFHEAD00) File *string* is not in EIF format.

Cause: This was not an EIF file. It could not be imported with the EIF specification.

Action: Unless this file has been damaged in some way and can be restored from backup, it is likely that this was never an EIF file.

ORA-35071: (QFHEAD06) EIF file *string* cannot be imported because analytic workspace *string* has not been upgraded to version *string*.

Cause: User attempted to import from an EIF file that was created by a newer version of the product into an AW that was created by a older version of the product.

Action: Make sure that the compatibility mode parameter in the init.ora of the importing instance specifies a version that is at least as high as the parameter was in the exporting instance. Then, convert the AW to the latest storage format and reexecute the import command. Alternatively, change the EIFVERSION option of the exporting instance to a lower number, recreate the EIF file, and import the new file.

ORA-35074: (QFHEAD02) EIF file *string* cannot be read by this version of *string*.

Cause: The EIF file was created with an internal version number indicating it may contain objects that are not compatible with the current Oracle OLAP version, or the EIF file is in an obsolete format.

Action: If possible, set EIFVERSION in the exporting instance to a lower number, recreate the EIF file, and import the new file.

ORA-35076: (QFHEAD04) CAUTION: The textual data in EIF file *string* is encoded in a character set that is not recognized by this version of *string*.

Cause: IMPORT could not recognize the character set specification in the EIF file.

Action: Check the imported text data. If it was not imported correctly, recreate the EIF file with a character set supported by the current Oracle version.

ORA-35078: (QFHEAD05) An EIF extension file header for *string* is not in the correct format.

Cause: An EIF extension file in multi-file IMPORT did not contain correct header information.

Action: Check to be sure that EIFEXTENSIONPATH is set correctly and that all the extension files for the current IMPORT were created by the same EXPORT command as the main EIF file.

ORA-35080: (QFOBJECT01) You cannot rename dimensions when you import them. The *string* dimension cannot be imported as *string*.

Cause: An attempt was made to rename a dimension during IMPORT. Renaming of dimension during IMPORT is not allowed.

Action: Do not attempt to rename the dimension during import.

ORA-35082: (QFOBJECT02) You cannot import changes to the *workspace object* program now, because it is currently executing.

ORA-35084: (QFOBJECT06) CAUTION: *string* is being imported. However, this is a reserved word, so you must rename the new object before you can use it.

ORA-35086: (QFOBJECT07) " *number* dimension values "

ORA-35087: (QFOBJECT09) *number*\nInvalid

ORA-35088: (QFOBJECT08) " *number* dimension value combinations "

ORA-35090: (QFPARSE00) The object *string* cannot be imported because it does not exist in the EIF file.

Cause: The requested object was not in the EIF file.

Action: To see the contents of the EIF file, run the IMPORT command with the LIST ONLY parameter.

ORA-35092: (QFPARSE01) You cannot import the object *string* into both *string* and *string* at the same time. To import an object into two different analytic workspaces, use two separate IMPORT commands with different INTO arguments.

ORA-35095: (QFSVNS01) One or more imported values of fixed-width dimension *workspace object* have been truncated.

Cause: The data in the EIF file was exported from a dimension with wider values than the target dimension will accommodate.

Action: Change the definition of the target dimension, or check to be sure that multiple values from the target dimension have not become identical during the import process. This could cause data loss as data from later dimension values overstores data imported earlier.

ORA-35096: (QUAFEOF) An unexpected end-of-file occurred in the EIF file. Check to make sure you have all the imported data that you expected.

ORA-35098: (RDPOW01) You cannot raise zero to a negative power.

ORA-35100: (RDPOW02) You cannot raise a negative number to a non-integer power.

ORA-35102: (READONLY00) The option *workspace object* is read-only. Its previous value was retained.

ORA-35104: (REALDTOK01) "*string*" is not a number.

ORA-35106: (REGRESS00) The regression was not calculated because of a linear relationship between your independent variables.

Cause: The values of the specified independent variables are not independent. For example, one may be a multiple of the other.

Action: Chose independent variables whose values are truly independent of one another.

ORA-35108: (REGRESS01) The number of non-NA observations with weights greater than zero (*number*) is too small to calculate a regression.

ORA-35110: (REGRESS02) The number of independent variables cannot exceed *number*.

ORA-35134: (RGACCUM01) A weighted regression cannot be calculated if any of the weights specified is less than zero.

ORA-35136: (RGINF00) There is no saved regression information for the INFO function to retrieve.

ORA-35138: (RPACROSS01) You must specify dimension values if you use *string* in an ACROSS phrase.

ORA-35140: (RPACROSS02) ACROSS must be followed by the name of a dimension or an expression with one dimension.

ORA-35142: (RPCOLUMN01) Multiple ACROSS phrases specifying the same dimension (*workspace object*) cannot be given for the same column.

ORA-35144: (RPFORMAT01) The value of the *string* attribute in column *number* is NA.

ORA-35146: (RPFORMAT02) The value of the *string* attribute in column *number* is negative.

ORA-35148: (RPFORMAT03) The value of the *string* attribute in column *number* is zero.

ORA-35150: (RPFORMAT04) The INDENT value for column *number* equals or exceeds the WIDTH.

ORA-35152: (RPFORMAT05) Column *number* extends past the maximum length (*number*) of a report line.

ORA-35154: (RSEXECUT01) The *string* function can only be used in a ROW or REPORT command.

Cause: The COLVAL, RUNTOTAL, or SUBTOTAL functions were used outside of a ROW or REPORT command.

Action: Use the COLVAL, RUNTOTAL, and SUBTOTAL functions only in a ROW or REPORT command.

ORA-35158: (RSEXECUT03) Column index *number* in *string* is before the first or after the last report column.

Cause: COLVAL referenced a column that did not exist.

Action: Use a valid column number or use a negative index to go back from the current column.

ORA-35162: (RSEXECUT05) The column number (*number*) in *string* must be greater than zero.

Cause: The specified column number was less than or equal to zero.

Action: Specify column numbers that are greater than zero.

ORA-35164: (RSEXECUT06) An argument (*number*) to *string* must be zero or greater.

Cause: The value of a row command attribute was less than zero.

Action: Omit this attribute if you want the default value.

ORA-35166: (SIGENG01) *string*

ORA-35168: (SIGENG02) (*number*) Contact the administrator of your *string* application.

ORA-35170: (SIGENG03) The "errorname" argument to the SIGNAL command is NA.

ORA-35172: (SNCHILD01) Either there is duplicate information beginning at *string*, or this information conflicts with a keyword.

Cause: The syntax of the current command was invalid.

Action: Check Oracle OLAP documentation for the correct syntax, and retry.

ORA-35174: (SNSYN100) The word *string* must be followed by a name.

Cause: The name of an Online Analytical Processing (OLAP) object was expected after the specified word in the command.

Action: Supply the name of an OLAP object and retry.

ORA-35176: (SNSYN101) The format of the AGGMAPINFO function is:\n \n AGGMAPINFO(aggmap-name { RELATIONS | NUMRELS | AGGINDEX | STORE | SHARE | FCACHE | MAPTYPE | { RELATION | PRECOMPUTE | STATUS } expression})
Cause: The syntax of the AGGMAPINFO function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35178: (SNSYN102) The format of the INFILE command is:\n \n INFILE {EOF | filename} [NOW] [NLS_CHARSET name] [TABEXPAND expression]
Cause: The syntax of the INFILE function was invalid.

Action: Check the error message or Oracle documentation for the correct syntax.

ORA-35180: (SNSYN103) The format of the OUTFILE command is:\n \n OUTFILE [APPEND] {EOF | TRACEFILE | filename [NOCACHE] [NLS_CHARSET name]}
Cause: The syntax of the OUTFILE command was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35182: (SNSYN104) The format of the WKSDATA function is:\n \n WKSDATA(worksheetname)
Cause: The syntax of the specified WKSDATA function was invalid.

Action: Check Oracle documentation for the correct syntax.

ORA-35184: (SNSYN105) The dimension name (*string*) must be followed by one of these keywords: TO, KEEP, ADD, REMOVE, COMPLEMENT, SORT, or INSERT.
Cause: The syntax of the LIMIT command or function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35186: (SNSYN106) The word *string* must be followed by an argument such as a dimension value.

ORA-35188: (SNSYN107) The word *string* must be followed by an expression.
Cause: A required expression was missing at the indicated location.

Action: Check Oracle documentation for the correct syntax and retry.

ORA-35190: (SNSYN108) The TOP or BOTTOM value (*string*) must be followed by the keyword BASEDON or PERCENTOF and an expression.
Cause: A BASEDON or PERCENTOF specification, required when generating a list of TOP or BOTTOM dimension values, was missing from the command.

Action: Supply a BASEDON or PERCENTOF specification. For the correct syntax, see the Oracle documentation.

ORA-35192: (SNSYN109) The dimension name must be followed by a sort order (A or D) and a sort criterion expression.
Cause: The syntax of the SORT command or function was invalid.

Action: Check the error message text. Check the Oracle documentation for the correct syntax.

ORA-35194: (SNSYN110) The format of the INFO function is:\n \n INFO({FORECAST | PARSE|REGRESS|MODEL} choice [index1 [index2 ...]])
Cause: The syntax of the INFO function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35196: (SNSYN111) The format of the CHARLIST function is:\n \n CHARLIST(expression [dimension1 [dimension2 ...]])

ORA-35198: (SNSYN112) The dimension name (*string*) must be followed by one of these keywords: ADD, BULKRENAME, DELETE, MERGE, MOVE, or RENAME.
Cause: The syntax of the MAINTAIN command was invalid.

Action: Check the error message text or refer to Oracle Database documentation for the correct syntax.

ORA-35200: (SNSYN113) An angle bracket (>) is missing after *string*.
Cause: The final angle bracket was missing from a list of dimensions or dimension values.

Action: Supply the missing angle bracket. For more information, consult the Oracle documentation.

ORA-35202: (SNSYN114) A right parenthesis or an operator is expected after *string*.

Cause: The expression could not be interpreted because a closing parenthesis or further expression operator was missing.

Action: For the correct expression syntax, consult the Oracle OLAP documentation.

ORA-35204: (SNSYN115) A label is missing after *string*.

Cause: The name of PROGRAM label was not found at the indicated location.

Action: Provide the missing label name. For more information, see Oracle OLAP documentation.

ORA-35206: (SNSYN116) The word UNION must be followed by a parenthesized list of LIST clauses.

ORA-35208: (SNSYN117) An expression, SKIP, <, or ACROSS must follow '*string*', or this expression conflicts with a keyword.

Cause: The syntax was invalid at the indicated location.

Action: Check the error message text or Oracle documentation for the correct syntax of the command or function where the error occurred.

ORA-35210: (SNSYN118) A colon (:) is required after an ACROSS phrase.

ORA-35212: (SNSYN119) The format of the UNRAVEL function is:\n \n UNRAVEL(expression [dimension1 [dimension2 ...]])

Cause: The syntax of the UNRAVEL function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35214: (SNSYN120) The format of the COMPILE command is:\n \n COMPILE name [NOWARN]

Cause: The syntax of the COMPILE command was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35216: (SNSYN121) The file unit number (*string*) must be followed by an attribute (such as DATE) and a new value for the attribute.

Cause: The syntax of the FILESET command was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35218: (SNSYN122) The format of LEAD and the LAG functions is:\n \n function(time-series nperiods time-dimension [STATUS|NOSTATUS])

Cause: The syntax of the LAG or LEAD function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35220: (SNSYN123) The format of the EXISTS function is:\n \n EXISTS(text-expression)

Cause: The syntax of the EXISTS function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35222: (SNSYN135) The format of the EXTCHARS function is:\n \n EXTCHARS(text-expression [start [length]])

Cause: The syntax of the EXTCHARS function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35224: (SNSYN136) The format of the EXTLINES function is:\n \n EXTLINES(text-expression [start [length]])

Cause: The syntax of the EXTLINES function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35226: (SNSYN137) The format of the FINDCHARS function is:\n \n FINDCHARS(search-text find-text [start [LINENUM]])

Cause: The syntax of the FINDCHARS function was invalid.

Action: Check the error message text or refer to Oracle documentation for the correct syntax.

ORA-35228: (SNSYN138) The format of the FINDLINES function is:\n \n FINDLINES(search-text find-text)

Cause: The syntax of the FINDLINES function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35230: (SNSYN139) The format of the JOINCHARS function is:\n \n JOINCHARS(text-expression1 text-expression2 ...)

Cause: The syntax of the JOINLINES function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35232: (SNSYN140) The format of the JOINLINES function is:\n \n JOINLINES(text-expression1 text-expression2 ...)

Cause: The syntax of the JOINLINES function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35234: (SNSYN141) The format of the NUMCHARS function is:\n \n NUMCHARS(text-expression)

ORA-35236: (SNSYN142) The format of the NUMLINES function is:\n \n NUMLINES(text-expression)

ORA-35238: (SNSYN143) The format of the UPCASE function is:\n \n UPCASE(text-expression)

Cause: The syntax of the UPCASE function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35240: (SNSYN144) The format of the TEXTFILL function is:\n \n TEXTFILL(text-expression width)

Cause: The syntax of the TEXTFILL function was invalid.

Action: Check the error message text or refer to Oracle documentation for the correct syntax.

ORA-35242: (SNSYN145) The format of the INSCHARS function is:\n \n INSCHARS(text-expression characters [after-position])

Cause: The syntax of the INSCHARS function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35244: (SNSYN146) The format of the INSLINES function is:\n \n INSLINES(text-expression newtext [after-expression])

Cause: The syntax of the INSLINES function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35246: (SNSYN147) The format of the REMCHARS function is:\n \n REMCHARS(text-expression start [length])

Cause: The syntax of the REMCHARS function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35248: (SNSYN148) The format of the REMLINES function is:\n \n REMLINES(text-expression start [length])

Cause: The syntax of the REMLINES function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35250: (SNSYN149) The format of the REPLCHARS function is:\n \n REPLCHARS(text-expression characters [start-position])

Cause: The syntax of the REPLCHARS function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35252: (SNSYN150) The format of the REPLLINES function is:\n \n REPLLINES(text-expression newtext [start-line]).

Cause: The syntax of the REPLLINES function was invalid.

Action: Check the error message text. Use the Oracle documentation for the correct syntax.

ORA-35254: (SNSYN151) The format of the SORTLINES function is:\n \n SORTLINES(text-expression [A|D] [nls_sort [sort-exp]])

Cause: The syntax of the SORTLINES function was invalid.

Action: Check the error message text or refer to Oracle documentation for the correct syntax.

ORA-35256: (SNSYN152) The format of the INLIST function is:\n \n INLIST(text-master text-sublist)

ORA-35258: (SNSYN153) The format of the BLANKSTRIP function is:\n \n BLANKSTRIP(text-expression [LEADING|TRAILING|BOTH])

Cause: The syntax of the BLANKSTRIP function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35260: (SNSYN154) The format of the ARG function is:\n \n ARG(n)\nwhere "n" specifies the number of the argument to be returned.

Cause: The syntax of the ARG function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35262: (SNSYN155) The format of the QUAL function is:\n \n QUAL(expression dimension1 dimvalue [dimension2 dimvalue ...])

Cause: The syntax of the QUAL function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35264: (SNSYN156) The format of the ARGFR function is:\n \n ARGFR(start-arg-no)

Cause: The syntax of the ARGFR function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35266: (SNSYN157) The format of the CONVERT function is:\n \n CONVERT(expression data-type [options])

Cause: The syntax of the CONVERT function was invalid.

Action: Check the error message text or refer to Oracle Database documentation for the correct syntax.

ORA-35268: (SNSYN158) The format of the OBJ function is:\n \n OBJ(choice ['name']) or OBJ(choice [text-expression])

Cause: The syntax of the specified OBJ function was invalid.

Action: Consult the Oracle documentation for syntax and available arguments for the OBJ function.

ORA-35270: (SNSYN159) The format for this type of aggregation function is:\n \n function(expression [[STATUS] dimensions])

Cause: The syntax of the aggregation function was invalid.

Action: Check the Oracle documentation for the correct syntax of the function.

ORA-35272: (SNSYN161) The ROWTOTALS attribute must immediately precede an ACROSS keyword.

ORA-35274: (SNSYN162) The first argument to GET must be a data type or the name of a dimension optionally preceded by the word NEW or VALID.

ORA-35276: (SNSYN163) The format of the ALLOCATE command is:\n \n ALLOCATE varname [SOURCE svarname] [BASIS bvarname [ACROSS dimname]] [TARGET tvarname [TARGETLOG logvarname]] [USING aggmap]

Cause: The syntax of the ALLOCATE command was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax and retry.

ORA-35278: (SNSYN164) A right parenthesis (]) is missing after "string".

ORA-35280: (SNSYN165) The format of the AGGREGATE command is:\n \n AGGREGATE varname1 [varname2 varname3 ...] [USING aggmap-name] [COUNTVAR intvar-name1 [intvar-name2 intvar-name3 ...]] [FUNCDATA] [FORCEORDER] [PARALLEL #] [{FROM|FROMVAR} fromname [, fromname2 ...]]

Cause: The user used incorrect syntax for the AGGREGATE command.

Action: Correct the calling syntax.

ORA-35282: (SNSYN166) The format of the AGGREGATE function is:\n \n AGGREGATE(varname [USING aggmap-name] [COUNTVAR intvar-name] [FORCECALC] [FORCEORDER] [{FROM|FROMVAR} fromname [, fromname2 ...]])

Cause: The user used incorrect syntax for the AGGREGATE function.

Action: Correct the calling syntax.

ORA-35284: (SNSYN167) The format of the IRR function is:\n \n IRR(cashflows time-dimension)

Cause: The syntax of the IRR function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35286: (SNSYN168) The format of the NPV function is:\n \n NPV(cashflows discount-rate time-dimension)

Cause: The syntax of the NPV function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35288: (SNSYN169) The format of a moving function is:\n \n function(expression, start, stop, stepsize, dimension)

Cause: The syntax of the MOVINGAVERAGE, MOVINGTOTAL, MOVINGMIN, or MOVINGMAX function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35290: (SNSYN170) The format of the CUMSUM function is:\n \n CUMSUM(expression [STATUS] dimension [resetdimension])

Cause: The syntax of the CUMSUM function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35292: (SNSYN171) The format of the ISVALUE function is:\n \n ISVALUE(dimension expression)

Cause: The syntax of the ISVALUE function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35294: (SNSYN173) The format of the STATLEN function is:\n \n STATLEN(dimension)

Cause: The syntax of the STATLEN function was invalid.

Action: Check the error message text or refer to Oracle Database documentation for the correct syntax.

ORA-35296: (SNSYN174) The format of the STATLIST function is:\n \n STATLIST(dimension [INTEGER] [width])

Cause: The syntax of the STATLIST function was invalid.

Action: Check the error message text or refer to Oracle documentation for the correct syntax.

ORA-35298: (SNSYN175) The format of the STATFIRST function is:\n \n STATFIRST(dimension)

ORA-35300: (SNSYN176) The format of the STATLAST function is:\n \n STATLAST(dimension)

Cause: The syntax of the STATLAST function was invalid.

Action: Check the error message text or refer to Oracle Database documentation for the correct syntax.

ORA-35302: (SNSYN177) The format of the STATMIN function is:\n \n STATMIN(dimension)

Cause: The syntax of the STATMIN function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35304: (SNSYN178) The format of the STATMAX function is:\n \n STATMAX(dimension)

Cause: The syntax of the STATMAX function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35306: (SNSYN179) The format of the STATVAL function is:\n \n STATVAL(dimension nth-value-to-find [INTEGER])

ORA-35308: (SNSYN180) The format of the STATRANK function is:\n \n STATRANK(dimension [dimension-value])

Cause: The syntax of the STATRANK function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35310: (SNSYN181) The format of the INSTAT function is:\n \n INSTAT(dimension dimension-value)

Cause: The syntax of the INSTAT function was invalid.

Action: Check the error message text and correct the format of the INSTAT function or refer to Oracle documentation for the correct syntax.

ORA-35312: (SNSYN182) The format of the COLVAL function is:\n \n COLVAL(column-number)

Cause: The syntax of the COLVAL function was invalid.

Action: Check the error message text or refer to Oracle documentation for the correct syntax.

ORA-35314: (SNSYN183) The format of the RUNTOTAL function is:\n \n RUNTOTAL(subtotal-number)

Cause: The syntax of the RUNTOTAL function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35316: (SNSYN184) The format of the SUBTOTAL function is:\n \n SUBTOTAL(subtotal-number)

Cause: The syntax of the SUBTOTAL function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35318: (SNSYN185) The format of the INTPART function is:\n \n INTPART(expression)**ORA-35320: (SNSYN186) The format of the SQRT function is:\n \n SQRT(expression).**

Cause: The syntax of the SQRT function was invalid.

Action: Check the error message text. Use the Oracle documentation for the correct syntax.

ORA-35322: (SNSYN187) The format of the LOG function is:\n \n LOG(expression)

Cause: The syntax of the LOG function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35324: (SNSYN188) The format of the LOG10 function is:\n \n LOG10(expression)**ORA-35326: (SNSYN189) The format of the ABS function is:\n \n ABS(expression)**

Cause: The syntax of the ABS function was invalid.

Action: Check the error message text and correct the syntax, or refer to Oracle documentation for the correct syntax.

ORA-35328: (SNSYN190) The format of the REM function is:\n \n REM(expression1 expression2)

Cause: The syntax of the REM function was invalid.

Action: Check the error message text or refer to Oracle documentation for the correct syntax.

ORA-35330: (SNSYN191) The format of the MIN function is \n \n MIN(expression1 expression2)

Cause: The syntax of the MIN function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35332: (SNSYN192) The format of the MAX function is:\n \n MAX(expression1 expression2)

Cause: The syntax of the MAX function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35336: (SNSYN195) The format of the FILEOPEN function is:\n \n FILEOPEN(filename-expression {READ | WRITE | APPEND} [BINARY] [NLS_CHARSET name])

Cause: The syntax of the FILEOPEN function was invalid.

Action: Check the error message text or refer to Oracle Database documentation for the correct syntax.

ORA-35338: (SNSYN196) The format of the FILEGET function is:\n \n FILEGET(fileunit [LENGTH n])

Cause: The syntax of the FILEGET function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35340: (SNSYN197) The format of the FILEQUERY function is:\n \n FILEQUERY({fileunit-number | filename-expression} attribute)

ORA-35342: (SNSYN198) The format of the SYSVAR function is:\n \n SYSVAR(system-variable-name)

Cause: The syntax of the SYSVAR function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35344: (SNSYN199) The format of the VALUES function is:\n \n VALUES(dimension [STATUS|NOSTATUS] [INTEGER])

Cause: The syntax of the VALUES function was invalid.

Action: Check the error message text, or refer to Oracle documentation for the correct syntax.

ORA-35346: (SNSYN201) The format of the LOWCASE function is:\n \n LOWCASE(text-expression)

Cause: The syntax of the LOWCASE function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35348: (SNSYN202) Invalid format for the FORECAST command.

ORA-35349: (SNSYN203) The format of the BASEVAL function is:\n \n BASEVAL(concat-dimension)

ORA-35350: (SNSYN206) The format of the KEY function is:\n \n KEY(conjoint-dimension, base-dimension)

Cause: The syntax of the KEY function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35351: (SNSYN204) The format of the BASEDIM function is:\n \n BASEDIM(concat-dimension [LEAF])

ORA-35353: (SNSYN205) The format of the MDQUERY function is:\n \n MDQUERY(object-type, schema-name, object-name [, refresh|norefresh])

Cause: The syntax of the MDQUERY function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35355: (SNSYN209) Invalid format for the AW command.

ORA-35356: (SNSYN210) The format of the NUMTODSINTERVAL function is:\n \n NUMTODSINTERVAL(number, day|hour|minute|second)

ORA-35357: (SNSYN211) The format of the NUMTOYMINTERVAL function is:\n \n NUMTOYMINTERVAL(number, year|month)

Cause: The syntax of the NUMTOYMINTERVAL function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35358: (SNSYN214) The format of the NAFILL function is:\n \n NAFILL(source-exp, fill-exp)

Cause: The syntax of the NAFILL function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35360: (SNSYN215) The format of the FILENEXT function is:\n \n FILENEXT(fileunit)

Cause: The syntax of the FILENEXT function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35362: (SNSYN216) The format of the RECNO function is:\n \n RECNO(fileunit)

Cause: The syntax of the RECNO function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35364: (SNSYN217) The format of the ROUND function is:\n \n ROUND(expression1 [, expression2])

Cause: The syntax of the ROUND function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35366: (SNSYN218) The format for exporting an expression is "expression AS name" or "SCATTER AS namevar [TYPE typevar]".

ORA-35368: (SNSYN219) The format of the ROW function is:\n \n ROW(list-of-column-descriptions)

Cause: The syntax of the ROW function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35370: (SNSYN220) The format of the AW function is:\n \n AW(subfunction [, analytic workspace-name-expression])

Cause: The syntax of the analytic workspace (AW) function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35372: (SNSYN221) The format of the OBJLIST function is:\n \n OBJLIST[(analytic workspace-list-expression)]

Cause: The syntax of the OBJLIST function was invalid.

Action: Check the error message text or Oracle documentation for the correct syntax.

ORA-35374: (SNSYN222) Invalid UNIQUELINES function syntax.

Cause: The format of the UNIQUELINES function was invalid.

Action: Correct the syntax and try again. The format of the UNIQUELINES function is 'UNIQUELINES(text-expression [nls_sort [sort-exp]])'. For more information, consult Oracle documentation.

ORA-35376: (SNSYN223) invalid JOINCOLS function syntax

Cause: The syntax of the JOINCOLS function was invalid.

Action: Correct the syntax and try again. The format of the JOINCOLS function is 'JOINCOLS(text-expression1 [, text-expression2 ...])'. For more information, consult Oracle documentation.

ORA-35378: (SNSYN224) The format of the EXTCOLS function is:\n \n EXTCOLS(text-expression [start [length]])

ORA-35380: (SNSYN225) The format of the REMCOLS function is:\n \n REMCOLS(text-expression, start [, length])

ORA-35382: (SNSYN226) Invalid REPLCOLS function syntax.

Cause: The format of the REPLCOLS function was incorrect.

Action: Correct the syntax and try again. The format of the REPLCOLS function is REPLCOLS(text-expression, overlay-expression [, start-position]). For more information, consult Oracle documentation.

ORA-35384: (SNSYN227) The format of the INSCOLS function is:\n \n INSCOLS(text-expression, insert-expression [, after-position])

ORA-35386: (SNSYN228) The format of MCALC is:\n \n MCALC(expression [ALWAYS] [SCREENBY expr] \n [method [OF] member-expr [WEIGHTBY expr]] ...)

ORA-35388: (SNSYN229) Invalid DDOF function syntax.

Cause: The format of the DDOF function was incorrect.

Action: Correct the syntax and try again. The format of the DDOF function is DDOF(expression). For more information, consult Oracle documentation.

ORA-35390: (SNSYN230) Invalid MMOF function syntax.

Cause: The format of the MMOF function was incorrect.

Action: Correct the syntax and try again. The format of the MMOF function is MMOF(expression). For more information, consult Oracle documentation.

ORA-35392: (SNSYN231) Invalid YYOF function syntax.

Cause: The format of the YYOF function was incorrect.

Action: Correct the syntax and try again. The format of the YYOF function is YYOF(expression). For more information, consult Oracle documentation.

ORA-35394: (SNSYN232) The DAYOF function syntax is invalid.

Cause: The format of the DAYOF function was invalid.

Action: Correct the syntax and try again. The format of the DAYOF function is DAYOF(expression). For more information, consult Oracle Database documentation.

ORA-35396: (SNSYN233) Invalid SIN function syntax.

Cause: The format of the SIN function was incorrect.

Action: Correct the syntax and try again. The format of the SIN function is SIN(expression). For more information, consult Oracle documentation.

ORA-35398: (SNSYN234) Invalid COS function syntax.

Cause: The format of the COS function was invalid.

Action: Correct the syntax and try again. The format of the COS function is COS(expression). For more information, consult Oracle documentation.

ORA-35400: (SNSYN235) Invalid MAKEDATE function syntax.

Cause: The format of the MAKEDATE function was invalid.

Action: Correct the syntax and try again. The format of the MAKEDATE function is MAKEDATE(year month day). For more information, consult Oracle documentation.

ORA-35402: (SNSYN236) Invalid ANTILOG function syntax.

Cause: The format of the ANTILOG function was invalid.

Action: Correct the syntax and try again. The format of the ANTILOG function is ANTILOG(expression). For more information, consult Oracle documentation.

ORA-35404: (SNSYN237) Invalid ANTILOG10 function syntax.

Cause: The format of the ANTILOG10 function was invalid.

Action: Correct the syntax and try again. The format of the ANTILOG10 function is ANTILOG10(expression). For more information, consult Oracle documentation.

ORA-35406: (SNSYN238) Invalid ROLLUP command syntax.

Cause: The format of the ROLLUP command was invalid.

Action: Correct the syntax and try again. The format of the ROLLUP command is ROLLUP variable [OVER dimension] [USING relationship]. For more information, consult Oracle documentation.

ORA-35408: (SNSYN239) Invalid STARTOF function syntax.

Cause: The format of the STARTOF function was invalid.

Action: Correct the syntax and try again. The format of the STARTOF function is STARTOF(expression). For more information, consult Oracle documentation.

ORA-35410: (SNSYN240) Invalid END OF function syntax.

Cause: The format of the END OF function was invalid.

Action: Correct the syntax and try again. The format of the END OF function is END OF(expression). For more information, consult Oracle documentation.

ORA-35412: (SNSYN241) Invalid BEGIN DATE function syntax.

Cause: The format of the BEGIN DATE function was incorrect.

Action: Correct the syntax and try again. The format of the BEGIN DATE function is BEGIN DATE(time-dimension-value). For more information, consult Oracle documentation.

ORA-35414: (SNSYN242) Invalid ENDDATE function syntax.

Cause: The format of the ENDDATE function was invalid.

Action: Correct the syntax and try again. The format of the ENDDATE function is ENDDATE(time-dimension-value). For more information, consult Oracle documentation.

ORA-35416: (SNSYN243) Invalid TCONVERT function syntax.

Cause: The format of the TCONVERT function was invalid.

Action: Correct the syntax and try again. The format of the TCONVERT function is TCONVERT(expression time-dimension method [method]). For more information, consult Oracle documentation.

ORA-35418: (SNSYN244) Invalid FILEERROR function syntax.

Cause: The format of the FILEERROR function was incorrect.

Action: Correct the syntax and try again. The format of the FILEERROR function is FILEERROR(TYPE | POSITION | WIDTH | VALUE | DIMENSION | RESET). For more information, consult Oracle documentation.

ORA-35420: (SNSYN245) Invalid payment or interest function syntax.

Cause: The format of an Oracle OLAP payment or interest function was invalid.

Action: Correct the syntax and try again. The format of a payment or interest function is FUNCTION-NAME(principal, rate, num-payments [time-dimension]). For more information, consult Oracle documentation.

ORA-35422: (SNSYN246) Invalid DEPRSL function syntax.

Cause: The format of the DEPRSL function was invalid.

Action: Correct the syntax and try again. The format of the DEPRSL function is DEPRSL(beg-val, end-val, num-pds, [FULL | HALF | exp, [time-dim]]). For more information, consult Oracle documentation.

ORA-35424: (SNSYN247) Invalid DEPRDECL function syntax.

Cause: The format of the DEPRDECL function was invalid.

Action: Correct the syntax and try again. The format of the DEPRDECL function is DEPRDECL(beg, end, n-pds, [decl-factor, [FULL | HALF | exp, [time dim]]]). For more information, consult Oracle documentation.

ORA-35426: (SNSYN248) Invalid DEPRSOYD function syntax.

Cause: The format of the DEPRSOYD function was invalid.

Action: Correct the syntax and try again. The format of the DEPRSOYD function is DEPRSOYD(beg-val, end-val, num-pds, [FULL | HALF | exp, [time- dim]]). For more information, consult Oracle documentation.

ORA-35428: (SNSYN249) Invalid GROWRATE function syntax.

Cause: The format of the GROWRATE function was invalid.

Action: 4688 // *Action: Correct the syntax and try again. The format of the GROWRATE function is GROWRATE(expression [time dim]). For more information, consult Oracle documentation.

ORA-35430: (SNSYN250) Invalid NORMAL function syntax.

Cause: The format of the NORMAL function was invalid.

Action: Correct the syntax and try again. The format of the NORMAL function is NORMAL(mean, standard-deviation). For more information, consult Oracle documentation.

ORA-35432: (SNSYN251) Invalid DEPRDECLSW function syntax.

Cause: The format of the DEPRDECLSW function was invalid.

Action: Correct the syntax and try again. The format of DEPRDECLSW is DEPRDECLSW(beg-val, end-val, num-pds, [decl-factor, FULL|HALF|exp, [sw-pd, [time dim]]]). For more information, consult Oracle documentation.

ORA-35434: (SNSYN265) Invalid format for CHGDFN command.

ORA-35436: (SNSYN267) Invalid WEEKOF function syntax.

Cause: The format of the WEEKOF function was invalid.

Action: Correct the syntax and try again. The format of the WEEKOF function is WEEKOF(expression). For more information, consult Oracle documentation.

ORA-35438: (SNSYN268) Invalid PERMIT command syntax.

Cause: The format of the PERMIT command was invalid.

Action: Correct the syntax and try again. The format of the PERMIT command is PERMIT READ|WRITE|MAINTAIN|PERMIT WHEN bool-exp [BY bool-exp]]. For more information, consult Oracle documentation.

ORA-35442: (SNSYN270) invalid PROPERTY command syntax

Cause: The format of the PROPERTY command was incorrect.

Action: Correct the syntax and try again. The format of the PROPERTY command is: PROPERTY {prop-name [,] value} | {DELETE {ALL | prop-name}} For more information, consult Oracle documentation.

ORA-35444: (SNSYN271) invalid TRANSLATEBYTES function syntax

Cause: The format of the TRANSLATEBYTES function was incorrect.

Action: Correct the syntax and try again. The format of the TRANSLATEBYTES function is: TRANSLATEBYTES(text 256-char-table). For more information, consult Oracle documentation.

ORA-35446: (SNSYN274) invalid LIMIT function syntax

Cause: The format of the LIMIT function was invalid.

Action: Correct the syntax and try again. The format of the LIMIT function is: LIMIT(limit arguments) For more information, consult Oracle documentation.

ORA-35448: (SNSYN276) The keyword USING must be followed by a dimension list in angle brackets .**ORA-35450: (SNSYN277) invalid CHANGECHARS function syntax**

Cause: The format of the CHANGECHARS function was invalid.

Action: Correct the syntax and try again. The format of the CHANGECHARS function is: CHANGECHARS(text-expr old-text new-text [num-to-change] [UPCASE]) For more information, consult Oracle documentation.

ORA-35456: (SNSYN281) The word *string* must be followed by an unsigned number.**ORA-35458: (SNSYN282) invalid ARCSIN function syntax**

Cause: The format of the ARCSIN function was incorrect.

Action: Correct the syntax and try again. The format of the ARCSIN function is: ARCSIN(expression). For more information, consult the Oracle documentation.

ORA-35460: (SNSYN283) invalid ARCTAN function syntax

Cause: The format of the ARCTAN function was incorrect.

Action: Correct the syntax and try again. The format of the ARCTAN function is: ARCTAN(expression). For more information, consult Oracle documentation.

ORA-35462: (SNSYN284) invalid COSH function syntax

Cause: The format of the COSH function was incorrect.

Action: Correct the syntax and try again. The format of the COSH function is: COSH(expression). For more information, consult Oracle documentation.

ORA-35464: (SNSYN285) Invalid SINH function syntax.

Cause: The format of the SINH function was incorrect.

Action: Correct the syntax and try again. The format of the SINH function is SINH(expression). For more information, consult Oracle documentation.

ORA-35466: (SNSYN286) The format of the TANH function is:\n \n TANH(expression)**ORA-35468: (SNSYN287) Invalid TAN function syntax.**

Cause: The format of the TAN function was incorrect.

Action: Correct the syntax and try again. The format of the TAN function is TAN(expression). For more information, consult Oracle documentation.

ORA-35470: (SNSYN288) Invalid ARCCOS function syntax.

Cause: The format of the ARCCOS function was incorrect.

Action: The format of the ARCCOS function is: ARCCOS(expression). Correct the syntax and retry.

ORA-35472: (SNSYN301) invalid MAXCHARS function syntax

Cause: The format of the MAXCHARS function was incorrect.

Action: Correct the syntax and try again. The format of the MAXCHARS function is MAXCHARS(text-expression). Refer to Oracle Database documentation for additional information.

ORA-35474: (SNSYN305) The format of the STATALL function is:\n \n STATALL(dimension)**ORA-35476: (SNSYN306) invalid EXTBYTES function syntax**

Cause: The format of the EXTBYTES function was invalid.

Action: Correct the syntax and try again. The format of the EXTBYTES function is: EXTBYTES(text-expression [start [length]]). For more information, consult Oracle documentation.

ORA-35478: (SNSYN307) The format of the FINDBYTES function is:\n \n FINDBYTES(search-text find-text [start [LINENUM]])**ORA-35480: (SNSYN308) The format of the JOINBYTES function is:\n \n JOINBYTES(text-expression1 text-expression2 ...)****ORA-35482: (SNSYN309) The format of the NUMBYTES function is:\n \n NUMBYTES(text-expression)****ORA-35484: (SNSYN310) The format of the INSBYTES function is:\n \n INSBYTES(text-expression bytes [after-position])****ORA-35486: (SNSYN311) The format of the REMBYTES function is:\n \n REMBYTES(text-expression start [length])**

ORA-35488: (SNSYN312) The format of the REPLBYTES function is:\n \n REPLBYTES(text-expression bytes [start-position])

ORA-35490: (SNSYN313) The format of the CHANGEBYTES function is:\n \n CHANGEBYTES(text-expression oldtext newtext [number-to-change])

ORA-35492: (SNSYN314) invalid MAXBYTES function syntax

Cause: The format of the MAXBYTES function was invalid.

Action: Correct the syntax and try again. The format of the MAXBYTES function is: MAXBYTES(text-expression). For more information, consult the Oracle documentation.

ORA-35494: (SNSYN315) The word ACROSS must be followed by a dimension name.

ORA-35496: (SNSYN316) The format of the FILTERLINES function is:\n \n FILTERLINES(source-exp, filter-exp)

ORA-35498: (SNSYN318) The format of the DBGOUTFILE command is:\n \n DBGOUTFILE [APPEND] {EOF | filename [NOCACHE]}

ORA-35500: (SNSYN319) The format of the OBSCURE function is:\n \n OBSCURE ({HASH | HIDE | UNHIDE | ENCRYPT} [, TEXT],\n seed-text, input-text)

ORA-35502: (SNSYN324) INSERT must be followed by FIRST, LAST, BEFORE dimension-value, or AFTER dimension-value.

ORA-35504: (SNSYN325) Invalid IMPORT command syntax.

Cause: There was an error in the syntax of the IMPORT command.

Action: Check Oracle documentation for command syntax and retry.

ORA-35508: (SNSYN329) invalid SYSINFO function syntax

Cause: The syntax of the SYSINFO function was incorrect.

Action: Correct the syntax and try again. The format of the SYSINFO function is 'SYSINFO(user|uid|roles|profiles|hostname|termname|pid| progname|osuser| chostname|cosuser|instname)'

ORA-35510: (SNSYN330) The format of the CATEGORIZE function is:\n \n CATEGORIZE(expression {group literal list | group expression})

ORA-35512: (SNSYN331) The format of the CORRELATION function is:\n \n CORRELATION(expression1, expression2, method, [BASEDON dimension1 [dimension2 ...]])

ORA-35514: (SNSYN332) The format of the MODE function is:\n \n MODE(expression, BASEDON dimension)

ORA-35516: (SNSYN333) The format of the PERCENTAGE function is:\n \n PERCENTAGE(expression [BASEDON dimension1 [dimension2 ...]])

ORA-35518: (SNSYN334) The format of the RANK function is:\n \n RANK(expression, method, BASEDON dimension)

ORA-35520: (SNSYN335) The format of the SMOOTH function is:\n \n SMOOTH(expression, method, parameters [BASEDON dimension1 [dimension2 ...]])

ORA-35522: (SNSYN336) The format of the NLSITEMS function is:\n \n NLSITEMS({LANGUAGE | TERRITORY})

ORA-35524: (SNSYN337) The format of the NLSAVAIL function is:\n \n NLSAVAIL({LANGUAGE | TERRITORY} itemname)

ORA-35526: (SORTENG10A) The expression for TOP or BOTTOM has a value of NA.

ORA-35528: (SORTENG10B) negative number of dimension values (*number*) requested in the TOP or BOTTOM phrase

Cause: There was a negative number of dimension values requested in the TOP or BOTTOM phrase. The TOP or BOTTOM phrase only support positive dimension values.

Action: Change your TOP or BOTTOM phrase to only use positive dimension values.

ORA-35529: (SORTENG10D) You cannot sort more than 231 - 1 values.**

Cause: The product of the status lengths of the base dimensions exceeded the maximum integer value.

Action: Use fewer base dimensions or reduce the status lengths of the base dimensions.

ORA-35530: (SORTENG10C) Cannot specify a percentage greater than 100 or less than 0. Percentage *number* requested.

Cause: A percentage greater than 100 or less than 0 was specified.

Action: Percent must be a number between 0 and 100.

ORA-35532: (SPSFILE1) The file you specified is not in *string* format.

ORA-35534: (SPSFILE2) *string* files require worksheets with only two dimensions.

ORA-35536: (SPSFILE3) PRN files require worksheets with only two dimensions.

ORA-35538: (SPSIDIF01) A record (*string*) that was not in DIF format was read while importing file *string*.

ORA-35540: (SPSIWKS1) An unexpected end-of-file occurred in spreadsheet file *string*. Check your data to make sure you imported all you expected.

ORA-35542: (SPSRREC01) An unexpected end-of-file occurred while importing file *string*. Check your data to make sure you imported all you expected.

ORA-35544: (SQA03) The SQL data in column *number* of your fetch statement cannot be converted to type *string*.

ORA-35548: (SQCGEXE01) SQL statement-name '*string*' has not been prepared in the current program.

ORA-35550: (SQCGOPN01) SQL cursor '*string*' has not been declared in the current program.

ORA-35554: (SQCSRNAM00) SQL cursor name '*number*' has an invalid length of *number*. A cursor name must have a length of 1 to 18 bytes, inclusive.

ORA-35556: (SQCSRNAM01) SQL cursor name '*number*' has an invalid first character. Use a-z, @, # or \$.

ORA-35558: (SQCSRNAM02) SQL cursor name '*number*' contains an invalid character. Use a-z, 0-9, @, #, \$ and _.

ORA-35559: (SQCSRNAM03) SQL cursor name cannot be INTO.

ORA-35560: (SQGETCD01) Conjoint dimension *workspace object* cannot be an input host variable. You can use the current values of its bases via the KEY function.

ORA-35561: (XSRWLD01) Object *workspace object* is not a valid target.

Cause: An invalid object was specified as a target.

Action: Choose a valid object as a target.

ORA-35562: (SQLIMP01) The SQL IMPORT command will produce *number* columns of output, but you have provided *number* host variables in your INTO clause.

Cause: The expression in the source query do not match the targets in the INTO clause.

Action: Make sure the the expressions in the source query match the targets in the INTO clause.

ORA-35563: (XSRWLD17) Multiple values exist for an attribute of this dimension member.

Cause: Multiple source table rows containing different values for a dimension attribute were found. Only the first of the multiple rows has been loaded.

Action: Fix the mapping or remove the rows with conflicting attribute values.

ORA-35564: (XSRWLD02) Cannot convert from the *string* type to the *string* type.

Cause: Conversion from source to target is not allowed

Action: Choose a different target datatype

ORA-35565: (XSRWLD03) For object *workspace object* only APPEND, MATCH or ASSIGN may be used.

Cause: An incorrect setting was applied to the target

Action: For DIMENSIONS use APPEND or MATCH, for SURROGATES use ASSIGN.

ORA-35566: (XSRWLD04) Object *workspace object* cannot be used with QDRs

Cause: A QDR was placed on a target dimension

Action: Remove the QDR on the target dimension

ORA-35568: (SQLIMP03) The datatype of variable *number* should be INTEGER, LONGINTEGER or SHORTINTEGER.

Cause: The target variable was not INTEGER, LONGINTEGER or SHORTINTEGER.

Action: The target variable must be INTEGER, LONGINTEGER or SHORTINTEGER.

ORA-35569: (XSRWLD05) An error was encountered in converting data *string* to *string* in column *number*.

Cause: The data could not be converted to the target datatype.

Action: Ensure the source data is valid for the target datatype.

ORA-35570: (XSRWLD06) A column value is not a valid member of its target dimension.

Cause: The source value for a dimension is not an existing member of the dimension.

Action: Ensure the column value is an existing member of its target dimension.

ORA-35571: (XSRWLD07) The maximum number of load errors has occurred. No changes from this step were committed to the database.

Cause: The number of load errors exceeded the specified maximum.

Action: Fix the load errors, or increase the maximum number allowed and rerun the load.

ORA-35572: (XSRWLD08) A column value is not a valid member of its related dimension.

Cause: The source data for a relation is not a member of the related dimension.

Action: Ensure the source data is a valid member of the related dimension.

ORA-35573: (XSRWLD09) An incoming dimension value is null.

Cause: A source value for a dimension is null.

Action: Ensure the source data for the dimension is not null.

ORA-35574: (SQLOUT02) SQL cursor '*number*' is not known in the current logical unit of work.

ORA-35575: (SQLOUT04) The *string* command will produce *number* columns of output, but you have provided *number* host variables in your INTO clause.

ORA-35576: (SQLOUT09) SQL cursor '*number*' is not open.

ORA-35577: (SQLOUT10) SQL cursor '*number*' has already been declared with a different SELECT statement.

ORA-35578: (SQLOUT11) SQL cursor '*number*' cannot be used with CURRENT OF *cursor name* syntax

Cause: The CURRENT OF *cursor* syntax in the WHERE clause tried to use a cursor that was not declared with the FOR UPDATE [of *column name*] SQL syntax.

Action: Add the FOR UPDATE [OF *column name*] SQL syntax to the cursor specified.

ORA-35579: (SQLOUT12) SQL cursor '*number*' has already been opened.

ORA-35580: (XSRWLD10) An incoming column contains a data type mismatch.

Cause: The data could not be converted to the target datatype.

Action: Ensure the source data is valid for the target datatype.

ORA-35581: (XSRWLD11) You do not have permission to write this value of the target.

Cause: You do not have sufficient permissions to write to the specified target.

Action: Ask the owner of the schema or OLAP DBA to grant you sufficient permissions.

ORA-35582: (XSRWLD12) Cannot change the level of dimension member "*number*" from "*number*" to "*number*" within a single load.

Cause: A dimension member is mapped to more than one level.

Action: Change the mapping so that each dimension member is mapped to only one level.

ORA-35583: (XSRWLD13) Cannot change the level of a dimension member within a single load.

Cause: A dimension member is mapped to more than one level.

Action: Change the mapping so that each dimension member is mapped to only one level.

ORA-35584: (SQLOUT17) The *string* procedure requires *number* parameters.

ORA-35585: (XSRWLD14) This SQL query generated rejected records.

Cause: Rejected records were generated by this query.

Action: Locate the records that were rejected and resolve the rejection (for example, data, mapping, and so on).

ORA-35586: (SQLOUT19) The parameter list passed to the procedure is syntactically incorrect.

ORA-35587: (SQLOUT20) The nesting of table functions and SQL commands has exceeded the maximum of *number* levels.

Cause: The nesting of table functions with the PREDMLCMD token populated with an OLAP DML expression that use the embedded SQL support to access another table function which contains a table functions with the PREDMLCMD token filled in with an OLAP DML expression that uses the embedded SQL support.

Action: Reduce the level of nesting between table functions and OLAP DML embedded SQL support.

ORA-35588: (XSRWLD15) Cannot change the parent of existing dimension member "*number*" from "*number*" to "*number*" in LOAD RETAIN mode.

Cause: An attempt was made to change the parent of an existing dimension member in LOAD RETAIN mode.

Action: Fix the mapping or use LOAD [NO] SYNCH mode.

ORA-35589: (XSRWLD16) Cannot change the parent of an existing dimension member in LOAD RETAIN mode.

Cause: An attempt was made to change the parent of an existing dimension member in LOAD RETAIN mode.

Action: Fix the mapping or use LOAD [NO] SYNCH mode.

ORA-35590: (SQPHRASE01) The host variable expression has invalid syntax.

ORA-35592: (SQRT00) The argument to SQRT is negative. Set ROOTOFNEGATIVE to YES if you want NA to be returned for the root of a negative number.

ORA-35594: (SSCGEXP01) The LIMIT criterion expression must be dimensioned by *workspace object*.

Cause: The LIMIT criterion did not have the dimension that LIMIT requires.

Action: If the target is a VALUESET, check its VALUESET attribute.

ORA-35596: (SSCGEXP02) The LIMIT criterion expression must be dimensioned by *workspace object*, which is a component of *workspace object*.

Cause: The LIMIT criterion expression was not a dimension of all the base dimensions of the composite.

Action: Use a LIMIT criterion that is dimensioned by all the base dimensions of the composite.

ORA-35600: (SSCGLIMT01) The IFNONE label is not allowed when you specify NULL status.

Cause: The LIMIT to NULL IFNONE label was specified which is not allowed.

Action: Use GOTO, if that is the desired behavior.

ORA-35602: (SSCGLIMT02) You cannot limit dimension composite *workspace object*.

Cause: The LIMIT of composite dimensions was specified which is not allowed.

Action: If a limit is required, then specify the limit in the base dimensions // of the composite dimension.

ORA-35603: (SSCGLIMT03) You cannot limit PARTITION TEMPLATE *workspace object*.

ORA-35604: (SSCGNULL01) The phrase "IFNONE label" can only be used when the LIMIT command executes in a program.

Cause: This specified command was not used in a program.

Action: Use this command in a program to intercept NULL status.

ORA-35606: (SSCGNULL02) *string* is not defined as a label.

Cause: The IFNONE label did not exist.

Action: Change the program to add the label or correct its spelling.

ORA-35610: (SSCGREL01) *workspace object* and *workspace object* are not related.

Cause: The target and source dimensions were not related.

Action: Choose a related dimension.

ORA-35612: (SSCGREL02) Related dimension values are not allowed when you specify a scalar or multi-dimensional relationship array.

ORA-35614: (SSCGREL03) *workspace object* is not a relationship involving *workspace object*.

ORA-35622: (SSCGREL07) *workspace object* is not a relation of *workspace object*.

Cause: The RELATION argument to LIMIT was not valid.

Action: Find a relation with the correct RELATION attribute.

ORA-35623: (XSSCLLEV07) *workspace object* is not a VALUESET of *workspace object*.

Cause: LEVELREL expected a VALUESET of the dimension argument.

Action: Use a VALUESET of the target dimension.

ORA-35624: (SSCGREL08) *workspace object* is not dimensioned by *workspace object*.

Cause: This relation was not a valid self relation for the target dimension.

Action: Find or create a valid self relation.

ORA-35625: (XSSCLLEV08) *workspace object* is not dimensioned by *workspace object*.

Cause: The relation was not a valid LEVELREL for target dimension.

Action: Use a valid LEVELREL.

ORA-35626: (SSCGREL09) *workspace object* is not related to itself.

ORA-35627: (XSSCLEV09) *workspace object* is not a relationship array.

Cause: LIMIT or SORT expected a RELATION name.

Action: Fix the RELATION argument to LIMIT or SORT.

ORA-35628: (SSCGREL10) *workspace object* is not a dimension of relation *workspace object*.

Cause: A dimension of the relation or its relation dimension was expected.

Action: Describe the relation and choose the one of its dimensions.

ORA-35629: (XSBASLIM00) *workspace object* does not have base dimensions.

ORA-35630: (SSCGREL11) While limiting dimension *workspace object*, it was used to qualify relation *workspace object*.

Cause: The target dimension was used to qualify a relation while it was being limited.

Action: Remove this clause from the LIMIT command.

ORA-35632: (SSCGREL12) While limiting an alias of *workspace object*, it was used to qualify relation *workspace object*.

Cause: The target dimension was used to qualify a relation.

Action: Remove this clause from the LIMIT command.

ORA-35633: (STATEQ01) Both arguments to STATEQUAL must be status lists of the same dimension.

Cause: The arguments are status lists of different dimensions.

Action: Use two status lists of the same dimension.

ORA-35634: (SSCGVALS01) The format of a related dimension list is:\n related-dimension [valuelist] | relationship-array-name

Cause: Incorrect syntax was used to specify a relate-dimension list.

Action: Consult Oracle Documentation for correct syntax of related- dimension lists.

ORA-35636: (SSCGVALS02) *workspace object* is a dimension composite and its position numbers cannot be used in LIMIT NOCONVERT.

ORA-35640: (SSEXECUT03) You cannot MAINTAIN ADD *workspace object* while it is being LIMITED.

ORA-35642: (SSEXECUT07A) The expression for the beginning of the dimension range has a value of NA.

Cause: The values for the beginning and ending of a dimensions range need to be non-NA values.

Action: Fix the caller to check for NA values.

ORA-35644: (SSEXECUT07B) The expression for the end of the dimension range has a value of NA.

Cause: The values for the beginning and ending of a dimensions range must be non-NA values.

Action: Fix the caller to check for NA values.

ORA-35646: (SSEXECUT08) The expression for BEFORE or AFTER has a value of NA.
Cause: The BEFORE or AFTER value is NA.

Action: Fix the caller to supply a correct value.

ORA-35648: (SSEXECUT09) The expression for FIRST or LAST has a value of NA.
Cause: LIMIT did not allow NA values for FIRST or LAST.

Action: Either test the value before using LIMIT or fix the expression to exclude NA values.

ORA-35650: (SSEXECUT15) The expression for BEFORE or AFTER is not in current status.

Cause: BEFORE and AFTER must be followed by a value in current status.

Action: Fix the BEFORE or AFTER expression.

ORA-35652: (SSFRLST01) In the FIRST or LAST phrase, you requested a negative number of dimension values (*number*).

ORA-35654: (SSNULL) The status of the *workspace object* dimension cannot be set to null.

ORA-35656: (STATCHK00) *workspace object* has no values in status.

ORA-35658: (STATLIST01) The data width argument to the STATLIST function must be greater than zero.

ORA-35660: (STATVAL03) The *workspace object* dimension does not have a status value numbered *number*.

ORA-35662: (STKTOINF01) The width argument to the CONVERT(... INFILE) function was *number*. The limit is *number*.

ORA-35664: (STKTOINF02) Conversion to INFILE would produce a value *number* bytes wide, exceeding the maximum input line length *number*.

ORA-35666: (STRBYT01) NTEXT arguments to the BYTE functions must be converted to TEXT. Use CONVERT(value TEXT NOTRANSLATE) to avoid translation.

ORA-35668: (STRCHG01) The oldtext and newtext arguments must be single-line text values.

ORA-35670: (STRCHG02) The oldtext argument must contain at least one character.

ORA-35672: (STRCHG03) The number-to-change argument must be greater than 0.

ORA-35674: (STRDEL01) The position of the first character to remove must be at least 1.

ORA-35676: (STRDEL02) You must remove at least one character. You cannot remove *number* characters.

ORA-35678: (STREXTR01) The position of the first character to extract must be greater than zero. You cannot start extracting at position *number*.

ORA-35680: (STREXTR02) You must extract at least one character. You cannot extract *number* characters.

ORA-35682: (STRFIND01) The start argument must be at least 1.

ORA-35684: (STRINS01) Insertion must begin after a character position of zero or greater.

ORA-35686: (STRINS02) The length of one line of a text value cannot exceed *number* characters. You attempted to create a line with *number* characters.

ORA-35688: (STRREP01) The position of the first character to replace must be at least 1.

ORA-35690: (SUBGONE00) You have requested a feature or used a command that is not supported in this release.

ORA-35692: (TDENDPT00) Dimension *workspace object* is empty.

ORA-35694: (TDINCNM00) You attempted to work with a date outside of the allowable range.

ORA-35696: (TEXTFENG01) The data width argument to the TEXTFILL function must be greater than zero.

ORA-35698: (TFGROUP01) Dimension *workspace object* appears in more than one GROUP phrase, either directly or via a dimension composite or conjoint dimension.

ORA-35700: (TFGROUP02) An expression used in a GROUP phrase must have exactly one dimension.

ORA-35702: (TFPARSE01) Dimension *workspace object* appears in both the DOWN phrase and a GROUP phrase, either directly or via a conjoint dimension or composite.

ORA-35704: (TFPARSE02) Dimension *workspace object* appears in both the DOWN phrase and an ACROSS phrase, either directly or via a conjoint dimension or composite.

ORA-35706: (TFPARSE03) Dimension *workspace object* appears both inside and outside an ACROSS loop.

ORA-35708: (TFPARSE04) The expressions used in the DOWN phrase must all have the same single dimension.

ORA-35710: (TFPARSE05) The DOWN phrase must be a single expression or a list of expressions enclosed in angle brackets .

ORA-35712: (TFPARSE07) Dimension *workspace object* appears in both an ACROSS phrase and a GROUP phrase, either directly or via a conjoint dimension or composite.

ORA-35716: (TRIGGER00) NA trigger calls exceed the maximum allowable depth of *number*.

ORA-35718: (TRIGGER01) The NA trigger expression for variable *workspace object* contains a format error.

ORA-35720: (TRIGGER02) The NA trigger for *workspace object* could not be executed recursively because the RECURSIVE option is set to NO.

ORA-35726: (TSFENG01) The starting point (*number*) for a moving function must be less than or equal to the stopping point (*number*).

ORA-35728: (TSFENG02) The step value (*number*) for a moving function must be greater than zero.

ORA-35730: (TSFENG03) The starting point, stopping point, and step value for a moving function cannot be NA.

ORA-35732: (UNITCHEK01) *number* is an invalid file unit number.

ORA-35734: (UNITCHEK02) File unit *number* is not open.

ORA-35736: (VALNAME01) You cannot define NAME. NAME is a special reserved dimension used to organize your analytic workspace dictionary.

ORA-35738: (VCLEX01) "*number*" is not a valid dimension value because it contains invalid characters or blanks, but it is not enclosed in single quotes.

ORA-35740: (VCLEX02) *string* is too large to be an integer.

ORA-35742: (VCLEX06) *number* already exists in the *string* analytic workspace.

ORA-35744: (VCLEX07) "*number*" is not a valid name because it contains invalid characters or blanks.

ORA-35746: (VCLEX08) *string* is too large to be a short integer.

ORA-35748: (VCOVRFLW01) A text value cannot be more than *number* characters long. Your value is *number* characters long.

ORA-35749: (VCHEX01) '*character*' is not a valid hexadecimal digit.

Cause: The text being converted contains an invalid hexadecimal digit.

Action: Replace the character with a digit in the range 0-9 or A-F.

ORA-35750: (VCTOBOOL01) A multiline text value cannot be converted to a BOOLEAN.

ORA-35752: (VCTODT00) '*string*' is not a valid date order. Valid orders are YMD, YDM, MYD, MDY, DMY, and DYM.

ORA-35754: (VCTODT01) '*number*' is not a valid date because *number* is out of range for a month.

ORA-35756: (VCTODT02) '*number*' is not a valid date because *number* is out of range for a year.

Cause: n'%1p'

Action: n/a

ORA-35758: (VCTODT03) '*number*' is not a valid date because *number* is out of range for a day of the month.

Cause: The numeric value of day was invalid for this year and month.

Action: Specify a valid numeric value in day for the specified year and month. Then, retry the operation.

ORA-35760: (VCTODT04) '*number*' is not a valid date because it is ambiguous.

ORA-35762: (VCTODT05) '*number*' is not a valid packed numeric date.

ORA-35764: (VCTODT06) 'number' is not a valid date.

ORA-35766: (VCTODT07) 'number' is not a valid date or name for the *workspace object* dimension.

ORA-35768: (VCTODT08) 'number' is not a valid name for *workspace object*, because the period *number* is out of range.

Cause: The wrong number days, weeks or months in a year was specified.

Action: Correct the first word in this error to be a valid date.

ORA-35770: (VCTODT15) 'number' is not a valid date. The numeric field 'string' cannot be interpreted.

ORA-35772: (VCTODT16) 'number' is not a valid date. 'string' is the second year field encountered.

Cause: Two year fields were entered.

Action: Remove the second year field.

ORA-35774: (VCTODT17) 'number' is not a valid date. A second alphabetic field, 'string', is not allowed.

Cause: The date contains two values for month.

Action: Enter a single valid date.

ORA-35776: (VCTODT18) 'number' is not a valid date. A date cannot end with a separation character.

ORA-35778: (VCTODT19) 'number' is not a valid date. Input after 'string' is extra.

ORA-35780: (VCTODT20) A date cannot be an empty string.

ORA-35782: (VCTODT21) 'number' is not a valid date because it is incomplete.

ORA-35784: (VCTODT22) 'number' is not a valid date. Packed numeric notation must be 6 or 8 digits long.

ORA-35786: (VCTODT23) 'number' is not a valid date. 'string' cannot be recognized as a month name.

Cause: An invalid month name was specified.

Action: Specify a valid month name.

ORA-35788: (VCTODT24) 'number' is not a valid date. There are too many leading zeros beginning at 'string'.

ORA-35790: (VCTODT25) 'number' is not a valid date. A date cannot begin with 'string'.

Cause: The date was invalid. Valid dates cannot begin with the specified characters.

Action: Use a correct date value.

ORA-35792: (VCTODT27) 'number' is not a valid date. 'string' is not a valid character.

ORA-35794: (VCTORD01) A multiline text value cannot be converted to a number.

ORA-35796: (VERFAIL01) Your response does not meet the requirements for this item.

ORA-35798: (VERFAIL02) *string*

ORA-35800: (VSDOKAY01) Discarding compiled code for *workspace object*, because *number* now resolves to a value of *workspace object*. Previously, it resolved to a value of *workspace object*.

ORA-35802: (VSDOKAY02) Discarding compiled code for *workspace object*, because *number* is no longer a value of *workspace object*.

ORA-35804: (WATCHXEQ01) Watch point *number*: *number* is true in *workspace object* at statement:

ORA-35810: (XSINPUTERR) The command has requested more input than was supplied in the command string.

Cause: The command required input that was not supplied in the string.

Action: Reexecute the command with the required input.

ORA-35812: (XSACROSS01) The *string* command cannot be executed by ACROSS.

ORA-35818: (XSCAT01) Group definition values cannot be NA.

ORA-35820: (XSCAT02) Each group definition value must be greater than its predecessor.

ORA-35822: (XSCGCAT01) The source expression must be numeric.

ORA-35824: (XSCGCAT02) The group expression must be numeric.

ORA-35826: (XSCGCAT03) The group expression must be one-dimensional.

ORA-35828: (XSCGCORR01) Data expressions must be numeric.

ORA-35830: (XSCGCORR02) BASEDON names must be dimensions.

ORA-35832: (XSCGCORR03) BASEDON names must be dimensions of both data expressions.

ORA-35834: (XSCGCORR04) You have named duplicate BASEDON dimensions.

ORA-35836: (XSCGCORR05) The two expressions must have at least one common dimension.

ORA-35838: (XSCGMODE01) The data expression must be numeric.

ORA-35840: (XSCGMODE02) BASEDON names must be dimensions.

ORA-35842: (XSCGMODE03) BASEDON names must be dimensions of the data expression.

ORA-35844: (XSCGMODE04) You have named duplicate BASEDON dimensions.

ORA-35846: (XSCGPCTAGE01) The data expression must be numeric.

Cause: The data expression was not numeric.

Action: Correct the data expression to be numeric.

ORA-35848: (XSCGPCTAGE02) BASEDON names must be dimensions.

ORA-35850: (XSCGPCTAGE03) BASEDON names must be dimensions of the data expression.

ORA-35852: (XSCGPCTAGE04) You have named duplicate BASEDON dimensions.

ORA-35854: (XSCGRANK01) The data expression must be numeric.

ORA-35856: (XSCGRANK02) BASEDON names must be dimensions.

Cause: BASEDON was not followed by the name of a dimension.

Action: Use a dimension name.

ORA-35858: (XSCGRANK03) BASEDON names must be dimensions of the data expression.

ORA-35860: (XSCGRANK04) You have named duplicate BASEDON dimensions.

ORA-35862: (XSCGSMOOTH01) The data expression must be numeric.

ORA-35864: (XSCGSMOOTH02) You have not supplied enough smoothing parameters.

ORA-35866: (XSCGSMOOTH03) The smoothing parameters must be numeric.

ORA-35868: (XSCGSMOOTH04) BASEDON names must be dimensions.

Cause: BASEDON must be followed by the name of a dimension.

Action: Use a dimension name.

ORA-35870: (XSCGSMOOTH05) BASEDON names must be dimensions of the data expression.

ORA-35872: (XSCGSMOOTH06) You have named duplicate BASEDON dimensions.

ORA-35874: (XSFCAST01) The *string* forecasting option cannot be set.

ORA-35876: (XSFCAST02) You must use an INTO phrase to specify an output location for the forecast results.

ORA-35878: (XSFCAST03) The *string* forecasting option cannot be queried.

ORA-35880: (XSFCAST04) You cannot specify a trial number when querying the *string* forecasting option.

ORA-35882: (XSFCAST05) You must specify a trial number when querying the *string* forecasting option.

ORA-35884: (XSFCAST06) The forecasting context handle cannot be NA.

ORA-35886: (XSFCAST07) The time dimension *workspace object* has *number* values in status. The limit is *number*.

ORA-35888: (XSFCAST08) The time dimension *workspace object* has no values in status.

ORA-35890: (XSFCAST09) The time dimension *workspace object* has only *number* values in status. You cannot specify *number* historical periods.

ORA-35892: (XSFCAST10) The *string* target variable must also be dimensioned by *string*.

ORA-35894: (XSFCAST11) *string* must be less than or equal to *string*. The current values are *number* and *number*, respectively.

ORA-35896: (XSFCAST12) The value of *string* must evenly divide the difference between MIN and MAX values. The current values are *number*, *number*, and *number*.

ORA-35898: (XSFCAST13) The trial number for querying *string* cannot be NA.

ORA-35900: (XSFCAST14) *number* is not the handle of an open forecasting context.

ORA-35902: (XSFCAST15) You cannot specify an NA value for *string*.

ORA-35904: (XSFCAST16) Values of *string* must be between *number* and *number*. You specified *number*.

ORA-35906: (XSFCAST17) Values of *string* must be between *number* and *number*. You specified *number*.

ORA-35908: (XSFCAST18) '*number*' is not a recognized value of *string*.

ORA-35910: (XSFCAST19) The forecasting context *number* has been invalidated because one or more of the extra dimensions of the time-series expression is no longer available.

ORA-35912: (XSFCAST20) A forecasting context identified by the text '*string*' already exists. Its handle is *number*.

ORA-35914: (XSFCAST21) Values of the TRADINGDAYS expression cannot be less than or equal to zero.

ORA-35916: (XSHIDE01) *workspace object* is not a program or model.

ORA-35917: (XSHIDE05) Cannot HIDE model *workspace object* because the analytic workspace in which it is defined has not been upgraded to version *string*.

Cause: An attempt was made to apply the HIDE command to a model in an analytic workspace that was not upgraded to the necessary compatibility level.

Action: Ensure that the database is running in the appropriate compatibility mode, and upgrade the analytic workspace.

ORA-35918: (XSHIDE02) You do not have access to *workspace object*.

Cause: Permission to read the text of the named object was not granted.

Action: Acquire the necessary READ permission on the object and retry the command.

ORA-35919: (XSHIDE06) The encryption seed text for *string* must be at least *number* characters in length.

Cause: Seed text shorter than the minimum required length was specified.

Action: Specify seed text that is at least as long as the length specified.

ORA-35920: (XSHIDE03) The encryption seed for HIDE and UNHIDE must be a non-empty, one-line TEXT value.

ORA-35922: (XSHIDE04) *workspace object* is already hidden.

ORA-35924: (XSMOOTH01) Smoothing parameters cannot be NA.

ORA-35926: (XSMOOTH02) Smoothing constants must be between 0 and 1.

ORA-35928: (XSMOOTH03) Cannot compute valuespace offset

ORA-35930: (XSPCTAGE01) Cannot compute valuespace offset

ORA-35932: (XSPGFTCH01) Analytic workspace *string* is not attached.

ORA-35934: (XSPGFTCH02) No fetch analytic workspace specified

ORA-35950: (OBSCURE01) The seed expression argument to OBSCURE cannot be NA.

ORA-35951: (OBSCURE02) The ENCRYPT option of OBSCURE is not supported at the current compatibility level.

Cause: An attempt was made to use the ENCRYPT option of the OBSCURE function, which is not supported for a compatibility level earlier than 12.2.0.2.

Action: Raise the compatibility level or choose a different OBSCURE option.

ORA-35952: (XSSPFC01) The *string dimension workspace object* and the *string dimension workspace object* must have the same number of values in status for SPFCEXEC method *number*.

Cause: This method requires the named dimensions to have the same number of values in status, but the user provided statuses of different lengths.

Action: Relimit the dimensions so that their status lengths are the same.

ORA-35958: (XSPGREPORT01) Of *number* allocated pages *number* are currently in use, *number* are available for use, *number* are hard-locked, and *number* are soft-locked.

ORA-35964: (COPYDFN01) You must have a current analytic workspace to perform a COPYDFN.

ORA-35966: (COPYDFN02) The format of the COPYDFN command is:\n\n COPYDFN newname oldname.

ORA-35968: (COPYDFN03) Analytic workspace object %1 does not exist.

ORA-35970: (COPYDFN05) You cannot copy the definition of an OPTION.

ORA-35972: (COPYDFN06) %1 is an invalid name for an analytic workspace object.

ORA-35974: (DBDESC00) There are no objects in this analytic workspace.

ORA-35976: (DBDESC01) Last updated: %1 Time: %2

ORA-35980: (DBDESC03) %1 contains:

ORA-35986: (DBDESC06) Description of %1 objects

ORA-35988: (DBDESC07) Description of PROGRAM %1

ORA-35990: (DBDESC08) Description of MODEL %1

ORA-35992: (DBDESC09) (Cont'd)

ORA-35996: (DBDESC11) Analytic Workspace:

ORA-35998: (DBDESC12) Updated:

ORA-36000: (DBDESC13) At:

ORA-36004: (DBDESC15) TYPE

ORA-36006: (DBDESC16) DESCRIPTION

ORA-36008: (DBDESC17) Analytic Workspace Listing

ORA-36010: (DBDESC18) Page

ORA-36017: (XSHIERCK10) The definition of hierarchy *workspace object over number* in level *number* is not star consistent. The collision parents include *number*.

Cause: The definition of the hierarchy was not star consistent.

Action: Change the definition of the hierarchy.

ORA-36018: (XSHIERCK02) The format of the HIERCHECK command is:\n\n HIERCHECK relation [STATUS|NOSTATUS|valueset] [MULTIPATH] [CONSISTENT] [{BALANCED|STAR_CONSISTENT} levelrelation] \nOr\n HIERCHECK aggmap [MULTIPATH] [CONSISTENT]

Cause: The wrong object type was specified.

Action: Change the object to a RELATION or AGGMAP.

ORA-36019: (XSHIERCK11) The format of the HIERSHAPE function is:\n\n HIERSHAPE(relation[(qdr)] {level|ragged|skipleve|regular} USING levelrel [INHIERARCHY inhvs] LEVELORDER levels)

Cause: The wrong object type or the wrong object definition was specified.

Action: Change the object type or use the correct object definition.

ORA-36020: (XSHIERCK03) The definition of hierarchy *workspace object over number* is inconsistent.

Cause: The definition of the hierarchy was inconsistent.

Action: Change the definition of the hierarchy.

ORA-36021: (XSHIERCK12) The format of the HIERCHECK function is:\n\n HIERCHECK(relation [STATUS|NOSTATUS|valueset] [MULTIPATH] [CONSISTENT] [{BALANCED|STAR_CONSISTENT} levelrelation]) \nOr\n HIERCHECK(aggmap [MULTIPATH] [CONSISTENT])

Cause: The wrong object type was specified.

Action: Change the object to a RELATION or AGGMAP.

ORA-36022: (XSHIERCK04) Valuesets specified in the HIERCHECK command must be scalar. *workspace object* is dimensioned.

Cause: The HIERCHECK command specified a dimensioned valueset.

Action: Specify a scalar valueset in its place.

ORA-36024: (XSHIERCK05) Valueset *workspace object* must contain values of one of the extra dimensions of relation *workspace object*.

Cause: The HIERCHECK command specified a valueset over an invalid dimension.

Action: Specify a valueset containing values of one of the self-relation's extra dimensions (the dimensions in the relation's dimension list, minus the self-related dimension itself).

ORA-36025: (XSHIERCK06) The level dimension of the level relation *workspace object* is the same as the relation dimension *workspace object*.

Cause: The level dimension was the same as the relation dimension.

Action: Change the definition of the level relation.

ORA-36026: (XSHIERCK07) Level relation *workspace object* is not dimensioned by relation dimension *workspace object*.

Cause: The level relation was not dimensioned by the relation dimension.

Action: Change the definition of the level relation.

ORA-36027: (XSHIERCK08) Hierarchy *workspace object* is not balanced.

Cause: The current hierarchy was not balanced.

Action: Change the hierarchy to balanced.

ORA-36028: (XSHIERCK09) Hierarchy *workspace object* has multiple paths from *number* to *number*.

Cause: The current hierarchy had multiple paths.

Action: Remove multiple paths from the hierarchy.

ORA-36034: (XSMHIERCK00) One or more loops have been detected in relationship *workspace object* over *workspace object*. The last *number* of the items are *number*.

Cause: A relation was used that contained loops. There were more items involved than could be reported.

Action: Correct the relation so that it does not contain loops.

ORA-36035: (XSMHIERCKREL) One or more loops have been detected in *workspace object*. *number* items involved are *number*.

Cause: A relation was used that had loops in it.

Action: Correct the relation so that it does not contain loops.

ORA-36036: (XSMHIERCK01) One or more loops have been detected in relationship *workspace object* over *workspace object*. The *number* items involved are *number*.

Cause: A relation was used that contained loops.

Action: Correct the relation so that it does not contain loops.

ORA-36038: (INTL00) No application code specified

ORA-36040: (INTL01) IMPORTANT: The length of the following phrase(s) exceeds %1. They will be truncated.

ORA-36042: (INTL02A) The %1 language analytic workspace for %2 could not be attached, and there is no English-language analytic workspace for this application.

ORA-36044: (INTL02B) Neither the %1 language analytic workspace nor the %2 language analytic workspace could be attached for %3, and there is no English-language analytic workspace for this application.

ORA-36050: (INTL06) Invalid option specified. Option must be either OSM, CA, or blank.

ORA-36052: (LISTBY00) LISTBY cannot be called as a function returning a value.

ORA-36054: (LISTBY01) You must have a current analytic workspace to use the LISTBY command.

ORA-36056: (LISTBY02) The syntax of the LISTBY command is:\n LISTBY dimension [dimension ...]\nDimension composites can also be named.

ORA-36058: (LISTBY03) %1 does not exist in any attached analytic workspace.

ORA-36060: (LISTBY04) %1 is not a dimension or composite.

ORA-36062: (LISTBY05) %1 is in a different analytic workspace from previously specified object(s) "%2".

ORA-36064: (LISTBY06) The syntax for specifying an unnamed composite is:\n SPARSE*dimension-list*\nwhere 'dimension-list' is a list of simple or conjoint dimensions or named composites.

ORA-36066: (LISTBY07) %1 objects dimensioned by or related to %2 in analytic workspace %3

ORA-36068: (LISTNAMES00) Analytic workspace %1 is not attached.

ORA-36070: (LISTNAMES01) There are no objects in the analytic workspace of the following types:\n%1

ORA-36072: (LISTNAMES02) There are no objects in the analytic workspace.

ORA-36074: (LISTNAMES03) There are no objects in the analytic workspace that match '%1'.

ORA-36076: (LISTNAMES04) %1 is not a valid keyword for LISTNAMES.\nValid keywords are:\nALL, SORT or UNSORT, AW workspace-name\n%2

ORA-36078: (MODEL00) Specify the name of a model for the report.

ORA-36080: (MODEL01) %1 does not exist.

ORA-36082: (MODEL02) %1 is not a model.

ORA-36084: (MODEL03) Model %1 has not been compiled.

ORA-36086: (MODEL04) Information is not available for model %1.

ORA-36088: (MODEL05) Model %1 is not the most-recently executed model.

ORA-36090: (MODEL06) Solution status:

ORA-36092: (MODEL07) Model options in use:

- ORA-36094: (MODEL08) Solution status:**
- ORA-36098: (MODEL10) Divergent statement**
- ORA-36100: (MODEL11) Model: %1**
- ORA-36102: (MODEL12) Statement %1%2**
- ORA-36104: (STATUS00) You must have a current analytic workspace to use the STATUS command.**
- ORA-36106: (STATUS01) There are no dimensions in your current analytic workspace.**
- ORA-36108: (STATUS02) There are no dimensions in analytic workspace %1.**
- ORA-36110: (STATUS03) %1 has no dimensions.**
- ORA-36112: (STATUS04) The current status of %1 is:**
- ORA-36114: (STDHDR00) Page**
- ORA-36116: (TRACKREPORT00) Program name**
- ORA-36118: (TRACKREPORT01) Exclusive cost**
- ORA-36120: (TRACKREPORT02) Inclusive cost**
- ORA-36122: (TRACKREPORT03) Number of calls**
- ORA-36124: (XLIST00) %1 exceptions found.**
- ORA-36126: (XLIST01) %1 already exists.**
- ORA-36128: (XLIST03) The exception criterion must be a single expression.**
- ORA-36130: (XLIST04) The exception criterion must be a BOOLEAN expression.**
- ORA-36132: (XLIST05) The exception criterion must be dimensioned.**
- ORA-36134: (XLIST06) %1 is not an exception list.**
- ORA-36136: (XLIST07) There is no current exception list. You can use the NAMEXL command to specify one.**
- ORA-36138: (XLIST08) %1 has been deleted.**
- ORA-36142: (XREF01) Referenced By:**
- ORA-36145: (SETPROP01) The property "%1" cannot be set for measure "%2".**
Cause: A property name was given that is not one of the allowed properties to be set.
Action: Specify one of the legal property names.
- ORA-36146: (READSIZE01) The *string* expression cannot be missing or NA.**
- ORA-36148: (READSIZE02) The minimum value for *string* is *number*. You specified a value of *number*.**

ORA-36152: (READSIZE04) The maximum value for *string* is *number*. You specified a value of *number*.

ORA-36154: (XSMXAGGR01) *workspace object* is not a data variable.

Cause: An object was specified on the Aggregate command line that was not a variable

Action: Specify a variable instead

ORA-36155: (XSMXAGGRFROM) *workspace object* must be a variable or formula of a similar data type to *workspace object* to be used with FROM, or a TEXT variable or formula to be used with FROMVAR.

Cause: The user specified an illegal variable for use with FROM or FROMVAR on the AGGREGATE command line

Action: Specify a legal variable instead

ORA-36156: (XSMXAGGR02) When using the BOOLEAN or FORMULA WEIGHT *workspace object*, WNAFILL is the only valid option.

ORA-36158: (XSMXAGGR03) *workspace object* must be an AGGMAP object.

ORA-36160: (XSMXAGGR04) You cannot use *string* on scalar VARIABLE *workspace object*.

Cause: The user tried to run the AGGREGATE or AGGCOUNT command or function on a scalar variable.

Action: Specify a dimensioned variable instead

ORA-36161: (XSAGGRRUVCV) Aggregation variable *workspace object* cannot have itself as a COUNTVAR.

Cause: The user specified the same variable as both an aggregation variable and a COUNTVAR

Action: Specify a different COUNTVAR

ORA-36162: (XSMXAGGR05) COUNTVAR variable *workspace object* must be of type INTEGER, not *string*.

Cause: The user specified a non-INTEGGER variable as a COUNTVAR for aggregation

Action: Redefine the COUNTVAR to be an INTEGER

ORA-36164: (XSMXAGGR07) When using the COUNTVAR clause, the number of variables to be aggregated (*number*) must match the number of COUNTVAR variables (*number*).

Cause: The user specified a COUNTVAR clause to the AGGREGATE command, but the number of COUNTVAR variables specified did not match the number of variables to be aggregated

Action: Specify a separate COUNTVAR for each variable

ORA-36165: (XSAGGCNTPROP) Variable *workspace object* cannot have both an AGGCOUNT and the \$COUNTVAR property.

Cause: An attempt was made to add the \$COUNTVAR property to a variable which already had an AGGCOUNT, or vice versa.

Action: Delete the already existing \$COUNTVAR property or AGGCOUNT first.

ORA-36166: (XSMXAGGR08) workspace object is not a VARIABLE.

Cause: An attempt was made to perform an AGGREGATE or other action on an object which is not a variable.

Action: Specify a variable instead.

ORA-36167: (XSAGGRFORM) workspace object is not a valid AGGMAP for aggregating a FORMULA.

Cause: The user attempted to aggregate a FORMULA using an AGGMAP that is not valid for aggregating FORMULAs. The AGGMAP must specify PRECOMPUTE(NA) for all relation lines and must not specify any caching.

Action: Correct the AGGMAP so that it is valid for aggregating a FORMULA.

ORA-36168: (XSMXAGGR10) COUNTVAR variable workspace object must have the same dimensionality as workspace object

Cause: The user specified a COUNTVAR variable which is missing at least one dimension of the aggregation variable

Action: Specify a COUNTVAR variable which has at least as many base dimensions as the aggregation variable

ORA-36170: (XSMXAGGR12) The data type of the WEIGHT workspace object must be numeric or BOOLEAN, not string.

Cause: The user specified a WEIGHT variable or formula which wasn't numeric or boolean

Action: Specify a numerical or boolean weight instead

ORA-36172: (XSMXAGGR18) WEIGHT option WNOAGG cannot be used with the WSTORE, WVARPRIORITY, or WAGGPRIORITY options on WEIGHT workspace object.**ORA-36174: (XSMXAGGR23) workspace object must be either a VARIABLE, a RELATION or a FORMULA.**

Cause: The user specified something that was not a variable, a relation or a formula as a weight for AGGREGATE

Action: Specify a valid variable, relation or formula instead

ORA-36176: (XSMXAGGR25) Relation workspace object must be a one-dimensional self-relation to be used as a weight for AGGREGATE.

Cause: The user specified an illegal relation as a weight. The relation might have been multidimensional, not a self-relation, or not a relation over one of the bases of the aggregation variable.

Action: Specify a valid self relation over one of the bases of the aggregation variable.

ORA-36178: (XSAGGR01) To be used with AGGREGATE, AGGMAP workspace object must be declared with the AGGMAP command.

Cause: The user used the ALLOCMAP command to define the AGGMAP, so the AGGMAP can only be used with the ALLOCATE command, or the AGGMAP has no contents attached to it.

Action: Use the AGGMAP command to define the AGGMAP.

ORA-36179: (XSNOAGM) No AGGMAP was specified for VARIABLE workspace object.

Cause: The user used the AGGREGATE command without specifying an AGGMAP on the command line, with a variable which had no \$AGGMAP property.

Action: Specify an AGGMAP on the AGGREGATE command line, or add the \$AGGMAP property to the variable in question.

ORA-36180: (XSAGGR08) AGGREGATE cannot function because there is a permission clause associated with variable workspace object.

Cause: When using AGGREGATE, only simple permissions and permissions on base dimensions are valid.

Action: Remove the permissions clause from the variable causing problems.

ORA-36181: A VARIABLE cannot have both the \$AGGREGATE_FROM and \$AGGREGATE_FROMVAR properties applied to it.

Cause: The user attempted to add both the \$AGGREGATE_FROM and \$AGGREGATE_FROMVAR properties to a single variable.

Action: Remove the existing property before applying the new one.

ORA-36182: (XSAGGR09) Could not locate a value for variable number in measure dimension workspace object.

Cause: A measure dimension was supplied in the AGGMAP, but a position for the variable was not found in it.

Action: Add a position for the variable in the measure dimension.

ORA-36184: (XSAGGR10) You do not have sufficient permissions for the variable workspace object.

Cause: The user lacked the permissions necessary for the aggregation variable.

Action: Remove the restricting permissions from the variable or base dimension.

ORA-36185: (XSAGGR11) workspace object does not have any AGGCOUNT information.

Cause: User attempted an operation (such as the AVERAGE aggregation operator or the AGGCOUNT function) that requires a variable to have AGGCOUNT information on a variable that does not.

Action: Define the variable using the WITH AGGCOUNT clause, or use the CHGDFN ADD AGGCOUNT command to enable AGGCOUNT for the variable.

ORA-36186: (XSAGGR12) You must use a COUNTVAR when aggregating with AVERAGE.**ORA-36188: (XSAGGR16) AGGREGATE read a value less than 1 out of COUNTVAR variable workspace object. Either the values of the COUNTVAR variable are stored improperly, or there is problem in AGGREGATE. If no one has modified the values in this COUNTVAR, contact Oracle customer support.**

Cause: Either someone improperly changed the COUNTVAR variable, or AGGREGATE has an error.

Action: Set the COUNTVAR variable to NA before starting AGGREGATE. If you previously set the COUNTVAR variable to NA, then contact Oracle OLAP technical support.

ORA-36190: (XSAGGR26) workspace object is of type string. The numerical calculation string requires INTEGER, DECIMAL or SHORTDECIMAL data.

ORA-36192: (XSAGGR27) *workspace object* is of type *string*. The boolean calculation *string* requires BOOLEAN data.

ORA-36194: (XSAGGR28) *workspace object* is of type *string*. The requested operation requires INTEGER, DECIMAL, SHORTDECIMAL or BOOLEAN data.

ORA-36196: (XSAGGR32) '*number*' is an invalid argument specifier for AGGREGATE.

ORA-36198: (XSAGGR33) Cannot aggregate over COMPRESSED COMPOSITE *workspace object* using AGGMAP *workspace object* because the operator variable with more than 1 line dimensions is not supported for bases of a COMPRESSED COMPOSITE.

Cause: The user specified an aggregation the operator variable with more than 1 line dimensions that is not supported by COMPRESSED COMPOSITES.

Action: Use a MODEL for the calculation, or use an uncompressed COMPOSITE.

ORA-36200: (XSAGGR34) AGGREGATE operator *string* requires a WEIGHTBY clause, but ARGS variable *workspace object* did not specify one.

Cause: The given operator requires a WEIGHT specification, but the ARGS variable did not supply one.

Action: Modify the ARGS variable to specify a weight for the operation.

ORA-36201: (XSAGGR35) Cannot aggregate *workspace object*(partition *workspace object*) because the subpartition is itself partitioned.

Cause: Attempted to aggregate an intermediate partition of a variable with nested partitioning.

Action: rerun the aggregate command separately for each ultimate partition or just for the variable as a whole

ORA-36202: (XSAGOP01) '*number*' is not a valid aggregation operator.

Cause: An invalid string was provided for an aggregation operator.

Action: Check the spelling of the operator to make sure you are specifying a valid one.

ORA-36204: (XSAGOP04N) In AGGMAP *workspace object*, the NAOPERATOR *string* must be HFIRST, HLAST or HEVEN.

Cause: An invalid NAOPERATOR was specified.

Action: Specify HFIRST, HLAST or HEVEN.

ORA-36206: (XSAGOP04R) In AGGMAP *workspace object*, REMOPERATOR *string* must be MIN, MAX, FIRST, LAST, HFIRST or HLAST.

Cause: An invalid REMOPERATOR was specified.

Action: Specify one of the legal operators.

ORA-36208: (XSAGOP05N) In AGGMAP *workspace object*, you can only specify NAOPERATOR *string* with the PROPORTIONAL or EVEN operators, not *string*.

Cause: The user specified an NAOPERATOR when you were not using PROPORTIONAL or EVEN.

Action: Remove the NAOPERATOR clause from the RELATION line.

ORA-36210: (XSAGOP05R) In AGGMAP workspace object, you can only specify the REMOPERATOR string with the PROPORTIONAL, EVEN, or HEVEN operators, not string.

Cause: The user specified a REMOPERATOR without using PROPORTIONAL, EVEN, or HEVEN.

Action: Remove the REMOPERATOR clause from the RELATION line.

ORA-36212: (XSAGOP06) In AGGMAP workspace object, you can only specify the MIN, MAX, FLOOR, and CEILING arguments while using the PROPORTIONAL operator, not string.

Cause: The user specified MIN, MAX, FLOOR, or CEILING when using an operator other than PROPORTIONAL.

Action: Remove the incorrect argument from the RELATION line.

ORA-36216: (XSOPARM01) A DIMENSION must have a data type (ID, TEXT, or INTEGER), a time period, or a list of bases for a conjoint dimension.

ORA-36220: (XSLPDSC01) All dimensions in LIST number are also in the IGNORE clause.

Cause: One of the dimension lists in the dimension loop descriptor had no base dimensions except those in the IGNORE list. This leaves no dimensions for looping over.

Action: Fix the dimension loop descriptor.

ORA-36221: (XSLPDSC02) LIST number and LIST number have different base dimensions.

Cause: The base dimensions of the dimension lists given in the loop descriptor do not match.

Action: Ensure that each dimension list has the same set of looping base dimensions. If necessary, use IGNORE within a lists to discard base dimensions that should not be looped.

ORA-36222: (XSLPDSC03) duplicate IGNORE or DENSE information for dimension workspace object

Cause: An IGNORE or DENSE list in a dimension loop descriptor included the dimension twice, included two different valuesets of the dimension, or includes the dimension and a valueset of the dimension.

Action: Only use the dimension or a valueset of the dimension once in an IGNORE or DENSE list.

ORA-36223: (XSLPDSC04) object workspace object in IGNORE or DENSE list has illegal type

Cause: An IGNORE or DENSE list in a dimension loop descriptor included an object that was not a dimension or a valueset, was a conjoint dimension, or was a dimensioned valueset.

Action: Only use simple dimensions and undimensioned valuesets in the IGNORE or DENSE list.

ORA-36224: (XSLPDSC05) workspace object is not a loop dimension

Cause: An IGNORE or DENSE list in a dimension loop descriptor referenced a dimension (or a valueset of a dimension) that was not a base dimension of the loop dimension list.

Action: Remove the dimension or valueset from the IGNORE or DENSE list.

ORA-36225: (XSLPDSC06) A LOOP AGGMAP list must contain an aggmap object, followed by one or more variables and/or dimensions.

Cause: An invalid AGGMAP list was specified. Either too few objects were specified, or an incorrect type of object was used.

Action: Specify a valid AGGMAP list consisting of an aggmap object, followed by one or more variables and/or dimensions.

ORA-36226: (XSLPDSC07) The syntax of the \$LOOP property on formula workspace object is incorrect.

Cause: Unrecognized contents in the \$LOOP property of a formula in the table function measure list.

Action: Restrict the contents of the \$LOOP property to valid elements (other than OPTIMIZED and MEASURES) of the table function LOOP directive.

ORA-36230: (XSANALYZ00) object workspace object cannot be used in the ANALYZE command

Cause: An object that cannot be analyzed was used in the ANALYZE command.

Action: Analyze VARIABLES, RELATIONS, DIMENSIONS, or SURROGATES.

ORA-36231: (XSANALYZ01) object workspace object cannot be used in the INHIERARCHY clause

Cause: An invalid INHIERARCHY object was referenced.

Action: Use either a VALUESET or boolean VARIABLE.

ORA-36232: (XSANALYZ02) a level list was specified when a language dimension was present

Cause: A level list dimension was specified when a language dimension was present.

Action: Remove the USING clause.

ORA-36233: (XSANALYZ03) the dimensionality of object workspace object does not match the ANALYZE command

Cause: The dimensionality of the object did not match the ANALYZE command syntax used.

Action: Match the ANALYZE syntax to the dimensionality of the specified object.

ORA-36234: (XSANALYZ04) all objects in the current status of the NAME dimension must have the same dimensionality when used with the ANALYZE command

Cause: The dimensionality of at least one of the objects listed in the NAME dimension does not match the rest of the objects.

Action: Make sure all objects listed in the NAME dimension have the same dimensionality.

ORA-36236: (XSANALYZ06) the AW format must be 11.0.0.0 or higher to use the ANALYZE command

Cause: The AW version is less than 11.0.0.0

Action: Make sure the compatible mode is 11.0.0.0 or higher and upgrade the AW

ORA-36237: (XSANALYZ07) analytic workspace *string.string* must be attached RW or EXCLUSIVE mode

Cause: The analytic workspace was already attached RO or MULTI mode.

Action: Detach the analytic workspace.

ORA-36238: (XSANALYZ08) object *string.string* does not exist

Cause: The object name does not exist

Action: Check the spelling and case of the object name

ORA-36258: (XSAGINFO00) When the AGGMAPINFO function is called, *workspace object* must be an AGGMAP.

Cause: The AGGMAPINFO function was called with an object that is not an AGGMAP.

Action: Modify the call to AGGMAPINFO to specify an AGGMAP object.

ORA-36260: (XSAGHIERPART00) Aggregating from partition %J to partition %J over hierarchy *workspace object* creates an increase in sparsity.

Cause: In the partition creation / aggmap creation a situation developed such that when aggregating over a particular dimension of the aggmap a partition boundary was crossed such that the sparsity of the target partition included dimensions that were not in the sparsity of the source partition. Since the process of aggregation always densifies rather than sparsifying this is an extremely suboptimal design and it is not supported by the aggregate system.

Action: Set up your partitioning such that for any partition boundary the source and target partitions of the aggregation will always move towards denser partitions. For any child (c) and any parent (p) where (c) and (p) are in different partitions it must be the case that the parent partition contains no dimension in the composite that the child partition does not contain in its composite.

ORA-36261: (XSAGPARTDEP00) Can not Aggregate PARTITION TEMPLATE %J because the path of aggregation would recursively enter partition %J.

Cause: The partitioning scheme was such that while aggregating there exists a cell (m) such that both one of its descendants and one of its ancestors are both in the referenced partition, while (m) is in a different partition.

Action: Change the partitioning scheme.

ORA-36262: (XSAGREMOD00) MODEL *workspace object* was not attached to the AGGMAP.**ORA-36264: (XSAGREMOD01) Removed MODEL: *number*****ORA-36266: (XSCGMDLAGG00) Invalid context for the AGGREGATION function**

Cause: The AGGREGATION function was used outside of the MODEL context.

Action: Use AGGREGATION only in a model.

ORA-36267: (XSCGMDLAGG09) *workspace object* has no dimensions, so it cannot have a qualified data reference.

Cause: A dimension qualification was specified for a valueset with no dimensions.

Action: Remove the qualification.

ORA-36268: (XSCGMDLAGG01) 'string' is not a valid dimension value.

Cause: The AGGREGATION parameter list included a value that does not exist in the MODEL dimension that contains the target of the AGGREGATION

Action: Specify only values from the appropriate MODEL dimension

ORA-36269: (XSCGMDLAGG10) 'workspace object' does not exist or is not a dimension.

Cause: A nonexistent or invalid object was specified as a QDR dimension.

Action: Specify existing dimensions only.

ORA-36270: (XSCGMDLAGG03) The parameter list for the AGGREGATION function includes duplicate values.

Cause: One or more duplicate values appeared in the AGGREGATION parameter list.

Action: Remove the duplication.

ORA-36271: (XSCGMDLAGG11) workspace object is not in the dimension list of valueset workspace object.

Cause: A QDR dimension was specified that does not appear in the valueset's dimension list.

Action: Specify only dimensions in the valueset's dimension list.

ORA-36272: (XSCGMDLAGG04) 'workspace object' is not a valid operator for the AGGREGATION function.

Cause: An invalid AGGREGATION operator was specified.

Action: Correct the invalid operator.

ORA-36273: (XSCGMDLAGG12) Dimension workspace object appears more than once in the QDR.

Cause: A dimension was specified more than once in the QDR.

Action: Remove the duplication.

ORA-36274: (XSCGMDLAGG05) The operator used in this equation needs a weight variable.

Cause: An invalid weight variable was specified.

Action: Correct the invalid weight variable.

ORA-36275: (XSCGMDLAGG13) string is not a valid workspace object.

Cause: A value was specified that does not exist in the QDR dimension.

Action: Specify an existing value.

ORA-36276: (XSCGMDLAGG06) The current operator does not need a weight variable.

Cause: A weight variable was specified in a context that does not support it.

Action: Remove the weight variable.

ORA-36278: (XSCGMDLAGG07) workspace object does not exist or is not valueset.

Cause: A nonexistent or invalid object was specified where a valueset is required.

Action: Specify an existing valueset only.

ORA-36280: (XSCGMDLAGG08) Valueset *workspace object* does not contain values of any dimension of the current model.

Cause: AGGREGATION specified a valueset of a dimension not listed in a DIMENSION statement for the current model.

Action: Add the valueset's dimension to the model's DIMENSION list, or choose a different valueset.

ORA-36282: (DNAMELEN01) Object name *string* is longer than *number* bytes.

ORA-36286: (EIFMAKEF12) The EXPORT command terminated because there is not enough disk space in path *string* to contain a complete extension file.

Cause: There was insufficient disk space at the specified location.

Action: Free some disk space or change the target location of your export file.

ORA-36290: (EIFMAKEF14) You cannot export object *workspace object*, because EIFVERSION is set to *number*. That version does not support *string strings*.

Cause: Tried to export a NUMBER dimension to an EIF file with the EIFVERSION option set to a number less than 80000. Versions before 80000 do not support NUMBER dimensions.

Action: A NUMBER dimension cannot be used in an older version.

ORA-36300: (XSCGTERM01) The command is too long or complex to compile.

Cause: In a PROGRAM or a MODEL, expressions exceeded the limit of 32765 bytes of stack memory.

Action: This may work if the long expression is in a formula. Otherwise eliminate or simplify the expressions, or remove or shorten the text constants.

ORA-36302: (MXCLASS03) You cannot reference an analytic workspace NAME dimension using a QON. You can only access the NAME dimension of the current analytic workspace.

Cause: An attempt was made to access the NAME dimension of a non-current analytic workspace by using a qualified object name (QON).

Action: Only use the NAME dimension without a QON.

ORA-36304: (MXDCLAGR02) *workspace object* was not defined as an AGGMAP.

ORA-36306: (MXDCLAGR03) Since there is no current aggmap definition, the AGGMAP statements will be discarded. Type END to return to the command line.

ORA-36308: (MXDCLAGR04) The object *workspace object* has been defined as an AGGMAP, and it cannot be redefined as an ALLOCMAP.

ORA-36310: (MXDCLAGR05) The object *workspace object* has been defined an ALLOCMAP, and it cannot be redefined as an AGGMAP.

ORA-36312: (PHYS00) *workspace object* must be a dimension, dimensioned variable, or relation.

Cause: An invalid Oracle OLAP object was specified while attempting to use the PHYSICAL function.

Action: Specify a valid dimension, dimensioned variable, or relation object.

ORA-36313: (PHYS03) The VALUE option of the PHYSICAL clause cannot be applied to a variable.

Cause: A VALUE option of the PHYSICAL clause was specified for a variable.

Action: Remove the VALUE option or specify a relation or dimension.

ORA-36314: (PHYS01) workspace object must be a dimension, relation or variable.

Cause: An invalid OLAP object was specified while attempting to use the PHYSICAL command.

Action: Specify a valid object.

ORA-36315: (PHYS04) You must specify the VALUE option for scalar relation workspace object.

Cause: The VALUE argument to PHYSICAL was omitted for a scalar relation

Action: specify VALUE or choose a dimensioned relation

ORA-36316: (PHYS02) Relation workspace object must be a single-dimensional relation that relates one INTEGER dimension to another.

Cause: An invalid relation was specified while attempting to use the PHYSICAL command.

Action: Specify a valid relation.

ORA-36320: (PPENG05) No more than *number* push levels are allowed.

Cause: An attempt was made to use the PUSH command more times than allowed.

Action: This error is frequently caused by programs and procedures that start with a PUSH command and recursively call themselves.

ORA-36322: (PPENG06) workspace object cannot be pushed more than *number* times.

Cause: The specified PUSH command did not have a matching POP command.

Action: Use 'OBJ(PUSHCOUNT ..)' to find the missing POP command.

ORA-36324: (PPNLSOPT00) '*number*' is not a legal value for the *string* option. The previous value was retained.

ORA-36330: (SNSYN124) The format of the PHYSICAL command is:\n \n PHYSICAL [dimension|relation]

ORA-36332: (SNSYN125) The format of the PHYSICAL function is:\n \n PHYSICAL(dimension|variable){relation [VALUE]}

ORA-36334: (SNSYN126) The format of the TO_DATE function is:\n \n TO_DATE(value [format] [{option optionvalue}...])

ORA-36336: (SNSYN127) The format of the TO_CHAR function is:\n \n TO_CHAR(value [format] [{option optionvalue}...])

ORA-36338: (SNSYN128) invalid TO_NUMBER function syntax

Cause: The format of the TO_NUMBER function was incorrect.

Action: Correct the syntax and try again. The format of the TO_NUMBER function is TO_NUMBER(value [format] [{option optionvalue}...]). For more information, consult Oracle documentation.

ORA-36339: (SNSYN129) The format of the TO_NCHAR function is:\n \n TO_NCHAR(value [format] [{option optionvalue}...])

ORA-36340: (SNSYN130) The format of the PARTITIONCHECK function is:\n \n PARTITIONCHECK(aggmap, partition_template)

Cause: Bad syntax

Action: Correct syntax

ORA-36341: (SNSYN131) The format of the TO_TIMESTAMP function is:\n \n TO_TIMESTAMP(value [format] [{option optionvalue}...])

ORA-36342: (SNSYN200) Invalid CLEAR command syntax.

Cause: The format of the CLEAR command was incorrect.

Action: Correct the syntax and try again. The format of the CLEAR command is: CLEAR [ALL | STATUS] [AGGREGATES | CHANGES | PRECOMPUTES | NONPRECOMPUTES | CACHE] FROM var1 [var2, var3...] [USING aggmap]. For more information, consult Oracle documentation.

ORA-36344: (SNSYN272) invalid AGGREGATION function syntax

Cause: The format of the AGGREGATION function syntax was invalid.

Action: Correct the syntax and try again. The format of the AGGREGATION function syntax is AGGREGATION(dimension-value [dimension-value ...]) [OPERATOR operator-name [WEIGHT | WEIGHTBY weight-var]]. For more information, consult Oracle documentation.

ORA-36346: (SNSYN338) invalid TRUNC function syntax

Cause: The format of the TRUNC function syntax was invalid.

Action: Correct the syntax and try again. The format of the TRUNC function syntax is TRUNC(expression1 [, expression2]). For more information, consult Oracle documentation.

ORA-36348: (SNSYN339) invalid CEIL function syntax

Cause: The format of the CEIL function was invalid.

Action: Correct the syntax and try again. The format of the CEIL function is: CEIL(number) For more information, consult Oracle documentation.

ORA-36350: (SNSYN340) invalid FLOOR function syntax

Cause: The format of the FLOOR function syntax was invalid.

Action: Correct the syntax and try again. The syntax for the FLOOR function is FLOOR(number). For more information, consult Oracle documentation.

ORA-36352: (SNSYN341) Invalid ADD_MONTHS function syntax.

Cause: The format of the ADD_MONTHS function was incorrect.

Action: Correct the syntax and try again. The format of the ADD_MONTHS function is ADD_MONTHS (date, number of months). For more information, consult Oracle documentation.

ORA-36354: (SNSYN342) Invalid LAST_DAY function syntax.

Cause: The format of the LAST_DAY function was incorrect.

Action: Correct the syntax and try again. The format of the LAST_DAY function is: LAST_DAY(date). For more information, consult Oracle documentation.

ORA-36356: (SNSYN343) Invalid MONTHS_BETWEEN function syntax.

Cause: The format of the MONTHS_BETWEEN function was incorrect.

Action: Correct the format and try again. The format of the MONTHS_BETWEEN function is: MONTHS_BETWEEN(date, date). For more information, consult Oracle documentation.

ORA-36358: (SNSYN344) invalid NEW_TIME function syntax

Cause: The format of the NEW_TIME function was invalid.

Action: Correct the syntax and try again. The format of the NEW_TIME function is: NEW_TIME(date, zone, new zone). For more information, consult Oracle documentation.

ORA-36360: (SNSYN345) The format of the NEXT_DAY function is:\n \n NEXT_DAY(date, day name)**ORA-36376: (XSAGZERO) AGGREGATE attempted to divide by zero. Set DIVIDEBYZERO to YES if you want NA to be returned as the result of a division by zero.**

Cause: A calculation in the current AGGREGATE command attempted to divide by zero as a result of an AVERAGE, WAVERAGE, HAVERAGE or HWAVERAGE operation.

Action: Either fix the data, or set DIVIDEBYZERO to YES to return NA instead of signaling an error.

ORA-36387: (XSPARTCHECK00) Object *workspace object* must be an AGGMAP.**ORA-36388: (XSPARTCHECK01) Object *workspace object* must be a PARTITION TEMPLATE.****ORA-36389: (XSAGPARTDEP01) Can not aggregate from PARTITION *number* into PARTITION *number* due to increasing sparsity along DIMENSION %J.**

Cause: The user is attempting to use partitions as a means of sparsity control, however they have set up their partitions in a manner that simply makes no sense. It is a simple fact that during aggregation data becomes more dense, not less dense, and yet their partitions indicate the opposite.

Action: Modify the partition template add the specified dimension into the source composite, or removing it from the target composite.

ORA-36392: (XSMXCLEA02) When using CLEAR with the PRECOMPUTES or NONPRECOMPUTES options, you must specify an AGGMAP.

Cause: The user didn't specify an AGGMAP with the CLEAR command.

Action: specify an aggmap by adding a USING phrase to the CLEAR command, or attach a '\$AGGMAP' property to the variable.

ORA-36393: (XSMXCLEA03) When using the AGGREGATES, CHANGES or CACHE options, specify the ALL keyword.

Cause: The ALL keyword was not specified when using the AGGREGATES, CHANGES or CACHE options.

Action: Specify the ALL keyword.

ORA-36394: (XSMXCLEA04) When using CLEAR on the AGGMAP workspace object, CACHE is the only valid directive.

Cause: An attempted was made to CLEAR an AGGMAP using a directive other than CACHE.

Action: Change the CLEAR command so that only the CACHE keyword is used for AGGMAP.

ORA-36395: (XSMXCLEA05) To CLEAR ALL AGGREGATES from workspace object, specify an AGGMAP.

Cause: The CLEAR command could not determine how the variable was aggregated because the variable was not dimensioned by a compressed composite.

Action: Specify an AGGMAP by adding a USING clause to the CLEAR command, or attach a \$AGGMAP property to the variable.

ORA-36397: (XSSPROPNA) The value of property string cannot be NA.

Cause: The user tried to set a system-reserved property on an OLAP object to NA

Action: Set the property to a non-NA value

ORA-36398: (XSSPROP01) Property name 'number' is invalid because only system-reserved property names can begin with '\$'.

Cause: The user attempted to add a property which starts with \$ but is not a reserved property name

Action: Remove the \$ from the property name

ORA-36399: (XSSPROPDTYPE) The data type of property string must be string.

Cause: The user tried to set a system-reserved property on an OLAP object to a value with an illegal datatype

Action: Set the property with the proper datatype

ORA-36400: (XSSPROP02) workspace object is not a valid variable name.

Cause: Not a valid variable name

Action: Change to a valid variable name

ORA-36401: (XSSPROPOTYPE) Property string may only be applied to objects of type string.

Cause: The user applied a reserved property name to an incorrect object type

Action: Apply the property to the correct object

ORA-36402: (XSSPROP03) The property '\$string' requires a leading "\$" because it is a system-reserved property name.

Cause: The user tried to specify a property name which is reserved, but did not use a leading \$

Action: Either add a leading \$ or choose another property name

ORA-36403: (XSBADSPROP) *number* is an illegal value for system-reserved property *string* on workspace object.

Cause: The user tried to specify an illegal value for a special property

Action: Specify a legal value.

ORA-36404: (XSSPROP04) Property *string* cannot be applied to an undimensioned (scalar) TEMPORARY variable.

Cause: The user applied a reserved property name to an incorrect object type

Action: Apply the property to the correct object

ORA-36405: (XSSPROP05) Property ignored for object *workspace object*:

Cause: A property was ignored during import.

Action: Refer to the message that follows this one and correct the error it describes.

ORA-36406: (VCACHE00) '*number*' is an invalid value for the VARCACHE option. The only permissible values are 'SESSION', 'VARIABLE', and 'NONE'.

Cause: The user tried to assign an invalid value to the VARCACHE option

Action: Assign one of the valid values

ORA-36410: (VCACHE03) '*number*' is an invalid value for the \$VARCACHE property. The only permissible values are 'DEFAULT', 'SESSION', 'VARIABLE', and 'NONE'.

Cause: The user tried to assign an invalid value to the \$VARCACHE property on a variable

Action: Assign one of the valid values

ORA-36608: (XSAGHOVERFLOW) The depth of the hierarchies encountered while processing a composite dimension in AGGREGATE caused a counter overflow.

Cause: The depth of the hierarchies that are part of a composite exceeded 4 billion levels during the merge.

Action: Reduce the number of levels in the hierarchies, reduce the number of dimensions in the composite, or do not aggregate over all dimensions at once.

ORA-36610: (XSLMS00) Unable to locate a message file for Online Analytical Processing (OLAP) message *value*.

Cause: An internal OLAP program in the EXPRESS Analytic Workspace failed to retrieve a user message.

Action: Contact Oracle Support.

ORA-36612: (XSLMS01) invalid OLAP message number: *value*

Cause: An internal OLAP DML program in the EXPRESS Analytic Workspace attempted to retrieve a non-existent message.

Action: Contact support.

ORA-36616: (XSAGMODHIER01) There is a cycle formed by MODEL workspace object and other embedded or containing models with the same dimension, workspace object.

Cause: Inclusion of a dynamic model formed a cycle in the named dimension.

Action: Edit the models involving this dimension to remove the cycle.

ORA-36617: (XSAGMODHIER02) There is a self-cycle equation in MODEL workspace object.

Cause: The model for relation modification included a self-cycle equation.

Action: Remove the self-cycle equation from the model.

ORA-36618: (XSAGMODDIM00) workspace object is not a valid dynamic model for AGGMAP.

Cause: The model failed one of the following tests: 1) only one dimension (aside from LAG/ LEAD dimensions); 2) assignment to dimension values only; 3) a single simple solution block; 4) no time-series functions with variable step values.

Action: Edit the model so that it conforms to the above requirements.

ORA-36620: (XSAGMODDIM01) MODEL workspace object cannot find the matching embedded model.

Cause: AGGMAP ADD model could not find the matching embedded model.

Action: Add the matching embedded model to the AGGMAP.

ORA-36621: (XSAGMODDIM02) You cannot AGGREGATE the individual partition using static model workspace object because a partition dimension or its deriver workspace object appears in the equation of the step or simultaneous block.

Cause: An attempt was made to AGGREGATE the individual partition using the static model with the partition dimension in the equation of the step or simultaneous block.

Action: AGGREGATE the variable instead of the individual partition.

ORA-36622: (XSAGMODLIST00) workspace object cannot be added to the AGGMAP workspace object because it is not a valid MODEL.

Cause: An object specified in AGGMAP ADD was not a model.

Action: Specify the name of a model.

ORA-36626: (XSAGMODLIST02) MODEL workspace object was skipped because there is already a MODEL by that name attached to AGGMAP workspace object.

Cause: An attempt was made to add the same model to the AGGMAP twice.

Action: None required.

ORA-36628: (XSAGMODLIST03) MODEL workspace object could not be added to AGGMAP workspace object.

Cause: The dimension of the model did not match a hierarchy of the aggmap.

Action: Add a RELATION statement to the AGGMAP for that dimension.

ORA-36630: (XSDUNION00) An empty base dimension list was specified in the concat dimension definition.

Cause: An empty concat dimension list was specified.

Action: Specify a valid list of dimensions when defining a concat dimension.

ORA-36632: (XSDUNION01) The concat dimension *workspace object* is not currently defined as UNIQUE.

Cause: An attempt was made to CHGDFN a concat dimension, which was already non-unique, to NOT UNIQUE.

Action: Since the concat dimension is already non-unique, this command is unnecessary.

ORA-36634: (XSDUNION02) INTEGER dimension *workspace object* cannot be used as a concat dimension base.

Cause: The user cannot specify INTEGER base dimensions when defining a concat dimension.

Action: Change the datatype of the INTEGER base dimension, or omit it from the concat.

ORA-36635: (XSDUNION03) The base dimension *workspace object* has an invalid datatype for use in a UNIQUE concat definition.

Cause: Base dimensions of a unique concat must have TEXT or ID datatypes.

Action: Specify a valid list of dimensions when defining a unique concat dimension.

ORA-36636: (XSDUNION04) The unique concat dimension *workspace object* cannot be changed to NOT UNIQUE, because it is a base of at least one other unique concat dimension.

Cause: A non-unique concat dimension could not be used as a base of a dependent unique concat.

Action: Run the CHGDFN command to change the definition of any dependent unique concat dimensions to NOT UNIQUE and retry.

ORA-36637: (XSDUNION05) The concat dimension cannot be defined as UNIQUE because it has a non-unique concat base dimension *workspace object*.

Cause: A non-unique concat dimension could not be used as a base for a dependent unique concat.

Action: Using the CHGDFN command, change any non-unique concat base dimensions to be UNIQUE and retry.

ORA-36638: (XSDUNION17) Concat dimension *workspace object* cannot be changed to UNIQUE because it has a non-unique concat base dimension *workspace object*.

Cause: A non-unique concat dimension was used as a base for a dependent unique concat.

Action: Change any non-unique concat base dimensions to UNIQUE using the CHGDFN command and retry.

ORA-36639: (XSDUNION18) UNIQUE cannot be applied to this concat dimension because LEAVES *workspace object* and *workspace object* share the value *number*.

Cause: The UNIQUE concat base dimensions contained duplicate values.

Action: Use MAINTAIN RENAME to change one of the duplicate values and retry.

ORA-36640: (XSDUNION19) Concat dimension *workspace object* cannot be changed to UNIQUE because base dimension *workspace object* does not have a TEXT or ID datatype.

Cause: Base dimensions of a unique concat must have TEXT or ID datatypes.

Action: n/a

ORA-36641: (XSDUNION20) The concat dimension must be defined as UNIQUE because base dimension *workspace object* contains custom member values.

Cause: The UNIQUE keyword was not specified in the concat dimension definition and is required if any of the base dimensions contain custom member values.

Action: Define the concat dimension as UNIQUE or remove all base custom member values.

ORA-36642: (XSDUNION06) Concat dimension list contains duplicate leaf dimension *workspace object*.

Cause: Duplicate concat leaf dimensions were found.

Action: Remove the duplicate concat leaf dimensions and retry.

ORA-36643: (XSDUNION21) Concat dimension *workspace object* cannot be changed to NOT UNIQUE because it contains custom member values.

Cause: Only UNIQUE concat dimensions can have custom member values or base dimensions which contain custom member values.

Action: Remove all custom member values from the concat and all of its bases, and retry.

ORA-36646: (XSDUNION08) Only concat dimensions can be redefined as UNIQUE. *workspace object* is not a concat dimension.

Cause: The UNIQUE keyword was used with an invalid object.

Action: Retry without the UNIQUE keyword.

ORA-36648: (XSDUNION09) Concat dimension *workspace object* is already defined as UNIQUE.

Cause: The concat dimension could not be changed to UNIQUE because it was already UNIQUE.

Action: No action is necessary.

ORA-36650: (XSDUNION10) Concat dimension *workspace object* cannot be changed to UNIQUE. Leaves *workspace object* and *workspace object* share the value *number*.

Cause: The concat dimension could not be changed to UNIQUE because of one or more duplicate values among its bases.

Action: Use MAINTAIN RENAME to change one of the duplicate values and retry.

ORA-36652: (XSDUNION11) *workspace object* is not a *string* type dimension.

Cause: The CHGDFN BASE ADD command was applied to an object that is not a concat dimensions.

Action: Do not use CHGDFN to add bases to this object. Consult the Oracle documentation.

ORA-36654: (XSDUNION12) *workspace object* cannot be added to *workspace object* because it conflicts with the dimensions of object *workspace object*.

Cause: The dimension could not be added using CHGDFN because it was already one the bases of the concat dimension.

Action: None

ORA-36656: (XSDUNION13) *workspace object* is already a member of *workspace object* and cannot be added.

ORA-36660: (XSDUENG00) The first argument to the *string* function must be an expression yielding a dimension value.

Cause: The user supplied an expression to BASEVAL or BASEDIM that did not yield a valid dimension value.

Action: Supply a valid dimension value expression to BASEVAL or BASEDIM.

ORA-36662: (XSDUENG01) You cannot apply the *string* function to *workspace object* because it is not a concat dimension.

Cause: You tried to use the BASEVAL or BASEDIM function with an object that is not a concat dimension.

Action: Specify the name of a concat dimension when using BASEVAL or BASEDIM.

ORA-36663: (XSDPART01) specify a dimension list when defining a PARTITION TEMPLATE

Cause: The PARTITION TEMPLATE specification did not contain a dimension list.

Action: Provide a list between angle brackets () of the dimensions of the variable being partitioned.

ORA-36664: (XSDPART02) defined a PARTITION TEMPLATE without a PARTITION BY clause

Cause: An attempt was made to define a PARTITION TEMPLATE without a PARTITION BY clause.

Action: Specify a partitioning method and one or more partition dimensions when defining a PARTITION TEMPLATE. Add a PARTITION BY clause.

ORA-36665: (XSDPART03) *workspace object* is not in the dimension list of the partition template.

Cause: While defining a partition template, an attempt was made to specify a partition dimension that was not a dimension of the partition template itself.

Action: Choose a partition dimension from among the dimensions of the partition template.

ORA-36666: (XSDPART04) *workspace object* is not a concat dimension.

Cause: An attempt was made to define a partition template with PARTITION BY CONCAT(... dim ...) command where dim is not a concat dimension.

Action: Only concat dimensions can serve as partition dimensions with CONCAT partitioning. Choose a different partition dimension.

ORA-36667: (XSDPART05) *string* is not a valid CONCAT partition.

Cause: An attempt was made to use RANGE or LIST syntax in defining a CONCAT partition template.

Action: Use valid CONCAT partition syntax.

ORA-36668: (XSDPART06) *string* is not a legal RANGE partition.

Cause: User attempted to use CONCAT or LIST syntax in defining a RANGE partition template.

Action: Use RANGE partition syntax.

ORA-36669: (XSDPART07) *string* is not a legal LIST partition.

Cause: User attempted to use RANGE or CONCAT syntax in defining a LIST partition template.

Action: Use LIST partition syntax.

ORA-36670: (XSDPART08) *workspace object* is an INTEGER or NTEXT dimension, or contains an INTEGER or NTEXT dimension. INTEGER and NTEXT dimensions cannot be used as partition dimensions.

Cause: User attempted to define a partition template partitioned by an INTEGER or NTEXT dimension or a concat containing an NTEXT leaf.

Action: Either pick a different partition dimension, or redefine the dimension to use a different data type.

ORA-36671: (XSDPART09) Leaves of *workspace object* have different datatypes. A partition dimension cannot have more than one datatype when RANGE partitioning is used.

Cause: User attempted to define a range partition template with a concat partition dimension, and the concat had two leaf dimensions with different datatypes.

Action: Pick a different partition dimension.

ORA-36672: (XSDPART10) A RANGE or LIST PARTITION TEMPLATE can only have a single partition dimension.

Cause: User attempted to define a RANGE or LIST partition template with more than one partition dimension.

Action: Remove all but one of the dimensions from the PARTITION BY RANGE(...) or PARTITION BY LIST(...) clause of the partition template definition.

ORA-36673: (XSDPART11) Use simple leaf values to identify concat dimension values in a VALUES LESS THAN clause, rather than the <LEAF: VALUE> format.

Cause: While defining a RANGE partition template with a concat dimension for the partition dimension, an attempt was made to define a range using the <LEAF: VALUE> format of a concat dimension value.

Action: Use the leaf value only. Instead of using VALUES LESS THAN <leaf: value>, specify VALUES LESS THAN value.

ORA-36674: (XSDPART12) Invalid dimension value starting at *string*.

Cause: When defining a RANGE or LIST partition template, the user specified an invalid value in a VALUES LESS THAN or VALUES clause. An "invalid value" can be one of two things: a value whose datatype does not match the partition dimension's datatype, or a non-constant value.

Action: Modify the offending VALUES LESS THAN or VALUES phrase.

ORA-36675: (XSDPART13) A RANGE or LIST PARTITION TEMPLATE cannot have a conjoint for its partition dimension.

ORA-36676: (XSDPART14) Missing dimension list for *string*.

Cause: User attempted to define a CONCAT partition template, and didn't supply a list of dimensions for one of the partition definitions.

Action: Give a dimension list for each partition.

ORA-36677: (XSDPART15) Duplicate value in value lists of *number* and *number*.

Cause: In a LIST PARTITION TEMPLATE definition, a value appeared in more than one value list, or more than once within a single value list.

Action: List each value only once.

ORA-36678: (XSDPART16) *workspace object* is missing from one or more partition dimension lists.

Cause: In the definition of a partition template, one of the partitions had a dimension list that did not contain all the dimensions of the partition template.

Action: Add the offending dimension to the partition's dimension list, or delete it from the partition template's dimension list. If using CONCAT partitioning and the missing dimension is a partition dimension, add to the partition dimension list any leaf of the partition dimension or any concat of leaves of the partition dimension.

ORA-36679: (XSDPART17) *workspace object* contains a leaf (*workspace object*) that is not part of the partition dimension *workspace object*.

Cause: In the definition of a CONCAT partition template, one of the partitions was dimensioned by a dimension that was concat-related to a partition dimension. For example, it shared some leaves with the partition dimension, but it also contained some leaves that were not in the partition dimension.

Action: Either modify the dimensionality of the partition template to include a concat dimension that contains all of the desired leaves, or pick a different dimension for the partition.

ORA-36680: (XSDPART18) *workspace object* is not a dimension of the PARTITION TEMPLATE.

Cause: In the definition of a partition template, one of the partitions was dimensioned by a dimension that was not given in the dimension list of the partition template.

Action: Remove the offending dimension from the partition's dimension list, or add it to the partition template's dimension list.

ORA-36681: (XSDPART19) Partitions *string* and *string* are out of order.

Cause: In the definition of a range partition template, a partition with a lower range boundary was listed after a partition with a higher range boundary.

Action: Alter the order of the partition definition list.

ORA-36682: (XSDPART20) Partition name *string* appears more than once.

Cause: A list of analytic workspace partitions was specified in which the partition name appeared more than once.

Action: Remove all but the first instance of the partition name from the list.

ORA-36683: (XSDPART21) Partition *string* dimensioned by more than one composite.

Cause: It is illegal to define a partition template in which one of the partitions is dimensioned by more than one composite.

Action: Make sure that the partition template being defined has at most one composite per partition.

ORA-36684: (XSDPART22) cannot rename values of DIMENSION workspace object because it is the partition dimension of RANGE PARTITION TEMPLATE workspace object

Cause: An attempt was made to rename the value of a dimension that serves as the partition dimension of some RANGE or LIST partition template.

Action: It is not possible to rename values in a dimension that serves as the partition dimension without deleting all RANGE and LIST partition templates that are partitioned by it.

ORA-36685: (XSDPART23) Only CONCAT partition templates can be subpartitioned.

Cause: User attempted to define a RANGE or LIST partition template with one or more partitions dimensioned by another partition template.

Action: Use only regular dimensions and composites to dimension each partition of the RANGE or LIST template.

ORA-36686: (XSDPART24) Value number is not in partition number.

Cause: User attempted to reorganize a list partition template by removing a value from some partition's list, but the value was not in the list.

Action: Ensure that the given values match the given partition.

ORA-36687: (XSDPART25) You cannot use compressed composite workspace object to dimension multiple partitions of the partition template, because its dimension list includes the PARTITION BY dimension workspace object.

Cause: The specified PARTITION BY dimension also occurred in the dimension list of a compressed composite used to dimension multiple partitions.

Action: Ensure that no PARTITION BY dimension occurs among the bases of the compressed composite used to dimension multiple partitions.

ORA-36688: (NTEXTCNV00) Error during conversion from TEXT to NTEXT.

Cause: An unknown character set conversion error occurred when converting a TEXT value to an NTEXT value.

Action: Unknown.

ORA-36691: (NTEXTCNV02) invalid escape sequence in argument to UNISTR function: string

Cause: The UNISTR function was called on a string that had an invalid escape sequence. The only valid escape sequences in UNISTR are - An escape-escape sequence. - An escape, followed by exactly four hexadecimal digits.

Action: Ensure that all escape sequences in UNISTR arguments are exactly four hexadecimal digits. To represent code points whose value is less than 0x1000, use preceding zeros. For example: - Invalid: 0x10 - Valid: 0x0010

ORA-36692: (XSRELID24) A level relation must be specified for the GROUPSET and ROLLUP options of GROUPINGID.

Cause: level relation was not specified.

Action: Specify a level relation.

ORA-36693: (XSRELGID25) INHIERARCHY cannot be specified with the GROUPSET and ROLLUP options of GROUPINGID.

Cause: INHIERARCHY option was specified.

Action: Remove INHIERARCHY option.

ORA-36694: (XSRELTBL01) The value cannot be added to dimension *workspace object*.

Cause: Unknown.

Action: Check the context and permission for dimension maintenance.

ORA-36695: (XSRELGID26) The length of GID dimension status is *number*. The length of LEVEL dimension status is *number*.

Cause: GID dimension status did not match LEVEL dimension status.

Action: Change either GID dimension status or LEVEL dimension status.

ORA-36696: (XSRELTBL02) QDR dimension *workspace object* should not be the related dimension of the relation.

Cause: An ineligible dimension was specified in the Qualified Data Reference

Action: Do not attempt to qualify this dimension.

ORA-36698: (XSRELTBL03) QDR dimension *workspace object* is not in the dimension list that dimensions the relation.

Cause: The specified qualified data reference (QDR) dimension was not in the dimension list of the relation.

Action: Select only dimensions that are in the dimension list of the relation.

ORA-36700: (XSRELTBL04) Dimension *workspace object* cannot be qualified more than once.

Cause: The same dimension was specified more than once in the qualified data reference.

Action: Specify each qualified data reference dimension only once.

ORA-36702: (XSRELTBL05) The format of the HIERHEIGHT function is: \n HIERHEIGHT(relation [,] level)\n level >= 1.

Cause: The HIERHEIGHT function was specified incorrectly.

Action: Ensure that the format of the HIERHEIGHT function is correct.

ORA-36704: (XSRELTBL06) *workspace object* should be dimensioned by *workspace object*.

Cause: The level relation is not dimensioned by the source relation dimension.

Action: Make sure the level relation has the correct definition.

ORA-36706: (XSRELTBL07) *workspace object* should be dimensioned by *workspace object* and one level dimension.

Cause: The destination relation has the wrong definition.

Action: Make sure the destination relation has the correct dimensions.

ORA-36708: (XSMXALLOC00) Variable *workspace object* must be dimensioned to be used by the ALLOCATE command.

Cause: The user supplied an undimensioned (scalar) variable to the ALLOCATE command.

Action: Use a dimensioned variable.

ORA-36710: (XSMXALLOC01) TARGETLOG variable *workspace object* must be dimensioned identically to TARGET variable *workspace object*.

Cause: The user attempted to execute ALLOCATE with mismatched TARGET and TARGETLOG variables

Action: Use TARGET and TARGETLOG variables with matching dimensionality.

ORA-36712: (XSMXALLOC02) Relation *workspace object* must be a one-dimensional self-relation to be used as a SOURCE or BASIS with ALLOCATE.

Cause: The user specified an invalid source or basis relation on the ALLOCATE command line.

Action: Modify the relation to be a one-dimensional self-relation.

ORA-36714: (XSMXALLOC03) TARGETLOG variable *workspace object* must have the same data type as TARGET variable *workspace object*.

Cause: The user specified a TARGETLOG variable that had a different data type from the TARGET variable.

Action: Use TARGETLOG and TARGET variables with an identical data type.

ORA-36718: (XSALLOC00) You do not have the necessary permissions to use AGGMAP *workspace object*.

Cause: The user did not have sufficient permissions to run the ALLOCATE command

Action: Change to a user ID with the appropriate permissions, or use objects that you have permission to use.

ORA-36720: (XSALLOC01) To be used with ALLOCATE, your AGGMAP *workspace object* must be defined with the ALLOCMAP command.

Cause: The user used the AGGMAP command to define the AGGMAP, so either the AGGMAP can only be used with the AGGREGATE command, or the AGGMAP has no contents attached to it.

Action: Use the ALLOCMAP command to define the AGGMAP.

ORA-36722: (XSALLOC02) In AGGMAP *workspace object*, you specified an NA or ZERO sourceval but supplied formula *workspace object* as your source for ALLOCATE.

Cause: The user requested that source values be modified during the allocation, but that is not possible when using a formula source.

Action: Either use a VARIABLE source or remove the SOURCEVAL specification for your ALLOCMAP.

ORA-36724: (XSALLOC03) *workspace object* cannot include more dimensions than the source variable.

ORA-36726: (XSALERR00) The character '*character*' is not a valid format specifier for the ALLOCATE error log.

Cause: The user specified an invalid formatter in the ALLOCERRLOGHEADER or ALLOCERRLOGFORMAT options.

Action: Correct the option to have a valid format.

ORA-36728: (XSALERR01) While performing the ALLOCATE command with AGGMAP workspace object, the error logging limit of number was exceeded.

Cause: The user specified an ERRORLOG MAX value in the ALLOCMAP, but more errors were encountered while performing the allocation.

Action: Either set ERRORLOG NOSTOP, reduce the allocation errors, or increase the ERRORLOG MAX setting

ORA-36730: A deadlock occurred allocating data.

ORA-36731: An NA basis parent cell was encountered.

ORA-36732: A value was less than the FLOOR specification.

ORA-36733: A value exceeded the CEILING specification.

ORA-36734: A value was less than the MIN specification.

ORA-36735: A value exceeded the MAX specification

Cause: .

Action: n/a

ORA-36736: Renormalizing data

ORA-36737: The logging limit was exceeded.

ORA-36738: Falling back to NAOOPERATOR after deadlock.

ORA-36739: Redistributing remainder with REMOPERATOR.

ORA-36740: A CHILDLCK was detected in your valueset

Cause: .

Action: n/a

ORA-36741: A source was OVER ALLOCATED to its children

ORA-36761: (XSLANGDM01) Analytic workspace string already contains a dimension (%J) with the string property.

Cause: An attempt was made to apply this property to more than one dimension in the analytic workspace.

Action: Remove the property from the named dimension and try the command again.

ORA-36762: (XSLANGDM02) Cannot modify the string property of %J because analytic workspace string is attached in multiwriter mode.

Cause: An attempt was made to add or delete a \$DEFAULT_LANGUAGE property in an analytic workspace (AW) attached in multiwriter mode.

Action: Attach the AW in a different mode.

ORA-36763: (XSAGGCNTMOVE01) Aggregation variable workspace object cannot have itself as an AGGCOUNT.

Cause: An attempt was made to turn a variable into its own AGGCOUNT.

Action: Select a different AGGCOUNT variable.

ORA-36764: (XSAGGCNTMOVE02) AGGCOUNT variable *workspace object* must be of type INTEGER, not *string*.

Cause: An attempt was made to create an AGGCOUNT variable that was not an INTEGER type.

Action: Select an INTEGER AGGCOUNT variable.

ORA-36765: (XSAGGCNTMOVE03) A *string* aggregation variable cannot have a *string* AGGCOUNT.

Cause: The specified AGGCOUNT variable did not have the same TEMPORARY or PERMANENT attribute as the aggregation variable.

Action: Select an AGGCOUNT variable with the same TEMPORARY or PERMANENT attribute as the aggregation variable.

ORA-36766: (XSAGGCNTMOVE04) *workspace object* cannot be used as an AGGCOUNT because it has an AGGCOUNT.

Cause: The specified AGGCOUNT variable had its own AGGCOUNT

Action: Select a different variable, or remove the AGGCOUNT using CHGDFN.

ORA-36767: (XSAGGCNTMOVE05) *workspace object* cannot be used as an AGGCOUNT while there are permissions applied to it.

Cause: The specified AGGCOUNT variable permissions were distinct from those on the aggregation variable.

Action: Select a different AGGCOUNT variable or remove the permissions. This may require an UPDATE before the command can succeed.

ORA-36768: (XSAGGCNTMOVE06) An aggregation variable and its AGGCOUNT must have the same base dimensions.

Cause: An AGGCOUNT variable was specified with different base dimensions than the aggregation variable.

Action: Select an AGGCOUNT variable with exactly the same base dimensions as the aggregation variable.

ORA-36777: Unable to allocate *string* bytes for the OLAP page pool.

Cause: Insufficient memory was available to allocate the needed memory for the online analytical processing (OLAP) page pool. One cause is the value of the OLAP_PAGE_POOL_SIZE initialization parameter.

Action: Check the value of the OLAP_PAGE_POOL_SIZE initialization parameter. It cannot be larger than 90% of the value of the PGA_AGGREGATE_LIMIT initialization parameter.

ORA-36778: (XSPGTRLOW) The amount of available temporary storage is still low. Free some temporary storage immediately. You can do so, for example, by UPDATING or DETACHING an analytic workspace.

Cause: Ran out of temporary tablespace storage.

Action: Increase the amount of temporary tablespace storage.

ORA-36779: invalid parameter value specified for OLAP_PAGE_POOL_SIZE

Cause: The specified value for the OLAP_PAGE_POOL_SIZE initialization parameter was out of range. The OLAP_PAGE_POOL_SIZE initialization parameter must be between

2,097,152 (2MB) and 2,147,483,647, and it must be less than 90% of the PGA_AGGREGATE_LIMIT initialization parameter. Furthermore, you cannot set a fixed-size OLAP page pool with multiple tablespace block sizes. The OLAP_PAGE_POOL_SIZE initialization parameter remains unmodified.

Action: Specify a value for the OLAP_PAGE_POOL_SIZE initialization parameter that is between 2,097,152 (2MB) and 2,147,483,647, and does not exceed 90% of the PGA_AGGREGATE_LIMIT initialization parameter. Do not try to set this parameter if you are using tablespaces with multiple block sizes in your database.

ORA-36780: (IOSEC01) Current Directory Alias is not set. Cannot complete *string*.

ORA-36782: (IOSEC02) Directory Alias used in *string* does not exist, or you do not have sufficient privileges to access it.

ORA-36783: Directory alias used in *string* does not exist, or there are insufficient access privileges.

Cause: The directory alias did not exist, or there were insufficient access privileges.

Action: Process the CREATE DIRECTORY *name* AS 'path' statement. Then, grant privileges to that directory alias.

ORA-36784: (IOSEC03) *string* is an invalid directory or file name.

Cause: The supplied value could not be interpreted as a directory or a file name.

Action: Supply a valid directory or file name.

ORA-36785: Invalid directory or file name *string*.

ORA-36786: (IOSEC04) File *string* does not exist or cannot be accessed.

ORA-36792: (IOSEC07) Error accessing file *string*.

ORA-36793: Error accessing file *string*.

ORA-36802: (XSTBLFUNC01) The OLAP_TABLE function must contain a DATAMAP that executes a FETCH command or a LIMITMAP.

Cause: There is no limitmap on the table function and either the datamap does not contain a fetch, or it errored before the fetch was called.

Action: Check the datamap for errors, make sure that it executes a fetch statement, if it is not intended to execute the fetch then make sure that the table function has a valid limitmap.

ORA-36804: (XSTBLFUNC02) The OLAP_TABLE function encountered an error while parsing the LIMITMAP.

Cause: Invalid LIMITMAP syntax, or the name resolution failure of an ANALYTIC WORKSPACE OBJECT.

Action: Check the syntax of the limit map, check that the OLAP_TABLE function refers to a valid analytic workspace, check that all analytic workspace objects within the limitmap actually exist within the analytic workspace

ORA-36806: (XSTBLFUNC03) The OLAP_TABLE function refers to an invalid ADT attribute: *string*.

Cause: The limitmap refers to a matching of ADT attribute to AW object, but the ADT attribute is not an element of the specified ADT table. Most commonly this is a typo.

Action: Add the attribute to the ADT, correct the LIMITMAP, or remove the reference from the LIMITMAP.

ORA-36808: (XSTBLFUNC04) The OLAP_TABLE function LEVELREL clause cannot declare *number* ADT fields from *number* AW fields.

Cause: The limitmap has a levelrel clause which has a different number of values in the list to the right of the FROM than it has to the left.

Action: Change the limitmap so that there is a 1:1 mapping of adt and aw elements.

ORA-36810: (XSTBLFUNC05) Analytic workspace object *number* does not exist.

Cause: The limitmap refers to a non-existent aw object.

Action: Change the limitmap or define the object

ORA-36814: (XSTBLFUNC07) The datatype of the column used in the ROW2CELL clause of a LIMITMAP must be RAW(16).

Cause: Datatype of column used in ROW2CELL clause of a LIMITMAP is not RAW(16).

Action: Change datatype to RAW(16).

ORA-36815: (XSTBLFUNC08) The OLAP_TABLE has attempted to use an AW single row function with the aw_attach parameter set to DURATION QUERY.

Cause: The OLAP_TABLE aw_attach parameter was set to DURATION QUERY.

Action: Change the OLAP_TABLE aw_attach parameter to DURATION SESSION.

ORA-36816: (XSTBLFUNC09) The *workspace object* dimension is of datatype *string* which does not support custom member upserts.

Cause: Custom members were attempted to be added via an upsert to a dimension that does not support them

Action: Disable the AW Hash optimization for this query

ORA-36817: (XSTBLFUNC10) The LIMITMAP LOOP clause specifies an invalid type of object. *workspace object* must be a DIMENSION or COMPOSITE.

Cause: An invalid type of object was specified in the LOOP clause.

Action: Correct the LOOP clause.

ORA-36818: (XSTBLFUNC11) A LIMITMAP DIMENSION clause specifies an invalid type of object. *workspace object* must be a DIMENSION.

Cause: An invalid type of object was specified in the DIMENSION clause.

Action: Correct the DIMENSION clause.

ORA-36819: (XSTBLFUNC12) *workspace object* cannot be used in a LIMITMAP *string* clause.

Cause: An invalid type of object was specified in a LIMITMAP clause.

Action: Correct the LIMITMAP clause.

ORA-36820: (XSLMINFO00) The LIMITMAPINFO function encountered an error while parsing the LIMITMAP.

Cause: Invalid LIMITMAP syntax.

Action: Correct the syntax of the limit map.

ORA-36825: (XSTBLFUNC13) An error occurred expanding the cube_name argument in the OLAP table function

Cause: Incorrect metadata or invalid cube name

Action: Correct the metadata.

ORA-36826: (XSTBLFUNC14) OLAP C Looper is disabled by event 37395

Cause: init.ora event 37395 includes level 8 which disables the OLAP C looper

Action: Remove event level 8 and use explicit FETCH function for OLAP_TABLE

ORA-36831: (XSLMGEN01) View token cannot be NA

Cause: A NA was passed as the view token

Action: Pass in a valid view token

ORA-36832: (XSLMGEN02) View token cannot be greater than 4000 bytes

Cause: A view token was greater than 4000 bytes

Action: Pass in a view token less than 4000 bytes

ORA-36833: (XSLMGEN03) View token cannot be blank

Cause: A blank was passed as the view token

Action: Pass in a valid view token

ORA-36834: (XSLMGEN04) Column tag is greater than 30 bytes

Cause: A value greater than 30 bytes was passed as the column tag

Action: Pass in a column tag of 30 bytes or less

ORA-36835: (XSLMGEN05) Dimension *string.string* hierarchy *string* level *string* is missing a COLUMNNAME property value

Cause: The COLUMNNAME property has no value

Action: Add a value to COLUMNNAME property

ORA-36836: (XSLMGEN06) The dimensionality of object *string.string* is different than the view token

Cause: The dimensionality of the cube does not match the view token

Action: Check view token for unrelated hierarchies clauses

ORA-36837: (XSLMGEN07) Object owner *string* is different than *string*

Cause: The object owners are different

Action: Make the object owners match

ORA-36838: (XSLMGEN08) Dimension *string.string* attribute *string* is missing a COLUMNNAME property value

Cause: The COLUMNNAME property has no value

Action: Add a value to COLUMNNAME property

ORA-36839: (XSLMGEN09) Cube *string.string* measure *string* is missing a COLUMNNAME property value

Cause: The COLUMNNAME property has no value

Action: Add a value to COLUMNNAME property

ORA-36840: (XSLMGEN10) Cube *string.string* has no measures

Cause: The cube has no measures

Action: Add a measure to the cube

ORA-36841: (XSLMGEN11) Dimension *string.string* was not found

Cause: The view token referenced a dimension that does not exist

Action: Pass in a dimension that does exist

ORA-36842: (XSLMGEN12) Hierarchy *string.string.string* was not found

Cause: The view token referenced a hierarchy that does not exist

Action: Pass in a hierarchy that does exist

ORA-36843: (XSLMGEN13) Dimension *string.string* hierarchy *string* is missing a PHYSICALNAME property value

Cause: The property PHYSICALNAME has no value

Action: Populate the property PHYSICALNAME with a value

ORA-36844: (XSLMGEN14) Dimension *string.string* is missing a *string* property value

Cause: The dimension is missing a required property

Action: Check dimension property values

ORA-36845: (XSLMGEN15) Owner is greater than 30 bytes

Cause: The owner passed is greater than 30 bytes

Action: Pass in an owner that is 30 bytes or less

ORA-36846: (XSLMGEN16) AW name is greater than 30 bytes

Cause: The AW name passed is greater than 30 bytes

Action: Pass in an AW name that is 30 bytes or less

ORA-36847: (XSLMGEN17) AW name is blank

Cause: The AW name passed is blank

Action: Pass in an AW name that has a value

ORA-36848: (XSLMGEN18) Object name *string* is different than *string*

Cause: The object names are different

Action: Make the object names match

ORA-36849: (XSLMGEN19) AW owner does not match View token owner

Cause: The AW owner does not match the View token owner

Action: Match AW over to View token object owner

ORA-36850: (XSLMGEN20) View token *string* is not correct

Cause: The view token is not correct

Action: Check view token syntax for errors

ORA-36861: (XSTFRC01) SQL Cache ID parameter is invalid or missing.

Cause: SQL Cache ID parameter is required to identify SQL cache to query

Action: Supply a valid SQL Cache ID. Normally, users should not call OLAP Random Access Cursor table function themselves and therefore should not encounter this error.

ORA-36862: (XSTFRC02) Column number for this SQL Cache must be between 1 and *number*. Specified column number *number* is invalid.

Cause: Column Map references a column number that is greater than the maximum column number in SQL Cache

Action: Reference a correct column number. Normally, users should not call OLAP Random Access Cursor table function themselves and therefore should not encounter this error.

ORA-36871: (XSFTDSC01) Object *string* cannot be used to define a column in a LIMITMAP.

Cause: The object cannot define a column in LIMITMAP most likely because it is of a wrong type such as, for example, a Worksheet.

Action: Remove the reference from the LIMITMAP.

ORA-36872: (XSTFDSC02) Column type specifier cannot be used when the table function data type is specified.

Cause: Column type can only be used with implicitly-specified table functions

Action: Remove column type from reference from the LIMITMAP or remove the explicit table function data type specification.

ORA-36874: (XSTFDSC04) Expression *string* cannot be used to define a column in a LIMITMAP.

Cause: The expression cannot define a column in LIMITMAP most likely because it is of a wrong type such as, for example, a Worksheet.

Action: Remove the reference from the LIMITMAP.

ORA-36875: (XSTFDSC05) LIMITMAP is missing or is not a string literal.

Cause: Table functions that have an automatic ADT require LIMITMAP to be a string literal.

Action: Either specify ADT for the table function or specify LIMITMAP as a string literal.

ORA-36876: (XSTFDSC06) The column datatype *string* is not supported in OLAP table functions.

Cause: The object type layer does not support column datatype.

Action: Use a supported column datatype.

ORA-36881: (XSSRF00) The OLAP DML ROW2CELL function can only be used in a LIMITMAP.

Cause: Using the ROW2CELL function outside of the LIMITMAP.

Action: Remove use of the ROW2CELL function.

ORA-36882: (XSSRF01) The second parameter of an AW single row function cannot be NULL.

Cause: The second parameter of the AW single row function was NULL

Action: Pass a valid OLAP DML expression as the second parameter of the AW single row function

ORA-36883: (XSSRF02) The first parameter of an AW single row function cannot be NULL.

Cause: The first parameter of the AW single row function was NULL

Action: Make sure the column specified in the LIMITMAP ROW2CELL clause is the first parameter of the AW single row function.

ORA-36884: (XSSRF03) The value of the first parameter of the AW single row function is incorrect.

Cause: The column specified in the LIMITMAP ROW2CELL clause was not the first parameter of the AW single row function.

Action: Make sure the column specified in the LIMITMAP ROW2CELL clause is the first parameter of the AW single row function.

ORA-36885: (XSSRF04) Error rewriting OLAP DML expression. Column name too big

Cause: The column name specified in the OLAP DML expression was larger than 30 bytes.

Action: Make sure the column name specified in the OLAP DML expression is less than or equal to 30 bytes.

ORA-36886: (XSSRF05) Error rewriting OLAP DML expression. Rewritten expression is greater than *number* bytes

Cause: The rewritten OLAP DML expression was larger than the output buffer.

Action: Create a smaller OLAP DML expression.

ORA-36887: (XSSRF06) Error rewriting OLAP DML expression. Column name *string* is not a valid ADT column.

Cause: The column name passes does not exist.

Action: Only reference columns that exist.

ORA-36902: (XSAGDNGL43) In AGGMAP *workspace object*, the MODEL *workspace object* is not a model over a base dimension of the AGGMAP.

Cause: Model may include equations others than dimension values, or blocks other than simple blocks.

Action: Make sure model only includes the simple blocks with dimension values.

ORA-36904: (XSAGDNGL44) In AGGMAP *workspace object*, RELATION *workspace object* occurs after a dynamic model. The dynamic model must be the last calculation within the AGGMAP.

Cause: Before the current relation, dynamic model exists.

Action: Make sure the dynamic model is the last statement.

ORA-36910: (XSAGDNGL47) In AGGMAP workspace object, DYNAMIC MODEL workspace object can only edit the top level of its matching relation hierarchy.

Cause: The model attempted to edit a child node in the relation hierarchy.

Action: Remove this attempt from the model definition.

ORA-36912: (XSAGDNGL48) In AGGMAP workspace object, MODEL workspace object cannot be simultaneous.

Cause: The aggmap contained a simultaneous model.

Action: Change the model definition so that it is no longer simultaneous.

ORA-36913: (XSAGDNGL49) In AGGMAP workspace object, LOAD_STATUS object workspace object must be an undimensioned VALUESET over the relation dimension.

Cause: The object referred to by the LOAD_STATUS clause of the aggmap wasn't an undimensioned valueset over the related dimension

Action: Change the aggmap definition so that it doesn't refer to an invalid object

ORA-36914: (XSAGDNGL50) In AGGMAP workspace object, LOAD_STATUS valueset workspace object contains both a child and its ancestor.

Cause: The LOAD_STATUS valueset is not allowed to contain both a dimension value and an ancestor of that value.

Action: Perform a limit remove ancestors on the valueset and confirm that the result matches the intended load.

ORA-36920: (XSVPMTOPART01) workspace object cannot become anonymous because it has properties.

Cause: The OLAP DML command would result in a named object becoming an anonymous object, but the object had one or more properties associated with it.

Action: Remove the properties using the PROPERTY command. In some cases an UPDATE may be required before the command can proceed.

ORA-36921: (XSVPMTOPART02) workspace object and workspace object are not in the same analytic workspace.

Cause: The OLAP DML command requires certain objects to be in the same analytic workspace, and the command string specified objects from two different analytic workspaces.

Action: If more than one analytic workspace is attached to the session, make sure that the object names given in the command are unique across all attached analytic workspaces. Use qualified object names (QON's) if necessary.

ORA-36922: (XSVPMTOPART03) workspace object is the target of an external partition of a partitioned variable.

Cause: An attempt was made to perform some prohibited operation on a variable which is itself a partition of some other variable.

Action: If desired, use the CHGDFN command to DROP the partition from the partitioned variable, and then run the command again.

ORA-36923: (XSVPMTOPART04) workspace object is not a LIST or RANGE PARTITION TEMPLATE.

Cause: The user ran a command that only operates on a LIST or RANGE partition template (or a variable dimensioned by a LIST or RANGE partition template) on some other kind of analytic workspace object.

Action: Rerun the command on a LIST or RANGE partition template or a variable dimensioned by a LIST or RANGE partition template.

ORA-36924: (XSVPMTOPART05) workspace object is not in a COMPOSITE.

Cause: The OLAP DML command expected that the variable would be dimensioned by a composite containing the specified dimension, the specified dimension within a composite.

Action: Rerun the command on some variable is dimensioned by a composite containing the specified dimension.

ORA-36925: (XSVPMTOPART06) Partition number has some values that are not in workspace object.**ORA-36930: Cannot start a recursive call to Oracle OLAP because a ROLLBACK past an UPDATE to an attached analytic workspace has been performed.**

Cause: ROLLBACK past the UPDATE of one of the attached Analytic Workspaces was called. A recursive Oracle OLAP call cannot be made until the control returns to the initial OLAP call and the affected Analytic Workspaces detached.

Action: Change the called SQL procedure to avoid the ROLLBACK

ORA-36940: (XSDPENG00) The PARTITION function cannot be applied to workspace object because it is not a partition template.

Cause: An attempt was made to apply the PARTITION function to an object that was not a partition template.

Action: Supply the name of a partition template.

ORA-36950: (XSFCAST22) The list of string values cannot have more than number members. number were supplied.

Cause: More than the maximum number of OFFSET or PERIODICITY values were specified.

Action: Remove some of the OFFSET or PERIODICITY values.

ORA-36951: (XSFCAST28) The ALLOCLAST parameter cannot be set to YES unless PERIODICITY specifies more than one cycle.

Cause: The ALLOCLAST parameter was set to YES when the PERIODICITY parameter specified a single value rather than a list of nested cycles.

Action: Set the ALLOCLAST parameter to FALSE (the default), or specify more than one value for the PERIODICITY parameter (in the form of a parenthesized list).

ORA-36952: (XSFCAST23) cannot specify a cycle number when querying the string forecasting option

Cause: A cycle number was specified in a call to the FCQUERY function to retrieve forecast data not related to a cycle.

Action: Remove the cycle specification from the call to the FCQUERY function.

ORA-36954: (XSFCAST24) The cycle number must be between 1 and *number*. You specified *number*.

Cause: A cycle number less than 1 or greater than the maximum value was specified in a call to FCQUERY.

Action: Specify a number in the indicated range.

ORA-36956: (XSFCAST25) There are only *number* PERIODICITY values. You cannot specify more OFFSET values.

Cause: More OFFSET values were specified than PERIODICITY values.

Action: Specify only as many OFFSET values as there are PERIODICITY values.

ORA-36958: (XSFCAST26) The OFFSET value for cycle *number* cannot be greater than the cycle's PERIODICITY, which is *number*. You specified *number*.

Cause: The OFFSET for a cycle exceeded the PERIODICITY for that cycle.

Action: Supply an OFFSET less than or equal to the PERIODICITY for the corresponding cycle.

ORA-36960: (XSFCAST27) The value of the *string* expression must be an odd number. You specified *number*.

Cause: An even number was given for an option that requires an odd number.

Action: Supply an odd number or let the option default.

ORA-36961: Oracle OLAP is not available.

Cause: An attempt was made to utilize functionality found only in Oracle OLAP, but Oracle OLAP was not enabled in the executable.

Action: Install the Oracle OLAP option.

ORA-36962: (XSRELTBL08) *string* is not a valid workspace object.

Cause: The specified value did not exist in the dimension.

Action: Specify an existing value of the dimension.

ORA-36963: (XSRELTBL16) INHIERARCHY object *workspace object* should be a valid valueset or boolean variable.

Cause: Invalid valueset or variable was specified.

Action: Specify a valid valueset or variable.

ORA-36964: (XSRELTBL09) *workspace object* is not a valid level relation.

Cause: The specified level relation was not consistent with the parentage hierarchy.

Action: Fix one or both of the relations involved so that all parents are at a higher level than their children.

ORA-36965: (XSRELTBL17) Invalid LEVELORDER valueset *workspace object*.

Cause: Invalid LEVELORDER valueset was specified.

Action: Specify a valid valueset.

ORA-36966: (XSRELTBL10) *workspace object* must be a dimension.

Cause: The qualified object must be a dimensions.

Action: Remove the named object from the QDR.

ORA-36967: (XSRELTBL18) invalid INHIERARCHY valueset *workspace object*

Cause: An invalid valueset was specified for the INHIERARCHY parameter.

Action: Specify a valid valueset for the INHIERARCHY parameter.

ORA-36968: (XSRELTBL11) Invalid relation *workspace object*.

Cause: Non-object or an object other than a RELATION was specified as source or destination.

Action: Specify RELATION objects.

ORA-36969: (XSRELTBL19) Merged family relation cannot take INHIERARCHY option.

Cause: INHIERARCHY option was specified.

Action: Remove INHIERARCHY option.

ORA-36970: (XSRELTBL12) *workspace object* must be a self-relation.

Cause: The specified source relation was not a self-relation.

Action: Specify a self-relation as the source.

ORA-36971: (XSRELTBL20) Merged family relation cannot take LEVELORDER option.

Cause: LEVELORDER option was specified.

Action: Remove LEVELORDER option.

ORA-36972: (XSRELTBL13) Relation *workspace object* must be dimensioned by *workspace object*.

Cause: Destination relation is not dimensioned by source relation dimension.

Action: Give a correct destination relation.

ORA-36974: (XSRELTBL14) *workspace object* is not a BOOLEAN variable dimensioned by all the dimensions of the hierarchy.

Cause: The named variable had either the wrong data type or the wrong dimensions.

Action: Specify a BOOLEAN variable dimensioned by all the dimensions of the hierarchy.

ORA-36975: (XSRELTBL15) The USING clause did not name a relation with the same level dimension as LEVELORDER valueset *workspace object*.

Cause: Either the USING clause was omitted from the HIERHEIGHT command, or specified a relation that contained values of a different dimension other than the LEVELORDER valueset.

Action: Specify a USING clause naming a relation containing values from the correct level dimension.

ORA-36976: (XSRELGID00) Invalid GROUPINGID destination relation or variable *workspace object*.

Cause: Non-Object or invalid relation or invalid variable.

Action: Specify the valid relation or variable.

ORA-36977: (XSRELGID17) The GROUPINGID command does not support hierarchies with more than 126 levels.

Cause: A hierarchy was specified with more than 126 levels.

Action: Decrease the number of levels in the hierarchy.

ORA-36978: (XSRELGID01) workspace object must be a self-relation.

Cause: Source relation is not a self-relation.

Action: Specify a self-relation as the source relation.

ORA-36979: (XSRELGID18) Property *number* can only be set by the GROUPINGID command.

Cause: You tried to set the \$GID_DEPTH property.

Action: Stop to set the \$GID_DEPTH property.

ORA-36980: (XSRELGID02) Variable workspace object must have a numeric data type.

Cause: The destination variable does not have a numeric data type.

Action: Make sure the variable is numeric.

ORA-36981: (XSRELGID19) The format of the GROUPINGID function is:\n \n GROUPINGID(gidrel1 [gidrel2]...)

Cause: Bad syntax

Action: Correct syntax

ORA-36982: (XSRELGID03) The destination variable/relation workspace object must be dimensioned by all dimensions of the source relation workspace object that have more than one value in status.

Cause: Destination variable/relation does not have enough dimensionality to hold the result from the multi-dimensional source relation.

Action: Either limit the status of hierarchy dimensions or redefine the destination variable/relation with the extended dimensionality

ORA-36983: (XSRELGID20) The groupingid relation workspace object repeats.

Cause: The groupingid relation repeated.

Action: Remove the duplicated groupingid relation.

ORA-36984: (XSRELGID04) A value cannot be inserted into dimension workspace object.

Cause: An error occurred that prevented a value from being added to the named dimension.

Action: Check to make sure that you have permission to add values to the dimension.

ORA-36985: (XSRELGID21) The source relation can be omitted only when using both surrogate GID and level order valueset.

Cause: Source relation was not specified.

Action: Specify the source relation or both surrogate gid and level order valueset.

ORA-36986: (XSRELGID05) Relation *workspace object* must be dimensioned by *workspace object*.

Cause: The destination relation was not dimensioned by the dimension of the source relation.

Action: Redefine the destination relation or choose another relation with the correct dimensionality.

ORA-36988: (XSRELGID06) The related dimension of relation *workspace object* must be of type NUMBER.

Cause: The related dimension of the destination relation has the wrong data type.

Action: Redefine the destination relation or choose another relation whose related dimension is of type NUMBER.

ORA-36989: (XSRELGID23) GROUPSET and ROLLUP options in GROUPINGID require the destination relation.

Cause: Either variable or surrogate dimension was specified as destination.

Action: Specify the destination relation.

ORA-36990: (XSRELGID07) The level relation *workspace object* should be dimensioned by a level dimension.

Cause: The level relation was not dimensioned by a level dimension.

Action: Redefine the level relation or choose another relation with the correct dimensionality.

ORA-36991: (XSRELGID08) The level relation and level order valueset provide inconsistent level mappings.

Cause: There is a conflict between the hierarchy/level relation and the level order valueset.

Action: Choose objects that do not conflict.

ORA-36992: (XSRELGID09) A level relation is needed to produce a surrogate dimension gid.

Cause: A level relation was not specified.

Action: Specify a level relation.

ORA-36993: (XSRELGID10) OBJECT *workspace object* must be a SURROGATE DIMENSION based on the level dimension *workspace object*.

Cause: The object specified was not a surrogate dimension based on the level dimension.

Action: Select a surrogate of the level dimension.

ORA-36994: (XSRELGID11) The SURROGATE DIMENSION *workspace object* must be numeric.

Cause: The surrogate dimension is not numeric

Action: Change the surrogate dimension as numeric

ORA-36995: (XSRELGID12) There are duplicate values in the surrogate dimension gid. Use the levelorder option to resolve the ambiguity.

Cause: more than 1 hierarchies in the current computing scope.

Action: use inhierarchy to limit

ORA-36996: (XSRELGID13) Valueset *workspace object* should be defined over dimension *workspace object*.

Cause: The specified INHIERARCHY valueset did not contain values of the hierarchy dimension.

Action: Supply an INHIERARCHY valueset containing values of the hierarchy dimension.

ORA-36997: (XSRELGID14) For variable or relation grouping ids, a level relation is needed when a level order valueset is specified.

Cause: no level relation exists with level order valueset.

Action: provide the level relation.

ORA-36998: (XSRELGID15) LEVELORDER valueset *workspace object* and level relation *workspace object* do not have the same level dimension.

Cause: A mismatch was detected between the level dimension of the LEVELORDER valueset and that of the level relation specified in the USING clause.

Action: Specify objects with the same level dimension.

ORA-36999: (XSRELGID16) OBJECT *workspace object* is not a surrogate dimension, a source relation must be specified when creating any non-surrogate grouping id.

Cause: use variable/relation gid without providing the source relation

Action: use the surrogate or provide the source relation

ORA-37000: (NOTALIAS00) *workspace object* is not an ALIAS DIMENSION of *workspace object*.

Cause: The user specified an object which is not alias dimension of the first dimension

Action: Specify an alias dimension of the first dimension

ORA-37001: You have one or more attached but unupdated analytic workspaces.

Cause: The user has attempted to shut down OLAP, but they have active analytic workspaces whose changes have not been saved.

Action: Either issue the update command to update the AWWs, or pass TRUE as the force parameter to `dbms_aw.shutdown()`

ORA-37003: (AWLISTALL01) *number readers*

Cause: Used in AW(LISTALL) output formatting when %d is 0.

Action: No action needed.

ORA-37010: (XSACQUIRE_DIFFAW) When using the CONSISTENT WITH clause, all objects must come from the same analytic workspace.

Cause: The ACQUIRE command cannot keep objects from several workspaces consistent with each other

Action: Omit the CONSISTENT WITH clause or make sure all objects being acquired belong to the same analytic workspace.

ORA-37011: (XSACQUIRE_LOCKED) Object *workspace object* is locked by another user.

Cause: Could not acquire (or acquire consistent) the object, since it is locked by another user

Action: Try to acquire this object later

ORA-37012: (XSACQUIRE_TIMEOUT) Object *workspace object* is locked by another user and the WAIT timed out.

Cause: Could not acquire (or acquire consistent) the object for a while, since it is locked by another user

Action: Try to acquire this object later

ORA-37013: (XSACQUIRE_DEADLOCK) Cannot wait to acquire object *workspace object*, since doing so would cause a deadlock.

Cause: Waiting to acquire the object would cause a deadlock

Action: Release some other object that another user is waiting for and try to acquire this object again.

ORA-37014: (XSACQUIRE_ACQUIRED) Object *workspace object* is already acquired.

Cause: The object is already acquired

Action: Do not try to acquire this object again

ORA-37015: (XSACQUIRE_YNRESYNC) Object *workspace object* is ambiguously listed to be acquired both with and without RESYNC.

Cause: The object is listed in with resync list and no resync list. Such usage is ambiguous as to the user's intent on preserving or not preserving private changes.

Action: Do not list the object both with and without RESYNC

ORA-37016: (XSACQUIRE01) You must specify objects to acquire for the ACQUIRE command.

Cause: A list of objects to acquire with or without resync is missing

Action: Specify the list of objects to acquire

ORA-37018: (XSACQUIRE03) Multiwriter operations are not supported for object *workspace object*.

Cause: Multiwriter presently does not work for this object type

Action: Attach the AW in RW or EXCLUSIVE modes to modify this object.

ORA-37020: (XSMULTI01) Analytic workspace *string* is not in MULTI mode.

Cause: The workspace for an object is not in multiwriter mode. Hence, no multiwriter operations are allowed on the objects in the workspace

Action: Attach the workspace in the multiwriter mode or do not use multiwriter commands with it.

ORA-37021: (XSMULTI02) Object *workspace object* is not acquired.

Cause: The object must be acquired for this multiwriter operation

Action: Do not use this multiwriter operation on an object that is not acquired

ORA-37023: (XSMLTUPD01) Object *workspace object* cannot be updated without dimension *workspace object*.

Cause: One cannot update an object if it is dimensioned by a maintained dimension without updating that dimension or if the object is a relation and the dimension is its target.

Action: Include the maintained dimension in the update list

ORA-37026: (XSMLTRESYNC01) Object *workspace object* cannot be resynced without dimension *workspace object*.

Cause: One cannot resync an object if it is dimensioned by a maintained dimension without updating that dimension or if the object is a relation and the dimension is its target.

Action: Include the maintained dimension in the update list

ORA-37027: (XSMLTRESYNC02) Object *workspace object* cannot be resynced without modified object *workspace object* because they share a modified composite dimension.

Cause: When one resyncs an object that is dimensioned by a composite dimension, the composite dimension is resynced automatically, dropping all new tuples. This cannot be done, however, if the automatic resync of the composite dimension might cause data in an object that shares the composite dimension to become NA.

Action: Resync both objects together. Alternatively, you can try to acquire the other object (that will ensure that the composite dimension is locked in the latest generation and will not be resynced when resyncing the first object), resync the first object, and release the other object.

ORA-37028: (XSMLTRESYNC03) Object *workspace object* cannot be resynced without modified object *workspace object* because they share a modified dimension map.

Cause: When one resyncs an object that is dimensioned by a dimension map, the dimension map is resynced automatically, dropping all changes. This cannot be done, however, if the automatic resync of the dimension map might cause data in an object that shares the dimension map to become NA.

Action: Resync both objects together. Alternatively, you can try to acquire the other object (that will ensure that the dimensions map is locked in the latest generation and will not be resynced when resyncing the first object), resync the first object, and release the other object.

ORA-37030: (XSMLTMAINT01) You cannot maintain *workspace object* because it is not ACQUIRED.

Cause: One cannot maintain a dimension in a multiwriter AW if it is not acquired.

Action: Acquire the dimension first.

ORA-37031: (XSMLTMAINT02) You cannot DELETE values of dimension *workspace object* in MULTI mode.

Cause: DELETE is allowed in multiwriter mode only for SESSION dimension members

Action: Attach the AW in a R/W mode and perform the DELETE operation

ORA-37032: (XSMLTMAINT03) cannot MAINTAIN partition template *workspace object* in MULTI mode

Cause: An attempt was made to add or remove values from LIST partition template lists while the analytic workspace containing the partition template was attached in multiwriter mode.

Action: Do the maintenance in read-only or read/write mode.

ORA-37035: (XSMLTDCL01) You can only DEFINE SESSION objects in analytic workspace *string* because it is attached in MULTI mode.

Cause: Persistent object definition in multiwriter mode is not allowed.

Action: Do all persistent object definitions in read-write mode.

ORA-37036: (XSMLTDCL02) You cannot DELETE objects in analytic workspace *string* because it is attached in MULTI mode.

Cause: One cannot delete objects in an analytic workspace attached in MULTI mode.

Action: Do all object in read-only or read-write mode.

ORA-37037: (XSMLTDCL03) You cannot RENAME objects in analytic workspace *string* because it is attached in MULTI mode.

Cause: One cannot rename objects in an analytic workspace attached in MULTI mode.

Action: Do all persistent object maintenance in read-write mode.

ORA-37038: (XSMLTDCL04) You cannot change definitions of objects in analytic workspace *string* because it is attached in MULTI mode.

Cause: One cannot used CHGDFN command on objects in an analytic workspace attached in MULTI mode.

Action: Do all persistent object maintenance in read-write mode.

ORA-37039: (XSMLTDCL05) You cannot maintain triggers in analytic workspace *string* because it is attached in MULTI mode.

Cause: One cannot use TRIGGER command on objects in an analytic workspace attached in MULTI mode.

Action: Do all persistent object maintenance in read-write mode.

ORA-37040: (XSACQUIRE_DEP_LOCKED) Composite, concat, dimension map, or internal partition *workspace object* is locked by another user.

Cause: Some object required locking a composite, concat, dimension map, or internal partition, which is locked by another user

Action: Try to acquire this object later

ORA-37041: (XSACQUIRE_DEP_TIMEOUT) Composite, concat, dimension map, or internal partition *workspace object* is locked by another user and the WAIT timed out.

Cause: Some object required locking a composite, concat, dimension map, or internal partition, which could not be locked for a while, since it is locked by another user

Action: Try to acquire this object later

ORA-37042: (XSACQUIRE_DEP_DEADLOCK) Cannot wait to acquire composite, concat, dimension map, or internal partition *workspace object*, since doing so would cause a deadlock.

Cause: Some object required locking a composite, concat, dimension map, or internal partition, which would cause a deadlock

Action: Release some other object that another user is waiting for and try to acquire this object again.

ORA-37043: (XSACQUIRE_DEP_OLDGEN) Composite, concat, dimension map, or internal partition *workspace object* cannot be locked, since another user has committed a new one already.

Cause: Some object required locking a composite, concat, dimension map, or internal partition in the present generation, which is not possible, since a newer generation already exists.

Action: Try to acquire the main object with resync

ORA-37044: (XSACQUIRE_OLDGEN) Cannot acquire object *workspace object* without resync.

Cause: Could not acquire the object without resync because another user has committed a newer version of it already.

Action: Try to acquire this object with resync parameter

ORA-37050: (XSMLTDCL06) You cannot use the RELATION command with *workspace object* because analytic workspace *string* is attached in MULTI mode.

Cause: One cannot use the RELATION command on objects in an analytic workspace attached in MULTI mode.

Action: Change the default relation when the analytic workspace is attached in RW or Exclusive mode.

ORA-37051: (XSAWRESREV01) You cannot RESYNC or REVERT analytic workspace *string* because one or more objects have been defined in it during this session.

ORA-37052: (XSAWRESREV02) You cannot RESYNC or REVERT analytic workspace *string* because one or more objects have been deleted from it during this session.

ORA-37053: (XSAWRESREV03) You cannot RESYNC or REVERT analytic workspace *string* because one or more of its objects have had their definitions changed during this session.

ORA-37054: (XSAWRESREV04) You cannot RESYNC or REVERT analytic workspace *string* because it contains one or more unnamed composites renamed during this session.

ORA-37055: (XSAWRESREV05) You cannot RESYNC analytic workspace *string* because another session has changed the definitions of one or more objects it contains.

ORA-37056: (XSAWRESREV06) You cannot RESYNC or REVERT analytic workspace *string* because one or more SESSION dimensions or composites are based on *workspace object*.

ORA-37072: (XSMCSESS00) Object *workspace object* has the wrong type.

Cause: The object is not of the object type specified in the APPLY clause

Action: Specify the correct object type

ORA-37073: (XSMCSESS01) Applied relation *workspace object* must be dimensioned by dimension *workspace object*.

Cause: Applied relation has the different dimension from the dimension currently being maintained

Action: Maintain relation dimension

ORA-37074: (XSMCSESS02) Variable *workspace object* has no default aggmap.

Cause: The applied variable has no default aggmap

Action: Use variable with the default aggmap or aggmap directly

ORA-37075: (XSMCSESS03) You cannot rename a session-only dimension value.

Cause: The user tried to apply MAINTAIN RENAME to a SESSION value.

Action: Delete the old value and add a new one with the desired name.

ORA-37076: (XSMCSESS04) *workspace object* is not the type of dimension that can have session-only values. Valid types are TEXT, NTEXT, ID, NUMBER, and CONCAT with the UNIQUE attribute.

Cause: The user tried to add a SESSION value to a dimension type that does not support SESSION values.

Action: Use a dimension of one of the listed types.

ORA-37077: (XSMCSESS05) Object *workspace object* is specified more than once.

Cause: The same object name was given more than once in the apply clause or in the step dimension list.

Action: Remove the repetitions.

ORA-37078: (XSMCSESS06) The dimension being maintained (*workspace object*) cannot also be used as a step dimension.

Cause: The dimension being maintained was named as a step dimension.

Action: Remove this dimension from the list of step dimensions.

ORA-37079: (XSMCSESS07) Aggmap *workspace object* cannot be used for AGGREGATE.

Cause: The current aggmap may be for ALLOCATE

Action: Choose the correct aggmap for AGGREGATE only.

ORA-37080: Advice requested for hierarchy with too many levels

Cause: A request was made for advice on a hierarchy with more levels than are supported.

Action: Only request advice for hierarchies with less than 32 levels.

ORA-37082: invalid percent specified for pre-computation

Cause: Advice was requested for an invalid percent value for pre-computation.

Action: Request between 0 and 100 percent for pre-computation.

ORA-37083: advice requested for invalid object *string*

Cause: Advice was requested for an invalid object name.

Action: Specify a valid object name.

ORA-37084: Output valueset *string* must match *string*'s dimensionality

Cause: A request was made for advice for a relation with different dimensionality from the output valueset.

Action: Request using objects that have the same dimensionality.

ORA-37086: *string* is not a valueset

Cause: An operation was attempted that supports only valuesets as precompute expressions in an aggmap, yet a different kind of precompute expression was used.

Action: Replace this limit expression with an equivalent valueset and retry the operation. General precompute expressions are deprecated.

ORA-37093: (XSOBJORG_BAD_CUBE) invalid property "*string*" specified for cube "*string.string*"

Cause: Either the specified cube did not have an analytic workspace (AW) organization or the specified property did not apply to cubes.

Action: Specify a property that applies to cubes or specify a cube with an AW organization.

ORA-37094: (XSOBJORG_BAD_DIM) invalid property "*string*" specified for dimension "*string.string*"

Cause: Either the specified dimension did not have an analytic workspace (AW) organization, or the specified property did not apply to dimensions.

Action: Specify a property that applies to dimensions with an AW organization.

ORA-37095: (XSOBJORG_BAD_MEAS) invalid property "*string*" specified for measure "*string.string.string*"

Cause: Either the specified measure did not have an analytic workspace organization, or the specified property did not apply to measures.

Action: Specify a property that applies to measures and a measure with an analytic workspace organization.

ORA-37096: (XSOBJORG_BAD_ATTR) invalid property "*string*" specified for base attribute "*string.string.string*"

Cause: Either the specified base attribute did not have an analytic workspace (AW) organization, or the specified property did not apply to the base attribute.

Action: Specify a property that applies to the base attributes or specify a base attribute with an AW organization.

ORA-37097: (XSOBJORG_BAD_DIM_LEVEL) invalid property "*string*" specified for dimension level "*string.string.string*"

Cause: Either the specified dimension level did not have an analytic workspace (AW) organization or the specified property did not apply to dimension levels.

Action: Specify a property that applies to dimension levels or specify a dimension level with an AW organization.

ORA-37098: (XSOBJORG_BAD_MODEL) invalid property "string" specified for dimension calculation model "string.string.string"

Cause: Either the specified dimension calculation model did not have an analytic workspace (AW) organization, or the specified property did not apply to the dimension calculation models.

Action: Specify a property that applies to the dimension calculation models and a dimension calculation model with an AW organization.

ORA-37099: (XSOBJORG_BAD_DIMALITY) invalid property "string" specified for dimensionality "string.string.string"

Cause: Either the specified dimensionality did not have an analytic workspace organization, or the specified property did not apply to dimensionalities.

Action: Specify a property that applies to dimensionalities and to a dimensionality with an analytic workspace organization.

ORA-37100: (XSUNCOMMITTED) You have one or more updated but uncommitted analytic workspaces.

Cause: The user has attempted to shut down OLAP, but they have active analytic workspaces whose changes have not been saved.

Action: Issue the commit command. ---- 37101 - 37110 are reserved for partitioned variables ----

ORA-37101: (XSVPART01) Partitioning information can only be given for variables dimensioned by a PARTITION TEMPLATE.

Cause: User attempted to define or reference an AW object with the "all internal" phrase or internal / external partition list, but the object was not a variable, was not dimensioned by a partition template, or was an already existing target of an external partition.

Action: Eliminate phrases specific to partitioned variables from the definition string, or dimension the variable by a partition template.

ORA-37102: (XSVPART02) Invalid partition name *string*.

Cause: The user gave an invalid partition name. When defining a partitioned variable, this message indicates that the partition name does not exist in the partition template. In any other context, it indicates that the partitioned variable or partition template does not have a partition with the given name.

Action: Supply a valid partition name.

ORA-37103: (XSVPART03) The dimensionality or datatype of workspace object does not match the dimensionality or datatype of the partition.

Cause: User attempted to define a partitioned variable with an external partition, but the target of the external partition had incorrect dimensionality or datatype.

Action: Pick a different target variable. The target variable must be dimensioned by exactly the same dimensions, composites, and partition templates, in the same order, as are specified in the partition template, and must have the exact same datatype (including width, precision, and scale) as the partitioned variable itself.

ORA-37104: (XSVPART04) A partitioned variable must be dimensioned by a single partition template only.

Cause: User attempted to define a partitioned variable with more than one partition templates, or a partition template and one or more other dimensions, in the dimension list.

Action: Use only a partition template in the dimension list of the variable. All dimensions of the variable must be included in the definition of the partition template.

ORA-37105: (XSVPART05) Only variables dimensioned by a CONCAT PARTITION TEMPLATE can have *string* partitions.

Cause: Attempted to create an external partition on a partitioned variable, but variable was dimensioned by a RANGE or LIST partition template.

Action: Declare the partition INTERNAL instead of EXTERNAL, or use a CONCAT partition template in place of the RANGE or LIST partition template.

ORA-37106: (XSVPART06) Invalid partition name *number*.

Cause: The user gave an invalid partition name.

Action: Supply a valid partition name.

ORA-37107: (XSVPART07) Attempt to write to non-existent partition of *workspace object*.

Cause: Some action attempted to write data to a partitioned variable, but the variable didn't have a partition for that data. This can result from a partition template that does not assign all possible dimension values to some subcube, or from a partitioned variable that does not have a partition for one of the partitions defined by the partition template.

Action: Make sure that the cell being written is assigned to some partition by the partition template, and that the variable has an actual partition associated with the partition of the template. Use the CHGDFN template DEFINE... command to define new partitions within the template, and the CHGDFN variable ADD... command to add new partitions to the variable. Alternatively, the PARTWRITEERR can be set to false, in which case data being written to a non-existent partition will be silently discarded.

ORA-37108: (XSVPART08) *workspace object* has an AGGCOUNT, but *workspace object* does not.

Cause: An attempt was made to add a partition to a partitioned variable. Either the partition was defined WITH AGGCOUNT and the partitioned variable was not, or the partitioned variable was defined WITH AGGCOUNT and the partition was not.

Action: Use CHGDFN ADD AGGCOUNT or CHGDFN DROP AGGCOUNT to either add or remove an AGGCOUNT from either the partition or the partitioned variable.

ORA-37109: (XSVPART09) Partition *workspace object* and its parent variable *workspace object* cannot both be specified.

Cause: Partition and its parent partition were operated upon together.

Action: Remove the partition from the object list.

ORA-37111: unable to load the OLAP API sharable library: (*string*)

Cause: This could happen if: - The online analytical processing (OLAP) API sharable library was missing. - The sharable library upon which the OLAP API sharable library depends was missing. - The OLAP API sharable library was the wrong version.

Action: Ensure that Oracle is properly installed with the OLAP option. If RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support.

ORA-37113: OLAP API initialization error: (string)

Cause: OLAP API initialization failed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Customer Support.

ORA-37114: Online Analytical Processing (OLAP) API bootstrap error: (string)

Cause: OLAP API bootstrapping failed.

Action: Verify that Oracle is properly installed with the OLAP option. If the DB has been patched, review the patch log for errors. If the problem persists, contact Oracle Support.

ORA-37115: New OLAP API history is not allowed

Cause: If there are active OLAP API sessions, it is not allowed to start a new OLAP API history by setting `_olapi_history_retention` parameter to true.

Action: Wait until all active OLAP API sessions terminate before resetting `_olapi_history_retention` parameter to true.

ORA-37116: OLAP API table function error: (string)

Cause: OLAP API table function failed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Customer Support.

ORA-37117: olapi history retention has been disabled

Cause: Under certain circumstances, for example, when the database is read only, olapi history retention is not possible because it requires updating persistent tables from time to time. If olapi history retention has been disabled, setting `_olapi_history_retention` parameter to true has no effect.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Customer Support.

ORA-37118: The Online Analytical Processing (OLAP) API library was not preloaded.

Cause: In shared-server mode, the OLAP API library must be loaded during process initialization to ensure that the C++ virtual table addresses are identical in all shared server processes. The OLAP API session was executing in a process in which the library had not been loaded.

Action: Contact Oracle Support.

ORA-37119: Incompatible Online Analytical Processing (OLAP) application programming interface (API) library load address.

Cause: The OLAP API session was executing in a process in which the OLAP API sharable library was loaded which was at a different address than the process in which the OLAP API session originated.

Action: If instance cannot be restarted successfully, contact Oracle Support.

ORA-37120: expression string is null

Cause: expression parser received a null string for syntax analysis.

Action: Prepare a non-null and well-formed MDX query string and try again.

ORA-37121: AW Spreadsheet invalidated

Cause: While this cursor was open, a command was issued that changed the underlying data to become inconsistent.

Action: Perform the query again, avoid performing dimension maintenance and cache clears during spreadsheet processing.

ORA-37122: AW Session cache disabled

Cause: A SQL Spreadsheet was attempted while the AW Session cache was disabled.

Action: Enable the session cache and perform the query again.

ORA-37123: (XSCCOMP17) Can not AGGREGATE *workspace object*(partition number) because it depends on unaggregated compressed partition number.

Cause: attempted to use a feature not supported by CC's in the current AW format

Action: Remove the unsupported feature from the aggmap, or upgrade the AW

ORA-37124: (XSCCOMP16) COMPRESSED COMPOSITES with *string* are not supported in analytic workspace *string* because it has not been upgraded to version *string*.

Cause: attempted to use a feature not supported by CC's in the current AW format

Action: Remove the unsupported feature from the aggmap, or upgrade the AW

ORA-37126: (XSCCOMP01) The COMPRESSED COMPOSITE *workspace object* can only be used as the base of a single variable.

Cause: An attempt was made to DEFINE a variable dimensioned by a COMPRESSED COMPOSITE, but that COMPRESSED COMPOSITE was already being used by another VARIABLE.

Action: Create a second COMPRESSED COMPOSITE for the second VARIABLE or add a measure dimension to the first variable.

ORA-37127: (XSCCOMP02) The compressed composite *workspace object* must be last in the dimension list.

Cause: An attempt was made to DEFINE a variable dimensioned by a compressed composite, but a slower varying dimension was specified in the dimension list.

Action: Specify the compressed composite last in the dimension list when defining the VARIABLE.

ORA-37128: (XSCCOMP20) The partition template *workspace object* has already used the COMPRESSED COMPOSITE *workspace object*.

Cause: The COMPRESSED COMPOSITE specified for either a variable or partition template was already in use in another partition template.

Action: Define a different COMPRESSED COMPOSITE.

ORA-37129: (XSCCOMP04) Cannot aggregate over COMPRESSED COMPOSITE *workspace object* using AGGMAP *workspace object*. All static MODEL statements must precede all RELATION statements over the bases of the COMPRESSED COMPOSITE.

Cause: The AGGMAP was defined with a MODEL statement after a RELATION statement over a base of the COMPRESSED COMPOSITE.

Action: Change the AGGMAP so that the MODEL statements appear before the RELATION statements.

ORA-37130: (XSCCOMP05) Cannot aggregate over COMPRESSED COMPOSITE workspace object using AGGMAP workspace object because you must specify AGGINDEX OFF when there is a PRECOMPUTE clause on a RELATION over base workspace object.

Cause: A PRECOMPUTE clause was specified in the AGGMAP for a RELATION over a base of a COMPRESSED COMPOSITE, but AGGINDEX was ON.

Action: Remove the PRECOMPUTE clause from the AGGMAP, or add AGGINDEX OFF.

ORA-37132: (XSCCOMP07) Incremental aggregation over the dense DIMENSION workspace object is not supported when aggregating a VARIABLE dimensioned by a COMPRESSED COMPOSITE.

Cause: The status of the specified dimension did not include all detail cells.

Action: Add all detail cells to the status of the dimension and reissue the AGGREGATE command.

ORA-37133: (XSCCOMP08) cannot write into an aggregated VARIABLE dimensioned by a COMPRESSED COMPOSITE

Cause: An attempt was made to store a value into to an aggregated variable dimensioned by a COMPRESSED COMPOSITE. Once the AGGREGATE command is run on a variable dimensioned by a COMPRESSED COMPOSITE, it becomes read-only until the computed values are removed with the CLEAR command.

Action: Run the CLEAR AGGREGATES command to remove the computed values from the variable and then rerun the failed operation. The CLEAR AGGREGATES command removes all of the data computed during the last AGGREGATE command on this variable.

ORA-37134: (XSCCOMP09) cannot add new values to workspace object because it includes positions for precomputed aggregate values

Cause: An attempt was made to create a new position in a compressed composite, either directly (using MAINTAIN MERGE or MAINTAIN ADD) or by storing a value in the variable dimensioned by the compressed composite. This is not allowed when the variable has been precomputed using the AGGREGATE command. Once the AGGREGATE command is run on a variable dimensioned by a compressed composite, the compressed composite becomes read-only until the computed values are removed with the CLEAR command.

Action: Run the CLEAR AGGREGATES command to remove the computed values from the variable and then rerun the failed operation. Note that the CLEAR AGGREGATES command removes all the data computed during the last AGGREGATE command on this variable.

ORA-37135: (XSCCOMP19) The compressed composite workspace object in the current defined partition template should be unique or global.

Cause: The compressed composite was neither unique nor global. Unique subpartitions should have different compressed composites. Global subpartitions should use the same compressed composite if they use any compressed composite at all.

Action: Redefine the partition template.

ORA-37136: (XSCCOMP11) Cannot ROLLUP dimension workspace object which is a base of COMPRESSED COMPOSITE workspace object. Use AGGREGATE instead.

Cause: An attempt was made to run ROLLUP on a variable dimensioned by a COMPRESSED COMPOSITE.

Action: Instead of using ROLLUP, generate an aggmap object and use the AGGREGATE function.

ORA-37137: (XSCCOMP12) cannot CHGDFN *workspace object* because it is a compressed composite

Cause: An attempt was made to process the CHGDFN function on a compressed composite.

Action: If the change is required, then delete the old composite and create // a new one.

ORA-37138: (XSCCOMP13) You cannot delete values from *workspace object* because it is an aggregated compressed composite.

Cause: The MAINTAIN DELETE statement was specified for an aggregated compressed composite.

Action: In order to perform this maintenance, the composite must first be cleared. This can be done by running the CLEAR AGGREGATES command on the variable dimensioning the composite. This removes all data computed during the last AGGREGATE command.

ORA-37139: (XSCCOMP14) Cannot AGGREGATE *workspace object* using aggmap *workspace object* because you cannot AGGREGATE a variable dimensioned by a COMPRESSED COMPOSITE using an aggmap with a PROTECT clause.

Cause: An attempt was made to AGGREGATE a variable dimensioned by a COMPRESSED COMPOSITE with an aggmap that included a PROTECT clause.

Action: Modify the aggmap or create a new aggmap that does not include a PROTECT clause and retry the command.

ORA-37140: (XSCCOMP15) Cannot AGGREGATE partitioned variable *workspace object* using AGGMAP *workspace object* because you cannot use the base of a COMPRESSED COMPOSITE as a partition dimension.

Cause: The user tried to run aggregate on a partitioned variable with a partition dimension that is a base of a COMPRESSED COMPOSITE.

Action: Repartition the data, drop the partition dimension from the aggmap, or don't use COMPRESSED COMPOSITES.

ORA-37141: (XSSQLMDQ01) Invalid host variable syntax for MDQUERY procedure.

Cause: The schema and analytic workspace name for the MDQUERY cursor declaration were incorrectly specified.

Action: Specify the schema and awname as a host variable name preceded by a colon, or as a text literal string of the form 'SCHEMA.AWNAME' or '*.*' (quotes optional).

ORA-37142: (XSSQLMDQ02) Invalid host variable data type for MDQUERY procedure: *string* expected.

Cause: The user specified a host variable that was not of the correct type.

Action: Choose a different host variable.

ORA-37143: (XSQLMDQ03) *string* is not a valid analytic workspace name.

Cause: The user specified an analytic workspace name not qualified by a schema name, or one or both components of the name exceed the maximum length

Action: Specify a schema-qualified analytic workspace name with components no longer than 30 characters long.

ORA-37144: (MDQUERY01) *string* is not a valid metadata object type for MDQUERY.

Cause: The first argument to MDQUERY was not recognized.

Action: Specify a recognized object type (CUBE or DIMENSION).

ORA-37145: (XSTTS_PLAT) cannot transport analytic workspace across platforms

Cause: An attempt was made to transport a tablespace containing an analytic workspace from one platform to another.

Action: Use the EXPORT or IMPORT command to move an analytic workspace across platforms.

ORA-37146: (XSCCOMP18) The variable *workspace object* is already dimensioned by the compressed composite *workspace object*.

Cause: An attempt was made to define the partition template dimensioned by the compressed composite that had dimensioned the variable.

Action: Define the second compressed composite.

ORA-37147: (XSCCOMP21) The variable *workspace object* must be in the current operation group of the COMPRESSED COMPOSITE *workspace object*.

Cause: The variable dimensioned by the COMPRESSED COMPOSITE was not in the object list of the current operation group. For AGGREGATE, all variables dimensioned by the same COMPRESSED COMPOSITE also must use the same aggmap

Action: Add the variable into the object list of the current operation group.

ORA-37149: (XSCCOMP23) Individual partitions of the variable dimensioned by *workspace object* cannot be aggregated separately.

Cause: An attempt was made to aggregate partitions of a variable dimensioned by a global COMPRESSED COMPOSITE partition template.

Action: Aggregate the partitioned variable dimensioned by the global COMPRESSED COMPOSITE.

ORA-37150: line *string*, column *string*, *string*

Cause: A syntax error was found in the expression query string.

Action: Check the error message details and make the necessary corrections.

ORA-37151: expression parser initialization error

Cause: expression parser initialization failed

Action: Please report this to Oracle Support Services.

ORA-37152: MDX query error: (*string*)

Cause: An exception occurred while the Multidimensional Expressions (MDX) query was being processed.

Action: Check the error message details and try again.

ORA-37154: OLAP API initialization error: (case string)

Cause: OLAP API initialization failed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support Services.

ORA-37155: OLAP API bootstrap error: (case string)

Cause: OLAP API bootstrapping failed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support Services.

ORA-37156: (string)

Cause: An unexpected error occurred while the Oracle Online Analytical Processing (Oracle OLAP) Java API (OLAPI) command was being processed.

Action: Check the error message for details.

ORA-37157: Error text is missing for the expression syntax error.

Cause: A syntax error occurred in the expression, but the message file containing the error text could not be found.

Action: Ensure that the message file, xsous.msb, is located in \$ORACLE_HOME/olap/mesg and retry.

ORA-37158: Bad clob or varray IN-args: (case string)

Cause: When in clob or varray mode, the PL/SQL mappings of OLAP API's IDL interface methods were executed blindly with null clob/varray or non-null clob/varray containing garbages.

Action: Do not blindly execute them as doing so does not make sense unless you understand how OLAP API works internally.

ORA-37159: OLAPI operations cannot be performed because OLAPI C++ virtual table addresses have become invalid.

Cause: Session migration in shared server mode caused Oracle Online Analytical Processing (Oracle OLAP) Java API (OLAPI) C++ virtual table addresses to become invalid. This was most likely due to the use of Exec Shield.

Action: Contact Oracle Support.

ORA-37161: invalid privilege specified for OLAP object

Cause: An attempt was made to grant or revoke an invalid privilege on an OLAP object.

Action: Specify a valid privilege.

ORA-37162: OLAP error

Cause: An exception was raised by OLAP code.

Action: Check error messages and correct any reported problems.

ORA-37163: An analytic workspace with dependent CUBES or CUBE DIMENSIONS cannot be deleted or truncated.

Cause: An attempt was made to delete or truncate an analytic workspace that currently had a CUBE or CUBE DIMENSION defined over it.

Action: Drop the corresponding CUBE or CUBE DIMENSION before deleting the analytic workspace.

ORA-37164: The current SQL statement does not support this OLAP object

Cause: The OLAP object is not supported in the current SQL statement.

Action: Use a valid SQL command on the OLAP object.

ORA-37166: (XSOQ_BAD_OBJ) OLAP object "*string.string*" does not exist

Cause: A nonexistent OLAP object was specified.

Action: Use an existing OLAP object instead.

ORA-37167: (XSOQ_BAD_SUBOBJ) OLAP object "*string.string.string*" does not exist

Cause: A nonexistent OLAP object was specified.

Action: Use an existing OLAP object instead.

ORA-37168: (XSOBJORG_UNSUPP_OBJ) unsupported OLAP object "*string.string*" for OBJORG function

Cause: The specified OLAP object was a type that is not supported by the OBJORG function.

Action: Specify an OLAP object type that the OBJORG function supports.

ORA-37169: (XSOBJORG_UNSUPP_SUBOBJ) unsupported OLAP object "*string.string.string*" for OBJORG function

Cause: The specified OLAP object was of a type not supported by the OBJORG function.

Action: Specify an OLAP object of a type that the OBJORG function supports.

ORA-37170: (XSOBJORG_NA) The top-level object name argument to the OBJORG function cannot be NA.

Cause: An attempt was made to pass NA as the second argument to the OBJORG function.

Action: Pass the name of the top-level object to the OBJORG function.

ORA-37171: dimension sources not specified

Cause: The user passed an empty or null collection to DBMS_AW.ADVISE_SPARSITY

Action: Specify a valid set of dimension sources

ORA-37172: invalid dimension type

Cause: An invalid number was specified for the DIMTYPE field in the dimension sources argument.

Action: Specify a valid value for the DBMS_AW PL/SQL package.

ORA-37173: null dimension source data

Cause: The user specified NULL for one of the members of the dimension sources argument

Action: Specify a value

ORA-37174: source SQL must be a SELECT statement

Cause: The user specified an INSERT, UPDATE, DELETE or other type of SQL statement

Action: Specify a SQL SELECT statement instead

ORA-37175: column *string* is not a column of source data

Cause: A dimension column was specified which did not exist in the input data

Action: Specify one of the columns of the input data

ORA-37176: argument *string* is not valid for the sparsity advisor

Cause: An invalid argument was passed to the advisor

Action: Specify a TABLE, VIEW or SELECT statement instead

ORA-37177: column *string* does not have any leaf values

Cause: The specified dimension column or fact table did not contain any leaf values

Action: Populate the source data

ORA-37178: column *string* has no values

Cause: The specified dimension column did not contain any values

Action: Populate the source data

ORA-37179: expected at least one column for dimension *string*, got *string*

Cause: Not enough columns were specified for the dimension

Action: Specify more source columns, or change the dimension to another type

ORA-37180: expected exactly one column for dimension *string*, got *string*

Cause: Expected a single source column for the dimension. Either none or more than one was specified.

Action: Specify exactly one column, or change the dimension to another type

ORA-37181: expected exactly *string* columns for dimension *string*, got *string*

Cause: Expected a certain number of source columns for the dimension. Either none or the wrong number of columns was specified.

Action: Specify the right number of columns, or change the dimension to another type

ORA-37182: you may only specify one dimension to partition

Cause: The user passed a DIMENSION_SOURCE_T to ADVISE_SPARSITY which specified partitioning on more than one dimension

Action: Remove all but one of the partitioning requests

ORA-37183: invalid value *string* for PARTBY

Cause: A value other than PARTBY_DEFAULT, PARTBY_NONE or PARTBY_FORCE was passed to the DBMS_AW.ADVISE_SPARSITY PL/SQL package.

Action: Specify a valid value for the DBMS_AW.ADVISE_SPARSITY PL/SQL package.

ORA-37184: invalid value *string* for ADVMODE

Cause: A value other than `ADVICE_DEFAULT`, `ADVICE_FAST` or `ADVICE_FULL` was passed to the `DBMS_AW.ADVISE_SPARSITY` PL/SQL package.

Action: Specify a valid value for the `DBMS_AW.ADVISE_SPARSITY` PL/SQL package.

ORA-37185: length of *string* (*string*) exceeds maximum (*string*)

Cause: The specified value exceeded the maximum length allowed.

Action: Specify a shorter value.

ORA-37186: null child value for parent (*string*) found in parent-child hierarchy

Cause: While reading values for a parent-child hierarchy, a NULL child value was found for a non-NULL parent

Action: Correct the source table or SQL to return value parent and child pairs.

ORA-37187: null parent and child pair found in parent-child hierarchy

Cause: While reading values for a parent-child hierarchy, a row was retrieved which had both null child and parent values.

Action: Correct the source table or SQL to return value parent and child pairs.

ORA-37188: unexpected null result while querying *string*

Cause: While querying the input fact table, the sparsity advisor unexpectedly got no results, possibly due to changes being made during operation.

Action: Retry the operation ensuring that the data is not changed while the sparsity advisor is running / Errors from 37200 - 37399 are reserved for events

ORA-37400: analytic workspace does not exist

Cause: The user attempted to create an OLAP MV or Table on an AW that does not exist.

Action: Specify a valid AW in the `ORGANIZATION CUBE` clause

ORA-37401: you may not perform this operation on a system analytic workspace

Cause: The user attempted to create a CUBE MV or Table on a system-created AW.

Action: Specify a valid AW in the `ORGANIZATION CUBE` clause

ORA-37402: analytic workspace object does not exist

Cause: The user attempted to create a CUBE MV or Table mapping to an object that does not exist in the AW.

Action: Specify a valid AW object name in the `ORGANIZATION CUBE` clause.

ORA-37403: invalid analytic workspace object type

Cause: The user attempted to create a CUBE MV or Table mapping to an object that is not the correct type.

Action: Specify a valid AW object name in the `ORGANIZATION CUBE` clause.

ORA-37404: Create table as select disallowed for CUBE ORGANIZED tables

Cause: User attempted to create a CUBE ORGANIZED table by doing a create table as select.

Action: Do a create table followed by an insert as select

ORA-37405: unknown ORGANIZATION CUBE keyword

Cause: An unknown keyword was encountered while parsing the ORGANIZATION CUBE clause

Action: Correct the ORGANIZATION CUBE syntax

ORA-37406: invalid option for a CUBE ORGANIZED table

Cause: An attempt to specify one or more options for a CUBE ORGANIZED table such as: [NO]CACHE, NO LOGGING, CLUSTER, (NO)COMPRESS

Action: Remove the illegal option(s)

ORA-37407: invalid column type for a CUBE ORGANIZED table

Cause: A illegal column type is specified in a CUBE ORGANIZED table.

Action: Do not use column types such as LONG, LOB

ORA-37409: Cannot delete or truncate analytic workspace used by CUBE ORGANIZED table.

Cause: User attempted to delete or truncate an analytic workspace (AW) which had a CUBE ORGANIZED table or materialized view defined over it.

Action: Drop the corresponding table or materialized view, and then delete the analytic workspace.

ORA-37410: cannot delete or modify AW object referenced by CUBE ORGANIZED table

Cause: User attempted to delete, chgdfn, or otherwise modify an object referenced by a CUBE ORGANIZED table or MV

Action: Drop the corresponding table or MV before manipulating the object

ORA-37411: invalid object type

Cause: User referenced an invalid object type

Action: Use an appropriate object

ORA-37412: column not mapped by ORGANIZATION CUBE clause

Cause: Not all columns in the table or MV definition were mapped in the ORGANIZATION CUBE clause

Action: Make sure that all columns are mapped

ORA-37413: column referenced multiple times in ORGANIZATION CUBE clause

Cause: The same column name was referenced multiple times inside of the ORGANIZATION CUBE clause

Action: Supply unique mappings for each column

ORA-37414: dimension without mapping or hierarchy in ORGANIZATION CUBE clause

Cause: A dimension was listed in the ORGANIZATION CUBE clause but no mapping information was supplied

Action: Provide either a column mapping or hierarchy for the dimension

ORA-37415: AW schema must match TABLE or MATERIALIZED VIEW schema

Cause: An ORGANIZATION CUBE table or MV on top of an existing AW must be created in the same schema as the AW

Action: Create the new object in the same schema as the AW

ORA-37416: multiple GROUPING IDs found for ORGANIZATION CUBE

Cause: Multiple GROUPING IDs for the ORGANIZATION CUBE TABLE or MATERIALIZED VIEW

Action: Remove the duplicates

ORA-37417: variable does not have an AGGCOUNT

Cause: A COUNT clause was specified in the ORGANIZATION CUBE description for a variable that does not have an AGGCOUNT

Action: chgdfn the variable to include an AGGCOUNT

ORA-37418: detail query cannot be derived

Cause: If an ORGANIZATION CUBE MV is to automatically derive its loading clause, then its definition query cannot contain set operators (eg UNION ALL), a HAVING clause, START WITH or a SQL MODEL clause. The definition query contains these or other unsupported syntax.

Action: Use an explicit ORGANIZATION CUBE clause, or simplify the defining query.

ORA-37419: ORGANIZATION CUBE clause not allowed in explain mvview

Cause: User tries to explain mvview on a CREATE MATERIALIZED VIEW statement that contains a ORGANIZATION CUBE clause.

Action: Remove the ORGANIZATION CUBE clause from the CREATE MATERIALIZED MATERIALIZED VIEW statement.

ORA-37420: unsupported feature with CUBE ORGANIZED materialized view

Cause: User attempts operations such as creating a mv log on an CUBE ORGANIZED MATERIALIZED VIEW.

Action: Do not do that.

ORA-37421: specified pseudocolumn is not supported by CUBE ORGANIZED tables

Cause: An unsupported pseudocolumn was referenced with a CUBE ORGANIZED table.

Action: Remove the unsupported pseudocolumn.

ORA-37422: illegal attempt to write to a calculated column

Cause: An attempt was made to write to a calculated column which could not be written to.

Action: List only the non-calculated columns in your DML command.

ORA-37423: operation not supported on CUBE ORGANIZED tables

Cause: The attempted operation was not supported with CUBE ORGANIZED tables.

Action: Do not attempt this operation on CUBE ORGANIZED tables.

ORA-37424: alter materialized view (MV) on a primary cube organized MV failed to find secondary cube MV table

Cause: The operation failed due to the missing secondary cube materialized view (MV) table in alter MV.

Action: Recreate the primary CUBE MV and make sure the secondary cube MV table is correctly created.

ORA-37521: (HASHSCAN00) Dimension *string* contains duplicate values. Please contact Oracle OLAP Technical Support.

Cause: The named dimension contains duplicate values.

Action: Contact Technical Support for instructions.

ORA-37522: (HASHSCAN01) You must specify the name of an existing TEXT or NTEXT dimension.

Cause: the _HASHSCAN program was invoked with an invalid argument

Action: Provide a text expression yielding the name of an existing TEXT dimension

ORA-37527: (XSCHGDFN01) SESSION values of dimension *string* are being automatically deleted.

Cause: When using CHGDFN to rebuild the hash index of a TEXT or NTEXT dimension, SESSION values were encountered.

Action: Recreate the SESSION values after the CHGDFN command completes. Information about the deleted values has been written to the trace file.

ORA-37528: (XSOBJORG_BAD_HIER) invalid property "*string*" specified for hierarchy "*string.string.string*"

Cause: Either the specified hierarchy did not have an analytic workspace organization, or the specified property did not apply to hierarchies.

Action: Specify a property that applies to a hierarchy or a dimension with an analytic workspace organization.

ORA-37530: (XSCCLOAD01) When aggregating between compressed partitions the base dimensions of *workspace object* did not match the base dimensions of *workspace object*.

Cause: When aggregating a partitioned variable the dimensionality of any compressed partitions should be identical.

Action: Delete the upper partition and redefine it with a composite that matches the lower partition. If it is dependent on multiple partitions with varying sparsity you must first unify the the sparsity of the source partitions.

ORA-37531: (XSCCLOAD02) When aggregating between compressed partitions the source partitions were aggregated with a different AGGMAP, or the RELATIONS have changed since the source partitions were aggregated.

Cause: When aggregation crosses partition boundaries within a compressed variable the individual partitions must all be aggregated using a similar aggmap over the same unaltered relations.

Action: Modify the aggmap for the upper partition to more exactly match the aggmap of the source partitions, or if the aggmap is already similar, re-aggregate the source partitions to pick up any changes to the relations.

ORA-37541: Hierarchy element DIMENSION_MEMBER can aggregate into element MEMBER_ANCESTOR through multiple paths.

Cause: When a low level hierarchy element can reach an aggregate element by more than one path through the hierarchy, it is said to have multiple paths. The danger is that the value of the low level hierarchy element will have its value counted multiple times (once per path) in the total of the aggregate element.

Action: Eliminate multiple paths from the hierarchy.

ORA-37542: DIMENSION_MEMBER makes hierarchy HIERARCHY1 unbalanced.

Cause: A hierarchy is balanced if: 1) All members of a level are at the same depth from the root of the hierarchy and 2) All the members in different levels are at different depths from the root of the hierarchy.

Action: Fix the hierarchy so that it is balanced. This is often done by looking for nulls in the middle levels of a hierarchy.

ORA-37543: Hierarchy member DIMENSION_MEMBER is inconsistent across HIERARCHY1 and HIERARCHY2.

Cause: Two hierarchies are inconsistent when members that appear in both hierarchies have different ultimate leaves.

Action: This problem is usually resolved by defining a new dimension member for the secondary hierarchy, or fixing the hierarchy table so that the definitions of the member match across hierarchies.

ORA-37544: Dimension members DIMENSION_MEMBER and MEMBER_ANCESTOR make this dimension star inconsistent.

Cause: A dimension is "star consistent" when it can be represented in a star schema table. This requires that a hierarchy level map to a single underlying column. If a level is shared across one or more hierarchies, it must have the same set of members in each hierarchy (to share a column).

Action: Create a different level for the secondary hierarchy. This provides a separate level column for each hierarchy.

ORA-37545: DIMENSION_MEMBER is part of a hierarchy loop.

Cause: A hierarchy has loops when the ancestor of a dimension member uses that member as its parent. Note that some loops are created across hierarchies. For example, in hierarchy 1, dimension member A is the parent of B, B is the parent of C and in hierarchy 2, C is that parent of A forms a hierarchy loop.

Action: Change the hierarchies so that the loop is eliminated or move the problem hierarchy to a different dimension.

ORA-37546: (XSHIERSP00) Levelorder valueset is empty.

Cause: An empty levelorder valueset was specified for the HIERSHAPE function.

Action: specify a non-empty levelorder valueset.

ORA-37547: (XSHIERSP01) DIMENSION_MEMBER has no level associated with it.

Cause: DIMENSION_MEMBER did not have an associated level. Level based hierarchies must have a level for every dimension member.

Action: Add level assignments for all dimension members in the hierarchy.

ORA-37548: (XSHIERSP02) DIMENSION_MEMBER is not specified as a member of HIERARCHY1.

Cause: When a dimension member is part of a hierarchy, it appears in the INHIER valueset associated with the hierarchy. This dimension member is missing from this value set and thus should not be part of this hierarchy.

Action: Alter the hierarchy's membership to include the specified dimension member.

ORA-37549: (XSHIERSP03) The level of DIMENSION_MEMBER is not lower than the level of MEMBER_ANCESTOR.

Cause: A dimension member has a parent that is lower or on the same level as this member according to the levelorder valueset.

Action: Fix the child and/or parent levels so that every dimension member has a parent whose level is higher than the level of this member.

ORA-37550: (XSHIERSP04) The level of MEMBER_ANCESTOR is not one level above DIMENSION_MEMBER.

Cause: A dimension member had a parent that was not one level above the level of this member according to the LEVELORDER valueset.

Action: Fix the child or parent or both levels so that every dimension member has a parent whose level is one level above the level of this member according to the LEVELORDER valueset.

ORA-37551: (XSHIERSP05) Leaf value DIMENSION_MEMBER is not on the same level as the rest of leaf dimension values.

Cause: The detail or leaf values of this hierarchy must all have the same level. This member is on a different level than most of the leaf values.

Action: Fix DIMENSION_MEMBER's level so that all leaves are on the same level.

ORA-37552: (XSHIERSP06) DIMENSION_MEMBER is associated with a level not found in the levelorder valueset.

Cause: DIMENSION_MEMBER must have an associated level that is found in the levelorder valueset so that we can figure out DIMENSION_MEMBER's level depth.

Action: Fix DIMENSION_MEMBER's associated level.

ORA-37553: A cycle between *number* and *number* has been detected in relation *workspace object* over *workspace object*.

Cause: A relation was used that had loops in it.

Action: Correct the relation so that it does not contain loops.

ORA-37554: A cycle between *number* and *number* has been detected in relation *workspace object*.

Cause: A relation was used that contained loops.

Action: Correct the relation so that it does not contain loops.

ORA-37560: lob locator invalid for specified log target

Cause: A lob locator was passed as a target to DBMS_CUBE_LOG.ENABLE, but the log_target was not DBMS_CUBE_LOG.TARGET_LOB

Action: Specify LOG_TARGET_LOB as the log_target, or specify a valid location instead

ORA-37561: unknown logging type

Cause: An invalid log_type was specified

Action: Specify a valid logging type from the DBMS_CUBE_LOG package

ORA-37562: unknown logging target

Cause: An invalid log_target was specified

Action: Specify a valid logging target from the DBMS_CUBE_LOG package

ORA-37563: invalid log verbosity

Cause: An invalid log_verbosity was specified

Action: Specify a valid logging verbosity from the DBMS_CUBE_LOG package

ORA-37564: unknown log table version

Cause: Could not determine the version of the specified logging table

Action: Specify a valid target table, or use DBMS_CUBE_LOG.TABLE_CREATE to create one

ORA-37565: invalid parameter for specified log type

Cause: The log_type specified does not support the specified parameter, for instance, DBMS_CUBE_LOG.MAX_ERRORS is not valid for

Action: Specify a valid log_type / log_param combination

ORA-37566: invalid log location

Cause: The specified log location is in an invalid format. For file targets it must be of the form 'directory_alias/filename'

Action: Specify a valid log location

ORA-37567: log location not specified

Cause: The log location was not specified for a log target which requires one

Action: Specify a valid log location

ORA-37568: invalid log parameter

Cause: An invalid log_param was passed to dbms_cube_log.set_parameter or get_parameter

Action: Specify a valid parameter

ORA-37569: invalid log parameter value

Cause: An invalid value was passed to dbms_cube_log.set_parameter

Action: Specify a valid value

ORA-37570: invalid log specification

Cause: An invalid logging specification was supplied to DBMS_CUBE_LOG.SET_LOG_SPEC

Action: Correct the syntax being supplied

ORA-37571: invalid SQL ID

Cause: Either the SQL ID supplied was invalid or no associated logging information was captured.

Action: Specify a valid SQL ID.

ORA-37572: invalid ID

Cause: An invalid ID was supplied for the given SQL ID.

Action: Specify a valid ID for that SQL ID.

ORA-37573: no limits logged

Cause: There were no corresponding OLAP filters to the supplied information.

Action: Specify predicates on the original query or specify a new SQL ID or ID.

ORA-37574: error logging to table "*string.string*"

Cause: An error occurred attempting to write log records to the named table.

Action: Make sure the user has permissions to write to the table.

ORA-37575: Invalid cube operations log component, "*string*".

Cause: Invalid cube operations log component value.

Action: Provide a valid cube operations log component or accept the default value by leaving the parameter unspecified.

ORA-37576: Invalid cube operations log handle id.

Cause: An invalid cube operations log handle id was specified. No oplog handle found for oplogHandleId parameter.

Action: Provide a valid cube operations log handle id for oplogHandleId. Use DBMS_CUBE_LOG.START_OPLOG to get a valid handle id.

ORA-37577: Invalid cube operations log message name.

Cause: Cube operations log message name value is NULL.

Action: Provide a valid non-null cube operations log message name.

ORA-37578: Invalid cube operations log operation value.

Cause: Cube operation log operations value is NULL.

Action: Provide a valid non-null cube operations log operation value.

ORA-37580: The EXPRESS AW does not exist.

Cause: The EXPRESS AW does not exist.

Action: Ensure that Oracle is properly installed with the OLAP option. If the database was patched, review the patch log for errors. If the problem persists, contact Oracle Support Services.

ORA-37581: The EXPRESS AW has not been properly installed.

Cause: The EXPRESS AW has not been properly installed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support Services.

ORA-37582: The EXPRESS AW version *string* is different than the Oracle version *string*.

Cause: The EXPRESS AW version does not match the current Oracle version.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support Services.

ORA-37600: (XSPGERRPERMDETACH) ran out of tablespace storage while updating analytic workspace *string*

Cause: There was not enough space in the large object (LOB) segment to complete the UPDATE operation.

Action: Increase the tablespace storage, and detach the analytic workspace if necessary.

ORA-37601: (XSPGERRTEMP) Ran out of temporary storage while writing to analytic workspace with ID=*number*.

Cause: Ran out of temporary tablespace storage.

Action: Increase the amount of temporary tablespace storage by DETACHING an analytic workspace.

ORA-37602: (XSPGERRTEMPUSER) Ran out of temporary storage while writing to analytic workspace *string*. Free some temporary storage by detaching an analytic workspace.

Cause: There was insufficient temporary tablespace storage for the analytic workspace.

Action: Increase the amount of temporary tablespace storage.

ORA-37603: (XSPGERRTEMPSYSTEM) Ran out of temporary storage while writing to a system temporary analytic workspace. Free some temporary storage immediately by DETACHING an analytic workspace.

Cause: The amount of temporary tablespace storage was insufficient.

Action: Increase the amount of temporary tablespace storage.

ORA-37604: (XSPGERRPQUPD) Parallel updating analytic workspace *string* failed.

Cause: An unexpected error occurred to the parallel update servers.

Action: Check the other errors that are associated with this error and act accordingly. Analytic workspace may need to be detached.

ORA-37605: error during OLAP AW UPDATE

Cause: An error occurred during the OLAP AW UPDATE process.

Action: Refer to the next error in the error stack.

ORA-37606: Oracle OLAP failed to initialize at *string*.

Cause: A severe error occurred while initializing Oracle OLAP.

Action: Contact Oracle Support Services.

ORA-37999: Serious Oracle OLAP error: *string*.

Cause: Something unexpected occurred in the Oracle Online Analytical Processing (Oracle OLAP) system.

Action: Contact Oracle Support.

ORA-38001 to ORA-39975

ORA-38001: RBO Disable constant predicate elimination optimization

ORA-38002: CBO enable restriction on type of join (NL only) for a query block with pushed predicate

ORA-38003: CBO Disable column stats for the dictionary objects in recursive SQL

ORA-38004: CBO (9.0.1 ONLY) Enable column stats for the dictionary objects in recursive SQL

ORA-38005: CBO disable fix for bug 2251373

ORA-38006: DBMS_STATS override commit threshold for (sub)partition level stats

ORA-38008: CBO disable costing overhead of inlist iteration

ORA-38009: CBO disable fix for bug 2109825

ORA-38010: CBO disable push predicate, driven by functional index into PV

ORA-38011: CBO disable truncation of bind when dealing with fixed char descend index expression

ORA-38012: CBO disable normalization of b-tree index selectivity

ORA-38013: CBO disable delayed ANY=>EXISTS conversion for colocated subquery of CTAS

ORA-38015: CBO enable unnesting of more than one subquery based on CVM

ORA-38016: CBO disable full functional index scan

ORA-38017: CBO disable push of join predicate for a table with RLS

ORA-38018: CBO disable full statistics load for evaluation of average row length

ORA-38020: CBO disable fix for bug 2324795

ORA-38021: CBO disable view merge with multi-referenced non-deterministic function

ORA-38022: CBO disable Distinct Sort Elimination at subquery unnest

ORA-38023: CBO disable fix for bug 2853398

ORA-38025: CBO enable generation of excessive semijoin subqueries

ORA-38026: CBO enable bitmap plan based on domain index, with no domain index driver

ORA-38027: CBO disable evaluation column gnd using inlist gnd

ORA-38028: DBMS_STATS disable small object optimization**ORA-38029: object statistics are locked**

Cause: An attempt was made to modify optimizer statistics of the object.

Action: Unlock statistics with the DBMS_STATS.UNLOCK_TABLE_STATS procedure on base table(s). Retry the operation if it is okay to update statistics.

ORA-38030: CBO enable strongly connected preds for intersect to join**ORA-38031: CBO disable the fix for bug 2663857****ORA-38032: CBO disable the fix for bug 3063008****ORA-38033: CBO disable costing of push join predicate in OJ view****ORA-38034: CBO disable the fix for bug 2871645****ORA-38036: NSO disable the fix for bug 3070157****ORA-38037: CBO disable the fix for bug 3405237****ORA-38038: CBO disable the fix for bug 3168961****ORA-38039: CBO enable view merge/ subquery ANY=>EXISTS conversion having view(subquery) predicates in front of outer query block (connecting) predicates****ORA-38040: DBMS_STATS minimum sample size in number of rows (0 = internal default)****ORA-38041: DBMS_STATS auto_sample_size overrides****ORA-38042: CBO disable usage of tjp when generating pruning subquery****ORA-38044: CBO disable expression folding at evaluation of a predicate selectivity****ORA-38047: CBO disable join back elimination of 1-row tables****ORA-38048: CBO enable the fix for bug 3400412****ORA-38049: CBO disable the fix for bug 3406977****ORA-38050: CBO disable the fix for bug 2943173****ORA-38051: CBO disable the fix for bug 3349903****ORA-38052: CBO disable the fix for bug 3317309****ORA-38053: DBMS_STATS override automatic sample size adjustment****ORA-38054: VOP enable the fix for bug 3537765****ORA-38055: CBO disable the fix for bug 3193835****ORA-38056: CBO disable peeking of form func(:b) bug 3668224****ORA-38057: CBO disable special numeric string normalization for bug 3567928**

- ORA-38087: dbms_stats enable fix of bug 5842686**
- ORA-38090: CBO dump virtual columns in EXPLAIN PLAN**
- ORA-38091: CBO forces native full outer join**
- ORA-38094: dbms_stats enable fix of bug 6934892**
- ORA-38098: CBO reject various transformation even if chosen**
- ORA-38100: enable tracing of DML frequency tracking**
- ORA-38101: Invalid column in the INSERT VALUES Clause: *string***
Cause: INSERT VALUES clause refers to the destination table columns
Action: n/a
- ORA-38102: Invalid column in the INSERT WHERE Clause: *string***
Cause: INSERT WHERE clause refers to the destination table columns
Action: n/a
- ORA-38103: Invalid column in the UPDATE SET Clause: *string***
Cause: UPDATE SET clause refers to the source table columns in the LHS

Action: n/a

ORA-38104: Columns referenced in the ON Clause cannot be updated: *string*

Cause: LHS of UPDATE SET contains the columns referenced in the ON Clause

Action: n/a

ORA-38105: Delete not yet supported when Update row-migration is possible

Cause: When Update Row-Migration is possible, Delete in MERGE is not yet supported

Action: n/a

ORA-38106: MERGE not supported on join view or view with INSTEAD OF trigger.

Cause: The MERGE operation contained a join view or view with INSTEAD of trigger which is not supported.

Action: When using MERGE to modify a view, you must only specify a single table in the view, and the view cannot have an INSTEAD OF trigger.

ORA-38131: specified SQL handle *string* does not exist

Cause: The specified SQL handle did not exist in the repository.

Action: Specify correct SQL handle.

ORA-38132: specified SQL ID *string* does not exist

Cause: The SQL statement for SQL ID did not exist in the cursor cache.

Action: Specify correct SQL ID.

ORA-38133: invalid parameter name *string* specified

Cause: An invalid parameter name was specified.

Action: Verify the name of the parameter.

ORA-38134: invalid parameter value *string* specified

Cause: An invalid parameter value was specified.

Action: Verify the parameter value.

ORA-38135: invalid fixed status value specified

Cause: Specified fixed status value was neither YES or NO.

Action: Specify either 'YES' or 'NO'.

ORA-38136: invalid attribute name *string* specified

Cause: An invalid attribute name was specified.

Action: Verify the name of the attribute.

ORA-38137: invalid attribute value *string* specified

Cause: An invalid attribute value was specified.

Action: Verify the attribute value.

ORA-38138: plan name is missing or NULL

Cause: A valid plan name was not specified.

Action: Specify a valid plan name.

ORA-38139: concurrent DDL Error in load plans operation

Cause: A concurrent DDL operation was performed during a load plans operation.

Action: Try operation again.

ORA-38140: no SQL plan baselines were found

Cause: No SQL plan baselines were found during pack or unpack operation.

Action: Specify correct selection criterion.

ORA-38141: SQL plan baseline *string* does not exist

Cause: A SQL plan baseline name was specified that did not exist.

Action: Verify the name of the SQL plan baseline.

ORA-38142: SQL plan baseline named *string* already exists

Cause: A SQL plan baseline already exists with the name specified.

Action: Specify a different name or drop the existing SQL plan baseline.

ORA-38143: invalid enabled status value specified

Cause: Specified enabled status value was neither YES or NO.

Action: Specify either 'YES' or 'NO'.

ORA-38144: specified plan name *string* does not exist

Cause: The specified plan name did not exist in the repository.

Action: Specify correct plan name.

ORA-38145: neither SQL handle nor plan name specified

Cause: The SQL handle or plan name was not specified. The SQL handle or plan name is required.

Action: Specify either SQL handle or plan name or both.

ORA-38146: invalid verify value specified

Cause: Specified verify value was neither YES or NO.

Action: Specify either 'YES' or 'NO'.

ORA-38147: invalid commit value specified

Cause: Specified commit value was neither YES or NO.

Action: Specify either 'YES' or 'NO'.

ORA-38148: invalid time limit specified

Cause: Specified time limit value was not a positive integer.

Action: Specify a positive integer value.

ORA-38149: There is no recommended action for object *string* in task *string*.

Cause: The advisor did not generate a recommended action for the given object and task.

Action: Choose a different object and retry the operation.

ORA-38150: not enough room for filter length *string*; *string* characters remaining

Cause: An auto-capture filter was too large to fit in the remaining space. Each filter requires a number of characters equal to the size of its value plus one.

Action: Remove other filters to make room for the new filter.

ORA-38151: module name is too long

Cause: The provided module name was too long.

Action: Provide a valid module name.

ORA-38152: action name is too long

Cause: The provided action name was too long.

Action: Provide a valid action name.

ORA-38153: Software edition is incompatible with SQL plan management.

Cause: SQL plan management could be used only with Oracle Database Enterprise Edition.

Action: Ensure that Oracle is linked with the Enterprise Edition options.

ORA-38171: Insufficient privileges for SQL management object operation

Cause: A DDL operation was attempted on a SQL management object by a session without the proper privileges.

Action: Grant the appropriate privilege.

ORA-38172: No SQL management object satisfies specified filters

Cause: An attempt was made to perform an operation by specifying filters that did not target any SQL management objects.

Action: Try different filters.

ORA-38173: Invalid value *string* specified for SQL management object attribute *string*

Cause: An invalid attribute value was specified.

Action: Specify a valid attribute value.

ORA-38301: can not perform DDL/DML over objects in Recycle Bin

Cause: Tried to perform DDL or DML operation on Recycle Bin object.

Action: DDL or DML operations are not permitted on Recycle Bin objects.

ORA-38302: invalid PURGE option

Cause: Invalid purge option specified.

Action: Specify a valid purge option.

ORA-38303: invalid option for PURGE TABLESPACE

Cause: Either a token other than USER was found following the tablespace name or some text was found following USER *user name*.

Action: Place nothing or only USER *user name* after the tablespace name

ORA-38304: missing or invalid user name

Cause: A valid user name was expected.

Action: Specify a valid user name.

ORA-38305: object not in RECYCLE BIN

Cause: Trying to Flashback Drop an object which is not in RecycleBin.

Action: Only the objects in RecycleBin can be Flashback Dropped.

ORA-38306: this object is not recoverable standalone

Cause: Trying to flashback drop an object other than of type TABLE.

Action: Only tables are recoverable.

ORA-38307: object not in RECYCLE BIN

Cause: Trying to Purge the object which is not in RecycleBin.

Action: Only the objects in RecycleBin can be PURGEDED.

ORA-38308: invalid FLASHBACK DROP option

Cause: Invalid Flashback Drop option specified.

Action: Specify a valid Flashback Drop option.

ORA-38309: object not purgable

Cause: An attempt was made to purge an object that is either not purgable or else dependent upon some other object.

Action: Cannot purge this object.

ORA-38310: cannot purge tablespace for other users

Cause: An attempt was made to purge the tablespace for a different user by a user who does not have system DBA privileges.

Action: Cannot purge the tablespace for some other user.

ORA-38311: cannot purge objects owned by other users

Cause: An attempt was made to purge an object which is owned by some other user.

Action: Cannot purge this object.

ORA-38312: original name is used by an existing object

Cause: An attempt was made to recover an object preserving the original name, but that name is taken up by some other object.

Action: use the RENAME clause to recover the object with a different name.

ORA-38320: policy does not exist

Cause: An attempt was made to delete a nonexistent policy.

Action: Correct the policy name.

ORA-38321: duplicate policy name specified

Cause: A policy name was specified that already existed under this schema.

Action: Correct the policy name.

ORA-38322: scope of policy not specified

Cause: An attempt was made to add a policy without the scope.

Action: Specify a scope when creating a policy.

ORA-38323: policy conflicts with policy *string*

Cause: An attempt was made to create a policy with the same action type and based on the same statistic as another policy on the object.

Action: Use a different action and/or statistic for the new policy, or delete the old policy.

ORA-38324: policy conflicts with policy *string*

Cause: An attempt was made to create a policy with the same action, scope and compression level as another policy on the object.

Action: Use a different action, scope and/or level for the new policy, or delete the old policy.

ORA-38325: policy conflicts with policy *string*

Cause: An attempt was made to create a compression policy that conflicts with another policy on the object.

Action: Change the policy so that policies with a higher compression level take effect after policies with a lower compression level, or delete the old policy.

ORA-38326: schema level policies are not supported

Cause: Attempt was made to create a schema level policy.

Action: Do not create a schema level policy.

ORA-38327: invalid argument value

Cause: The specified API argument values were of the wrong value range.

Action: Supply valid values for the API.

ORA-38328: inconsistent internal state

Cause: An inconsistency was detected in ILM related data in the dictionary.

Action: Contact Oracle Support Services.

ORA-38329: internal ILM error

Cause: An internal error occurred during execution of ILM related activity. Further information can be found in the alert log.

Action: Fix the problem and retry the operation.

ORA-38330: insufficient privilege for ILM operation

Cause: Sufficient privileges were not granted for the ILM operation.

Action: Retry operation with sufficient privileges granted. Consult documentation for privileges required to perform the ILM operation.

ORA-38331: row-level write activity tracking not enabled on the table

Cause: An attempt was made to create a modification time-based policy when row-level write tracking was not enabled on the object.

Action: Ensure that row-level write tracking is enabled on the table.

ORA-38332: valid time periods were not present on the table

Cause: An attempt was made to create a valid time-based policy when valid time periods were not present on the table.

Action: Add valid time periods to the table.

ORA-38333: row-level access activity tracking not enabled on the table

Cause: An attempt was made to create an access time-based policy when row-level access tracking was not enabled on the object.

Action: Ensure that row-level access tracking is enabled on the table.

ORA-38334: segment-level access activity tracking not enabled on the table

Cause: An attempt was made to create an access time-based policy when segment-level access tracking was not enabled on the object.

Action: Ensure that segment-level access tracking is enabled on the table.

ORA-38335: sysdba privilege is required

Cause: SYSDBA privilege is required for applying ILM policies on a tablespace.

Action: Grant user SYSDBA role before applying tablespace level ILM policies.

ORA-38336: invalid policy

Cause: A row level policy was used with a compression level other than OLTP.

Action: Use the OLTP compression level with row level compression policies.

ORA-38337: invalid policy

Cause: A custom policy is only allowed at the segment level.

Action: Change the scope of the policy to be of type segment.

ORA-38338: incorrect ILM policy scope

Cause: An attempt was made to create an Information Lifecycle Management (ILM) policy with incompatible scope.

Action: Ensure that the scope of the ILM policy is compatible.

ORA-38339: invalid action specified

Cause: An invalid action was specified in the policy definition.

Action: Specify a valid action in the policy definition.

ORA-38340: invalid policy

Cause: An attempt was made to create a custom policy at the tablespace level.

Action: Specify the policy directly on the desired objects.

ORA-38341: policy conflicts with policy *string*

Cause: An attempt was made to create more than one storage tiering policy directly on an object.

Action: Delete the conflicting policy before creating a new policy.

ORA-38342: heat map not enabled

Cause: An attempt was made to create an Information Lifecycle Management (ILM) policy when heat map was not enabled.

Action: Enable heat map before creating a new ILM policy.

ORA-38343: ADO online mode not supported with supplemental logging enabled

Cause: An attempt was made to perform an automatic data optimization (ADO) operation with supplemental logging enabled.

Action: Disable supplemental logging or switch to ADO offline mode and retry.

ORA-38345: object not enabled for in-memory column store

Cause: An attempt was made to create a policy on an object that was not enabled for in-memory column store.

Action: Enable the object for in-memory column store and specify the policy.

ORA-38346: ILM operation not supported

Cause: An attempt was made to use an Information Lifecycle Management (ILM) operation that is not supported for the current SQL statement.

Action: Use the operation with a supported SQL statement.

ORA-38347: join group cannot be created

Cause: Join group cannot be created on the specified tables.

Action: Check to see that the database is not in standby mode and has read-write privileges, the specified tables for creating join group are ready for processing and the dictionary tables `im_domain$`, `im_joyingroup$` are also present. Then, retry the operation.

ORA-38348: join group cannot be dropped

Cause: The specified join group cannot be dropped.

Action: Check to see that the database is not in standby mode and has read-write privileges, and the dictionary tables `im_domain$`, `im_joyingroup$` are present. Then, retry the operation.

ORA-38349: join group cannot be altered

Cause: The specified join group cannot be altered.

Action: Check to see that the database is not in standby mode and has read-write privileges, the specified tables used in altering join group are ready for processing and the dictionary tables `im_domain$`, `im_joyingroup$` are also present. Then, retry the operation.

ORA-38350: join group not supported on given columns

Cause: One of the columns used for the join group was not supported because the column property field was non-zero.

Action: Retry the operation on the join group without including the unsupported column.

ORA-38351: join group (*string*) not supported on abstract data type columns

Cause: One of the columns used for the join group was of the abstract data type.

Action: Retry the operation on the join group without including columns of the abstract data type.

ORA-38352: cannot alter column present in a join group

Cause: The alter table operation caused one of the columns to become unsupported for a join group.

Action: Drop the column from the join group and retry the operation.

ORA-38353: This table type is not supported by the ROW ARCHIVAL clause.

Cause: An attempt was made to create or alter table to enable ROW ARCHIVAL, but ROW ARCHIVAL is not supported for these table types.

Action: None

ORA-38354: syntax error; operation on join group cannot be done

Cause: There was a syntax error found for either the create, alter, or drop in-memory join group.

Action: Use the correct syntax.

ORA-38388: cannot add ILM policy to a bitmap index

Cause: An attempt was made to add an Information Lifecycle Management (ILM) policy to a bitmap index, which was not supported.

Action: No action required.

ORA-38389: cannot add ILM policy to an index-organized table

Cause: An attempt was made to add an Information Lifecycle Management (ILM) policy to an index-organized table, which was not supported.

Action: No action required.

ORA-38390: ILM policy operations not supported for cluster tables

Cause: An attempt was made to add an Information Lifecycle Management (ILM) policy for a cluster table, which was not supported.

Action: No action required.

ORA-38391: disabling ILM filtering**ORA-38393: ILM internal out-of-space error**

Cause: Information Lifecycle Management (ILM) internal operation encountered out-of-space error.

Action: None

ORA-38394: test event for table ILM operations

Cause: Internal testing event for table Information Lifecycle Management (ILM) operations.

Action: None

ORA-38395: debug event for table ILM operations

Cause: There was an internal debugging event for table Information Lifecycle Management (ILM) operations.

Action: None

ORA-38396: table is already enabled for the ILM feature

Cause: The table was already enabled for the specified Information Lifecycle Management (ILM) feature.

Action: No action required.

ORA-38397: table is not enabled for the ILM feature

Cause: An attempt was made to perform an Information Lifecycle Management (ILM) operation on a table on which the specified ILM feature is not enabled.

Action: No action required.

ORA-38398: DDL not allowed on the system ILM column

Cause: An attempt was made to drop, rename, or modify a system Information Lifecycle Management (ILM) column.

Action: No action required.

ORA-38399: cannot update the system ILM column

Cause: An attempt was made to update a system Information Lifecycle Management (ILM) column.

Action: No action required.

ORA-38400: cannot combine ILM operation with other operations

Cause: An attempt was made to combine Information Lifecycle Management (ILM) operation with other ALTER TABLE operations.

Action: Ensure that ILM is the sole operation specified in ALTER TABLE.

ORA-38401: synonym *string* not allowed

Cause: An attempt was made to use a synonym for a data type of an attribute or a table alias.

Action: Use the object name instead of the synonym.

ORA-38402: invalid name: empty string or spaces in the name

Cause: There were spaces in the name.

Action: Remove spaces in the name or use quotes around the name.

ORA-38403: attribute set name may not be longer than 22 characters

Cause: The attribute set name was longer than 22 characters.

Action: Choose a name that has 22 or fewer characters.

ORA-38404: schema extension not allowed for the attribute set name

Cause: There was a schema extension for the attribute set name. Attribute sets are always created in the current schema and thus schema extended names are not allowed.

Action: Create the attribute set from the appropriate schema.

ORA-38405: quotes not allowed in the attribute set name

Cause: The attribute set name contained quotes.

Action: Remove quotes in the attribute set name.

ORA-38406: attribute set *string* already exists

Cause: An attribute set with a matching name already exists in the current schema.

Action: Drop the existing attribute set or choose a different name.

ORA-38407: The ADT associated with the attribute set already exists.

Cause: The Abstract type (ADT) with the same name as the attribute set already exists in the current schema.

Action: Create the attribute set for the existing ADT or drop the ADT.

ORA-38408: The ADT "*string*" does not exist in the current schema.

Cause: An attempt was made to create the attribute set from a nonexistent ADT.

Action: Make sure that the ADT with the same name as the attribute set exists in the current schema.

ORA-38409: invalid name or option for the attribute set: *string*

Cause: An invalid name or option was used for the attribute set.

Action: Set serveroutput ON and repeat the operation for additional information.

ORA-38410: schema extension not allowed for the table name

Cause: An attempt was made to use a schema extended name for the table storing expressions.

Action: The table storing expressions and the corresponding attribute set should be created in the same schema.

ORA-38411: invalid datatype for the column storing expressions

Cause: An attempt was made to create an expression column from a column of invalid datatype.

Action: Create a VARCHAR2 or CHAR column to store expressions in a table.

ORA-38412: Expression set column *string* does not exist.

Cause: The column storing expressions does not exist.

Action: Pass a valid name for the column storing expressions.

ORA-38413: elementary attribute name may not be longer than 32 characters

Cause: An attempt was made to create an elementary attribute with a name longer than 32 characters.

Action: Use a shorter name for the elementary attribute.

ORA-38414: invalid datatype for the attribute *string*

Cause: The datatype specified for the attribute was invalid.

Action: If the datatype is an ADT, make sure that the ADT exists and the current user has execute permissions to it.

ORA-38415: invalid name or datatype for the attribute: *string*

Cause: An invalid name or datatype was used for the attribute.

Action: Set serveroutput ON and repeat the operation for additional information.

ORA-38416: A stored attribute may not be longer than 300 characters.

Cause: An attempt was made to create a stored or indexed attribute longer than 300 characters.

Action: A predicate with such attribute may not be indexed. It will be evaluated as sparse predicate.

ORA-38417: attribute set *string* does not exist

Cause: An attempt was made to use an attribute set that does not exist.

Action: Create the attribute set or choose an existing attribute set.

ORA-38418: ADT associated with the attribute set *string* does not exist

Cause: The ADT with the same name as the attribute set was not found in the current schema.

Action: Drop the attribute set and recreate it.

ORA-38419: invalid identifier in attribute : *string*

Cause: An identifier used in the stored/indexed attribute sub-expression was not defined or was invalid.

Action: Create all the required elementary attributes and user-defined functions and try again.

ORA-38420: invalid stored attribute sub-expression: *string*

Cause: The sub-expression used for the stored expression was invalid.

Action: Set serveroutput ON and repeat the operation for additional information.

ORA-38421: attribute *string* already exists

Cause: An attribute with a matching name (or form) already exists in the attribute set.

Action: Drop the existing attribute or choose a different name for the new attribute.

ORA-38422: invalid datatype for the attribute: *string*

Cause: An attempt was made to create an attribute with invalid datatype.

Action: If the data type of the attribute is an ADT, make sure that the type exists.

ORA-38423: Attribute set created from an ADT may not be extended.

Cause: An attempt was made to add an elementary attribute to an attribute set created from an ADT.

Action: Create a new attribute set and add all the required elementary attributes one at a time.

ORA-38424: no attribute set currently assigned to the expression set

Cause: An attempt was made to un-assign an attribute set from an expression set when there is no attribute set assigned to it.

Action: No action is required.

ORA-38425: attribute set used for an index object may not be unassigned

Cause: An attempt was made to un-assign an attribute set from an expression set when there is an Expression Filter index defined on the column.

Action: Drop the index before un-assigning the attribute set.

ORA-38426: attribute set assigned to an expression set may not be dropped

Cause: An attempt was made to drop an attribute set when it is still associated with an expression set.

Action: Un-assign the attribute set from the expression set before dropping it.

ORA-38427: attribute *string* does not exist

Cause: An attempt was made to use an attribute set that does not exist.

Action: Create the attribute set.

ORA-38428: too many attributes selected for indexing

Cause: An attempt was made to create an expression filter index with more than 490 indexed attributes.

Action: Remove some of the indexed attributes. Make sure that the default indexed attributes associated with the attribute set combined with the indexed attributes specified in the Create Index Parameters clause are less than or equal to 490.

ORA-38429: invalid datatype for a stored attribute: *string*

Cause: The (resulting) datatype for the attribute was not appropriate for storing.

Action: Choose a stored attribute that has a resulting datatype of NUMBER, VARCHAR2, CHAR or DATE.

ORA-38430: Operation "*string*" not supported in the current release.

Cause: An attempt was made to perform an unsupported operation.

Action: Do not use the operation.

ORA-38431: could not evaluate subexpression "*string*" for rowid "*string*"

Cause: Either the expression was not a valid SQL-WHERE clause format or it had references to nonexistent schema objects.

Action: Correct the expression.

ORA-38432: EVALUATE operator only allowed on an expression column

Cause: An attempt was made to use the EVALUATE operator on a column not configured as a column storing expressions.

Action: Assign an attribute set to the column.

ORA-38433: index "string" could not be maintained due to "string"

Cause: The error was caused by the recursive operation.

Action: Fix the error and retry.

ORA-38434: could not evaluate expression "string"

Cause: Either the expression was not in a valid SQL-WHERE clause format or it had references to nonexistent schema objects or there is a missing attribute value.

Action: Set serveroutput ON for more details.

ORA-38435: missing elementary attribute value or invalid name-value pairs

Cause: The second argument to the EVALUATE operator had either a missing attribute or an invalid value for an attribute.

Action: Try again after fixing the error.

ORA-38436: attribute set used for an Expression set may not be modified.

Cause: An attempt was made to add an elementary attribute to an attribute set assigned to an expression set.

Action: Un-assign the attribute set and try again.

ORA-38437: The ADT "string" may not contain any user methods.

Cause: An attempt was made to create an attribute set from an ADT that has one or more user methods.

Action: Drop the ADT and recreate it with no user methods.

ORA-38438: getVarchar not possible due to "string" datatype in the attribute set

Cause: An attempt was made to use the getVarchar API when the attribute set has one or more non-scalar types.

Action: Use AnyData conversion to encode the data item.

ORA-38439: invalid operation "string"

Cause: An attempt was made to use an invalid operation.

Action: Use one of the following operations : ADD, DROP

ORA-38440: attribute set string does not exist

Cause: An attempt was made to copy an attribute set that is not accessible from the current schema.

Action: Grant execute permissions on the corresponding ADT to the current user and try again.

ORA-38441: System could not derive the list of STORED and INDEXED attributes.

Cause: The attribute set was created without default index parameters.

Action: Specify the default index parameters for the attribute set or include a valid PARAMETERS clause for the CREATE INDEX command.

ORA-38442: The ADT "string" is not in a valid state.

Cause: An attempt was made to use an ADT that is not in a valid state.

Action: Check the INCOMPLETE field in the user_types catalog view to make sure that the ADT is in a valid state. Drop the invalid ADT and recreate the corresponding attribute set.

ORA-38443: An attribute set should be assigned to the expression set for statistics collection.

Cause: An attempt was made to collect statistics for an expression set with no attribute set assigned to it.

Action: Assign an attribute set to the expression set before collecting the statistics.

ORA-38444: statistics do not exist for the expression set

Cause: An attempt was made to clear the statistics that do not exist.

Action: No action was required.

ORA-38445: TOP clause not allowed with no statistics

Cause: An attempt was made to use the TOP parameters clause with no statistics available for the expression set.

Action: Collect statistics for the expression set and try again.

ORA-38446: Error with embedded ADT "string" in the attribute set.

Cause: The embedded ADT has errors.

Action: Set serveroutput ON for additional information.

ORA-38447: Type required for the embedded ADT attribute "string" is missing

Cause: Object type required for the embedded ADT was missing.

Action: Set serveroutput ON for additional information.

ORA-38448: Indexing predicates with "string" operator is not supported.

Cause: An unsupported operator was used in the expr_indexoper array.

Action: Choose the operators from this list : =, <, >, <=, >=, !=, is null, is not null, nvl, and between.

ORA-38449: table "string" does not exist or is not accessible

Cause: An attempt was made to create a table alias for a table that does not exist or is not accessible.

Action: Grant select privileges on the table to the current user.

ORA-38450: error computing a stored attribute for the expression set.

Cause: Either values for one of the attributes was incorrect or a stored attribute was invalid due to broken dependencies.

Action: Correct the input.

ORA-38451: index is in an inconsistent state

Cause: One or more secondary objects used to maintain the index did not exist

Action: Drop the index and recreate it.

ORA-38452: Expression Filter index name may not be longer than 25 characters

Cause: An attempt was made to use a name longer than 25 characters for the Expression Filter index.

Action: Choose a name that has 25 or fewer characters

ORA-38453: ExpFilter index should be created in the same schema as the base table.

Cause: An attempt was made to create the Expression Filter index in a schema other than that of the base table.

Action: Create the index in the same schema as the base table.

ORA-38454: attribute set not defined for the column being indexed

Cause: An attempt was made to create an Expression Filter index on a column with no attribute set association.

Action: Assign an attribute set to the expression set column being indexed.

ORA-38455: Expression Filter index should be created by the owner.

Cause: An attempt was made to create the Expression Filter index by a user who is not the owner of the index.

Action: Create the index using owner's privileges.

ORA-38456: The attribute set "string" is in an inconsistent state.

Cause: The attribute set was in an inconsistent state due to broken dependencies.

Action: Set serveroutput ON for more details. The attribute set may not be reused after this error.

ORA-38457: The attribute "string" is not a valid XMLType attribute.

Cause: An attempt was made to use a non-XMLType attribute to configure XPath filtering.

Action: Use an attribute of sys.XMLType datatype to configure XPath filtering.

ORA-38458: invalid operation "string" for XPATH_FILTER_PARAMETERS

Cause: An attempt was made to use an invalid operation.

Action: Use one of the following operations : ADD, DROP.

ORA-38459: XML Tag "string" not found for the XMLType attribute "string"

Cause: An Attempt was made to use a non-existent XML Tag.

Action: Correct the name of the XML Tag or the XMLType attribute.

ORA-38460: filtering based on datatype "string" not supported for XML Tags

Cause: An attempt was made to configure XPath filtering with an XML Tag of unsupported datatype.

Action: Leave the XML Tag out of filter parameters. It will be processed as sparse predicate

ORA-38461: XML Tag "string" already exists for the XMLType attribute "string"

Cause: An attempt was made to create a duplicate XML Tag.

Action: Choose a different XML Tag.

ORA-38462: invalid attribute list

Cause: The input was missing an attribute list or had null values for the attribute names.

Action: Correct the input.

ORA-38463: invalid XML Tag list

Cause: The input was missing a tag list or had null values for the tag names.

Action: Correct the input.

ORA-38464: expression set is not empty.

Cause: An attempt was made to assign an attribute set to a non-empty expression set.

Action: Use FORCE = 'TRUE' to validate all the existing expressions.

ORA-38465: failed to create the privilege checking trigger due to: *string*

Cause: Creation of the trigger failed due to the error listed in the message.

Action: Set serveroutput ON for more information.

ORA-38466: user does not have privileges to CREATE/MODIFY expressions

Cause: An attempt was made to INSERT or UPDATE a column storing expression without appropriate permissions.

Action: Appropriate privileges on the expression set should be granted by the owner of the expression set.

ORA-38467: user cannot GRANT/REVOKE privileges to/from himself

Cause: An attempt was made to GRANT or REVOKE privileges to or from the current user.

Action: The to_user or from_user field should be different from the user performing the operation.

ORA-38468: column "*string*" is not identified as a column storing expressions.

Cause: An attempt was made to grant permission on a nonexistent expression set.

Action: Make sure that the table and the column exist and an attribute set is associated with the column.

ORA-38469: invalid privilege for an expression set: *string*

Cause: An attempt was made to use an invalid privilege.

Action: See documentation for a valid privilege.

ORA-38470: cannot revoke a privilege that was not granted.

Cause: An attempt was made to revoke a privilege that had not been granted.

Action: Check catalog views to see if the user has the privilege.

ORA-38471: ROWIDs for table aliases cannot be null

Cause: An attempt was made to pass a null value for the table alias attribute in the data item, which is not permitted.

Action: Pass a valid rowid value for the table alias.

ORA-38472: VARCHAR representation of the data item is too long.

Cause: The VARCHAR representation of data item was too long.

Action: Use the EVALUATE operator with AnyData argument instead.

ORA-38473: cannot drop a type used for Expression Filter attribute set

Cause: An attempt was made to drop an ADT that was used to maintain an attribute set for the Expression Filter.

Action: Query USER_EXPFIL_ATTRIBUTE_SETS view to see the dependency.

ORA-38474: attribute set may not have attributes of TABLE COLLECTION type.

Cause: An attempt was made to create an attribute with a TABLE COLLECTION type.

Action: Use VARRAYs instead of table collection, if possible.

ORA-38475: The attribute set and the associated ADT are out of sync.

Cause: The ADT was directly modified by CREATE or ALTER operations.

Action: Drop the attribute set and recreate it from scratch.

ORA-38476: abstract type used for an Attribute set may not be modified.

Cause: An attempt was made to alter a type (ADT) that is used to maintain an attribute set of an Expression set.

Action: Do not modify the ADT directly. Use DBMS_EXPFIL APIs instead.

ORA-38477: attribute set cannot be derived from an evolved type or a subtype.

Cause: An attempt was made to create an attribute set from an evolved ADT or a subtype.

Action: The ADT used for the attribute set cannot be an evolved type or a subtype.

ORA-38478: creation of system trigger EXPFIL_DROPOBJ_MAINT failed

Cause: The creation of the system trigger EXPFIL_DROPOBJ_MAINT failed due to missing Expression Filter dictionary tables.

Action: Try a clean installation again. If this error is ignored, the Expression Filter dictionary could have some stale entries.

ORA-38479: creation of system trigger EXPFIL_RESTRICT_TYPEEVOLVE failed

Cause: The creation of system trigger EXPFIL_RESTRICT_TYPEEVOLVE failed due to missing Expression Filter dictionary tables.

Action: Try a clean installation again. If this error is ignored, the user will be able to evolve ADTs associated with the attribute set, thus causing spurious errors.

ORA-38480: creation of system trigger EXPFIL_ALTEREXPTAB_MAINT failed.

Cause: The creation of system trigger EXPFIL_ALTEREXPTAB_MAINT failed due to errors in SYS.EXF\$DBMS_EXPFIL_SYSPACK package.

Action: Try a clean installation again. If this error is ignored, a RENAME of the expression table may cause the EVALUATE queries to fail.

ORA-38481: ADT "*string*" is used for a dependent object.

Cause: An attempt was made to create an attribute set from an ADT which is used by one or more dependent objects.

Action: Use a new ADT instead.

ORA-38482: no elementary attributes defined in the attribute set

Cause: An attempt was made to use an empty attribute set.

Action: Create one or more elementary attributes for the attribute set.

ORA-38483: invalid FUNCTION/PACKAGE/TYPE name: "string"

Cause: An attempt was made to use an invalid name format.

Action: The function/package/type name should be specified in the following format
[owner.]object_name

ORA-38484: FUNCTION/PACKAGE/TYPE string does not exist

Cause: Attempt was made to use a object that does not exist.

Action: Query ALL_OBJECT view to ensure that the object exists.

ORA-38485: invalid object type for the user-defined function

Cause: An attempt was made to use an invalid object as a function.

Action: Valid object types are FUNCTION / PACKAGE / TYPE

ORA-38486: FUNCTION/PACKAGE/TYPE already exists for the attribute set

Cause: An attempt was made to add a duplicate function to the list.

Action: Use a different object name.

ORA-38487: FUNCTION/PACKAGE/TYPE "string" not allowed in the expression

Cause: An attempt was made to use an un-approved function in the expression.

Action: Add the function to the corresponding attribute set

ORA-38488: attribute set already assigned to the column storing expressions

Cause: An attempt was made to reassign an attribute set to an expression column.

Action: Query USER_EXPFIL_EXPRESSION_SETS view to find the attribute set assigned the expression set

ORA-38489: predicate table creation failed due to: ORAstring

Cause: Predicate table creation failed due to the reported error.

Action: Set serveroutput ON for additional information

ORA-38490: invalid name: quotes do not match

Cause: The quotes in the name did not match.

Action: Correct the name to match the quotes.

ORA-38491: could not evaluate subexpression for rowid "string"

Cause: Either the expression was not in a valid SQL-WHERE clause format or it had references to nonexistent schema objects.

Action: Correct the expression.

ORA-38492: invalid ALTER INDEX parameters clause "string"

Cause: An invalid parameters clause was specified with the ALTER INDEX command.

Action: See documentation for a valid list of parameters.

ORA-38493: feature not enabled : Expression Filter index

Cause: An attempt was made to create an Expression Filter index in Standard Edition.

Action: Do not attempt to use this feature.

ORA-38494: column in the table alias and an attribute have matching names

Cause: One of the attributes in the set has the same name as the name of one of the columns in the table configured for table alias.

Action: If possible, use a different name for the attribute.

ORA-38495: data type for the stored attribute *string* is inconsistent.

Cause: The actual data type for the stored attribute configured for the Expression Filter index object did not match the data type recorded in the Expression Filter dictionary.

Action: Delete the attribute from the default index attributes and recreate it.

ORA-38496: Expression Filter index is not in a valid state

Cause: An attempt was made to REBUILD an Expression Filter index that was not valid.

Action: Use DEFAULT keyword in the parameters clause to rebuild the index from defaults or drop and recreate the index.

ORA-38497: Expression Filter index does not exist

Cause: Index with a matching name does not exist or the index was not created using ExpFilter indextype.

Action: Identify the correct index using the Expression Filter catalog views

ORA-38498: invalid stored attribute for the index object : *string*

Cause: The expression filter index object has a stored or indexed attribute that had broken dependencies.

Action: Make sure that all the identifiers used in the attribute are valid.

ORA-38499: expression set already configured for stored/indexed attributes

Cause: The expression set already had a list of stored and indexed attributes. Additional attributes cannot be specified in the CREATE INDEX parameters clause.

Action: Remove TOP, STOREATTRS and INDEXATTRS clauses from the parameters clause or clear the expression set statistics using DBMS_EXPFIL.INDEX_PARAMETERS API.

ORA-38500: *string*

Cause: There was a generic error

Action: See documentation for further information.

ORA-38501: sub-query not allowed in the expression

Cause: An attempt was made to use a sub-query in the expression.

Action: Do not use sub-queries in the expressions.

ORA-38502: invalid XML tag: *string*

Cause: An attempt was made to use an invalid XML tag for the index.

Action: Correct the XML tag and retry.

ORA-38503: index already defined using the parameters

Cause: An attempt was made to modify the index parameters after the index creation.

Action: Drop the index and retry.

ORA-38504: this operator not allowed with the configured attribute set

Cause: An attempt was made to use the operator binding with an attribute set containing more than one (table alias) attribute. This is not permitted.

Action: Use a different operator binding.

ORA-38505: invalid default value for the attribute

Cause: An attempt was made to use an invalid default value or a default that is larger than 100 characters.

Action: Specify a correct default value.

ORA-38506: invalid attribute type for text predicates

Cause: An attempt was made to use an invalid type for an attribute configured for text predicates.

Action: Use either a VARCHAR or a CLOB attribute instead.

ORA-38507: attributes of *string* data type should be indexed

Cause: An attempt was made to configure an attribute of spatial or text data type as stored predicate group.

Action: Configure them as indexed predicate groups instead.

ORA-38601: Not enough memory for frequent itemset counting: *string*

Cause: The memory size did not satisfy the minimum memory requirement.

Action: Consider setting `workarea_size_policy='auto'`. Or with `workarea_size_policy='manual'` mode, consider revising the data, increasing the `support_threshold` setting, and decreasing `itemset_length_max` setting.

ORA-38602: FI invalid input cursor

Cause: The input cursor did not return exactly two columns for transactional input format or the input cursor didn't have consistent data types for horizontal input format

Action: For transactional input format, specify that the input cursor returns exactly two columns: one for transaction-id, one for item-id. For horizontal input format, make sure the input cursor's columns have the same data types.

ORA-38603: FI including & excluding cursor can only return one column

Cause: The including & excluding cursor did not return exactly one column.

Action: Specify that the cursor return only one column: item-id.

ORA-38604: FI including & excluding cursor item-id type must match input cursor item-id type

Cause: The including & excluding cursor item-id type did not match input cursor item-id type

Action: Specify that the item-id type of the cursors match each other.

ORA-38605: Not enough memory for candidate generation

Cause: There was insufficient available memory for candidate generation.

Action: Consider revising the data, increasing the support_threshold setting, and decreasing itemset_length_max setting. And, in workarea_size_policy='auto' mode, set pga_aggregate_target to a reasonably larger value.

ORA-38606: FI support threshold not between [0, 1]

Cause: The user inputed a support threshold not in the range of [0, 1].

Action: The user should adjust the input value in the range of [0, 1].

ORA-38607: FI minimum and maximum itemset length not between [1, string]

Cause: The inputed minimum or maximum itemset length exceed the internal maximum itemset length or less than 1.

Action: The user should adjust the input value not larger than the internal maximum itemset length and not less than 1.

ORA-38608: FI itemset minimum-length(string) should not be greater than maximum length(string)

Cause: The user inputed minimum length is more than maximum length.

Action: The user should adjust the input values to make the minimum length less than or equal to the maximum length.

ORA-38609: Not enough memory for tree counting, requires at least stringKB

Cause: The memory size did not satisfy the minimum memory requirement for tree counting.

Action: Consider setting workarea_size_policy='auto'. Or with workarea_size_policy='manual' mode, consider revising the data, increasing the support_threshold setting, and decreasing itemset_length_max setting.

ORA-38610: FI "string" name prefix is reserved for frequent itemset counting

Cause: An error occurred because DBMS_FREQUENT_ITEMSET and prefix ORA_FI are reserved for the DBMS_FREQUENT_ITEMSET package's internal use.

Action: Do not re-define functions with names starting with DBMS_FREQUENT_ITEMSET package or ORA_FI.

ORA-38611: FI input cursor's item type is not supported

Cause: The input cursor's item type is not number or character type

Action: Redefine the input cursor so that item type is number or character type.

ORA-38612: FI item length cannot exceed half of one database block.

Cause: The item's length was more than half of one database block.

Action: Redefine the data type of the item column so that its maximum length is less than half of one database block.

ORA-38613: FI Cursor is returning less than 2 columns.

Cause: Cursor parameter is returning less than 2 columns.

Action: Modify the Cursor argument to return 2 columns.

ORA-38620: DT expressions in input cursor do not have an alias name

Cause: Expressions in input cursor do not have an alias name.

Action: Add an alias name for the expression.

ORA-38621: Decision Tree maximum depth setting not between [2, 20]

Cause: The user specified a max tree depth not in the range of [2, 20].

Action: The user should adjust the input value to be in the range of [2, 20].

ORA-38622: Decision Tree not enough memory, requires at least *string*KB

Cause: The memory size did not satisfy the minimum memory requirement for decision tree building.

Action: In `workarea_size_policy='manual'` mode, set `_dtree_area_size` to a reasonably larger value. Or, In `workarea_size_policy='auto'` mode, please raise `pga_aggregate_target` to a reasonably larger value.

ORA-38700: Limit of *string* flashback database logs has been exceeded.

Cause: The maximum number of flashback database log files was exceeded.

Action: `DB_FLASHBACK_RETENTION_TARGET` may be set to high. Modify it to a smaller value.

ORA-38701: Flashback database log *string* seq *string* thread *string*: "*string*"

Cause: This message reports the filename for details of another message.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

ORA-38702: Cannot update flashback database log file header.

Cause: Could not write to the flashback database log file.

Action: Restore access to the file.

ORA-38703: Type *string* in header is not a flashback database log file.

Cause: A corrupt flashback database log file header was read.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38704: Checksum error in flashback database log file header.

Cause: The flashback database log file header contained a checksum that does not match the value calculated from the file header as read from disk. This means the file header was corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38705: Expected block size *string* does not match *string* in log header.

Cause: When the flashback log file header was read, the block size in the control file did not match the block size contained in the header.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38706: Cannot turn on FLASHBACK DATABASE logging.

Cause: An ALTER DATABASE FLASHBACK ON command failed. Other messages in the alert log describe the problem.

Action: Fix the problem and retry.

ORA-38707: Media recovery is not enabled.

Cause: An ALTER DATABASE FLASHBACK ON command failed because media recovery was not enabled.

Action: Turn on media recovery with an ALTER DATABASE ARCHIVELOG command and then retry the command.

ORA-38708: not enough space for first flashback database log file

Cause: An ALTER DATABASE FLASHBACK ON command failed because there was not enough space in the Recovery Area for the first flashback database log file.

Action: Make more space in the Recovery Area. For example, this can be done by increasing the value of DB_RECOVERY_FILE_DEST_SIZE.

ORA-38709: Recovery Area is not enabled.

Cause: An ALTER DATABASE FLASHBACK ON command failed because the Recovery Area was not enabled.

Action: Set DB_RECOVERY_FILE_DEST to a location and retry.

ORA-38710: Flashback log version *string* is incompatible with ORACLE version *string*.

Cause: The flashback database log file was rejected because it appeared to be written by an incompatible version of Oracle.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38711: Corrupt flashback log block header: block *string*

Cause: A corrupt Flashback Database log file block header was read. More information was dumped to the trace file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38712: Corrupt flashback log record header: block *string*, offset *string*.

Cause: A corrupt flashback database log record header was read. Either the record type or length were incorrect. More information was dumped to the trace file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38713: Flashback Database logging is already turned on.

Cause: An ALTER DATABASE FLASHBACK ON command had no effect because flashback database logging was already on.

Action: No action required.

ORA-38714: Instance recovery required.

Cause: An ALTER DATABASE FLASHBACK ON command failed because the database either crashed or was shutdown with the ABORT option.

Action: Open the database and then enter the SHUTDOWN command with the NORMAL or IMMEDIATE option.

ORA-38715: Invalid log number specified in the DUMP FLASHBACK command.

Cause: An invalid log number was used when dumping a flashback database log file.

Action: Specify a valid flashback database log number.

ORA-38716: Must supply an integer for the TYPE option.

Cause: An invalid value was specified for TYPE in the DUMP FLASHBACK command.

Action: Specify an integer value.

ORA-38717: Invalid DUMP FLASHBACK option.

Cause: An invalid option was specified in the DUMP FLASHBACK command. Currently the only options allowed are: DBA, TYPE, and LOGICAL.

Action: Retry the command with the correct options.

ORA-38718: Invalid thread number specified in the DUMP FLASHBACK command.

Cause: An invalid thread number was used in dumping the flashback database log files for a thread.

Action: Specify a valid thread number.

ORA-38719: Invalid DUMP FLASHBACK object.

Cause: An invalid object was specified in a DUMP FLASHBACK command. Currently the only objects allowed are: LOGFILE or THREAD.

Action: Retry the command with the correct options.

ORA-38720: Missing log file name or number.

Cause: A log file name or number was missing in a DUMP FLASHBACK LOGFILE command.

Action: Supply a valid log file name or number.

ORA-38721: Invalid file number.

Cause: An invalid file number was specified in the DBA clause of a DUMP FLASHBACK command.

Action: Supply a valid file number.

ORA-38722: ON or OFF expected.

Cause: The ALTER DATABASE FLASHBACK command was specified without the ON or OFF keyword.

Action: Retry the command with the ON or OFF keyword.

ORA-38723: Invalid SCN expression.

Cause: The SCN keyword was specified in a FLASHBACK DATABASE command but the SCN expression was invalid.

Action: Retry the command using a valid SCN number.

ORA-38724: Invalid option to the FLASHBACK DATABASE command.

Cause: An invalid option was specified to the FLASHBACK DATABASE command. Valid options are: SCN or TIMESTAMP.

Action: Correct the syntax and retry the command.

ORA-38725: specified name "*string*" does not match actual "*string*"

Cause: The database name specified in a FLASHBACK DATABASE command did not match the name of the currently mounted database.

Action: Correct the database name spelling or DISMOUNT the mounted database and mount the correct database.

ORA-38726: Flashback database logging is not on.

Cause: A FLASHBACK DATABASE command was tried but flashback database logging has not been enabled.

Action: Flashback database logging must be enabled via the ALTER DATABASE FLASHBACK ON command before a FLASHBACK DATABASE command can be tried. If the database must be taken back in time then a restore and incomplete recovery must be performed.

ORA-38727: FLASHBACK DATABASE requires a current control file.

Cause: The control file being used is a backup control file.

Action: FLASHBACK DATABASE cannot be used with a backup control file. If the database must be taken back in time then a restore and an incomplete recovery must be performed.

ORA-38728: Cannot FLASHBACK DATABASE to the future.

Cause: An SCN or time stamp provided in a FLASHBACK DATABASE command was in the future.

Action: Supply a proper SCN or time stamp and retry the command.

ORA-38729: Not enough flashback database log data to do FLASHBACK.

Cause: There was not enough flashback database log data to do the FLASHBACK DATABASE.

Action: If the database must be taken back in time then a restore and incomplete recovery must be performed.

ORA-38730: Invalid SCN/TIMESTAMP expression.

Cause: The expression supplied in a FLASHBACK DATABASE command was invalid.

Action: Retry the command using a valid number or time stamp expression.

ORA-38731: Expected version *string* does not match *string* in log header.

Cause: The version of the flashback database log file header was corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38732: Expected file size *string* does not match *string*.

Cause: The file size indicated in the control file did not match the file size contained in the flashback log file header. The flashback database log file was corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38733: Physical size *string* less than needed *string*.

Cause: A flashback database log file shrank in size. This was likely to have been caused by operator or operating system error.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38734: Flashback log is inconsistent; belongs to another database.

Cause: The database ID in the flashback database log file did not match the database ID in the control file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38735: Wrong log number *string* in flashback log file header.

Cause: The log file number in the flashback database log file did not match the control file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38736: Wrong thread number *string* in flashback log file header.

Cause: The thread number in the flashback database log file did not match the control file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38737: Expected sequence number *string* doesn't match *string*

Cause: The flashback database log is corrupted or is an old version.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38738: Flashback log file is not current copy.

Cause: A check of flashback database log file header at database open found that the flashback database log appeared to be an incorrectly restored backup. Flashback database log files cannot be backed up and restored.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38739: Flashback log file is more recent than control file.

Cause: The control file change sequence number in the flashback database log file was greater than the number in the control file. This implies that the wrong control file was being used. Note that repeatedly causing this error can make it stop happening without correcting the real problem. Every attempt to open the database will advance the control file change sequence number until it is great enough.

Action: FLASHBACK DATABASE can only be used with the current control file. If it is not available, then a restore and an incomplete recovery must be performed instead.

ORA-38740: Usable blocks value *string* is not valid.

Cause: A flashback database log file header contained a usable blocks value greater than the file size. The flashback database log file file is corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38741: Formatted blocks value *string* is not valid.

Cause: The formatted blocks value in the flashback database log file was greater than the file size. The flashback database log file was corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38742: Flashback log file has incorrect log reset status.

Cause: The flashback database log file header had log reset data that was different than the control file. The log was probably an incorrectly restored backup. Flashback database logs cannot be backed up.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38743: Time/SCN is in the future of the database.

Cause: The Time/SCN provided in a FLASHBACK DATABASE command was in the future of the database.

Action: Retry the command with a correct Time/SCN or RECOVER the database.

ORA-38744: file *string* is not the same file seen at start of flashback

Cause: A different copy of the file was accessed the last time FLASHBACK DATABASE looked at the file header. A backup of the file was restored or the meaning of the file name changed during FLASHBACK DATABASE.

Action: Ensure the correct file is available, then retry FLASHBACK DATABASE.

ORA-38746: error occurred while restoring data block (file# *string*, block# *string*)

Cause: An error occurred during a FLASHBACK DATABASE command. See other errors on error stack.

Action: Investigate why the error occurred. It may be that the flashback database log data is corrupt. If so, a restore and an incomplete recovery must be performed instead.

ORA-38747: corrupt before image (file# *string*, block# *string*)

Cause: A corrupt data block before image was encountered during a FLASHBACK DATABASE command.

Action: The flashback log data is probably corrupt. If so, a restore and an incomplete recovery must be performed instead.

ORA-38748: cannot flashback data file *string* - file is in use or recovery

Cause: An attempt to do FLASHBACK DATABASE found that the file was not available for recovery. Either it was online and the database was open in some instance, or another process was currently doing media recovery or flashback on the file.

Action: Do not do FLASHBACK DATABASE.

ORA-38749: A media recovery has been started.

Cause: An attempt was made to start a FLASHBACK DATABASE in the same session as a media recovery.

Action: Complete or cancel the first media recovery session.

ORA-38750: FLASHBACK DATABASE may not be performed using a dispatcher.

Cause: An attempt was made to use a dispatcher process for FLASHBACK DATABASE. Memory requirements disallow this recovery method.

Action: Connect to the instance via a dedicated server process to perform FLASHBACK DATABASE.

ORA-38751: Flashback database log: "*string*"

Cause: This message reports the filename for details of another message.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

ORA-38752: file *string* does not exist

Cause: During an RMAN FLASHBACK DATABASE conversation, a file was listed which was not part of the database. The RMAN conversation was aborted.

Action: Retry the conversation with the appropriate file numbers.

ORA-38753: Cannot flashback data file *string*; no flashback log data.

Cause: An attempt to perform a FLASHBACK DATABASE failed because the file does not have enough flashback log data to cover the time to flash back. Either the file did not have flashback generation enabled for it, or had flashback generation turned off for it some time during the time span of the flashback.

Action: The file cannot be flashed back. The file must be taken offline or the tablespace dropped before continuing with the FLASHBACK DATABASE command.

ORA-38754: FLASHBACK DATABASE not started; required redo log is not available

Cause: A FLASHBACK DATABASE command did not start. A redo log needed for the recovery part of FLASHBACK DATABASE could not be found or accessed.

Action: See trace files for details of the problem.

ORA-38755: Flashback is already turned on for this tablespace.

Cause: An attempt was made to turn on flashback database logging for a tablespace that already has flashback turned on.

Action: No action required.

ORA-38756: Flashback is already turned off for this tablespace.

Cause: An attempt was made to turn off flashback database logging for a tablespace that already has flashback off.

Action: No action required.

ORA-38757: Database must be mounted and not open to FLASHBACK.

Cause: An attempt to Flashback a database was made when the database was not mounted or was already open.

Action: Mount the database and retry the FLASHBACK command.

ORA-38758: cannot flashback data file *string*; restored since last recovery

Cause: An attempt to do FLASHBACK DATABASE found that the file was restored since the last standby recovery. The file cannot be flashed back.

Action: The file must be taken offline before continuing with the FLASHBACK DATABASE command.

ORA-38759: Database must be mounted by only one instance and not open.

Cause: An attempt to turn on or off Flashback Database logging was made when the database was open or mounted by more than one instance.

Action: Mount the database in only one instance and retry the command.

ORA-38760: This database instance failed to turn on flashback database

Cause: Database flashback is on but this instance failed to start generating flashback data. Look in alert log for more specific errors.

Action: Correct the error or turn off database flashback.

ORA-38761: redo log sequence *string* in thread *string*, incarnation *string* could not be accessed

Cause: A redo log needed for the recovery portion of FLASHBACK could not be read or opened. The FLASHBACK operation failed.

Action: Restore the log and retry the FLASHBACK command.

ORA-38762: redo logs needed for SCN *string* to SCN *string*

Cause: The FLASHBACK DATABASE operation failed. The recovery portion of FLASHBACK DATABASE needed redo from the first SCN to the second, but one or more of the redo logs in the range could not be read or opened.

Action: Check the FLASHBACK DATABASE command trace file for a description of the inaccessible redo logs, restore access to them, and retry the FLASHBACK DATABASE command.

ORA-38763: flashback not started; enabled threads have changed

Cause: A FLASHBACK DATABASE command did not start. The set of enabled threads changed during the time to flash back.

Action: The flashback cannot be performed. Perform a restore and an incomplete recovery instead.

ORA-38764: flashback not started; datafile *string* enabled threads are different

Cause: A FLASHBACK DATABASE command did not start. The datafile was restored from a backup taken when the enabled threads were different than at the time of the flashback.

Action: The flashback cannot be performed. Perform a restore and an incomplete recovery instead.

ORA-38765: Flashback database cannot be opened read-only.

Cause: A complete recovery was performed after a database flashback but the database was not opened for read-write access, or a FLASHBACK DATABASE command failed.

Action: If a complete recovery was performed after a database flashback, open the database for read-write access. If a FLASHBACK DATABASE command failed, fix what caused the command to fail and retry the command, or recover and open the database for read-write access.

ORA-38766: cannot flashback data file *string*; file resized smaller

Cause: An attempt to do FLASHBACK DATABASE found that the file was shrunk during the time to flash back.

Action: The file cannot be flashed back. The file must be taken offline or the tablespace dropped before continuing with the FLASHBACK DATABASE command.

ORA-38767: flashback retention target parameter mismatch

Cause: The value of parameters DB_FLASHBACK_RETENTION_TARGET must be same in all instances. All databases must have same flashback retention target parameters.

Action: Check DB_FLASHBACK_RETENTION_TARGET values in all instances.

ORA-38768: resizing datafile *string* failed

Cause: An operating system error occurred when Flashback Database tried to shrink (resize) a datafile. Flashback shrinks a file in order to undo the effects of a file expand, for example, an autoextension of the file.

Action: Recover the database to return it to its previous state, or fix the cause of the operating system error and retry the Flashback. If that is not possible, then the file can be taken offline and the Flashback command retried. The file will have to be restored from a backup and rolled forward.

ORA-38769: FLASHBACK DATABASE failed after modifying data.

Cause: A FLASHBACK DATABASE command failed after modifying the the database. Look in the alert log for more information about the failure.

Action: Recover the database to return it to its previous state, or fix the cause of the error and retry the Flashback.

ORA-38770: FLASHBACK DATABASE failed during recovery.

Cause: A FLASHBACK DATABASE command successfully restored the database but failed during the recovery step. Look in the alert log for more information about the failure.

Action: Fix the error and then recover the database to the same SCN or timestamp used in the FLASHBACK DATABASE command.

ORA-38771: unnamed datafile(s) added to control file by flashback recovery

Cause: The recovery step of FLASHBACK DATABASE encountered the creation of a datafile that could not be added to the control file. An entry has been added to the control file for the new datafile, but with the file name UNNAMEDnnnn, where nnnn is the file number. Related error messages provide the file names that were originally used to create the files.

Action: Rename the file in the control file, or use the ALTER DATABASE CREATE DATAFILE command to create a file suitable for recovery. If the file is not going to be recovered, then take it offline with the FOR DROP option. The recovery step of Flashback can be resumed by entering a RECOVERY command with the same SCN or timestamp as used in the FLASHBACK DATABASE command. For example, RECOVER AUTOMATIC DATABASE UNTIL CHANGE *flashback-scn*.

ORA-38772: cannot add datafile 'string' - file could not be created

Cause: The recovery step of FLASHBACK DATABASE encountered the creation of a datafile and could not recreate the file. The error from the creation attempt is displayed in another message. The control file file entry for the file is 'UNNAMEDnnnnn'.

Action: Use the ALTER DATABASE CREATE DATAFILE statement to create the file.

ORA-38773: cannot add data file 'string' - file already part of database

Cause: The recovery step of FLASHBACK database encountered the creation of a datafile and could not create the file because the file name is already in use in the database. The control file file entry for the file is 'UNNAMEDnnnnn'.

Action: Use the ALTER DATABASE CREATE DATAFILE statement to create the file with a different name.

ORA-38774: cannot disable media recovery - flashback database is enabled

Cause: An attempt was made to disable media recovery while flashback database was enabled.

Action: Use the ALTER DATABASE FLASHBACK OFF statement to disable flashback database, then disable media recovery.

ORA-38775: cannot disable recovery area - flashback database is enabled

Cause: An attempt was made to set DB_RECOVERY_FILE_DEST to null while flashback database was enabled. Flashback database requires DB_RECOVERY_FILE_DEST to be set.

Action: Use the ALTER DATABASE FLASHBACK OFF statement to disable flashback database, then disable the recovery area.

ORA-38776: cannot begin flashback generation - recovery area is disabled

Cause: During a database mount, the RVWR process discovered that the recovery area was disabled. DB_RECOVERY_FILE_DEST must have been set null or removed from the INIT.ORA file while the database was unmounted.

Action: Flashback database requires the recovery area to be enabled. Either enable the recovery area by setting the DB_RECOVERY_FILE_DEST and DB_RECOVERY_FILE_DEST_SIZE initialization parameters, or turn off flashback database with the ALTER DATABASE FLASHBACK OFF command.

ORA-38777: database must not be started in any other instance

Cause: A command was attempted that required the database to be mounted in this instance and not started in any other instance. ALTER DATABASE OPEN RESETLOGS requires that the database be started in only one instance if flashback database logging is enabled.

Action: Ensure that the no other instances are started. Then retry the command.

ORA-38778: Restore point '*string*' already exists.

Cause: The restore point name of the CREATE RESTORE POINT command already exists. A restore point name must be unique.

Action: Either use a different name or delete the existing restore point with the same name.

ORA-38779: cannot create restore point - too many restore points.

Cause: The maximum number of restore points already have been created.

Action: Delete some existing restore point and retry the operation.

ORA-38780: Restore point '*string*' does not exist.

Cause: The restore point name specified in the command did not exist.

Action: Look up restore points by query restore point tables.

ORA-38781: cannot disable media recovery - have guaranteed restore points

Cause: An attempt was made to disable media recovery while there is at least one guaranteed restore point.

Action: Drop all guaranteed restore points and then disable media recovery.

ORA-38782: cannot flashback database to non-guaranteed restore point '*string*'

Cause: An attempt was made to flashback database to a non-guaranteed restore point while flashback database is off. You can only flashback a database to guaranteed restore point when flashback database is not on.

Action: Consider picking a guaranteed restore point to flashback the database to, if there is one.

ORA-38783: Instance recovery required.

Cause: An attempt was made to create a restore point when the database is in mount mode but it was not shutdown cleanly before it was mounted. In order to create a restore point when the database is mounted, the database must be shutdown cleanly before it is mounted.

Action: Consider one of the following: 1. Create the restore point after opening the database. 2. Open the database, shut it down cleanly, mount the database, and retry creating the restore point.

ORA-38784: Cannot create restore point '*string*'.

Cause: An attempt to create a restore point failed. See other errors on the error stack and in the alert log for the specific reason.

Action: Fix the problem and retry.

ORA-38785: Media recovery must be enabled for guaranteed restore point.

Cause: Media recovery is not enabled. Media recovery must be enabled in order to create a guaranteed restore point.

Action: Turn on media recovery with an ALTER DATABASE ARCHIVELOG statement and then retry the command.

ORA-38786: Recovery area is not enabled.

Cause: An attempt was made to perform a command that requires Flash recovery area to be enabled.

Action: Set DB_RECOVERY_FILE_DEST to an appropriate location and retry.

ORA-38787: Creating the first guaranteed restore point requires mount mode when flashback database is off.

Cause: While flashback database is not on, an attempt was made to create the first guaranteed restore point while the database is open.

Action: Mount the database and retry.

ORA-38788: More standby database recovery is needed

Cause: An attempt was made to create a restore point or a guaranteed while a physical standby database is not cleanly checkpointed.

Action: Perform more standby database recovery via managed standby database recovery. Cancel managed recovery and retry the command.

ORA-38789: File name is too long.

Cause: The file name provided in the command was longer than the maximum allowed.

Action: Use a shorter file name.

ORA-38790: BEFORE must be specified with RESETLOGS

Cause: The FLASHBACK DATABASE command included the RESETLOGS parameter but not the BEFORE parameter.

Action: Retry the command with TO BEFORE RESETLOGS.

ORA-38791: flashback did not start because file *string* was not in a valid incarnation

Cause: Flashback could not be started because a file was checkpointed or fuzzy at a point where the file can neither be restored nor recovered to our restore target. In order for a file to be brought to the restore target, the file has to be in one of the incarnations along the ancestral path from the current incarnation to the restore incarnation.

Action: Manually restore or recover the file to a point where it is in one of the incarnations along the ancestral path from the current incarnation to the restore incarnation.

ORA-38792: encountered unknown flashback record from release *string*

Cause: A Flashback Database logfile contains a record written by a future Oracle release and is unknown by this release.

Action: The given release of Oracle must be installed in order to use these flashback database log files.

ORA-38793: cannot FLASHBACK the database or pluggable database to a future SCN or time

Cause: The Flashback Pluggable Database target SCN or timestamp is greater than the current database or pluggable database SCN/timestamp and the database or pluggable database incarnation is not the last opened incarnation.

Action: If the target SCN or timestamp is in the current incarnation or a child incarnation whose branch point is after the current database or pluggable database SCN then RECOVER DATABASE or RECOVER PLUGGABLE DATABASE to the target SCN or time. If the target SCN or timestamp is in a child incarnation whose branch point is prior to the current database or pluggable database SCN then FLASHBACK DATABASE to before the branch point. Next, use RMAN to reset the database or pluggable database to the child incarnation. Finally, RECOVER DATABASE OR PLUGGABLE DATABASE to the target SCN time.

ORA-38794: Flashback target time not in current incarnation

Cause: The Flashback Database target timestamp is not in the database's current incarnation or any of its ancestors.

Action: Use a different target timestamp or use RMAN to reset the database to the appropriate incarnation.

ORA-38795: WARNING: FLASHBACK DATABASE succeeded but OPEN RESETLOGS would fail

Cause: FLASHBACK DATABASE succeeded. However, if ALTER DATABASE OPEN RESETLOGS command was attempted now, it would fail with the specified error.

Action: Fix the error before trying ALTER DATABASE OPEN RESETLOGS.

ORA-38796: Not enough flashback database log data to undo FLASHBACK.

Cause: There was not enough flashback log data to undo the flashback so a flashback was not started.

Action: It is still possible to get to the restore target by doing a flashback until the resetlogs branch point of the restore target is reached. This can be done by executing multiple "flashback to before resetlogs" commands, or by doing a flashback to the exact time or SCN of the desired resetlogs branch point. Note that this flashback cannot be undone should an error occur. The only option is to complete the flashback.

ORA-38797: Full database recovery required after a database has been flashed back

Cause: An attempt was made to recover some datafiles or tablespaces of a database after the database had been flashed back. In order to recover control file and all datafiles correctly, full database recovery is required after a database has been flashed back.

Action: Recover the whole database instead.

ORA-38798: Cannot perform partial database recovery

Cause: See other other messages on error stack for the cause.

Action: See other other messages on error stack for the action.

ORA-38799: Cannot drop guaranteed restore point internally created for snapshot standby

Cause: An attempt is made to drop the guaranteed restore point Oracle created internally for a snapshot standby.

Action: Use the "alter database convert to physical standby" command to convert the snapshot standby to a normal physical standby. This will automatically flashback the database and drop this guaranteed restore point.

ORA-38800: Cannot start Redo Apply on the open physical standby database

Cause: An attempt was made to start Redo Apply on an open physical standby database instance.

Action: Make sure the primary database is at compatibility 11.0.0 or higher. The redo logs to be recovered on an open physical standby database must be generated at compatibility 11.0.0 or higher. If you have any redo below 11.0.0 to be applied on the standby, you must apply them on a mounted standby before restarting recovery on an open standby when the log format advances to 11.0.0 or higher. If this is a RAC standby database, make sure the ACTIVE_INSTANCE_COUNT parameter is not set.

ORA-38801: improper value for ORA_EDITION

Cause: An improper value was used for ORA_EDITION when trying to specify an edition to use at login time. The value is not understandable as an identifier, or is too long.

Action: Correct the value for ORA_EDITION and try again.

ORA-38802: edition does not exist

Cause: This error occurred because a reference was made to an edition that does not exist or that the current user does not have privileges on.

Action: Check the edition name and verify that the current user has appropriate privileges on the edition.

ORA-38803: edition is unusable

Cause: This error occurred because a reference was made to an unusable edition.

Action: Use another edition.

ORA-38804: not a legal edition name

Cause: This error occurred because an attempt was made to create an edition called ORA\$BASE, DATABASE_DEFAULT, or USER_DEFAULT. These are not legal edition names. Or a value provided as an edition name is not understandable as an identifier, or is too long.

Action: Choose a different name for the edition.

ORA-38805: edition is in use

Cause: An attempt was made to ALTER or DROP an edition that was being used in another session or was the database default edition.

Action: Retry when the edition is not in use and is not the database default edition.

ORA-38806: edition is being altered or dropped

Cause: An attempt was made to use an edition that was in the process of being altered or dropped.

Action: Use a different edition.

ORA-38807: Implementation restriction: an edition can have only one child

Cause: This error occurred because an attempt was made to create more than one child edition for a parent edition.

Action: Create the edition as a child of the leaf edition.

ORA-38808: edition has a usable parent and a usable child

Cause: An attempt was made to make an edition with a usable parent and a usable child edition unusable.

Action: An edition with a usable parent and a usable child edition cannot be made unusable. Retry after either parent or child has been made unusable.

ORA-38809: edition must be unusable

Cause: This error occurred because an attempt was made to drop a usable edition.

Action: Retry after the altering the edition to be unusable.

ORA-38810: Implementation restriction: cannot drop edition that has a parent and a child

Cause: This error occurred because an attempt was made to drop an edition that has a parent and a child edition.

Action: Retry after dropping the parent or child edition.

ORA-38811: need CASCADE option to drop edition that has actual objects

Cause: This error occurred because an attempt was made to drop an edition that has actual objects.

Action: Specify CASCADE option in drop command.

ORA-38812: maximum number of editions reached

Cause: The number of editions has reached the limit.

Action: Drop some editions before creating new ones.

ORA-38813: editions not supported for schema *string*

Cause: The Oracle-supplied schema did not support editions.

Action: Do not attempt to enable editions for the specified Oracle-supplied schema.

ORA-38814: ALTER SESSION SET EDITION must be first statement of transaction

Cause: An attempt was made to execute an edition switch within an open transaction.

Action: Commit or rollback the transaction and reexecute the statement, or use `DBMS_SESSION.SET_EDITION_DEFERRED` if its deferred effect is appropriate.

ORA-38815: ALTER SESSION SET EDITION must be a top-level SQL statement

Cause: An edition switch failed because it was executed from a PL/SQL block or using recursive SQL.

Action: Execute the statement from a top-level OCI call, or use `dbms_session.set_edition` if its deferred effect is appropriate.

ORA-38816: edition has a child that inherits objects from the edition

Cause: This error occurred because an attempt was made to drop an edition that a child that inherits objects from the edition.

Action: Retry after the child edition has no inherited objects.

ORA-38817: Insufficient privileges

Cause: You did not have sufficient privileges to execute the subprogram package DBMS_EDITIONS_UTIL.

Action: Obtain the necessary privileges. Please see the package specification for details.

ORA-38818: illegal reference to editioned object *string.string*

Cause: An attempt was made to violate the rule "A noneditioned object may not depend on an editioned object."

Action: Either make this object editioned; or do not make the illegal reference.

ORA-38819: user *string* owns one or more objects whose type is editionable and that have noneditioned dependent objects

Cause: An attempt was made to violate the rule "A noneditioned object may not depend on an editioned object."

Action: Either make sure that those objects owned by this user whose type is editionable have no noneditioned dependent objects; or use the FORCE option.

ORA-38820: user has evolved object type

Cause: User could not be edition enabled if it has evolved object type.

Action: Reset the evolved object type first.

ORA-38821: unsupported DBMS_SQL Edition operation

Cause: Could not bind or define ADT, VARRAY, nested table or REF data type when the specified Edition is different from the current edition.

Action: Use the current Edition.

ORA-38822: referential integrity constraints not allowed on editioned views

Cause: An attempt was made to create a referential integrity constraint to or from an editioned view or enable editions for a user that has views with referential integrity constraints.

Action: Do not attempt to create editioned views with referential integrity constraints.

ORA-38823: Crossedition triggers are not allowed to exist when dropping the root edition

Cause: An attempt was made to drop the root edition when enabled crossedition trigger exists.

Action: Drop or disable all the crossedition triggers before dropping the root edition.

ORA-38824: A CREATE OR REPLACE command may not change the EDITIONABLE property of an existing object.

Cause: An attempt was made to replace an existing object with a different value for the EDITIONABLE property.

Action: Switch the EDITIONABLE property in the REPLACE statement, or alter the existing object to have an EDITIONABLE property matching the EDITIONABLE property in the REPLACE statement.

ORA-38825: The EDITIONABLE property of an editioned object cannot be altered.

Cause: An attempt was made to alter the EDITIONABLE property of an object whose type has been enabled for editioning in the owner's schema.

Action: Drop the object and re-create it with the desired EDITIONABLE state.

ORA-38826: The EDITIONABLE property of a TYPE or PACKAGE specification and its body must match.

Cause: An attempt was made to create a TYPE or PACKAGE specification or body whose EDITIONABLE property did not match its counterpart.

Action: Switch the EDITIONABLE property in the CREATE statement, or alter the existing object to have an EDITIONABLE property matching the EDITIONABLE property in the CREATE statement.

ORA-38827: DBMS_SESSION.SET_EDITION_DEFERRED failed due to change of PDB.

Cause: An edition switch failed because an attempt was made to change pluggable database (PDB) before the edition switch took effect.

Action: Do not change PDB before the edition switch takes effect.

ORA-38828: DBMS_SESSION.USE_DEFAULT_EDITION_ALWAYS mode is on.

Cause: A change of the session-level edition failed because the overriding USE_DEFAULT_EDITION_ALWAYS mode was on.

Action: Do not change the session-level edition, or first turn off USE_DEFAULT_EDITION_ALWAYS mode.

ORA-38829: FLASHBACK DATABASE failed before modifying any data.

Cause: The FLASHBACK DATABASE command failed before modifying the the database. Look in the alert log for more information about the failure.

Action: Fix the cause of the error and retry the FLASHBACK DATABASE command.

ORA-38850: an enabled thread missing from control file

Cause: A CREATE CONTROLFILE statement was given that did not list all the enabled threads for the database.

Action: Reissue the CREATE CONTROLFILE statement, including all enabled threads.

ORA-38851: cannot mark the current instance (redo thread) as disabled

Cause: The standby switchover or failover operation failed because it needs to mark the current instance (redo thread) as disabled.

Action: Shut down this instance and start up using a different instance name or redo thread number and retry.

ORA-38852: cannot mark the current instance (redo thread) as disabled

Cause: The open resetlogs or standby activation operation failed because it must use a different instance (redo thread) than the current instance (redo thread) to open the database.

Action: Shut down this instance and start up using a different instance name or redo thread number and retry.

ORA-38853: cannot mark instance *string* (redo thread *string*) as disabled

Cause: The standby switchover or failover operation failed because it needs to mark an instance (redo thread) as disabled. That instance was up, which prevented it from being disabled.

Action: Shut down the specified instance and retry this command.

ORA-38854: cannot mark instance *string* (redo thread *string*) as disabled

Cause: The open resetlogs or standby activation operation failed because it needs to mark an instance (redo thread) as disabled. That instance was up, which prevented it from being disabled.

Action: Shut down the specified instance and retry this command.

ORA-38855: cannot mark instance *string* (redo thread *string*) as enabled

Cause: The standby switchover or failover operation failed because it needs to mark an instance (redo thread) as enabled. However, it had less than 2 online redo logs, which prevented it from being enabled.

Action: Add more logfiles to the specified instance and retry the command.

ORA-38856: cannot mark instance *string* (redo thread *string*) as enabled

Cause: The open resetlogs or standby activation operation failed because it needs to mark an instance (redo thread) as enabled. However, it had less than 2 online redo logs, which prevented it from being enabled.

Action: Add more logfiles to the specified instance and retry the command.

ORA-38857: cannot mark redo thread *string* as enabled

Cause: The standby switchover or failover operation failed because it needs to mark a redo thread as enabled. However, the control file was recreated with a MAXINSTANCES value smaller than the thread number of the redo thread.

Action: Recreate the control file with a larger MAXINSTANCES value.

ORA-38858: cannot mark redo thread *string* as enabled

Cause: The open resetlogs or standby activation operation failed because it needs to mark a redo thread as enabled. However, the control file was recreated with a MAXINSTANCES value smaller than the thread number of the redo thread.

Action: Recreate the control file with a larger MAXINSTANCES value.

ORA-38859: instance *string* (thread *string*) is not ready to be disabled

Cause: The command attempted to switch the instance (thread) into a new log before disabling it. The switch attempt failed because all eligible online logs were either being cleared or not completely archived yet.

Action: Wait a few minutes and retry.

ORA-38860: cannot FLASHBACK DATABASE during instantiation of a logical standby

Cause: The command was not permitted because the controlfile indicates the database was in the process of becoming a logical standby database but the controlfile conversion had not completed.

Action: If in the process of creating a logical standby database, perform the remaining instantiation procedures to completion. If this flashback operation followed a Data Guard failure, permit the errant Data Guard operation to successfully complete. Once the instantiation is complete, reissue the flashback operation.

ORA-38861: flashback recovery stopped before reaching recovery target

Cause: Flashback recovery on the standby ended early because the user attempted to flashback to an SCN or time for which there were no redo logs. Most likely, the user is trying to flashback to a future time in the database that the database has never recovered through. Check the alert log to find out which SCN the database recovered to.

Action: Flashback to an older SCN or acquire the necessary redo logs.

ORA-38862: Flashback database logs are in use.

Cause: The command could not be performed because the flashback database logs were locked by another operation, such as FLASHBACK DATABASE or a query of V\$FLASHBACK_DATABASE_LOG.

Action: Wait for the other operation to complete.

ORA-38863: datafile *string* has been restored from an optimized RMAN backup.

Cause: Flashback Database could not flash back the file because it was restored from an RMAN optimized backup with deallocated objects. Flashback cannot revert the file to a time before the last deallocation in the datafile backup.

Action: Restore the file from a backup prior to the Flashback target SCN or time and then retry the command.

ORA-38864: cannot create a guaranteed restore point with user specified SCN or time.

Cause: An SCN or timestamp was specified when creating a guaranteed restore point. This is not supported. You can only create a guaranteed restore point as of the current time.

Action: Avoid this combination of options for creating a restore point.

ORA-38865: cannot create restore point for a future SCN or time.

Cause: An attempt was made to create a restore point with an SCN or timestamp that is in the future.

Action: Revise the SCN or timestamp specified so that it is an SCN or timestamp in the past.

ORA-38866: cannot create restore point for an SCN or time before current database incarnation.

Cause: An attempt was made to create a restore point with an SCN or timestamp that is before the beginning of the current database incarnation.

Action: Revise the SCN or timestamp specified so that it is within current database incarnation.

ORA-38867: database not open: cannot create restore point with the specified timestamp

Cause: An attempt was made to create a restore point with the specified timestamp while the database was not open. The database must be open in order to map the timestamp to an SCN.

Action: Open the database first or pick another way to create the restore point.

ORA-38868: warning: the control file may have incorrect data file structure

Cause: This control file was created or converted based on a control file from a time different from the time of the database.

Action: Open database and all pluggable databases read-only to synchronize the control file with the database dictionary. You can also force recovery to proceed by invoking recovery again.

ORA-38869: datafile *string* has been restored from an RMAN backup with undo block compression.

Cause: Flashback Database could not flash back the database because a file was restored from an RMAN backup with undo block compression, and the Flashback target was to a time when the missing undo may be needed to open the database.

Action: Restore an earlier backup of the file and retry the command or Flashback to a later time.

ORA-38870: cannot backup a control file that may have incorrect data file structure.

Cause: This control file was created or converted based on a control file from a time different from the time of the database.

Action: Open database read-only to synchronize the control file with the database dictionary to fix the control file.

ORA-38871: cannot enable flashback before open resetlogs after incomplete recovery.

Cause: To enable flashback on a primary database, the database must be clean without requiring open resetlogs.

Action: Open resetlogs first and then enable flashback database.

ORA-38872: Cannot perform backup control file recovery if Flashback Database is enabled.

Cause: RECOVER DATABASE with the BACKUP CONTROLFILE option, or a database recovery that required the control file be made a backup failed because Flashback Database was enabled or there was a guaranteed restore point.

Action: Disable Flashback Database or remove the guaranteed restore point and retry the command.

ORA-38873: missing incarnation information

Cause: Flashback Database failed because incarnation information was not found in the control file. The Flashback target incarnation was not in the control file or had a missing parent incarnation.

Action: Register logs from the missing incarnations and retry the command.

ORA-38874: cannot flashback data file *string* - missing incarnation information

Cause: Flashback Database failed because incarnation information for the start of the offline range for a file was not found in the control file. Flashback could not update the file's header with the missing incarnation's resetlogs information.

Action: Check the trace log for the offline range of the data file. If redo logs from the missing incarnation can be found, register the logs in the control file and retry the command.

ORA-38875: FLASHBACK DATABASE not started; in test mode

Cause: The FLASHBACK DATABASE command was not performed because it was started in test mode.

Action: No action required.

ORA-38876: redo logs not required

Cause: The FLASHBACK DATABASE command was performed in test mode and determined that no redo logs were required to perform the tested FLASHBACK DATABASE command.

Action: No action required.

ORA-38877: required redo logs are available

Cause: The FLASHBACK DATABASE command was performed in test mode and determined that no redo logs required to perform the tested FLASHBACK DATABASE command were missing.

Action: No action required.

ORA-38878: required redo log is not available

Cause: A redo log needed for the recovery part of FLASHBACK DATABASE could not be found or accessed.

Action: See trace files for details of the problem.

ORA-38879: Cannot flashback data file *string*; may not be able to undo all changes.

Cause: A data file was plugged in when there was a guaranteed restore point, but Flashback Database was not enabled. It is possible that some changes to the data file, after it was converted, were not logged to the Flashback Database logs.

Action: If the FLASHBACK DATABASE command was meant to rewind the database to a time before the file was plugged in, take the data file offline and retry the command. If the FLASHBACK DATABASE command was meant to rewind the database to a time after the file was plugged in, restore the original version of the plugged in file and retry the command.

ORA-38880: Cannot advance compatibility from *string* to *string* due to guaranteed restore points

Cause: Flashback database cannot undo the advance of database compatibility. Therefore, one cannot advance the compatibility of the database while there are guaranteed restore points in the database.

Action: Drop all guaranteed restore points first and retry, or delay the advance of database compatibility to a later time.

ORA-38881: Cannot drop tablespace *string* on primary database due to guaranteed restore points.

Cause: An attempt was made to drop a tablespace on a primary database while there are guaranteed restore points. You cannot do this because Flashback database cannot undo dropping of a tablespace.

Action: Drop all guaranteed restore points first and retry, or delay dropping the tablespace until all guaranteed restore points are removed.

ORA-38882: Cannot drop tablespace *string* on standby database due to guaranteed restore points.

Cause: An attempt was made to drop a tablespace on a standby database while there are guaranteed restore points. You cannot do this because Flashback database cannot undo dropping of a tablespace.

Action: Drop all guaranteed restore points and rerun recovery on standby database.

ORA-38883: Cannot shrink data file *string* by *string* blocks on primary database due to guaranteed restore points.

Cause: An attempt was made to shrink a data file on a primary database while there are guaranteed restore points. You cannot do this because Flashback database cannot undo the shrinking of a data file.

Action: Drop all guaranteed restore points first and retry, or delay the data file resize until all guaranteed restore points are removed.

ORA-38884: Cannot shrink data file *string* by *string* blocks on standby database due to guaranteed restore points.

Cause: An attempt was made to shrink a data file on a standby database while there are guaranteed restore points. You cannot do this because Flashback database cannot undo the shrinking of a data file.

Action: Drop all guaranteed restore points and rerun recovery on standby database.

ORA-38885: WARNING: Flashback database has been disabled while fast-start failover is enabled.

Cause: Flashback database was disabled while fast-start failover was enabled.

Action: Enable flashback database if fast-start failover is enabled.

ORA-38886: WARNING: Flashback database was disabled due to error when writing flashback database logs.

Cause: Recovery writer (RVWR) encountered an error when writing flashback database logs.

Action: See the error stack in the alert log.

ORA-38887: WARNING: Recovery writer (RVWR) hang due to error when writing flashback database logs.

Cause: An error occurred while writing to the flashback database logs.

Action: Shutdown the instance or turn off flashback database.

ORA-38888: invalid redo thread number

Cause: The provided thread number was invalid.

Action: Specify a valid redo thread number.

ORA-38889: Cannot shrink data file *string* as server process could not allocate memory to generate before images.

Cause: An error occurred while trying to allocate PGA memory to store before images to write into flashback database log.

Action: Retry the operation after making sure system has sufficient free memory available.

ORA-38890: RESETLOGS option may need to be used to open this PDB

Cause: Pluggable database (PDB) flashback or point-in-time recovery was performed on this PDB.

Action: Either issue the ALTER PLUGGABLE DATABASE OPEN RESETLOGS statement, open the PDB in read only mode, or perform recovery on the PDB and open the PDB.

ORA-38891: cannot use DB_FLASHBACK_LOG_DEST without DB_FLASHBACK_LOG_DEST_SIZE

Cause: There are two possible cause for this error: 1) The DB_FLASHBACK_LOG_DEST parameter was in use when no DB_FLASHBACK_LOG_DEST_SIZE parameter was encountered while fetching initialization parameter. 2) An attempt was made to set DB_FLASHBACK_LOG_DEST with the ALTER SYSTEM command when no DB_FLASHBACK_LOG_DEST_SIZE was in use.

Action: Correct the dependency parameter definitions and retry the command.

ORA-38892: cannot disable flashback log dest - flashback database is enabled

Cause: An attempt was made to set DB_FLASHBACK_LOG_DEST to null while flashback database was enabled. Flashback database requires DB_FLASHBACK_LOG_DEST to be set.

Action: Use the ALTER DATABASE FLASHBACK OFF statement to disable flashback database, then disable the flashback log dest.

ORA-38893: Parameter DB_FLASHBACK_LOG_DEST_SIZE is out of range (1 - string)

Cause: Parameter DB_FLASHBACK_LOG_DEST_SIZE specified was not valid.

Action: Specify a valid number within the range.

ORA-38894: flashback log destination parameter mismatch

Cause: The value of parameters DB_FLASHBACK_LOG_DEST and DB_FLASHBACK_LOG_DEST_SIZE must be same in all instances. All databases must have same flashback destination parameters.

Action: Check DB_FLASHBACK_LOG_DEST and DB_FLASHBACK_LOG_DEST_SIZE values in all instances.

ORA-38895: can not set DB_FLASHBACK_LOG_DEST dynamically after flashback database is on

Cause: There are two possible cause for this error: 1) The flashback log can only be either in DB_RECOVERY_FILE_DEST or DB_FLASHBACK_LOG_DEST but not both. As flashback database is already on without a DB_FLASHBACK_LOG_DEST, there will already be flashback logs inside DB_RECOVERY_FILE_DEST. Can not set DB_FLASHBACK_LOG_DEST dynamically now because flashback logs will be in both places after the operation. 2) An attempt was made to change DB_FLASHBACK_LOG_DEST with the ALTER SYSTEM command when flashback database is on

Action: Set DB_FLASHBACK_LOG_DEST dynamically before turning on flashback database.

ORA-38896: can not specify DB_FLASHBACK_LOG_DEST in INIT.ORA file after flashback database has been enabled without it

Cause: Flashback logs can only be in either DB_RECOVERY_FILE_DEST or DB_FLASHBACK_LOG_DEST but not both. Because flashback database is already enabled

with flashback logs in DB_RECOVERY_FILE_DEST, one cannot specify DB_FLASHBACK_LOG_DEST in the INIT.ORA file.

Action: Remove ADB_FLASHBACK_LOG_DEST in INIT.ORA file or add it before turning on flashback database.

ORA-38897: cannot remove DB_FLASHBACK_LOG_DEST in INIT.ORA file after flashback database has been enabled with it

Cause: Flashback logs can only be in either DB_RECOVERY_FILE_DEST or DB_FLASHBACK_LOG_DEST but not both. Because flashback database is already enabled with flashback logs in DB_FLASHBACK_LOG_DEST, one cannot remove DB_FLASHBACK_LOG_DEST in the INIT.ORA file.

Action: Add back DB_FLASHBACK_LOG_DEST in the INIT.ORA file or remove it before turning on flashback database.

ORA-38898: cannot set DB_FLASHBACK_LOG_DEST_SIZE to *string*, minimum quota required is *string*

Cause: DB_FLASHBACK_LOG_DEST_SIZE cannot be set to new value as it is lower than the minimum quota required.

Action: Set DB_FLASHBACK_LOG_DEST_SIZE to a higher value.

ORA-38899: compatible initialization parameter must be at least release 23.0.0.0 in order to use DB_FLASHBACK_LOG_DEST

Cause: The use of DB_FLASHBACK_LOG_DEST requires Oracle Database 23c compatibility but currently the compatible initialization parameter was not set to release 23.0.0.0 or later version.

Action: Set the compatible parameter in initialization parameter file to release 23.0.0.0 or later version.

ORA-38900: missing mandatory column "*string*" of error log table "*string*"

Cause: Mandatory column of error logging table is not present

Action: Add the named column to the error logging table. Consult ORACLE documentation for the correct data type.

ORA-38901: column "*string*" of table "*string*" must be one of the first "*string*" columns

Cause: Mandatory information column of error logging table is present, but must be at the beginning of the row.

Action: Create the error logging table correctly. Consult ORACLE documentation for the correct format of an error logging table.

ORA-38902: errors in array DML exceed *string*

Cause: The operation failed because the array DML had more errors than can be stored internally for BATCH ERRORS.

Action: Do not use BATCH ERROR mode when array DML has more error rows than the number specified in the error.

ORA-38903: DML error logging is not supported for abstract column "*string*"

Cause: A DML Error Logging operation was attempted on a table which has an ADT, REF, VARRAY, or nested table column type, and the error logging table referred to the specified column.

Action: Either do not use DML Error Logging on such a table or remove the offending column from the error logging table. The scalar columns can be logged, but not abstract column types.

ORA-38904: DML error logging is not supported for LOB column "*string*"

Cause: A DML Error Logging operation was attempted on a table which has a CLOB, NCLOB, or BLOB column type, and the error logging table referred to the specified column.

Action: Either do not use DML Error Logging on such table or remove the offending column from the error logging table. The scalar columns can be logged, but not LOB column types.

ORA-38905: DML error logging is not supported for LONG column "*string*"

Cause: A DML Error Logging operation was attempted on a table which has a LONG, or LONG RAW column type, and the error logging table referred to the specified column.

Action: Either do not use DML Error Logging on such a table or remove the offending column from the error logging table. The scalar columns can be logged, but not long column types.

ORA-38906: insert into DML Error Logging table "*string*" failed

Cause: An error occurred when attempting to log a DML Error on behalf of the DML Error logging clause. This may be intended if a trigger is defined on the error table (which in turn errors out in certain cases).

Action: Determine root cause of error (in error stack).

ORA-38907: DML error logging is not supported for FILE column "*string*"

Cause: A DML Error Logging operation was attempted on a table which has a BFILE column and the Error Logging table referred to the specified column.

Action: Either don't use DML Error Logging on such table or remove the offending column from the error logging table. The scalar columns can be logged, but not BFILE column types.

ORA-38908: internal error occurred during DML Error Logging

Cause: An unexpected error occurred while executing recursive SQL to insert a row into the DML Error Logging table.

Action: Report this error to Oracle Support.

ORA-38909: DML Error logging is not supported with BATCH ERROR mode

Cause: A DML Error Logging operation was attempted on a table which has BATCH ERROR mode also specified.

Action: Refrain from using both DML Error Logging and BATCH ERROR mode on the same table.

ORA-38910: BATCH ERROR mode is not supported for this operation

Cause: BATCH ERROR mode specified for this operation.

Action: Refrain from using BATCH ERROR mode with this operation.

ORA-38911: unique constraint (*string.string*) violated

Cause: An INSERT statement with a CHANGE_DUPKEY_ERROR_INDEX hint tried to insert a duplicate key into a table.

Action: Either remove the unique restriction or do not insert the key.

ORA-38912: An index must be specified in the index hint

Cause: Index specification was missing in an IGNORE_ROW_ON_DUPKEY_INDEX or CHANGE_DUPKEY_ERROR_INDEX hint.

Action: In the hint, specify a unique index that exists on the table.

ORA-38913: Index specified in the index hint is invalid

Cause: The index specified in an IGNORE_ROW_ON_DUPKEY_INDEX or CHANGE_DUPKEY_ERROR_INDEX hint could not be found.

Action: Specify a unique index that exists on the table. The index cannot be a non-unique index or a bitmap index.

ORA-38914: Either mutate the error or ignore row on unique violation

Cause: IGNORE_ROW_ON_DUPKEY_INDEX and CHANGE_DUPKEY_ERROR_INDEX were both specified in the same statement.

Action: You cannot specify both hints in the same statement. Remove one of these two hints, or both, from the statement.

ORA-38915: Multiple indexes in change or ignore duplicate key hint

Cause: Multiple indexes were specified in an IGNORE_ROW_ON_DUPKEY_INDEX or CHANGE_DUPKEY_ERROR_INDEX hint.

Action: Only one index must be specified in the hint.

ORA-38916: CHANGE_DUPKEY_ERROR_INDEX hint disallowed for this operation

Cause: CHANGE_DUPKEY_ERROR_INDEX hint was specified for the operation.

Action: You cannot specify this hint for this operation. Remove the hint from the statement.

ORA-38917: IGNORE_ROW_ON_DUPKEY_INDEX hint disallowed for this operation

Cause: IGNORE_ROW_ON_DUPKEY_INDEX hint was specified for the operation.

Action: You cannot specify this hint for this operation. Remove the hint from the statement.

ORA-38918: RETRY_ON_ROW_CHANGE hint disallowed for this operation

Cause: RETRY_ON_ROW_CHANGE hint was specified for the operation.

Action: You cannot specify this hint for this operation. Remove the hint from the statement.

ORA-38919: remote table not supported for DML error logging

Cause: A remote table was specified in the DML error logging clause.

Action: You cannot specify a remote table to which errors will be logged. Specify a local table only.

ORA-38950: Source platform *string* not cross platform compliant

Cause: Cross platform transport was not allowed for this platform.

Action: For a list of supported platforms, query fixed view SYS.V\$TRANSPORTABLE_PLATFORM.

ORA-38951: Target platform *string* not cross platform compliant

Cause: Cross platform transport was not allowed for this platform.

Action: For a list of supported platforms, query fixed view SYS.V\$TRANSPORTABLE_PLATFORM.

ORA-38952: Source database not 10.0.0.0 compatible

Cause: Cross platform transport is not supported unless database compatibility is advanced to 10.0.0.0 or higher

Action: Use the compatible parameter to advance source database compatibility and redo the transport

ORA-38953: Cross platform transport is not supported between source platform *string* and target platform *string***ORA-38954: Cross platform transport is not supported between source platform identifier *string* and target platform identifier *string***

Cause: The platform identifier in the transported file indicated that the datafile format was different than the target database datafile format.

Action: For a list of supported platforms, query fixed view SYS.V\$TRANSPORTABLE_PLATFORM. If both platforms are present, Contact Oracle support

ORA-38955: Source platform *string* not cross platform compliant

Cause: The platform identifier in the transported file indicated that this platform is not supported for a cross platform transport.

Action: For a list of supported platforms, query fixed view SYS.V\$TRANSPORTABLE_PLATFORM.

ORA-38956: Target platform *string* not cross platform compliant

Cause: Cross platform transport was not allowed for this platform.

Action: For a list of supported platforms, query fixed view SYS.V\$TRANSPORTABLE_PLATFORM.

ORA-38958: Source platform *string* is in different byte order than target platform *string*

Cause: Probably a conversion was not done before the import phase of the transport.

Action: Use RMAN CONVERT functionality to convert endian ordering.

ORA-38959: Failed to update block 0 to new version 10 format

Cause: An attempt was made to update block 0 to version 10 format.

Action: check additional error messages and contact Oracle Support Services.

ORA-38960: File *string* from platform *string* is not compatible with current platform *string*

Cause: The file was directly copied to this platform from a platform with a different endian ordering.

Action: Use RMAN CONVERT functionality to convert endian ordering.

ORA-38961: data file: *string*

Cause: Reporting file name for details of another error.

Action: See associated error message.

ORA-39000: bad dump file specification

Cause: The user specified a dump file that could not be used in the current job.

Subsequent error messages describe the inadequacies of the dump file.

Action: Specify a dump file that is usable for the job.

ORA-39001: invalid argument value

Cause: The user specified API parameters were of the wrong type or value range.

Subsequent messages supplied by DBMS_DATAPUMP.GET_STATUS will further describe the error.

Action: Correct the bad argument and retry the API.

ORA-39002: invalid operation

Cause: The current API cannot be executed because of inconsistencies between the

API and the current definition of the job. Subsequent messages supplied by

DBMS_DATAPUMP.GET_STATUS will further describe the error.

Action: Modify the API call to be consistent with the current job or redefine the job in a manner that will support the specified API.

ORA-39003: unable to get count of total workers alive

Cause: Attempt to get count of total worker processes alive failed.

Action: Check the additional error messages to see what caused the failure. Correct the error, if possible, and try the operation again. If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39004: invalid state

Cause: The state of the job precludes the execution of the API.

Action: Rerun the job to specify the API when the job is an appropriate state.

ORA-39005: inconsistent arguments

Cause: The current API cannot be executed because of inconsistencies between

arguments of the API call. Subsequent messages supplied by

DBMS_DATAPUMP.GET_STATUS will further describe the error.

Action: Modify the API call to be consistent with itself.

ORA-39006: internal error

Cause: An unexpected error occurred while processing a Data Pump job. Subsequent

messages supplied by DBMS_DATAPUMP.GET_STATUS will further describe the

error.

Action: Contact Oracle Customer Support.

ORA-39012: Client detached before the job started.

Cause: The client detached or ended their session before the Data Pump job was started.

Action: Create new job and remain attached to the job until it is started.

ORA-39013: Remapping the SYSTEM schema is not supported.

Cause: A remap_schema transform with the SYSTEM schema was specified.

Action: Retry the import command without remapping the SYSTEM schema.

ORA-39014: One or more workers have prematurely exited.

Cause: One or more of the worker processes exited before the job was completed. With no workers, the master process will terminate the job.

Action: Rerun the job. If problem persists, contact Oracle Customer Support.

ORA-39015: job is not running

Cause: An API was executed that required the job to be running, but the job was not active.

Action: Retry the API. If problem persists, contact Oracle Customer Support.

ORA-39016: Operation not supported when job is in *string* state.

Cause: The state of the job precludes the execution of the API.

Action: Rerun the job to specify the API when the job is an appropriate state.

ORA-39017: Worker request not supported when job is in *string* state.

Cause: The state of the job precludes the execution of a worker request. This is an internal error.

Action: Contact Oracle Customer Support.

ORA-39018: master process received invalid message number *string*

Cause: Internal Error

Action: Contact Oracle Customer Support.

ORA-39019: invalid operation type *string*

Cause: User specified an invalid operation name on an DBMS_DATAPUMP.OPEN API or an invalid operation name was specified in the master table for a restart API.

Action: Correct the operation name and recreate the job.

ORA-39020: invalid mode type *string*

Cause: User specified an invalid mode on an DBMS_DATAPUMP.OPEN API or an invalid mode was specified in the master table for a restart API.

Action: Correct the mode and recreate the job.

ORA-39021: Database compatibility version *string* is not supported.

Cause: User selected COMPATIBLE as the version on an DBMS_DATAPUMP.OPEN API, but the current database compatibility version is not supported by the Data Pump API. Database versions before 9.2 are not supported by the Data Pump.

Action: Specify a supported version and recreate the job.

ORA-39022: Database version *string* is not supported.

Cause: User selected LATEST as the version on an DBMS_DATAPUMP.OPEN API, but the current database version is not supported by the Data Pump API. Database versions before 9.2 are not supported by the Data Pump.

Action: Specify a supported version and recreate the job.

ORA-39023: Version *string* is not supported.

Cause: User specified an explicit version on an DBMS_DATAPUMP.OPEN API, but the current database version is not supported by the Data Pump API. Database versions before 9.2 are not supported by the Data Pump.

Action: Specify a supported version and recreate the job.

ORA-39024: wrong schema specified for job

Cause: Internal error caused by the master process finding inconsistencies between the schemas specified for the job.

Action: Contact Oracle Customer Support.

ORA-39025: jobs of type *string* are not restartable

Cause: Attempt to restart a job which was not restartable.

Action: Recreate the job via the open API.

ORA-39026: master table is inconsistent on validation *string*

Cause: Job cannot be restarted because it failed a validation check. Validation checks are of the form -xx.y where -xx is the value of the PROCESS_ORDER column in the master table where the error was detected and y is the actual validity check for the row.

Action: Recreate the job. If master table has not been modified, but problem persists, contact Oracle Customer Support.

ORA-39027: wrong version of master table

Cause: Job cannot be restarted because the version of the database upon which the job started is different than the current version of the database and the format of the master table has changed between the versions.

Action: Recreate the job.

ORA-39028: cannot restart job from *string* state

Cause: The job was not in a suitable state for restart. Jobs must begin executing before they can be restarted.

Action: Recreate the job.

ORA-39029: worker *string* with process name "*string*" prematurely terminated

Cause: The specified worker process terminated unexpectedly. Subsequent messages describe the reason for the termination.

Action: In many cases, the Data Pump will attempt to automatically restart the worker. If problem persists, contact Oracle Customer Support.

ORA-39030: invalid file type *string*

Cause: An invalid filetype was specified for an DBMS_DATAPUMP.ADD_FILE API call.

Action: Correct the filetype parameter and reissue the API request.

ORA-39031: invalid filter name *string*

Cause: An invalid filter name was specified on a DBMS_DATAPUMP.DATA_FILTER API call.

Action: Correct the filter name parameter and reissue the API request.

ORA-39032: Parameter *string* is not supported in *string* jobs.

Cause: The specified parameter was not supported for the specified class of jobs.

Action: Re-create the job with the appropriate mode or operation type.

ORA-39033: Data cannot be filtered under the direct path access method.

Cause: The user specified that the data access method for the job was direct which precludes the use of certain data filters.

Action: Use the SUBQUERY or the SAMPLE data filter with the automatic data access method.

ORA-39034: Table *string* does not exist.

Cause: The user referenced a table in an API that did not exist.

Action: Correct table name and retry API.

ORA-39035: Data filter *string* has already been specified.

Cause: The user has already specified a data filter that matches on the filter name, schema name, and table.

Action: Specify a different data filter.

ORA-39036: invalid metadata filter name *string*

Cause: An invalid metadata filter name was specified on a DBMS_DATAPUMP.METADATA_FILTER API call.

Action: Correct the metadata filter name parameter and reissue the API request.

ORA-39037: Object type path not supported for *string* metadata filter.

Cause: An object type path was specified for the filter, but the filter does not support the object type path parameter.

Action: Remove the object type path parameter.

ORA-39038: Object path "*string*" is not supported for *string* jobs.

Cause: The specified object type path is invalid for the job mode.

Action: Correct the object type path.

ORA-39039: Schema expression "*string*" contains no valid schemas.

Cause: The specified SCHEMA_EXPR filter resulted in no schemas being selected.

Action: Correct the the SCHEMA_EXPR filter specification.

ORA-39040: Schema expression "*string*" must identify exactly one schema.

Cause: For TABLE mode jobs, the SCHEMA_EXPR filter must identify exactly one schema.

Action: Correct the the SCHEMA_EXPR filter specification.

ORA-39041: Filter "*string*" either identifies all object types or no object types.

Cause: A Metadata filter specifying path names either returned all objects or no objects in the job.

Action: Correct the the metadata filter specification.

ORA-39042: invalid transform name *string*

Cause: An invalid transform name was specified on a DBMS_DATAPUMP.METADATA_TRANSFORM API call.

Action: Correct the transform name parameter and reissue the API request.

ORA-39043: Object type *string* is not supported for *string*.

Cause: The specified object type is invalid for the specified transform or remap.

Action: Correct the object type.

ORA-39044: Metadata transform *string* has already been specified.

Cause: The user has already specified the metadata transform for the same class of object types.

Action: Specify a different object_type for the transform.

ORA-39045: invalid metadata remap name *string*

Cause: An invalid metadata remap name was specified on a DBMS_DATAPUMP.METADATA_REMAP API call.

Action: Correct the metadata remap name parameter and reissue the API request.

ORA-39046: Metadata remap *string* has already been specified.

Cause: The user has already specified a metadata remap that matches on the remap name and original value.

Action: Specify a different original value.

ORA-39047: Jobs of type *string* cannot use multiple execution streams.

Cause: The user specified a value of parallelism that is precluded by the operation type or mode of the job.

Action: Specify only a parallelism of 1 for this type of job.

ORA-39048: Unable to start all workers; only *string* worker(s) available.

Cause: The full degree of parallelism could not be honored due process limits, resource limits, or other internal errors.

Action: Increase process/resource limits for the job.

ORA-39049: invalid parameter name *string*

Cause: An invalid parameter name was specified on a DBMS_DATAPUMP.SET_PARAMETER API call.

Action: Correct the parameter name and reissue the API request.

ORA-39050: parameter *string* is incompatible with parameter *string*

Cause: Two parameters were set that were incompatible with each other. Only the first parameter setting will be used.

Action: Decide which parameter is to be used and stick to it.

ORA-39051: parameter *string* specified multiple times

Cause: The user has already specified a parameter that matches on the name and the specific parameter doesn't support duplicate definitions.

Action: Specify non-repeatable parameters only once.

ORA-39052: cannot specify SKIP_CURRENT on initial start of a job.

Cause: The user has already specified SKIP_CURRENT for a job that has never executed.

Action: Only specify SKIP_CURRENT when restarting a job.

ORA-39053: parameter or attribute *string* must be defined for a *string* job

Cause: The job being defined cannot be started because it is missing the specified definition.

Action: Specify the omitted parameter or attribute before starting the job.

ORA-39054: missing or invalid definition of the SQL output file.

Cause: The job being defined could not be started because it was missing the file to receive the SQL output of the job, the SQL output file name conflicted with the output LOG file, or the definition was unusable.

Action: Specify a valid directory name and file name for the SQL file.

ORA-39055: The *string* feature is not supported in version *string*.

Cause: An attempt was made to use a feature that was not enabled in the database version specified for the current job. Typically, this error occurs if the compatibility level of the database was below the current version of the database or if the version for a Data Pump job was specified explicitly. specifies a .

Action: Specify the current database version as a version parameter for the job.

ORA-39056: invalid or duplicate log file specification

Cause: The log file for the job was incorrectly specified.

Action: Specify a valid directory name and file name for the log file.

ORA-39057: invalid worker request *string* for *string* jobs.

Cause: The worker process sent a message that wasn't supported for the current job.

Action: Internal error -- contact Oracle Customer Support and report the error.

ORA-39058: current object skipped: *string* of type *string*

Cause: The user specified SKIP_CURRENT when restarting a job. This message is a confirmation that the object will not be imported.

Action: User must manually define the object in the target database.

ORA-39059: dump file set is incomplete

Cause: An IMPORT or SQL_FILE operation was being performed but not all of the files from the EXPORT dump file set were included.

Action: Check the export log file and make sure all of the files that were exported are included in the current job.

ORA-39060: table(s) dropped because of conflict with master table

Cause: A table specified by a job was not included because its definition would collide with the master table definition for the current job.

Action: After the job completes. Import the conflicting tables using a unique job name to avoid conflicts with normal user tables.

ORA-39061: import mode *string* conflicts with export mode *string*

Cause: The mode used for import cannot be used with a dump file set of specified mode. Transportable jobs are not compatible with other modes.

Action: Perform the import using a mode compatible with the export.

ORA-39062: error creating master process *string*

Cause: An attempt to create the listed master process failed.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39064: unable to write to the log file

Cause: Errors were detecting while writing to the log file. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39065: unexpected master process exception in *string*

Cause: An unhandled exception was detected internally within the master control process for the Data Pump job. This is an internal error. messages will detail the problems.

Action: If problem persists, contact Oracle Customer Support.

ORA-39067: Unable to close the log file.

Cause: Errors were detecting while closing the log file. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39068: invalid master table data in row with `PROCESS_ORDER=string`

Cause: A corruption was detected in the master table in the specified row(s). Either the row wasn't found, it was missing columns or had illegal values in its columns.

Action: Rerun the job with an uncorrupted master table.

ORA-39070: Unable to open the log file.

Cause: Errors were detecting while opening the log file. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39071: Value for *string* is badly formed.

Cause: The value of the user specified filter did not contain a legitimate SQL clause. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39076: cannot delete job *string* for user *string*

Cause: Unable to delete a job. Refer to the any following or prior error messages for clarification.

Action: Eliminate the problems indicated.

ORA-39077: unable to subscribe agent *string* to queue "*string*"

Cause: The Data Pump's communication layer was unable to attach one of its processes to the control or status queue. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Customer Support.

ORA-39078: unable to dequeue message for agent *string* from queue "*string*"

Cause: The Data Pump's communication layer was unable to retrieve a message from the control or status queue. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Customer Support.

ORA-39079: unable to enqueue message *string*

Cause: The Data Pump's communication layer was unable to send the specified message on the control or status queue. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Customer Support.

ORA-39080: failed to create queues "*string*" and "*string*" for Data Pump job

Cause: The Data Pump's communication layer was unable to create the status and control queues required for interprocess communication. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Support.

ORA-39081: failed to unsubscribe agent *string* from queue "*string*"

Cause: The Data Pump's communication layer was unable to unsubscribe a process from the control or status queue. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Customer Support.

ORA-39082: Object type *string* created with compilation warnings

Cause: The object in the SQL statement following this error was created with compilation errors. If this error occurred for a view, it is possible that the base table of the view was missing.

Action: This is a warning. The object may have to be recompiled before being used.

ORA-39083: Object type *string* failed to create with error:\n*string*\nFailing sql is:\n*string*

Cause: Examine original error code to determine actual cause

Action: Original error code will contain more information

ORA-39084: cannot detach job *string* for user *string*

Cause: Unable to detach a job from the session. Refer to any following error messages for clarification.

Action: Eliminate the problems indicated.

ORA-39085: cannot update job *string* for user *string*

Cause: Unable to update the fixed table information for a job. Refer to any following or prior error messages for clarification.

Action: Eliminate the problems indicated.

ORA-39086: cannot retrieve job information

Cause: Unable to retrieve fixed table information for a job. Refer to the secondary error messages that follow this one for clarification.

Action: Eliminate the problems indicated by the secondary errors.

ORA-39087: directory name *string* is invalid

Cause: A corresponding directory object does not exist.

Action: Correct the directory object parameter, or create a corresponding directory object with the CREATE DIRECTORY command.

ORA-39088: File name cannot contain a path specification.

Cause: The name of a dump file, log file, or SQL file contained a path specification."

Action: Use the name of a directory object to indicate where the file should be stored and remove the path specification from the DUMPFILE, LOGFILE or SQLFILE parameter.

ORA-39090: Cannot add devices to file oriented job.

Cause: Attempt to add a device to a job that already contains more than one disk file.

Action: Only specify one file for jobs that contain sequential devices.

ORA-39091: unable to determine logical standby and streams status

Cause: An error occurred when determining if the Data Pump job needed to support logical standby or streams.

Action: The subsequent message describes the error that was detected. Correct the specified problem and restart the job.

ORA-39092: unable to set SCN metadata for object "*string.string*" of type *string*

Cause: An error occurred when applying a SCN to the specified object to support logical standby or streams.

Action: The subsequent message describes the error that was detected. Correct the specified problem and restart the job.

ORA-39093: FLASHBACK automatically enabled to preserve database integrity.

Cause: A Data Pump job was required to enable flashback support to specific SCNs in order to preserve the consistency of a logical standby or streams instantiation.

Action: None

ORA-39094: Parallel execution not supported in this database edition.

Cause: Parallel execution of Data Pump jobs is not supported for this database edition.

Action: Specify a parallelism of 1 for jobs not running on Enterprise Edition databases.

ORA-39095: Dump file space has been exhausted: Unable to allocate *string* bytes

Cause: The Export job ran out of dump file space before the job was completed.

Action: Reattach to the job and add additional dump files to the job restarting the job.

ORA-39096: invalid input value *string* for parameter *string*

Cause: A NULL or invalid value was supplied for the parameter.

Action: Correct the input value and try the call again.

ORA-39097: Data Pump job encountered unexpected error *string*

Cause: An unexpected, potentially non-fatal error occurred while processing a Data Pump job.

Action: Contact Oracle Customer Support.

ORA-39098: Worker process received data objects while loading metadata. Invalid process order range is *string*..*string*

Cause: This is an internal error. Messages will detail the problem.

Action: If problem persists, contact Oracle Customer Support.

ORA-39099: cannot create index for "*string*" on master table *string*

Cause: One or more indexes couldn't be created on the master table. subsequent error messages describe the failure.

Action: Correct the condition that is preventing the indexes from being created.

ORA-39102: Timeout before master process *string* finished initialization. Master error:

Cause: The master process whose name is listed started up but did not finish its initialization within the allowed time limit.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39103: Timeout before worker process *string* finished initialization. Worker error:

Cause: The worker process whose name is listed started up but did not finish its initialization within the allowed time limit.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39104: cannot call this function from a SQL parallel query slave process

Cause: Called a Data Pump process model function from a process which is a SQL parallel query slave process

Action: A SQL parallel query slave process cannot create a Data Pump master process. This is not supported. If this error occurs from a Data Pump client (for example, expdp or impdp), contact Oracle Customer Support and report the error.

ORA-39105: Master process *string* failed during startup. Master error:

Cause: The master process whose name is listed failed during startup.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39106: Worker process *string* failed during startup. Worker error:

Cause: The worker process whose name is listed failed during startup.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39107: Master process *string* violated startup protocol. Master error:

Cause: The master process whose name is listed started up but then exited before notifying the creating process that it was finished with initialization.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39108: Worker process *string* violated startup protocol. Worker error:

Cause: The worker process whose name is listed started up but then exited before notifying the creating process that it was finished with initialization.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39109: Unprivileged users may not operate upon other users' schemas

Cause: An unprivileged user attempted to reference another user's schema during a Data Pump operation. Because of this, no schemas were selected for the job.

Action: Retry the operation under a username owning the schema.

ORA-39110: error deleting worker processes

Cause: An attempt to delete the worker processes failed.

Action: Refer to any following error messages for possible actions. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39111: Dependent object type *string* skipped, base object type *string* already exists

Cause: During a Data Pump import job, a dependent object is being skipped because its base object already existed.

Action: If the object from the dump file is wanted, drop the base and dependent objects and try to import again using desired filters.

ORA-39112: Dependent object type *string* skipped, base object type *string* creation failed

Cause: During a Data Pump import job, a dependent object is being skipped because its base object creation failed.

Action: If the object from the dump file is wanted, drop the base and dependent objects and try to import again using desired filters

ORA-39113: Unable to determine database version

Cause: The Data Pump was unable to determine the compatibility level and version of the current database using SYS.DBMS_UTILITY.DB_VERSION.

Action: Make sure access to the DBMS_UTILITY package is granted to you. If this is a network job, be sure that access to the DBMS_UTILITY package is granted to you on the remote instance.

ORA-39114: Dump files are not supported for network jobs.

Cause: An attempt was made to add a dumpfile to an Import job that is using a network link to the source database.

Action: Do not specify a dumpfile for jobs that do not require dumpfiles.

ORA-39115: *string* is not supported over a network link

Cause: An attempt was made to use an option that is not supported over network links such as the PARTITION_LIST filter.

Action: Do not attempt to use Data Pump features on network jobs if they are not compatible with jobs over the network.

ORA-39116: invalid trigger operation on mutating table *string.string*

Cause: A Data Pump load operation failed because a trigger attempted to fire on the table while it was mutating.

Action: Disable trigger(s) on the specified table. Also see ORA-004091.

ORA-39117: Type needed to create table is not included in this operation. Failing sql is:\nstring

Cause: A create table was attempted and a dependent type does not exist in the dumpfile or on the target database. Either the export or the import Data Pump job was a table mode job and types are not included in table mode jobs.

Action: Determine which type(s) are missing and create them on the target system and run the Data Pump import job again.

ORA-39119: worker process interrupt for delete worker processes call by master process

Cause: The master process that created this worker process called delete worker processes to abort the current operation.

Action: No action is necessary. This is an informational error message.

ORA-39120: Table *string* can't be truncated, data will be skipped. Failing error is:\nstring

Cause: Table data was about to be loaded into a table that already existed and the table_exists_action parameter is truncate, but the table could not be truncated.

Action: Determine actual cause by looking at base error.

ORA-39121: Table *string* can't be replaced, data will be skipped. Failing error is:\nstring

Cause: Table data was about to be loaded into a table that already existed and the table_exists_action parameter is replace, but the table could not be dropped.

Action: Determine actual cause by looking at base error.

ORA-39122: Unprivileged users may not perform *string* remappings.

Cause: A user attempted to remap objects during an import but lacked the IMPORT_FULL_DATABASE privilege.

Action: Retry the job from a schema that owns the IMPORT_FULL_DATABASE privilege.

ORA-39123: Data Pump transportable tablespace job aborted\string

Cause: A DBMS_PLUGTS procedure failed and the Data Pump operation could not continue so it was aborted. The DBMS_PLUGTS failure listed describes the original error.

Action: Look at the DBMS_PLUGTS error to determine actual cause.

ORA-39124: dump file name "*string*" contains an invalid substitution variable

Cause: The substitution variable '%' must be followed by '%','u', or 'U'.

Action: Correct the substitution variable in the dump file name and re-enter the command.

ORA-39125: Worker unexpected fatal error in *string* while calling *string* [*string*]

Cause: An unhandled exception was detected internally within the worker process for the Data Pump job while calling the specified external routine. This is an internal error. Additional information may be supplied.

Action: If problem persists, contact Oracle Customer Support.

ORA-39126: Worker unexpected fatal error in *string* [*string*] \string

Cause: An unhandled exception was detected internally within the worker process for the Data Pump job. This is an internal error. Additional information may be supplied.

Action: If problem persists, contact Oracle Customer Support.

ORA-39127: unexpected error from call to *string* \string

Cause: The exception was raised by the function invocation, a procedural action extension of export.

Action: Record the accompanying messages and report this as a Data Pump internal error to customer support.

ORA-39128: unexpected DbmsJava error *number* from statement *string*

Cause: The error was returned from a call to a DbmsJava procedure.

Action: Record the accompanying messages and report this as a Data Pump internal error to customer support.

ORA-39129: Object type *string* not imported. Name conflicts with the master table

Cause: The table being imported from the remote instance has the same name as the master table running this Data Pump job.

Action: Rerun the Data Pump job with a nonconflicting name.

ORA-39130: Object type *string* not imported. Base object name conflicts with the master table

Cause: The object being imported from the remote instance is dependent on an object that has the same name as the master table running this Data Pump job.

Action: Rerun the Data Pump job with a nonconflicting name.

ORA-39132: object type "*string*"."*string*" already exists with different hashcode

Cause: An object type could not be created because there was already a type with the same name but a different hashcode on the target system. Tables in the transportable tablespace set that use this object type cannot be read.

Action: Drop the object type from the target system and retry the operation.

ORA-39133: object type "*string*"."*string*" already exists with different typeid

Cause: An object type in a transportable tablespace set already exists on the target system, but with a different typeid. The typeid could not be changed because the type is used by an existing table. Tables in the transportable tablespace set that use this object type cannot be read.

Action: Drop the object type from the target system and retry the operation.

ORA-39134: Cannot include "*string*" tablespace as a Transportable Tablespace

Cause: The user attempt to specify the SYSAUX or SYSTEM tablespace as a member of the transportable tablespace list in the current job. These tablespaces may not be transported between databases.

Action: Specify different tablespaces to be transported.

ORA-39135: File "*string*" is already a member of this dump set

Cause: An attempt was made to add a new file to an export job but a file with the same name already exists in the dump set for the job.

Action: Reenter the new file information using a different file name.

ORA-39136: cannot specify an SCN on a transportable job

Cause: A target SCN was specified for a table in a transportable job by the streams or logical standby components which was not the defaulted SCN for the table.

Action: This is an internal error. Please report it to Oracle support.

ORA-39137: cannot specify a TABLE_EXISTS_ACTION of *string* for a job with no metadata

Cause: A job was defined with the TABLE_EXISTS_ACTION parameter set to REPLACE or SKIP, but without metadata. Without metadata, data could not be loaded for the requested table actions.

Action: Change the setting of the TABLE_EXISTS_ACTION parameter to APPEND or TRUNCATE or supply Metadata with the data.

ORA-39138: Insufficient privileges to load data not in your schema

Cause: An unprivileged user attempted to load data into a different schema.

Action: Use a privileged account if you must load data not in your schema

ORA-39139: Data Pump does not support XMLType objects in version *string*. *string* will be skipped.

Cause: Object had an XMLType column using either an object relational or binary storage format, which is unsupported by Data Pump in the target version.

Action: Use the original export and import utilities to move this object.

ORA-39140: dump file "*string*" belongs to job *string*

Cause: When a dump file set consists of multiple files, all files in the set must be specified for an import operation, and all files must have been produced by the same export job. One of the files provided does not belong to the original dump file set. For instance, it was created by a different export job than the other files.

Action: Remove the dump file indicated in the message and retry the import operation providing only the complete set of dump files created by a specific export job.

ORA-39141: dump file "*string*" is a duplicate of dump file "*string*"

Cause: When a dump file set consists of multiple files, all files in the set must be specified for an import operation. One of the files provided to import was found to be a duplicate of another dump file in the set. This can occur if the files in the dump set were copied or renamed using operating system utilities and the same dump file was inadvertently copied more than once with different destination names.

Action: Remove the dump file indicated in the message and retry the import operation providing only the complete set of dump files created by a specific export job.

ORA-39142: incompatible version number *string* in dump file "*string*"

Cause: A dump file was specified for an import operation whose version number is incompatible with the dump file version of the Data Pump product currently running on the system. Usually this message indicates that the dump file was produced by a newer version of the Data Pump export utility.

Action: Import this dump file using the Data Pump import utility with the same version as the export which created the file.

ORA-39143: dump file "*string*" may be an original export dump file

Cause: A dump file was specified for an import operation which appears to have been created using the original export utility. These dump files cannot be processed by the Data Pump import utility.

Action: Try using the original import utility to process this dump file.

ORA-39144: The file name parameter must be specified and non-null.

Cause: A file name was not provided in the DBMS_DATAPUMP.ADD_FILE API call.

Action: Correct the file name parameter and reissue the API request.

ORA-39145: directory object parameter must be specified and non-null

Cause: No directory object was provided in either an DBMS_DATAPUMP.ADD_FILE API call or to the directory parameter used by the Data Pump command line clients.

Action: Correct the directory object parameter and retry the operation.

ORA-39146: schema "*string*" does not exist

Cause: The specified schema was referenced as the source of a REMAP_SCHEMA parameter, but did not exist in the dump file (for file-based import) or in the source database (for network import).

Action: Specify the correct name of the schema to be remapped.

ORA-39147: cannot migrate Data Pump queue table ownership to this instance

Cause: There are active Data Pump jobs running on another instance in a RAC. All concurrent, active Data Pump jobs must be run on the same instance.

Action: Start this job on the same instance where other active Data Pump jobs are running, or wait until they finish.

ORA-39148: unable to import data into pre-existing queue table *string*. Table_exists_action of *string* being ignored for this table

Cause: A Data Pump import detected that a queue table that was to be imported already exists. Importing data into pre-existing queue tables is not supported.

Action: If the data from the dump file is desired, then drop the queue table and perform the import again, or use the import parameter table_exists_action=replace.

ORA-39149: cannot link privileged user to non-privileged user

Cause: A Data Pump job initiated by a user with DATAPUMP_EXP_FULL_DATABASE or DATAPUMP_IMP_FULL_DATABASE roles specified a network link that did not correspond to a user with equivalent roles on the remote database.

Action: Specify a network link that maps users to identically privileged users in the remote database.

ORA-39150: bad flashback time

Cause: A flashback time was specified for the Data Pump job which either could not be parsed or else could not be translated into a system change number (SCN). This typically occurs when specifying a time far in the past.

Action: Specify an explicit SCN for the desired flashback rather than a time.

ORA-39154: Objects from foreign schemas have been removed from import

Cause: An non-privileged user attempted to import objects into a schema other than their own.

Action: Either perform the import from a privileged schema or else remap all schemas that were exported into the username running the import.

ORA-39155: error expanding dump file name "*string*"

Cause: Export was unable to expand the directory object and dump file name into a full file name. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39156: error parsing dump file name "*string*"

Cause: Export was unable to parse the dump file name. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39157: error appending extension to file "*string*"

Cause: Export or Import was unable to append the default extension to create the file name. The given file name could be too long or contain illegal characters. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39159: Cannot call this function from a non-Oracle Data Pump process

Cause: Called an Oracle Data Pump process model function from a process which is not an Oracle Data Pump process.

Action: Refer to error message for additional information. If this error occurs from an Oracle Data Pump Export client or Import client. Try the operation again. If the error persists, contact Oracle Support Services.

ORA-39160: error on whats my name call

Cause: Attempt to get the Data Pump process name failed.

Action: Refer to any following error messages for additional information. If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39161: Full database jobs require privileges

Cause: Either an attempt to perform a full database export without the EXP_FULL_DATABASE role or an attempt to perform a full database import over a network link without the IMP_FULL_DATABASE role.

Action: Retry the operation in a schema that has the required roles.

ORA-39162: Transportable tablespace job require privileges

Cause: User attempted to perform a transportable tablespace job without being having the proper EXP_FULL_DATABASE or IMP_FULL_DATABASE role.

Action: Retry the operation in a schema that has the required roles.

ORA-39163: A sample size of *string* is invalid.

Cause: An attempt was made to do data sampling on a table with a value outside of the range of 0 - 100.

Action: Retry the filtering using a sampling number greater than 0 and less than 100.

ORA-39164: Partition *string* was not found.

Cause: If exporting or importing over the network, the user specified a partition name that was not found in the source database. For importing from files, the user specified a partition name not found in the dump file set.

Action: Retry the operation using the correct partition name.

ORA-39165: Schema *string* was not found.

Cause: If exporting or importing over the network, either the user specified a schema name that was not found in the source database or else the user lacked the proper EXP_FULL_DATABASE or IMP_FULL_DATABASE role that would allow them to access another schema. For importing from files, the user specified a schema name not found in the dump file set.

Action: Retry the operation using the correct schema name.

ORA-39166: Object *string* was not found or could not be exported or imported.

Cause: If exporting to files or importing over the network, one of the following occurred: - The object specified did not exist in the source database. - The user lacked the proper EXP_FULL_DATABASE or IMP_FULL_DATABASE role that would allow access to the object. - The VIEWS_AS_TABLES object contained a type that is not supported with the VIEWS_AS_TABLES parameter. If importing from files, the user specified an object name that was not found in the dump file set.

Action: Retry the operation using the correct object name, correct set of privileges, or a view that has only supported types.

ORA-39168: Object path *string* was not found.

Cause: If exporting or importing over the network, the user specified an object type path name that was not found in the source database. For importing from files, the user specified an object type path name not found in the dump file set.

Action: Retry the operation using the correct object type path name.

ORA-39169: Local version of *string* cannot work with remote version of *string*.

Cause: A Data Pump job specified a network link, but the version on the remote database cannot interoperate with the version on the local database.

Action: Do not specify network links between instance running different versions of the database.

ORA-39170: Schema expression *string* does not correspond to any schemas.

Cause: A schema expression or schema list was supplied for a Data Pump job that did not identify any schemas in the source database.

Action: Correct the schema specifications and retry the job.

ORA-39171: Job is experiencing a resumable wait.*lnstring*

Cause: The Data Pump job is stalled with one or more of its sessions having a resumable wait. Resumable waits are typically caused by a non-expandable tablespace running out of space. The follow-on message describes the nature of the wait.

Action: Correct the condition causing the wait. This will typically involve adding datafiles to the tablespace that is full.

ORA-39172: Cannot remap transportable tablespace names with compatibility of *string*.

Cause: The user attempted to remap a tablespace name in a transportable tablespace job when the compatibility level was set below 10.1.

Action: Reset the compatibility level of the database to a more recent version.

ORA-39173: Encrypted data has been stored unencrypted in dump file set.

Cause: No encryption password was specified for an export job that involved data that was encrypted in the database.

Action: No specific user action is required. This is only a warning that secure data may be readable from within the dump file set.

ORA-39174: Encryption password must be supplied.

Cause: No encryption password was supplied to import a dump file set that was created using an encryption password. Alternatively, no encryption password was supplied to a

transportable export job in which one or more tablespaces in the transportable set contained data for tables with encrypted columns.

Action: Specify the encryption password for the dump file set.

ORA-39175: Encryption password is not needed.

Cause: An encryption password was supplied to import a dump file set that was not created using an encryption password.

Action: No user action is required. This is merely a warning message.

ORA-39176: Encryption password is incorrect.

Cause: Wrong encryption password was supplied to import a dump file set.

Action: Resubmit the job using the correct encryption password for the dump file set.

ORA-39177: invalid compression value *string*

Cause: An invalid value was specified for compression.

Action: Correct the value and recreate the job.

ORA-39178: cannot perform estimate on metadata only jobs

Cause: An estimate was requested for a job by specifying the ESTIMATE or ESTIMATE_ONLY parameter. However, the job was also defined to have no data. These specifications conflict with each other.

Action: Remove one of the conflicting specifications for the job.

ORA-39179: unable to load table "*string*"."*string*" because of OID transform

Cause: The OID transform for the job was set to false and the identified table contained either VARRAYs with non-final types or unscoped REF columns. Both of these column types have embedded OIDs so they cannot be imported correctly when OIDs are not preserved.

Action: You must manually move the data with the specified tables when OIDs are not preserved.

ORA-39180: unable to encrypt ENCRYPTION_PASSWORD

Cause: The specified encryption password was unable to be encrypted for placement within the master table or decrypted when it was to be restored from the master table. Subsequent messages will describe the actual error that caused the encryption to fail.

Action: Fix the problems referenced by the subsequent messages. The most common reason for the encryption to fail is the lack of a security wallet.

ORA-39181: Only partial table data may be exported due to fine grain access control on *string*

Cause: An unprivileged user has tried to export a table that has fine grain access control. The table owner is subjected to access control and may not be able to export all rows in the table. Only the rows that can be seen by that user will be exported. In order to preserve integrity of the table, the user importing the table should have enough privilege to recreate the table with the security policies at import time.

Action: It is strongly recommended that the database administrator handle exporting of this table.

ORA-39182: internal error *string* occurred during compression phase *string*\n

Cause: An unexpected error occurred while compressing data buffers.

Action: Contact Oracle Customer Support.

ORA-39183: internal error *string* occurred during decompression phase *string*\n

Cause: An unexpected error occurred while decompressing data buffers.

Action: Contact Oracle Customer Support.

ORA-39184: Transportable Data Pump jobs cannot exclude PLUGTS objects

Cause: A Transportable Data Pump job requires all PLUGTS% objects, but the user-supplied exclude filters were excluding these objects.

Action: Reenter command without excluding PLUGTS% objects.

ORA-39185: The transportable tablespace failure list is

Cause: Some of the tablespaces specified for this job could not be exported.

Action: See specific errors for each tablespace, correct the problem, and try again.

ORA-39186: No tablespaces in the specified list exist.

Cause: The tablespaces specified on the EXPORT command did not exist.

Action: Check the list of tablespaces and reenter command with correct set of tablespaces.

ORA-39187: The transportable set is not self-contained, violation list is

Cause: The tablespaces specified for this job did not satisfy the closure checking. The list of violations specified each closure violation.

Action: See specific errors for violation and correct the problem or change the tablespaces on the command line and try again.

ORA-39188: unable to encrypt dump file set

Cause: Data Pump could not create an encrypted dump file set. This message will be accompanied by other messages that give more details about why the encrypted dump file set could not be created. The most common reason for this message is that you are trying to create a dump file set that can be transparently decrypted, and the database external security device is not open.

Action: If the external security device is not open, then open it. If the external security device is not configured, then the only type of encrypted dump file set that you can create is a password-based dump file set.

ORA-39189: unable to decrypt dump file set

Cause: The dump file set could not be decrypted. The reason could be that either an invalid password was entered, or, when using transparent decryption, the database wallet or external security device was not open.

Action: If password-based import was enabled for this dump file set, then supply the correct password. If transparent import was enabled for this dump file set, then ensure that the database wallet or external security device is open.

ORA-39192: table mode jobs with transportable=always and partition filters only allow objects from one table

Cause: Multiple tables are not supported when specifying partitions while using transportable table mode.

Action: Retry the job specifying only one table.

ORA-39193: Table mode jobs do not allow the schema to be wild carded.

Cause: The table filter included a schema expression with the % wild card.

Action: Retry the job specifying actual schemas.

ORA-39194: Table mode jobs require the tables to be comma separated.

Cause: The string describing tables in a table mode job was not comma separated.

Action: Retry the job specifying the tables separated by commas.

ORA-39195: At least one schema in the TABLE_FILTER does not exist.

Cause: The TABLE_FILTER specified contains a schema that does not exist.

Action: Retry the job specifying only schemas that exist.

ORA-39200: Link name "string" is invalid.

Cause: The name of the network link supplied for a Data Pump job was not usable. Secondary messages identify the problem.

Action: Rerun the job using a valid network link.

ORA-39201: Dump files are not supported for estimate only jobs.

Cause: An attempt was made to add a dumpfile to an Export job that only requested file estimates.

Action: Do not specify a dumpfile for jobs that do not require dumpfiles.

ORA-39202: Data cannot be filtered or selected in string jobs.

Cause: A data filter was supplied for the specified type of job, but is not supported in the specified job type. From the command line, data filters can be specified by the CONTENT, TABLES (partition specifications), SAMPLE and QUERY parameters.

Action: Do not restrict data handling on jobs that cannot support data filtering.

ORA-39203: Partition selection is not supported over a network link.

Cause: Specific partitions were selected for a job operating over a network link.

Action: Remove the partition specifications and rerun the job.

ORA-39204: No subsetting of tablespaces is allowed for transportable import.

Cause: A tablespace filter was applied to a transportable import job that was not performed over a network link. In this case, the tablespace may not be changed from its specification at export time.

Action: Rerun the job without specifying a tablespace filter.

ORA-39205: Transforms are not supported in transportable jobs.

Cause: A metadata transformation such as STORAGE or SEGMENT_ATTRIBUTES has been specified for a transportable Data Pump job.

Action: Rerun the job without specifying a transform.

ORA-39206: A parallel degree of *string* is invalid.

Cause: A bad numeric was supplied for specifying the parallelism to be used within a Data Pump job. The degree of parallelism must be an integer greater than 0.

Action: The the degree specifying and retry the parallelism setting.

ORA-39207: Value *string* is invalid for parameter *string*.

Cause: A parameter for a Data Pump job was set with a NULL or invalid value.

Action: Refer to the documentation to identify the legal values for each parameter. Retry the operation with a valid value.

ORA-39208: Parameter *string* is invalid for *string* jobs.

Cause: The a parameter has been specified that is not supported for the specified type of Data Pump.

Action: Remove the parameter specification and retry the operation.

ORA-39209: Parameter *string* requires privileges.

Cause: Use of the specified privileges requires the user to have the IMP_FULL_DATABASE role for import jobs or the EXP_FULL_DATABASE role for export jobs.

Action: Remove the parameter specification and retry the operation.

ORA-39210: A PCTSPACE adjustment of *string* is invalid.

Cause: User specified a storage space transformation that was out of range. Values for PCTSPACE must be greater than zero.

Action: Retry the operation with a valid PCTSPACE value.

ORA-39211: unable to retrieve dumpfile information as specified

Cause: User specified an invalid or inaccessible file with the specified filename and directory object.

Action: Retry the operation with a valid directory object and filename.

ORA-39212: installation error: XSL stylesheets not loaded correctly

Cause: The XSL stylesheets used by the Data Pump Metadata API were not loaded correctly into the Oracle dictionary table "sys.metastylesheet." Either the stylesheets were not loaded at all, or they were not converted to the database character set.

Action: Connect AS SYSDBA and execute dbms_metadata_util.load_stylesheets to reload the stylesheets.

ORA-39213: Metadata processing is not available

Cause: The Data Pump could not use the Metadata API. Typically, this is caused by the XSL stylesheets not being set up properly.

Action: Connect AS SYSDBA and execute dbms_metadata_util.load_stylesheets to reload the stylesheets.

ORA-39214: Data Pump does not support external tables with encrypted columns. *string* will not be exported

Cause: The object is an external table with encrypted columns and this is unsupported with Data Pump.

Action: External table must be manually recreated on the target system.

ORA-39216: object type "*string*"."*string*" hashcode or version number mismatch

Cause: An object type in a transportable tablespace set could not be used because there was a type with the same name but a different hashcode (and type definition) or the same hashcode but different version numbers for the type on the target system. Tables in the transportable tablespace set that use this object type cannot be created.

Action: Drop the object type and dependent objects from the target system if possible and retry the operation.

ORA-39217: object type "*string*"."*string*" typeid mismatch

Cause: An object type in a transportable tablespace set already exists on the target system, but with a different typeid. The typeid could not be changed because the type or a dependent type is used by an existing table. Tables in the transportable tablespace set that use this object be created.

Action: Drop the object type and dependent objects from the target system if possible and retry the operation.

ORA-39218: type check on object type "*string*"."*string*" failed

Cause: The type check on a type failed. Therefore, the table create for the table which uses the type also fails.

Action: Refer to any following error messages for additional information. Correct the error, if possible, and try the action again.

ORA-39219: directory object name is too long

Cause: The directory object name provided to the Data Pump Job was invalid because its length was greater than 30 characters.

Action: Retry the operation with a valid directory object name.

ORA-39220: file name is too long

Cause: The file name provided to the Data Pump Job was invalid because its length was greater than 4000 characters.

Action: Retry the operation with a valid file name.

ORA-39221: Specifying data filters is invalid when dumpfiles do not contain table data.

Cause: A data filter was supplied for an import job, but the dumpfile does not contain any table data. The export command created a dumpfile with metadata only. No table data was included. From the command line, data filters can be specified by the CONTENT, SAMPLE and QUERY parameters.

Action: Do not restrict data handling on jobs that cannot support data filtering.

ORA-39222: Unable to create global temporary master table *string*

Cause: Data Pump tried to create a global temporary master table but could not. The errors that follow describe why the table could not be created.

Action: Examine and fix the problems described in the additional errors.

ORA-39223: Internal Data Pump error. Master table information for version *string* not found.

Cause: An unexpected error occurred while processing the job. The data in an internal table could not be found.

Action: Contact Oracle Support Services.

ORA-39224: *string* row(s) were rejected with the following error:\n*string*

Cause: These rows were not loaded due to constraint or index violations.

Action: Retry the operation when row data is fixed.

ORA-39228: Unable to construct a unique departitioned object name for *string string.string:string* when defaulted.

Cause: All (sub)partitions in the job were to be created as individual objects and the renaming was defaulted. The job will attempt to create unique object names, but the name creation algorithm was unable to find a unique object name for the specified (sub)partition.

Action: Specify a rename_table transform to use or delete some of the existing objects causing the name conflicts.

ORA-39230: Service name *string* is not available

Cause: The specified resource service name for the Data Pump job was not available.

Action: Pick a service name that the user is authorized to use.

ORA-39231: invalid data remap name: *string*

Cause: The specified type of data remapping was not supported.

Action: Only COLUMN_FUNCTION data remaps are supported. Retry the operation using a supported data remap name.

ORA-39232: invalid remap function: *string*

Cause: The specified package function for performing data remapping was not found.

Action: Either create the specified package function or else grant the user access to the function.

ORA-39233: invalid remap column name: *string*

Cause: The column name specified for the data remapping either does not exist in the specified table, is not a scalar column, or is not supported.

Action: Specify a scalar column name within the table to be remapped.

ORA-39234: Data cannot be remapped under the direct path access method.

Cause: Data remapping was requested on a job that requires the direct path access method. Data remapping can only be performed using the external table access method.

Action: Retry the job without specifying any access method.

ORA-39235: data remap *string* has already been specified

Cause: A data remap has already been specified for the indicated column. Only one data remap may be defined for a column.

Action: Remove one of the data remap specifications for the job.

ORA-39237: Failed to load XML document *string*. Compare process aborted.

Cause: An error occurred while performing XML difference parse.

Action: Resubmit XML compare request with valid document.

ORA-39238: XML node attribute differences are not supported.

Cause: MDAPI XML difference parsing did not support node attributes.

Action: Resubmit XML compare request with valid document.

ORA-39239: No differences found.

Cause: XML documents compared were identical.

Action: No action required.

ORA-39240: Error while processing difference document.

Cause: Error occurred in the MDAPI difference writer.

Action: Refer to any following error messages for additional information. Correct the error, if possible, and try the action again.

ORA-39242: Unable to export/import *string* due to table attributes.

Cause: See the Data Pump documentation for an explanation of what table attributes prevent an export or import from succeeding.

Action: Resolve conflicting table attributes.

ORA-39243: Import job requires 'TRANSPORT_DATAFILES' parameter.

Cause: The export job used 'TRANSPORTABLE=ALWAYS' and the import job requires TRANSPORT_DATAFILES to be specified.

Action: Specify the transport datafiles associated with this job.

ORA-39245: import job requires export dump file "*string*"

Cause: A Data Pump IMPORT or SQL_FILE operation was being performed but not all of the files from the Data Pump export dump file set were included.

Action: Check the export log file and make sure all of the files that were exported are included in the current job. The import log file also lists the export names of the missing files.

ORA-39246: cannot locate master table within provided dump files

Cause: A Data Pump IMPORT or SQL_FILE operation was being performed but not all of the files from the Data Pump export dump file set were included. In particular, the dump file containing the export job's master table was not provided.

Action: Check the export log file and make sure all of the files that were exported are included in the current job.

ORA-39251: Importing a SecureFile LOB with metadata into a scalar, column *string*, is not allowed.

Cause: An import of a SecureFile LOB with metadata into a scalar column was attempted.

Action: Change the scalar column to a SecureFile LOB.

ORA-39252: Importing a SecureFile LOB with metadata or archived SecureFile LOB into a BasicFile LOB is not allowed

Cause: An attempt was made to import a SecureFile LOB that contained metadata or was archived at the time of export into a BasicFile LOB.

Action: Perform the import into a different table, perform DBMS_LOB.ARCHIVE_GET on any archived SecureFile LOBs, and then use INSERT AS SELECT to migrate the SecureFile LOB data to the BasicFile LOB.

ORA-39253: Specified tables do not exist.

Cause: The tables specified for this export job did not exist.

Action: Check the specified table list and make sure the tables listed exist.

ORA-39254: Direct path load not possible into preexisting table with column that has a default value and is not being loaded or is default on null; table *string*, column *string*

Cause: The direct path access method could not be used to load into a preexisting table that has a column with a default value and that column is not being loaded into, or the column is default on null.

Action: Remove the ACCESS_METHOD parameter from the import command line.

ORA-39255: Failed to fetch PLUGTS_BLKs.

Cause: The Data Pump expected a PLUGTS_BLK object to be exported but none were.

Action: Contact Oracle Support Services.

ORA-39256: Transportable tablespace Data Pump jobs from read-only databases not supported.

Cause: The remote database was read-only and Data Pump export jobs using transportable tablespace over a network link require the remote database to be read/write.

Action: Use Data Pump without transportable tablespace or make the remote database read/write.

ORA-39258: Cannot rename cluster.

Cause: DBMS_METADATA_DIFF was comparing two clusters with different names. There is no SQL ALTER statement to rename a cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39259: Cannot add column to cluster.

Cause: DBMS_METADATA_DIFF was comparing two clusters with different column lists. There is no SQL ALTER statement to add a column to a cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39260: Cannot delete column from cluster.

Cause: DBMS_METADATA_DIFF was comparing two clusters with different column lists. There is no SQL ALTER statement to delete a column from a cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39261: Cannot modify column in cluster.

Cause: DBMS_METADATA_DIFF was comparing two clusters with different column lists. There is no SQL ALTER statement to modify a column in a cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39262: Cannot alter size for hash cluster.

Cause: DBMS_METADATA_DIFF was comparing two hash clusters with different sizes. There is no SQL ALTER statement to modify the size of a hash cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39263: Cannot alter PARALLEL INSTANCES.

Cause: DBMS_METADATA_DIFF was comparing two objects, both with PARALLEL but with different INSTANCES values. There is no SQL ALTER statement to modify PARALLEL INSTANCES.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39264: Cannot alter type of table: *string*

Cause: DBMS_METADATA_DIFF was comparing tables of different types: relational table, object table or XMLType table. There is no SQL ALTER statement to change a table's type.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39265: Cannot alter object_type of object table: *string*

Cause: DBMS_METADATA_DIFF was comparing object tables based on different object types. There is no SQL ALTER statement to change an object table's object type.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39266: Cannot add, remove, or modify partitioning attributes.

Cause: DBMS_METADATA_DIFF was comparing two tables with different partitioning attributes. There is no SQL ALTER statement to resolve these differences.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39267: Cannot remove default from table column.

Cause: DBMS_METADATA_DIFF was comparing two table columns, one with a default value, one without. There is no SQL ALTER syntax to remove a column default.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39268: Cannot alter a real column to make it virtual or vice versa.

Cause: DBMS_METADATA_DIFF was comparing two table columns, one virtual, one real. There is no SQL ALTER statement to make a virtual column real or vice versa.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39269: Cannot alter a column of type LONG to anything other than LOB.

Cause: DBMS_METADATA_DIFF was comparing two table columns, the first of type LONG, the second of a data type other than LOB. There is no SQL ALTER statement to modify a long data type to anything other than a CLOB or NCLOB.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39270: Cannot alter a column to or from a LOB data type.

Cause: DBMS_METADATA_DIFF was comparing two table columns, one of type CLOB, NCLOB or BLOB, the second of some other data type. There is no SQL ALTER statement to change the data type to or from a LOB column.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39271: Cannot alter substitutability of column: *string*

Cause: DBMS_METADATA_DIFF was comparing two table columns. This error may occur because the first column is substitutable and the second column is not, or because the first column is OF TYPE and the second column is substitutable.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39272: Cannot alter organization of nested table column: *string*

Cause: DBMS_METADATA_DIFF was comparing two nested table columns. One was a heap table, the other an index-organized table. There is no SQL ALTER statement to change the organization of a nested table.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39273: Cannot alter storage type of XMLType column: *string*

Cause: DBMS_METADATA_DIFF was comparing two XMLType columns with different storage types (CLOB, BINARY, OBJECT RELATIONAL). There is no SQL ALTER statement to change the storage type of an XMLType column.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39274: Cannot alter physical organization of table.

Cause: DBMS_METADATA_DIFF was comparing two tables with different physical organizations (heap, index organized, external, or cluster). There is no SQL ALTER statement to change the physical organization of a table.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39275: Cannot alter INITIAL storage option.

Cause: DBMS_METADATA_DIFF was comparing two tables with different FREELIST GROUPS storage options. There is no SQL ALTER statement to change a table's INITIAL storage option.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39276: Cannot alter MINEXTENTS storage option.

Cause: DBMS_METADATA_DIFF was comparing two tables with different MINEXTENTS storage options. There is no SQL ALTER statement to change a table's MINEXTENTS storage option.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39277: Cannot alter FREELIST GROUPS storage option.

Cause: DBMS_METADATA_DIFF was comparing two tables with different FREELIST GROUPS storage options. There is no SQL ALTER statement to change a table's FREELIST GROUPS storage option.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39278: Cannot alter table with segments to segment creation deferred.

Cause: DBMS_METADATA_DIFF was comparing two tables, the first with allocated segments, the second with deferred segments. There is no SQL ALTER statement to change a table which already has segments to segment creation deferred.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39279: Cannot alter tablespace of overflow segment.

Cause: DBMS_METADATA_DIFF was comparing two index organized tables whose overflow segments have different tablespaces. There is no SQL ALTER statement to change an overflow segment's tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39280: Cannot drop overflow segment.

Cause: DBMS_METADATA_DIFF was comparing two index organized tables, the first with an overflow segment, the second without. There is no SQL ALTER statement to drop an overflow segment.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39281: Cannot alter COMPRESS in index-organized materialized view.

Cause: DBMS_METADATA_DIFF was comparing two index organized materialized views with different key compression values. There is no SQL ALTER statement to modify the key compression of an index organized materialized view.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39282: Cannot alter default tablespace of partitions in partitioned table.

Cause: DBMS_METADATA_DIFF was comparing two partitioned tables with different default tablespaces. There is no SQL ALTER statement to change the default tablespace of a partitioned table.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39283: Cannot drop, split or merge hash partition: *string*

Cause: DBMS_METADATA_DIFF was comparing two tables or indexes partitioned or subpartitioned by hash, and a (sub)partition in the first object was not present in the second object. Partition maintenance operations such as drop, split or merge can only be performed on list or range (sub)partitioned objects.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39284: Cannot alter the list values of a list subpartition: *string*

Cause: DBMS_METADATA_DIFF was comparing two tables subpartitioned by list, one of which has a subpartition with the same name but a different values list as a subpartition in the other. There is no SQL ALTER statement to change the list values of a list subpartition.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39285: Cannot alter index key compression.

Cause: DBMS_METADATA_DIFF was comparing two indexes with different values of key compression. There is no SQL ALTER statement to change index key compression.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39286: Cannot convert between types of index.

Cause: DBMS_METADATA_DIFF was comparing two indexes of different types, for example, a table index, a domain index, a cluster index, a bitmap index or a bitmap join index. There is no SQL ALTER statement to change the type of an index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39287: Cannot alter index column list.

Cause: DBMS_METADATA_DIFF was comparing two indexes with different column lists. There is no SQL ALTER statement to change the columns of an index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39288: Cannot alter index base table.

Cause: DBMS_METADATA_DIFF was comparing two table indexes defined on different tables. There is no SQL ALTER statement to change the base table of an index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39289: Cannot add or drop local index partition or subpartition: *string*

Cause: DBMS_METADATA_DIFF was comparing two locally partitioned indexes with different partitions or subpartitions. There is no SQL ALTER statement to add or drop a partition or subpartition of a locally partitioned index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39290: Cannot drop a partition of a globally partitioned index.

Cause: DBMS_METADATA_DIFF was comparing two globally partitioned indexes and a partition in the first index does not exist in the second index. There is no SQL ALTER statement to drop a partition of a globally partitioned index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39291: Cannot alter index storage option: *string*

Cause: DBMS_METADATA_DIFF was comparing two indexes with different values for the specified storage option. There is no SQL ALTER statement to change this storage option.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39292: Cannot alter join table of bitmap join index.

Cause: DBMS_METADATA_DIFF was comparing two bitmap join indexes with different join tables. There is no SQL ALTER statement to alter the join tables of a bitmap join index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39293: Cannot alter join condition of bitmap join index.

Cause: DBMS_METADATA_DIFF was comparing two bitmap join indexes with different join conditions. There is no SQL ALTER statement to alter the join condition of a bitmap join index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39294: Cannot alter indextype of domain index.

Cause: DBMS_METADATA_DIFF was comparing two bitmap domain indexes with different indextypes. There is no SQL ALTER statement to alter the indextype of a domain index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39295: Cannot alter index base cluster.

Cause: DBMS_METADATA_DIFF was comparing two cluster indexes defined on different clusters. There is no SQL ALTER statement to change the base cluster of a cluster index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39296: Cannot alter index partitioning type or partitioning columns.

Cause: DBMS_METADATA_DIFF was comparing two indexes with incompatible partitioning: (1) one is partitioned and one is not (2) both are partitioned but in different ways (locally vs. globally, hash vs. range) (3) both are partitioned but on different columns. There is no SQL ALTER statement to change the way an index is partitioned.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39297: Cannot alter materialized view attribute: *string*

Cause: DBMS_METADATA_DIFF was comparing two materialized views with incompatible attributes. There is no SQL ALTER statement to change this attribute of a materialized view.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39298: Cannot alter materialized view partitioning type or partitioning columns.

Cause: DBMS_METADATA_DIFF was comparing two materialized views with incompatible partitioning: (1) one is partitioned and one is not (2) both are partitioned but in different ways (locally vs. globally, hash vs. range) (3) both are partitioned but on different columns. There is no SQL ALTER statement to change the way a materialized view is partitioned.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39299: Cannot alter materialized view physical organization.

Cause: DBMS_METADATA_DIFF was comparing two materialized views with different physical organizations: heap, index organized, etc. There is no SQL ALTER statement to change the index organization of a materialized view.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39300: Cannot alter materialized view log partitioning type or partitioning columns.

Cause: DBMS_METADATA_DIFF was comparing two materialized view logs with incompatible partitioning: (1) one is partitioned and one is not (2) both are partitioned but in different ways (locally vs. globally, hash vs. range) (3) both are partitioned but on different columns. There is no SQL ALTER statement to change the way a materialized view log is partitioned.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39301: Cannot alter values recorded in materialized view log: *string*

Cause: DBMS_METADATA_DIFF was comparing two materialized view logs that are recording different values, and the set of values in the first materialized view log cannot be changed to that in the second materialized view log. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39302: Cannot alter tablespace of materialized view log.

Cause: DBMS_METADATA_DIFF was comparing two materialized view logs which have different tablespaces. There is no SQL ALTER statement to change the tablespace of a materialized view log.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39303: Cannot alter attribute of queue: *string*

Cause: DBMS_METADATA_DIFF was comparing two advanced queues with attribute differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39304: Cannot alter attribute of queue table: *string*

Cause: DBMS_METADATA_DIFF was comparing two AQ queue tables with attribute differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39305: Cannot alter attribute of sequence: *string*

Cause: DBMS_METADATA_DIFF was comparing two sequences with attribute differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39306: Cannot alter attribute of trigger: *string*

Cause: DBMS_METADATA_DIFF was comparing two triggers with differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39307: Cannot alter attribute of type: *string*

Cause: DBMS_METADATA_DIFF was comparing two types with differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39308: Cannot alter attribute of view: *string*

Cause: DBMS_METADATA_DIFF was comparing two views with differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39309: Cannot alter tablespace between bigfile and smallfile.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces, one bigfile, one smallfile. There is no SQL ALTER statement to change a tablespace from smallfile to bigfile or vice versa.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39310: Cannot alter tablespace type.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces of different types: permanent, temporary or undo. There is no SQL ALTER statement to change the type of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39311: Cannot alter tablespace blocksize.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces with different blocksizes. There is no SQL ALTER statement to change the blocksize of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39312: Cannot alter tablespace encryption.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces, one encrypted, one not. There is no SQL ALTER statement to change the encryption property of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39313: Cannot alter tablespace flashback mode.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces, one in flashback mode, one not. There is no SQL ALTER statement to alter the flashback mode of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39314: Cannot alter tablespace extent_management.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces with different extent management properties. There is no SQL ALTER statement to alter the extent management properties of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39315: Cannot drop the first data file from a permanent or undo tablespace.

Cause: DBMS_METADATA_DIFF was comparing two permanent or undo tablespaces. The first data file in the first tablespace is missing from the second tablespace. There is no SQL ALTER statement to drop the first data file from a permanent or undo tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39316: Cannot resize a data file in a smallfile tablespace.

Cause: DBMS_METADATA_DIFF was comparing two smallfile tablespaces. A data file in the first tablespace is of a different size from the corresponding data file in the second tablespace. There is no SQL ALTER statement to resize a data file in a smallfile tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39317: Cannot change the segment space management of a tablespace.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces with different segment space management. There is no SQL ALTER statement to change the segment space management of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39318: Cannot alter user name.

Cause: DBMS_METADATA_DIFF was comparing two users with different names. There is no SQL ALTER statement to change the name of a user.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39319: Cannot undo password expiration.

Cause: DBMS_METADATA_DIFF was comparing two users and the first user had an expired password. There is no SQL ALTER statement to undo the expiration of a user password.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39320: Column names do not match between export and import databases.

Cause: The column names of the table being imported did not match the column names of the preexisting table.

Action: Ensure the column names match between export and import database.

ORA-39321: Cannot alter functional index or virtual expression column: *string*

Cause: Altered column was referenced in a virtual column or functional index expression. There is no SQL ALTER statement to change a column which is referenced in one of these types of expressions.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39322: Cannot use transportable tablespace with TIMESTAMP WITH TIME ZONE columns and different time zone version.

Cause: The source database was at a different time zone version than the target database and there were tables in the dumpfile with TIMESTAMP WITH TIME ZONE columns.

Action: Convert the target database to the same timezone version as the source database or use Data Pump without transportable tablespace.

ORA-39323: cannot load data from external table dump file "*string*"

Cause: A dump file was specified for an import operation that had been created with external tables using the ORACLE_DATAPUMP access driver. This type of dump file cannot be processed using the Data Pump import utility.

Action: Access the data in this dump file with external tables using the ORACLE_DATAPUMP access driver.

ORA-39324: cannot load data from Data Pump dump file "*string*"

Cause: A dump file was specified for a load operation that had been created using the Data Pump Export (expdp) utility. This type of dump file could not be processed as external table using the ORACLE_DATAPUMP access driver.

Action: Access the data in this dump file using the Data Pump Import (impdp) utility.

ORA-39325: TABLE_EXISTS_ACTION cannot be applied to *string*.

Cause: An object was already in existence that uses a name in common with this table. The name collision could be the table name, a constraint, a LOB storage table, or something else in the table definition.

Action: Drop the existing object before running Data Pump.

ORA-39326: cannot load data into table, *string*, due to an unusable index

Cause: An unusable index existed on the table. This index prevented data from being loaded into the table associated with this index.

Action: Either drop the unusable index or make it valid before attempting the import operation.

ORA-39327: Oracle Database Vault data is being stored unencrypted in dump file set.

Cause: No encryption was specified for an export job that involved data from an Oracle Database Vault realm.

Action: No specific user action is required. This is only a warning that secure data may be readable from within the dump file set.

ORA-39328: encryption password is too long

Cause: The encryption password provided to the Data Pump job was invalid because its length was greater than the maximum allowed. When using the password to encrypt the dump file set, the maximum length is 1000 bytes. When using the password to re-encrypt encrypted columns only, the maximum length is 30 bytes.

Action: Retry the operation with a valid encryption password.

ORA-39329: Tablespace *string* needs to be locally managed.

Cause: An attempt was made to run an Oracle Data Pump job with the TRANSPORTABLE=ALWAYS parameter. Tablespaces that contain data for EARLY_OPTIONS in an Oracle Data Pump job run with FULL=Y and TRANSPORTABLE=ALWAYS parameter need to be locally managed.

Action: Run the Oracle Data Pump job without the TRANSPORTABLE parameter set to ALWAYS.

ORA-39331: Wallet is not open on remote node.

Cause: The security module wallet was not open on the remote node.

Action: Open the wallet on the remote node.

ORA-39339: Table *string* was skipped due to transportable import and TSTZ issues resulting from time zone version mismatch.

Cause: The source database is at a different time zone version than the target database and this table contains TIMESTAMP WITH TIME ZONE data.

Action: Convert the target database to the same time zone version as the source database or use Oracle Data Pump with conventional data movement to export then import this table.

ORA-39340: unsupported object, *string* will be skipped.

Cause: Oracle Data Pump encountered an object type that it currently does not support.

Action: Manually move the object to the target database.

ORA-39341: Cannot convert an existing column into an identity column.

Cause: An attempt was made to convert an existing column into an identity column. There is no SQL ALTER statement that will convert an existing column into an identity column.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39342: Data Pump did not import dependent objects for *string* due to the previous error *string*.

Cause: Oracle Data Pump did not import dependent objects because the parent object failed to import properly.

Action: Contact Oracle Support Services.

ORA-39343: Object type *string* failed to create returning error:\n*string*\n

Cause: The object type could not be created. Examine the original error code to determine the actual cause.

Action: The original error code will contain more information.

ORA-39345: Warning: possible data loss in character set conversions

Cause: Oracle Data Pump displayed this message at the start of the import operation because it determined that the character set or the NCHAR character set used by the export database was different from that of the target database and also that the target database character set was not a superset of the export database character set.

Action: No specific user action is required.

ORA-39346: data loss in character set conversion for object *string*

Cause: Oracle Data Pump import converted a metadata object from the export database character set into the target database character set prior to processing the object. Some characters could not be converted to the target database character set and so the default replacement character was used.

Action: No specific user action is required. This type of data loss can occur if the target database character set is not a superset of the export database character set.

ORA-39347: Character data loss was detected during conversion, the row was rejected.

Cause: The row contained characters that did not exist in the destination character set.

Action: No specific user action is required. The destination character set must be a superset of the source character set to avoid data loss.

ORA-39352: Wrong number of TRANSPORT_DATAFILES specified: expected *string*, received *string*

Cause: The number of TRANSPORT_DATAFILES specified on the impdp command was not correct.

Action: Specify the correct TRANSPORT_DATAFILES for this transportable job.

ORA-39353: Data was not imported for *string*. Cannot locate the time zone version *string* file.

Cause: This table contains TIMESTAMP WITH TIME ZONE data and Oracle Data Pump needed to load the source version of the time zone file. This version cannot be located.

Action: Install the latest time zone version files.

ORA-39357: InWarning: Oracle Data Pump operations are not typically needed when connected to the root or seed of a container database.

Cause: The Oracle Data Pump client was attached to the root or seed container database.

Action: Continue if this is the desired connection string or attach to a pluggable database within the container database.

ORA-39358: Export dump file version *string* not compatible with target version *string*

Cause: The Oracle Data Pump export job version was newer than the target compatibility version.

Action: Upgrade the target database to a compatibility level of at least the export job version, or rerun the export job with a job version that is lower than or equal to the compatibility version of the target database.

ORA-39359: Source time zone version is *string* and target time zone version is *string*.

Cause: The time zone version of the source database is not the same as the time zone version of the target database.

Action: Tables containing TIMESTAMP WITH TIME ZONE data cannot be imported with transportable tablespace technology when time zone versions are different between the export and target databases. All affected tables will be reported during the import job and will not be created. If any are reported, convert the target database to the same time zone version as the source or use Oracle Data Pump with conventional data movement to export then import the affected tables.

ORA-39360: Table *string* was skipped due to transportable import and TSLTZ issues resulting from time zone mismatch.

Cause: The time zone of the source database is different than the time zone of the target database and this table contains TIMESTAMP WITH LOCAL TIME ZONE data.

Action: Convert the target database to the same time zone as the source database or use Oracle Data Pump with conventional data movement to export then import this table.

ORA-39361: Source time zone is *string* and target time zone is *string*.

Cause: The time zone of the source database is different than the time zone of the target database.

Action: Tables containing TIMESTAMP WITH LOCAL TIME ZONE data cannot be imported with transportable tablespace technology when time zones are different between the export and target databases. All affected tables will be reported during the import job and will not be created. If any are reported, convert the target database to the same time zone as the source or use Oracle Data Pump with conventional data movement to export then import the affected tables.

ORA-39363: Type evolution could not be preserved for *string*

Cause: Trying to apply each version of the type during import resulted in compilation warnings. The type was successfully recreated to the latest version only.

Action: Export dump files as well as transportable tablespaces that contain earlier versions of this type cannot be imported on top of this type definition.

ORA-39364: encryption password is too long

Cause: The encryption password provided to the Oracle Data Pump job was invalid because its length was greater than the maximum allowed. When using the password to encrypt the dump file set, the maximum length is 128 bytes. When using the password to re-encrypt encrypted columns only, the maximum length is 30 bytes.

Action: Retry the operation with a valid encryption password.

ORA-39366: disable table lock on *string.string* failed with:\nstring\n

Cause: Examine the original error code to determine the actual cause.

Action: The original error code contains more information.

ORA-39367: Statistics are being skipped. Cannot locate the time zone version *string* file.

Cause: Importing statistics requires that the Oracle Data Pump load the source version of the time zone file. This version cannot be located.

Action: Install the latest time zone version files.

ORA-39368: cannot alter partition varray column properties

Cause: DBMS_METADATA_DIFF was comparing two partitioned tables. There is no SQL ALTER statement to change varray column properties.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39369: some rows may not be exported for *string* due to block corruption

Cause: The corrupted data blocks were ignored when Oracle Data Pump was exporting the table.

Action: No action is required.

ORA-39370: remap value *string* is too long

Cause: The remap value provided to the Oracle Data Pump job was invalid because its length was greater than the maximum allowed.

Action: Retry the operation with a valid remap value.

ORA-39371: cannot specify partition in remap_table without departitioning

Cause: The 'remap_table' value specified a partition but the tables were not being departitioned.

Action: Either remove the partition name in the 'remap_table' parameter or add the 'partition_options=departition' parameter.

ORA-39372: InWarning: Oracle Data Pump is exporting from a database that supports long identifiers to a version that does not support long identifiers.

Cause: The Oracle Data Pump job was exporting from a database version that has support for long identifiers and may have objects with long identifiers but the target version does not support long identifiers.

Action: Continue if this is the desired action but be aware that some objects may not be exported and some that are exported will not be able to be imported to the target database.

ORA-39373: cannot export *string* to version *string* due to long identifiers

Cause: This object had long identifiers and could not be exported to the target version specified in the Oracle Data Pump command.

Action: If this is the desired action, then continue, but be aware that this object will not be included in the dump file. If this is not the desired action then change the version parameter to a value greater than or equal to 12.2.0.0.0.

ORA-39374: Statistics failed to export. Failing error is *lnstring*

Cause: The statistics failed to export.

Action: Examine the original error code to determine the actual cause.

ORA-39375: Statistics failed to import. Failing error is *lnstring*

Cause: The statistics failed to import.

Action: Examine the original error code to determine the actual cause.

ORA-39376: invalid data encountered (*string*)

Cause: Optional data validation detected invalid data while accessing external table data.

Action: See trace files for details of the problem.

ORA-39377: altering table read-only *string.string* failed with:*lnstringln*

Cause: Altering the table to read-only failed.

Action: Examine the original error code to determine the actual cause.

ORA-39378: Data Pump *string* import job conflicts with underscore parameter *string*

Cause: The mode used for import cannot be used with the underscore parameter.

Action: Unset the underscore parameter and retry the import.

ORA-39379: Logging for table *string* may not be restored.

Cause: The table was created with NO LOGGING specified and the restore to the original value failed.

Action: Verify the logging attributes on the table.

ORA-39380: Cannot alter tablespace with lost write protection.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces. There is no SQL ALTER statement to change tablespace lost write protection.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39381: Cannot add datafile to bigfile tablespace.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces. Datafile can not be added to a bigfile tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39382: There are *string* cursors left open in the *string* package.

Cause: This is an internal error. The identified package left some cursors opened.

Action: Contact Oracle Support Services.

ORA-39383: There is more data loss than reported for object type *string*.

Cause: The maximum number of replacement characters for each read operation prevented all objects within this object type that lost data from being found. There should be one or more messages preceding this one that indicate data loss for specific objects within the named object type. However, this message indicates that there may be more objects within the named object type that lost

Action: No specific user action is required.

ORA-39384: Warning: User *string* has been locked and the password expired.

Cause: Oracle Data Pump displayed this message while importing users because it determined that a user was created with a password version that is no longer supported. See the documentation for PASSWORD_VERSIONS in the system view DBA_USERS for more information.

Action: Connect AS SYSDBA and unlock the account and set a password for the user. This can be done by issuing an "ALTER USER *username* ACCOUNT UNLOCK;" command followed by an "ALTER USER *username* IDENTIFIED BY *password*;" command. See the documentation for the SQLNET.ORA parameter SQLNET.ALLOWED_LOGON_VERSION_SERVER which explains how to control which password versions will be created when the password for the user is reset.

ORA-39385: Data was not imported for *string*.

Cause: The Data Pump export job had an unreported problem while exporting the data for this table, partition, or subpartition.

Action: Retry the export command including the data for this table, partition, or subpartition.

ORA-39386: cannot load data into sharded table from sharded catalog for table *string*

Cause: Data pump import operation was trying to load table data into a sharded table from the sharded catalog database. Table data for sharded tables must be loaded into the sharded databases.

Action: Use the data pump to load the table data into the sharded database.

ORA-39387: cannot load metadata into a sharded database

Cause: Data pump import operation was trying to load metadata into a sharded database.

Action: Metadata is propagated to the sharded database from the sharded catalog.

ORA-39388: cannot use transportable tablespace to export from a sharded database

Cause: An attempt was made to export from a sharded database using transportable tablespace.

Action: Perform this operation without transportable tablespace.

ORA-39389: no form of transportable export is allowed from a sharded catalog

Cause: An attempt was made to export from a sharded catalog using a form of transportable Data Pump.

Action: Perform this operation without transportable data movement.

ORA-39390: cannot use Oracle Data Pump with a network link in a sharded environment

Cause: An attempt was made to perform an Oracle Data Pump operation over a network link with either the source or target database being sharded.

Action: Perform this operation without a `network_link` parameter.

ORA-39391: maximum number of Data Pump jobs (*string*) exceeded

Cause: The value of the `MAX_DATAPUMP_JOBS_PER_PDB` initialization parameter exceeded the allowed value.

Action: Retry the operation or increase the maximum allowed value of the `MAX_DATAPUMP_JOBS_PER_PDB` initialization parameter.

ORA-39392: Data Pump filter object *string* invalid length

Cause: The Data Pump filter contained an object name that was larger than 128 characters.

Action: Fix the object name in the filter and retry the Data Pump command.

ORA-39393: direct path operation in shard catalog not allowed on sharded table *string*

Cause: Direct path operations could not be performed on a sharded table from inside of the catalog database for a sharded table. The data for sharded tables lives in other shard databases.

Action: Use direct path operations directly on the shard databases.

ORA-39394: Cannot alter vector encoded attributes on a table column.

Cause: An attempt was made to change a column that was vector encoded with a SQL ALTER statement.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39395: Warning: object *string* requires password reset after import

Cause: During Data Pump Export or Import, fixed user or shared database link objects were exported and the enforcement of dictionary credentials was set to ENABLED.

Action: After running Data Pump Import, execute the ALTER DATABASE LINK statement for each link mentioned in the error message and reset the password for the link. Failure to reset the password for the link results in an ORA-28449 error when attempting to use the link.

ORA-39396: Warning: exporting encrypted data using transportable option without password

Cause: The encryption password was not specified for an export job that used the transportable option and included one or more encrypted tablespaces.

Action: No specific user action is required. However, note that the wallet on the source and target databases must be identical in order to import the dump file. Continue if this is the desired operation or add an encryption password to the DataPump export command.

ORA-39398: cannot load data, Oracle Data Pump dump file "*string*" was created in TEST_MODE

Cause: The Oracle Data Pump dump file was created using a value of TEST_MODE for the export TTS_CLOSURE_CHECK parameter. The Oracle Data Pump dump file was in an inconsistent state and could not be loaded.

Action: Re-create the Oracle Data Pump dump file and specify a value of FULL or ON or OFF for the export TTS_CLOSURE_CHECK parameter.

ORA-39399: Dump file set is unusable. TEST_MODE requested.

Cause: This is an informational message to indicate that the Data Pump dump file was created using a value of TEST_MODE for the export TTS_CLOSURE_CHECK parameter. The Data Pump dump file was in an inconsistent state and could not be processed by the Data Pump import utility.

Action: None

ORA-39400: invalid value *string* for parameter *string*

Cause: The string supplied for the parameter MAX_DATAPUMP_JOBS_PER_PDB or MAX_DATAPUMP_PARALLEL_PER_JOB was neither an integer nor was it the special value AUTO.

Action: Provide a proper value for this parameter.

ORA-39402: The log or SQL file cannot overwrite dump file "*string*".

Cause: The name and location of the Data Pump log or SQL file matched the name of an existing Data Pump, external table, or legacy dump file. This message may be seen before the Data Pump job has started or after the job has started, if wildcard dump files are being used.

Action: If this message is seen before the job has started, then retry the operation using a different name or directory object for the log or SQL file. Otherwise, the message is informational and no further action is required.

ORA-39403: object *string* "*string*" type identifier mismatch

Cause: An object type in a transportable tablespace set already existed on the target system but with a different type identifier. The object type or dependent type was used by an existing table and could not be changed. Tables in the transportable tablespace set that use this object type could not be created. The alert log contains additional information.

Action: If possible, drop the object type and the dependent objects from the target system and retry the operation.

ORA-39405: Oracle Data Pump does not support importing from a source database with TSTZ version *string* into a target database with TSTZ version *string*.

Cause: The source database was at a different time zone version than the target database and there were tables that contained TIMESTAMP WITH TIME ZONE (TSTZ) data.

Action: Convert the target database to the same time zone version or later as the source database or use Oracle Data Pump with conventional data movement to export then import this data.

ORA-39406: Job mode *string* is not permitted when running as SYSBACKUP.

Cause: A mode other than transportable, table, or tablespace was specified for the job. When running a Data Pump export or import operation as SYSBACKUP, the mode is limited to transportable, table, and tablespace.

Action: No action is required.

ORA-39407: Warning: Incompatible usage of parameters *string* and *string.in*

Cause: When using the DEPARTITION transform, REMAP_TABLE should reference a specific table partition. Otherwise the REMAP_TABLE is ignored.

Action: No action is required.

ORA-39408: unable to generate checksum for dump file "*string*"

Cause: The Oracle Data Pump Export utility was unable to generate a checksum for the specified dump file. This message is followed by one or more secondary messages.

Action: Take the appropriate action based on the secondary messages.

ORA-39409: unable to verify checksum for dump file "*string*"

Cause: Data Pump Import was unable to verify the checksum for the specified dump file. This message is followed by one or more secondary messages.

Action: Take appropriate action based on the secondary messages.

ORA-39411: header checksum error in dump file "*string*"

Cause: The header block for the Oracle Data Pump dump file contained a header checksum that did not match the value calculated from the header block as read from disk. This indicated that the header was tampered with or otherwise corrupted due to transmission or media failure.

Action: Make sure the filesystem where the dump files are stored does not report any issues and has enough capacity. Re-create the Data Pump export and retry the import. If the problem persists, contact Oracle Support Services.

ORA-39412: file checksum error in dump file "*string*"

Cause: The header block for the Data Pump dump file contained a file checksum that did not match the value calculated from the header block as read from disk. This indicates that the file was tampered with or otherwise corrupted due to transmission or media failure.

Action: Contact Oracle Support Services.

ORA-39416: Warning: dump file checksum verification is disabled

Cause: The Data Pump VERIFY_CHECKSUM parameter was either implicitly or explicitly set to NO and the import dump file set included files that contain checksums.

Action: Continue if the desired behavior is to not perform checksum verification. Otherwise, restart the import operation and include VERIFY_CHECKSUM=YES.

ORA-39417: cannot alter external tables to remove default directory

Cause: DBMS_METADATA_DIFF was comparing two external tables. There is no SQL ALTER statement to remove the default directory.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39418: cannot alter external tables to remove access parameters

Cause: DBMS_METADATA_DIFF was comparing two external tables. There is no SQL ALTER statement to remove the access parameters.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39419: Error *string* during import when reordering POs in Master table *string* for object type with sequence number *string*.

Cause: This is an internal error. Data Pump encountered a potentially non-fatal error during import when reordering process orders. Refer to the error codes and subsequent messages for details.

Action: Rerun the impdp command with a version earlier than release 12.2 or, if the problem persists, contact Oracle Support Services.

ORA-39420: transportable tablespace '*string*' clean offline SCN mismatch [*string*] [*string*]

Cause: The tablespace clean offline SCN changed during a transportable Data Pump export operation. Tablespaces in the transportable export tablespace set are required to be and to remain in READ ONLY mode for the duration of the operation. During the transportable export operation, a tablespace within the transportable tablespace set was taken out of READ ONLY mode. This resulted in the tablespace clean offline SCN being altered. As a result, the tablespace is incompatible with the current transportable export operation.

Action: ALTER the tablespace to be READ ONLY and then retry the operation.

ORA-39421: cannot modify JSON storage attributes

Cause: DBMS_METADATA_DIFF compared attributes of two JavaScript Object Notation (JSON) columns. JSON storage attributes could not be modified.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39422: invalid definition of the TRANSPORT_DATAFILES_LOG output file

Cause: The job being defined could not be started because either the TRANSPORT_DATAFILES_LOG output file name conflicted with the output LOG file, or the definition was unusable.

Action: Specify a valid directory name and file name for the TRANSPORT_DATAFILES_LOG file.

ORA-39423: The dump file set and data files must be copied to the target database area.

Cause: Information message written to the TRANSPORT_DATAFILES_LOG output file.

Action: None required.

ORA-39424: The data file paths must be updated accordingly before initiating the Import.

Cause: Information message written to the TRANSPORT_DATAFILES_LOG output file.

Action: None required.

ORA-39425: <target_database_area_path>*string.string*

Cause: Information message written to the TRANSPORT_DATAFILES_LOG output file.

Action: None required.

ORA-39426: Domain indexes of partitioned tables will not be imported.

Cause: The domain indexes were not imported because the PARTITION_OPTIONS parameter was set to MERGE.

Action: Manually create the domain indexes on the target database.

ORA-39427: Dependent objects of partitioned tables will not be imported.

Cause: The dependent objects were not imported because the PARTITION_OPTIONS parameter was set to DEPARTITION.

Action: Manually create the dependent objects on the target database.

ORA-39428: Warning: Statistics not gathered while loading data for table "*string*"

Cause: An attempt was made to automatically collect statistics in an Autonomous Data Warehouse (ADW) or Autonomous Transaction Processing (ATP) environment. If the ACCESS_METHOD parameter is specified as something other than EXTERNAL_TABLE or if properties of the table prevent using EXTERNAL_TABLE, then this warning is displayed.

Action: Gather statistics manually once data loading is complete.

ORA-39429: REMAP_SCHEMA for SYSTEM does not exist, *string*\n

Cause: The Data Pump REMAP_SCHEMA parameter for import was specified for schema SYSTEM, but the target schema did not exist in the database.

Action: Create the schema in the database and then retry the import operation.

ORA-39430: Warning: Optimized column *string.string.string* length exceeds index key limit

Cause: An attempt was made to optimize the byte column length with the BYTE_OPTIMIZED transform parameter value to avoid index creation failure during import.

Action: None

ORA-39432: Warning: Grant *string* failed due to timeout while waiting to lock oracle object.\nFailing sql is:\n*string*\n

Cause: A lock timeout error occurred while executing an Oracle object grant DDL because it recompiled the target object which requires a lock on this object. If a lock is not acquired, then a timeout error occurs.

Action: None

ORA-39433: cannot alter domain index parameters

Cause: The DBMS_METADATA_DIFF package was comparing two domain indexes with different parameters. There is no SQL ALTER statement to alter the index type of a domain index.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39435: Warning: *string* cannot be applied to blockchain table *string*. No rows processed.

Cause: Oracle Data Pump options SAMPLE, QUERY, REMAP_DATA, and TABLE_EXISTS_ACTION were specified for blockchain tables.

Action: None

ORA-39436: transportable table "string"."string" metadata mismatch

Cause: The metadata of the plugged in transportable table did not match the metadata located in the dump file.

Action: See trace files for details of the problem.

ORA-39437: Warning: DEPARTITIONING cannot be applied to blockchain tables.

Cause: Departitioning options cannot be applied to blockchain tables.

Action: None

ORA-39438: Cannot alter the data type of column *string*

Cause: An attempt was made to change the data type of this column. There is no SQL ALTER statement to change this column to the new data type.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39439: Warning: cannot process blockchain tables in transportable jobs or over a network link.

Cause: Oracle Data Pump encountered blockchain tables which are not supported over a network link or in transportable jobs.

Action: None

ORA-39440: failed to verify blockchain rows in table *string*

Cause: Oracle Data Pump import failed to verify blockchain rows loaded.

Action: None

ORA-39442: Data Pump software update in progress

Cause: DPLOAD.SQL was holding the exclusive lock. Data Pump software update was in progress.

Action: Try again after the software update is complete.

ORA-39444: failed to retrieve the current session address

Cause: Oracle Data Pump was unable to retrieve the current session address.

Action: None

ORA-39445: REMAP_TABLESPACE with wildcard is not mapped to *string*

Cause: Remapping tablespaces using a wildcard during import was not allowed. Tablespace was either temporary or did not exist.

Action: Use a permanent tablespace with wildcard remapping.

ORA-39446: VIEWS_AS_TABLES error: *string* does not exist.

Cause: The specified element in the VIEWS_AS_TABLES parameter did not exist.

Action: Retry the operation with an existing and valid view or template table.

ORA-39447: VIEWS_AS_TABLES error: *string* has invalid properties *string*.

Cause: The specified element in the VIEWS_AS_TABLES parameter had invalid properties.

Action: Retry the operation with a valid view or template table.

**ORA-39448: VIEWS_AS_TABLES error: Cannot create template table *string*.
SQLCODE is *string*.lnFailing sql is: ln*string***

Cause: The specified internal template table could not be created.

Action: None

ORA-39449: cannot disable editioning attributes

Cause: Editioning was not reversible once it had been enabled.

Action: None

ORA-39450: Database release *string.string* unable to read file created by release *string*

Cause: A dump file was specified for an import operation whose version number was incompatible with the dump file version of the Data Pump product currently running on the system. Usually this message indicates that the dump file was produced by a newer version of the Data Pump export utility.

Action: Import this dump file using the Data Pump import utility with the same version as the export which created the file.

ORA-39451: PARALLEL value *string* exceeds dump file set count

Cause: The value specified by the PARALLEL parameter for the Data Pump Export job is greater than the number of dump files indicated.

Action: No specific user action is required. This is an informational message to indicate that the value specified by the PARALLEL parameter exceeds the number of dump files indicated for the Data Pump Export job.

ORA-39452: FILESIZE is outside valid range of *string*KB to *string*MB

Cause: The value specified for the FILESIZE parameter was either too small to hold the header information for the export file, plus any data, or exceeded the allowed maximum size for a Uniform Resource Identifier (URI) dump file.

Action: Retry the operation using a value for FILESIZE that falls within the valid range.

ORA-39453: Warning: The ENABLE_SECURE_ROLE parameter has been desupported.

Cause: The desupported ENABLE_SECURE_ROLES parameter was specified using either the Data Pump command-line clients, expdp and impdp, or the Data Pump PL/SQL API.

Action: Consult the Oracle Utilities documentation to find a workaround for running a Data Pump operation with secure roles enabled.

ORA-39454: Warning: Ignoring *string* transform parameter with older dump files.

Cause: OMIT_ACDR_METADATA transform parameter was not supported with dump files older than Oracle Database release 23c, version 23.1.

Action: None

ORA-39458: Transportable tablespaces prevented from being set read/write.

Cause: The tablespaces in the transportable import tablespace set could not be set to read/write access. This may be due to the file system or tablespace data file protection being read only. As a result timezone fixup and bitmap rebuild operations did not occur for tablespaces in the transportable import tablespace set.

Action: Verify the data file protection settings before retrying the operation.

ORA-39459: *string* was called with a NULL dump file specification.

Cause: The Oracle Data Pump process model function was called with a NULL dump file specification.

Action: Specify a dump file that is valid for the job.

ORA-39460: cannot create password verification function *string* due to lockdown

Cause: COMMON_SCHEMA_ACCESS lockdown was enabled for the pluggable database (PDB) but there was no PASSWORD_VERIFY_FUNCTION owner identified and the ALLOWED_PVF_OWNERS system parameter was not configured to allow schema-qualified password verification function.

Action: Set the PASSWORD_VERIFY_FUNCTION owner system parameter and retry the import again. - If the ALLOWED_PVF_OWNERS system parameter is set to NULL (default value), contact your database administrator to have it set to an appropriate value (comma-separated list of database users) to allow schema-qualified password verification function.

ORA-39500: failed to notify CRS of a Startup/Shutdown event for database "*string*", instance "*string*" (ignored)

Cause: The instance was unable to obtain the context or information required to notify the CRS framework.

Action: None Required. The error is ignored.

ORA-39501: failed to notify CRS of a Startup/Shutdown event [*string*] (ignored)

Cause: The instance was unable to communicate with the CRS framework.

Action: None Required. The error is ignored.

ORA-39502: failed to notify CRS of a Startup/Shutdown event [*string*] (ignored)

Cause: The instance was unable to create an environment context.

Action: None Required. The error is ignored.

ORA-39503: failed to notify CRS of a Startup/Shutdown event [*string*] (ignored)

Cause: The instance was unable to populate the environment context.

Action: None Required. The error is ignored.

ORA-39504: failed to notify CRS of a Startup/Shutdown event [*string*] (ignored)

Cause: The instance was unable to find the location of the alert file.

Action: None Required. The error is ignored.

ORA-39510: CRS error performing *string* on *string* '*string*' on '*string*\n*string*

Cause: Unable to perform action on associated CRS resource.

Action: See following error messages for additional information. Fix error and retry.

ORA-39511: Start of CRS resource for instance '%0!s' failed with error:[%1!s]\n%2!s

Cause: The Cluster Ready Services (CRS) detected an error during an attempt to start the indicated resource. The instance start operation was terminated. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, correct the indicated problems, and then retry the operation.

ORA-39512: Stop of CRS resource for instance '%0!s' failed with error:[%1!s] ln%2!s

Cause: The Cluster Ready Services (CRS) detected an error during an attempt to stop the indicated resource. The instance stop operation was terminated. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, correct the indicated problems, and then retry the operation.

ORA-39600: Queue keys needs to be a suffix of cluster key.

Cause: Attempt to specify queue key columns that don't form a suffix of the cluster key.

Action: Only specify queue key columns as a suffix of cluster key.

ORA-39601: Hash key is required.

Cause: Missing hash key in the cluster key specification.

Action: Specify one or more hash key columns.

ORA-39700: database must be opened with UPGRADE option

Cause: A normal database open was attempted, but the database has not been upgraded to the current server version.

Action: Use the UPGRADE option when opening the database to run catupgrd.sql (for database upgrade), or to run catalog.sql and catproc.sql (after initial database creation).

ORA-39701: database must be mounted EXCLUSIVE for UPGRADE or DOWNGRADE

Cause: The database was mounted for SHARED cluster access.

Action: Set the CLUSTER_DATABASE initialization parameter to FALSE and restart the server with the UPGRADE or DOWNGRADE option.

ORA-39702: database not open for UPGRADE or DOWNGRADE

Cause: An upgrade, downgrade, reload, or patch script was invoked when the database was not open for UPGRADE or DOWNGRADE.

Action: Use STARTUP UPGRADE to open the database for upgrade or to apply a patch set. Use STARTUP DOWNGRADE for running a downgrade script or the reload script.

ORA-39703: server version and script version do not match

Cause: An upgrade, downgrade, reload, or patch script was invoked, but the database instance version was not the version for which the script was intended.

Action: Check that the correct ORACLE_HOME and ORACLE_SID environment variables are set. Also check that the SQL script is being invoked from the correct ORACLE_HOME.

ORA-39704: permission to modify component registry entry denied

Cause: An attempt was made to modify an entry in the component registry, but the session user was not authorized; only the CONTROL or SCHEMA user for the component are authorized to modify the component registry entry.

Action: Connect as either the CONTROL or SCHEMA user for the component.

ORA-39705: component '*string*' not found in registry

Cause: No entry in the component registry was found for the specified component.

Action: Check the spelling of the component ID and use the DBA_REGISTRY view to list the existing components.

ORA-39706: Schema '*string*' is not found.

Cause: The schema name specified was not found in the database.

Action: Create the schema, or request privileges to the schema.

ORA-39707: compatible parameter *string* too high for downgrade to *string*

Cause: A downgrade was attempted, but the compatible initialization parameter value was greater than the downgrade release version.

Action: Once the compatible value has been raised, downgrade to earlier releases is not supported.

ORA-39708: component '*string*' not a *string* component

Cause: The component was not a component for the specified namespace.

Action: Either enter a valid component identifier for the namespace or set the session namespace to the correct component namespace.

ORA-39709: incomplete component downgrade; *string* downgrade aborted

Cause: One or more components did not have a status of DOWNGRADED.

Action: Correct the component problem and re-run the downgrade script.

ORA-39710: The database mode conflicts with the connection type.

Cause: An attempt was made to connect to a database when the database was open for upgrade or downgrade, but a conflicting type of connection was specified. Only the SYSDBA and SYSOPER types of administrative connection are allowed while the database is open in upgrade or downgrade mode.

Action: If you are not an administrative user, try to connect again after the database upgrade or downgrade is complete. If you are an administrative user, specify either the AS SYSDBA or the AS SYSOPER administrative connection type.

ORA-39711: critical patch number less than last installed CPU number

Cause: A Critical Patch Update (CPU) script was invoked that had a number that was less than the last CPU installed in the database.

Action: Check the DBA_REGISTRY_HISTORY view to identify the last CPU for the database, and install the most recent CPU.

ORA-39712: database cannot be opened by an Oracle Database XE server

Cause: An attempt was made to open a Standard Edition or Enterprise Edition database with the Oracle Database Express Edition (XE) of the server.

Action: Use the Oracle Database XE server only with Oracle Database XE databases.

ORA-39714: upgrade script utlmmig.sql failed

Cause: A normal database open was attempted, but the upgrade script utlmmig.sql failed to complete.

Action: Use the UPGRADE option when opening the database and then run utlmmig.sql.

ORA-39715: Downgrade script UTLMMIGDOWN.SQL failed.

Cause: A normal database open was attempted, but the downgrade script UTLMMIGDOWN.SQL failed to complete.

Action: Use the DOWNGRADE option when opening the database and then run UTLMMIGDOWN.SQL.

ORA-39716: Downgrade for Oracle Label Security failed.

Cause: Downgrading Oracle Label Security module failed since OLS triggers were found in LBAC_TRIGGER schema.

Action: Disable all the OLS policies and delete all the triggers within LBAC_TRIGGER schema.

ORA-39726: unsupported add/drop column operation on compressed tables

Cause: An unsupported add/drop column operation for compressed table was attempted.

Action: When adding a column, do not specify a default value. DROP column is only supported in the form of SET UNUSED column (meta-data drop column).

ORA-39727: COMPATIBLE must be set to 10.0.0.0.0 or higher

Cause: An add/drop column operation for compressed table has been performed on the database. This requires COMPATIBLE to be set to 10.0.0.0.0 or higher during upgrade from 9.2 to a 10i or higher release.

Action: Set COMPATIBLE to 10.0.0.0.0 and retry the upgrade.

ORA-39728: compressed table cannot have column with LONG data type

Cause: One of the following was attempted: - Created a basic or advanced row-compressed table with a LONG data type. - Altered an existing table with a LONG data type to be basic or advanced row compressed. - Added a LONG data type column to a basic or advanced row-compressed table.

Action: LONG data types are not supported with basic or advanced row-compressed tables. Create the table without a LONG column or change the table to not use basic or advanced row compression. If adding a column, do not use the LONG data type. If modifying attributes of a column to change the data type to LONG the table cannot be basic or advanced row compressed.

ORA-39751: partitioned table on both sides of PARTITIONED OUTER JOIN is not supported

Cause: An attempt was made to partition both sides of PARTITIONED OUTER JOIN.

Action: Specify partitioned table on one side of PARTITIONED OUTER JOIN only.

ORA-39752: redundant column in partitioning and join columns is not allowed

Cause: An attempt was made to specify redundant columns in partitioning and join columns for NATURAL or named column PARTITIONED OUTER JOIN.

Action: Do not specify redundant column in partitioning and join columns.

ORA-39753: unsupported use of subquery in PARTITIONED OUTER JOIN condition

Cause: An attempt was made to use subquery in PARTITIONED OUTER JOIN condition.

Action: Remove subquery from the join condition.

ORA-39754: FULL PARTITIONED OUTER JOIN is not supported

Cause: An attempt was made to use FULL PARTITIONED OUTER JOIN.

Action: Specify FULL PARTITIONED OUTER JOIN through UNION of LEFT and RIGHT PARTITION OUTER JOIN.

ORA-39755: cannot use PARTITIONED OUTER JOIN with a left correlation

Cause: An attempt was made to use a PARTITIONED OUTER JOIN where the right side is a lateral view with a left correlation to the left side and is partitioned.

Action: Rewrite the query without the left correlation.

ORA-39761: stream reset required before loading this stream again

Cause: An attempt was made to load a stream that was previously loaded but has not been reset yet.

Action: Reset the specified stream and convert column array data to it before attempting to load it again.

ORA-39762: streams must be loaded in conversion order

Cause: An attempt was made to load a stream out of conversion order.

Action: Load streams in the same order they were converted.

ORA-39763: stream must be completely loaded before it is reset

Cause: An attempt was made to reset a stream that contains converted column array data and hasn't been completely loaded yet.

Action: Before resetting a stream, load it until a status of OCI_SUCCESS, OCI_NO_DATA, or OCI_NEED_DATA is returned.

ORA-39764: specified stream is not in the specified direct path context

Cause: A direct path operation was attempted using a stream that was not created in the specified direct path context.

Action: Only use streams created in the specified direct path context.

ORA-39765: stream must be reset before used in a column array conversion

Cause: The stream was completely loaded, but has not been reset yet.

Action: Reset loaded streams after load returns OCI_SUCCESS, OCI_NO_DATA, or OCI_NEED_DATA. The stream can then be used in a column array to stream conversion.

ORA-39766: invalid stream specified for column array conversion

Cause: A stream must be loaded and reset before used again in a column-array-to-stream conversion. This error is issued if another stream has subsequently been converted before the specified stream has been loaded, or if the latest load of this stream returned OCI_ERROR.

Action: Don't convert into a previous stream before it is loaded. Also, when load stream returns OCI_ERROR, the stream must be loaded again to insure any remaining information in the stream is loaded. The stream must be loaded even if the last or only row was in error. There may be error information in the stream that needs to be sent to the server.

ORA-39767: finish is not allowed when unloaded stream data exists

Cause: A direct path finish was attempted when at least one stream buffer has not been completely loaded.

Action: All streams must be loaded after a column array to stream conversion until load stream returns a status of OCI_SUCCESS or OCI_NO_DATA. The load can then be finished.

ORA-39768: only one direct path context top level column array is allowed

Cause: Attempt to create multiple top level column arrays in a direct path context, when only one is allowed.

Action: Create another direct path context if additional top level column arrays are required.

ORA-39769: finish is not allowed with an incompletely loaded last row

Cause: Part of a row has been loaded, but it is not complete.

Action: Finish loading the current row when load stream returns OCI_ERROR or OCI_NEED_DATA.

ORA-39771: stream must be loaded before its handle is freed

Cause: An attempt was made to free a stream handle after conversion but before the stream was loaded.

Action: Load the stream until OCI_SUCCESS, OCI_NEED_DATA or OCI_NO_DATA is returned before attempting to free the stream handle. If OCI_NEED_DATA is returned, another stream must be loaded to complete last row.

ORA-39772: column array reset disallowed after OCI_CONTINUE or OCI_NEED_DATA

Cause: An attempt was made to reset a column array when a row conversion is still in progress.

Action: Complete the current row before resetting the column array. To ignore the current row when conversion returned OCI_NEED_DATA, set the current column flag to OCI_DIRPATH_COL_ERROR. This should be followed by a conversion, which will undo and ignore the row. The column array(s) can then be reset.

ORA-39773: parse of metadata stream failed

Cause: An unexpected error occurred while attempting to parse the metadata // stream for a table being loaded.

Action: Call Oracle support.

ORA-39774: parse of metadata stream failed with the following error:\n *string*

Cause: An unexpected error occurred while parsing the metadata stream.

Action: See the secondary error for more information.

ORA-39775: direct path API commit not allowed due to previous fatal error

Cause: An attempt was made to commit a Direct Path context after a fatal error.

Action: Correct the error and retry.

ORA-39776: fatal Direct Path API error loading table *string*

Cause: A fatal error was detected loading the specified or previous table.

Action: Correct the error and retry.

ORA-39777: data saves are not allowed when loading LOB columns

Cause: An attempt was made to save data when loading LOB columns or columns stored as LOBs (such as long varchars, varrays and XMLtypes).

Action: Do not attempt to do a data save or partial save when loading LOB columns. A finish save is allowed.

ORA-39778: the parallel load option is not allowed when loading lob columns

Cause: An attempt was made to load lob columns using the attribute OCI_ATTR_DIRPATH_PARALLEL. This error will also be issued when loading any columns that are stored as lobs (such as varrays and xml types).

Action: Do not use the parallel attribute when loading lob columns.

ORA-39779: type "*string*". "*string*" not found or conversion to latest version is not possible

Cause: Unable to import table data using the specified type. The type was nonexistent in the database or the input type could not be converted to the existing type. The reasons why a conversion was not possible are: 1. The version of the type in the database was greater than the version of the type at export time because 1 or more attributes have been added or dropped from the type. 2. If the type existed in the database prior to the import operation, then its internal identifier may not match the internal identifier of the type from the export database. The identifiers must match for an import to succeed.

Action: Ensure the types in the database match those at export time.

ORA-39780: Direct path context operations are not allowed after the context is aborted or finished

Cause: The specified direct path context was aborted or finished.

Action: Do not pass a direct path context that has ended to any direct path functions.

ORA-39781: Direct path stream loads are not allowed after another context loading the same table has ended

Cause: Attempt to load a stream in one context after another loading the same table has ended.

Action: Close all contexts before trying to create another that loads the same table as a previous context in the same session.

ORA-39782: Direct path prepare is not allowed after another context loading the same table has ended

Cause: Direct path prepare called after a context loading the same table has ended.

Action: Close all contexts before trying to create another that loads the same table as a previous context in the same session.

ORA-39783: Invalid direct path transaction active

Cause: Direct path operations were not performed in the transaction started by the first OCIDirPathPrepare call.

Action: Ensure the correct transaction is active prior to calling Direct Path API operations.

ORA-39784: This direct path operation is not allowed while another is in progress

Cause: Another direct path operation was active.

Action: Complete any direct path operations in progress before attempting this operation.

ORA-39785: SQL expressions returning ADT objects are not allowed in direct path

Cause: The passed SQL expression returned a user-defined ADT which was not supported.

Action: Remove the SQL expression.

ORA-39786: Number of columns does not match between export and import databases

Cause: External tables could not import into a table with mismatched columns.

Action: Ensure the number of columns matches between export and import database.

ORA-39787: Column *string* subtype "*string*"."*string*" is not instantiable.

Cause: Subtype specified was not instantiable.

Action: Ensure all subtypes specified are instantiable.

ORA-39788: Subtype "*string*"."*string*" is specified multiple times for column *string*.

Cause: Subtype specified was not unique.

Action: Ensure all subtypes specified are unique.

ORA-39789: "*string*"."*string*" is not a valid type for column *string*.

Cause: Subtype specified was not a valid type for the column being loaded.

Action: Ensure all subtypes specified are valid types for the column being loaded.

ORA-39790: Attribute "*string*" specified multiple times for column *string*.

Cause: Attribute specified multiple times.

Action: Ensure all attributes specified are unique.

ORA-39791: Attribute "string" for column string is not in subtype "string"."string".

Cause: Attribute was not included in the subtype indicated.

Action: Ensure the attribute is included in the subtype indicated by the specified subtype index.

ORA-39792: Attribute "string" is not valid for subtype(s) loaded into column string.

Cause: Attribute specified was not included in any subtypes specified for the column or the declared subtype of the column.

Action: Ensure the attribute is included in at least one of the subtypes loaded into the column.

ORA-39793: Attribute "string" is not unique within the hierarchy being loaded.

Cause: The attribute was defined in multiple lines of descent in the hierarchy being loaded.

Action: When describing the attribute, a subtype index must be specified to uniquely identify the attribute being loaded.

ORA-39794: No attributes loaded for subtype "string"."string".

Cause: None of the attributes loaded were included in the type shown.

Action: At least one attribute must be loaded for each subtype specified.

ORA-39795: Subtype index is not first attribute for object table or column, string.

Cause: The subtype index was not the first attribute when describing the attributes of an object column or object table with multiple subtypes.

Action: Describe the subtype index as the first attribute for this object column or object table.

ORA-39796: column array entry for string is not valid for the current subtype

Cause: This column was not part of the current subtype being loaded for this object column or table. Therefore, its entry must be null in the column array.

Action: Set the column array entry to null.

ORA-39797: The subtype index value is not valid.

Cause: The subtype index value in the column array was not valid for the object column or object table.

Action: Set a valid subtype index value in the column array for this table or column.

ORA-39798: The column array row offset number is out of range (max: number).

Cause: The specified row offset was too large for the column array.

Action: Ensure the row offset is in range.

ORA-39799: The column index number is out of range (max: number).

Cause: The specified column index was too large for the column array.

Action: Ensure the column index is in range.

ORA-39800: Database version number does not support the load of multiple subtypes.

Cause: Direct Path API support for loading multiple subtypes of an object table or column was only present in the Oracle 11 release and higher.

Action: Upgrade database to Oracle 11 or higher.

ORA-39801: Subtype "string"."string" is not a valid subtype for column string.

Cause: Subtype specified was not the declared type nor was it derived from the declared type.

Action: Ensure all subtypes specified are either the declared type or derived from the declared type.

ORA-39802: ADT object column string specified a SQL expression which is not allowed in direct path mode.

Cause: The ADT column reported in the error specified a SQL expression which returned the ADT. This is not supported.

Action: Remove the SQL expression.

ORA-39803: Data saves are not allowed on tables with partitioning referential constraints.

Cause: Data saves (and the sqlldr ROWS parameter) are not allowed when loading both the parent and child tables of a partitioning referential constraint.

Action: Do not attempt data saves when loading both the parent and child tables of a partitioning referential constraint.

ORA-39804: The load was aborted due to an error loading parent string while also loading child string.

Cause: An error occurred while loading the child and parent table of a partitioning referential constraint. The load was aborted to ensure the partitioning referential constraint was not violated.

Action: Fix the error that caused the load to abort and retry.

ORA-39805: Parallel loads are not allowed when loading child and parent.

Cause: A parallel load was requested when loading the child and parent of a partitioning referential constraint. This is not allowed.

Action: Remove the parallel option.

ORA-39806: The attempt to lock string parent table string string string failed.

Cause: While loading the child table of a partitioning referential constraint, the parent table must be locked in SHARE mode.

Action: Determine why the parent table could not be locked and retry.

ORA-39807: Partial data save on child string was ignored.

Cause: An attempt was made to partially save data when loading both the child and parent of a partitioning referential constraint or when loading a table with a domain index.

Action: Fix the error that caused the partial load and retry.

ORA-39808: The SINGLEROW option must be specified for parent table string.

Cause: The SINGLEROW option was not specified when loading both the parent and child table of a partitioning referential constraint.

Action: Ensure the SINGLEROW option is specified for the parent when loading the parent and child of a partitioning referential constraint.

ORA-39809: Data saves are not allowed on tables with domain indexes.

Cause: Data saves (and the sqlldr ROWS parameter) could not be allowed when loading a table with domain indexes.

Action: Do not attempt data saves when loading a table with domain indexes.

ORA-39810: Data saves are not allowed when NO_INDEX_ERRORS is specified.

Cause: Data saves (and the sqlldr ROWS parameter) could not be allowed when loading with the NO_INDEX_ERRORS option.

Action: Do not attempt data saves when loading a table with the NO_INDEX_ERRORS option.

ORA-39811: index *string.string* had the following error:

Cause: An error occurred on the index; error follows.

Action: Fix the error and retry.

ORA-39812: index *string.string* partition *string* had the following error:

Cause: An error occurred on the index; error follows.

Action: Fix the error and retry.

ORA-39813: index *string.string* had *string* partition errors:

Cause: A logical index error occurred on a partitioned index which affected one or more index partitions, which are listed below this message.

Action: Fix the error(s) and retry.

ORA-39814: The SKIP_INDEX_MAINTENANCE option is not allowed with NO_INDEX_ERRORS.

Cause: The SKIP_INDEX_MAINTENANCE option was used with the NO_INDEX_ERRORS option.

Action: Do not use SKIP_INDEX_MAINTENANCE with NO_INDEX_ERRORS.

ORA-39815: Direct Path Unload of an external table is not allowed.

Cause: An attempt was made to use Direct Path API Unload to unload an external table.

Action: Do not use Direct Path Unload to unload an external table.

ORA-39816: Direct Path Unload of tables with encrypted column(*string.string*) is not allowed.

Cause: An attempt was made to use Direct Path API Unload to unload a table with encrypted columns.

Action: Do not use Direct Path Unload to unload a table with encrypted columns.

ORA-39817: index *string.string* was ignored due to:

Cause: Index was unusable at the start of the load and it was requested that unusable indexes be skipped.

Action: No action required.

ORA-39818: index *string.string* partition *string* was ignored due to:

Cause: Index was unusable at the start of the load and it was requested that unusable indexes be skipped.

Action: No action required.

ORA-39819: The OCI_ATTR_DIRPATH_NO_INDEX_ERRORS attribute cannot be set to TRUE in direct path parallel loads.

Cause: An attempt was made to set the OCI_ATTR_DIRPATH_NO_INDEX_ERRORS attribute to TRUE in a direct path parallel load.

Action: Do not set the OCI_ATTR_DIRPATH_NO_INDEX_ERRORS to TRUE for direct path parallel loads.

ORA-39820: Zero length LONG piece detected for column *string* row *string*.

Cause: A zero length piece was detected for a LONG column.

Action: Do not use a length of zero when loading LONG columns.

ORA-39821: domain index on columnar data made unusable

Cause: An attempt was made to load a columnar table with a domain index using SQL*Loader direct part load

Action: n/a

ORA-39822: A new direct path operation is not allowed in the current transaction.

Cause: All previous direct path contexts ended and the current transaction was ready for a commit or abort of those changes.

Action: Commit or abort the current transaction, and start a new transaction for the next direct path context.

ORA-39823: The attribute OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS is only allowed for load operations.

Cause: The attribute OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS was set for a nonload operation.

Action: Use OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS for load operations only.

ORA-39824: The OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS attribute was set when no transaction was active.

Cause: There was no active transaction to use.

Action: Start a transaction or do not set the attribute OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS to TRUE.

ORA-39825: Direct path load of view or synonym (*string.string*) with multiple dependencies not permitted.

Cause: An attempt was made to load a view or synonym which has more than a single dependency.

Action: A view or synonym being loaded by the direct path API must resolve to a single object.

ORA-39826: Direct path load of view or synonym (*string.string*) could not be resolved.

Cause: A synonym or view could not be translated.

Action: Verify that the view or synonym is valid.

ORA-39827: Direct path load of PL/SQL function not permitted.

Cause: An attempt was made to load a PL/SQL function with the direct path API.

Action: Remove PL/SQL function the direct path load.

ORA-39828: Constraint *string* was disabled because of index *string.string* error.

Cause: The index used for the constraint was set as unusable.

Action: Fix the error that caused the index to be set unusable.

ORA-39829: function-based index on columnar data made unusable

Cause: An attempt was made to load a columnar table with a function-based index using SQL*Loader direct path load.

Action: Rebuild the function-based index after the load completes.

ORA-39830: XML parsing failed *\nstring*

Cause: XML parser returned an error while trying to parse the document.

Action: Fix the error that caused the document to be invalid.

ORA-39831: Direct path load failed, (*string.string*) is not a table.

Cause: Object being loaded did not resolve to a table.

Action: Verify that the view or table name is correct.

ORA-39832: Direct path unload was not allowed due to columns with default values.

Cause: Direct path unload was attempted on a table with columns that have default values.

Action: Do not attempt a direct path unload of a table with columns that have default values.

ORA-39833: Direct path parallel load was not allowed on a temporary table.

Cause: A direct path parallel load was attempted on a temporary table.

Action: Do not attempt a direct path parallel load on a temporary table.

ORA-39834: Direct path load or unload was not allowed on a remote table.

Cause: An attempt was made to specify a remote table in a direct path API load or unload.

Action: Do not specify a remote table in a direct path API load or unload.

ORA-39835: Direct path load partition memory exceeded. PGA use is *stringkb*, PGA limit is: *stringkb*

Cause: A direct path load ran out of process memory when loading multiple partitions.

Action: Use the PARTITION_MEMORY parameter to limit memory used when loading many partitions. Once this limit is reached, loading of some partition rows will be delayed until memory use falls below the limit. Use a value (kb) lower than the current program global area (PGA) limit included in this message and try the load again.

ORA-39836: Invalid direct path API server context detected

Cause: The data cartridge encountered an unexpected condition.

Action: Contact Oracle Support Services.

ORA-39837: Direct path loading does not support the DEFAULT value clause for column *string*.

Cause: Direct path loading could not support loading the default value for the data type of the indicated column.

Action: Use conventional path loading. Otherwise, use DEFAULTS=IGNORE, DEFAULTS=IGNORE_UNSUPPORTED_EVALUATE_ONCE or DEFAULTS=IGNORE_UNSUPPORTED_EVALUATE_EVERY_ROW.

ORA-39838: Direct path load of a specific partition with interval subpartitioning is not allowed.

Cause: An attempt was made to load a specific partition of a table that was interval subpartitioned. This is not supported by the Direct Path API.

Action: Load the entire table when the table is interval subpartitioned.

ORA-39839: Direct path default expression cache size (*string*) is too large.

Cause: An attempt was made to allocate a default expression cache that was too large.

Action: Use a smaller value for the default expression cache and retry.

ORA-39840: A data load operation has detected data stream format error *string*.

Cause: A dump file data stream format error was detected during a load operation.

Action: The stream format error may have been caused by a corrupted dump file. If possible, re-create the dump file and try again. If the problem persists, contact Oracle Support Services.

ORA-39841: A data load operation detected a data stream format error (see next error), attempting to continue.

Cause: A dump file data stream format error was detected during a load operation. An attempt was made to continue the load from a point beyond the corruption.

Action: The stream format error may have been caused by a corrupted dump file. If possible, re-create the dump file and try again. If the problem persists, contact Oracle Support Services.

ORA-39842: Data load operation was discontinued due to the previous data stream format error.

Cause: A dump file data stream format error was detected during a a load operation. The operation was aborted.

Action: The stream format error may have been caused by a corrupted dump file. If possible, re-create the dump file and try again. If the problem persists, contact Oracle Support Services.

ORA-39843: Invalid direct path API server context detected

Cause: The data cartridge encountered an unexpected condition.

Action: Contact Oracle Support Services.

ORA-39844: Bad stream format detected: [*string*] [*string*] [*string*] [*string*] [*string*] [*string*] [*string*] [*string*]

Cause: A dump file data stream format or initialization error was detected during a load or import operation.

Action: The stream format error may have been caused by a corrupted dump file. If possible, re-create the dump file and try again. If the problem persists, contact Oracle Support Services.

ORA-39845: A data load operation detected a data stream format error, attempting to continue.

Cause: A dump file data stream format error was detected during a load operation. An attempt was made to continue the load from a point beyond the corruption.

Action: The stream format error may have been caused by a corrupted dump file. If possible, re-create the dump file and try again. If the problem persists, contact Oracle Support Services.

ORA-39846: The specified number format for column *string* was invalid.

Cause: The specified number format for the column was not valid.

Action: Specify a valid numeric format and try again.

ORA-39847: Value too large for column *string* (maximum: *string*)

Cause: An attempt was made to load a column with a value which is too large, possibly after conversion. The maximum value is in characters for character length semantics and bytes for byte length semantics.

Action: Ensure that the destination column is large enough to hold the maximum possibly converted result.

ORA-39849: corrupt metadata stream detected for table *string*

Cause: The metadata stream for the table was corrupt. Because of the corruption, the table data could not be loaded.

Action: Verify that the file has not been modified since it was created. If it has, use a copy of the original file. If not, contact Oracle Support Services.

ORA-39850: Sequence expressions are not supported for SQLLDR direct path loads on server versions prior to Oracle Database 23c.

Cause: An attempt was made to use a SQLLDR SEQUENCE expression on a server version that did not support it.

Action: Do not attempt to use a SQLLDR SEQUENCE expression on server releases prior to Oracle Database 23c.

ORA-39851: Subtype instances are not supported by this function.

Cause: An attempt was made to use a subtype of a hierarchy as an attribute to a function that does not support subtypes.

Action: Ensure that the argument is not an instance of a subtype of a hierarchy.

ORA-39852: Use of non primary key based OID table is not allowed by this function.

Cause: An attempt was made to use a non primary key based OID table as an input to a function that does not support it.

Action: Ensure that the table is a primary key based OID table.

ORA-39861: auxiliary data file copy file for Pluggable Database *string*: "*string*"

Cause: This message reports the filename for details of another message.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

ORA-39862: RESETLOGS option only valid after a Pluggable Database incomplete recovery

Cause: The ALTER PLUGGABLE DATABASE OPEN RESETLOGS command was issued, but the Pluggable Database was not flashed back or point-in-time recovered.

Action: Retry the ALTER PLUGGABLE DATABASE OPEN command without specifying RESETLOGS.

ORA-39863: An earlier Pluggable Database incomplete recovery failed.

Cause: An earlier Pluggable Database flashback or point-in-time recovery failed.

Action: Retry the Pluggable Database flashback or incomplete recovery.

ORA-39864: Data file *string* on standby database must be restored and renamed, and standby database recovery must be restarted.

Cause: A missing data file was added on a standby database in response to a Pluggable Database (PDB) OPEN RESETLOGS command on the primary database. This data file must be restored and renamed on the standby database before standby database recovery can be restarted.

Action: Restore the missing data file and rename it on the standby database, then restart standby database recovery.

ORA-39865: cannot FLASHBACK beyond Pluggable Database resetlogs operation

Cause: An attempt was made to perform a FLASHBACK DATABASE beyond a Pluggable Database resetlogs system change number (SCN).

Action: Choose a FLASHBACK SCN that is more recent than the Pluggable Database resetlogs SCN.

ORA-39866: Data files for Pluggable Database *string* must be offline to flashback across special 12.1 PDB resetlogs.

Cause: An attempt was made to perform a FLASHBACK DATABASE beyond a Pluggable Database (PDB) resetlogs performed at 12.1 compatibility. Furthermore, the PDB resetlogs was performed after a flashback or point-in-time recovery (PITR) of the PDB to its parent database incarnation. This is not supported unless all data files in the PDB are offline.

Action: Take the data files for the Pluggable Database (PDB) offline before performing the FLASHBACK DATABASE command. To bring the PDB to the same past point in time as the container database (CDB), those data files can be restored from backups and recovered to that same past point in time. This can be done in one of two ways: * Flashback the CDB and open the CDB with resetlogs. Restore the PDB later, and perform a complete PDB recovery. * Flashback the CDB first. Restore and recover the PDB to the same system change number (SCN). Open CDB with resetlogs.

ORA-39867: PDB restore point '*string*' is on an orphan incarnation of the pluggable database.

Cause: The specified PDB restore point was on an orphan incarnation of the pluggable database. One cannot flashback a pluggable database to an orphan incarnation.

Action: Check the restore point and make sure the feature is enabled.

ORA-39868: The specified PDB target incarnation is not on the current database ancestor path.

Cause: The specified recover target incarnation for the pluggable database (PDB) was not on the current database ancestor path.

Action: Specify a recovery target incarnation that is on the current database ancestor path.

ORA-39869: cannot flashback/PITR to a point on orphan PDB incarnation

Cause: An attempt was made to flashback/PITR the Pluggable Database(PDB) to a point on the orphan PDB incarnation. PDB flashback/PITR to a point on orphan PDB incarnation is not supported on standby database or when the database is in shared undo mode.

Action: If flashback/PITR not on standby database, then flashback/PITR the pluggable database to a point after the undo mode was changed to local undo.

ORA-39870: container database is not open in read/write mode

Cause: A command was attempted that requires the container database (CDB) to be open in read/write mode.

Action: Open the container database in read/write mode and try the command again.

ORA-39871: An earlier Pluggable Database resetlogs operation failed after making changes.

Cause: An earlier ALTER PLUGGABLE DATABASE OPEN RESETLOGS command failed after it made some changes.

Action: Perform another Pluggable Database point-in-time recovery before attempting to open the Pluggable Database with RESETLOGS.

ORA-39872: Data file *number* is in the middle of Pluggable Database resetlogs operation.

Cause: The data file was in the middle of a Pluggable Database resetlogs operation.

Action: Find the right file version or perform more media recovery. For additional information, see other errors.

ORA-39873: Restore all data files to a checkpoint SCN lower than *string*.

Cause: This error provides additional information for error 39874.

Action: Restore the data files as suggested and restart the recovery process.

ORA-39874: Pluggable Database *string* recovery halted

Cause: The Pluggable Database was recovered into an orphan branch.

Action: Restore all data files to a checkpoint system change number (SCN) lower than the branch point and restart the recovery process. Check the alert log for additional information.

ORA-39875: Data file *string* is in the middle of Pluggable Database resetlogs operation.

Cause: The data file is in the middle of a Pluggable Database (PDB) resetlogs operation.

Action: If possible, recover the data file further so that it is not in the middle of a PDB resetlogs operation. Another alternative is to perform PDB point-in-time recovery.

ORA-39876: cannot perform CDB OPEN RESETLOGS because data file *string* is in the middle of a PDB resetlogs operation

Cause: The data file mentioned was in the middle of a Pluggable Database (PDB) resetlogs operation.

Action: Recover the container database (CDB) to a different system change number (SCN) at which the data files are not in the middle of a PDB resetlogs operation. Alternatively, you can offline the problematic data file and let CDB OPEN RESETLOGS succeed. You may need to perform PDB point-in-time recovery later in order to open the PDB of the offlined data file.

ORA-39877: keyword ONLINE or OFFLINE expected

Cause: The ONLINE or OFFLINE keyword was not specified after the ALL keyword.

Action: Use the correct syntax.

ORA-39878: Only one Pluggable Database name can be specified.

Cause: Multiple Pluggable Database names were specified for the ALTER PLUGGABLE DATABASE OPEN RESETLOGS command.

Action: Specify only one Pluggable Database name.

ORA-39879: Pluggable Database *string* is in the middle of a Pluggable Database RESETLOGS operation

Cause: There was already an on-going Pluggable Database OPEN RESETLOGS operation for this Pluggable Database.

Action: If needed, retry after the Pluggable Database OPEN RESETLOGS operation completes.

ORA-39880: One or more pluggable databases were in the middle of a point-in-time recovery at this incomplete database recovery SCN.

Cause: In the past, one or more pluggable databases had an active pluggable database RESETLOGS operation as of this incomplete recovery SCN.

Action: Additional messages are logged in the alert log indicating all of the pluggable databases affected by this container database OPEN RESETLOGS operation. Recover the container database to a different system change number (SCN) at which none of the pluggable databases had an active RESETLOGS operation. To continue the container database OPEN RESETLOGS operation at the same SCN, offline all of the data files of the affected pluggable databases first and reissue the command. However, a new point-in-time recovery of the affected pluggable databases would be required before these databases can be opened again.

ORA-39881: Pluggable database *string* must be closed while recovering the physical standby across PDB RESETLOGS

Cause: The pluggable database (PDB) is open while the physical standby is recovering across a PDB RESETLOGS operation for the PDB.

Action: Close the PDB and restart physical standby recovery.

ORA-39882: cannot create clean pluggable database restore point for the specified pluggable database (*con_id:string*)

Cause: There were still outstanding transactions in the closed pluggable database.

Action: Retry the command after opening the pluggable database and closing all outstanding transactions. Alternatively, create a normal pluggable database restore point.

ORA-39883: Restore point *string* for pluggable database *string* is not a clean pluggable database restore point.

Cause: For a pluggable database using shared undo, there was an attempt to flashback pluggable database in SQL without a clean pluggable database restore point. The specified restore point was not a clean pluggable database restore point.

Action: Do one of the following: - Issue flashback pluggable database in RMAN. - Issue the SQL flashback pluggable database command to flashback to a clean pluggable database restore point. - Turn on local undo mode for the pluggable database. The SQL flashback pluggable database command can always be used to flashback a pluggable database using local undo.

ORA-39884: Flashback of PDB (*con_id:string*) cannot restore data file *string* which is currently used by PDB (*con_id:string*).

Cause: The data file required to flashback the specified pluggable database to the specified point in time could not be restored. The file number of the pluggable database data file was used by a different pluggable database.

Action: Flashback the pluggable database to a different point-in-time. Alternatively, drop the conflicting data file from the database first before you flashback the pluggable database. If neither option can be used, you can also flashback the entire consolidated database or restore and recover a copy of the consolidated database to the specified point-in-time. You can then extract the recovered data.

ORA-39885: flashback/PITR of a pluggable database before its creation is not allowed

Cause: The flashback/PITR System Change Number (SCN) or timestamp specified was less than the pluggable database creation SCN or timestamp. Flashback/PITR SCN or timestamp cannot be less than the pluggable database creation SCN or timestamp.

Action: Check the flashback/PITR SCN or timestamp and retry the command.

ORA-39886: With shared undo, one can only use an SQL command to flashback a pluggable database (PDB) to a clean PDB restore point.

Cause: The command issued did not specify a clean pluggable database restore point. For a pluggable database using shared undo, one can only use the SQL Flashback pluggable database command to flashback to a clean pluggable database restore point.

Action: Do one of the following: - Issue flashback pluggable database in RMAN. - Issue the SQL flashback pluggable database command to flashback to a clean pluggable database restore point. - Turn on local undo mode for the pluggable database. The SQL flashback pluggable database command can always be used to flashback a pluggable database using local undo.

ORA-39887: Cannot create restore points for SEED PDB

Cause: There was an attempt to create a restore point for SEED PDB.

Action: Create restore points in ROOT or for a different pluggable database.

ORA-39888: Guaranteed restore points exist for pluggable database *string*.

Cause: There was an attempt to drop or unplug a pluggable database when there were still guaranteed restore points for this pluggable database.

Action: Drop all the guaranteed restore points for the pluggable database before dropping the pluggable database.

ORA-39889: Specified System Change Number (SCN) or timestamp is in the middle of a previous PDB RESETLOGS operation.

Cause: The specified System Change Number (SCN) or timestamp was in the middle of a previous PDB RESETLOGS operation. More specifically, each PDB RESETLOGS operation may create a PDB incarnation as shown in v\$pdb_incarnation. Any SCN between INCARNATION_SCN and END_RESETLOGS_SCN or any timestamp between INCARNATION_TIME and END_RESETLOGS_TIME as shown in v\$pdb_incarnation is considered in the middle of the PDB RESETLOGS operation.

Action: Flashback the PDB to an SCN or timestamp that is not in the middle of a previous PDB RESETLOGS operation. If flashback to a SCN on the orphan PDB incarnation is required, then use "RESET PLUGGABLE DATABASE TO INCARNATION" RMAN command to specify the pluggable database incarnation along which flashback to the specified SCN must be performed. Also, ensure that the feature is enabled.

ORA-39890: Flashback or PITR of a pluggable database to a System Change Number (SCN) or timestamp before latest undo mode switch is not allowed.

Cause: An attempt was made to flashback/PITR a pluggable database (PDB) to a System Change Number (SCN) or timestamp that precedes the latest switch between shared and local undo.

Action: Flashback/PITR a pluggable database (PDB) to an SCN or timestamp that comes after the latest switch between shared and local undo.

ORA-39891: Clean PDB restore point cannot be created when CDB is in local undo mode.

Cause: There was an attempt to create a clean restore point when the CDB was in local undo mode. This is not supported. Clean PDB restore points are designed for CDB in shared undo mode. They are not useful for CDB in local undo mode.

Action: Do not use "clean" option when creating the restore point.

ORA-39892: PDB PITR/Flashback to a point in time on an orphan database incarnation is not allowed.

Cause: An attempt was made to flashback or point-in-time recovery (PITR) of a pluggable database (PDB) to a point in time that falls on an orphaned database incarnation.

Action: Flashback or PITR a pluggable database (PDB) to an earlier point in time that falls somewhere along the database direct ancestor path from the current database incarnation.

ORA-39893: PDB restore point could not be created

Cause: There was an attempt to create a restore point for a pdb that was still in the process of being created or was never opened before.

Action: Retry the operation after pdb creation is complete and opened once.

ORA-39894: PDB restore point could not be created

Cause: There was an attempt to create a restore point for a pdb when an application install or upgrade was going on.

Action: Retry the operation after application install or upgrade is complete.

ORA-39895: unable to flashback or PITR a pluggable database

Cause: The flashback or point-in-time recovery (PITR) system change number (SCN) or timestamp specified was less than the SCN or timestamp at which the pluggable database was first opened in read/write mode.

Action: Check the flashback or PITR SCN or timestamp and retry the command.

ORA-39896: INSTANCES clause and RESETLOGS keyword cannot be used together in ALTER PLUGGABLE DATABASE command

Cause: The INSTANCES clause was specified in the ALTER PLUGGABLE DATABASE OPEN RESETLOGS command.

Action: Specify either the INSTANCES clause or the RESETLOGS keyword in the command, but not both.

ORA-39897: A required flashback log has been reused during flashback of a pluggable database.

Cause: At least one required flashback log has been reused during flashback of a pluggable database.

Action: You can no longer flashback this pluggable database to the same point-in-time as specified because a required flashback log file has been reused. You may still be able to flashback this pluggable database to a more recent point-in-time. You can also recover the pluggable database to undo the effect of the failed flashback pluggable database operation.

ORA-39898: unable to locate the specified timestamp along any of the pluggable database incarnations

Cause: The specified timestamp could not be located on any of the Pluggable Database (PDB) incarnations. This could be because the system timestamp went backwards at some point in the past.

Action: Pick a different timestamp, or try using flashback to SCN.

ORA-39899: User specified recovery target incarnation %0!s does not belong to pluggable database %1!s (%2!s)

Cause: The recovery target incarnation did not belong to the pluggable database.

Action: Specify a valid pluggable database recovery target incarnation that belongs to the pluggable database.

ORA-39900: specified SCN is beyond the PDB recovery target incarnation

Cause: The specified System Change Number (SCN) was beyond the specified Pluggable Database (PDB) recovery target incarnation.

Action: Use a valid SCN that lies on the PDB recovery target incarnation or set a valid PDB recovery target incarnation corresponding to the specified SCN.

ORA-39901: Partitioned table *string.string* is partially contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Check table partitions by querying SYS.DBA_TAB_PARTITIONS.

ORA-39902: Subpartitioned table *string.string* is partially contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Check table subpartitions by querying SYS.DBA_TAB_SUBPARTITIONS.

ORA-39903: IOT Partition *string.string* is partially contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Check table partitions by querying SYS.DBA_IND_PARTITIONS.

ORA-39904: Partitioned object *string.string* is partially contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Check partitions and overflow segments by querying SYS.DBA_IND_PARTITIONS and SYS.DBA_TAB_PARTITIONS.

ORA-39905: Table *string.string* in tablespace *string* points to LOB segment *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39906: Constraint *string* between table *string.string* in tablespace *string* and table *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39907: Index *string.string* in tablespace *string* points to table *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39908: Index *string.string* in tablespace *string* enforces primary constraints *string* of table *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39909: Index *string.string* in tablespace *string* points to table/cluster *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39910: Partitioned Global index *string.string* in tablespace *string* points to partition *string* of table *string.string* in tablespace *string* outside of transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39911: Index *string.string* in tablespace *string* points to partition *string* of table *string.string* in tablespace *string* outside of transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39912: Partitioned index *string.string* in tablespace *string* points to table *string.string* in tablespace *string* outside of transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39913: *string string.string* in tablespace *string* not allowed in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39914: Index *string.string* in tablespace *string* points to subpartition *string* of table *string.string* in tablespace *string* outside of transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39915: Partition *string* of table *string.string* in tablespace *string* points to LOB segment *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39916: Subpartition *string* of table *string.string* in tablespace *string* points to LOB segment *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39917: SYS owned object *string* in tablespace *string* not allowed in pluggable set

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39918: PLSQL Functional Index *string.string* in tablespace *string* not allowed in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39919: Object *string.string* in tablespace *string* not contained within transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Check SYS.DBA_OBJECTS.

ORA-39920: Rollback segment *string* in tablespace *string* not allowed in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39921: Default Partition (Table) Tablespace *string* for *string* not contained in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39922: Default Partition (Index) Tablespace *string* for *string* not contained in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39923: Default Composite Partition (Table) Tablespace *string* for *string* not contained in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39924: Default Composite Partition (Index) Tablespace *string* for *string* not contained in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39925: LOB segment *string.string* in tablespace *string* points to table *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39926: Join index between table *string.string* in tablespace *string* and table *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39927: Scoped REF constraint between table *string.string* in tablespace *string* and table *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39928: *string string.string* in tablespace *string* contains evolved type data that have not been upgraded.

Cause: Transportable tablespace operation could not be performed because some tables depending on evolved types were not upgraded.

Action: Transportable tablespace operation can only be performed when all tables depending on evolved types have been upgraded. Perform ALTER TABLE <tab_name> UPGRADE for the table name listed in the message above

ORA-39929: Table *string.string* in tablespace *string* has encrypted columns which are not supported.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39930: Violation *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Contact Oracle Support Services.

ORA-39931: XML Schema *string* Owner: *string* not fully contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Identify the associated elements and resolve self containment.

ORA-39932: Extensible Index *string.string* not fully contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Identify the associated table and list of secondary objects and resolve self containment.

ORA-39933: Parent table *string.string* and its nested table columns are not fully contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Identify the nested tables using view DBA_NESTED_TABLES and resolve self containment.

ORA-39934: Materialized view log *string.string* in tablespace *string* and master table *string.string* in tablespace *string* are not fully contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39935: Updatable materialized view log *string.string* in tablespace *string* and materialized view *string.string* in tablespace *string* are not fully contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39936: Token manager for the CSX tablespace *string* not fully contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Include the specified tablespace into the transportable set.

ORA-39937: Unsupported operation, default token tables used for binary XML data.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Copy default token tables into a new token table set using DBMS_CSX_ADMIN package.

ORA-39938: Operation not supported, tablespace *string* contains binary XML data.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39939: More than one set of token tables are used in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Remap tables in the specified tablespace to use same token tables.

ORA-39940: Child reference partitioned table *string.string* in tablespace *string* or parent table *string.string* in tablespace *string* is included but not both.

Cause: Informational message to describe a failure during transportable containment checking. Both parent and child reference partition tables must be included.

Action: Check reference partitioned tables.

ORA-39941: Partitioned table *string.string* in tablespace *string* has a partition that has an incomplete online move.

Cause: This is an informational message to describe a failure during transportable containment checking. Online moves need to be complete before transporting a tablespace.

Action: Use the DBMS_PART.CLEANUP_ONLINE_OP procedure to force the online move to complete.

ORA-39942: Subpartitioned table *string.string* in tablespace *string* has a subpartition that has an incomplete online move.

Cause: This is an informational message to describe a failure during transportable containment checking. Online moves need to be complete before transporting a tablespace.

Action: Use the DBMS_PART.CLEANUP_ONLINE_OP procedure to force the online move to complete.

ORA-39943: Global index *string.string* in tablespace *string* has orphaned entries.

Cause: This is an informational message to describe a failure during transportable containment checking. Orphaned entries need to be cleaned up before transporting a tablespace.

Action: Use DBMS_PART.CLEANUP_GIDX() to cleanup orphaned index entries.

ORA-39944: Global partitioned index *string.string* in tablespace *string* has orphaned entries.

Cause: This is an informational message to describe a failure during transportable containment checking. Orphaned entries need to be cleaned up before transporting a tablespace.

Action: Use DBMS_PART.CLEANUP_GIDX() to cleanup orphaned index entries.

ORA-39945: Token conflicting with existing tokens.

Cause: The binary XML tokens contained in the imported tablespace conflicted with the existing tokens.

Action: Use the dump file export or import instead of transportable tablespace.

ORA-39946: Nondefault token table encountered.

Cause: During transportable tablespace import, a nondefault token table was encountered.

Action: Use the dump file export or import instead of transportable tablespace.

ORA-39947: Table *string.string* in tablespace *string* has token tables in tablespace *string*.

Cause: The token tables for the table were in a tablespace which was not being exported.

Action: Include the specified tablespace into the transportable set.

ORA-39948: QNAMES or NAMESPACE tables for the import are in use.

Cause: The import needed xdb.XDB\$IMPORT_NM_INFO and xdb.XDB\$IMPORT_QN_INFO to be empty to avoid collisions or corruptions.

Action: This is an internal error. Contact Oracle Support Services.

ORA-39950: invalid parameter for PLSQL warnings flag

Cause: The user either entered invalid value for the PLSQL_WARNINGS flag or the value of the flag conflicts with other values.

Action: Enter correct values for the switch.

ORA-39951: incomplete values specified for PL/SQL warning settings

Cause: The user either did not enter the value for the settings or entered incomplete values.

Action: Enter correct syntax for the switch.

ORA-39952: only numbers can be specified as range values

Cause: The range values did not have numerical values only.

Action: Enter only numerical values.

ORA-39953: the range value specified is beyond allowed range

Cause: The range values were either too low or too high.

Action: Specify only the allowed range values.

ORA-39954: DEFERRED is required for this system parameter

Cause: The ALTER SYSTEM command for PLSQL_WARNINGS did not include the keyword, DEFERRED.

Action: Change the command to use the keyword, DEFERRED.

ORA-39955: invalid PL/SQL warning message number

Cause: The PL/SQL message number specified was not in a valid range.

Action: Specify PL/SQL warning message numbers within the valid range.

ORA-39956: duplicate setting for PL/SQL compiler parameter *string*

Cause: A PL/SQL compiler parameter was set more than once.

Action: Remove the duplicate PL/SQL compiler setting.

ORA-39957: invalid warning category

Cause: The category of the message was incorrect.

Action: Specify a valid category

ORA-39958: invalid warning category qualifier

Cause: The category qualifier was incorrect.

Action: Specify a valid category qualifier.

ORA-39959: invalid warning number (*string*)

Cause: The warning number was incorrect.

Action: Specify a valid warning number.

ORA-39960: scope can only be SYSTEM or SESSION

Cause: The scope specified was not set.

Action: Specify a valid scope, either SESSION or SYSTEM.

ORA-39961: message specified was not found

Cause: The message number specified was not set.

Action: specify the message number whose settings have been set in the given scope.

ORA-39962: invalid parameter for PLSQL_CCFLAGS

Cause: The value for the PLSQL_CCFLAGS parameter was not valid.

Action: Specify a valid value for the PLSQL_CCFLAGS parameter.

ORA-39964: Specified value for `_PLSQL_MAX_STACK_SIZE` (*string*) is larger than available memory (*string*)

Cause: The value specified for the `_PLSQL_MAX_STACK_SIZE` parameter was larger than the amount of stack size available to the process.

Action: Specify a smaller value for the `_PLSQL_MAX_STACK_SIZE` parameter.

ORA-39965: Collection of records with PL/SQL type attributes are not allowed in this context.

Cause: A collection of records with attributes of PL/SQL types was used as an argument to the `TABLE` operator, which is not allowed.

Action: Use a collection of records whose attributes are of a type that your operation supports.

ORA-39966: This form is allowed only in WITH clause context

Cause: Only an entry point number was specified for `SYS_PLSQL_CPU`, `SYS_PLSQL_COUNT` or `SYS_PLSQL_IO` costing operator. This is allowed only when these operators are applied to functions appearing in the `WITH` clause.

Action: Specify the required function, package, or type name. An optional schema name can also be specified.

ORA-39967: Cannot use this PL/SQL procedure while data files are being moved or rekeyed.

Cause: Some data files were being moved or rekeyed either on the primary or standby database.

Action: Check the status of data files and try this command again.

ORA-39968: Invalid value for parameter `PLSCOPE_SETTINGS`. Value must be from among 'IDENTIFIERS:[ALL|NONE|PLSQL|SQL|PUBLIC], STATEMENTS:[ALL|NONE]'.

Cause: The value for the `PLSCOPE_SETTINGS` parameter was not valid.

Action: Specify a valid value for the `PLSCOPE_SETTINGS` parameter.

ORA-39969: Bind variable should be of a supported PL/SQL type

Cause: A variable of a wrong type was used in the `DBMS_SQL.BIND_VARIABLE_PKG` call. In the `DBMS_SQL.BIND_VARIABLE_PKG` call, the type of the variable should be declared in a package specification and should be either a record or one of the supported collection types.

Action: Use a bind variable whose type is one of the supported types for this operation and whose type is declared in a package specification.

ORA-39970: Bind calls are not allowed after cursor execution

Cause: A bind call was used after the cursor was executed. Binds can only be done after the cursor was parsed but before execution.

Action: Move the bind call before cursor execution.

ORA-39971: cannot use this PL/SQL procedure for this pluggable database when `PATH_PREFIX` information is not accessible

Cause: Some pluggable databases have specified `PATH_PREFIX` for security purposes, but the PL/SQL procedure was unable to check the `PATH_PREFIX` because the root was not open or for some other security reasons.

Action: Open the root or connect to the root directly and try this command again.

ORA-39972: cannot use an object type with PL/SQL unique attributes in a SQL statement

Cause: An object type created with PL/SQL unique attributes was used in a SQL statement.

Action: Use only SQL-permitted type attributes in a SQL statement.

ORA-39973: invalid or duplicate named fields in collection type

Cause: The collection type had duplicate or invalid named fields.

Action: Rename the invalid or duplicate field or use an alias in the SELECT list of the cursor type to avoid duplicate or invalid named fields.

ORA-39974: unsupported RECORD type operation

Cause: An attempt was made to use RECORD variable in MEMBER OF operation with target collection that was not null.

Action: Do not use this operation. For backward compatibility, no compile time error was given because no error is raised for null target collection.

ORA-39975: Failed to extend the program call stack depth to *string*. (The current maximum allowed depth is *string* frames.)

Cause: PL/SQL program execution stack depth is more than permitted.

Action: Contact your DBA to increase the maximum allowed frames. Decrease the stack depth of the program by ensuring less call nesting or evaluate if there is a runaway recursion by inspecting the program.

ORA-40001 to ORA-40999

ORA-40001: value for *string* must be greater than zero

Cause: The input parameter in question has a value of zero or less.

Action: Provide a value greater than zero for the relevant parameter.

ORA-40002: wordsize must be *string* or greater

Cause: The input wordsize is less than the prescribed limit for the BLAST Match or Align algorithm.

Action: Provide a wordsize greater than or equal to the prescribed value.

ORA-40003: wordsize must be in the range *string* - *string* for BLAST-P

Cause: The input wordsize has a value out of the prescribed range.

Action: Provide a wordsize value within the prescribed range for BLAST-P.

ORA-40004: penalty must be negative for BLAST-N

Cause: The input value provided for penalty is zero or greater.

Action: Provide a negative penalty value.

ORA-40021: no column named *string* in training table *string*

Cause: The training table does not contain the specified column

Action: Provide a case-id/target column that exists in the training table

ORA-40022: null case ID column - cannot provide row diagnostics

Cause: The row diagnostics were enabled, but without a corresponding case or row identifier column in the build data.

Action: Provide a non-null case identifier column in the build data.

ORA-40023: sufficient memory could not be allocated given the number of attributes

Cause: Unable to allocate sufficient memory to create a model capable of producing confidence bounds on predictions because there were too many attributes or there were high cardinality categorical attributes, or both, in the build data.

Action: Reduce the number of attributes, especially high cardinality categoricals, or enable ridge regression.

ORA-40024: solution to least squares problem could not be found

Cause: Unable to find solution because the predictor covariance matrix was singular.

Action: Enable ridge regression or remove exact multicollinearities from the build data.

ORA-40025: reference class name not found in build data

Cause: The provided reference class name was not found in the build data.

Action: Provide an existing target value as the reference class name.

ORA-40026: reference class name not found in the weights table

Cause: The provided reference class name did not correspond to any of the entries in the weights table.

Action: Provide consistent specification for reference class name and weights table.

ORA-40027: Target attribute has more than two distinct values

Cause: Generalized Linear Models only support binary classification.

Action: Consolidate target values into two distinct categories.

ORA-40028: solution to least squares problem could not be found

Cause: Unable to find solution because the predictor build data were not properly scaled.

Action: Standardize the predictor build data by enabling auto prep.

ORA-40029: Specified diagnostics table name already exists

Cause: A diagnostics table name matching an existing table was specified.

Action: Choose a table name that does not match any existing user table.

ORA-40030: solution to least squares problem could not be found

Cause: Unable to find solution because the predictor covariance matrix was singular for the forced-in features.

Action: If there are forced-in features, remove them. If `GLMS_FTR_ACCEPTANCE` was set to `GLMS_FTR_ACCEPTANCE_STRICT`, reset it to `GLMS_FTR_ACCEPTANCE_RELAXED` and rebuild the model.

ORA-40031: too many forced-in features (maximum allowable 1000)

Cause: Too many forced-in features were specified or the features were high cardinality attributes, or both.

Action: Reduce the number of forced-in attributes.

ORA-40032: solution to least squares problem could not be found

Cause: Unable to find solution because the predictor covariance matrix was singular for the selected features.

Action: If `GLMS_FTR_ACCEPTANCE` was set to `GLMS_FTR_ACCEPTANCE_STRICT`, reset it to `GLMS_FTR_ACCEPTANCE_RELAXED` and rebuild the model.

ORA-40033: invalid covariance matrix

Cause: This was caused by one or more of the following: - Data rows were too few in number. - Mining attributes were too many. - Ridge regression was on.

Action: Modify the data or disable ridge regression to get a valid covariance matrix and full diagnostic statistics.

ORA-40034: FORCE_IN incompatible with the setting GLMS_FTR_SELECTION disabled

Cause: The setting `GLMS_FTR_SELECTION` which was disabled was incompatible with the specified `FORCE_IN` transformation.

Action: Either enable the setting `GLMS_FTR_SELECTION`, or respecify the `FORCED_IN` transformation to be compatible with the disabled `GLMS_FTR_SELECTION` setting.

ORA-40051: too few rows to estimate the specified model

Cause: The time series had fewer rows than the number of parameters in the model.

Action: Choose a simpler model type with fewer parameters.

ORA-40052: series contains large numbers; possible numerical instability

Cause: The time series contained numbers greater than 1 million.

Action: Scale the data.

ORA-40053: inappropriate data for multiplicative model

Cause: The time series was not strictly positive.

Action: Choose a model type that does not contain a multiplicative trend or seasonality.

ORA-40054: time series is constant

Cause: The time series was constant.

Action: Choose a model type that does not contain a multiplicative trend or seasonality.

ORA-40055: too few rows to estimate trend

Cause: The time series had too few rows to obtain an initial trend estimate.

Action: Choose a simple exponential model type.

ORA-40056: must provide a valid EXSM_INTERVAL setting

Cause: A valid value was not specified for the `EXSM_INTERVAL` setting. If the case ID column type is `datetime`, a valid `EXSM_INTERVAL` setting must be provided.

Action: Specify a valid `EXSM_INTERVAL` setting.

ORA-40057: must provide a valid case ID column

Cause: The case ID column was required to provide time labels, but a valid case ID column was not provided.

Action: Specify a valid case ID column name as input.

ORA-40058: seasonal effect not estimable for irregular time series

Cause: There was no consecutive one year period containing all existing seasons.

Action: Choose a model type with no seasonal effect.

ORA-40081: invalid name for the right bound column of XGBoost AFT model

Cause: The right bound column name for the XGBoost Accelerated Failure Time (AFT) model was invalid.

Action: Choose a valid right bound column name for the XGBoost AFT model.

ORA-40101: Data Mining System Error *string-string-string*

Cause: An internal system error occurred during a data mining operation.

Action: Contact Oracle Support Services.

ORA-40102: invalid input *string* for data mining operation *string*

Cause: The input parameter was either not specified or invalid for the given operation.

Action: Provide a valid parameter value. Check the range for the NUMBER parameters or the column name for the PARTITION BY expression.

ORA-40103: invalid case-id column: *string*

Cause: The case-id column was invalid. If a case-id column is specified, it must be present in the input data source. The case-id column cannot be the same as the target column, and the column's data type is restricted to NUMBER, CHAR, and VARCHAR2 when building a GLM model with a diagnostics table.

Action: Change the schema of your input data to supply a case-id column of appropriate data type.

ORA-40104: invalid training data for model build

Cause: The training data provided in the reported table is unsuitable for build, either because it is empty, has unsuitable data, or the schema of the table does not match the input specifications.

Action: Inspect the training data and correct the contents/schema as appropriate.

ORA-40105: input data incompatible with model signature

Cause: The data provided for this post-build operation is in format different from that used for model build.

Action: Provide data whose attribute data types match the build data. Input data attributes must have the same data types as those described in the model signature for the model.

ORA-40106: positive target value not specified for computing Lift

Cause: Positive target value has not been specified for Lift.

Action: Provide a positive target value for the Lift operation.

ORA-40107: operation requires *string* RDBMS option to be installed

Cause: The specified option was not installed with the RDBMS.

Action: Install the required option and retry the operation.

ORA-40108: input data contains too few distinct target (*string*) values

Cause: At least two distinct target values are required for Build.

Action: Provide counter-example target values in the input data.

ORA-40109: inconsistent logical data record

Cause: Repeated instances of a record identifier or repeated attributes found in a nested column.

Action: Remove or relabel repeated instances to resolve inconsistencies.

ORA-40110: Duplicate model tables found for table type *string*

Cause: Operation would result in duplicate model table types which is not supported.

Action: Remove the duplicate entry.

ORA-40111: no mining attributes found in build data

Cause: Could not build a model when only special or empty columns were present. Special columns include target, row weight, and case ID columns.

Action: Provide mining attribute data.

ORA-40112: insufficient number of valid data rows

Cause: Fewer than two valid data rows were found in the build data.

Action: Provide at least two valid build data rows. If the model is either a classification or regression model, then valid rows must have non-NULL targets. If a weight column was provided, then valid rows must have positive row weights. In addition, if DELETE_ROW missing value treatment was used, consider disabling it.

ORA-40113: insufficient number of distinct target values

Cause: Less than two distinct target values were found in the build data.

Action: Provide the classification build data with valid rows containing at least two distinct target values. Valid rows must have non-NULL targets. If a weight column was provided, then valid rows must have positive row weights. In addition, if DELETE_ROW missing value treatment was used, consider disabling it.

ORA-40114: weights table target values mismatched with build data

Cause: The entries in the weights table did not correspond to the target values in the build data.

Action: Verify the entries in the weights table.

ORA-40115: weights table schema is incorrect

Cause: The weights table did not have the required schema.

Action: Provide a weights table with schema: (target_value, weight), where the type of the first column corresponds to the type of the target column (CHAR, VARCHAR2 or NUMBER) and the type of the second column is NUMBER.

ORA-40116: NULL values found in weights table

Cause: The weights table had NULL entries.

Action: Replace or eliminate all NULL entries in the weights table.

ORA-40117: repeated target values found in weights table

Cause: The weights table had repeated target values.

Action: Remove the repeated target values from the weights table.

ORA-40118: insufficient number of target values in weights table

Cause: The weights table had less than 2 target values.

Action: Provide at least two target values in the weights table.

ORA-40119: nested columns incompatible with missing value treatment

Cause: delete_row missing value treatment is not supported for nested columns.

Action: Use 2D (non-nested) data representation or manually delete the rows with NULL values and disable the delete_row missing value treatment.

ORA-40120: invalid weight value in the weights table

Cause: Negative or zero weight values were found in the weights table.

Action: Ensure that weight values in the weights table are positive.

ORA-40121: force option not allowed for drop model in different schema

Cause: The force option was specified, but the model is in a different schema.

Action: If the force option is necessary, run the drop model from the owning schema. If the force option is not necessary, set the force parameter to FALSE.

ORA-40122: Invalid data type attempted for row weights column *string*.

Cause: Row weights column was not assigned one of the allowed data types.

Action: Choose a row weight column of type NUMBER, BINARY_FLOAT, or BINARY_DOUBLE.

ORA-40123: invalid row weights column *string*

Cause: Row weights column was the same as the target column.

Action: Choose a new row weights column.

ORA-40124: partition key column *string* missing from input

Cause: A partitioned model was referenced in the query, but the partition key column was not found in the input.

Action: Provide an input data set containing the partition key column.

ORA-40125: Partition *string* does not exist.

Cause: The specified partition did not exist.

Action: Check the name of the partition and retry.

ORA-40126: model *string* is not partitioned

Cause: The model specified was not a partitioned model.

Action: Specify a model that is partitioned.

ORA-40127: invalid number of partition keys specified

Cause: The number of partition keys specified did not match the model.

Action: Specify key values for each partition.

ORA-40128: partition *string* already exists for specified partition keys

Cause: A partition already existed for the specified partition keys.

Action: Specify unique key values for each partition.

ORA-40129: partition name *string* exists for this model

Cause: The partition name specified was not unique for this model.

Action: Specify a unique partition name.

ORA-40130: invalid partition name *string*

Cause: The partition name specified was not valid.

Action: Check the spelling of the partition name and try again.

ORA-40131: invalid data type for partition column *string*

Cause: The partition column did not have a supported data type.

Action: Choose a partition column of type NUMBER, CHAR, BOOLEAN or VARCHAR2.

ORA-40132: partition not specified

Cause: A model partition was not specified. This function requires the specification of a model partition.

Action: Specify a model partition.

ORA-40133: invalid partition columns

Cause: The partition columns in the operation did not match those in the existing model.

Action: Specify the correct partitioning keys.

ORA-40135: cannot drop the only partition of a partitioned model

Cause: The specified partitioned model contained a single partition. An empty model is not supported.

Action: Drop the model, or add additional partition(s) then drop the desired partition.

ORA-40136: maximum number of partition columns exceeded

Cause: The maximum number of 16 partition columns was exceeded.

Action: Reduce the number of partition columns.

ORA-40137: maximum number of partitions exceeded

Cause: The maximum number of partitions per model was exceeded.

Action: Reduce the number of partitions.

ORA-40139: no partitions found in training data

Cause: There were no partitions found in the training data.

Action: Specify partitioning keys that have one or more distinct values in the training data.

ORA-40140: model could not be built

Cause: The training data did not allow the building of a meaningful model.

Action: Modify the training data to ensure that there are valid data rows, columns, or targets. If there is solver choice, ensure that the selected solver is appropriate for the training data.

ORA-40141: only zero norm rows were provided in the training data

Cause: All training data rows had zero norm.

Action: Modify the training data or enable automatic data preparation.

ORA-40142: partition mismatch for feature comparison

Cause: The partition key column values did not match for one or more scored rows.

Action: Modify the query to ensure that each scored row contains matching partition key column values.

ORA-40150: Model *string* function is not specified.

Cause: The required R function was not specified.

Action: Specify the required R function in the model setting table and build the R model.

ORA-40151: invalid output type from R SCORE, WEIGHT, or DETAILS function

Cause: The R SCORE, WEIGHT, or DETAILS function did not return the result in a data.frame containing either R numeric values for SCORE and WEIGHT function or R numeric or string values for DETAILS function.

Action: Modify the R function to return the result in a data.frame that contains values of valid types.

ORA-40152: Output data.frame mismatches the input for R SCORE or WEIGHT function.

Cause: The R SCORE or WEIGHT function returned a different number of rows than that of the input data.frame.

Action: Modify the R function to output the result for each row of the input data.frame.

ORA-40153: invalid value on attribute *string* for R model

Cause: The specified attribute was not a scalar numeric value or a single string.

Action: Set the specified attribute of the R model with a valid value.

ORA-40154: invalid type or value for R parameter specification

Cause: The R parameter was not a scalar numeric value or a single string.

Action: Modify the parameter specification to use either a scalar numeric value or a single string.

ORA-40155: R script *string* is not found.

Cause: The specified script was not found in the R script repository.

Action: Verify that the script exists in the R script repository or create it using the `rqScriptCreate` PL/SQL function.

ORA-40156: invalid or mismatched output specification for R model view

Cause: The R DETAILS function output format specification did not use numeric or string value, or did not match the actual output from the R DETAILS function.

Action: Use scalar numeric and string to specify the R DETAILS function output format and match the actual output of the R function.

ORA-40157: R_HOME is not set on *string*.

Cause: The R_HOME was not set to the location where R was installed.

Action: Use `sys.rqConfigSet` to set the R_HOME to the correct value.

ORA-40158: invalid values on R memory control settings

Cause: The R memory control settings did not use positive values.

Action: Use `sys.rqConfigSet` to set R memory control with valid values.

ORA-40159: Parameter setting *string* is not specified for R model.

Cause: The expected setting was not on the model setting table.

Action: Set the expected setting on the model setting table.

ORA-40160: Mining function *string* requires attribute *string* on the R model.

Cause: The generated R model did not have the required attribute.

Action: Set the required attribute for the R model in the R BUILD function.

ORA-40161: Either attribute *string* or *string*, but not both, is required.

Cause: Conflict attributes were specified for the R model object.

Action: Set the required attribute only for the return R model object.

ORA-40162: mismatched results from *string* output data.frame

Cause: The R regression model prediction did not return an R data.frame with a single column of numerics for predicted value, or two additional columns containing the standard error of model fit and the degree of freedom were missing from the output when SQL function prediction_bounds was invoked.

Action: Modify the specified R function to return the results in the right format.

ORA-40163: some prediction results missing from *string* output

Cause: The R classification, clustering, or feature extraction model SCORE function did not return the prediction for each class, cluster, or feature respectively in the output R data.frame.

Action: Modify the R model SCORE function to return all predicted values in the output data.frame.

ORA-40164: contribution weights of some attributes missing from *string* output

Cause: The R model WEIGHT function did not return the contribution weight for each attribute of the data.

Action: Modify the R model WEIGHT function to return the contribution weights for all attributes.

ORA-40165: mismatched target class name from R model prediction *string*

Cause: The R classification model prediction did not have correct target class names assigned as the column names for the return data.frame.

Action: Modify the R classification model SCORE function to set the correct target class names on the return data.frame.

ORA-40166: invalid R name for input data.frame columns

Cause: The input data.frame column names contained special characters that are not supported by R.

Action: Modify the input data.frame column names and remove the unsupported characters from the column names.

ORA-40167: no valid data in input table

Cause: The specified input table contained no valid data to build R model.

Action: Insert valid data into the input table to build R model.

ORA-40170: Error out in R: *string*

Cause: The R function execution failed.

Action: Verify the specified R model function script.

ORA-40171: The algorithm cannot be dropped because there are models built on it.

Cause: An attempt was made to drop models built on this algorithm.

Action: Drop the model first.

ORA-40172: The algorithm registration does not follow the predefined JSON schema.

Cause: An attempt was made to register an algorithm that did not follow the predefined JavaScript Object Notation (JSON) schema.

Action: Check the predefined JSON schema and revise the algorithm format.

ORA-40173: The same algorithm name, mining function, and algorithm type combination already exists.

Cause: An attempt was made to register an algorithm with the same name, mining function and type combination.

Action: Use a different algorithm name for the same mining function and algorithm type.

ORA-40174: The algorithm that is used is not registered yet.

Cause: The specified algorithm did not exist.

Action: Register the algorithm first.

ORA-40175: Registered algorithm name and R script definition cannot be used simultaneously.

Cause: An attempt was made to use both registered algorithm name and R scripts definition.

Action: Keep either registered algorithm name or R script definition, but not both.

ORA-40176: The current user does not have privilege to register or drop an algorithm.

Cause: The privileges to register or drop an algorithm were not granted.

Action: Obtain the proper privileges before attempting to register or drop an algorithm.

ORA-40181: invalid transformation definition for column *string*

Cause: Transformation definition has duplicate or NULL columns.

Action: Provide a valid transformation definition specification.

ORA-40182: invalid column reference

Cause: Transformation expression has no column references or more than one reference or the reference is qualified.

Action: Provide a valid expression.

ORA-40183: invalid stack definition for attribute *string*

Cause: Stack definition expression or reverse expression has syntax errors or it does not match the transformation definition.

Action: Provide a valid expression.

ORA-40184: transformation definition does not match the data

Cause: Transformation definition specifies nested transformation for non-nested data or it removes all of the columns.

Action: Provide a valid data.

ORA-40185: no valid value found for Box-Cox parameter lambda

Cause: Automated procedure for discovering lambda did not find a value within the valid range.

Action: None required. No Box-Cox transformation was performed.

ORA-40201: invalid input parameter *string*

Cause: The input parameter was either null or invalid.

Action: Provide a valid value for the input parameter.

ORA-40202: column *string* does not exist in the input table *string*

Cause: The specified column was not found in the table.

Action: Check the table schema and provide the correct column name.

ORA-40203: model *string* does not exist

Cause: The model did not exist.

Action: Supply a valid model name.

ORA-40204: model *string* already exists

Cause: A model by the same name exists.

Action: Provide a different, unique name for the model.

ORA-40205: invalid setting name *string*

Cause: The input setting name was invalid.

Action: Consult the documentation for the settings table and provide a valid setting name.

ORA-40206: invalid setting value for setting name *string*

Cause: The input value for the given setting name was invalid.

Action: Consult the documentation about settings and provide a valid setting value.

ORA-40207: duplicate or multiple function settings

Cause: The input settings table contained settings for multiple mining functions.

Action: Provide setting(s) for a single function in the settings table.

ORA-40208: duplicate or multiple algorithm settings for function *string*

Cause: The input settings table had duplicate or multiple algorithm settings for a mining function.

Action: Provide only one appropriate algorithm setting for the mining function.

ORA-40209: setting *string* is invalid for *string* function

Cause: The specified setting was not supported for the mining function supplied.

Action: Provide appropriate combination of function and algorithm settings.

ORA-40210: invalid score criterion type when cost matrix is specified

Cause: The score criterion type may not be 'PROBABILITY' when a cost matrix is specified.

Action: Set score criterion type to 'COST' or don't specify a cost matrix.

ORA-40211: algorithm name *string* is invalid

Cause: Algorithm name for the model was invalid or the operation was not valid for the algorithm.

Action: Check the algorithm name for the model and verify that the operation is valid.

ORA-40212: invalid target data type in input data for *string* function

Cause: Target data type was invalid.

Action: Classification and attribute importance functions accept CHAR, VARCHAR2, and NUMBER data type targets. VARCHAR2 data type targets longer than 4000 bytes are not supported. Regression and time series functions accept NUMBER, BINARY_DOUBLE, and BINARY_FLOAT data type targets only.

ORA-40213: contradictory values for settings: *string*, *string*

Cause: The values entered for the settings were not compatible.

Action: Check the documentation and review the values for the settings.

ORA-40214: duplicate setting: *string*

Cause: Duplicate setting in the settings table.

Action: Remove the duplicate setting from the settings table.

ORA-40215: model *string* is incompatible with current operation

Cause: The current operation was not supported for the mining function the model corresponds to.

Action: Provide the model name suitable for current operation.

ORA-40216: feature not supported

Cause: The feature was not supported in the API.

Action: Modify the code to avoid usage of the feature.

ORA-40217: priors table mismatch with training data

Cause: The entries in the priors table did not correspond to the targets in the training data.

Action: Verify the entries in the priors table.

ORA-40218: Both priors table and weights table are specified

Cause: Both a priors table and a weights table are specified for SVM model build.

Action: Priors table is the old (pre 11g) mechanism for specifying class weights, and class weights table is the new (and correct) way to specify class weights. Remove the priors table entry from the settings table (after transferring class weight settings, if appropriate). Going forward, priors table will be valid only for NB models. Use class weights for SVM.

ORA-40219: apply result table *string* is incompatible with current operation

Cause: The current operation was not allowed for the apply result table supplied.

Action: Ensure that the operation being performed is valid for the mining function used to build the model (using for which the apply result table was created).

ORA-40220: number of attributes is too high

Cause: The data had too many attributes for the available memory.

Action: Reduce the dimensionality of the data and try again.

ORA-40221: Too many distinct target values.

Cause: The number of distinct target values of the training data was too high for the available memory.

Action: Reduce the number of distinct targets and retry.

ORA-40222: data mining model export failed, job name=*string*, error=*string*

Cause: The model export job failed.

Action: Check export job settings as required by DataPump.

ORA-40223: data mining model import failed, job name=*string*, error=*string*

Cause: The model import job failed.

Action: Check import job settings as required by DataPump.

ORA-40224: must specify a valid ID column name when setting *string* is provided

Cause: The training data is transactional. A valid ID column must be specified.

Action: Specify a valid ID column name as input.

ORA-40225: model is currently in use by another process

Cause: The model is currently in use by another process.

Action: Retry if necessary.

ORA-40226: model upgrade/downgrade must be performed by SYS

Cause: Upgrade/Downgrade routines are being invoked by a user with insufficient privileges.

Action: Run the routines as SYS during migration.

ORA-40227: invalid transformation attribute

Cause: Transformation list provided to CREATE_MODEL has duplicate or NULL attributes. Case ID or target attribute has attribute_subname that is not NULL. Attribute provided to ALTER_REVERSE_EXPRESSION does not exist in the model.

Action: Remove NULLs and duplicates and fix case ID and target attributes or provide a valid attribute for a given model.

ORA-40228: scoring cost matrix already exists

Cause: The model already has a scoring cost matrix.

Action: To add a new scoring cost matrix the existing one should be removed first.

ORA-40229: scoring cost matrix not found

Cause: The model does not have a scoring cost matrix.

Action: To remove a scoring cost matrix the model should have one.

ORA-40230: invalid transformation expression

Cause: The expression had syntax or semantic errors.

Action: Provide a valid expression.

ORA-40231: transactional input incompatible with specified algorithm

Cause: Training data in transactional format is not accepted for model creation using the specified mining algorithm.

Action: Pivot the data into 2D tabular format, or provide the transactional input through a nested table column.

ORA-40232: transactional input - incompatible datatype for column *string*

Cause: The data type of the column in the input training data is not supported.

Action: Cast or change the type of the column to one of CHAR, VARCHAR, NUMBER or FLOAT

ORA-40233: transactional input - case id should be provided with id *string*

Cause: The training data is transactional by virtue of presence of a and item id - but does not have a case id specification.

Action: Specify a valid case id column name as input

ORA-40234: reverse expression incompatible with model cost matrix

Cause: A cost matrix existed for this model with actual and predicted values which were inconsistent with the values resulting from the specified reverse transformation.

Action: Either remove the cost matrix table and re-add it with the new actual and predicted values, or respecify the reverse transformation to be consistent with the existing cost matrix.

ORA-40235: invalid setting value for setting ASSO_AGGREGATES: *string*

Cause: The setting ASSO_AGGREGATES was not valid.

Action: Specify valid aggregates column names.

ORA-40236: maximum number of aggregates exceeded

Cause: The setting ASSO_AGGREGATES specified too many aggregates.

Action: Reduce the number of aggregates.

ORA-40237: duplicate case IDs in training table

Cause: The same value occurred more than once in the case ID column of the training table.

Action: Eliminate the duplicate case IDs in the training table.

ORA-40238: invalid linear algebra shared library *string*

Cause: The shared library containing platform-optimized linear algebra routines was not loaded.

Action: Verify that the shared library is correctly installed.

ORA-40251: no support vectors were found

Cause: The input data is non-predictive in nature, or one of the input settings is incorrect/incompatible with respect to the input data.

Action: Provide additional data or change model setting value.

ORA-40252: no target values were found

Cause: No target values were identified during load.

Action: Validate that the target is correctly specified.

ORA-40253: no target counter examples were found

Cause: One or more of the target classes have only positive examples.

Action: Provide counter examples or remove that target class.

ORA-40254: priors or weights cannot be specified for one-class models

Cause: Priors or weights were specified.

Action: Do not specify priors or weights for one-class models.

ORA-40255: specified priors or weights table has an incorrect schema

Cause: The priors or class weights table whose name is specified in the settings does not have the prescribed schema. A priors table should have the schema (target_value, prior_probability) and a class weights table should have the schema (target_value, class_weight)

Action: Modify the schema of the input priors or class weights table to match the ones provided above (also in the documentation).

ORA-40261: input data for model build contains negative values

Cause: The input data contains negative values, which is not acceptable for a Non-negative Matrix Factorization model.

Action: Provide clean data for build without any negative values.

ORA-40262: NMF: number of features not between [1, string]

Cause: The number of requested features must be greater than 1, and less than the smaller of the number of attributes and the number of cases in the dataset.

Action: Specify the desired number of features within the acceptable range.

ORA-40263: no meaningful matrix factorization found

Cause: Input data was not significantly different from 0.

Action: Check your data for problems or add a positive constant to all the numeric attributes.

ORA-40264: number of mining attributes (string) exceeds maximum (string)

Cause: Input data was found to contain a number of mining attributes exceeding the maximum allowed.

Action: Check the input data for categorical fields with high cardinality.

ORA-40271: no statistically significant features were found

Cause: Input data inadequate in volume and/or quality to derive statistically significant predictors for building a data mining model.

Action: Provide a well-prepared training data set.

ORA-40272: apply rules prohibited for this model mode

Cause: Adaptive Bayes Network rules are only generated for SingleFeature ABN models

Action: Rebuild model in SingleFeature mode and then apply with rules.

ORA-40273: invalid model type *string* for Adaptive Bayes Network algorithm

Cause: The valid values for the abns_model_type settings are: abns_multi_feature, abns_single_feature, abns_naive_bayes.

Action: Use a valid value for the abns_model_type setting.

ORA-40274: the Adaptive Bayes Network algorithm is desupported

Cause: An attempt was made to score an Adaptive Bayes Network model.

Action: Drop the existing model and build a new model using a supported classification algorithm.

ORA-40281: invalid model name

Cause: A model name is invalid or does not exist.

Action: Check spelling. A valid model name must begin with a letter and may contain only alphanumeric characters and the special characters \$, _, and #. The name must be less than or equal to 30 characters and cannot be a reserved word.

ORA-40282: invalid cost matrix

Cause: Cost matrix specification is invalid.

Action: Provide valid cost matrix specification. Check syntax for data mining functions.

ORA-40283: missing cost matrix

Cause: Cost matrix specification is missing.

Action: Provide valid cost matrix specification. Check syntax for data mining functions.

ORA-40284: model does not exist

Cause: The model entered does not exist.

Action: Check spelling.

ORA-40285: label not in the model

Cause: The user-specified label was not present in the model.

Action: Provide a valid label. The set of valid labels can be retrieved from a classification model by invoking PREDICTION_SET, from a clustering model by invoking CLUSTER_SET, and from a feature extraction model by invoking FEATURE_SET.

ORA-40286: remote operations not permitted on mining models

Cause: An attempt was made to perform queries or DML operations on remote tables using local mining models.

Action: Remove the reference to remote tables in the statement.

ORA-40287: invalid data for model - cosine distance out of bounds

Cause: The norm computed using attribute values from the incoming row for the cosine model is outside the range 0-1.

Action: Remove or correct the data in the offending row.

ORA-40289: duplicate attributes provided for data mining function

Cause: A duplicate, non-nested attribute was provided as input to the data mining function. A duplicate attribute is one which is present in the model signature, occurs more than once in the USING clause after tablename expansion, and is not a collection element in a nested table column.

Action: Eliminate the duplicate attribute(s).

ORA-40290: model incompatible with data mining function

Cause: The supplied model cannot be operated upon by the data mining function because the model is built for a mining function and/ or based on an algorithm that is incompatible with function.

Action: Provide the name of the model suitable for the function.

ORA-40291: model cost not available

Cause: The supplied model was assumed to have been built with a cost matrix specification, when in reality, it was not.

Action: Provide a model name that corresponds to a model that was built with an appropriate cost matrix specification.

ORA-40292: confidence level must be greater than 0 and less than 1

Cause: The specified value for confidence level is out of range.

Action: Specify a value for confidence level in the range $0 < \text{level} < 1$

ORA-40293: input class is invalid for the specified predictive model

Cause: The specified model is either not a classification model, or does not have the input class label as one of its target values.

Action: Provide the correct target value (class label) or provide the appropriate classification model with the target attribute that has the specified class label as one of its values.

ORA-40294: corrupted model

Cause: The model object was in an inconsistent state.

Action: Drop the corrupted model.

ORA-40295: model does not fit in system global area

Cause: The model was too large to fit in shared memory.

Action: No action is needed. The model is automatically loaded to program global area (PGA).

ORA-40301: invalid cost matrix specification

Cause: A valid cost matrix is not specified.

Action: Consult documentation for valid cost matrix specification.

ORA-40302: invalid classname *string* in cost matrix specification

Cause: Actual or predicted classname specified is not present in training data

Action: Provide valid classname(s) in cost matrix specification

ORA-40303: invalid prior probability specification

Cause: Valid prior probabilities not specified. Valid probabilities should be between 0 and 1.

Action: Consult documentation for valid prior probability specification.

ORA-40304: invalid classname *string* in prior probability specification

Cause: Actual or predicted classname specified is not present in training data.

Action: Provide valid classname(s) in prior probability specification.

ORA-40305: invalid impurity metric specified

Cause: Impurity metric specified is not valid. Examples of valid metrics are TREE_IMPURITY_GINI, TREE_IMPURITY_ENTROPY.

Action: Consult documentation for valid impurity metrics and specification.

ORA-40306: dm_nested types not supported by this algorithm

Cause: The training input to the CREATE_MODEL routine contained one or more columns of DM_NESTED type (DM_NESTED_NUMERICALS or DM_NESTED_CATEGORICALS). These columns are currently not supported by Orthogonal Partitioning Clustering (O-Cluster).

Action: Remove columns of these data types from the input data source.

ORA-40307: nested attribute combined name and value too long

Cause: The data that was presented to the decision tree algorithm was too long. The length is computed from the sum of the length of the nested attribute name and the length of the attribute value.

Action: Reduce the length of the attribute name or reduce the length of the categorical value (perhaps by recoding).

ORA-40308: RFOR_MTRY is greater than attribute count or negative or 0

Cause: The setting for RFOR_MTRY was either 0 or \geq number of attributes. The default behavior in this scenario is to use all of the attributes for the model build.

Action: Consider a different value for RFOR_MTRY.

ORA-40309: The Random Forest sample size exceeds available memory.

Cause: The sample did not fit into available memory.

Action: No action needed. The sample size was adjusted automatically to fit into memory.

ORA-40321: invalid bin number, is zero or negative value

Cause: Input bin number has zero or negative values.

Action: Provide positive bin numbers starting from 1.

ORA-40322: bin number too large

Cause: Bin number is too large.

Action: Reprocess build data by choosing smaller bin numbers.

ORA-40323: Attribute *string* has too many distinct values (*string*)

Cause: Exceeded maximum number of distinct values allowed in an attribute.

Action: Bin numerical data with fewer than 1024 bins or recode categorical data with fewer than 1024 unique values.

ORA-40324: All rows contain the same data

Cause: All rows contained the same data and could not be clustered using k-Means with cosine distance metric.

Action: Use Euclidean distance metric.

ORA-40325: maximum number of clusters exceeded

Cause: The maximum number of clusters was exceeded.

Action: Reduce the number of clusters.

ORA-40326: no mining attributes after filtering

Cause: All mining attributes were filtered out.

Action: Disable attribute filtering.

ORA-40341: access violation on model storage object

Cause: An attempt was made to directly access/modify a schema object that stores model metadata and content.

Action: Perform all mining operations (create,drop,alter, and select using data mining functions) against named model objects. Contact your DBA or Oracle Support if you suspect that an orphaned schema object.

ORA-40342: model was not correctly upgraded

Cause: An attempt was made to use a model, but the model was not correctly upgraded to the current release. This is most likely caused by importing a model from an old release without upgrading it, but could also be caused by a failed database upgrade.

Action: Invoke the SYS.DMP_SYS.UPGRADE_MODELS() procedure.

ORA-40343: invalid version specified in UPGRADE_MODELS

Cause: An invalid version was specified when invoking the UPGRADE_MODELS procedure. Valid values for the version are 10.2.0, 11.0.0, 12.0.0, and NULL.

Action: Specify a valid version for UPGRADE_MODELS.

ORA-40350: One or more models exist that cannot be downgraded

Cause: There are data mining models in the database that were created in a release beyond the selected release for downgrade.

Action: Prior to downgrade, drop data mining models that cannot be downgraded to the selected release.

ORA-40361: only SELECT and ALTER are valid for mining models

Cause: An attempt was made to grant or revoke an invalid privilege on a mining model.

Action: Do not attempt to grant or revoke any privilege besides SELECT or ALTER on mining models.

ORA-40362: invalid object *string.string* specified in the statement

Cause: An attempt was made to grant a privilege on an invalid object.

Action: Ensure that the dependents of the object are valid before attempting to grant the privilege on the object.

ORA-40363: GRANT failed: user SYS always has SYSOPER and SYSDBA

Cause: An attempt was made to grant SYSOPER or SYSDBA privileges to SYS user. These administrative privileges cannot be granted to SYS, since SYS always has SYSOPER and SYSDBA privileges.

Action: Try granting administrative privilege to users other than SYS.

ORA-40364: Use of BECOME USER functionality is restricted.

Cause: This is an internal error message.

Action: Contact Oracle Support Services.

ORA-40365: The SYS user cannot be locked while the password file is in its current format.

Cause: An attempt was made to lock the SYS user account by executing the DDL statement ALTER USER SYS ACCOUNT LOCK while the password file was created in LEGACY or 12 format.

Action: The password file must be created in the 12.2 format to provide support for maintaining the ACCOUNT_STATUS of all administrative users including SYS.

ORA-40366: Administrative privilege cannot be granted to this user.

Cause: An attempt was made to grant administrative privilege to a user who has been created with NONE as its authentication type. Such grants are not allowed.

Action: Do not grant administrative privilege to user with NONE as its AUTHENTICATION_TYPE in DBA_USERS view.

ORA-40367: An Administrative user cannot be altered to have no authentication type.

Cause: An attempt was made to alter an administrative user to have no authentication type.

Action: Revoke administrative privilege from the user before attempting to alter the user.

ORA-40368: User which can be proxied cannot be marked as dictionary protected

Cause: An attempt was made to mark a user which could be proxied as dictionary protected.

Action: Revoke connection through proxy from the user and retry the operation.

ORA-40369: Only NO AUTHENTICATION user can be marked as dictionary protected

Cause: An attempt was made to mark user with AUTHENTICATION TYPE other than NONE as dictionary protected.

Action: Alter user AUTHENTICATION_TYPE to NONE and retry the operation.

ORA-40370: IDENTIFIED clause not allowed for user marked as dictionary protected

Cause: IDENTIFIED clause was used for user which has been marked as dictionary protected.

Action: Disable DICTIONARY PROTECTION on the user and retry the operation.

ORA-40371: Cannot connect as dictionary protected user

Cause: Connect was used for user which has been marked as dictionary protected.

Action: Disable DICTIONARY PROTECTION on the user and retry the connection.

ORA-40372: ACCOUNT UNLOCK not allowed for user marked as dictionary protected

Cause: ACCOUNT UNLOCK was used for user which has been marked as dictionary protected.

Action: Disable DICTIONARY PROTECTION and retry the operation.

ORA-40373: only CREATE, CREATE ANY, ALTER, DROP are valid for property graph

Cause: An attempt was made to grant or revoke an invalid privilege on a property graph.

Action: Do not attempt to grant or revoke any privilege besides CREATE, CREATE ANY, ALTER, or DROP on property graphs.

ORA-40374: Dictionary protection feature is supported for only Oracle-maintained users.

Cause: A non Oracle-maintained user attempted to use the dictionary protection feature.

Action: Use the dictionary protection feature for only Oracle-maintained users.

ORA-40375: Dictionary protection feature is not supported for SYS user.

Cause: An attempt was made to mark SYS user as dictionary protected.

Action: SYS user cannot be marked as dictionary protected.

ORA-40381: Invalid field specification for: *string*

Cause: The derived field was incorrectly defined.

Action: Ensure that the field is correctly defined in the PMML document.

ORA-40382: More than one linear regression equation in the model

Cause: More than one linear regression equation was in the model.

Action: Ensure that there is only one linear regression equation in the model.

ORA-40383: No model found in PMML document

Cause: There was no model found in the PMML document.

Action: Ensure that the PMML document contains a model section.

ORA-40384: Only one model allowed in PMML document

Cause: More than one model existed in the PMML document.

Action: PMML model import only supports one model per PMML document. Ensure that only one model exists in the PMML document.

ORA-40385: Target has more than two categories

Cause: The target contained more than two categories.

Action: PMML model import supports only binary logistic regression. Ensure that the target contains no more than two categories.

ORA-40386: NormContinuous must include at least two LinearNorm elements

Cause: NormContinuous included less than two LinearNorm elements.

Action: NormContinuous must include at least two LinearNorm elements. Ensure that at least two LinearNorm elements are included.

ORA-40387: Invalid interval for Discretize field: *string*

Cause: The intervals were incorrect.

Action: Ensure that that both margins are not missing.

ORA-40388: Unsupported feature in PMML document: *string*

Cause: The feature was not supported by Predictive Model Markup Language (PMML) model import.

Action: Ensure that you use the supported features.

ORA-40389: Unsupported PMML transformation: *string*

Cause: The transformation was not supported.

Action: Ensure that you use the supported transformations.

ORA-40390: PMML DerivedField must have a unique name specified: *string*

Cause: "The Predictive Model Markup Language (PMML) DerivedField did not reference another defined field and did not have a unique name."

Action: "Specify a unique name for each DerivedField."

ORA-40391: PMML DerivedField depends on a undefined field: *string*

Cause: A DerivedField referenced an undefined field.

Action: Ensure that the DerivedField references other defined fields.

ORA-40392: PMML regression equation references an undefined field: *string*

Cause: The Predictive Model Markup Language (PMML) Regression equation did not reference defined fields. PMML Regression equation may only reference defined fields.

Action: Ensure that all fields are defined.

ORA-40401: categorical attributes are not supported by this algorithm

Cause: The build data provided to the CREATE_MODEL routine contained one or more categorical attributes of types CHAR, VARCHAR2, or

DM_NESTED_CATEGORICAL. These attributes are currently not supported for the SVD algorithm.

Action: Remove the categorical attributes from the build data.

ORA-40402: cannot output U matrix without a valid case identifier column

Cause: A U matrix was requested, but there was no case identifier column in the build data.

Action: Provide a non-null case identifier column in the build data.

ORA-40403: model does not have any valid features

Cause: All singular values in the SVD model were equal to zero. This can occur if the build data contains only zeros or all build columns have constant values and automatic data preparation is turned on.

Action: Inspect and modify the build data.

ORA-40404: approximate computation cannot be disabled for the build data

Cause: The build data had a very high number of attributes. An SVD model can be built only by enabling approximate computation.

Action: Enable approximate computation.

ORA-40405: Full SVD solvers cannot be used for the build data.

Cause: The build data had a very high number of attributes. A Singular Value Decomposition (SVD) model cannot be built using full SVD solvers.

Action: Select a truncated SVD solver.

ORA-40421: missing text policy name

Cause: The text policy name was either missing or invalid.

Action: Provide a valid text policy name created using CTX_DDL.CREATE_POLICY().

ORA-40422: TEXT attribute types not supported by this algorithm

Cause: The training input to the CREATE_MODEL routine contained one or more attributes of TEXT type. These attributes are currently not supported by Orthogonal Partitioning Clustering (O-Cluster).

Action: Remove attributes of these types from the input data source.

ORA-40423: Extraction of tokens from text failed

Cause: Extraction of tokens from an attribute of TEXT type failed.

Action: Check text policy, policy owner, other settings for TEXT type, and computer resources.

ORA-40441: JSON syntax error

Cause: The provided JavaScript Object Notation (JSON) data had invalid syntax and could not be parsed.

Action: Provide JSON data with the correct syntax.

ORA-40442: JSON path expression syntax error ('string')string

Cause: The provided JavaScript Object Notation (JSON) path expression had an invalid syntax and could not be parsed.

Action: Provide JSON path expression with the correct syntax.

ORA-40443: unsupported JSON path expression

Cause: The provided JavaScript Object Notation (JSON) path expression contained unsupported features.

Action: Remove unsupported features from JSON path expression.

ORA-40444: JSON processing error

Cause: The requested JavaScript Object Notation (JSON) operation failed.

Action: Ensure that the JSON operation is invoked correctly.

ORA-40445: unsupported JSON operation

Cause: The requested JavaScript Object Notation (JSON) operation is not supported.

Action: None

ORA-40446: expecting keyword STREAM

Cause: The JavaScript Object Notation (JSON) operator expected the keyword STREAM.

Action: Add the keyword STREAM to the JSON operator.

ORA-40447: expecting PASSING clause

Cause: The JavaScript Object Notation (JSON) operator expected a PASSING clause.

Action: Add a PASSING clause to the JSON operator.

ORA-40448: expecting RETURNING clause

Cause: The JavaScript Object Notation (JSON) operator expected a RETURNING clause.

Action: Add a RETURNING clause to the JSON operator.

ORA-40449: invalid data type for return value

Cause: The provided data type for the return value was invalid or unsupported.

Action: Provide a supported return value.

ORA-40450: invalid ON ERROR clause

Cause: The provided ON ERROR clause was invalid.

Action: Provide a valid ON ERROR clause.

ORA-40451: invalid default value provided

Cause: The provided default value was not valid.

Action: Provide a valid default value.

ORA-40452: default value not matching type defined in RETURNING clause

Cause: The provided default value did not match the type defined in the RETURNING clause.

Action: Ensure that the default value and RETURNING clause are of the same type.

ORA-40453: JSON operator syntax error

Cause: The provided JavaScript Object Notation (JSON) operator had invalid syntax.

Action: Provide JSON operator with correct syntax.

ORA-40454: path expression not a literal

Cause: The provided path expression was not a literal (a constant).

Action: Provide a constant path expression.

ORA-40455: default value not a literal

Cause: The provided default value was not a literal (a constant).

Action: Provide a constant default value.

ORA-40456: JSON_VALUE evaluated to non-scalar value

Cause: The provided JavaScript Object Notation (JSON) path expression selected a non-scalar value.

Action: Correct the JSON path expression or use JSON_QUERY.

ORA-40457: JSON path expression contained an invalid array index ('string')string

Cause: The provided JavaScript Object Notation (JSON) path expression contained an invalid array index.

Action: Provide a valid array index. The first element in the array has the index 0.

ORA-40458: JSON_EXISTS used outside predicate

Cause: The operator JSON_EXISTS was used outside of a predicate.

Action: Use JSON_EXISTS inside a predicate, for instance by embedding it inside a CASE expression.

ORA-40459: output value too large (actual: string, maximum: string)

Cause: The provided JavaScript Object Notation (JSON) operator generated a result which exceeded the maximum length specified in the RETURN clause.

Action: Increase the maximum size of the data type in the RETURNING clause or use a CLOB/BLOB in the RETURNING clause.

ORA-40460: default value too large

Cause: The specified default value exceeded the maximum length specified in the RETURNING clause.

Action: Increase the maximum size of the data type in the RETURNING clause or reduce the length of the default value.

ORA-40461: Unsupported character set

Cause: The provided JavaScript Object Notation (JSON) operator does not supported the current database character set.

Action: Chose a different database character set, for instance AL32UTF8, AL16UTF16, or a single byte character set.

ORA-40462: JSON_VALUE evaluated to no value

Cause: The provided JavaScript Object Notation (JSON) path expression did not select a value.

Action: Correct the JSON path expression.

ORA-40463: JSON path expression contained an invalid variable name

Cause: The provided JavaScript Object Notation (JSON) path expression contained a variable name that was not used in the PASSING clause.

Action: Ensure that the variable names in the path expression and PASSING clause match.

ORA-40464: JSON PASSING clause contained duplicate variable name: 'string'

Cause: The provided JavaScript Object Notation (JSON) PASSING clause contained non-unique variable names.

Action: Rename the variables in the PASSING clause.

ORA-40465: JSON PASSING clause contained too many unnamed parameters

Cause: The provided JavaScript Object Notation (JSON) PASSING clause contained too many unnamed parameters.

Action: Assign names to the parameters provided in the PASSING clause.

ORA-40466: Invalid parameter in IS [NOT] JSON predicate

Cause: The IS [NOT] JSON predicate contains an invalid parameter.

Action: Remove or correct the parameter.

ORA-40467: JSON_TEXTCONTAINS() cannot be evaluated without a JSON-enabled context index

Cause: There was no JavaScript Object Notation (JSON)-enabled context index available.

Action: Create a JSON-enabled context index.

ORA-40468: first input parameter to JSON_TEXTCONTAINS() must be a table column

Cause: The first input parameter to JSON_TEXTCONTAINS() was not a table column.

Action: Pass a table column to the first input parameter to JSON_TEXTCONTAINS().

ORA-40469: JSON path expression in JSON_TEXTCONTAINS() is invalid

Cause: A predicate or array position was used in JavaScript Object Notation (JSON) path expression, or the length of a JSON field name in the path expression exceeded the JSON search index token length limit.

Action: Neither use a predicate or array position in a JSON path expression nor a step with length longer than the JSON search index token length limit.

ORA-40470: JSON_VALUE evaluated to multiple values

Cause: The provided JavaScript Object Notation (JSON) path expression selected more than one value.

Action: Correct the JSON path expression or use JSON_QUERY.

ORA-40471: selected value not JSON array or object

Cause: The selected value was not a JavaScript Object Notation (JSON) value. (object or array)

Action: Use CAST AS ARRAY to return this value.

ORA-40472: invalid escape sequence in JSON data

Cause: The provided JavaScript Object Notation (JSON) data had an invalid escape sequence.

Action: Provide JSON data with corrected escape sequence.

ORA-40473: duplicate key names in JSON object

Cause: The provided JavaScript Object Notation (JSON) data had duplicate key names in one object.

Action: Provide JSON data with unique key names in each JSON object.

ORA-40474: invalid UTF-8 byte sequence in JSON data

Cause: The provided JavaScript Object Notation (JSON) data had an invalid UTF-8 byte sequence.

Action: Provide JSON data with corrected UTF-8 byte sequence or escape the characters.

ORA-40475: JSON data nested too many levels

Cause: The provided JavaScript Object Notation (JSON) data had too many levels of nesting.

Action: Provide JSON data with fewer levels of nesting.

ORA-40476: JSON key too long

Cause: The provided JavaScript Object Notation (JSON) data had a key which exceeds the maximum length.

Action: Provide JSON data with shorter key names.

ORA-40477: internal JSON error

Cause: There was an internal error in the JavaScript Object Notation (JSON) processing layer.

Action: None

ORA-40478: output value too large (maximum: *string*)

Cause: The provided JavaScript Object Notation (JSON) operator generated a result which exceeds the maximum length specified in the RETURN clause.

Action: Increase the maximum size of the data type in the RETURNING clause or use a CLOB or BLOB in the RETURNING clause.

ORA-40479: internal JSON serializer error

Cause: There was an internal error in the JavaScript Object Notation (JSON) serializer).

Action: None

ORA-40480: The result cannot be returned without an array wrapper.

Cause: The JavaScript Object Notation (JSON) path expressions selected a value that can only be returned inside an array.

Action: Add WITH ARRAY WRAPPER to the JSON function.

ORA-40481: ASCII or PRETTY not supported for non-textual return data type.

Cause: Attempted to PRETTY print or escape non-ASCII characters for a non-textual output of a JavaScript Object Notation (JSON) operation.

Action: Change return data type to VARCHAR2 or CLOB or remove the PRETTY or ASCII serialization option.

ORA-40482: JSON_TEXTCONTAINS() used outside predicate of WHERE clause

Cause: JSON_TEXTCONTAINS() was used outside of the predicate of a WHERE clause.

Action: Use JSON_TEXTCONTAINS() inside a predicate of a WHERE clause.

ORA-40483: incorrect search string to JSON_TEXTCONTAINS()

Cause: An incorrect search string to JSON_TEXTCONTAINS() was used.

Action: The search string to JSON_TEXTCONTAINS() needs to be a non-zero length compile time constant.

ORA-40484: invalid data type for JSON_TABLE column 'string'

Cause: A column in the provided JSON_TABLE had an unsupported data type.

Action: Provide a supported data type.

ORA-40485: keyword PRETTY not valid for column "string"

Cause: A JSON_TABLE column could not be pretty-printed because it had no JSON_QUERY semantics.

Action: Change the column semantics to JSON_QUERY or remove the keyword PRETTY.

ORA-40486: array wrapper not valid for column string

Cause: A JSON_TABLE column used the ARRAY WRAPPER clause where it was not allowed because the column did not have JSON_QUERY semantics.

Action: Change the column semantics to JSON_QUERY or remove the array wrapper.

ORA-40487: invalid usage of keyword EXISTS

Cause: A JSON_TABLE column with JSON_EXISTS semantics had invalid parameters.

Action: Remove the invalid keywords.

ORA-40488: invalid ON ERROR clause for column "string"

Cause: An ON ERROR clause was provided that was not valid for the selected column semantics.

Action: Change or remove the ON ERROR clause or change the column semantics.

ORA-40489: keyword ASCII not valid for column "string"

Cause: The column did not have JSON_VALUE or JSON_QUERY semantics and did not allow the ASCII printing option.

Action: Change the column semantics to JSON_VALUE or JSON_QUERY or remove the keyword ASCII.

ORA-40490: COLUMNS clause required

Cause: The provided JSON_TABLE row source requires a COLUMNS clause.

Action: Provide a COLUMNS clause.

ORA-40491: invalid input data type for JSON_TABLE

Cause: The provided input to JSON_TABLE has an unsupported data type.

Action: Provide a (N)VARCHAR2, (N)CLOB, RAW, BLOB or BFILE input.

ORA-40492: invalid definition in JSON_TABLE for column "string"

Cause: A column definition inside JSON_TABLE was invalid.

Action: Correct the column definition.

ORA-40493: invalid option or parameter in JSON_TABLE for column "string"

Cause: The specified JSON_TABLE definition contained an invalid option or parameter near the column referred to in the error message.

Action: Correct the JSON_TABLE definition.

ORA-40494: error during execution of JSON_TABLE

Cause: The provided JSON_TABLE definition could not be evaluated.

Action: Correct the JSON_TABLE definition.

ORA-40495: internal error in JSON_TABLE

Cause: The provided JSON_TABLE definition could not be evaluated.

Action: Contact Oracle Support Services.

ORA-40496: too many keys for JSON_OBJECTAGG

Cause: The number of rows in a JSON_OBJECTAGG aggregation group exceeded the maximum number of keys for a JSON object.

Action: Reduce the number of rows in each group, or remove the WITH UNIQUE KEYS check.

ORA-40497: only one ordinality column permitted

Cause: The provided JSON_TABLE definition contained more than one ordinality column.

Action: Remove the ordinality column or columns from the JSON_TABLE definition.

ORA-40498: binary format requested for non-binary data type

Cause: The provided JSON format was binary but the input data type was not binary.

Action: Either change the format clause or use an input of binary data type.

ORA-40499: no format defined for binary data type

Cause: The provided JavaScript Object Notation (JSON) input was of binary type but a format was not defined.

Action: Define a format for binary input.

ORA-40501: cannot open an encrypted log file

Cause: An attempt was made to open a log file that has been encrypted for storage and management by the Oracle Availability Machine. Only the processes involved in shipping such a log to or from the Oracle Availability Machine can open the log.

Action: Allow the Oracle Availability Machine to manage the log file.

ORA-40504: file *string* created before last CREATE CONTROLFILE, could not proceed with recovery

Cause: An attempt at media recovery found that the data file already existed before the last CREATE CONTROLFILE statement was executed. The information needed for doing the media recovery was lost with the control file that existed when the data file was added to the database.

Action: Restore a more recent backup of the data file and retry the recovery.

ORA-40505: tablespace #*string* has been dropped

Cause: An attempt was made on the physical standby database to access the tablespace that was being dropped by Redo Apply. Note that the target tablespace was dropped on the primary database and the physical standby database was applying the redo that was generated at the primary database for the target tablespace drop.

Action: None

ORA-40507: The file header of data file *string* is corrupt. Automatic block repair is trying to fix the file header.

Cause: A corrupt data file header was encountered during a checkpoint.

Action: Run the query after the data file header is fixed by the automatic block repair.

ORA-40509: cursor compilation failed because *string*

Cause: Cursor compilation failed. Check the alert log for more details.

Action: Run the query again after fixing the condition that failed cursor compilation.

ORA-40510: This type of file cannot be renamed.

Cause: An attempt was made to rename a file for which renaming is not supported.

Action: Do not attempt to rename files of this type.

ORA-40511: Data file *string* is not accessible to recovery.

Cause: The data transfer cache was sent and rejected blocks for a file that was not accessible to the recovery. Either the file had not yet been added by the recovery or the file was offline.

Action: No action is required. If the recovery adds the file or the standby media recovery is restarted after bringing the file online, then the data blocks are fetched automatically.

ORA-40512: PDB recovery stopped at SCN %0!s, time %1!s, before reaching target time %2!s on an orphan database incarnation.

Cause: The target time was on an orphan database incarnation and the pluggable database (PDB) recovery could not proceed further.

Action: Examine if the current state of the pluggable database satisfies the requirement. If you indeed need the pluggable database to be recovered to the previously specified time, consider performing flashback or point-in-time recovery of the entire Container Database(CDB) to the target time.

ORA-40513: not supported on standby database

Cause: An attempt was made to reset the pluggable database (PDB) incarnation on the standby database.

Action: This is an informational message only.

ORA-40514: You may need to restore an older backup for recovery to orphan PDB incarnation

Cause: Oracle can not verify that the specified file is a correct file for this database. This may be because Oracle is recovering to an orphan PDB incarnation.

Action: Restore an older backup for this file. See alert log for additional details.

ORA-40515: No source of foreign redo could be found for PDB string.

Cause: The named standby pluggable database was waiting for a new source pluggable database to be identified.

Action: Try the action again once the role change to primary of the new source pluggable database has completed.

ORA-40516: Cannot create a pluggable database restore point on standby when the pluggable database has orphaned from the primary.

Cause: An attempt was made to create a pluggable database (PDB) restore point on the standby when the PDB had orphaned from the primary.

Action: Restore and recover the pluggable database to follow the primary and then attempt to create the restore point.

ORA-40541: exceeded maximum size for a JSON schema literal

Cause: The maximum size permitted for a JavaScript Object Notation (JSON) schema literal was exceeded.

Action: Ensure that the JSON schema literal does not exceed the maximum size permitted

ORA-40542: use of eJSON not allowed for this operation

Cause: An extended JavaScript Object Notation (eJSON) document was used as an input to a JSON operation that does not support eJSON documents.

Action: Ensure that the input is not using the eJSON format.

ORA-40543: invalid alias definition

Cause: A column alias was used in an expression that does not allow aliases.

Action: Remove the column alias definition.

ORA-40544: CHECK expression of 'string' constraint not possible to use as PRECHECK condition

Cause: The CHECK constraint expression had no equivalent in JSON schema definition.

Action: Remove the PRECHECK keyword from the constraint definition.

ORA-40551: internal BSON/JSON conversion error [string]

Cause: BSON/JSON conversion failed with internal error.

Action: Contact Oracle Support Services.

ORA-40552: invalid data type

Cause: The BSON/JSON converter was invoked with an invalid data type.

Action: Ensure that both the input and output is of data type BLOB.

ORA-40553: path expression with predicates not supported in this operation

Cause: A path expression with predicates was specified in a JavaScript Object Notation (JSON) operation that does not support predicates.

Action: Only JSON_EXISTS supports predicates.

ORA-40554: invalid input data type in PASSING clause for variable 'string'

Cause: The specified PASSING clause had an unsupported data type.

Action: Use a supported data type in the PASSING clause.

ORA-40555: incorrect PASSING clause

Cause: The specified PASSING clause was invalid.

Action: Specify a valid passing clause.

ORA-40556: unsupported chaining of JSON_TABLE

Cause: The specified JSON_TABLES were chained.

Action: Use the NESTED PATH syntax for JSON_TABLE.

ORA-40557: cannot update a JSON value

Cause: An attempt was made to update a JavaScript Object Notation (JSON) value.

Action: Update the entire JSON object instead.

ORA-40558: Simple Oracle Document Access (SODA) requires that the Oracle Database compatible parameter is set to 12.0.0.0.0 or higher.

Cause: DBMS_SODA_ADMIN package was used when the database was operating at a compatible setting lower than 12.0.0.0.0.

Action: Upgrade the database compatible setting to 12.0.0.0.0 or higher to enable the desired new features.

ORA-40559: one or more JSON objects exist that cannot be downgraded.

Cause: There were JavaScript Object Notation (JSON) objects in the database that were created in a release beyond the selected release for downgrade.

Action: Prior to downgrade, drop the JSON objects that cannot be downgraded to the selected release.

ORA-40560: JSON_TABLE nested path expressions not disjunct

Cause: The JSON_TABLE expression contained two or more nested path expressions that (partially or fully) selected the same fields.

Action: Correct or combine the nested path expressions so that they become disjunct.

ORA-40561: invalid path in JSON_TABLE nested path clause

Cause: The JSON_TABLE expression contained a nested path clause with an invalid path expression.

Action: Correct or remove the nested path expression.

ORA-40562: Conversion from JSON to SDO_GEOMETRY failed.

Cause: The selected value could not be converted to a SDO_GEOMETRY object.

Action: Ensure that the path expression selects one valid JSON value.

ORA-40563: default value not allowed for object types

Cause: The error handler specified a default value and the returned data type was an object type. These cannot be combined.

Action: Use a scalar return type for the operator, or choose a different error handler such as 'NULL ON ERROR' or 'ERROR ON ERROR'.

ORA-40564: Invalid JSON specification.

Cause: The provided specification was invalid.

Action: Correct the specification parameter.

ORA-40565: JSON path expression did not select a value.

Cause: The JavaScript Object Notation (JSON) path expression did not select a value.

Action: Correct the JSON path expression.

ORA-40566: JSON path expression selected a value of different data type.

Cause: The JavaScript Object Notation (JSON) path expression selected a data type value different than the requested data type.

Action: Use another 'get-method' to retrieve the value selected by the JSON path expression.

ORA-40567: JSON patch operation failed.

Cause: The JavaScript Object Notation (JSON) patch operation failed.

Action: Correct the specification parameter.

ORA-40568: Cannot modify read-only target.

Cause: An attempt to modify a JavaScript Object Notation (JSON) structure failed because the structure cannot be modified.

Action: None

ORA-40569: Unimplemented JSON feature.

Cause: An attempt was made to execute an unimplemented JavaScript Object Notation (JSON) feature.

Action: None

ORA-40570: JSON conversion failed.

Cause: A conversion between a JavaScript Object Notation (JSON) value and another type failed.

Action: Check the type definition or the selected JSON value.

ORA-40571: JSON key name not found.

Cause: A key with the specified name was not found in the JavaScript Object Notation (JSON) data.

Action: Correct the key name.

ORA-40572: Invalid JSON array position.

Cause: An attempt was made to access an item inside a JavaScript Object Notation (JSON) array with a position that is either out of bounds or invalid.

Action: Correct the position value.

ORA-40573: Invalid use of PL/SQL JSON object type.

Cause: An attempt was made to use a PL/SQL JavaScript Object Notation (JSON) object type in an invalid context.

Action: Use PL/SQL JSON object types only inside PL/SQL.

ORA-40574: JSON operation on redacted column *string* not allowed.

Cause: An attempt was made to use a JavaScript Object Notation (JSON) operation on a column which has a redaction policy.

Action: Drop the redaction policy. Re-create redaction policy on a new view over the column if needed.

ORA-40575: JSON operation only supports scalar types.

Cause: An attempt was made to use a JavaScript Object Notation (JSON) operation on a non-scalar value.

Action: Apply the operation on a scalar value.

ORA-40576: Bind variable '*string*' has to be a constant in this operation.

Cause: An attempt was made to bind a variable in a SQL/JSON path to a value that may change during the execution of a SQL statement.

Action: Use either a compile time constant or a run-time constant such as a statement-level bind variable as the SQL/JSON variable value.

ORA-40577: invalid key name

Cause: The provided key name was not valid.

Action: Provide a valid key name.

ORA-40578: invalid or non-existent array position

Cause: The provided array position was not valid or nonexistent.

Action: Provide a valid array position or use the 'append' function to add new items to the array.

ORA-40579: star expansion is not allowed

Cause: Either t.* or * was used in a context where it is not allowed.

Action: Explicitly specify the column names.

ORA-40580: STRICT or WITH UNIQUE KEYS not allowed for JSON type

Cause: An attempt was made to use IS JSON with the STRICT or UNIQUE KEYS option on a JSON type input. A JSON type instance is always STRICT and has unique keys.

Action: Apply the STRICT and UNIQUE KEYS options on a textual JSON value. Remove these options from the IS JSON operation if the input is a JSON type.

ORA-40581: package functions are unsupported below compatible *string*

Cause: The package was used with a database that was operating at a compatible setting lower than expected.

Action: Upgrade the database to a compatible setting that is the expected release or higher to enable the desired new features.

ORA-40582: cannot find a data guide-enabled context index

Cause: A data guide-enabled context index for the specified column in the specified table was not found.

Action: Ensure that the table and column exist, the column is a JavaScript Object Notation (JSON) column, and a data guide-enabled context index exists on the JSON column before invoking the procedure or function.

ORA-40583: view name or table name or JSON column name cannot be null

Cause: The view name or table name or JSON column name was null.

Action: Pass in a valid view name or table name or JavaScript Object Notation (JSON) column name to the function or procedure.

ORA-40584: JSON column *string* does not exist

Cause: The given table did not have a JavaScript Object Notation (JSON) column with the given name.

Action: Ensure that the table name and JSON column name are specified correctly.

ORA-40585: invalid frequency

Cause: The specified frequency was invalid.

Action: The range of frequency must be between 0 to 100.

ORA-40586: error occurred in the execution of *string*

Cause: A internal error occurred.

Action: This is an internal error. Contact Oracle Support Services.

ORA-40587: invalid JSON type

Cause: The specified JavaScript Object Notation (JSON) type was invalid.

Action: Ensure that the JSON type is specified correctly.

ORA-40588: invalid estimate percentage

Cause: The specified estimate percentage was invalid.

Action: The range of estimate percentage has to be 0.000001 to 100.

ORA-40589: path '*string*' does not exist

Cause: The specified path was not found.

Action: Ensure that the specified path exists.

ORA-40590: invalid format

Cause: The specified format was invalid.

Action: Ensure that the format is specified correctly.

ORA-40591: empty data guide on json column

Cause: No data has been inserted to the json column.

Action: Insert data or commit.

ORA-40592: name conflicts were found during execution of DBMS_JSON.ADD_VIRTUAL_COLUMNS: *string*

Cause: An attempt was made to create virtual columns using an annotated Javascript Object Notation (JSON) data guide with the name of a column that already exists.

Action: Change the preferred name of the virtual column in the annotated Javascript Object Notation (JSON) data guide. An alternative is to set parameter `resovleNameConflicts` in procedure `DBMS_JSON.ADD_VIRTUAL_COLUMNS` to `TRUE` and the procedure will automatically resolve the virtual column name conflicts by appending a sequence number.

ORA-40593: name conflicts were found during execution of DBMS_JSON.CREATE_VIEW: *string*

Cause: An attempt was made to create a view using an annotated Javascript Object Notation (JSON) data guide with the name of a column that already exists.

Action: Change the preferred name of the column in the annotated Javascript Object Notation (JSON) data guide. An alternative is to set parameter `resovleNameConflicts` in procedure `DBMS_JSON.CREATE_VIEW` to `TRUE` and the procedure will automatically resolve the view column name conflicts by appending a sequence number.

ORA-40594: invalid data guide: *string*

Cause: The specified data guide was invalid.

Action: Ensure that the specified data guide follows data guide rules.

ORA-40595: Name input to JSON generation function cannot be null.

Cause: The name input given to the Javascript Object Notation (JSON) generation function was null.

Action: Ensure that the input has a valid value.

ORA-40596: error occurred in JSON processing *string*

Cause: An error occurred when evaluating the JavaScript Object Notation (JSON) operator.

Action: None

ORA-40597: JSON path expression syntax error ('string')

Cause: The specified JavaScript Object Notation (JSON) path expression had invalid syntax and could not be parsed.

Action: Specify JSON path expression with the correct syntax.

ORA-40598: JSON path expression contained an invalid array index ('string')

Cause: The specified JavaScript Object Notation (JSON) path expression contained an invalid array index.

Action: Specify a valid array index. The first element in the array has the index 0.

ORA-40599: IS JSON check constraint cannot be dropped.

Cause: IS JSON check constraint could not be dropped when there was a JSON search index created on the column.

Action: Drop the JSON search index first before dropping the IS JSON check constraint.

ORA-40600: JSON_EQUAL used outside predicate

Cause: The operator JSON_EQUAL was used outside of a predicate.

Action: Use JSON_EQUAL inside a predicate, for instance by embedding it inside a CASE expression.

ORA-40601: missing data for object type conversion

Cause: The input JavaScript Object Notation (JSON) data was missing data to match all of the attributes in the specified object type.

Action: The input JSON data must include the fields that are missing.

ORA-40602: extra data for object type conversion

Cause: The input JavaScript Object Notation (JSON) data had extra fields that did not match any attribute in the specified object type.

Action: The input JSON data should not include fields that do not match an attribute in the specified object type.

ORA-40603: type error mismatch for object type conversion

Cause: The input JavaScript Object Notation (JSON) data had fields that nominally matched an attribute in the specified object type, but had an incompatible data type.

Action: The input JSON data should not have fields that do not match the data type of an attribute with which they nominally match in the specified object type.

ORA-40604: exceeded maximum size for a JSON data type object

Cause: The maximum size permitted for a JavaScript Object Notation (JSON) data type object was exceeded.

Action: Ensure that the JSON data type object does not exceed the maximum size permitted.

ORA-40605: invalid value for OCI_ATTR_SODA_FETCH_ARRAY_SIZE attribute

Cause: An invalid value was specified for OCI_ATTR_SODA_FETCH_ARRAY_SIZE attribute.

Action: Use a non-zero value not exceeding MINSWORDMAXVAL for the OCI_ATTR_SODA_FETCH_ARRAY_SIZE attribute.

ORA-40606: missing primary key in JSON relational duality view for table 'string'

Cause: Primary key columns were not found for a table used in a JSON relational duality view."

Action: Ensure that the table has a primary key column and add this column to the JSON relational duality view.

ORA-40607: incomplete or invisible primary key in table 'string' of JSON relational duality view

Cause: Not all primary key columns were provided or visible in the JSON relational duality view for the specified table.

Action: Ensure that all primary key columns are visible and selected for the specified table.

ORA-40608: join in JSON relational duality view has incomplete primary key

Cause: A join of tables in the JSON relational duality view missed one or more primary key columns.

Action: Ensure that all primary key columns are part of the tables that are joined in the JSON relational duality view.

ORA-40609: foreign key column 'string' cannot be selected in JSON relational duality view

Cause: One or more foreign key columns were selected in a table of the JSON relational duality view.

Action: Remove the foreign keys columns.

ORA-40610: missing referential constraint for primary key 'string' in JSON relational duality view

Cause: A referential constraint was not found for the primary key used in the JSON relational duality view.

Action: Define a referential constraint for the primary key.

ORA-40611: only one table can be in FROM clause in each query block in JSON relational duality view

Cause: More than one table was used in the FROM clause in each query block in the JSON relational duality view.

Action: Use only one table in the FROM clause in each query block in the JSON relational duality view.

ORA-40612: invalid subquery in JSON relational duality view

Cause: A SELECT of a JSON relational duality view was invalid because it contained a non-scalar subquery.

Action: Modify the subquery to return a scalar result.

ORA-40613: invalid JSON key name used in JSON relational duality view

Cause: An invalid key name was used in a JSON relational duality view.

Action: Do not use the reserved name `_ID`, `_ETAG`, `_ROW_ETAG` as key names of a JSON relational duality view.

ORA-40614: JSON key name not constant

Cause: A key name was used in the JSON relational duality view that was not constant.

Action: Replace the key name with a constant value.

ORA-40615: result of JSON generating subquery not JSON type

Cause: A subquery that generated JSON did not return it as JSON data type.

Action: Change the return data type to be JSON.

ORA-40616: invalid ON NULL behavior in JSON_OBJECT

Cause: A JSON_OBJECT operator was found in a JSON relational duality view that had a different ON NULL behavior than NULL ON NULL.

Action: Change the behavior to NULL ON NULL in JSON_OBJECT.

ORA-40617: invalid ON NO ROWS behavior in JSON_ARRAY

Cause: A JSON_ARRAY operator was found in a JSON relational duality view that had a different ON NO ROW behavior than EMPTY ON NO ROW.

Action: Change the behavior to EMPTY ON NO ROW in JSON_ARRAY.

ORA-40618: invalid input for SYS_ROW_ETAG

Cause: Input that was not a column was provided to the SYS_ROW_ETAG function.

Action: Ensure that only columns are provided as input to the SYS_ROW_ETAG function.

ORA-40619: missing column 'string' in CHECK ETAG list

Cause: The mentioned column was not found in the CHECK ETAG list of a JSON relational duality view.

Action: Add the column to the CHECK ETAG list.

ORA-40620: total length of key names in JSON object too long

Cause: The length of all the key names combined exceeded the maximum length permitted for a JavaScript Object Notation (JSON) object.

Action: Use fewer keys or shorter key names.

ORA-40621: Collection create mode *string* is not supported.

Cause: An invalid collection create mode was specified.

Action: Use a valid collection create mode.

ORA-40622: Creating a collection backed by view or package in "NEW" mode is not allowed.

Cause: Creating a collection backed by view or package in NEW mode was not allowed.

Action: Do not specify a view or package when creating the collection in NEW create mode, or specify a create mode that supports view or package-based collections.

ORA-40623: The table intended to back the collection does not exist.

Cause: The table intended to back the collection did not exist.

Action: Ensure that the table intended to back the collection exists.

ORA-40624: Columns of the mapped table backing the collection do not match collection metadata.

Cause: The columns of mapped table backing the collection did not match the collection metadata.

Action: Ensure that the columns of the table backing the collection match their description in collection metadata.

ORA-40625: The view intended to back the collection does not exist.

Cause: The view intended to back the collection did not exist.

Action: Ensure that the view intended to back the collection exists.

ORA-40626: The table or view underlying the collection cannot be dropped.

Cause: The table or the view underlying the collection could not be dropped. There could be uncommitted writes to the collection.

Action: Ensure that all writes to the collection are committed.

ORA-40627: Columns of the mapped view backing the collection do not match collection metadata.

Cause: The columns of mapped view backing the collection did not match the collection metadata.

Action: Ensure that the columns of the view backing the collection match their description in collection metadata.

ORA-40628: Projection specification is not valid JSON

Cause: Projection specification was not expressed in valid JSON.

Action: Ensure that projection specification is expressed in valid JSON.

ORA-40629: Patch specification is not valid JSON

Cause: Patch specification was not expressed in valid JSON.

Action: Ensure that patch specification is expressed in valid JSON.

ORA-40630: Versioning method '*string*' is not valid.

Cause: The specified versioning method was not valid.

Action: Specify a valid versioning method.

ORA-40631: The last-modified column index can only be set when the last-modified column name is set.

Cause: The last-modified column index was specified without setting the last-modified column name.

Action: Specify the last-modified column name if the last-modified column index is required.

ORA-40632: Key column length value cannot be less than 0.

Cause: The specified key column length value was less than 0.

Action: If the key column length value is specified, then ensure that it is greater than 0.

ORA-40633: When using GUID or UUID to assign character type key values, the key column length must be 32 bytes or greater.

Cause: The specified key column length for a GUID or UUID character type key value was less than 32 bytes.

Action: Ensure that the specified key column length for a GUID or UUID character type key value is 32 bytes or greater.'

ORA-40634: Key assignment method '*string*' is not valid.

Cause: The specified key assignment method was not valid.

Action: Specify a valid key assignment method.

ORA-40635: If the key assignment method is 'SEQUENCE', a key column sequence name must be specified.

Cause: The key assignment method 'SEQUENCE' was specified, but the key column sequence name was not set.

Action: If the key assignment method is 'SEQUENCE', ensure that the key column sequence name is set.

ORA-40636: Content column type '*string*' is not valid.

Cause: The specified content column type was not valid.

Action: Specify a valid content column type.

ORA-40637: Content column maximum length value cannot be less than 0.

Cause: The specified content column maximum length value was less than 0.

Action: Specify a content column maximum length value greater than 0.

ORA-40638: Content column validation mode '*string*' is not valid.

Cause: The specified content column validation mode was not valid.

Action: Specify a valid content column validation mode.

ORA-40639: Content column compress setting '*string*' is not valid.

Cause: The specified content column compress setting was not valid.

Action: Specify a valid content column compress setting.

ORA-40640: Content column LOB cache setting '*string*' is not valid (must be 'true' or 'false').

Cause: The specified content column LOB cache setting was not valid.

Action: 'Specify a valid content column LOB cache setting.

ORA-40641: Content column LOB encrypt setting '*string*' is not valid.

Cause: The specified content column LOB encrypt setting was not valid.

Action: Specify a valid content column LOB encrypt setting.

ORA-40642: The collection cannot have a media type column unless the content column type is BLOB.

Cause: The content column type was set to a type other than Binary Large Object (BLOB), and the media type column was requested.

Action: If the media type column is requested, set the content column type to BLOB.

ORA-40643: INITIAL storage clause parameter value cannot be less than 0.

Cause: The specified INITIAL storage clause parameter value was not valid.

Action: Specify a valid INITIAL storage clause parameter value.

ORA-40644: PCTINCREASE storage clause parameter value cannot be less than 0.

Cause: The specified PCTINCREASE storage clause parameter value was not valid.

Action: Specify a valid PCTINCREASE storage clause parameter value.

ORA-40645: If the key column sequence name was specified, the key column assignment method must be set to 'SEQUENCE'.

Cause: The key column sequence name was specified, but the key column assignment method was not 'SEQUENCE'.

Action: If the key column sequence name is specified, ensure that the key column assignment method is 'SEQUENCE'.

ORA-40646: SecureFile LOB settings cannot be used when the content column type is 'string'.

Cause: SecureFile LOB settings were specified, but the content column was not of LOB type.

Action: If SecureFile LOB settings are specified, ensure that the content column is of LOB type.

ORA-40647: A non-zero content column maximum length cannot be set for LOB content types.

Cause: A non-zero content column maximum length was specified, but the content column was of a LOB type.

Action: If non-zero content column maximum length is specified, ensure that the content column is not of a LOB type.

ORA-40648: Versioning method other than 'NONE' can only be specified if version column name is specified.

Cause: Versioning method other than 'NONE' was specified, but the version column name was not specified.

Action: If a versioning method other than 'NONE' is specified, ensure that the version column name is set.

ORA-40649: Key column maximum length cannot be greater than 255 bytes.

Cause: A key column maximum length value greater than 255 bytes was specified.

Action: Ensure that the key column maximum length value is not greater than 255 bytes.

ORA-40650: The specified key column type cannot be used with a maximum length.

Cause: A key column type that does not support maximum length was specified.

Action: Ensure that if a key column maximum length is set, the key column type supports a maximum length setting.

ORA-40651: Key column type 'string' is not valid.

Cause: The specified key column type was not valid.

Action: Specify a valid key column type.

ORA-40652: Read-only setting is not valid (must be 'true' or 'false').

Cause: The specified read-only setting was not valid.

Action: Specify a valid read-only setting.

ORA-40653: Spatial data type MDSYS.SDO_GEOMETRY not found.

Cause: The spatial data type MDSYS.SDO_GEOMETRY could not be found.

Action: Create data type MDSYS.SDO_GEOMETRY by installing Oracle Spatial and Graph or Oracle Locator.

ORA-40654: Input to JSON generation function has unsupported data type.

Cause: An input parameter to the JavaScript Object Notation (JSON) generation function had a data type that is not supported.

Action: Use the correct input or a conversion function to convert the input to a supported data type.

ORA-40655: no PASSING clause specified

Cause: The PASSING clause was not specified for the bind variables in the query.

Action: Add a PASSING clause to specify the values for bind variables.

ORA-40656: Variable 'string' in JSON path expression has no value in PASSING clause

Cause: The JavaScript Object Notation (JSON) path expression contained a variable name that had no corresponding value in the external PASSING clause.

Action: Add a variable to the external PASSING clause and ensure that the names match.

ORA-40657: Variable in PASSING clause has no name.

Cause: The expression provided in the PASSING clause had no name.

Action: Name the expression in the PASSING clause.

ORA-40658: Collection name cannot be null for this operation.

Cause: An attempt was made to perform the operation without a name.

Action: Specify the collection name for the operation.

ORA-40659: Data type does not match the specification in the collection metadata.

Cause: An attempt was made to use an invalid data type.

Action: Use the data type that is specified in the collection descriptor.

ORA-40660: Content value cannot be null for instantiating a document.

Cause: An attempt was made to instantiate a document with a null content.

Action: Specify non-null content for instantiating the document.

ORA-40661: Key value cannot be null for this operation.

Cause: An attempt was made to perform an operation with a null key.

Action: Specify non-null key for the operation.

ORA-40662: Document cannot be null for this operation.

Cause: An attempt was made to perform an operation with a null document.

Action: Instantiate a document using the constructor before this operation.

ORA-40663: cannot modify a read-only collection

Cause: An attempt was made to modify a read-only collection.

Action: None

ORA-40664: cannot add additional IS JSON check constraint

Cause: An attempt was made to add an IS JSON check constraint to a column that already had an IS JSON check constraint.

Action: None

ORA-40665: A client-assigned key cannot be used for this operation.

Cause: An attempt was made to use a client-assigned key for this collection.

Action: Remove the client-assigned key from the document.

ORA-40666: Internal error '*string*' received from JSON processor

Cause: An internal error was received during a JSON operation.

Action: This is an internal error. Contact Oracle Support Services.

ORA-40667: Patch operation cannot destroy JSON_ELEMENT_T type.

Cause: An operation in the patch specification attempted to remove the top-most container (object or array) from the JSON_ELEMENT_T type.

Action: Modify the patch specification by either removing the operation that deletes the top-most container or by adding an operation that adds a new top-most container.

ORA-40668: collection metadata too long

Cause: The collection metadata which was passed was too long.

Action: Reduce the size of the collection metadata.

ORA-40669: Collection create failed: collection with same name but different metadata exists.

Cause: Creation of the collection failed because there was an existing collection with same name but different metadata.

Action: None

ORA-40670: Unable to complete collection create due to an interfering collection DDL operation.

Cause: Existing collection with the same name was encountered, but dropped from another process before its metadata could be checked.

Action: Retry creating the collection.

ORA-40671: Collection not found.

Cause: Collection was not found.

Action: None

ORA-40672: Specified key column max length of *string* bytes exceeds maximum allowed 255 bytes.

Cause: Key column max length specified in the supplied metadata exceeded maximum allowed length of 255 bytes.

Action: Ensure key column max length specified in the supplied metadata does not exceed 255 bytes.

ORA-40673: *string* argument cannot be NULL.

Cause: Supplied argument was NULL.

Action: Provide a valid argument.

ORA-40674: Length of *string* metadata value cannot exceed *string* bytes.

Cause: Length of the supplied metadata value exceeded allowed limit.

Action: Provide a valid metadata value.

ORA-40675: Metadata descriptor must be specified using valid JSON.

Cause: JSON supplied for the metadata descriptor was not valid.

Action: Supply valid JSON for the metadata descriptor.

ORA-40676: invalid Query-By-Example (QBE) filter specification\in*string*

Cause: The Query-By-Example (QBE) filter specification was invalid.

Action: Correct the filter specification.

ORA-40677: internal SODA error

Cause: There was an internal error in the Simple Oracle Document Access (SODA) processing layer.

Action: None

ORA-40678: The total number of keys specified using the attributes *key*, *keys*, and *filter* is *string*; exceeds the maximum allowed limit of *string*.

Cause: The number of keys exceeded allowed limit.

Action: Reduce the number of keys to below the maximum allowed limit

ORA-40679: Lob length of *string* bytes exceed maximum supported length of *string* bytes

Cause: The large object (LOB) content that was fetched exceeded the maximum supported length

Action: None

ORA-40680: invalid identifier used for path expression in JSON_TABLE

Cause: A double-quoted identifier used a path expression that was invalid.

Action: Use single quotes to specify the path expression.

ORA-40681: OCI_SODA_AS_STORED cannot be used if the content column type is JSON, CLOB, or VARCHAR2.

Cause: An attempt was made to use OCI_SODA_AS_STORED on a collection whose content column type was not BLOB.

Action: Use either the OCI_DEFAULT or OCI_SODA_AS_AL32UTF8 mode of execution.

ORA-40682: invalid combination of flags used

Cause: An attempt was made to use an invalid combination of flags.

Action: Use only one of the flags. (OCI_DEFAULT, OCI_AS_STORED or OCI_SODA_AS_AL32UTF8)

ORA-40683: Value '*string*' is not valid for field '*string*' (must be 'true' or 'false').

Cause: The specified setting was not valid.

Action: Specify a valid setting ('true' or 'false').

ORA-40684: maximum number of key names exceeded

Cause: An attempt was made to return a list of keys names for a JSON object that had more than 32767 keys.

Action: Reduce the number of keys in the JSON object to 32767 or less.

ORA-40685: UTF-32 encoding is not supported for JSON documents.

Cause: UTF-32 encoded content was specified for a document of type "application/json".

Action: Use UTF-8 or UTF-16 encoding with JavaScript Object Notation (JSON) documents.

ORA-40686: For a JSON-only collection, media type of the input document must be 'application/json'.

Cause: An attempt was made to write a document with media type other than 'application/json' to a JSON-only collection.

Action: Provide a document with media type 'application/json'.

ORA-40687: CREATE_MODE parameter of CREATE_COLLECTION function is invalid.

Cause: Invalid value was supplied as CREATE_MODE parameter of CREATE_COLLECTION function.

Action: Supply MAP or DDL constant for the CREATE_MODE parameter of CREATE_COLLECTION function.

ORA-40688: date or time stamp string value does not conform to ISO 8601 format

Cause: An attempt was made to convert the date or time stamp string value that did not conform to ISO 8601 format.

Action: Supply a proper date or time stamp string value conforming to ISO 8601 format for conversion.

ORA-40689: Skip value cannot be set to null.

Cause: An attempt was made to set a null value for skip.

Action: Specify a non-null value for skip in the operation.

ORA-40690: Limit value cannot be set to null.

Cause: An attempt was made to set a null value for limit.

Action: Specify a non-null value for limit in the operation.

ORA-40691: The cursor for the operation has already been closed.

Cause: An attempt was made to use a cursor that has already been closed.

Action: Do not use the cursor that has already been closed or retry the operation after removing the close.

ORA-40692: Version value cannot be set to null.

Cause: An attempt was made to set a null value for version.

Action: Specify a non-null value for version in the operation.

ORA-40693: Filter value cannot be set to null.

Cause: An attempt was made to set a null value for filter.

Action: Specify a non-null value for filter in the operation.

ORA-40694: Query-by-example (QBE) with clauses other than \$id, \$textContains is not supported on heterogeneous collections.

Cause: An attempt was made use QBE on a heterogeneous collection with clauses other than \$id, \$textContains.

Action: Do not use QBE on heterogeneous collection with clauses other than \$id, \$textContains.

ORA-40695: The collection does not have version column.

Cause: An attempt was made to use version in the operation on a collection with no version column.

Action: Do not use version on a collection with no version column.

ORA-40696: invalid type for index property *string*: expected *string*

Cause: An invalid index property type was specified.

Action: Supply a valid type for the index property.

ORA-40697: invalid value specified for index property 'dataguide'

Cause: An invalid value for the index property 'dataguide' was specified.

Action: Supply a valid value for the 'dataguide' index property. Valid values are 'on' or 'off'.

ORA-40698: invalid value specified for index property 'search_on'

Cause: An invalid value for the index property 'search_on' was specified.

Action: Specify a valid value for the 'search_on' index property. Valid values are 'none', 'text', or 'text_value'.

ORA-40699: invalid value specified for index property 'order'

Cause: An invalid value for the index property 'order' was specified.

Action: Specify a valid value for the 'order' index property. Valid values are 'asc', 'desc', '-1', or '1'.

ORA-40700: missing *string* index property

Cause: A mandatory index property was missing.

Action: Specify the mandatory index property.

ORA-40701: null case ID column - cannot provide row importance

Cause: The row importance was enabled, but without a corresponding case or row identifier column in the build data.

Action: Provide a valid case identifier column in the build data.

ORA-40711: incompatible index field properties *string* and *string*

Cause: Incompatible index field properties were specified.

Action: Specify compatible index field properties.

ORA-40712: Index property *string* cannot be specified without specifying the 'fields'.

Cause: An index property was specified without specifying the 'fields' property.

Action: Specify the properties of index fields.

ORA-40713: Index property 'lax' cannot be specified with 'scalarRequired'.

Cause: Index properties 'lax' and 'scalarRequired' were both specified.

Action: Specify either 'lax' or 'scalarRequired' but not both.

ORA-40714: data type *string* not recognized or acceptable for an index column

Cause: An invalid data type property was used.

Action: Specify a valid data type (for example, STRING, VARCHAR, VARCHAR2, NUMBER, DATE, or TIMESTAMP).

ORA-40715: Index property 'maxLength' cannot be specified with non-string data types.

Cause: Index property 'maxLength' was specified with a non-string data type.

Action: Remove the 'maxLength' index property if a non-string data type must be used.

ORA-40716: Text indexing is not supported on heterogeneous collections.

Cause: An attempt was made to create a text index on a heterogeneous collection.

Action: Do not create a text index on a heterogeneous collection.

ORA-40717: Functional indexing is not supported on heterogeneous collections.

Cause: An attempt was made to create a functional index on a heterogeneous collection.

Action: Do not create a functional index on a heterogeneous collection.

ORA-40718: Geospatial indexing is not supported on heterogeneous collections.

Cause: An attempt was made to create a geospatial index on a heterogeneous collection.

Action: Do not create a geospatial index on a heterogeneous collection.

ORA-40719: invalid index property *string*

Cause: An invalid index property was specified.

Action: Specify a valid index property.

ORA-40720: Text indexing is not supported on collections with key column of NVARCHAR2 data type.

Cause: An attempt was made to create a text index on a collection with a key column of NVARCHAR2 data type.

Action: Do not create an index on a collection that has a key column of NVARCHAR2 data type.

ORA-40721: Text indexing is not supported on collections with content column of NVARCHAR2 or NCLOB data type.

Cause: An attempt was made to create a text index on a collection with a content column of NVARCHAR2 or NCLOB data type.

Action: Do not create an index on a collection that has a content column of NVARCHAR2 or NCLOB data type.

ORA-40722: Text indexing is not supported on collections with encrypted content column.

Cause: An attempt was made to create a text index on a collection with an encrypted content column.

Action: Do not create an index on a collection with an encrypted content column.

ORA-40723: index specification cannot be null

Cause: An attempt was made to specify a null index specification.

Action: Specify a non-null index specification.

ORA-40724: array steps in the fields path is not supported

Cause: An attempt was made to use array steps in fields path.

Action: Do not use array steps in the fields path.

ORA-40725: path for the field in the index specification cannot be null

Cause: An attempt was made to specify a null value for the field's path in the index specification.

Action: Specify a non-null value for the field's path in the index specification.

ORA-40726: path for the field in the index specification is invalid

Cause: An attempt was made to specify an invalid path in the index specification.

Action: Specify a valid path for the field in the index specification.

ORA-40727: number of paths with string data type exceeds the maximum permissible limit of 16

Cause: Number of paths with string data type exceeds the maximum permissible limit of 16.

Action: Reduce the number of paths with string data type.

ORA-40728: missing dot separator in path *string* at position *string*.

Cause: A dot separator was missing in the path expression.

Action: Specify the missing dot step separator in the path expression.

ORA-40729: unclosed quote at end of path *string*

Cause: A quote that was not closed was detected at the end of the path.

Action: Specify the missing back quote at the end of the path expression.

ORA-40730: an invalid character detected in the escape string in the path *string* at position *string*

Cause: An attempt was made to use a path containing invalid characters in the escape string.

Action: Specify a valid escape string in the path expression.

ORA-40731: invalid quoted step in the path *string* at position *string*

Cause: An attempt was made to use an invalid quoted step in the path.

Action: Specify a valid quoted step in the path expression.

ORA-40732: incomplete escape sequence in the path *string*

Cause: An attempt was made to use an incomplete escape sequence in the path.

Action: Specify an escape sequence that is complete in the path expression.

ORA-40733: An index with the specified name already exists in the schema.

Cause: An attempt was made to create an index with the same name as another index in the schema.

Action: Specify an index name that does not match the name of any indexes already existing in the schema.

ORA-40734: key for the document to replace must be specified using the key attribute

Cause: An attempt was made to replace a document without setting the key attribute.

Action: Set the key attribute for the replace operation.

ORA-40735: invalid type in RETURNING clause

Cause: An attempt was made to use an invalid data type in the RETURNING clause.

Action: Use a supported data type in the RETURNING clause.

ORA-40736: Query-By-Example (QBE) filter is not valid JSON\string

Cause: QBE filter was not expressed in valid JSON.

Action: Ensure that the QBE filter is expressed in valid JSON.

ORA-40737: partitionColumn.path is missing

Cause: partitionColumn.name was specified, but partitionColumn.path was missing.

Action: Specify partitionColumn.path.

ORA-40738: partitionColumn.name is missing

Cause: One or a combination of partitionColumn.path, partitionColumn.maxLength, or partitionColumn.sqlType was specified, but partitionColumn.name was missing.

Action: Specify the partitionColumn.name value.

ORA-40739: Partition column type *string* is not valid.

Cause: The specified partition column type was not valid.

Action: Specify a valid partition column type.

ORA-40740: cannot use JSON format '*string*' with content columns of type '*string*'

Cause: An invalid combination of content column settings was specified.

Action: Specify a valid combination of content column settings.

ORA-40741: cannot use JSON format '*string*' with a heterogeneous collection

Cause: An invalid combination of heterogeneous collection settings was specified.

Action: Specify a valid combination of heterogeneous collection settings.

ORA-40742: Content column JSON format '*string*' is invalid.

Cause: An invalid JSON format was specified for the content column.

Action: Provide a valid JSON format content column setting.

ORA-40743: Partition column length value cannot be less than 0.

Cause: The specified partition column length value was less than 0.

Action: If the partition column length value is specified, then ensure that it is greater than 0.

ORA-40744: Specified partition column max length of *string* bytes exceeds maximum allowed *string* bytes.

Cause: Partition column max length specified in the supplied metadata exceeded the maximum allowed length.

Action: Ensure that the partition column max length specified in the supplied metadata does not exceed the maximum allowed length.

ORA-40745: The specified partition column type cannot be used with a maximum length.

Cause: A partition column type that does not support maximum length was specified.

Action: Ensure that, if a partition column maximum length is set, the partition column type supports a maximum length setting.

ORA-40746: keyColumn.path must be set with '*string*' key assignment method.

Cause: keyColumn.path was not set with the specified EXTRACT or INSERT key assignment method.

Action: Ensure that keyColumn.path is set when the key assignment method is EXTRACT or INSERT.

ORA-40747: The value *string* is not a valid key of type *string*.

Cause: The key value was not of a valid type.

Action: Ensure that the input for key is of a valid type.

ORA-40748: SKIP and LIMIT attributes cannot be used for count operation.

Cause: An attempt was made to use SKIP and LIMIT attributes in a count operation.

Action: Do not use SKIP or LIMIT attributes in a count operation.

ORA-40749: Index property *string* cannot be specified without specifying the fields or spatial properties.

Cause: An index property was specified without specifying the fields or spatial properties.

Action: Specify either the properties of the index fields or spatial.

ORA-40750: Column of Large Object (LOB) type cannot be used for sorting.

Cause: The specified sort condition included a LOB column such as CLOB, BLOB or JSON.

Action: Ensure that the sort column data type is not a large object such as CLOB, BLOB or JSON.

ORA-40751: Document flags are not the same in all the input documents.

Cause: The document flags were not the same in all the input documents supplied to the insert operation.

Action: Ensure that the document flags are the same in all the input documents supplied to the insert operation.

ORA-40752: Input document array length must be greater than 0.

Cause: The supplied input document array length was less than or equal to 0.

Action: Supply the input document array length that is greater than 0.

ORA-40753: The current user is not the owner of the index.

Cause: The current user was not the owner of the index. Only the owner of the index can perform the operation.

Action: Connect as the owner of the index and retry the operation. If you connect as the owner of the base table and get the error, then the owner of the index has to be the owner of the base table in order to perform the operation. Connect as the owner of the base table then create the index.

ORA-40754: Collection name cannot be null for this operation.

Cause: Collection name was null for the operation.

Action: Specify a non-null collection name.

ORA-40755: Index name cannot be null for this operation.

Cause: Index name was null for the operation.

Action: Specify a non-null index name.

ORA-40756: descendant step in the path expression is not supported

Cause: The specified path contained a descendant step.

Action: Do not use descendant step in the path expression.

ORA-40757: A dot (.) cannot appear as the first or last character of a path. To signify a zero-length field name, a pair of backquotes must be used before or after the dot.

Cause: A dot (.) was used as the first or last character of the path.

Action: Do not use a dot (.) as the first or last character of the path. To signify a zero-length field name, a pair of backquotes must be used before or after the dot.

ORA-40758: unquoted special character *string* used as step in the path *string* at position *string*

Cause: Special characters such as \$, @ cannot be used as a path step by itself unless backquoted.

Action: Backquote the special character if used as a path step by itself.

ORA-40759: wildcard step in the path expression is not supported

Cause: The specified path contained a wildcard step.

Action: Do not use a wildcard step in the path expression.

ORA-40760: Index with the specified name did not exist on the collection.

Cause: Index with the specified name did not exist on the collection.

Action: Specify the name of the index that exists on the collection.

ORA-40761: OCI_SODA_AS_STORED cannot be used if the content column JSON format is not textual JSON.

Cause: An attempt was made to use OCI_SODA_AS_STORED on a Binary Large Object (BLOB) collection whose content column format was not textual JavaScript Object Notation (JSON).

Action: Use OCI_DEFAULT or OCI_SODA_AS_AL32UTF8.

ORA-40762: missing value in JSON_TRANSFORM (*string*)

Cause: An attempt was made to work with a value in JSON_TRANSFORM that was missing.

Action: Correct your path expression or change the ON MISSING clause in the JSON_TRANSFORM operation.

ORA-40763: existing value in JSON_TRANSFORM (*string*)

Cause: An attempt was made to work with a value in JSON_TRANSFORM that already existed.

Action: Correct your path expression or change the ON EXISTING clause in the JSON_TRANSFORM operation.

ORA-40764: invalid option in ON EXISTING clause for path *string*

Cause: An option for the ON EXISTING clause was provided that was not valid for the specified JSON_TRANSFORM operation.

Action: Specify a different option for ON EXISTING or omit the ON EXISTING clause and use the default option.

ORA-40765: invalid option in ON MISSING clause for path *string*

Cause: An option for the ON MISSING clause was provided that was not valid for the specified JSON_TRANSFORM operation.

Action: Specify a different option for ON MISSING or omit the ON MISSING clause and use the default option.

ORA-40766: error in JSON_TRANSFORM execution (*string*)

Cause: An operation was performed that raised this internal error.

Action: This is an internal error. Contact Oracle Support Services.

ORA-40767: field with this name already exists (*string*)

Cause: A RENAME operation was attempted to rename a field to a name that already existed in the same Javascript Object Notation (JSON) object.

Action: Choose another field name, remove the existing field, or choose the REPLACE ON EXISTING clause.

ORA-40768: field with name '*string*' does not exist

Cause: A RENAME operation attempted to rename a field that did not exist.

Action: Check the field name or use the IGNORE ON MISSING clause.

ORA-40769: selected value not a JSON array

Cause: An attempt was made to execute a JSON_TRANSFORM array operation on a value that was not an array.

Action: Correct your path expression.

ORA-40770: removal of root value not allowed

Cause: An attempt was made to remove the topmost object, array or scalar value in the JavaScript Object Notation (JSON) data.

Action: Do not use path expression '\$' in the REMOVE operation.

ORA-40771: JSON array subscript '*last*' not permitted

Cause: An attempt was made to use the JavaScript Object Notation (JSON) array subscript '*last*' with an operator that does not support '*last*'.

Action: Replace '*last*' with the actual subscript or use another operator.

ORA-40772: Truncation is not supported on a collection that is not table based.

Cause: An attempt was made to truncate a collection that was not table based.

Action: Ensure that the collection being truncated is table based.

ORA-40773: Input JSON document contents are not in the same encoding.

Cause: Encoding of JSON content in all input documents was not the same.

Action: Ensure that all JSON documents content are in the same encoding.

ORA-40774: Metadata component *string* has value *string* which differs from expected value *string*.

Cause: An attempt was made to use unsupported collection metadata value.

Action: Provide a supported collection metadata value.

ORA-40775: Only table-backed collections are supported.

Cause: An attempt was made to create a collection not backed by a table.

Action: Specify collection metadata appropriate for a collection backed by a table.

ORA-40776: SCN value for 'as of' operation cannot be set to null.

Cause: An attempt was made to set a null value for system change number (SCN).

Action: Specify a non-null value for the SCN in the operation.

ORA-40777: Timestamp value for 'as of' cannot be set to null.

Cause: An attempt was made to set a null value for the timestamp value.

Action: Specify a non-null value for the timestamp in the operation.

ORA-40778: SCN and timestamp attributes for SELECT and COUNT operations only.

Cause: An attempt was made to use system change number (SCN) and timestamp attributes in an 'as of' operation that was not SELECT or COUNT.

Action: Do not use SCN or timestamp attributes in operations other than SELECT and COUNT.

ORA-40779: Truncation is not supported with data type in RETURNING clause.

Cause: An attempt was made to use the TRUNCATE keyword with a non-textual data type in the RETURNING clause.

Action: Remove the TRUNCATE keyword or change the RETURNING clause to use a textual data type like VARCHAR2 or CLOB.

ORA-40780: JSON syntax error\string

Cause: The provided JavaScript Object Notation (JSON) data had invalid syntax and could not be parsed.

Action: Provide JSON data with the correct syntax.

ORA-40781: buffer underflow during the execution of OCIJson function\string

Cause: The operation on the OCIJson descriptor resulted in an underflow error.

Action: Supply a larger buffer for the operation to prevent underflow.

ORA-40782: invalid parameter value 'string' specified for the OCIJson function call

Cause: The operation on the OCIJson descriptor resulted in an error due to invalid input.

Action: Supply valid input for the OCIJson descriptor function.

ORA-40783: invalid binary JSON data\string

Cause: The provided binary JavaScript Object Notation (JSON) data was invalid.

Action: Supply valid binary JSON data.

ORA-40784: Error occurred while reading from the input stream.

Cause: An error occurred while reading from the input stream due to incorrect initialization.

Action: Ensure that the read input stream is valid and initialized correctly for read operation.

ORA-40785: Error occurred while writing to the output stream.

Cause: An error occurred while writing to the output stream due to incorrect initialization.

Action: Ensure that the write output stream is valid and initialized correctly for write operation.

ORA-40786: JSON_VALUE evaluated to non-Boolean value

Cause: The provided JavaScript Object Notation (JSON) path expression selected a non-Boolean value.

Action: Correct the JSON path expression or use JSON_QUERY.

ORA-40787: invalid input data type for JSON_TRANSFORM

Cause: The specified input to JSON_TRANSFORM has an unsupported data type.

Action: Provide an input value with a supported data type.

ORA-40788: JSON_TRANSFORM function INSERT operation contains invalid path (*string*)

Cause: An attempt was made to insert a value into a JSON object or array using a JavaScript Object Notation (JSON) path expression that could potentially select multiple positions inside the same array or multiple keys in the same object. This is not allowed.

Action: Do not use the asterisk (*) wildcard or range specification in the JSON path expression of an INSERT operation.

ORA-40789: JSON_TRANSFORM operation invalid or not supported

Cause: An attempt was made to invoke JSON_TRANSFORM with an invalid or unsupported operation or parameter.

Action: Check and correct the syntax of the JSON_TRANSFORM expression.

ORA-40790: invalid null input value for JSON_TRANSFORM

Cause: The specified input to JSON_TRANSFORM had a SQL null value.

Action: Convert the input value to a JSON null.

ORA-40791: invalid option in ON NULL clause

Cause: An illegal option for the ON NULL clause was provided for the specified JSON_TRANSFORM operation.

Action: Specify a different option for ON NULL or omit the ON NULL clause to use the default option.

ORA-40792: invalid ON NULL clause

Cause: The specified ON NULL clause was either already defined or invalid.

Action: Provide a valid ON NULL clause. Valid options are [NULL | ERROR | IGNORE | REMOVE] ON NULL

ORA-40793: invalid JSON descriptor detected: [*string*]

Cause: An invalid JavaScript Object Notation (JSON) descriptor was detected.

Action: Contact Oracle Support Services.

ORA-40794: Warning of a NULL or empty input.

Cause: The operation processed a NULL or empty input.

Action: An OCI return code of OCI_SUCCESS_WITH_INFO is returned.

ORA-40795: cannot perform a write operation on a JSON descriptor in a C callout if the PL/SQL argument type is IN

Cause: An attempt was made to perform a write operation on a JavaScript Object Notation (JSON) descriptor passed as an IN argument to a C callout.

Action: Use either IN/OUT or OUT type argument for JSON type in the C callout.

ORA-40796: invalid comparison operation involving JSON type value

Cause: An attempt was made to perform a comparison against a JavaScript Object Notation (JSON) type value.

Action: Add a JSON trailing type cast function to compare the JSON type value against a scalar value. Use JSON_EQUAL to compare two JSON type values.

ORA-40797: Error occurred during conversion of OCIJson descriptor to textual JSON\string.

Cause: An error occurred during conversion of OCIJson descriptor to textual JSON.

Action: Ensure that the OCIJson descriptor was written to correctly without any errors.

ORA-40798: Boolean conversion not supported for data type

Cause: An attempt was made to use the Boolean number conversion with a data type that was not NUMBER.

Action: Change the data type in the RETURNING clause to NUMBER.

ORA-40799: cannot convert Boolean value to number

Cause: An attempt was made to convert a Boolean value that was selected by a JavaScript Object Notation (JSON path) expression having a number() or numberOnly() function to a number.

Action: Remove the number()/numberOnly() function from the JSON path expression.

ORA-40800: cannot create a JSON_VALUE functional index with predicates in the path expression

Cause: An attempt was made to create a JSON_VALUE functional index with predicates as the last step in the path expression.

Action: Do not include predicates as the last step in the path expression in a JSON_VALUE functional index.

ORA-40801: metadata descriptor cannot be null

Cause: An attempt was made to specify a null metadata descriptor.

Action: Specify a non-null metadata descriptor.

ORA-40802: Collection create mode *string* cannot be used if collection is backed by a view.

Cause: An invalid collection create mode was specified.

Action: Use a valid collection create mode.

ORA-40803: JSON_TRANSFORM operation called with NULL input

Cause: A JSON_TRANSFORM operation was called with an input value that was NULL and the operation had ERROR ON NULL handling specified.

Action: Ensure that the provided value is not NULL or remove the ERROR ON NULL option.

ORA-40804: Warning of an operation on an empty JavaScript Object Notation (JSON) descriptor.

Cause: The operation processed a JSON descriptor that was empty.

Action: An OCI return code of OCI_SUCCESS_WITH_INFO is returned.

ORA-40805: cannot add an IS JSON check constraint to a JSON type column

Cause: An attempt was made to add an IS JSON check constraint to a column of JSON type.

Action: None

ORA-40806: Warning of replacement characters in the converted textual JavaScript Object Notation (JSON) due to bad character data in the source.Instring

Cause: Conversion to textual JSON completed with replacement characters in the output.

Action: An OCI return code of OCI_SUCCESS_WITH_INFO is returned. Check if the source was encoded correctly.

ORA-40807: Validation value 'string' cannot be specified with 'string' content column type.

Cause: Content column type for which validation is not supported was used.

Action: Do not specify validation.

ORA-40808: Content column tablespace cannot be specified with 'string' content column type.

Cause: Content column type for which content column tablespace is not supported was used.

Action: Do not specify content column tablespace.

ORA-40809: memOptimizeRead cannot be set to 'true' with 'string' content column type.

Cause: Content column type for which memOptimizeRead is not supported was used.

Action: Do not specify memOptimizeRead, or set its value to 'false'.

ORA-40810: update of root value not allowed

Cause: An attempt was made to update the topmost object, array or scalar value in the JavaScript Object Notation (JSON) data.

Action: Do not use path expression '\$' in a JSON_TRANSFORM SET operation.

ORA-40811: piecewise write operation failed on a LOB column with persistent binary JSON

Cause: An attempt was made to update a piece of Large Objects (LOB) column with persistent binary Javascript Object Notation (JSON) data.

Action: Do not use DBMS_LOB write operations on a LOB column with persistent binary JSON data.

ORA-40812: cannot specify both WITH ARRAY WRAPPER and OMIT QUOTES

Cause: The clause OMIT QUOTES ON SCALAR STRING conflicted with the clause WITH ARRAY WRAPPER.

Action: Change OMIT to KEEP, or use WITHOUT ARRAY WRAPPER.

ORA-40813: cannot specify ASIS with KEEP QUOTES or OMIT QUOTES

Cause: The ASIS clause could not be used together with the clauses OMIT QUOTES or KEEP QUOTES.

Action: Remove the ASIS clause.

ORA-40814: selected value not a JSON object

Cause: An attempt was made to execute a JSON_TRANSFORM object operation on a value that was not an object.

Action: Correct your path expression.

ORA-40815: cannot create JSON array inside another array

Cause: An attempt was made to create a JSON array using the CREATE ON MISSING option to add this new array to another existing array. This was not possible as an array newly created by the CREATE ON MISSING option could only be added to an object.

Action: Correct your path expression to either add the new array to a JSON object or to append to the existing array.

ORA-40816: invalid JSON key name

Cause: An attempt was made to set or rename a key in a JSON object with a name that was invalid.

Action: Correct the key name.

ORA-40817: Metadata field *string* is either invalid, or missing in the original collection metadata.

Cause: An invalid field, or a field missing in the original collection metadata, was specified in the interim collection metadata.

Action: Ensure that all interim collection metadata fields are valid and, if required, present in the original collection metadata.

ORA-40818: Metadata field *string* has a value *string* unsupported in online redefinition.

Cause: A field with a value unsupported in online redefinition was supplied in the interim collection metadata.

Action: Ensure that all interim collection metadata fields have values supported in online redefinition.

ORA-40819: Metadata field *string* cannot be specified when metadata field *string* has value *string*.

Cause: An invalid combination of fields was specified in the interim metadata.

Action: Ensure that only allowed combinations of fields are specified in the interim metadata.

ORA-40820: cannot set LOCK on the operation if SKIP or LIMIT attributes are set

Cause: An invalid combination of operation attributes was specified.

Action: Specify a valid combination of operation attributes.

ORA-40821: LOCK attribute cannot be set for *string* operation.

Cause: An attempt was made to set LOCK attribute in this operation.

Action: Do not set LOCK attribute in this operation.

ORA-40822: SecureFile LOB settings cannot be used when the content column stores binary JSON.

Cause: SecureFile LOB settings were specified for a binary JSON content column.

Action: Do not specify SecureFile LOB settings.

ORA-40823: Validation cannot be specified when the content column stores binary JSON.

Cause: Validation was specified for a binary JSON content column.

Action: Do not specify validation.

ORA-40824: Content column tablespace cannot be specified when the content column stores binary JSON.

Cause: Content column tablespace was specified for a binary JSON content column.

Action: Do not specify content column tablespace.

ORA-40825: memOptimizeRead cannot be set when the content column stores binary JSON.

Cause: memOptimizeRead was specified for a binary JSON content column.

Action: Do not specify memOptimizeRead.

ORA-40826: Collection create mode '*string*' is not supported on this cloud service.

Cause: An unsupported collection create mode was specified.

Action: Specify a supported collection create mode.

ORA-40827: keyColumn.path must not be set with '*string*' key assignment method.

Cause: keyColumn.path was set with a key assignment method that does not require a key path.

Action: Ensure that keyColumn.path is set only with a key assignment method that requires it.

ORA-40828: keyColumn.sqlType must be set to '*string*' for the specified key column assignment method.

Cause: Key column SQL type incompatible with the specified key column assignment method was used.

Action: Ensure that appropriate key column SQL type is used.

ORA-40829: keyColumn.maxLength must be set to '*string*' for the specified key column assignment method.

Cause: Key column SQL type length incompatible with the specified key column assignment method was used.

Action: Ensure that appropriate key column SQL type length is used.

ORA-40830: ROWID not a valid JSON_TABLE column

Cause: An attempt was made to select a ROWID column from a JSON_TABLE.

Action: Use an ORDINALITY column instead of a ROWID column.

ORA-40831: CONS_VPD_AUTO is not applicable to online redefinition for SODA collections

Cause: An attempt was made to specify CONS_VPD_AUTO for redefining SODA collections.

Action: Set the COPY_VPD_OPT value to CONS_VPD_MANUAL or CONS_VPD_NONE.

ORA-40832: Dependent *string* on *string* column is missing from the interim collection.

Cause: A required dependent was not defined on the interim collection.

Action: Define the required dependents or call procedure COPY_COLLECTION_DEPENDENTS to copy all of the dependents from the original collection.

ORA-40833: empty input to JSON operator

Cause: An empty input (e.g. an empty CLOB) was provided to a JSON operator that expected a non-empty input.

Action: Check and correct the input.

ORA-40834: invalid input to JSON parse/load function

Cause: An invalid value (e.g. a NULL CLOB) was provided as input to the JSON parse or load functions.

Action: Check and correct the input.

ORA-40835: invalid path '*string*'

Cause: Only a simple JavaScript Object Notation (JSON) path expression was allowed. Predicates, wildcard steps, descendant steps, array steps, or trailing functions were not allowed.

Action: Remove disallowed components from the path expression.

ORA-40836: invalid character in o:preferred_column_name '*string*'

Cause: Double quotation was not allowed in a column name.

Action: Check the Oracle identifier naming convention.

ORA-40837: invalid materialized view refresh mode

Cause: The specified materialized view refresh mode was invalid.

Action: Ensure that the refresh mode is specified correctly.

ORA-40838: Metadata specification must be an object.

Cause: The metadata specification root was an array or scalar. A metadata specification must be an object.

Action: Ensure that the metadata specification root is an object node.

ORA-40839: invalid field type in the metadata *string*, expected: *string*

Cause: The metadata specification contained a field with an incorrect type.

Action: Ensure that the metadata field type is correct.

ORA-40840: unsupported field *string* in the metadata

Cause: The metadata specification contained a field that is not supported.

Action: Do not use this field or try upgrading your client library to the supported version.

ORA-40841: invalid scalar type in the metadata field *string*, expected: *string*

Cause: The metadata specification contained a field with an incorrect scalar type.

Action: Ensure that the metadata field has the correct scalar type.

ORA-40842: unsupported value *string* in the metadata for the field *string*

Cause: The metadata specification contained a value that is not supported.

Action: Do not use this value.

ORA-40843: Multiple KEEP operations in JSON_TRANSFORM

Cause: A JSON_TRANSFORM expressions was provided that contained more than one KEEP operation.

Action: Use multiple path expressions in the same KEEP operations instead of multiple KEEP operations.

ORA-40844: cannot create a multivalue index having array step with position greater than zero in the path expression

Cause: An attempt was made to create a multivalue index that had an array step with a position greater than zero in the path expression.

Action: Do not include an array step with a position greater than zero in the path expression in a multivalue index.

ORA-40845: failed to create object (*string*)

Cause: An attempt to create an object failed because there was not enough memory.

Action: n/a

ORA-40846: Redefining to contentColumn.sqlType BLOB with jsonFormat OSON is not allowed if the original collection's contentColumn.sqlType is JSON.

Cause: An invalid request was made to redefine a collection with contentColumn.sqlType JSON to contentColumn.sqlType BLOB with jsonFormat OSON.

Action: Ensure that the requested redefinition can be supported.

ORA-40847: Redefining to contentColumn.sqlType BLOB with jsonFormat OSON is not allowed if the original collection has user-defined constraints.

Cause: An invalid request was made to redefine a collection with user-defined constraints to contentColumn.sqlType BLOB with jsonFormat OSON.

Action: Ensure that the requested redefinition can be supported.

ORA-40848: Metadata field *string* cannot be specified when metadata field *string* has value *string* and metadata field jsonFormat has value OSON.

Cause: An invalid combination of fields were specified in the interim metadata.

Action: Ensure that only allowed combinations of fields are specified in the interim metadata.

ORA-40849: Redefining to contentColumn.sqlType BLOB with jsonFormat OSON is not allowed if compatibility is 20 or above.

Cause: An invalid combination of fields were specified in the interim metadata.

Action: Redefine to contentColumn.sqlType JSON instead.

ORA-40850: cannot create a composite multivalue index on sibling arrays

Cause: An attempt was made to create a composite multivalue index on sibling arrays.

Action: Create separate multivalue indexes for sibling arrays instead of one composite multivalue index.

ORA-40851: cannot create a composite multivalue index with ordinality column that is not the last column in the index

Cause: An attempt was made to create a composite multivalue index with ordinality column that was not the last column in the index.

Action: Create a composite multi-value index with ordinality column as the last column in the index.

ORA-40852: SKIP and LIMIT attributes cannot be used for dataguide getter operation.

Cause: An attempt was made to use SKIP and LIMIT attributes for dataguide getter operation.

Action: Do not use SKIP or LIMIT attributes in dataguide getter operation.

ORA-40853: Multi-Value Index (MVI) must be created with ERROR ON ERROR, NULL ON EMPTY and NULL ON MISMATCH.

Cause: An attempt was made to create a multi-value index without using ERROR ON ERROR, NULL ON EMPTY, and NULL ON MISMATCH.

Action: Add ERROR ON ERROR, NULL ON EMPTY, and NULL ON MISMATCH when creating a multi-value index.

ORA-40854: A multivalue index is defined on table *string*.ln

Cause: A direct load was specified for a table on which a multivalue index was defined.

Action: Take one of the following actions: - Drop the multivalue index that is defined on the table. - Do not use direct load. - Use the SKIP_INDEX_MAINTENANCE option. - Mark the multivalue index as unusable prior to loading.

ORA-40855: operation not allowed on SODA collection table "*string*".*string*"

Cause: An attempt was made to alter or drop a SODA collection table.

Action: No action required.

ORA-40856: illegal hint for Simple Oracle Document Access (SODA)

Cause: A hint containing illegal characters was supplied to SODA operations.

Action: Ensure that the hint supplied does not contain "/"* or "*/".

ORA-40857: JSON_VALUE returned an object type that is not SDO_GEOMETRY.

Cause: The object type that was returned was not of SDO_GEOMETRY type.

Action: If an object is returned in JSON_VALUE, ensure that it is SDO_GEOMETRY type.

ORA-40858: cannot create a JSON_VALUE functional index with binding variables

Cause: An attempt was made to create a JSON_VALUE functional index with binding variables.

Action: Do not include binding variables in a JSON_VALUE functional index.

ORA-40859: A JSON path expression was too long.

Cause: A Java Script Object Notation (JSON) path expression exceeded the maximum length allowed.

Action: Take one of the following actions: - Ensure that simple path expressions are 4000 bytes or less. - Ensure that predicate expressions are 32767 bytes or less.

ORA-40860: invalid combination of flags used

Cause: An attempt was made to use an invalid combination of flags.

Action: Use a combination of the flags defined in DBMS_JSON package.

ORA-40861: JSON System Error [*string*]

Cause: An internal system error occurred during a Java Script Object Notation (JSON) operation.

Action: Use the error message to locate the issue and correct the command. If the issue persists, contact Oracle Support Services.

ORA-40862: contentColumn.jsonFormat cannot specified with a contentColumn.sqlType other than BLOB.

Cause: contentColumn.jsonFormat was specified with a contentColumn.sqlType other than BLOB.

Action: Ensure that contentColumn.jsonFormat is only specified with a contentColumn.sqlType of BLOB.

ORA-40863: contentColumn.jsonFormat can only be set to OSON.

Cause: contentColumn.jsonFormat was set to a value other than OSON.

Action: Ensure that contentColumn.jsonFormat is set to OSON.

ORA-40864: contentColumn.jsonFormat cannot be set with a media type column.

Cause: contentColumn.jsonFormat was set in conjunction with a media type column.

Action: Ensure that contentColumn.jsonFormat is not set in conjunction with a media type column.

ORA-40865: JSON DOM operation was attempted on container of incorrect type

Cause: An array operation was attempted on an object, or an object operation was attempted on an array.

Action: Ensure that the instance container is of the correct type for the desired operation.

ORA-40866: JSON DOM operation was attempted on a node of incorrect type

Cause: A scalar DOM operation was attempted on a node that was not a scalar value or that was a scalar of an incompatible data type.

Action: Ensure that the instance value is a scalar of the correct type.

ORA-40867: Embedded key path cannot contain more than a single step.

Cause: Embedded key path with multiple steps or a descendant step has been encountered.

Action: Ensure the embedded key path contains a single step only.

ORA-40868: Embedded key path cannot contain an empty step.

Cause: Embedded key path contained an empty step, represented by two consecutive backquotes.

Action: Ensure the embedded key path does not contain an empty step.

ORA-40869: invalid value for SAMPLE percentage attribute.

Cause: An invalid value was specified for the SAMPLE percentage attribute.

Action: Use a value not exceeding 100 for the SAMPLE percentage attribute.

ORA-40870: invalid value for SAMPLE seed attribute.

Cause: An invalid value was specified for the SAMPLE seed attribute.

Action: Use a value between -1 and 4,294,967,295 for the SAMPLE seed attribute.

ORA-40871: SAMPLE attribute cannot be used for remove or replace operation.

Cause: An attempt was made to use the SAMPLE attribute for a remove or replace operation.

Action: Do not use the SAMPLE attribute in a remove or replace operation.

ORA-40872: unexpected token in JSON_TABLE (near 'string')

Cause: An unexpected token was found in the JSON_TABLE function.

Action: Correct the JSON_TABLE function and retry the operation.

ORA-40873: invalid JSON_TABLE column name 'string'

Cause: An invalid column name was specified in the JSON_TABLE function.

Action: Correct the column name.

ORA-40874: Bind variable not supported in this operation.

Cause: A PASSING clause was provided for an operation that does not allow bind variables.

Action: Remove the bind variable PASSING clause.

ORA-40875: JSON schema validation error

Cause: The input JSON document instance failed schema validation.

Action: Correct the JavaScript Object Notation (JSON) document.

ORA-40876: invalid JSON schema document

Cause: An invalid JavaScript Object Notation (JSON) schema document was used.

Action: Correct the JSON schema document.

ORA-40877: Cannot use empty policy name on INMEMORY TEXT.

Cause: An empty policy name was specified on an In-Memory text column. In-Memory text always requires a policy.

Action: Use a valid policy name.

ORA-40878: unsupported data type for JSON schema validation

Cause: The input JSON data to be validated was of an unsupported data type.

Action: Change or convert the input data to use a supported data type.

ORA-40879: invalid IS JSON option for JSON schema validation

Cause: An invalid option was selected for IS JSON with JSON schema validation.

Action: remove the option.

ORA-40880: JSON schema has unsupported data type

Cause: The provided JSON schema had an unsupported data type.

Action: Correct the JSON Schema to use a supported data type, e.g. VARCHAR2.

ORA-40881: JSON schema not a literal

Cause: The provided JSON schema expression was not a literal.

Action: Provide a constant JSON schema.

ORA-40882: JSON schema not a literal

Cause: The provided JSON schema expression was not a literal.

Action: Provide a constant JSON schema.

ORA-40883: unsupported character in an array step

Cause: An unsupported character was specified in an array step.

Action: Use only digits with optional surrounding whitespace in an array step.

ORA-40884: array step is not closed

Cause: An unclosed array step was specified.

Action: Ensure that the array step is ended with a closing ']' character.

ORA-40885: character following an array step must be either '.' or '['

Cause: A character other than '.' or '[' was specified immediately after the array step.

Action: Ensure that the array step is not followed by a character other than '.' or '['.

ORA-40886: array step cannot follow a '.' step separator character

Cause: An opening character of an array step was encountered following a '.' step separator character.

Action: Ensure that the array step is not following the '.' step separator character.

ORA-40887: Pseudo-column *string* not allowed in UPDATE or INSERT

Cause: An attempt was made to use a pseudo-column in an INSERT or UPDATE statement.

Action: Remove the pseudo-column.

ORA-40888: The predicate specified in the JSON_VALUE functional index is invalid.

Cause: The predicate specified in a JSON_VALUE functional index was invalid. The predicate operator can only be &&, ||, >, >=, <, <=, and ==. One side of a comparison predicate must be a relative path expression.

Action: Correct the predicate in the JSON_VALUE functional index.

ORA-40889: 'path' or 'nestedPath' is missing in a 'fields' array element

Cause: 'path' or 'nestedPath' was not found in a 'fields' array element.

Action: Ensure that 'path' or 'nestedPath' is present in a 'fields' array element.

ORA-40890: 'nestedPath' and 'fields' cannot be specified in conjunction with other fields within the same object

Cause: 'nestedPath' and 'fields' were specified in conjunction with another field within the same object.

Action: Ensure that 'nestedPath' and 'fields' are not specified in conjunction with another field within the same object.

ORA-40891: 'string' and 'string' cannot appear within the same object

Cause: Incompatible fields specified within the same object.

Action: Ensure that only compatible fields are specified within the same object

ORA-40892: invalid element under the 'fields' array

Cause: An invalid element was encountered under the 'fields' array.

Action: Ensure that each element of a 'fields' array is an object.

ORA-40893: unsupported data type used in CHECK ETAG computation

Cause: An unsupported data type was specified for the ETAG calculation.

Action: Do not use columns of data types LOB, JSON, object type, collections, or XML to compute the ETAG values.

ORA-40894: input to JSON_ARRAYAGG does not provide ETAG

Cause: The JSON_ARRAYAGG operator was not able to return an ETAG value because the input did not provide an ETAG value.

Action: Ensure that the input to JSON_ARRAYAGG provides an ETAG.

ORA-40895: invalid SQL expression in JSON relational duality view

Cause: An invalid SQL expression was used in JSON relational duality view.

Action: Ensure that a JSON relational duality view is constructed solely using JSON_OBJECT and JSON_ARRAYAGG with JSON_OBJECT input. Joins must be expressed on key columns with referential integrity

ORA-40896: CHECK ETAG mismatch for object 'string'

Cause: The check failed because a previously cached ETAG value did not match the current value.

Action: The object is no longer valid. Fetch the updated object to get the latest object state with a new valid ETAG value.

ORA-40897: cannot update object key 'string' in JSON relational duality view

Cause: An attempt was made to update the key of an object in a JSON relational duality view.

Action: The key of a JSON relational duality view cannot be updated.

ORA-40898: \$SYS_OBJ_ID mismatch for object 'string'

Cause: A \$SYS_OBJ_ID value did not match the object of the JSON relational duality view.

Action: Correct the \$SYS_OBJ_ID value.

ORA-40899: Primary keys in WITH OBJECT ID clause do not match primary keys of table 'string'.

Cause: The column names in the WITH OBJECT ID clause did not match the primary key columns of the corresponding table.

Action: Ensure that the column names in the WITH OBJECT ID clause match the primary key columns of the corresponding table.

ORA-40900: filestore name invalid

Cause: The filestore name provided differs from the mount directory name.

Action: Use a filestore name that matches the mount directory name.

ORA-40901: mountpoint not specified

Cause: The mountpoint was not specified.

Action: Provide a valid mountpoint.

ORA-40902: backingfile name invalid

Cause: The backingfile name was not specified or already exists.

Action: Provide a valid backingfile name.

ORA-40903: filestore already mounted

Cause: A filestore with same name, backing file, or mountpoint was already mounted.

Action: Unmount or drop the filestore before mounting or creating it again, or specify different filestore name, backing file, and mountpoint.

ORA-40904: unable to dismount: filestore not mounted

Cause: The provided filestore was not mounted.

Action: Mount the filestore before attempting to dismount.

ORA-40905: filestore not specified

Cause: The filestore name was not specified.

Action: Provide a valid filestore name. to do: add integer values to error message

ORA-40906: size or resize value greater than available memory

Cause: Specified size or resize value was greater than the available memory size.

Action: Provide a smaller value for the size.

ORA-40907: resize value greater than maximum size provided

Cause: The resize value was greater than the maximum size provided during creation.

Action: Provide a value lower than the maximum size.

ORA-40908: unable to resize: filestore not mounted

Cause: The provided filestore was not mounted.

Action: Mount the filestore before attempting to resize.

ORA-40909: file handle not valid

Cause: The provided file handle did not exist or was stale.

Action: Check the target file and re-acquire file handle.

ORA-40911: filestore name too long

Cause: Filestore name exceeded 64 characters.

Action: Limit filestore name to maximum 64 ASCII characters.

ORA-40912: invalid filestore name

Cause: Filestore name contained invalid sequence of characters.

Action: Filestore name must begin with an alphabetic character. After that, it may be followed by zero or more alphanumeric and underscore characters. Specify a filestore name using acceptable characters.

ORA-40913: invalid blocksize

Cause: Value specified for BLOCKSIZE was incorrect.

Action: Value for BLOCKSIZE must be 512, 2048, 4096, 8192, 16382 or 32768.

ORA-40914: filestore size must not be zero

Cause: Filestore size was specified as zero.

Action: Specify a filestore size other than zero.

ORA-40915: blocksize must not be zero

Cause: BLOCKSIZE was specified as zero.

Action: Specify a valid blocksize.

ORA-40916: invalid backingfile name

Cause: BACKINGFILE name was not valid.

Action: Specify a valid file name.

ORA-40917: invalid mountpoint name

Cause: Specified MOUNTPOINT name was invalid.

Action: Specify a valid file name.

ORA-40920: filestore must be mounted

Cause: This operation required filestore to be mounted.

Action: Mount the filestore and retry the operation.

ORA-40921: resize value must not be zero

Cause: New size was specified as zero.

Action: Use a new size value other than zero.

ORA-40922: insufficient amount of available free space in the filestore

Cause: Used storage space in the filestore exceeded specified target size.

Action: RESIZE to a larger size, or delete existing files in the filestore to free up more space.

ORA-40923: filestore has content

Cause: Filestore was not empty.

Action: Use INCLUDING CONTENTS clause in DROP PMEM FILESTORE command or delete filestore contents first.

ORA-40924: operation is not allowed

Cause: This operation was not allowed because database was still mounted.

Action: Restart the instance in nomount mode and retry the operation.

ORA-40925: You need to restart the instance and reissue the command in order for this operation to succeed

Cause: This operation failed because the required OS resources could not be acquired.

Action: Restart the instance and reissue the command.

ORA-40926: invalid or missing maximum file size in MAXSIZE clause

Cause: UNLIMITED was not specified, or an invalid integer value was specified, for the MAXSIZE clause in the persistent memory (PMEM) filestore operation. The MAXSIZE value cannot be smaller than the SIZE value.

Action: Use the correct syntax.

ORA-40927: invalid file increment size in NEXT clause

Cause: A non-integer value was used for the NEXT clause in the persistent memory(PMEM) filestore operation.

Action: Use the correct syntax.

ORA-40928: File *string* is of invalid file type

Cause: An unsupported file type was created in the persistent memory filestore.

Action: Create only supported file types in PMEM filestore.

ORA-40931: A subquery within a JSON array constructor cannot have a select list with more than one expression.

Cause: A JSON array constructor directly contained a subquery that had a select list with more than one expression.

Action: Combine the expressions in the select list into a single expression. For example, 'SELECT a, b' would become 'SELECT JSON { 'a' : a, 'b' : b }'.

ORA-40932: A subquery within a JSON array constructor contains a set operation such as UNION or INTERSECT.

Cause: A JSON array constructor directly contained a subquery that used a set operation such as UNION or INTERSECT.

Action: Rewrite the expression using the JSON_ARRAYAGG function.

ORA-40933: missing primary key column '*string*' in CHECK ETAG list

Cause: The mentioned primary key column was not found in the CHECK ETAG list of a JSON relational duality view.

Action: Add the primary key column to the CHECK ETAG list.

ORA-40934: invalid expression for JSON relational duality view CHECK ETAG clause

Cause: An invalid expression was used in JSON relational duality view CHECK ETAG clause.

Action: Ensure that a JSON relational duality view is constructed with correct ETAG clause.

ORA-40935: invalid table for JSON relational duality view FROM clause

Cause: An invalid table was used in JSON relational duality view FROM clause.

Action: Ensure that a JSON relational duality view is constructed from a table not a view, index-organized table table.

ORA-40936: JSON relational duality view error

Cause: There was an error in JSON relational duality view processing.

Action: Contact Oracle Support.

ORA-40937: cannot insert into table *string* in view *string*

Cause: Insert annotation for the table was not specified during view creation.

Action: Re-create JSON relational duality view with insert annotation for the table.

ORA-40938: cannot delete from table *string* in view *string*

Cause: Delete annotation for the table was not specified during view creation.

Action: Re-create JSON relational duality view with delete annotation for the table.

ORA-40939: cannot update table *string* in view *string*

Cause: Update annotation for the table was not specified during view creation.

Action: Re-create JSON relational duality view with update annotation for the table.

ORA-40940: cannot update column *string* of table *string* in view *string*

Cause: Update annotation for the column was not specified during view creation.

Action: Re-create JSON relational duality view with update annotation for the column or table.

ORA-40941: cannot specify a column name or subquery alias for JSON relational duality view

Cause: A column name or subquery alias was specified for a JSON relational duality view.

Action: Do not specify a column name or subquery alias for a JSON relational duality view.

ORA-40942: Primary key has a virtual column in JSON relational duality view for table '*string*'.

Cause: A virtual column was found in the primary key columns for a table used in a JSON relational duality view.

Action: Ensure that the table does not have a virtual column in its primary key.

ORA-40943: column *string* in table *string* is missing from JSON input

Cause: Column was missing from JavaScript Object Notation (JSON) input.

Action: Add the missing column to the JSON input and retry.

ORA-40944: invalid JSON input\n*string*

Cause: Input JavaScript Object Notation (JSON) document was invalid.

Action: Resolve the JSON error and retry.

ORA-40945: Column '*string*' of table '*string*' cannot be selected in JSON relational duality view as it is virtual.

Cause: A virtual column was selected in the JSON relational duality view.

Action: Remove the virtual column.

ORA-40946: JSON relational duality view is not supported on remote table '*string*'.

Cause: A remote table was used in a JSON relational duality view.

Action: Ensure that no remote table is used.

ORA-40947: A JSON relational duality view is created with duplicate tag '*string*'.

Cause: A duplicate tag was specified in JSON relational duality view.

Action: Remove the duplicate tag.

ORA-40948: Cannot insert multiple values to JSON relational duality view '*string*'

Cause: An attempt was made to insert multiple values to JSON relational duality view.

Action: Use single insert values or insert as select.

ORA-40951: unsupported operation for GRAPH_TABLE: *string*

Cause: This was an unsupported operation.

Action: Contact Oracle Support Services.

ORA-40952: total domain columns length exceeds 32K

Cause: Join group did not support domains defined over a set of columns where the sum of column sizes (in bytes) exceeds 32K.

Action: Remove some columns from the join group.

ORA-40953: column type mismatch: *string*

Cause: Columns in a join group did not have the same data type. For example, a join group defined on tab1(col1, col4), tab2(col5, col1) means that tab1.col1 and tab2.col5 must have the same data type (the same applies to other columns).

Action: Ensure the column data types match.

ORA-40954: invalid label used

Cause: The specified label did not exist in the graph.

Action: Specify a label that exists.

ORA-40956: invalid property name format

Cause: An invalid format was specified for accessing a property.

Action: Ensure that you always access properties using a variable property format.

ORA-40957: missing variable name

Cause: A variable name was not specified for the element pattern expression.

Action: Use an identifier for the variable name in the element pattern expression.

ORA-40958: missing label name

Cause: A label name was not specified for the label expression.

Action: Use an identifier for the label name in the label expression.

ORA-40959: Property graph with disconnected VERTEX table cannot be INMEMORY enabled.

Cause: The property graph contained at least one VERTEX table which was not referenced by any EDGE tables so it could not be INMEMORY enabled.

Action: Change the property graph such that all VERTEX tables are referenced by one or more EDGE tables.

ORA-40960: invalid SQL data type for property

Cause: An invalid SQL data type was used to define the property.

Action: Use a valid SQL data type to define the property.

ORA-40961: not enough memory to compile GRAPH_TABLE operator

Cause: Compilation of GRAPH_TABLE failed due to lack of memory.

Action: Increase your PGA memory or contact your system administrator.

ORA-40962: invalid property graph input to GRAPH_TABLE()

Cause: An invalid property graph input was passed to GRAPH_TABLE().

Action: Use valid property graph input to GRAPH_TABLE().

ORA-40963: invalid dot notation for JSON type in the label

Cause: An invalid dot notation for JSON type was used in the label.

Action: Use a valid dot notation for JSON type in the label.

ORA-40964: invalid argument specified in an EDGE_ID or EDGE_EQUAL operator

Cause: An invalid argument was specified in an EDGE_ID or EDGE_EQUAL operator.

Action: Use the edge variable name as an argument to EDGE_ID or EDGE_EQUAL operator.

ORA-40966: cannot alter column present in in-memory graph element key

Cause: The alter table operation caused one of the columns to become unsupported for an in-memory property graph.

Action: Alter all the dependent INMEMORY graphs to NOINMEMORY.

ORA-40967: Property graph not in enforced mode

Cause: The property graph being altered In-Memory is not in enforced mode

Action: Re-create or alter the property graph in enforced mode.

ORA-40968: data manipulation operation not legal on GRAPH_TABLE() operator

Cause: An attempt was made to use an UPDATE, INSERT, or DELETE statement on GRAPH_TABLE() operator.

Action: UPDATE, INSERT, or DELETE rows in the underlying graph element tables instead.

ORA-40969: query graph on a remote database is not supported

Cause: An attempt was made to query a graph on a remote database using dblink.

Action: Do not attempt to access graph on a remote database.

ORA-40971: invalid vertex or edge ID: 'string'

Cause: The specified vertex or edge ID was not valid.

Action: Pass a valid vertex or edge ID.

ORA-40981: invalid argument specified in a VERTEX_ID or VERTEX_EQUAL operator

Cause: An invalid argument was specified in a VERTEX_ID or VERTEX_EQUAL operator.

Action: Use a vertex variable name as an argument to VERTEX_ID or VERTEX_EQUAL operator.

ORA-40983: input property "string" is never defined

Cause: A vertex (respectively edge) input property is not defined on any of the vertex (respectively edge) tables of the graph.

Action: Specify a property that is defined on at least one graph element table of the kind specified as input (vertex/edge).

ORA-40984: invalid value specified for bounded quantifier in a GRAPH_TABLE operator

Cause: An invalid value was specified for the bounded quantifier in a GRAPH_TABLE operator.

Action: Choose a valid value and retry the operation. The lower bound value must be non-negative. The upper bound value must be positive and greater than or equal to the lower bound value.

ORA-40985: unsupported quantifier for variable path pattern in a GRAPH_TABLE operator

Cause: The specified quantifier for the variable path pattern was not supported.

Action: Modify the pattern specification and retry the operation.

ORA-40986: unsupported nested quantified path pattern in a GRAPH_TABLE operator

Cause: The specified nested quantified path pattern was not supported.

Action: Modify the pattern specification and retry the operation.

ORA-40987: path pattern is not specified in a GRAPH_TABLE operator

Cause: A path pattern was not specified in a GRAPH_TABLE operator.

Action: Add the path pattern specification and retry the operation.

ORA-40988: subquery is not allowed in a GRAPH_TABLE operator

Cause: An attempt was made to use a subquery in a GRAPH_TABLE operator.

Action: Remove the subquery from the GRAPH_TABLE operator and retry the operation.

ORA-40996: variable *string* is not declared in the MATCH clause of a GRAPH_TABLE operator

Cause: A variable used in a predicate or column clause was not declared in the MATCH clause of a GRAPH_TABLE operator.

Action: Remove the undeclared variable and retry the operation.

ORA-40997: invalid path pattern expression is specified in a GRAPH_TABLE operator

Cause: A path pattern expression was specified with a syntax error.

Action: Modify the path pattern specification and retry the operation.

ORA-40998: invalid reference of group variable *string* in a GRAPH_TABLE operator

Cause: A group variable was referenced outside of the quantified path pattern in which it was declared.

Action: Remove the invalid use of the group variable and retry the operation.

ORA-40999: edge pattern missing in a quantified path pattern of the MATCH clause of a GRAPH_TABLE operator

Cause: A quantified path pattern did not contain an edge pattern.

Action: Modify the path pattern specification and retry the operation.

ORA-41001 to ORA-42911

ORA-41001: session id list not specified

Cause: An attempt to migrate was made, which failed because the session id list specified was null.

Action: Check the session id list, and try again with a valid value.

ORA-41002: destination instance not specified

Cause: An attempt to migrate was made, which failed because the destination instance specified was null.

Action: Check the destination instance , and try again with a valid value.

ORA-41003: client id not specified

Cause: An attempt to migrate was made, which failed because the client id specified was null.

Action: Check the client id, and try again with a valid value.

ORA-41004: percentage not specified

Cause: An attempt to migrate was made, which failed because the percentage specified was null.

Action: Check the percentage, and try again with a valid value.

ORA-41005: session id list not specified

Cause: An attempt to cancel migration was made, which failed because the session id list specified was null.

Action: Check the session id list, and try again with a valid value.

ORA-41006: session id not specified

Cause: An attempt to get migration status was made, which failed because the session id specified was null.

Action: Check the session id, and try again with a valid value.

ORA-41007: sid field is null

Cause: A session id instance passed into a dbms_tsm procedure or function had a null sid field.

Action: Check the session id, and try again with a valid value.

ORA-41008: serial# field is null

Cause: A session id instance passed into a dbms_tsm procedure or function had a null serial# field.

Action: Check the session id, and try again with a valid value.

ORA-41009: Session with session number *string*, serial number *string* does not exist

Cause: An attempt to migrate was made, which failed because of invalid session number and/or serial number.

Action: Check the session number and serial number and try again.

ORA-41010: No more memory to hold connection state information

Cause: An attempt to reference more connections than configured

Action: Check the connection information and try again.

ORA-41011: migrate operation for session id *string*, serial number *string* failed

Cause: A migration related operation failed because of contention between sessions.

Action: Check the additional error codes for more information, and retry the operation later.

ORA-41012: session number *string*, serial number *string* cannot be migrated

Cause: The specified session could not be migrated by using the transparent session migration due to its current state.

Action: Verify the session number and serial number, and try again.

ORA-41013: instance name not specified

Cause: An attempt to migrate was made, which failed because the instance name specified was null.

Action: Check the instance name, and try again with a valid value.

ORA-41014: session number *string* with serial number *string* is already being migrated

Cause: An attempt was made to migrate a session that was already being migrated.

Action: Check the session number and serial number and try again.

ORA-41015: destination connect string not specified

Cause: A migration attempt was made, which failed because the connect string specified was null.

Action: Check the connect string and try again.

ORA-41016: Session recreation failed

Cause: Session recreation failed at the destination instance.

Action: Check session state and try migration again

ORA-41017: Session prepare failed for session number *string*, serial number *string*

Cause: A migration attempt was made, which failed because session prepare failed.

Action: Retry migration again after checking all arguments.

ORA-41019: Session begin at the destination instance failed

Cause: Session begin failed at the destination instance because the shadow connection could not be established.

Action: Check the connect string and try beginning the session again.

ORA-41020: invalid value "string" specified for parameter "string"

Cause: An invalid value was specified for the the given parameter.

Action: Correct the value being specified for the parameter.

ORA-41021: OCI error during transparent session migration

Cause: An OCI operation failed during transparent session migration.

Action: Check the OCI error signalled, and take corrective action.

ORA-41022: instance name not specified

Cause: An attempt to recover after instance death was made, which failed because the instance name specified was null.

Action: Check the instance name, and try again with a valid value.

ORA-41023: death time not specified

Cause: An attempt to recover after instance death was made, which failed because the death time specified was null.

Action: Check the death time, and try again with a valid value.

ORA-41024: Cursor needs to be parsed again

Cause: An SQL operation failed because the cursor state was lost.

Action: Reissue all operations starting from parse.

ORA-41025: sid field string is invalid

Cause: A session id instance passed into a dbms_tsm procedure or function had an invalid sid field.

Action: Check the session id, and try again with a valid value.

ORA-41026: serial# field string is invalid

Cause: A session id instance passed into a dbms_tsm procedure or function had an invalid serial# field.

Action: Check the serial#, and try again with a valid value.

ORA-41027: Error status string during OCI operation at string

Cause: An OCI operation failed during transparent session migration.

Action: Check the OCI error signalled, and take corrective action.

ORA-41028: Session id not specified

Cause: An attempt to migrate was made, which failed during migration because the session id specified by the client was null.

Action: Check the session id, and try again with a valid value.

ORA-41029: Destination session id not specified for sid string serial# string

Cause: An attempt to migrate was made, which failed during migration because the destination session id specified by the client was null.

Action: Check the session id, and try again with a valid value.

ORA-41030: Session id not specified

Cause: An attempt to migrate was made, which failed during migration because the session id specified by the client was null.

Action: Check the session id, and try again with a valid value.

ORA-41031: Destination session key not specified for sid *string* serial# *string*

Cause: An attempt to migrate was made, which failed during migration because the destination session key specified by the client was null.

Action: Check the session id, and try again with a valid value.

ORA-41100: Oracle Cluster Registry operation failed with event *string*.

Cause: The Portable Clusterware/Oracle Cluster Registry stack returned an error.

Action: Check if the Portable Clusterware stack is properly brought up.

ORA-41101: The database: *string* has already been designated as Cluster Director.

Cause: An attempt was made to designate multiple databases as the Cluster Director.

Action: Undesignate the existing Cluster Director before Designating a new one.

ORA-41102: No database has currently been designated as Cluster Director.

Cause: An attempt was made to query/undesignate a Cluster Director when no database has been designated as Cluster Director.

Action: n/a

ORA-41103: Only the designated Cluster Director: *string* can undesignate itself.

Cause: An attempt was made to undesignate the current Cluster Director by a database that is not the Cluster Director.

Action: Login to the currently designated Cluster Director to perform the undesignation.

ORA-41104: The database: *string* is the Cluster Director.

Cause: An attempt was made to control the Cluster Director on a database that is not the Cluster Director.

Action: Log in to the currently designated Cluster Director to perform the control operation.

ORA-41105: The Cluster Director is not stopped.

Cause: An attempt was made to control the Cluster Director before the Cluster Director was stopped.

Action: Use `dbms_cluster_director.stop` to stop the Cluster Director and retry the control operation.

ORA-41106: invalid argument *string*: value is null

Cause: An attempt to read the scan hostname or port failed

Action: Verify `pcw` is running and `scan` is configured. Run `grdcscan read_config` to verify or `grdcscan set_config host:port` to set scan name and port.

ORA-41107: invalid argument: service *string* cannot be found

Cause: The program attempted to access a nonexistent or deleted service.

Action: Check to make sure the service has been properly created.

ORA-41108: Posting system alert with reason_id *string* failed with code [*string*] [*string*]

Cause: Internal Error: An attempt to post a system alert failed.

Action: If this condition repeats, please contact Oracle Support.

ORA-41109: Updating system alert with reason_id *string* failed; previous alert not found

Cause: System Error: An attempt to update a system alert failed. The alert was improperly cleared from WRI\$_ALERT_OUTSTANDING.

Action: Do not delete from WRI\$_ALERT_OUTSTANDING. If this condition repeats, please contact Oracle Support.

ORA-41110: The Director has blocked this instance. Cannot start [*string*]

Cause: An attempt to start services on an instance that will be shutdown

Action: Start the services on another available instance

ORA-41201: Session state not capturable due to reason (*string*, *string*)

Cause: Session state capture was initiated when session state could not be captured.

Action: Check session state status and make sure session state can be captured.

ORA-41202: Session state capture or restore failed

Cause: Capture or restore operation failed.

Action: Check session state status and failure reason for details.

ORA-41203: Invalid session state operation

Cause: Invalid session state operation was issued.

Action: Check if session status was valid for the current operation.

ORA-41204: Session capture in progress

Cause: Session state capture was initiated and could not perform the requested operation.

Action: Wait for the current capture to complete or abort it.

ORA-41205: Invalid parameter for session state capture or restore

Cause: Invalid parameter was passed to session state capture or restore interface.

Action: Correct the invalid parameter(s).

ORA-41206: Session capture or restore internal error KPCFSR-*string*

Cause: Internal operation error was encountered.

Action: Turn on related trace for details and report it as a bug.

ORA-41207: Cannot restore session state due to reason (*string*, *string*)

Cause: Session state restore was initiated when session was not ready for state restore.

Action: Restore session state immediately after logging into a session or perform necessary operations to make the session ready for restore; for example, commit current transaction, or close BFiles.

ORA-41208: OCI error during session state capture and restore

Cause: An OCI operation failed during an internal operation of session state capture and restore.

Action: Check the OCI error signaled and take corrective action.

ORA-41209: OCI operation failed at *string* due to ORA-*string*

Cause: An OCI operation failed during an internal operation of session state capture and restore.

Action: Check the OCI error signaled and take corrective action.

ORA-41210: Failed to resolve session state directory object

Cause: Session state directory object passed to capture or restore was incorrect.

Action: Verify session state directory object and retry.

ORA-41211: Failed to insert capture or restore record

Cause: An error occurred while capture or restore record was being stored into the database.

Action: Check the error signaled and take corrective action.

ORA-41251: Failed to restore session state from a file (error code *number*)

Cause: Session state file may be corrupted.

Action: Ensure that the file is a session state file.

ORA-41252: Failed to switch to new session in SSCR

Cause: This is the generic internal error number for the SSCR exceptions. This indicates that the SSCR has encountered an exceptional condition.

Action: Report as a bug.

ORA-41253: Failed to access session state file

Cause: An error was encountered while reading from or writing to session state capture file.

Action: Check the error stack for the actual error number and turn on tracing if necessary.

ORA-41254: Invalid session state file: *string*

Cause: An invalid session state file was used in session state restore operation.

Action: Check if the session state file is a valid file created by session capture.

ORA-41255: Package not supported: *string*

Cause: The specified package is not supported.

Action: Do not call the package functions and procedures.

ORA-41300: File driver is not initialized

Cause: An attempt was made to operate on the uninitialized file driver.

Action: Initialize the file driver using the OCIServerAttach function.

ORA-41301: failed to write data to file

Cause: You may not have sufficient privileges or quotas for this action.

Action: Ensure that you have sufficient privileges and quotas for this action.

ORA-41302: failed to read data from file

Cause: The file may not exist or you do not have privileges for this action.

Action: Ensure that the file exists and that you have sufficient privileges for this action.

ORA-41303: Received partial data from file

Cause: This is the generic internal error number for file driver exceptions. This indicated that file driver encountered an exception condition.

Action: Report as a bug.

ORA-41304: Failed to connect to file driver

Cause: The connect string may be incorrect.

Action: Ensure that the connect string is correct.

ORA-41305: Failed to open file

Cause: You may not have sufficient privileges for this action.

Action: Ensure that the file exists and that you have sufficient privileges for this action.

ORA-41400: Bind character set (*string*) does not match database character set (*string*)

Cause: In this recursive OCI call, the bind character set was different from the current database character set. This is usually caused by database character set change.

Action: Be sure to obtain bind data in database character set and do rebind in the current environment.

ORA-41401: Define character set (*string*) does not match database character set (*string*)

Cause: In this recursive OCI call, the define character set was different from the current database character set. This is usually caused by database character set change.

Action: Be sure to do redefine in the current environment.

ORA-41402: SCNs not valid after failover; failover cannot continue

Cause: SCNs for replay are not valid on target database. The system change numbers (SCN) recorded during the original execution were not valid on the new database after failover. This might happen if the new database was opened with RESETLOGS option, or if the new database was set up to allow significant lag in replication. The failover could not continue.

Action: Check the SCNs on target and source, and whether RESETLOGS was used when opening the target database.

ORA-41403: failed over to older server; failover cannot continue (*string, string, string*)

Cause: Target database version is older than source database version. Failover replay was enabled for a service in which some standby databases were older than the original server and could not replay work from the original server.

Action: Keep standby database current with primary.

ORA-41404: invalid replay context

Cause: Application Continuity protocol was violated.

Action: Contact Oracle Support Services.

ORA-41405: Failed over to older server; failover cannot continue (*string*, *string*).

Cause: Target database version is older than source database version. Failover replay was enabled for a service in which some standby databases were older than the original server and could not replay work from the original server.

Action: Keep standby database current with primary.

ORA-41406: driver disabled replay due to an unsupported call

Cause: Application replay encountered a command that was not supported for replay, and so replay was disabled. Client driver has initiated disable.

Action: Check the user call that disabled. TAC will enable when possible.

ORA-41407: SQL command not supported for replay; replay disabled

Cause: Application replay encountered a command that was not supported for replay, and so replay was disabled. Server has initiated disable.

Action: Check the user call that disabled. TAC will enable when possible.

ORA-41408: embedded COMMIT in last call; failover cannot continue

Cause: The Oracle server process failed after committing a transaction but COMMIT was embedded in a stored procedure. Failover cannot continue.

Action: Do not resubmit, your transaction committed.

ORA-41409: cannot replay committed transaction; failover cannot continue

Cause: The Oracle server process failed after committing a transaction in the current request. Failover cannot continue.

Action: Do not resubmit, your transaction committed.

ORA-41410: call committed a transaction and started a new transaction; failover cannot continue

Cause: The Oracle server process failed after committing a transaction in the current request. Your request has more than one transaction. Failover cannot continue.

Action: Do not resubmit, your transaction committed. Structure your application to have one commit per request. Consider using TAC.

ORA-41411: too many round trips in request; replay disabled

Cause: The Oracle server process failed after executing a single request with more than 65535 round trips from the client to the server.

Action: Do not resubmit. Reduce application calls per request, for example, use an array fetch or set a prefetch size.

ORA-41412: results changed during replay; failover cannot continue

Cause: Replay terminated as results differed from original execution. Failover cannot continue.

Action: User may resubmit request.

ORA-41413: too much data in call capture; replay disabled

Cause: The Oracle server process failed after executing a request with a complex call whose capture had too much data, therefore, replaying of the request was not possible.

Action: Resubmit and reduce application calls per request.

ORA-41414: could not allocate memory for call capture; replay disabled

Cause: The Oracle server process encountered a memory allocation failure while executing the replay of the request, therefore replaying of the request was not possible.

Action: Resubmit and reduce application calls per request.

ORA-41415: duplicate or conflicting KEEP or NOKEEP specifications

Cause: Duplicate KEEP or NOKEEP was specified, or both KEEP and NOKEEP were specified.

Action: Remove the duplicate or conflicting specification.

ORA-41417: invalid use of DBMS_APP_CONT_PRIVT: [string] [string] [mode=string] [string] [string] [string] [string] [string]

Cause: Application continuity protocol was violated.

Action: Contact Oracle Support Services.

ORA-41418: Replay context is corrupt. Reason: [string], [string], [string], [string]

Cause: The replay context was not valid.

Action: Check your network configuration and hardware.

ORA-41420: block size cannot be zero

Cause: The block size sent by remote server was zero.

Action: Specify a valid block size as documented in the Oracle Database Administration Guide when creating data files. If displayed as an error, this represents a DBMS_FILE_TRANSFER protocol violation which should be reported to Oracle Support Services.

ORA-41421: database request ended

Cause: The application ended its database request or released the connection to the connection pool, thereby disabling replay mode.

Action: Review your results to see if your last request completed successfully.

ORA-41422: unsupported use of an incoming database link connection from a background, JOBQ slave or PQ slave

Cause: A background, JOBQ slave or PQ slave attempted to use an incoming database link connection and such usage is not supported.

Action: Contact Oracle Support Services.

ORA-41424: initial session state mismatch during replay

Cause: The initial session state at replay did not match the state at the beginning of the request.

Action: Review this request to see if the request committed, and if not whether it is safe to resubmit.

ORA-41425: replay disabled for a global transaction that uses Two-Phase Commit (2PC) managed by external Transaction Processing Monitor (TPM)

Cause: The request was unable to replay because it was part of a Two-Phase Commit (2PC) transaction managed by the Transaction Processing Monitor (TPM).

Action: To use AC determine if the application can use local or one-phase transactions.

ORA-41426: could not determine session state information

Cause: Unable to obtain session state classification information.

Action: Check alert log for more details.

ORA-41427: client session environment mismatch at replay

Cause: The client session environment could not be restored to the original values.

Action: Check the setting of failover_restore on your service.

ORA-41428: initial session state could not be verified during replay

Cause: The client session environment could not be verified for a failover of the first statement in a series.

Action: Upgrade to a driver with full support for TAC.

ORA-41429: non-replayable side effect on failed connection

Cause: The application executed an operation with side effects, which disabled Application Continuity for this request.

Action: Review this request to see if the request committed, and if not whether it is safe to resubmit with this side effect.

ORA-41430: connection test not found or is predefined

Cause: An attempt was made to enable or disable a connection test that did not exist or to delete a predefined connection test.

Action: Query the view DBA_CONNECTION_TESTS to see which connection tests exist and add the connection test, if needed. Predefined connection tests can be disabled but not deleted.

ORA-41431: Application Continuity does not support ISOLATION_LEVEL=SERIALIZABLE; failover cannot continue.

Cause: Application Continuity does not support ISOLATION_LEVEL=SERIALIZABLE.

Action: Consider using SELECT FOR UPDATE instead of serializable transactions.

ORA-41432: An open transaction is detected when attempting to start a request or at the end of a request.

Cause: It is illegal to have an open transaction when starting a new request or at the end of a request.

Action: Commit or rollback the open transaction in the previous request or in the callback for session setup or failover. It is illegal to have an open transaction at the end of a labeling or failover callback

ORA-41434: transaction replay disabled by unsupported value in call to *string*

Cause: The application passed to an Oracle Call Interface (OCI) function an argument value that was not supported with transactional failover.

Action: Manually recover the pending transaction. / Note: following reserved for special situations to aid diag

ORA-41435: transaction replay disabled by call to *string*

Cause: The application called an Oracle Call Interface (OCI) function that was not supported with transactional failover.

Action: Manually recover the pending transaction.

ORA-41437: session template could not be applied

Cause: The provided session template did not exist or was corrupt.

Action: Create a new session.

ORA-41438: cannot get service parameter (*string*)

Cause: Unable to get the value of the service attribute at session creation

Action: Check session has been created with the service set

ORA-41440: unsupported session template usage

Cause: An application attempted to apply a template produced by a newer server on a server that does not support session templates.

Action: Do not configure a service to use session templates if some of the databases providing the service do not support templates.

ORA-41444: new DRCP session no longer supports Transaction Guard

Cause: The initial session for this connection supported Transaction Guard, but a new session created for the latest request did not. The connection was aborted, to avoid potential misuse of Transaction Guard functionality.

Action: Ensure that Transaction Guard service settings are consistently configured.

ORA-41445: not able to read reset session state value

Cause: Reset Session State parameter has not been included in the service.

Action: Include a valid value for the Reset Session State parameter.

ORA-41446: The driver is not supported for resetting state at request boundaries

Cause: The driver did not support RESET_STATE.

Action: - To use RESET_STATE, upgrade to a driver that supports RESET_STATE. - To continue without RESET_STATE capability (do not use this if applications are depending on the session state being cleared): - Use a different service that does not have RESET_STATE enabled. - Set RESET_STATE = NONE on the current service.

ORA-41448: could not verify commit status due to database mismatch (CDB root or non-CDB)

Cause: The application attempted to obtain the commit status of a transaction on a database logically different from where it was first started.

Action: Check the status of this transaction manually.

ORA-41449: could not verify commit status due to invalid recovery System Change Number (SCN)

Cause: The application attempted to obtain the commit status of a transaction on a database with SCN at which recovery could not be performed.

Action: Check the status of this transaction manually.

ORA-41450: could not verify commit status due to incomplete recovery information

Cause: The application attempted to obtain the commit status of a transaction on a database that was open read-only but with unspecified System Change Number (SCN). The actual SCN may be beyond the current, and recovery may yield erroneous results.

Action: Check the status of this transaction manually.

ORA-41451: Logical Transaction Identifier (LTXID) from too old a version of database

Cause: The application was passing in an old LTXID whose format the current database no longer supported.

Action: No action needed. The connection now has a current LTXID.

ORA-41452: Application Continuity is disabled due to lack of support by the client driver.

Cause: The client driver did not fully support Application Continuity.

Action: Upgrade to a driver with full support for Application Continuity.

ORA-41453: Application Continuity is disabled due to unsupported use of SESSION_STATE_CONSISTENCY by the client driver.

Cause: The client driver did not fully support the service attribute SESSION_STATE_CONSISTENCY.

Action: Set the service attribute SESSION_STATE_CONSISTENCY to DYNAMIC, or upgrade to a driver with full support of the SESSION_STATE_CONSISTENCY service attribute.

ORA-41454: Application Continuity could not be enabled because Transaction Guard was not enabled in the session.

Cause: Application Continuity was disabled by the server because Transaction Guard was disabled in the session.

Action: Upgrade to a client driver with full support for Application Continuity and ensure that all services used in the application are configured to enable Transaction Guard.

ORA-41455: Transparent Application Continuity is disabled due to lack of support by the client driver.

Cause: The client driver did not fully support Transparent Application Continuity.

Action: Use Application Continuity, or upgrade to a driver with full support for Transparent Application Continuity.

ORA-41456: Replay is disabled because the old client driver does not support Transparent Application Continuity.

Cause: The replay was disabled because the old client driver did not support Transparent Application Continuity.

Action: Upgrade your client to a version that fully supports Transparent Application Continuity.

ORA-41457: The client driver disabled replay.

Cause: The client driver encountered a call that it could not replay. Therefore, it disabled replay for that call.

Action: Take the necessary corrective action.

ORA-41458: A SELECT using AS OF could not execute at replay.

Cause: During replay of this SELECT statement, PL/SQL was encountered.

Action: Revise the SELECT statement to exclude PL/SQL in the FETCH.

ORA-41459: The request has committed and cannot reenable with FAILOVER_TYPE = TRANSACTION.

Cause: A commit completed in this request and there were subsequent calls after this commit.

Action: Use one commit per request, and also check that connections are being returned to the pool between requests. You could also use Transparent Application Continuity (FAILOVER_TYPE = AUTO).

ORA-41460: The request cannot reenable replay because of unrestorable session state with FAILOVER_TYPE = AUTO.

Cause: The session contained unrestorable session state.

Action: Consider using RESET_STATE = LEVEL1 or FAILOVER_TYPE = TRANSACTION.

ORA-41461: The request cannot reenable replay because of open cursors with FAILOVER_TYPE = AUTO.

Cause: There were open cursors that prevented Transparent Application Continuity from reenabling replay.

Action: Return cursors to the statement cache at the end of the request, so that a fetch cannot inadvertently leak to a later request. Use RESET_STATE = LEVEL1 to close cursors between the requests or use FAILOVER_TYPE = TRANSACTION.

ORA-41462: Application Continuity is not enabled.

Cause: A connection pool was not used with Application Continuity.

Action: Use a connection pool and return the connection to the pool or connect to a service that has FAILOVER_TYPE = AUTO.

ORA-41463: The application has request boundaries but Application Continuity is not enabled.

Cause: Possible causes are: - The replay driver was not used. - There was UNRESTORABLE session state in the login trigger or label. - A transaction processing monitor was in use with two-phase commit. - The client disabled replay.

Action: Use the replay driver or validate trigger checking for restorable state if using `FAILOVER_TYPE = AUTO` or check if the application is explicitly disabling replay or using Oracle XA Library.

ORA-41464: Application Continuity could not restore the original session.

Cause: The server process failed and the original session state could not be restored as part of the failover.

Action: Clear the session states before returning connections to the connection pool.

ORA-41465: Client driver does not support implicit request boundaries.

Cause: Application is using a client driver that doesn't fully support implicit request boundaries.

Action: Upgrade to a driver that fully supports implicit request boundaries.

ORA-41467: Application Continuity could not restore tagged session during failover.

Cause: At checkout, client received a previously tagged session. But that session experienced an outage and Application Continuity replay was attempted, but could not confirm restoration of the tagged state.

Action: One or more of the following: (1) use Transparent Application Continuity (2) register a Transparent Application Failover callback (3) do not use tags (4) resubmit failed work.

ORA-41468: execution failed due to unstable dependencies

Cause: Cursor execution could not proceed because a referenced object was modified.

Action: Retry the SQL statement when the referenced objects are not being modified.

ORA-41469: failover was rejected due to incompatible checksum version

Cause: The failover request attempted to use a higher checksum version that the old server does not support.

Action: Ensure that all Oracle RAC instances are patched to the same level.

ORA-41470: fetch tried on dead connection

Cause: A fetch was attempted on a dead connection.

Action: Check for a failed error on previous call. Discard the connection and reconnect. 41471 and 41472 both indicate that client receives unexpected replay context in function `kpxcAppContCtlRecv`. The difference is that: 41471 is for standard case which is what we expect since it is raised by unsupported metadata call to `OCIAttrGet` and we could ignore it while 41472 is for non-standard case which means client receives unexpected replay context but the reason is not clear.

ORA-41471: transaction replay disabled by unsupported metadata call to OCIAttrGet

Cause: Application Continuity was disabled by an unsupported metadata call in the request.

Action: Manually recover the pending transaction

ORA-41472: transaction replay disabled by unsupported metadata call.

Cause: Application Continuity was disabled by an unsupported metadata call in the request.

Action: Manually recover the pending transaction

ORA-41473: Allocated call should already be processed.

Cause: This call may have missed the enqueueing process.

Action: Contact Oracle Support Services.

ORA-41474: Application Continuity is disabled due to unsupported client driver.

Cause: The client driver did not fully support Application Continuity.

Action: Upgrade to a driver with full support of Application Continuity.

ORA-41475: Application Continuity is disabled due to switching from a non-Application Continuity service.

Cause: The client session environment could not be verified for a failover of the first statement in a series, since the session was started with a service that does not support Application Continuity.

Action: To use Application Continuity with ALTER SESSION SET CONTAINER SERVICE, configure all services with Application Continuity.

ORA-41477: invalid LOB locator.

Cause: This LOB locator was generated on logical primary database during database rolling upgrade. It can't be used on a new database.

Action: Reload this LOB locator from the current database.

ORA-41479: OCI_ATTR_PING_INTERVAL was set via pooled service context obtained by OCISessionGet or OCILogon2.

Cause: After checking out session from session pool, OCI_ATTR_PING_INTERVAL was set via service context handle.

Action: Set OCI_ATTR_PING_INTERVAL via session pool handle.

ORA-41480: Request was not made between request begin and request end.

Cause: OCI Request was not made between OCIRequestBegin and OCIRequestEnd, or OCISessionGet and OCISessionRelease, or OCILogon2 and OCILogoff.

Action: put OCI requests between OCIRequestBegin and OCIRequestEnd, or OCISessionGet and OCISessionRelease, or OCILogon2 and OCILogoff.

ORA-41481: Request begin or request end call was called inappropriately.

Cause: OCIRequestBegin was called when a database request was already active or a pooled service context obtained by OCISessionGet or OCILogon2

Action: Do not call OCIRequestBegin when OCISessionGet or OCIlogon2 in session pool mode or OCIRequestBegin was already called.

ORA-41482: Null attribute address for attribute *string*

Cause: Null attribute address was provided for OCIAttrSet/Get.

Action: Provide valid attribute address

ORA-41483: cannot change session state consistency in client for failover type *string*

Cause: An attempt was made to change session state consistency, but the current failover type does not allow consistency changes.

Action: OCIAttrSet() only supports changing session state consistency for failover type AUTO. Setup a valid failover type and session state consistency combination using the DBMS_SERVICE package.

ORA-41484: cannot change session state consistency in client to value *string*

Cause: An invalid session state consistency value was set for the current failover type.

Action: OCIAttrSet() only supports session state consistency values OCI_SESSSTATECONS_AUTO and OCI_SESSSTATECONS_HYBRID. Setup a valid value for session state consistency.

ORA-41485: Failover is not enabled.

Cause: The connection did not connect to a service with failover enabled.

Action: Connect to a service with failover enabled.

ORA-41601: invalid property for the rule class

Cause: An invalid property was specified for the rule class.

Action: Correct the rule class properties and try again.

ORA-41602: insufficient privileges

Cause: The user does not have required privileges on the object.

Action: Obtain the required privileges and try again.

ORA-41603: invalid privilege type

Cause: An attempt was made to grant an invalid privilege on a rule class.

Action: Correct the privilege name and try again.

ORA-41604: cannot revoke a privilege that was not granted

Cause: An attempt was made to revoke a privilege that was never granted.

Action: None

ORA-41605: schema extended name not allowed: *string*

Cause: An attempt was made to specify a schema extended name for an event structure, a rule class, or an action call-back procedure.

Action: Specify the object name with out a schema extension.

ORA-41606: rule class name already used by an existing object

Cause: An attempt was made to create a rule class with a name that is already used by an existing object.

Action: Specify a different name for the rule class and try again.

ORA-41607: rule class creation failed with *string*

Cause: rule class creation failed with a recursive error.

Action: Correct the rule class specification and try again.

ORA-41608: rule class does not exist

Cause: An attempt was made to access a rule class that does not exist or is not accessible.

Action: Correct the rule class name and try again.

ORA-41609: invalid name for the rule class

Cause: An invalid name was specified for the rule class.

Action: Correct the rule class name and try again.

ORA-41610: callback procedure name already used for an existing object

Cause: An attempt was made to create a callback procedure with a name that is already used for an existing object.

Action: Choose another name for the callback procedure.

ORA-41611: rule identifier "string" not unique in the rule class

Cause: An attempt was made to use a duplicate rule identifier.

Action: Choose a unique identifier for the rule and try again.

ORA-41612: scalar values expected for action preferences

Cause: Incorrect values were specified for the action preferences.

Action: Correct the action preferences values and try again.

ORA-41613: invalid action preference for rule class: string

Cause: An attempt was made to use an invalid action preference.

Action: Correct the input and try again.

ORA-41614: missing action preference value

Cause: Values for one or more action preferences were not specified.

Action: Specify values for all relevant action preferences.

ORA-41615: too many values in action preference list

Cause: Too many entries were specified in the action preference values list. The action preference values list should not have more entries than the action preference names list.

Action: Correct the input and try again.

ORA-41616: rule class's action callback procedure may have errors

Cause: The operation failed because the action callback procedure associated with the rule class has compilation errors.

Action: Recompile the action callback procedure and try the operation again.

ORA-41617: action preference name "string" collides with an event attribute name

Cause: An attempt was made to create an action preference with the same name as an attribute in the event structure.

Action: Choose a different name for action preference and try again.

ORA-41618: specified rule does not exist

Cause: Invalid rule identifier was used to operate on a rule definition.

Action: Use a valid rule identifier.

ORA-41619: rule manager feature currently not supported

Cause: An attempt was made to use a rule manager feature that is currently not supported.

Action: No action necessary. This is an informational message only.

ORA-41620: invalid ordering property for the rule class

Cause: An attempt was made to specify an invalid ordering property for the rule class.

Action: Make sure that the attributes listed in the ordering property are all part of the rule class/event structure definition with appropriate extended names.

ORA-41621: error in ordering property :*string*

Cause: An attempt was made to specify an invalid ordering property for the rule class.

Action: Make sure that the attributes listed in the ordering property are all part of the rule class/event structure definition with appropriate extended names.

ORA-41622: invalid primitive event object in rule class properties : *string*

Cause: In the rule class properties, the name used for one or the primitive event objects was not found in the corresponding composite event structure.

Action: Correct the name of the primitive event object in the rule class properties and try again.

ORA-41623: conflicting values for autocommit and duration properties

Cause: An attempt was made to create a rule class with autocommit enabled when the duration of events is set to TRANSACTION.

Action: Turn autocommit off or choose a different duration policy.

ORA-41624: invalid duration policy for primitive object in a composite event

Cause: An attempt was made to specify a SESSION or TRANSACTION duration policy for the primitive objects.

Action: Correct the rule class properties and try again.

ORA-41625: event structure *string* does not exist

Cause: The object type that represents the event structure was not created in the user's schema.

Action: Create the object type with the event structure's name and try again.

ORA-41626: invalid XML element "*string*" in rule class properties

Cause: An invalid XML element was used in the properties specification for the rule class.

Action: Use the correct (case-sensitive) tags in the properties.

ORA-41627: event structure object type in inconsistent state

Cause: The object type specified for the event structure was in an inconsistent state.

Action: Fix the object type and try again.

ORA-41628: invalid usage of "string" attribute in "string" element

Cause: An invalid or unsupported XML attribute was used in the rule class properties.

Action: Use the correct (case-sensitive) tags in the properties.

ORA-41629: event structure for simple events cannot be reused for composite events

Cause: An attempt was made to reuse an object type (event structure) for composite events when it is already configured for simple events.

Action: Drop the attribute set associated with the object and try again.

ORA-41630: invalid value for "string" attribute in the rule class properties

Cause: An invalid value was specified for an attribute in the rule class properties.

Action: Correct the value and try again.

ORA-41631: invalid text node or child element for "string" element in properties

Cause: An attempt was made to specify a child element or a text node in invalid position in the rule class properties specification.

Action: Correct the rule class properties and try again.

ORA-41632: invalid value for the "string" attribute

Cause: An attempt was made to assign an invalid value for an attribute in the rule class properties.

Action: See the documentation.

ORA-41633: specified rule class configuration not supported: "string"

Cause: An attempt was made to use an unsupported configuration for the rule class.

Action: Remove the specified tag in the properties and try again.

ORA-41634: invalid duration specification in rule properties: "string"

Cause: Invalid value was specified for the duration attribute in the rule class properties.

Action: Correct the value and try again.

ORA-41635: invalid unit of time used in duration specification

Cause: An attempt was made to use an invalid unit of time for the rule class's duration specification. Valid units are : minutes, hours, and days.

Action: Correct the duration specification and try again.

ORA-41636: invalid duration specification at the primitive event level

Cause: An attempt was made to specify a duration policy for the primitive events when the composite event was configured with TRANSACTION or SESSION duration policy.

Action: Correct the rule class properties and try again.

ORA-41637: missing primitive event name

Cause: The name attribute of the object element in the rule class properties was not specified. This is a required value.

Action: Specify the name of the primitive event and try again.

ORA-41638: invalid attribute for "string" element in rule condition

Cause: An attempt was made to specify an invalid attribute for an XML element in the rule condition.

Action: Correct the rule condition and try again.

ORA-41639: invalid child node in "string" element

Cause: An attempt was made to specify an invalid child element or text node for an XML element in the rule condition.

Action: Correct the rule condition and try again.

ORA-41640: invalid element "string" in the rule condition

Cause: An attempt was made to use an invalid element or a valid element in invalid position in the rule condition.

Action: Correct the rule condition and try again.

ORA-41641: invalid or empty rule condition

Cause: An attempt was made to specify an invalid or empty rule condition.

Action: Correct the input and try again.

ORA-41642: Missing "string" element in the rule condition

Cause: The rule condition was specified without a required element.

Action: Correct the rule condition and try again.

ORA-41643: invalid attribute for the "string" element in the rule condition

Cause: An attempt was made to specify an invalid attribute for an element in the rule condition.

Action: Correct the rule condition and try again.

ORA-41644: invalid use of "string" attribute in rule condition

Cause: An attempt was made to specify an invalid attribute for an element in the rule condition.

Action: Correct the rule condition and try again.

ORA-41645: duplicate tag "string" in rule condition

Cause: An attempt was made to specify the same XML tag in more than one positions within a single rule condition.

Action: Remove the duplicate reference to the tag and try again.

ORA-41646: missing "string" attribute for "string" element in the rule condition

Cause: One of the required attributes was not specified in the rule condition.

Action: Correct the rule condition and try again.

ORA-41647: negation not allowed in rule conditions with "any" semantics

Cause: An attempt was made to specify a "not" element within an "any" element in the rule condition.

Action: Correct the rule condition and try again.

ORA-41648: invalid sequence of child elements in "string" element

Cause: An attempt was made to specify an invalid sequence of elements within a parent element.

Action: Correct the rule condition and try again.

ORA-41649: invalid rule condition for a rule class involving composite events

Cause: An attempt was made to add an invalid rule condition to a rule set defined for composite events.

Action: Correct the input and try again.

ORA-41650: invalid composite event structure

Cause: A composite event structure may only have attributes that are either table aliases or of an object type that is defined in the owner's schema.

Action: Ensure that the event structure has no scalar attributes and all the embedded types in it are defined in the owner's schema.

ORA-41651: Event structure object type has one or more dependent objects

Cause: An attempt was made to configure an object type that has one or more dependents as a event structure. The object type cannot be modified due to the dependent objects.

Action: Create a new object type for the event structure and try again.

ORA-41652: invalid value for the equal attribute in the rule condition

Cause: An invalid value is assigned to the equal attribute in the rule condition.

Action: Correct the input and try again.

ORA-41653: inconsistent value for the "count" attribute of the "any" element

Cause: The value specified for the "count" attribute of the "any" element is greater than or equal to the the number of primitive events appearing in the rule condition.

Action: Specify a smaller value for the "any" element's "count" attribute.

ORA-41654: insufficient number of primitive events for the use of "sequence"

Cause: An attempt was made to use "sequence" attribute when there is an insufficient number of primitive events in the rule conditions.

Action: Remove the sequence specification.

ORA-41655: rule condition construct not supported: *string*

Cause: An attempt was made to use a rule condition construct that is not supported in the current release.

Action: Modify the rule condition.

ORA-41656: insufficient number of child elements in "string" element.

Cause: An attempt was made to use fewer than two elements within an "and" or "notany" element.

Action: Specify at least two elements within the parent element.

ORA-41657: rule class internal objects cannot be dropped

Cause: An attempt was made to drop an internal object that is required for a rule class.

Action: Drop the rule class associated with this object.

ORA-41658: invalid value for the "count" attribute in the "any" element

Cause: An invalid value is assigned to the count attribute in the rule condition. The values should be a positive integer that is smaller than the number of object elements within the "any" element.

Action: Correct the input and try again.

ORA-41659: invalid primitive event "string" for the rule class

Cause: An attempt was made to use an invalid primitive event in a rule condition.

Action: Correct the input and try again.

ORA-41660: ordering property for the rule class is too long

Cause: An attempt was made to configure the rule class with an ordering property that is longer than 240 characters.

Action: Correct the input and try again.

ORA-41661: the system generated rule class package has errors

Cause: An attempt was made to use a rule class configuration that was not supported.

Action: File a bug.

ORA-41662: number of primitive events in the composite event exceeds maximum limit

Cause: An attempt was made to create a composite event structure with more than 32 primitive events.

Action: Use a composite event that consists of fewer primitive events.

ORA-41663: invalid use of "equal" or "sequence" attribute with a single event

Cause: An attempt was made to use "equal" or "sequence" attribute when the "count" attribute in a rule condition with "any" semantics is set to 1.

Action: Remove the "equal" and "sequence" specifications.

ORA-41664: invalid consumption policy for the primitive event

Cause: An attempt was made to use EXCLUSIVE consumption policy for a primitive event when the composite event is configured for RULE consumption policy.

Action: Correct the rule class properties and try again.

ORA-41665: conflicting values for duration, consumption, and autocommit policies

Cause: An attempt was made to use an EXCLUSIVE consumption policy with no autocommit and a duration other than TRANSACTION or SESSION.

Action: Modify the rule class properties and try again. Autocommit should be set to YES when the consumption policy is EXCLUSIVE.

ORA-41666: XML schema validation failed when validating against string

Cause: The user input has undefined element or attribute according to the provided XML schema definition.

Action: Correct the user inputs and try again.

ORA-41667: rule class results view name already used for an existing object

Cause: An attempt was made to use a duplicate name for the rule class results view.

Action: Use a different name for the rule class results view.

ORA-41668: invalid operation for the rule class

Cause: An attempt was made to use an invalid operation for the rule class.

Action: No action necessary. This is an informational message only.

ORA-41669: invalid list of primitive event identifiers

Cause: An attempt was made to pass an empty list of primitive event identifiers to the CONSUME_PRIM_EVENTS API.

Action: Correct the input and try again.

ORA-41670: duplicate or invalid event name in equal specification

Cause: An attempt was made to specify a duplicate or invalid primitive event for the rule class's equal property.

Action: Correct the input and try again.

ORA-41671: duplicate table names in the event structure with table aliases

Cause: The table used for an event structure has the same name as another table or a primitive event type in the event structure.

Action: Use an event structure with distinct table names for table aliases.

ORA-41672: invalid rowid passed in for "string" table

Cause: An attempt was made to pass a NULL or invalid rowid for a table in the event structure.

Action: Correct the input and try again.

ORA-41673: sequence attribute not allowed in rule conditions using table aliases

Cause: An attempt was made to use sequence attribute in a rule condition that is defined using table aliases. Sequence usage is not permitted for the lack of timestamp attribute.

Action: Correct the input and try again.

ORA-41674: dmlevents policy allowed only for event structures with table aliases

Cause: An attempt was made to use the dmlevents policy for an event structure with no table alias constructs.

Action: Correct the rule class properties and try again.

ORA-41675: schema for data tables does not match that of the rule class

Cause: An attempt was made to use the dmlevents policy for a rule class that refers to table residing in different schema. To use the dmlevents policy, the table associated with table aliases in the event structure and the rule class should exist in the same schema.

Action: Remove dmlevents specification from rule class properties.

ORA-41676: invalid use of dmlevents policy for primitive event

Cause: An attempt was made to use the dmlevents policy for a primitive event defined with more than one table alias attribute.

Action: Remove the dmlevents specification from the rule class properties.

ORA-41677: DML event trigger creation failed with *string*

Cause: Triggers could not be created on the data table to track DML events.

Action: Remove the dmlevents specification from the rule class properties.

ORA-41678: conflicting values for the autocommit and dmlevents policies

Cause: An attempt was made to use dmlevents policy in combination with autocommit set to YES. This combination is not allowed.

Action: Set autocommit to NO and try again.

ORA-41679: dmlevents specification only allowed with table alias attributes

Cause: An attempt was made to use the dmlevents policy for an event structure not containing any table alias attributes.

Action: Remove the dmlevents specification from the rule class properties.

ORA-41680: Rules Manager background process *string* does not exist

Cause: An attempt was made to use a Scheduler process that does not exist.

Action: Execute EXFSYS.RLM\$CREATE_SCHEDULER_JOBS procedure as a privileged user.

ORA-41681: clean up of expired events failed

Cause: The background process that cleans up the expired events failed for a rule class.

Action: Invoke EXFSYS.DBMS_RLMGR_UTL.CLEANUP_EVENTS API for the exact nature of the problem.

ORA-41682: invalid rule class package

Cause: An attempt was made to use a rule class package with invalid signature or permissions.

Action: Drop the rule class and recreate it.

ORA-41683: unable to lock a rule in the rule class

Cause: A rule matching the current event is locked by another session.

Action: Reissue the command after committing the other sessions.

ORA-41684: invalid value for the RLM\$ENABLED column

Cause: An attempt was made to insert or update a value other than 'Y' or 'N' into the RLM\$ENABLED column of a rule class table.

Action: Retry the DML statement with a value of 'Y' or 'N' for the RLM\$ENABLED column.

ORA-41685: invalid window specification for the collection element

Cause: An invalid attribute value was specified for the "windowlen" or the "windowsize" attribute. The value specified for the "windowlen" attribute should be a number indicating the number of days or a fraction of a day. The value specified for the "windowsize" attribute should be an integer which indicates number of items in the collection. The maximum value allowed for the window specification is 64000.

Action: Correct the input and try again.

ORA-41686: use of "collection" invalid for the primitive event

Cause: An attempt was made to define a rule condition with "collection" element when the corresponding event was not configured for collections of events.

Action: Correct the rule condition and try again.

ORA-41687: attribute "*string*" not allowed in the "groupby" specification

Cause: The attributes listed in the "groupby" specification in a rule condition were not a subset of the attributes specified in the rule class properties.

Action: Correct the "groupby" specification for the rule condition and try again.

ORA-41688: invalid value for the "groupby" attribute

Cause: An invalid value was specified for the "groupby" attribute.

Action: Correct the input and try again.

ORA-41689: invalid collection specification in the rule condition

Cause: An attempt was made to insert a rule condition with invalid collection element specification.

Action: Correct the input and try again.

ORA-41690: maximum number of grouping expressions for a rule class exceeded

Cause: An attempt was made to specify more than 32 expressions for the "groupby" clause in rule class properties.

Action: Use fewer than 32 expressions for the "groupby" clause.

ORA-41691: invalid aggregate specification: *string*

Cause: The aggregate operation specified in the rule condition was invalid.

Action: Correct the input and try again.

ORA-41692: unsupported aggregate operator in the having/compute clause: *string*

Cause: An attempt was made to use an unsupported aggregate operator in the having or the compute clause in the rule condition.

Action: Correct the input and try again.

ORA-41693: invalid attribute or data type for an aggregate operator: *string*

Cause: An attempt was made to apply an aggregate operator on an invalid attribute or an attribute with invalid or unsupported data type in the aggregate operator. Only NUMBER and DATE attributes are allowed in the aggregate operators.

Action: Correct the input and try again.

ORA-41694: invalid equal specification around: *string*

Cause: An attempt was made to specify an invalid equal clause for a rule condition or the rule class properties.

Action: Correct the input and try again.

ORA-41695: equal specification should have a minimum of two elements

Cause: An attempt was made to specify fewer than two elements in the equal clause for a rule condition or the rule class properties.

Action: Correct the input and try again.

ORA-41696: invalid operator in the having clause: *string*

Cause: An attempt was made to use an invalid relational operator in the having clause of the rule condition.

Action: Correct the input and try again.

ORA-41697: attribute prefix missing in aggregate specification: *string*

Cause: An attempt was made to specify an aggregate predicate across multiple primitive event types with no attribute prefix.

Action: Correct the input and try again.

ORA-41698: invalid use of "*string*" attribute in aggregate predicate

Cause: An attempt was made to use an attribute where a literal is expected in the aggregate predicate in the rule condition.

Action: Correct the input and try again.

ORA-41699: maximum number of aggregate operations per rule condition exceeded

Cause: An attempt was made to specify more than 5 aggregate operations in a rule condition.

Action: Correct the input and try again.

ORA-41700: a conditions table already exists for the event structure

Cause: A table storing the primitive rule conditions was already assigned to the event structure.

Action: No action necessary. This is an informational message only.

ORA-41701: conditions table with a rule class association cannot be truncated or dropped

Cause: An attempt was made to truncate or drop a conditions table when one or more rule classes are associated to it through the event structure.

Action: Drop the rule class before truncating or dropping the conditions table.

ORA-41702: invalid conditions table

Cause: An attempt was made to use an invalid conditions table.

Action: Correct the input and try again.

ORA-41703: invalid child node in "object" element with "ref" attribute

Cause: An attempt was made to use both a condition and a "ref" attribute in the "object" element.

Action: Remove the "ref" attribute.

ORA-41704: invalid condition reference: "string"

Cause: An attempt was made to use a reference to a nonexistent conditions table or a condition.

Action: Ensure that the conditions table exists for the primitive event and the value specified for the "ref" attribute of the "object" element is valid.

ORA-41705: conditions table cannot be dropped with DROP TABLE command

Cause: An attempt was made to drop a conditions table with a DROP TABLE command.

Action: Use DBMS_RLMGR.DROP_CONDITIONS_TABLE instead.

ORA-41706: a condition referenced in rule conditions may not be deleted

Cause: An attempt was made to delete a condition when one or more rule conditions refer to it.

Action: Delete the rules before deleting the conditions.

ORA-41707: unsupported construct with collection events: "string"

Cause: An attempt was made to define a collection rule condition with unsupported constructs.

Action: Correct the input and try again.

ORA-41708: the identifier for the shared condition may not be modified

Cause: An attempt was made to update the identifier of a row stored in the conditions table.

Action: Insert a row with the new identifier instead.

ORA-41710: invalid use of aggregate operator for a noncollection event

Cause: An attempt was made to specify an aggregate operator on an event that is not identified as collection.

Action: Correct the input and try again.

ORA-41711: invalid attribute in the rule condition's having clause

Cause: An invalid attribute is used in the specification for the having clause of the rule condition.

Action: Correct the input and try again.

ORA-41712: missing groupby specification for the collection "string"

Cause: An attempt was made to use a collection element with no groupby specification in the rule condition.

Action: Correct the input and try again.

ORA-41713: invalid use of "windowlen" and "windowsize" attributes

Cause: An attempt was made to use the windowlen and windowsize attributes within the same collection element.

Action: Correct the input and try again.

ORA-41714: invalid use of window specification with SESSION/TRANSACTION duration

Cause: An attempt was made to use the `windowlen` or `windowsize` attributes when the events are configured for `SESSION` or `TRANSACTION` duration.

Action: Remove the window specification and try again.

ORA-41721: invalid use of DMLEVENTS and CNFEVENTS in rule class properties

Cause: An attempt was made to specify both the `DMLEVENTS` and `CNFEVENTS` for the same rule class.

Action: Remove either the `DMLEVENTS` or the `CNFEVENTS` specification.

ORA-41722: insufficient privileges for database change notification

Cause: An attempt was made to use `CNFEVENTS` property with insufficient privileges.

Action: Grant `CHANGE NOTIFICATION` privilege and `EXECUTE` privilege on `DBMS_CHANGE_NOTIFICATION` to the user and try again.

ORA-41800: too many notifications with the notification ID "string"

Cause: Multiple pluggable databases (PDBs) shared the same notification ID.

Action: Set a secondary ID attribute in `NOTIFICATIONID` for the procedure.

ORA-41801: invalid PDB "string" for procedure string

Cause: The specified pluggable database (PDB) name was not found in the multitenant container database (CDB).

Action: Set the correct PDB name for the procedure.

ORA-41802: invalid JSON format for NOTIFICATION

Cause: An incorrect JavaScript Object Notation (JSON) string was set as the `NOTIFICATION` parameter.

Action: Check and correct the JSON format.

ORA-41803: value of NOTIFICATION parameter string is empty

Cause: The value of the required non-null parameter was empty.

Action: Check the value of the specified parameter to guarantee not `NULL`.

ORA-41804: NOTIFICATION parameter string not set

Cause: The specified parameter was not set.

Action: Set the required parameter with a non-null value.

ORA-41805: NOTIFICATION or NOTIFICATIONID is NULL

Cause: The specified parameter was not set.

Action: Set the required `NOTIFICATION` or `NOTIFICATIONID` for `DBMS_NOTIFICATIONS`.

ORA-41806: exceeded the maximum number of secondary ID parameters for NOTIFICATIONID

Cause: Too many specified secondary ID parameters were set.

Action: Reset the NOTIFICATIONID parameter and set fewer secondary ID parameters.

ORA-41807: primary ID or secondary ID parameter not set for NOTIFICATIONID

Cause: A primary or secondary ID parameter was not set.

Action: Set a valid primary or secondary ID based on DB_NOTIFICATIONS view.

ORA-41808: insufficient privileges for the DBMS_NOTIFICATIONS action

Cause: The user did not have sufficient privileges to execute the procedure.

Action: Grant the DBA privilege or NOTIFICATIONS_ADMIN privilege and try again.

ORA-41931: underlying object *number* does not exist

Cause: The underlying graph object defined in the graph does not exist.

Action: Execute create or replace on the graph.

ORA-42000: invalid online redefinition column mapping for table "*string*". "*string*"

Cause: An attempt was made to change the logical structure of a materialized view log, queue table, or a partition by specifying a non-NULL column mapping during online redefinition.

Action: Pass a NULL column mapping parameter.

ORA-42002: partition "*string*" of table "*string*". "*string*" not being redefined

Cause: An attempt was made to redefine a partition which is not involved in this redefinition.

Action: Pass a valid partition name.

ORA-42003: partition must be specified for this redefinition

Cause: A partition was involved in this redefinition but was not specified.

Action: Specify the partition involved in this redefinition.

ORA-42004: redefinition not instantiated

Cause: An attempt was made to complete an instantiation-deferred redefinition without invoking dbms_redefinition.sync_interim_table.

Action: Invoke dbms_redefinition.sync_interim_table to instantiate this redefinition.

ORA-42005: invalid type of redefinition method

Cause: An unknown redefinition method was used.

Action: Use one of the supported redefinition methods: o dbms_redefinition.cons_use_pk o dbms_redefinition.cons_use_rowid

ORA-42006: dependent object registration not supported during a partition redefinition

Cause: An attempt was made to register dependent objects when redefining a partition.

Action: Do not invoke dbms_redefinition.register_dependent_object during a partition redefinition.

ORA-42007: dependent object unregistration not supported during a partition redefinition

Cause: An attempt was made to unregister dependent objects when redefining a partition.

Action: Do not invoke `dbms_redefinition.unregister_dependent_object` during a partition redefinition.

ORA-42008: error occurred while instantiating the redefinition

Cause: An error occurred while instantiating the online redefinition which requires aborting the redefinition.

Action: Correct the error, abort, and restart the online redefinition.

ORA-42009: error occurred while synchronizing the redefinition

Cause: An error occurred while synchronizing the online redefinition.

Action: Correct the error and continue the online redefinition.

ORA-42010: error occurred while synchronizing the redefinition

Cause: An error occurred while synchronizing the online redefinition which requires aborting the redefinition.

Action: Correct the error, abort, and restart the online redefinition.

ORA-42011: error occurred while completing the redefinition

Cause: An error occurred while completing the online redefinition.

Action: Correct the error and continue the online redefinition.

ORA-42012: error occurred while completing the redefinition

Cause: An error occurred while completing the online redefinition which requires aborting the redefinition.

Action: Correct the error, abort, and restart the online redefinition.

ORA-42013: interim table of an AQ IOT table should be an IOT table

Cause: An attempt was made to create a table that is not an index-organized table (IOT) as the interim table of an AQ IOT table (history, time management, or dequeue).

Action: Ensure that the interim table is created as an IOT table.

ORA-42014: online redefinition unable to lock AQ objects

Cause: An online redefinition of an AQ table was unable to lock all related AQ objects.

Action: Abort and retry the redefinition.

ORA-42015: online redefinition unable to log changes made to AQ tables

Cause: An online redefinition of an AQ table was unable to log changes made to AQ tables during the redefinition.

Action: Abort and retry the redefinition.

ORA-42016: shape of interim table does not match specified column mapping

Cause: The number of columns, or the type or the length semantics of a column, in the interim table did not match the specified column mapping.

Action: Ensure that the interim table matches the column mapping by either modifying the column mapping string or altering the interim table's column definition(s).

ORA-42017: interim table of an AQ table should not be an AQ table

Cause: An attempt was made to create an AQ table as an interim table of an online redefined AQ table.

Action: Ensure that the interim table is not created as an AQ table.

ORA-42018: partition cannot be redefined online because of index organization incompatibility

Cause: interim table is incompatible with partition being redefined because one or more of the following apply: - one is index-organized and the other is not - one has IOT overflow segment and the other does not - one has IOT mapping table and the other does not

Action: Ensure that the interim table is compatible with the partition being redefined.

ORA-42019: partition cannot be redefined online because of incompatible partitioning of interim table

Cause: both original and interim tables are partitioned, or original table is composite-partitioned but interim table is non-partitioned.

Action: Ensure that the interim table has compatible partitioning with the original table. For example, if the original table is partitioned, the interim table should be non-partitioned. If the original table is composite-partitioned, the interim table should be partitioned.

ORA-42020: partition cannot be redefined online because of unsupported type of interim table

Cause: An unsupported type of interim table was provided during the partition redefinition. Currently the following types of interim tables are not supported: - a nested table or has nested-table columns - an external table - part of cluster - contains LOB shared segments

Action: Do not use unsupported types of interim tables.

ORA-42021: partition cannot be redefined online because of incompatible row dependencies

Cause: original/interim table was created with row dependency and interim/original table was not.

Action: Ensure that both tables are created with same row dependency properties.

ORA-42022: partition cannot be redefined online because of presence of nested columns

Cause: An attempt was made to online redefine a partition with nested table columns.

Action: Do not attempt to online redefine a partition with nested table columns.

ORA-42023: compatibility of AQ table must be release 8.1.x or later

Cause: An attempt was made to perform online redefinition on an AQ table that was created with compatibility prior to release 8.1.x.

Action: Ensure that the AQ table is created with the COMPATIBLE parameter set to release 8.1.x or later before attempting online redefinition.

ORA-42024: interim table of an AQ table can not be a partitioned table

Cause: An attempt was made to use a partitioned table as an interim table.

Action: Ensure that the interim table is not a partitioned table.

ORA-42025: redefinition of CONS_USE_ROWID method cannot be used to redefine an AQ IOT table

Cause: An attempt was made to use method of DBMS_REDEFINITION.CONΣ_USE_ROWID to redefine an AQ IOT table.

Action: Ensure that method of DBMS_REDEFINITION.CONΣ_USE_PK is used to redefine an AQ IOT table.

ORA-42026: duplicated rows detected while instantiating the redefinition

Cause: Duplicated rows are detected during instantiation of the redefinition.

Action: Abort the redefinition, turn off the optimistic ascending SCN optimization, and restart the redefinition.

ORA-42027: cannot redefine an object online that is not a table

Cause: An attempt was made to redefine an object online that is not a table.

Action: Ensure that the object being redefined online is a table.

ORA-42028: materialized view log "*string*"."*string*" does not exist

Cause: An attempt was made to register a nonexistent materialized view log as a dependent object.

Action: Invoke DBMS_REDEFINITION.REGISTER_DEPENDENT_OBJECT on a valid materialized view log.

ORA-42029: cannot online redefine table "*string*"."*string*" at this time

Cause: An attempt was made to redefine a table which is incompatible with another ongoing redefinition.

Action: Do not perform the redefinition operation on this table or wait until the incompatible ongoing redefinition has completed.

ORA-42030: cannot online redefine table "*string*"."*string*" with commit SCN-based MV log

Cause: An attempt was made to redefine a table which had a commit SCN-based materialized view log defined on it.

Action: Do not attempt to online redefine a table that has a commit SCN-based materialized view log defined on it.

ORA-42031: interim table cannot have a commit SCN-based MV log defined on it

Cause: An attempt was made to use an interim table which had a commit SCN-based materialized view log defined on it.

Action: Ensure that the interim table does not have a commit SCN-based materialized view log defined on it.

ORA-42032: cannot online redefine table "*string*"."*string*" with Flashback Data Archive enabled

Cause: An attempt was made to redefine a table which had Flashback Data Archive enabled.

Action: Do not attempt to online redefine a table that has Flashback Data Archive enabled.

ORA-42033: interim table "*string*"."*string*" cannot have Flashback Data Archive enabled

Cause: An attempt was made to redefine a table with an interim table which had Flashback Data Archive enabled.

Action: Do not attempt to online redefine a table with an interim table which has Flashback Data Archive enabled.

ORA-42034: cannot online redefine table "*string*"."*string*" which is a CDC table

Cause: An attempt was made to redefine a table which is a CDC table.

Action: Do not attempt to online redefine a table that is a CDC table.

ORA-42035: cannot online redefine IOT table "*string*"."*string*" with CONS_USE_ROWID

Cause: An attempt was made to redefine an IOT table with CONS_USE_ROWID.

Action: Do not attempt to online redefine an IOT table with CONS_USE_ROWID.

ORA-42036: cannot online redefine temporary table "*string*"."*string*"

Cause: An attempt was made to redefine a temporary table.

Action: Do not attempt to online redefine a temporary table.

ORA-42037: cannot online redefine table "*string*"."*string*" with IOT overflow segment

Cause: An attempt was made to redefine a table with IOT overflow segment.

Action: Do not attempt to online redefine a table with IOT overflow segment.

ORA-42038: cannot online redefine table "*string*"."*string*" with a CDC log defined on it

Cause: An attempt was made to redefine a table with a CDC log defined on it.

Action: Do not attempt to online redefine a table with a CDC log defined on it.

ORA-42039: cannot online redefine table "*string*"."*string*" with FGA enabled

Cause: An attempt was made to redefine a table with Fine Grained Auditing (FGA) or Row Level Security (RLS) enabled.

Action: Do not attempt to online redefine a table with Fine Grained Auditing (FGA) or Row Level Security (RLS) enabled.

ORA-42040: cannot online redefine table "*string*"."*string*" with column of binary XML type

Cause: An attempt was made to redefine a table with a column of binary XML type.

Action: Do not attempt to online redefine a table with a column of binary XML type.

ORA-42041: cannot online redefine table "*string*"."*string*" with nested table columns

Cause: An attempt was made to redefine a table with nested table columns.

Action: Do not attempt to online redefine a table with nested table columns.

ORA-42042: time out in acquiring DML lock during online redefinition

Cause: During FINISH_REDEF_TABLE procedure, the elapsed time waiting to acquire a table or partition DML lock on the original table exceeds the timeout the user specified.

Action: Rerun FINISH_REDEF_TABLE procedure to continue the process.

ORA-42043: CONS_VPD_AUTO is only applicable to null column mapping

Cause: An attempt was made to specify CONS_VPD_AUTO for non-null column mapping other than null column mapping. CONS_VPD_AUTO can only be specified for null column mapping.

Action: Set the COPY_VPD_OPT value to CONS_VPD_MANUAL.

ORA-42044: cannot redefine table with non-null VPD policy predicate against the table owner or redefinition invoker

Cause: Virtual Private Database (VPD) policies with non-null predicate against the table owner or redefinition invoker existed on the original table.

Action: Drop the VPD policies with non-null predicate against the table owner or redefinition invoker. Restart online redefinition.

ORA-42045: COPY_VPD_OPT cannot be set to CONS_VPD_NONE with VPD policies on table "string"."string".

Cause: An attempt was made to set the COPY_VPD_OPT value to CONS_VPD_NONE. COPY_VPD_OPT cannot be set to CONS_VPD_NONE with Virtual Private Database (VPD) policies on the original table.

Action: Set COPY_VPD_OPT to CONS_VPD_AUTO or CONS_VPD_MANUAL.

ORA-42046: COPY_VPD_OPT cannot be set to string with VPD policies on interim table "string"."string".

Cause: An attempt was made to set the COPY_VPD_OPT value to either CONS_VPD_NONE or CONS_VPD_AUTO. Cannot set the COPY_VPD_OPT value to CONS_VPD_NONE or CONS_VPD_AUTO with Virtual Private Database (VPD) policies on the interim table.

Action: Set the COPY_VPD_OPT value to CONS_VPD_MANUAL.

ORA-42047: The specified value for COPY_VPD_OPT is invalid.

Cause: An unknown COPY_VPD_OPT value was used.

Action: Use one of the supported COPY_VPD_OPT values: o
 DBMS_REDEFINITION.CONST_VPD_NONE o
 DBMS_REDEFINITION.CONST_VPD_AUTO o
 DBMS_REDEFINITION.CONST_VPD_MANUAL

ORA-42048: Automatic copying of VPD policies with application context is not supported in online redefinition.

Cause: An attempt was made to set the COPY_VPD_OPT value to CONS_VPD_AUTO for Virtual Private Database (VPD) policies with application context. Automatic copying of VPD policies with application context is not supported in online redefinition.

Action: Drop VPD policies with application context or set the COPY_VPD_OPT value to CONS_VPD_MANUAL.

ORA-42049: cannot online redefine multiple tables and multiple partitions

Cause: An online redefinition procedure was passed multiple original tables and multiple partitions to redefine.

Action: Do not attempt to online redefine multiple tables at the same time as multiple partitions.

ORA-42050: COPY_VPD_OPT cannot be set to CONS_VPD_MANUAL when redefining a partition.

Cause: An attempt was made to set the COPY_VPD_OPT value to CONS_VPD_MANUAL. COPY_VPD_OPT cannot be set to CONS_VPD_MANUAL when redefining a partition.

Action: Set COPY_VPD_OPT to CONS_VPD_NONE or CONS_VPD_AUTO.

ORA-42051: duplicate partition names in partition name list

Cause: An online redefinition procedure was passed a partition name list containing duplicates.

Action: Ensure that all names in the partition name list are unique.

ORA-42052: interim table cannot have materialized view or zonemap defined on it

Cause: An attempt was made to redefine a table with an interim table on which a materialized view or zonemap was defined.

Action: Remove all materialized views and zonemaps defined on the interim table and retry online redefinition, or do not attempt online redefinition.

ORA-42053: cannot online redefine table "*string*"."*string*" with OLS/XDS enabled

Cause: An attempt was made to redefine a table with Oracle Label Security (OLS) or Extensible Data Security (XDS) enabled.

Action: Do not attempt to online redefine a table with Oracle Label Security (OLS) or Extensible Data Security (XDS) enabled.

ORA-42054: cannot online redefine table "*string*"."*string*" with UXI XML index

Cause: An attempt was made to redefine a table with XML indexes having an Unstructured XMLIndex (UXI) component.

Action: Do not attempt to online redefine a table with XML indexes having an Unstructured XMLIndex (UXI) component.

ORA-42056: interim table cannot be a system-partitioned table

Cause: An attempt was made to redefine a table with an interim table that was a system-partitioned table.

Action: Use an interim table whose partition type is supported.

ORA-42057: cannot use lock free finish redef for current redefinition

Cause: An attempt was made to enable lock free finish redef for current redefinition, but lock free was not feasible.

Action: Refer to the documentation for restrictions.

ORA-42058: unsupported UPDATE statement

Cause: The UPDATE statement passed to DBMS_REDEFINITION.EXECUTE_UPDATE was not supported.

Action: Refer to the documentation for restrictions and supported types.

ORA-42059: cannot update a table with a DML trigger on UPDATE

Cause: An UPDATE statement passed to the DBMS_REDEFINITION.EXECUTE_UPDATE method attempted to update a table with a trigger on UPDATE, which is not supported.

Action: Drop the DML trigger.

ORA-42060: cannot update a table with a nested table column

Cause: An UPDATE statement passed to the DBMS_REDEFINITION.EXECUTE_UPDATE method attempted to update a table with a nested table column, which is not supported.

Action: Refer to the documentation for restrictions.

ORA-42061: cannot update a typed table or a table with an ADT column

Cause: An UPDATE statement passed to the DBMS_REDEFINITION.EXECUTE_UPDATE method attempted to update a typed table or a table with an ADT column, which is not supported.

Action: Refer to the documentation for restrictions.

ORA-42062: cannot update a table with a partition extended name

Cause: An attempt was made to pass an UPDATE statement with a partition extended name to the DBMS_REDEFINITION.EXECUTE_UPDATE method, which is not supported.

Action: Refer to the documentation for restrictions.

ORA-42064: invalid UPDATE statement *string*

Cause: An attempt was made to pass an invalid UPDATE statement to the DBMS_REDEFINITION.EXECUTE_UPDATE method.

Action: Pass a valid UPDATE statement to the DBMS_REDEFINITION.EXECUTE_UPDATE method.

ORA-42065: REDEF_TABLE() does not support redefining AQ table

Cause: An attempt was made to redefine an Advanced Queueing (AQ) table with the REDEF_TABLE() procedure.

Action: Do not attempt to redefine an AQ table using REDEF_TABLE().

ORA-42066: illegal redefinition for a clustered table

Cause: An attempt was made to redefine a clustered table to modify the tablespace or compression type with the REDEF_TABLE() procedure.

Action: Do not attempt to specify a new tablespace or compression type.

ORA-42067: invalid column mapping with invisible columns on original or interim table

Cause: There was an invalid column mapping with invisible columns on the original or interim table.

Action: Invisible columns in the column mapping string must be invisible on both the original and interim table.

ORA-42068: rollback unsupported with COPY_VPD_OPT option

Cause: ENABLE_ROLLBACK and COPY_VPD_OPT were both set to TRUE.

Action: Either unset ENABLE_ROLLBACK or COPY_VPD_OPT.

ORA-42069: rollback unsupported

Cause: Tables in the redefinition are either an object, advanced queue or index-organized table.

Action: Currently ROLLBACK is unsupported on such tables.

ORA-42070: wrong usage of DBMS_REDEFINITION.ROLLBACK

Cause: ENABLE_ROLLBACK was not set to TRUE during START_REDEF_TABLE.

Action: Restart START_REDEF_TABLE with ENABLE_ROLLBACK set to TRUE and then use ROLLBACK.

ORA-42071: rollback unsupported with NO-DML lock option

Cause: ENABLE_ROLLBACK was set to TRUE along with DML_LOCK_TIMEOUT set to -1.

Action: Either unset ENABLE_ROLLBACK or DML_LOCK_TIMEOUT.

ORA-42072: REDEF_TABLE() does not support a table with LONG column.

Cause: An attempt was made to redefine a table that has a LONG column with the REDEF_TABLE() procedure.

Action: Do not attempt to redefine a table with LONG column using REDEF_TABLE().

ORA-42073: cannot online redefine external table or fixed table

Cause: An attempt was made to redefine an external table or a fixed table.

Action: Do not attempt to online redefine an external table or a fixed table.

ORA-42074: Cannot update a table with VPD policy

Cause: An UPDATE statement passed to the DBMS_REDEFINITION.EXECUTE_UPDATE method attempted to update a table with Virtual Private Database (VPD) policy.

Action: Refer to the documentation for restrictions.

ORA-42075: wrong usage of parameter, DISABLE_ROLLBACK in FINISH_REDEF_TABLE

Cause: ENABLE_ROLLBACK was not set to TRUE during START_REDEF_TABLE.

Action: Rerun FINISH_REDEF_TABLE with DISABLE_ROLLBACK set to FALSE.

ORA-42076: DBMS_REDEFINITION does not support a table on single table hash clusters.

Cause: An attempt was made to use DBMS_REDEFINITION on a table on single table hash clusters.

Action: Do not attempt to use DBMS_REDEFINITION to operate on a table that is on single table hash clusters.

ORA-42077: unsupported column type found in VPD protected object

Cause: An attempt was made with Oracle Virtual Private Database (VPD) policy to enforce column security on a column with unsupported operator type.

Action: Refer to the documentation for restrictions.

ORA-42078: DBMS_REDEFINITION does not support a clustered table without cluster index or with virtual cluster index

Cause: An attempt was made to use the DBMS_REDEFINITION package on a clustered table without a cluster index or with a virtual cluster index.

Action: Create a regular cluster index and rerun the DBMS_REDEFINITION procedure.

ORA-42079: wrong usage of DBMS_REDEFINITION.FINISH_REDEF_TABLE

Cause: Rollback was initiated as part of the previous call to FINISH_REDEF_TABLE.

Action: Use ROLLBACK or ABORT_ROLLBACK to end redefinition.

ORA-42080: wrong usage of DBMS_REDEFINITION.ABORT_ROLLBACK

Cause: ABORT_ROLLBACK was called without starting the rollback operation.

Action: Use ABORT_REDEF_TABLE instead of ABORT_ROLLBACK.

ORA-42081: wrong usage of DBMS_REDEFINITION.ABORT_REDEF_TABLE

Cause: ABORT_REDEF_TABLE was called when ROLLBACK was active.

Action: Use ABORT_ROLLBACK instead of ABORT_REDEF_TABLE.

ORA-42082: cannot update a table with a hidden column

Cause: An UPDATE statement passed to the DBMS_REDEFINITION.EXECUTE_UPDATE method attempted to update a table with a hidden column, which is not supported.

Action: Refer to the documentation for restrictions.

ORA-42083: cannot online redefine table "*string*". "*string*" with staging log

Cause: An attempt was made to redefine a table that had a staging log.

Action: Do not attempt to online redefine a table that has a staging log.

ORA-42084: cannot online redefine table that has inconsistent sharing with interim table

Cause: An attempt was made to redefine a table that had inconsistent sharing with an interim table.

Action: Do not attempt to online redefine a table that has inconsistent sharing with an interim table, ensure that there is consistent sharing.

ORA-42086: cannot enable ROLLBACK on a table with row movement enabled

Cause: An attempt was made to enable ROLLBACK on a table with row movement enabled in the redefinition.

Action: Currently, ROLLBACK is unsupported on such tables.

ORA-42087: cannot enable ROLLBACK on a nested table

Cause: An attempt was made to enable ROLLBACK on a nested table.

Action: Currently, ROLLBACK is unsupported on such tables.

ORA-42088: cannot enable ROLLBACK on a clustered table

Cause: An attempt was made to enable ROLLBACK on a clustered table.

Action: Currently, ROLLBACK is unsupported on such tables.

ORA-42089: ROLLBACK unsupported with specified column mapping string

Cause: The specified column mapping string included an identity column.

Action: ROLLBACK is unsupported with column mapping string.

ORA-42090: cannot use EXECUTE_UPDATE when the statement contains ROWID

Cause: An attempt was made to use EXECUTE_UPDATE when the update statement contained ROWID.

Action: Execute the update statement directly.

ORA-42091: shape of interim table does not match original table

Cause: An attempt was made to online redef a table when either the original table or the interim table did not have ROW ARCHIVAL.

Action: Remove ROW ARCHIVAL from the tables or add it to both tables.

ORA-42092: cannot add, remove or modify columns of Automatic CDR enabled table "*string*". "*string*" with online redefinition

Cause: Cannot add, remove, or modify columns with Automatic Conflict Detection and Resolution (ACDR) enabled using online redefinition.

Action: Do not attempt to add, remove, or modify a column on a table with Automatic Conflict Detection and Resolution (ACDR) enabled using online redefinition. Use ALTER TABLE instead.

ORA-42093: cannot online redefine table "*string*". "*string*" which is a delete tombstone table

Cause: An attempt was made to redefine a delete tombstone table.

Action: Do not attempt to online redefine a delete tombstone table.

ORA-42094: interim table of an AQ table can not have deferred segment

Cause: An attempt was made to use a deferred segment table as an interim table.

Action: Ensure that the interim table is not a deferred segment table.

ORA-42095: REDEF_TABLE() does not support a table in the join of a bitmap index

Cause: An attempt was made to redefine a table that was in the join of a bitmap index with the REDEF_TABLE() procedure.

Action: Do not attempt to redefine a table in the join of a bitmap index using REDEF_TABLE().

ORA-42287: cannot rename user on whose type a table depends

Cause: An attempt was made to rename a user whose schema contained a type on which some table depends. The operation may not proceed as it would render the table invalid causing loss of data.

Action: Drop table(s) dependent on types belonging to the schema of the user being renamed.

ORA-42288: may not create a schema synonym for the specified schema

Cause: An attempt was made to create a schema synonym for one of the reserved schemas (such as SYS or SYSTEM.)

Action: Schema synonyms for this schema may not be created.

ORA-42289: may not rename specified user

Cause: An attempt was made to rename one of the following: - reserved user (such as SYS or SYSTEM) - an administrative user - a common user - a locked user account

Action: This user may not be renamed.

ORA-42290: specified schema does not exist

Cause: An attempt was made to create a schema synonym for a schema which did not exist.

Action: Correct the input and try again.

ORA-42291: schema synonym '*string*' does not exist

Cause: The named schema synonym did not exist.

Action: Verify you are using the correct schema synonym name.

ORA-42292: RENAME TO already specified

Cause: The RENAME TO clause was specified twice.

Action: Use only one RENAME TO clause.

ORA-42293: user name conflicts with another user, role or schema synonym name

Cause: There was already a user, role or schema synonym with that name.

Action: Specify a different user name.

ORA-42294: role name conflicts with another user, role or schema synonym name

Cause: There was already a user, role or schema synonym with that name.

Action: Specify a different role name.

ORA-42295: schema synonym name conflicts with another user, role or schema synonym name

Cause: There was already a user, role or schema synonym with that name.

Action: Specify a different schema synonym name or use CREATE OR REPLACE SCHEMA SYNONYM.

ORA-42296: user, role or schema synonym '*string*' does not exist

Cause: There was no user, role, or schema synonym by that name.

Action: Respecify the name.

ORA-42297: cannot drop a schema synonym for a schema of a user who is currently connected

Cause: An attempt was made to drop a schema synonym for a schema of a user who was logged on.

Action: Make sure user is logged off, then repeat command.

ORA-42298: cannot rename a user that is currently connected

Cause: An attempt was made to rename a user that was logged on.

Action: Make sure user is logged off, then repeat command.

ORA-42299: internal error occurred while dropping user

Cause: An internal error occurred while trying to drop a user.

Action: Contact the database administrator.

ORA-42300: an Editioning view is already defined on this table

Cause: An attempt was made to create an Editioning view on a table on which another Editioning view is already defined in the same Edition. This violates a restriction that at most one Editioning view may be associated with any base table in a given Edition.

Action: Create the new view as a regular view or, if the view being created is really intended to be an Editioning view associated with this table, drop the existing Editioning view before creating the new one.

ORA-42301: definition of an Editioning view may not refer to a synonym

Cause: An attempt was made to create an Editioning view referring to a synonym, which is not supported.

Action: Do not create an Editioning view if you want the view to refer to a synonym.

ORA-42302: definition of an Editioning view may not refer to remote tables

Cause: An attempt was made to create an Editioning view referring to remote tables, which is not supported.

Action: Do not create an Editioning view if you want the view to refer to a remote table.

ORA-42303: duplicate column reference in a definition of an Editioning view

Cause: An attempt was made create an Editioning view referencing the same column of a base table more than once, which is not supported.

Action: Do not create an Editioning view if you have multiple columns referring to the same column of the base table.

ORA-42304: base table and the Editioning view must belong to the same schema

Cause: An attempt was made to create an Editioning view in a schema different from that of the base table.

Action: Create an Editioning view in the same schema as the base table.

ORA-42305: only an Editioning view may replace an Editioning view

Cause: An attempt was made to replace an Editioning view with a view which is not an Editioning view or vice versa.

Action: Ensure that either both or neither of the views involved are Editioning views.

ORA-42306: a CrossEdition trigger may not be created on an Editioning view

Cause: An attempt was made to create a CrossEdition trigger on an Editioning view, which is not supported.

Action: Instead of creating a CrossEdition trigger on an Editioning view, create it on the Editioning view's underlying table.

ORA-42307: columns of an Editioning view may only refer to base table columns

Cause: An attempt was made to define an Editioning view containing a column referring to an entity other than a base table column (for example, a PL/SQL function without a parameter), which is not supported.

Action: Ensure that every column of an Editioning view refers to a column of a base table.

ORA-42308: view *string.string* is already in read-only mode

Cause: An attempt was made to set a read-only table in read-only mode.

Action: This DDL can only be executed on a read/write view.

ORA-42309: view *string.string* is already in read/write mode

Cause: An attempt was made to set a read/write view in read/write mode.

Action: This DDL can only be executed on a read-only view.

ORA-42310: Implementation restriction: this operation is only permitted on Editioning views

Cause: The view being altered was not an Editioning view. In this release, an ALTER VIEW READ ONLY, or ALTER VIEW READ WRITE operation is only permitted on Editioning views.

Action: Ensure that the view is an Editioning view.

ORA-42311: This operation is not permitted on Editioning views with compilation errors

Cause: ALTER VIEW READ ONLY and ALTER VIEW READ WRITE are not permitted on Editioning views which have compilation errors.

Action: Resolve the compilation errors.

ORA-42313: This operation is not supported on Editioning views marked invalid

Cause: ALTER VIEW READ ONLY and ALTER VIEW READ WRITE are not permitted on Editioning views which are marked invalid.

Action: Recompile the Editioning view to ensure that it is valid.

ORA-42314: editioning view cannot be owned by a non-editioned user

Cause: An attempt was made to create an editioning view in a schema where views were not editionable.

Action: Enable editions for the user for views and then create the editioning view.

ORA-42399: cannot perform a DML operation on a read-only view

Cause: An attempt was made to insert, delete, or update row(s) of a view created with read-only option. DML operations on such views are explicitly prohibited.

Action: Perform the desired DML operation on the view's underlying base table or issue ALTER VIEW ... READ WRITE command to make the view updatable.

ORA-42400: invalid object type for vertex or edge table definition

Cause: Vertex or edge tables were not defined from tables or materialized views.

Action: Use a schema object of the correct type to define an edge or vertex table of a property graph.

ORA-42401: invalid table for vertex or edge table definition

Cause: An object table, an XML table, or a dblink was used to define a vertex or edge table of a property graph.

Action: Use tables that are not an object, XML table, or dblink to any tables to define an edge or vertex table of a property graph.

ORA-42402: cannot infer key for graph element table *string*

Cause: Either a primary key or a unique and non-null key constraint was missed.

Action: Create a primary key or unique and non-null key constraint, or explicitly list the primary key columns using the KEY clause.

ORA-42403: ambiguous key for graph element table *string*

Cause: More than one unique and not null key constraints existed.

Action: Explicitly list key column names.

ORA-42404: graph element table name *string* already defined

Cause: Graph element table name was already defined in the graph.

Action: Specify a different graph element table name using the AS clause in the vertex table or edge table definition.

ORA-42405: Referenced vertex table *string* does not exist.

Cause: The vertex table name used in the SOURCE or DESTINATION clause did not exist.

Action: Use an existing vertex table name from the graph.

ORA-42406: columns used to define edge relationship must be NOT NULL in ENFORCED MODE

Cause: ENFORCED MODE was specified but a column used to define the foreign key of the edge table, or a referenced key to a vertex table allowed NULL values.

Action: Use columns that are NOT NULL for defining a foreign key or referenced key, or specify the TRUSTED MODE instead.

ORA-42407: duplicate property name in label *string* : *string*

Cause: The specified property name was already used to define another property in this label.

Action: Use a different property name.

ORA-42408: default label already defined

Cause: A default label was already defined.

Action: Use the LABEL clause to specify a different name.

ORA-42409: label *string* already defined

Cause: A label with this name was already defined differently.

Action: Use a different label name or specify the same property names.

ORA-42410: inconsistent property definition: *string*

Cause: A property name was defined differently for the same graph element table.

Action: Change the definition of properties to be consistent.

ORA-42411: column of data type *string* cannot be graph element table key

Cause: The type of a column was not allowed as key.

Action: Use a column with a data type that is allowed as key only.

ORA-42412: type mismatch between vertex key column *string* and edge key

Cause: The data type of an edge foreign key column and vertex referenced column were incompatible.

Action: Use edge and vertex columns with compatible data types.

ORA-42413: cannot infer edge relationship for edge table *string*

Cause: Zero or more than one foreign key constraints existed between the edge table and its vertex tables.

Action: Create a foreign key constraint, or explicitly specify the foreign and referenced keys between the edge table and the referenced table.

ORA-42414: cannot use mixed type for property *string.string*

Cause: The option DISALLOW MIXED TYPE was set but multiple definitions of the same property exposed column expressions that had different data types.

Action: Use the ALLOW MIXED TYPE option, or wrap the exposed column expression in casts so that all definitions of the property have the same data type.

ORA-42415: missing key column in edge reference definition

Cause: A different number of key columns were defined.

Action: Specify the same number of key columns for edge and vertex tables.

ORA-42416: duplicate column name *string* in key definition

Cause: The specified column name was already used in a key definition.

Action: Remove the duplicate column name from the list of columns in the KEY clause.

ORA-42417: option *string* already set

Cause: The same graph option was set multiple times.

Action: Remove the duplicate setting of the option.

ORA-42418: missing property graph option

Cause: An argument was missing in the OPTIONS clause.

Action: Pass a property graph option as an argument.

ORA-42419: At least one property graph option must be declared.

Cause: The OPTIONS clause required at least one option declaration.

Action: Declare at least one property graph option.

ORA-42420: invalid property graph option

Cause: An argument passed to the OPTIONS clause was not a valid property graph option.

Action: Use a valid property graph option.

ORA-42421: property graph does not exist

Cause: The specified property graph did not exist.

Action: Check the property graph name passed as argument.

ORA-42422: missing definition of properties

Cause: Arguments defining a column expression exposed as properties were missing in the PROPERTIES clause.

Action: Declare at least one column expression exposed as a property.

ORA-42423: invalid property graph label property definition

Cause: The specified property expression for a label property definition was invalid.

Action: Use either a column name or SQL operator to define the property.

ORA-42424: expression based label property definition must use the AS clause

Cause: The AS clause was not used to specify a property name for an expression in vertex or edge table definition.

Action: Use the AS clause to specify a name for the property defined using an expression.

ORA-42425: column expression to define property is too long

Cause: The SQL text of the column expression used to define the property was too long.

Action: Use less SQL text for the column expression to define the property.

ORA-42426: duplicate column name *string* in EXCEPT clause

Cause: The column name was already referenced in an EXCEPT clause.

Action: Remove the duplicate column name from the list of columns in the EXCEPT clause.

ORA-42427: not a property graph

Cause: The specified object was not a property graph.

Action: Use a property graph object.

ORA-42428: no longer a valid graph element table

Cause: The object defining the graph element table was no longer valid.

Action: Revalidate the property graph or alter the property graph to change the invalid graph element table.

ORA-42429: property graph not allowed here

Cause: A property graph was specified incorrectly in a statement.

Action: Ensure that the name is correct or remove it.

ORA-42430: invalid identifier for property graph name or owner

Cause: An invalid identifier was specified as the property graph name or owner.

Action: Provide a valid identifier as the property graph name or owner. A valid property graph or owner identifier must start with a letter, be less than or equal to 128 bytes in length, and contain only alphanumeric characters or the special characters \$, _, and #. It may not be a reserved word.

ORA-42431: ambiguous edge relationship for graph edge table *string*

Cause: More than one foreign key constraint existed between the edge table and a referenced vertex table.

Action: Explicitly declare the edge relationship using the KEY...REFERENCES clause.

ORA-42432: missing ENABLE VALIDATE constraint on graph element table *string* for ENFORCED MODE

Cause: Enforced mode was specified but no primary key or unique key constraint in the enable and validate state was found.

Action: Use the TRUSTED MODE, or define an ENABLE VALIDATE constraint for a primary key or a not null unique key clause.

ORA-42433: object used for vertex or edge table definition is not in a valid state

Cause: The object used to define a vertex or edge table was not in a valid state.

Action: Use a schema object in a valid state to define an edge or vertex table of a property graph.

ORA-42434: columns used to define graph element table key must be NOT NULL in ENFORCED MODE

Cause: Enforced mode was specified but a column used to define the key of a graph element table was nullable.

Action: Use columns that are NOT NULL for defining key columns, or specify the TRUSTED MODE instead.

ORA-42435: invalid SQL data type for property

Cause: An invalid SQL data type was used to define the property.

Action: Define the property using a column expression that has a valid SQL data type.

ORA-42436: Join group does not exist

Cause: The target join group does not exist.

Action: Create the join group in order to alter/drop it.

ORA-42437: remote object cannot be used to define graph element tables

Cause: A remote object was used to define a graph element table.

Action: Change the property graph definition to only use local objects.

ORA-42438: remote property graph cannot be used as a graph argument to DDL commands for creating, altering or dropping property graph

Cause: A remote property graph was used as argument to a DDL statement for creating, altering, or dropping a property graph.

Action: Connect to the remote database to perform the operation locally.

ORA-42800: The specified attribute association ("*string*", "*string*") is already attached to existing shared context-sensitive policies with the specified policy function *string.string*.

Cause: An attempt was made to add an attribute association which was already attached to shared context-sensitive policies with the specified policy function. All shared context-sensitive policies with a common policy function need to have the same set of attribute associations. Attribute associations of an existing shared context-sensitive policy which is using the specified policy function will be automatically added to the new policy.

Action: Retry the operation without specifying the attribute association.

ORA-42801: Value is not set for context attribute ("*string*", "*string*") which is associated with the Row Level Security (RLS) policy "*string*".

Cause: The value was not set for every attribute association of the shared context-sensitive policy. The value must be set for every attribute association of the shared context-sensitive policy.

Action: Set the value for the context attribute and retry the operation.

ORA-42802: Could not read attribute associations from an existing shared context-sensitive policy which is using the specified policy function.

Cause: An existing shared context-sensitive policy using the specified policy function was dropped from another session.

Action: Re-issue the command.

ORA-42803: Cannot use bind variable in VERSIONS clause when the object has a Row-Level Security (RLS) policy defined on it.

Cause: The object being accessed had a Row-Level Security (RLS) policy defined on it and the VERSIONS clause contained a bind variable.

Action: Rewrite the query without the use of bind variable in the VERSIONS clause.

ORA-42804: The operation can disclose rows protected by VPD policy.

Cause: The object being accessed had a Virtual Private Database (VPD) policy defined on it and the DML which is executed could disclose rows protected by the VPD policy.

Action: Define VPD policy with the specific statement type.

ORA-42805: The number of VPD policies on an object exceed the maximum number that is allowed.

Cause: A maximum of 255 Virtual Private Database (VPD) policies that can be enforced on an object was exceeded.

Action: Drop an existing policy before creating a new policy.

ORA-42900: OLS policy creation not allowed in application root.

Cause: Oracle Label Security (OLS) policy creation was attempted in application root.

Action: Switch to an application pluggable database to create an OLS policy.

ORA-42901: Cannot apply OLS policy on common or application objects.

Cause: An attempt was made to enforce Oracle Label Security (OLS) policy on common or application objects.

Action: Apply OLS policy on local objects only.

ORA-42902: cannot use virtual column as OLS policy column

Cause: An attempt was made to use the virtual column as an Oracle Label Security (OLS) policy column.

Action: Use another column or update the user table.

ORA-42903: Cannot assign OLS authorizations to common or application users.

Cause: An attempt was made to assign Oracle Label Security (OLS) authorizations to common or application users.

Action: Assign OLS authorizations to local users only.

ORA-42904: full table access is restricted by Oracle Label Security

Cause: The user did not have permission to bypass reads for Oracle Label Security policies.

Action: Grant appropriate privileges, or change the policy configurations.

ORA-42905: Oracle Label Security is not supported for an external table.

Cause: An attempt was made to enforce Oracle Label Security (OLS) policy to external tables.

Action: OLS is not supported for external tables.

ORA-42906: Cannot assign a non-existing OLS data label as row label.

Cause: An attempt was made to assign a non-existing Oracle Label Security (OLS) data label as a row label in an OLS-OID configuration.

Action: Ensure that the row label is a valid data label.

ORA-42907: cannot apply OLS policy with labeling function.

Cause: An attempt was made to enforce Oracle Label Security (OLS) policy with labeling function when Oracle Database Vault operations control was enabled.

Action: Apply OLS policy without the labeling function.

ORA-42908: cannot be executed by an Oracle Real Application Security user

Cause: An attempt was made to execute Oracle Label Security (OLS) API by an Oracle Real Application Security (RAS) user.

Action: Execute as a database user with necessary privileges and roles.

ORA-42909: cannot be executed outside datapump export

Cause: An attempt was made to execute the function outside datapump export.

Action: Do not execute outside datapump export.

ORA-42910: cannot be processed because user session label is modified

Cause: An attempt was made to alter the user session after the session label changed.

Action: Do not process after modifying the user session label.

ORA-42911: cannot administer Oracle Label Security policy

Cause: An attempt was made to administer Oracle Label Security (OLS) policy by an admin user within cloud database.

Action: Administer OLS policy using a designated OLS administrative user.

ORA-43750 to ORA-45928

ORA-43750: invalid or illegal combination of COMMIT WRITE options

Cause: invalid or illegal combination of options provided to COMMIT WRITE SQL statement.

Action: Provide a valid combination of options for COMMIT WRITE statement

ORA-43751: invalid value for parameter *string*

Cause: invalid or illegal value provided for parameter.

Action: Provide a valid value for the parameter

ORA-43807: indexes on ORA_ROWSCN not allowed

Cause: An attempt was made to create an index that refers to the ORA_ROWSCN pseudo-column, either directly or in an expression.

Action: Do not use ORA_ROWSCN to define an index on a table.

ORA-43814: DROP INDEX is invalid for hash cluster index

Cause: An attempt was made to drop an index defined on a hash cluster. Hash cluster indexes cannot be dropped.

Action: Do not attempt to drop an index defined on a hash cluster.

ORA-43817: indexes on ROWID not allowed

Cause: An attempt was made to create an index that refers to the ROWID pseudo-column, either directly or in an expression.

Action: Do not use ROWID to define an index on a table.

ORA-43850: Advanced Compression Option parameter is required to be enabled

Cause: An Advanced Compression Option (ACO) feature was specified without enabling the ACO parameter.

Action: Set or Update the ACO parameter (enable_option_advanced_compression) to TRUE.

ORA-43852: SECUREFILE and BASICFILE cannot be used together

Cause: SECUREFILE and BASICFILE were both specified.

Action: Modify the SQL statement to specify only one of SECUREFILE or BASICFILE.

ORA-43856: Unsupported LOB type for SECUREFILE LOB operation

Cause: A LOB that is not a SECUREFILE was used in a SQL statement or in a call where a SECUREFILE LOB was expected.

Action: Convert the LOB to a SECUREFILE LOB or do not use this keyword or call.

ORA-43857: Parameter Error

Cause: Attempt to modify a LOB with an invalid parameter.

Action: Fix paramters and retry the operation.

ORA-43859: CONTENTTYPE string too long

Cause: Length of CONTENTTYPE string exceeded the defined maximum.

Action: Modify length of CONTENTTYPE string and retry operation.

ORA-43862: CONTENTTYPE buffer length incorrect

Cause: Length of CONTENTTYPE buffer less than defined constant.

Action: Modify length of CONTENTTYPE buffer and retry operation.

ORA-43878: LOB feature unsupported below compatible setting 11.2.0

Cause: An 11.2 LOB feature was specified when the database was operating at a compatible setting lower than "11.2.0".

Action: Upgrade the database compatible setting to "11.2.0" or higher to enable the desired new features.

ORA-43883: SECUREFILE LOBs delta update invalid operation

Cause: Invalid delta update operation was issued on LOB. This includes operation beyond LOB length; move operation with destination offset inside move interval.

Action: Check operation parameters for validity.

ORA-43907: This argument must be a literal or bind variable.

Cause: An attempt was made to provide an argument that was not a literal or bind variable.

Action: Provide an argument that is either a literal or bind variable.

ORA-43908: invalid output data type

Cause: An invalid output data type was provided. The valid output data types for VALIDATE_CONVERSION operator and the operators supporting DEFAULT ON CONVERSION ERROR syntax are: NUMBER, BINARY_FLOAT, BINARY_DOUBLE, DATE, TIMESTAMP, TIMESTAMP WITH TIME ZONE, INTERVAL DAY TO SECOND, INTERVAL YEAR TO MONTH.

Action: Provide a valid output data type.

ORA-43909: invalid input data type

Cause: An invalid input data type was provided for Validate_Conversion operator. For the NUMBER, BINARY_FLOAT and BINARY_DOUBLE output data types, the input data types can be: - NUMBER - BINARY_FLOAT - BINARY_DOUBLE - CHAR - VARCHAR2 - NCHAR - NVARCHAR2 For the DATE, TIMESTAMP, TIMESTAMP WITH TIME ZONE, INTERVAL DAY TO SECOND, and INTERVAL YEAR TO MONTH output data types, the input data types can be: - CHAR - VARCHAR2 - NCHAR - NVARCHAR2

Action: Provide a valid input data type.

ORA-43910: precision is not supported by Validate_Conversion operator

Cause: Precision was provided for the following data types: NUMBER, TIMESTAMP, TIMESTAMP WITH TIME ZONE, INTERVAL YEAR TO MONTH, INTERVAL DAY TO SECOND.

Action: Do not specify precision for following data types: NUMBER, TIMESTAMP, TIMESTAMP WITH TIME ZONE, INTERVAL YEAR TO MONTH, INTERVAL DAY TO SECOND.

ORA-43911: cannot specify collation for non-character columns

Cause: COLLATE was specified for a non-character column.

Action: Remove the COLLATE keyword.

ORA-43912: invalid collation specified for a CLOB or NCLOB value

Cause: A character LOB column or expression was declared as having a collation other than USING_NLS_COMP or the determined collation for a collation-sensitive operator or function operating on character LOB values was not USING_NLS_COMP. Character LOB values support only the USING_NLS_COMP collation.

Action: Correct the collation declarations to make sure the USING_NLS_COMP collation is applied to the character LOB values.

ORA-43913: unable to derive collation for the result: conflicting collations

Cause: Arguments to the operator or function (operation) that have the lowest coercibility level and are relevant for derivation of the collation for the result of this operation had conflicting collations.

Action: Check the collation derivation rules in the Oracle Database documentation and apply the COLLATE operator as appropriate to remove the existing conflict.

ORA-43914: unable to determine collation: arguments have undefined collation

Cause: Arguments to the operator, function, or condition (operation) that are relevant for determining the collation to be used by this operation had undefined collations.

Action: Check the collation determination rules in the Oracle Database documentation and apply the COLLATE operator as appropriate to assign a collation explicitly.

ORA-43915: unable to determine collation: arguments have conflicting collations

Cause: Arguments to the operator, function, or condition (operation) that have the lowest coercibility level and are relevant for determining the collation to be used by this operation had different collations.

Action: Check the collation determination rules in the Oracle Database documentation and apply the COLLATE operator as appropriate to remove the existing conflict.

ORA-43916: unable to determine collation for the column

Cause: An attempt was made to create a virtual character column in a table, a character column in a table based on a query (CREATE TABLE AS SELECT), or a character column in the key of a functional index. The expression on which the column definition was based did not have a derived collation to be used for the column, because of a collation conflict in one of its operators. In case of a virtual column, no collation was provided for the column through the data type declaration, either.

Action: Check the collation derivation rules in the Oracle Database documentation and apply the COLLATE operator in the defining expression as appropriate to resolve collation conflicts. If defining a virtual column, alternatively, specify a data type for the column to let the column inherit the collation from the table default, or specify the collation explicitly with the data type.

ORA-43917: invalid collation for a primary key column of the index-organized table

Cause: An attempt was made to specify an invalid collation for the primary key column of an index-organized table.

Action: Use one of the supported collations for the primary key column of the index-organized table: BINARY, USING_NLS_COMP, USING_NLS_SORT, USING_NLS_SORT_CS, USING_NLS_SORT_VAR1, or USING_NLS_SORT_VAR1_CS.

ORA-43918: This argument must be a literal

Cause: An attempt was made to provide an argument that was not a literal.

Action: Provide a literal argument.

ORA-43919: Nested aggregates are not supported for pivot operation.

Cause: Nested aggregates were specified in the pivot operator. This operation is not supported.

Action: Remove the nested aggregates from the pivot operation.

ORA-43920: DEFAULT ON NULL is not supported for object type or REF columns

Cause: DEFAULT ON NULL was specified on a object type or REF column. These types are not supported.

Action: Remove the ON NULL keyword for this column.

ORA-43921: invalid collation for cluster column

Cause: An attempt was made to create an index cluster in which one of the key columns had an unsupported declared collation or an attempt was made to create a hash cluster in which a key column with SORT clause had an unsupported declared collation. Only the collations BINARY, USING_NLS_COMP, USING_NLS_SORT, USING_NLS_SORT_CS, USING_NLS_SORT_VAR1, and USING_NLS_SORT_VAR1_CS are supported for character columns in index clusters and for sorted character columns of hash clusters.

Action: Use one of the supported collations for the offending column.

ORA-43922: Collation of the column cannot be modified.

Cause: An attempt was made to modify the declared collation of a column that either:
 o belonged to a foreign key
 o belonged to a primary or unique key and that key was referenced by some foreign key
 o corresponded to a cluster key column
 o was referenced by a defining expression of a virtual column
 o was referenced by a defining expression of a functional index
 o corresponded to an attribute of a user-defined type or an object table
 o belonged to the container table of a materialized view
 o was referenced by a join condition of a bitmap join index
 The declared collation of such columns cannot be modified.

Action: Use one of the following as appropriate:
 o Drop the offending constraint, virtual column, or index, modify the collation of the column, and re-create the dropped element.
 o If possible, modify the type attribute instead of the column.
 o If possible, modify the derived collation of the corresponding materialized view column (for example, with the COLLATE operator) and re-create the materialized view to re-create its container table with the new column collation.
 o Save the tables of a cluster,

re-create the cluster using the new collation, and restore the saved tables into the cluster.

ORA-43923: The column cannot be modified to the specified collation.

Cause: An attempt was made to modify the declared collation of a column that belonged to a primary or unique key, or a standard index key, or a partitioning key, and the new collation was from a different group than the old collation, where the groups are defined as follows:

Group 1: BINARY, USING_NLS_COMP, USING_NLS_SORT, USING_NLS_SORT_CS, USING_NLS_SORT_VAR1, and USING_NLS_SORT_VAR1_CS
Group 2: BINARY_CI, USING_NLS_SORT_CI, and USING_NLS_SORT_VAR1_CI
Group 3: BINARY_AI, USING_NLS_SORT_AI, and USING_NLS_SORT_VAR1_AI

Action: When modifying the column collation, specify a new collation that is in the same group as the current column collation. If there is no current collation, because you changed the column data type at the same time and the old data type is not a character data type, then select a collation from Group 1 as the new collation.

ORA-43924: unable to modify collation of an Oracle-maintained database object

Cause: An attempt was made to modify the collation of an Oracle-maintained database object. Modifications of Oracle-maintained database objects are generally not permitted.

Action: Do not modify Oracle-maintained database objects unless explicitly instructed to do so by Oracle Support Services.

ORA-43925: A character column in the index definition has an unsupported collation.

Cause: An attempt was made to create a bitmap join index or a domain index with a key or join condition that contained a character column with a declared collation other than BINARY, USING_NLS_COMP, USING_NLS_SORT, USING_NLS_SORT_CS, USING_NLS_SORT_VAR1, or USING_NLS_SORT_VAR1_CS. Only these listed collations are supported by this type of the index.

Action: Use one of the supported collations for the key column or join condition.

ORA-43926: Cannot use the specified collation with some of the dependent objects.

Cause: An attempt was made to change the collation of a character column to a collation that is not supported in a key of a bitmap join index, a domain index key to which the column belongs. Only the collations BINARY, USING_NLS_COMP, USING_NLS_SORT, USING_NLS_SORT_CS, USING_NLS_SORT_VAR1, and USING_NLS_SORT_VAR1_CS are supported in these keys.

Action: Use one of the supported collations for the key column.

ORA-43927: Cannot specify default collation for object tables.

Cause: An attempt was made to explicitly state the default collation setting for an object table. However, default collations do not apply to object tables because all columns of an object table inherit collations from the attributes of the base type of the table.

Action: The operation is not allowed.

ORA-43928: Conversion error handling is not allowed here.

Cause: An attempt was made to use the default value, in case of a conversion failure, by specifying the DEFAULT *argument* ON CONVERSION ERROR statement to a conversion operator. This feature is not allowed for current operation.

Action: Remove DEFAULT *argument* ON CONVERSION ERROR from the conversion operator and try again.

ORA-43929: Collation cannot be specified if parameter MAX_STRING_SIZE=STANDARD is set.

Cause: The COLLATE or DEFAULT COLLATION clause was specified in a DDL statement or the DEFAULT_COLLATION parameter was specified in an ALTER SESSION statement, but the value of the initialization parameter MAX_STRING_SIZE was STANDARD. The data-bound collation feature is disabled if the value of this parameter is STANDARD.

Action: Set MAX_STRING_SIZE to EXTENDED by following the procedure documented in the Oracle Database Reference.

ORA-43930: A query issued from a pre-12.2 database references a column with an unsupported collation.

Cause: A table or view column with a declared collation other than USING_NLS_COMP was referenced in a distributed query that originated in an Oracle Database with the release number lower than 12.2. Such references are not allowed.

Action: In the remote database that reported this error, create a view corresponding to the subquery that was executed in that database and make sure that all columns of this view have the collation USING_NLS_COMP. Use the COLLATE operator if necessary. In the original query, replace the subquery with a reference to the view.

ORA-43931: DEFAULT COLLATION may not be combined with other operations

Cause: An ALTER TABLE statement attempted to combine DEFAULT COLLATION with some other operation, which is not allowed.

Action: Ensure that DEFAULT COLLATION is the only operation specified in an ALTER TABLE statement.

ORA-43932: DROP IDENTITY cannot be combined with other operations

Cause: An ALTER TABLE statement attempted to combine DROP IDENTITY with some other operation, which is not allowed.

Action: Ensure that DROP IDENTITY is the only operation specified in an ALTER TABLE statement.

ORA-43933: Collation must be specified.

Cause: Collation was not specified in a context where it was required.

Action: Specify the required collation.

ORA-44001: invalid schema

Cause: The schema for the given schema name did not exist.

Action: Provide a valid schema name.

ORA-44002: invalid object name

Cause: The input parameter string was not a qualified SQL identifier of an existing SQL object.

Action: Make sure the string matches an existing SQL object that is accessible by the current schema.

ORA-44003: invalid SQL name

Cause: The input parameter string was not a valid SQL name.

Action: Check the DBMS_ASSERT specification to verify that the parameter string is a valid SQL name.

ORA-44004: invalid qualified SQL name

Cause: The input parameter string was not a valid qualified SQL name.

Action: Check the DBMS_ASSERT specification to verify that the parameter string is a valid qualified SQL name.

ORA-44021: DBMS_SESSION.SET_CURRENT_SCHEMA_DEFERRED failed due to change of PDB.

Cause: Set schema failed because an attempt was made to change the pluggable database (PDB) before the set schema took effect.

Action: Do not change the PDB before the set schema takes effect.

ORA-44101: invalid priority

Cause: The priority level given by the user was invalid.

Action: See UTL_MAIL for valid priority values and change the priority parameter accordingly.

ORA-44102: unknown or unsupported algorithm

Cause: An unknown or unsupported authentication or compression algorithm was encountered.

Action: Check the authentication or compression algorithm. Use one that is supported by Oracle.

ORA-44103: Materialized view has a circular dependency and cannot be validated.

Cause: A materialized view with a circular dependency was encountered by UTL_RECOMP and could not be validated.

Action: Drop and re-create the materialized view to remove the circular dependency.

ORA-44203: timeout waiting for lock on cursor

Cause: A timeout occurred while waiting for a cursor to be compiled. This is usually caused by the SQL parse requiring access to system resources which are locked by concurrently executing sessions.

Action: Investigate possible causes of resource contention. If necessary, contact support for additional information on how to diagnose this problem.

ORA-44204: library cache object *string.string* found in an in-flux state

Cause: The pseudo-cursor depends on a table which was found to be obsolete due to metadata invalidation of the library cache object.

Action: Contact Oracle Support Services for additional information.

ORA-44206: cursor exceeded parse time limit

Cause: The cursor consumed too much elapsed time during parse and was aborted to avoid blocking other sessions.

Action: Tune the SQL statement or increase the parse time limit.

ORA-44301: NULL service name is not permitted

Cause: The service name argument was found to be NULL.

Action: Provide a non-NULL service name.

ORA-44302: NULL network name is not permitted

Cause: The network name argument was found to be NULL.

Action: Provide a non-NULL network name.

ORA-44303: service name exists

Cause: This service name was already in existence.

Action: Provide a new unique service name.

ORA-44304: service *string* does not exist

Cause: The specified service was not in existence.

Action: Provide a valid service name.

ORA-44305: service *string* is running

Cause: The specified service was running.

Action: This message is informational only.

ORA-44306: service name exceeds maximum length of *string*

Cause: The service name was too long.

Action: Use a shorter service name.

ORA-44307: network name too long

Cause: The network name, excluding the domain, was too long.

Action: Use a shorter network name.

ORA-44310: maximum number of services exceeded

Cause: The maximum number of services has been reached.

Action: None

ORA-44311: service *string* not running

Cause: The specified service was not running.

Action: This message is informational only.

ORA-44312: database closed

Cause: The database was closed.

Action: Open the database and retry the operation.

ORA-44313: instance name invalid

Cause: The instance name argument was not valid.

Action: Provide a valid instance name.

ORA-44314: network name already exists

Cause: The network name was already in existence.

Action: Use an alternate network name.

ORA-44315: all service attributes null

Cause: All attributes specified were null.

Action: At least one attribute must be non-null.

ORA-44316: invalid argument

Cause: Invalid argument supplied.

Action: Supply a valid argument.

ORA-44317: database open read-only

Cause: The database is open read-only.

Action: Close the database and reopen it read/write before trying again.

ORA-44318: exceeded maximum SERVICE_NAMES length

Cause: The total length of all running service network names exceeded the maximum allowable length.

Action: Stop another service to start this one.

ORA-44319: Cannot delete AQ service

Cause: Specified AQ service belonged to a queue.

Action: Delete the queue.

ORA-44320: cannot modify global service

Cause: Could not modify the global service because of insufficient privileges or you were trying to modify the global service attribute.

Action: Use global service management to modify a global service.

ORA-44321: cannot read command line from trace file *string*

Cause: Trace file could not be read.

Action: Make sure trace file exists and contains valid raw trace data.

ORA-44322: invalid file name '*string*'

Cause: A NULL or zero length file name was specified.

Action: Correct the file name to be a nonzero length string.

ORA-44323: negative *count* '*string*' to *string* option

Cause: The given count was a nonpositive number.

Action: Provide a positive count number.

ORA-44324: no *count* argument to *string* option

Cause: Count number was missing for the option.

Action: Provide a count number to the option.

ORA-44325: no entry points found in trace file *string*

Cause: The given trace symbol was not found.

Action: None

ORA-44326: no *symbol* argument to *string* option

Cause: *symbol* argument to `-[un]trace` option was missing.

Action: Provide *symbol* argument to `-[un]trace` option.

ORA-44327: no *filename* argument to *string* option

Cause: *filename* argument to the option was missing.

Action: Provide *filename* argument to the option.

ORA-44328: unsupported version number: *string*

Cause: Version of the trace file was not supported.

Action: Provide supported version of trace file.

ORA-44329: length of full path name too long

Cause: The full path name provided was too long.

Action: Use a shorter directory path, file name or both.

ORA-44403: Change user id operation failed due to invalid flag parameter.

Cause: Mutually exclusive values were specified for the flag parameter.

Action: Internal error. Contact Oracle Support Services.

ORA-44404: Oracle client version 10.2 requires Oracle server version 10.2 or higher.

Cause: The user name could not be changed for an Oracle client with version 10.2 or higher when connected to an Oracle server version lower than 10.2.

Action: Use an Oracle server with the same version as the client, and retry the operation.

ORA-44411: START_DATE cannot be later than END_DATE for all ACEs

Cause: The `END_DATE` was earlier than the `START_DATE` in one of the access control entries (ACEs) in this access control list (ACL).

Action: Set the `END_DATE` to be later than or the same as the `START_DATE` in each of the ACEs in this ACL.

ORA-44412: Cyclic ACL inheritance is not allowed.

Cause: A cycle was formed by the access control list (ACL) inheritance.

Action: Check the ACL inheritance and break the cycle by removing some of the ACL inheritance.

ORA-44413: Security class of parent ACL must be an ancestor of security class of child ACL.

Cause: The security class of the parent access control list (ACL) was not an ancestor of the security class of the child ACL.

Action: Change the security class of the parent ACL to be an ancestor of the security class of the child ACL.

ORA-44414: Invalid ACL: Parent ACL '*string*' does not exist

Cause: The path to the parent ACL was not a valid resource.

Action: Change the parent ACL of this resource or create the parent ACL at the specified location.

ORA-44415: undefined privileges

Cause: An undefined privilege was found in an access control entry (ACE) in the access control list (ACL).

Action: Ensure that the privilege is defined in the security class as specified in the ACL.

ORA-44416: invalid ACL: unresolved principal '*string*'

Cause: An unresolved principal was found in an access control entry (ACE) in the access control list (ACL).

Action: Ensure that the principal is a valid user or role in the system.

ORA-44417: invalid access control list ID (ACLID)

Cause: The specified ACLID did not point to a valid access control list (ACL) document.

Action: Ensure that the ACLID points to a valid ACL document.

ORA-44418: Invalid ACL: *string*

Cause: The specified ACL did not meet the validation requirements of the constraining ACL.

Action: Ensure ACL meets the validation requirements of the constraining ACL.

ORA-44421: cannot DISALLOW NONSCHEMA without a SCHEMA clause

Cause: If no SCHEMA clause (explicit schema or ANYSCHEMA) was specified, nonschema data cannot be disallowed.

Action: Remove DISALLOW NONSCHEMA or add some SCHEMA clause.

ORA-44422: nonschema XML not allowed for this column

Cause: An attempt was made to insert nonschema-based XML documents in a binary XML column that did not allow nonschema data.

Action: Insert only schema-based documents or alter the column to allow nonschema data.

ORA-44423: XML schema registered for BINARY cannot be used for CLOB or Object-Relational clause.

Cause: An attempt was made to use an XML schema registered for BINARY usage as part of a CLOB or Object-Relational clause.

Action: Specify a schema registered for CLOB or Object-Relational use. Otherwise, specify BINARY XML storage for the column.

ORA-44424: BINARY XML storage requires an XML schema registered for BINARY usage.

Cause: An attempt was made to specify BINARY XML storage using an XML schema that was not registered for BINARY.

Action: Specify a schema registered for BINARY usage. Otherwise, specify CLOB or Object-Relational storage for the column.

ORA-44425: XML DB needs to be installed for creating an XMLType table or column

Cause: An attempt was made to create an XMLType table or column with out XML DB installed.

Action: Install XML DB.

ORA-44501: QMEL: Too much concurrency.

Cause: Too much concurrency

Action: Transient error, try again.

ORA-44502: QMEL: Lock not found.

Cause: Lock not found

Action: Check arguments

ORA-44503: QMEL: Lock Denied.

Cause: Lock denied

Action: None

ORA-44504: Resource Locked by Implicit Lock

Cause: The resource is locked by an implicit lock

Action: Implicit locks are normally caused by NFS locks. Refer to XDB Protocol guide for removing/obtaining information about implicit locks.

ORA-44505: QMEL: Invalid arguments.

Cause: Arguments to QMEL are not correct.

Action: None

ORA-44607: Archive logging must be enabled.

Cause: Archive logging was not enabled.

Action: Enable archive logging on the database.

ORA-44608: Supplemental logging settings cannot be modified in Oracle Database Express Edition.

Cause: An attempt was made to modify supplemental logging settings using Oracle Database Express Edition.

Action: Upgrade to Oracle Database Standard Edition (SE) or Oracle Database Enterprise Edition (EE) to enable supplemental logging and logical replication.

ORA-44609: CONTINUOUS_MINE is desupported for use with DBMS_LOGMNR.START_LOGMNR.

Cause: An attempt was made to use DBMS_LOGMNR.START_LOGMNR with CONTINUOUS_MINE as an option.

Action: Reissue START_LOGMNR without the CONTINUOUS_MINE option specified.

ORA-44610: DBMS_LOGSTDBY extended data type support is desupported.

Cause: An attempt was made to use one of the DBMS_LOGSTDBY extended data type support procedures.

Action: DBMS_LOGSTDBY extended data type support is desupported and cannot be used.

ORA-44611: Only one LogMiner adhoc session is allowed in Oracle Cloud Autonomous Database.

Cause: A second LogMiner adhoc session is being attempted in Oracle Cloud Autonomous Database.

Action: Try again after the existing LogMiner adhoc session has ended.

ORA-44612: could not attach to LogMiner session because session is disabled

Cause: The LogMiner session was disabled because the metadata information was not available in the metadata tables.

Action: Ensure that the upgrade or downgrade has migrated all of the metadata information to the SYS or SYSTEM schema LogMiner tables and try again.

ORA-44700: Language '*string*' is not a valid language for a translation

Cause: Invalid language.

Action: The language must conform to IETF RFC 3066.

ORA-44701: language not found for translation

Cause: The document had multiple translations and one of them did not have the xml:lang attribute.

Action: All translations must have the xml:lang attribute when multiple translations are present.

ORA-44702: Multiple translations found for language '*string*'

Cause: The document had multiple translations for a language.

Action: The document must contain only one translation per language for every translated element.

ORA-44703: Multiple source language translations found

Cause: The document had multiple source language translations.

Action: The document must contain only one source language translation for every translated element.

ORA-44704: XPath '*string*' does not uniquely identify a translated element

Cause: The given XPath pointed to multiple translated elements.

Action: The given XPath must uniquely identify a translated element.

ORA-44705: Must have xdb:maxOccurs='1' for translated elements

Cause: The value of xdb:maxOccurs was not '1' for a translated element.

Action: The value of xdb:maxOccurs must be '1' for a translated element.

ORA-44706: Must have xsd:maxOccurs='unbounded' for translated elements

Cause: The value of xsd:maxOccurs was not 'unbounded' for a translated element.

Action: The value of xsd:maxOccurs must be 'unbounded' for a translated element.

ORA-44707: no source language translation found

Cause: The document had no source language translation for a translated element.

Action: The document must contain exactly one source language translation for each translated element.

ORA-44708: Translations not supported for object relational storage

Cause: The storage type of the schema was object relational.

Action: Register the schema with storage type as clob or binary xml.

ORA-44709: Invalid schema definition for translated element

Cause: The schema definition for a translated element was invalid.

Action: A translated element must be a complex type with simple content which is a restriction or extension of xs:string.

ORA-44710: Malformed XLIFF document: *string*

Cause: The XLIFF document was malformed.

Action: Fix the error and try again.

ORA-44711: XPath refers to an untranslatable element

Cause: XPath pointed to an untranslatable element.

Action: XPath for this operation must refer to a translatable element.

ORA-44712: Invalid XPath in XLIFF document used for merging

Cause: XPath within trans-unit/id attribute was invalid.

Action: XPath within trans-unit/id attribute must point to a set of translations, not to a particular translation.

ORA-44713: XPath does not select all translations.

Cause: XML Path Language (XPath) did not select all translations for a particular element.

Action: XPath must point to a set of translations, not to a particular translation.

ORA-44717: First 7 positions (0-6) in the XDB repository is reserved for fusion security

Cause: An attempt was made to add or add a resource to the XDB repository at a position reserved for fusion security.

Action: Give a position other than 0 to 6.

ORA-44718: Port conflict in XDB Configuration file

Cause: A port number specified in the XDB Configuration file conflicts with a port number used in the XDB Configuration file of the same non-consolidated database or the same Pluggable Database or a different Pluggable Database of the same consolidated database or the root container of the same consolidated database.

Action: Specify a different port number.

ORA-44730: XML Index *string* is not usable at the moment

Cause: The async XML Index could not be used since ORACLE is not open for query.

Action: Try the same query again when ORACLE is open for query, or use NO_XMLINDEX_REWRITE hint.

ORA-44731: Path *string* cannot be removed from the repository XML Index

Cause: The repository XML Index indexed one of the parent folders of the resource identified by given path.

Action: Try removing the parent folder from the repository XML Index.

ORA-44732: Path *string* cannot be removed from the repository XML Index

Cause: The repository XML Index did not index the resource identified by given path.

Action: Try removing a resource that is indexed by the repository XML Index.

ORA-44733: The repository XML Index cannot be dropped directly

Cause: DROP INDEX could not be used on the repository XML Index.

Action: Try using DBMS_XDB_ADMIN.DROPREPOSITORYXMLINDEX.

ORA-44734: Predicate Index on nodes with similar children not allowed

Cause: There was at least one node in the document with multiple similar children which was used in Predicate Indexing.

Action: Try removing Predicate Index on nodes with multiple similar children.

ORA-44735: Too many predicates

Cause: Number of predicates were more than limit.

Action: Try reducing number of predicates.

ORA-44736: Group name already existed

Cause: The group name specified already exists.

Action: Try a different group name.

ORA-44737: Parameter *string* did not exist.

Cause: The parameter name specified did not exist.

Action: Check the parameter name.

ORA-44738: Group *string* did not exist.

Cause: The group name specified did not exist.

Action: Check the group name.

ORA-44739: cannot drop the last group in XML Index

Cause: An attempt was made to drop the last group in the XML Index. The last group could not be dropped as the index required at least one group.

Action: Use DROP INDEX statement to drop the index.

ORA-44740: Parameter *string* is already registered.

Cause: The parameter name specified was already registered.

Action: Either drop the existing parameter or use a different parameter name.

ORA-44741: Cannot drop a group whose tables are shared by other group(s).

Cause: An attempt was made to drop a group whose tables are shared by other group(s).

Action: First drop group(s) with shared table(s) from this group.

ORA-44742: cannot alter columns of a table that is shared by other groups

Cause: An attempt was made to add, modify, or drop columns of a table that is shared by other groups.

Action: Drop the group or groups with the shared table or tables from this group, and then proceed with this operation.

ORA-44743: Cannot alter columns of a dependent shared table.

Cause: An attempt was made to add columns to, modify columns of, or drop columns from a dependent shared table. One can only add columns to, modify columns of, or drop columns from the original shared table.

Action: Use the group name of the original shared table while executing this operation.

ORA-44744: Cannot have more than one add, modify, or drop operation in an ALTER INDEX statement.

Cause: An attempt was made to have more than one add, modify, or drop column or group operation in the ALTER INDEX statement.

Action: Use multiple ALTER INDEX statements instead.

ORA-44745: cannot add or drop columns to or from multiple tables

Cause: An attempt was made to add or drop columns to or from multiple tables in a single ALTER INDEX statement.

Action: Use multiple ALTER INDEX statements instead.

ORA-44746: Missing XMLTABLE in GROUP clause.

Cause: An attempt was made to create or add a group without XMLTABLE.

Action: Add required XMLTABLE clause to the GROUP clause.

ORA-44747: An XMLIndex with a structured component cannot be specified with ASYNC.

Cause: An attempt was made to specify ASYNC parameter for an XMLIndex with a structured component.

Action: Use valid parameters for XMLIndex with a structured component.

ORA-44748: Invalid name for GROUP.

Cause: An attempt was made to create a GROUP with invalid name.

Action: Use a valid name for the GROUP.

ORA-44749: Missing PATH for the COLUMN.

Cause: An attempt was made to create a COLUMN without PATH.

Action: Specify PATH for the COLUMN definition.

ORA-44750: Cannot create secondary index on unstructured component of XMLIndex.

Cause: An attempt was made to create a secondary index on the unstructured component of an XMLIndex when the XMLIndex does not have an unstructured component.

Action: Alter XMLIndex to add an unstructured component.

ORA-44751: XML schema enumeration index is out of range

Cause: The enumeration item corresponding to the enumeration index could not be found in the XML schema.

Action: If the XML schema has been evolved, try restarting the client that performed the evolution.

ORA-44752: New element '*string*' in complex type '*string*' has the same qualified name as another element

Cause: The new element that was added to a complex type by in-place XML schema evolution had the same qualified name as another element in the same complex type or in one of its ancestor complex types.

Action: Try adding an element with a different qualified name.

ORA-44753: Change to minOccurs attribute of element '*string*' is illegal

Cause: The value of attribute minOccurs on an element could not be increased by in-place XML schema evolution.

Action: Do not increase the value of attribute minOccurs.

ORA-44754: Change to maxOccurs attribute of element '*string*' is illegal

Cause: The value of attribute maxOccurs on an element could not be decreased by in-place XML schema evolution.

Action: Do not decrease the value of attribute maxOccurs.

ORA-44755: Change to complexType property of element '*string*' is illegal

Cause: The complexType property on an element could not be changed by in-place XML schema evolution.

Action: Do not change the complexType property.

ORA-44756: Change to SQLType attribute of element '*string*' is illegal

Cause: The SQLType property on an element in a binary XML schema could not be changed by in-place XML schema evolution.

Action: Do not change the SQLType property.

ORA-44771: Invalid name for a container database.

Cause: The service operation failed.

Action: Check the name of the container database.

ORA-44772: Cluster Ready Services (CRS) operation failed

Cause: The CRS operation failed.

Action: Check the trace file and the CRS daemon log file for details.

ORA-44773: Cannot perform requested service operation.

Cause: The consolidated database was not open. The operation was not performed.

Action: Open the consolidated database.

ORA-44774: Pluggable database attribute cannot be changed.

Cause: The attempted operation was invalid for a consolidated database.

Action: PDB attribute of a service cannot be changed.

ORA-44775: Pluggable database service cannot be created.

Cause: The attempted pluggable database operation failed.

Action: Check the trace file for details.

ORA-44776: Pluggable database service cannot be deleted.

Cause: The attempted pluggable database operation failed.

Action: Check the trace file for details.

ORA-44777: Pluggable database service cannot be started.

Cause: The attempted pluggable database operation failed.

Action: Check the trace file for details.

ORA-44778: Invalid value for service attribute retention_time.

Cause: The attempted operation failed.

Action: The value for the service attribute 'retention_time' must be greater than the value of the service attribute 'replay_initiation_timeout'.

ORA-44779: Invalid value for service attribute replay_initiation_timeout.

Cause: The attempted operation failed.

Action: The value for the service attribute 'replay_initiation_timeout' must be greater than the value of the service attribute 'failover_delay'.

ORA-44780: Invalid value for service attribute commit_outcome.

Cause: The attempted operation failed.

Action: The value for the service attribute 'commit_outcome' cannot be disabled if the service attribute 'failover_type' has the value 'transaction'.

ORA-44781: Invalid value for service attribute aq_ha_notifications.

Cause: The attempted operation failed.

Action: The value for the service attribute 'aq_ha_notifications' cannot be disabled if the service attribute 'failover_type' has the value 'transaction'.

ORA-44782: Cluster Ready Services (CRS) service operation failed - reason: *string*.

Cause: The attempted CRS service operation failed.

Action: Check the trace file for details.

ORA-44783: The maximum number of runtime load balancing services exceeded.

Cause: The number of runtime load balancing services reached the maximum allowed.

Action: None

ORA-44784: Service cannot be deleted.

Cause: The attempted service operation failed.

Action: Internal services and the database service cannot be deleted.

ORA-44785: Service attribute `commit_outcome` cannot be specified for the database or Pluggable Database service.

Cause: The attempted service operation failed.

Action: None

ORA-44786: Service operation cannot be completed.

Cause: The service was not imported successfully while plugging in the pluggable database or the service is defined in a different pluggable database.

Action: Connect to the correct pluggable database and re-execute the service operation.

ORA-44787: Service cannot be switched into.

Cause: The service did not exist in the new pluggable database or the service was not started in the pluggable database.

Action: Use a valid service name for the pluggable database or start the service in the pluggable database first.

ORA-44789: Service cannot be switched into.

Cause: One of the verification checks failed.

Action: Check the previous error message.

ORA-44790: exceeded maximum GUID length

Cause: The total length of a globally unique identifier (GUID) exceeded 16 characters.

Action: Specify a GUID with the correct length.

ORA-44791: Drain timeout or stop option cannot be specified for a different database instance.

Cause: Drain timeout and stop option could not be used for remote operations.

Action: Connect to the correct database instance to use drain timeout or stop option.

ORA-44792: cannot initialize Oracle Call Interface (OCI) environment

Cause: There was not enough memory available.

Action: Configure the Oracle database with more memory.

ORA-44793: cannot stop internal services

Cause: The user tried to stop an internal service.

Action: None

ORA-44794: cannot create the specified service

Cause: Oracle Clusterware was configured but not running.

Action: Start Oracle Clusterware and try to create the service.

ORA-44795: service *string* is not a child service or *string* is not its parent service

Cause: The specified service was not a child service or it was not a child service of the specified parent service.

Action: Provide a valid child service.

ORA-44796: invalid goal attribute value for parent service *string*

Cause: An attempt was made to specify a goal attribute of SERVICE_TIME or THROUGHPUT for a parent service.

Action: If a child service is being created, modify the parent service goal attribute and re-create the child service. If a parent service is being modified, only NONE or SMART_CONN are valid goal attribute values.

ORA-44797: illegal operation attempted on child service *string*

Cause: An operation such as start, stop or modify was attempted on a child service.

Action: Some operations cannot be performed directly on a child service. Perform the operation on the parent service instead.

ORA-44798: maximum number of child services exceeded for parent service *string*

Cause: The maximum number of child services for a parent service was exceeded.

Action: None

ORA-44800: Number of classifiers cannot be NULL

Cause: The num_classifiers argument was found to be NULL.

Action: Provide a non-NULL num_classifiers.

ORA-44801: NULL classifier list not permitted

Cause: The wlm_classifiers argument was found to be NULL.

Action: Provide a non-NULL wlm_classifiers.

ORA-44802: No new plan (classifier list) has been submitted

Cause: No new plan was created before submission.

Action: Create a new plan, followed by adding classifier & PC lists.

ORA-44803: Plan is in transition (about to be activated)

Cause: New plan was attempted to be created before activating the current plan.

Action: Completely submit the current plan and activate it.

ORA-44804: Plan is not created yet

Cause: A new plan was not created before submitting the Classifier and Performance Class lists.

Action: Call dbms_wlm.create_plan first to create the plan.

ORA-44805: No classifier is present

Cause: The classifier list contained no classifiers.

Action: Check the syntax of the classifier list.

ORA-44806: Extra classifiers are present in list

Cause: More classifiers were present in the list than specified.

Action: Only include the number of classifiers less than or equal to num_classifiers mentioned in dbms_wlm.create_plan.

ORA-44807: Performance Class name is too large

Cause: The Performance Class name was larger than 32 bytes.

Action: Rename the Performance Class to fit within 32 bytes.

ORA-44808: Work Request Class name is too large

Cause: The Work Request Class name was larger than 32 bytes.

Action: Rename the Work Request Class to fit within 32 bytes.

ORA-44809: No expression is present for classifier

Cause: This classifiers contained no expression. It should contain one more more expressions.

Action: Check syntax in the classifier list.

ORA-44810: No parameter is present for expression

Cause: This expression contained no paramaters or attribute values. It should contain one or more attribute values. Attributes can be SERVICE_NAME, MODULE, ACTION, PROGRAM or USER.

Action: Check syntax in the classifier list.

ORA-44811: Service name is too large

Cause: The service name mentioned in the parameter list was too large.

Action: Check the service name.

ORA-44812: Module name is too large

Cause: The module name mentioned in the parameter list was too large.

Action: Check the module name.

ORA-44813: Action name is too large

Cause: The action name mentioned in the parameter list was too large.

Action: Check the action name.

ORA-44814: Program name is too large

Cause: The program name mentioned in the parameter list was too large.

Action: Check the program name.

ORA-44815: User name is too large

Cause: The user name mentioned in the parameter list was too large.

Action: Check the user name.

ORA-44816: Number of Performance Classes is less than specified

Cause: The number of Performance Classes submitted were less than what was specified.

Action: Submit the full list of Performance Classes.

ORA-44817: Classifier list is too large

Cause: The length of the classifier list was greater than 4000 bytes.

Action: Break the list into two lists before submission.

ORA-44818: General failure

Cause: There was an unknown failure.

Action: Contact Oracle Support Services.

ORA-44819: Execution of this WLM function is denied

Cause: Either a WLM plan was being loaded from another instance, or the strict order of the PL/SQL calls for loading WLM plan was not followed.

Action: Check if another session is also concurrently trying to load a WLM plan. If that is not true, check the order in which you are making these PL/SQL calls to load your WLM plan.

ORA-44820: Number of Work Request Classes is less than specified

Cause: The number of Work Request Classes submitted were less than what was specified.

Action: Submit the full list of Work Request Classes.

ORA-44821: Number of classifiers is too large

Cause: A very large number (> 1024) of classifiers were requested.

Action: Submit a smaller (< 1024) number of classifiers.

ORA-44822: QoS Resource Manager plan does not exist in database "*string*"

Cause: QoS Resource Manager plan did not exist in this database.

Action: Rerun CATPROC.SQL to create the plan.

ORA-44823: The QoS Resource Manager plan is not in use

Cause: The QoS Resource Manager plan was not in use.

Action: Correct the setting of the current Resource Manager plan and try again.

ORA-44824: Resource Manager is disabled

Cause: Resource Manager was turned off.

Action: Reenable the Resource Manager and retry the operation.

ORA-44825: Classifier plan does not match across instances

Cause: Classifier plan was not the same across instances.

Action: Resubmit the classifier plan and try again.

ORA-44826: Number of Performance Classes is more than what was specified.

Cause: The number of Performance Classes submitted were more than what was specified.

Action: Submit only the specified number of Performance Classes.

ORA-44827: Number of Performance Classes is too large

Cause: A large number (≥ 50) of Performance Classes were requested.

Action: Submit a smaller (< 50) number of Performance Classes.

ORA-44828: memory allocation failed

Cause: Memory allocation for the attempted operation failed.

Action: Retry the operation. Contact Oracle Support if the problem persists.

ORA-44850: attempt to set a bad status *string* [*string*]

Cause: There was an internal Global Service Manager (GSM) error.

Action: Contact Oracle Support Services.

ORA-44851: "*string*" is not a valid name for a database

Cause: The specified database name was not valid.

Action: Provide a valid database name.

ORA-44852: maximum number of regions exceeded

Cause: The maximum number of regions was exceeded.

Action: Check the catalog to see if you can remove unused regions.

ORA-44853: maximum number of valid nodes for VNCR exceeded

Cause: The maximum number of nodes for valid node checking for registration (VNCR) was exceeded.

Action: Check the catalog to see if you can remove unused nodes.

ORA-44854: catalog has already been created

Cause: This database already contained the catalog.

Action: Ensure that the specified database name is correct and, if yes, delete and re-create the catalog.

ORA-44855: configuration name is not valid

Cause: The specified configuration name contained invalid characters or was too long.

Action: Provide a valid (or shorter) configuration name.

ORA-44856: catalog service name is not valid

Cause: There was an internal Global Service Manager (GSM) error.

Action: Contact Oracle Support Services.

ORA-44857: catalog does not exist

Cause: A catalog did not exist in the database.

Action: Validate the connect string and retry the operation.

ORA-44858: cannot remove catalog

Cause: The catalog contained one or more database or Global Service Manager (GSM) objects.

Action: Remove the database and GSM objects from the catalog.

ORA-44859: GSM "*string*" is already defined in the catalog

Cause: The specified Global Service Manager (GSM) was already in existence in the catalog.

Action: Check the specified object name.

ORA-44860: Region "*string*" was not found in the catalog.

Cause: The specified region was not found in the catalog.

Action: Check the specified object name.

ORA-44861: invalid use of REMOVE VNCR command

Cause: A valid node and group name were specified in the same command.

Action: Provide either a valid node or group name.

ORA-44862: region name and buddy region name cannot be the same

Cause: A region was specified as buddy for itself.

Action: Provide a valid buddy region name.

ORA-44863: region "*string*" is the last region and cannot be removed

Cause: The last region could not be removed from the cloud catalog.

Action: No action is required.

ORA-44864: cannot remove region because it is still being used by a GSM

Cause: The region contained databases or Global Service Manager (GSM).

Action: Remove the database and GSM objects from the region first.

ORA-44865: cannot remove GDS pool because it is still being used by a database or service

Cause: The Global Data Services (GDS) pool contained databases or services.

Action: Remove the databases and services from the GDS pool.

ORA-44866: pool "*string*" can only contain databases that belong to a Data Guard broker configuration

Cause: An attempt was made to add a database that does not belong to a Data Guard broker configuration to a Data Guard broker pool.

Action: None

ORA-44867: GDS pool already contains database "*string*"

Cause: The database or service was already in the Global Data Services (GDS) pool.

Action: None

ORA-44868: pool "*string*" is a pool that contains a Data Guard broker configuration; Databases that do not belong to a broker configuration cannot be added to this pool.

Cause: An attempt was made to add a database to a pool that contains a Data Guard broker configuration.

Action: None

ORA-44869: cannot build net service name with "*string*\ because it is too long

Cause: The automatically created network service name was too long.

Action: Use a shorter network domain name.

ORA-44870: The "role" property is only supported for pools that contain a Data Guard broker configuration.

Cause: ROLE was specified for a pool that did not contain a Data Guard broker configuration.

Action: None

ORA-44871: This operation cannot be performed on PREFERRED_ALL service "string".

Cause: The service was created with the PREFERRED_ALL option.

Action: Do not perform this operation on a PREFERRED_ALL service.

ORA-44872: The same name "string" cannot be used for both source and target databases.

Cause: The source and target parameters of MOVE SERVICE were the same.

Action: Check the parameters and try again.

ORA-44873: database "string" already offers the service

Cause: An attempt was made to add a service to a database that already offered the service.

Action: No action is required.

ORA-44874: service "string" not offered by database "string"

Cause: An attempt was made to start or stop a service on a database that does not offer the service.

Action: None

ORA-44875: database-related service parameters exceed the maximum allowed parameter length (1024 bytes)

Cause: The specified database-related service parameters were not valid.

Action: Check the parameters and try again.

ORA-44876: service *string* is running

Cause: The specified service was running.

Action: This message is informational only.

ORA-44877: service "string" is not enabled on database "string"

Cause: The service could not be started on the database because it was disabled.

Action: Enable the service.

ORA-44878: The database current lag is too high for the service "string".

Cause: The service could not be started on the standby database because the database current lag exceeds the service lag.

Action: The standby current lag needs to be reduced.

ORA-44879: A region name has not been provided.

Cause: An attempt was made to add a new Global Service Manager (GSM) without providing a region. When there is more than one existing region, a region name must be provided.

Action: Check the syntax and rerun the command.

ORA-44880: catalog has not yet been created

Cause: An attempt was made to modify the catalog, but it does not yet exist.

Action: Create the catalog before trying to modify it.

ORA-44881: GDS pool is not empty

Cause: An attempt was made to add broker configuration to a Global Data Services (GDS) pool that already contained a database. This is not allowed.

Action: Either remove all databases from the Global Data Services (GDS) pool or create a new GDS pool.

ORA-44882: The name "*string*" is not valid for a GDS pool.

Cause: The name of the specified Global Data Services (GDS) pool was not valid.

Action: Check the name and try again.

ORA-44883: The name "*string*" is not valid for a region.

Cause: The name of the specified region was not valid.

Action: Check the name and try again.

ORA-44884: The name "*string*" is not valid for a service.

Cause: The name of the specified service was not valid.

Action: Check the name and try again.

ORA-44885: invalid VNCR name *string*

Cause: The name specified for the valid node checking for registration (VNCR) was not valid.

Action: Check the name and try again.

ORA-44886: The name "*string*" is not valid for a VNCR group.

Cause: The name specified for the valid node checking for registration (VNCR) group was not valid.

Action: Check the name and try again.

ORA-44887: The name "*string*" is not valid for a GSM.

Cause: The name of the specified Global Service Manager (GSM) was not valid.

Action: n/a

ORA-44888: The name "*string*" is not valid for a GSM user.

Cause: The name of the specified Global Service Manager (GSM) was not valid.

Action: Check the name and try again.

ORA-44889: Region "*string*" is already defined in the catalog.

Cause: The specified region was already in existence in the catalog.

Action: Check the specified region name.

ORA-44890: GDS pool "string" is already defined in the catalog.

Cause: The specified Global Data Services (GDS) pool was already in existence in the catalog.

Action: Check the specified pool name.

ORA-44891: GSM "string" was not found in the catalog

Cause: The specified region was not found in the catalog.

Action: Check the specified region name.

ORA-44892: GDS pool "string" was not found in the catalog.

Cause: The specified Global Data Services (GDS) pool was not found in the catalog.

Action: Check the specified pool name.

ORA-44893: Database "string" was not found in pool "string".

Cause: The specified database was not found in the pool.

Action: Check the specified database name.

ORA-44894: Service "string" was not found in the catalog.

Cause: The specified service was not found in the catalog.

Action: Check the specified service name.

ORA-44895: cannot remove region because it is still being used by a database

Cause: The region contained databases.

Action: Remove the database objects from the region.

ORA-44896: GDS pool already contains service "string"

Cause: The service was already in the Global Data Services (GDS) pool.

Action: None

ORA-44897: The "lag" property is only supported for pools that contain a Data Guard broker configuration.

Cause: LAG was specified for a pool that did not contain a Data Guard broker configuration.

Action: None

ORA-44898: The "failover_primary" property is only supported for pools that contain a Data Guard broker configuration.

Cause: FAILOVER_PRIMARY was specified for a pool that did not contain a Data Guard broker configuration.

Action: None

ORA-44899: VNCR name "string" is already defined in the catalog.

Cause: The specified valid node checking for registration (VNCR) name was already in existence in the catalog.

Action: Check the specified VNCR name.

ORA-44900: Identifier "string" is too long.

Cause: The specified identifier exceeded the maximum allowed length.

Action: Use a shorter identifier name

ORA-44901: unable to resolve symbolic link "*string*"

Cause: The system was unable to resolve the specified symbolic link.

Action: Check the definition of the symbolic link to ensure that it refers to a valid resource.

ORA-44902: failed to resolve symbolic link "*string*"

Cause: The system was unable to fully resolve a path with symbolic links within a reasonable number of steps. It could be due to cycles in definitions of symbolic links or very long chains of symbolic links to symbolic links.

Action: Remove any cycles in symbolic link definitions. If there are no cycles, reduce the length of chains of symbolic links to symbolic links.

ORA-44903: Cannot create hard link to specified resource

Cause: The system cannot create a hard link to the specified resource.

Action: Check the configuration parameter(s) to verify the restrictions on creating hard links to folder or non-folder resources.

ORA-44904: target path in document link exceeds maximum length

Cause: Target path length exceeds the maximum which can be stored to disk.

Action: Reduce target path to smaller length

ORA-44905: extended link type not supported

Cause: XLink type attribute is extended.

Action: Remove extended link, or replace with simple link.

ORA-44906: Unable to resolve target path in document link.

Cause: The target path does not resolve to a valid resource.

Action: Check the target path validity.

ORA-44907: cannot delete resource with incoming hard document links

Cause: An attempt was made to delete a resource that had hard incoming document link targeting the resource.

Action: Query the DOCUMENT_LINKS view to see which resources have hard links to this resource, and change the document link in the source resource accordingly.

ORA-44908: Found a loop in XInclude elements while expanding *string*.

Cause: A loop in XInclude elements was detected in the document.

Action: Remove the loop in XInclude elements.

ORA-44909: HREF attribute is required within an XInclude element.

Cause: The HREF attribute was missing within XInclude element.

Action: Add the HREF attribute.

ORA-44910: XPointer is not supported within an XInclude element.

Cause: An Xpointer attribute was used within an XInclude element, and this is not supported.

Action: Remove the XPointer attribute.

ORA-44911: exceeded maximum depth of nested xinclude expansion

Cause: The depth of nested xinclude expansion has exceeded system limit.

Action: Reduce the depth of nested xinclude expansion.

ORA-44912: The XPath expression *string* is invalid or unsupported.

Cause: The specified XPath was either invalid or not supported in this context.

Action: Change or correct the XPath expression.

ORA-44913: error while processing XInclude *string*

Cause: There was an error while processing the specified XInclude.

Action: Ensure that the XInclude attributes are correct.

ORA-44914: schema XPointer exceeds maximum length

Cause: The XPointer was too long with the schema URL and element name.

Action: Use a shorter name.

ORA-44915: cannot rename virtual folders

Cause: Renaming virtual folders was not supported.

Action: Create a new virtual folder instead.

ORA-44916: Cannot recursively delete virtual folders.

Cause: Attempted to recursively delete virtual folders.

Action: Delete components of the virtual folder first.

ORA-44917: References cannot point to resources.

Cause: Attempted to set a REF to point to the resource table.

Action: Correct the reference to not point to the resource table.

ORA-44918: The source of a copy cannot be an ancestor of the destination.

Cause: The destination of a copy was an ancestor of the source.

Action: Correct the source and destination of the copy.

ORA-44919: cannot overwrite existing resource

Cause: An attempt was made to overwrite an existing resource without permission.

Action: Specify a new destination or allow overwrites.

ORA-44920: The source and destination of a copy or move cannot be the same.

Cause: A copy or move was attempted with the same source and destination.

Action: Use the correct source and destination.

ORA-44921: The XPath returns none or more than one node.

Cause: The XPath did not map to a single node.

Action: Specify a path that maps to a single node.

ORA-44922: The XPath expression must evaluate to a scalar type.

Cause: The XPath did not map to a scalar type.

Action: Specify a path that maps to a scalar type.

ORA-45001: SecureFile archive implicit not allowed

Cause: A SecureFile was archived and implicit retrieval was not allowed.

Action: Retrieve the SecureFile with a Get operation.

ORA-45002: Content ID not found in the DBFS HS

Cause: The content ID was invalid or was already deleted.

Action: No action required.

ORA-45003: DBFS HS: Invalid checksum, potential data corruption

Cause: Potential data corruption.

Action: No action required.

ORA-45004: DBFS HS SBT Error

Cause: Error related to SBT Tape library.

Action: Refer to error log for more details.

ORA-45005: DBFS HS invalid store

Cause: Error related to DBFS HS Store.

Action: Check that the store name and store parameters are valid values.

ORA-45400: operation not permitted on current database

Cause: An operation was not permitted to start because the database role is not supported.

Action: Attempt the operation on the primary database. If the primary database has recently switched to a logical standby database, and an error has occurred, reexecute the DBMS_ROLLING.SWITCHOVER procedure on the former primary database until successful completion of the operation.

ORA-45401: upgrade plan is already active

Cause: An upgrade plan was already active.

Action: The existing plan must first be destroyed by calling DBMS_ROLLING.DESTROY_PLAN.

ORA-45402: LOG_ARCHIVE_CONFIG must contain the DG_CONFIG attribute

Cause: The DG_CONFIG attribute was missing from the LOG_ARCHIVE_CONFIG parameter.

Action: Configure this parameter with the DG_CONFIG attribute before performing DBMS_ROLLING operations.

ORA-45403: database string must be specified in DG_CONFIG

Cause: The specified database was not found in the DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG parameter.

Action: Add the specified database to the DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG parameter.

ORA-45404: target version is incompatible

Cause: The configured target software version was incompatible with a DBMS_ROLLING administered upgrade.

Action: Use alternative upgrade methods.

ORA-45405: A rolling upgrade operation is already in progress.

Cause: A DBMS_ROLLING operation was already in progress. Only one operation is permitted at a time.

Action: Wait for the operation to complete, or query the PID column of DBA_ROLLING_STATUS view to identify the active process.

ORA-45406: operation completed with warnings

Cause: An operation succeeded but warnings were generated.

Action: Consult the DBA_ROLLING_EVENTS view for the list of warnings.

ORA-45407: operation encountered a query error

Cause: An internal database query failed.

Action: Consult the DBA_ROLLING_EVENTS and DBA_ROLLING_PLAN views to identify the error code and instruction that caused the failure.

ORA-45408: parameter name is unknown

Cause: The specified parameter could not be modified because the parameter name was not recognized.

Action: Verify that the parameter is among the available parameters listed in DBA_ROLLING_PARAMETERS view.

ORA-45409: parameter value is invalid or out of bounds

Cause: The specified parameter could not be modified because its value was invalid or out of bounds.

Action: Consult the DBA_ROLLING_PARAMETERS view to obtain the valid range of values for the associated parameter.

ORA-45410: parameter may not be modified

Cause: The specified parameter could not be modified.

Action: Internal parameters may not be modified through the DBMS_ROLLING.SET_PARAMETER procedure. If the parameter is a user parameter, the parameter is no longer meaningful at the current phase of the upgrade.

ORA-45411: operation requires additional arguments

Cause: An operation has failed because one or more arguments were not supplied.

Action: Retry the operation with all required arguments.

ORA-45412: parameter scope argument is unknown

Cause: An operation has failed because the database unique name provided in the scope argument was not known.

Action: Verify that the database unique name exists in the DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG parameter.

ORA-45413: parameter has no default value

Cause: The specified parameter could not be reverted back to its default value because the default value did not exist.

Action: The parameter must be set to an explicit value.

ORA-45414: could not connect to a remote database

Cause: Connections to one or more databases failed.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the involved databases and the specific error codes.

ORA-45415: instruction execution failure

Cause: A rolling upgrade operation has halted due to the failure of one or more required upgrade instructions.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the active instructions and their associated error codes.

ORA-45416: operation cannot start until plan rebuild

Cause: An operation was not permitted to start due to recent parameter modifications which required a rebuild of the upgrade plan.

Action: Call the DBMS_ROLLING.BUILD procedure to rebuild the upgrade plan.

ORA-45417: operation not permitted since current phase was not *string*

Cause: An operation was not permitted to start because the upgrade was in a different phase.

Action: Call the DBMS_ROLLING procedure associated with the current phase.

ORA-45418: database is not running the higher version RDBMS

Cause: A rolling upgrade instruction has failed because a database was not running the correct target RDBMS version.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending databases and restart them on the higher version binaries.

ORA-45419: DB_UNIQUE_NAME initialization parameter was not set for a member.

Cause: The DB_UNIQUE_NAME initialization parameter was not set for a member.

Action: Set the member's DB_UNIQUE_NAME initialization parameter and retry the operation.

ORA-45420: return TNS service was not found

Cause: An instruction failed because a Transparent Network Substrate (TNS) service name for return communication was not found on a remote database.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending database or databases.

ORA-45421: database type is not supported by rolling upgrade

Cause: One or more databases specified in the DG_CONFIG attribute was incompatible with a DBMS_ROLLING administered upgrade.

Action: Disable the databases from the upgrade configuration by setting their associated INVOLVEMENT parameters to a value of NONE, and rebuild the upgrade plan.

ORA-45422: operation requires existing plan

Cause: An operation was not permitted to start because it required an active plan.

Action: Configure an upgrade plan by calling the DBMS_ROLLING.INIT_PLAN procedure.

ORA-45423: target database has mismatched DB_UNIQUE_NAME

Cause: A specified DB_UNIQUE_NAME attribute in a LOG_ARCHIVE_DEST_n parameter did not match the DB_UNIQUE_NAME at the target database.

Action: Ensure the DB_UNIQUE_NAME attribute and associated Transparent Network Substrate (TNS) service name or associated connect string has been configured properly.

ORA-45424: initialization parameter file has unexpected value

Cause: An instruction failed due to an initialization parameter file at a remote database that was found to be invalid.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending database.

ORA-45425: operation halted due to required user interaction

Cause: A rolling upgrade operation stopped because interaction is required.

Action: Consult the DBA_ROLLING_EVENTS view to identify the actions required.

ORA-45426: managed recovery process was not running

Cause: An operation failed due to the inactive managed recovery process at a remote database.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database. Restart the managed recovery process or resolve any errors that would prevent the managed recovery process from remaining active.

ORA-45427: logical standby Redo Apply process was not running

Cause: An operation failed due to the inactive logical standby Redo Apply process at a remote database.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database. Restart the logical standby Redo Apply process or resolve any errors that would prevent the logical standby Redo Apply process from remaining active.

ORA-45428: database was not in expected database role

Cause: An instruction failed due to a database operating in a database role which was not expected.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database. If the role change is due to a failover, the FAILOVER parameter must be set and the upgrade plan must be rebuilt before resuming the rolling upgrade.

ORA-45429: database was set to an invalid Data Guard protection mode

Cause: An instruction failed due to a database operating at a data protection mode that was not expected.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending database. Set the data protection mode accordingly based on the requirement as described in the instruction.

ORA-45430: flashback database was not enabled

Cause: An instruction failed due to a database that was found to not have Flashback Database enabled.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending database. Configure the database with adequate storage to support guaranteed restore points and enable Flashback Database.

ORA-45431: database was mounted or open in an invalid mode

Cause: An instruction failed due to a database that was mounted or open in an invalid mode.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending database and the expected mode. Restart the database in the expected mode.

ORA-45432: future primary database is not a physical standby database

Cause: An operation was not permitted because the future primary database is not a physical standby database.

Action: Specify a physical standby database as the future primary database.

ORA-45433: failover was detected on an unsupported database

Cause: An operation was not permitted because a failover was detected on a database which does not permit continuation of the rolling upgrade.

Action: Consult the DBA_ROLLING_EVENTS view to identify the unsupported database and abort the rolling upgrade.

ORA-45434: multiple failovers of the same type detected

Cause: An operation was not permitted because multiple failovers were detected on standby databases which protect a common target.

Action: Consult the DBA_ROLLING_EVENTS view to identify the offending databases. Remove the unwanted databases from the configuration and rebuild the upgrade plan.

ORA-45435: managed recovery process was running

Cause: An operation failed due to an active managed recovery process at a remote database.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database and stop the managed recovery process.

ORA-45436: logical standby Redo Apply process was running

Cause: An operation failed due to an active Redo Apply process at a remote database.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database and stop the Redo Apply process.

ORA-45437: database upgrade progress is inconsistent

Cause: An operation failed due to the discovery of the catalog upgrade progress on a database that was different from the progress value saved in the plan state.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database and remove the database from the configuration.

ORA-45438: database is not in mounted mode

Cause: An operation failed due to the discovery of a database which was not in mounted mode.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database. If the database was opened, restart the database in mounted mode.

ORA-45439: database is not in open read/write mode

Cause: An operation failed due to the discovery of a database which was not in open read/write mode.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database. Open the database in read/write mode.

ORA-45440: server parameter file has not been configured

Cause: An operation failed due to the discovery of a database which was not configured with a server parameter file that could be modified.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database. Ensure the database has been configured with a server parameter file, and that the parameter file can be modified.

ORA-45441: no databases eligible for rollback

Cause: A rollback operation could not start because the databases have not created the guaranteed restore point needed for rollback.

Action: A rollback is not necessary. The rolling operation can be cancelled by calling DBMS_ROLLING.DESTROY_PLAN.

ORA-45442: rollback is not permitted after a role change

Cause: A rollback operation was not permitted due to a prior role change event such as a switchover or failover.

Action: Reconfigure the Data Guard configuration manually.

ORA-45443: cannot quiesce replicated PL/SQL procedures

Cause: An operation failed because there were other processes executing long running replicated PL/SQL procedures.

Action: Increase the value of DICTIONARY_PLS_WAIT_TIMEOUT and retry the failed operation.

ORA-45486: database update progress is inconsistent

Cause: An operation failed due to the discovery of the update progress on a database that was different from the progress value saved in the plan state.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database and remove the database from the configuration.

ORA-45494: database is not in open read-only mode

Cause: An operation failed due to the discovery of a database which was not in open read-only mode.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the database. Open the database in read-only mode.

ORA-45495: capture is unusable due to not migrating on earlier rolling upgrade

Cause: An operation failed due to the discovery of a capture session that did not migrate across an earlier rolling upgrade before a second rolling upgrade was done.

Action: Re-create the capture.

ORA-45500: Cannot remove a database from a pool that contains a broker configuration.

Cause: An attempt was made to remove a database from a pool that contained a broker configuration.

Action: If the broker configuration has changed, use the SYNC command in gsmctl to synchronize the pool

ORA-45501: The maximum number of global service managers for this region has been exceeded.

Cause: A new Global Service Manager (GSM) was added to a region that already contained the maximum number of GSMs.

Action: The maximum has been reached. Do not attempt to add anymore GSMs.

ORA-45502: Insufficient privileges to perform this operation.

Cause: A Global Service Manager (GSM) command was executed by a non-privileged user.

Action: Either connect as a privileged user, or ask your GSM administrator to add you as a pool or GSM administrator.

ORA-45503: This database is already in cloud *string*.

Cause: An attempt was made to add a database to a cloud when it was already in another cloud.

Action: A database can only be in one cloud. Remove it from the other cloud first.

ORA-45504: Cannot relocate a preferred_all service.

Cause: The command 'relocate service' is not supported for preferred_all services.

Action: Do no attempt to relocate a preferred_all service.

ORA-45505: The maximum number of services has been reached.

Cause: The hard limit for the number of global services has been reached.

Action: No more global services can be added without first removing a service.

ORA-45506: The maximum number of GDS pools has been reached.

Cause: The hard limit for the number of Global Data Services (GDS) pools has been reached.

Action: No more Global Data Services (GDS) pools can be added without first removing a pool.

ORA-45507: Region *string* does not have a buddy region.

Cause: The specified region did not have a buddy.

Action: This message is informational only. Consider using 'modify region' to add a buddy for this region.

ORA-45508: Database *string* does not have an assigned region.

Cause: The specified database did not have an assigned region.

Action: Use 'modify database' to assign a region to this database.

ORA-45509: Database *string* has an invalid status "*string*".

Cause: The specified database had an invalid status.

Action: Check that the account "gsmuser" has been enabled by the remote DBA, that you used the correct password for "gsmuser" when running "add database", and that there is an existing valid node check for registration (VNCR) entry for this database host.

ORA-45510: There is an outstanding GSM request for change number *string* created at *string*. GSM has failed to apply this request *string* times.

Cause: A change request originating from a gdsctl command was not applied after several minutes.

Action: Verify that the Global Service Manager (GSM) server is able to connect to all databases in the framework to apply the change.

ORA-45511: Service *string* does not have a preferred database.

Cause: The specified service did not have a preferred database. This can happen if the database was removed from the pool.

Action: Use 'modify service' to provide a preferred database for this service.

ORA-45512: Service *string* is a local only service which has an available database in region *string*, but does not have a preferred database in the same region.

Cause: The specified service did not have a preferred database in a region in which it had an available database.

Action: Use 'modify service' to provide a preferred database in this region for this service, or remove the available database in this region.

ORA-45513: Database *string* has no global services defined for it.

Cause: A database was added to the global data services framework, but no global services have been defined for it, or they have all been removed.

Action: This is an informational message. Consider defining a service for this database, or removing the database from the framework.

ORA-45514: Region *string* does not contain any databases.

Cause: A region was added to the global data services framework, but no databases were added to this region, or they have all been removed.

Action: This is an informational message. Consider adding a database to this region or removing the region.

ORA-45515: Region *string* does not contain any GSMs.

Cause: A region was added to the global data services framework, but no global services manager servers were defined for this region, or they have all been removed.

Action: This is a warning message. You are advised to define a GSM in this region for high availability.

ORA-45516: GDS pool *string* does not contain any databases.

Cause: The specified Global Data Services (GDS) pool did not contain any databases.

Action: This is an informational message. Consider adding databases to this pool or removing the pool from the global data services framework.

ORA-45517: GDS pool *string* does not contain any global services.

Cause: The specified Global Data Services (GDS) pool did not contain any global services.

Action: This is an informational message. Consider adding services to this pool or removing the pool from the global data services framework.

ORA-45518: Service *string* will not be started on logical/snapshot standby.

Cause: The specified service will not be started on a logical/snapshot standby.

Action: This is a warning message. Consider re-defining lag parameter to "any", if the service needs to be started on a logical/snapshot standby.

ORA-45519: Database pool *string* is empty; this operation cannot be performed on an empty pool.

Cause: The database pool does not contain any databases. Therefore this operation will have no effect.

Action: This is a warning message. Do not perform this operation on an empty database pool.

ORA-45520: A service with locality ANYWHERE cannot set region failover.

Cause: Service attributes ANYWHERE and REGION_FAILOVER are incompatible.

Action: Do not attempt to set REGION_FAILOVER on a service with locality ANYWHERE.

ORA-45521: A service with a primary role cannot set FAILOVER_PRIMARY.

Cause: A service with a primary role cannot set FAILOVER_PRIMARY.

Action: Do not attempt to set FAILOVER_PRIMARY on a service that has a primary role.

ORA-45522: LOCAL_ONLY service *string* cannot be relocated to a database in another region.

Cause: The specified service is LOCAL_ONLY and cannot be relocated to a database in a different region.

Action: Do not relocate a LOCAL_ONLY service to a database in another region.

ORA-45523: Warning: service *string* is already stopped.

Cause: The service was stopped already.

Action: None; this is only a warning message.

ORA-45524: must explicitly specify Global Data Services pool name because there could be multiple candidates

Cause: An attempt to have a default Global Data Services pool when multiple pools already coexist in the domain failed.

Action: Do not omit '-gdspool gdspool_name_list' when multiple pools exist

ORA-45525: A value of TRANSACTION was provided for the service parameter '-failovertime', but bad or nonexistent value was specified for service parameter '-retention'.

Cause: The command specified a value of TRANSACTION for the service parameter '-failovertime', and either did not provide a value for the parameter '-retention', or provided a value that was less than or equal to the value provided for the parameter '-replay_init_time'.

Action: If a service is created with a value of TRANSACTION for the parameter '-failovertime', then a value must be provided for the parameter '-retention', and that value must be greater than the value provided for the parameter '-replay_init_time'.

ORA-45526: A value of TRANSACTION was provided for the service parameter '-failovertime', but a bad or nonexistent value was specified for service parameter '-replay_init_time'.

Cause: The command specified a value of TRANSACTION for the service parameter '-failovertime', and either did not provide a value for the parameter '-replay_init_time', or provided a value that was less than or equal to the value provided for the parameter '-failoverdelay'.

Action: If a service is created with a value of TRANSACTION for the parameter '-failovertime', then a value must be provided for the parameter '-replay_init_time', and that value must be greater than the value provided for the parameter '-failoverdelay'.

ORA-45527: Database compatibility level was too low for use with Global Data Services (GDS).

Cause: The major database compatibility level is below 12. The Global Data Services (GDS) feature requires that the database compatibility level of all participating databases be at 12 or above.

Action: In order to use this database for Global Data Services (GDS), an upgrade must be completed so that its major compatibility level is at 12 or above.

ORA-45528: Service *string* has not been globally started.

Cause: An attempt was made to start the service in a specific database without first starting it globally.

Action: Start the service globally by using 'start service' command without specifying the '-database' parameter.

ORA-45529: Database has not been configured to use an SPFILE.

Cause: The database was not configured to use an SPFILE. This is required before it can be used within a Global Data Services (GDS) framework.

Action: Reconfigure the database to use an SPFILE and attempt the action again.

ORA-45530: A local service with the same name already exists.

Cause: An attempt was made to create a global service with the same name as an existing local service.

Action: Use a different service name or delete the existing local service.

ORA-45531: This database is already in another Global Data Services (GDS) framework.

Cause: An attempt was made to create a Global Data Services (GDS) catalog on a database that was already in another GDS framework.

Action: Remove this database from the other framework before using it as a Global Data Services (GDS) catalog.

ORA-45532: This database is already a catalog for another Global Data Services (GDS) framework.

Cause: An attempt was made add a database to a Global Data Services (GDS) framework, but it was already a catalog database for another framework.

Action: Do not attempt to to add a Global Data Services (GDS) catalog to another GDS framework.

ORA-45533: Service *string* is already being modified from another GDSCTL session.

Cause: The specified service was already in the process of being modified.

Action: Wait until any other service modifications have completed. If this problem persists, contact Oracle Support Services.

ORA-45534: There is a running GSM (Global Service Manager) connected to the catalog.

Cause: This command could not be executed while there were running GSM (Global Service Manager) servers connected to the catalog.

Action: Shut down all GSM servers before running this command.

ORA-45535: Catalog version cannot be determined.

Cause: The version of the GDS (Global Data Services) catalog could not be determined.

Action: Contact Oracle Support Services.

ORA-45536: This version of GDSCTL is not compatible with the GDS (Global Data Services) catalog.

Cause: The version of GDSCTL being used was not compatible with the current GDS catalog.

Action: Refer to the documentation for compatible versions and upgrade or downgrade GDSCTL or the GDS catalog.

ORA-45537: This version of GSM (Global Service Manager) is not compatible with the GDS (Global Data Services) catalog.

Cause: The version of GSM being used was not compatible with the current GDS catalog.

Action: Refer to the documentation for compatible versions and upgrade or downgrade GSM or the GDS catalog.

ORA-45538: The database version is not compatible with the GDS (Global Data Services) catalog.

Cause: The version of the database being added was not compatible with the GDS catalog.

Action: Refer to the documentation for compatible versions and upgrade or downgrade the database or the GDS catalog.

ORA-45539: Database *string* has already been added to another pool.

Cause: An attempt was made to add a database to a pool, but this database has already been added to another pool.

Action: Do not attempt to add a database to two different pools.

ORA-45540: Call to SRVCTL failed with status *string*, errors: *string*.

Cause: An attempt to call the SRVCTL command line failed with the specified errors.

Action: Refer to the Oracle Real Application Clusters (Oracle RAC) documentation and resolve the problems reported by SRVCTL.

ORA-45541: Parameters "-serverpool" and "-cardinality" are invalid for administrator-managed Oracle RAC databases.

Cause: The service command stipulated -serverpool or -cardinality but this database was an administrator-managed Oracle RAC database, which does not recognize these parameters.

Action: Do not use -serverpool or -cardinality on administrator-managed Oracle RAC databases.

ORA-45542: Parameters "-serverpool", "-cardinality", and "-instances" are invalid for non-Oracle RAC databases.

Cause: The service command stipulated -serverpool, -cardinality, or -instances but this database was a non-Oracle RAC database, which does not recognize these parameters.

Action: Do not use -serverpool, -cardinality, or -instances on non-Oracle RAC databases.

ORA-45543: Parameter "-instances" is invalid for policy-managed Oracle RAC databases.

Cause: The service command stipulated -instances, but this database was a policy-managed Oracle RAC database, which does not recognize this parameter.

Action: Do not use -instances on policy-managed Oracle RAC databases.

ORA-45544: An invalid weight string was provided for manual override of runtime load balancing.

Cause: The string provided by GDSCTL to override runtime load balancing with manual region weights was badly formed.

Action: Retry the command. If the problem persists, contact Oracle Support Services.

ORA-45545: cannot delete all remaining instances

Cause: This command would delete all remaining instances from the service, leaving the service in an invalid state.

Action: Do not provide an instance list that would delete all instances.

ORA-45546: cannot create process to run SRVCTL with system error *string*

Cause: There was a problem creating a new process to run SRVCTL from the command line.

Action: Check the Oracle alert log on the Oracle database server machine and rectify the problem on the server.

ORA-45547: A call to SRVCTL failed with error *string* because of bad parameters.

Cause: The command-line execution of SRVCTL failed because of bad parameters.

Action: Check the database server traces and contact Oracle Support Services.

ORA-45548: The catalog database can be downgraded, downgrading a catalog database after making changes is not advised.

Cause: This is a warning message only. This command required catalog changes and the 'compatible' database parameter indicated that the database could be downgraded. Downgrading a catalog database after making catalog changes is not advised and may cause data loss in the catalog.

Action: Make your database upgrade permanent by updating the 'compatible' database parameter before using GDSCTL commands that will alter the catalog.

ORA-45549: Catalog changes are not possible without a running GSM at the current version.

Cause: This command required catalog changes, which are not allowed unless there is at least one Global Service Manager (GSM) server running at the current version.

Action: Start a GSM server that is running the current version of the software. If there are none, upgrade at least one existing GSM or add a new one at the current version.

ORA-45550: service does not exist

Cause: An attempt was made to start a service that did not exist on the target database.

Action: None. This error was caught by the Global Service Manager (GSM), and the service was created automatically.

ORA-45551: Instance *string* was not in the instance list for this database.

Cause: An attempt was made to delete an instance from this database but the instance was not in the existing instance list.

Action: None. This is a warning only. No action was taken for the named instance.

ORA-45552: None of the provided instances were in the instance list for this database.

Cause: The provided instance list did not contain any valid instances, or the existing instance list for the catalog was empty.

Action: Check the list of instances and run the command again if necessary.

ORA-45553: Service *string* does not have any instances defined for databasell (*s\l*) *string*.

Cause: An attempt was made to start a service on an administrator-managed Oracle RAC database, but there were no instances defined for the service on that database.

Action: Define instances for the service on all of the listed databases before attempting to start the service.

ORA-45554: There are no services that can start on database *string*.

Cause: An attempt was made to start all services for a given database but there were no services that could start.

Action: None. This is a warning message indicating that no action was taken for this command.

ORA-45555: The target database is not in the preferred or available list for this service.

Cause: The new database name provided was not in the list of preferred or available databases for the service.

Action: Either add the new database to the service or relocate the service to another database.

ORA-45556: A database name or service name was not provided.

Cause: A disable service request did not provide either a database name or a service name.

Action: Provide either a service name or a database name on the request.

ORA-45557: The database pool *string* does not contain a broker configuration.

Cause: An attempt was made to remove a broker configuration from a database pool that does not contain one.

Action: Rerun the command using a different database pool.

ORA-45558: There are no database pools in this catalog.

Cause: The catalog did not have any database pools defined.

Action: Create at least one database pool before running any other commands.

ORA-45559: Global service manager (GSM) *string* did not provide a version.

Cause: The GSM did not provide a version when attempting to connect to the catalog.

Action: This version of GSM is too old to connect to the catalog. Upgrade the GSM installation.

ORA-45560: Database *string* must contain at least one preferred instance.

Cause: The MODIFY command did not add any preferred instances or removed all existing preferred instances from this database.

Action: Provide at least one preferred instance, or do not attempt to remove all existing preferred instances.

ORA-45561: region name is required

Cause: A region name was not provided and was required because there were multiple regions in the catalog.

Action: Provide the region name on the command line.

ORA-45562: The Global Data Services catalog must be created in a root container.

Cause: The CREATE CATALOG command could not be executed on a container other than the root container.

Action: Use the root container to create the Global Data Services catalog.

ORA-45563: The pool database cannot be a pluggable database.

Cause: The ADD DATABASE command could not add a pluggable database.

Action: Provide the consolidated database name instead.

ORA-45564: pool "*string*" contains a sharded root configuration; only preferred_all services are allowed

Cause: An attempt was made to add non-uniform service to a pool that contains a sharded root.

Action: None

ORA-45565: pool "*string*" contains a sharded root configuration; databases cannot be added to this pool

Cause: An attempt was made to add a database to a pool that contains a sharded root.

Action: None

ORA-45566: pool "*string*" contains a sharded root configuration

Cause: An attempt was made to work with a generic pool that was not a sharded root.

Action: None

ORA-45567: pool "*string*" is not a shard

Cause: An attempt was made to work with a generic pool that was not a shard.

Action: None

ORA-45568: database link to catalog is invalid

Cause: An attempt to use a database link from a pool database to a catalog failed.

Action: Check the network connectivity and master global service manager (GSM) endpoint.

ORA-45570: The *string* is not empty and cannot be removed.

Cause: The shardspace or shardgroup was not empty and contained at least one shardgroup or shard.

Action: Delete all shards or shardgroups before calling the procedure again.

ORA-45572: Remote shard conversion job *string* failed with error: *string*

Cause: The remote scheduler job to convert a shard from seed has failed.

Action: Read the error and resolve the problem described, then restart the job using the "deploy" command in GDSCTL.

ORA-45573: shard open mode is *string*, it should be READ WRITE

Cause: The shard was opened in the incorrect mode for Oracle Data Guard broker setup.

Action: If the open mode was "MOUNTED", then check that the shard has been correctly converted from a shard seed. If the shard was already a converted primary shard, then open it in the correct mode and rerun "deploy" from GDSCTL.

ORA-45574: shard has role *string*, it should be PRIMARY

Cause: The shard did not have the correct role for Oracle Data Guard broker setup.

Action: Ensure the shard is placed in a shardgroup that will automatically assign the correct role to it.

ORA-45575: Deployment has terminated due to previous errors.

Cause: Due to previous errors deployment could not continue.

Action: Resolve the issues described in all of the displayed errors and rerun "deploy" from GDSCTL.

ORA-45576: Shard *string* requires conversion from seed, but the remote scheduler is not configured.

Cause: The remote scheduler agent is required to convert the shard from a seed, but it has not been configured.

Action: Configure the remote scheduler and rerun "\deploy" from GDSCTL.

ORA-45577: cannot convert standby shards to primary shard *string* because the DBID is unknown

Cause: A primary shard was added to the catalog but the DBID was not discovered, and none of the standby shards could be converted.

Action: Remove the primary shard from the catalog and re-add it so that the database identifier (DBID) can be discovered.

ORA-45578: No credential for scheduler jobs.

Cause: Credential could not be created or retrieved.

Action: Specify -osaccount and -ospassword in "add shard", or use "add credential" command to add credential.

ORA-45579: There are converted physical standby shards for intended primary seed shard *string*.

Cause: The primary shard was still an unconverted seed, but it had converted standby shards. Standby shards cannot be converted before their primary shard.

Action: Either remove the converted standby shards or remove the primary shard, convert it manually, and re-add it.

ORA-45580: invalid value specified for input parameter *string*

Cause: The specified parameter was set to an invalid value.

Action: Verify the parameter value and retry operation.

ORA-45581: cannot mix sharded and non-sharded pools in the same catalog

Cause: An attempt was made to create a sharded and a non-sharded database pool in the same catalog.

Action: Create a separate catalog for each database pool type.

ORA-45582: The chunk *string* was not found or has been moved to another shard.

Cause: The client application specified a chunk name associated with the current user call that was not found on the current shard.

Action: Invalidate the connection pool routing table for this shard.

ORA-45583: chunk *string* does not contain the specified key

Cause: The chunk, specified by the client application, was split or never contained the specified key.

Action: Invalidate the pool routing table for the given chunk. The client should ask the listener to route to the specified key.

ORA-45584: The shard object to be removed does not exist.

Cause: The shardspace or shardgroup that you intended to remove did not exist in catalog.

Action: Do not attempt to remove the shard object again.

ORA-45585: Chunk move failure: target shard is unavailable: "*string*"

Cause: The chunk move failed. The source shard could not connect to the target.

Action: Check the availability of the target shard and network configuration.

ORA-45586: Chunk move failure: target shard is in invalid state: "*string*".

Cause: The chunk move failed. The target shard was improperly configured.

Action: Call the GDSCTL VALIDATE command for more details.

ORA-45587: Chunk move failure: target standby is unavailable; connection string: "*string*"

Cause: The chunk move failed. The source shard could not connect to the target standby shard.

Action: Check the availability of the target standby shard and broker configuration.

ORA-45588: Chunk move failure: unable to read tablespace information "*string*"

Cause: Shard metadata inconsistency was detected.

Action: Call the GDSCTL VALIDATE SHARD command for more details.

ORA-45589: Chunk move failure: DB_FILE_CREATE_DEST value is not valid

Cause: Shard configuration inconsistency was detected.

Action: Set the DB_FILE_CREATE_DEST initialization parameter to a valid existing folder.

ORA-45590: Chunk move failure: backup cannot be created for tablespace "*string*"

Cause: Shard configuration inconsistency was detected.

Action: Set the DB_FILE_CREATE_DEST initialization parameter to a valid existing folder.

ORA-45591: Chunk move failure: data file copy error. Destination: "*string*"

Cause: There was a database management system (DBMS) file transfer error.

Action: Check the alert log for details.

ORA-45592: Chunk move failure: RPC error on: "*string*"

Cause: There was a database management system (DBMS) file transfer error.

Action: Check the alert log for details.

ORA-45593: Chunk move failure: file delete error on source shard

Cause: The backup file could not be deleted from the file system.

Action: Check the operating system log for details.

ORA-45594: Chunk move failure: cannot put chunk into read-only state

Cause: There was an internal error which prevented a chunk state change.

Action: Check the alert log for details.

ORA-45595: Chunk move failure: export metadata error

Cause: There was an internal error which prevented the metadata export.

Action: Check the alert log for details.

ORA-45596: cannot remove region because it contains a shardgroup

Cause: The region was not empty because it contained at least one shardgroup.

Action: Remove all shardgroups from the region and retry the operation.

ORA-45598: Shard *string* is in converted state *string*, it should be either "PRIMARY" or "PHYSICAL STANDBY".

Cause: The shard was in an invalid or unsupported state for use with sharding.

Action: Rebuild the shard using Oracle Database Configuration Assistant (DBCA) or reapply an RMAN backup to bring the shard to a supported state.

ORA-45599: Shard *string* is in converted state *string*, but does not have a valid DBID.

Cause: The discovered database identifier (DBID) for the shard was invalid, but the shard was already converted from a shard seed.

Action: Check the DBID for the shard and report this issue to Oracle Support Services.

ORA-45600: Transparent Sensitive Data Protection (TSDP) internal error

Cause: There was an unexpected error during TSDP operation.

Action: Retry the command. If the problem persists, contact Oracle Support Services.

ORA-45601: Invalid data has been found and discarded. Valid data has been imported.

Cause: The names of invalid or nonexistent database objects were found in the XML input.

Action: Check the trace files for the names of the invalid objects found in the XML input.

ORA-45602: Schema *string* does not exist.

Cause: The schema specified did not exist.

Action: Specify a valid schema.

ORA-45603: Schema *string* does not contain table *string*.

Cause: The table specified did not exist in the schema.

Action: Specify a valid table.

ORA-45604: Column *string.string* does not exist in schema *string*.

Cause: The column specified did not exist.

Action: Specify a valid column.

ORA-45605: invalid sensitive type *string*

Cause: A sensitive type that was associated with one or more sensitive columns did not exist.

Action: Ensure the valid sensitive type is mentioned. If it is a new sensitive type, include the definition in the XML input.

ORA-45606: There was no sensitive column matching the given criteria.

Cause: There was no sensitive column matching the schema, table and column input.

Action: Ensure the valid column is mentioned.

ORA-45607: Column *string.string* in schema *string* has already been identified as sensitive.

Cause: The column was already identified as sensitive.

Action: Remove the column from the list of sensitive columns to be imported.

ORA-45608: There are no sensitive columns for source *string*.

Cause: No sensitive columns were found for the given source.

Action: Specify the valid source.

ORA-45609: Sensitive type *string* already exists.

Cause: The sensitive type already existed in the database.

Action: Specify a different name for the sensitive type.

ORA-45610: Sensitive type *string* does not exist.

Cause: The sensitive type did not exist in the database.

Action: Specify the valid sensitive type.

ORA-45611: cannot drop sensitive type *string*

Cause: The sensitive type that is associated with one or more columns could not be dropped.

Action: Ensure the sensitive type is not associated with any column before dropping it.

ORA-45612: A Transparent Sensitive Data Protection (TSDP) policy with name *string* already exists.

Cause: A TSDP policy with the same name was found.

Action: Specify a different name for the policy.

ORA-45613: invalid Oracle security feature

Cause: The Oracle security feature specified was not supported by Transparent Sensitive Data Protection.

Action: Specify a valid security feature.

ORA-45614: invalid Transparent Sensitive Data Protection (TSDP) policy *string*

Cause: The TSDP policy specified did not exist.

Action: Specify a valid policy.

ORA-45615: One or more sensitive column types already exist.

Cause: Importing the list of sensitive columns succeeded. However, one or more sensitive column types already existed in the database and were not imported again. The corresponding column is associated with the existing type.

Action: Check the trace files for details regarding which sensitive column types were not imported.

ORA-45616: Column *string.string* in schema *string* is not identified as sensitive.

Cause: An attempt was made to alter a column that was not identified as sensitive.

Action: Specify a valid column.

ORA-45617: Policy *string* is not associated with sensitive column type *string*.

Cause: The given policy was not associated with the sensitive column type.

Action: Specify the valid combination of policy and sensitive column type.

ORA-45618: policy enforcement failure on one or more columns

Cause: Policy enforcement on one or more columns encountered errors.

Action: Check the alert log or trace files for more details.

ORA-45619: Policy *string* is not enabled on column *string*.

Cause: The given policy was not enabled on the column.

Action: Specify a valid policy.

ORA-45620: Policy *string* is already associated with sensitive column type *string*.

Cause: The given policy was associated with the given sensitive column type.

Action: Specify the valid combination of policy and sensitive column type.

ORA-45621: Disabling of a policy on one or more columns failed.

Cause: Errors were encountered while disabling one or more policies.

Action: Check the alert log for more details.

ORA-45622: warnings generated during policy enforcement

Cause: The cause of this error could be one or more of the following: - The policy that was associated with the sensitive column type of a column was not enabled on the column because no subpolicy matched the column properties. - There was no policy associated with the sensitive column type of a sensitive column. - A conflicting redaction policy was enabled on the table.

Action: Check the alert log for more details.

ORA-45623: Disabling protection failed during import of sensitive columns.

Cause: Importing the list of sensitive columns failed because there was a problem in disabling protection on the columns.

Action: Check the alert log or trace files for more details.

ORA-45624: reenabling protection failed before import

Cause: Importing the list of sensitive columns failed because there was a problem in disabling protection on the columns. A subsequent attempt to reenabling protection on the columns also failed.

Action: Check the alert log for more details.

ORA-45625: reenabling protection failed after import

Cause: Importing the list of sensitive columns succeeded. A subsequent attempt to reenabling protection on the columns failed.

Action: Check the alert log for more details.

ORA-45626: Dropping of one or more columns from the list failed.

Cause: Disabling protection on the column failed.

Action: Check the trace files for more details.

ORA-45627: There is no associated sensitive column(s) of sensitive column type *string*.

Cause: DBMS_TSDP_PROTECT.ENABLE_PROTECTION PL/SQL API is executed prior to associating sensitive columns to the sensitive column type.

Action: Specify a valid sensitive column for the sensitive column type using DBMS_TSDP_PROTECT.ASSOCIATE_POLICY PL/SQL API.

ORA-45628: no policy associated with sensitive column type *string*

Cause: There was no policy associated with the sensitive column type.

Action: Specify a valid sensitive column type.

ORA-45629: policy *string* is enabled on one or more columns

Cause: A Transparent Sensitive Data Protection policy that was enabled on a column could not be altered or dropped.

Action: Disable the policy before altering or dropping the policy.

ORA-45630: Policy *string* is associated with one or more sensitive types.

Cause: A Transparent Sensitive Data Protection policy that was associated with a sensitive column type could not be dropped.

Action: Disassociate the policy from the sensitive column type before dropping the policy.

ORA-45631: Policy *string* does not have the given condition.

Cause: The given condition was not found for the policy.

Action: Specify the valid condition for the policy.

ORA-45632: default policy *string* cannot be altered

Cause: The default policy for Transparent Sensitive Data Protection could not be altered.

Action: Specify the valid policy to be altered.

ORA-45633: default policy *string* cannot be dropped

Cause: The default policy for Transparent Sensitive Data Protection could not be dropped.

Action: Specify the valid policy to be dropped.

ORA-45634: The security feature does not contain parameter *string*.

Cause: An invalid parameter was found for the given security feature.

Action: Verify the parameters input to the policy.

ORA-45635: invalid parameter found: *string*

Cause: An invalid parameter was found for the given security feature.

Action: Verify the parameters input to the policy.

ORA-45636: Input parameter for '*string*' is not valid.

Cause: Invalid input was given for the parameter.

Action: Enter valid input.

ORA-45637: invalid condition given for policy condition

Cause: The given condition was invalid.

Action: Enter a valid value for the condition.

ORA-45638: Policy *string* is enabled on one or more columns of sensitive type *string*.

Cause: A Transparent Sensitive Data Protection policy that was enabled on one or more columns of a particular sensitive type could not be disassociated from the sensitive type.

Action: Ensure the policy is not enabled on a column of the given sensitive type.

ORA-45639: discovery result cannot be imported

Cause: One or more columns from the XML input were already identified as sensitive by a different source.

Action: Check the trace file for a list of sensitive columns that were already identified as sensitive.

ORA-45640: Columns from SYS schema cannot be marked as sensitive.

Cause: A column in a SYS-owned table was being marked as sensitive.

Action: Ensure the column being marked as sensitive does not belong to SYS schema.

ORA-45641: cannot specify SEC_RELEVANT_COLS parameter

Cause: The SEC_RELEVANT_COLS parameter was specified while configuring a Transparent Sensitive Data Protection (TSDP) policy. SEC_RELEVANT_COLS_OPT parameter can be specified to indicate that TSDP should input the sensitive column as input to SEC_RELEVANT_COLS parameter at the time of enabling protection.

Action: Use the SEC_RELEVANT_COLS_OPT parameter to configure the security relevant column.

ORA-45642: transparent sensitive data protection (TSDP) operation not supported

Cause: An attempt was made to perform the TSDP operation from inside the application install or patch begin-end block.

Action: Perform the TSDP operation outside the application install or patch begin-end block.

ORA-45643: specified column cannot be marked as sensitive.

Cause: An attempt was made to mark one of the virtual or hidden columns as sensitive.

Action: Retry the operation by removing the virtual or hidden column.

ORA-45900: data file number *string* already included as *string*

Cause: RMAN attempted to use the specified data file number, but this data file number was already in use by a different container database.

Action: Resolve the conflict and retry the command.

ORA-45901: File *string* is from different container identifier *string*; current *string*

Cause: This backup piece contained a data file that did not belong to the current container. Cataloging such a backup piece is not allowed.

Action: Connect to root or to the correct Pluggable Database and retry the command.

ORA-45902: cannot rename data file '*string*' - file was instantly restored.

Cause: During ALTER DATABASE RENAME or RMAN command SWITCH, the rename was specified for an instantly restored file.

Action: Rename the file that was not instantly restored or wait until the repopulation work is complete and the retry the command.

ORA-45903: catalog instantly restored data file copy *string* is not supported

Cause: This data file copy was instantly restored. Cataloging such file is not supported.

Action: Do not request to catalog instantly restored data file copy.

ORA-45904: instant restore of data file copy *string* is not supported

Cause: An attempt was made to restore a data file copy in instant restore mode. This is not supported.

Action: Do not restore a data file copy in instant restore mode.

ORA-45905: deleting or restoring instantly restored data file *string* is not supported

Cause: This data file was instantly restored with the full option. A background process was repopulating the data file. An attempt to take the data file out of the process failed. Deleting or restoring such files is not supported.

Action: Retry the command later.

ORA-45906: moving instantly restored data file *string* is not supported

Cause: This data file was instantly restored. Moving such file is not supported.

Action: Do not request to move instantly restored data file.

ORA-45907: instant restore of data file *string* failed

Cause: During an instant restore, it was not possible to initialize the destination data file. A possible cause for this message is that the instant restore feature is disabled in this database.

Action: Check the other messages in the error stack, alert log, or trace file to see if there is a specific reason for this failure. If the situation cannot be resolved, then request a regular (not instant) restore.

ORA-45908: cannot create a control file record for data file number *string*

Cause: This data file was instantly restored. An attempt was made to create a record in the control file for the data file. Unless the database is mounted, this command cannot be completed.

Action: Mount the database and retry the command.

ORA-45909: restore, recover or block media recovery may be in progress

Cause: A backup or copy was attempted while restore, recover or block media recovery was in progress. This error should be preceded by another error indicating file access enqueue problem for a file specified in a backup, copy or restore operation.

Action: Let restore, recover or block media recovery finish before starting a backup or copy operation.

ORA-45910: cannot look up the rewrapped key for tablespace *string*

Cause: During transport, an encrypted tablespace could not find its rewrapped key as part of a Recovery Manager (RMAN) cross-platform command.

Action: Connect to the respective pluggable database and check if the master table is created.

ORA-45911: cannot restore as encrypted/decrypted on database with compatibility below 12.2

Cause: Restore with encryption and decryption is only supported on 12.2 compatible databases and above.

Action: Upgrade database or restore without encryption/decryption.

ORA-45912: cannot restore as encrypted or decrypted from backup piece with pre-12.2 compatibility

Cause: An attempt to restore with encryption or decryption failed because backups must be Oracle Database 12c Release 2 compatible.

Action: Create a backup of the Oracle Database 12c Release 2 database or restore without encryption or decryption.

ORA-45913: cannot backup file *string* because it belongs to dropped PDB

Cause: The indicated file was not included in the backup because it belongs to a dropped pluggable database (PDB).

Action: Do not request to backup dropped PDB files.

ORA-45914: cannot backup a mounted control file of type backup

Cause: An attempt was made to backup a control file when the mounted control file at that time was a backup control file. This is not allowed.

Action: Mount a current control file and retry the operation.

ORA-45915: physical block size *string* does not match logical block size *string*

Cause: The physical block size and logical block size of the backup piece did not match.

Action: Ensure that the physical block size size and logical block size match before copying the backup piece.

ORA-45916: must use backup control file that has dropped PDB with GUID *string*

Cause: Some restored files belonged to the dropped pluggable database (PDB) with respect to the current control file.

Action: Restore and mount a backup control file that has the dropped PDB.

ORA-45917: nonexistent backup piece or data file "*string*" in the current container

Cause: An attempt was made to access a backup piece or data file. This attempt failed because the specified file is not known to the current container.

Action: Specify the name of an existing file that can be accessed by the current container. Check the relevant V\$ table for a list of possible files.

ORA-45918: data file *string* is offline: incremental start SCN is too recent

Cause: The incremental start system change number (SCN) which was specified when starting an incremental data file backup was greater than the data file checkpoint SCN, which could cause some blocks to be missed.

Action: Specify a smaller incremental start SCN.

ORA-45919: no key present in wallet

Cause: An attempt was made to restore a backup as encrypted. This attempt failed because the current wallet did not contain an encryption key with which to encrypt the data.

Action: Create an encryption key in the wallet and retry the command.

ORA-45920: multiple keys present in wallet

Cause: An attempt was made to restore a backup as encrypted. This attempt failed because the current wallet contained more than one encryption key.

Action: Specify with which key to encrypt by using the USING KEY clause of RESTORE AS ENCRYPT.

ORA-45922: backup operation interrupted by restoration or recovery of file *string*

Cause: A restoration, recovery, or block media recovery interrupted a backup or copy in progress. This error indicates that restoration or recovery of file is given preference over the backup operation.

Action: Let restoration, recovery, or block media recovery finish before starting a backup or copy operation.

ORA-45923: Archived log thread *string* sequence *string* does not exist.

Cause: An attempt was made to access the indicated archived log. This attempt failed because the specified file is not known to the backup step.

Action: Specify the name of an existing file that can be accessed by the database.

ORA-45924: Multi-section archived log backup requires COMPATIBLE *string* or higher.

Cause: An attempt was made to perform a multi-section archived log backup with a database compatibility that was not high enough.

Action: Raise the compatibility level and retry the operation.

ORA-45925: cannot obtain *string* enqueue for archived log thread *string* sequence *string*

Cause: The file access enqueue could not be obtained for a file specified in a backup, copy or restore operation.

Action: Wait until the conflicting operation is complete, then retry the copy or backup.

ORA-45926: failed to generate RMAN backup encryption key: *string*

Cause: RMAN failed to generate a typed key for backup encryption. Error code definitions as follows: 2 : key buffer is too small 5 : invalid owner type 7 : cannot find specified encryption key 9 : master key revoked or disabled

Action: Resolve the error or contact Oracle Support Services.

ORA-45927: PDB *number* with GUID *string* now has ID *number* and GUID *string*. RMAN cannot backup file *string* due to PDB change.

Cause: The indicated pluggable database (PDB) has changed since the start of the backup operation. RMAN can no longer back up the files associated with the PDB.

Action: Restart the backup.

ORA-45928: SBT Library callback invalid function value *string*

Cause: An unrecognized function code was supplied from the SBT library.

Action: The SBT library will determine if this is a fatal error or not. If this is a fatal error, the SBT will report the error with more detail.

ORA-46000 to ORA-46988

ORA-46000: invalid option to apply XS Data Security

Cause: The input value was not a valid option to apply XS Data Security.

Action: Use a valid option to apply XS Data Security.

ORA-46001: argument *string* is not valid for XS Data Security policies

Cause: An illegal argument value was used with DBMS_RLS to apply XS Data Security.

Action: Use the XS_DATA_SECURITY API to apply XS Data Security.

ORA-46003: Column "*string*" is not valid in data security policy for "*string*"

Cause: An invalid column was specified in the data security policy.

Action: Correct the column name in the policy.

ORA-46004: XS Data Security policy is not applied on *string.string*

Cause: A table without an XS Data Security policy applied was specified.

Action: Specify a table with one XS Data Security policy applied.

ORA-46005: multiple XS Data Security policies applied on *string.string*

Cause: A table with more than one XS Data Security policy applied was specified.

Action: Specify a table with one XS Data Security policy applied.

ORA-46006: cannot mix VPD column and XS column constraint policies

Cause: The object was protected by both VPD (Virtual Private Database) column security and XS column constraint policies.

Action: Disable or drop either the VPD or XS column policies.

ORA-46007: no XS Data Security policy associated with *string.string*

Cause: A table not associated with an XS Data Security policy was specified.

Action: Specify a table associated with an XS Data Security policy.

ORA-46008: multiple XS Data Security policies associated with *string.string*

Cause: A table associated with more than one XS Data Security policy was specified.

Action: Specify a table associated with one XS Data Security policy.

ORA-46019: User-built Static ACL Materialized View does not exist

Cause: A non-existing user-built Static ACL Materialized View was specified

Action: Create a user-built Static ACL Materialized View with the specified name or use system-built Static ACL views

ORA-46020: User-built Static ACL Materialized View has invalid schema

Cause: A user-built Static ACL Materialized View was specified but with an incorrect schema

Action: Create a user-built Static ACL Materialized View with at least the required columns with correct names and types

ORA-46021: Invalid refresh mode specified for Static ACL Materialized View

Cause: The refresh mode specified for the Materialized View supporting static ACLs is invalid.

Action: Specify either "ON DEMAND" or "ON COMMIT" for parameter refresh_mode

ORA-46022: Invalid name specified for user-built Static ACL Materialized View

Cause: The name specified for the Static ACL Materialized View (ACLMV) is reserved for system-built ACLMVs.

Action: Rename the user-built Static ACL Materialized View

ORA-46023: Application Session affinity is not the same as when the cursor was parsed.

Cause: The security context was changed and was different from the time the cursor was parsed.

Action: Make sure the security context is the same as when the cursor was parsed.

ORA-46024: The policy schema differs from the object schema for Static ACL Materialized View based XDS policy.

Cause: The specified object schema was different from the policy schema.

Action: Make sure the object and the policy have the same schema.

ORA-46025: no static rule specified in applied policy

Cause: The policy applied on the table did not contain any static rules.

Action: Ensure the applied policy has at least one static rule.

ORA-46026: creation of static ACL materialized view (MV) failed

Cause: Creation of the static access control list (ACL) materialized view (MV) failed.

Action: Check the trace file for detailed error information.

ORA-46050: Oracle Real Application Security internal error.

Cause: There was an Oracle Database Real Application Security internal error.

Action: None

ORA-46051: invalid application user specified

Cause: An invalid application user was specified.

Action: Check the user name and execute the function or procedure again.

ORA-46052: invalid session ID specified

Cause: An invalid XS Security session ID was specified.

Action: Check the session ID and execute the function or procedure again.

ORA-46053: invalid cookie specified

Cause: An invalid XS Security session cookie was specified.

Action: Check the session cookie and execute the function or procedure again.

ORA-46054: invalid namespace specified

Cause: An invalid XS session application namespace or system-defined namespace was specified. Certain operations are not allowed on the system-defined namespace.

Action: Check the namespace and execute the function or procedure again.

ORA-46055: invalid role specified

Cause: An invalid application role was specified.

Action: Check the role and execute the function or procedure again.

ORA-46056: invalid namespace or attribute specified

Cause: An invalid XS Security application namespace or attribute was specified.

Action: Check the namespace and attribute, and execute the function or procedure again.

ORA-46057: namespace already exists

Cause: The specified XS Security application namespace was already in existence.

Action: Execute the function or procedure with a different namespace.

ORA-46058: attribute *string* is invalid

Cause: An invalid XS Security application namespace attribute was specified.

Action: Check the attribute and execute the function or procedure.

ORA-46059: Invalid ACL identifier specified

Cause: The specified ACL identifier is invalid.

Action: Check the ACL identifier, and execute the function or procedure again with a valid ACL ID.

ORA-46060: user name not specified

Cause: An application user was not specified.

Action: Execute the function or procedure with a user name.

ORA-46061: session ID not specified

Cause: XS Security session ID was not specified.

Action: Execute the function or procedure with a session ID.

ORA-46062: Namespace not specified

Cause: XS Security application namespace was not specified.

Action: Execute the function or procedure with a namespace.

ORA-46063: not attached to XS Security session

Cause: There was no attachment to an XS Security session.

Action: Attach to an XS Security session and execute the function or procedure.

ORA-46064: attribute name not specified

Cause: XS Security application namespace attribute name was not specified.

Action: Execute the function or procedure with an attribute name.

ORA-46065: attribute value not specified

Cause: XS Security application namespace attribute value was not specified.

Action: Execute the function or procedure with an attribute value.

ORA-46066: inactivity timeout not specified

Cause: XS Security session inactivity timeout was not specified.

Action: Execute the function or procedure with an inactivity timeout value.

ORA-46067: cookie not specified

Cause: XS Security session cookie was not specified.

Action: Execute the function or procedure with a cookie value.

ORA-46068: role not specified

Cause: XS Security role was not specified.

Action: Execute the function or procedure with a Role value.

ORA-46069: operation disallowed in an application session

Cause: Operations were blocked when an application session was attached.

Action: Try the operation later after the application session is detached.

ORA-46070: insufficient privileges

Cause: An attempt was made to execute an XS Security session function or procedure without the appropriate privilege.

Action: Ask the administrator to perform the operation or to grant the appropriate privilege.

ORA-46071: Error occurred in event handler *string*

Cause: An error or exception was returned by the error handling function invoked as part of the current operation.

Action: Check the trace files to identify the source of the error in the event handling function. Attempt the operation again after the error has been resolved. Also, abort attach session since the changes made to the session by the event handler might not have been recorded because of the error.

ORA-46072: Column width too small

Cause: The size of the column or variable used to store the output of this function or procedure is too small.

Action: Increase the size of the column or variable and try again.

ORA-46073: cookie already in use by another session

Cause: The specified XS Security session cookie was used by another XS Security session.

Action: Execute the function or procedure with a different cookie.

ORA-46074: session ID mismatch

Cause: The specified session ID does not match the attached session ID.

Action: Execute the function or procedure without a session ID or with a matching attached session.

ORA-46075: already attached to an application user session

Cause: The current database session is already attached to an application user session.

Action: Detach from the current application user session before attaching to the new application user session.

ORA-46076: The specified name length not within valid range.

Cause: The length of the name was shorter or longer than allowed limits.

Action: Try again with a new name with a length less than the maximum or more than the minimum allowed.

ORA-46077: Length of value too large

Cause: The specified attribute value is too large.

Action: Execute the function or procedure again with a smaller attribute value.

ORA-46078: Invalid event type specified

Cause: The event type specified is invalid.

Action: Reattempt the operation with an invalid event type.

ORA-46079: invalid external principal specified

Cause: An XS Security principal already existed with same name.

Action: Specify another external principal and try again.

ORA-46080: User status is currently inactive

Cause: User was marked inactive.

Action: Change status in enterprise directory to active and try again.

ORA-46081: User's password has expired

Cause: User password was expired.

Action: Change the user's password and update status to active.

ORA-46082: User's account was locked

Cause: The user's account is locked.

Action: Update user's status to Active in Enterprise Directory and try again.

ORA-46083: Cannot update the GUID of the principal

Cause: The GUID of the principal existed or the external source was not set.

Action: None

ORA-46084: cannot update or delete system-seeded XS objects.

Cause: An attempt was made to update or delete system-seeded XS objects.

Action: Do not attempt to update or delete system-seeded XS objects.

ORA-46085: Cannot add a proxy user when there was no proxy roles.

Cause: An attempt was made to add a proxy user to a target user when proxy roles did not exist.

Action: Verify the proxy roles and try again.

ORA-46086: Cannot detach from a direct-login XS session

Cause: An attempt was made to detach from an XS session created by a direct password login.

Action: To detach and destroy the XS session, logout of the DB session.

ORA-46087: Switching users not allowed for a proxy session

Cause: An attempt was made to switch users within a proxy session.

Action: Switch back to original user and try again.

ORA-46088: operation disallowed in application session

Cause: The specified operation was not allowed in an application session.

Action: None

ORA-46089: Unsupported verifier type

Cause: This verifier was not currently supported.

Action: Execute again with a different verifier type.

ORA-46090: Requested event handler not registered for the event

Cause: An attempt was made to update or delete nonregistered event handler.

Action: Please verify event handler name.

ORA-46091: Requested event handler already registered for the event

Cause: An attempt was made to re-register an event handler.

Action: Please verify event handler name.

ORA-46092: Requested event handler does not exist

Cause: An attempt was made to register a nonexistent event handler.

Action: Please verify event handler name or create the event handler.

ORA-46093: Cannot destroy a direct-login XS session

Cause: An attempt was made to destroy an XS session created by a direct password login.

Action: To destroy the XS session, logout of the DB session.

ORA-46094: XS user not effective

Cause: An attempt was made to create an XS session by a user that is not effective.

Action: To create the XS session, contact the administrator to check the effective dates on the user.

ORA-46095: Invalid error code supplied

Cause: An error code with an illegal value was supplied.

Action: Use an error code from the range of valid values.

ORA-46096: An attribute in a namespace cannot have both default value and first read event set.

Cause: Both default value and first read were specified in namespace template.

Action: Specify either default value or first read for the attribute in the namespace, but not both.

ORA-46097: The *string* did not exist in the *string*.

Cause: An attempt was made to delete an XS artifact which was not in existence within the scope.

Action: Check if the XS artifact was created or referenced within the scope.

ORA-46098: The *string* already exists in the *string*.

Cause: An attempt was made to create or refer to an XS artifact which was already in existence within the scope.

Action: Check if the XS artifact name is unique within the scope.

ORA-46099: Feature unsupported or not implemented

Cause: This feature was not supported or implemented.

Action: None

ORA-46100: XS session operations are disallowed during the execution of a definer's rights program unit.

Cause: An attempt was made to do an XS session operation that could modify the current security context inside a definer's rights program unit.

Action: Change the program unit to invoker's rights.

ORA-46101: Circular definition for aggregate privilege *string* in security class *string*

Cause: Definition of an aggregate privilege contained itself.

Action: Fix the aggregate privilege definition.

ORA-46102: Privilege *string* aggregated in security class *string* is not found

Cause: Definition of an aggregate privilege contained a privilege that is not defined in this or parent security classes.

Action: Fix the aggregate privilege definition.

ORA-46103: Circular definition for security class *string*

Cause: Security class definition inherited from itself through circular definition.

Action: Fix the security class definition.

ORA-46104: Security class *string* cannot inherit from base security classes

Cause: Definition of a security class specified an internal base security class as a parent security class.

Action: Remove the internal base security class from the "inherits-from" list.

ORA-46105: unable to load security class *string*

Cause: The specified security class did not exist.

Action: Create the security class.

ORA-46106: Missing parent security class for security class *string*

Cause: The specified security class did not have any parent security class.

Action: Add a parent security class using "inherits-from" tag.

ORA-46107: Privilege *string* not found in the associated security classes

Cause: The specified privilege did not exist in the security classes that were associated with the ACLs.

Action: Use a security class that contains the specified privilege.

ORA-46108: Invalid security class *targetNamespace* or name.

Cause: The security class *targetNamespace* attribute was either null or was longer than 4000 characters. Or, the security class name attribute was either null or was longer than 1024 characters.

Action: Provide valid *targetNamespace* and name attributes.

ORA-46109: Duplicate definition for privilege *string* in security class *string*.

Cause: The privilege name in the security class was previously defined in another security class.

Action: Provide a unique name for the privilege.

ORA-46111: Security Class *string* specified in the ACL *string* does not exist.

Cause: An invalid security class was specified in the ACL.

Action: Specify a valid security class.

ORA-46112: Duplicate security class name *string* under *targetnamespace string*

Cause: The security class name under the *targetnamespace* was also used for another security class.

Action: Provide a unique name for the security class.

ORA-46114: ACL name *string* not found.

Cause: An invalid ACL name was used as one of the operator parameters.

Action: Specify a valid ACL name.

ORA-46115: error raised during evaluation of a data realm

Cause: During SQL execution, evaluation of a data realm failed with an error.

Action: Find the cause of the error from the error stack.

ORA-46116: The ACL *string* is referenced by a namespace template.

Cause: An attempt was made to delete an access control list (ACL) which was referenced by a namespace template.

Action: Delete the namespace template first if the ACL needs to be deleted.

ORA-46117: The ACL *string* is set on a user or dynamic role.

Cause: An attempt was made to delete an access control list (ACL) that was set on a user or dynamic role.

Action: Set the ACL on the user or dynamic role to NULL, or delete the user or dynamic role if the ACL needs to be deleted.

ORA-46118: ACL *string* schema must be SYS.

Cause: An attempt was made to use an access control list (ACL) whose schema was not SYS.

Action: Check and use an ACL whose schema is SYS.

ORA-46119: ACL must not be NULL.

Cause: An attempt was made to specify a NULL value for an access control list (ACL).

Action: Remove the NULL parameter, or specify an existing ACL.

ORA-46200: Attribute cannot be deleted. The attribute is seeded from the template.

Cause: An attempt was made to delete an attribute that was seeded from the template from which this namespace was created.

Action: Attempt to delete only custom attributes.

ORA-46201: Attribute *string* already exists in namespace *string*.

Cause: An attempt was made to create an attribute that already exists within the given namespace.

Action: Make sure the attribute name is unique within the namespace.

ORA-46202: handler specified in the namespace template does not exist

Cause: An attempt was made to create a namespace template with an invalid handler function.

Action: Specify a valid handler function in the template.

ORA-46203: handler is not specified in the namespace template

Cause: An attempt was made to create a template or a custom attribute with events specified. However, a handler function was not specified in the template.

Action: Specify a valid handler function in the template.

ORA-46204: Multiple UID or GUID specified for the resource.

Cause: An attempt was made to create a resource with multiple UIDs or GUIDs specified in the document.

Action: Provide, at most, one UID or GUID for the resource in the document.

ORA-46205: User with empty GUID cannot create session.

Cause: An attempt was made by a user with an empty GUID to create a session.

Action: Update the GUID for the user.

ORA-46206: Negative inactivity timeout value not allowed.

Cause: An attempt was made to set the inactivity timeout time to a negative value.

Action: Specify a non-negative inactivity timeout value.

ORA-46207: During global callback execution, *string* is not allowed.

Cause: An attempt was made to execute a disallowed session operation during global callback execution.

Action: Remove the invalid session operation from callback function.

ORA-46208: Circular callback call caused by *string*

Cause: Circular callback call caused an infinite chain of callback function executions.

Action: Check the event handling functions to identify the source of the circular callback call. Attempt the operation again after the error has been resolved.

ORA-46209: User switch is disallowed for administrative operation.

Cause: An attempt was made to switch user with administrative operation.

Action: Attach the application session to a database session first.

ORA-46210: Source user is not anonymous in user assignment operation.

Cause: An attempt was made to assign user to a named user.

Action: Change source user to the anonymous user first.

ORA-46211: XS entity name length not within valid range.

Cause: An attempt was made to create an XS entity with a name length less than the minimum or more than the maximum allowed.

Action: Ensure the name length is in the valid range (between 1 and 128).

ORA-46212: XS entity with this name already exists.

Cause: An attempt was made to create an XS entity with a name that already belongs to another entity.

Action: Use a different name and try again.

ORA-46213: An unexpected constraint violation occurred during creation of an XS entity.

Cause: An attempt was made to create an XS entity resulting in an unexpected constraint violation.

Action: Check with the DBA or security administrator for resolution.

ORA-46214: Deletion of the XS entity is not allowed while dependencies exist.

Cause: An attempt was made to delete an XS entity with dependent entities in the system.

Action: Remove the dependencies and try again.

ORA-46215: XS entity by the name *string* did not exist.

Cause: A reference was made to an XS entity that did not exist.

Action: Review the entity reference and try again.

ORA-46216: XS entities are not related.

Cause: An attempt was made to remove a relation that did not exist.

Action: Review the entity reference and try again.

ORA-46217: Operation is not allowed.

Cause: An unexpected operation was performed.

Action: Check with the DBA or security administrator for resolution.

ORA-46218: Unauthorized proxy user

Cause: The current user was not an authorized proxy user of the client user during a switching user operation.

Action: Add the current user as a proxy user of the client user.

ORA-46219: Role version numbers mismatch in server and mid-tier.

Cause: There was another mid-tier attached to the server session with a different set of roles.

Action: Reattach the session supplying the current set of roles.

ORA-46220: database is in readable standby mode; changes will not be saved

Cause: An attempt was made to change an application session in readable standby mode.

Action: None

ORA-46221: cannot modify an application user that is currently connected

Cause: An attempt was made to modify an application user that is currently logged on.

Action: Make sure the application user is logged off, then repeat the command.

ORA-46222: Real Application principal name *string* conflicts with another user or role name.

Cause: There was already a user or role with that name.

Action: Specify a different user or role name.

ORA-46230: XS administrative operation failed.

Cause: An unexpected error occurred during the requested XS administrative operation.

Action: None

ORA-46231: Granted role is not a regular role.

Cause: A nonregular role was granted to a principal.

Action: Grant a regular role to a principal.

ORA-46232: Circular grant for role

Cause: The role was granted from itself through circular operation.

Action: Fix the role grant operation.

ORA-46233: Circular definition for ACL *string*

Cause: The ACL was inherited from itself through circular definition.

Action: Fix the ACL definition.

ORA-46235: Policy parameter *string* did not exist.

Cause: The policy parameter did not exist.

Action: Review the parameter definition and try again.

ORA-46236: Invalid policy parameter type

Cause: Invalid parameter type was specified.

Action: Use the correct parameter type.

ORA-46237: Mid-tier cache synchronization failed

Cause: An unexpected error occurred during mid-tier cache synchronization.

Action: None

ORA-46238: Database user or role '*string*' does not exist

Cause: An invalid database user or role was specified as the principal name.

Action: Make sure the database principal is a valid database user or role.

ORA-46239: Key manager not initialized.

Cause: A request to sign the message could not be processed because the key manager was not initialized.

Action: Reinitialize the key manager and resubmit the request.

ORA-46240: Application proxy user is already configured with a schema.

Cause: An attempt was made to add a schema to an application proxy user that already was configured with a schema.

Action: Remove the schema configuration of the application proxy user and try again.

ORA-46241: Application proxy user is not configured with the schema.

Cause: An attempt was made to remove a schema from an application proxy user that was not configured.

Action: None

ORA-46242: Granting a role to XSGUEST is not allowed.

Cause: An attempt was made to grant a role to the XSGUEST seeded user.

Action: None

ORA-46243: The dispatcher's session does not exist.

Cause: The dispatcher's session timed out due to inactivity.

Action: Increase the inactivity timeout for the dispatcher's session.

ORA-46244: The request is not signed by the dispatcher.

Cause: A request was made without the dispatcher's signature. The server is configured to accept requests signed by the dispatcher only.

Action: Ask the administrator to configure the mid-tier allowing the dispatcher signature. Or, ask the administrator to configure the server to not be in dispatcher-only mode.

ORA-46245: Invalid session or namespace request

Cause: The request message was corrupt.

Action: Check with the DBA or security administrator for resolution.

ORA-46246: session operation failed

Cause: An attempt was made to either update an XS Data Security session which did not exist, or to create an XS Data Security session which already existed, or to attach a direct-login XS Data Security session.

Action: None

ORA-46247: detach completed; session changes are not saved

Cause: The XS Data Security session is detached successfully, but session changes are not saved due to updating an XS Data Security session which did not exist.

Action: None

ORA-46248: This type of database link is not supported.

Cause: An attempt was made to use an unsupported database link type in an XS Data Security session.

Action: Use a supported database link type.

ORA-46250: Invalid value for argument 'string'

Cause: Input value was not valid for the procedure.

Action: Use a valid option.

ORA-46251: Value for argument 'string' out of range

Cause: Input value was out of range.

Action: Use a value within allowed range.

ORA-46252: Cannot complete the operation, overlapping job already exists

Cause: Cleanup job already existed which spanned the given audit trail type.

Action: Drop the existing job.

ORA-46253: Cannot complete the operation, overlapping property already exists

Cause: The property already exists which spans the given audit trail type.

Action: Clear the existing property.

ORA-46254: 'string' already exists

Cause: The value being set already existed.

Action: Delete the existing entry.

ORA-46255: Incorrect job name specified

Cause: The job did not exist or was not created by DBMS_AUDIT_MGMT package.

Action: Create the job using DBMS_AUDIT_MGMT package.

ORA-46256: Internal error: Audit Table not partitioned

Cause: Invalid operation on a non partitioned table.

Action: Contact Oracle Support Services.

ORA-46257: Property 'string' cannot be cleared

Cause: The property could not be cleared.

Action: None. The property can only be set or reset.

ORA-46258: Cleanup not initialized for the audit trail

Cause: DBMS_AUDIT_MGMT.INIT_CLEANUP was not called for the erroring audit trail.

Action: Invoke the procedure, DBMS_AUDIT_MGMT.INIT_CLEANUP.

ORA-46260: Error during audit trail cleanup

Cause: The audit trail cleanup operation could not be completed.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

ORA-46261: Error during audit trail cleanup, internal error

Cause: The audit trail cleanup could not be completed because of an internal error.

Action: Contact Oracle Support Services.

ORA-46262: Audit table(s) cannot be moved to 'string' tablespace

Cause: The tablespace was either unavailable or did not have enough space to accommodate the audit table being moved.

Action: Make sure that the tablespace is online and has enough space for the audit tables being moved.

ORA-46263: The audit trail is already initialized for cleanup

Cause: DBMS_AUDIT_MGMT.INIT_CLEANUP was already invoked for the audit trail type.

Action: None

ORA-46264: Error during DBMS_AUDIT_MGMT operation

Cause: Could not complete the DBMS_AUDIT_MGMT operation.

Action: Check the PL/SQL error stack and trace files for a possible error. Fix the cause and retry the operation. If the error is internal or if there is no error, contact Oracle Support Services.

ORA-46265: Subset of audit trail is already initialized

Cause: Audit Trail was initialized which spans the given audit trail type.

Action: Use DBMS_AUDIT_MGMT.DEINIT_CLEANUP to deinitialize conflicting audit trail types.

ORA-46266: Missing value for argument 'string' in Oracle RAC enabled database

Cause: The DBMS_AUDIT_MGMT API was executed in an Oracle RAC enabled database and AUDIT_TRAIL_TYPE was one of AUDIT_TRAIL_OS or AUDIT_TRAIL_XML. But, Oracle RAC instance number for which DBMS_AUDIT_MGMT API was run, was not supplied.

Action: Input a valid Oracle RAC instance number for which the configuration must be done.

ORA-46267: Insufficient space in 'string' tablespace, cannot complete operation

Cause: Could not complete the operation because the DBMS_AUDIT_MGMT API involved movement of one or more audit tables and there was not enough space in the destination tablespace.

Action: Turn on tracing using DBMS_AUDIT_MGMT.SET_DEBUG_LEVEL to find the amount of space required. Then, allocate that space in the destination tablespace,

even if destination tablespace datafile has AUTOEXTEND option turned on. And then, retry the operation.

ORA-46268: Conflicting operation on audit table(s)

Cause: Audit tables were being operated by more than one DBMS_AUDIT_MGMT API from different sessions. The simultaneous execution of the following API with one another and with itself can cause the conflict: INIT_CLEANUP, DEINIT_CLEANUP, SET_AUDIT_TRAIL_LOCATION and MOVE_DBAUDIT_TABLES.

Action: Wait until the execution of one of the API's completes and try executing the API again.

ORA-46269: Conflicting operation on audit files

Cause: Audit files were being operated by more than one DBMS_AUDIT_MGMT API from different sessions. The simultaneous execution of the CLEAN_AUDIT_TRAIL API with itself can cause the conflict.

Action: Wait until the execution of one of the API's complete and try executing the API again.

ORA-46271: Error during DBMS_AUDIT_MGMT operation; database I/O suspended

Cause: An I/O attempt occurred during DBMS_AUDIT_MGMT operation and the database I/O was suspended.

Action: Retry the operation after resuming database I/O suspension. If database I/O is not suspended, contact Oracle Support Services.

ORA-46272: Subset of audit trail is already deinitialized

Cause: Audit trail was deinitialized which spans the given audit trail type.

Action: Use DBMS_AUDIT_MGMT.INIT_CLEANUP to initialize conflicting audit trail types.

ORA-46273: DBMS_AUDIT_MGMT operation failed in one of the PDB

Cause: The executed DBMS_AUDIT_MGMT operation failed in one of the PDB.

Action: Check the trace files for the PDB information where the operation failed. Fix the cause and retry the operation. If the error is internal or if there is no error, contact Oracle Support Services.

ORA-46274: Error during DBMS_AUDIT_MGMT operation; tablespace '*string*' not available

Cause: The tablespace associated with Unified Audit Trail is either invalid or is offline.

Action: Check if the tablespace is valid and make sure the tablespace is online and writable.

ORA-46276: DBMS_AUDIT_MGMT operation on unified audit trail failed

Cause: Audit records were not generated in the unified audit trail.

Action: Generate audit records in the unified audit trail and retry the operation.

ORA-46277: Conflicting operation on unified audit trail

Cause: Unified audit trail is being operated by more than one DBMS_AUDIT_MGMT API from different sessions. The simultaneous execution of the following API with one another and with itself can cause the conflict: FLUSH_UNIFIED_AUDIT_TRAIL, LOAD_UNIFIED_AUDIT_FILES, CLEAN_AUDIT_TRAIL, and SET_AUDIT_TRAIL_LOCATION.

Action: Wait until the execution of one of the API's complete and try executing the API again.

ORA-46278: Conflicting operation using DBMS_AUDIT_MGMT routines

Cause: One of the following API's was concurrently executed with itself or with another API in separate sessions causing a conflict: -
 SET_LAST_ARCHIVE_TIMESTAMP - CLEAR_LAST_ARCHIVE_TIMESTAMP -
 CLEAN_AUDIT_TRAIL - SET_AUDIT_TRAIL_PROPERTY -
 CLEAR_AUDIT_TRAIL_PROPERTY.

Action: Wait until the execution of one of the API's completes and try executing the API again.

ORA-46279: Input value for argument '*string*' exceeds the maximum length.

Cause: The identifier name generated after concatenating with 'AMGT\$DP\$' exceeded 30 or 128 bytes.

Action: Specify a value which does not exceed the maximum length after concatenation. 46340 - 46500 Use for Auditing

ORA-46340: Command cannot have both BY *user-list* and IN SESSION *session-information* clauses together

Cause: BY *user-list* clause was supplied with IN SESSION *session-information* clause in the command.

Action: Use either BY *user-list* or IN SESSION *session-information* clause.

ORA-46341: ALL STATEMENTS option cannot be supplied with BY SESSION clause

Cause: An attempt was made to use ALL STATEMENTS audit option with BY SESSION clause. ALL STATEMENTS audit option can be configured with BY ACCESS only.

Action: Specify BY ACCESS instead of BY SESSION.

ORA-46342: NOAUDIT command cannot be executed with IN SESSION clause

Cause: An attempt was made to use IN SESSION *session-information* clause in NOAUDIT command.

Action: None

ORA-46343: Cannot drop AUDSYS user

Cause: An attempt was made to drop the AUDSYS user that hosts the audit trail.

Action: None

ORA-46350: Audit policy *string* already applied with the BY clause.

Cause: An attempt was made to apply audit policy with the EXCEPT clause which was already applied with the BY clause.

Action: Remove audit policy using the NOAUDIT command.

ORA-46351: Audit policy *string* already applied with the EXCEPT clause.

Cause: An attempt was made to apply audit policy with the BY clause which was already applied with the EXCEPT clause.

Action: Remove audit policy using the NOAUDIT command.

ORA-46352: NOAUDIT command with the EXCEPT clause is not allowed.

Cause: An attempt was made to remove audit policy using NOAUDIT command with the EXCEPT clause.

Action: Remove audit policy selectively using NOAUDIT command with the BY clause.

ORA-46353: missing or invalid audit policy name.

Cause: A valid audit policy name was expected.

Action: Specify a valid audit policy name.

ORA-46354: missing or invalid audit context or attribute name.

Cause: A valid context or attribute name was expected.

Action: Specify a valid context attribute name.

ORA-46355: missing or invalid privilege audit option.

Cause: Creating or altering the audit policy was attempted with an invalid system privilege audit option.

Action: Use a valid system privilege audit option.

ORA-46356: missing or invalid action audit option.

Cause: Creating or altering the audit policy was attempted with an invalid action audit option.

Action: Use a valid action audit option.

ORA-46357: Audit policy *string* not found.

Cause: The specified audit policy object did not exist in the database.

Action: Use the correct audit policy name and try again.

ORA-46358: Audit policy *string* already exists.

Cause: The specified audit policy object already existed in the database.

Action: Use a different name and try again.

ORA-46359: Invalid auditing option for *string*.

Cause: Creating or altering the audit policy was attempted with an invalid audit option for the object.

Action: Use a valid audit option for the object.

ORA-46360: Same auditing option cannot be both added and dropped in audit policy.

Cause: Altering the audit policy was attempted for adding and dropping the same auditing option in the audit policy.

Action: Choose either to add or drop the audit option.

ORA-46361: Audit policy cannot be dropped as it is currently enabled.

Cause: An attempt was made to drop the audit policy which is currently enabled.

Action: Disable the audit policy before dropping.

ORA-46362: Could not translate variable ORACLE_BASE.

Cause: An attempt to obtain the value for ORACLE_BASE failed.

Action: Make sure the variable is set.

ORA-46363: Audit directory '*string*' not found.

Cause: Could not find the specified audit directory.

Action: Make sure the audit directory is created.

ORA-46364: Audit directory '*string*' could not be created.

Cause: Could not create the specified audit directory.

Action: Make sure the Oracle process has permissions to create the audit directory.

ORA-46365: Audit file '*string*' could not be created.

Cause: Could not create the specified audit file.

Action: Make sure the Oracle process has permissions to create the audit files in the audit directory.

ORA-46366: File '*string*' is not a recognized Oracle audit file.

Cause: The file found in Oracle audit directory was not a valid Oracle audit file.

Action: Remove the file from the audit directory and try the action again.

ORA-46367: Database is not opened for write; cannot complete operation.

Cause: An operation requiring the database to be open in read/write mode was attempted.

Action: Open the database in read/write mode.

ORA-46368: Audit policy does not have a simple rule condition.

Cause: Creating or altering the audit policy was attempted with a complex audit condition.

Action: Use a simple rule expression for audit policy condition.

ORA-46369: An error occurred while evaluating audit policy condition.

Cause: Check the error stack for detailed error information.

Action: Fix the errors in the error stack and retry the operation.

ORA-46370: cannot connect as AUDSYS user

Cause: An attempt was made to connect to the database as AUDSYS user.

Action: Do not connect to the database as AUDSYS user.

ORA-46372: audit file '*string*' not found

Cause: An operation was attempted on the audit file which was not available in the audit directory.

Action: Make sure the file exists in the \$ORACLE_BASE/audit/\$ORACLE_SID directory.

ORA-46373: Audit policy '*string*' must have at least one audit option.

Cause: An attempt was made to create, alter or enable the empty audit policy.

Action: Use at least one audit option in the audit policy.

ORA-46374: error during AUDIT or NOAUDIT of audit policy in an Oracle RAC enabled database

Cause: The operation could not be completed on one or more Oracle RAC instances.

Action: Check the trace file for more information. Ensure every instance in Oracle RAC is operational and retry the operation.

ORA-46376: FGA policy owner '*string*' is not available

Cause: An attempt to import Fine-Grained Audit (FGA) policy failed because the specified FGA policy owner has not been imported.

Action: Perform the import of the specified user schema and retry the operation.

ORA-46377: Auditing cannot be configured on the specified system privilege.

Cause: An attempt was made to configure auditing on the system privilege which is not supported by the audit facility.

Action: None

ORA-46378: Cannot use bind variable in VERSIONS clause when the object has FGA policy defined on it.

Cause: The object being accessed had a fine-grained audit (FGA) policy defined on it and the VERSIONS clause contained a bind variable.

Action: Rewrite the query without the use of a bind variable in the VERSIONS clause.

ORA-46379: generation of audit session ID failed with error '*number*'

Cause: An error was encountered while generating the audit session ID.

Action: Retry the operation and, if the error persists, contact Oracle Support Services.

ORA-46380: invalid usage of EXCEPT clause

Cause: Use of the EXCEPT clause and the USERS WITH GRANTED ROLES clause in the same AUDIT and NOAUDIT statements was not a valid combination

Action: Do not use the EXCEPT clause here.

ORA-46381: audit configuration using global roles is not supported

Cause: A global role was found in the enablement list.

Action: Remove the global role from the enablement list and retry the operation.

ORA-46382: must disable unified audit policy on this role first

Cause: The role being altered to IDENTIFIED GLOBALLY has unified audit policy enabled on users to whom it is directly granted. Audit configuration using global role is not supported.

Action: Use NOAUDIT POLICY command to disable the unified audit policy on users to whom this role is directly granted.

ORA-46383: incorrect order of unified audit options

Cause: The order in which audit options were mentioned was incorrect.

Action: Make sure privilege audit options are followed by action audit options which in turn should be followed by role audit options.

ORA-46384: incorrect order of unified audit policy clause

Cause: The order in which ADD, DROP or CONDITION clauses were mentioned was incorrect.

Action: Make sure the ADD clause is followed by the DROP clause which in turn should be followed by the CONDITION clause.

ORA-46385: DML and DDL operations are not allowed on table "string"."string".

Cause: A DML or DDL operation was attempted on a unified auditing internal table.

Action: No action required. Only Oracle is allowed to perform such operations on a unified auditing internal table.

ORA-46386: error during TRANSFER_UNIFIED_AUDIT_RECORDS operation

Cause: Either the database was not open in the read/write mode, or the transfer of the unified audit records was already in progress.

Action: Open the database in read/write mode and rerun the TRANSFER_UNIFIED_AUDIT_RECORDS operation after the ongoing transfer process finishes.

ORA-46387: Cannot perform this operation on unified audit internal table

Cause: An attempt was made to perform an operation that is not allowed on a non-partitioned unified audit internal table.

Action: No action required. This operation can only be performed on partitioned unified audit internal table.

ORA-46388: unified audit files space usage in container is too high

Cause: Space usage by unified audit files in the current container has exceeded the value of MAX_AUDIT_STORAGE for the container.

Action: Create some space by deleting the old audit records using DBMS_AUDIT_MGMT.CLEAN_AUDIT_TRAIL or open the container in the read/write mode and execute DBMS_AUDIT_MGMT.LOAD_UNIFIED_AUDIT_FILES.

ORA-46389: cannot alter or drop Oracle predefined policies

Cause: An attempt was made to alter or drop an Oracle predefined policy.

Action: None

ORA-46390: incorrect tablespace type used

Cause: An attempt was made to use a tablespace which is of type TEMPORARY, UNDO or LOST WRITE PROTECTION.

Action: Check the tablespace type and reissue the command.

ORA-46391: disk group to store audit files is not configured

Cause: An attempt was made to move the audit files to a disk group without configuring one for auditing.

Action: Execute DBMS_AUDIT_MGMT.SET_AUDIT_TRAIL_LOCATION to provide a disk group for storing audit files.

ORA-46500: User is not a common user.

Cause: An attempt was made to apply the common audit configuration to a local user. Common audit configuration can be applied only to common users.

Action: Specify a common user.

ORA-46501: Object is not a common object.

Cause: Object audit option for the common audit policy was specified on a local object. A common audit policy can have object audit options on common objects only.

Action: Specify a common object.

ORA-46503: not connected to a pluggable database

Cause: An attempt was made to create a local audit policy or configuration while not connected to a pluggable database. Local audit policy or configuration can be created only when connected to a pluggable database.

Action: Connect or switch session to a pluggable database to create local audit policy or configuration.

ORA-46504: AUDIT command cannot specify ON *object* and CONTAINER clauses together.

Cause: An attempt was made to specify the CONTAINER clause with the AUDIT command while configuring object auditing. The CONTAINER clause is not supported for object auditing using the SQL AUDIT command.

Action: Do not specify the CONTAINER clause while configuring object auditing using SQL AUDIT command.

ORA-46505: Role is not a common role.

Cause: An attempt was made to apply the common audit configuration to a local role. Common audit configuration can be applied to common roles only.

Action: Specify a common role.

ORA-46506: FGA handler schema is not common user.

Cause: An attempt was made to create fine-grained Audit (FGA) policy on common object and associated handler schema is not common user.

Action: Specify FGA handler schema as common user appropriately.

ORA-46507: FGA object name is not a common object.

Cause: An attempt was made to create common fine-grained Audit (FGA) policy on a local object. A common FGA policy can only be configured on common object.

Action: Specify a common object.

ORA-46508: not connected to root container

Cause: An attempt was made to create a Fine-Grained Auditing (FGA) policy on an object-linked common object from within a pluggable database (PDB).

Action: Connect to the root and create FGA policies on object-linked common objects.

ORA-46600: invalid ADMINISTER KEY MANAGEMENT command**ORA-46601: missing KEYSTORE, ENCRYPTION, KEY, or TAG keyword**

ORA-46602: missing OPEN or CLOSE keyword

ORA-46603: invalid ADMINISTER KEY MANAGEMENT CREATE command

ORA-46604: invalid or missing keystore file name

Cause: The required keystore file name was invalid or missing.

Action: Specify a valid keystore file name.

ORA-46605: master key identifier is invalid or missing

ORA-46606: tag is invalid or missing

ORA-46607: client secret is invalid or missing

ORA-46608: client identifier is invalid or missing

ORA-46609: export or import secret is invalid or missing

ORA-46610: expecting SELECT query that returns the master key identifiers

ORA-46612: import file name is invalid or missing

ORA-46614: export file name is invalid or missing

ORA-46615: missing WITH or CONTAINER keyword

ORA-46616: master key is invalid or missing

ORA-46617: master key identifier is invalid or missing

ORA-46620: backup for the keystore cannot be taken

Cause: Either the specified backup location was not an ASM path name when the configured keystore location was an ASM path or the specified backup location was an ASM path name when the configured keystore location was not an ASM path.

Action: Either specify an ASM path name for the backup location if the keystore location is an ASM path or specify a non-ASM path name for the backup location if the keystore location is not an ASM path.

ORA-46621: no backup identifier specified

Cause: Backup identifier was not specified.

Action: Provide a valid backup identifier.

ORA-46622: location of the backed up keystore is incorrect

Cause: Keystore location where the backup was to be created was incorrect.

Action: Provide a valid location to backup the keystore.

ORA-46623: cannot create the keystore file name

Cause: Keystore name could not be formed possibly due to the incorrectly specified keystore location.

Action: Verify the location to where the keystore can be backed up.

ORA-46624: cannot find the source keystore

Cause: The source keystore for which the backup was requested was not found.

Action: Verify that the source keystore exists and try again.

ORA-46625: backup keystore already exists

Cause: A backup of the keystore of the same name already existed in the given location.

Action: Change the location of the backup keystore or the backup identifier of the backup keystore and try again.

ORA-46626: cannot create a backup of the keystore

Cause: The backup of the keystore could not be created.

Action: Check the trace file for more information and try again.

ORA-46627: keystore password mismatch

Cause: The keystore password specified did not match that of the keystore that was open.

Action: Specify the correct keystore password.

ORA-46628: cannot alter the software keystore password

Cause: An attempt was made to alter the software keystore password.

Action: Check the viability of the keystore and replace the keystore from the backup if required and try to alter the keystore password.

ORA-46629: keystore was not open after the alter keystore operation

Cause: The keystore password was changed. However, the keystore was closed during this operation.

Action: Reopen the keystore with the new password.

ORA-46630: keystore cannot be created at the specified location

Cause: The keystore could not be created at the specified location because a keystore of the same type already existed.

Action: Specify a different location to create the keystore. If no keystore exists and the operation is failing, check the trace file and try again.

ORA-46631: keystore needs to be backed up

Cause: The keystore was not backed up. For this operation to proceed, the keystore must be backed up.

Action: Backup the keystore and try again.

ORA-46632: password-based keystore does not exist

Cause: Password-based keystore was missing for this operation. Auto login keystore can be created from a password-based keystore only.

Action: Specify a location where the password-based keystore exists.

ORA-46633: creation of a password-based keystore failed

Cause: Password-based keystore could not be created at the specified location due to either incorrect file permissions for Oracle on the specified location or due to the nonexistence of the specified location.

Action: Check the trace file for more information, create permissions on the specified location, or specify a different location and try again.

ORA-46634: creation of a local auto login keystore failed

Cause: The local auto login keystore could not be created at the specified location due to the incorrect password specified for the password-based keystore or due to incorrect file permissions for Oracle on the specified location or due to the nonexistence of the specified location.

Action: Check the trace file for more information, specify the correct password for the password-based keystore, create permissions on the specified location, or specify a different location and try again.

ORA-46635: creation of an auto login keystore failed

Cause: The auto login keystore could not be created at the specified location due to the incorrect password specified for the password-based keystore or due to incorrect file permissions for Oracle on the specified location or due to the nonexistence of the specified location.

Action: Check the trace file for more information, specify the correct password for the password-based keystore, create permissions on the specified location, or specify a different location and try again.

ORA-46636: cannot add second keystore to the target keystore

Cause: The second keystore could not be added to the target keystore.

Action: Check trace files for more information. Delete the target keystore and try merging the two keystores again.

ORA-46637: cannot add first keystore to the target keystore

Cause: The first keystore could not be added to the target keystore.

Action: Check trace files for more information. Delete the target keystore and try merging the two keystores again.

ORA-46638: merging of the two keystores failed

Cause: The two keystores could not be merged.

Action: Check trace files for more information. If the target keystore is corrupted, replace it from the backup and try merging the two keystores again.

ORA-46639: backup of keystore failed during migration

Cause: Keystore location was not configured correctly in the sqlnet.ora file.

Action: Keystore location is missing or not correct in the sqlnet.ora file. Specify the correct keystore location for migration and backup.

ORA-46640: incorrect file name for exporting keys

Cause: The file name of the file to which keys from the keystore will be written was incorrect or invalid.

Action: Verify the file name. Ensure that both the full path and the file name are provided.

ORA-46641: incorrect file name for importing keys

Cause: The file name of the file from which the keys will be read and saved in the keystore was incorrect or invalid.

Action: Verify the file name. Ensure that both the full path and the file name are provided.

ORA-46642: key export destination file already exists

Cause: The file name specified as the export destination for keys exported from the keystore was already in existence.

Action: Specify a different file name that does not exist.

ORA-46643: file from which keys are to be imported does not exist

Cause: The specified file from which the keys are to be imported into the keystore did not exist.

Action: Specify the name of a file that contains keys exported from the keystore.

ORA-46644: creation or open of file to store the exported keys failed

Cause: Creation or opening of the file specified as the key export destination, where the keys exported from the keystore were to be written, failed.

Action: Verify that the file name is valid and that the Oracle process has sufficient privilege to create, open and write to the file.

ORA-46645: open of file from which keys are to be imported failed

Cause: The file specified as the key import source, from which the keys were to be imported into the keystore, could not be opened.

Action: Verify that the file name is valid and that the Oracle process has sufficient privilege to read the file.

ORA-46646: file from which keys are to be imported is invalid or lacks needed file permission

Cause: The file specified as the key import source, from which the keys were to be imported, was not a valid file or does not have the needed file access permission.

Action: Specify a valid file, containing keys which were previously exported from the keystore. Also, ensure that the file has read and write access permission.

ORA-46647: specified protection differs from that specified in the file

Cause: The file specified as the key import source, from which the keys are to be imported, had different protection from what was specified in the SQL command.

Action: Provide a valid protection option, ensuring that it is the same protection option that was in the file from which the keys are to be imported.

ORA-46648: cannot commit the keys to the keystore

Cause: The operation of writing the keys to the keystore failed.

Action: Verify that the keystore is not corrupt. Copy the keystore from the backup if it is corrupt. Retry the command.

ORA-46649: master key with the specified identifier does not exist

Cause: Master key with the specified identifier does not exist in the keystore.

Action: Specify a valid master key identifier for the SQL command and retry the command.

ORA-46650: cannot retrieve information for a master key identifier

Cause: The master key or the master key information associated with a specified master key identifier did not exist.

Action: Check the contents of the trace file to identify the faulty master key identifier. Either fix or drop the faulty master key, then retry the command.

ORA-46651: cannot create a master key

Cause: Master key creation failed.

Action: Check the trace file for errors and retry the command.

ORA-46652: cannot create tag for the master key

Cause: Creation of the tag for the specified master key failed.

Action: Check the contents of the trace file for errors and retry the command.

ORA-46653: cannot retrieve master key information

Cause: Retrieval of the master key information for the specified master key identifier failed.

Action: Check the contents of the trace file for errors and retry the command.

ORA-46654: cannot add the imported keys to the keystore

Cause: The operation of writing the imported keys to the keystore failed.

Action: Check the contents of the trace file for more information on the cause of the failure and retry the command.

ORA-46655: no valid keys in the file from which keys are to be imported

Cause: The specified keystore, from which keys are to be imported, did not contain any valid keys.

Action: None

ORA-46656: operation not valid for container database

Cause: The specified operation was not supported for the container database.

Action: None

ORA-46657: the source keystores are the same

Cause: The specified source keystores to be merged were the same. There is no need to merge these keystores.

Action: Check the locations and types of the specified keystores. Specify the correct path and types for the source keystores, if necessary.

ORA-46658: keystore not open in the container

Cause: The keystore was not open in the container.

Action: Open the keystore in the container.

ORA-46659: master keys for the given PDB not found

Cause: The master keys for the specified pluggable database (PDB) could not be retrieved.

Action: Check if the master keys were generated for the specified PDB and retry the command.

ORA-46660: the source and target keystores are the same

Cause: The specified source and target keystores to be merged were the same. There is no need to merge these keystores.

Action: Check the locations and types of the specified keystores. Specify the correct path and types for the source and target keystores, if necessary.

ORA-46661: keystore not open in root container

Cause: The root container keystore was not open.

Action: Open the root container keystore.

ORA-46662: master keys not created for all PDBs

Cause: Creation of the master key failed for one or more pluggable databases (PDBs).

Action: Check the trace files for errors. Create the keys in PDBs where the operation failed or retry the command.

ORA-46663: master keys not created for all PDBs for REKEY

Cause: Creation of the master key failed for one or more pluggable databases (PDBs) and as such REKEY failed for these PDBs.

Action: Check the trace files for errors. REKEY the keys in PDBs where the master keys could not be created or retry the command.

ORA-46664: master keys not created for any PDBs during REKEY

Cause: Creation of the master key failed for all pluggable databases (PDBs).

Action: Check the contents of the trace file for more information on the cause of the failure and retry the command.

ORA-46665: master keys not activated for all PDBs during REKEY

Cause: Activation of the master key failed for one or more pluggable databases (PDBs) and as such REKEY failed for these PDBs.

Action: Check the trace files for errors. Activate the keys in PDBs where the master keys were created but not activated or retry the command.

ORA-46666: master keys not created or activated for all PDBs during REKEY

Cause: Creation of the master key failed for one or more pluggable databases (PDBs). Further, activation of one or more created master keys also failed for some PDBs and as such REKEY failed on these PDBs.

Action: Check the trace files for errors. REKEY the PDBs where the master keys could not be created. Activate the keys in PDBs where the master keys were created but not activated or retry the command.

ORA-46667: client not found in the keystore

Cause: An entry with the given client name was not found in the keystore.

Action: Add the secret for the given client to the keystore, if required.

ORA-46668: client already exists in the keystore

Cause: An entry with the given client name was already in existence in the keystore.

Action: Delete or update the entry with the client name.

ORA-46669: the target keystore does not exist

Cause: The location specified for the target keystore did not contain a valid keystore, or target keystore did not have valid file permissions.

Action: Specify a different location for the target keystore where it exists. Also, check the file permissions of the target keystore.

ORA-46670: client secret keystore operation failed

Cause: The client secret keystore add, update or delete operation failed.

Action: Open the keystore and retry the client secret keystore operation.

ORA-46671: master key not set in root container

Cause: Master key was not set in the root container.

Action: Set the Master key in the root container.

ORA-46672: backup keystore file name could not be stored

Cause: The file name of the keystore backup could not be recorded in props\$.

Action: Open the keystore and retry the backup operation.

ORA-46673: write to the export file failed

Cause: Oracle was unable to write an entry to the export file.

Action: Check the trace file for more information and retry the operation. If there is no trace information and trying the operation again fails, contact Oracle Support Services.

ORA-46674: read from the export file failed

Cause: Oracle was unable to read an entry from the export file.

Action: Check the trace file for more information and retry the operation. If there is no trace information and trying the operation again fails, contact Oracle Support Services.

ORA-46675: write of keys for export failed

Cause: Oracle was unable to write an entry for export.

Action: Check the trace file for more information and retry the operation. If there is no trace information and trying the operation again fails, contact Oracle Support Services.

ORA-46676: read of keys for import failed

Cause: Oracle was unable to read an entry for import.

Action: Check the trace file for more information and retry the operation. If there is no trace information and trying the operation again fails, contact Oracle Support Services.

ORA-46677: specified backup identifier exceeds maximum length

Cause: The backup identifier within the ASM file name of the keystore exceeded the maximum length of 12 characters.

Action: Specify a backup identifier that does not exceed the limit.

ORA-46678: cannot encrypt an identity column created with GENERATED BY DEFAULT or GENERATED ALWAYS

Cause: An attempt was made to encrypt an identity column created with GENERATED BY DEFAULT or GENERATED ALWAYS keywords.

Action: An identity column created with the GENERATED BY DEFAULT or GENERATED ALWAYS keywords cannot be encrypted.

ORA-46679: missing or invalid master key encryption algorithm

Cause: An encryption algorithm for the master key was missing or invalid in the user command.

Action: Specify a valid algorithm: 'AES256', 'ARIA256', 'SEED128', or 'GOST256'.

ORA-46680: master keys of the container database must be exported

Cause: The master keys of the container database were not exported.

Action: Export the master keys of the container database before unplugging the container database.

ORA-46681: reverse migration failed for PDB

Cause: Reverse migration failed for one or more pluggable databases (PDB).

Action: Check the trace files for errors. Retry the command.

ORA-46683: addition of master key string not supported with CONTAINER=ALL

Cause: An attempt was made to add a master key with the same master key identifier to more than one container database. A user specified master key string with a master key identifier can be added to a single container only.

Action: Retry the operation without CONTAINER=ALL clause.

ORA-46684: master key identifier exists in the keystore

Cause: An attempt was made to add a master key with a master key identifier that was already present in the keystore.

Action: Specify a different value for the master key identifier in the master key string.

ORA-46685: invalid master key identifier or master key value

Cause: The master key identifier or master key value was invalid. To be valid, the values supplied for both the master key identifier and the master key value must be hex-encoded and must have the following properties: - For a master key value to be valid, its length must be a valid key length for the specified encryption algorithm. - For a master key identifier to be valid, it must have a length of 16 bytes. - For a master key identifier to be valid, it must have a non-zero value.

Action: Specify a correct value for the master key identifier or master key in the master key string.

ORA-46686: missing or invalid master key string

Cause: The master key string was missing or invalid.

Action: Specify the correct master key string.

ORA-46687: operation not supported for HSM

Cause: The specified operation is not supported with Hardware Security Module (HSM).

Action: Check the trace file for more details.

ORA-46688: cannot move a master key

Cause: The master key could not be moved out of the keystore.

Action: Check whether the specified master key identifiers are valid, and if they are found in the V\$ENCRYPTION_KEYS view. Container keys can be moved from the CDB\$ROOT only when the container is unplugged and dropped from the CDB. Check the trace file for additional errors if needed. Retry the command.

ORA-46689: specified master key identifier does not exist in the keystore

Cause: An attempt was made to move a master key that did not exist in the keystore.

Action: Check if the master key identifier exists in the keystore by querying the V\$ENCRYPTION_KEYS view.

ORA-46690: could not create wallet

Cause: The new wallet used to store the keys to be moved could not be created. The cause could be the lack of permission to write to the directory for the Oracle user or the directory did not exist.

Action: Check the permissions for the Oracle user on the directory or check if the directory exists.

ORA-46691: The value of the KEYSTORE_CONFIGURATION attribute is invalid.

Cause: An attempt was made to set or use an invalid value for the KEYSTORE_CONFIGURATION attribute of the TDE_CONFIGURATION instance initialization parameter.

Action: Use a valid value for the KEYSTORE_CONFIGURATION attribute of the TDE_CONFIGURATION instance initialization parameter. When using WALLET_ROOT, set the TDE_CONFIGURATION instance initialization parameter correctly in both the root and in the pluggable database. A value must be provided for the TDE_CONFIGURATION instance initialization parameter if a value is provided for the WALLET_ROOT instance initialization parameter, in order to fully specify the keystore configuration of the CDB\$ROOT and of the pluggable database (either both parameters must be present, or both must be absent). For an ADMINISTER KEY MANAGEMENT ISOLATE KEYSTORE operation, the KEYSTORE_CONFIGURATION attribute of the CDB\$ROOT must have the value FILE. For an ADMINISTER KEY MANAGEMENT ISOLATE KEYSTORE operation, if a value for the KEYSTORE_CONFIGURATION attribute is set in the pluggable database, it must have the value FILE. If the TDE_CONFIGURATION instance initialization parameter is not set in the pluggable database, the isolation operation automatically sets its KEYSTORE_CONFIGURATION attribute to FILE.

ORA-46692: cannot close wallet

Cause: An attempt was made to close the wallet when it was in use.

Action: Close the wallet in any pluggable database that is configured with an isolated wallet. Alternatively, use the FORCE KEYSTORE CLOSE clause of the ADMINISTER KEY MANAGEMENT command.

ORA-46693: The WALLET_ROOT location is missing or invalid.

Cause: An attempt was made to perform a keystore operation when the instance initialization parameter WALLET_ROOT was missing or invalid.

Action: Start the database after setting the WALLET_ROOT instance initialization parameter to the directory where all of the wallets are stored.

ORA-46694: The keys are already in the root keystore.

Cause: An attempt was made to unite an isolated keystore with the root keystore, but the keys of the isolated keystore were already present in the root keystore.

Action: No action is required. Check the value of the TDE_CONFIGURATION instance initialization parameter of your system and ensure that you are issuing the ADMINISTER KEY MANAGEMENT UNITE KEYSTORE command in the correct pluggable database.

ORA-46695: The value of the TDE_CONFIGURATION instance initialization parameter is invalid.

Cause: An attempt was made to set or use an invalid value for the TDE_CONFIGURATION instance initialization parameter.

Action: Use a valid value for the TDE_CONFIGURATION instance initialization parameter. The KEYSTORE_CONFIGURATION attribute must be present and must have a valid value. During recovery, the CONTAINER attribute can also be specified and its value must be a valid container name. The CONTAINER attribute can only be specified when the TDE_CONFIGURATION instance initialization parameter is modified in the CDB\$ROOT, not when it is modified in a pluggable database.

ORA-46696: A master key is required by another pluggable database.

Cause: An attempt was made to isolate a master key or move a master key out of keystore when it was still required by another pluggable database. Another pluggable database still required the master key if the pluggable databases were clones of each other.

Action: Before attempting to isolate or move the keys of a pluggable database, perform an ADMINISTER KEY MANAGEMENT SET KEY command on each pluggable database that required the master key, in order to remove any dependency on the master key being isolated or moved. If necessary, include the FORCE clause and issue the ADMINISTER KEY MANAGEMENT FORCE ISOLATE KEYSTORE command, which causes the master keys of the pluggable database to be copied to the isolated keystore rather than moved to it, so that the keys remain available to any pluggable database that required them. ADMINISTER KEY MANAGEMENT MOVE command has no FORCE option.

ORA-46697: Keystore password required.

Cause: The keystore password clause was not provided for this SQL command.

Action: Retry the command with a keystore password clause.

ORA-46698: CDB\$ROOT is not open.

Cause: CDB\$ROOT was not open.

Action: Open the CDB\$ROOT and retry the command.

ORA-46699: cannot create a keystore

Cause: A keystore could not be created. A combination of the following conditions prevented the operation: 1. The pluggable database was not open in read/write mode. Note that the pluggable database needs to be open in read/write mode for the KEYSTORE_MODE configuration of the pluggable database to be automatically changed to ISOLATED during the ADMINISTER KEY MANAGEMENT CREATE KEYSTORE command. 2. The KEYSTORE_MODE configuration of the pluggable database was UNITED (rather than ISOLATED).

Action: Open the pluggable database in read/write mode or configure the pluggable database as ISOLATED, and retry the ADMINISTER KEY MANAGEMENT CREATE KEYSTORE command.

ORA-46700: failed to copy or move wallet

Cause: An attempt was made to either copy or move the isolated wallet of the pluggable database (PDB) that was plugged.

Action: Ensure that the source wallet location and the file specified in XML exist on disk and are accessible from this database. Also, ensure that WALLET_ROOT is set and the directory specified in WALLET_ROOT exists on the disk.

ORA-46701: failed to delete source wallet

Cause: An attempt was made to delete the source wallet file during the pluggable database (PDB) plug with MOVE clause.

Action: Ensure that the source wallet file and the directory allow deletion of the wallet.

ORA-46702: failed to switch over the PKCS#11 library

Cause: An attempt was made to switch over the PKCS#11 library and there was trouble finding or loading the new library.

Action: Ensure that the: - PKCS11_LIBRARY_LOCATION parameter is set when the database is started. - Value of the PKCS11_LIBRARY_LOCATION parameter begins with /opt/oracle/extapi/64/pkcs11/. - Path in the fully qualified library name of the PKCS11_LIBRARY_LOCATION parameter does not contain any component which is a symbolic link. - Each directory component of the path is owned by the root user and is writable by only the root user (for example, drwxr-xr-x root root).

ORA-46703: switching over the PKCS#11 library is not supported

Cause: The switch over command was executed on a system with an unsupported configuration of the Oracle Advanced Security Transparent Data Encryption (TDE) keystore.

Action: Configure the TDE keystore to use Oracle Key Vault (OKV) or hardware security module (HSM) and rerun the command.

ORA-46704: wallet status is 'OPEN' for PDB, cannot create the password-based keystore

Cause: Password based keystore could not be created for the PDB, because the PDB's current wallet status is 'OPEN'.

Action: Close the PDB's wallet and try again.

ORA-46705: key is set for the PDB, cannot create the password-based keystore

Cause: Password based keystore could not be created for the PDB, because the PDB was using a key from the PDB's current keystore.

Action: Use "Administer Key Management Isolate Keystore" command to create a password based keystore so that the PDB's keys are automatically moved to the new keystore.

ORA-46706: PKCS#11 library was loaded from legacy location

Cause: When the database instance started, the Public-Key Cryptography Standard (PKCS) #11 library was discovered at the legacy location which is under `/opt/oracle/extapi/64/hsm/`. The switchover command was not supported because the PKCS#11 library was loaded from legacy location.

Action: Configure the `PKCS11_LIBRARY_LOCATION` and provision the library under `/opt/oracle/extapi/64/pkcs11/` and restart the database.

ORA-46707: PKCS#11 library location was invalid

Cause: The switchover command was executed with an invalid or insecure Public-Key Cryptography Standard (PKCS) #11 library location.

Action: Ensure that: - The PKCS#11 library is provisioned under the location that was provided in the command. - The fully qualified filename of the library begins with `/opt/oracle/extapi/64/pkcs11/`. - The fully qualified filename of the library does not exceed 255 characters. - The fully qualified filename of the library does not contain any component which is a symbolic link. - Each directory component of the path is owned by the root user and is writable by only the root user (for example, `drwxr-xr-x root root`).

ORA-46708: PKCS#11 library was already loaded with this version

Cause: The switchover command was executed on a system that is currently using the library to which the command is trying to switch over.

Action: Check if the fully qualified filename of the library to switch over to needs to be corrected and rerun the command.

ORA-46709: autologin wallet already exists on disk

Cause: An attempt was made to isolate the keystore and it failed due to an existing autologin (`cwallet.sso`) wallet under `{WALLET_ROOT}/PDBGUID/tde/` directory. `cwallet.sso` was not overwritten because it could contain client secrets which may have been added manually when the keystore was previously isolated.

Action: Rename `cwallet.sso` file under `{WALLET_ROOT}/{PDBGUID}/tde/` directory (to move it out of the way) and retry the command.

ORA-46710: keystore is already in isolated mode

Cause: An attempt to isolate the keystore failed because the keystore of the pluggable database was already configured in isolated mode.

Action: No action required. This operation can only be performed when the keystore of the pluggable database is configured in united mode.

ORA-46711: keystore is already in united mode

Cause: An attempt to unite the keystore failed because the keystore of the pluggable database was already configured in united mode.

Action: No action required. This operation can only be performed when the keystore of the pluggable database is configured in isolated mode.

ORA-46713: password-based keystore not open in root container

Cause: The password-based keystore was not open in the root container.

Action: Open the password-based keystore in the root container.

ORA-46900: unsupported proxy authentication

Cause: A proxy authentication was attempted using an administrative privilege.

Action: Authenticate without any administrative privilege if proxy authentication is desired.

ORA-46951: unsupported format for password file '*string*'

Cause: An attempt was made to use the Oracle password file which is not in legacy or in release 12.1 or higher format. The password file is either not present or may have become corrupt.

Action: Re-create the password file and grant the administrative privileges to users appropriately.

ORA-46952: standby database format mismatch for password file '*string*'

Cause: An attempt was made to apply password file changes made on the primary database to the password file of the standby database, but there was a password file format mismatch which prevented the operation.

Action: Re-create the password file on the standby database using the same password file format as that of the primary database. Ensure that the password file format used on the standby database matches that of the primary database.

ORA-46953: The password file is not in the 12.2 format.

Cause: An attempt was made to perform one of the following operations, but none of these operations are allowed while the password file is in LEGACY or in release 12.1 format. - Attempting to grant an administrative privilege to an external user (a user created as IDENTIFIED EXTERNALLY). - Attempting to change the authentication type of an administrative-privileged user from PASSWORD to EXTERNAL. - When a common user has an administrative privilege granted in a pluggable database (PDB) but no longer exists in the CDB\$ROOT container, attempting to create this common user again in the root as IDENTIFIED EXTERNALLY.

Action: Create the password file in 12.2 format or migrate the existing password file to 12.2 format, then retry the operation.

ORA-46981: Access to service *string* from *string* was denied.

Cause: Access to this service from this location was not allowed.

Action: Contact Oracle Support Services.

ORA-46987: Access control propagation failed (error=*number*).

Cause: The executed DBMS_SFW_ACL_ADMIN operation failed.

Action: Retry the operation.

ORA-46988: Access control propagation timed out.

Cause: The executed DBMS_SFW_ACL_ADMIN operation timed out.

Action: Retry the operation.

ORA-47000 to ORA-48000

ORA-47000: Factor type *string* is already defined.

Cause: The object with this name was already defined.

Action: Choose a different object name and retry the operation.

ORA-47001: Factor type *string* is not found.

Cause: The requested object did not exist.

Action: Choose an existing object and retry the operation.

ORA-47002: error creating Factor Type *string*, *string*

Cause: An unexpected error occurred creating the factor type

Action: Please review the definition and retry the operation

ORA-47003: error deleting Factor Type *string*, *string*

Cause: An unexpected error occurred deleting the factor type

Action: Please review the definition and retry the operation

ORA-47004: error updating Factor Type *string*, *string*

Cause: An unexpected error occurred updating the factor type

Action: Please review the definition and retry the operation

ORA-47005: error renaming Factor Type *string*, *string*

Cause: An unexpected error occurred renaming the factor type

Action: Please review the definition and retry the operation

ORA-47020: Factor *string* is already defined.

Cause: The specified object name was already defined.

Action: Choose a different object name and retry the operation.

ORA-47021: Factor *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47022: error creating Factor *string*, *string*

Cause: An unexpected error occurred creating the factor

Action: Please review the definition for accuracy and retry the operation

ORA-47023: error deleting Factor *string*, *string*

Cause: An unexpected error occurred deleting the factor

Action: Please review the definition for accuracy and retry the operation

ORA-47024: error updating Factor *string*, *string*

Cause: An unexpected error occurred updating the factor

Action: Please review the definition for accuracy and retry the operation

ORA-47025: Factor Link already exists for *string* and *string*

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47026: error creating Factor Link for *string* and *string*, *string*

Cause: An unexpected error occurred creating the factor link

Action: Please review the definition for accuracy and retry the operation

ORA-47027: Factor Link does not exist for *string* and *string*

Cause: The factor link referenced does not exist

Action: Please review the definition for accuracy and retry the operation

ORA-47028: error deleting Factor Link for *string* and *string*, *string*

Cause: An unexpected error occurred deleting the factor link

Action: Please review the definition for accuracy and retry the operation

ORA-47029: Factor type *string* is used by one or more factors.

Cause: The specified factor type was used by existing factor(s).

Action: Remove the dependent factors and retry the operation.

ORA-47030: Factor *string* is referred by one or more factor links.

Cause: The specified factor was referred by existing factor link(s).

Action: Remove the dependent factor links and retry the operation.

ORA-47031: Factor *string* is used by one or more policy factors.

Cause: The specified factor was used by existing policy factor(s).

Action: Remove the dependent policy factors and retry the operation.

ORA-47032: Factor *string* is referred by one or more identities.

Cause: The specified factor was referred by existing identities.

Action: Remove the dependent identities and retry the operation.

ORA-47033: Factor link for *string* and *string* is referred by one or more identity maps.

Cause: The specified factor link was referred by existing identity maps.

Action: Remove the dependent identity maps and retry the operation.

ORA-47034: cannot rename default factor *string*

Cause: An attempt was made to rename a default factor. Default factors cannot be renamed.

Action: No action required.

ORA-47040: Identity *string* for factor *string* is already defined.

Cause: The object with this name was already defined.

Action: Choose a different object name and retry the operation.

ORA-47041: Identity *string* for factor *string* is not found.

Cause: The requested object did not exist.

Action: Choose an existing object and retry the operation.

ORA-47042: error creating Identity *string* for Factor *string*, *string*

Cause: An unexpected error occurred creating the identity

Action: Please review the definition for accuracy and retry the operation

ORA-47043: error deleting Identity *string* for Factor *string*, *string*

Cause: An unexpected error occurred deleting the identity

Action: Please review the definition for accuracy and retry the operation

ORA-47044: error updating Identity *string* for Factor *string*, *string*

Cause: An unexpected error occurred updating the identity

Action: Please review the definition for accuracy and retry the operation

ORA-47045: Identity *string* for Factor *string* is used by one or more identity maps.

Cause: The specified identity was used by exiting identity map(s).

Action: Remove the dependent identity maps and retry the operation.

ORA-47046: Identity *string* for Factor *string* is referred by one or more policy labels.

Cause: The specified identity was used by exiting policy label(s).

Action: Remove the dependent policy labels and retry the operation.

ORA-47060: Identity map for Identity *string.string*, Factor Link *string*, *string* already defined for operation *string* on *string*

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47061: Identity map for Identity *string.string*, Factor Link *string*, *string* not found for operation *string* on *string*

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47062: error creating Identity map for Identity *string.string*, Factor Link *string*, *string* already defined for operation *string* on *string*

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47063: error deleting Identity map for Identity *string.string*, Factor Link *string*, *string* already defined for operation *string* on *string*

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47080: code *string* already defined in group *string*

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47081: code *string* not found in group *string*

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47100: Command rule *string* already defined for *string.string*.

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47101: Command rule *string* not found for *string.string*.

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47102: error creating command rule *string* for *string.string*, *string*

Cause: An unexpected error occurred creating the command rule

Action: Please review the definition for accuracy and retry the operation

ORA-47103: error deleting command rule *string* for *string.string*, *string*

Cause: An unexpected error occurred deleting the command rule

Action: Please review the definition for accuracy and retry the operation

ORA-47104: error updating command rule *string* for *string.string*, *string*

Cause: An unexpected error occurred updating the command rule

Action: Please review the definition for accuracy and retry the operation

ORA-47105: Object owner *string* is invalid for command *string*.

Cause: The specified object owner was invalid for this command.

Action: Choose a valid object owner for this command and retry the operation.

ORA-47106: Command rule *string* already defined for clause *string* with clause parameter *string*.

Cause: The object with this name exists already.

Action: Choose a unique object name and retry the operation.

ORA-47107: Command rule *string* not found for clause *string* with clause parameter *string*.

Cause: The object being requested did not exist.

Action: Choose an object name that exists and retry the operation.

ORA-47108: Command rule *string* does not support clause level protection.

Cause: Oracle Database Vault did not support clause level protection for this command rule.

Action: Choose a valid command rule that supports clause level protection.

ORA-47109: Command rule *string* for clause *string* with parameter *string* does not support event level protection.

Cause: Oracle Database Vault did not support event level protection for this command rule.

Action: Choose a valid command rule that supports clause level protection.

ORA-47110: cannot create command rules for *string.string*

Cause: When ALLOW COMMON OPERATION was set to TRUE, a smaller scope user was not allowed to create command rules on a larger scope user's object.

Action: When ALLOW COMMON OPERATION is TRUE, do not create command rules on a larger scope user's object.

ORA-47120: Document *string* already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47121: Document *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47140: Factor expression *string* already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47141: Factor expression *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47160: Factor link *string* already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47161: Factor link *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47180: Integration Policy for OLS Policy *string* is already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47181: Integration Policy for OLS Policy *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47182: Label algorithm *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47183: error creating Integration Policy for OLS Policy *string*, *string*

Cause: An unexpected error occurred creating the integration policy

Action: Please review the definition for accuracy and retry the operation

ORA-47184: error updating Integration Policy for OLS Policy *string*, *string*

Cause: An unexpected error occurred updating the integration policy

Action: Please review the definition for accuracy and retry the operation

ORA-47185: error deleting Integration Policy for OLS Policy *string*, *string*

Cause: An unexpected error occurred deleting the integration policy

Action: Please review the definition for accuracy and retry the operation

ORA-47200: Integration Policy Factor already defined for Factor *string* and Policy *string*

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47201: Integration Policy Factor not found for Factor *string* and Policy *string*

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47202: error creating Integration Policy Factor for factor *string* and policy *string*, *string*

Cause: An unexpected error occurred creating the integration policy factor

Action: Please review the definition for accuracy and retry the operation

ORA-47203: error deleting Integration Policy Factor for factor *string* and policy *string*, *string*

Cause: An unexpected error occurred deleting the integration policy factor

Action: Please review the definition for accuracy and retry the operation

ORA-47220: Label *string* for Identity *string.string* under OLS Policy *string* already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47221: Label *string* for Identity *string.string* under OLS Policy *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47222: error creating Label *string* for Identity *string.string* under OLS Policy *string*, *string*

Cause: An unexpected error occurred creating the identity label

Action: Please review the definition for accuracy and retry the operation

ORA-47223: error deleting Label *string* for Identity *string.string* under OLS Policy *string, string*

Cause: An unexpected error occurred deleting the identity label

Action: Please review the definition for accuracy and retry the operation

ORA-47240: Realm *string* already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47241: Realm *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47242: error creating Realm *string, string*

Cause: An unexpected error occurred creating the realm

Action: Please review the definition for accuracy and retry the operation

ORA-47243: error deleting Realm *string, string*

Cause: An unexpected error occurred deleting the realm

Action: Please review the definition for accuracy and retry the operation

ORA-47244: error updating Realm *string, string*

Cause: An unexpected error occurred updating the realm

Action: Please review the definition for accuracy and retry the operation

ORA-47245: error renaming Realm *string, string*

Cause: An unexpected error occurred renaming the realm

Action: Please review the definition for accuracy and retry the operation

ORA-47246: cannot change default realm *string* to mandatory realm

Cause: An attempt was made to change the realm type of this default realm to mandatory realm.

Action: No action required.

ORA-47247: cannot rename default realm *string*

Cause: An attempt was made to rename a default realm. Default realms cannot be renamed.

Action: No action required.

ORA-47260: Realm authorization to *string* for realm *string* already defined.

Cause: The object with this name exists already.

Action: Choose a unique object name and retry the operation.

ORA-47261: Realm authorization to *string* with *string* scope for realm *string* not found.

Cause: The object being requested does not exist.

Action: Choose an object name that exists and retry the operation.

ORA-47262: error creating realm authorization to *string* for realm *string*, *string*

Cause: An unexpected error occurred creating the realm authorization.

Action: Review the definition for accuracy and retry the operation.

ORA-47263: error deleting realm authorization to *string* for realm *string*, *string*

Cause: An unexpected error occurred deleting the realm authorization.

Action: Review the definition for accuracy and retry the operation.

ORA-47264: error updating realm authorization to *string* for realm *string*, *string*

Cause: An unexpected error occurred updating the realm authorization.

Action: Review the definition for accuracy and retry the operation.

ORA-47265: The *string* scope realm authorization is not allowed in realm *string*.

Cause: The realm authorization scope was greater than the realm scope.

Action: Modify the realm authorization scope or add the realm authorization to a realm with proper scope.

ORA-47280: Realm Object *string,string.string* already defined in Realm *string*

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47281: Realm Object *string,string.string* not found in Realm *string*

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47282: error adding Realm Object *string,string.string* to Realm *string*, *string*

Cause: An unexpected error occurred creating the realm object

Action: Please review the definition for accuracy and retry the operation

ORA-47283: error deleting Realm Object *string,string.string* from Realm *string*, *string*

Cause: An unexpected error occurred deleting the realm object

Action: Please review the definition for accuracy and retry the operation

ORA-47284: error adding Realm Object *string.string*. *string* is not a valid object type

Cause: The specified object type is not valid.

Action: Enter a valid object type for the specified object name, or enter "%" and all objects with the specified name and the specified owner will be added to the realm.

ORA-47285: Object is not a common object.

Cause: The object was neither a metadata link nor an object link object.

Action: Enter a metadata link object or an object link object or enter "%" and all objects with the specified owner will be added to the realm.

ORA-47286: Cannot add *string string.string* to the realm because of an invalid scope.

Cause: The Oracle Database Vault ALLOW COMMON OPERATION status is set to TRUE. This prevents a smaller scope user from adding a larger scope user's object or a larger scope role to the realm.

Action: Requested action is blocked by security settings. No action needed.

ORA-47290: error creating VPD policy for Realm *string, string*

Cause: An unexpected error occurred creating the VPD policy

Action: Please review the definition for accuracy and retry the operation

ORA-47300: Role already *string* defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47301: Role *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47302: error creating Role *string, string*

Cause: An unexpected error occurred creating the role

Action: Please review the definition for accuracy and retry the operation

ORA-47303: error deleting Role *string, string*

Cause: An unexpected error occurred deleting the role

Action: Please review the definition for accuracy and retry the operation

ORA-47304: error updating Role *string, string*

Cause: An unexpected error occurred updating the role

Action: Please review the definition for accuracy and retry the operation

ORA-47305: Rule Set violation on *string (string)*

Cause: An operation that was attempted failed due to a rule set violation

Action: Ensure you have sufficient privileges for this operation retry the operation

ORA-47320: Rule *string* already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47321: Rule *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47322: error creating Rule *string, string*

Cause: An unexpected error occurred creating the rule

Action: Please review the definition for accuracy and retry the operation

ORA-47323: error deleting Rule *string*, *string*

Cause: An unexpected error occurred deleting the rule

Action: Please review the definition for accuracy and retry the operation

ORA-47324: error updating Rule *string*, *string*

Cause: An unexpected error occurred updating the rule

Action: Please review the definition for accuracy and retry the operation

ORA-47325: Rule *string* is used by one or more rule sets.

Cause: The specified rule was used by existing rule set(s).

Action: Remove the dependent rule sets and retry the operation.

ORA-47326: The common rule expression contains local object(s).

Cause: Local object(s) were used in the common rule expression.

Action: Use common object(s) when creating or updating a common rule expression.

ORA-47327: The scope of the Rule and the Rule Set are different.

Cause: The scope of the Rule and the Rule Set were different.

Action: Use Rule and Rule Set of the same scope.

ORA-47328: cannot rename default rule *string*

Cause: An attempt was made to rename a default rule. Default rules cannot be renamed.

Action: No action required.

ORA-47340: Rule Set *string* already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47341: Rule Set *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47342: error creating Rule Set *string*, *string*

Cause: An unexpected error occurred creating the rule set

Action: Please review the definition for accuracy and retry the operation

ORA-47343: error deleting Rule Set *string*, *string*

Cause: An unexpected error occurred deleting the rule set

Action: Please review the definition for accuracy and retry the operation

ORA-47344: error updating Rule Set *string*, *string*

Cause: An unexpected error occurred updating the rule set

Action: Please review the definition for accuracy and retry the operation

ORA-47345: Rule set *string* is used by one or more realm authorizations.

Cause: The specified rule set was used by existing realm authorization(s).

Action: Review the AUTH_RULE_SET_NAME column in DBA_DV_REALM_AUTH view, remove the dependent realm authorizations and retry.

ORA-47346: Rule set *string* is used by one or more command rules.

Cause: The specified rule set was used by existing command rule(s).

Action: Remove the dependent command rules and retry the operation.

ORA-47347: Rule set *string* is used by one or more secure application roles.

Cause: The specified rule set was used by existing secure application role(s).

Action: Remove the dependent secure application roles and retry the operation.

ORA-47348: Rule set *string* is used by one or more factors.

Cause: The specified rule set was used by existing factor(s).

Action: Review the ASSIGN_RULE_SET_NAME column in DBA_DV_FACTOR view, remove the dependent factors and retry the operation.

ORA-47349: error occurred when executing the rule set handler

Cause: Either there was a syntax error on the rule set handler or DVSYS did not have sufficient privilege to execute the rule set handler.

Action: Fix the syntax error on the rule set handler or grant execute privilege on the rule set handler to DVSYS.

ORA-47350: cannot rename default rule set *string*

Cause: An attempt was made to rename a default rule set. Default rule sets cannot be renamed.

Action: No action required.

ORA-47360: rule *string* already added to rule set *string*

Cause: The object with this name existed already.

Action: Choose a unique object name and retry the operation.

ORA-47361: rule *string* not associated to rule set *string*

Cause: The rule specified was not associated to the rule set.

Action: Review the definition for accuracy and retry the operation.

ORA-47362: error adding rule *string* to rule set *string*, *string*

Cause: An unexpected error occurred while adding the rule to the rule set.

Action: Review the definition for accuracy and retry the operation.

ORA-47363: error deleting rule *string* from rule set *string*, *string*

Cause: An unexpected error occurred while deleting the rule from the rule set.

Action: Review the definition for accuracy and retry the operation.

ORA-47381: Oracle Label Security (OLS) Policy *string* not found

Cause: The object being requested did not exist.

Action: Choose an object name that exists and retry the operation.

ORA-47382: Oracle Label Security (OLS) Policy Label *string* not found for policy *string*

Cause: The object being requested did not exist.

Action: Choose an object name that exists and retry the operation.

ORA-47383: error capturing the session state information

Cause: An internal error occurred capture the session state

Action: Please retry the operation if possible

ORA-47390: failed to audit event, *string*

Cause: An internal error auditing the operation

Action: Please retry the operation if possible

ORA-47391: attempt to set Factor *string* violates Rule Set *string*

Cause: An attempt to set the factor violated the associated rule set

Action: Please check to ensure you have the ability to set the factor

ORA-47392: Factor *string* cannot be set

Cause: The attempt to set the factor is not allowed

Action: This factor cannot be set so there is no corrective action

ORA-47393: Factor *string* value not allowed

Cause: The value being assigned to the factor is not allowed

Action: This factor cannot be set to this value so there is no corrective action

ORA-47394: Factor assignment rule set not defined

Cause: The rule set being associated to the factor does not exist

Action: Please review the definition for accuracy and retry the operation

ORA-47395: error returned by Factor *string* evaluation expression *string*

Cause: The factor retrieval method resulted in an error

Action: Please review the retrieval method definition for accuracy and correct it as required

ORA-47396: error returned by Factor *string* validation expression *string*

Cause: The factor retrieval method resulted in an invalid value based on its validation method

Action: Please review the factor definition and correct it as required

ORA-47397: incorrect identified by value for Factor *string*

Cause: The factor identified by value is incorrect

Action: Please review the factor definition and correct it as required

ORA-47398: multiple identities defined for Factor *string*

Cause: The factor has duplicate identities defined

Action: Please review the factor definition and correct it as required

ORA-47399: incorrect labeled by value for Factor *string*

Cause: The factor labeled by value is incorrect

Action: Please review the factor definition and correct it as required

ORA-47400: Command Rule violation for *string* on *string*

Cause: An operation that was attempted failed due to a command rule violation

Action: Ensure you have sufficient privileges for this operation retry the operation

ORA-47401: Realm violation for *string* on *string.string*

Cause: An operation that was attempted failed due to a realm protection

Action: Ensure you have sufficient privileges for this operation retry the operation

ORA-47402: incorrect evaluation options value for Factor *string*

Cause: The factor evaluations options value is incorrect

Action: Please review the factor definition and correct it as required

ORA-47403: NULL returned by Factor *string* evaluation expression *string*

Cause: The factor evaluated to a NULL value

Action: Please review the factor definition and correct it as required

ORA-47404: NULL trust level for Factor *string*

Cause: The factor has a NULL trust level

Action: Please review the factor definition and correct it as required

ORA-47405: negative trust level for Factor *string*

Cause: The factor has a negative trust level

Action: Please review the factor definition and correct it as required

ORA-47406: ALWAYS AUDIT option set for Factor *string*

Cause: The factor audit option is set to always audit

Action: No action required

ORA-47407: ALWAYS AUDIT option set for Rule Set *string*

Cause: The rule set audit option is set to always audit

Action: No action required

ORA-47408: Realm violation for the EXECUTE command

Cause: A realm violation has occurred for a realm-protected stored procedure.

Action: In order to invoke the realm-protected procedure, you must have GRANT privileges to execute the procedure, or you must be authorized to operate in the procedure's realm.

ORA-47409: Command Rule violation for the EXECUTE command

Cause: A command rule violation occurred when trying to perform the EXECUTE command for a stored procedure protected by a command rule.

Action: Ask the Database Vault administrator to perform the operation or remove the command rule for the protected stored procedure.

ORA-47410: Realm violation for *string* on *string*

Cause: An operation that was attempted failed with insufficient privileges due to an attempt to violate a Database Vault Realm security policy which is currently enabled and enforced.

Action: Ensure you have sufficient privileges for this operation and retry the operation.

ORA-47411: Cannot use *string* due to Oracle Database Vault policy.

Cause: An operation that was attempted failed because Database Vault policy currently prevents the related feature from being used.

Action: Ask the Database Vault administrator to allow the feature to be used.

ORA-47412: The DVSYS and DVF users are not allowed to switch containers.

Cause: An attempt was made to switch containers while connecting as DVSYS or DVF, which is not allowed.

Action: Connect as a different user and try again.

ORA-47413: Cannot connect due to Oracle Database Vault policy.

Cause: An attempt to connect to DVSYS or DVF accounts failed because the Database Vault administrator had disabled the account.

Action: Ask the Database Vault administrator to enable the account.

ORA-47420: Database Vault policy *string* already defined

Cause: The policy with this name already existed.

Action: Choose a unique policy name and retry the operation.

ORA-47421: Database Vault policy *string* not found

Cause: The policy being requested did not exist.

Action: Choose a policy name that exists and retry the operation.

ORA-47422: The object already belongs to a Database Vault policy.

Cause: An attempt was made to add a realm or command rule to more than one Database Vault policy.

Action: Make sure the realm or command rule does not belong to any Database Vault policy and retry the operation.

ORA-47423: The object does not belong to Database Vault policy *string*.

Cause: An attempt was made to delete a realm or command rule from a Database Vault policy that did not contain it.

Action: Choose the Database Vault policy that contains the realm or command rule and retry the operation.

ORA-47424: The user *string* already owns Database Vault policy *string*.

Cause: An attempt was made to add a user as policy owner to a Database Vault policy that the user already owned.

Action: Choose a user who does not own the policy and retry the operation.

ORA-47425: The user *string* does not own Database Vault policy *string*.

Cause: An attempt was made to delete a user as policy owner from a Database Vault policy that the user did not own.

Action: Choose a user who owns the policy and retry the operation.

ORA-47426: The object or its parent object belongs to a Database Vault policy.

Cause: An attempt was made to modify an object that either belongs to a Database Vault policy or has a parent object that belongs to a Database Vault policy.

Action: Choose a different object or change the related policy state to the PARTIAL mode.

ORA-47427: The *string* scope realm *string* cannot be added to policy *string*.

Cause: The realm scope did not match the policy scope.

Action: Add the realm to a policy with the same scope.

ORA-47428: The *string* scope command rule cannot be added to policy *string*.

Cause: The command rule scope did not match the policy scope.

Action: Add the command rule to a policy with the same scope.

ORA-47429: The common scope command rule cannot be created on local objects.

Cause: An attempt was made to create a common scope command rule on a local object.

Action: Make sure the object is of common scope before creating a common scope command rule protecting it.

ORA-47430: Nested tables cannot be added to Oracle Database Vault realms and command rules.

Cause: An attempt was made to add a nested table to a realm or command rule.

Action: Protect the base table of the nested table in order to automatically protect the nested table.

ORA-47431: cannot rename default policy *string*

Cause: An attempt was made to rename a default policy. Default policy cannot be renamed.

Action: No action required.

ORA-47500: Database Vault cannot be configured.

Cause: The Database Vault configuration failed because some Database Vault objects were missing.

Action: Run the dvremov.sql script to remove Database Vault and then reinstall Database Vault.

ORA-47501: Database Vault has already been configured.

Cause: An attempt was made to run this procedure more than once. This procedure can be run successfully only once.

Action: If you are attempting to grant the DV_OWNER or DV_ACCTMGR roles, do so manually.

ORA-47502: Database Vault is not yet configured.

Cause: The Database Vault configuration procedure `dvsys.configure_dv()` had not been run.

Action: Run `dvsys.configure_dv()` before attempting to enable or disable Database Vault enforcement.

ORA-47503: Database Vault is not enabled in CDB\$ROOT or application root.

Cause: Database Vault was not enabled in CDB\$ROOT or application root for this operation.

Action: Enable Database Vault in CDB\$ROOT or application root and retry the operation.

ORA-47504: Common audit policies for component Oracle Database Vault not supported.

Cause: Audit policies for Oracle Database Vault realms, factors and rule sets could not be common audit policies.

Action: If creating audit policies for Oracle Database Vault objects in CDB\$ROOT, include the clause `'container=current'`.

ORA-47505: Oracle Database Vault strict mode cannot be enabled in PDB.

Cause: "An attempt was made to enable Oracle Database Vault strict mode in a pluggable database (PDB). Strict mode can only be enabled in CDB\$ROOT or application root.

Action: Enable Oracle Database Vault strict mode in CDB\$ROOT or application root.

ORA-47506: Oracle Database Vault or Oracle Database Vault application protection is not enabled in CDB\$ROOT.

Cause: Oracle Database Vault or Oracle Database Vault application protection was not enabled in CDB\$ROOT for this operation.

Action: Enable Oracle Database Vault or Oracle Database Vault application protection in CDB\$ROOT and retry the operation.

ORA-47507: Oracle Database Vault cannot be enabled inside an application action.

Cause: An attempt was made to enable Oracle Database Vault inside an application action.

Action: Enable Oracle Database Vault outside of application actions.

ORA-47508: Oracle Label Security cannot be enabled inside an application action.

Cause: An attempt was made to enable Oracle Label Security inside an application action.

Action: Enable Oracle Label Security outside of application actions.

ORA-47600: Firewall is not enabled

Cause: Firewall was not enabled.

Action: Enable firewall and retry the operation.

ORA-47601: Firewall is already enabled

Cause: Firewall was already enabled.

Action: Disable firewall and retry the operation.

ORA-47602: Policy is not in valid JSON format

Cause: Policy was not in valid JavaScript Object Notation (JSON) format.

Action: Choose a policy in valid JSON format and retry the operation.

ORA-47604: Attribute set *string* contains invalid *string*

Cause: An invalid attribute set parameter was used in the Firewall policy.

Action: Review the Firewall policy and choose a valid attribute set parameter.

ORA-47605: Firewall Violation

Cause: The operation was blocked by Firewall.

Action: Review the Firewall policy to make adjustments.

ORA-47606: Profile(s) refer to invalid attribute set

Cause: Firewall policy contains one or more profiles that are referring to non-existent attribute set.

Action: Review and modify the Firewall policy for profile definition and retry the operation.

ORA-47607: Context rule(s) refer to invalid profile

Cause: Firewall policy contained one or more context rules that are referring to non-existent profile.

Action: Review and modify the Firewall policy for context rule definition and retry the operation.

ORA-47608: SQL rule(s) refer to invalid profile

Cause: Firewall policy contained one or more SQL rules that are referring to non-existent profile.

Action: Review and modify the Firewall policy for SQL rule definition and retry the operation.

ORA-47609: Command rule(s) refer to invalid profile

Cause: Firewall policy contained one or more command rules that are referring to non-existent profile.

Action: Review and modify the Firewall policy for command rule definition and retry the operation.

ORA-47610: Default rule(s) refer to invalid profile

Cause: Firewall policy contained one or more default rules that are referring to non-existent profile.

Action: Review and modify the Firewall policy for default rule definition and retry the operation.

ORA-47611: Object information is incomplete in command rule *<string, string, string>*

Cause: The specified command type requires object owner and object name information, but object owner and object name information was not complete for the specified command rule.

Action: Review and modify the Firewall policy for command rule definitions and retry the operation.

ORA-47612: Attribute set *string* contains invalid rule expression

Cause: The attribute set had one or more rules with invalid expression.

Action: Review and modify the Firewall policy for attribute set rule definitions and retry the operation.

ORA-47613: Invalid SQL command *string* is used in command rule.

Cause: The specified SQL command was invalid.

Action: Review and modify the Firewall policy for command rule definitions and retry the operation.

ORA-47614: Invalid object owner *string* in command rule <*string*, *string*, *string*>

Cause: The specified command rule was using an invalid object owner.

Action: Review and modify the Firewall policy for command rule definitions and retry the operation.

ORA-47615: Object level protection is not supported for the command *string*

Cause: A command rule specified object level protection for the specified command type.

Action: Review and modify the Firewall policy for command rule definitions and retry the operation.

ORA-47616: Another policy deployment is in progress

Cause: Firewall could only deploy new policy one at a time.

Action: Wait until the current policy deployment is completed and try again.

ORA-47617: Invalid object name *string* in command rule <*string*, *string*, *string*>

Cause: A command rule was using "%" as object owner, but object name was not "%".

Action: Review and modify the Firewall policy for command rule definitions and retry the operation.

ORA-47618: SQL command *string* is not supported for command rule.

Cause: The specified SQL command was not supported for command rule.

Action: Review and modify the Firewall policy for command rule definitions and retry the operation.

ORA-47619: Failed to deploy Firewall policy due to: *string*

Cause: Firewall policy could not be deployed because of missing fields, invalid strings used as name, or invalid action, logging_level or threat_severity value.

Action: Review and modify the Firewall policy and retry the operation.

ORA-47620: invalid input value for parameter *string*

Cause: The value specified for this parameter was invalid.

Action: Review and modify the parameter and retry the operation.

ORA-47621: specified partition is actively being used by firewall

Cause: The specified partition of the log table was actively being used by the firewall.

Action: Call the DBMS_FIREWALL.READ_TOGGLE_PARTITION procedure to determine the idle partition, modify the parameter and retry the operation.

ORA-47622: concurrent procedure call that manages log partition is in progress

Cause: The firewall log partition change was not serialized and could not happen concurrently.

Action: Wait until the current procedure that manages log partition is complete and try again.

ORA-47623: flush log propagation timed out

Cause: The flush log operation across Oracle RAC instances timed out.

Action: Make sure all RAC instances are available and retry the operation.

ORA-47800: Oracle Data Pump authorization for Oracle Database Vault to *string* to execute action *string* already exists.

Cause: Oracle Data Pump authorization for Oracle Database Vault to execute the specified action was already granted to the specified grantee.

Action: Choose a different grantee or action and retry the operation.

ORA-47801: Oracle Data Pump authorization for Oracle Database Vault to *string* on schema *string* to execute action *string* already exists.

Cause: Oracle Data Pump authorization for Oracle Database Vault on the specified schema to execute the specified action was already granted to the specified grantee.

Action: Choose a different grantee, schema or action and retry the operation.

ORA-47802: Oracle Data Pump authorization for Oracle Database Vault to *string* to execute action *string* is not found.

Cause: Oracle Data Pump authorization for Oracle Database Vault to execute the specified action was not granted to the specified grantee.

Action: Choose a different grantee or action and retry the operation.

ORA-47803: Oracle Data Pump authorization for Oracle Database Vault to *string* on schema *string* to execute action *string* is not found.

Cause: Oracle Data Pump authorization for Oracle Database Vault on the specified schema to execute the specified action was not granted to the specified grantee.

Action: Choose a different grantee, schema or action and retry the operation.

ORA-47804: Oracle Database Vault application protection exception for *string* already exists.

Cause: Oracle Database Vault application protection exception was already granted to the specified user.

Action: Choose a different user and retry the operation.

ORA-47805: Oracle Database Vault application protection exception for *string* does not exist.

Cause: Oracle Database Vault application protection exception did not exist for the specified user.

Action: Choose a different user and retry the operation.

ORA-47806: Oracle Database Vault application protection exception for *string.string* already exists.

Cause: Oracle Database Vault application protection exception was already granted to the specified package.

Action: Choose a different package and retry the operation.

ORA-47807: Oracle Database Vault application protection exception for *string.string* does not exist.

Cause: Oracle Database Vault application protection exception did not exist for the specified package.

Action: Choose a different package and retry the operation.

ORA-47808: Oracle Database Vault application protection exception cannot be added to package *string.string*.

Cause: Oracle Database Vault application protection exception was not added for a definer rights package.

Action: Choose a different package and retry the operation.

ORA-47809: User *string* is not an existing RAS user.

Cause: Oracle Database Real Application Security (RAS) attach session authorization for Oracle Database Vault was not granted on an existing RAS user.

Action: Choose an existing RAS user and retry the operation.

ORA-47810: Oracle RAS attach session authorization for Oracle Database Vault to *string* on RAS user *string* already exists.

Cause: Oracle Database Real Application Security (RAS) attach session authorization for Oracle Database Vault on the specified RAS user was already granted to the specified grantee.

Action: Choose a different grantee or RAS user and retry the operation.

ORA-47811: Oracle RAS attach session authorization for Oracle Database Vault to *string* on RAS user *string* is not found.

Cause: Oracle Database Real Application Security (RAS) attach session authorization for Oracle Database Vault was not granted to the specified user on the specified RAS user.

Action: Choose a different grantee or RAS user and retry the operation.

ORA-47812: Oracle RAS attach session authorization for Oracle Database Vault to *string* already exists.

Cause: Oracle Database Real Application Security (RAS) attach session authorization for Oracle Database Vault was already granted to the specified grantee.

Action: Choose a different grantee or RAS user and retry the operation.

ORA-47813: Oracle RAS attach session authorization for Oracle Database Vault to *string* is not found.

Cause: Oracle Database Real Application Security (RAS) attach session authorization for Oracle Database Vault was not granted to the specified grantee.

Action: Choose a different grantee and retry the operation.

ORA-47814: Oracle Database Vault application protection cannot be *string*.

Cause: One or more of the pluggable databases were in read-only mode.

Action: Reopen the pluggable databases in read/write mode and retry the operation.

ORA-47815: Oracle Database Vault application protection cannot be *string* for the pluggable database.

Cause: The pluggable database was in read-only mode.

Action: Choose a pluggable database that is opened in read/write mode.

ORA-47897: AUDIT_ADMIN authorization for Oracle Database Vault to *string* already exists.

Cause: AUDIT_ADMIN authorization for Oracle Database Vault was already granted to the specified grantee.

Action: Choose a different grantee and retry the operation.

ORA-47898: AUDIT_ADMIN authorization for Oracle Database Vault to *string* is not found.

Cause: AUDIT_ADMIN authorization for Oracle Database Vault was not granted to the specified user.

Action: Choose a user who has AUDIT_ADMIN authorization for Oracle Database Vault and retry the operation.

ORA-47899: AUDIT_VIEWER authorization for Oracle Database Vault to *string* already exists.

Cause: AUDIT_VIEWER authorization for Oracle Database Vault was already granted to the specified grantee.

Action: Choose a different grantee and retry the operation.

ORA-47900: AUDIT_VIEWER authorization for Oracle Database Vault to *string* is not found.

Cause: AUDIT_VIEWER authorization for Oracle Database Vault was not granted to the specified user.

Action: Choose a user who has AUDIT_VIEWER authorization for Oracle Database Vault and retry the operation.

ORA-47901: OLS policy not specified

Cause: An OLS policy name is required for this operation

Action: Specify a policy name and retry the operation

ORA-47902: OLS policy label not specified

Cause: An OLS policy label is required for this operation

Action: Specify a policy label and retry the operation

ORA-47903: OLS policy label *string* not found for policy *string*

Cause: The policy label being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47904: OLS session label does not exist

Cause: The policy label specified does not exist

Action: Choose a valid policy label and retry the operation

ORA-47905: OLS policy label *string* is not allowed for policy *string*

Cause: The policy label specified is not valid for this policy

Action: Choose a valid policy label for this policy and retry the operation

ORA-47906: OLS policy label not specified for identity *string.string* under policy *string*

Cause: The policy label is required for this operation

Action: Choose a valid policy label for this policy and retry the operation

ORA-47907: Database Vault associated OLS policy *string* not fully configured

Cause: The Oracle Label Security (OLS) policy was associated with Database Vault. But either the policy was not configured with a factor or the current factor identity was not assigned a label.

Action: Based on the cause, either configure a factor with the OLS policy using DVSYS.DBMS_MACADM.ADD_POLICY_FACTOR procedure and assign labels to factor identities using DVSYS.DBMS_MACADM.CREATE_POLICY_LABEL procedure or remove Database Vault association using DVSYS.DBMS_MACADM.DELETE_MAC_POLICY_CASCADE procedure.

ORA-47910: failure to add language *string*

Cause: An error occurred while adding a language to Oracle Database Vault.

Action: Review the trace file and identify the cause.

ORA-47920: Authorization failed for user *string* to perform this operation

Cause: The operation attempted is not allowed for this user

Action: Please ensure you have privileges to perform this operation

ORA-47921: error adding host *string* to domain *string, string*

Cause: An error occurred adding the host specified to the domain specified

Action: Please review the host and domain definition and correct it as required

ORA-47922: error removing host *string* to domain *string, string*

Cause: An error occurred removing the host specified to the domain specified

Action: Please review the host and domain definition and correct it as required

ORA-47930: Privilege capture *string* already exists.

Cause: A privilege capture with the given name was already in existence.

Action: Choose another capture name or drop the existing privilege capture.

ORA-47931: Privilege capture *string* does not exist.

Cause: The given privilege capture did not exist.

Action: Choose another privilege capture.

ORA-47932: Privilege capture *string* is still enabled.

Cause: The given privilege capture was still enabled.

Action: Choose another capture or disable the given privilege capture.

ORA-47933: Privilege capture *string* is already enabled.

Cause: The given privilege capture was already enabled.

Action: Choose another privilege capture.

ORA-47934: Two privilege captures are already enabled.

Cause: The maximum number of two privilege captures were enabled."

Action: Disable one of the enabled privilege captures.

ORA-47935: Another privilege capture is enabled.

Cause: Another capture of the same type or another nondatabase-wide capture was enabled.

Action: Disable the enabled privilege capture.

ORA-47936: Privilege capture *string* is already disabled.

Cause: The given privilege capture was already disabled.

Action: Choose another capture.

ORA-47937: Input *string* does not match the given privilege capture type.

Cause: The given input did not match the given privilege capture type.

Action: Change the input or the privilege capture type.

ORA-47938: GENERATE_RESULT is already running for privilege capture *string*.

Cause: DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT was already running for the given privilege capture.

Action: Wait and retry later or choose another privilege capture.

ORA-47939: Capture context namespace or attribute does not exist or is invalid.

Cause: Context namespace or attribute used in the capture condition did not exist or was invalid.

Action: Create the namespace or set the attribute or re-create a privilege capture with a valid namespace and attribute.

ORA-47940: Cannot create a capture condition for SYS user.

Cause: Attempted to create a capture with the condition set as SYS user, and this is not allowed.

Action: Create the capture condition for non-SYS user.

ORA-47941: Privilege capture *string* has not been enabled with run name *string*.

Cause: The given privilege capture has not been run with run name %s.

Action: Enable the given privilege capture with the given run name.

ORA-47942: Privilege capture *string* had been enabled with run name *string*.

Cause: The given privilege capture had been run with the given run name.

Action: Enable the given privilege capture with a new run name.

ORA-47943: Privilege capture *string* is enabled with run name *string*.

Cause: The given privilege capture is running with the given run name.

Action: Disable the given privilege capture.

ORA-47944: Privilege capture *string* has not been enabled.

Cause: The given privilege capture has not been enabled.

Action: Enable the given privilege capture.

ORA-47945: duplicate roles *string* in capture condition

Cause: An attempt was made to specify duplicate roles in a capture condition.

Action: Specify only unique roles and retry the operation.

ORA-47946: invalid System Privilege - '*string*'

Cause: An invalid system privilege was passed as a parameter.

Action: Specify valid system privilege and retry the operation.

ORA-47950: required value not defined for parameter *string*

Cause: A value was not defined for the specified parameter.

Action: Specify the missing parameter value and retry the operation.

ORA-47951: invalid input value or length for parameter '*string*'

Cause: The value specified for this parameter is invalid or too large

Action: Please specify the a valid parameter and retry the operation

ORA-47952: Oracle Data Pump authorization for Oracle Database Vault to *string* already exists

Cause: Oracle Data Pump authorization for Oracle Database Vault was already granted to the given grantee.

Action: Choose a different grantee and retry the operation.

ORA-47953: Oracle Data Pump authorization for Oracle Database Vault to *string* on schema *string* already exists

Cause: Oracle Data Pump authorization for Oracle Database Vault on the given schema was already granted to the given grantee.

Action: Choose a different grantee or schema and retry the operation.

ORA-47954: Oracle Data Pump authorization for Oracle Database Vault to *string* on object *string.string* already exists

Cause: Oracle Data Pump authorization for Oracle Database Vault on the given object was already granted to the given grantee.

Action: Choose a different grantee or a different object and retry the operation.

ORA-47955: Oracle Data Pump authorization for Oracle Database Vault to *string* is not found

Cause: Oracle Data Pump authorization for Oracle Database Vault was not granted to the given user.

Action: Choose a user who has Oracle Data Pump authorization for Oracle Database Vault and retry the operation.

ORA-47956: Oracle Data Pump authorization for Oracle Database Vault to *string* on schema *string* is not found

Cause: Oracle Data Pump authorization for Oracle Database Vault was not granted to the given user on the given schema.

Action: Choose a different user or schema and retry the operation.

ORA-47957: Oracle Data Pump authorization for Oracle Database Vault to *string* on object *string.string* is not found

Cause: Oracle Data Pump authorization for Oracle Database Vault was not granted to the given user on the given object.

Action: Choose a different user or object and retry the operation.

ORA-47958: Running EXP with direct path option is disallowed when Oracle Database Vault is enabled.

Cause: While Oracle Database Vault was enabled, an attempt was made to run EXP with the 'direct=y' option.

Action: Change the option to 'direct=n' or disable Oracle Database Vault and retry the operation.

ORA-47959: Oracle transportable tablespace authorization for Oracle Database Vault to *string* on tablespace *string* already exists.

Cause: The Oracle transportable tablespace authorisation for Oracle Database Vault on the given tablespace was already granted to the given grantee.

Action: Choose a different grantee or tablespace and then retry the operation.

ORA-47960: Oracle transportable tablespace authorization for Oracle Database Vault to *string* on tablespace *string* is not found.

Cause: The Oracle transportable tablespace authorization for Oracle Database Vault was not granted to the given user on the given tablespace.

Action: Choose a different user or tablespace, and then retry the operation.

ORA-47961: Oracle Scheduler Job authorization for Oracle Database Vault to *string* already exists

Cause: Oracle Scheduler Job authorization for Oracle Database Vault was already granted to the given grantee.

Action: Choose a different grantee and retry the operation.

ORA-47962: Oracle Scheduler Job authorization for Oracle Database Vault to *string* on schema *string* already exists

Cause: Oracle Scheduler Job authorization for Oracle Database Vault on the given schema was already granted to the given grantee.

Action: Choose a different grantee or schema and retry the operation.

ORA-47963: Oracle Scheduler Job authorization for Oracle Database Vault to *string* is not found

Cause: Oracle Scheduler Job authorization for Oracle Database Vault was not granted to the given user.

Action: Choose a user who has Oracle Scheduler Job authorization for Oracle Database Vault and retry the operation.

ORA-47964: Oracle Scheduler job authorization for Oracle Database Vault to *string* on schema *string* is not found

Cause: Oracle Scheduler job authorization for Oracle Database Vault was not granted to the given user on the given schema.

Action: Choose a different user or schema and retry the operation.

ORA-47965: DEBUG_CONNECT authorization for Oracle Database Vault to %0!s on schema %1!s already exists.

Cause: DEBUG_CONNECT authorization for Oracle Database Vault on the given schema was already granted to the given grantee.

Action: Choose a different grantee or schema and retry the operation.

ORA-47966: DEBUG_CONNECT authorization for Oracle Database Vault to %0!s on schema %1!s is not found.

Cause: DEBUG_CONNECT authorization for Oracle Database Vault was not granted to the given user on the given schema.

Action: Choose a different user or schema and retry the operation.

ORA-47967: DBCAPTURE authorization for Oracle Database Vault to *string* already exists.

Cause: DBCAPTURE authorization for Oracle Database Vault was already granted to the specified grantee.

Action: Choose a different grantee and retry the operation.

ORA-47968: DBCAPTURE authorization for Oracle Database Vault to *string* is not found.

Cause: DBCAPTURE authorization for Oracle Database Vault was not granted to the specified user.

Action: Choose a user who has DBCAPTURE authorization for Oracle Database Vault and retry the operation.

ORA-47969: DBREPLAY authorization for Oracle Database Vault to *string* already exists.

Cause: DBREPLAY authorization for Oracle Database Vault was already granted to the specified grantee.

Action: Choose a different grantee and retry the operation.

ORA-47970: DBREPLAY authorization for Oracle Database Vault to *string* is not found.

Cause: DBREPLAY authorization for Oracle Database Vault was not granted to the specified user.

Action: Choose a user who has DBREPLAY authorization for Oracle Database Vault and retry the operation.

ORA-47971: Oracle proxy authorization for Oracle Database Vault to *string* on schema *string* already exists

Cause: Oracle proxy authorization for Oracle Database Vault on the given schema was already granted to the given grantee.

Action: Choose a different grantee or schema and retry the operation.

ORA-47972: Oracle proxy authorization for Oracle Database Vault to *string* on schema *string* is not found.

Cause: Oracle proxy authorization for Oracle Database Vault was not granted to the given user on the given schema.

Action: Choose a different user or schema and retry the operation.

ORA-47973: Oracle DDL authorization for Oracle Database Vault to *string* on schema *string* already exists.

Cause: Oracle DDL authorization for Oracle Database Vault on the given schema was already granted to the given grantee.

Action: Choose a different grantee or schema and retry the operation.

ORA-47974: Oracle DDL authorization for Oracle Database Vault to *string* on schema *string* is not found.

Cause: Oracle DDL authorization for Oracle Database Vault was not granted to the given user on the given schema.

Action: Choose a different user or schema and retry the operation.

ORA-47975: PREPROCESSOR authorization for Oracle Database Vault to *string* already exists

Cause: PREPROCESSOR authorization for Oracle Database Vault was already granted to the specified grantee.

Action: Choose a different grantee and retry the operation.

ORA-47976: PREPROCESSOR authorization for Oracle Database Vault to *string* is not found

Cause: PREPROCESSOR authorization for Oracle Database Vault was not granted to the specified user.

Action: Choose a user who has PREPROCESSOR authorization for Oracle Database Vault and retry the operation.

ORA-47977: Maintenance authorization *string* for Oracle Database Vault to *stringstring* already exists.

Cause: Maintenance authorization for Oracle Database Vault was already granted to the specified grantee.

Action: Choose different parameters and retry the operation.

ORA-47978: Maintenance authorization *string* for Oracle Database Vault to *stringstring* on schema *string* already exists.

Cause: Maintenance authorization for Oracle Database Vault on the specified schema was already granted to the specified grantee.

Action: Choose different parameters and retry the operation.

ORA-47979: Maintenance authorization *string* for Oracle Database Vault to *string* on object *string.string* already exists.

Cause: Maintenance authorization for Oracle Database Vault on the specified schema was already granted to the specified grantee.

Action: Choose a different grantee or schema and retry the operation.

ORA-47980: Maintenance authorization *string* for Oracle Database Vault to *stringstring* is not found.

Cause: Maintenance authorization for Oracle Database Vault was not granted to the specified user.

Action: Choose different parameters and retry the operation.

ORA-47981: Maintenance authorization *string* for Oracle Database Vault to *stringstring* on schema *string* is not found.

Cause: Maintenance authorization for Oracle Database Vault was not granted to the specified user on the specified schema.

Action: Choose a different user or schema and retry the operation.

ORA-47982: Maintenance authorization *string* for Oracle Database Vault to *string* on object *string.string* is not found.

Cause: Maintenance authorization for Oracle Database Vault was not granted to the specified user on the specified object.

Action: Choose a different user or object and retry the operation.

ORA-47983: Diagnostic authorization for Oracle Database Vault to *string* already exists.

Cause: Diagnostic authorization for Oracle Database Vault was already granted to the specified grantee.

Action: Choose a different grantee and retry the operation.

ORA-47984: Diagnostic authorization for Oracle Database Vault to *string* is not found.

Cause: Diagnostic authorization for Oracle Database Vault was not granted to the specified user.

Action: Choose a user who has diagnostic authorization for Oracle Database Vault and retry the operation.

ORA-47985: password same as or similar to user

Cause: The password specified similar to the user account name and therefore insecure

Action: Please specify the more complex password and retry the operation

ORA-47986: password length must be 8 characters or more

Cause: The password specified is too short and therefore insecure

Action: Please specify a password with more characters and retry the operation

ORA-47987: password is too simple

Cause: The password specified can be guessed based on dictionary terms and therefore insecure

Action: Please specify a password that is not based on dictionary terms and retry the operation

ORA-47988: password should contain at least one numeric and one alphabetic character

Cause: The password does not contain at least one numeric and one alphabetic character

Action: Please specify a password with at least one numeric and one alphabetic character and retry the operation

ORA-47989: password should differ by at least 3 characters

Cause: The password specified does not differ from the previous one by more than 3 characters

Action: Please specify a password that differs from the previous one by more than 3 characters and retry the operation

ORA-47990: Function *string* has already been added to Oracle Database Vault index functions list.

Cause: The function specified had already been added to Oracle Database Vault index functions list.

Action: Choose a different function and retry the operation.

ORA-47991: Function *string* is not found in Oracle Database Vault index functions list.

Cause: The function specified was not found in Oracle Database Vault index functions list.

Action: Choose a different function and retry the operation.

ORA-47992: Function *string* is not an Oracle built-in operator.

Cause: The function specified was not provided as a built-in operator by Oracle.

Action: Choose a different function and retry the operation.

ORA-47993: Cannot run *dvremov.sql* from CDB root when DV is installed in one or more PDBs.

Cause: The Database Vault (DV) removal script was not allowed to be run from the multitenant container database (CDB) root when DV is installed in one or more of the underlying pluggable databases (PDBs).

Action: Run *dvremov.sql* on all PDBs before running it from CDB root.

ORA-47994: Database Vault removal script must be run as SYS

Cause: The Database Vault removal script was not run as SYS.

Action: Run the Database Vault removal script as SYS.

ORA-47995: Database Vault must be linked off and disabled before removal

Cause: Database Vault was not linked off and disabled.

Action: Link Database Vault off and execute `DBMS_MACADM.DISABLE_DV_CHECK` as `DV_OWNER`.

ORA-47996: The RECYCLEBIN is turned on

Cause: The RECYCLEBIN was turned on.

Action: Turn off the RECYCLEBIN and then execute Database Vault Removal script.

ORA-47997: Database Vault protected schema does not exist

Cause: The Database Vault DVSYS protected schema did not exist.

Action: Contact Oracle Support Services for instructions.

ORA-47999: internal Database Vault error: *string*\n Error: *string*

Cause: An internal Database Vault framework error occurred.

Action: Contact Oracle Customer Support.

ORA-48000: Cannot run dvremov.sql from CDB root when one or more PDBs are closed.

Cause: The Database Vault (DV) removal script was not allowed to be run from the multitenant container database (CDB) root when one or more pluggable databases (PDBs) are closed.

Action: Open all PDBs before running dvremov.sql from CDB root.

ORA-48001 to ORA-51705

ORA-48001: internal error code, arguments: [string], [string], [string], [string], [string], [string], [string], [string]

Cause: This is the generic internal error number for program exceptions. This indicated that a process encountered an exceptional condition.

Action: Report as a bug - the first argument is the internal error number.

ORA-48002: thread terminated by fatal error

Cause: The thread was in an unrecoverable state.

Action: Examine the thread trace file for more information.

ORA-48003: out of process memory when trying to allocate string bytes (string,string)

Cause: Operating system process private memory was exhausted.

Action: n/a

ORA-48004: unable to allocate string bytes of shared memory ("string","string","string","string")

Cause: More shared memory is needed than was allocated in the shared pool.

Action: Reduce your use of shared memory or increase the amount of available shared memory.

ORA-48006: user requested cancel of current operation

ORA-48007: name is already used by an existing product type

Cause: An attempt was made to define a product type with the same name as an already defined product type.

Action: Use the already existing product type with the specified name, or use a different name for the product type.

ORA-48008: id is already used by an existing product type

Cause: An attempt was made to define a product type with the same id as an already defined product type.

Action: Choose a different name for the product type.

ORA-48100: error encountered when attempting to open a file

Cause: There was an error encountered when attempting to open a file with the ADR file interface.

Action: Check that the specified directory name, file name, and open options are valid.

ORA-48101: error encountered when attempting to read a file [string] [string] [string]

Cause: There was an error encountered when attempting to read a file with the ADR file interface.

Action: Check the specified arguments to the read interface.

ORA-48102: encountered the end-of-file when reading the file

Cause: The ADR file interface encountered the end-of-file when reading the file.

Action: Handle the end of file condition.

ORA-48103: error encountered when attempting to write a file [string] [string] [string]

Cause: There was an error encountered when attempting to write a file with the ADR file interface.

Action: Check the specified arguments to the write interface.

ORA-48104: read mismatch on blocks requested and returned, [string], [string]

Cause: There was a mismatch between the number of blocks requested for reading and the number of blocks actually returned.

Action: Check the file to make sure there are no partial blocks.

ORA-48105: write mismatch on blocks requested and returned, [string], [string]

Cause: There was a mismatch between the number of blocks requested for writing and the number of blocks actually written.

Action: Check that there is enough space left on the device to write the requested number of blocks.

ORA-48106: error initializing the ADR string object

Cause: There was an error encountered during the initialization of one of the ADR file objects.

Action: Check the validity of the specified directory name and file name.

ORA-48107: invalid Bfile input, [string]

Cause: An invalid Bfile was passed into the routine to convert the bfile into a file handle.

Action: Verify the contents of the specified Bfile.

ORA-48108: invalid value given for the diagnostic_dest init.ora parameter

Cause: The value given for the diagnostic_dest directory is not a valid directory. Either the directory does not exist or the process does not have read/write privileges on the directory.

Action: Use a value for diagnostic_dest that is a valid directory with the proper read and write privileges.

ORA-48109: invalid lock mode for file descriptor, [string]

Cause: The lock mode associated with the file descriptor was invalid in the context of the routine.

Action: Verify that a file is not trying to obtain multiple locks and that the file is holding a lock when attempting to release the lock.

ORA-48110: error encountered while attempting to get a file lock [string] [string]

Cause: There was an error encountered while trying to get a file lock.

Action: Check the state of the file and operating system.

ORA-48111: error encountered while attempting to release a file lock [string]

Cause: There was an error encountered while trying to release a file lock.

Action: Check the state of the file and operating system.

ORA-48112: invalid flags for open file, string

Cause: Invalid flags were passed in to the open file routine.

Action: Check to see if the flags are a valid combination.

ORA-48113: unable to write to stream file because of out of space condition

Cause: The system is unable to write the requested number of bytes to a stream file. This is due to an out of space condition. The additional information shows how many bytes were not written.

Action: Check that there is enough space left on the device to write the requested number of bytes.

ORA-48114: error encountered when attempting to close a file

Cause: There was an error encountered when attempting to close a file with the ADR file interface.

Action: Check the validity of the file descriptor.

ORA-48115: error encountered while seeking a file position

Cause: There was an error encountered while seeking a position in a file.

Action: Check that the requested file position falls within the file boundaries.

ORA-48116: error encountered when attempting to create a directory [string]

Cause: There was an error encountered when attempting to create a directory.

Action: Check the directory name.

ORA-48117: error encountered when attempting to remove a directory [string]

Cause: There was an error encountered when attempting to remove a directory.

Action: Check the directory name.

ORA-48118: error encountered with list directory [string]

Cause: There was an error with listing the elements of a directory.

Action: Check the state of the operating system.

ORA-48119: error encountered when attempting to remove a file [string] [string]

Cause: There was an error encountered when attempting to remove a file with the ADR file interface.

Action: Check the directory name and file name.

ORA-48120: error encountered when attempting to retrieve the file size [string] [string]

Cause: There was an error encountered when attempting to retrieve the file size with the ADR file interface.

Action: Check the directory name and file name.

ORA-48121: error with opening the ADR stream file [string] [string]

Cause: An error was encountered when attempting to open an ADR stream file.

Action: Check the rest of the error stack for details of the actual error that was encountered.

ORA-48122: error with opening the ADR block file [string] [string]

Cause: An error was encountered when attempting to open an ADR block file.

Action: Check the rest of the error stack for details of the actual error that was encountered.

ORA-48123: error encountered when attempting to flush a file

Cause: There was an error encountered when attempting to flush a file with the ADR file interface.

Action: Check the state of the file.

ORA-48124: device full encountered during write to a file

Cause: The device full error was encountered during the write to a file.

Action: Check the amount of free space on the device.

ORA-48125: illegal identifier length, argn:string, len:string, lim:string

Cause: An input identifier was passed in that has a length that is greater than the max length.

Action: Make sure the input identifier has a length that is less than the max length.

ORA-48126: attempting to create a file that already exists

Cause: The client attempted to create a file that already exists.

Action: Either remove the file or check if it is okay if the file already exists.

ORA-48127: attempting to open a file that does not exist

Cause: An attempt was made to open a file that does not exist.

Action: Either create the file or check why the file does not exist.

ORA-48128: opening of a symbolic link is disallowed

Cause: An error was encountered when attempting to open a file that is a symbolic link. Users are not allowed to open symbolic links.

Action: Check the specified file name.

ORA-48129: invalid input for the full path specification

Cause: Input was incorrectly specified for the full path specification, or the default extension may have been incorrectly specified. Or an empty string was passed in for the full path.

Action: Check that the full path string is non-NULL. If you want to specify a relative path from ADR Home for the full path specification, then use '<ADR_HOME>' instead of the actual path to ADR Home. For ADR Base, use '<ADR_BASE>'.

ORA-48130: invalid lock parameters for get file lock [string]

Cause: Invalid lock parameters passed in for the get file lock routine. The user must pass in file as the lock type. Or, there is a lock mode mismatch. Exclusive locks are not allowed in read-only mode, and shared locks are not allowed in write-only mode.

Action: Check that correct lock type is specified and that the correct lock mode is requested for the file given its open flags.

ORA-48131: error encountered when attempting to tell the file position

Cause: An error was encountered when attempting to tell the file position using the ADR file interface.

Action: Check the directory and file name of the file along with the open state.

ORA-48132: requested file lock is busy, [string] [string]

Cause: The requested file lock is busy because another process is holding the file lock.

Action: Try to get the file lock again at a later time.

ORA-48133: file descriptor has already been opened [string] [string]

Cause: The specified file descriptor has already been opened.

Action: Do not open a file that has previously been opened, or check your code to make sure you are cleaning up a file descriptor that is being reused correctly.

ORA-48134: invalid file descriptor state for operation, string, string, string

Cause: The state of the file descriptor was invalid for the requested operation. An example is that a file was opened for read, but a write operation to the file was requested.

Action: Check the state of the file descriptor and make sure it matches the operation.

ORA-48135: uninitialized file descriptor

Cause: The specified file descriptor is uninitialized.

Action: Make sure the file descriptor is initialized before passing it into the routine.

ORA-48136: directory already exists [string]

Cause: Operation failed because the specified directory already exists.

Action: Remove the directory or ignore this error.

ORA-48137: uninitialized file handle

Cause: The specified file handle is uninitialized.

Action: Make sure the file handle is initialized before passing it into the routine.

ORA-48138: invalid directory name input for client address

Cause: An invalid directory name was specified as part of the address path specification.

Action: Check that the directory name is non-NULL and that the directory name length does not exceed the maximum length.

ORA-48139: invalid input to ADR initialization routine

Cause: There was an invalid input to the ADR initialization routine.

Action: Check the length of the ADR base, product ID, and instance ID input arguments.

ORA-48140: the specified ADR Base directory does not exist [string]

Cause: The specified ADR Base Directory does not exist.

Action: Check that the specified ADR Base Directory is a valid path name and that the directory exists.

ORA-48141: error creating directory during ADR initialization [string]

Cause: Error encountered when creating a directory during the initialization of the ADR subsystem.

Action: Check the input arguments to the ADR initialization routine and the state of the operating system.

ORA-48142: invalid permissions input for change permissions

Cause: Invalid permissions passed into change permissions routine.

Action: Check the value of the permissions input.

ORA-48143: error changing permissions for a file

Cause: Error encountered while changing the permissions for a file

Action: Check the specified directory and file and the state of the operating system.

ORA-48144: error encountered while performing standard file I/O

Cause: Error encountered while performing standard file I/O

Action: Check the validity of standard in, out, and error.

ORA-48145: invalid seek location, [string], [string]

Cause: Invalid seek location specified for routine.

Action: Check the validity of specified seek location.

ORA-48146: missing read, write, or exec permission on directory during ADR initialization [string] [string]

Cause: Error encountered when checking if the process has read, write, and exec privileges on directories needed by the ADR subsystem. This error occurs during the initialization of the ADR subsystem.

Action: Check the input arguments to the ADR initialization routine and the state of the operating system. Ensure that the user has the proper permissions on the ADR directories.

ORA-48147: invalid home location specification for ADR, [string], [string], [string]

Cause: Invalid read or write home location specification for ADR.

Action: An invalid home was specified for the ADR Read or Write Home location.

ORA-48148: error encountered when attempting to move a file

Cause: There was an error encountered when attempting to move a file with the ADR file interface.

Action: Check the directory name and file name.

ORA-48149: error encountered when attempting to copy a file

Cause: There was an error encountered when attempting to copy a file with the ADR file interface.

Action: Check the directory name and file name.

ORA-48150: error encountered with set current working directory

Cause: There was an error with setting the current working directory.

Action: Check the path used, or the state of the operating system.

ORA-48151: error getting operating system time for a file

Cause: Error encountered while getting the operating system time for a file.

Action: Check the specified directory and file and the state of the operating system.

ORA-48152: lock table is full

Cause: Lock table is full - too many locks granted

Action: Try again later

ORA-48153: error encountered when getting ADR base directory default

Cause: There was an error encountered when attempting to get the ADR base directory default value.

Action: Check your environment to see if the \$ORACLE_BASE and \$ORACLE_HOME environment variables are set.

ORA-48154: reached end of file for alert log

Cause: The end of file was reached for reading the Alert Log. There are no more messages to read in the Alert Log.

Action: Do not read from the Alert Log

ORA-48155: error encountered when read alert log [*string*]

Cause: There was an error encountered when attempting to read a message from the Alert Log.

Action: Check the error message and the contents of the alert message.

ORA-48156: Alert log purge has occurred - retry operation

Cause: The purge of the alert log has occurred.

Action: Retry the operation.

ORA-48157: null input to ADR initialization

Cause: There was an null input to the ADR initialization routine.

Action: Check the ADR base, product ID, and instance ID input arguments.

ORA-48158: invalid input for ADR base directory

Cause: An invalid input was passed in for the ADR base directory name. The ADR base directory name is either NULL or too long of a string.

Action: Check the ADR base directory input argument.

ORA-48159: invalid input for ADR product type

Cause: An invalid input was passed in for the ADR product type. The ADR product type is out of bounds.

Action: Check the ADR product type input argument.

ORA-48160: invalid input for ADR product id

Cause: An invalid input was passed in for the ADR product id. The ADR product id is either NULL or too long of a string.

Action: Check the ADR product id input argument.

ORA-48161: invalid input for ADR instance id

Cause: An invalid input was passed in for the ADR instance id. The ADR instance id is either NULL or too long of a string.

Action: Check the ADR instance id input argument.

ORA-48162: string buffer too small to hold input, [string], [string], [string]

Cause: The string buffer is too small to copy an input string into.

Action: Check the size of the string buffer and the input string. Look in the argument for the location in the code where the error occurs.

ORA-48163: error concatenating directory onto path, [string], [string], [string]

Cause: Error encountered while concatenating a directory onto a path name.

Action: Check the error returned by the OS and the size of the input and output buffers.

ORA-48164: error concatenating file onto path, [string], [string], [string]

Cause: Error encountered while concatenating a directory onto a path name.

Action: Check the error returned by the OS and the size of the input and output buffers.

ORA-48165: user missing read, write, or exec permission on specified ADR Base directory [string]

Cause: The specified ADR Base Directory does not have the correct permissions.

Action: Check the read, write, and exec permissions on the specified ADR Base Directory

ORA-48166: error with opening ADR block file because file does not exist [string] [string]

Cause: An error was encountered with opening an ADR block file because the file does not exist.

Action: Check the existence of the ADR Block File.

ORA-48167: invalid argument for checking ADR initialization

Cause: Invalid arguments were specified for the routine to check ADR initialization.

Action: Check the inputs to the ADR initialization routine.

ORA-48168: the ADR sub-system is not initialized

Cause: The ADR subsystem has not been initialized. The requested operation cannot be performed.

Action: Check the usage of the call to the ADR services. The ADR sub-system must be initialized for the call to work.

ORA-48169: incorrect arguments to ADR deferred initialization

Cause: There are incorrect arguments to the ADR deferred initialization.

Action: Check the input arguments. It could be possible that the product is not set up for deferred initialization.

ORA-48170: unable to lock file - already in use

Cause: the file is locked by another process, indicating that it is currently in use by another process

Action: determine which process legitimately owns this file.

ORA-48171: unable to get share lock - file not readable

Cause: share lock request was made on a file not open for read access.

Action: file must be open read-only or read-write to get a share lock.

ORA-48172: unable to find a valid ADR base

Cause: Unable to find a valid ADR base. We tried the ORACLE_BASE, ORACLE_HOME, home, and tmp directories, but none of the directories exist for read/write access.

Action: Check the validity of the ORACLE_BASE, ORACLE_HOME, home, and tmp directories.

ORA-48173: error checking directory existence during ADR initialization [*string*]

Cause: Error encountered when checking directory existence during the initialization of the ADR subsystem. Either the diag or product type directory does not exist underneath the ADR base.

Action: The directory in the error message must exist in order for ADR initialization to succeed. Make sure the directories exist.

ORA-48174: error encountered with get current working directory

Cause: There was an error with getting the current working directory.

Action: Check the state of the operating system or the size of the path buffer.

ORA-48175: the path name must not contain the string '..'

Cause: The specified path name contains '..'.

Action: Correct the path name and retry the operation.

ORA-48176: error translating a path name into its full path name

Cause: An error was encountered when translating a path name into its full path name.

Action: Check the inputted path name to make sure it is a valid relative path.

ORA-48177: file name with full path information [*string*] not allowed

Cause: Input was incorrectly specified for the file name. The inputted file name is greater than the maximum length, or the file name has path information. In this case, the file name should not have any path information. The path information should be specified in a separate argument.

Action: Check that the string for the file name is not too long and does not have path information.

ORA-48178: error encountered while reading an ADR block file during ADR initialization [*string*]

Cause: An error was encountered while reading an ADR block file during the initialization of the ADR subsystem.

Action: Check the state of the file system.

ORA-48179: OS file synchronization failure

Cause: OS command to synchronize the changes to a file with the operating system failed.

Action: Check the state of the file system and the amount of free space left on your device.

ORA-48180: OS open system call failure

Cause: OS open system call failed. The system failed to open or create a file in the requested mode.

Action: Check the OS error code

ORA-48181: OS write system call failure

Cause: OS write system call failed. The system failed to write to a file.

Action: Check the OS error code

ORA-48182: OS read system call failure

Cause: OS read system call failed. The system failed to read to a file.

Action: Check the OS error code

ORA-48183: OS close system call failure

Cause: OS close system call failed. The system failed to close a file.

Action: Check the OS error code

ORA-48184: OS seek system call failure

Cause: OS seek system call failed. The system failed to seek to a position in a file.

Action: Check the OS error code

ORA-48185: OS file size system call failure

Cause: OS file size call failed. The system failed to retrieve the file size for a file.

Action: Check the OS error code

ORA-48186: OS check file exists system call failure

Cause: OS check file exists system call failed. The system failed to perform the check file exists command for a file.

Action: Check the OS error code

ORA-48187: specified directory does not exist

Cause: The specified directory does not exist.

Action: Check the directory name.

ORA-48188: user missing read, write, or exec permission on specified directory

Cause: The user does not have valid permissions on the specified directory. The user is missing either the read, write, or execute permission.

Action: Check the permissions of the specified directory.

ORA-48189: OS command to create directory failed

Cause: The OS command to create a directory failed.

Action: Check the error number associated with the create directory failure.

ORA-48190: OS unlink system call failure

Cause: OS unlink system call failed. The system failed to perform unlink on the specified file.

Action: Check the OS error code

ORA-48191: user missing read or write permission on specified file

Cause: The user does not have valid permissions on the specified file. The user is missing either the read or write permission.

Action: Check the permissions of the specified file.

ORA-48192: OS command to move a file failed

Cause: The OS command to move a file failed.

Action: Check the error number associated with the move file.

ORA-48193: OS command to open a directory failed

Cause: The OS command to open a directory failed.

Action: Check the OS error associated with the open directory failure.

ORA-48194: OS command to close a directory failed

Cause: The OS command to close a directory failed.

Action: Check the OS error associated with the close directory failure.

ORA-48195: OS command to remove a directory failed

Cause: The OS command to remove a directory failed.

Action: Check the OS error associated with the remove directory failure.

ORA-48196: OS command to release advisory lock failed

Cause: The OS command to release the advisory lock failed

Action: Check the OS error associated with the release advisory lock failure.

ORA-48197: OS command to get the file status failed

Cause: The OS command to get the file status failed. This could be because the file is not open or file descriptor is invalid.

Action: Check the OS error associated with the get file status failure.

ORA-48198: OS command to change the file permissions failed

Cause: The OS command to change the file permissions failed.

Action: Check the OS error associated with the failure.

ORA-48199: OS command to copy a file failed

Cause: The OS command to copy a file failed.

Action: Check the error number associated with the copy file.

ORA-48200: Illegal Input Argument [*string*]

Cause: An illegal argument was passed in.

Action: Fix the call.

ORA-48201: Field Length Exceeds Maximum [*string*] [*string*] [*string*]

Cause: An illegal field length was used.

Action: Fix the call.

ORA-48202: Illegal Identifier [*string*] [*string*]

Cause: Illegal identifier specified.

Action: Use a valid identifier.

ORA-48203: Illegal Data Type [*string*]

Cause: Illegal data type specified.

Action: Use a valid data type.

ORA-48204: Illegal Identifier Length [*string*] [*string*] [*string*]

Cause: The input identifier is too long.

Action: Specify a shorter identifier.

ORA-48205: Record Length too Big [*string*] [*string*] [*string*]

Cause: The sum of the maximum lengths of all fields exceeds the maximum record length that is supported.

Action: Remove or shorten some of the fields.

ORA-48206: Illegal Number of Fields [*string*] [*string*] [*string*]

Cause: The number of fields specified exceeds the supported maximum.

Action: Remove some of the fields in the relation.

ORA-48207: Illegal Field Name [*string*]

Cause: The field name is invalid.

Action: Specify a valid field name.

ORA-48208: Duplicate Field Names [*string*]

Cause: The list of fields specified contains a duplicate field.

Action: Remove the duplicate field.

ORA-48209: Relation Already Exists

Cause: The relation already exists.

Action: Remove the relation.

ORA-48210: Relation Not Found

Cause: The relation was not found.

Action: Either specify a valid relation name or create one with that name.

ORA-48211: Illegal Access Mode [string] [string]

Cause: The supplied access mode is not recognized.

Action: Supply a valid mode.

ORA-48212: Open Record Access Not Done

Cause: The open record access call was not performed.

Action: The open record access call is required before attempting this call.

ORA-48213: Incorrect Access Mode for Operation [string] [string]

Cause: The relation was opened in a mode not compatible with the attempted operation being done.

Action: Reopen the relation in the correct mode.

ORA-48214: Sequence Overflow [string] [string] [string]

Cause: The sequence number will exceed the system maximum.

Action: Reset the sequence number.

ORA-48215: Sequence Invalid Operation [string] [string]

Cause: The specified sequence operation is not valid.

Action: Specify a valid operation.

ORA-48216: Field Len Exceeds Max Field Length [string] [string] [string] [string]

Cause: The field length specified exceeds the defined maximum for the field.

Action: Supply a smaller field length.

ORA-48217: Out of Space on Device

Cause: The storage subsystem is out of space.

Action: Add more space to the storage subsystem.

ORA-48218: Duplicate Key Name [string] [string]

Cause: The key name already exists.

Action: Specify a different key name.

ORA-48219: Key Name Doesn't Match Any Existing Key

Cause: The key name provided doesn't match an existing key.

Action: Specify a key name that exists.

ORA-48220: Too Many Keys Defined [string] [string]

Cause: A key is trying to be created that exceeds the maximum number of keys supported.

Action: Drop another key.

ORA-48221: Key Exceeds Maximum Allowed Length [string] [string] [string]

Cause: The sum of the lengths of the fields in the key exceeds the maximum length supported.

Action: Remove one or more fields from the key.

ORA-48222: Predicates/Order By Not Allowed

Cause: A predicate or order by can not be added after fetch has started.

Action: Put the predicate or order by call before the first fetch.

ORA-48223: Interrupt Requested - Fetch Aborted - Return Code [string] [string]

Cause: User interrupt has occurred.

Action: None

ORA-48224: DDL has occurred since parse - reparse [string] [string] [string]

Cause: Another session has performed a DDL (i.e. add field, create key, drop key) that prevents this session from being to continue.

Action: Call open record access again.

ORA-48225: No More Space in Order By Buffer

Cause: The order by buffer size is not sufficient for the number of rows.

Action: Increase the order by buffer size specified.

ORA-48226: No Fetch in Progress

Cause: An attempt to perform update or delete has occurred without a fetch.

Action: You must first perform a fetch.

ORA-48227: Invalid Relation File - [string] [string] [string] [string]

Cause: The AMS file is invalid or corrupt.

Action: Do a repair relation

ORA-48228: Missing Define Call [string]

Cause: A call to define was not performed before doing a fetch.

Action: Call the define service before fetch.

ORA-48229: Invalid Relation Handle Provided [string] [string]

Cause: An invalid or corrupt relation handle was used.

Action: Possible memory corruption.

ORA-48230: Expression arguments must match types

Cause: Incorrect type semantics for fields in the predicate.

Action: Correct the predicate.

ORA-48231: Predicate syntax error

Cause: A syntax error exists in the predicate string.

Action: Correct the predicate.

ORA-48232: Debug command syntax error [string]

Cause: An invalid debug command has been specified.

Action: Correct the debug command.

ORA-48233: Invalid Field Handle [string] [string] [string]

Cause: The field handle is invalid.

Action: Possible memory corruption.

ORA-48238: Invalid Surrogate Length Specified [string] [string]

Cause: An invalid length during create field was specified

Action: Specify a correct length

ORA-48239: Invalid Predicate Handle Provided [string] [string]

Cause: An invalid or corrupt relation handle was used.

Action: Possible memory corruption.

ORA-48240: Field is NOT NULL but NULL value supplied

Cause: A field [%s] declared to not allow nulls contains a null value.

Action: Specify a correct value

ORA-48242: Fields that are NOT NULL can not use surrogates

Cause: NOT NULL fields can not have surrogates specified.

Action: Either remove the constraint or the surrogate.

ORA-48243: Additional Fields must be declared nulls allowed

Cause: A field can not be added to a relation that is defined NOT NULL

Action: Do not specify NOT NULL

ORA-48244: Purge for Retention can't be called while in an Query

Cause: A query is already running - purge for retention can't be invoked

Action: Fix call sequence

ORA-48245: Attempt to Update/Delete when at EOF

Cause: The fetch operation is positioned at EOF - can not update/delete

Action: Do not call update/delete after fetch has returned EOF

ORA-48246: Illegal Operation on External Relation

Cause: An illegal call was made using an external relation

Action: Do not perform the API Call

ORA-48247: Predicate Conversion Error string

Cause: A time conversion failed

Action: Fix the input

ORA-48248: Function *string* type check error; ityp = *string* typ = *string* arg = *string*

Cause: Invalid inputs to the specified function

Action: Change the inputs

ORA-48251: Failed to open relation due to following error

Cause: See error below in the error stack

Action: See error below in the error stack

ORA-48252: Relation does not require migration

Cause: Relation on disk is compatible with the current code

Action: Don't run the migration services

ORA-48258: AMS Corrupt Page Found - Rebuild Relation

Cause: A corrupted page has been found.

Action: Do a rebuild of the relation

ORA-48259: AMS Relation not Created Correctly

Cause: Create relation failed

Action: Recreate the relation

ORA-48260: Function *string* not found

Cause: A reference to a function that is not valid was found

Action: Fix the function name

ORA-48262: Sequence references not allowed in predicates

Cause: References to curval or nextval not allowed

Action: Remove these references

ORA-48263: Curval not set yet - use nextval

Cause: References to curval can't occur until a nextval is done

Action: Remove the reference

ORA-48265: Incorrect number of arguments (*string*) provided - expected (*string*)

Cause: Number of arguments to function is incorrect

Action: Specify the correct number of arguments

ORA-48291: Field name *string* can't be unique resolved

Cause: Field name appears in more than one relation

Action: Prefix the field name with the relation name

ORA-48292: Can't use outer join syntax mixed with inner join syntax

Cause: The join condition was specified using both inner and outer join elements"

Action: Specify the join condition correctly

ORA-48293: Outer join syntax not allowed without a join

Cause: Using outer join syntax in the predicate without doing a join

Action: Fix the predicate

ORA-48300: Incident Record Already Exists

Cause: trying to create an incident that already exists

Action: retry operation with new incident ID

ORA-48301: An Invalid Incident ID was specified

Cause: the specified incident ID was invalid

Action: retry operation with correct incident ID

ORA-48302: Incident Directory does not exist

Cause: the incident directory was not found

Action: retry operation with a different incident ID

ORA-48303: Exceeded max Incident Sequence Value

Cause: the maximum supported incident sequence value was exceeded

Action: reset incident sequence and retry operation

ORA-48304: incident staging file not found

Cause: the incident staging file is missing

Action: retry with a different incident ID

ORA-48305: incident ID range is too large

Cause: the maximum incident sequence value was exceeded

Action: retry operation with a smaller range

ORA-48309: illegal incident state transition, [*string*] to [*string*]

Cause: the incident cannot be moved to the new state

Action: retry operation with a valid incident status

ORA-48310: Incident *string* staging file not found

Cause: the incident staging file does not exist

Action: retry operation with a valid incident ID

ORA-48311: Invalid field name [*string*]

Cause: the specified field name is invalid

Action: retry operation with a valid field name

ORA-48312: Sweep incident *string* staging file failed

Cause: the sweep action of incident staging file failed

Action: check the incident ID and retry

ORA-48313: Updates not allowed on ADR relation [*string*] of Version=*string*

Cause: Update operations not supported on this version of ADR relation

Action: check ADR version and retry

ORA-48314: Invalid ADR Control parameter [*string*]

Cause: the specified control parameter is invalid

Action: check parameter and reissue command

ORA-48315: ADR unavailable

Cause: the ADR directory is not available

Action: enable ADR and retry operation

ORA-48316: relation [*string*] unavailable or cannot be created

Cause: the ADR relation is not available

Action: check ADR directory and retry operation

ORA-48317: ADR Relation [*string*] of version=*string* is obsolete

Cause: the version of ADR relation is too old and not supported

Action: check the ADR version and retry

ORA-48318: ADR Relation [*string*] of version=*string* cannot be supported

Cause: the version of ADR relation is too new and cannot be supported

Action: need to use a newer release to access the ADR

ORA-48319: Update operation on ADR relation [*string*] not allowed

Cause: updates to foreign ADR relation cannot be supported

Action: verify ADR location and reissue command

ORA-48320: Too many incidents to report

Cause: the result set of incidents is too large to handle

Action: use a predicate to reduce the number of incidents and retry

ORA-48321: ADR Relation [*string*] not found

Cause: the required ADR relation is missing, ADR may be corrupted

Action: check ADR directory and retry

ORA-48322: Relation [*string*] of ADR V[*string*] incompatible with V[*string*] tool

Cause: the tool version is incompatible with the ADR version

Action: use another version of tool and retry

ORA-48323: Specified pathname [*string*] must be inside current ADR home

Cause: A file outside of ADR home was not allowed for this type of file.

Action: Check the file name and retry.

ORA-48324: Incompatible staging file encountered

Cause: sweep incident failed because staging file is incompatible

Action: check the incident ID and version of ADR and retry

ORA-48339: view [*string*] does not exist

Cause: view has not been created

Action: verify view name and reissue command

ORA-48340: operation not supported on view [*string*]

Cause: unsupported (dml) operation on views

Action: verify relation name and reissue command

ORA-48341: Field [*string*] not a grouping field

Cause: the field name specified is not a grouping field

Action: verify field names and groupby clause and reissue command

ORA-48342: Field [*string*] cannot be mixed with *string* fields

Cause: the specified field is incompatible with other grouping fields

Action: verify this and other field names and reissue command

ORA-48343: invalid field [*string*] reference in *string* clause

Cause: the specified field in the specified clause is invalid

Action: verify this field name and reissue command

ORA-48344: Invalid Name [*string*] specified

Cause: Either the name refers to an existing object or violates the reserved namespace rules.

Action: Pick another name

ORA-48345: Timeout encountered during operation

Cause: The attempted operation conflicted with another operation that was already being executed.

Action: Retry operation at a later time.

ORA-48400: ADRCI initialization failed

Cause: The ADR Base directory does not exist

Action: Either create an ADR Base directory or point to an existing one

ORA-48401: SET command requires arguments

Cause: No arguments are input for the SET command

Action: Input the arguments

ORA-48402: Variable is not defined

Cause: No substitution value is input.

Action: Input the substitution value following after the variable name.

ORA-48403: DEFINE or UNDEFINE command has no arguments

Cause: DEFINE and UNDEFINE command need users to input the substitution variable name.

Action: Input the variable name after the keyword DEFINE or UNDEFINE

ORA-48404: RUN or @ command has no arguments

Cause: RUN and @ commands need users to input script filename

Action: Input script filename after RUN and @ commands

ORA-48405: The option in the command is invalid

Cause: The option is not allowed in the command

Action: Check the command syntax

ORA-48406: ECHO or TERMOUT status must be set to ON or OFF

Cause: the status of ECHO and TERMOUT commands must be ON or OFF

Action: input ON or OFF

ORA-48407: DESCRIBE and QUERY commands need at least relation name argument

Cause: This is no relation name is input as argument

Action: Need users to input at least the relation name

ORA-48408: The incident number exceeds the maximum number [string]

Cause: The input incident number exceeds the maximum number

Action: Input fewer incidents

ORA-48409: The ADR homes exceed the maximum number [string]

Cause: The input ADR homes number exceeds the maximum number

Action: Input shorter ADR home string

ORA-48410: The trace path exceeds the maximum number [string]

Cause: The input trace path exceeds the maximum number

Action: Input less trace path

ORA-48411: The trace files exceed the maximum number [string]

Cause: The input trace file path number exceeds the maximum number

Action: Input less trace file path

ORA-48412: The parameters exceed the maximum number [string]

Cause: The input parameter number exceeds the maximum number

Action: Input fewer parameters

ORA-48413: The number of orderby fields exceeds maximum number [string]

Cause: The orderby field number exceeds the maximum number

Action: Input fewer fields

ORA-48414: The string in the execution option exceeds maximum length [string]

Cause: The string length is too long

Action: Divide the commands into two sets or use adrci scripts.

ORA-48415: Syntax error found in string [*string*] at column [*string*]

Cause: Parsing error found in the user input string

Action: Validate the input string

ORA-48419: Illegal arguments

Cause: The input argument is illegal

Action: Check the input arguments and make sure it is not null

ORA-48421: Predicate string in the command must be single or double quoted

Cause: The predicate string is not single or double quoted

Action: Put single or double quotes around the predicate string

ORA-48422: Invalid relation field type [*string*]**ORA-48423: IMPORT command must have a filename**

Cause: File name is missing from the command

Action: Input the import file name after the IMPORT keyword

ORA-48424: SHOW TRACE command needs argument

Cause: SHOW TRACE command needs arguments

Action: Input arguments

ORA-48426: The initialization filename is too long

Cause: The initialization filename length exceeds the maximum length

Action: This is really an internal setting parameter of the ADRCI, report it as a bug. Alternatively move the initialization file to the current working directory

ORA-48427: Unknown command**ORA-48428: Input command string exceeds max length [*string*]**

Cause: The current command string is too long and exceeds the limit

Action: Input less characters

ORA-48429: Variable name [*string*] is an invalid identifier

Cause: The substitution variable name is not a valid identifier

Action: Input the valid identifier defined by ADRCI

ORA-48430: Cannot read the parameter**ORA-48431: Must specify at least one ADR home path**

Cause: The command syntax requires at least one ADR home path to be input

Action: Check the command syntax and input the home path

ORA-48432: The ADR home path [*string*] is not valid

Cause: The adr home user inputs is not valid, which may due to the path does not exist.

Action: Check if the input home path exists

ORA-48433: Unknown help topic

Cause: The input topic is unknown

Action: Check if the topic is valid

ORA-48434: No DDE commands are input

Cause: No DDE commands are input

Action: Input a DDE command

ORA-48435: Input a trace file

Cause: Show trace expects a trace file

Action: Input a trace file

ORA-48436: File [*string*] does not exist

Cause: the file does not exist

Action: Validate the trace file name

ORA-48437: No IPS commands are input

Cause: No IPS commands are input

Action: Input a IPS command

ORA-48438: [*string*] is not a valid number

Cause: The input number is not valid

Action: Check the input number

ORA-48439: The input path name exceeds the maximum length [*string*]

Cause: The input path name is too long

Action: Report as a bug to change the limit

ORA-48440: Variable [*string*] is already defined

Cause: The variable name is defined previously

Action: Use another variable name

ORA-48441: The function parameter number exceeds the maximum number [*string*]

Cause: The function parameter number exceeds the maximum number

Action: Report it as bug to change the maximum number

ORA-48442: The number of control parameters exceeds the maximum allowed [*string*].

Cause: The control parameters exceeded the maximum number allowed.

Action: Check the parameters. If the parameters are correct, contact Oracle Support Services.

ORA-48443: Trace Record type appears in the middle of the path

Cause: The trace record cannot be in the middle of the path

Action: Validate the input

ORA-48444: The single "." and "*" cannot appear in the middle of the path

Cause: The single "." and "*" appears in the middle of the path

Action: Validate the input

ORA-48445: Path expression only supports one bucket dump type

Cause: The path expression only supports one bucket dump"

Action: Change the path expression syntax

ORA-48446: The command needs path input

Cause: No path is input as a parameter

Action: Input the path

ORA-48447: The input path [*string*] does not contain any ADR homes

Cause: The input path does not contain ADR homes

Action: Validate the path

ORA-48448: This command does not support multiple ADR homes

Cause: There are multiple homes in the current adr setting.

Action: Use command SET HOMEPATH to set a single home

ORA-48449: Tail alert can only apply to single ADR home

Cause: There are multiple homes in the current setting

Action: Use command SET HOMEPATH to set a single home

ORA-48450: Syntax:\n**ORA-48451: adrci [-help] [-script script_filename]\n\n****ORA-48452: Options Description (Default)\n****ORA-48453: -----\n****ORA-48454: script script file name (None) \n****ORA-48455: help help on the command options (None) \n****ORA-48456: -----\n****ORA-48457: ADRCI core dumped**

Cause: It is adrci internal error.

Action: Report to Oracle

ORA-48458: "show incident" failed due to the following errors

Cause: There could be a bug or users do not have the access permission

Action: Report to Oracle if the errors are not due to ADR permission settings

ORA-48459: "describe" command only supports one ADR home path

Cause: Multiple ADR home paths in the command

Action: put one ADR home path

ORA-48460: The home path [*string*] is not valid

Cause: The input home path is not valid home path

Action: Verify the homopath

ORA-48461: "describe" failed due to the following errors

Cause: Underlying code failed

Action: If it is not due to permission issue, report to Oracle

ORA-48462: Fatal error encountered in [*string*]

Cause: Fatal error encountered

Action: Report to Oracle

ORA-48463: The value buffer reached the maximum length [*string*]

Cause: The value buffer is full

Action: Report to Oracle

ORA-48464: The predicate buffer reached the maximum length [*string*]

Cause: The predicate buffer is too small

Action: Report to Oracle

ORA-48465: The specified type [*string*] is undefined

Cause: The purge type specified is undefined

Action: Check the type name

ORA-48466: Internal failure, the report context is not initialized

Cause: Internal problem failure.

Action: Report to Oracle

ORA-48467: "*string*" for the keyword "*string*" is not a valid number

Cause: The keyword value is not a valid number

Action: Check the value

ORA-48468: "*string*" is not a valid keyword

Cause: The keyword is not defined for the command

Action: Check the available keywords

ORA-48469: Keyword "*string*" cannot be duplicated

Cause: The command can only allow one key with the name

Action: Remove one keyword name from the command

ORA-48470: Unknown "*string*" command

Cause: The command is not valid

Action: Use help manual to check the command syntax

ORA-48472: Invalid product name

Cause: The product name provided does not exist

Action: Specify a product name, see HELP SHOW BASE

ORA-48473: Internal failure, unknown return code [*string*]

Cause: Internal program failure

Action: Report to Oracle

ORA-48474: Syntax error specifying product, must not be NULL

Cause: The product clause is being used, but no product name is provided

Action: Supply the product name

ORA-48475: [*string*] is not a valid timestamp

Cause: The input timestamp string is not in valid format

Action: None

ORA-48476: Cannot write the results out to a file, please check if \nthe environment variable TMPDIR is set or the current directory is \nnot writable

Cause: The current path may not be writable

Action: If the current path is writable, report to Oracle

ORA-48477: The input path does not contain any valid ADR homes

Cause: The input path does not contain any valid ADR homes

Action: Check the path if it is valid

ORA-48478: No alert messages are created

Cause: No alert messages are created

Action: No action

ORA-48479: No HM runs are created

Cause: There is no hm runs

Action: No action

ORA-48480: No incidents are created

Cause: There is no incident

Action: No action

ORA-48481: Report is not available

Cause: The requested report does not exist"

Action: Check the report ID

ORA-48482: Report is not generated

Cause: The requested report is not ready to be generated

Action: Check the report ID

ORA-48483: Spooling failed, it may be because the spool file cannot be created due to a permission issue

Cause: The spooling filename may not be valid or the file cannot be created

Action: Check the permissions of the target directory and verify the filename

ORA-48484: Run script failed, it may be because the script file does not exist

Cause: The script file may not exist

Action: Check if the script file exist

ORA-48485: The file exceeds the maximum length [*string*]

Cause: The filename is too long

Action: Report to Oracle

ORA-48486: The file [*string*] exceeds the maximum length [*string*]

Cause: The filename is too long

Action: Report to Oracle

ORA-48487: The internal predicate string exceeds the maximum length [*string*]

Cause: The predicate string exceeds the maximum length

Action: Report to Oracle

ORA-48488: The predicate string exceeds the maximum length [*string*]

Cause: The input predicate string exceeds the maximum length

Action: Report to Oracle

ORA-48489: The input exceeds the maximum length [*string*]

Cause: The input exceeds the maximum length

Action: Report to Oracle

ORA-48490: The field number exceeds the maximum number [*string*]

Cause: The input field number exceeds the maximum number

Action: Input less field names

ORA-48491: The program name is too long, exceeds the maximum length [*string*]

Cause: the program name length exceeds the maximum length setting

Action: Report to Oracle

ORA-48492: The report component name is not defined

Cause: the report component name does not exist

Action: Check the component name to ensure it is registered

ORA-48493: Sweep command needs parameters

Cause: sweep command needs parameter

Action: Check the syntax of the command

ORA-48494: ADR home is not set, the corresponding operation cannot be done

Cause: The adr home is not set in the current adrci session

Action: Set the adr home using the adrci command "set base" and "set homepath"

ORA-48495: Interrupt requested

Cause: User requested to interrupt the current action

Action: No action is needed

ORA-48496: "*string*" is a mandatory keyword for the command

Cause: The keyword is not specified for the command

Action: Input the keyword

ORA-48497: "*string*" is an invalid product type

Cause: The product type is not registered

Action: Check the product type

ORA-48499: The value of the keyword "*string*" exceeds the maximum length *string*

Cause: The keyword value is too long

Action: Check the limit and input again

ORA-48500: File Write Error [*string*] [*string*]

Cause: Number of bytes written differs from number requested. Possibly due to out of disk space.

Action: Ensure sufficient disk space.

ORA-48501: File Read Error [*string*] [*string*]

Cause: Number of bytes read differs from number requested. Possibly due due to corrupted file.

Action: Recreate the file.

ORA-48502: Invalid Command Line - Missing Required Elements

Cause: Missing required command line arguments.

Action: Review the help message and supply the required arguments.

ORA-48503: Invalid Parameter Specified

Cause: Invalid input parameter supplied.

Action: Review the help message and correct the invalid input parameter.

ORA-48504: Relation Parameter Must be Specified

Cause: Relation parameter must be specified during ADR export.

Action: Supply the relation parameter.

ORA-48505: File Parameter Must be Specified

Cause: File parameter must be specified during ADR import.

Action: Supply the file parameter.

ORA-48506: Existing Relation at different version than export [string] [string]

Cause: Attempting to import into an existing relation and the schema version of that relation differs from the schema of the relation that was exported.

Action: Drop the existing relation if you still wish to import the relation.

ORA-48507: Predicate Not Allowed during Import

Cause: The predicate option is not allowed during ADR import.

Action: Remove the predicate argument.

ORA-48508: Export File Version [string] Can Not be Used by Import [string]

Cause: The version of the export file is not able to be read by this version of ADR import.

Action: Rerun the export using the current version of ADR export.

ORA-48509: Error occurred during operation. See the following errors

Cause: An underlying error has occurred.

Action: Review and correct the underlying error.

ORA-48510: Can not export an in memory relation

Cause: In memory relations can not be exported.

Action: Pick a different relation.

ORA-48600: HM run with name [string] already exists

Cause: The specified run name already existed.

Action: Specify different run name and re-run the check

ORA-48615: Parameter [string] value not specified

Cause: Run was invoked without specifying the parameter and its value

Action: Specify the needed parameter and its value

ORA-48617: Parameter [string] value [string] length exceeds the maximum limit [string]**ORA-48618: Invalid HM run name specified**

Cause: An invalid Health Monitor (HM) run name was specified.

Action: Specify a HM run name using only alphanumeric and underscore characters.

ORA-48800: "string" for the keyword "string" is not in the right format of timestamp

Cause: The value format is not right

Action: Check the format ADRCI supports

ORA-48801: The option "string" is duplicated

Cause: The option has been specified more than once

Action: Check the input

ORA-48802: The options "%0!s" and "%1!s" are mutually exclusive.

Cause: An attempt was made to specify the two options together.

Action: Specify only one of the options.

ORA-48803: The keyword "*string*" is not defined for this command

Cause: The keyword is invalid

Action: Check the valid keywords for the command

ORA-48804: The command needs at least one file input

Cause: No files are specified to view

Action: Input the files

ORA-48805: BEGIN BACKUP issued already - must do an END BACKUP first

Cause: A begin backup was already issued.

Action: Issue END BACKUP

ORA-48806: Unknown Function Reference (*string*)

Cause: The function reference is not a valid function

Action: Change the reference

ORA-48807: The SET subcommand requires at least one additional parameter

Cause: An argument was not specified for the SET subcommand.

Action: Specify additional arguments or precede the command with help.

ORA-48808: malformed SET CONTROL command - see "HELP SET CONTROL"

Cause: Improper syntax was specified for the SET CONTROL command.

Action: Specify additional arguments or use the HELP SET CONTROL command for more information.

ORA-48809: The number of estimate parameters exceeds the maximum allowed [*string*].

Cause: The estimate parameters exceeded the maximum number allowed.

Action: Check the parameters. If the parameters are correct, contact Oracle Support Services.

ORA-48810: malformed ESTIMATE command - see "HELP ESTIMATE"

Cause: Improper syntax was specified for the ESTIMATE command.

Action: Specify additional arguments or use the HELP ESTIMATE command for more information.

ORA-48900: Illegal Input Argument [*string*]

Cause: The input argument is invalid

Action: Check the input parameter

ORA-48902: Empty component specification**ORA-48903: String [*string*] is not a valid library name**

ORA-48904: String [*string*] is not a valid component name**ORA-48905: String [*string*] is not a valid operation name****ORA-48906: Parser context is not valid**

Cause: The parser context is not initialized

Action: Call the initialization routine first before using the context

ORA-48907: The end of file is reached

Cause: The end of file is reached

Action: Handle the end of file

ORA-48908: No trace files are found

Cause: This is no file in the navigator context, either it is done with parsing, or no file is pushed

Action: Check if the file is added to the context

ORA-48909: Scan context is not initialized

Cause: The scan context is not initialized

Action: call the initialization routine of the scan context

ORA-48912: The specified trace filename is too long

Cause: The resulting trace filename length exceeds the maximum length

Action: Use a smaller trace filename suffix or move ADR higher in the directory hierarchy

ORA-48913: Writing into trace file failed, file size limit [*string*] reached

Cause: An attempt was made to write into a trace file that exceeds the trace's file size limit

Action: increase the trace's file size limit.

ORA-48914: File position is not in right format

Cause: The file position format is not right

Action: Check if the file format string is the right one

ORA-48928: The predicate exceeds the max limit *string*

Cause: The predicate is too long, exceeds the max limit

Action: Use a shorter predicate

ORA-48929: The trace record size exceeded the max size that can be read [*string*]

Cause: A trace record is too large to be read by the ADR viewer

Action: Report to Oracle

ORA-48930: Cannot allocate memory for processing traces

Cause: A memory allocation request failed

Action: Report to Oracle

ORA-48934: invalid input for the file name identifier

Cause: An invalid input was given for the file name identifier. The file name is not allowed to have slashes ('/', '\') and is not allowed to refer to the parent directory using the '..' characters.

Action: Check the file name and provide a valid input.

ORA-48936: The number of relations exceeds maximum number [*string*]

Cause: Too many relations listed

Action: Reduce the number

ORA-48937: Feature (*string*) currently not allowed for SELECT

Cause: Feature is not allowed

Action: Remove feature

ORA-48938: View select column count differs from select alias list

Cause: The view alias list has a different number of fields than the select list"

Action: Change the alias list or view select statement

ORA-48939: Select * not allowed in a CREATE VIEW

Cause: * is currently not allowed for a create view select list

Action: List the fields explicitly

ORA-49000: A vertex variable has the same name as an edge variable.

Cause: A vertex variable was specified with the same name as an edge variable.

Action: Use a different name for the vertex and edge variables.

ORA-49001: A singleton variable has the same name as a group variable.

Cause: A singleton variable was specified with the same name as a group variable.

Action: Use a different name for the singleton and group variables.

ORA-49002: Grouped variables contained in different quantified path patterns have the same name.

Cause: Two group variables contained in different quantified path patterns had the same name.

Action: Use a different name for group variables in different quantified path patterns.

ORA-49003: Using a question mark in path pattern is not supported.

Cause: A question mark was specified in the path pattern expression in the MATCH clause of a GRAPH_TABLE operator.

Action: Modify the path pattern specification and retry the operation.

ORA-49004: Two consecutive vertex patterns are specified in the path pattern.

Cause: Two consecutive vertex patterns were specified in the path pattern expression in the MATCH clause of a GRAPH_TABLE operator.

Action: Modify the path pattern specification and retry the operation.

ORA-49315: Invalid incident type specified [*string*]

Cause: The specified incident type is not defined in this ADR.

Action: Specify an available incident type.

ORA-49316: required environment variable not set [string]

Cause: The required environment variable was not set.

Action: Set the required environment variable.

ORA-49317: Action cannot be run in read-only database instance.

Cause: The database was not opened in read/write mode.

Action: Open the database in read/write mode.

ORA-49318: action cannot be run, database not available

Cause: The action could not connect to the database.

Action: Open the database.

ORA-49320: database error when executing action [string]

Cause: A database error occurred while executing the action.

Action: Review the database error.

ORA-49404: No such package [string]

Cause: The specified package does not exist.

Action: Specify an existing package.

ORA-49405: Cannot change package name [string] [string]

Cause: Attempted to change package name after package generation.

Action: Use current name, or create a new package with the desired name.

ORA-49406: Undefined configuration parameter specified [string]

Cause: The specified configuration parameter was not found in ADR.

Action: Specify an existing parameter. Re-populate parameters if necessary.

ORA-49407: No unpacking history in this home

Cause: No packages were unpacked into this home.

Action: Verify the current home. Unpack a package if necessary.

ORA-49408: Invalid home specified [string]

Cause: An invalid ADR_HOME was specified.

Action: Verify that the directory exists, and has the correct structure.

ORA-49409: Incremental package provided when complete expected

Cause: No packages were unpacked into this home.

Action: Provide a complete package, or use FORCE option.

ORA-49410: Not an IPS package

Cause: The specified file was not an IPS package.

Action: Verify that the file is a valid zip file with expected contents.

ORA-49412: Package ID does not match existing ID [string] [string]

Cause: The package ID in package file did not match previously unpacked packages.

Action: Use the correct location for unpacking the package.

ORA-49413: Package name does not match existing name [string] [string]

Cause: The package name in package file did not match previously unpacked packages.

Action: Use the correct location for unpacking the package.

ORA-49414: Package sequence later than expected [string] [string]

Cause: The package sequence in package file was later than expected.

Action: Apply packages in correct order, or use FORCE option.

ORA-49415: Package sequence earlier than expected [string] [string]

Cause: The package sequence in package file was earlier than expected.

Action: Apply packages in correct order, or use FORCE option.

ORA-49416: Earlier package sequence applied with FORCE option [string] [string]

Cause: An earlier package sequence was applied using the FORCE option.

Action: Apply a complete sequence which is later than any already applied, or use FORCE option to apply an incremental package.

ORA-49417: Cannot modify already generated package

Cause: Attempted to change package attributes after package generation.

Action: Create a new package with the desired name.

ORA-49418: Invalid package name specified

Cause: An invalid Incident Packaging Service (IPS) package name was specified.

Action: Specify a package name using only alphanumeric and underscore characters.

ORA-49420: Package too large [string] [string]

Cause: The package is too large.

Action: Remove some files or incidents from the package, or try using incremental mode.

ORA-49421: Maximum number of package files generated [string]

Cause: The command generated the maximum number of package files.

Action: Remove some files or incidents from the package, or use incremental mode to generate additional files.

ORA-49423: File outside ADR not allowed

Cause: The specified file is not within the ADR directory structure.

Action: Specify a file inside ADR.

ORA-49424: Directory outside ADR not allowed

Cause: The specified directory is not within the ADR directory structure.

Action: Specify a directory inside ADR.

ORA-49425: File inside ADR not allowed

Cause: The specified file is within the ADR directory structure.

Action: Specify a file outside ADR.

ORA-49426: Directory inside ADR not allowed

Cause: The specified directory is within the ADR directory structure.

Action: Specify a directory outside ADR.

ORA-49427: No such file or file not accessible [string]

Cause: The specified file does not exist or cannot be accessed.

Action: Create the file or verify file permissions.

ORA-49428: No such directory or directory not accessible [string]

Cause: The specified directory does not exist or cannot be accessed.

Action: Create the directory or verify directory permissions.

ORA-49429: File already exists and OVERWRITE option not specified [string]

Cause: The client attempted to create a file that already exists.

Action: Either remove the file or use the OVERWRITE option.

ORA-49430: No such problem [string]

Cause: The specified problem does not exist.

Action: Specify a problem that exists in this repository.

ORA-49431: No such incident [string]

Cause: The specified incident does not exist.

Action: Specify an incident that exists in this repository.

ORA-49432: Problem not part of package [string]

Cause: The specified problem is not included in the package.

Action: Specify a problem that is included in the package.

ORA-49433: Incident not part of package [string]

Cause: The specified incident is not included in the package.

Action: Specify an incident that is included in the package.

ORA-49434: Invalid date format

Cause: An invalid format was used to specify a date

Action: Specify the date in a supported format.

ORA-49435: Flood-controlled incident not allowed here [string]

Cause: A flood-controlled incident cannot be included in a package

Action: Specify an incident that is not flood-controlled

ORA-49436: Date conversion error [string]

Cause: An invalid format was used to specify a date

Action: Specify the date in a supported format.

ORA-49440: Warnings while unpacking package, details in file *string*

Cause: There were some non-fatal errors when unpacking a package

Action: Review the specified unpacking log file

ORA-49441: Warnings while finalizing package, details in file *string*

Cause: There were some non-fatal errors when finalizing a package

Action: Review the specified finalize log file

ORA-49450: Non-zero return code from archiving utility [*string*] [*string*]

Cause: The archiving utility (zip/unzip) returned a warning or error.

Action: Verify that the file and directory exist and are readable, and that the file is a valid zip file.

ORA-49451: Archive file structure error [*string*] [*string*]

Cause: The archiving utility (zip/unzip) returned an error indicating that the archive file structure is incorrect.

Action: Verify that the file was transferred correctly and that the file is a valid zip file.

ORA-49452: Archiving utility out of memory [*string*] [*string*]

Cause: The archiving utility (zip/unzip) returned an error indicating that it was unable to allocate enough memory.

Action: Check for operating system limitations on process memory usage.

ORA-49453: Invalid command invoking archiving utility [*string*] [*string*]

Cause: The archiving utility (zip/unzip) was invoked with an invalid command line, or with invalid options.

Action: Verify that there are no operating system settings affecting the behavior of the archiving utility..

ORA-49454: Archive is missing or empty [*string*] [*string*]

Cause: The specified archive does not exist, or is empty.

Action: Check if the specified archive exists.

ORA-49455: Archive I/O failed [*string*] [*string*]

Cause: An attempt to create, write to or read from an archive failed.

Action: Verify that operating system I/O operations are working correctly.

ORA-49456: Operation failed due to insufficient disk space [*string*] [*string*]

Cause: An operation on an archive failed due to insufficient disk space.

Action: Verify that there is sufficient disk space. Check for operating system quotas or other restrictions.

ORA-49601: syntax error: found "*string*": expecting one of: "*string*" etc..

Cause: Syntax error discovered when processing event specification

Action: Enter correct event specification

ORA-49701: Parameter *string* is NULL.

Cause: NULL was passed to a function that requires a non-NULL parameter.

Action: Pass a valid non-NULL parameter.

ORA-49702: unable to allocate '*string*' bytes of external procedure call memory

Cause: An attempt to allocate memory in a C external procedure failed due to insufficient memory.

Action: Try the operation again.

ORA-49703: invalid ADR service name

Cause: A NULL or undefined Automatic Diagnostic Repository (ADR) service name was specified.

Action: Specify a valid ADR service name.

ORA-49704: invalid incident ID

Cause: A NULL or nonpositive incident ID was specified.

Action: Specify a valid ADR incident ID.

ORA-49800: ADR block file [*string*] could not be opened using direct I/O

Cause: An error was encountered when attempting to open an Automatic Diagnostic Repository (ADR) block file using O_DIRECT. The system automatically retries the open without using O_DIRECT.

Action: No action is required.

ORA-49802: missing read, write, or execute permission on specified ADR home directory [*string*]

Cause: The specified Automatic Diagnostic Repository (ADR) home directory did not have the correct permissions.

Action: Check the read, write, and execute permissions on the specified ADR home directory.

ORA-49803: Purge not possible due to incompatible schema version.

Cause: The Automatic Diagnostic Repository (ADR) found on disk was different from the version in the library.

Action: Start the product to migrate automatically or use the ADRCI utility command MIGRATE SCHEMA.

ORA-49804: cannot modify ADR PDB parameter *string*

Cause: An attempt was made to alter the Automatic Diagnostic Repository (ADR) pluggable database (PDB) - only parameters from a non-consolidated database or root container of a consolidated database.

Action: ADR PDB parameters cannot be altered from non-consolidated database or root container of a consolidated database. Switch to a PDB to perform the operation.

ORA-49900: cannot modify parameter *string*

Cause: An attempt was made to alter the parameter from a non-consolidated database or pluggable database.

Action: The parameter can only be altered in the root container of a consolidated database.

ORA-51001: check [string] not found in HM catalog

Cause: checker name might have been misspelled

Action: retry running check with proper checker name

ORA-51003: run parameters not formatted correctly

Cause: Run parameters were given in a wrong format

Action: Correct the run params text and try again

ORA-51004: Check doesn't take any input params

Cause: run params were passed to the check, which doesn't take any inputs

Action: don't pass any run params and try again

ORA-51006: unexpected delimiter ';' in the run params text

Cause: run params were not properly formatted.

Action: correct the run params format and try again

ORA-51007: parameter [string] not registered with this check

Cause: Wrong inputs were given to this check.

Action: correct the run params and try the check again

ORA-51008: parameter [string] value is not a proper number

Cause: the given parameter value is a not a proper number

Action: correct the run params and try again

ORA-51025: check name should be non NULL value

Cause: NULL value was passed for check name

Action: give a proper check name and retry again

ORA-51035: invalid timeout value

Cause: User specified an invalid timeout value

Action: n/a

ORA-51036: check [string] can only be executed in database instance

Cause: An attempt was made to run database-specific check in ASM environment

Action: Don't run the check in ASM environment

ORA-51037: check [string] can only be executed in ASM instance

Cause: An attempt was made to run ASM-specific check in a database environment

Action: Don't run the check in database environment

ORA-51102: cannot change priority of a critical failure string

Cause: An attempt was made to change priority of a failure with CRITICAL priority.

Action: No action is required.

ORA-51103: cannot change priority of a closed failure *string*

Cause: An attempt was made to change priority of a closed failure.

Action: No action is required.

ORA-51105: cannot change priority of a failure to CRITICAL

Cause: An attempt was made to change priority of a failure to CRITICAL.

Action: No action is required.

ORA-51106: check failed to complete due to an error. See error below

Cause: While executing the check, an unexpected error occurred.

Action: Check the errors below and try rerunning the check.

ORA-51107: failures are changing too rapidly - retry command

Cause: Failures were added or closed during a Data Recovery Advisor command.

Action: Retry the command.

ORA-51108: unable to access diagnostic repository - retry command

Cause: A lock or timeout error occurred when trying to read failure or repair data from the Automatic Diagnostic Repository.

Action: Retry the command.

ORA-51109: repair script file is too large

Cause: Data Recovery Advisor generated a repair script file that was too large.

Action: Retry the command with fewer failures selected.

ORA-51110: buffer size [*string*] is too small - [*string*] is needed

Cause: An internal buffer was too small.

Action: This is an internal error. Contact Oracle Support Services.

ORA-51111: failure revalidation timed out

Cause: Data Recovery Manager was unable to revalidate all failures before timing out.

Action: Increase timeout and retry the command.

ORA-51190: Internal error [*string*], [*string*] from DBMS_IR

Cause: An unexpected error occurred while executing a routine in the DBMS_IR package.

Action: This is an internal error. Contact Oracle Support Services.

ORA-51191: Too many files opened

Cause: Data Recovery Advisor attempted to open too many files using the DBMS_IR package.

Action: This is an internal error. Contact Oracle Support Services.

ORA-51192: File not open

Cause: Data Recovery Advisor attempted to read or write from a file that was not open.

Action: This is an internal error. Contact Oracle Support Services.

ORA-51193: invalid parameter value

Cause: An invalid parameter value was supplied in a call to the DBMS_IR package.

Action: Fix the parameter value and retry the call.

ORA-51303: illegal check mask value specified

Cause: An illegal check mask value was specified.

Action: Specify one of the following legal values: COLUMN_CHECKS, ROW_CHECKS, REFERENTIAL_CHECKS, or ALL.

ORA-51316: No check meta-data found on specified table *string*

Cause: No check meta-data was found for the object

Action: Table may not exist or no checks currently defined for the table

ORA-51700: Invalid file URL

Cause: A URL with invalid syntax was provided, either directly to the function or through an XML IMPORT or INCLUDE.

Action: Check the URL.

ORA-51701: Invalid file URL or path prefix

Cause: Either a URL or path prefix with invalid syntax was provided.

Action: Check the URL.

ORA-51702: Could not find file at URL provided

Cause: The file requested could not be found in the given location.

Action: Check the URL provided.

ORA-51703: Missing *body* tag from HTML

Cause: An HTML document was passed to the function missing its *body* tag.

Action: Check the HTML source.

ORA-51704: Error *string* received from XPath engine

Cause: An error was received from the XPath library during an XPath operation.

Action: Check xmlerr.h to understand the cause of the error and correct the relevant client code.

ORA-51705: XML *string* error: *string* "*string*"

Cause: An error was received from an underlying XDK API and is being resigalled.

Action: Check xmlerr.h to understand the cause of the error and correct the relevant client code.

ORA-54000 to ORA-54058

ORA-54000: Virtual column feature not yet implemented

Cause: Feature has not been implemented.

Action: Feature is being implemented.

ORA-54001: *string*: invalid identifier specified for virtual column expression

Cause: Column expression referenced a column that does not exist in the table.

Action: Rewrite column expression to reference only scalar columns in the table.

ORA-54002: only pure functions can be specified in a virtual column expression

Cause: Column expression contained a function whose evaluation is non-deterministic.

Action: Rewrite column expression to reference only pure functions.

ORA-54003: specified data type is not supported for a virtual column

Cause: Only scalar data types are supported for virtual columns. LONG, BLOB, REF, and BFILE data types are not supported for virtual columns.

Action: Specify the expression column with a supported scalar data type.

ORA-54004: resultant data type of virtual column is not supported

Cause: The data type of the underlying expression is not supported. Only scalar data types are supported for virtual columns. LONG, BLOB, REF, and BFILE data types are not supported for virtual columns.

Action: Specify the expression of virtual column to return a supported scalar data type.

ORA-54005: keyword VIRTUAL cannot be specified here

Cause: The keyword VIRTUAL was either repeated or incorrectly specified.

Action: Remove the keyword from the specified syntax.

ORA-54006: keyword VISIBLE cannot be specified here

Cause: The keyword VISIBLE was either repeated or incorrectly specified.

Action: Remove the keyword from the specified syntax.

ORA-54007: keyword HIDDEN cannot be specified here

Cause: The keyword HIDDEN was either repeated or incorrectly specified.

Action: Remove the keyword from the specified syntax.

ORA-54008: expression column is not supported for an index organized table

Cause: Attempt to create/alter an index organized table with an expression column

Action: These columns are not supported, change the DDL.

ORA-54009: expression column is not supported for an external table

Cause: Attempt to create/alter an external table with an expression column

Action: These columns are not supported, change the DDL.

ORA-54010: expression column is not supported for a temporary table

Cause: Attempt to create/alter a temporary table with an expression column

Action: These columns are not supported, change the DDL.

ORA-54011: expression column is not supported for a clustered table

Cause: Attempt to create/alter a clustered table with an expression column

Action: These columns are not supported, change the DDL.

ORA-54012: virtual column is referenced in a column expression

Cause: This virtual column was referenced in an expression of another virtual column

Action: Ensure the column expression definition for any virtual column does not refer to any virtual column

ORA-54013: INSERT operation disallowed on virtual columns

Cause: Attempted to insert values into a virtual column

Action: Re-issue the statement without providing values for a virtual column

ORA-54014: Resulting table from a CTAS operation contains virtual column(s)

Cause: Table being created by a CTAS operation contains a virtual column definition

Action: Remove the virtual column definition from the table being created

ORA-54015: Duplicate column expression was specified

Cause: Expression of the virtual column being added/created conflicts with an existing/previously specified functional index expression or virtual column expression

Action: Change the expression of the virtual column as there are no duplicate expressions

ORA-54016: Invalid column expression was specified

Cause: Virtual column expression is not a valid arithmetic expression. it probably refers to another column in the table

Action: Change the expression of the virtual column

ORA-54017: UPDATE operation disallowed on virtual columns

Cause: Attempted to update values of a virtual column

Action: Re-issue the statement without setting values for the virtual column

ORA-54018: A virtual column exists for this expression

Cause: Specified index expression matches an existing virtual column"

Action: Re-issue the statement by replacing the index expression with the matching virtual column

ORA-54019: Virtual column expression cannot be changed because it is a partitioning column

Cause: Attempted to modify the expression of a virtual column that was also a partitioning column.

Action: This is not supported.

ORA-54020: Virtual column expression cannot be changed because it is a subpartitioning column

Cause: Attempted to modify the expression of a virtual column that was also a subpartitioning column.

Action: This is not supported.

ORA-54021: Cannot use PL/SQL expressions in partitioning or subpartitioning columns

Cause: Attempted to partition a table on a virtual column that contained PL/SQL expressions.

Action: This is not supported.

ORA-54022: Virtual column expression cannot be changed because an index is defined on column

Cause: Attempted to change the expression of a virtual column that was indexed.

Action: Drop the index and then change the expression.

ORA-54023: Virtual column expression cannot be changed because a constraint is defined on column

Cause: Attempted to change the expression of a virtual column that had a constraint defined on it.

Action: Drop constraint and then change expression.

ORA-54024: expression column is not supported for an organization cube table

Cause: Attempted to create or alter an organization cube table with an expression column

Action: These columns are not supported, change the DDL.

ORA-54025: Virtual column cannot have a default value

Cause: Attempted to alter a virtual column to have a default value.

Action: This is not valid, change the DDL.

ORA-54026: Real column cannot have an expression

Cause: Attempted to alter a real column to have an expression.

Action: This is not valid, change the DDL.

ORA-54027: cannot modify data-type of virtual column

Cause: Attempted to change the data-type of virtual column without modifying the underlying expression

Action: change the underlying expression to be compatible with the data-type change

ORA-54028: cannot change the HIDDEN/VISIBLE property of a virtual column

Cause: Attempted to change the HIDDEN/VIRTUAL property of a virtual column

Action: re-issue the DDL without the virtual column property change

ORA-54029: Virtual column cannot be updated in trigger body

Cause: Attempted to change the value of virtual column in a trigger body"

Action: This is not valid, change the trigger definition.

ORA-54030: datatype mismatch between virtual column and expression

Cause: virtual column expression was changed after column was created"

Action: change the underlying expression to return datatype that conforms to the virtual column

ORA-54031: column to be dropped or modified is used in a virtual column expression

Cause: Attempted to drop or modify a column that was used in a virtual column expression.

Action: Drop the virtual column first or change the virtual column expression to eliminate dependency on the column to be dropped.

ORA-54032: column to be renamed is used in a virtual column expression

Cause: Attempted to rename a column that was used in a virtual column expression.

Action: Drop the virtual column first or change the virtual column expression to eliminate dependency on the column to be renamed.

ORA-54033: column to be modified is used in a virtual column expression

Cause: Attempted to modify the data type of a column that was used in a virtual column expression.

Action: Drop the virtual column first or change the virtual column expression to eliminate dependency on the column to be modified.

ORA-54034: virtual columns not allowed in functional index expressions

Cause: An attempt was made to create a functional index with an expression defined on one or more virtual columns.

Action: Specify the index expression using only regular columns.

ORA-54035: keyword HIDDEN cannot be specified here

Cause: Attempted to specify HIDDEN key word for a virtual column

Action: This is not supported.

ORA-54036: cannot define referential constraint with ON DELETE SET NULL clause on virtual column

Cause: Attempted to specify ON DELETE SET NULL clause for a referential integrity constraint on a virtual column.

Action: Reissue the statement without specifying ON DELETE SET NULL clause.

ORA-54037: table must have at least 1 column that is not virtual

Cause: An attempt was made to create a table with only virtual columns.

Action: Include at least 1 column that is not virtual in the table being created.

ORA-54038: Virtual column cannot be encrypted

Cause: An attempt was made to create or alter a virtual column to have encryption.

Action: Encryption is unnecessary for a virtual column as the data is not stored on disk.

ORA-54039: table must have at least one column that is not invisible

Cause: An attempt was made to create or alter a table to have only invisible columns.

Action: Include at least one column that is not invisible in the table being created or altered.

ORA-54040: Visibility of a system-generated column cannot be changed.

Cause: An attempt was made to alter the visibility of a system-generated column.

Action: This is not supported.
